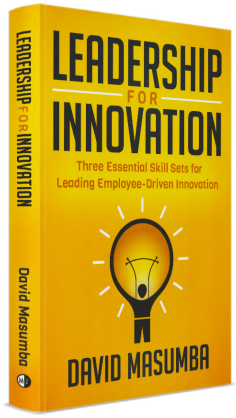
Leadership for Innovation

Three Essential Skill Sets for Leading Employee-Driven Innovation



by **David Masumba**

Innovative Management Skills
Page 3

Formulating Innovation Goals
Page 4

THE SUMMARY IN BRIEF

Not long ago, innovation in organizations was perceived as the responsibility of specific functional units and professionals. That's no longer the case. Study after study has revealed that many organizations now view innovation as everyone's job, from senior leadership to the most junior employee. So what skill sets should senior executives, managers, and supervisors possess to lead and effectively systemize innovation across all functional units of the organization?

David Masumba, in ***Leadership for Innovation***, draws from his many years of experience as an international consultant and from the body of research to guide us through steps to more innovative leadership practices. Masumba suggests three categories of innovation skill sets that are essential for leading employee-driven innovation: innovative thinking skills, innovation engagement skills, and innovation management skills. The culture of innovation does not occur naturally; it occurs only if a climate for innovation is created. Innovation is everybody's business.

IN THIS SUMMARY, YOU WILL LEARN:

- The importance of making innovation systemic in your company.
- To consider innovation as a criterion in hiring.
- Principles to carry the innovation message to all levels of the organization.
- How good questioning can reveal the next layer of innovation.

Innovative Thinking Skills

The conventional approach to innovation in organizations has been that innovation is the responsibility of specific functional units and professionals, yet studies have revealed in many cases, functional units responsible for innovation struggle to meet the organization's demands for innovation. Further, most innovative companies—such as Apple, Amazon, Google, Tesla, Microsoft, IBM, GE, 3M, Netflix, Samsung Group, Toyota, and Uber—require multiple pipelines to satisfy their innovation and growth demands. Also, innovative companies are usually at risk of losing their top creative talent.

This book defines leadership for innovation as leadership provided by individuals who possess particular creative skill sets and the ability to execute those skill sets to build a culture of innovation in which ***every employee*** across the organization is involved in driving innovation.

Innovative performance can be defined as an expression of innovative thinking skills and abilities in response to a need or problem in the particular context of an organization's functional activity.

Understanding Innovative Thinking Skills

A senior executive at IBM contributed to building a Life Sciences Unit at the company. Anne Robertson (*name changed) was in charge of a unit she had built from scratch to its current status of over two thousand employees. Robertson learned that her mother had developed complications during a health treatment when she reacted adversely to a particular medication. Although Anne's mother's records were updated to warn doctors not to repeat the treatment, just three days later, another doctor missed that warning and gave her the very same medicine. Robertson was shocked when she found out how common and widespread the problem was in US hospitals. According to reports, more than one hundred thousand people die every year in US hospitals because of medical errors such as incorrect medication, incorrect dosage, inefficient diagnostics, duplicated procedures, operations on the wrong side of the body, and so forth, and the problem has been going on for many years. Robertson started thinking about how IBM could solve the problem in an innovative way or in a way not seen on the market before. Today, IBM's Life Sciences Unit manufactures and supplies IT systems that are helping hospitals manage their patient data more effectively.

Anne's story illustrates the innovative thinking process. She could identify problems, needs, and challenges. Her thinking allowed her to turn the problems and needs into a creative opportunity by generating solutions not seen on the market before.

Approaches to Development

What are the characteristics of innovative people? Opinions would usually range from innovative thinking being an inborn attribute to it being an attainable ability. Everyone has the potential to develop innovative thinking skills.

The power of imagination links associations and connections between unrelated things to generate ideas to solve a problem. With this understanding, leaders can urge workforces to be regularly engaged in the practice of interlacing and intertwining ideas from different areas or fields to solve a particular problem. Many inventions and innovations have been developed by connecting ideas from very different fields to solve a problem. For instance, ideas that were developed for computers have been used in cell phones. Products that were meant to solve a particular issue have serendipitously solved other problems.

Innovators As Leaders

Followers learn through emulation or imitation. Organizational leaders have to be seen contributing to the generation of innovative ideas and not just evangelizing innovation to their followers. Albert Schweitzer was a French-German theologian who died while serving as a missionary in the West-Central African country of Gabon at the age of ninety in 1965. Schweitzer repeatedly said, "Example is not the main thing in influencing others. It is the only thing." This quotation underscores why leadership role modeling is such a vital aspect when leading people.

Studies have revealed that one of the reasons why many innovative companies have been successful at innovation-led growth over a long period is because these companies—such as Alphabet, Apple, Amazon, Tesla, Microsoft, and GE—are driven by innovative leaders who have a strong passion for creative approaches and also have strong innovative thinking abilities. Such a reputation is a magnet for the attraction and retention of innovation talent who, in most cases, want to join a company or stick around longer so that they can learn unique skills on how to lead innovative companies from their leaders.

Innovative Engagement Skills

This innovation skill set involves the application of skills and abilities by organizational leaders to create and im-

plement organization-wide innovation-support initiatives aimed at specifically engaging and instilling innovation in the hearts and minds of workforces.

Communicating Innovative Engagement

Innovative leaders understand the need for communicating innovation throughout the organization. Information and inspiration are both necessary. Innovative leaders look for ways to relate to every type of audience.

Compare the speeches by two former US presidents, Bill Clinton and Barack Obama, at the Democratic National Convention in 2012. These two leaders delivered their speeches on different days; both were great speeches, but they had different styles. What is interesting about the speeches is how the two leaders rallied the huge audience at the venue and the viewers across the US to reelect President Obama. In his speech, Clinton made a case for President Obama by constantly quoting qualitative and quantitative data on what President Obama had achieved during his first four-year term. In his speech, he emphasized data about the economy using an informative style. In contrast, President Obama made the case for his reelection through the constant use of motivational catchphrases such as hope, change, aspirations, opportunity for all, the American dream, and the unwavering character of Americans.

Motivating Innovation

Many organizations will include or display on a poster a phrase such as "Innovation is our core value," yet the majority of the leadership and the workforces do not even understand what innovation means in the context of the company's nature of business.

Workforces should be able to form pictures or images from the company's motivational messages. You should ensure that employees can create visual images from the creativity-motivating slogans. A study in Switzerland showed high productivity in managers who used a lot of visual illustration techniques to communicate various organizational activities to workforces compared with managers who did not use visual methods.

Motivation is not the same for everyone. Record the CEO's innovation statements in video and audio formats. Introduce an innovation newsletter. Establish an "Innovation Day" where various activities are conducted as a way of indicating to workforces the importance that the company attaches to innovation performance. Arrange visitations or internships for staff to highly innovative companies. Each of these serves as motivators across the organization.

Building a Culture of Innovation

By its nature, a culture of innovation is not easy to create in an organization. Leadership must broaden the perception of the idea within the organization. Innovation is a process that involves identifying a problem or need, generating a new approach that has not been seen on the market before, turning the idea into a solution to address the identified need, and then converting the solution into monetary value. This goes beyond new products. Marketing, customer service, and finance are just a few of the departments that will be impacted.

Companies that develop a culture of innovation find that an innovation in one department can impact another. One of PepsiCo's plants developed a cost-saving process that involved collecting the rising steam from cookers using a new device that transformed the potato vapors back into water. That water was then used for cleaning equipment, washing potatoes, and irrigating lawns and shrubs. This process innovation saved the company about $1 million annually.

Innovative Management Skills

In a nutshell, innovation management skills involve creating and implementing organization-wide innovation-support systems, such as innovation-support strategies, innovation policies, innovation procedures, innovation plans, innovation-development processes, and workforce innovation skill-development programs.

Planning for Innovation

Innovation-oriented planning is a process that involves creating formats for organizing and implementing the innovation-related functional activities required to achieve desired functional innovation goals that ultimately contribute to overall corporate innovation goals.

Great innovators have also been referred to as great visionaries. Envisioning is the ability to understand, predict, or picture key aspects of market (local or global) trends or patterns that affect the organization's business trends.

At Procter & Gamble, innovation is seen as the cornerstone to develop the best possible products for consumers everywhere. Alan George Lafley ingrained innovation as a core practice and business strategy across all functional units and divisions. Lafley relates, "The problem at P&G in 2000 was not that we weren't inventive. The problem with us was that we weren't turning that invention into innovation that

created customers that benefitted customers, that created value for customers or a better experience for customers, and that's all I wanted to do." Lafley continued, "So, P&G innovations have become so successful and a part of people's daily lives, because the company innovates its brands with the customer in mind 100 percent of the time.

Innovation Performance Job Descriptions

One example of innovation management skills is the ability to create and implement innovation-performance job descriptions and job specifications. Larry Page and Serge Brin, founders of Google, continue to influence innovation across all structures of the company.

To ensure that innovation was enshrined and sustained as a culture, from the very beginning, Page and Brin initiated policies that were aimed at creating conditions that would continually advance and sustain innovation across Google. For instance, they had to hire proven corporate leaders with innovative abilities to ensure a radiant effect on the rest of the workforce. Google has a recruitment mechanism called "Spot the Innovators," which the company uses to look for people with a track record of innovation.

Innovation Challenge Questions

Innovation-challenge questions are pinpointing exploratory questions formulated to reveal specific organizational or community problems/needs or business opportunities requiring innovative solutions. In the context of innovation, questioning could be interpreted as a mental activity that involves showing curiosity, examining, and asking questions to explore an issue.

Simple questions that challenge standard practices by asking "Why?" or "Why not?" or "What if?" may lead to an organization's next breakthrough.

After arriving at Estée Lauder as the new CEO, Fabrizio Freda played the outsider. He spent six months on a "listening tour," zigzagging across Lauder's worldwide operations in 140 countries. In a statement to the media, Freda said he uses the power of listening to generate innovative ideas. "I strongly believe in the power of listening," says Freda. Listening, he says, helps him connect the dots. "The way my thinking and creativity goes is listening, connecting, and creating," Freda's curiosity and well-posed questions gave him insight across the company.

Formulating Innovation Goals

Goal setting is one of the most common and vital organizational practices. It is equally as critical when it comes to scaling innovation performance across functional units. Setting goals for functional-unit innovation contributes to inciting and motivating workforces to generate innovative ideas, and in turn, these ideas fuel the advancement of innovation across the organization.

Jeff Bezos, who won the Economist magazine's Innovation Award, has instilled a culture of innovation in his executives and employees across all functional units of Amazon. Leading by example in championing innovative thinking skills, Bezos ensures that every manager possesses creative thinking abilities, and he routinely checks innovation goals for his managers.

Making innovation systemic means that the top leadership of an organization must ensure that each functional unit plays a key role within the context of its operational activities to develop strategies and initiatives that lead to the continual flow of diverse, innovative ideas, ultimately resulting in growth in terms of product offerings, revenue, and market share. Innovation is everybody's business. Engaging and instilling innovation in the hearts and minds of workforces starts with the leaders.

Based in Walnut Creek, California, David Masumba is a workforce innovation trainer-consultant and author. David is the inventor of the upcoming simple kitchen device; the CT Holder. He is the Founder of Innovation Strategy Lab, an innovation training & consulting firm. David has more than 10 years of experience focusing on workforce innovation, also, referred to as employee-driven innovation.

THE SUMMARY IN BRIEF

Change happens, adversity in business is inevitable, and a leader's decisions always have human consequences. So, when a crisis knocks at your organization's door, the only question worth asking is, "Are the decisions you take as a leader human-focused?"

The book ***Leading with Humanity: How Purpose Creates Value*** unlocks precious ideas, innovative approaches, and actionable methods for leaders to lead their organizations through difficult times. It serves as a roadmap to building cultures that enable people to excel and organizations to succeed.

By putting his colorful personal experiences on the table, author Tom Wellner shows us how to strike the right balance between purpose and profit, adapt to change through innovation, and take a human-first approach toward our organizations' success.

IN THIS SUMMARY, YOU WILL LEARN:

- How to leverage courageous curiosity to foster innovation.
- How to adapt to change through innovation.
- How to establish the equilibrium between purpose and profit.
- To achieve excellence by building cultures of respect, integrity, and compassion.

Introduction: Be Good and Do Right

Building a resilient, agile, purpose-driven culture where people want to accomplish good things for others, even when no one is looking, starts with us, at whatever level we provide leadership. Accomplishing these demands doesn't mean changing our natural curiosity. It means making sure that the culture we develop at work reflects the best parts of who we are and where we come from. When the companies we lead need to change to remain competitive, it doesn't have to come at the expense of our humanity.

This book is about leadership and life, and it tries to offer ways to balance what can seem to be competing demands. It shows us how to:

- Foster individual, inquisitive minds and still interact with and learn from others.
- Learn to retain the best from the past and still remain relevant for the future.
- Apply inquisitive thinking and original problem-solving to face a crisis when it arrives and avoid the next crisis by planning for the future we can't see yet.

I hope that by the time you reach the end of this book, you will agree that we can create work cultures where we respect the people we serve and still attain sustainable economic results.

Chapter 1: Stay Strong, Stay Focused: Leading through Adversity

Acting with resilience when adversity arises will require individuals to dig deep within themselves, but they have a better opportunity to overcome difficult circumstances when their organizations consistently foster cultures of agility, innovation, transparent communication, and team member empowerment. Smart companies invest in good risk management strategies, and such traits can become focal points of that development.

As leaders we hope we will never have to put these strategies to use, but as we all know a Black Swan event like a global pandemic can very quickly help put these strategies into action. The best way to apply our learnings in times of crisis is to have insatiable knowledge appetites and open minds. As leaders, we must create cultures where the desire to apply learnings becomes locked into the culture's DNA.

Part 1: An Insatiable Mind: Leveraging Courageous Curiosity to Foster Innovation

Chapter 2: Say Hello: Discovering the Entrepreneurial Path

I don't know if it's possible for someone to be born an entrepreneurial-minded businessperson or if it is a learned orientation. What I do know is that I was fortunate enough to be born into a great environment for learning about the entrepreneurial spirit. Throughout my life, I had several mentors who proved inspirational and who helped shape my thinking.

The premium I place on education and lifelong learning has been a critical part of my leadership, not only in continuous self-education but also in making certain we offer programs for our employees to expand their knowledge formally and by ensuring we create environments where learning is supported and reinforced. Organizations must define their values by three pillars – lead self, lead others, and lead functions.

As a leader, have you created a culture that supports an entrepreneurial spirit? Ask yourself, "Does my organization have a systematic framework for guiding employee education specific to their responsibilities?" "Is there a formalized mentoring program in place?" "Do we create mechanisms for interaction between team members who work directly with our customers and those who do not have customer-facing responsibilities?" "Does my organization have a means in place to support candidate interaction between frontline workers and senior managers?"

Chapter 3: Love What You Are Doing: Finding Creativity in Curiosity

As much as we should value the curiosity that drives learning, curiosity needs a purpose. Facts may be interesting, and research may be rewarding, but if the learning we do is not focused on pragmatic solutions for an identifiable problem, then it is not going to result in any meaningful change or new opportunities. A big part of applying creative thinking is learning how to frame problems and how you view them. We have to balance the visionary with the practical. Doing so starts by genuinely loving what you are doing.

Create a culture where insatiable curiosity is celebrated. When we create an atmosphere where leaders are not afraid to show that they still have things to learn, then the natural consequence is for team members to be willing to

learn what they don't know. Being comfortable admitting our vulnerabilities is critical to transforming our enterprises because the very idea of innovation requires a culture that supports risk-taking.

If curiosity drives the desire to learn and learning determines the ability to grow, together these forces foster a climate where creativity can thrive.

Chapter 4: Buy the Barn: Thinking in New Ways

The path toward innovation requires the creative ability to think in new patterns. A central part of what we associate with entrepreneurs is new thinking. Successful leaders and entrepreneurs see new markets and new customer demands before they emerge. That usually means that new thinking is uncomfortable. But if we can embrace some uncomfortable thinking, we might just discover some ingenious approaches to seizing new opportunities. Ask the following questions to create a culture that inspires ingenuity:

- How do you encourage uncomfortable thinking in your organization?
- Have you created an environment that supports risk-taking?
- In meetings at all levels, do you have a system in place that encourages a specific period for open discussion of new ideas? How do you then move that discussion to specific actions?
- Do you have systems in place to encourage and reward employees to explore new markets, new systems, and new products?

Chapter 5: Communicated with Clarity: Giving Voice to Collective Values

The best lessons and the newest ideas don't have a lot of value if we can't communicate what we've learned. Communication that demonstrates how an organization is applying past lessons to future actions is required internally and externally in equal measures and with consistent clarity.

If our leaders don't reflect our corporate values, we are doomed before we start. Everyone will take their cue from authentic leaders, and they'll know the difference. From there, we need to build inclusive communication styles from a bottom-up perspective rather than from a top-down one, and we need to build silo-free platforms to encourage information exchange. Only by seeing from perspectives different from our own, can we begin to see the bigger picture.

Part 2: The Innovative Agenda: Adapting through Invention

Chapter 6: Empower and Invest: Cultivating the Desire to Innovate

At its heart, innovation is about change. Change is part of human nature. Because people change, the cultures they create change. And because culture changes, the things people want and need change, so markets change. To stay relevant in business, we've always got to be remaking ourselves to adapt to these new demands. If we are not innovative in our problem-solving, we get left behind.

The only way to adapt to change is to create a culture that invests in innovation. Be aware of examples of innovations or entrepreneurial thinking that are already going on in your business. Catalog innovative practices your team members have quietly put in place. Incentivize the would-be problem-solvers in your enterprise. Create a dedicated team that would be focused on introducing innovation into your company. Have people in place who are experienced in evaluating the adoption of new technologies. Finally, invest in people who have the skills and expertise to guide your enterprise through change.

Chapter 7: Do What You Do Best: Identifying Abilities and Leveraging Partnerships

You can't invest in innovation unless you already know what you do well. One of the important abilities a leader can bring to a business is to provide a comprehensive assessment of the company's breadth and identify its strengths and weaknesses. We also have to think like outsiders. We have to be as objective as possible.

Think of an organization as an organism with a lifespan. To lengthen that lifespan, an organization (like an organism) must adapt and change. Because potential partners have specific expertise, multiple partnerships can make us nimbler. Truly partnering with others who bring new strengths, new knowledge, and new assets to our organizations can go far beyond solving immediate problems.

Whether we're investing in rising leaders within our organizations or acquiring another enterprise that can help us fulfill our mission, we have to undertake an honest and transparent exploration to identify what we do best and where we need help. Then bringing along young, promising talent, turning to experts in narrow but applicable fields, and identifying partnerships that enhance what we already

excel at will help us create a true competitive advantage and build something permanent that can continue to grow.

Chapter 8: Act on Principles: Celebrating the Ageless Spirit through Applied Innovation, a Case Study

Of course, we will all be old one day. How would you want to be treated then? I'm guessing that how you wish to be treated one day in your future isn't different from how you want to be treated now. We live in a time of tremendous social change, one where people all around the world reject prejudicial behaviors. It is beyond time that this call for equity and social justice extends to seniors. Today, we can no longer see older people as irrelevant or dismiss them as having passed the time of their lives when they were vital to the larger cultural exchange.

The simple act of spending time with someone from a different generation is a powerful way to keep prejudice from forming, especially when you're young, which is exactly when most of our prejudices are formed. This can be educational at the same time it forges inter-generational relationships, as is the case in a partnership initiative formed between Revera, Inc., a leading owner, developer, investor and asset manager in the senior living sector, and Reel Youth, a Vancouver nonprofit that helps young Canadians tell stories through film. With the Age Is More Film Project, we have paired students with seniors in our retirement communities and have produced more than 280 short films that celebrate older Canadians and bring together what used to be the two solitudes of young and old.

Part 3: Humans Serving Humans: Realizing Excellence by Developing Cultures of Respect, Integrity, and Compassion

Chapter 9: Craft a Culture: Creating the Workplace That Would Make Our Parents Proud

Any organization is bettered when it takes advantage of the collective wisdom of its members. For me, central to creating an effective culture is to try to achieve one that is as non-hierarchical as possible, one that fosters a spirit of openness where people feel safe and comfortable and have confidence that they can ask questions and share ideas. I want a workplace where it is acceptable, even desirable, to ask your boss legitimate, tough questions.

The delicate balancing act is making sure that employees knowingly believe they are heard and supported while also creating an environment where everyone understands that decisions have to be made and then all must align with such decisions.

Because cultures typically take on the attributes of their leaders, as any quick survey of world history will remind you, the culture you desire is usually the one you'll get. Determine the three cultural attributes you want your business to actively reflect. Find out what personal behaviors are part of your own day-to-day interactions that you'd like to see others in your organization emulate. Finally, determine the type of mechanisms that are needed to make sure your people have the chance to have their ideas shared.

Chapter 10: Strive for Excellence: Achieving Perfection Is Impossible but Worth Attempting

Too often, people mistake attempting to achieve excellence with an expectation of perfection. While attempting perfection is a worthy goal, it is impossible to attain. Don't lower your standards, but accept that in the search for excellence, you're going to make mistakes.

Inculcate the ability to differentiate excellence from perfection in your culture. Start by transforming people's definition of failure. I'm not suggesting that we want to aspire to failure, but if you are taking risks, even calculated ones, occasional failure is inevitable.

Then eradicate blame culture while maintaining accountability. Your company will never be successful if it employs a blame culture. Instead, invest in those who own up to an error when they make it and who then get busy fixing the problem. Remember, good leaders always invite scrutiny, reflection, and discussion on how to avoid repeating mistakes.

When we create cultures of open communication and supported collaboration, people learn not to take things personally and work collectively. And the stronger the collective ownership of a project or strategy, the more colleagues will hold one another accountable. Lastly, remember that people are motivated by improving themselves, by improving the lives of others, and by contributing to lasting change. If we lead organizations that share those values, then our people will want to be part of moving the organization in a positive direction.

Chapter 11: Establish Equilibrium: Exceeding Expectations while Maintaining the Mission

At its core, a leader's role is to reduce risks and identify op-

portunities, which then enables us to be excellent allocators of financial and human capital. Too much focus on one aspect of the business and another suffers. To be successful as a leader, achieving equilibrium on multiple fronts is key. Maintaining equilibrium in a wide variety of responsibilities is both a skill a leader has to learn and a strategy for guiding our companies forward. The three central ideas of establishing equilibrium between profit and purpose include:

- Never lose sight of natural inquisitiveness and embrace courageous curiosity in learning new things about your business and the larger world.
- Apply innovation to find new solutions in order to take your business in new directions that are fitting for its strengths, consistent with its mission, and necessary for market demands
- Invest energy in cultivating a productive, desirable, respectful culture without your business that allows flexibility while creating stability.

The path to achieving each of these three elements is found in following our human instincts to do the right thing. Lean too exclusively toward purpose, and we may no longer have a sustainable business venture; lean too far toward profit, and we'll likely have a business that's not worth sustaining because it is morally corrupt. Some principles of applied equilibrium to employ during a time of crisis include:

- Balancing timeliness and informed decisions
- Balancing personal vision and an informed view
- Balancing getting it right and getting it done
- Balancing resources
- Balancing communication flow
- Balancing investment risk and reward
- Balancing growth and dividends
- Balancing innovation and infrastructure
- Balancing IQ (Intelligence Quotient) and EQ (Emotional Quotient)

Conclusion: Create Change by Making a Difference

It shouldn't take a pandemic to make us human. It shouldn't take observing courage and resiliency in the face of death to make us take stock of our values. It shouldn't take a crisis to remind a business about why it is in business in the first place.

The core principles I have outlined in this book have consistently guided my decisions and approaches throughout my career. If you're going to be able to create the kind of culture I've tried to illustrate within this book, it starts in one place: you must become comfortable in your own skin. You need to know who you are and know what you're good at while seeing where you need to learn.

No one ever suggested that guiding a company is easy. But the capacity you have to lead change in your company can also change lives for the better. That's a worthy goal. And remember, inside every challenge lies an opportunity.

For nearly 10 years, **Tom Wellner** has been the CEO of Revera Inc., a leading owner, developer, investor and asset manager in the senior living sector. Over his career, Tom has led with people and purpose at the centre of decision making, and he shares these philosophies and experiences in his first book Leading with Humanity: How Purpose Creates Value. He also contributed to the book Unprecedented: Canada's Top CEOs on Leadership During the Pandemic, sharing his experience at the helm of Canada's leading senior living organization during the pandemic in a frank and personal account.

THE SUMMARY IN BRIEF

Attracting and keeping the best and the brightest is an ongoing challenge for any organization. In ***Talent Keepers,*** authors Christopher Mulligan and Craig R. Taylor—of the acclaimed TalentKeepers organization—explore the winning approaches that are designed to create the kind of engagement that produces perpetual positive energy, energizes others, and leads to commitment and loyalty.

Leaders who communicate well are the most important factor for implementing an effective engagement and retention strategy. Leaders can learn to hone their communication skills in order to create a healthy and engaging workplace culture. ***Talent Keepers*** also reveals how leaders can apply workplace data to improve engagement and retention, with results that will echo throughout the organization.

Without taking a one-size-fits-all approach, ***Talent Keepers*** offers proven suggestions, ideas, and strategies for forward-thinking leaders who want to create a vibrant workplace environment. It's s your guide for improving your staff's effectiveness from top to bottom.

IN THIS SUMMARY, YOU WILL LEARN:

- Why leaders are the single most important element in fostering engagement.
- The four drivers of employee engagement and how leaders can use them.
- Communication strategies for managing constant change.
- To create a culture of engagement and retention throughout the organization.

Introduction: Energizing a Changing Workplace

These days, the workforce on which we depend changes rapidly. People leave their employers for new opportunities more frequently than ever before.

More and more often, organizations find themselves committing the time and resources to train a new employee, only to see him underperform or even depart before ever making a meaningful impact. Often, this leads to an underlying drain on the energy and commitment of an entire staff.

To succeed in this remarkably fluid new workplace, the best organizations must find ways to invigorate their staffs. That invigoration comes with a new focus on the importance of managers and the critical role they play in employee engagement and retention.

Engagement is that level an employee reaches when she is ultimately committed to the organization, the leader, and the tasks at hand. Engaged employees act like caffeine for an organization—a java-crew that can enliven people around them, inspire creativity, promote high performance, and delight customers. You already know that, and most executives agree with you.

It's no surprise that, today, 82 percent of all organizations make engagement a strategic priority, with over one-third of them ranking it among their top talent initiatives.

Act on the Data

More organizations are finding ways to generate, analyze, and use data to guide talent-management practices. That's why, in 2016, employee surveys were the most popular and effective way of gathering relevant and actionable data on employee engagement. The problem is that too many leaders with access to this data never wind up doing anything with it.

In a major study that TalentKeepers undertook earlier this year that included over 30,000 employees, those employees who believed their leader took some action as a result of a survey were 11 percent more engaged on every index measured. The impact this has on business metrics can't be overstated.

Let's figure out how to make that happen for your organization.

Engaging Your Talent Is a Business Imperative

When it comes to keeping and engaging high-performing employees, it's no longer enough to leave the responsibility in the hands of the HR department. In truth, retention and engagement are business strategies with clear business outcomes. An engaged workforce positively impacts the customer experience, which improves employee/customer relationships, and, in turn, generates more revenue.

The effort to engage and retain talent must move out to the front lines. It must rest squarely in the hands of leaders like you. When leaders hold themselves accountable for energizing their most talented employees, every aspect of the organization improves.

So how do you keep and engage your best workers? It takes leaders with a well-honed skill in building a climate of engagement and retention—a climate that speaks to employees in a way that encourages them to get connected and do their best. This stance is not necessarily revolutionary, but the following strategies stand on 16 years of data compiled from thousands of companies of all backgrounds and goals and in any industry you can think of.

In this changing organizational climate, with high turnover as we transition from the baby boomer to the millennial generation, we are looking at a new and extremely valuable trend: Organizations that leverage their leaders to engage and retain employees achieve a significant advantage. When it comes to talent, this is the new market inefficiency. And this market inefficiency, like any others, offers plenty of opportunity for those who take action.

Introducing the Leader Engagement Index

One of the most effective strategies an organization can implement is to survey its employees on their opinions about their leaders. The Leader Engagement Index (LEI) is a composite of the data gathered from multiple behavioral questions presented to an organization's employees. The results are expressed as the percentage of team members who are currently engaged by their immediate leader.

Imagine being able to see how all leaders within your organization vary, from 100 to 0 percent, on LEI. Imagine the power of comparing the LEI score with team performance (almost always a strong positive correlation) as a way to demonstrate the value of leader engagement on performance. Organizations who successfully do this find that they have a new lever to pull to drive higher performance: the power of highly engaging leaders. Perhaps even more exciting is the ability to show leaders with lower LEI scores the exact behaviors they can modify to increase their LEI, and in turn, their team's performance.

There is nothing that an organization can change quicker, easier, and to greater results than how their leaders approach employee engagement.

How does it work? Every leader's employees receive a survey that asks them to rate their leader on statements like these:

- My supervisor wants me to be successful.
- My supervisor uses specific work examples while coaching me.
- My supervisor enables me to achieve the career and professional goals I have set.
- My supervisor is usually receptive regarding suggestions from employees.
- My supervisor communicates effectively.
- I am satisfied with the recognition I receive from my supervisor for my achievements.
- The feedback and coaching my supervisor provides helps me improve my performance.
- My supervisor is someone I can trust.

Once each employee has provided answers to the 22 statements similar to the eight listed above, the data gets compiled into a percentage. The higher the percentage, the higher the engagement; the lower the percentage, the lower the engagement.

The core principles that the index can instill in your leaders and the people they lead include being a trust builder, communicator, esteem builder, flexibility expert, developer and coach, high-performance builder, climate builder, generation manager, talent finder, and retention expert.

These principles all contribute to creating an environment in which employees see the value of their work and a connection between their success and the success of the organization.

What Engages People at Work?

Three important trends have emerged from the millions of answers TalentKeepers has compiled through surveys:

1. There are four key drivers of employee engagement: organizational factors, job/career satisfaction, co-worker relationships, and credible leadership.
2. Different generations tend to favor those four drivers in slightly different ways;
3. No matter what generation, organization, or industry we're talking about, quality of leadership is the absolute most controllable driver of employee engagement. There is nothing that an organization can change quicker, easier, and to greater results than how their leaders approach employee engagement.

Let's now discuss the four drivers of employee engagement.

Organizational factors. Organizational factors include perception of senior management, the organization's vision and mission, reputation, policies and procedures, culture, and environment. An engaged employee tends to make these kinds of statements about the organizational factors that contribute to her job: "The organization's vision, mission, and goals inspire me and help me to be more productive." "Senior management in my organization is open, honest, and transparent in communication." "Senior management is accessible and approachable when necessary."

Job/career satisfaction. The components of job/career satisfaction include clarity of job roles, job responsibilities, accountability for goals, opportunities to utilize skills, and chances for career growth. An engaged employee tends to make these kinds of statements about the job/career satisfaction measures that contribute to his job: "My decision-making authority is sufficient for me to perform my job effectively." "I receive the training needed to perform my job effectively." "This is a career that I love and believe in."

Co-worker relationships. Team-based relationships, including peer support and everyday work interactions, can make or break how satisfied an employee feels, while playing a key role in overall engagement. Here are a few examples of statements an engaged employee might make: "Most of my co-workers communicate effectively with me." "From most of my co-workers, I receive the support I need

to be able to succeed." "Most of my co-workers demonstrate interest and concern for my personal well-being."

Credible leadership. Here is where we can make the greatest difference as leaders of an organization. Credible leadership involves engagement of team members by immediate managers, including communication, trust, coaching, and recognition. Here is what a leader who effectively engages her employees looks like: "Tells the truth, meets commitments, and does what she says she will do; is someone an employee can trust; listens when an employee has suggestions on how to do things better; clearly communicates expectations and the reasons behind changing priorities," and so forth.

LEI correlates positively to all the factors listed in the four drivers model. A leader with a high LEI score can influence and shape an employee's perception of team building, career opportunity, self-esteem, sense of self-worth, safety, and on and on.

Leaders and Their Impact

Many people think of engagement as a light switch that we turn on or off. We often think of people as either engaged in their work or not. In reality, becoming engaged in one's work is a process we all go through.

TalentKeepers has developed an engagement continuum to describe the process of getting individuals engaged with their work. Let's talk about the three phases of that process: commit, engage, and excel.

Commit. Each of us makes a commitment to our job in various ways and to different degrees. We commit to a role, a leader, the team, and the organization when we see alignment between what we want to achieve from our work and what we perceive the opportunity will provide to us. Employers want people to make intellectual, emotional, and even behavioral commitments to, for example, perform to the best of our ability. This commitment begins during the recruiting process and evolves as an employee gains more experience. This is why it is so important for recruiters to provide a realistic job preview to potential employees.

Engage. Once we make that conscious or perhaps subliminal commitment, we begin to dig in and apply ourselves. At this point, we have the opportunity to become engaged in the work and bring that energy and discretionary effort to our role and the organization. As described above, the four drivers of engagement and retention play an important role here over time: credible leadership, supportive co-workers, job and career satisfaction, and a high-performing organization.

Excel: For many employees, engagement leads to sustained high performance over time, and people excel in their roles. Here is where all stakeholders—the employees, their leaders, and the organization—reap the rewards of discretionary effort in the form of higher performance in the areas of service, sales, productivity, safety, and so on.

How do we get there? As the continuum suggests, it starts with commitment. Engaging your leaders to increase the commitment from their teams is a matter of communication. Trust is also a building block in fostering commitment. Getting leaders and employees to connect and commit to each other, their roles, and the organization is imperative for building engaged, loyal, and productive team members.

The next phase of the continuum, engage, calls for ensuring that all the four drivers of engagement and retention are working effectively for your employees. The final phase, excel, leads to a continuation of the development of an engaged culture. By this point, leaders are focused specifically on areas of engagement and are empowered to enhance interactions and performance with team members.

Because organizations are constantly changing, let's now discuss strategies, tactics, and pitfalls for successfully maintaining a highly engaged culture in an ever-changing environment.

Communication: The Lubricant of Change

New products. New marketing strategies. New sales goals. New policies. How often do these kinds of changes emerge in your organization? If yours is like just about every other organization on the planet, the answer is "constantly."

Almost across the board, the difference between high-performing organizations and everyone else is that the former's leadership structure—from top to bottom—is equipped to foster, manage, and communicate the reasons for that change, details of the change, the benefit of the changes to the organization, and how the change will affect employees.

Blaming Up

"I don't know why they won't let me buy you pizza anymore," a front-line manager would tell an employee who complained about the cutbacks. "And I can tell you one thing for sure: If I were running this store, the last thing

I would have cut was the coffee. I mean, how much can coffee possibly cost, anyway?"

It's a natural human reaction to deflect blame. It's also an all-too-natural response for managers to deflect that blame upward. The message that management often delivers is that they don't understand the changes and definitely don't agree with them. When a miscommunication like this occurs, people become distrustful of senior management, resistant to inevitable change, and slow to adopt new processes or procedures.

Think about it from the front-line employee's perspective. If he or she hears from his or her boss, "I don't know what management is thinking," then the message isn't only about disagreement, it's about how "my boss isn't on board about this decision, and in fact, he may be skeptical that this is the right decision in the first place." For front-line employees, what exactly is their incentive to work hard on this new initiative or make the change management is asking them to make? Why should they jump in with both feet if this might not even be the direction the organization goes long term?

What to Do: Sharing Down

Your greatest ally to reverse blaming up and strengthening your culture is increased communication. This is called "sharing down." In any culture, communication is the lubricant for effecting change, and silence is the friction.

First, whenever possible, providing advance notice to all levels of leadership about an upcoming announcement, policy change, new goal, and so on is important. This gives them time to personally react to the change before they think about how their teams will react.

Second, management must give leaders the right talking points to share about the reasons for this decision. It's not enough to say, "We have to make this change" to survive, thrive, or whatever the message happens to be. Your leaders must know the business drivers that you're hoping to influence with this decision. They need to know what alternative strategies management considered before arriving at this decision. And they need to know every element of why this decision will benefit the organization. Then, leaders must use these talking points when they address their teams.

The third tactic is to give leaders an upward feedback channel to go to with questions from their team that they can't answer. This lets them quickly get an answer and provide it to their team, which builds confidence for the team, confidence for the leader, and confidence between the team and their leader.

There's a litmus test in all of this. Listen to your managers as they describe changes. Listen specifically for two words: If the leaders are saying, "They want us to do this," then they aren't engaged with the message. They're blaming up. If they say, "We want to do this," then they're owning and advocating the decision. They're sharing down.

In any culture, communication is the lubricant for effecting change, and silence is the friction.

Solving the Career-Growth Dilemma

Career issues remain the top reason that employees are voluntarily leaving their jobs in the United States. And it's not always about upward mobility or a lack thereof. It's about growth—growing skills and knowledge, gaining responsibility for roles and tasks, being exposed to things that make one better at one's job, and so on. No matter what organization we're talking about, employees care a great deal about these matters, particularly millennials.

The Stay Interview

You've heard of exit interviews. You've probably even conducted or sat in on a few. Their value to any organization is tremendous, because here we have an opportunity to learn from a departing employee all those factors that are causing him to leave. This allows us to assess how we might make changes to prevent similar departures from happening in the future. This data is incredibly useful, which is exactly why such a high percentage of organizations employ the strategy.

What would make this kind of data even more useful would be if your organization gathered it throughout every employee's career life cycle. Many organizations get part of the way there by implementing selection and onboarding programs that include some form of assessment or evaluation that can be used to learn more about the new employee's potential for growth. Unfortunately, too many of these organizations then stick that information in a drawer and never revisit it—at least not until it's time to conduct the exit interview.

Organizations should collect the appropriate data early and often, keep this data with the employee, and revisit it as often as possible. Start by gathering information from each employee and building on this data with each subsequent (ideally monthly or at least quarterly) conversation between leader and employee.

If you talk to the people you count on frequently, you have a much better understanding of who they are, what they expect, what they need, and what it will take to compel them to stay with your organization. That information is so much more valuable and actionable than the exit interview data related to why that employee left you.

Conducting these stay interviews on a regular basis through a short questionnaire also allows the organization to aggregate the data, which opens leadership's eyes to what their employees want at any given time during their tenure.

New Rules for Building a Leadership Team

A large call center in Charlotte, North Carolina had a manager named Leon. Leon was the manager of a day shift. His employees regarded him highly, and his team performed exceedingly well on all measures. Then, Leon decided that he wanted to go back to school to get a degree, and the only way to do that would be to switch to an evening shift so he would have enough time during the day to attend his classes.

Now, completely switching a work schedule is a big, often uncomfortable change for most people, to say nothing of switching teams. Not many people would volunteer to make such a dramatic change. But when Leon announced his decision to move to an evening shift, nine of his 15 team members went with him. That's nine people who valued Leon's spectacular leadership to the point where they were willing to literally turn their working lives upside down just to stay with him.

Obviously, Leon scored quite highly on the Leader Engagement Index. Leaders like Leon are an organization's best defense against unwanted turnover and keeping valued talent longer.

Promote for More Than Just Job Skill

When selecting new leaders to serve your organization, the overarching goal is to avoid the common tendency to select or promote someone (whether internally or from another talent pool) based solely on the performance results they're currently delivering, rather than more comprehensive criteria. Include performance results as well as talent engagement and retention results.

In an environment committed to energizing employees, we need to select leaders who have a core belief that the best work gets done by inspiring people and lifting them up instead of hammering on them to work ever harder. When looking internally to fill an open leadership role, organizations must interview and evaluate candidates based on how they believe in and support engagement and retention as fundamental requirements of a leader's role.

Interviewing internal candidates allows you to base your decision on their track records of energizing employees, too. Do people enjoy working with or for this person? Does this person lift the level of excitement and performance of those people around them? Do people jump at the opportunity to join this person on an assignment, like so many did for Leon?

How can you shed light on organization-wide data to determine how leaders are performing and how they might learn better engagement strategies from other teams? Many employers have found a 360-degree survey format is useful to solicit input from individual leaders themselves, their direct reports, their managers, and often their peers. The objective is to enhance a leader's awareness of their strengths and weaknesses so that the organization can determine and prioritize the most appropriate developmental activities for that leader.

Additionally, this kind of survey can be used as pretraining and posttraining diagnostic tools and as part of a leadership assessment program for development and promotion.

Creating an Engagement and Retention Culture

To this point, the focus has been on how improving engagement and retention works on the individual level. The results ramp up dramatically when you find ways to weave these measures into the organizational culture. In fact, improved engagement and retention always have a positive effect on people and teams, but when organizations embrace these values as part of their culture, the benefits become truly massive.

How massive? In TalentKeepers's most recent Workplace America survey, when asked, "What part of your company is most impacted by low engagement and high turnover?"

The most important goal is to hold your leaders accountable for the engagement and retention of valued and contributing employees on their team.

respondents placed "morale and culture" in the lead with an eye-opening 65 percent.

How can an organization that understands the value of engagement and retention on employee and leadership levels make those same measures a part of their culture? Best-in-class organizations start with assessment and analysis. They ask themselves what the organizational climate is like on all levels. They examine how trust and communication might improve. They question whether they are doing enough to stir and embrace creativity and group problem solving.

Creating the Culture

Consider these strategies for building engagement and retention into your organizational culture:

Onboarding. One retail business used to manage onboarding this way: first the interview, then the hiring, then the employee immediately goes to training, and then once that's complete, they go directly to the store to start working. They overcame high turnover by making the onboarding process more personal. One manager reaches out to a new hire and meets him at the store before he goes to training. In that meeting, he gets the new hire's contact information, introduces him to everyone in the store, and tries to connect on a personal level even before that new hire is exposed to any form of training.

Then, on that first day of training, that great leader texts the new hire, saying something like, "Good luck. You're going to knock it out of the park. We're here if you need anything or have any questions." This leader also likes to get everyone else on the team involved in the process. Once that new hire gets through training, he has everyone in the store send him an email of congratulations that also welcomes him to the store and offers any help necessary.

Measuring and monitoring. Creating a culture of engagement and retention is like any other process you are trying to manage; you need frequent measurements to monitor your progress and make adjustments.

Today, 75 percent of organizations are utilizing some form of survey to measure employee sentiment, whether it's an engagement survey, satisfaction survey, pulse survey, or some other sort of survey. Regularly gathering this data and utilizing the results to measure and monitor how you're doing is essential for sustained execution and success. For example, you can measure the effectiveness of each driver of engagement so you can leverage strengths and align resources to opportunities. Or you can hold leaders accountable for improving opportunity areas.

Action planning. Once your survey data has been gathered, analyzed, and presented to leadership, the next step is to have concrete, documented action plans based on priorities formed from the results. You have to build specific strategies that help weave it into the culture.

For example, action planning should take place at least at two levels: for organizational groups and individual leaders. Senior leaders will want to consider survey results from a group, issues, and people perspective. There will be variance in how different groups performed, and they should be managed differently from an action-planning standpoint. Higher-performing groups can be recognized and studied to see if the practices that led to their higher results may be leveraged as "best practices" and shared with other groups.

Accountability. The most important goal is to hold your leaders accountable for the engagement and retention of valued and contributing employees on their team. Engagement and retention only works if the leader holds herself accountable.

Building the Business Case for Engagement and Retention

To sell and sustain a business strategy for engagement and retention, you need data to build the case for support, funding to keep the initiatives moving, and mindshare coupled with commitment from those who are required to execute the actions you have planned.

Much of the data you need likely exists. You probably track turnover data already. You may not have attrition information by individual leader, but that is usually obtainable. You should know the cost of losing a valued contributor. You may also already have in hand many of the relevant key business metrics that are well established and often reported to track performance in your organization.

But this isn't the whole picture. The missing pieces are best obtained through the voice of the employee. In 2018, 73 percent of companies in the United States administered some form of an employee survey. It begins with knowing the metrics that matter. For example, 100 percent of this year's best-in-class organizations track links between on-the-job safety and employee engagement and satisfaction.

The real value in linking key performance indicators like this to employee engagement, and determining where the largest gains are, is to determine where best to invest limited resources to get the biggest payoff.

Finding the Money

Consider these strategies that will help you fund your engagement and retention initiatives and help ensure the greatest level of success.

- **Work from data and build your case**. Focus on relevant and accepted metrics that link engagement/retention to business results.
- **Establish or build budget categories for engagement and retention**. You may find that one strategy will be easier to fund than another. Be thoughtful about where this budget resides in your business unit and who controls the funds (HR? Operations? Training?). Next, move existing funded activities into this bucket to create the understanding that you are already doing some things that contribute to keeping and motivating people. The purpose of this step is to establish the mindset that this initiative is important.
- **Recruit and foster internal partners and advocates**. As with any major initiative, recruiting thought leaders in various parts of the business to serve as your advocates and supporters is the first step. Find leaders who believe in your mission, have influence, and will support you in getting resources and funding. Their ability to help you gain that funding is invaluable, but they can also help you during the execution phase as well.

TalentKeepers is proud to be a leader in shaping how people view engagement and retention in the workplace and in developing innovative solutions to help organizations everywhere engage and retain employees.

You now have the TalentKeepers tools to identify the engagement and retention strategies best suited for your culture, needs, and budget.

THE SUMMARY IN BRIEF

The shared economy is the future, but it introduces business challenges never before faced: How do you serve a broad range of customers across varying geographies through a distributed network of partners?

In ***The Airbnb Way***, author Joseph A. Michelli describes how innovative leaders have managed to build a unique brand by inspiring and engaging a community of hospitality entrepreneurs—a feat unparalleled in the shared economy. Michelli shares five essential concepts that underpin outstanding Airbnb experiences: belonging, trust, hospitality, empowerment, and community.

These principles apply not just to businesses in the sharing economy but to any business that wants to deliver technology-aided, human-powered experiences, disrupt an established industry, retain strong market position, or improve sales or service. By creating and leveraging world-class customer experiences in the shared economy, Airbnb has achieved all of these goals and more. Let ***The Airbnb Way*** show you how to leverage the five principles for your business.

IN THIS SUMMARY, YOU WILL LEARN:

- To understand and apply the five concepts to your organization.
- Airbnb's strategies and practices that drive customer engagement and loyalty.
- Proven principles for engaging and inspiring all stakeholders, including those who share resources and services.
- Inspiring stories of hosts who have mastered the five concepts.

Part I: Belonging

Make It a People Business

What business are you in? Are you in a product-focused business, a service-centric business, or something else? To be effective in business as well as in life, we must develop skills to understand, meet, and even exceed the *needs* of those we serve. Yet, many business leaders only seek to offer practical benefits through the features and attributes of the products and services they provide.

How can you understand the needs of your customers more broadly and deeply? In the approach taken by Airbnb leadership, the process of human need assessment involves three key steps: study human motivation and needs, seek partnerships with thought leaders and change agents, and ask stakeholders to share their preferences, wants, and needs.

Study human motivation and needs. From early in the company's evolution, the leaders at Airbnb stewarded their organization to be a "people business" that fosters meaningful human connections enabled by technology. Airbnb co-founder Joe Gebbia cites many people (including Apple's Jony Ive) who have inspired him in areas such as human-centric and frictionless design. Nathan Blecharczyk acknowledges the importance of customer service insights gained from Tony Hsieh at Zappos, and co-founder Brian Chesky reports being mentored by leaders including Warren Buffett and hotelier Chip Conley.

Seek partnerships with thought leaders and change agents. At the beginning of 2013, Brian Chesky asked Chip Conley to provide a fireside chat on hospitality innovation for the team at Airbnb. Chesky actively looked for ways to grow as a leader and guide Airbnb's development, and he read Conley's work. He found value in what he read, so he asked Conley to partner with him. He then had to work with Conley's reticence to accept his initial offer. Chesky also had to remain patient and adapt to meet Conley's needs. Similar steps are essential for anyone committed to lead business transformation—particularly in the direction of serving others.

Ask stakeholders to share their preferences, wants, and needs. At Airbnb, listening involved asking team members, hosts, and guests (all facets of the Airbnb community) to share their thoughts on Airbnb's purpose, reason for existence, and the needs the brand can and does fulfill. By reaching out to 485 employees, hosts, and guests, Airbnb garnered stories and data that clearly established Airbnb's "why": "to create a world where anyone could belong anywhere." Ultimately, that "why" was shortened to read simply "Belong Anywhere."

How have you gone about exploring the "why" or true north of your business? Does your "why" reflect a convergence of inputs (for example, the wants and needs of customers, the results of active listening to all stakeholders, research-based information, and the input of partners)? How aspirational, inspirational, and credible is your "true north" or "why"?

Create Belonging

Airbnb hosts demonstrate commonalities in their "belonging" behaviors. This includes ways they seek to actively listen, practice empathy, attentively welcome, create inviting environments, and read the invisible signs.

For example, empathy is essential for effective service delivery and is defined as a key component of emotional intelligence. Empathy is an awareness of the emotional state of others. At an elevated level, empathy involves attempting to assume the frame of reference of other people so you can understand their feelings, thoughts, and attitudes.

Airbnb Superhost (a Superhost is an individual who maintains guest ratings of 4.8 or higher on a 1 to 5 scale) Cynthia Mackey, who rents an upstairs bedroom in a home she owns in Oakland, California, describes how she specifically strives to place herself in the role of her guests: "I often have visitors coming to see grandchildren. Since many of them have adult children who can't take time off of work, I think about unique experiences those guests can have with their grandchildren during the workday. If I find out someone is visiting on vacation, I try to get a sense of what interests him or her so I can think about what regional activities would best fit someone like that person."

In terms of reading invisible signs, Danny Meyer, legendary restaurateur and author of the book ***Setting the Table***, emphasized that "everyone is walking around wearing an invisible sign that says, 'Make me feel important,' and your job is to understand the size of the font of this invisible sign and how brightly it's lit. So, make me feel important by leaving me alone. Make me feel important by letting me tell you everything I know about food. It's our job to read that sign and to deliver the experience that that person needs."

In order to read invisible signs like "give me privacy," "bring me towels," or "take me to Chinatown's local markets," hosts and all of us who create customer experiences

When done well, the belonging behaviors shared by Airbnb hosts will lead to a bond essential to all human relationships ... trust.

must constantly work on nonverbal communication skills.

When done well, the belonging behaviors shared by Airbnb hosts will lead to a bond essential to all human relationships and ultimately sustain our next theme: trust!

Part II: Trust

Design for Trust and Safety

Normally, we think about trust as something to be earned. Airbnb's co-founders Joe Gebbia and Brian Chesky graduated from design school. That educational experience shaped their perspective on the importance of solving human problems by applying principles of sound design. Joe Gebbia talks about trust as something Airbnb has "designed."

To demonstrate some of the breakthrough ideas that surfaced among Airbnb innovators, Joe Gebbia asked audience members at his TED Talk to engage in a live experiment. Gebbia instructed the audience to unlock their cell phones and pass their phones to the person next to them.

In the moments that followed, Gebbia said, "What if we changed one small thing about the design of that experiment? What if your neighbors had introduced themselves first, with their name, where they're from, the name of their kids or their dog? Imagine that they had 150 reviews of people saying, 'They're great at holding unlocked phones!' Now how would you feel about handing your phone over? It turns out, a well-designed reputation system is key for building trust."

Airbnb has designed ways for people to make meaningful connections, starting with account sign-up. In order to create an Airbnb account, every person must be at least 18 years of age. A person can become a new member of the community via email, Google, or Facebook.

Airbnb requires that each participant complete a profile prior to booking or hosting through the platform. Airbnb profile data is used to verify participants' identities, acquire contact details that can be used to communicate with them, and secure payment information.

At Airbnb all of the hosts are required to upload a photo, and they are asked to ensure that it clearly shows their face. The potential friction that comes from this is offset by the benefit of a prospective guest being able to see the face of a person and not just the details of a listing.

Once profiles are established, hosts and guests can list and book on the Airbnb platform. When searching for a property or experience, prospective guests can review ratings provided by other members of the community who have booked and reviewed the listing. Guests are also provided the opportunity to write comments and suggestions.

From a design perspective, Airbnb's secure communication channel also serves to foster bidirectional trust. How do you use communication platforms to foster a consistent cadence of connection with your customers?

Practice Helpful Disclosure

Amazon CEO Jeff Bezos once observed, "A brand for a company is like a reputation for a person. You earn reputation by trying to do hard things well." The best Airbnb hosts build their reputations through choices made long before a prospective guest finds them. Specifically, they market accurately, make appropriate personal disclosures, and set expectations.

Outstanding Airbnb hosts suggest that when you tell the truth, reputation takes care of itself. Too often sales and service providers think their words must be chosen to "sell their offerings to all people." The best Airbnb hosts emphasize the importance of offering balanced and informative descriptions to their listings, so guests can self-select.

Consider this transparent listing: "Please do not book this listing if you are afraid of nature or its creatures. Understand you are surrounded by thousands of acres of completely untouched nature. You are very likely to hear (or see) coyotes, owls, seals, roadrunners, and bunnies. There is a bobcat in the area, but these are usually very skittish. There are mice in the Santa Monica mountains. About once a month, a guest will complain that they saw a mouse. Said mouse might come into the Airstream if food is left outside the fridge. We do not offer refunds if a mouse comes into

the Airstream, but we do have four traps around the Airstream, so the odds are heavily stacked against the mice."

Often service providers fear they will lose a sale if they reveal expectations they'll place on a prospective buyer. By contrast, the best Airbnb hosts are abundantly clear regarding what guests can expect and what will be expected of them, when it comes to house rules, special considerations, and host interaction style.

When done well, Airbnb hosts spell out house rules and special circumstances on their property listing, which removes surprises and forges agreements necessary to maintain trust. One listing advises, "From time to time, villagers need to use the river for bathing (naked), washing clothes, and performing ceremonies."

How clear, concise, and up front are you with your customers? What should you be telling them in advance, to avoid confusion, distress, and disappointment later?

Part III: Hospitality

Be a Host

At Airbnb, hosting represents a long-standing practice of forging emotional connections that go well beyond what is traditionally thought of as the hospitality industry.

Airbnb's CEO and co-founder Brian Chesky has said, "There's a lot of talk about technology companies disrupting the way people work and the way people live, but . . . technology is never going to disrupt hosting. Author Tom Friedman . . . says there's three types of jobs: jobs through the hand, jobs at the head, and jobs with the heart. . . . Technology first typically disrupts jobs of the hand, . . . then eventually jobs at the head, but technology can never disrupt jobs of the heart, and hospitality is service with heart."

Those who visit your websites, apps, or physical locations are your "guests." Like Airbnb, you invariably want to host (forge an emotional connection) with your guests and offer them hospitality (service with heart).

Hosts are encouraged to strive for service excellence. For example, on the Hospitality page of the Airbnb website, Airbnb asserts, "We want to give you clear guidance so you know what's expected and can provide a 5-star stay every time you share your home." To achieve that goal, Airbnb helps hosts focus on the following:

Responsiveness: Providing immediate guest service and communication—when they want it. Since mobile technology allows us to instantaneously interact with one another from virtually anywhere on the planet, consumers have come to avoid businesses that can't address their inquiries and needs immediately.

Convenience: Offering effortless experiences—the way guests want them. Airbnb gives hosts the opportunity to remove a step in the booking process. Rather than having guests look at a property's available dates and then make a booking request (requiring a host's response and approval), hosts can choose to give prospective guests the option to instantly book the property. Once the guests click on an instant booking, their request is immediately accepted, and the reservation is confirmed.

Needs fulfillment: Meeting guest needs consistently—giving them what they want and how they want it. Guests want their Airbnb hosts to be nice, but a guest's primary concern is to secure a clean place that meets their functional need for shelter. Airbnb requires hosts to provide what the company refers to as "essential amenities" in the form of toilet paper, soap, linens and sheets, and at least one towel and pillow for every guest.

Cleanliness and the presence of basic—as well as desired—amenities are necessary elements of Airbnb service, but they don't guarantee that a guest's experience will be infused with heart.

Brian Chesky captures the emotional essence of the optimal Airbnb experience in a single word: magical. The Airbnb "way we serve" statement could be reflected in delivering memorable and magical experiences. In an interview for Fortune magazine, Chesky noted, "We call all this 'magical trips'—basically trips that are just amazing, memorable, end-to-end experiences. This is what we want to be doing in the next 10 years."

To inspire these experiences, Airbnb offers webinars, and it invites hosts to regional training events and workshops.

How is hosting guests relevant to your business? Consider having a team discussion about your current strengths and opportunities when it comes to delivering hospitality—service with heart.

Think Magical and Memorable

Professors of retail and marketing A. Parasuraman and Len Berry and marketing professor Valarie A. Zeithaml have described five dimensions of service excellence:

- **Responsiveness**: helping customers with prompt service;
- **Reliability**: efficiently delivering on promises;
- **Tangibles**: appearance of virtual and physical property, equipment, people, products, and communications;
- **Assurance**: courtesy, knowledge, thoughtfulness, and anticipation of emotional needs;
- **Empathy**: personalized care.

The last two relate to emotional or heart elements needed to achieve memorable and magical experiences. What needs do your customers have before and after they interact with you? How might you anticipate and meet those needs?

Personalization often involves close collaboration with the customer. Superhosts Dabney Tompkins and Alan Colley list an extremely popular Airbnb property atop a 40-acre meadow on 160 acres of private land near the Umpqua National Forest in Oregon. The property is so desirable it appears on the wish lists of 20,000 Airbnb guests and gets booked for the entire season within a few minutes of opening their annual calendar.

The home is modeled after fire lookout towers built by the US Forest Service, with considerable modern upgrades. Despite all of the property's modernization, guests still have to traverse four flights of stairs to get from the ground to the living area, and toilet facilities are primitive by flush-toilet standards.

Limitations notwithstanding, the peaceful, off-the-grid nature of the listing is a large part of the fire tower's appeal. An equally important attractant is Dabney and Alan's commitment to personalized guest care. Dabney and Alan choose to live on the 40-acre parcel so they can be available to guests. Cell service is provider dependent, so Dabney and Alan supply two-way radios for communication with guests. They also keep guests informed if they go off-property for supplies.

Dabney said, "We are aware of 12 marriage proposals that have taken place on this property. It's a very popular place because it's so remote, and we are eager and willing to do whatever we can to make a visit special."

One man began involving the hosts in his plan for his proposal as soon as he secured a booking for his return visit. When the guest and his girlfriend arrived, Alan recalled, "We met them at the base of the tower and asked if we could reveal to them the major renovations we had made in the home since they last visited. To do so, we asked if we could blindfold them before we led them into the living space. They agreed, and we took the boyfriend in first.

"The room had been staged for the event, and he swiftly went to one knee with his ring in hand. We then escorted his girlfriend in and removed her blindfold. We videotaped her surprise and her acceptance of his proposal." Dabney added, "When we were discussing the arrangements, I said, 'This is a personal moment. Are you sure you want us there?' And our guest said, 'You guys are like family to us.' So, we enjoyed the honor of sharing that moment."

> Personalization often involves close collaboration with the customer.

Part IV: Empowerment

Maximize Impact

Tristan Claridge, founder of Social Capital Research and Training, defines social capitalism as a "socially minded form of capitalism, where the goal is making social improvements, rather than focusing on accumulating capital in the classic capitalist sense. It is a utilitarian form of capitalism with a social purpose."

Let's look at Airbnb's "social purpose" from the perspective of how it has improved economic opportunities for its employees and the host community, including Airbnb hosts and employees who have been empowered and who empower others.

In 2017, Airbnb advised hosts about a new set of initiatives called the Airbnb Economic Empowerment Agenda. Here's how Airbnb summarized the relevant social and economic trends that prompted the new goals: "

At a time of growing economic inequality, Airbnb is democratizing capitalism and creating economic opportunities for the middle class, using technology to help connect and empower our community—not replace it. Our people-for-people platform allows ordinary people to use their house—typically their greatest expense—to generate

supplemental income to pay for costs like food, rent, and education for their children."

In 2017, globally Airbnb

- Contributed to an estimated 730,000 jobs (as stated in a NERA Economic Consulting study), in a subset of 200 highly booked cities, and
- Supported more than $60 billion in economic output in the 200 cities evaluated.

In North America in 2017, Airbnb reported that

- US hosts on the platform earned an average of $6,100 annually
- 62 percent of US hosts noted that home sharing helped them afford their home; and
- 12 percent of North American hosts claimed that home sharing saved them from foreclosure or eviction.

Airbnb's desire to "do more" also prompted the creation of the Airbnb Economic Empowerment Agenda, which Airbnb kicked off with two overarching initiatives: a living wage pledge and an aggressive growth target for urban hosts in predominantly minority areas.

As it related to living wages in 2017, Airbnb pledged to pay at least $15 per hour "to all contractors and vendors whose personnel provide a substantial amount of work to Airbnb in the United States" by 2020.

In addition to extending Airbnb's Living Wage Pledge to contractors and vendors, Airbnb encouraged the host community to pay their employees and vendors accordingly. For example, Airbnb asked hosts to pledge to pay individuals who clean their properties at least $15 an hour. Hosts who make that commitment can post their support of the Living Wage Pledge on their property listing. This allows prospective guests to consider a host's commitment to provide a living wage when they book a listing.

As for Airbnb's commitment to minority neighborhoods (often referred to as "majority-minority" areas), leadership announced, "We are setting a goal of doubling the size of our host community in urban majority-minority districts and underserved areas around the United States in the next two years. We will do this through a new effort, partnering with national and local organizations and holding on-the-ground, in-person events and trainings to help more people understand the economic opportunity provided by hosting." One such Airbnb partnership is with the National Association for the Advancement of Colored People (NAACP).

How does your wage structure help attract quality talent, increase employee retention, enhance worker health, or improve service quality? What goals have you set to enable economic growth for the communities in which you do business?

Claim and Share Your Value

Let's now look at how hosts leverage the power of their knowledge, interests, skills, and properties to create various types of value for guests and how they use the economic power of their microbusinesses to empower others.

In addition to being a platform for offering space, Airbnb allows hosts to offer experiences. Some experiences are more entertainment focused, like participating in a bar crawl in Madrid or attending a comedy show in Shanghai, but many involve classes, workshops, or elements of information sharing in areas like the arts, history, or nature.

Knowledge is power. Diane Wong from Somerville, Massachusetts, offers six different Airbnb experiences, including one workshop called Create a Podcast: Find Your Own Voice. Diane notes, "I've had a rich, full life. I'm 72 and a post-World War II baby. I use Airbnb opportunities to teach skills for how to move through your life and realize that you have responsibility for your life."

Based on feedback, guests report that their time with Diane represents an important transfer of life skills: "This experience was phenomenal! It was a tutorial on how to podcast AND a wonderful discussion of ideas, desires, and vision. Diane also helps you conquer the two main things that have been preventing you from podcasting: (1) Not knowing what supplies, software, and other tools you need. (2) Fearing diving right in because of doubt or a lack of confidence. She gives you what you need, helps you produce one to two podcast episodes of the topic(s) that you want to talk about, and nurtures your vision."

Business opportunities: the ultimate empowerment. Many Airbnb hosts have launched successful companies to improve the hosting experience. Jasper Ribbers, for example, took expertise he gained as a host and built a business helping other hosts.

Jasper shares, "When I started hosting back in 2012, I wanted to optimize my Airbnb hosting business so I could support a lifestyle of travel. I had quit my finance career and was searching the internet for hosting tips and resources. There wasn't much information available at the time, so I gathered

In addition to personal philanthropy, Airbnb leaders have explored ways to offer the organization's host community an equity stake in Airbnb.

what I could and learned from experience. I started sharing what I learned in the spirit of helping others, and before you know it, that information organically turned into a business."

Soon, Jasper was podcasting, writing a hosting tips book, and publishing blogs. Having developed a sizable following, Jasper used his blog to review new technology solutions created for hosts. In turn, Jasper's company, Get Paid for Your Pad, receives reimbursement for the traffic he generates for solutions he endorses.

What challenges do you face in your business? How might you craft solutions that not only meet your needs but address the same needs for others like you?

Part V: Community

Serve Your Neighbor

In 2018, Airbnb co-founder Brian Chesky wrote an "Open Letter to the Airbnb Community About Building a 21st Century Company." In that letter, Chesky shared a vision of Airbnb serving all stakeholders and changing the world. Chesky said Airbnb would adopt an open mindset with an infinite time horizon. In so doing, Airbnb could be more audacious, could assume greater social responsibility, and could commit to lasting change that improves society.

Walking the talk. On the 2018 ***Forbes*** 400 list, each of the Airbnb founders had an estimated net worth of $3.7 billion. Each founder (along with Nathan's wife Elizabeth Blecharczyk) has taken the Giving Pledge originated by Bill and Melinda Gates and Warren Buffett. That pledge is a commitment to philanthropy, encouraging the world's wealthiest individuals and families to declare they will "dedicate the majority of their wealth to giving back."

Airbnb leaders have also explored ways to offer the organization's host community an equity stake in Airbnb. In a letter filed with the US Securities and Exchange Commission in September 2018, Airbnb asked for an amendment to commission Rule 701, which "as currently written and generally interpreted, does not allow companies to grant equity to sharing economy participants who are not otherwise affiliated with the issuer."

Airbnb's petition for host equity reflects both a desire for stakeholder alignment and a willingness to share the wealth that has been generated by hosts. That wealth sharing would provide extra income to hosts and even possibilities for hosts to upgrade the quality or quantity of their listings.

Strengthen communities. The Airbnb Community Compact addresses civic leaders in communities where Airbnb has a significant presence. The compact reflects Airbnb's promise to

- Provide personal attention to each local area;
- Assist hosts to pay their fair share of hotel and tourist taxes;
- Provide transparency and openness regarding hosting activities;
- Strengthen local communities by promoting responsible hosting.

The Community Compact demonstrates that cities and city leaders can and should be viewed as an important stakeholder group. Additionally, the compact reflects how business leaders can make commitments to foster cooperation and joint action in support of shared benefits.

What commitments have you made or are you making in the villages, towns, or municipalities in which you do business?

Respond to crisis. Airbnb leaders have also evolved their response to acute human need. Starting in 2012, Airbnb formalized and scaled the host community's response to natural disasters. After hearing stories of Airbnb hosts who provided housing and meals to those displaced by Hurricane Sandy, Airbnb created a way for hosts to create free bookings through an Airbnb Disaster Response Tool. This tool was activated in the aftermath of a catastrophic event to house aid workers and those directly affected. Airbnb also expanded this emergency housing program, in response to changes in US immigration laws.

By June 2017, Airbnb co-founder Joe Gebbia announced the evolution of the Disaster Relief Tool into a program referred to as Open Homes. In describing Open Homes, Gebbia proclaimed Airbnb was taking crisis response forward "to a whole other level simply by shifting from being reactive to proactive. No waiting around for the crisis to hit, but to anticipate and harness this natural generosity on a daily basis."

Own Goodness

Let's now look at examples and insights from hosts who take action to serve their communities.

Kathy Peterman is an example of an Airbnb Superhost whose worldview aligns well with Airbnb's concept of healthy travel. She notes, "Since I started hosting, I became a master recycler and I am very eco-conscious. I use far fewer resources than what a hotel would use."

Kathy explains that she sets annual trash reduction goals, "which are personal to me, but I share my goals and processes for attaining them with my guests. While I don't expect guests to fully participate with me since they are on vacation, I do drive some waste reduction behaviors. For example, I ask guests to please put any items that would go in the compost bin in a container I provide. Surprisingly, my guests only generated 50 gallons of trash for an entire year, and on a personal level, I only generated two gallons."

Adrienne Penny said she had been hosting Airbnb guests for a few years and was looking for ways to give back to her community when a friend suggested, "Why don't you use your space to give a break to people who provide long-term care to individuals with mental and physical illness?"

Adrienne said: "I contacted my local carers organization, Carers Queensland. Unfortunately, there aren't a lot of options for carers to receive planned respite breaks, so my offer was much needed and well received. In fact, over a short period of time, I've provided free stays to 14 caregivers."

How are you "opening the heart of your business" to those in need throughout your community? Who has inspired you with their acts of compassion? Whom are you inspiring?

As you look to your journey ahead, consider adopting and adapting themes, principles, and ideas from ***The Airbnb Way*** in your own business and with your own customers.

In so doing, you will surely realize your personal and professional goals in keeping with the words of Henry David Thoreau: "If one advances confidently in the direction of his dreams, and endeavors to live the life which he has imagined, he will meet with a success unexpected in common hours."

Here's to "a success unexpected in common hours"—the Airbnb Way!

How the World's Best Companies Develop Complete Leaders

HEAD, HEART & GUTS

THE SUMMARY IN BRIEF

Complex times require complete leaders. Partial leaders struggle during an era of paradox, ambiguity and unpredictability. A one-dimensional leadership approach may have worked in simpler times, but in an environment of moral complexity and rapid shifts in attitude, social and political circumstances, economic conditions and technology, leaders must be capable of using their head, their heart and their guts as situations demand.

Today's companies want leaders who can "lead from the front" — take a clear position, create meaningful relationships and "know themselves" while simultaneously building businesses. Employees want leaders who are authentic and inspire trust — those who set high standards and respect their employees' unique talents.

In this summary, the authors, all from the world's leading executive-development firm, argue that traditional leadership development focuses too much on the "head," and that it is critical for companies to identify and integrate other capabilities into the development of leaders. Examples of leaders who have successfully blended head, heart and guts perspectives into their management styles — such as Rudy Giuliani in his former role as New York City mayor, as well as CEOs at Bank of America, Procter & Gamble, Philip Morris and Morgan Stanley — are used to illustrate the high level of real-world effectiveness possible with this approach.

This summary reveals the three most important leadership capabilities — the abilities to implement, emphasize and take risks — and tells how to put them in action.

In addition, this summary will teach you:

- ✓ ***How to rethink the way things are done and reframe boundaries when necessary.***
- ✓ ***How to think strategically without losing sight of short-term goals.***
- ✓ ***How to develop and articulate a point of view.***
- ✓ ***How to take risks with incomplete data and balance risk and reward.***
- ✓ ***How to act with unyielding integrity in spite of difficulty.***

HEAD, HEART & GUTS

By David L. Dotlich, Peter C. Cairo and Stephen H. Rhinesmith

— THE *COMPLETE* SUMMARY

Whole Leadership Versus Partial Leadership

To be a leader in today's business environment, you need to use your head, demonstrate heart and act with guts. This is not an unrealistic objective, in that most people are fully capable of exhibiting all three qualities. Unfortunately, the majority of executives either have come to rely on one capacity or live in organizational systems that do not reward or reinforce them to develop others. They remain partial leaders, even when their organizations require whole ones.

Historically, business leaders have led with their heads — the notion being that if you analyze a situation, absorb the data and decide among rational alternatives, you can be a strong leader. As important as the head is to leadership, it is insufficient for the demands leaders face today.

Drivers of the Change to Whole Leadership

Some of the drivers of the change to whole leadership are:

✓ **Global Interdependence.** An interpersonal orientation toward business is prevalent in most countries outside the United States.

✓ **Increased Complexity of Execution.** In their books *Execution* and *Confronting Reality*, Larry Bossidy and Ram Charan make it clear that emotional intelligence plays a significant role in getting things done.

✓ **Growth.** It is incumbent on leaders to get excited about a growth strategy, which will convince them to believe in leadership's vision for the future of the company and feel that they will be able to contribute to the realization of that vision.

✓ **Need for Innovation.** The challenge today is to create a climate of innovation, and this cannot be done unless both heart and guts leadership are combined with head leadership.

✓ **Rising Expectations.** Today, largely due to the Internet and other technologies, employees are much more informed and expect much more than directions and decisions.

Leader Qualities

Effective leaders need more than a quick mind and strong analytics. In the 1990s, psychologist Bob Hogan reviewed all of the leadership research to date and concluded that personal characteristics have a strong connection to leadership effectiveness. Among the qualities that distinguish the best leaders from others are emotional maturity, the capacity to create trust and the flexibility to work with a range of different types of people. In other words, the best leaders have heart, in addition to their other strengths. Effective leaders show tenacity, persistence and the ability to overcome obstacles that get in their way — what is referred to as guts.

Of course, a leader who relies primarily on heart or guts is equally ineffective. Most people who achieve senior-level leadership positions in business today, however, are head-oriented individuals; the heart- or guts-oriented managers tend to be stigmatized or eliminated before they make it to a top position, or they are relegated to a function best suited to their orientation.

Integrating head, heart and guts into leadership is both art and science. Dirk Jagger at Procter & Gamble, Mike Miles at Philip Morris and Phil Purcell at Morgan Stanley were all extremely intelligent individuals. Though some of their failures resulted from events beyond their control, many can be traced back to the

Whole Leadership Versus Partial Leadership

(continued from page 2)

CEO's single-minded approach to leadership. As driven and determined as they were, their lack of empathy, courage, instinct and willingness to acknowledge their own vulnerability derailed them and, in some cases, their organization.

Anatomy of a Whole Leader

When we think of a whole leader, former New York City Mayor Rudy Giuliani immediately comes to mind. After 9/11, he displayed a remarkable combination of head, heart and guts — remarkable in large part because the heart side of his leadership personality had rarely emerged in the past.

In the glare of publicity following the terrorist attack, however, Giuliani displayed his emotional connectedness and vulnerability to the world. Not only was he omnipresent at the scene of the crime, lending support to firemen and families of victims, but his press conferences demonstrated and elicited genuine compassion and real feeling. ■

Developing Leaders the Systemic, Integrated Way

Deep and systemic organic organizational issues often prevent the best-laid plans of leadership development from coming to fruition. When a disconnect exists between targeted competencies and cultural norms, the leadership lessons won't stick. A leader may experience a transformation during the development process and come back to his organization, only to find that the culture doesn't support his transformed persona. He may have made a breakthrough during a development program in terms of speaking his mind, but when he comes back to work, colleagues and supervisors give him so much grief about his newfound honesty that he retreats to his old behaviors.

The good news is that these obstacles can be overcome with the right development approach and the commitment and involvement of an organization's executive committee.

A Risk-Taking, Interpersonal, Intelligent Development Process

As the world becomes increasingly complex and volatile, a greater need exists for leaders who can move beyond cold analysis and strategic execution. Without leaders who can seize opportunities when they appear, such as acquiring another company, discounting prices when a competitor is weakened or shedding nonperforming assets in advance of a recession, large companies gradually become slow and ineffective.

Here are four steps companies must take:

Step 1: Address Systemic Issues. Do this before implementing a development process.

Step 2: Involve the Executive Committee. When executive committees are not involved and aligned, the process goes awry.

Step 3. Use Leadership Development as a Diagnostic Tool. Foster a dialogue in real time on real issues between participants and senior leaders. If this is done right, participants feel free to provide senior management with their feedback.

Step 4. Customize the Process. Don't rely on off-the-shelf or "best practice" institutional programs. ■

Rethinking the Way We Do Things Around Here

The growing complexity, volatility and ambiguity of business and competition constantly demand new perspectives. This environment, however, is uncertain and filled with risk, and it is human nature to cleave to tried-and-true methods in unpredictable times.

The ability to rethink is not something you find listed under leadership traits, at least in most traditional definitions of leadership.

Finding a Fresh Perspective

The most successful leaders and companies, such as GE, Johnson & Johnson, Bank of America and others, tend to rethink who their customers are, question what business they are in and fearlessly restructure to better serve customers.

Nokia reinvented itself after existing for 100 years as a lumber company by divesting itself of everything but microchips and telephones. This was a massive rethinking of a historically entrenched business.

All the obstacles to rethinking — daunting complexity, the power of paradigms, falling into the activity trap — can be overcome, given the right development approach. Here are some ways of doing so that can be effective in both coaching and teaching executives:

- **Hit people with data.** People require compelling data to change their thinking. Data must convey a singularly powerful message: The way you're doing things now isn't working.
- **Encourage tolerance of ambiguity.** Ritualized, agenda-driven behavior patterns in meetings can inhibit real dialogue and discourage innovative thinking and problem solving. Going into a meeting with no agenda

(continued on page 4)

Rethinking the Way We Do Things Around Here

(continued from page 3)

can make direct reports more willing to venture opinions, explore options and propose creative ideas.

● **Break the frame of cultural traditions.** Creative leadership development designs, usually in some form of learning while doing, can help break the frame of cultural traditions. ■

Reframing the Boundaries

Despite a growing organizational recognition that hard-and-fast boundaries are things of the past, individuals within most organizations still fail to think about existing boundaries in new ways.

Whole leaders not only reframe the boundaries but can emotionally accommodate the uncertainty of doing things in a new way. Understanding the notion of movable boundaries, though, is the first step, and what helps organizational leaders take it is awareness of the five types of boundaries that they must reframe.

1. External Boundaries. Everything must now be judged against world-class standards, which means looking at the world beyond the organization's borders.

2. Vertical Boundaries. Managers must be both coach and mentor to others, and this means exhibiting greater transparency and emotional intelligence.

3. Horizontal Boundaries. The growth of teams and "communities of interest" in organizations has made peer relationships more critical than ever before.

4. Geographical Boundaries. As companies become more decentralized, participate in joint ventures, create informal marketing or product-development alliances, and engage in mergers and acquisitions throughout the world, old boundaries fall by the wayside.

5. Personal Boundaries. Today, people must manage personal weaknesses in order to live in a more transparent, unforgiving, complex environment.

The Three Catalysts

To help people adopt a reframing capability, you have a number of options, including the obvious strategy of restructuring the incentive system to reward boundary-reframing behaviors. Here are three others:

● **Raise awareness that boundaries are changing.** With greater awareness, people start thinking about what might happen if they changed their approach to traditional boundaries.

● **Take advantage when someone trips over a boundary.** When people are on the edge of derailing, intervene with leadership development. They need to learn that if they don't change, they're dead.

● **Draw a distinction between organizational and individual arrogance.** Top companies must call attention to individual arrogance and discourage it. They must provide feedback that points out to people where their arrogance is causing them to be inflexible regarding internal and external relationships. ■

Getting Things Done

To get things done, leaders need to grasp the complexity of the task and find an approach that takes the difficulties associated with execution into consideration. Head, heart and guts leaders are able to do this in part because they recognize that people issues and risk can affect what is accomplished.

There are two common leadership types:

1. Strategic. These are brilliant analyzers of data and setters of direction. And they may be adept at inspiring and motivating people to believe in their strategies, but they aren't particularly good at figuring out how to implement them.

2. Operational. These leaders thrive on finding solutions to difficult problems. They work hard and get others to work hard. They usually fail to consider how an idea can capture people's imaginations and inspire them to work harder and more creatively.

Balance Between Two Positions

A more effective approach is to find the balance between the two positions. The ability to know when to be operational and when to be strategic is crucial. Getting things done often means knowing when to get them done by taking charge and being directive and when to step back, trust others and provide direction. It also means moving between these two positions. ■

Developing and Articulating a Point of View

A point of view serves as an anchor and a driver. It offers an internal sense of security — a base from which decisions can be made in a sometimes political, complex and unclear corporate environment.

A viewpoint is an overarching, strongly held system of beliefs that applies to everything from individual behavior to values to business strategy. A leader can use his point of view to evaluate a specific option or opportunity — for example, to determine whether he believes a new growth strategy will be effective, to assess whether a corporate practice is unethical, and to evaluate which of his direct reports deserves a promotion. A point of view, in other words, provides a framework for analysis and decision making.

(continued on page 5)

Developing and Articulating a Point of View

(continued from page 4)

The Five-Step Process

Corporations can do a lot to help people develop their point of view but need to know the typical process by which an individual develops a point of view and uses it.

Step 1. Define the Challenge. People begin to formulate or revise their point of view when something in their environment prompts them to clarify how they see things.

Step 2. Explore External Information. Read and absorb external information related to the challenge.

Step 3. Converge Ideas Into a Single Viewpoint. After absorbing diverse ideas, the next step is to ask, "What do I believe?" and "Why do I believe it's true?" This step causes you to integrate what is useful and helps you focus your point of view.

Step 4. Test the Idea With Others. Engage in dialogue and debates about how you see the business.

Step 5. Reconfigure Your Viewpoint. Take risks with it. Based on feedback and dialogue, you may need to modify your perspective. Once you've modified it, you're ready to put it to use. ■

Balancing People Needs With Business Requirements

It takes heart to achieve a balance between people needs and business needs. A "heartless" leader discovers that if you drive people relentlessly, you'll drive down their effort or drive them away from the organization. At the same time, the leader who is all heart can't achieve this balance either. In fact, if you're only concerned with satisfying people's needs, you may end up with a happy team who will soon be working for your successor.

The ability to foster inclusiveness and be empathetic can have a dramatic impact on performance. For instance, demonstrating real concern to a team member can not only reward you with greater commitment but give the team member confidence to pursue more innovative solutions to difficult problems. The ability to know yourself and connect emotionally to others makes a difference in the ability to lead and influence.

Confronting Direct Reports About Performance

Sometimes the balancing point between people and business is precarious. The most difficult challenge for most leaders is to confront direct reports about performance issues or to move them out of their jobs. Poor leaders allow mediocre or poor performers to stay in place and damage the organization, simply because they want to be nice.

Balancing people needs and business requirements may require a gradual transition; it may mean the company should approach replacing these individuals as a process rather than a "bloody Monday" event. Perhaps some of the executives can be moved into new roles or trained for higher effectiveness. Whatever is done, people needs and business requirements must be considered as factors rather than viewed as either-or alternatives. ■

Delivering Integrated Solutions Through Trust

White spaces exist between hierarchical levels, divisions, departments and geographies. These are areas where responsibility is unclear. The ability to collaborate is required to be successful in the white space. This means developing the mindset and relationship skills to work with others over whom there is no direct authority in order to identify mutually important goals.

Collaboration requires at least two key qualities. The first is the ability to recognize the opportunities or problems. Effective leaders need the capability to use their heads to analyze what exists in the white space. Second, they need to use their hearts to be able to extend trust to others, especially to those who don't work directly for them. This can involve risk.

Understanding What Trust Entails

Trust is often talked about as having three components: character, competence and consistency of behavior. For leaders who are able to operate effectively in the white space, this means:

- Providing suppliers with sensitive information based

(continued on page 6)

How to Keep People's Requirements in Mind

Even the most demanding, toughest bosses are capable of balancing human and business requirements. The key is using coaching or leadership development to accomplish the following:

- ✓ **Acknowledge the reality of competing needs that must be balanced, and don't consistently favor one over the other.**
- ✓ **Get in touch with your own heart.** One of the reasons some leaders are so unrelenting and hard on others is that they are out of touch with their own emotions.
- ✓ **Be capable of pivoting from driving to listening mode.** Driving behavior originates in the head; listening behavior is located in the heart.
- ✓ **Develop a more complex worldview.**

Delivering Integrated Solutions Through Trust

(continued from page 5)

on the belief that they won't "leak" that information to competitors.

- Openly sharing trusted clients with colleagues in other units to increase potential business opportunities for the whole enterprise, because you trust their competence to deliver.
- Giving direct reports the freedom to work independently from home because you are sure they will be consistently self-motivated and get the job done wherever they are.

Teach Delegation the Trusting Way

Many leaders grow up in organizations where they believe that if they don't do something themselves, it won't get done — or it won't get done the right way. To help them relearn delegation with trust, the following four-step process is useful:

Step 1: Set Goals and Boundaries.

Step 2: Allow Freedom.

Step 3: Offer Support.

Step 4: Recognize and Evaluate Results. ■

Overcoming Personal Derailers in Working With Others

Derailers continue to sabotage leaders. Many executives are aware that certain qualities — arrogance, volatility and perfectionism, to name just three — can diminish their effectiveness if not "managed."

Although many executives think about it, they don't address the subject from a heart perspective. Leaders may be willing to admit that they can be arrogant taskmasters at times, but their admission is purely cognitive and dispassionate. They don't consider the effects on the people around them.

By failing to come to terms with this behavior from an emotional perspective, they don't address the behavior in a deep enough way to manage it effectively. They don't reflect on why they act the way they do and how their behavior affects other people and their own overall effectiveness.

Drama at Hewlett-Packard

Carly Fiorina was a highly charismatic leader who seemed the right choice to turn Hewlett-Packard's people-oriented culture into a more performance-driven one. As pressure for improved performance mounted and competition from Dell and IBM intensified, Fiorina's melodramatic and distrustful derailers kicked in. She fired key people. Her relationship with influential journalists became strained, and she alienated members of her own board. No doubt her skill as a salesperson helped her throughout her career; the drama and excitement she brought to presentations could be tremendously persuasive. Her melodramatic tendencies, however, may have caused her to make decisions that drew attention to her but were not in the best interest of HP.

If Fiorina could have taken a step back and observed how her distrust and melodramatic behavior were affecting key people, she might have been able to limit the damage.

Three Ways to Manage Derailers

Derailers are deep-rooted aspects of personality, and while leaders may understand them, they may also have great difficulty acknowledging and overcoming them. Coming to terms with and learning to manage one's own emotional weaknesses is difficult. Companies can help their leaders do so, however, if they adopt the following three guidelines:

1. Focus attention on the private moment of self-doubt. By identifying a derailer and seeing it for what it is — an ingrained pattern of behavior that often surfaces under stress — leaders can learn to accept it and gain the courage to manage it.

2. Identify the pattern. When people see how they fall into a counterproductive routine in certain situations, they cannot dismiss their derailers so easily.

3. Present evidence linking the derailer to a negative work outcome. Arrogant or aloof leaders need to be confronted with data that clearly demonstrates how their derailing behaviors have negative work outcomes. ■

Three Ways Leaders Develop Compassion

✓ **Through life or work experiences.** When people face personal or professional crises, they naturally develop some degree of empathy and compassion.

✓ **Through coaching.** Leaders can be emotional and still emphasize the task at hand. Coaching teaches leaders ways in which they can be empathic but still hold people's feet to the fire.

✓ **Through engagement with all types of people.** Leaders who communicate regularly with only a small circle of advisers or who segregate themselves within a function are going to have little empathy for those outside these small circles. Leaders must force themselves out of their comfort zones and engage with people in areas that are different from their own.

Taking Risks With Little or No Data

Guts involves doing the right thing, based on the context. "Doing the right thing" must be a flexible concept. Courageous leaders become ideologues when they adhere to an absolute definition of what's right. They demonstrate naiveté rather than guts when they believe they — and they alone — know the right thing to do in all situations. These self-righteous leaders are unable to adjust to changes in their environment, ignoring ideas or opinions that fall outside their narrow definition of "right." Instead of courage, they display stubbornness.

Leadership courage is often a matter of vision and values — knowing what you believe and when to act according to these beliefs. This means making decisions that entail some risk, based on beliefs and instinct, rather than relying exclusively on the data.

Rely on Instincts as Well as Data

Most leaders need to overcome the biases and false beliefs that prevent them from relying on collective intuition and their own instincts. Here are three development approaches that will help them clear these hurdles:

- **Connect to people at the margins.** Leaders should spend time with people who see the world differently, and explore the way they approach everything from idea creation to decision making.
- **Uncover assumptions about the decisions they make.** It helps to point out to leaders that biases based on previous experiences sometimes masquerade as facts.
- **Step out of the office.** Instinct requires stimuli, and many times these stimuli reside in out-of-the-office experiences. Personal interaction with different people and places activates our instincts. ■

Balancing Risk and Reward

Managing risk and reward as if it were a science is doomed to failure. Managing as if it were an art is more appropriate. Today's best leaders push the edge of the envelope, but they also have a sense of when to push it and how far is too far. They are willing to put it all on the line if a given action jibes with their beliefs, but they sense when it's appropriate or overly dangerous to do so. They temper their courage with heart and head qualities. As a result, they manage the balance according to the situations they find themselves in. They recognize that there is no perfect solution and that they have to rely on creativity and instinct to deal with it effectively.

Bob Shaye and Michael Lynne, co-CEOs of New Line Cinema, provide a good example of how this balance can work. They were described as real risk-takers when they took a chance and filmed the three segments of *Lord of the Rings* simultaneously with an unproven director, Peter Jackson. New Line and its parent, Time Warner, invested more than $200 million on the "bet" that *Lord of the Rings* would be a hit. However, Shaye and Lynne did not simply roll the dice on this movie. They partnered with foreign distributors to minimize the financial risks. So although they did indeed take a big chance on *Lord of the Rings*, they managed the potential downside. In this case they got the balance right and, of course, *Lord of the Rings* turned out to be one of the most successful movie trilogies of all time.

Balance Risk and Reward

Balancing risk and reward is an art, not a science. As a result, you can't tell people how to do it. What you can and should do, however, is come at this issue from a number of directions, giving people the opportunity to think about the balance. Here are some diverse ways to develop leaders' abilities in this area:

- **Provide a forum for risk-reward storytelling.** An ongoing dialogue needs to take place so that people can come to terms with how they're going to deal with risk and reward.
- **Wake people up to their own derailing behaviors.** Being overly cautious is the derailer most likely to cause a leader to unbalance the risk-reward equation.
- **Take actions that encourage people to take more heart-related risks.** People need to take some chances in this area in order to improve performance.
- **Avoid template management.** Although templates may help control costs in the short term, they also control risk, which has a negative impact on rewards.
- **Encourage greater self-awareness.** Managing the risk-reward balance effectively is difficult if leaders are unaware of their strengths and weaknesses, motivations and biases. ■

Acting With Unyielding Integrity

It is both more difficult and more necessary than ever before to act with unyielding integrity in today's corporate environment. We live in a time when trust in institutional leaders, especially business leaders, is at an all-time low due to corporate and accounting scandals that have rocked companies such as Enron, Adelphia, WorldCom, Tyco and Vivendi.

As difficult as it is to act with integrity, it is absolutely essential to do so. This guts trait is critical because it creates tremendous positive energy within an organization. In companies where leaders exhibit integrity, a high level of commitment and confidence exists.

(continued on page 8)

Acting With Unyielding Integrity

(continued from page 7)

Leaders with great integrity energize the work force, demonstrating a commitment to higher principles that is inspirational.

How to Develop Unyielding Integrity

When leaders become attuned to how and when they behave in ways that are inconsistent with their beliefs, they will be more likely to act with unyielding integrity. The following techniques help foster this awareness:

- **Facilitate thinking about and discussing integrity issues.** The CEO and other senior leaders must make this subject part of an ongoing corporate dialogue.
- **Encourage people to articulate what they're thinking of doing before they do it.** By articulating their fears and reservations about an issue, leaders can receive reactions from others and perhaps adapt their point of view.
- **Create a series of questions that help people grapple with what is right and help them find the courage to take the right course of action.** It takes serious reflection to determine what you believe and to find the courage to act on this belief. ■

Developing Mature Leaders for the 21st Century

Mature leaders often display head, heart and guts naturally. Based on years of experience, during which they had to deal with adversity and wrestle with a range of complex issues, these leaders have learned from their experiences and, consequently, have developed the wisdom that comes with maturity.

Maturity doesn't mean becoming one-third head, one-third heart and one-third guts. Everyone has a natural leadership style and a natural tendency to lean on intellect, emotion or courage doesn't change with maturity. What does change is a willingness to consider options that don't fit with one's natural style. What also changes is a capacity for trying new ways of leading others, thus expanding their personal leadership skills.

What Companies Need

Culturally, the majority of companies are head-oriented. They rely on data and focus on results. A significant minority, though, are heart-oriented, especially the not-for-profits and a growing number of companies that are led by executives with strong people values. Startups, high-techs with younger leaders and companies with entrepreneurial cultures are often guts-oriented, staffed by those who feel free to speak their minds and follow courses of action that are both risky and rooted in strong beliefs. While companies don't always fall neatly into these categories, they usually have a dominant culture that is obvious.

Development, therefore, should focus on helping leaders increase their capacity in the less dominant areas. Most companies are both the beneficiary and the victim of their strong cultures, which can often prevent leaders from going against conventional wisdom, standard practice or tradition. Companies must make it a priority to go beyond the development of the norm and help leaders build their capacity to exhibit head, heart and guts as complete leaders — at the right times in the right situations. Here are the ways they can do so:

- **Hire based on criteria related to head, heart and guts.** If you want to know whether someone has heart capacity, ask candidates questions based on the four elements of emotional intelligence: self-awareness, self-regulation, empathy and managing conflict and influencing.
- **Encourage people not to be prisoners of their own experience.** Head, heart and guts evolve from many experiences and a willingness to learn from them.
- **Involve people in action learning experiences that force them to take on new and challenging assignments.** Creative program designs that involve putting people in a temporary system of new values and ways of doing things can stimulate insights about oneself, the business and the world.
- **Place people in jobs before they're ready to handle them.** Companies should develop certain leaders who may have the capacity for integrating head, heart and guts behaviors but haven't had the chance to do so.
- **Provide people with coaching and other tools that facilitate learning from experience.** Real learning requires people to confront their weaknesses.
- **Develop leaders with head, heart and guts traits in mind.** These qualities provide a good foundation because they help leaders think and act in more holistic ways. ■

Blanchard on Leadership and Creating High Performing Organizations

LEADING AT A HIGHER LEVEL

THE SUMMARY IN BRIEF

Management expert Ken Blanchard, co-author of The One Minute Manager*, and his colleagues at The Ken Blanchard Companies have spent more than 25 years helping good leaders and organizations become great and stay great. Now, for the first time, they've brought together everything they've learned about outstanding leadership. In this summary, they show managers and leaders how to go beyond the short term and zero in on the right target and vision. They also describe how companies can empower people and unleash their incredible potential.*

A key aspect of Blanchard's philosophy involves treating customers right. This summary explains his three secrets for learning how to accomplish this and turn customers into "raving fans." Other skill sets that are detailed include the three keys to empowerment, the three skills of a situational leader and the three skills of a self leader.

Experts from The Ken Blanchard Companies who contributed to the lessons presented in this summary include founding associates Marjorie Blanchard, Don Carew, Eunice Parisi-Carew, Fred Finch, Laurence Hawkins, Drea Zigarmi and Pat Zigarmi. Also contributing were consulting partners Alan Randolph, Jesse Stoner, Susan Fowler, Fay Kandarian, Judd Hoekstra and Scott Blanchard. Together they present more than 25 years of breakthrough leadership insights.

This summary of Leading at a Higher Level *will show you:*

- ✓ ***How to ground your leadership in humility.***
- ✓ ***Ways to focus on the greater good of people and the organization.***
- ✓ ***Why it is important to have an engaged work force of self leaders.***
- ✓ ***How to go beyond the short term and zero in on the right target and vision.***
- ✓ ***Ways to deliver legendary, maniacal customer service and earn raving fans.***
- ✓ ***How to determine your leadership point of view.***

LEADING AT A HIGHER LEVEL

By Ken Blanchard

— THE *COMPLETE* SUMMARY

What Is Leadership?

For years we defined leadership as an influence process. A better definition of leadership is the capacity to influence others by unleashing the power and potential of people and organizations for the greater good.

When the definition of leadership focuses on goal accomplishment, one can think that leadership is only about results. Yet accomplishment is not enough. The key phrase in the second definition is "the greater good" — what is best for all involved. Leadership should not be done purely for personal gain or goal accomplishment: It should have a much higher purpose than that.

When you are leading at a higher level, you have a "both/and" philosophy. The development of people is of equal importance to performance. As a result, the focus in leading at a higher level is on long-term results and human satisfaction. Leading at a higher level, therefore, is a process. It can be defined as the process of achieving worthwhile results while acting with respect, care and fairness for the well-being of all involved. When that occurs, self-serving leadership is not possible. It's only when you realize that it's not about you that you begin to lead at a higher level. ■

PART ONE: SET YOUR SIGHTS ON THE RIGHT TARGET AND VISION

Is Your Organization High Performing?

Those who want to lead at a higher level need to understand what a high performing organization looks like and what is necessary to create one. They need to aim for the right target.

The Right Target: The Triple Bottom Line

In high performing organizations, everyone's energy is focused on not just one bottom line, but three bottom lines — being the provider of choice, the employer of choice, and the investment of choice. The triple bottom line is the right target and can make the difference between mediocrity and greatness. The leaders in high performing organizations know that their bottom line depends on their customer, their people and their investors.

1. Provider of Choice: To keep your customers today, you can't be content just to satisfy them; you have to create raving fans. Raving fans are customers who are so excited about the way you treat them that they want to tell everyone about you.

2. Employer of Choice: Today's workers seek opportunities where they feel like their contributions are valued and rewarded.

3. Investment of Choice: All companies require funding sources, through stock purchases, loans, grants or contracts. To be willing to invest, people must believe in the company's viability and performance over time.

The HPO SCORES Model

Because of their flexibility, nimbleness and responsive systems, high performing organizations (HPOs) remain not only successful and respected today but are also poised to succeed in the future. HPOs demonstrate results consistently over time.

SCORES is an acronym that represents the six elements evident in every HPO. An HPO SCORE hits the target consistently because it demonstrates strength in each of these six elements:

S = Shared Information and Communication. Information needed to make informed decisions must be readily available to people and openly communicated.

Is Your Organization High Performing?

(continued from page 2)

C = Compelling Vision. When everyone supports such an organizational vision — including purpose, picture of the future and values — it creates a deliberate, highly focused culture that drives the desired business results.

O = Ongoing Learning. HPOs are constantly focusing on improving capabilities through learning systems, building knowledge capital and transferring learning throughout the organization.

R = Relentless Focus on Customer Results. HPOs understand who their customers are and measure their results accordingly. Everyone passionately holds and maintains the highest standards for quality and service from their customers' perspectives.

E = Energizing Systems and Structures. The systems, structures and processes in HPOs are aligned to support the organization's vision, strategic direction and goals.

S = Shared Power and High Involvement. In HPOs, power and decision making are shared and distributed throughout the organization, not guarded at the top of the hierarchy.

Leadership Is the Engine

If becoming a high performing organization is a destination, leadership is the engine. While the HPO SCORES model describes the characteristics of a high performing organization, leadership is what moves the organization in that direction. ■

The Power of Vision

When leaders who are leading at a higher level understand the role of the triple bottom line as the right target — to be the provider of choice, employer of choice and investment of choice — they are ready to focus everyone's energy on a compelling vision.

A compelling vision creates a strong culture in which the energy of everyone in the organization is aligned. This results in trust, customer satisfaction, an energized and committed work force and profitability.

The Importance of Vision

Once a leader has clarified and shared the vision, he or she can focus on serving and being responsive to the needs of the people, understanding that the role of leadership is to remove barriers and help people achieve the vision. The greatest leaders mobilize others by coalescing people around a shared vision.

When Louis Gerstner Jr. took the helm of IBM in 1993 — amid turmoil and instability as the company's annual net losses reached a record $8 billion — he was quoted as saying, "The last thing IBM needs is a vision." In an article in *The New York Times* two years later, Gerstner conceded that IBM had lost the war for the desktop operating system, acknowledging that the acquisition of Lotus signified that the company had failed to plan properly for its future. He admitted that he and his management team now "spent a lot of time thinking ahead."

Once Gerstner understood the importance of vision, an incredible turnaround occurred. He saw clearly that the company's source of strength would be in integrating solutions and resisted pressures to split the company. In 1995, delivering the keynote address at the computer industry trade show, Gerstner articulated IBM's new vision — that network computing would drive the next phase of industry growth and would be the company's overarching strategy. That year, IBM began a series of acquisitions that positioned services to become the fastest-growing segment of the company, with growth at more than 20 percent per year. This extraordinary turnaround demonstrated that the most important thing IBM needed was a vision — a shared vision. ■

PART TWO: TREAT YOUR CUSTOMERS RIGHT

Serving Customers at a Higher Level

The second step in leading at a higher level is to treat your customers right. While everybody seems to know that, few organizations are creating raving fans — devoted customers who want to brag about them.

Scoring With Your Customers

In high performing organizations, everything starts and ends with the customer. This is a radical shift from organizations whose business design put the customer at the end of the chain. For example, at the renowned Golden Door Spa, all systems are set up to wow the customer. Everyone knows that his or her job is to exceed expectations and to back up the key front-line person at that moment.

In high performing organizations, management has regular face-to-face contact with customers — not only with devoted customers, but also with those who are frustrated, angry or not using the organization's products and services. Leaders are passionate about developing sophisticated knowledge of customers and sharing the information broadly throughout the organization.

Decide, Discover and Deliver

There are three secrets to treating your customers right and turning them into raving fans:

(continued on page 4)

Serving Customers at a Higher Level

(continued from page 3)

1. Decide. If you want to create raving fans, you don't just announce it. You have to plan for it. You have to decide what you want to do. What kind of experience do you want your customers to have as they interact with every aspect of your organization? Understanding what your customers really want when they come to you helps you determine what you should offer them.

A good example of how this works is Domo Gas, a full-service gasoline chain in Western Canada, co-founded by Sheldon Bowles. Back in the 1970s, when everybody was going to self-service gasoline stations, Bowles knew that if people had a choice, they would never go to a gas station.

But people have to get gas, and they want to get in and out as quickly as possible. The customer service vision that Bowles and his co-founders imagined was an Indianapolis 500 pit stop. They dressed all their attendants in red jumpsuits. When a customer drove into one of Bowles' stations, two or three people ran out of the hut and raced toward the car. As quickly as possible, they looked under the hood, cleaned the windshield and pumped the gas.

2. Discover. After you decide what you want to have happen, it's important to discover any suggestions your customers may have that will improve their experience with your organization. What would make their experience with you better? Ask them!

3. Deliver +1 Percent. Now you have to figure out how to get your people excited about delivering this experience, plus a little bit more. The responsibility for establishing a shared vision rests with the senior leadership. ■

PART THREE: TREAT YOUR PEOPLE RIGHT

Empowerment Is the Key

How do the best-run companies in the world beat out the competition day in and day out? They treat their customers right. They do that by having a work force that is excited about their vision and motivated to serve customers at a higher level. So how do you create this motivated work force? The key is empowerment.

Empowerment means letting people bring their brains to work and allowing them to use their knowledge, experience and motivation to create a healthy triple bottom line. Leaders of the best-run companies know that empowering people creates positive results that are just not possible when all the authority moves up the hierarchy and managers shoulder all the responsibility for success.

Researcher Edward Lawler found that when people are given more control and responsibility, their companies achieve a greater return on sales than companies that do not involve their people. Scholar Thomas Malone believes that empowerment is essential for companies that hope to succeed in the new knowledge-based economy.

The Three Keys to Empowerment

To guide the transition to a culture of empowerment, leaders must use three keys:

1. Sharing Information. One of the best ways to build a sense of trust and responsibility in people is by sharing information. Giving team members the information they need enables them to make good business decisions. High performing organizations continually look for ways to incorporate knowledge into new ways of doing business. Michael Brown, former chief financial officer of Microsoft, says, "The only way to compete today is make your intellectual capital obsolete before anyone else does."

2. Declaring the Boundaries. In a hierarchical culture, boundaries are really like barbed-wire fences. They are designed to control people by keeping them in certain places and out of other places. In an empowered culture, boundaries are more like rubber bands that can expand to allow people to take on more responsibility as they grow and develop.

3. Replacing the Old Hierarchy With Self-Directed Individuals and Teams. As people learn to create autonomy by using newly shared information and boundaries, they must move away from dependence on the hierarchy. Self-directed individuals and Next Level teams — highly skilled, interactive groups with strong self-managing skills — replace the clarity and support of the hierarchy. ■

Situational Leadership®II: The Integrating Concept

If empowerment is the key to treating people the right way and motivating them to treat your customers right, having a strategy to shift the emphasis from leader as boss and evaluator to leader as partner and cheerleader is imperative.

Is the direct report new and inexperienced about the task at hand? Then more guidance and direction are called for. Is the direct report experienced and skilled?

(continued on page 5)

Situational Leadership®II: The Integrating Concept

(continued from page 4)

That person requires less hands-on supervision. All of us are at different levels of development depending on the task we are working on at a particular time. To bring out the best in others, leadership must match the development level of the person being led. Giving people too much or too little direction has a negative impact on people's development.

Situational Leadership®II is based on the belief that people can and want to develop, and there is no best leadership style to encourage that development. You should tailor leadership style to the situation.

Leadership Style

There are four basic leadership styles in Situational Leadership®II: directing, coaching, supporting and delegating that correspond with four basic development levels: enthusiastic beginner, disillusioned learner, capable but cautious performer and self-reliant achiever.

Enthusiastic beginners need a directing style, disillusioned learners need a coaching style, capable but cautious performers need a supporting style and self-reliant achievers need a delegating style.

Development level is not a global concept, but it's task-specific. Development level varies from goal to goal or task to task. An individual can be at one level of development on one goal or task and be at a different level of development on another goal or task.

The Three Skills of a Situational Leader

To become effective as a situational leader, you must master these three skills:

1. Diagnosis. You must determine the development level of your direct report. The key is to look at competence and commitment.

2. Flexibility. When you are comfortably able to use a variety of leadership styles, you have mastered the skill of flexibility. As your direct reports move from one development level to the next, your style should change accordingly.

3. Partnering for Performance. Partnering opens up communication between you and your direct reports and increases the quality and frequency of your conversations. Leadership is not something you do to people, but something you do with people. ■

Self Leadership: The Power Behind Empowerment

Managers must learn to let go of command-and-control leadership styles, because soon they will have no choice. In the 1980s, a manager typically supervised five people — in other words, the span of control was one manager to five direct reports. Today, companies have more mean-and-lean organizational structures, where spans of control have increased considerably. Now it is common to find one manager for 25 to 75 direct reports. Add to that the emergence of virtual organizations — where managers are being asked to supervise people they seldom, if ever, meet face to face — and we have an entirely different work landscape emerging.

The truth is that most bosses today can no longer play the traditional role of telling people what, when and how to do everything. More than ever before, companies today are relying on empowered individuals to get the job done.

Creating an Engaged Work Force

People need to be trained in self leadership. Organizations on the leading edge have learned that developing self leaders is a powerful way to positively impact the triple bottom line.

For example, Bandag Manufacturing experienced the value of self leadership after a major equipment breakdown. Rather than laying off the affected work force, the company opted to train them in leadership. A funny thing happened. Direct reports began holding their managers accountable and asking them to demonstrate their leadership capabilities. They were asking managers for direction and support and urging them to clarify goals and expectations. Suddenly, managers were studying up on rusty skills and working harder.

When the plant's ramp-up time was compared to the company's other eight plants that had experienced similar breakdowns in the past, the California plant reached pre-breakdown production levels faster than any in history. The manufacturer studied other measures, too, and concluded that the determining factor in the plant's successful rebound was primarily the proactive behavior of the workers, who were fully engaged and armed with the skill of self leadership.

The Three Skills of a Self Leader

Self leaders must be actively developed by teaching people skills and mental attitudes that foster empowerment. Here are the three skills of self leadership:

1. Challenge Assumed Constraints. An assumed constraint is a belief, based on past experience, that limits current and future experiences.

2. Celebrate Your Points of Power. The five points of power are position power, personal power, task power, knowledge power and relationship power. The sole advantage of power is the ability to do more good.

(continued on page 6)

Self Leadership: The Power Behind Empowerment

(continued from page 5)

Getting feedback on your points of power can be an enlightening experience. The best way to increase your power base is to gather people around you who have points of power you don't have.

3. Collaborate for Success. Self leaders take the initiative to get the direction and support they need to achieve their goals. The direct reports of self leaders diagnose their own development levels on a particular goal or task and take the initiative to get from their managers the leadership style they need to succeed. ■

Partnering for Performance

At its best, leadership is a partnership that involves mutual trust between two people who work together to achieve common goals. When that occurs, both leader and follower have an opportunity to influence each other.

Partnering for performance, the third skill of effective situational leaders, provides a guide for creating such side-by-side leadership relationships. It is a process for increasing the quality and quantity of conversations between managers and direct reports. These conversations not only help people perform better, but they also help everyone involved feel better about themselves and each other.

The best way to improve people's job satisfaction is to help them perform well. That requires a good formal and informal performance management system.

An Effective Performance Management System

An effective performance management system has three parts:

1. Performance Planning. After everyone is clear on the organizational vision and direction, it's during performance planning that leaders agree with their direct reports about the goals and objectives they should be focusing on. Goal setting, diagnosis and matching are part of performance planning.

2. Performance Coaching. This is where the pyramid is inverted and the hierarchy is turned upside down on a day-to-day basis. Now leaders do everything they can to help direct reports be successful. At this stage, managers work for their people, praising progress and redirecting inappropriate performance.

3. Performance Review. This is where a manager and direct report sit down and assess the direct report's performance over time. When progress-check meetings are scheduled, open and honest discussions about the direct report's performance take place on an ongoing basis, creating mutual understanding and agreement. ■

Situational Team Leadership

Teams can execute better and faster and change more easily than traditional hierarchical structures. They have the power to increase productivity and morale or destroy it. When working effectively, a team can make better decisions, solve more complex problems and do more to enhance creativity and build skills than individuals working alone. The team is the only unit that has the flexibility and resources to respond quickly to changes and new needs that have become commonplace.

Organizations can no longer depend on hierarchical structures and a few peak performers to maintain a competitive advantage. The demand now is for collaboration and teamwork in all parts of the organization.

Not only are teams hard-core units of production, they also provide a sense of worth, connection and meaning to the people involved in them. A study of 12,000 male Swedish workers over a 14-year period revealed that workers who felt isolated and had little influence over their jobs were 162 percent more likely to have a fatal heart attack than were those who had a lot of influence in decisions at work and who worked in teams. Data like this — combined with the fact that teams can be far more productive than individuals functioning alone — provide a compelling argument for creating high-involvement workplaces.

The Reality of Teams

A team is defined as two or more people who come together for a common purpose and who are mutually accountable for results. Some teams achieve outstanding results no matter how difficult the objective. High performing teams cross all walks of life and vary in size, complexity and purpose. Although each outstanding team is unique, all share certain characteristics.

Building highly effective teams, like building a great organization, begins with a picture of what you are aiming for — a target. ■

The High Cost of a Disengaged Work Force

According to a 2003 Gallup study, "actively disengaged" people — workers who are fundamentally disconnected from their jobs — are costing the U.S. economy between $292 billion and $355 billion a year. The Gallup survey found that 24.7 million workers (17 percent) are actively disengaged. These workers are absent from work 3.5 more days a year than other workers, or 86.5 million days in all. Statistics show an even less engaged work force worldwide.

Organizational Leadership

Just as team leadership is more complicated than one-on-one leadership, leading an entire organization is more complicated than leading a single team.

Constant change is a way of life in organizations today. How do managers and leaders cope with the barrage of changes that confront them daily as they attempt to keep their organizations adaptive and viable?

They must develop strategies to listen in on the conversations in the organization so that they can surface and resolve people's concerns with change. They have to strategize hard to lead change in a way that leverages everyone's creativity and ultimate commitment to working in an organization that's resilient in the face of change.

Directive Behavior for Organizational Change

Behaviors that provide support in leading organizations are primarily related to facilitating the change process and inspiring everyone to work together. Buy-in and cooperation are increased when change leaders listen to and involve others at each step of the change process. This means sharing information broadly across the organization, asking for input, sponsoring pilots, celebrating small successes and recognizing people who are changing. ■

Leading Change

There are eight change leadership strategies, as well as their outcomes, that describe a process for leading change that is dramatically different from how change is introduced in most organizations.

Eight Change Leadership Strategies

Strategy 1: Expand Opportunities for Involvement and Influence (Outcome: Buy-In). This strategy must be used consistently throughout the change process. Once a leader has diagnosed people's stages of concern, the leader must learn to use the appropriate change strategy and corresponding behaviors to address the specific concerns people have in each stage of organizational change.

Doing so significantly increases the probability of implementing successful change because it expands opportunities for involvement and influence.

Strategy 2: Explain the Business Case for Change (Outcome: Compelling Case for Change). This strategy addresses information concerns. When leaders present and explain a rational reason for the change, the outcome is a compelling case that helps people understand the change being proposed, the rationale for the change and the reason the status quo is no longer a viable option.

Top 10 Reasons Why Teams Fail

Being aware of the following pitfalls is important so that you can avoid them in the teams in which you participate:

1. Lack of a sufficient charter that defines the team's purpose and how it will work together.
2. Inability to decide what constitutes the work for which they are interdependent and mutually accountable.
3. Lack of mutual accountability.
4. Lack of resources, including time, to do the job.
5. Lack of effective leadership.
6. Lack of norms that foster creativity and excellence.
7. Lack of planning.
8. Lack of management support.
9. Inability to deal with conflict.
10. Lack of training on all levels on group skills.

Strategy 3: Envision the Future (Outcome: Inspiring Vision). This strategy addresses both information and personal concerns. When leaders envision the future, they create an inspiring vision that motivates people in the organization and unleashes their power and potential.

Strategy 4: Experiment to Ensure Alignment (Outcome: One Voice and Aligned Infrastructure). This strategy is for personal and implementation concerns. When leaders engage others in planning and experimenting, they encourage collaborative effort and help build the infrastructure that is needed to support the change.

Some of the strongest resistance to change occurs when reality differs from expectations. Understanding the current expectations of those affected by the change is critical if leaders are to manage and shape or transform those expectations effectively.

Strategy 5: Enable and Encourage (Outcome: New Skills and Commitment). This strategy is for implementation and impact concerns. When leaders enable and encourage people throughout the organization to embrace the change, associates can develop new skills and make a deeper commitment to the organization. After determining the roles, responsibilities and competencies required for lasting change, skill gaps need to be closed.

Strategy 6: Execute and Endorse (Outcome: Accountability for Results). This strategy is for impact and collaboration concerns. When leaders execute and endorse the change, they create conditions for account-

(continued on page 8)

Leading Change

(continued from page 7)

ability and early results. Follow through on your promise to recognize and reward behavior you expect, and follow through on your promise to impose consequences for anyone attempting to derail the program.

Strategy 7: Embed and Extend (Outcome: Sustainable Results). This strategy is for collaboration and refinement concerns. Organizations should spend 10 times more energy reinforcing the change they just made than looking for the next great change to try.

Strategy 8: Explore Possibilities (Outcome: Options). This strategy is for refinement concerns. By involving others in exploring possibilities, you immediately lower information concerns when a new change is announced, because people are "in the loop" about deciding what needs to change.

Responding to others' concerns and paying attention to how you increase involvement and influence at each step in the change process is the best way to build future change receptivity, capability and leadership. ■

PART FOUR: HAVE THE RIGHT KIND OF LEADERSHIP

Servant Leadership

When people lead at a higher level, they make the world a better place because their goals are focused on the greater good. Making the world a better place requires a special kind of leader: a servant leader.

Robert Greenleaf first coined the term "servant leadership" in 1970 and published widely on the concept for the next 20 years. Yet it is an old concept. Mahatma Gandhi, Dr. Martin Luther King Jr. and Nelson Mandela are examples of leaders who have practiced this philosophy.

What Is Servant Leadership?

Leadership has two parts: vision and implementation. In the visionary role, leaders define the direction. It's their responsibility to communicate what the organization stands for and wants to accomplish.

The responsibility for this visionary role falls to the hierarchical leadership. The visionary role is the leadership aspect of servant leadership. Servant leaders feel their role is to help people achieve their goals. They try to find out what their people need to be successful. They want to make a difference in the lives of their people and, in the process, impact the organization. ■

Determining Your Leadership Point of View

Research shows that effective leaders have a clear, teachable leadership point of view and are willing to teach it to others, particularly the people they work with.

If you can teach people your leadership point of view, they will not only have the benefit of understanding where you're coming from, but they'll also be clear on what you expect from them and what they can expect from you. They may also begin to solidify their own thinking about leadership so that they can teach others too. Some say that learning, teaching and leading should be inherent parts of everyone's job description.

Seven Questions

In determining your leadership point of view, you should be able to answer these seven questions:

1. Who are the influencers (leaders) in your life who have had a positive (or, in some cases, negative) impact on your life, such as parents, teachers, coaches or bosses?
2. Think of your life purpose. Why are you here, and what do you want to accomplish?
3. Which of your core values will guide your behavior as you attempt to live your life "on purpose"?
4. Given what you've learned from past leaders, your life purpose and your core values, what are your beliefs about leading and motivating people?
5. What can your people expect from you?
6. What do you expect from your people?
7. How will you set an example for your people?

As you develop your own leadership point of view, don't be hard on yourself. This might be your first time thinking about your beliefs about leading and motivating people.

The world needs more leaders who are leading at a higher level. Perhaps the day will come when self-serving leaders are history, and leaders serving others are the rule, not the exception. ■

SOUNDVIEW RECOMMENDED READING LIST

If you liked *Leading at a Higher Level*, you'll also like:

1. ***Heart of a Leader: Insights on the Art of Influence*** **by Ken Blanchard.** The author's insight on choosing values, aiming for excellence, maintaining integrity and more.
2. ***12: The Elements of Great Managing*** **by Rodd Wagner and James K. Harter.** Based on 10 million interviews, Wagner and Harter follow great managers as they successfully face business challenges around the world.
3. ***First, Break All the Rules*** **by Marcus Buckingham and Curt Coffman.** The authors expose the fallacies of standard management thinking.
4. ***The Five Dysfunctions of a Team*** **by Patrick Lencioni.** A fictional tale that delivers hard truths about critical business procedures.
5. ***Leading Change*** **by John Kotter.** An eight-step framework for change that can be followed by executives at all levels.

When in Doubt, Look About

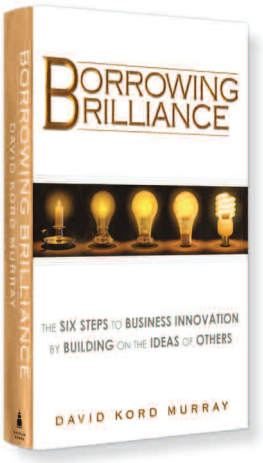
Review by Andrew B. Clancy

BORROWING BRILLIANCE

by David Kord Murray

© 2009, Gotham Books, 292 pages, $26.00,
ISBN 978-1-592-40478-0

One of the best ways to start a debate amongst intellectuals is to introduce the statement, "There's no such thing as an original idea." Within minutes, side-conversations are likely to spark into blazing arguments as people debate the originality of the works of artists, inventors, musicians and business leaders. Entrepreneur and inventor David Kord Murray would wield a heavy hammer of doubt in this debate. He is a firm believer in the notion that no idea is truly born in a vacuum. It's worth noting that Murray has a familiarity with the largest vacuum in existence, the one that surrounds everything beyond our atmosphere. He previously worked as an aerospace engineer and was involved in the development of the International Space Station.



Murray's book *Borrowing Brilliance: The Six Steps to Business Innovation by Building on the Ideas of Others* supports the belief that all great ideas can be sourced from other places. This notion is one that creates a bit of discomfort for the majority of businesspeople. In a world where an ill-timed sneeze appears cause for litigation, the suggestion that ideas can be "borrowed" is enough to make any company's legal department quiver. Copyright infringement lawsuits and allegations of violations of patents clog the lower levels of the court system and result in a great deal of time and money being spent in the process.

The issues with creative license aren't limited to the workplace. Societal norms indicate that original thought is highly prized, while imitation and inspiration without credit are demonized as academic treason. After all, one of the most severe (non-violent) offenses in any school is lifting a few answers from a neighbor's paper. Accusations of plagiarism are known to permanently haunt the careers of academics unfortunate enough to have theories that appear too close to those of a colleague.

Executives should know that Murray isn't giving the world license to engage in intellectual thievery. His book centers on the way in which ideas evolve and change. The roots of any new product, theory or methodology are entrenched in a previous idea or set of ideas. Whether the author's use of the term "borrowing" is intended partly for contrived shock value is debatable, but he generally concerns himself more with influence and inspiration than literally passing off someone else's work as one's own. Murray is a high-level thinker, yet he infuses much of the book with a casual humor.

Borrowing Brilliance addresses a serious concern for many companies in the United States and around the globe: the need for continued innovation. As noted in the promotional copy for the book, the creation of new ideas is a responsibility that is evenly distributed throughout an entire organization. In fact, a department given the heading "Innovation" is often merely the filter through which raw ideas from other departments pass.

Murray's own time serving as an innovation strategist for software company Intuit put him in the position of constantly delivering new ideas and understanding the

methods of the creative process. It was a job that was specially created for him after he fused together a combination of borrowed ideas from Intuit's competitors to solve a direct marketing problem the company had at the time. This position also spawned Murray's development of his system for teaching innovative thinking.

Murray divides the innovation process into six steps that executives will find easy to follow. Each step winds its way through a series of examples from both well-known companies and Murray's own career. Readers should be alert to the fact that Murray frequently leans on his own experiences. While he references companies with which every reader will be familiar, it is clear that Murray himself is the star of his own tale. He also has a tendency to jump forward and backward in his personal history while relaying an idea. For someone whose career has gone from the aerospace industry to the software field to marketing, it can sometimes take a moment or two to center oneself when Murray takes off on another autobiographical jaunt.

"Pirates who plundered other territories, he notes, were referred to as privateers. The solutions that result from drawing inspiration from fields that appear unrelated to one's own are less likely to be scrutinized … "

The Pirates of Silicon Valley

The references Murray makes to businesses other than his own will help readers to connect with some of the more obtuse psychological and theoretical discussions in *Borrowing Brilliance*. The history and evolution of the personal computer is mined for a lot of the gold that permeates the early chapters of Murray's book. Because of the speed with which technology has evolved since the Altair 8800 personal computer made its first appearance, many of the best innovations are the result of borrowed ideas. Murray uses the historical context of pirates and notes that pirates weren't considered outlaws until they began stealing from ships that sailed from their homelands. In the computer industry, this type of in-house appropriation became standard practice in the industry's early years and has become an accepted part of the process of continuous innovation. With this in mind, Murray examines the individuals he considers to be the captains of the field's two biggest pirate ships: Microsoft founder Bill Gates and Apple CEO Steve Jobs.

Murray takes something of a risk labeling two greatly respected rivals as pirates, but because he considers the designation a badge of honor, much of what he writes is intended to praise Gates and Jobs. One of the most important aspects for executives to take away from this section is the role observation plays in the birth of an idea. Murray points out that an idea is typically a solution to a problem. If a company has a problem, the most likely candidates to encounter the same problem are its competitors. This is why Murray suggests that it's only natural to focus one's attention on competitors as a way to observe a problem. The competitors who are closest to solving the problem are the ones who are likely to provide the best inspiration for the executive's solution that is specific to his or her own company's need.

Murray is quick to point out that the competition is not the lone source of information that informs an innovator's process. Pirates who plundered other territories, he notes, were referred to as privateers. The solutions that result from drawing inspiration from fields that appear unrelated to one's own are less likely to be scrutinized and therefore less likely to cause any legal furor. Murray appears to suggest a blending of the two, but emphasizes that credibility often comes in greater heaps to the person who best knows how to cover his or her tracks. As with other arguments in the book, this philosophy may lead some executives to question Murray's wisdom, but the moment he appears to tread too closely to questionable morals, he brings *Borrowing Brilliance* back to steady ground with reminders of the discipline and ingenuity used by the best business minds.

The Science Behind Human Thought

Much of the material presented in *Borrowing Brilliance* is concerned with the process of thinking. These sections of the book are where some of Murray's strongest writing occurs. He helps executives understand the natural collision between the conscious mind and the subconscious and the role both play in the creation of an idea. Murray appears to sense the limits of his reader's patience and knows the depth to which he should discuss the science behind human thought. When explaining the way in which the mind works off of repetition, he notes that as a thought travels along its pathway, it digs a trench behind it. Repeat the thought and the trench gets deeper. Repeat the thought too many times and the trench becomes too deep to escape. In a few short sentences, Murray reveals the problem and readers will find his solution to be equally brief and effective.

The capturing of a few ideas from a variety of sources (competitors, dissimilar industries, even historical examples) is meaningless until they are put into the forge of

the subconscious. Murray reminds readers throughout *Borrowing Brilliance* that even the work of the inactive mind is an active process. Although it may seem puzzling that humans have to work hard at not thinking, Murray explains what is necessary to help leaders clear their minds and allow their best thoughts to come to the surface. After reading these sections of the book, it is very difficult to ever use the phrase "out of left field" again when referring to an idea. The exercises suggested by Murray are an important key to helping executives break through the haze of white noise created by the digital age.

The Force of Innovation

Murray's discussion of innovation is not limited to the world of business. He drafts examples from art, literature, even popular culture to make his point. One of the more notable names with which he has a particular fascination is filmmaker George Lucas. Murray's affinity for Lucas makes sense when one considers the former's work in the aerospace industry. However, Murray would be the first to point out that his connection with Lucas' *Star Wars* franchise goes deeper than the author's own interest in the heavens.

> "A marketer can borrow the idea of a luxurious shave and incubate it through the modern issue of not having enough time."

The segments on Lucas are some of the most easily relatable material and will be familiar to anyone who shares Murray's appreciation for the six *Star Wars* films. The anecdotes reveal that Lucas's films, particularly the 1977 release now known as *Episode IV: A New Hope* (originally titled *Star Wars*), achieved record-breaking success because they hit a sympathetic nerve in many viewers. The films are packed with a combination of character archetypes (they're called Jedi *Knights* for a reason) from classic mythology and elements from more recent memory, such as the use of the term "storm trooper" for an evil soldier. When audiences attended *Star Wars* in 1977, they were treated to a very familiar story of a young hero on a quest to save a princess aided by a wizard mentor. All of these elements were borrowed by Lucas and processed through what Murray refers to as incubation (one of the six steps). With Lucas's addition of lightsabers, hyperspace and the mystical element of The Force, the end result appeared new and audiences responded in droves.

This section holds a few key points for marketers who may be struggling with selling a product with which audiences have long been familiar. The concepts of borrowing that are discussed in *Borrowing Brilliance* come into play frequently in industries where several players compete to capture the market for a single product.

As an example, if a company is trying to sell a product such as shaving cream, it can borrow elements from the collective past of the intended audience and give it a key twist that applies to today to differentiate the product. The resurgence of barbershops where men receive a straight razor shave using luxury shaving lather seems to recall a by-gone era. Today, a man is lucky to swipe a razor across his face between answering e-mails on his Blackberry. A marketer can borrow the idea of a luxurious shave and incubate it through the modern issue of not having enough time. The end result is a shaving cream that offers the mind (and the face) a momentary escape into luxury.

The Positive and Negative of an Idea

Murray has a tendency to weave his examples together as the book progresses. This means that *Borrowing Brilliance* does not lend itself well to the casual reader. There is not much opportunity to "skip around" from chapter to chapter because many of the references Murray makes, particularly to his own life, will seem out of context if the book isn't read from start to finish. A reader isn't likely to understand the author's reference to the testing a structural engineer performs on a spacecraft if he or she hasn't first read Murray's story about a government oversight nearly destroying an early shuttle launch. Murray treats his subject matter as a proper story, one that is intended to unfold over the course of the book's 280-plus pages.

By the time the reader reaches the book's latter third, he or she will have endured some rather intense discussions. Applying Murray's own advice about thinking, it may be best to set the book aside for a day before returning to it to fully absorb the key messages contained in the fifth and sixth steps of business innovation, judging and enhancing an idea. While the formation and incubation of ideas are the building blocks of any product, the process of judging and refining those ideas are what separate the items that fill our homes from the ones that remain, at best, on the shelves, or at worst, in the lab.

Skepticism plays one of the most important roles in the process of innovation, according to Murray. The ability to look objectively at one's work is an essential element in turning a good idea into a great solution. This is not the domain for fragile egos, yet it produces results that tend to outpace those of more tolerant com-

petitors. Murray gives good instruction on how to develop and channel one's own inner critic, as well as where to look within an organization for the type of input that will have the necessary impact to shape an idea. As much as a critical judgment can prove where an idea is weak, it also has the ability to prove where the idea is at its most strong. The combination of the two is what will help an innovator make corrections and improve the strength of the whole.

What executives will find interesting about this discussion is that it deals with two areas that are frequently viewed as negative aspects of any leadership role: criticism and micromanagement. The workplace is one of the few remaining places in American society where harsh criticism is tolerated. The need to treat one's ideas ruthlessly is essential to the process described in *Borrowing Brilliance*. An idea, as Murray indicates, is an assembly of pieces from various areas of influence. The mass of pieces is assembled for the purpose of solving a problem. The process of scrutiny requires executives to look at the way the pieces of the solution interact, then slice off those that don't fit the end result. Sometimes the piece that can be holding a project back can be miniscule. The skill of the micromanager is the ability to examine the sum of the parts and recognize which part is crucial to the success of the idea but needs reshaping to work to perfection.

"The workplace is one of the few remaining places in American society where harsh criticism is tolerated. The need to treat one's ideas ruthlessly is essential."

It's important for the reader to understand that negative thinking alone does not get the leader to his or her result. Non-stop negativity is one of the great destroyers of creativity. Positive reinforcement is what drives ideas and the people that turn them into reality forward. This is another area of *Borrowing Brilliance* where Murray looks to Jobs as his standard-bearer. Jobs' use of a terse, profane declaration led to the destruction of many an idea at Apple. This method of quality control allowed only the strongest ideas to land on the company's agenda. When a particular project had promise, Jobs would get behind the idea with a relentless push of enthusiasm, inspiring the individuals working on the idea and getting others excited about the potential end result. Murray points out that this seemingly split personality is frustrating for those working with the innovator, but it is a necessary part of the balanced judgment that creates a great solution.

A Little Light Reading

For the truly adventurous, Murray concludes *Borrowing Brilliance* with a suggested reading list of titles that further explore the subjects covered in his book. Each book in the list includes a short review provided by Murray. This is an interesting add-on that increases the value of the book to an executive. Depending on which topic most garnered the reader's interest (creativity, psychology, neurology, etc.), he or she will find one or two additional titles that come highly recommended from a source that has obviously done more than his share of homework.

Murray admits that hundreds of books were consulted during his writing process, and his joy and devotion to enriching his own knowledge about his subject matter is repeated throughout the book. While not all of the titles he read appear in the appendix, some of Murray's personal favorites are highlighted. In some respects, the appendix is the perfect ending to *Borrowing Brilliance*. Murray spent 280-plus pages explaining how the best ideas are constructed from dozens of tiny building blocks from other sources. With the appendix, he shows you exactly which ones formed the biggest sections of his own grand idea. It may not be an original but, as Murray himself would contend, there are no original ideas.

The author: David Kord Murray began his career as an aerospace engineer working on the conceptual development team for the International Space Station. He has also been an entrepreneur, inventor and Fortune 500 executive. He was the head of innovation for the software company Intuit and held similar positions at other Fortune 500 companies. He lives in Tahoe City, Calif.

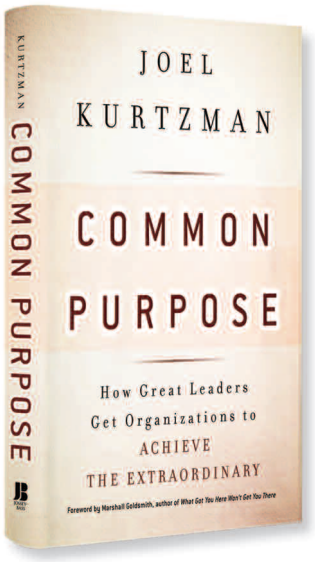
Leadership: Strategies

Common Purpose

How Great Leaders Get Organizations to Achieve the Extraordinary



by Joel Kurtzman

THE SUMMARY IN BRIEF

What is common purpose? It is that rare, almost palpable experience that happens when a leader coalesces a group, team or community into a creative, dynamic, brave and nearly invincible *we*. It happens the moment the organization's values, tools, objectives and hopes are internalized in a way that enables people to work tirelessly toward a goal. Common purpose is rarely achieved. But when a leader is able to bring it about, the results are outsized, measurable and inspiring.

Common Purpose features personal interviews with some of the most dynamic, successful and enduring leaders, including Gordon Bethune of Continental Airlines, Richard Boyatzis of Case Western Reserve University and John Tyson of Tyson Foods.

With new insights on how to approach a leadership mindset, as well as how to implement it, Joel Kurtzman sheds new light on the meaning of leadership, the crucial qualities of leaders and, most importantly, how to lead.

The road to common purpose in leaders and leadership is not an easy one. *Common Purpose* provides a road map to stay on that journey — and to succeed along the way.

IN THIS SUMMARY, YOU WILL LEARN:

- How excellent leaders create a feeling of "we" among the members of their group, team or organization.
- How to get people to do the right thing on their own and then get them to do it again.
- How to build a common purpose in a world besieged by failures of leadership.
- How to create sustainable, healthy organizations.

No One Leads Alone

Leaders are people who rise to prominence. But leadership is different. Leadership is about what leaders do. A leader who mistakes one for the other can suffer a dangerous fall.

Leadership is akin to a contract between the leader and the group. To use a common analogy, if leaders are the captains of the ship, they sign a contract with the board of directors (or its equivalent, depending on the leader's level in the organization) and also with those who are furling the sails, coiling the ropes, hoisting the anchors and sweeping the decks. It's those people — the deckhands and swabbies — as much as the board who can eject any leader from his or her job.

The contract that leaders sign stipulates they are to select the destination; plot a course to it; arrive with crew, cargo and ship intact; and put down mutinies should they occur along the way. If the wind changes, they have to tack. But if the seas rise, they are not free to change destinations. They are hired to achieve a goal, no matter the odds.

Common Purpose

Great leaders motivate people by building a sense of inclusiveness, which is how they connect with and become accepted by the group. They create a sense of *we* by using their emotions as well as other tools — ideas, arguments, numbers and so on — in strategic and disciplined ways. A leader's authority derives from effectively balancing what can only be called the near-schizophrenic task of being a genuinely accepted member of a group, while having sufficient detachment to constantly adjust course. To do that, leaders must be conscious about which emotions to display and when to display them. They must use their full set of leadership tools to create common purpose, which is how one person impels another to act without directing that person's every move. Common purpose is what turns *me* into *we*.

Common purpose is a force you can almost feel. It animates great companies and great movements, and it can be summoned to propel a politician forward. When cared for, nurtured and protected, it produces an almost palpable sense of "we" that can be felt inside the company. It is the feeling that we're all in this together and that we all know and understand what to do, why we're here and what we stand for. ●

The Leadership Disconnect

A major disconnect exists today on the topic of leadership. Senior leaders in business, government and nonprofit organizations talk about the need to push decision making down in their organizations. They do this with the goal of making their organizations more responsive to their customers and constituencies, and more competitive against rivals. Rather than wait until a problem moves up through the management levels, quality- and quick-response-minded organizations need people who can solve problems and pursue opportunities as soon as they arise. Minimizing response time has never been more important.

And yet, while organizations need leaders at every level and in every function if they are to quicken their response time, senior executives still talk — and, even worse, think — in terms of leaders, followers, subordinates and direct reports. Although these executives might espouse the value of flatness, they still think in hierarchical terms.

Leadership Determines Results

Leadership matters not just when it comes to preventing calamities and seizing opportunities. It matters when it comes to retaining an organization's most precious resource: talent. Richard Boyatzis, a professor of business at Case Western Reserve University and a noted researcher regarding individuals and organizations, has said that some firms actually become emotionally toxic places to work because of the way they are led.

Leaders within toxic organizations create cultures, or allow toxic cultures to develop, that harm the organization's talent. Badly led, toxic organizations not only dispirit the individuals who remain in place (the best people usually leave), they create environments of low productivity, low expectations, poor morale and flagging creativity. According to Boyatzis, some organizations are so badly led, so stifling to the dreams of employees, so damaging to their abilities and passions, that they can take a toll on their employees' health.

Leaders at All Levels

Great leaders put their stamp on an organization and that stamp is replicated throughout the organization. Gordon Bethune turned around Continental Airlines, once viewed as the worst in the industry, with a high level of integrity and simple ideas everyone could understand.

Bethune became CEO in 1995. He was famous at Continental for inviting people into his office for a pizza lunch to discuss ways to make the airline better. He got great ideas this way, but he was also able to change the culture of the airline through the strength of his personality. His authenticity counted for a lot — so much so, that after he retired in 2004, the company's performance deteriorated, a powerful indicator of the importance of leadership and a reminder that each generation of leaders must do its part to maintain its lead.

Bethune, who began his career as an aircraft mechanic, understood that, after safety, the most important metric in the industry was an airline's on-time performance. By focusing on this single metric, everyone's behavior changed. To succeed, Bethune said, your customer's definition of success has to be your definition of success. And since customers valued on-time performance above everything else — even price — he made it the measure of the company's success.

But you can't just pick a metric and expect to create a sense of common purpose around it. You need to communicate the importance throughout the organization in a way everyone understands. So, beginning when he took over as CEO, Bethune decided to send every employee a check each time the airline was No. 1 in on-time performance. Rewarding the entire company without exception when the airline succeeded made everyone not only realize, but feel "we're in it together," Bethune said.

Common purpose requires common goals. It also requires communicating what's expected and providing feedback when people get it right.

How to Retain Leaders

To retain leaders, do the following:

- Identify them early and make sure they know it.
- Celebrate their accomplishments.
- Educate them about the organization and its capabilities.
- Give them access to the team at the top.
- Respond quickly with a counteroffer if they plan to leave.
- Reward them with new challenges, not just with more money.

Internalizing What the Organization Stands For

Embedded in a firm's language is a set of assumptions that enable people to discuss and solve problems in a kind of shorthand. These commonly held assumptions have power and help make each organization unique. They also make it difficult for one organization to copy another's business model. And they offer clues to each organization's hidden vulnerabilities.

Microsoft

All organizations have embedded assumptions. At Microsoft, for example, these assumptions focused on the belief that superior intelligence, combined with tenacity and aggressiveness toward the accomplishment of a goal, could solve any problem. At Microsoft, people were hired based on how smart they were and how aggressively they pursued goals. They were promoted for the same reasons. Leaders at Microsoft were often ferocious in meetings and rarely cared about feelings or even group cohesiveness. Many meetings at Microsoft in its early days were animated mixtures of raw intelligence and high levels of aggression. It was not uncommon for people to call each other stupid or to dismiss someone's

ideas with groans. The belief was that intelligence and aggression could solve any problem.

These types of embedded assumptions might have worked in Microsoft's early days, but when its objective was to capture the desktop, they did not work as the company matured. Lawsuits were brought against the company for unfair business practices, and the Justice Department nearly broke up the company. As a result, the culture and the firm's faith in unbridled aggression was forced to change.

People hired a decade or two ago at the company might be passed over today for being too raw. In fact, at a recent meeting at Microsoft, one of the firm's leaders told the group, "I think, as a company, we need to be humble." This remark was vastly different from those made in the company's early days and shows how an organization's assumptions can change over time. ●

The Best Leaders Are Part of the Group

Leadership must permeate an organization at all levels if it is to be successful. This challenges an outdated assumption about leadership that is essentially military in nature: that a leader is in command of others. And while sometimes that type of leadership is what we get, it's rarely what we need. The world is simply too complicated for a command-and-control type of leader.

Consider Tyco under the iron hand of Dennis Kozlowski and Enron under the leadership of Jeffrey Skilling. Within these organizations, bad behavior occurred in large measure because the leaders at the top not only condoned it, they did it themselves. Even the military has largely abandoned the idea that leadership and command are synonymous.

Inspirational Leadership

Leadership is really about guiding, coaching and inspiring others to reach a goal. Sometimes a leader stands in front, sometimes to the side, sometimes even behind the people he or she is trying to help reach a goal. This approach to leadership means that it's not just the man or woman at the top who is responsible. Instead, everyone in an organization shares responsibility for reaching a goal. Sometimes, of course, the structure of the organization can get in the way of leading. At other times, people can have that effect. The point is that while great leadership is never easy, now, more than ever before, it is distributed.

Individuals take their cues from the way other people in the organization behave. They look to the right and left, but they also look at the top leaders of their organizations for ways to model their behavior. They look at the top team, because even though modern organizations require leadership at all levels, the people at the top have the most leverage. People within organizations tend to model the behavior of the people at the top. ●

Cultivating Curiosity, Not Complacency

An organization's leaders at all levels are its rock stars. But it's not enough to tell them that or even pay them well in appreciation. They also need to be celebrated for what they add to the organization's overall endeavor.

At Wynn Resorts, a bellman can be celebrated for his accomplishments in taking care of a guest. He can post his story on the internal Web site and become a hero. At Colgate-Palmolive, the company's next generation of leaders are celebrated in ways that integrate them more closely into the firm — meetings with people from around the world and presentations for the top executives followed by dinner with the CEO. These are perks given to people with talent whose impact will reverberate around the organization.

Organizations are really nothing more than ways people have devised in order to accomplish goals larger than an individual can pursue on his or her own. Even so, people often lose sight of the fact that the individuals working in the organization are the ones who actually accomplish goals. An IBM or Xerox can accomplish nothing without a talented group of people working side-by-side. These individuals must be free to pursue their purpose within the organization; they must feel valued and feel that they own their job. At Colgate/Palmolive, people feel that way. They are celebrated as new leaders not just because they are talented, but because they contribute to the common purpose of the organization. ●

Creating a Culture of Leadership

Fit is an incredibly important and difficult-to-define attribute to select for when bringing people into an organization. In interviews, everyone is in sales mode. A check of references often turns up little. Character, honesty and integrity are all very important aspects of a leader's personality, but two people who look the same and test the same way on paper are never interchangeable.

You cannot lead if you do not know the people you are leading. And the best way to get to know them is informally.

At the beginning of every year, in good times and in bad, senior executives from the engineering firm FM Global travel to each of the firm's offices around the world to discuss the year's strategy, answer questions and do something fun. So important are these meetings that FM Global decided to continue to hold them even in the economic downturn of 2009. In addition, they hold big conferences where people can get together on a grand scale.

All of these events, and the expenses that go with them, are critical elements in how FM Global builds its common purpose culture. That culture is actually a set of relationships among leaders at every level. These relationships are complicated networks that transfer best practices. And, as an organization, FM Global has gone to great lengths to help its employees create their networks, a conclusion that researchers Robert Kelly and Janet Caplan say is a requirement for firms wishing to develop stars.

Clear Vision

At FM Global, helping people develop these networks is not something that took place on its own. It developed because its leaders began with the understanding that FM Global is something special and that people within the firm are better off if they know each other and understand how they think and work.

"Leadership begins with a clear vision," FM Global Executive Vice President Tom Lawson said. "Then you have to communicate what you have to do to make that vision happen. But after you define that vision, you also have to examine where it breaks down and what you have to do about it when it does. And once you understand that, you have to create a business environment where people can be successful so they can execute against that vision." ●

We're All in This Together

When referring to competitors, leaders often resort to an us-versus-them strategy to rally the troops. And although this strategy might work in baseball or football, it doesn't work outside the realm of sports. This approach to leadership is doomed to fail. If leaders at Lowe's think only about Home Depot, or if Ford cannot get Toyota out if its mind, ultimately their enterprises will be doomed because they're focusing on the wrong thing. Rather than obsessing about the competition, organizations should focus on the people they want to serve.

High Road to Leadership

Standing up for what you believe, versus standing up in an effort to prove you're not someone else, is the high road to leadership. It is also practical.

When you've taken on an opponent and develop an us-versus-them culture, your opponent gets energized. Not only that, but your opponent then sees a justification and an opportunity to create a coalition against you.

Great leaders are not those who press ever onward. They are people who are sensitive enough to know when to march and when to hold back. Great leadership is not about keeping your competition in your sights and relentlessly pushing back your rivals. It is about keeping your customers or clients in your sights and doing everything you can, in a flexible way, to ensure you are committed to solving their problems.

In a common purpose organization, the truth is that highly competitive people hardly ever think about the competition. They are aware of their rivals, but they keep them in their peripheral vision. What great leaders think about are better ways to make their own organization more responsive, flatter, better and faster at achieving their goals.

Not the Art of War

A great disservice was done to the field of leadership by pressing people to read *The Art of War* by Sun Tzu, which was trendy in the 1980s. While this is a great book with a powerful message and page after page of elegantly set out tactics, the problem is that most people look at this book and mistake a rival for the enemy. War is war — and very different from business. In war, your enemy is hidden on the other side of the hill and is waiting there to surprise or destroy you. Your enemy is an army or air force or nave, like you, and the match is like chess.

But in business, the enemy is more like what the old comics strip character Pogo once said: "We have met the enemy and it is us." Meaning that one company or firm succeeds against another not by attacking that company buy by satisfying its own clients' needs.

Need for Discipline

Fixing organizations that have descended into the pit of us-versus-them thinking is not easy. In most cases, it requires getting rid of the people who have created the toxic environment in the first place. People whose default setting is anger or confrontation or excessive negativity need more than a training program, a few directives and a pat on the back. For the good of the organization, these people should go and be allowed to find a place where their unique set of skills, not to men-

tion their temperament, is needed, although, such places may not exist.

How Leaders Stay Positive and Determined

Organizations without common purpose are far weaker than those with it. And why not? If powerful emotions like caring and compassion, along with values like authenticity, are the forces that hold these organizations together, what holds together non-common purpose organizations?

For the most part, they are held together not with the glue of caring and compassion, but with the paste of interesting work, various types of incentives and money. Non-common purpose organizations need powerful retention packages where payments for an employee's accomplishments are stretched out into the future. But common purpose organizations need far less when it comes to these packages.

When it comes to common purpose and resonant leadership, one size does not fit all. People are individuals, and those who thrive in one firm might not thrive in another. Chemistry, fit, values and many other qualities are in the eye of the beholder. And whereas some people might feel warm, fuzzy and perfectly at home swimming in a shark tank, others need the warmth and calm of the beach. Resonant leaders can create harmony only if the people they work with share a sufficient number of traits. That puts the selection process, whether for a team or an organization, into high relief.

Positive Stress

We should not just tolerate our jobs, the way we tolerate a bad-tasting medicine when we're sick. We should enjoy them. Our jobs take up a large portion of our lives. What this says is that we shouldn't just put up with them. We should find them exciting and challenging, and although there is no such thing as stress-free work, the majority of that stress should be positive.

In a recessionary period or even in a run-of-the-mill downturn, our choices are often limited. But when jobs are plentiful and the world is growing, it behooves us to lead in a positive way and to work with leaders who do the same. And while we might not all be geniuses, most of us are sufficiently capable that our talents can find a worthy home in more than one setting. If that is true, then why accept working with people who create a toxic environment? Why not seek out people whose aim is to create a common purpose organization?

Leading Is a Mental Game

Michael Maccoby, a brilliant student of leadership and psychology, and a psychoanalyst, said that the definition of a leader should be simple. A leader, he said, is someone whom people follow.

And while common purpose leaders are people whom others align with in the pursuit of common goals, Maccoby's definition makes sense. Leaders have followers, or, at least, leaders have people who join them in pursuit of a goal.

Leaders who help their teams achieve aims beyond their expectations find that they have no difficulty recruiting people to join them. And why not? In our free-agent, new-employment-compact world, where loyalty is no longer the virtue it once was, being a member of an organization's top-performing team means you will always be in demand.

It is no surprise, for example, that the three runners-up to succeed Jack Welch at GE all became CEOs of large companies. Working on a great team, with great leaders, provides a boost to any individual's career.

Maccoby suggests that there are three distinct types of leadership roles within organizations:

- **Strategic leaders.** Strategic leaders are people within organizations who plot the course. They are the longer-term thinkers. Strategic leaders generally can think far into the future. The best of these people understand where the future is going and how to get there. They love trying to figure out tomorrow's challenges long before they happen.
- **Operational leaders.** Operational leaders make certain the trains run on time, the manufacturing processes are adequate, the logistics systems work, the technicians are well trained and the trucks are where they are supposed to be. Like strategic leaders, operational leaders are vital to an organization's success.
- **Bridge-building leaders.** These are people who connect people together, transfer knowledge and information, make introductions and help others achieve their goals. Bridge-building leaders are extremely important within organizations as well.

All three leadership roles — strategic, operational and bridge building — are vital to creating a common purpose organization. Setting a goal (strategic leadership), making certain everything is being done that is needed to reach that goal (operational leadership) and ensuring that everyone is working together to achieve the same aims (bridge-building leadership) are essential to the success of any endeavor.

Different Strokes for Different Generations

Common purpose leadership, at its most basic level, is about recognizing people as individuals. It doesn't matter if they are young or old, if they play in a band on weekends, if they are extremely intense and focused or if they multitask, if they're outdoors people or bookworms. Common purpose leadership begins with respect for individuals and their differences, and it goes on to celebrate their strengths. Since it is about individuals aligning themselves together to achieve goals, common purpose leadership is also about making up for each other's weaknesses.

Members of Gen X and Y are uniquely qualified to lead. And yet, because of accidents of fate and economics, they have not yet gotten the chance. Many were hired on Wall Street, only to be let go when the economy tanked, beginning in 2007. Others were working in traditional industries when the economy teetered.

Zigzagging Career Paths

For Gen X and Y individuals, says CEO and Chairman of Tyson Foods John Tyson, the career path has to "zigzag rather than go in a straight line." Young people, especially these young people, are used to change. As a result, leaders must set up programs to develop them, that move them around the organization and have them interact with lots of different groups.

Gen X and Y think differently about work, because, said Tyson, "they saw their moms and dads get on a career train and stay on it for 30 years. They also saw that it didn't quite work out and that their moms and dads were frustrated. And they also saw their moms and dads being happier when they were off work — you know, having a little barbeque on the weekends — than when they were working." These observations formed the basis of Gen X and Y's relationship to work. They don't want to get caught in a rut or trapped in a job without meaning to them. And they certainly don't want to create common purpose inside an organization that doesn't have a higher purpose.

It is important for organizations to stand for more than the bottom line.

In many cases, the organizations for which we work express an entirely different set of values from the homes in which we live. And yet, for the most part, we are far more accepting of work behaviors than of the types of behaviors we experience at home. In fact, if we have children, we usually spend hours teaching them not to perpetuate the types of behaviors we experience routinely at work.

Leaders must take it on themselves to make certain that the values their organizations express are the right ones. A further conclusion of an early study of systems was that values determine whether an organization will survive or fail.

What Great Leaders Do

Great leaders do the following:

- They make certain the mood of the organization is positive and accomplishment oriented.
- They remove toxic emotions from the organization, not by being a Pollyanna, but by focusing on the positive application of effort.
- They distinguish between chronically negative people and people who might engage in creative disagreements for the long-term good of the organization.
- If they fail at changing chronically negative people into people who are positive, they remove the negative people from their teams.

You Don't Have to Be Ruthless to Lead

What's more important to the success of a company: competent leaders or nice leaders?

While brains, raw talent, education and training matter, none of these factors on their own explains success. In the view of William Baker, a professor at Columbia University who teaches about social intelligence, kindness, caring and empathy are powerful factors for success. When leaders exhibit these types of emotions, they are clearing the air of the type of emotional toxicity that dulls focus and blunts productivity.

Caring is an important leadership tool no matter who the followers are. According to Colin Powell, who led the United States and its allies in the first Gulf War, "The day soldiers stop bringing you their problems is the day you have stopped leading them. They have either lost confidence that you can help them, or concluded you do not care. Either case is a failure of leadership."

Leading With the Heart

The leaders who are most admired at all levels are those who care about people and lead with their hearts. They are men and women who know that one of their

jobs is to rid their team, and their organization, of negativity. And they understand the massive difference between creating an environment where creative disagreement is fostered in pursuit of the best solution, and allowing an environment to develop where negativity builds up and becomes toxic.

Ideas Matter

Ideas do more than matter; they are competitive differentiators. Companies that embrace thought leadership win because they are fearless when it comes to assessing their strengths and weaknesses. And even more important, companies that embrace thought leadership win because they recognize that the world is not static. Rather, they understand that it is constantly changing and that in order for them to keep pace, they must do what Socrates said everybody should do: Question all assumptions.

True Leadership

Leadership is about working with your team to achieve goals. A great deal of time those goals are stretch goals and not easy to achieve. Progress requires hard work and dedication. It takes strategy and a thoughtful analysis of all the tactics that are available. Good leadership requires an active mind.

What this means is that one of the worst mistakes a leader can make is to become intellectually lazy. Real leaders need to take in enormous amounts of information and knowledge and to process what they take in from the vantage point of their teams and from the point of view of their organization and its mission. They must pore over newspapers, magazines and books. They must review what's on the Web. Leaders must spend a lot of time searching for ideas.

It may sound like a truism, but learning organizations must make learning available to everyone who works there — and that can take many forms, from office book clubs to budgets for seminars and conferences to paying for advanced degrees.

Thought leadership is not an add-on; it should be part of every firm's strategies. And although a lot of companies have adopted the words, few firms have really embraced them. Thought leadership is a powerful form of leadership, but it is not an easy form.

To be successful, companies must be open enough and transparent enough to question everything. Ideas must be transmitted if they are to make a difference. The more widely they are disseminated, the more powerful their effect.

Epilogue: The Future of Leadership

We no longer need managers in the traditional sense — those who organize and execute on behalf of the leaders. What we need instead are leaders who can create a sense of common purpose so everyone executes and everyone leads. We need people who are well-trained, who embrace thought leadership, who are positive and who are willing to work toward a common goal. We need *individuals*, in the best sense of the word, who can lead alongside a group of peers. We need people with a wide range of skills and true mental agility. We need people who have internalized the values of the company — its brand, mission and values — and can make decisions based on what they know.

We don't need managers in the old-fashioned sense of people whose responsibility derives from someone else — people who must constantly seek permission before they can act.

What we need are people like the bellman at the Wynn Resorts who hopped into his car and drove from Las Vegas to Los Angeles to retrieve a guest's pills, entirely on his own initiative. What we need are more CEOs like FM Global's Shivan Subramaniam, who has the discipline to let others do jobs he enjoys, like poring over spreadsheets, so they will continue to grow and develop their sense of leadership and autonomy. We need to train people and work with people to achieve these ends.

These two individuals are united in their respective organizations through the power of common purpose. They do what they need to do, go where they need to go and help people in their organizations they need to help because they have disciplined and trained themselves to think from the point of view of *we*, and not just *me*. These two individuals are as different as any two people can be with regard to education, capabilities, skills and point of view, but they are united in the sense that both act out of a sense of common purpose.

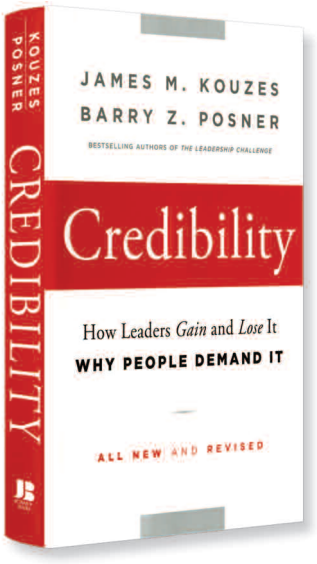
Leadership

Credibility

How Leaders Gain and Lose It, Why People Demand It



by James M. Kouzes and Barry Z. Posner

THE SUMMARY IN BRIEF

As the world falls deeper into economic downturns and armed conflicts, as communities become more heatedly partisan and as many workplaces show growing signs of disengagement, issues of credibility remain front and central.

In this revised and updated edition of their best-selling book *Credibility*, James M. Kouzes and Barry Z. Posner explore why leadership is, above all, a relationship and why leaders must "Do what you say you will do." Building on their more than 30 years of ongoing research, *Credibility* expands on the authors' seminal work, *The Leadership Challenge*, and shows why credibility remains the foundation of great leadership. The authors reveal the actions needed to strengthen credibility.

At the heart of *Credibility* is an exploration of the six key disciplines that strengthen a leader's capacity for developing and sustaining credibility. Kouzes and Posner also examine the tension that exists when leaders try to respond to constituents while remaining true to their values and how to recover if credibility is ever tarnished. And everything is backed up by solid evidence from their own case studies to empirical findings from scholars around the globe.

This personal, inspiring and genuine guide offers an understanding of the fundamental importance of credibility and how to gain it in order to build personal and organizational success.

IN THIS SUMMARY, YOU WILL LEARN:

- What qualities constituents look for and admire in leaders.
- The principles that strengthen leadership credibility.
- How to apply the six key disciplines to your own initiatives.
- How to build a strong foundation for leadership and for all working relationships.

Introduction

Credibility is the foundation of leadership. People have to believe in their leaders before they will willingly follow them.

Credibility is about how leaders earn the trust and confidence of their constituents. It's about what people demand of their leaders as a prerequisite to contributing their hearts and minds willingly to a common cause, and it's about the actions leaders must take in order to intensify their constituents' commitment.

When the first edition of *Credibility* was published in 1993, nearly half of America's work force was cynical. Worldwide, 60 percent or more of workers believed that their management wasn't honest with them, more than half had lost confidence in the abilities of their top management and overall confidence in major business was at a historic low of only 26 percent.

We wanted to remind leaders how important it is to attend to the fundamentals. We thought they should take the importance of earning and sustaining credibility more seriously. We wanted to offer an understandable and useful framework along with practical suggestions on what leaders can do to increase the trust and confidence others have in them. We hoped we could play a small part in restoring people's faith in their leaders.

For several years, it seemed that leaders were listening. Things got better — perhaps because leaders took notice or perhaps because things couldn't get much worse. The public's mood changed. The decade of the 1990s and the turn of the century saw increases in trust, confidence and credibility among leaders of major institutions. But these shifts turned out to be short-lived.

After rising for a decade, in the early 2000s confidence in institutions and leaders began to slide, and by 2007 trust (the key ingredient of credibility) took a nosedive. Whatever gains had been achieved had been lost. Organized religion, Wall Street, Congress, business executives, the presidency, public schools, newspapers, banks, insurance companies, car salespeople, HMOs and more have taken big hits.

Bad Timing Can Ruin Credibility

When times are good, people exhibit more confidence in their leaders; when times are bad, they exhibit less. The more severe the events and the more compressed the time frame, the more cynical people are likely to become. It is natural to expect, then, in a prolonged recession — with attendant layoffs and shrinking family incomes — that the credibility of business, labor and government leaders would decline. A natural suspicion of power, a host of unrealistically positive expectations and the confluence of events setting off the worldwide economic crisis beginning in late 2007 can explain a great deal about why leaders have lost credibility. Bad timing can often ruin credibility as much as bad actions.

But dismissing credibility problems as simply a function of the times permits leaders to escape responsibility for their own actions. The entire economic system is based on trust. It's not based on a particular investment model, price-earnings ratio, income statement or balance sheet. It's not based on any of these rational concepts. It's based on whether people believe in the numbers and in the people who are supplying them. If people don't

trust those who handle their money, their livelihoods and their lives, they'll just refuse to participate. Leaders must accept that it is their responsibility to take the first step in earning back what has been lost and then take further steps to sustain it.

Leadership Is a Relationship

We began our investigation into what people expected from their leaders more than three decades ago, in a study sponsored by the American Management Association. We asked the open-ended question, "What values (personal traits or characteristics) do you look for in your superiors?" (As you can see, we were stuck in the old hierarchical metaphors back then.)

More than 1,500 managers nationwide provided 225 values, characteristics and traits that they believed to be crucial in the people leading them. A parallel study was conducted with more than 1,000 federal government executives. A panel of researchers and managers subsequently analyzed the 200+ factors and reduced them to 20 categories. What were these crucial attributes? The majority of people look for and admire leaders who are:

1. **Honest** (truthful, has integrity, has character, is trusting).
2. **Forward-looking** (visionary, foresighted, concerned about the future, has a sense of direction).
3. **Inspiring** (uplifting, enthusiastic, energetic, humorous, cheerful, optimistic, positive about the future).
4. **Competent** (capable, proficient, effective, gets job done, professional).

The results of our studies over the last three decades have been strikingly consistent not only over time, but also around the world and across categories of age, gender, ethnicity, functional discipline, organizational level and the like. While the exact rank order (first through fourth) might vary, these same four qualities remain at the top of the list of what people everywhere want from their leaders. Indeed, people are remarkably clear about the qualities leaders must demonstrate if they want others to voluntarily enlist in a common cause and to freely commit to action.

Earning Credibility

Credibility is something that is earned over time. It does not come automatically with the job or the title. It begins early in your life and career, and it is something that you develop day by day, year by year. Complete trust is granted (or not) only after people have had the chance to get to know more about you.

Without a firm foundation of personal credibility, leaders can have no hope of enlisting others in a common vision.

Obviously the loftier and more expansive a leader's dream, the deeper the foundation must be. The less stable the ground underneath, the more solid the foundation must be. Especially in uncertain times, leadership credibility is essential in generating confidence among constituents. Without credibility nothing can be built — at least nothing that can survive the test of time.

Credibility Makes a Difference

When people work with leaders they admire and respect, they feel better about themselves. Credible leaders raise self-esteem. They set people's spirits free and enable them to become more than they might have thought possible. Credible leaders make people feel that they, too, can make a difference in others' lives.

Case studies document how admired leaders focus their time and attention on others. They do not place themselves at the center; they place others there. They do not seek the attention of others; they give their attention to others. They do not focus on satisfying their own aims and desires; they look for ways to respond to the needs and interests of their constituents. They are not self-centered; they are constituent-centered.

This qualitative data is supported by quantitative research. When people perceive their managers to have high credibility, they are significantly more likely to:

- Be proud to tell others they are part of the organization.
- Feel a strong sense of team spirit.
- See their own personal values as consistent with those of the organization.
- Feel attached and committed to the organization.
- Feel a sense of ownership for the organization.

But when people perceive their managers to have low credibility, they are significantly more likely to report that they:

- Produce only if they are watched carefully.
- Are motivated primarily by money.
- Say good things about the organization publicly, but feel differently in private.
- Would be unwilling to stick around very long if the organization experienced problems.

These respondents are also significantly less likely to be proud of the organization, and they are more likely to see their own values as dissimilar to the organization's values, feel a weak sense of team spirit, and experience

low levels of attachment, engagement and ownership.

The critical credibility difference is an increase in a person's willingness to put forth effort on behalf of the shared vision and values. Rather than acting sheepishly compliant in following orders, constituents act with moral commitment in following a common purpose. Rather than doing it because they have to, they do it because they want to and because they know that what they do matters.

The Six Disciplines for Earning and Sustaining Credibility

To further understand the behavioral dimension of how admired leaders earn and sustain credibility, survey respondents and interviewees were asked to provide specific examples of what their most admired leaders did that made them want to follow. Just how did leaders earn trust and credibility? From empirical data and comprehensive analysis of the common themes in the cases emerged the six disciplines of credibility. The process of building and sustaining credibility requires you to take the following steps:

1. Discover your self.
2. Appreciate constituents.
3. Affirm shared values.
4. Develop capacity.
5. Serve a purpose.
6. Sustain hope.

Earning and sustaining credibility is not a casual exercise. It requires adherence and devotion to a way of doing things that goes beyond mere acknowledgment of its importance.

Discover Your Self

"I know who I was, who I am and where I want to be," said Dan Kaplan, founder of Daniel Kaplan Associates and former president of Hertz Equipment Rental Corp. "So in other words," he continued, "I know the level of commitment that I am prepared to make and why I am prepared to make that level of commitment personally. I know what it takes to achieve success for me. That success for me comes from paying a big price, putting a lot of work and a lot of sacrifice behind it."

All leaders must seek self-knowledge if they mean to establish and enhance their credibility. As Steve Dellaporta, product manager at the U.S. Department of Defense's Manpower Data Center, explained: "To be a good leader you need to know who you are, your values as a person and how best to use these values in every interaction. Without knowing who you are, you cannot lead with integrity."

Leadership scholar Warren Bennis, in his study of how successful people learned to become leaders, noted that self-knowledge is an essential part of defining a leader's integrity. "To become a leader," he says, "you must become yourself; become the maker of your own life."

How to Earn and Sustain Personal Credibility

Your ability to earn and sustain personal credibility depends, first and foremost, on how well you know yourself. It depends on how well you know your values and beliefs, your skills and deficiencies, what success means to you and the level of commitment you are willing to make. The better you know yourself, the better sense you can make of the often incomprehensible and conflicting messages you receive daily. Do this, do that. Buy this, buy that. Support this, support that. Decide this, decide that. You need internal guidance to navigate the turmoil in today's highly uncertain environment.

To genuinely know the level of commitment you are willing to make, you must discover and develop three essential aspects of yourself: your credo, your competencies and your confidence. Your *credo* is the set of values and beliefs that serves as a guide to your decisions and actions. Your *competencies* are the knowledge, skills and abilities that you use to transform your words into action. And *confidence* is the will to make use of those skills. To be credible, you need to have trust in your abilities to do what you believe, especially in uncertain and challenging situations. Your initial steps on your leadership development journey are ones that enable you to discover your credo, your competencies and your confidence.

Appreciate Constituents

Researchers have found that organizations with adaptive, performance-enhancing cultures outperform non-adaptive, unhealthy organizations precisely because of their emphasis on attending to all of their constituencies — that is, their customers, stockholders and employees. By contrast, in organizations with non-adaptive and unhealthy cultures, "most managers care mainly about themselves, their immediate work group or some product (or technology) associated with that work group," wrote Harvard University researchers John Kotter and James Heskett.

Related studies demonstrate that putting others' interests first, rather than your own objectives, is also critical

to building customer loyalty. Leaders who are clearly interested in their own agendas, their own advancement and their own well-being will not be followed willingly.

The credibility-strengthening process begins with clarification of your personal values and beliefs, but only by being constituent-oriented can you ultimately become trustworthy. A firm credibility foundation can be established only when you truly understand and appreciate — even embrace — the aims and aspirations of your constituents. When you appreciate and pay attention to others, you send signals that they are important to you, and that their input and ideas are valued.

Begin Appreciation with Listening

As fundamental as it might seem, the best thing that you can do to show others you respect them and consider them worthwhile is to reach out, listen and learn. Professors Suresh Srivastva and Frank Barrett of Case Western University underscored this point in their writings on executive integrity: "[It is] not the content of the exchange that is central but the experience of being taken in and heard, which not only affirms the legitimacy of one's way of looking at the world but then allows one to begin letting go of some defensiveness because the experience of affirmation increases one's capacity to affirm others."

This means that you must not simply articulate your own philosophy. You must also listen to the philosophies of others. Building trust begins by building a personal relationship through listening. This means listening everywhere and to everyone. It means regularly walking the halls and plant floors, meeting often with small groups below the managerial level, and hitting the road for frequent visits with employees, key suppliers, business partners, customers and other key stakeholders.

Affirm Shared Values

All leaders must build consensus around shared values. Everyone in the organization needs to understand the fundamental beliefs that direct decisions and actions, and the principles that are used to resolve the inevitable conflicts that arise in business and in life.

Credibility is not just a function of clear *personal* values. That's the starting place. But for leaders' organizations to have high credibility, all members must align with *shared* values. Leaders build commitment to those values, and they get people to see themselves as part of a larger whole — as part of a community in which survival and success depend on a common understanding of purpose and principles.

How Organizations Benefit from Shared Values

Organizations greatly benefit from shared values. Employees are more motivated when they believe that their values and the organization's values are aligned. They are more creative and innovative because they become immersed in what they are doing. When people feel like part of the same team the quality and accuracy of communication increase and the integrity of the decision-making process is enhanced.

Use Shared Values to Make a Difference

Shared values are the foundation for building productive and genuine working relationships. While credible leaders honor the diversity of their many constituencies, they also stress their commonalities. Each and every member of the organization certainly has unique needs, and leaders attend to those, but to function as a unit, team members must have a strong sense of the values and norms that bind them together. For people to work together effectively, they must agree on a few fundamentals. They need some common core of understanding to build community.

Shared values are the internal compasses that enable people to act independently and interdependently. Shared values provide groups with a common reference for making decisions and taking action. They provide guidance in dealing with critical incidents. They inform people about the standards for treating each other, for responding to customers and for negotiating with business partners. They serve as guidelines on the actions that get rewarded — and those that should be reprimanded. They give everyone a place to go when an ethical dilemma is nagging them. When people recognize that there are shared values, they have a common language with which they can collaborate.

When individual, group and organizational values are in synch, tremendous energy is generated. Commitment, enthusiasm and drive are intensified. People have a reason for caring about their work. Individuals are more effective (and satisfied) because they feel they are doing something meaningful. They experience less stress and tension.

Develop Capacity

Credible leaders know that they have to continuously develop the capacity of their constituents to put shared values into practice. When individuals, teams, depart-

ments and organizations grow more able to perform their jobs and keep their promises, not only are their reputations enhanced, the leader's credibility also grows.

Leaders must provide the resources and other organizational supports that enable constituents to put their abilities to constructive use. This means going beyond traditional definitions of jobs and even functional classifications. It means increasing the scope of work for everyone, especially those on the front lines.

Developing capacity requires you to ask yourself about the assumptions you make regarding the abilities of the people you lead. Just how far are you willing to go to develop the skills people need to be able to contribute effectively to making shared values a way of life? You have to be willing to liberate the leader in everyone and distribute leadership across the organization in order to make yours one of the best places to work.

Five essential components go into developing capacity so that everyone can act in a free and responsible way:

- **Competence.** People must have the knowledge and skill to Do What We Say We Will Do (DWWSWWD).
- **Choice.** They must have the latitude to make choices based on what they believe should be done.
- **Confidence.** They must believe they can do it.
- **Climate.** They need a culture that encourages some risk-taking and experimentation, accepting mistakes as a chance to learn from experience.
- **Communication.** They must be constantly informed about what is going on in order to keep up to date.

Fostering and sustaining liberated people is vital to leaders and their organizations' ability to maintain credibility. The only sustainable competitive advantage any business has is its credible reputation and the ability to deliver what it's promised.

Do What We Say We Will Do

Capacity building is necessary because people have to be able to DWWSWWD. If they can't, then everyone's credibility suffers. That's as true for the CEO or the managing director as it is for the frontline worker, and as true for every single individual as it is for the team. Developing capacity is about building the skills, knowledge and attitudes of the entire work force at all levels to DWWSWWD.

The fact that individuals or organizations have the capacity to be consistent with their values does not, however, mean that they are. Shared values and shared capacity do not guarantee results. In the final analysis, credibility is earned through credible actions that are supported and consistently reinforced.

If a group is to live up to its values, its members must use their skills on a daily basis. For example, your organization may espouse diversity, but if respect for others who are different is not shown on a daily basis — if people of diverse backgrounds are not recruited and hired, if merit reviews don't address accomplishments in the area of diversity, and if performance and rewards are not linked — then diversity becomes just a convenient politically correct slogan.

Credible leaders play a central role in translating promises and preparations into performance.

Lead By Example

The truth is that you either lead by example or you don't lead at all. Credible leaders walk the talk. They don't ask others to do something they wouldn't do themselves. Credible leaders hold themselves accountable to the same set of standards as they hold others.

Serve a Purpose

Credible leaders serve a purpose and they serve the people who have made it possible for them to lead. They put the guiding principles of the organization ahead of all else and then strive to live by those principles. They set the example for others and are the first to do what has been agreed upon. In serving a purpose, you strengthen credibility by demonstrating that you are not in it for yourself, but instead have the interests of the institution, department or team, and its constituents at heart. Being a servant may not be what you had in mind when you chose to take responsibility for the vision and direction of your team, but serving others is the most glorious and rewarding of all leadership tasks.

The concept of "servant leadership" is not new. Many years ago Robert Greenleaf pointed out, "The great leader is seen as servant first, and that simple fact is the key to [the leader's] greatness." Greenleaf, who had spent 30 years as a Fortune 50 senior executive, spent the last part of his career reflecting upon and organizing what he had learned about successful business and professional people. He observed that those people who believed foremost in the concept of service, who were servant leaders, were also successful leaders. It was their belief in serving others that enabled these executives to provide leadership that made others willing to follow.

Seeing a new kind of connection between leaders and

their constituents, Greenleaf suggested: "A new moral principle is emerging which holds that the only authority deserving one's allegiance is that which is freely and knowingly granted by the led to the leader in response to, and in proportion to, the clearly evident servant stature of the leader. Those who choose to follow this principle will not casually accept the authority of existing institutions. Rather, they will freely respond only to individuals who are chosen as leaders because they are proven and trusted as servants."

Servant leaders put other people's needs first. The measure of success is whether those who are served grow — whether they become healthier, wiser, freer, more autonomous, more capable — and whether they are likely to become servant leaders in their own right. This is not the image you see on reality TV, but it is the way things work in the real world. People will not voluntarily follow self-serving leaders whose goals are to enrich only themselves. People want to follow leaders who place others' interests above their own.

Sustain Hope

When leaders uplift spirits and restore people's belief in the future, they strengthen their own credibility. Constituents want leaders who demonstrate an enthusiastic and genuine belief in the capacity of others, who strengthen people's will, who supply the means to achieve and who express optimism for the future. Constituents want leaders who remain passionate despite obstacles and setbacks. In uncertain times, leaders with a positive, confident, can-do approach are desperately needed in business and in life.

Salvatore Sarno is a compelling example of how a leader can uplift people's spirits. Sarno was the managing director of the team driving *Shosholoza*, the first African boat to take part in the most important sailing competition in the world, the America's Cup race. Sarno's biggest passion is sailing, and for many years before the official launch of the *Shosholoza* initiative he would talk about his dream: "One day we will participate in the America's Cup. I want to give to these guys the opportunity to make history."

For many people, Sarno's idea was crazy and disruptive, but not only did he believe in it deeply, he also communicated and shared his vision passionately with the people around him. His dream went far beyond the sport experience: He not only wanted South Africa to be the first African team in the America's Cup, he wanted to give a chance to people who had grown up under difficult conditions to represent the pride of their nation in front of the world.

In 2007, *Shosholoza* took part in the America's Cup race, a remarkable achievement in itself since only 12 countries were represented. *Shosholoza*, with a significantly lower budget and less experience than the world giants like *Alinghi, Oracle* or *Luna Rossa*, managed to compete at the same level as the other 11 participants. Placing sixth at the final round in Valenci, the South African team had achieved some amazing victories in one-on-one challenges.

These achievements reached far beyond the results on the racecourse, however. *Shosholoza* became a "hope generator" for many South Africans who identified in this success with pride. And the spread of optimism didn't stop at the America's Cup success.

Thanks to the creation of MSC-Shosholoza Foundation sailing centers around South Africa, less wealthy youths of all races are able to learn sailing and life skills. The meaning of the team's name is an acknowledgment of the dedication to pursue excellence, especially when the struggle is a challenge — the Zulu word shosholoza means "go forward, make your road, forge ahead." The spirit of the *Shosholoza* project is all about keeping hope alive and taking concrete action to achieve the dream.

Leaders Must Keep Hope Alive

Leaders must keep hope alive. They must strengthen people's belief that the struggle they are called upon to deal with will produce a more promising future. The only antidote to the increased cynicism and stresses of these times is renewed faith in human capacity and an intensely optimistic belief that together leaders and constituents can overcome the difficulties of today and tomorrow. "Keep hope alive" continues to be the credible leader's battle cry.

Hope is essential to achieving the highest levels of performance. Studies clearly show that people with high hope have a greater number of goals across various arenas of life, select more difficult goals, and see their goals in a more challenging and positive manner than people with low hope. They get more done.

The Struggle to Be Human

Organizational life is full of struggles and tensions. Leaders feel these tensions acutely because of their responsibilities to set the example and inspire others to work collaboratively toward a shared vision of the future. The leaders who are the most in touch with their constituents — and therefore likely to be the most

credible — will experience the pain most intensely.

Let's acknowledge these tensions and, furthermore, let's even suggest that leaders would do well to learn to love the struggles. Where there is tension there is also energy. And where there is energy, there is also the possibility of movement. And where there is movement, there is the chance for progress. Making forward progress is the measure of leadership. So let's wrestle with three of the tensions and dilemmas that leaders experience as they stretch to strengthen credibility:

• **Tension Between Freedom and Constraint.** Leaders demonstrate their commitment to a consistent set of expectations by clarifying meaning, unifying constituents and intensifying actions. This process tugs at an uneasy tension between liberty and limits. Be clear about the fact that people will have choices, but be equally clear that choices are constrained. They are constrained by the owners, the shareholders, the customers, the economic system, the idiosyncrasies of the founders, the executives in power and the people in the room at the time, along with a host of other forces, seen and unseen.

It is the leader's responsibility to make sure that everyone has the opportunity to express opinions and get a fair hearing. Provide the forum for discussion, debate and reconciliation.

• **Tension Between Leading and Following.** There is a crucial difference between a pioneering leader and a dependable colleague. While success in both is founded on personal credibility, leadership requires the realization of a unique and ideal image of the future. Teamwork requires cooperation and reliable adherence to that common vision. Leadership and teamwork are certainly not mutually exclusive — in fact, exemplary leaders foster collaboration — yet there is a dynamic tension between them.

In these uncertain times it is absolutely necessary for leaders to encourage and tolerate more internal conflict than has been allowed in the past. If organizations expect people to show initiative in meeting today's business challenges, then they have to relax their expectations of abiding devotion. Instead, they must support efforts of honest and competent people to find solutions to the problems that are confronting their companies. In short, they must develop the leader in everyone.

• **Tension Between Definitions of Success.** Leadership is both local and global. Acts of credible leadership come in all sizes. You can lead people to change the world, the state, the community, the workplace, the neighborhood and the family. Or you can just lead yourself to change. Leadership is also transitory and most often lasts a relatively short time. There are those whose influence has spanned centuries and crossed continents, but they are not the only ones who have led. Those whose influence has spanned only a few days and a few blocks can still have taken people to places they have never been before.

So what defines success? When it comes to leadership, perhaps the most appropriate response is the one adopted by such organizations as the Scouts and the Sierra Club. Whether your leadership is confined to your own 25 square feet of campground or extends to the plant's 250,000 square feet or to the corporation's 2,500,000 square feet, success is leaving the place better than you found it. ●

Epilogue: Character Counts

The more we study leadership, the more we're persuaded that leadership development is not simply about skill development. It's also about character development. Building upon previous wisdom, we offer this poetic inspiration:

> Be careful of your thoughts, for your thoughts become your words;
>
> Be careful of your words, for your words become your deeds;
>
> Be careful of your deeds, for your deeds become your habits;
>
> Be careful of your habits, for your habits become your character;
>
> Be careful of your character, for your character becomes your destiny.
>
> Be careful of your leadership, for your leadership becomes your legacy.

Read these six simple lines at the start of every day. They will remind you that what you do as a leader begins in your mind, gets expressed in your words and then gets translated into your actions. Over time those actions become who you are, determine the credibility you earn and shape the legacy you leave. ●

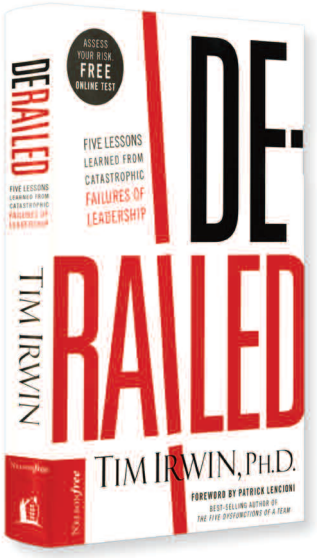
Derailed

Five Lessons Learned From Catastrophic Failures of Leadership



by Tim Irwin, Ph.D.

THE SUMMARY IN BRIEF

The story of the fallen CEO has become a cultural fixture: veering off course with the force of a train careening off its tracks, leaving fiery wreckage and devastating injury throughout the organization. These executives are often the smartest and most respected individuals in their industries, yet they astonish us by driving the train dramatically off course, blinded by unchecked power and arrogance. Author Tim Irwin believes that these leaders suffer from failures of character that are common to each of us — even the most capable individuals. Deficits in authenticity, humility, self-management and courage become more dangerous as we take on more leadership and can cause us to ignore glaring signals that might otherwise save us from catastrophic demise.

Derailed chronicles the collapse of six high-profile CEOs (Robert Nardelli, Carly Fiorina, Durk Jager, Steven Heyer, Frank Raines and Dick Fuld) and the factors that drove their downfalls. These particular leaders offer highly visible and compelling illustrations of individuals who derailed for the very reasons we can derail — a failure of character. This doesn't mean failed character in the sense of dishonesty that results in fraudulent behavior, but rather compromised character in a broader sense — for example, hubris or being dismissive of others.

We learn that derailment really happens long before the crash. *Derailed* helps us to understand how derailment occurs — the real point of the six leader profiles — and it helps us avoid cataclysmic train wrecks in our own careers.

IN THIS SUMMARY, YOU WILL LEARN:

- What common character traits undermine otherwise successful leaders.
- How to read the warning signs of an impending train wreck.
- How a strength can quickly and easily become a weakness.
- Why it is important to understand the character qualities that are essential for leadership.
- How to cultivate habits that improve our effectiveness.

THE COMPLETE SUMMARY: **DERAILED**

by Tim Irwin, Ph.D.

The author: Tim Irwin, Ph.D., is an author, speaker and leading authority on leadership development, organizational effectiveness and executive selection. For more than 20 years, he has consulted with many of America's most well-respected organizations and top Fortune 100 companies. He has also served in a senior management post for a U.S.-based company with more than 300 offices worldwide. Presently, he is managing partner of IrwinInc., a provider of psychological services to businesses.

Running Off the Rails

When a huge machine that is designed to pull great loads gets outside the crucial limits of two parallel steel rails, there are always certain and disastrous consequences. It seems particularly grievous when the derailment results from the careless behavior of the engineer who, of all people, should be responsible and worthy of our trust.

All of us who work in organizations are the "engineers" of something, whether it is a team, a project, a department or the mail room. Derailment in our jobs means we are off the rails. We cannot proceed in our present jobs, just as a derailed train cannot continue on its intended path. Whether it's business, law, medicine, ministry, transportation, education, consulting, the military, skilled trades, art, music or anything else, we work according to some set of expectations or requirements. A failure to achieve the expected results in any work relationship can result in derailment.

Consequences of Derailment

A person in a senior position, like the CEO, works for a governing authority, such as a board of directors, which can vote to remove the leader from his or her position. Though there may be many specific reasons for termination, they basically fall into three categories.

First, the company is not performing to expectations. The metrics by which a board makes that determination vary. The stock price may be languishing. The company's return on investment may be poor and it may be losing money.

The second category is more complex. The governing body concludes that even if the company is achieving its financial goals, the manager reaches them in a manner incongruent with the values and culture of the organization. Turnover in the senior ranks, poor morale and general lack of endorsement by the members of the organization typify the symptoms of an organization with a leader not fulfilling a cultural mandate.

Category three, a combination of the first two, makes the decision to fire a leader easy. The leader failed to achieve results, and he or she violated the company's values or culture along the way. ●

Profiles in Derailment

Profile: Bob Nardelli

At 5 feet 10 inches tall and 195 pounds, Bob Nardelli's dream of playing professional football was a stretch. "The rest of the world got bigger," he recalled, "and I didn't grow anymore." Perhaps this was when the chip began to form on Nardelli's shoulder. From that point on, he seemed wrought with something to prove, if not to the NFL, then to the hard-hitting, high-dollar corporate world.

He earned a business degree and took a job at General Electric(GE) where he quickly became a go-to guy. Though never a blazing intellect, he worked the longest hours, tackled the toughest turnarounds, and became, in the words of GE's CEO at the time, Jack Welch, "the best operating executive I've ever seen." He was duly nicknamed "Little Jack." He was primed to succeed his namesake as GE's next CEO, but he came up short yet again, and this time it had nothing to do with his height.

Soon after Welch let him go, Nardelli was offered the CEO position at Home Depot. Nardelli's charge: Tidy

the chaos of Home Depot's rapid, uncontrolled expansion.

Nardelli shoved the interpersonal relationship standard to the concrete floor when his initial cost-cutting measures included slashing full-time jobs, capping wages and recruiting former military officers to run the stores. It didn't take long before staff morale and customer service began to collapse. Slowly but surely, the once happy-go-lucky Home Depot became a mathematical equation. As the earnings went up under the Nardelli equation — they had nearly doubled by the time of his departure — the stock went down (at a time when Lowe's soared 200 percent) and the human spirit went out.

His Way Was the Highway

The sum total of Nardelli's leadership at Home Depot was a dramatic shift in the spirit of the company and subsequently the service of their ever-satisfied customers. The 98 percent turnover in the company's top executives — with 56 percent of the new hires coming in from outside the company — supports this notion. People simply couldn't and wouldn't work passionately for their command-and-control leader. In this respect, Nardelli was no leader at all. He was a dictator who demanded compliance.

If there is a generalization about Nardelli's mistake, it is that he usurped Home Depot's identity. This was the result of a much deeper mistake than alienating employees and angering stockholders.

Nardelli displayed an unprecedented level of arrogance at Home Depot. It was his way or the highway. His tone-deaf response to criticism was only slightly overshadowed by an ego that served as the antithesis of his physical stature. His intolerance for imperfect people and those who could not be controlled sent only one message: Get it right or get out.

While no one will argue that Nardelli is highly capable, he will likely not fulfill his potential as a leader until he learns what all great leaders know: Greatness does not result from competence only; it flows from an inspired work force that trusts the character of its leader.

Profile: Carly Fiorina

In the late 1990s, Hewlett-Packard(HP) faced a defining moment in its history. Caught in its longest financial slump, the HP Way was under fire. "To jumpstart the moribund company," explained a *Business Week* article, "the board brought in … the charismatic Carleton S. Fiorina. Shake things up she did." It is an accurate assessment. But perhaps the connotation is more diplomatic than it should be.

It took little time for Fiorina's cultural makeover of HP to take hold … and begin turning sour. While no one was arguing the need for a more unified front, HP insiders began to sense that Fiorina's change strategy was less about HP and more about promoting its new boss.

Fiorina's make-or-break moment occurred in 2002, when she pushed through a controversial merger with Compaq, overcoming opposition from board member and Hewlett family member Walter Hewlett in the most expensive proxy battle ever fought. Although the merger made HP the immediate market leader in personal computers, Fiorina's treatment of Walter Hewlett showed a gross disregard for HP's roots.

The board tightened its position and eventually made it clear to Fiorina that they planned to shift some of her operational responsibilities to her direct reports. It was their intention not to fire Fiorina in this process but rather to help her succeed. Because of her resistance, the board asked for her resignation on the grounds that they needed a leader with more operational talent.

Failing to Face Facts

Prior to Fiorina's arrival, HP fostered an environment where workers felt obligated to be involved and speak up when something needed fixing or could be improved. Fiorina changed that environment to one of distrust and fear. People no longer felt they could or

Critical Questions for Managers

Every manager should be able to answer these questions before taking over a department, function or even the whole organization. Take off the mask and lay down the baseline of authenticity from which to build by asking yourself:

- Who am I?
- Where did I come from (personally and professionally)?
- What are the values that fundamentally guide me?
- Who has had a major influence in my management philosophy?
- What experiences (positive and negative) in my background have prepared me for this role?
- Why am I the right person for this position?
- What are my expectations for the team?

For some, personal transparency feels like a loss of control. We just can't push through and break the authenticity barrier to express who we really are. But when we answer these or similar questions honestly, we are being authentic. It makes us more credible and trustworthy in the eyes of our colleagues.

should speak up. Nor did they feel they had any say in the direction the company was headed. It was a shift too far off track from which to recover.

On Fiorina's downfall, it is perhaps simplest to conclude that what led to her derailment were the shortcomings she saw abundantly in others but did not acknowledge in herself. Failure — even her own — was always someone else's fault. This trait, in combination with her penchant for promoting herself, did nothing but culminate into a perception that she was both too self-focused and disingenuous.

Profile: Durk Jager

When longtime Procter & Gamble CEO Edwin Artzt retired in 1995, the company's board created a post for Dutch-born Durk Jager, 51-year-old head of Procter & Gamble's U.S. business. Tough, autocratic and a former protégé of Artzt, Jager was named chief operating officer(COO). Four years later, the hard-charging Jager became CEO.

Jager was adamant that rapid restructuring and cultural change were necessary to free innovation from the many layers of bureaucracy. Jager was dead-on in theory — structural and cultural change were necessary to survive. However, he was way off track in the application.

Seeking to force innovation to the forefront and drive new brands to the global market rapidly, Jager, a mere nine months into the job, announced he was eliminating 13 percent of the work force. He then disregarded business managers responsible for current products and transferred their responsibilities to global brand managers. He simultaneously established "innovation teams" that displaced the company's best and brightest from important daily roles to the ongoing development and launching of the best new brands.

Seventeen months after they made him their man, the Procter board pressured Jager to resign in what *Business Week* called "a boardroom coup unprecedented in P&G's history."

Quickly Off Course

As a chief executive, Jager failed by over-focusing the company's resources on generating the next big idea and introducing products that "left customers yawning," while under-investing in the development and marketing of established brands. While there were glaring, fiscally tangible reasons for Jager's short and unsuccessful tenure — he missed earnings projections twice in six months, and the company's price per share declined 52 percent — his ultimate derailers were less tangible failures of character.

Change can be orchestrated respectfully and incrementally, but it was not Jager's way. He went about the change forcefully and immediately, and his actions showed a gross disregard for P&G's existing culture. But more than that, his approach displayed a disregard for the lives his demands were affecting.

Jager clearly displayed all of the four categories of derailers. Throughout his tenure, he maintained an intense — even feared — degree of arrogance. He openly despised the old mores of the company, making it clear that he found P&G's culture to be intolerable and wholly to blame for the company's problems. Jager also cultivated a ruthless image in an attempt to convey his hard-charging commitment toward turning the company around. The inauthentic veneer intimidated employees and implanted an intended sense of insecurity about their place in the company.

Jager's derailment teaches us a further lesson: Neither speed nor good business sense are substitutes for good leadership.

Profile: Steven Heyer

When it came time for its founding CEO, Barry Sternlicht, to transition from the day-to-day, Starwood Hotels & Resorts Worldwide sought a leader with the marketing prowess to keep its brands, including the prestigious W, Westin and St. Regis hotels, on the upswing. It was a young, entrepreneurial company that needed an innovative leader with both business and branding experience. Steven Heyer, president and COO of Coca-Cola, appeared to be the perfect fit.

Nicknamed "The Tank" in college for his relentless ways, Heyer embedded a reputation as a prolific mass marketer. He rolled into Starwood ready to showcase yet another compelling executive campaign.

Unfortunately, the master marketer made a very basic marketing blunder: He failed to keep up appearances — namely his own.

As was his protocol, Heyer went right to polishing the branding side of the Starwood business. While Heyer was turning the company's brands to gold, he was losing touch with the people he was leading. It was the beginning of an internal branding issue and Heyer was the problem product.

A Bad Campaign

Leaders make mistakes. While they are held to a higher standard, they still have lapses in judgment. Certain mistakes, handled tactfully, willfully and humbly, are often forgivable to the point where the position of leadership is salvageable. The same mistakes avoided and

handled irresponsibly — or worse, flippantly and arrogantly — often say a lot more about a leader than the mistakes ever did. This was the case with Steven Heyer.

The Starwood board had been willing to overlook Heyer's rough edges given his continued accomplishments. Yet, Heyer was flippant in his self-consumption. His lack of humility was first evident by his roguish work habits, opting to commute from his Atlanta office instead of remaining a steady presence at headquarters in White Plains, N.Y. However the real straw that broke the camel's back was Heyer's handling of the accusations of his inappropriate activity with female employees.

Heyer claimed he had done nothing wrong regarding the allegations — then ran. Given his flawless handling of every brand he had ever touched, this was a shockingly elementary marketing mistake. To the majority of onlookers it communicated only one thing: "I did it but owe no explanation."

Heyer's derailment ensued because he never committed himself to the role of a leader within Starwood. He grew the company, boosted the stock and polished its brands, but he remained dangerously detached. He was a steam engine attempting to pull the rest of the train without being attached to it. While Heyer knew the company brands, he never knew the company — and the company never knew him. His detachment only exasperated the allegations of his inappropriate behavior.

The people had no personal history with which to counterbalance Heyer's actions. Perhaps for many employees, the accusations were their first interaction with Heyer's personal image outside his marketing handiwork. In the end, it seemed the marketing master could enhance the appearance of everything but himself.

Profile: Frank Raines

In the late 1990s, middle-class homeownership looked to be peaking after nearly a decade-long run of good fortune for any company in the mortgage business, especially for the government-chartered and sponsored Fannie Mae. Under chief executive James A. Johnson, the value of its assets had tripled and its share price had risen sevenfold.

When Johnson left his office for the last time in December 1998, Fannie Mae faced the challenge of sustaining its run on double-digit growth and its reputation as the "dominant force in the mortgage industry." To do so, it would need to rely on creative, non-traditional efforts to expand the housing market through "groups — black and Hispanic families, immigrants and single people — that traditionally have been far less likely to buy houses."

Developing Courage

Here are some suggestions for how you can develop this key workplace skill:

1. Keep a journal about your experiences at work. Who do you admire? What do they do that strikes you as courageous?
2. When you have to deliver tough news, being courageous is critical. Also, be savvy. Think about the timing and shape the message for the recipient.
3. When you take a stand make sure you have your facts right. The facts often help separate the courageous from the foolhardy.
4. Mangers hate it when they have to do our thinking for us. Be sure to have several possible remedies for a problem, along with a recommended solution.

Fannie Mae needed a leader who not only understood all sides of the government-backed mortgage business but also understood the people who would become their most important customers. Franklin Delano Raines seemed perfectly suited. Raines leveraged the work ethic and financial wisdom passed down from his parents into a noteworthy career. After graduating from Harvard College, Harvard Law School and Magdalen College at Oxford as a Rhodes Scholar, he quickly gained a reputation for tight accounting, results-driven leadership and shrewd diplomacy, simultaneously climbing the political, legal and corporate ladders and working with the Nixon, Carter and Clinton administrations.

Newton's Law: What Goes Up …

With Raines conducting, Fannie Mae not only sustained double-digit income growth but vastly expanded its reach with new technology and products. The biggest — and costliest — of Fannie's expansions was Raines's commitment to invest $2 trillion in mortgage programs that would make homeownership and rental housing more affordable for 18 million more families. The program included sub-prime mortgages. This greater opportunity of homeownership, Raines believed, was Fannie Mae's mission personified. He was hailed a hero by many.

Fannie Mae was constantly under attack from mortgage industry rivals who insisted the company maintained an unfair advantage with its government ties and under-regulated procedures. Raines rose to each challenge with the nimble diplomacy for which he was known. There was one attack, however, for which Raines was neither prepared nor deft enough to defeat.

From 1999 to 2002, Fannie Mae accountant Roger Barnes sent repeated correspondence to a "wider range of Fannie Mae managers and executives," including Frank Raines and Fannie Mae Chief Financial Officer Timothy Howard, urging them to look into accounting irregularities he had discovered.

It is said that adverse circumstances do not make or break you; they reveal you. It is a fitting maxim given Raines's telling response to the confirmation of illegal accounting. His unwillingness to accept responsibility revealed his three primary derailers: 1) a lack of authenticity, 2) a lack of humility and 3) a lack of courage.

The discrepancy between the legal conclusions and Raines's vague posturing sends the wrong message: The leader is larger than both the company and the bodies that govern the company's practices. Whether Raines understood it as such is debatable. Perhaps he was not entirely aware of the illegal nature of the practices he was allowing. Perhaps he believed certain accounting measures were relative to circumstances.

Still one thing cannot be debated: Raines had and still has every opportunity to admit, in the very least, to poor judgment, lax standards or subjective governance. He has admitted none.

Profile: Dick Fuld

Dick Fuld was as insider as they come. He was equally as intense. His long and successful career at Lehman Brothers began in 1969 after his dream to become an air force pilot "came to an abrupt halt when he got into a fist fight with a commanding officer." In Fuld's defense, he was said to have been protecting a younger cadet who was being mistreated.

This heart of the underdog gave rise to the man who seemed unbreakable — tough-talking his way upward over a 39-year history with Lehman Brothers. Fuld was famously aggressive, uncomfortably intense and unquestionably smart. His aura could fill a room — giving second chair to his equally impressive but less-mentioned education, military service and numerous service positions on non-profit and professional boards.

Strength Is Weakness Well-Harnessed

Under Fuld's stewardship, Lehman soared. By 2006, *Institutional Investor* magazine had named him America's top chief executive. By the end of 2007, he was at the pinnacle of the financial world, having turned a $102 million loss in 1993 into a $4.2 billion profit in 2007. In March 2008, Fuld was named to *Barron's* list of the world's 30 best CEOs and dubbed "Mr. Wall Street."

The financial world would believe him, until the credit crisis came — perhaps the only force tougher than the Wall Street brawler. Markets were crashing; investors were pulling funds; and the American public was pocketing their pennies and losing their homes, their jobs and their confidence. For the first time, Fuld was facing a fight bigger than Wall Street. It was then he made the classic competitive error: He grossly underestimated his opponent and overestimated his strength.

Weakness Is Strength Unharnessed

In June 2008, Lehman Brothers posted a second-quarter loss of $2.8 billion, its first loss since going public in 1994. The blow was crushing to the organization and to Fuld — the man whose track record had, for more than a decade, continued to overshadow itself year after year.

Fuld had been struck with a solid left hook. As he had always done before, he shook it off and fought harder. Unfortunately, Lehman had been cut bad, and forceful Fuld could not stop the bleeding. In September 2008, Lehman reported yet another loss — this time of $3.9 billion. Days later, the firm filed for bankruptcy protection and eventually bankruptcy itself — the largest in history.

While it's easy to respect the strength of a man like Fuld, one has to also take into account that such strength is a weakness when it cannot be harnessed. Ultimately, it was Fuld's intensity-turned-stubborn-arrogance that did him in. His derailment resulted from two things: He refused to quit fighting and he failed to size up his opponent. ●

Derailment in Slow Motion

Certainly each of these leaders' downfalls involves a complex set of reasons. We see the headlines, watch the news coverage and read the voyeuristic details of their demise. The smoldering piles of wreckage mark ruined companies, ruined careers and ruined reputations. It looks as if the crash took place in one cataclysmic instant — one wrong turn and then the screeching sound of twisting metal — a massive derailment. It is not the whole story.

Derailment occurs over time — and it occurs in a predictable progression — a process that those who derail seem to follow. Derailed leaders progress through five stages as they head toward their demise. Perhaps there's hope for us to learn about these escalating stages of derailment and stay on track.

Stage I: A Failure of Self-/Other-Awareness

Derailed leaders seem to manifest a lack of self-awareness. Self-awareness is a prerequisite for managing ourselves well. Derailed leaders also seem to lack awareness of and concern for others. This type of insight informs us as to the needs, desires, hopes and moods of others that we might respond appropriately. It involves empathy, consideration and general attentiveness to the interests of others. Derailed leaders seem oblivious to the impact of their behavior on others.

Stage II: Hubris — Pride Before the Fall

Hubris — extreme arrogance — manifests itself in the leader who believes he or she is the epicenter of an organization's success. Despite Home Depot's storied entrepreneurial, fraternal culture, Nardelli presumed his controlling methodology was better. Instead of using the positive momentum with Home Depot's culture, he cut loose from the culture entirely and bled the orange-blooded faithful to death. No matter how bright and capable a leader might be, the work of the organization must be accomplished by trusted colleagues.

Stage III: Missed Early Warning Signals

The early warning signals of derailment were there for all six leaders but went unheeded. People were yelling and waving their hands, but these engineers paid no attention. In their arrogance, they missed the signals. Fuld was born a winner, yet he was so focused on winning the financial prize that he failed to see the chasm into which he was guiding Lehman. He had tunnel vision. These otherwise talented leaders did not see the warning signals represented by subtle but persistent feedback about their own inner states, others' diminishing confidence in them or the wrong direction in which they were leading the company. Early warning signals should have jarred their attention to avoid the danger ahead. Instead, our profiled leaders barreled ahead toward the inevitable crash.

Stage IV: Rationalizing

When it becomes apparent to a leader that he or she is losing the confidence of colleagues or a board, his or her defenses are heightened. A siege mentality takes over, and the leader begins to rationalize his or her actions, further insulating him- or herself from the very information that could either fend off disaster or greatly limit the damage.

Stage V: Derailment

The emissary comes to the leader's office and says, "I'm sorry … it's over. We all had high hopes for you here, but we need to help you leave in a way that preserves the company and maintains your dignity." An irony of Stage V is that despite the board's actions to preserve their CEO's dignity, our six profiled leaders undid this preservation of dignity with their own actions. ●

Staying on the Rails

A failure of authenticity frequently contributes to derailment. It is not a blatant attempt to deceive, but at the heart of the problem is a failure to let others see who we really are. Not engaging with others in a meaningful way is always a tip off.

Lack of engagement was one of Heyer's most significant problems. He never really unpacked his emotional bags at Starwood. He didn't spend enough time at the headquarters engaging with the people who did the work of the organization. Individuals don't trust someone when they are not sure if the person is authentic and truly committed to the well-being of the organization and its employees.

The Real Deal

When we see people who actually are who they "appear" to be, we call them authentic. There's an alignment between the inner person and the outer person … between their beliefs, values and behavior. "Authenticity" most often refers to things, like documents or paintings, implying that these objects are genuine, not counterfeit. Our trust in and value of an object ties directly to its authenticity or genuiness.

We use this same word to describe people. We trust someone who is authentic and distrust someone who has a lack of genuiness. Actually the Greek origin of authenticity means "acting on one's own authority — entitled to acceptance as factual." Effective individuals frequently venture "self-authored" ideas, which reflect a person's true beliefs and convictions. We may disagree with their idea, but our respect and trust of the person rises when we feel we're dealing with someone who is real, open, direct, trustworthy and genuine.

Get a Hold of Yourself!

Self-management may be best defined as skill, insight, sensitivity, impulse control, optimism and persistence applied in the particular environment in which we work and live. Effective self-management is heavily dependent upon good self- and other-awareness. A lack of self- and other-awareness is a common denominator among those who derail. The ability to manage ourselves and to manage our relationships is heavily dependent upon our per-

ceptiveness of what's going on within us and with others.

Self-aware individuals pay attention to their emotions without being ruled by them. They observe the responses of others and are able to adjust their behavior to make their interaction more effective. They understand how to build on their strengths and observe their limits. They use feedback as a corrective mechanism.

Self-aware leaders often reflect on how they are doing and are more inclined to work in harmony with their values and priorities. Decisions are more thoughtful and well-intentioned. Their direction is clear and founded on clear rationale. They draw this direction from the deep well of personal reflection. Those who derail tend to be unreflective, imperceptive, undisciplined and impulsive.

The Star of Your Own Show

In the research of the highly placed leaders, it became very apparent that arrogance was a key contributor to their derailments. If humility is having an accurate self-image and being other-oriented, then arrogance is its mirror opposite. Each executive profiled manifested this debilitating quality.

Arrogance is presumptuousness, overbearing pride and an unwarranted, exalted sense of self-importance. Lest we think that arrogance is a foible only in profit-driven business settings, it has nothing to do with the level at which we work in an organization or the nature of the work we do.

One of the most revealing tests of a person's character is power. We see in the profiles of derailment that power, in many cases, became self-serving. The "trappings" of power often tell a lot about character. Nardelli created a nine-car personal parking area for his cars underneath Home Depot's corporate office. His private elevator went from his personal parking area straight to his private office on the top floor of the building — no stopping for the little people.

The Courage of Our Convictions

Courage emanates from our resolute beliefs and core convictions. It follows that when we are not grounded at some foundational level in our beliefs and convictions, we will not be courageous. Absent any real beliefs and convictions, and the courage that rests on them, we become tentative or worse, expedient. We then want to just get along and line up with the prevailing opinion.

A courageous act only occurs when we are convinced that something is true and truly important, rather than simply a preference. Courage never exists in a vacuum. It results from our internalized beliefs and convictions about how our lives should best be directed toward some noble end. The absence of courage in our jobs can manifest itself in behaviors serious enough to derail us. It makes us tentative. Tentativeness makes us conflict-avoidant, over-controlling and cautious. We experience an excessive need for approval. The cure is to develop the courage of our convictions. ●

Five Critical Lessons Learned

Here are five critical lessons learned from the examples of derailed leaders and others who have discovered the crucial principles for staying on track:

Lesson One: Character trumps competence. Character as expressed in authenticity, wisdom, humility and courage must ultimately form the substance of who we are if we want to have great impact.

Lesson Two: Arrogance is the mother of all derailers. It is commonly at the root of a leader's undoing. Aloofness, being critical, self-promotion and not listening to others all tie to arrogance.

Lesson Three: Lack of self-/other- awareness is a common denominator of all derailers.

Lesson Four: We are always who we are ... especially under stress. If we will always be who we are, it pays to consider deeply who we want to become and to make choices consistent with that intention.

Lesson Five: Derailment is not inevitable, but without attention to development, it is probable.

In moments of gut-wrenching candor, many self-aware leaders acknowledge a dark side to their character. Leaders who have great strengths also possess significant weaknesses, which cannot be ignored. Sadly, we, too, have the innate capacity for narcissism, arrogance or disregard of other's opinions and interests in favor of our own. Perceptive executives control these impulses and choose to manage their darker sides' intrusion on decisions and relationships. Those who are more likely to stay out of trouble, constantly remind themselves of their own vulnerability. ●

RECOMMENDED READING LIST

How Great Changes Begin at the Beginning

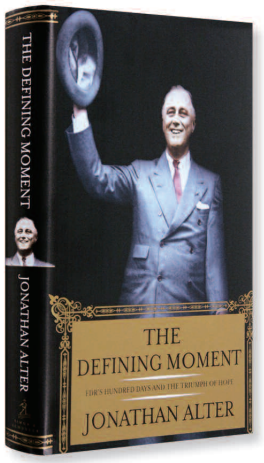
Review by Chris Lauer

THE DEFINING MOMENT: FDR'S Hundred Days and the Triumph of Hope

by Jonathan Alter

Simon & Schuster, © 2006, 415 pages, $29.95
ISBN 978-0-7432-4600-2

As a senior editor at *Newsweek*, Jonathan Alter started writing a critically acclaimed column on politics, history, media and society back in 1991, gaining praise for his even-handed analysis and thoughtful research and commentary. Fifteen years later, Alter brought even more respect to his journalistic skills by writing *The Defining Moment*, a historical account of the moments in Franklin Delano Roosevelt's life that shaped him into the man who brought the United States out of the Great Depression and kept democracy alive when hopelessness, communism and fascism threatened the country.



The Defining Moment accomplishes something no other book about FDR has done in a single volume: It describes just the factors leading up to and including the first 100 days of his administration in 1933. While most books about the 32nd president of the United States refer to Pearl Harbor and World War II and describe his performance as a wartime president, this book stops long before the bombs exploded. Instead of recounting the presidential challenges of leading the country through war, *The Defining Moment* describes the pivotal moments, critical events and historic decisions in FDR's life during the early days of his presidency, when crucial leadership was vital for the survival of democracy in the United States.

Pinnacles and Pitfalls

The story Alter describes follows the swerving path of Roosevelt's early life, revealing it as a roller-coaster ride filled with glorious pinnacles and tragic pitfalls. What emerges from the journey is a thrilling American adventure that recounts the life of one of history's most remarkable and admired leaders, and provides future leaders with much food for thought about gaining early momentum in a new leadership role. Jonathan Alter's talents as a storyteller turn FDR's perilous tale into an exciting and revealing glimpse into the life of the man often cited by experts as one of the greatest U.S. presidents of all time, alongside Abraham Lincoln.

The story begins peacefully enough with a description of the wealth into which Roosevelt was born. As fifth cousin to President Theodore Roosevelt, and his maternal family roots tied to a ship that arrived at the Plymouth colony shortly after the *Mayflower*, privilege was practically FDR's middle name. He was the only child of a doting mother, Sara, and a highly stationed father, James, who was absent for most of FDR's upbringing due to a debilitating illness. Although he was not very skilled as an athlete and not particularly impressive to those who knew him at the time, he did boldly claim that, because of his presidential name and family fortune, he would become president one day. But his lack of success as a young lawyer caused many people to view his ambitious prediction as unlikely to come true.

Without reaching into too much psychoanalysis or extrapolating too much from political conjecture, Alter provides enough guidance to the events and circumstances of FDR's life to shed light without interjecting

more than a storyteller's spark into the story. For example, while describing FDR's earliest memories, readers learn that FDR was present in the house when his aunt accidentally set herself on fire with an alcohol lamp while curling her hair. She subsequently died from her injuries. Alter connects this family event, which undoubtedly exposed young Roosevelt to horrific screams and unimaginable terror, to FDR's later admission that the only thing he truly feared was fire. Small insights from events like this build from his youngest days through his college life and into his earliest days in politics. Each turn in his history holds increasing lessons that slowly transform the well-traveled sophisticate into a more empathetic human and powerful politician.

Alter explains that FDR's distrust of experts helped him succeed as president. FDR became famous for gathering a multitude of different opinions and sorting through them first before rendering his own judgment on a matter.

The Power of Relationships

One of the concepts Alter revisits frequently is the power that relationships had in changing Roosevelt from the effete "feather duster" of a man to a leader whose decisions and guidance put the country at ease during some of its roughest times. One of these relationships was with his wife, Eleanor, who helped guide him in a more humane direction by showing him the suffering of the lower classes, something about which Roosevelt knew very little. Her work with poor Jewish immigrants in the slums of New York brought her husband in contact with suffering he had never seen before. Alter credits Eleanor with softening FDR's sense of self-satisfaction and opening his mind to help those less fortunate. These were significant changes that would play out on a much larger scale when he became president.

Another relationship Alter describes that would prove pivotal to Roosevelt's rise to the presidency was that between FDR and Louis McHenry Howe, a cranky reporter from *The New York Herald* who would become an important ally and adviser in his efforts to gain prominence in local and then national politics. This "medieval gnome" would play a key role in Roosevelt's development as a man who could play the game of politics. Alter describes Howe's skills as a manipulator and confidante, and how this tiny, unattractive man helped Roosevelt grow as a campaigner and master of the press who was able to firm up support from the country's population and win elections.

Polio

One aspect of Roosevelt's life that Alter connects to his effectiveness as president was the onset of the debilitating disease that would test his character and then help him demonstrate his latent yet impressive strengths. While making an appearance at a Boy Scout camp at Bear Mountain, N.Y., Roosevelt apparently caught polio after sailing with his wife and running a couple of miles with the scouts. At 39 years old, polio-related paralysis left him unable to walk for the rest of his life. Alter interprets this tragic event in the life of a physically active man — who had become an avid golfer, swimmer and outdoorsman since his graduation from college — as the source of life lessons that would eventually benefit Roosevelt and the rest of the country.

One aspect of Roosevelt's personality that changed due to his experience with polio was his belief in expert opinions. Shortly after the onset of the disease, Alter relates, one doctor prescribed deep massage to help the paralysis in his legs. This turned out to be a terribly painful and mistaken combination. Alter quotes columnist and FDR acquaintance Max Lerner regarding the shift that took place inside Roosevelt's psyche: "[It] cured him permanently of any belief in the conventional wisdom of experts, whether in medicine, politics, economics, warfare or diplomacy."

Alter explains that Roosevelt's distrust of experts helped him succeed as president. Unsatisfied with having only a few perspectives, FDR became famous for gathering a multitude of different opinions and sorting through them first before rendering his own judgment on a matter, whether it was about fighting his own polio, handling the Depression or entering the country into World War II. His success at staying optimistic through such an agonizing and debilitating affliction also characterized the optimism with which he would lead the country through its darkest days.

Saving Democracy

The Defining Moment provides a compelling glimpse into FDR's rise to power as well as the people and events that shaped his personal character, but the history lessons it contains offer more than a simple guide to presidential politics. By focusing specifically on the years of 1932 and 1933, Alter's book provides deep insight into the first time FDR "saved democracy" from the rise of communist and fascist trends taking place in other countries at the same time "by convincing the American people that they should not give up on their system of government." This deep look into FDR's first months in office also gives readers a glimpse into the formative

personal factors that led to his success. One was the self-confidence he injected into the collective American consciousness, replacing the "fatalistic terror" that had frozen the public in a pernicious malaise. In *The Defining Moment*, Alter reveals the sources of Roosevelt's confidence and how he was able to rise above adversity and offer the country hope.

Alter explains that he wrote this book "to better understand a few timeless questions about the nature of crisis leadership and the meaning of the American experiment in self-government." These questions probe the sources of inspiration and hope that a country needs to pull itself out of insecurity and suffering. By examining the defining moment "when the character or perception of a political figure is crystallized," in this case FDR's first months in office, Alter offers future presidents and politicians a role model who can provide guidance on ways to grow and shape their own effective leadership strategies.

Alter transforms the cold winter of 1933 into an example of how a lone individual can face desperate adversity — including an assassination attempt at the hands of an unemployed bricklayer from New Jersey and a deepening national economic crisis — and rise above it with enough self-assurance and strength to restore confidence to a nation.

In those first difficult days as president, Alter reminds readers, Roosevelt gave the country his famous first inaugural address, in which he stated, "The only thing we have to fear is fear itself," and started his hugely popular "Fireside Chats." He points out that FDR also created "the thrilling legislative experimentation of what came to be known as the Hundred Days." Alter explains that this is the story of how one man was able to transform his formidable communication and political skills, honed during a life filled with staggering fortune and tragedy, into a rejuvenated outlook for an entire country facing tremendous difficulties.

Roosevelt's 'Tree Army'

One of the 15 major pieces of legislation in FDR's first 100 days in office was the Civilian Conservation Corps (CCC), a New Deal program that combined Roosevelt's deep beliefs in hard work and environmental conservation. Alter explains that this program alone, which began when 275,000 young men were mobilized in 1,300 camps across the country, was the best example of how the new president's leadership style changed the United States during those 100 days. Not only did this unique program substitute work and jobs for government-funded relief, but it also kept thousands of people fed, sheltered and working when they might have been tempted to create the civil unrest that many feared would take place at the height of the Depression. In addition, the work of the CCC helped the country improve its infrastructure of resources by employing more than 3 million men to plant 3 billion trees, develop 800 state parks, protect 20 million acres from erosion and create 125,000 miles of trails across the United States. Alter points out that the program would also eventually inspire the creation of the Job Corps, the Peace Corps, VISTA, AmeriCorps and thousands of community projects.

Another feat Roosevelt accomplished during his first four months in office was to establish of the National Recovery Administration (NRA), which extended the U.S. government into the private economy more than any program before or since. While it abolished child labor in the country and setting the first federal minimum wage, Alter points out that the NRA also boosted national confidence when it was most needed. Although its many strict codes and micro-regulations would prove to be too much of a burden for businesses and the country in the long run, Alter explains that experts credit the NRA program with giving a new and needed sense of corporate accountability to the community.

Social Security

Perhaps the greatest accomplishment of Roosevelt's first 100 days in office was his creation and support of the Social Security system. When he signed the bill to protect older Americans from destitution in their later years, he called it "the cornerstone" of his administration. Although he believed it was less than perfect in its original form, Roosevelt, Alter explains, told his people that he believed it was his "greatest domestic achievement."

An accomplishment such as Social Security became not only a crucial part of Roosevelt's early impact on the country's economic system, but also an example of the type of giant action that can make or break a president when he or she first takes office. Alter writes that since 1933, making a great impact in the first four months in office has been the goal of presidents, with some more effective than others at reaching that goal. The author points out that Lyndon B. Johnson claimed

When he signed the bill to protect older Americans from destitution in their later years, he called it "the cornerstone" of his administration ... Roosevelt told his people that he believed it was his "greatest domestic achievement."

he did more with the 15 bills he pushed through the U.S. legislature during his first 100 days than Roosevelt did in his initial period of time in office. Ronald Reagan also took the idea of early wins to heart and worked hard at accomplishing historic budget and tax law changes in his first months in office. On the other hand, Alter points out, the idea to prove yourself as president in 100 days was not something that John F. Kennedy would let distract him from the longer-term efforts that he knew were required to lead the country through lasting changes.

Barack Obama

According to the New York *Daily News*, Barack Obama was seen reading a copy of *The Defining Moment* in the days before he was elected as the 44th president. While only history will tell whether the stories Alter describes in his book had a significant impact on Obama and the country during his own first 100 days in office, the fact that one of his final advertisements during the presidential campaign was titled "Defining Moment" might indicate that he took some of the lessons in Alter's book to heart. When Obama won the Iowa caucus, he exclaimed, "They said this country was too divided, too disillusioned to ever come together around a common purpose. But on this January night, at this defining moment in history, you have done what the cynics said we couldn't do." Obama would later talk about "defining moments" in his victory speech in Chicago.

In a recent interview with author Mark Green, the president of Air America Radio, Jonathan Alter was asked whether there is a valid comparison between the transitions of FDR and Obama, and he said Obama's process seems to be more orderly, while FDR's transition was often characterized as "seat of the pants." He added: "Indeed, Roosevelt was described to have a second-class intellect and a first-class temperament. Obama has a first-class intellect, he's smarter than Roosevelt, and a first-class temperament."

"Indeed, Roosevelt was described to have a second-class intellect and a first-class temperament. Obama has a first-class intellect, he's smarter than Roosevelt, and a first-class temperament."

Alter's Next Book

According to Dermot McEvoy of *Publisher's Weekly*, Simon & Schuster has already acquired Alter's next book project: a book about President Obama's first 100 days in office, which will be published in 2010. In McEvoy's article, Alter explained that his next book will cover Obama's campaign as well as how he performs when he reaches the White House.

With his rich perspective on Franklin Delano Roosevelt's rise to prominence and his historic presidency, Alter is uniquely suited to provide a comparative view of yet another Democratic president facing difficult national and global struggles during an unprecedented economic downturn. Sure to answer similar questions about who influenced Obama and how he became an inspirational figure to many, Alter's next book, thanks to his ability to dig deeply into the details that make historical figures who they are, will undoubtedly offer readers another fascinating look at the powers that shaped the leader and his date with destiny. Judging by Alter's ability to portray FDR's leadership as a powerful force grown out of personal experiences and numerous difficulties and accomplishments, the Obama book will be a welcome addition to the historical record. It promises to advance the collective understanding of those eager to learn how yet another president faced great odds while leading the United States through tough times.

The author: Jonathan Alter is a senior editor at *Newsweek,* where since 1991 he has written an acclaimed column on politics, history, media, and society at large. He is also an analyst and contributing correspondent for NBC News.

His next major project will be a book detailing the first 100 days of Barack Obama's presidency. The book is scheduled to be published by Simon & Schuster in 2010.

How to Survive the First 100 Days

THE NEW BOSS

THE SUMMARY IN BRIEF

Innovation, consistently high standards and speed are necessities in the competitive environment of today's business world. New executives are expected to move forward with their own agendas and make their mark within as little as 18 months. However, it is often forgotten that these agendas need the support of key people, and as a new manager, you will have to gain and retain this support in order to achieve success.

In the fast-paced business world, there is little room for error or experiment. In large organizations, the pressure for success is huge. The ability to become the new leader of a department or organization and transition seamlessly is what separates great leaders from good leaders. The smoothness with which this change happens is crucial to a manager's success, and it makes starting a new job even more of a challenge. The window of opportunity for achieving a seamless transition is the first 100 days — that's all the time a new manager typically has to ensure that he or she will be effective in the long run and that employees stay motivated.

There are seven building blocks to creating a successful leadership change. According to author Peter Fischer, these building blocks help leaders understand why they shouldn't just "jump in"; they show leaders the *why* and *how* of assessing critical situations, how to know what everyone expects and how to introduce change mindfully. Fischer also provides case studies that shed more light on the pressures and opportunities for new managers in specific and all-too-common circumstances such as dealing with being promoted and surviving a cumbersome predecessor.

This summary will give new leaders the necessary tools for making a smooth transition into their new role within the first 100 days, and will make them aware of some of the common pitfalls to be avoided.

IN THIS SUMMARY, YOU WILL LEARN:

- How to define and manage expectations — from your boss, your employees, your colleagues and yourself — well.
- How to prove yourself to disappointed rivals, hidden competitors and other skeptics.
- How to figure out what problems are important and which to tackle first.
- What common obstacles to avoid to ensure a successful transition.

The Dos and Don'ts of Successful Leadership

It is the rule rather than the exception for successful executives to move on to new responsibilities every two to three years. It is a further rule that as soon as a change in leadership is imminent, there are certain questions from all directions in the organization.

People who successfully assume new leadership roles also have a number of other competencies that set them apart from less successful counterparts. They are able to organize and communicate the many topics, issues and expectations as a clear, manageable concept.

Another characteristic that differentiates successful from less-than-successful executives is their stamina, particularly in a crisis. These characteristics are not innate; they are competencies acquired through practical experience. ■

PART I: BUILDING BLOCKS

Managing Expectations Proactively

Expectations are the surest thing about a change in leadership, which has an almost magical attraction and seems to bring every wish and hope for change to the surface. Sometimes they coalesce into expectations that are almost impossible to meet. Skill at handling expectations is thus one of the first competencies that a person must have in order to manage a transition successfully.

The expectations of superiors are a rather problematic matter for new managers. If anything at all is explained, the executives focus on the usual quantitative objectives, mentioning more sales, better variable gross margin and lower costs as important expectations. Preeminent expectations such as supporting a superior's own work or ensuring loyalty are rarely voiced. Many managers fail to ask about the simplest things, such as important milestones and the criteria for success in the new position.

The expectations of the employees seem much clearer at first glance, and those that tend to be formulated clearly are those pertaining to the solution of old problems. Not until the newcomer patiently asks the employees what they hope their manager can do for them will they articulate the otherwise unstated expectations of personal job security and advancement.

In contrast, colleagues expect a newcomer to ask about their rules of the game, not to present new ideas too quickly and to avoid forging too close an alliance with the powers that be. They assume the newcomer will come to them, not the other way around.

Develop Expectations Actively

Expectations don't go away by being ignored. At best they turn into support for the changes to come; at worst they harbor the potential for resistance to the new executive's plans.

- Expectations are *desires, ideas, hopes, suggested solutions to problems and recommendations.*
- Expectations are *not* logical.
- Expectations stand for a basic attitude — waiting. "Let's see if he succeeds at it" is a sentence frequently heard in changes of leadership. Lurking behind it is the passivity of wait-and-see. That is why expectations have to be translated into tasks. *You therefore have to ask which expectations can be turned into shared tasks.* This will help to create a balance. ■

Developing Key Relationships

In many instances, relations with shareholders, superiors, employees, clients and colleagues decide the success of a change in leadership. Misunderstandings and lack of clarity in important relationships are liable to lead to tensions that are difficult, if not impossible, to compensate for in the difficult phase of assuming a new position.

On Dealing With the Disappointed Rivals and Hidden Competitors

Key relationships in a change of leadership are those that are important to taking over a position successfully. The problem is that it is usually easier to determine after the fact which relationships were key and which were not.

One primary player, of course, is the person who managed things while the position was vacant. It would be a mistake to give a hidden rival the cold shoulder during a change in leadership. He or she wants to be talked to and asked for advice.

At this point, people often make mistakes in dealing with a disappointed rival. They make promises, try to find soothing words and raise hopes for future prospects. Instead the new manager needs to approach the disappointed rival with understanding. It is the rival's job to work through his or her disappointment; your contribution lies in making that person a fair offer and thereby bridging the gap between the two of you.

The Predecessor — the Hidden Competition

The relationship to a predecessor is a special topic in the subject of leadership transition. The matter goes beyond relations between the newcomer and the predecessor to include those with the employees as well, because they will always compare the two bosses with each other. Don't make the mistake of accepting the invitation to complain about your predecessor's possible weaknesses, for then you will experience fully the double nature of the situation.

Things are usually easier if the former manager has been promoted. But if the employees feel that their former boss got a raw deal from top management, then your predecessor will continue to enjoy the loyalty of the employees and you will not have an easy time of it. Absolutely clear signals are needed so everyone recognizes the authority of the new manager.

Invitations Better Refused

Invitations are more or less overtly formulated recommendations that, if accepted by the newcomer, will lead to serious trouble. The moment you buy into the viewpoint lurking behind these invitations, you meet the negative expectations. The risk is particularly high when a team has been working very effectively, perhaps even for a long period, without formal leadership.

Seasoned managers practice patience in such instances. They know that employees need some time to accept that they are no longer alone and must relinquish some of the authority they had previously exercised on their own. Meanwhile, they confine themselves to gathering information, making contacts and performing typical managerial duties.

If a team has been waiting for the newcomer's highly praised management talent, accepting the invitation to show it off is one of the biggest mistakes that the manager can make. Experience shows that such an approach cements the actors in their roles of the savior and the weak. ■

Constructively Analyzing the Initial Situation

A characteristic of leadership transitions is that the newcomer must not only come to grips with a host of issues and problems, but also make decisions without being thoroughly informed. There are five perspectives that have proved particularly useful for analyzing the types of situations that you, the new manager, will face at the outset of the transition process:

Perspective 1: the rules and assumptions guiding the people involved. Surprisingly, as any seasoned manager will confirm, the purportedly hard realities are easier and quicker to change than the so-called soft corporate culture. You, too, should therefore begin your analysis of the initial situation by exploring the rules, assumptions and values that underpin the way people think and work in your new department. Slowly but surely, an initial picture of the new organization forms.

Perspective 2: the issues occupying the organization. It is important not to regard the list of problems as anything other than a description of the situation from various perspectives. Gather as much information as possible.

Perspective 3: the facts that determine action. An interesting contradiction between the descriptions of the soft problems and the hard facts usually emerges after you gather information. It is not a matter of using the facts to wipe the complaints off the table. It is simply a matter of making the tension between soft and hard factors apparent.

Perspective 4: the available potential for innovation. If important changes are called for when you take over

(continued on page 4)

Constructively Analyzing the Initial Situation

(continued from page 3)

your new position, you must find out how open to innovation your company or area is. In doing so, however, you should not confine yourself to assessing the current situation. You should instead focus above all on discovering the existing potential.

Perspective 5: the resources on which you can build. Whether the company's strengths lie in the corporate culture, the products, the motivation of the employees or the strategies, you have to know the strengths on which you can build. This point is especially important if you are swamped with problems and difficulties. ■

Establishing a Set of Motivating Goals

What do employees look for in a change of leadership? If you ask employees what they expect of their new boss, you will hear vastly different answers. They look for information that will enable them to size up the kind of human being their new boss is and what personal interests he or she brings to the new position. They want to know whether it will be worth adapting to the new person.

But even when the unit has a reputation for having delivered solid work so far, one of the first questions that employees put to their new boss is whether he or she already has a plan and where their ideas will fit into it. If those changes divest the employees of authority or tasks of which they are especially proud, immediate and substantial resistance is likely.

On the other hand, employees also want, and need, a plan. A program capable of motivating employees to strive for ambitious goals must:

• Make clear that the new boss does not intend to impose some preconceived plan on the employees without recognizing the special features of their situation.

• Show the employees that it takes into account both their boss's legitimate interest in success and their own long-term interests.

• Be characterized by a balance between stability and change and demonstrate respect for significant achievements of the team.

• Be easy to communicate tangibly and inspiringly within the company and to the outside world.

Designing a Communicable Set of Goals

Most managers initiate changes near the end of the quarter, that is, around the end of the famous "first 100 days" in the job. Successful managers are able not only to look at the multitude of issues facing them but to choose the right ones as well.

That certainly doesn't mean they do what the employees want. But they should examine desired goals for their effects on employees. Experience shows that new managers should always be sure to formulate at least one stability-related goal for every three goals related to change. It is the only way to generate a positive climate. ■

Avoiding Pitfalls When Formulating Goals

Better results, lower coasts, a better climate and more initiative are typical goals challenging managers today. If goals are to be met, they have to be spelled out, and certain pitfalls must be avoided.

Mistake No. 1: Working with general goals. The general goals have to be dissected into their component parts before you can realistically assess the effort it will mean to make them part of your strategy.

Mistake No. 2: Working on urgent problems rather than on the really important ones. New managers all too often fail to correctly assess the significance of the goals.

Mistake No. 3: Considering the goals in isolation. You will find that some goals grow out of others. Furthermore, by comparing goals on your list, you will see that some of them are marginal or less critical than others. Linear thinking is a trap in these situations.

Fostering a Positive Climate for Change

An important factor is that managers who are successful at making transitions in leadership ask questions differently. Question by question, with great respect for what was done in the past, they systematically piece together a picture of the initial situation. These are called "reflective questions" because they get people to think.

Successful managers in new positions use a second group of questions as well. These are called "resourceful questions," meaning that they are questions intended to help systematically identify strengths. Therefore, ask your employees about the departmental projects they are proud of, how they managed to get through last year despite the tight personnel situation, what strengths they have honed in the last two years, what strengths they used to have and what would be needed to regain them.

What you should not do under any circumstances if you

(continued on page 5)

Fostering a Positive Climate for Change

(continued from page 4)

are interested in establishing a positive climate for change is ask about the cause of problems. It is considerably more helpful to assume that the employees have so far undertaken everything they could to solve the problems at hand.

Deal Positively With Skepticism

No matter how appreciative your interview strategies are, in many instances you will encounter a sizeable degree of skepticism among the employees. What should the newcomer do to succeed?

• **Meet the skepticism positively.** Welcome employee skepticism. It protects against exaggerated expectations and often contains a number of clues to possible obstacles that are liable to be overlooked.

• **Differentiate the skepticism.** A useful activity is to ask employees to write down on a card all the points that could block the successful implementation of a proposed strategy. What is found is that stated and unstated skepticism are not the same thing.

When people have to formulate their skepticism, many different points emerge. Also, when the skepticism is made visible to everyone in the room, a second effect occurs. The group almost always starts reacting against the skepticism and instead begins to experience seeds of optimism.

• **Beware of coming across as an optimistic prophet.** Dealing successfully with skepticism thus means keeping your own positive attitude in balance with respect for any well-founded skepticism found among employees.

Climate — the Basis of All Change

Every experienced manager knows that all the solid arguments for changes that are awaiting decisions will be of little use if the requisite climate does not exist among the employees. The image of the heroic new boss who acts quickly and assertively still exists in many companies, but these leadership strategies seldom work without the trust and support of the employees. Therefore, in your new position you will find it helpful to ask yourself these questions:

1. How much trust do the employees have in my abilities?
2. What do I know about their strengths?
3. What strengths urgently have to be developed?
4. What projects can develop the strengths? ■

For additional information on examples of reflective, resourceful or future-oriented questions , go to: http://my.summary.com

Initiating Changes Effectively

Initiating changes effectively means sending strong, clear signals for change. In signaling change, it is important to communicate at an objective as well as an emotional level, especially when time is of the essence. Employees must sense that matters are being taken seriously, and they need an indication of the many changes that will occur.

Remember, however, that the first steps need to be taken immediately after the strong signals for change are communicated. Otherwise, this experience will quickly fizzle out or degenerate into a one-off event like so many others.

Timing in Leadership Transition

Identifying the right time to initiate change is a key skill in handling a change in leadership successfully. First, you need to be sure that the organization is ready to undertake change. You should begin with such projects if: (1)discussions and meetings that you've held have prepared employees for change; (2) important key relationships that you need for a successful change process have at least begun to develop; and (3) a clear concept exists for the first steps. Experience has shown that this stage is reached after two to four months, depending on the magnitude of the tasks and the changes that are being considered.

The proverbial "100 days" is a well-known adage

(continued on page 6)

Some Obstacles to the Management of Change

The art of managers who are successful at leadership transition lies in keeping the change process going despite all the obstacles. Most problems in the management of change, however, are of your own making:

• One of the **first** and most frequent mistakes is starting without sufficient preparation.

• The **second** most common mistake made in the management of change is the formulation of vague goals.

• The **third** mistake is the adoption of an unrealistic timeline for change.

• The **fourth** mistake is made when change managers experience obstacles as disruptions or annoyances rather than as stimuli or indications of possible risks. This creates unnecessary problems for them.

• The **fifth** crucial mistake made in the course of managing change is using inadequate communication.

Initiating Changes Effectively

(continued from page 5)

expresses of a widely shared expectation: Employees want to know what is going to change. If you, as a new boss, exceed this time frame without apparent reason, you must be aware that the delay will entail a number of disadvantages:

- Expectations rise.
- You lose momentum.
- You increasingly lose the newcomer's license to challenge habits and traditions.
- You tend to become a part of the system yourself and lose your objective distance. ■

Using Symbols and Rituals

During a change in leadership, an important part of the new manager's challenge is to establish contact with a large number of employees in a relatively short period of time. After showing deference to the predecessor's symbols and rituals, however, the important thing is to make your own presence unmistakably clear. This message can be conveyed with words, of course, but better yet is to emphasize it with signs.

Symbolic management is the skillful and consistent combination of symbols and rituals into a convincing message. This is why it is important to ensure that what you say is consistent with how you behave. It is a symbolic expression of a different management style.

Changes of leadership entail a wide range of situations in which the language of symbols can be put to particularly effective use, as when the incoming manager wants to:

- Establish a strong presence and clarify the nature of the relationship to the predecessor;
- Demonstrate the new management values and style, and stimulate a cooperative approach;
- Communicate security and acceptance;
- Develop a new message; and
- Facilitate the transition to a new management style and culture.

Rituals of Transition and Change

During a change in leadership, the question that inevitably occupies the employees is: What will change? In this phase even the slightest changes are noted and interpreted. Often it is not a matter of creating new symbols and rituals but rather only of questioning one's own habits and purposely changing them.

When you have answered the following questions, you should go through them again and think about how you can support each of your statements.

1. How would I describe the ideal manager-employee relationship to strive for in this organization?
2. How do I think that decisions are best prepared for?
3. How should decisions be made around here?
4. How should people treat each other in this organization?
5. What do I believe are the most important values in the company?
6. What attitude do I expect from my employees?

It is helpful to think about how to support the desired changes by introducing new rituals, especially when you are asking your employees to let go of their deeply ingrained habits and attitudes at work. ■

PART II: CASE STUDIES

The Internal Promotion

Kristian is a mechanical engineer by training and has been a well-paid technical expert in a major trading company for 20 years. Rumors started to surface that a structural change was pending. In a departure from the old structure, the new strategy was to be linked to decentralization. The experts in the region were perplexed by this move, and the regional director encouraged them to apply for the newly created position. When none of them did, she approached Kristian and succeeded in persuading him that it would be logical for his career development to take over as head of his region.

The first difficulty arose when Kristian had to convey unwelcome news from headquarters. The technical experts were supposed to be equipped with BlackBerry devices so that they could be reached more easily and could answer questions 24/7. To Kristian's amazement, his colleagues refused. He was no longer "one of us" with the technical experts; he had become "one of them" because he had come to understand the arguments given by headquarters.

The Initial Situation

This example brings to light the situation in which managers often find themselves when they rise to a position of leadership from the ranks. The employees know their new boss, and for all the ambivalence they may experience upon his or her designation, they are usually happy that their colleague has received the posi-

(continued on page 7)

The Internal Promotion

(continued from page 6)

tion and not someone else. They tend to forget that a new role also entails new perspectives.

Typical Problems of Internal Promotions

New leaders who have been promoted internally grapple with four typical problems:

- Clear and visible assumption of the leadership role
- Delegation of tasks
- Close connection to the department
- Too much background knowledge.

What Can You Do?

• Speak with your former colleagues frankly about your new duties, and delegate tasks.

• If other employees in your department also applied for your new job, speak openly with them about the situation.

• Speak with your boss and people in other departments about issues they think need to be considered and about what is expected of you.

• State within a reasonable period of time what will remain the same as before and what will change.

• Prepare yourself for the possibility that your employees will be disappointed after an initial phase of going along with you. ■

Entrepreneur Wanted: The External Candidate

Agile, entrepreneurial self-starters and risk takers — these are the kind of people sought by companies today. Ricarda is precisely this kind of person. She therefore chose to go into production management at a consumer goods manufacturer. After four years, Ricarda was recruited to build a new line of business for a major tourism company.

The problem is her colleagues. They do not understand her business and tend to obstruct her. Because she is being advised to pay attention to corporate rules, she wonders whether this company really wants an entrepreneurial manager with drive and initiative.

The Initial Situation

Most companies justifiably pursue a human resource policy that gives preference to internal candidates for motivational reasons. They usually resort to outsiders when the necessary know-how is not available internally. The problem is that the employees feel threatened by the competition of external professionals and especially by the fact that these outsiders often take high-profile positions in the company.

Typical Problems of the External Manager

The description of the initial situation suggests where the typical problems lie for people brought into a company from the outside:

- The discrepancy between what top management expects and what the employees experience
- Time pressure and the need to get to know the organization
- The lack of an internal network of relationships
- The pressure of the external manager's own expectations.

What Can You Do?

• Treat the performance of technical tasks and the building of a viable network of relationships as two equally important responsibilities from the very beginning.

• Ask your boss whom you need to include and keep informed as you build your part of the business.

• In all your discussions, remember the necessity of getting to know the organization. ■

The Big Predecessor and the Little Successor

David had been the director of customer service for 18 years. It is no easy job for his successor, a 48-year-old engineer. The employees respect his work, but he has always been overshadowed by David. Top management chose David's deputy to succeed him because they simply wanted things to keep on running as smoothly as they had in the past.

The Initial Situation

If the predecessor retires, and the successor steps up from within the department, the new boss will generally enjoy the acceptance of the employees and find the initial situation favorable on the whole. The problem, however, is that this successor still stands in the shadow of the predecessor, and it takes time to emerge from it.

Things look very different if the "great" predecessor has suddenly left the company. The situation is different yet again when the change in leadership is accompanied by major structural changes. The successor is expected to make up for lost time and implement changes quickly. In this kind of context, the manager coming from outside the company has a better chance than the in-house candidate.

(continued on page 8)

The Big Predecessor and the Little Successor

(continued from page 7)

Typical Problems of the Successor

The successor must understand and accept that the emotional ties between the employees and the predecessor will take a long time to dissolve and that criticism of the former manager's achievements will be hard to accept. Typical problems to handle are:

- Being forever branded as No. 2
- The expectations of the employees
- The position in the circle of colleagues
- The constant comparison to the predecessor
- The weaknesses of the great predecessor.

What Can You Do?

• Plan a clean and clear transition, and see to it that your predecessor is given an appropriate farewell.

• Do not accept the invitation to follow in your predecessor's footsteps.

• Be sure to establish yourself clearly in your new position.

• Show through your actions that you appreciate your predecessor's work, while also showing interest in the work that has led to success in the past.

• Treat criticism of your predecessor very carefully.

• The new leader — whether he or she served as the former second-in-command or came in from a different company — must formulate a clear and, above all, balanced set of goals. ■

The Assignment Abroad

Philip has been promoted to head of the marketing department in an Italian subsidiary. For Philip, this new task area is a meaningful step in his career development. However, Philip can sense that the Italian employees are asking themselves whether a U.S. manager really is able to run marketing campaigns in their country.

Almost all the suggestions and ideas from the United States are immediately rejected by his Italian colleagues. Two of his key team members have already received attractive offers from other companies and have indicated they are likely to change jobs soon.

The Initial Situation

Every expatriate needs to be aware that adaptation to the host country's conventions of communication is important for developing positive working relations. Many behaviors that seem simple to change are deeply anchored in national character, so it is very problematic to expect people to adopt behaviors that contradict their traditions and values.

The most important aspects to pay attention to are communication style and conflict behavior, especially how colleagues interact with one another, how they deal with differences in status and how they share information.

Typical Problems for the Expatriate

Philip's case illustrates a few basic issues that can await an expatriate:

- Increased importance of the need to clarify the assignment
- Increased importance of the orientation phase and leadership transition rituals
- The response to cultural differences
- Increased importance of the situation to the family, spouse or partner.

What Can You Do?

• Thoroughly prepare for the new assignment, the country and the new culture.

• When you start the new position, devote the necessary attention not only to relationships but also to your cultural adaptation.

• Pay particular attention to the orientation phase.

• After two or three months, reflect on your experience. ■

SOUNDVIEW RECOMMENDED READING LIST

If you liked *The New Boss*, you'll also like:

1. ***Know-How* by Ram Charan.** Charan has developed an integrated, holistic approach to what executives and managers must do and be to become successful.
2. ***True North* by Bill George with Peter Sims.** Just as a compass points toward a magnetic field, your True North pulls you toward the purpose of your leadership.
3. ***The 360° Leader* by John C. Maxwell.** According to Maxwell, you can learn to develop your influence from wherever you are in an organization by becoming a 360-degree leader.

Conclusion

The act of transitioning is never an easy one, especially when it is a transition into a new leadership position. Nonetheless, after mastering the seven building blocks, and assessing what specific type of transition you will make into your new role, things will gradually fall into place. Strive to know the ins and outs of your organization, whether you are an insider or outsider, and forge solid working relationships with your employees. That leaves you the next steps of setting and implementing your goals, all the while making an impact within the first 100 days as the new leader. ■

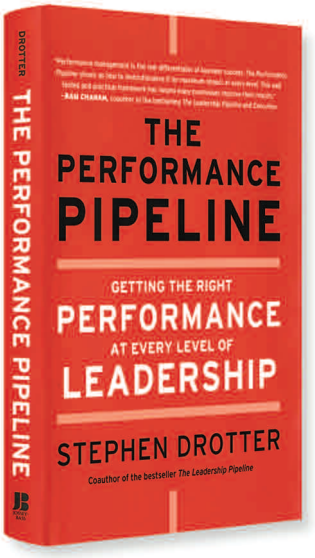
The Performance Pipeline

Getting the Right Performance at Every Level of Leadership



by Stephen Drotter

THE SUMMARY IN BRIEF

From Stephen Drotter, co-author of the best-selling book *The Leadership Pipeline*, comes the next-step resource designed to help leaders at every level succeed in an uncertain business environment. *The Performance Pipeline* is a groundbreaking book based on Drotter's 40 years of in-depth work with more than 100 companies worldwide. Drotter defines how work flows from top to bottom, and reveals what results each layer must produce and what each layer must pass down to make the layers below successful.

Drotter's Performance Pipeline method was created to be flexible and, can be easily adopted by companies of all sizes and in any industry. Using *The Performance Pipeline* as a touchstone, leaders and professionals will learn how to measure the work of leaders at every level.

Filled with illustrative examples and personal experiences, *The Performance Pipeline* shows how performance pipelines work in real-world organizations.

IN THIS SUMMARY, YOU WILL LEARN:

- How to improve business performance by defining the unique purpose of each layer and providing clarity and focus on the results to be achieved.
- How to make all leaders successful by having leaders at every layer pass down to the layers below things they need to be successful.
- How to help leaders make the transition to a new layer and how to remove performance roadblocks so leaders deliver the results required at their new layer.
- How to define and install your own Performance Pipeline to obtain the benefits of role clarity and to sharpen the focus of all your leaders at all levels.

PART ONE: THE PERFORMANCE PIPELINE CONCEPT

Four key imperatives for leaders dovetail with the changes sweeping through organizations today. The Performance Pipeline makes it possible to address these imperatives:

The First Imperative: *Every leader must spend 30 minutes to one hour or more daily in uninterrupted thought.*

The Second Imperative: *Everyone must innovate as a natural and expected part of one's daily routine.*

The Third Imperative: *Leaders must provide true role clarity and purpose for every employee.*

The Fourth Imperative: *Leaders must create an environment where sufficient focus is achievable.*

To respond to these four imperatives, you don't need an expensive "change management" program or a new CEO. Rather, a top-to-bottom architecture that distributes the accountability by layer and defines how work flows down to the appropriate layer is what's needed. The architecture, the Performance Pipeline, was developed to help leaders increase think time, encourage innovation, provide clarity and enable focus.

The Performance Pipeline architecture is based on these ideas:

- Every layer has a unique purpose.
- Every layer delivers unique results.
- Every layer contributes to the success of the layer below.

The Performance Pipeline is the starting point for leadership development and it enables delivering the right results in the right way at the right time.

Defining Your Performance Pipeline

The Performance Pipeline process consists of six steps:

• **Defining the purpose — being clear about what outcome you want.** Companies that have made the most progress in creating and using performance pipelines were clear at the outset about why they were doing it. Decide what business outcomes or benefits you want the model to deliver. It will help in choosing the right work and setting appropriate standards.

• **Collecting the data — finding out what's really getting done or, not getting done, but should be.** Considerable discipline is required when collecting data because it is the aggregate of all responses that counts. It is common to value a few people or a particular function more than others, but you need the full picture to get the best answer. Interviewers must use a standardized set of questions and be disciplined enough to ask everyone the same questions in the same way. The other requirement for interviewers is a deep understanding of what constitutes appropriate answers.

• **Sorting and codifying the data — organizing data in a useful way.** Ask yourself if the story hangs together. In other words, what conclusions can you draw after reviewing all the answers? Does the amount of time your leaders spend calling on customers suggest that leading and managing the team are taking a backseat? Does the decision-making authority seem reasonable for the expected results they described? Are the obstacles severe or just normal market conditions? The key is looking at the big picture based on all the responses rather than focusing narrowly on a single piece of information.

• **Defining the results to be delivered at each layer and the standards for measuring those results.** With six to 10 completed interviews for each layer in hand you can begin to build your performance pipeline. Start with Managers of Others (first-line managers) and follow these steps:

Step 1: Read through one entire interview.

Step 2: Pick out all the nouns, because they are the results. Nouns such as strategy, sales, teams, suppliers, expenses and people all provide "clues" as to what is important, and what needs to be spotlighted and measured in this position. Repeat this for each interview.

Step 3: Choose the work categories.

Step 4: Create column one ("Results") of the performance pipeline for this layer. Fit all the nouns into the work categories you have chosen. Make a judgment about the adequacy of the list.

Step 5: Decide what work elements are missing from the list and make any additions.

Step 6: Set the standards (column two, "Full Performance").

Step 7: Define exceptional performance (column three).

Step 8: Define the transition in work values.

Step 9: Decide what else to include in your performance pipeline. Most companies choose to identify the skills, experience and knowledge required to do the job (column four).

• **Validating the standards — getting leaders to agree.** Before your newly minted performance pipeline is put into practice, interviewees and senior management should review it. Conducting validation sessions with groups rather than individually seems to work best.

• **Allowing some flexibility — allowing different groups to adapt the standards in order to reflect specific needs.** How your performance pipeline gets used is a matter of choice based on your current needs and your feelings about what your people can absorb.

PART TWO: EXPECTED RESULTS AT EVERY LEVEL OF LEADERSHIP

Enterprise Chief Executive Officer: *Perpetuate the Enterprise*

The CEO's purpose is to perpetuate the enterprise. He or she puts in place those things that will keep the enterprise successful for as long as possible. A handful of critical results seems to make the most difference: earnings, a high-functioning team at the top of the enterprise, a strategic framework, a performance pipeline, high-level external relationships, talent, a healthy brand and an "immune system." The job is bigger than these, of course. Pay particular attention to these critical results. Results that drive the enterprise toward a successful future can be categorized for the CEO in the same way as in positions at lower levels in the enterprise. These categories are:

- Business Results — financial and customer outcomes
- Leadership Results — the human side of business
- Management Results — planning, organizing, integrating, measuring, executing
- Relationship Results — the necessary connections
- Innovation Results — new ways to add value

When you consider all these results, what's surprising is that CEOs *produce* very few of them compared to the large number of results they *enable* others to produce. This enabling portion of the CEO's requirements is where much of the confusion arises about a CEO's contribution.

This is especially true in large companies that do business around the world and in those with diverse business units. CEOs often leave the enabling results to others because they are busy appearing at glamorous events and attending to powerful people. They have little or no time for making lower levels successful.

Finding the Right Balance

When it comes to results at the top of the organization, CEOs must strike a delicate balance. Understanding what must be enabled is worth whatever effort is required. Delivering results while enabling others to succeed requires maturity as well as balance and owning the performance pipeline.

Finding the right balance between external and internal concerns is tougher than ever. Achieving the CEO's purpose — perpetuation of the enterprise — requires sustained and sustainable results produced by the entire work force. Thinking beyond themselves and their tenure helps CEOs succeed; making everyone successful helps the enterprise live on.

Group Managers: *Portfolio of Businesses*

A Group Manager is accountable for several businesses and may be called Group CEO, Region Executive or Sector Executive. Some smaller companies have only

one Group Manager; he or she might be the President or Chief Operating Officer.

Group Managers are responsible for delivering the portfolio strategy, which includes deciding what businesses the enterprise should embrace and what businesses should be abandoned. They must also build succession to the Business Manager layer to be sure qualified people exist to run the businesses.

Because Group Managers are the primary candidates for CEO, I have been closely involved with many of them in my CEO succession assignments.

Of all the senior executive positions, this one is in greatest need of role clarity and focus. All too frequently, Group Managers meddle in the business under them for want of a clear purpose.

Don't create Group Manager positions simply because you lack them, but do make sure specific executives are accountable for this layer's contributions. Many companies don't have Group Managers. In those cases, leaders who report to the CEO may be accountable for results. The needed results are core requirements and must be picked up by others. Decide who will pick up the accountability and consider the CEO as one candidate; also consider how to redistribute results responsibilities.

CEO Succession Candidates

Choosing the next CEO internally has about 10 times greater probability of success than hiring an outside candidate. Group Managers and the Chief Financial Officers are the most likely contenders.

Accepting responsibility for enterprise success, building peer and key external relationships, representing the enterprise to direct reports and partners of all kinds, and developing portfolio strategy are all crucial preparation for CEO candidates. Therefore, Group Managers must master these skills not only so they can perform their job at a high level, but so that if they are named CEO, they can hit the ground running.

Moving an internal candidate up is the best choice. If Group Managers are struggling with some or all of these requirements, however, the CEO may well conclude that new talent should be added.

If an external candidate has to be added, it is better to do so at the Group Manager layer than to recruit someone for the CEO position who lacks any internal connection. Time is needed to learn the company and build relationships before ascending to the top. With all its pressures and visibilities, the CEO layer is an extremely difficult place to enter a new company. ●

Business Managers: *Short-Term and Long-Term Profit*

This is a high-profile, much sought-after leadership position, but despite its visibility within organizations, the results for this level are often poorly defined. In fact, this is a level that receives a great deal of attention but insufficient definition. Consequently, Business Managers may appear to be doing a good job because they shine in one spotlighted area, but, unbeknownst to the organization, they are failing to deliver the total spectrum of results.

Let's start out by providing a proper definition of this role, one that is often lacking in companies. First and foremost, be aware that Business Manager positions have dramatic impact on both the incumbent and the enterprise. Incumbents tend to fall in love with their jobs. Many have told me that having direct control of the critical pieces of a business is stimulating and empowering. Many corporations recognize the importance of this leadership position, and invest heavily in development programs and career tracks to get people ready to run businesses. Given that the performance of incumbents is reflected in the enterprise share price, companies remove poor performers more quickly than they do managers at any other layer. Failure rates are second only to Enterprise CEOs.

Generally, the emphasis is on profit and the financials. It should be on building a profit-making machine — an organization that delivers under any conditions. Performance is hampered when too much focus is on the "score," and not enough focus is on learning to play the game with increasing skill.

To avoid confusion, let me clarify how I'm defining a true Business Manager. Quite simply, this is someone with accountability for profit and direct decision-making authority for both cost and revenue. Managing the trade-offs between these two requirements is especially critical; so, having only one or the other responsibilities disqualifies an individual from being a Business Manager, at least in terms of the Performance Pipeline. People running product lines are often called Business Managers, but they don't control the cost or sales, so that isn't enough; they are really Function Managers. ●

Function Managers: *Competitive Advantage*

When people are promoted to Function Manager, they are excited to be at the top of their profession in a

business. They report to a Business Manager and are part of the business team, and their peers run different functions. When only one business exists, they report to the CEO, and some double as Corporate Function Managers. Since their boss in either of these situations is probably not a product of their function, they don't get much technical guidance; they do receive business guidance that they translate into functional requirements. In turn, they provide technical guidance to the Business Manager, especially when he or she hasn't worked in the function. Facilitating business decision making with sound functional information is an important part of the role.

The primary purpose of Function Managers is to give their business a competitive advantage by delivering functional results that are better than the competition's. The business achieves its goals and improves its competitive position through the ability of the Function Manager to deliver. Unfortunately, Function Managers misinterpret their role frequently and hurt the business in many ways. This negative outcome can be prevented by building the right performance expectations.

While some Function Managers recognize the need to deliver a competitive advantage for the business, many fall short because they haven't produced the underlying results. Some of the most important underlying results are competitive analysis, knowledge of the state of the art, a high-performing organization, a work environment that supports innovation and a multifunctional thought process.

Functional Strategy Pulls It All Together

Functional strategy is the vehicle for pulling together a broad range of elements that are new when working at this layer. Function Managers support the business by defining how Business Results will actually be delivered and how competitive advantage will be achieved. The supporting platform for achieving business strategy, in concert with the others functions, is built on positioning relative to the state of the art, competitive analysis, innovation and organization effectiveness.

While defining the function's future direction — and the plans to achieve it — will benefit everyone in a function, the real beneficiaries are the definers themselves, the Function Managers. At the same time, leaders at lower layers need the functional strategy for setting priorities, giving work direction and enabling alignment. And leaders in other functions also benefit from the knowledge.

Four Key Ingredients for Successful Business Managers

Successful Business Managers I have worked with put four key ingredients in place:

1. A value proposition that customers want
2. Strategic alignment
3. Strong working relationships
4. A steady business rhythm

When Business Managers struggle to execute a business strategy, they usually fail. These four ingredients establish direction and make execution possible.

Managers of Managers: Productivity

Of all the layers, this one generates the most confusion and requests for clarification.

One problem is that people treat the Manager of Managers (MOMs) layer as if it were the layer below — Manager of Others. MOMs in every company are responsible for 90 to 95 percent of the work force; the layers above them are sparsely populated, relatively speaking. Despite this great responsibility, MOMs are often thought of as "a span breaker" or "unimportant," and that is a second problem.

In fact, MOMs are the key to a productive organization. In difficult business climates where cutbacks and staff reductions are common, they provide the day-to-day thinking, planning and leading that keep the business on track. Their ability to schedule and organize the work, their skill at breaking through silo walls so that work can flow easily and quickly, their dedication to training and developing the Managers of Others — all these tasks determine how well the business will execute. More specifically, MOMs must achieve and enable critical results, and avoid focusing on inappropriate ones.

Who Is a Manager of Managers?

Typically, Managers of Managers report to Function Managers and have Managers of Others reporting to them. Many variations of this reporting structure, which is a third problem, cause a good deal of confusion about MOMs. Starting from the bottom up, there may be a combination of Managers of Others and Self-Managers (individual contributors) that reports to a MOM. In that case, MOMs should devote most of their time and effort

toward dealing with Managers of Others. If guiding the Self-Managers takes most of the time and effort, then such MOMs really should be treated as operating at the Manager of Others level.

In large organizations, two or more layers of Managers of Managers may be found. Large data-processing organizations frequently have two layers of MOMs. Be aware that the critical results are similar for both MOM groups with one proviso: the upper level of MOMs leads the lower layer of MOMs, but typically doesn't directly manage the Managers of Others, especially when this dual grouping exists in large organizations.

In small enterprises, some smaller businesses and in functions like human resources and marketing, MOMs may be absent. In these situations, the Function Manager produces the results normally assigned to MOMs. It is equally likely that in small businesses where the founder is CEO and Business Manager, those reporting to the founder are doing MOM work, not Function Manager work. The founder/CEO in a small company often makes the product and customer decisions, signs every check as a CFO would do and complains about being overworked. In those cases the direct reports need to step up to Function Manager work.

Managers of Others: *The Enablers*

Absolutely nothing is more valuable to a Self-Manager (an individual contributor) at work than a good boss. Good bosses make the work experience more pleasant, facilitate completion of tough tasks without undue stress and answer questions. Ineffective bosses, on the other hand, make the work experience unpleasant, increase stress and leave people scratching their heads.

From an enterprise perspective, 80 to 90 percent of all employees work for a Manager of Others (MOO). So MOOs have the most direct impact of all managers on things like morale, motivation, attitude, job satisfaction, quality and employee retention. An ineffective Manager of Others makes the people under him or her unhappy, unproductive and often times resentful. Quality suffers and customers feel the impact.

MOOs make the product or service happen. They oversee the actual work at every stage of the process and are responsible for the work force that actually touches the product or delivers the service. They are accountable for getting the right workers to do the right work in the right way at the right time for the right cost with the right quality. It is not an easy job because they do their work without much say concerning what resources will be available, how much time will be allotted or what standard should be met. They are the "make it happen" link in the chain, but are often required to produce with less support than needed.

All the strengths and weaknesses of the enterprise show up on the MOO's desk. For example, if planning is done well in the enterprise, the resources MOOs need will be there. If recruiting is well done and the enterprise is a good place to work, they will have the people they need. Poor operational planning, ineffective recruiting and insufficient communication are more common and directly impact the MOO's ability to deliver. Even the best-run enterprises and businesses have problems, so the MOOs must be resourceful enough to overcome the problems and deliver the product or service. Getting a good result for customers often comes down to the ingenuity of the MOOs and their teams.

Critical Underlying Results

When you think about Managers of Others, you probably think of supervising, coaching, giving feedback and the like. Those are the inputs they make.

Delivering the right product or service to the customer at the right cost and quality is an outcome built on several critical underlying results. These underlying results collectively provide the framework for high performance by the individual contributors. While there are many results to be delivered by this layer, the following seem to make the most difference and should have highest priority:

- **Context.** When individual contributors show up for work on day one, they need everything required to get their job done. Effective MOOs define what is needed and why so that tasks make sense to the new people.
- **Connection.** This connecting goes beyond teamwork to a commitment to do what's needed to help the enterprise succeed.
- **Team capability.** MOOs coach and teach their team, and most individual contributors learn their job from their boss.
- **Completion.** It's not activity that matters; it's results.
- **Balanced caring.** By "balanced" I mean that MOOs must find the right mix of concern for company success and concern for and empathy with others.
- **Management skills.** MOOs are the feeder pool for all the other management positions in the business (Corporate Staff can be an exception).

Self-Managers: *Delivering the Products and Services*

What results should individual contributors, or Self-Managers, generate? That's a loaded question, but an important one; and it's one that often goes unanswered both for the Self-Manager and the Manager of Others. Many Managers of Others assume the Self-Manager population will know what to do if they are given the job description, have an area of specialization and are provided with general guidance. In fact, many Self-Managers possess only a vague sense of what results they are to produce. Or, even worse, they have a mistaken sense of what the required results are, and expend time and energy on the wrong things. I have included this chapter in a book about leaders to help Managers of Others understand what to ask from their people. Also, the Self-Manager population can help itself in the event their manager doesn't help them.

Self-managing employees are the biggest segment of the work force. These individuals have titles like salesperson, engineer, analyst, recruiter, dealmaker, lawyer, programmer, stylist and so on. While they manage tasks, they don't manage people. Sometimes they are asked to head a team of their peers to complete a project, but this is a temporary arrangement, not a permanent part of their job.

A wide range of skills and abilities resides in this layer. Not many businesses require only one skill set from this layer; a diverse set of skills is the norm. Diversity of skills and abilities is the one constant for this population because there are so many different kinds of work to be done. While diversity can be difficult to manage, a high level of diversity of thought, skills, experience, competence and approach keeps the enterprise from becoming too predictable to competitors or too complacent. A wide range of skills produces a wide range of results — it is what helps an enterprise excel in many areas and what gives it its unique character.

The Purpose of the Self-Manager Layer

This layer produces and sells the product or delivers the service. Beyond this central purpose, the layer adds value in other ways. While support positions may not actually touch the product, they enable those that do. In general, the Self-Manager is the least expensive layer, so they help keep the costs of products and services lower than they would be if the leadership layers had hands-on involvement. If managed properly, this layer can produce excellent results because this is where technical and professional skills reside. By building new technical skills and knowledge, Self-Managers can deliver the product or service in new or better ways. Through collaboration with their peers and management they can speed up the processes and get synergy. Direct customer contact is a big part of their work; they influence customers' attitudes through the quality of products or services, timely delivery, a positive and helpful attitude, and innovation of all kinds.

PART THREE: SUCCESSFUL IMPLEMENTATION OF THE PERFORMANCE PIPELINE

The business context in your company or business is determined by a wide range of requirements. You probably inherited some requirements that are hard to change; for instance, your founders established requirements many years ago and they're ingrained in the culture — things like their original vision, mission and values define the culture and direct performance. Most requirements, however, come from choices you or your bosses have made, such as the operating model you chose and are currently using (and probably haven't thought about enough). Operating models define how decisions are made, what processes will be used, what standards will be employed and where certain kinds of work will be done. The business context is reinforced by management practices you chose, such as how you are organized, the kind of people you recruit, the goal-setting systems you have put in place, the development process being used, the way performance is judged and recognized and what you do with poor performers. Every leader is affected by all of these variables. Context, therefore, is more than culture and is rarely neutral. It is either helping or hurting, and you need to know which requirements help and which hurt.

How to Succeed in This New Business Environment

For your performance pipeline to be effective, you may have to change some or even all of these requirements. This step is necessary to support the new performance you are after or to succeed in this new business environment. Changing any requirements, however, can be a challenge. A strong commitment to a clearly defined "change requirement" is needed. Challenges of this sort are not for the fainthearted because there always seems to be a large, vocal group of people dedicated to preserving the status quo. Also, many requirements are often implicit, making it difficult to surface them for purposes of discussion and change. Be aware that veteran

and highly influential executives are often those most resistant to changing these contextual requirements; and that this resistance can be either open or more subtle (such as passive-aggressive behaviors). To deal with this, make sure you understand what specific changes must be made, and communicate them clearly and frequently. This strategy might not melt all the resistance, but it will help you make the strongest case possible for doing so.

Enabling Layer Transitions

The model Peter Burow, the author of *NeuroPower*, and I have developed for helping people transition from one layer to the next comprises six phases. The central idea is to address the individual's needs in order that they emerge so that the emotional and rational parts of the brain work in unison and the individual feels comfortable about the transition we are asking him or her to make. By addressing these emotional and rational needs in a structured way, we can engage the person on a transformative journey from an individual contributor to a Manager of Others, or a Function Manager to a Business Manager and so on. We have to break down the emotional resistance to this transformation. The process has six steps:

1. Meaning. The individual builds meaning for the company and for himself through absolute role clarity and a new identity. The performance pipeline provides the role clarity. The required identity — being not one of the gang, but a leader of the gang and one of the leaders — has to be transitioned right at the beginning. To feel that we belong is our most basic need, and we develop our identity largely on the basis of where we feel most accepted and valued. This means bonding with this new layer is critical to the individual's transition.

2. Engagement. The individual uses the knowledge and the power of the position to empower others and resists the temptation to compete with them. This involves being less egocentric and more centered on the needs and aspirations of the team. Some help and assistance from the boss or HR may be needed and is certainly recommended. Do this badly and the individual will start competing with his team.

3. Action. The individual then creates a clear course of action and makes his intensions known. Courage is required to take actions that translate the strategy or operating plans into appropriate results-oriented actions.

4. Learning. The individual reflects, thinks and adjusts according to feedback. He must conquer the fear of failure. This involves clearly identifying the relevant business or personal principles and role requirements, and using them rather than politics to drive plans.

5. Embedding. The individual finds ways to embed in the business or organization, team-appropriate training and method improvements on gains that have been made. The individual looks at successes and duplicates them throughout.

6. Reinvigoration. The individual runs the risk of complacency when he doesn't want to lose what he has and new goals seem too hard. He may have achieved the original goals established by the boss or by the strategy. He has to move to new and probably tougher goals so that performance will continue to get better.

Implementing Your Performance Pipeline

You need to know what is happening at every level in your performance pipeline. The reports you receive aren't enough. Go see for yourself what is going on and why, and then form your own opinions about the progress and state of work completion. The Performance Pipeline helps you know what questions to ask and gives you a map of what should be happening — you know the results that are targeted, so it's simply a matter of determining if people are achieving these results.

Conclusion

Implementing a performance pipeline takes effort and commitment. Deciding what benefits you want and need is key. Understanding that the Performance Pipeline is a framework — a tool — to help you achieve those benefits will allow you to maintain your focus and energy. The Performance Pipeline isn't an end in itself; it is a means to an end: achieving your desired business performance. The pervasive uncertainty businesses are living with requires all leaders to improve their effectiveness. The Performance Pipeline can provide them with the clarity and focus that are so critical to their success. Every company can benefit when all leaders effectively pull in the same direction. When leaders help those below them succeed, everyone is a winner.

Buffett: Unabridged and Unabashed

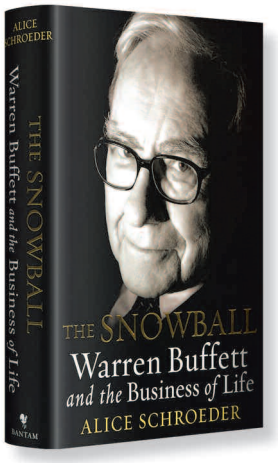
Review by Andrew Clancy

THE SNOWBALL: Warren Buffett and the Business of Life

by Alice Schroeder

Bantam Books, ©2008, 960 pages, $35.00,
ISBN 978-0-553-80509-3

These are daunting times for investors around the world. There are many individuals whose sweating palms dampen the pages of their copies of *The Wall Street Journal* on a daily basis. Others may feel apprehension before switching on CNBC or Bloomberg in the morning. However, there is one man, tucked comfortably into the folds of the Midwest, who has weathered every conceivable storm the market can create and still produced winning results year after year.



Warren Buffett, chairman and CEO of investment management firm Berkshire Hathaway (BRK), has often thrived while other investors were at their lowest. He is a model of both consistency and incredible success, and his fame reaches beyond the boundaries of the financial press. Yet there is a lot the public does not know about the man called the "Oracle of Omaha." Alice Schroeder, who became a full-time author at Buffett's suggestion, offers the first authorized glimpse into the private world of the Wall Street kingpin in the recent release *The Snowball: Warren Buffett and the Business of Life*.

While hundreds of pages have been devoted to Buffett's investing wizardry, details about his upbringing and development are less well known. He has been asked repeatedly, particularly as his age creeps closer to his 80th year, to pen a memoir and fill in the framework of a life that inspires many questions. How did Buffett begin investing? Who helped sculpt his unique approach to the market? How did one man make that much money that quickly on stocks few people ever considered purchasing?

One aspect of Buffett's life that quickly becomes apparent to readers is his ability to push off anything that would preempt him from his main motivation of increasing the value of BRK's stock. Writing a memoir would easily rank among the list of petty distractions. However, Buffett's enjoyment of a little positive publicity balanced the scales and he asked Schroeder, who had tracked BRK's progress during her days as a financial analyst, to handle the labor of telling his life story. Despite his name not appearing as a co-author, Buffett made himself available for hundreds of hours of interview time with Schroeder. The result is a massive, 800-plus page account of Buffett's life viewed from every conceivable angle.

Endless Devotion, Relentless Drive

What separates the great from the ordinary? Many would say talent. What divides the brilliant from the great? The answer may be talent combined with ambition. However, when one goes above brilliant to the realm of once-in-a-lifetime genius, there are three unique factors at work: talent, ambition and joy. It's the musician who skips parties as a teenager to gleefully sit alone and practice scale after scale. It's the basketball player who spends hours practicing the same jump shot in his driveway long after the sun has been extinguished for the day. From the moment in childhood when the genius finds his or her passion, there is a singular devotion to the pursuit of a dream that brings greater pleasure than anything else. This is the stratosphere of

> **"A young Buffett proved from his earliest moments that he was born different, and his first steps were trod on the path of capitalism."**

Mozart, Shakespeare, Einstein, Gates and a select few in the last two millennia.

If the question were posed to those in the financial realm, the majority would say Buffett deserves inclusion in this pantheon. *The Snowball* states a case from its opening chapters. A young Buffett proved from his earliest moments that he was born different, and his first steps were trod on the path of capitalism. What sort of child would claim that his favorite toy is a change dispenser like the one worn by ballpark vendors in the early 20th century? Fortunately, readers are provided with photographic proof from Buffett's Nebraska childhood that the dollar was his earliest and best playmate.

Schroeder's exhaustive look into Buffett's career begins with six-year-old Warren selling chewing gum and soda to neighbors on summer evenings. It was the pennies he received from these early deals that became the initial snowflakes of the financial snowball that gives the book its title. Readers get the sense that Buffett may have thrown himself into a life of business in part out of passion and also out of a need to escape his home life. While he loved and respected his politician father, Buffett's mother was a stern disciplinarian whose family history of mental illness may have triggered the rages she directed at Buffett and his sister Doris. It leads one to wonder whether his mother's genetic pattern clicked in a more positive way in Buffett's voracious appetite for reading and his obsessive memory for detail.

The depiction of Buffett's early years sets a pattern that is repeated frequently in *The Snowball*. Buffett is the central character throughout the book, but readers get detailed information about virtually every individual to cross Buffett's path for more than a passing moment. Family members, business partners, teachers and mentors all receive more than just a two-sentence back-story. This can occasionally cause a slight drag in a reader's progress through the book. While Schroeder possibly justifies this level of detail by demonstrating each person's importance to Buffett's journey, the question remains whether the audience can retain both interest and information throughout.

Making the Most of the Market

The biggest benefit to readers of *The Snowball* is the book's insight into Buffett's investing method. While Buffett himself would be the first to say he does not give advice on what stocks to buy, the book winds its way along the path of Buffett's development as an investor. Despite his plain-spoken descriptions of stock selection and financial analysis, one gets the feeling that like all geniuses, Buffett's path is nearly impossible to repeat. Still, the author's exploration of the relationship between Buffett and mentor Ben Graham is of particular interest. Buffett studied Graham's method of selecting "cigar butts," a term for companies that were near death but whose assets would turn a nice profit upon liquidation. These stocks proved particularly profitable because acquiring enough shares for controlling interest led to a potential win-win. If the stock was held, the company's assets could be used to leverage additional investments. If the company was liquidated, the profits from the sale could be used to fund the next venture. More often than not, Buffett held the stock and didn't liquidate the company.

The highly analytical nature of searching for these gold-plated needles among the Wall Street haystacks perfectly suited Buffett. Schroeder's descriptions of Buffett's research methods make one feel that were it not for his devotion to the dollar, he could easily have been a permanent fixture in academia. He devoured publications such as the *Moody's* and *Standard & Poor's* stock manuals and found more than his share of cigar butts. Many would accuse Buffett of being steadfast in his resistance to deviate from this method. Fortunately, *The Snowball* depicts Buffett's willingness to expand his focus for the greater cause of increasing his and his partners' wealth. Thanks to the advice of investor Herb Wolf, Buffett began to look beyond mere needles and seek what Wolf called "haystacks of gold."

One of the needles that later, thanks to Buffett, became a huge haystack was BRK. In the unique world of takeovers and mergers, BRK started life from the combination of two textile mills. When Schroeder first met with Buffett to discuss *The Snowball*, he mentioned that in moments where his own recollections failed him, she should seek information from others, then "use the less flattering version." The history of Buffett's involvement with BRK is one of the rare spots where readers may interpret Buffett's actions as bordering on less than flattering. His original interest in the company intensified once the firm's then-owner Seabury Stanton attempted to renege on a tender offer with Buffett. Money from Buffett's partnerships poured into the purchase of BRK stock and within a short period, Buffett held controlling interest and the Stanton family fled to the exit.

From the BRK platform, Buffett would turn a simple textile business into the front for one of the wealthiest investment firms in history. However, his resistance to abandon BRK's roots provides one of the best insights

revealed in *The Snowball*. The longing to be liked, embedded in Buffett since his youth in Omaha, combined with a deep sense of commitment to the workers at the mills, prevented him from rapidly closing the plants. He never wanted to be vilified as a liquidator, and this combination of fear and dedication kept the final mill running until 1985, long after most businessmen would have closed its doors. For all of his determination and cunning in the world of investments, it would be unfair of anyone to affix the label "ruthless" to Buffett.

Lifelong Partners in Success

No study of Buffett would be complete without examining the two people with whom he partnered in business and in life. *The Snowball* gives considerable space to the life and work of Buffett's late wife Susie. Though their relationship ended in a permanent separation, but never divorce, Buffett remained captivated by his wife until her death in 2004. Through Schroeder's loving tribute, readers will easily see why she held Buffett's rapt attention for the length of their time together. She was influential in leading Buffett to more philanthropic projects while remaining the consistent anchor he needed during the early years of BRK.

Susie was a champion of human rights and according to Schroeder had an innate ability to connect with nearly everyone she met. Buffett marveled at his wife's ability to get near-strangers to reveal their deepest secrets simply by showing them a modicum of compassion. While Buffett was piling up millions of dollars in investments, Susie spent her time leading the charge in various causes. In some respects, her battles were defined by the decades in which she operated: marching for civil rights in the 1960s and advocating AIDS research and treatment in the 1980s being just two instances. In each of these examples, Susie did not take the usual view of a wealthy patron who supported the cause in the form of cash, mailed from a great distance. Instead, she happily placed herself amongst those who struggled and shared a common bond that erased any pretense. Honestly, she deserves a biography of her own. One hopes that Schroeder's apparent fascination with Susie will lead the author to pursue her as subject for a future project.

While Susie Buffett was responsible for keeping Buffett's home life on the even keel he requested, it was a short, pessimistic lawyer from California who became one of his most trusted business associates. Charlie Munger, also a native Nebraskan, met Buffett at the ritzy Omaha Club in the summer of 1959. Buffett was meeting two of his various business partners and Munger, a childhood friend of one partner, happened to be along for the ride. Munger's fascination with Buffett's method of investing sprouted into a friendship and partnership. Based on the depiction of Munger in *The Snowball* as a man who respected few opinions other than his own, it says a great deal that Buffett became so highly praised so quickly by Munger. His overwhelming belief in Buffett's mission and principles provided a great boost in moments when self-doubt may have entered the picture.

The pair worked to diversify BRK's portfolio and grow the stable of businesses that it owned. Munger prided himself on the integrity displayed by BRK, largely due to Buffett's yearning for the firm to have a reputation as honest and trustworthy. Whatever venture the two investors entered, *The Snowball* demonstrates the power that can occur in a business when two talented individuals are committed to the same set of goals. Despite Munger being six years older than Buffett, readers will see that he learned a great deal from the Oracle of Omaha. However, his influence on Buffett's life should not be overlooked.

A Tough but Worthwhile Search for Tips

If there is one drawback to *The Snowball* it's the incredible amount of detail crammed into the work. Because of its length, readers may find it difficult to pick out takeaways from the text. Keep in mind that it is a biography and the legwork of learning from it falls to the reader. It may be best to start with the obvious. Buffett's investing method consists of simplicity in design but intensity in execution. Between Buffett and Munger there is the discussion of the "Circle of Competence." Investing should be limited to the areas in which the investor feels most comfortable. While this may prevent missteps in the stock market sector, the principle is not as likely to be applicable to most businesses. For those active in the market, it translates to doing diligent, all-encompassing research on the companies that fit the investor's area of expertise, then making smart decisions when putting that knowledge to work.

Buffett is also a proponent of investing in core companies. These are the firms that form the backbone of the economy and operate in industries that are unlikely to vanish from the landscape. Food and beverage manufacturers, energy companies, insurance firms and even select media outlets all remain a major part of the daily American's existence. There are those who criticize Buffett for this methodology and point to his resistance toward technology-based stocks as the trappings of an old man in a young man's game. Buffett makes no secret of the fact that, despite counting Bill Gates among his closest associates, he really doesn't understand technology. However, it's no small coincidence that he skated through the tech-stock bust of 2000 while others lost a considerable fortune.

One of the more important lessons learned from *The Snowball* is Buffett's ongoing commitment to using his fortune as a way to improve the world. Philanthropy plays a key role throughout the book and culminates in Buffett's 2006 decision to give 85 percent of his BRK stock away to a number of foundations. The largest of these gifts, five out of every six shares, would go to the Bill and Melinda Gates Foundation, already the largest charitable organization in the world. Buffett's display puts him on par with Andrew Carnegie in terms of intention, but in actual adjusted dollars, Buffett's donations could end up being as much as 40 times that of the steel magnate's gifts. When some questioned why the Gates' already enormous foundation should receive such an overwhelming amount, the answer was typical Buffett. He explained that he felt the Gates Foundation was attempting to do the most good for the most people, a principle that any investor would appreciate.

The Unknown Buffett

Readers who have little familiarity with Buffett beyond the headlines may be surprised at some of the untold tales revealed in *The Snowball*. For instance, Buffett's initial attempt to gain a position at his mentor's company, Graham-Newman Corporation, ended in an outright rejection, despite Buffett having been Ben Graham's prize pupil. The logic behind Graham's decision resided in the anti-Semitic attitudes of many financial institutions during the 1950s. In a self-created form of affirmative action, Graham was willing to overlook a sure thing in Buffett for the sake of fairness to those who had been discriminated against. It was a lesson that Buffett took to heart and only furthered his drive to promote equality in business and life.

Another aspect of Buffett's personality that threads through *The Snowball* is his impish sense of humor. Whether it was dressing as Mickey Mouse for an ABC television event or portraying any number of superheroes in the introductory film for BRK's annual shareholders' meeting, Buffett shatters the mold of the dour investor. He is more than willing to poke fun at himself and the long-standing perception that he is a cheapskate. Through each of these moments, readers get the feeling that Buffett has genuinely enjoyed himself during the various phases of his life. Despite being worth billions, there is a humility to Buffett that will likely cause readers to follow his exploits after reading the last of Schroeder's sentences.

"Whether it was dressing as Mickey Mouse for an ABC television event or portraying any number of superheroes in the introductory film for BRK's annual shareholders' meeting, Buffett shatters the mold of the dour investor."

As structured and precise as Schroeder's prose is throughout *The Snowball*, it is the moments where Buffett speaks that make for the best reading. These passages, marked by the use of italicized text, should not be missed by those readers who tend to skim their way through books of considerable length. These are the spots where the true voice of the investing genius shines through. Readers quickly realize that Buffett, at his core, is a simple Midwesterner who devoted his life to pursuing his passion. What started with a few simple flakes rolled down a hill to become a snowball the size of the moon. If history is any indicator, not even the continued warnings of a market meltdown could make Buffett's legacy lose a single drop. ●

The author: Alice Schroeder was a Wall Street analyst and a managing director at Morgan Stanley when Warren Buffett became impressed with her financial writing talents. Buffett decided to cooperate with her on this book about himself, which moves beyond his investing style to reveal his full life story. Schroeder, who was born in Texas and earned her undergraduate degree and an MBA at the University of Texas at Austin before moving east to work in finance, is a former CPA and currently lives in Connecticut.

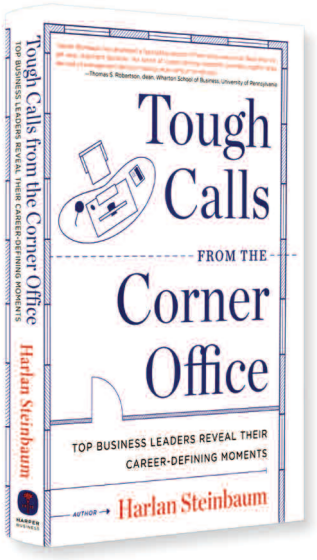
Leadership: Great Leaders

Tough Calls from the Corner Office

Top Business Leaders Reveal Their Career-Defining Moments



by Harlan Steinbaum

THE SUMMARY IN BRIEF

When former CEO Harlan Steinbaum decided to buy back his retail drug chain with his partners, his life changed dramatically. The personal impact that this one business decision — this "tough call" — had on Steinbaum made him wonder if others had experienced similar kinds of defining moments in their own careers. To find out, he reached out to some of the most successful people in the country to pinpoint the career-defining decisions that were integral to their success.

Tough Calls from the Corner Office offers inspiring stories, lessons, principles, strategies, ideas and solutions drawn from every stage in a successful career, from early key choices to the final leave-taking from the world of work. Given unprecedented access to such visionaries as Ogilvy & Mather Worldwide's Shelly Lazarus, ESPN's Bill Rasmussen and *Let's Make a Deal*'s Monty Hall, Steinbaum shares their experiences, told in their own words, so that others may learn from them.

In a time when many people are at professional crossroads, *Tough Calls from the Corner Office* offers inspiration and the confidence to believe that tough decisions can be the first step to extraordinary success.

IN THIS SUMMARY, YOU WILL LEARN:

- How hard decisions can have a reverberating impact on a company and career.
- How to prepare for the toughest calls in business.
- How to find the courage to keep going when circumstances look grim.
- How defining moments shaped the careers of some of the most successful people in the country.

Introduction

My name is Harlan Steinbaum, and I am a former CEO.

In looking back over my own career in business, I realized that among the many choices and decisions I had made, there was one that stood out above all the rest in terms of its impact on my company, my career, my family and my subsequent success.

It was the moment when my brothers-in-law and I decided to buy back the family business from the conglomerate that had purchased it from us several years earlier — and to run it ourselves once again. That decision, and the actions that flowed from it, came to define me and my life in business. My life would never be the same because of that decision. It was the gateway to my future. It was my defining moment.

The Impact of Defining Moments

A defining moment, I have found, isn't always the decision that makes the most money for the company or the person.

A defining moment is the decision or action a person takes that has the greatest impact on his or her career. It's a moment that shapes us as individuals and as businesspeople and sets the trajectory for the events that follow. It doesn't necessarily have a positive short-term outcome. Sometimes our most significant learning experiences come from our failures, not our successes.

Many of us won't know our defining moment until we reflect on our careers after the passage of time to see how certain events, decisions and judgments played out — when we can measure their effect on us and our work. That's how it was for me. Even after many years, I can still clearly see my own defining moment. It began with my restlessness and dissatisfaction with the status quo and my desire to take greater control of my future.

My defining moment put me on a path that I can look back on with satisfaction. It also taught me some important lessons.

I learned to have the intellectual honesty to face problems head-on — not rationalize them away or try merely to manage them, but to get to the sources or causes and then figure out a way to eliminate them.

I learned that hiring the best people pays off.

With cash flow tight, I learned to be careful and tough-minded when it came to management and planning. Only with great discipline and tight control could we have grown and prospered through the early, fragile years of the repurchased company.

I also learned that in business you never do anything alone. ●

The Road Taken: Making Key Career Choices

Defining moments often come during periods of transition, when the atmosphere is charged and the business environment is changing. It's at these times that leaders step forward and make their mark.

Another kind of transition, however, has little to do with company or business issues, but instead involves personal career issues. It's a defining moment that occurs when we look inward and begin to ask questions like: What do I really want out of my professional life? What

are my goals? What's going to make me happy?

Few of us really know what our professional goals are from the start. Stories of major changes in midstream or several changes over the course of a lifetime are the norm, not the exception.

As diverse as these stories are, an important common thread runs through them: At some point these people figured out what really made them tick, and they let that insight guide their decisions.

Some people find it easy to figure out what excites them professionally. Monty Hall, the famous game show host and producer, knew from the beginning that he wanted to be in the entertainment business. But for many of us the difficulty of getting to a useful and revealing analysis of our professional goals is separating what everyone — family, friends, society — tells us is important from what's actually important to us personally. There are a lot of red herrings out there, and sometimes it can take a while to figure out where our own true north lies.

Danny Meyer: Union Square Hospitality Group

Without Danny Meyer, New York would be a far less tasteful place. As head of the Union Square Hospitality Group, he runs a group of highly regarded Manhattan restaurants that are visited by tens of thousands of discerning diners each year.

Meyer's career in the restaurant business almost didn't happen. It was almost a road not taken. As a young man out of college, he started in sales at a company that developed electronic article surveillance security systems. An offer from his employer to take on a bigger, more important role in the company forced him to make a tough decision: Should he stay with this career and start moving up or should he move on? The situation was a turning point for Meyer, but he almost turned in the wrong direction.

Meyer struggled to make the right choice. He weighed his passion against more practical and typical career considerations. His emergence as one of the most successful restaurateurs in the world certainly validates his early decision and suggests to all of us that following one's heart is the surest way to a satisfying career. ●

Leaving the Mother Ship: Taking the Entrepreneurial Leap

When is the right time to take the entrepreneurial leap? Everyone says to the would-be entrepreneur, "Go for it. Chase your dream." Of course they say that — it's ingrained in our DNA to support pioneers and explorers, and nobody wants to get in the way of someone else's dream. But unless your advisers are jumping off the cliff with you, that advice should be taken with a big grain of salt.

When professional investors look at a business plan, they do it coldly. And that's the way entrepreneurs should look at their plans too … that is, if they possess the ability to critically self-assess.

Bill Rasmussen: ESPN

Bill Rasmussen exhibited the entrepreneurial spark as a young man just out of the U.S. Air Force. Working briefly in the advertising department of Westinghouse, he saw an opportunity to provide better work and greater value for the company as an outside contractor. He promptly quit, set up a company and secured Westinghouse as his first customer.

Rasmussen became the consummate entrepreneur — a visionary with unlimited energy and passion. Throughout his career he has shown that he can conceptualize a new and exciting business idea and then bring it to life successfully.

Rasmussen is willing to break the rules and push the boundaries, as he did when he started ESPN, the 24-hour cable sports network. There were times when he didn't quite know how to get to the next step in his quest to start a cable sports network, but his guts, his brilliance and his willingness to take risks got him through and on to the next step. Eventually he figured things out and made history.

Rasmussen's risks paid off for himself, his investors and legions of sports fans. He elevated sports news coverage to a new and sophisticated level, and he brought thousands of sporting events — some heretofore obscure ones — front and center in the American consciousness. He put cable sports on the map. ●

Total Fulfillment

Bill Rasmussen and his investors sold ESPN in 1984 to the ABC television network for $237.5 million. At the time, Bill and his family owned 12.32 percent of the company. He could have hung on longer and made even more money in the business, but he chose not to. People ask Bill, "Don't you feel bad that you got out so soon?" And he tells them, "No, I've lived an amazing life since 1984, and I have found total fulfillment."

Love and Marriage: Finding or Shedding Business Partners

Many executives say that finding the right business partner (or getting rid of the wrong one) was the defining moment of their successful career.

Business history provides many examples of great partnerships. In fact, it's interesting to speculate on whether Microsoft would have become the giant that it is today if Bill Gates hadn't partnered with his friend Paul Allen to found the company back in 1975. Or look at the history of Apple. The charismatic Steve Jobs and the computer genius Steve Wozniak each brought different, powerful capabilities to Apple when they started the company, resulting in a legendary success story.

The Imperatives for Partnerships

For a business partnership to work, there are usually four imperatives: aligned goals, complementary capabilities, compatible personalities and an explicit mutual understanding.

Having aligned goals means that the basic objectives of the business are the same for all parties. It's really about how the business will be managed, where it wants to go and how it will get there. In a partnership with the goals aligned, if one party acts in his or her own interest, it benefits both parties. That's a good outcome. You're not just banking on a statement or a contract to keep things in check, but on human nature.

Building a team with complementary skills and qualities is another key factor, and one that is often overlooked because most of us are more likely to entrust our business to people who are like ourselves. But companies don't need a team of clones, no matter how good they are at something. In most successful partnerships, the partners bring different skill sets to the table.

While differences in capabilities are an asset, differences in attitude can be a red flag. Whether or not the partners have compatible personalities might be difficult to determine upfront, but it is as important as any other factor. And for individual partnerships especially, mutual and complete trust is a must.

A business partnership is really like a marriage. It is intense. And while there's probably nothing less romantic than a prenuptial agreement, the business equivalent is strongly encouraged. Any prospective business partner who recoils at the suggestion of explicitly stating roles, responsibilities and goals or planning for contingencies in the event that things go awry might not be the right partner. The longer a partnership goes without a common understanding of how to handle different circumstances, the more fertile the ground for dysfunction. Left unchecked, dysfunctional situations can evolve into bizarreness that is accepted as normal. ●

Betting the Farm: Risking Success for More Success

Being in business is being at risk. Granted, it used to be easier to tell the secure companies and industries from the risky ones. If the financial crisis that started in 2008 told us anything, it's that the ground can shift quickly in ways that fundamentally change the economic landscape.

Businesspeople take risks for any number of reasons. Some go looking for it, chasing the big opportunity. Others simply accept it as part of the business landscape, taking calculated risks only when necessary. Then there are situations or crises that demand a response; it's not a question of deciding whether a risk should be taken, but choosing which risky path to take.

In 1963, along with his partner Stefan Hatos, Monty Hall created the most successful game show in TV history — *Let's Make a Deal*. The show was an instant hit, but Hall's deal with ABC gave the network most of the money. Unwilling to let that continue, he decided to take on the network. It is tempting to call this gambit "Monty Hall's Big Deal" — which, in many ways, it was. Suffice it to say, it was his defining moment.

Monty Hall: *Let's Make a Deal*

Hall explained: "We had an offer from some people to put the show into syndication. My partner and I told my agent, 'We'll stay on ABC during the day, but we want the right to put the show into syndication at night.'

"ABC said, 'Absolutely not.'

"What happened next is the critical junction in my career. My partner and I were sitting in my agent's office, and I said, 'If they don't give us permission to take the show into syndication, we're not going to do the daytime version with them.'

"My agent said, 'Are you crazy? You have to do the daytime show.'

"I said, 'No. I'm not going to do it. We've got some power here. We're the most successful show they've got, and I want the freedom to sell the show for nighttime syndication.'

"When you syndicate a show, you can sell it to any station in any market that you desire. And the big money made in television is through syndication.

"My agent shook his head. He said, 'You're crazy,

you're risking your entire career.' My partner Stef Hatos said, 'Monty's right. We'll do what he wants.'

"So we phone ABC, and this is the conversation:

"'If you don't give us the rights to go into syndication, we will not be at the studio tonight to tape. You've got until 5:00 PM New York time to let us know whether we get syndication or not.'

"I got off the phone and you should have seen the look on my agent's face. Nobody ever talks to a network like that, ever! My partner and I went to my house in Los Angeles and we waited for the phone to ring. At 2:00 PM Los Angeles time (5:00 PM New York time), nothing happens. There's no call.

"My wife comes into the room. She looks at the two of us and says, 'Well, you challenged them and you lost.'"

'OK, You Win.'

"At 2:20 PM Los Angeles time, the phone rings, and it's the head man of ABC calling me from New York. He says, 'OK, you win. But you've got to do one thing for us. You've got to let ABC be the syndicator.'

"I said, 'OK. I don't care who syndicates the show. We've had offers from other people, but we'd rather do business with you.'

"Then we went to the studio that night and taped our daytime show.

"I risked everything I had — my entire career — on this one decision.

"My partner said, 'Monty, you are really gutsy.'

"I'll tell you now, that was an understatement, because I risked everything I had worked for on that day. But it ended up working out. Our show went on to become one of the most successful game shows in TV history. The daytime show ran for 27 years — the syndicated version only a few years." ●

Hearts and Minds: Creating a New Corporate Culture

When David Farrell became chairman and CEO of May Department Stores in 1979, the company and industry were at a crossroads. New competitors and shifting trends were challenging the old business models; shopping centers were saturating the marketplace; families were moving to the suburbs (many of May's stores were in old downtown locations); and specialty retailers as well as discount stores were popping up and growing at a rapid pace.

May was not keeping up with the new selling environment, and its numbers reflected it.

David Farrell: May Department Stores Company

Farrell had another big problem. May had grown mainly by acquisition as the company purchased many family-owned department stores around the country over the years. Management control of this growing, disparate entity had not kept pace.

For the most part, the families continued to run these businesses, and they ran them all differently and sometimes not very well. Many were weak in all vital areas: products, merchandising, presentation, operations and control. Because it remained so decentralized, May's management was unable to bring any kind of unified vision or strong direction to this collection of stores.

'The May Mission'

When Farrell took over, he instinctively knew this had to change, and that meant transforming the company from a collection of quasi-independent operations to a united company committed to a culture of excellence, high expectations and high performance. His vehicle for accomplishing this was a plan called "the May Mission."

Farrell's defining moment came with the development and adoption of the May Mission. He turned to some of the best minds in management, the prestigious global consulting firm of McKinsey & Co., to help him develop the mission and plan for its rollout.

Consultants can provide sound and even brilliant advice. But when they're done with the project and the report is written, they move on to the next client. Often they are not there when the client begins to implement the plan, nor are they around for the aftermath, which is not always pretty.

By using consultants, Farrell chose a direct but potentially risky path. He introduced a plan created "from above" by consultants and a small group of senior management and then asked everyone to support and implement a plan they did not participate in creating and had not been asked to approve. He knew he'd be swimming upstream, but his instincts told him that this was the only way to make a radical and necessary change in the way the company was run.

In total, Farrell was with May for 46 years. When he started, volume was between $300 million and $400 million; when he retired, it was $14 billion. May was sold to Federated Department Stores in 2005 for $11 billion. ●

The Mother of Invention: Transforming the Company's Business Model

Shelly Lazarus describes herself as passionate. She is certainly passionate about her work and her family. She would like to be remembered as someone who had a successful career and a successful marriage and who was able to be a good mother without sacrificing anything of importance in her business or family life.

Most objective observers would agree that she has accomplished all of these goals and then some: She has a happy, long-lasting marriage and a fine family, and in her career she rose to the pinnacle of the advertising world as head of Ogilvy & Mather Worldwide.

Shelly Lazarus: Ogilvy & Mather Worldwide

Lazarus said: "There have been several key moments in my career.

"The first was a personal decision to go back to work after I had a third child.

"The second, from a company point of view, was when I made the decision to run Ogilvy Direct, the direct-marketing arm of our firm. I volunteered to go and run it at a time when it was looked at as sort of a poor sister by the rest of Ogilvy. It didn't have the status that advertising had. In a way, it was thought of as just being about 'junk mail.'

"Another critical decision occurred in 1996 when I was asked to come back and run the advertising agency four years after I left to run Ogilvy Direct. We had been acquired by WWP Group, an English company, in a hostile takeover, and now the advertising agency was completely falling apart. The takeover had been a traumatic event for the company, as it is for any company. The new owners had gone through three different CEOs, and the company was a mess, with terrible tension between the acquirers and the people in the agency.

"The easy decision for me would have been to just stay over at Ogilvy Direct, where things were going swimmingly and I wouldn't have to deal with all this turmoil. But at the end of the day, I thought, if these guys in the ad agency didn't survive, then Ogilvy Direct wasn't going to survive either. So I went.

"I don't think I could have accomplished what I have if I weren't passionate about what I do. If you don't like what you do, you're not going to be successful at it, I don't care how hard you try." ●

Sea Change: Repositioning, Refocusing and Renewing a Business

It's one thing to change the way you go about competing in your market, and it's quite another to shift to a different market altogether.

The Angelica Corporation that Les Loewe began working for in 1947 was in the work-apparel business. Its focus was manufacturing, marketing and selling uniforms for workers in a variety of industries, including restaurants, hotels and hospitals. The company also sold uniforms to railroad employees and workers in the food-processing industry.

From 1960 to 1980, Angelica acquired a number of small companies in the United States and Canada that amounted to a hodgepodge of uniform and linen businesses — a textile mill, small uniform-manufacturing firms, retail uniform stores and mail-order marketers — all operating with varying degrees of effectiveness and profit. Supervising these businesses, a number of which should never have been acquired, was Loewe's job. He performed this role at a high level for nearly seven years, and he rose steadily at Angelica and was named CEO in 1980.

Les Loewe: Angelica Corporation

Loewe's defining moment took approximately one year to materialize, and it started after he determined that the Angelica uniform company needed to be repositioned and rebranded so that it could reach its potential. In the ensuing 10 years, he more than succeeded as Angelica began to operate as a unified company with a strong corporate identity and a clear mission. Loewe managed to increase the company's annual sales to just short of $500 million and raise the share price from $3 to nearly $30.

Loewe explained: "The breakthrough event for the company, as well as me personally, came when I decided we needed to position ourselves as a health services company and to shed the market perception of us simply as an apparel firm. We were performing well as a company, but we quite clearly were neither leveraging our strengths nor unlocking our potential value. What we needed to do was focus our brand and future growth on the fast-growing and highly valued health services sector."

'A Defining Achievement'

"It took about a year from that initial realization to the market's positive response. When I look back and take all of these events into account, that decision, and

the subsequent implementation of it, was a defining achievement. We dramatically enhanced the value of our stock and our perception in the marketplace." ●

When to Fold 'Em: Knowing When It's Time to Step Aside

Bert Walker never gives up, despite setbacks, despite disappointments. Probably the most significant setback he ever experienced was when he was rebuffed by his father in his attempt to convince his dad that it was his time to run the family business, the investment backing firm of G. H. Walker & Co.

While very disappointed, Walker remained loyal to his father but was still determined to make a mark for himself. He settled into a subordinate role and worked hard to make a difference in the company.

Walker's time did come, but only when he left the confines of the family business after it had been merged into a larger company. Walker later joined a different firm, Stifel, Nicolaus & Co. After only two and a half years, he was rewarded for his contributions by being named president and chief executive officer and later chairman of the board. Now he had the opportunity to lead a business and he did so with gusto. He grew the company, made numerous smart acquisitions and built Stifel's capital markets and brokerage business.

As successful as he was, Walker's defining moment is not about his accomplishments in business, but about leaving the business world behind and beginning his life's second act at age 61. With fortunate timing, he chose the moment to end the business phase of his life, placed the business in the hands of a superb successor and began a new life devoted to family, community and national service.

George Herbert Walker III: Stifel, Nicolaus & Company

Walker explained: "My most important decision came … in 1992, when I decided I would not continue as the chief executive officer of the investment banking firm I was then running and handed over the reins to a successor.

"Then, in January 2003, the president — George W. Bush — came to St. Louis to make a speech. I was invited to go out and meet him, along with three others, at the airport. He said to me, 'Do you want to ride down in my limousine?' I said, 'Yes, sir!' Just the two of us were in the limo, and we chitchatted for a while, and then he said, 'Hey! Is it true you could be interested in serving abroad?' And I said, 'Yes, we sure would be very excited about that.' And he said, 'What country would you like to go to?'

"I said, 'Oh, Mr. President, wherever you think we could be of service.'

"He said, 'Great. I'm so glad to know you're interested. I will do some work on this when I get back to the White House tonight, and you'll be hearing from us.'

"A week later the White House called and said, 'We've decided to send you to Hungary as the U.S. ambassador.' In fact, my wife and I were not even sure where Hungary was on a map.'"

'A Wonderful Experience'

"In July 2003, we went to Hungary, and I spent just under three years there as ambassador. It was a wonderful experience. What I was particularly pleased about is that at the end of the three years the government gave me one of the highest medals they give for outstanding service, and two Hungarian universities gave me an honorary degree." ●

Paths to Service: Defining Moments That Transcend Business

If you are in business long enough, you'll probably become involved in community service in one way or another. Usually you do it because you want to help out and give something back, although sometimes you're just trying to live up to what's expected of you as a local business leader. Regardless of how you get there, community work goes with the territory and can be highly rewarding in many intangible ways — and often it's more rewarding than business itself.

General John W. Handy: U.S. Transportation Command

General John Handy's life and "business" have centered on service to his country. Starting out as a pilot in the U.S. Air Force, and trained to fly its giant transport and cargo aircraft, Handy moved on to numerous USAF management jobs of increasing importance and complexity. His military career spanned 39 years, with almost six years of service as a four-star general.

As a leader in the military, Handy dedicated himself to his missions and to his fellow servicemen and –women rather than to the corporate concerns of profits, margins or shareholders. That is not to say that he could afford to be unconcerned about the financials of his organization — they are impressive — but they were not his first

priority. His primary mission was safely moving all personnel and material around the globe for the Department of Defense. He carried out this challenging task not only for all the armed services, but also for many government agencies.

General Handy sees a series of decisions he made during his time as head of the U.S. Transportation Command (USTRANSCOM) as the events that defined him. While many of us in business sometimes think that the decisions we make in critical moments are matters of "life and death" in their importance for our companies, that is, of course, not literally true. For Handy, however, it was.

It turns out that he made good decisions, ones that military families throughout the country can be thankful for and that our nation as a whole can be proud of. ●

Conclusion

These executives' defining moments are filled with lessons for the rest of us. Their stories are valuable collections of guiding principles for anyone aspiring to be a leader. Of course, each story has a unique setting and plot, but they share some important and universal principles:

- **There's no substitute for strong leadership.** Leadership is the ability to set a direction and motivate people to move in that direction. It's about getting them into a mindset in which they put their reservations aside because they genuinely *want* to follow the mission. You don't always get to make important decisions under ideal circumstances; often they are made in a fog of uncertainty or even chaos. Any effective leader must be comfortable operating in any environment.
- **Ethical behavior is not just right, it's smart business.** For every deal point, negotiating position, higher price or other advantage you might give up by being ethical, you'll get it back in multiples for doing the right thing and the moral thing. Every business leader featured emphasized honesty and integrity in his or her dealings.
- **Always have a plan.** Planning is not about tying yourself down to any particular set of steps. It's about disciplined thinking — forcing yourself and your team to work through issues so you're prepared to either follow the script as it continues to make sense or go off in new directions as necessary. Planning is about imagining the future and, when circumstances change, re-imagining it.
- **Be comfortable with risk.** Business is about risk management, which means you are constantly analyzing and assessing new scenarios. If you are truly risk-averse, you probably don't want to be the boss.
- **Know yourself and follow your heart.** Every good leader must have the courage to go against the pack, or even against the advice of respected advisers, family or friends, if his or her internal compass is pointing in a different direction.
- **Take responsibility.** Step up and be willing to shoulder the burdens of your actions and your decisions, whether they turn out well or poorly. When the outcomes of your actions become clear, it's fine to take credit where credit is due, but it's also important to accept the blame when it all goes wrong.
- **Never stop learning.** Sandy McDonnell, in his quest to transform McDonnell Douglas into a professionally run organization, consulted with many people, perhaps most significantly with Reginald Jones, the chairman and CEO of General Electric, to learn how he would approach the same management situation.

Faced with any difficult business or career decision, you are ultimately on your own. Nobody can definitively tell you the right answer. But by broadening the inputs and listening to the voices of those whose journeys have taken them to similar places, you can find comfort, direction and inspiration for the moments that will determine your course — and on those rare and special occasions, those moments that will come to define you. ●

Ethics at Time, Inc.

Reginald Brack of Time, Inc., spurred on by his sense of ethics and fair play, forced cultural changes that emphasized a new set of values, including promotions based on merit, discouraged the three-martini-lunch culture and disenfranchised the good-old-boy network that had a stranglehold on the company.

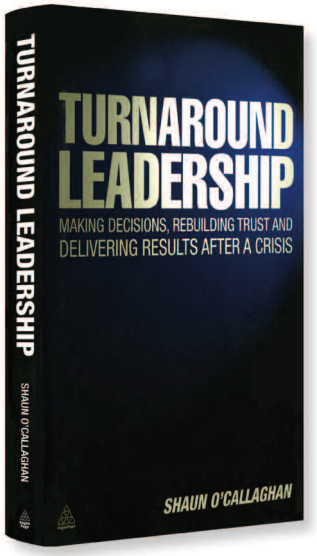
Leadership: Strategies



Turnaround Leadership

Making Decisions, Rebuilding Trust and Delivering Results After a Crisis

by Shaun O'Callaghan

THE SUMMARY IN BRIEF

Crises come in all shapes and sizes. They could be the result of a shift in consumer spending habits, or system-wide problems arising from a recession. The simple fact is that if you are in business for any reasonable period of time, you will have to manage and lead through a crisis.

Turnaround Leadership can help you plan a successful recovery after a crisis. Not only will it enable you to rebuild your business through developing the skills required during a recovery, it will also help you to identify the causes of a potential crisis so you can avoid one in the first place. It starts by looking at exactly what a crisis is and what can cause one. It then concentrates on the key areas of leadership expertise you need to master in order to be more effective in recovering after a crisis.

Turnaround Leadership will give you the tools you need to make the right decisions and lead your staff in this new environment. It will help you to effectively communicate those decisions with your customers, investors, lenders, suppliers and employees. It will also show you how to deliver better results so you can get your business back on track.

IN THIS SUMMARY, YOU WILL LEARN:

- How to make the right promises.
- How to gather multiple viewpoints.
- How to develop core business skills.
- How to deliver results through relationships.
- How to rebuild trust with authentic communication.

Leading After a Crisis

Any company that is being built to exist for more than a generation will have to go through periods of significant market uncertainty and suffer recession or business crisis. Any manager who wants to take up a leadership position will face a business crisis at some point in his or her career. In fact some leaders make it their career to help companies recover from a crisis. The simple fact is that if you are in business for any reasonable period of time you will have to manage and lead through a crisis.

Five Areas of 'Leadership Expertise'

There are five areas of "leadership expertise" that a manager can seek to master to be more effective in recovering after a crisis:

1. Making the right promises.
2. Gathering multiple new viewpoints.
3. Developing core business skills.
4. Delivering results through relationships.
5. Rebuilding trust with authentic communication.

As a leader after a crisis you must decide what, if any, promises to make and to which stakeholders. In periods of crisis and their aftermath there will always be higher levels of uncertainty about the future. Perversely, in such periods of heightened uncertainty people crave more uncertainty. Everybody asks for more and more detail, and budgets and forecasts are redone at more frequent intervals.

In such circumstances understanding the perspectives of your customers, investors, lenders, employees and suppliers is a key part of devising, communicating and delivering a successful recovery plan.

The second area of leadership expertise is gathering multiple viewpoints. It is often the lack of a fully rounded view of the issues that results in a business crisis. As you plan to emerge from the immediate impact of a crisis it is essential that a diverse, but appropriate, range of viewpoints is gathered to inform your recovery plan, communication and implementation. A critical aspect is not just gathering the differing viewpoints but being able to understand how the viewpoints interact with each other.

The third area of leadership expertise is developing the core business skills that will help you make the right judgments and plans for a recovery. These may be skills that you have already developed and use in "normal" business circumstances, but their application to a post-crisis environment may require you to refresh your insights.

The fourth area of leadership expertise covers how you can affect the delivery of business results. At a certain tier of management you become unable to directly deliver results through the impact of your own efforts. At this point working longer and longer hours, with ever more intensity and enthusiasm, will not produce the returns that it did earlier in your career. By this stage you will need to have made the transition from delivering results by yourself to enabling other people to be more capable and motivated in their jobs.

The fifth area is rebuilding trust with authentic communication. The first four areas of leadership expertise require skilled communication to rebuild trust with people inside and outside your organization. To be effective such communication needs to be authentic. ●

What Is a Crisis?

Failing to recognize that you have a crisis will prevent you and the rest of your management team from starting to take the actions necessary to manage and recover from it. A dictionary definition would say that a crisis is a time of intense difficulty or danger.

In medical terms a crisis is the turning point of a disease, when it becomes clear whether the patient will recover or not. The origin of the word crisis is from the Greek *krisis*, meaning "decision." In order to produce a practical business definition of a crisis it helps to focus on two parts of these different definitions: the concept of a turning point and the danger the problem poses.

The working definition of a crisis used here is when stakeholders change their view on an important assumption they are making about your business; or when you as a business fail to deliver on one of your promises.

Triggers of a Crisis

Using this definition provides us with a way to start to identify the risks within your business that could trigger a crisis. The first steps to take are:

- Identify the key stakeholders.
- List the critical assumptions made by each stakeholder.
- List the promises made by the business to each stakeholder.
- Consider the danger caused by a change in any assumption and/or any broken promise.

The first stage in completing these steps is to agree who the key stakeholders are within your business. While political correctness may prompt you to list a large number of interested parties, focus on the top five or six. Involving more diverse views from across the whole spectrum of your organization and its partners may flush out a stakeholder that you had not considered important before.

The next step in defining what could trigger a crisis is to list the critical assumptions that each important stakeholder is making. At any one time each of your stakeholders will have made certain assumptions about the future based on their view of what is likely to happen.

Identify and List Important Promises

The third step of the process is to identify and list the important promises that have been made to each stakeholder. It is necessary to distinguish between assumptions and promises. Assumptions are made by a stakeholder about your company, sector or the total economy. In contrast, a promise to a stakeholder is made by a manager.

Many Types of Crises

Crises can come in many shapes and sizes: system-wide and sector-specific problems can arise from a recession, technology changes that render a business model obsolete, regulatory changes and shifts in customer spending habits. Company-specific problems may result from poor strategic choices, lack of financial discipline, failed implementation of an IT project or self-inflicted damage to a brand.

The last step is to consider the consequences of a change in other people's assumptions and/or the breaking of promises made by the business.

Analyze the potential triggers of a crisis. A thorough analysis using stakeholders, assumptions, promises and danger level is quite involved and may even be a deliberately harsh definition of an impending crisis. It is harsh because it may sound the alarm bells on an impending crisis earlier than you think is necessary. But a harsh definition is more likely to alert you earlier to problems and possibly prevent them from becoming a full-blown crisis. The Titanic sank for many reasons, but part of the cause of management complacency at the White Star Line was the assumption that the ship was unsinkable.

External Causes of a Crisis

We can examine a crisis by looking at the underlying assumptions and promises that a business has made and seeing what caused stakeholders to change their opinions on those assumptions and promises. We can split the turning points into those primarily driven by external factors and those resulting from how the business is managed.

The four external factors to consider are: economic cycles; customer priorities; product, technology and business model innovation; and outside intervention.

Economic Cycles

For a business leader, trying to predict the timing of a downturn is not necessarily the best use of his or her time. Perhaps the old maxim of "hope for the best but plan for the worst" is a useful motto for managers.

Do not assume that today's economic circumstances will continue forever when things are good, or get better quickly when the economy is bad. Whatever the circumstances, you will be at a competitive advantage if you generate more of your cash flow needs from internal sources.

Customer Priorities

The second possible external cause of a crisis relates to the spending intentions of customers and consumers. Such changes in the normal course of competitive business should not be an external factor that causes a crisis. If it does become a crisis this is because management has been insensitive to the changes in the market that have been happening and have failed to react to them. The factor we are looking for here is the risk of a sudden change in spending patterns that would be much harder for a management team to predict. Hence this factor may be more of an outlying risk of causing a crisis but it can have a dramatic impact if it occurs.

A change in consumer sentiment about their wealth and continuing employment can cause rapid changes in spending decisions that last for many years.

Product, Technology and Business Model Innovation

The third area of external change that could generate a crisis is in the area of innovation.

As with potential changes to customer spending priorities, the normal cut and thrust of competition will produce a continuous flow of innovations that managers have to anticipate, be sensitive to and responsive to. This normal level of innovation is something that a leader should expect to have to manage and on its own is not a driver of crisis. Failure to respond to market innovation will create a crisis if management is too optimistic in its assumptions or insensitive to what is changing.

Outside Intervention

The last driver of a potential crisis from an external perspective is when a regulator, government or legislator changes the rules of the game for a specific company, a sector or the economy as a whole. These types of changes can result in sudden and cataclysmic impacts that have terminal consequences for a company. Why? Because a critical stakeholder has removed a company's license to operate or ability to trade profitably and management has very little time or few ways to respond. This is a perfect crisis that management did not see coming and its impact on value can be enormous.

Internal Drivers of a Crisis

We can itemize four causes arising from within management that contribute to a crisis-generating turning point. They are broken promises, corporate breakdown, management optimism and lack of sensitivity.

Broken Promises

The seeds of a crisis germinate at the point where a key stakeholder changes a critical assumption about a business and/or when an important promise made by management is broken. You will need to identify potential internal drivers of a crisis. Understanding what promises have been made is a good place to start.

Many companies that have made it through a crisis did not have a complete or up-to-date schedule of all the critical promises the business had made to its stakeholders. The first question must be whether your business knows what promises have been made, and how and when those promises are reviewed and assessed.

Always keep a register of the promises you make and, as importantly, investors might think you have made.

Corporate Breakdown

The second internal driver of a potential crisis is some form of corporate breakdown.

There are at least four traits of a business that a leader can monitor to help identify such breakdowns from a system-wide perspective:

- *No 360-degree view.* Decisions are made at a boardroom level without a genuine understanding of how the business actually operates.
- *Unbalanced economics and incentivization.* A business model, product or promise works in the short term but is a ticking time bomb that remuneration policies obscure until too late.
- *Management optimism.* Leaders are always assuming that things will be better than they turn out to be and responding too late to adversity.
- *Lack of sensitivity.* Managers do not scan their environment, market and business effectively enough to pick up on emerging trends and threats.

Devoting some serious management effort to these four areas can make a worthwhile impact on the incidence of serious corporate breakdowns.

Management Optimism

The third internal driver of a crisis is the predisposition of many managers to make over-optimistic assumptions about the future; it is a common trait in relation to identifying potential corporate breakdown.

Unhealthy optimism is found in leadership teams that make assumptions about future sales, margins, costs and cash flows that push middle managers to make poor resource judgments.

A word of warning. A leader who is displaying unhealthy optimism will often not recognize it, confus-

ing the need for a positive mental attitude with unhealthy optimism and, when the issue is raised, will shoot the messenger.

Lack of Sensitivity

The fourth driver of a crisis is where leaders and managers think they are sensitive to changes in the market but actually miss critical trends and changes. Such a lack of corporate sensitivity can manifest itself in being slow to understand changing customer needs, expanding too slowly or too fast in new countries and markets, in losing staff as ways of working change, or in being unable to set the right cost base.

Being sensitive means continually scanning the market and your own business to pick up emerging trends and issues. It is also the ability to make sense of disparate sets of conflicting data and take some action as a result.

Where to Start After a Crisis — Making the Right Promises

In the normal course of business, a leader is constantly making and trying to deliver on a set of promises to key stakeholders. The challenge is to try to give a reasonable return to all stakeholders. The choices of what promises to make and, critically, the delivery against those promises make up the fundamental core of what a business does. In many ways, you could say that the principal role of a leader is to make, balance and deliver business promises. Such promises could include:

- What can I promise to investors and lenders to attract and retain the right financing?
- What will customers expect and require from our company in order to buy from us?
- How can I attract, motivate and retain the right people?
- What will suppliers want from me, and what can I promise them?

Consider the interactions between four categories of stakeholders: customers, investors and lenders, employees and suppliers.

A crisis will destabilize the positions of the different stakeholders and restrict your ability to deliver on the promises previously made. To help with the start of your planning after a crisis spend a little time thinking about each of the key stakeholders, how they might feel and the promises you might consider making them:

- **Customers.** For a promise to customers to make business sense it needs to provide value to them, so they will stay with you or return if they have left; be capable of being delivered by you at a profit; and generate sufficient cash to pay all the other stakeholders their promised return. Consider the promises made against four parameters — quality, value, service and innovation.
- **Investors and Lenders.** The types of promises that companies make to investors and lenders tend to be financial in nature. As you start out on your recovery plan preparation the first important thing to do is understand what the lenders can do to help you in your turnaround and what they can do to remove control from your hands.
- **Employees.** After a crisis, your people will be the ones to design and deliver a recovery plan and you may have to make and keep promises to them that were not necessary in less turbulent times.
- **Suppliers.** As with the other three categories of stakeholders, understanding the current position of your suppliers, their potential reactions and the impact of their actions on your recovery planning are necessary first steps to take.

Gathering Multiple New Viewpoints

The second area of leadership expertise is about expanding the insights and knowledge you have about the crisis and the potential recovery options. This should enable you to make better choices and plans. The two resources in scarce supply after a crisis are cash and time. In order to increase the supply of both you will have to take actions, communicate effectively and deliver some early results. Action is not, however, a complete substitute for thought and insight. The actions you take have to be smarter than the ones that took the business into a crisis.

As with all matters of business, and in particular after a crisis when you are under greater levels of scrutiny, everything is a question of balance and perception. You need to ensure that stakeholders who expect rapid action feel that you are taking the necessary urgent measures. As a leader you must ensure that people in your team are, for example, totally in control of cash forecasting and management. As importantly, you need to make sure that stakeholders "perceive" that you are in total control of cash.

In addition, as a leader you need to make sure there is time available to seek out the fresh insights that you and the team will need. Given that time is always short in a crisis, you need to make the best use of the resources you apply to gaining new perspectives.

There are a couple of important principles about any approach that you use to gain fresh insight. First, make sure that you take a 360-degree viewpoint, which will require going to a wide variety of perspectives. Second, seek out new and different people, data and opinions. Sometimes it is the things on the periphery that are the most relevant but also the most difficult to find and interpret.

In business, being only a supply chain specialist or wizard accountant is unlikely to give you all of the perspectives that you will need to build and deliver a successful recovery plan. In order to make the best leadership decisions after a crisis you need to consider the factors facing your business from multiple viewpoints.

Six Viewpoints

You and your team need to test yourselves to see that you have sufficient knowledge to answer the questions that arise from six viewpoints:

- *Customer aces*. How will consumers and enterprises behave during and after a crisis?
- *Make promises you can keep*. How are plans and decisions made and do we deliver on our promises as a business?
- *Follow the money*. Where and how is cash generated and used within our business?
- *Lean not mean*. How is our cost base structured and what could be done to change it?
- *Flesh and blood*. How will the people outside and inside our business be affected by the crisis and how might they react?
- *Imagine new futures*. As we look toward the future, what is the transformational change that our company could make following the crisis?

It is important to consider the whole of your business from each particular viewpoint. ●

Core Business Skills 1 — Cash and Time

The third area of leadership expertise is developing the core business skills that could help you deliver a successful recovery plan.

Four core business skills are managing cash flow and time, developing strategy after a crisis, maintaining sales and cost base restructuring.

Managing Cash Flow and Time

Even companies not facing a crisis should always be trying to improve the amount of free cash flow they generate from their business operating model. An improvement in free cash flow generation improves the valuation of a company and the opportunities it has to make strategic and tactical choices. Understanding cash as a platform to gain fundamental insights into your business after, or even before, a crisis calls for an active change in leadership and management philosophy. Here are some specific cash forecasting and management tools:

- *Cash committee*. A cash committee is responsible for producing the cash flow forecasts and planning and monitoring cash improvement initiatives.
- *Forecasting*. There are basically two types of forecasts: a short-term, 13-week forecast driven from your balance sheet and an 18-month to three-year forecast driven by your profit and loss account assumptions about the future.
- *Time and cash before the accounting starts*. Clearly the shorter the time it takes from idea to invoice the faster you will generate cash. Of course it is essential to improve your order-to-cash cycle but it is also possible to improve your idea-to-order time.
- *Cash improvement opportunities*. For most companies one of the largest areas of cash outflow is in the form of sales taxes, corporation tax and employee-related taxes. In each of these areas local rules and regulations can be investigated to determine opportunities for cash flow benefits.
- *Trapped Cash*. One of the first places to look for additional cash after a crisis is cash trapped in parts of the business that could be better applied elsewhere within the group.
- *Capital Spending*. There are two ways to approach the issue of capital investment. First, what can be afforded? Second, what does the recovery plan require? There will often be a difference between the two approaches, especially at the start of the recovery plan, immediately after the crisis.
- *Working Capital*. After a crisis many customers will have concerns about buying from you. If you can provide them with additional perceived benefits and change the cash profile of your working capital investments at the same time, then you are starting to build a robust recovery plan.

All of these tools have multiple purposes: improved cash generation, buying more time for your recovery plan, re-engaging management with the detail of the business and creating stakeholder confidence that you are in control.

Remember, time and cash are often your most precious resources. ●

Core Business Skills 2

Developing the following core business skills will help you design and deliver a better recovery plan: developing strategy after a crisis; maintaining sales; and cost base restructuring.

Developing Strategy After a Crisis

After a crisis that has generated liquidity issues, the strategy formulation process is often driven by the perceived requirements of the financial stakeholders. This involves management working out how much profit and cash need to be generated and then working back to the most achievable combination of sales volumes, prices, cost reductions, capital spending and disposals to achieve this. Some would call this "the pragmatic capitalist" approach to strategy after a crisis. It is probably the one most used by companies that have faced a financial crisis.

An alternative approach to the "pragmatic capitalist" is the customer- or market-driven opportunity strategy. After a crisis you consider what the needs and requirements of different customer segments are and choose the opportunities that fit with the demands of your stakeholders.

Maintaining Sales

Maintaining sales during and after a crisis is one of the most important things to focus on.

To assess the potential strategies for maintaining sales, there are three things you could start to think about.

First, the confidence of your salespeople. After a crisis your own employees' confidence will be depressed. It is therefore a priority to produce and communicate a set of "questions and answers" for front-line staff to use with customers.

The second area to look at in maintaining sales is your marketing and product development teams. The important and urgent action is to communicate a shared view of the state of the customer's mind across the organization. This means that different departments are all using the same assumptions when interacting with customers to generate sales.

The third area to consider in maintaining sales after a crisis is the external messages you choose to communicate. When Tylenol was reintroduced into the market after the poisonings in 1982, it was accompanied by significant price reductions. Johnson & Johnson was keen to give customers an added reason to retry the product. After a crisis, you could consider adding, for a period of time, a feature, whether price, guarantee length or service in addition to the product's previous benefits.

Cost Base Restructuring

The flip side of striving to maintain sales income is to restructure the cost base to reflect the impact of the crisis and the proposed recovery strategy.

Each of the following post-crisis strategies provides a different context to the cost-reduction tactics that you could employ:

- *Cut back to grow.* A sizeable part of the cost base will need to be reduced, with many job losses and redundant assets to dispose of. However, an investment in the remaining core will be necessary.
- *Get fit.* The existing business may need to raise its net margins by 10, 20 or even 25 percentage points by increasing sales productivity and reducing the costs of operations and overheads.
- *Hold your breath.* Cost deferment and cost reduction need to be carried out to survive until the market returns, without permanently harming the business.
- *Save or dispose to invest.* Cost reduction efforts need to generate cash in the short to medium term, so the cash cost upfront of the cost restructuring cannot be too big.
- *Dress the bride.* Cost reductions can boost margins and therefore valuations, but care has to be taken not to cut perceived marginal activities that a purchaser values.

Delivering Results Through Relationships

The source of new ideas, better operating models, improved actions and the results you want is the network of relationships that you build inside and outside the business. The better those relationships are, the better business results you will deliver.

What does better relationships mean? There is both a quantity and quality element.

There is a wide range of people you will need to build relationships with in order to build and execute your recovery plan. It is not sufficient to rely on a narrow range of relationships where you feel comfortable.

As a business leader, your role is to act as the ringmaster, knowing everybody and having a sufficient relationship with them to gain their trust and contribution.

This brings into focus what the quality of the relationship needs to be. Clearly it will be different for different stakeholders. For your top team a quality relationship means that the team members are releasing their maximum discretionary efforts to achieve the plan. It can be

measured by the contribution they are making to developing and accepting the changes that will be needed. It can also be measured by the success that the team has in selling the plan to the rest of the business.

Rebuilding Trust With Authentic Communication

After a crisis, trust levels between the company, its customers, employees, suppliers and financial stakeholders can be at dangerously low levels. This lack of trust can lead to cash and time problems, missing out on opportunities when an upturn happens and, very often, a change of management.

The trust equation can be used to develop expertise in this area:

$$\text{TRUST} = \frac{(\text{BENEFIT-COST}) \times \text{INTIMACY}}{\text{PERCEIVED RISK}}$$

The equation is a framework for thinking about trust and how to rebuild it after a crisis.

- **Trust.** The first challenge is to define how we would measure business trust. Can you define and measure trust in the same way as you would sales, cash or profits? Unfortunately, there is no international accounting standard for trust.
- **Benefits Less Costs = Value.** The first part of the trust equation is about the tangible business value that you are bringing to a stakeholder as a result of the implementation of the recovery plan. Or, to put it more simply, what is in it for me, the stakeholder? If the business benefits from the plan are inconsequential for a person or institution, why should they bother to support it?

Some stakeholders will be interested in the benefits, or damage, to their reputations, personal pride, sense of responsibility and position in society. The costs to them of their time and inconvenience may figure as greatly as any return of cash and profits.

- **Intimacy.** The next part of the trust equation is about the quality and quantity of your interactions with each stakeholder. You may have developed a revolutionary recovery plan that will change the face of the commercial world, but if nobody knows who you are, their trust in you will be zero. Anything big multiplied by zero is still zero.
- **Perceived Risk.** The last part of the trust equation focuses on the risks that the stakeholders see in committing their time, money, credibility and discretionary effort to the recovery plan. Note that this is not your view of the actual risks they face but the stakeholders' own perception of the risks. To be successful in this area will require you to be able to stand in the shoes of your stakeholders and genuinely understand their point of view. This is one of the key components of being authentic. You make a genuine effort to understand the other person's point of view.

The other key aspects of authenticity are that you do not try to be somebody you are not and you do not try to cover up the problems your business is facing. A quickly made, sincere apology and acceptance of responsibility can go a long way to re-establishing a base to build trust after a crisis.

Trust and Communication

Think about how you bring key stakeholders on side to support your recovery plan. Even if the quality of your plan and ideas are outstanding, a low level of acceptance by stakeholders means your results will be below requirement.

Consider the causes of a crisis and the five areas of leadership expertise that you can work to develop to be better prepared to manage after a crisis. The glue that will help to bring all of these elements together is your ability to bring the right level of trust with stakeholders.

Leading after a crisis is one of the most challenging experiences a manager can expect to face, but it can also be one of the most rewarding. Just remember, always, to be careful with your assumptions.

Gut Feelings

The selecting and making of new promises after a crisis will test your common business sense. This "gut feel" about what is the right thing to do is a crucial ingredient in leadership and decision making. However, gut feel is also a dangerous way to make decisions if you do not have all the facts.

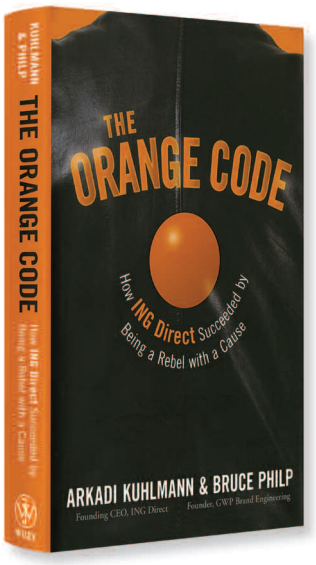
Leadership: Strategies

The Orange Code:

How ING Direct Succeeded by Being a Rebel with a Cause



by Arkadi Kuhlmann and Bruce Philp

THE SUMMARY IN BRIEF

Since 1996, ING Direct has grown from a mere concept to a global enterprise, with more than 20 million customers in nine countries. From the time this Internet-based direct bank first launched in Canada, it focused on serving ordinary people who felt abandoned by today's money-hungry financial institutions. In an industry dominated by big banks with little patience for their customers, ING Direct has always strived to be different — a rebel with a cause, if you will — and in doing so, it has become the most successful online banking venture in history.

In *The Orange Code*, Arkadi Kuhlmann, founding CEO of ING Direct USA and Bruce Philp, the branding consultant who helped him make ING Direct a cause to its own people and a household name, discuss the unconventional approach to business strategy, leadership and management that built ING Direct. Kuhlmann and Philp not only address the practical principles that have propelled ING Direct to the top, but they also help you understand how the cause of personal financial empowerment has made everyone a winner in the ING Direct story.

While the idea of a business as a cause — with a brand as its constitution — might seem idealistic and even naive in theory, it's not anymore. The level of success achieved by ING Direct holds important lessons for and offers some much needed inspiration to a business world that could use a little of both right now.

IN THIS SUMMARY, YOU WILL LEARN:

- How to create a company that has a cause.
- How any leader can ensure his or her brand says what it is and is what it says.
- How to create a corporate culture that goes beyond creating competence.
- How to make the customer a business partner.
- The temptations that can sink a business.

Introduction

ING Direct made history when it became the continent's largest Internet bank and one of the largest savings banks in America, and it defied expert prediction by becoming profitable within a couple of years of its launch. It also created a product category where none existed before.

The original Orange Code is a document that emerged very early in the history of ING Direct. It was created to be a sort of ethical road map, a promise ING Direct made to itself about how it would do business.

Claiming to have a cause is not, by itself, a new idea in leadership or in marketing. ING Direct went two steps further: It attached this internal code of conduct to its mission so that every behavior of every member of its team would serve it every day. And then it made customers complicit in that promise by embedding the spirit of the Orange Code in the ING Direct brand, effectively transforming those customers into watchdogs who would keep the enterprise honest.

The Guy in the Cape

Chief executive officers are a different breed, but they're by no means all the same. The best, from a branding point of view, are charismatic leaders: the bosses whose authority comes from an inspiring and genuine sense of purpose, a purpose not served by the status quo as they see it.

For ING Direct's founding CEO, Arkadi Kuhlmann, a calling such as "leading Americans back to saving" makes the leader's job description pretty simple:

"For a company that is built on a cause, shaped by and with its brand, the leader needs to carry the torch. Our credibility in the marketplace and the confidence of the people we employ can work and be sustained only if the leader can lead a company of people. We too often forget a company is fundamentally a company of people. The passion, the personal sacrifice, the belief that the cause, expressed by a vision, is real and can be actualized must come from the leader."

The ING Direct Leadership Model

ING Direct declared itself a rebel with a cause in an era when elaborate business models were more the fashion, when entrepreneurs spent more time with venture capitalists than they did with consumers and when being clever got more attention than being authentic. Between this and the fact that nobody thought at first that consumers would even want what ING Direct had to sell, it was obvious that no mere manager was going to make this idea fly.

For as long as anyone who knows him can remember, Kuhlmann has been a deep believer in the duty everyone has to themselves to have savings. Consumers lit this fire for ING Direct, but the fuel came from a value system. This connection between what people needed and what Kuhlmann believed in, more than any other factor, defined for him the way he would have to lead ING Direct: It would be evangelical, and it would be from the heart.

There are five fundamental things that it takes to be a leader of a company that is a cause. They aren't all from the standard CEO playbook, and they aren't all easy or

warm and fuzzy. But they are what it took to bring ING Direct to market, and grow it profitably, against all odds:

- **A calling.** ING Direct's corporate vision statement to lead Americans back to saving was a spiritual beacon for the enterprise, a strategic true north as they built the bank from day one. A decision was made that the idea behind this bank wasn't just a revolutionary business model, but a business model in the service of a revolution.
- **The guts to make it personal.** It's just as essential that this calling comes from a real place. Otherwise, the "calling" can seem like a marketing invention and the boss's moral authority can be pretty fragile and the leader two-dimensional. The boss can't be a creation of the mission or a shill for it; he has to be its author, and who he is as a person has to authenticate it.
- **A powerful enemy.** With no wrong to right, there's no job for a white knight. But the fact of a broken status quo in retail banking does more than create a business opportunity or a strategic convenience. Having someone to blame for a broken status quo also creates a tremendously effective leadership tool. Its competitors become a monolithic enemy, a dragon to be slain. For the people who work at ING Direct, that makes coming to work a bit heroic and more of an adventure.
- **An inner circle.** Picking a team is one of a leader's most basic responsibilities and is too important a task to rely on mere formal interviews and tidy curricula vitae as the bases for making decisions. Motivation and character are the things that separate loyal, enthusiastic workers from paycheck-collecting journeymen. Don't hide behind the safety of a good-looking resume. Hire people who have experienced rejection and have something to prove to the world.
- **The possibility of failure.** The constant state of impending crisis and creative destruction is not for the faint of heart when it comes to being on a team such as Kuhlmann's. It creates a continuing feeling of being potential prey to some outside force. As ING Direct gets larger and more successful, it could run the risk of believing its own press. It could run the risk of becoming complacent and thinking that it knows all it needs to know. Its own corporate ego could become its most dangerous predator. Crisis is Kuhlmann's way of keeping the enterprise small in its own collective mind, as if it were a perpetual startup that is just relieved and happy its doors are still open.

Powered by Purpose

The corporate mission statement is one of those things that went out of fashion too soon and for the wrong reasons. Such statements all too often failed at giving a company a real sense of purpose. It's hard to get adrenalized by a multiparagraph puddle of ambiguity, diluted by consensus until it is odorless, flavorless and utterly unthreatening to the status quo.

And yet a mission — a cause — is one of the most effective leadership tools humans have ever devised. Groups with clear causes practically self-organize. They organically attract the right kinds of people and turn them into teams. They produce a more empowered employee who knows what's right, even without a policies and procedures manual. They naturally produce compelling and profitable brands and direct the way companies behave in the marketplace so that everything is magnetically consistent. A team with a purpose is infinitely more formidable than a team with a process.

ING Direct has a five-point formula for an enduring mission statement that makes things happen:

1. **Advocate for somebody.** Mission statements about how an organization works produce bureaucracies. Mission statements about those served by an organization produce armies.
2. **Make it next to impossible.** It's unlikely that ING Direct will turn everyone on Earth into a saver any time soon. It's the journey that inspires, and the horizon should always be just out of reach.
3. **Make it poetry.** The great mission statements are music to hear and read, sticky and difficult to walk away from. If it sounds like the instruction manual that came with your DVD player, keep working on it. And poetic doesn't just mean pretty; it also means pure and unnervingly simple.
4. **Write it for you.** To include every stakeholder in the audience for your statement of purpose is to guarantee that your statement will devolve into being some sort of aspirational mirage. If you write it just for the people who show up for work every day, you get the powerful advantage of making it into a battle cry.
5. **Bring it down from the mountain.** Declaring a company's purpose is a leadership responsibility. Collaborating on it or, worse, delegating it produces a perfect little storm of negative consequences for leadership. Show us a leader who magnanimously gave rank-and-file managers the job of writing a mission statement, and we'll show you a dusty plaque in the reception area.

Building a Core Team

Consensus management isn't very compatible with a young organization on a mission. You can't have an organization with any real strength or drive if you populate it with conventional people who will just do as they're told.

Building a core ING Direct team meant searching for a combination of the two qualities that could reconcile the dilemma: a strong-minded internal sense of purpose and a genuine belief in what ING Direct was trying to do.

Building a high-performance team isn't a mechanical process. Character and motivation help amplify skills and aptitude. An enterprise isn't a machine, it's an unfolding story. Here are three principles to go by:

- **Don't just hire — assemble a cast.** Competence is a commodity. Sure, you need everyone in an organization to be able to do his or her job reliably and efficiently. But competence is table stakes for any employable candidate, and that means that it's equally available to your competitors. Companies will look at resumes and decide that the more years you've gone without screwing up, the more valuable you must be. But there's no profit in that. Not losing isn't the same as winning.
- **Manage your business's culture and that culture will manage your business.** To the outside observer, ING Direct's operating style can seem chaotic. Decisions seem provisional, and they're often made in a way that goes far beyond consultation. On the surface, this might seem like some kind of forced collegiality, but it's not. It's a way of making sure that everyone's input is heard publicly. That, in turn, forces the team to consider and care about the team. It eliminates silos not only functionally, but also culturally. And it promotes accountability to one another as well as to the cause.
- **Make everybody a hero.** Any revolution, even a business revolution, relies on mythmaking to keep it alive and inspired. There is a genuine and deliberate effort to give the team a sense that what they're doing is important and heroic and that it can create a legacy for each of them if they play their cards right.

The Conundrum of Advertising

Here are three pieces of advice any leader can use to make sure the brand says what it is and is what it says:

- **Think of advertising as the boss talking.** Today's consumers — and today's employees — want, above all, to know that what they're buying into is authentic. This is even more acute when you're asking them to take a chance by trying something new and unproven. Whether a company intends it or not, advertising, in all its forms, is that company's most public expression of what it thinks is important and how seriously it takes its customers and employees. Ignore this, and the most you can hope for is an amusing advertising experience that might make people briefly remember you, if only for that. But be authentic in your commercial messages and people will do better than remember. They'll believe, and belief is the root of loyalty. A good rule of thumb: Don't ask your ads to say anything your CEO couldn't say with a straight face.
- **Keep your friends close and your agency closer.** The reputation of a company and its brand is too valuable and too fragile to trust to suppliers that are disengaged or have their own agendas and too important to trust solely to middle managers. If a supplier is being given work that the public can observe and interpret, then that supplier should feel accountable to the very top, and maybe even fear it, just a little. A brand is a leadership responsibility, not a management one, and that makes the choice of a strategic communications partner no less important than the choice of an auditor or corporate law firm.
- **It doesn't matter that people are going to judge your advertising; what matters is how they're going to judge you for doing it.** You can't afford to care about what people think of your advertising in a creative sense, short of it being offensive or damaging to your credibility. You should care only about what your advertising makes them think of your company for doing it and, ultimately, whether it makes them *want* to want what you've got to sell. Popularity isn't a business result. All that matters is whether your messages brought consumers any closer to becoming your customers. That path starts with curiosity, which becomes desire, which then seeks trust and finally becomes action. Everything else is just vanity.

You Say You Want a Revolution?

It's possible to believe that banks are an oligarchy by divine right, a royal court from which favor and excommunication are dispensed to consumers who are supposed to consider themselves lucky to be allowed to bank at all. Banks are not evil, for the most part. But their institutional self-interest combines with their legacy systems and habits of thought to produce an

arrogant anti-consumer dynamic. It's a dynamic that, every day, leaves customers with the uneasy feeling that they need their bank more than their bank needs them.

ING Direct got a lot of things right: its mission, its leadership, its brand, its culture and team, and so on. But underneath all this, there really had to be a different way of doing what a bank has to do, so that success would never lead to arrogance. For everyone at ING Direct to believe, for the consumer to believe, that things would be different at ING Direct and, more important, to prevent the organization from devolving into the very dragon it was created to slay, ING Direct's banking business model had to be quite simple: Align ING Direct's operational imperatives with what's good for the customer. Invent a financial services business model in which, when the customer wins, ING Direct wins. And vice versa.

What If We Started Over?

"If consumers were to think differently about money and how they dealt with it," says Kuhlmann, "then our enterprise model would have to look and work differently as well. It quickly became obvious that to make it work we needed to be a rebel."

The first order of business was learning "What does the customer really want to pay for?" and "What do we absolutely need in order to profitably deliver it to them?"

Instead of working to create customer value by trying to overcome the basic nature of an institution, Kuhlmann and his team focused ING Direct on the point where the bank and the customer meet and built its solution outward from that moment of truth. For ING Direct, that felt like something more familiar and comfortable to the average American: a retailer.

Kuhlmann explains the distinction: "As a retail business, we are confronted with high volume and inventory turnover and small margins. Profits can only come if you get everything right. Your sales and marketing are on trial every day. Bottlenecks are deadly. Trust and reputation are being built constantly, and word of mouth is a big factor in success. A great retail business is built and operated from the customer's point of view."

For traditional banks, this approach is almost impossible to emulate. Kuhlmann explains why it worked for ING Direct: "As a new bank that wanted to use this strategy, we could develop business practices that supported our vision of a bank with a cause, because we had no legacy to serve."

ING Direct's idea evolved from letting the customer tell them how to run the bank, to making the customer a partner in it.

For a company with a cause, change is not a defensive tactic; it's a way forward. ●

Saving the Savers

It's hard to overstate how important it has been to ING Direct's success that there was no formally defined target group for what it had to offer. ING Direct was created for someone called the saver, a creature that, when the bank launched, seemed Sasquatch-like in its rarity and reclusiveness, if it existed at all. In a very real sense, ING Direct invented its customer, a consumer defined by attitudes and values rather than by its demographic characteristics.

"In any new startup or big push forward in business, many personal agendas need to be reconciled, not accommodated, along the way," says Kuhlmann. "As with any army marching off to battle, it gets organized by having a shared, larger objective in mind. It marches on its stomach, the saying goes, but it fights for a cause. In the end, the result is glory, and the human spirit triumphs by having done something good and just for man and country. If people's personal goals get met in the process, that's fine. It just can't be the focus."

If you make things hard for people, nobody is going to believe for a second that you're here to save them. Words, if they're long enough and you use enough of them, make walls. Eventually, people get the message they aren't welcome.

Simplification, as obvious as it might seem in hindsight, has been one of ING Direct's most fundamental ways of saving the saver. The products themselves must be simple. The process of signing up for one must be simple. The experience of using it must be simple. And this drive is not motivated by the belief that people aren't smart enough to handle complexity. It's motivated by the understanding that simple means honest. ●

It Takes a Village

Good leaders try to motivate their employees. Great ones try to inspire them. But ING Direct went further, declaring the people who work there to be the brand incarnate, and a full-fledged community, one with its own language and customs, its own obligations of citizenship, and its own gathering places. It's called being "orange," and the experience of citizenship in the community begins the day they walk through the door: The first training material they receive is a booklet called

"Your Official Orange Passport." The subhead on the cover is, "Get ready for the adventure of your life."

The word "values" comes up a lot in the ING Direct story. Values are the structural components of ING Direct's sense of purpose, its "pixie dust." This company's ability to inspire consumers and be nearly immune to being copied by competitors comes not from a proprietary business model, but from the cause the model serves. So it's natural that the team ING Direct builds has to be made up of recruits with an affinity for those values. And it's essential that the company appear to be guided by those values in the way it sells. But if ING Direct stopped there, its values could quickly become abstract and irrelevant to the way work gets done from day to day. They'd become an artifact of its culture, maybe, but not necessarily central to the way it operated.

For Kuhlmann and his team, that wasn't going to cut it. Such a lack of authenticity would be devastating to ING Direct's credibility as a cause. And it would be terribly unsatisfying to the people who worked at ING Direct. This was supposed to be, after all, a revolution. You can't have people just "phoning it in." They have to have evangelical fire in their bellies, and a book of rules isn't going to put it there. The leadership of this new bank needed something more organic, a way to make the organization live these values almost without thinking. And it needed the people who work there to expect this from one another just as constantly as their leaders expect it from them.

The solution was to prove one of the defining decisions in ING Direct's success: They recruited the brand as the key instrument of leadership.

The Brand as the Moral Standard

The word *brand*, for most people, instantly evokes marketing. They think of it as the name a company gives to its value proposition, making it recognizable to prospective customers. Most companies confine the subject of brands to their marketing departments just as they'd confine the subject of dental benefits to their HR departments. ING Direct made it mean much more. What it calls its brand is actually the moral standard to which everything the company does it held. It's what everybody and everything has to live up to. As Kuhlmann once put it, "Everybody thinks that the leadership of ING Direct shaped the brand. But it's not true. It's the brand that shaped the leadership." This turned the creation of ING Direct into something akin to nation building.

"The 12 statements in the Orange Code are not linked to a single theme but are a collection of thoughts that express a philosophy," explains Kuhlmann. "The Code states how things should work in our business, by stating how we should be. We did not turn it into a rules-based formula."

The Lesson: Don't Try This at Home

ING Direct got phenomenal performance out of its organization by making its brand an instrument of leadership. As a consequence of that leadership decision, the traditional wall between marketing and operations was torn down. The wall between the consumer and the organization got torn down too. The people who touched the consumer in any way became the brand incarnate, creating a classic virtuous circle: The organization stands for something; hires and operates in that image; efficiently attracts customers who share those values, who then have their attraction to the brand authenticated by their experiences with it.

You can see the power of this virtuous circle in ING Direct's numbers, whether it's in the high percentage of customers acquired through referral, the phenomenally low cost per acquisition, and behind this the phenomenally high conversion rate (often hovering in the 40 percent range); the strong staff and customer retention; or the exceptionally high satisfaction ratings.

Before a leader decides to try to substitute a moral purpose for a commercial one, he or she should try this simple gut check: What is the very last thing anyone in my company could get fired for? At ING Direct, it would be quite difficult to get fired for anything you did to help customers save their money, so long as it was legal. If the last thing you can get fired for sounds a lot like your company's declared mission, then hoist the flag. You are a brand nation. ●

The Money on the Table

Offering more products and services is obviously not a bad idea. It can be quite a good one, in fact, especially if it's a leader's job to build shareholder value. But it can also be messy and unproductive, and it usually goes wrong in one of two ways: Companies either make the move into a new category too soon, before they have enough credibility and resources to support it, or they move into a category that's just too different, in the consumer's mind, from the one that earned them trust in the first place.

This was what put Kuhlmann at odds with some of his original mortgage team. To them, a mortgage was another financial service, something a bank just does. But to the customer, Kuhlmann knew, the wrong

mortgage was an invitation to spend too much money, coming from a brand that stood for saving it. It would be dissonant, and dissonance like that destroys trust.

It's not that going after the money on the table is a bad idea. It's just that trying won't be easy or free. There are some costs that no financial model can measure, but that a leader should consider carefully:

1. **It can change you.** Adding products and services pushes an organization away from advocacy and toward bureaucracy. Power bases get built. The organization Balkanizes around product categories. These little empires can start defining themselves by how they're distinct with the organization rather than how they serve its overall mission.
2. **It can weaken you.** The risk of dividing resources is much broader than just to marketing. Leadership bandwidth gets divided too. So does the infrastructure of the organization, and it all has the same effect: It pulls the organization apart, bit by bit, creating a collection of pieces that are considerably weaker than the former whole was.
3. **It can make you look bad.** For all the marketing consequences of being greedy, there is a more basic danger, one that is especially scary if your business has publicly described itself as a cause: You can look as if you didn't mean it. Here again, let your brand's code be your compass.

Steering by the Stars

A funny thing happens when an organization is completely sure of what it stands for. It suddenly finds itself more nimble. Instead of a massive strategic playbook-in-the-sky that anticipates every challenge to its goals and prescribes a process for getting from A to B, it simply has a center of gravity and a sense of direction, a certainty about its purpose that is so solid that it isn't afraid that circumstances might intrude and contaminate its plan.

Without the pressure of executing the prescribed process, it can be fully watchful for the next source of momentum. The clearer your purpose, the less fixed your plan needs to be. Or, at least, a plan serves the organization's purpose rather than the other way around.

A clear sense of purpose is strategically liberating. Serendipity has always been a theme in ING Direct's success. But serendipity has never meant mere luck or opportunism; the company has always known who and what is needed and where it was ultimately going.

A Community Presence

There are three things that drive ING Direct's approach to charitable activity: We want to make a real difference, we want to be hands-on and engage everyone at ING Direct in what we are doing, and we want to focus our giving on causes that reflect our own values as a company and a brand.

Consider this and you begin to see a strategic pattern in the kinds of causes ING Direct works for in its communities:

- Children are the future. Primarily through the ING Direct Kids Foundation, children are given the chance and the means to learn, which, in turn, empowers them to believe in themselves.
- Financial literacy. There is more to self-determination than saving, and yet even this simple habit is one that too few people learn early enough, too often condemning them to a life on the treadmill of debt.
- Housing for those who can't make that all-important start on their own. For Americans, there is no more fundamental symbol of security than a home, no more powerful step in the journey to independence.

Herding Cats

The enemies of organizational integrity for an enterprise come in two basic varieties: The first is more of a nuisance than a threat, though it can still be pretty destructive, and that's the disparate individual agendas of the people on the team. If a company is more managed than led, the fact that everyone has his or her own agenda is just part of the deal.

But in a company whose leadership is striving to unite it around some kind of mission, those moments when employees ask about why they can't decorate their cubicles or why they have no titles make the leader's job seem like herding cats. You sometimes wonder who is really working for whom and how it came to be that a good day is just one when none of these cats pulled down the curtains or shredded the couch. Still, if you hire well and stick to your principles, this is a tolerable leadership challenge. Every good person, in the end, wants to play for a winner.

The second kind of enemy is more worrisome, because they're here to help. They're the professional managers, people with resumes studded with the names of corporate icons, and maybe even some management-

consulting experience. They talk about process and measurement and they toss data around like a circus knife-thrower. They think life is lived in fiscal quarters and that every business plan is a chance to start over again. To them, an enterprise is a machine, not a community. Their horizons are always short-term, and their rhetorical style is characterized by rationality and coolly embroidered with numbers. They are irresistible because, for a while anyway, they can fatten everybody's bonus check — and because they seem so darned reasonable.

Still, two things remain certain: An enterprise must grow, and that means more and more people with no cultural memory of a company's founding cause. And as it grows, it needs professional managers, because the bigger and more successful you become, the fewer technical mistakes you can afford to make. The challenge for tomorrow's leadership is not to avoid growth, but to somehow keep the flame alive in the face of it.

Peeling the Orange

The Orange Code did two crucial things for ING Direct. First, it collectivized the brand, made it everyone's business and responsibility. And second, it connected leadership to the operation of the company on a spiritual level. Instead of quietly assuming ING Direct will make money, the Orange Code loudly declares how it will be done. Without this sturdy bridge between the idea of ING Direct and the practical realities of the enterprise, it very likely would not have survived. This is how Kuhlmann defines the code:

1. **We are new here.** Every day is a new beginning, a new set of challenges, a chance to reinvent ourselves.
2. **Our mission is to help people take care of the wealth they make.** Money is the fruit of work, and saving it is fundamental to freedom. Few missions could be more important to the lives of our customers than this one.
3. **We will be fair.** Everyone has value. Everyone deserves a chance at independence. So everyone will be treated equally here.
4. **We will constantly learn.** Every experience we have will make us wiser and better at what we do. That will always be true.
5. **We will change and adapt and dwell only in the present and in the future.** The world does not stand still. Neither will we. We will not resist change. We will be exhilarated by it. The value of the past lies only in what it has taught us. Our greatest treasure is our potential. We are nourished by thinking about what can be done.
6. **We will listen; we will invent; we will simplify.** Our customers can make us better if we let them. But we must first understand them. We can find a solution or create one, but if our invention does not make our customers' lives better, it will not make our business better.
7. **We will never stop asking why or why not.** Nothing can be sacred here except for our mis sion. To be challenged is not to be criticized. It is to be invited into the process of invention.
8. **We will create wealth for ourselves, too, but we will do this by creating value.** Our customers want us to succeed. Profit is the proof that we are fulfilling our mission, and it is only rewarding when it is earned.
9. **We will tell the truth.** We cannot succeed without the trust of our customers and of society.
10. **We will be for everyone.** To be our customer, people need only a dollar and the will to be independent. Though we welcome everyone, we will have the courage to accept that not everyone will hear the call, and we will remain true to ourselves.
11. **We aren't conquerors — we are pioneers; we are not here to destroy — we are here to create.** We have competitors, not enemies. We will respect them. We came here to offer people a choice. It is for them, not us, to decide who will prevail.
12. **We will never be finished.** Every generation will have its own hunger for independence and its own challenges in achieving it. We will be there for them, as new then as we are today.

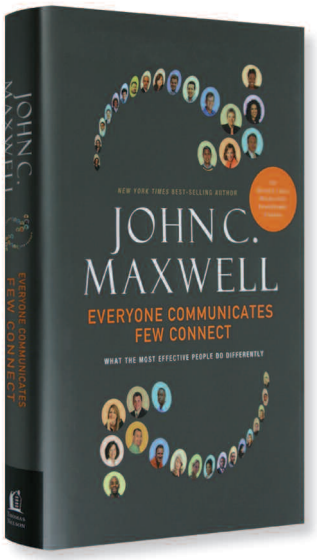
Leadership: Development

Everyone Communicates, Few Connect

What the Most Effective People Do Differently



by John C. Maxwell

THE SUMMARY IN BRIEF

Only one thing stands between you and success. It isn't experience or talent.

In *Everyone Communicates, Few Connect*, world-renowned leadership expert John C. Maxwell says if you want to succeed, you must learn how to *connect* with people. And while it may seem like some folks are just born with it, the fact is *anyone* can learn how to make every communication an opportunity for a powerful connection.

How can you *really* connect with others?

"Connecting is the ability to identify with people and relate to them in a way that increases your influence with them," says Maxwell. "And the ability to communicate and connect with others is a major determining factor in reaching your potential. To be successful, you must work with others. To do that at your absolute best, you must learn to connect."

It's a skill anyone can learn. In *Everyone Communicates, Few Connect*, Maxwell offers his proven method — Five Principles and Five Practices — so you can connect one-on-one, in a group or with an audience. You'll see all your relationships take a quantum leap.

Connecting is a skill you can learn and apply in your personal, professional and family relationships — and you can start now.

IN THIS SUMMARY, YOU WILL LEARN:

- How to find common ground.
- How to keep your communication simple.
- How to capture people's interest.
- How to inspire people.
- How to stay authentic in all your relationships.

Prologue

When your phone drops a call, you know it, don't you? And what is your reaction? How does it make you feel? Annoyed? Frustrated? Angry?

Being disconnected wastes your time. It interrupts the flow of what you're trying to accomplish, and it undermines your productivity. The bottom line is that connecting is everything when it comes to communication.

You know when you don't have a good connection on the phone, but how about when you're communicating with people in person? Do you know when a connection has been made? Can you tell when the connection is starting to go bad? Can you identify when the "call" has been dropped?

Most people have an easy time knowing when the connection is good on the phone. But they have no idea if they're connecting with others in other everyday situations.

How do you know that you've connected with others? Look for the signs. When interacting with people, whether one on one, in a group or with an audience, you know you've connected when you sense:

- **Extra Effort:** People go the extra mile.
- **Unsolicited Appreciation:** They say positive things.
- **Unguarded Openness:** They demonstrate trust.
- **Increased Communication:** They express themselves more readily.
- **Enjoyable Experiences:** They feel good about what they're doing.
- **Emotional Bondedness:** They display a connection on an emotional level.
- **Positive Energy:** Their emotional "batteries" are charged by being together.
- **Growing Synergy:** Their effectiveness is greater than the sum of the contributions.
- **Unconditional Love:** They are accepting without reservation.

Anytime you interact with people and you see evidence of these signals, you know you're connecting.

If you want to learn how to connect and thereby become more effective in everything you do, there's good news. Even if connecting with others isn't something you're good at today, you can learn how to do it and become better tomorrow.

PART I: CONNECTING PRINCIPLES

Connecting Increases Your Influence in Every Situation

People cannot succeed in life without communicating effectively. It's not enough just to work hard. It's not enough to do a great job. To be successful, you need to learn how to really communicate with others.

Good communication and leadership are all about connecting. If you can connect with others at every level — one-on-one, in groups and with an audience — your relationships are stronger, your sense of community improves, your ability to create teamwork increases, your influence increases and your productivity skyrockets.

Connecting is the ability to identify with people and relate to them in a way that increases your influence

with them. Why is that important? Because the ability to communicate and connect with others is a major determining factor in reaching your potential. To be successful, you must work with others. And to do that at your absolute best, you must learn to connect.

According to the *Harvard Business Review*, "The No.1 criteria for advancement and promotion for professionals is an ability to communicate effectively." That means connecting! If you learned to connect better, it would change your life.

Connecting is crucial whether you're trying to lead a child or a nation. President Gerald Ford once remarked, "If I went back to college again, I'd concentrate on two areas: learning to write and to speak before an audience. Nothing in life is more important than the ability to communicate effectively." Talent isn't enough. Experience isn't enough. To lead others, you must be able to communicate well, and connecting is key.

It Starts With Your Attitude

The ability to connect with others begins with understanding the value of people. Jim Collins, author of *Good to Great*, observes, "Those who build great companies understand that the ultimate throttle on growth for any great company is not markets, or technology, or competition, or products. It is the one thing above all others — the ability to get and keep enough of the right people." You do that by connecting with these people.

You can become more effective by learning to connect with every kind of person in any situation by:

- Focusing on others
- Expanding your connecting vocabulary beyond just words
- Marshalling your energy for connecting
- Gaining insight in how great connectors connect.

Here are five practical skills of connection to acquire:

- Finding common ground
- Making your communication simple
- Capturing people's interest
- Inspiring them
- Being authentic.

These are things anyone can learn to do.

Connecting Is All About Others

When you are trying to connect with people, it's not about you — it's about them. If you want to connect with others, you have to get over yourself. You have to change the focus from inward to outward, off of yourself and onto others. And the great thing is that you can do it. Anyone can. All it takes is the will to change your focus, the determination to follow through and the acquisition of a handful of skills!

Three Questions People Are Asking About You

Understanding that your focus must be on others is often the greatest hurdle people face in connecting with others. It's a matter of having the right attitude. But that alone is not enough. You must be able to communicate that attitude of selflessness. How do you do that? You do it by answering three questions that people always ask themselves when interacting with others, whether as a client, customer, guest, audience member, friend, colleague or employee:

1. "Do you care for me?" Mutual concern creates connection between people. Whenever you can help other people understand that you genuinely care about them, you open the door to connection, communication and interaction. You begin to create a relationship. And from that moment on, you have the potential to create something beneficial for both you and them, because good relationships usually lead to good things: ideas, growth, partnerships and more.

2. "Can you help me?" In his book *Presenting to Win*, Jerry Weissman points out that when people communicate, they focus too much on the features of their product or service instead of answering the question, "Can you help me?" The key, says Weissman, is to focus on benefits, not features.

In our current world, people are bombarded with information daily about the features of this product or that gadget. They tend to tune it out. If you want to get someone's attention, show that you can help.

Connecting One-on-One

To increase your influence one-on-one:

- Talk more about the person and less about you. Prepare two or three questions you can ask someone before a meeting or social gathering.
- Bring something of value, such as a helpful quote, story, book or CD, to give to someone when you get together.
- At the close of a conversation, ask if there is anything you can do to help them and then follow through. Acts of servanthood have a resounding impact that lives longer than words.

3. "Can I trust you?" Trust is vital to any business. In fact, it's vital to life itself. Author and speaker Jeffrey Gitomer once said that trust is even more important than love!

If I Were You …

Whenever people take action, they do so for their reasons, not yours. That's why we have to get on their agenda and try to see things from their point of view. If we don't, we're just wasting their time and ours.

You can connect with others if you're willing to get off your own agenda, to think about others and to try to understand who they are and what they want. If you really want to help people, connecting becomes more natural and less mechanical. It goes from being something that you merely do to becoming part of who you really are. If you're willing to learn how to connect, you will be amazed at the doors that will open to you and the people you will be able to work with. All you have to do is keep reminding yourself that connecting is all about others.

Connecting Goes Beyond Words

When people try to communicate with others, many believe the message is all that matters. But the reality is that communication goes way beyond words.

In an important study, UCLA psychology professor emeritus Albert Mehrabian discovered that face-to-face communication can be broken down into three components: words, tone of voice and body language. What may come as a surprise is that in some situations, such as when verbal and nonverbal messages aren't consistent, what people see us do and the tone we use can *far* outweigh any words we say while trying to communicate. In situations where feelings and attitudes are being communicated:

- *What we say* accounts for only 7 percent of what is believed.
- The *way we say* it accounts for 38 percent.
- *What others see* accounts for 55 percent.

Amazingly, more than 90 percent of the impression we often convey has nothing to do with what we actually say.

The Four Components of Connection

If you want to succeed in connecting with others, you need to be sure your communication goes beyond words. How can you do that? By connecting on four levels: visually, intellectually, emotionally and verbally.

1. What People See — Connecting Visually. People expect any kind of communication to be a visual experience. Anytime you are in front of other people to communicate — whether it's on a stage, in a boardroom, on a ball field or across a coffee table — the visual impression you make will either help or hinder you. The first place to start when connecting visually is to increase the chances that people are paying attention to the right things and not being distracted. If you're well groomed and wearing the right clothing for your situation, then that's a good start.

2. What People Understand — Connecting Intellectually. To effectively connect with people on an intellectual level, you must know two things: your subject and yourself. As jazz musician Charlie Parker once observed, "If you don't live it, it won't come out of your horn." There's no substitute for personal experience when we want to connect with people's hearts.

3. What People Feel — Connecting Emotionally. Whatever is inside you, whether positive or negative, will eventually come out when you are communicating to others. People may *hear* your words, but they *feel* your attitude. That will either enable you to connect with people and win them over, or it will alienate them and cause you to lose them. In fact, your attitude often overpowers the words you use when speaking to others. As Jules Rose of Sloans' Supermarkets points out, "The exact words that you use are far less important than the energy, intensity and conviction with which you use them."

4. What People Hear — Connecting Verbally. Words are the currency of ideas and have the power to change the world. What we say and how we say things make quite an impact. People respond to the language we use.

People pick up more than they might think from the way others say things. Tone, inflection, timing, volume, pacing — everything you do with your voice communicates something and has the potential to help you connect to or disconnect from others when you speak.

Connecting Always Requires Energy

It doesn't matter with whom or within what context you are trying to connect. It's always the same: You need to bring energy to do it effectively. And to make the most of connecting opportunities, you must channel that energy strategically. There are specific things you can do to help foster connection.

Five Proactive Ways to Use Energy to Connect

Here are five observations about the energy required

to connect and what action you should take to be strategic in using that energy:

1. Connecting Requires Initiative: Go First. Initiating a conversation with someone often feels awkward. Offering help to someone means risking rejection. Giving to others can lead to misunderstanding. You won't feel ready or comfortable in those moments. You just have to learn to get past those feelings of awkwardness or insecurity. The people who connect with others are the ones who go ahead and do what the rest of us never quite got around to.

2. Connecting Requires Clarity: Prepare. Connecting requires that we know what we're doing when we make contact. That means having clarity of thought, and clarity most often comes as a result of preparation in three main areas: know yourself (personal preparation), know your audience (people preparation) and know your stuff (professional preparation).

3. Connecting Requires Patience: Slow Down. Henry David Thoreau wrote: "The man who goes alone can start the day. But he who travels with another must wait until the other is ready." Waiting can be very frustrating. It can try your patience. However, if you want to connect with people, you have to be willing to slow down and go at someone else's pace. Good connectors don't always run the fastest, but they are able to take others with them. They exhibit patience. They set aside their own agendas to include others.

4. Connecting Requires Selflessness: Give. When you listen to someone speak, ask yourself, "Is the person giving me everything — eyes, face, body, brain and personality? Or is this person simply passing through town and this opportunity to speak is just a stop along the way?" People who want to connect with others must give their all. And that takes energy!

5. Connecting Requires Stamina: Recharge. If you are responsible for leading people or communicating with others, it is especially vital for you to find ways to recharge. It's really very simple. All you have to do is know the things you like to do and make time for them. If you can carve out moments to do what energizes you, then you will always have reserves of energy you can draw upon when you want to connect with others.

Connecting Is More Skill Than Natural Talent

Philosopher-poet Ralph Waldo Emerson said, "All great speakers were bad speakers first."

If you want to have better relationships, or if you want to become a better leader, make connecting your goal. To do that, become a student of communication if you aren't one already. Study effective and ineffective speakers, observing what works and what doesn't. Give thought to what causes people to listen to others, and begin working on cultivating those characteristics. And wherever you go, watch how good connectors interact with people one-on-one.

Connecting One-on-One

The skills you learn to connect at one level can be used to start connecting at the next level.

Most people believe that it's easier to connect with people one-on-one than with a group or an audience. That's usually true because they have more practice connecting with an individual than they do with a group. The way to overcome the fear of speaking to larger groups is to practice using the skills you acquire at one level on the next level. The process begins with using whatever gifts and talents you possess to begin connecting with people one-on-one.

To connect well one-on-one, you need to:

- Have interest in the person.
- Place value on that person.
- Put his or her interests ahead of your own.
- Express gratitude to and for that person.

Connecting in a Group

Once you have begun to connect well one-on-one, take stock of what skills you've developed and what assets you've utilized to succeed in that arena. Now consider how you can use these things to connect in a group. What easily transfers? What must be "translated" or altered in some way to be used with a group? Use those skills. In addition, take the four things mentioned above for connecting one-on-one and expand them to apply to a group:

- Show interest in each person in your group. Do this by asking each person questions.
- Place value on each person by pointing out his or her value to the others in the group.
- Make it your goal to add value to everyone in the group, and let them know that is your intention.
- Express your gratitude to each person in front of others.

Connecting With an Audience

As you become more adept at connecting with groups, once again take stock of what worked in connecting with them. Try to anticipate what could work

well with larger audiences. Just remember: the larger the audience, the more energy you need to bring to your communication.

To start the connection process, do the following:

- Show interest in your audience. When possible, meet and greet audience members before you speak. While speaking, let people know that you understand that each person is unique and special.
- Place value on each person by letting them know you spent a lot of time preparing your talk because you value them, their purpose and their time.
- Put the people first by letting them know you are there to serve them by being willing to answer questions and making yourself available to interact with people after a speech.
- Express gratitude and thank them for their time.

PART II: CONNECTING PRACTICES

Connectors Connect on Common Ground

The practice above all others that opens the door to connection with others is to look for common ground. It's difficult to find common ground with others when the only person you're focused on is yourself!

While it is true that not everyone starts out with the same ability to connect, anyone can learn to connect better because *connecting is a choice*. If you want to increase your odds of connecting with others, then make the following choices every day in your life:

- **Availability — "I will choose to spend time with others."** Common ground must be discovered, and that takes time. Availability also requires intentionality. Make it your goal to be available to others. Don't disconnect; stay engaged.
- **Listening — "I will listen my way to common ground."** Anytime you are willing to listen to others and figure out how the thing you're offering fills their needs, you've found a way to reach common ground.
- **Questions — "I will be interested enough in others to ask questions."** If you aren't especially outgoing or have a difficult time asking questions, you can use this trick that Duke Brekhus says he learned from Ron Puryear. Remember the word FORM, which stands for family, occupation, recreation and message. Brekhus comments, "When we ask questions centered around these topics it is amazing how much we can learn about a person and how quickly we can get to know them."
- **Thoughtfulness — "I will think of others and look for ways to thank them."** If you are able to show considerate thoughtfulness, you will find common ground with others.
- **Openness — "I will let people into my life."** Communication is all about the openness of finding commonality with others. Connection always requires both parties to engage and be open.
- **Likability — "I will care about people."** People like people who like them.
- **Humility — "I will think of myself less so I can think of others more."** If you want to impact people, don't talk about your successes; talk about your failures. Civil Rights activist Cornel West says, "Humility means two things. One, a capacity for self-criticism. … The second feature is allowing others to shine, affirming others, empowering and enabling others. Those who lack humility are dogmatic and egotistical. That masks a deep sense of insecurity. They feel the success of others is at the expense of their own fame and glory."
- **Adaptability — "I will move from my world to theirs."** To move others, we must first be willing to move ourselves to where they are. We must adapt to others and try to see things from their point of view.

Connectors Do the Difficult Work of Keeping It Simple

As leaders and communicators, our job is to bring clarity to a subject, not complexity. It doesn't take nearly as much skill to identify a problem as it does to find a good solution. The measure of a great teacher isn't what he or she knows; it's what the students know. Making things simple is a skill, and it's a necessary one if you want to connect with people when you communicate. Or to put it the way Albert Einstein did, "If you can't explain it simply, you don't understand it enough."

Here are five guidelines for keeping things simple:

1. Talk to people, not above them. The direct and simple approach is usually best in all forms of communication. Greater complexity is never the answer in communication — if your desire is to connect.

2. Get to the point. Good communicators get to the point before their listeners start asking, "What's the point?" To do that, one must start out knowing what the point is. The time to start thinking about the reason for your communication is before you begin to speak.

3. Say it over and over and over and over again. Good teachers know that the fundamental law of learning is repetition. Repetition is essential in communication if you want people to understand and buy into what you're saying. William H. Rastetter, who taught at MIT and Harvard before becoming CEO of IDEC Pharmaceuticals Corp., asserts: "The first time you say something, it's heard. The second time, it's recognized, and the third time, it's learned."

4. Say it clearly. In the end, people are persuaded not by what we say, but by what they understand. When you speak clearly and simply, more people can understand what you're trying to communicate. Being simple as a communicator isn't a weakness. It's a strength! Author and critic John Ruskin observed, "The greatest thing a human ever does in the world is to see something and tell others what he saw in a plain way."

5. Say less. Executive communication coach Anne Cooper Ready, in her book *Off the Cuff*, gives the following advice: "Begin, and end, on time. Or better yet, end a little early. Even if you are a paid speaker and want to impress the organizers so they know they've gotten their money's worth, stop yourself with a particularly good answer a few minutes before you have to. In today's overbooked society, nothing is more appreciated than the gift of a little found time."

Connectors Create an Experience Everyone Enjoys

Being interesting can be learned.

As you prepare to communicate, no matter whether it's to one, 100 or 1,000, try to do as many of these seven things as possible:

1. Take responsibility for your listeners. In general, there are no bad audiences, only bad speakers. If the audience is asleep, somebody needs to go onstage and wake up the speaker! Take responsibility for creating an experience that others will enjoy when you're with a small group of people.

2. Communicate in their world. To connect with others in their world, you can't just live in your own world. You have to link what you want to say to what others' needs are. Anything you can do to relate to your listeners and meet them on their terms is going to help you connect — as long as you maintain authenticity. You can't pretend to be someone you're not. You have to be yourself while speaking someone else's language.

3. Capture people's attention from the start. Here are some things you can do: Start with a comment about the situation or setting. Introduce yourself. Relax. Begin with humor. Create a sense of anticipation. You need to find ways to connect with your listeners early, put them at ease and get them interested from the start. Find ways to make the experience enjoyable.

4. Activate your audience. Look for signs of involvement from the people you're communicating with. If there are signs of life, great! If there aren't, get to work trying to get audience members involved. Here's how: Ask questions. Get people moving. Ask people to interact. It's the speaker's responsibility to bring energy to the audience and to work to activate them.

5. Say it so it sticks. If you want people to remember what you say, you need to say the right thing at the right moment in the right way! Link what you say with what people need. Find a way to be original. Use humor. Use a shocking statement or statistic. Say things in an interesting way. Learn to pause. Give people a chance to consider what you just said.

6. Be visual. Most people learn visually. Anything that can help people visually helps them to connect. Encourage people to take notes. When you've written something down it is more likely to stay with you. Use words to try to stimulate the imagination of your listeners. Encourage them to paint vivid pictures in their minds.

7. Tell stories. Perhaps the most effective way to capture people's interest and make the experience enjoyable when you talk is to include stories. Whether you are communicating humor, hard facts or tragedy, storytelling improves the experience.

Connectors Inspire People

As effective communicators inspire people, there is a kind of formula, The Inspiration Equation, that comes into play. It works like this: ***What They Know + What They See + What They Feel = Inspiration***.

When these three factors come into play and a communicator is able to bring them into alignment, it creates a synergy that inspires people. And from that place of inspiration, you can often lead people to take action. Here are the three pieces of the Inspiration Equation:

- **What People Need to Know.** In the context of connecting, people need to know you're on their side. Greek philosopher Aristotle understood this and commented on it in *The Rhetoric*. In the context of persuasion, he identified the most important element as *pathos*, the communicators' ability to

connect with the feelings, desires, wishes, fears and passions of their listeners. It's a way of giving people reassurance, of letting them know they can trust you, of telling them that they should listen to you. How do you communicate that? It boils down to two things: People need to know that you understand them and are focused on them, and they need to know that you have high expectations of them.

- **What People Need to See.** Most people decide very quickly whether they will continue listening to you or simply "turn off" and stop paying attention. Often they make that decision based on what they see. Their perceptions begin at a surface level. Do you look pleasant? Do you smile? If there are no red flags for your listeners, then they are usually willing to give you enough time to prove yourself. They are looking for your conviction, your credibility and evidence of your character.
- **What People Need to Feel.** The most important factor in the Inspiration Equation is what people feel. If you leave that part out and you don't help people feel what they need to feel, they will never be inspired. Why? Because people will not always remember what you said or what you did, but they will always remember how you made them feel! If you want to inspire people, there are three things you need in order to help them feel: your passion for the subject and them, your confidence in yourself and them, and your gratitude for them.

Connectors Live What They Communicate

To be successful in the long run, you need to do more than connect. You need to keep connecting, and you can do that only when you live what you communicate. When you do, the results can be fantastic. The more time goes by, the better the relationship gets.

We can't expect to connect with others if we don't live what we communicate. That can hurt someone professionally, but obviously it's even more painful on a personal level. One of the ways you can keep yourself accountable to live right is to think about the impact of your actions on your family. That's why you should always try to keep in mind this definition of success: "Those who are the closest to me and know me the best, love and respect me the most." When the people who know how you live day in, day out, see that your words and actions align, then they can trust you, have confidence in you and connect with you. And that makes life a great and enjoyable journey every day.

Credibility Connects

The true power of connecting with others does not come from superficial interactions with others — smiling at a stranger, being friendly with a food server or wowing a one-time audience. It comes from connecting with people long-term. In ongoing relationships, we are able to make an impact of real value. When we live with consistent integrity with our spouse, children and grandchildren. When we treat our customers, clients and colleagues the way they wish to be treated. When our neighbors see our values and actions lining up. When we lead others with honesty and respect. These are the things that give us credibility, allow us to connect and afford us an opportunity to help others and add value to them. As training consultant Greg Schaffer remarked, "If you do not connect with others, influence is out of the question."

American writer Henry Adams said, "A teacher affects eternity; he can never tell where his influence stops." The same can be said of a connector who has integrity. We can make a difference in our world, but to do so we must begin with ourselves — by making sure our words and our actions are consistent every day. We must live what we communicate. If we do that, there's no telling what we will be able to accomplish.

Action

If you really want to help others, you need to take your communication to the next level — which is to call people to action. When do inspired people take action? When you do two things:

1. **Say the right words at the right time.** Good leaders understand the importance of timing.
2. **Give people an action plan.** Connectors inspire people to move from "know how" to "do now."

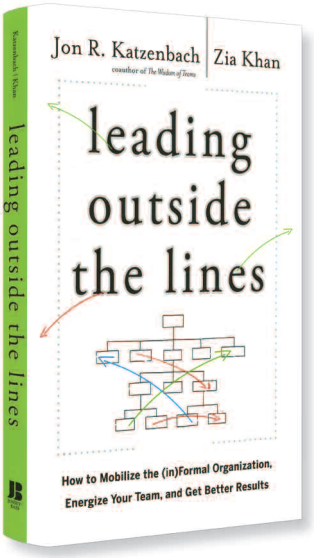
Leading Outside the Lines

How to Mobilize the (in)Formal Organization, Energize Your Team and Get Better Results



by Jon R. Katzenbach and Zia Khan

THE SUMMARY IN BRIEF

In *Leading Outside the Lines*, two top thought leaders, Jon R. Katzenbach and Zia Khan, offer an all-new examination of the modern workplace and how leaders and managers must embrace it for success. Together they reveal how two distinct factions form the bigger picture for how organizations actually work. The first faction is the more defined and visible "formal organization": the management structure, process configuration, performance metrics and formal strategy. The second faction is the "informal organization": the culture, social networks, peer interactions and ad hoc communities that spring up naturally and, in an equally vital but different way, can accelerate or hinder an organization's success. Many leaders quickly master the formal organization. Some leaders instinctively know or eventually learn how to mobilize the informal. However, the most effective leaders achieve breakthroughs by integrating both the formal and informal as both can contribute to performance in different but complementary ways.

Through compelling case studies from enterprises around the world, *Leading Outside the Lines* explores how top-level organizations balance the informal and formal elements of organizations to achieve outstanding results.

Leading Outside the Lines takes a timeless organizational approach and creates a powerful paradigm-shifting tool set for applying it, showing when you can get the most done by using the informal elements that operate under the radar, and when it is better to use formal processes. It also illustrates how the two can work together to get the best of both. In addition, the authors help senior leaders, front-line managers and individual contributors get better performance results.

IN THIS SUMMARY, YOU WILL LEARN:

- How to understand the requirements for 21st-century leadership.
- How the work of today's best organizations really gets done.
- How to help your teams shine in terms of performance, innovation and retention.
- How to tap into the power of the informal to reach your goals.

Introduction

In most companies, the formal organization is still seen as the right approach, the default structure. Especially if you have been trained in the hard disciplines (finance, technology or operations management) as so many senior leaders have, you tend to work most naturally through tangibles like job descriptions, organization charts, process flows, scorecards and physical structures. There is nothing wrong in that. However, you may be less comfortable dealing with the fuzzier aspects of an organization (informal networks, cultural norms, emotional realities and peer pressure) even if you recognize their importance. Leading outside the lines is harder than managing within the formal lines, partly because that territory is less well defined, less studied and less written about.

In the current business environment — characterized by a rapid rate of change, increasing globalization and the rise of Web-based social networks — more and more companies are finding that the best way to create lasting value is by nurturing all kinds of informal and nonhierarchical initiatives rather than by relying so heavily on formal top-down rules of engagement.

An Effort Worth Making

To make a shift toward the informal is not easy. It is, however, an effort that is really worth making. Increasingly, those companies that can *mobilize* the informal organization as effectively as they *manage* the formal — that is, integrate the two and achieve a balance of complementary benefits — are the companies that can create a real and sustainable competitive advantage.

Specifically, these organizations are ahead of the curve because they successfully accomplish more than one balancing act:

- They foster, encourage and support deep values that inform the decisions and actions taken at all levels of the formal structure. However, their values are also evident in the informal attitudes, interactions and behaviors of people throughout the organization.
- They ensure that formal, long-range strategy is understood rationally by people working on the front lines of the operation. However, they also provide emotional and visceral support, so the strategy permeates all aspects of the work.
- They retain the efficiency and clarity of the well-defined structures that define the formal organization while also capitalizing on the flexibility and speed of the social networks and peer interactions that connect people informally.
- They ensure that in addition to the formal methods of compensation and reward, including pay, benefits, bonuses and well-defined forms of recognition, employees have emotional sources of motivation that commit them in ways that the formal mechanisms cannot.

PART ONE: USING THE INFORMAL TO ENHANCE THE FORMAL

Why do managers favor the rational approach and rely on top-down execution efforts? Largely because the mechanisms of the formal organization can be clearly defined, named, captured in written form and measured. They include:

- *Strategy*. A set of priorities, plans and performance objectives that guide choices throughout the organiza-

tion in how to best use resources and deploy capabilities.

- *Structures.* The lines and boxes that determine who reports to whom for what and that help align the decision making needed to achieve the organization's strategy.
- *Processes and procedures.* The written ground rules that determine the information and work flows needed to efficiently carry out the organization's day-to-day tasks.
- *Programs and initiatives.* Sets of goals, work plans, rules of engagement and resources dedicated to achieving specific objectives within defined time lines.
- *Performance goals and metrics.* The explicit targets and measures that can be used to monitor and evaluate the performance of different groups and individuals.

The formal comprises the nuts-and-bolts hardware that runs the machinery of business.

The Magic of the Informal

The informal isn't as easily defined as the formal, because it does not have the clear structural boundaries that the formal has. In essence, the informal is the aggregate of organizational elements that primarily influence behavior through emotional means.

And, unlike the formal elements, the informal elements of an organization rarely appear as written instructions. Even so, they can still be identified and named. They include:

- *Shared values.* These are the shared beliefs and norms for taking action and making decisions as demonstrated individually and collectively.
- *Informal networks.* These are positive patterns of relationships between people that may be based on knowledge-sharing, trust, energy or other characteristics.
- *Communities.* These are more focused, cross-functional groups that share a common identity and practice.
- *Pride.* People feel proud when they use their skills to realize goals that are meaningful to them.

The informal is uniquely good for motivating people to go above and beyond their job duties, communicating information quickly and meaningfully, catalyzing collaboration and accelerating behavior change.

When the Balance Shifts

The required balance of the formal and informal changes over the course of a company's life cycle and imbalances tend to appear during periods of significant growth — or significant declines in growth.

Young companies, those with between 10 and 50 people, are informal by nature for four very good reasons. First, their worlds are largely unpredictable and unstable. Second, the participants know each other personally. Third, they are constantly forming and reforming in different ways to address sudden unexpected challenges. Finally, the personal values of the company are usually strongly shared — even if unstated — because of the hands-on involvement of leaders and the visible, interactive way they make decisions and solve problems on the run.

An Ever-Changing Balance Point

In these companies, productive relationships develop organically through long hours, shared space and collective frustrations. Such relationships usually reflect mutual respect, common interests, a strong sense of purpose and feelings of pride in working together to accomplish that purpose; these are natural motivators for the emerging enterprise.

As the organization grows, however, it increasingly needs to create distinct work groups, clear structures and repeatable workflow processes. As the organization grows, so does the need for clarity around who is responsible and accountable for execution, who has decision-making authority and who controls resources. The growing complexity of workflows amplifies the need for lucid processes that add direction and efficiency for work that is repeated often. As complexity increases, tough leaders demand more clarity about who deserves credit or blame.

The increases in need for formal elements (compensation plans, operational controls, clarity of accountability and responsibility and efficient work flows) can happen gradually or in waves. Generally, by the time a company has surpassed 1,000 people, it needs a robust and coordinated formal organization.

Just as organizations that have grown organically and informally will need to add more formal processes, leaders also need to become increasingly conscious of the changing role of the informal organization, giving it the attention and resources it needs to stay healthy and supportive.

The informal needs to be balanced with the recognition that appropriate elements of the formal are equally important, particularly as size and complexity increase.

Jumping Together

The difficulty of getting the formal and informal organizations jumping together has been the subject of management theorists' working for at least a century. Mary

Parker Follett, a pioneer in the study of organizations, defined the notion of integration as early as the 1920s, by saying, "When two [conflicting] desires are integrated, that means that a solution has been found in which both desires have found a place, that neither side has had to sacrifice anything."

Thus leading outside the lines need not diminish the impact of leading inside the lines. Indeed, when the actions are integrated, the lines largely vanish and "leading" becomes a holistic style that moves organizations to places they couldn't otherwise go.

Getting informal and formal mechanisms to integrate is tricky, and the shifting balance point between the informal and formal organization is but one part of this challenge. The inherent leadership bias to over-rely on the formal, plus the inherent limitations of the informal, make for a very dynamic situation. However, when all parties keep an eye on the balance, as well as on jumping together, needs become clear and practical solutions present themselves. Wise leaders learn how to monitor the line between the formal and informal organization.

The Elements of Integration

It is very important that leaders learn to spot important signposts that indicate integration is actually happening between formal and informal mechanisms. For example:

- *Emotionally motivated decisions and actions that align with strategic intent.*
- *Dynamic routines that are constantly improved upon.*
- *Work groups that grow organically to supplement and work across defined structures, yet maintain sufficient structure to execute efficiently.*
- *A range of value propositions to satisfy employees with different goals and ambitions.*
- *Employees who are proud of the company, their colleagues and their day-to-day accomplishments.*
- *An ecosystem of outside partners, suppliers and customers who are motivated to help the organization succeed.*

These are a few indicators of integration that can't be easily deconstructed into either their formal or informal components. At a high level, it's hard to find the line that separates what's being mobilized informally and what's being managed formally. The two become fundamentally intertwined. ●

PART TWO: MOTIVATING INDIVIDUAL PERFORMANCE

One of the strongest positive emotional drivers is pride. Pride in the journey can be as motivating as pride in the destination. Refinery workers will take extra care in their work for the pride of a clean safety record, or more simply the good feeling of helping a colleague avoid an injury.

Yet most motivational programs focus entirely on the formal rewards: money, perks and promotions. Research and experience show that how people feel about their work, and the pride they take in their daily or weekly accomplishments, can be a powerful motivator of their daily behavior. Here are some insights about pride as a motivational force:

- **What matters most is how people feel about what they do**. Pride is at the heart of what motivates peak performers in most human endeavors.
- **Pride has a dark side to its motivational pull.** Companies that rely too much on pride in monetary and material rewards for motivation invariably lose their best people to the highest bidders.
- **Pride in the journey is as important as pride in the destination.** The best motivators have learned how to get their people to anticipate how good they will feel during the journey as well as the end.
- **Money, perks and promotions also motivate people.** The tangible elements of job rewards are important in meeting survival and life-sustaining needs in Abraham Maslow's hierarchy. Once these fundamental needs are met, however, money becomes more important in attracting and retaining talent than it is in motivating behavior change and discretionary performance efforts.

Four other concepts have also come to light:

- **Feelings about the company motivate loyalty rather than behavioral change.** Pride in the company, and in its leaders, brands and aspirations, is important in attracting and retaining talent. Motivating behavior change, however, is much more dependent on how a person feels about the work itself.
- **Any organization contains multiple sources of pride.** Successful motivators have learned through trial and error how to draw on different sources of pride for different people and purposes.
- **People rarely feel pride in isolation.** There is almost always a real or imagined "pride audience" with whom individuals want to share their good feelings. People derive strong feelings of pride by reflecting on how their pride audience recognizes (or would recognize) an accomplishment.
- **Formal rewards can sometimes diminish pride.** Considerable study has been devoted to the combined effects of extrinsic motivators such as monetary rewards,

and *intrinsic* motivators such as pride in the work. It turns out that *extrinsic* rewards can actually reduce intrinsic motivation.

Values Driven, Not Values Displayed

Consider two well-known organizations whose stated values were similar. Organization A had *communication, respect, integrity* and *excellence*. These values were posted on the company Web site, included in the employee manual and printed on wallet cards distributed at company events. However, looking at the company's employee engagement survey results, researchers found a large and disturbing gap in the degree to which people actually subscribed to these values. They didn't necessarily disagree with them — who could disagree with any of those four words? — they just didn't *apply* them to determine their decisions and behavior.

The values of Organization B were *honor, courage* and *commitment*. These words are a little more unusual than those of Organization A, perhaps, but still nothing particularly exceptional. The real difference in these words is how the values actually determine critical behavior. Every person in this organization talks openly about the values, and makes critical, even life-saving decisions, based on them.

Can you guess the two organizations? Organization A was Enron. It went bankrupt after massive accounting irregularities came to light in 2001. Enron's CEO, Jeff Skilling, is in jail and his lawyers are still in court arguing his appeal. Organization B is the U.S. Marine Corps. It has endured for more than 200 years as an elite, high-performing institution — winning our nation's most difficult battles time and again.

A critical difference between these organizations lies in the use of the informal organization to bring the values to life. Enron was a values-*displayed* organization, where the values were nothing more than words on paper, cited in speeches and presentations when convenient. The Marine Corps is a values-*driven* organization, in which the values are lived, breathed and drawn upon to guide day-to-day actions and decisions.

Values as Organizational Guides

Values are both formal and informal. They are formal in that they can be written down, displayed throughout an organization's physical space and fleshed out in elaborate memoranda. They emanate on high and are disseminated through the hierarchy. However, it's the informal organization that is responsible for elevating values from admirable statements to a way of life.

In a values-driven organization, the values are shared and promoted not just through formal means but also by people who act consistently and communicate constantly. They are espoused and enforced among peers as well as by superiors at all levels. Values help organizations outperform their competitors, and success further reinforces the values.

It's Still About Performance

In the autumn of 2004, Gregg Sheehy, a contract relationship executive and senior vice president at Bank of America (BofA), took over responsibility for the bank's relationship with TeleTech, an independent customer support call center to which BofA outsourced much of its helpline business.

Sheehy needed to improve TeleTech's performance, but he had no formal authority over the company. TeleTech's people didn't work for Sheehy; he was not their manager. So, Sheehy had very few, if any, formal sticks available to him. He decided to work with informal carrots instead.

Making the Right Connections

For starters, he gave the TeleTech employees his word that he wasn't going anywhere soon, as had been the pattern among his predecessors. He wanted the people to know that he was interested both in results and in the people who worked at the company.

He built strong personal relationships with members of the leadership team and other key influencers. He took them out for meals, shared stories, paid attention to what mattered to them and, as a result, got to know them personally. As mutual respect increased, Sheehy was able to get employees to see more clearly the need to close the performance gap. He convinced them that rather than accept the minimal level of service laid out in their contract, they should aspire to exceed the contractual agreements and take personal pride in the achievement and what each of them as individuals do to make it happen.

Personal, Credible Interactions Are Mandatory

Sheehy believed the key to demonstrating both his and BofA's commitment to TeleTech's ability to improve was continued personal support and close, informal contact. No matter where he was, or what time zone he was in, Sheehy often called to offer his congratulations when a new benchmark had been achieved.

Sheehy's approach was to balance the formal impera-

tives with informal mechanisms in ways that would create the emotional commitment and energy needed to change behaviors to push TeleTech up the ladder of performance results.

The Informal Builds Performance; Performance Enhances the Informal

Both the formal and informal organizations in a company are needed to reach challenging performance goals, and both are strengthened by doing so. Managers can encourage this kind of mutual reinforcement in a number of ways:

1. *Set group performance goals* that require people to collaborate and often experience life in a real team. By working together, they get to know each other's values, skills, aspirations and feelings.

2. *Make goals meaningful* to create a sense of purpose and striving. When a goal is made individually meaningful, it becomes a source of pride that motivates behavior.

3. *Apply values to the hardest problems* that stand in the way of achieving performance goals. When applying values enables progress and the resolution of important problems, it reinforces the usefulness of those values as a group experience. ●

PART THREE: MOBILIZING ORGANIZATIONAL CHANGE

Setting the Fast Zebras Free

Mark D. Wallace was U.S. Ambassador to the United Nations during the George W. Bush administration. With charismatic good humor, Wallace talked about his role as a political appointee and the challenges that accompany it. There is always a lot of work to be done at the UN, and so, as Wallace says, "It becomes very clear, very quickly, who the fast zebras are."

Fast zebras is one of Wallace's favorite metaphors for those people who have the ability to absorb information and adapt to sudden challenges capably and quickly. On the African savannah, it is the fast zebra that survives a visit to the watering hole, drinking quickly and moving on, while the slower herd members fall prey to predators lurking in the shadows. The fast zebra is, in essence, a person who knows how to draw on both the formal and informal organizations with equal facility.

Different Organizations, Different Roles

Fast zebras can be found in all kinds of organizations, and in many different roles. They are, however, still relatively rare animals. Obviously, a wise leader learns to recognize and use them effectively. They have the ability to navigate treacherous waters of complex organizations, as well as the wisdom to cultivate the informal relationships that will guide them to perform well. What is more important, however, is that even though the instinctive fast zebras are rare, most people in most organizations have the potential to improve those skills.

It boils down to paying closer attention to the informal elements of your organization. We all network informally to some extent. We don't all, however, think rigorously about who we might add to our networks to enrich our work experience, or how we might more effectively influence our work experience or those within our networks to help us perform better.

A few fast zebras are born that way or master their skills early on. Others master them the hard way, through years of trial and error under difficult circumstances. However, most people can improve their organizational effectiveness and performance significantly by learning how to connect emotionally as well as rationally with a few more of their respected colleagues. ●

Melting the Frozen Tundra

In 2003, when Michael Sabia, CEO of Bell Canada, was asked to discuss the challenge he had with his top team, he said, "My problem isn't at the top. It's across the bottom."

He explained, "The organization's stuck. We introduced all sorts of well-planned strategic, organization and operating programs, but very few have had the impact we need. The front line is not changing their actions and behavior nearly as fast as we need, so we know we're doing something wrong." Then he added, "To make matters worse, many of my leaders are not convinced that we need to change our approach. They want to keep pushing the programs. Sometimes it seems like trying to pound through frozen tundra."

Know What You Want

Sabia's problem was typical of those of many large, complex organizations facing the challenge of rapidly changing market conditions. They put in place a new formal organization to address a strategic and operating challenge, yet they are not getting the behavior that the challenge demands.

Sabia decided to focus first on the supervisors in customer-facing operations. He was not only clear about who he wanted to target but also what he wanted them to do. He had evidence that customer satisfaction correlated with employee engagement. He needed these managers to motivate the customer-facing front-line staff

to take more pride in the results of their day-to-day work on customer satisfaction.

Build It and They Will Come

It seemed obvious to Sabia that if he could get a critical mass of managers across the company to unite, share positive experiences and focus on similar motivational elements, that could make the critical difference — and he turned out to be dead right.

In the early stages, this small network grew by word of mouth and became a symbol of the change Bell Canada needed. Eventually the informal network became a virtual community that got too big to manage itself, so it put in place some formal rules supported by the corporate center and a limited budget. It developed a few simple processes to bring on new members, plan conferences and develop local chapters. In just under two years, more than 2,000 members (all of them potential motivators) joined the group, making it the largest community of practice at Bell Canada.

And while the movement to build pride in the work was not the only aspect of the Bell culture change effort, it was the primary source of change energy across the front line. ●

Mobilizing: A Different Kind of Managing

Leaders at all levels of the organization can proactively influence the informal organization to get more traction where they need it. Instead of managing, the term *mobilizing* is more descriptive of what is needed — and it highlights the important distinctions.

Of course, *mobilize* has military connotations, typically defined as "marshaling resources for action." When business experts use the phrase, however, they mean putting human resources in motion that allow the organization to realize the full potential of the ideas and actions of more people. Leaders need to prod the informal organization, to guide or herd it in the right direction without trying to control or constrain it.

Of course, the balance between how much effort a leader puts into mobilizing the informal as opposed to managing the formal is difficult to strike. Most leaders tend to pay attention to one of the two, only to realize they need to compensate by paying closer attention to the other. As at Bell Canada, Sabia turned to the informal only when he realized that formal mechanisms weren't working fast enough. He did not, however, abandon the formal elements in favor of the informal; rather he found ways to get the best out of both.

The most effective approach, especially at times when leaders need massive change, is to take advantage of both *at the same time*.

Principles for Mobilizing

Unfortunately, there is no proven best way to mobilize the informal. It depends on who you are and where you are. A high degree of improvisation and customization is needed in every situation. However, there are a few principles that are generally helpful as people try to mobilize the informal while managing the formal:

- **Concentrate on the critical few.** Be crystal clear about a few objectives and behaviors.
- **Draw on what is already working.** Most people will take more pride in adopting what was developed from within rather than borrowing best practices from other organizations.
- **Promote emotional energy that feeds on itself.** Finding opportunities to create tipping points, reinforcing cycles or chain reactions is critical so that the energy latent in the informal organization can rise up and direct itself without requiring an overwhelming use of resources from the formal organization. ●

Five Behaviors of Master Motivators

Here are five common behaviors that set the best apart from most "good managers":

- **Know your people.** Create meaningful connections to get to know your team personally and understand individual definitions of success.
- **Recognize success.** Use spontaneous pats on the back for the "how" in addition to the "what"; the journey is as important as the destination.
- **Maintain the course.** Translate the organization's strategies into local context; prioritize a few goals and follow them; help people stay on track.
- **Use facts to make decisions.** Employ a transparent and data-driven process to make hard choices and always explain the "why" in clear terms.
- **Broaden the work.** Create stretch opportunities for everyone based on their skills and goals that go beyond the job description.

What to Do

Mobilizing the informal is a means to the end of solving performance challenges — and it's the latter that worries people. It's important to go beyond specific examples and explore a few general performance challenges where particularly helpful insights into the informal organization have been found:

- **Strategic planning.** This is the ultimate formal process where analytics, decision making, accountability setting and plan development rule.

An approach to try: Balance formal strategic planning processes with unstructured input from different parts of the organization, and allow people the time to wallow around in all the information to synthesize new insights.

- **Innovation.** There is another dimension to innovation beyond the creation of neat prototypes: the ability to take a high-potential idea, develop it and put it out into the market.

An approach to try: Create a very visible and central innovation process in which underdeveloped ideas can easily find their way to the front end. Integrate informal and formal mechanisms throughout the process.

- **Cost-cutting.** Companies often take an approach to cost cutting that resembles a crash diet. Experts advocate lean cuisine because it is a healthier and more enjoyable approach, and it helps keep the weight off longer.

An approach to try: Include people in the challenge of cutting costs. Engage employees in surfacing solutions and instill peer-to-peer "pride in being thrifty."

- **Culture change.** Culture is a blend of many elements of the informal organization. One of the most important — and overlooked — factors is to bring the culture to life with real and visible examples.

An approach to try: Find a double handful of key influencers at multiple levels — special individuals who are already exhibiting the behaviors you want. Get their help in initiating peer-to-peer interactions focused on the specific behaviors that need to change.

- **Customer service**. Nordstrom has no employee handbook at all. Instead, it has a 75-word statement that says, among a very few other things, "Our number one goal is to provide outstanding customer service." There is only one rule in the statement. "Use your good judgment in all situations. There will be no additional rules."

An approach to try: Ask employees which rules and processes are getting in the way of serving customers, and get rid of them. Create multiple and diverse sources of pride for employees in customer service processes, and be sure to find ways to provide public recognition for accomplishments that are otherwise overlooked by formal scorecards and metrics. ●

In Conclusion

While the fashion of management theory encourages throwing out the old to make room for the new, that is not what is being proposed here. Rather, you are being urged to:

- Keep and strengthen your formal management approaches — just realize their limitations.
- Avoid viewing the informal organization as unruly chaos — it can be influenced and energized to accelerate performance results and strategic imperatives.
- Refuse to manage the informal with the techniques that work for the formal — you will only make things worse.

When the informal organization is mobilized to balance the formal organization, the overall construct is whole and complete. New levels of performance result. It is like pushing a swing. New heights can only be achieved when the pusher and the swinger are in sync.

Many examples and case studies demonstrate some of the complexities involved in getting the best from both the formal and informal organizations, but they also illustrate the many different ways that leaders can achieve integration of the two. It is the mindset, the bias toward balance and integration, that differentiates the peak performers from the also-rans — be they individuals, teams or enterprises.

As you travel along this road, however, recognize that achieving integration is dynamic — a moving target. All this summary can offer is a range of ideas, options, approaches and examples to draw from — only some of which will fit your needs and your organizational DNA.

In addition to the ones offered here, find your own and they will help you be successful in leading outside the lines. ●

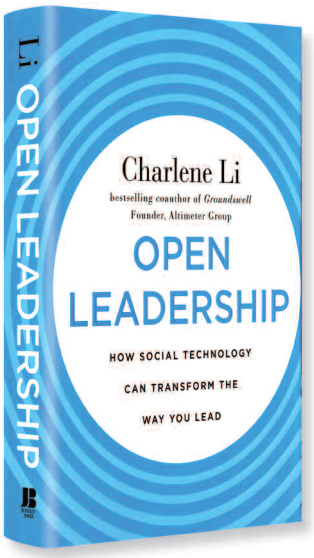
Leadership: Strategies

Open Leadership

How Social Technology Can Transform the Way You Lead



by Charlene Li

THE SUMMARY IN BRIEF

"Be open, be transparent, be authentic," are the current leadership mantras — but companies often push back. Traditionally, business is premised on the concept of control and yet the new world order demands openness.

Open Leadership offers leaders a resource that shows how to tap into the power of the social technology revolution and use social media to be "open" while maintaining control. Social media expert Charlene Li (co-author of *Groundswell*) explains how Facebook, Twitter, YouTube, Yammer, Jive and other popular social media sites can improve efficiency, communication and decision making for leaders and their organizations.

Openness requires more — not less — rigor and effort than being in control. *Open Leadership* reveals step-by-step, with illustrative case studies and examples from a wide range of industries, how to bring the precision of this new openness both inside and outside the organization. It also includes suggestions that will help an organization determine an open strategy, weigh the benefits against the risk and have a clear understanding of the implications of being open.

By embracing social media, leaders can transform their organizations to become more effective, decisive and ultimately more profitable in this new era of openness in the marketplace.

IN THIS SUMMARY, YOU WILL LEARN:

- How to create guidelines, policies and procedures to thrive in the new culture of openness.
- How many successful companies have managed openness.
- What you need to include in your new openness strategy.
- How to deal with the tensions between openness and order.

INTRODUCTION

As your customers and employees become more adept at using social and other emerging technologies, they will push you to be more open, urging you to let go in ways in which you may not be comfortable. Your natural inclination may be to fight this trend, to see it as a fad that you hope will fade and simply go away. It won't. Not only is this trend inevitable, but it also is going to force you and your organization to be more open than you are today.

In the past, organizational leaders had the luxury of remaining ensconced in their executive suites, opening up only when they felt the need to. Today there is information leakage everywhere, with company miscues and missteps spreading all over the Internet in seconds. And all involved — from employees and customers to business partners — feel entitled to give their opinions and get upset when their ideas are not implemented. The fundamental rules that have governed how *relationships* work are being rewritten, because of easy, no-cost information sharing.

The challenge, therefore, is to redefine how those relationships will operate. Organizations and their leaders need to lay out the commitments they expect from these new relationships.

It is critical that your organization not enter into these new open relationships without guidelines. Simply opening up and devolving into chaos, or worse, "letting this take its natural course" are recipes for disaster. Being open requires more — not less — rigor and effort than being in control.

The struggle in balancing openness and control is a universal, human problem. Just as children grow and develop their own voices that need to be heard, our customers, employees and partners want to be brought into the inner sanctum of the organization as well.

PART I: THE UPSIDE OF GIVING UP CONTROL

One March day not long ago, Dave Carroll was a United Airlines passenger waiting for takeoff. He looked out of the airplane window and couldn't believe what he was seeing. Out on the tarmac of Chicago's O'Hare airport, he saw baggage handlers tossing suitcases, sometimes dropping them on the ground. Among the items were guitar cases — and the alarmed Carroll, an independent Canadian musician and songwriter, realized that these were *his* guitars being thrown back and forth.

Sure enough, when Carroll landed in Omaha, his final destination, he opened his guitar case and found his beloved Taylor guitar badly damaged. Carroll was in a hurry to get to his gig, and he was booked with back-to-back shows, so it wasn't until three days later that he contacted United to report the damage.

But United refused to compensate Carroll for the $1,200 repair — the company had a standing policy to not accept claims more than 24 hours after a flight, because as time passes it becomes increasingly difficult to pinpoint responsibility for the damage. Because Carroll submitted his claim more than three days after the damage occurred, United said that it would not pay for damages that could have been caused elsewhere.

Carroll pressed his case for months but made no progress, so he made a music video called "United Breaks Guitars" and posted it on YouTube. He felt better, and he really didn't think more than a dozen people or so would see it. That was on July 7, 2009. Within

three days, the video had more than 1 million views, and Carroll's anthem became a viral sensation. By the end of 2009, there had been more than 7 million views and hundreds of news stories about Carroll's experience.

Understandably, United was aghast. The company immediately reached out to Carroll, who explained that his biggest desire was to have United's baggage damage policy changed.

Tony Cervone, United's SVP of corporate communications said, "We engaged directly with Dave as soon as this came out, and said, 'What happened and let us understand this better.' We listened, and then we changed a couple of the policies immediately."

Carroll posted a heartfelt video statement that explained the incident, applauded United Airlines for its efforts in reaching out to remedy the situation and even praised the professionalism of United's employees.

The New Rules of Open Leadership

What's changed today is that new technologies allow us to let go of control and still be in command, because better, cheaper communication tools give us the ability to be intimately familiar with what is happening with both customers and employees. Open leadership can be defined as: *Having the confidence and humility to give up the need to be in control while inspiring commitment from people to accomplish goals*. Open leadership fosters new relationships. To understand and govern how these new relationships work, we need new rules like the following:

- **Respect that your customers and employees have power.** If you ever need a reminder of what customer and employee power look like, just go read a social media monitoring report on your company from a vendor like Radian6, BuzzMetrics or Cymfony.
- **Share constantly to build trust.** At the core of any successful relationship is trust.
- **Nurture curiosity and humility.** The natural outgrowth of curiosity is humility, which gives you the intellectual integrity to acknowledge that you still have a lot to learn and also to admit when you are wrong.
- **Hold openness accountable.** In relationships, accountability is a two-way street — it makes clear the expectations in the relationship, as well as the consequences if they are not met.
- **Forgive failure.** Things go wrong all the time in relationships, and the healthiest ones move on from them, leaving behind grudges and blame. This is not to say that failure is accepted; rather, that it is acknowledged and understood.

Customer Support at iRobot

iRobot, the $300-million manufacturer and marketer of the Roomba vacuum, integrates its discussion forums and community (hosted by Lithium Technologies) into its customer support system. When an unanswered question is elevated from the community forum to the iRobot support center, the service representative can see information about the customer's participation in the Lithium online community, such as which questions were submitted and which ones were answered.

The 10 Elements of Openness

The 10 elements of being open fall into two broad categories: six information sharing elements and four decision making elements.

Open Information Sharing

The six elements of information sharing can be defined primarily by the goal and the nature of the sharing:

1. **Explaining.** The purpose of this type of information sharing is to inform people about a decision, direction or strategy with the goal of getting recipients — employees, associates, distributors and others — to buy into the idea, so that everyone is working toward the same goal.
2. **Updating.** New publishing tools, like blogs, collaboration platforms and even Twitter, provide updates that are easily available whenever someone needs them. These updates capture the knowledge, expertise and actions that happen in the ordinary course of business.
3. **Conversing.** Today, anyone with a computer can provide feedback to the organization — comments on blogs, discussion forums, review sites — and, even better, the company can talk back. By conversing openly, an organization engages in these conversations with the intent of improving operations and efficiency.
4. **Open Mic.** Micah Laaker, a director at Yahoo!, has adopted the phrase "open mic" because it so aptly captures the essence of this type of shared information, where anyone and everyone is welcome to come forward and participate with no preconditions.
5. **Crowdsourcing.** The goal of crowdsourcing is to grow the sources of new ideas and gather fresh thinking to create or improve a new product or service. This was always possible (think of the

Pillsbury Bake-Off, in which customers compete for prizes with new recipes they create). But the difference now is that this is happening on an unprecedented scale and is directed at encouraging a coherent contribution from an individual toward a specific goal.

6. **Platforms.** EBay is a great example of an open platform — by standardizing how items are listed and how transactions are handled, the company has enabled millions of individual sellers to trade online. The goal behind open platforms is to create standards, protocols and rules that govern how organizations and people can interact.

Open Decision Making

There are four major types of decision making in organizations today:

1. **Centralized.** A small number of people — typically the CEO and perhaps a small team around that person — have the knowledge and judgment to make centralized decisions.
2. **Democratic.** In democratic decision making, a limited set of choices is put forward to a group and voting is used to make the decision.
3. **Self-Managing.** In the consensus decision making model, every person involved and affected has to agree about whatever is being decided, resulting in tremendous buy-in. This type of decision making is often used in hiring.
4. **Distributed.** This model of decision making is a hybrid of all of the preceding ones, in that it pushes decisions away from the center to where the information and knowledge to make decisions actually reside, typically closer to the customer.

PART II: CRAFTING YOUR OPEN STRATEGY

What is often missing when leaders try to decide how open to be is a coherent open strategy and "open-driven objectives." With an open strategy, decision shifts from *whether* you should be open, to how open you *need to be* to accomplish your overall strategic goals.

There are four underlying objectives integrated into almost every successful strategic plan. The objectives apply to both internal and external situations, to an audience primarily of employees as well as to one of customers and partners. These objectives are to:

• **Learn.** First and foremost, organizations know that they must learn from employees, customers and partners before they can do anything else. Organizations and their leaders must be constantly open to learning. And you must do this first before pursuing any other goal — otherwise, you risk operating in a vacuum.

• **Dialog.** Communication — both internal and external — transforms a relationship from that of shouting out one-way messages to a dialog between equals. And along the way, people in the conversation become more and more engaged, to the point where they have a dialog without you having to be present. At the core, marketing and communications is about building relationships, but the key is knowing how to do it in a way that feels relevant and "authentic" to someone.

• **Support.** People both inside and outside the organization need help at different times — ranging from presale to post-sale.

• **Innovate.** Creativity needs to be fostered, both inside and outside the organization. Organizations are starting to turn to their customers for ideas, leveraging crowdsourcing markets, like crowdSPRING, uTest and InnoCentive, for design, testing and ideation, respectively. Customers and employees are also clamoring to have a say in what is created.

Understanding and Measuring the Benefits of Being Open

It's hard to quantify the value of a relationship, because we can tap into that value in so many different ways.

The difficulty with today's social technologies, like Facebook, blogs, discussion forums and Twitter, is that they appear to lack clear, direct benefits compared to more established relationship channels. In actuality, the activities taking place on those sites are inherently measurable, but we have not yet established a body of accepted knowledge and experience about the value of these activities versus the costs and risks of achieving those benefits.

Research shows that the open-driven objectives all create some common benefits, in that they:

• *Remove friction*. By removing barriers and access to information and people, the cost of information sharing and decision making is lowered. It is also simply easier to do.

• *Scale efforts*. The culture of sharing means things spread faster and wider, with less direct investment.

• *Enable fast response*. The real-time nature of social technologies means that you can respond quickly. In fact, if you are not there to head off the growing wave, you risk being overrun.

• *Gain commitment.* This is probably the hardest to quantify but the most important as you win the hearts and minds of your employees and customers.

The Ultimate Metric

Many companies have adopted the Net Promoter Score (NPS) as a key metric of customer loyalty and satisfaction in their organizations. The NPS asks just one question to gauge customer satisfaction: "How likely are you to recommend [company] to a friend or colleague?" on a 0 to 10 point scale. People who respond "9" or "10" are considered Promoters, those who respond "7" or "8" are Passives and those who respond "0" to "6" are Detractors. To calculate your company's NPS, take the percentage of your customers who are Promoters and subtract the Detractors. Satmetrix, which deploys and manages NPS loyalty programs, benchmarked the NPS scores of several industries, with companies like Vonage (45 percent), Charles Schwab (36 percent), Apple (77 percent) and Google (71 percent) leading in their respective categories.

NPS is especially interesting in that this single metric is strongly correlated with repeat customer purchase. Moreover, the NPS explains differences in relative revenue growth rates. To increase your NPS score requires that you increase the number of Promoters and decrease the number of Detractors. Greater openness can directly improve NPS in these two areas — consider how updating more frequently can convert Passives to Promoters, or how conversing in a more open manner can meet the needs of Detractors.

The beauty of NPS is that it is immediately and easily measurable. Having a common metric across the company provides not only a unified view, but also a way to make consistent trade-offs. ●

Structuring Openness With Sandbox Covenants

Open leadership requires that you create structure, process and discipline around openness when there is none, so that people know what to expect and how to behave in a new open environment. Make the rules, involving your employees and customers along the way. Think of it as one of your first openness initiatives — writing what could be called the "sandbox covenant" that will govern *how* you will enter into these new relationships.

One way to think about openness is to use a playground sandbox metaphor. On the one hand, there are clearly defined boundaries to the sandbox, and within those boundaries, it's a safe place to play. On the other hand, the sandbox still has rules: No throwing sand, no taking someone's truck unless you have permission.

Using Covenants to Build Trust

Covenants are promises that people make with each other, which differ from traditional corporate policies and procedures that *dictate* how things will operate within organizations. The philosophy behind covenants is more suited to openness strategies because the promises, bargains and contracts reflect a real trade-off and transfer of power and responsibility. When leaders open up and give up control, they trust that employees will do what they promise and that customers will respond and engage in a civil manner. A key part of a covenant is accountability — spelling out what happens if either party doesn't keep their side of the bargain.

A recent survey by Deloitte found that only 22 percent of companies have any type of social media guideline or policy in place. Without any sort of guidelines, employees and their managers will be at a loss as to what is allowed and what isn't. When situations come up, managers should all be able to recognize them as a problem (or not) and turn to the guidelines for advice on potential next steps. The following elements are essential components of a company's social media guidelines:

• **Introduction: Setting the Stage.** It's important to start off with the right tone — which is why your guidelines should start with a statement of encouragement and support.

• **Guidelines.** Explain when and for whom the policy applies. Explain why the organization needs social media guidelines and in particular when it applies to a person's *personal* use of social media. Address identity transparency, responsibility, confidentiality, common sense and judgment.

• **Best Practices for Social Media Practitioners.** Have a personality. Develop a voice. Address spelling and grammar. Respond to people.

• **Oversight and Consequences.** Describe the process for managers to follow.

• **Additional Resources.** Include HR, press and legal contacts for managers and employees, and training.

The sandbox covenant that you put in place has to be consistent and congruent with the kind of relationship you have with your employees and your audience. If *they* are not ready for openness, if *you* are not ready for openness, then you will have to make your sandbox covenants tighter and more closely defined to have a good working relationship. ●

Orchestrating Your Open Strategy

Openness, by definition, means that there will be bridges built between traditionally isolated departments and silos — and some people may not be all that happy about this. People are comfortable in their well-defined positions; then, suddenly, openness changes the rules and requires that they work together in concert toward a common goal.

This change doesn't happen overnight, nor will it happen on its own. You will need an overall action plan that lays out the details for the open strategy and goals that you developed — essentially, the score that you will use to conduct and lead your organization. Your detailed plan should include the following five elements:

• **Create robust socialgraphic profiles of your customers and employees.** There are three elements of socialgraphics: social audit, engagement audit and influence audit. By mapping the basic socialgraphics of your audience, you'll have a fundamental baseline of where your customers and employees are today.

• **Identify points where workflow and stakeholders are affected.** One of the first actions you need to take is mapping out the workflows, processes and stakeholders that will be affected by your open strategy goal. You need to anticipate how requests need to be handled and to clearly communicate that to the people who will have to take action. Here are three types of workflows: triage of real-time requests, crisis management and internal communications.

• **Determine the best organizational structure.** The Altimeter Group has found that successful organizations adopt one of three models: organic, centralized or coordinated. The *organic* model is very natural and allows openness to develop where it is most likely to grow and thrive. In a *centralized* model, one person or group leads the efforts and sets the pace. In a *coordinated* model, one group provides best practices, with execution at the edge. The right model for you depends heavily on the level of openness in your organization, your goals and how you are currently structured.

• **Assign roles and responsibilities.** In most situations, there are three major responsibilities: laying out the strategy, building and maintaining the tools, and engaging with the community. The strategist is the person who sets the direction of the open initiative and makes sure that a strategic plan is in place, corralling executives behind it and securing resources as needed. The builder or program manager decides on the technology, details the business model and workflow, and manages ongoing maintenance. The community manager facilitates and responds to the community, be that communicating with an external community or fostering internal employee collaboration.

• **Design appropriate training and incentive plans.** Some companies, like Humana, have social media training modules uploaded on their intranets, with titles like "Understanding LinkedIn in 15 Minutes" and "Understanding Twitter in 15 Minutes." Other organizations organize mentorships, whereby younger, more socially savvy employees buddy up with a senior executive for weekly online training sessions. But a more important education and training initiative to consider is one for changing mind-sets and behaviors. It comes down to the incentives the organization puts in place. When someone sees a benefit in being more open and sees a reward for doing so, behavior tends to change.

PART III: OPEN LEADERSHIP REDEFINING RELATIONSHIPS

There are two mindsets that define and determine how open you are as a leader. The first is your view of people — in general, are you optimistic or pessimistic about people's intentions? No one is completely optimistic nor completely pessimistic — and, like an open strategy, this often depends on the situation at hand. But in general, open leaders believe in "win-win" situations, in which when people act in their self-interest it also turns out to be in the best interest of the organization.

Optimism allows open leaders to be more open with information, both in sharing it with a greater audience and in gathering it from different sources. If a key component of your open strategy involves more open information sharing, then you will need to have leaders who are more optimistic than pessimistic in their mindsets.

The second mindset is your view of your successes: as either coming primarily from your efforts as an individual or stemming from the efforts of a team. A good leader always has elements of both views, but in tough times, where do you draw your strength from as a leader — yourself or the people around you? Open leaders recognize their limitations and are quick to collaborate with others, whereas individualistic leaders turn inward and rely first on their own strength and ability to prevail.

If your open strategy requires more distributed decision making, then having leaders who are comfortable with collaboration will be crucial.

The Importance of Curiosity and Humility

Open leaders are inherently curious about the world and have an insatiable need to constantly seek out

opportunities to improve themselves and the world around them. They are curious about customers, about their employees, about suppliers, about industry trends and about the wider world. Most intelligent leaders are open to what they don't know, but open leaders are driven by a deeper quest to learn constantly. They look at social technologies as a unique way for them to extend that learning in a way that they never could before.

Being curious isn't enough to make people open leaders — you can be a constant learner but not necessarily want to change your view of the world. Humility is also needed, and as Jim Collins pointed out in his book *Good to Great*, it's a key characteristic of great leaders. But in the context of open leadership, humility plays a special role — it allows open leaders to accept that their views on something may need to shift because of what their curious explorations expose. In a sense, humility gives them the self-awareness and confidence to admit when they are wrong or need help.

Nurturing Open Leadership

To be a leader, you must first be a good person with intangibles like integrity, honesty, fairness, respect for people, a sense of humor, daring — in short, traits that, as described in Warren Bennis' classic *On Becoming a Leader*, get people to trust and follow you.

In addition to characteristics like integrity, open leadership requires one over all others — authenticity. "Managing Authenticity: The Paradox of Great Leadership," an article that appeared in the *Harvard Business Review* in 2005, explains: "Authenticity is a quality that others must attribute to you. … Authenticity is largely defined by what other people see in you and, as such, can to a great extent be controlled by you."

Open leaders have the ability to pull the relevant parts of their authentic selves into the conversation, to innately know which parts of their identity and personalities to show to whom and when.

So, how do you get started being an "authentic" open leader? First, you must remain true to your values and focus on what you want to accomplish.

The second thing you can do to build your authenticity skills is to start small. By tapping into the core person that you are — and just as important, centering your efforts on the people and audiences you want to reach — you'll soon find and develop your voice.

Transparency Is Not Show-and-Tell All

The other key skill you will need to develop is transparency. Executives like Brian Moynihan, the new CEO of Bank of America, understand the importance of transparency, saying, "We … are changing the way we do business. We are committed to fairness and transparency." Moynihan is acknowledging that after the transgressions of the past decade, organizations need to be more forthcoming about how they conduct business.

Like authenticity, transparency is defined not by you, the leader, but by the people you want to trust you and your organization. How much information do they need in order to follow you, to trust you with their money or business?

This skill can be described as making information "visible." You make visible your goals, and also the challenges, threats and opportunities you face. Greater visibility can also come from *not* sharing, as long as it's accompanied by reasons why the leader cannot say more (for example, "We're in negotiations").

Supporting Open Leadership with Technology

Some leaders have learned that they are capable of using social technologies to extend and support their leadership. Open leaders will need to be very comfortable with using social technologies to implement an open strategy. This has to start at a personal level — how comfortable are *you* with these technologies yourself? To develop new open relationships, you'll have to *scale* your authenticity and transparency.

The Failure Imperative

A key part of being an open leader is the ability to effectively deal with failure, because even with the best structures and planning in place, things go wrong. By mastering failure, you create an environment in which risk taking is encouraged and recovery from failure becomes a skill that everyone in the organization possesses. Essentially, this is about your ability to create a culture in which people have such trust in each other that they know they can safely take risks.

How you, as an open leader, deal with failure is just as important as how well you deal with success. If you feel you cannot be open to mistakes and failures, think of the consequences of this closed mindset. Your colleagues will be afraid to step out or to speak up, and that goes against the very core of being open.

John Chambers, the CEO of Cisco, often asks prospective employees about results. "I never get hard work confused with success. So I walk you through your successes, and what you did right. I also ask you to tell me about your failures. And that's when people make a tremendous mistake. All of us have had mistakes

and failures, yet it's surprising how many people say, 'Well, I can't think of one.' That person immediately loses credibility with me. It's an important ability to be very candid on what mistakes they've made, and then the question is, what would you do differently this time?"

Structure Your Risk-Taking and Failure Systems

There are four processes and skills that you can build into your organization to create the structure and discipline that will give you and your organization the resilience you need to deal with failure:

- **Conducting post-mortems.** Companies need to listen to what is being said about their brands and businesses online. And if your organization encounters rough waters, consider how you will recover.
- **Preparing with worst-case scenarios.** Worst-case scenario planning involves brainstorming all of the things that could possibly go wrong, getting them out on the table, and putting in place mitigation and contingency plans to reduce risk and anxiety.
- **Building in responsiveness.** Best Buy has a little monitoring program called Spy that allows it to monitor social media mentions about the company. CMO Barry Judge views social media as a constant opportunity to engage. He wants "to make it as easy as possible for people to complain." Rather than see this as a negative, he views each complaint as an opportunity to hear about all the daily mistakes and failures at Best Buy, in an effort not only to resolve those problems, but also to make Best Buy better in the long run.
- **Preparing yourself for the personal cost of failure.** Personal failure has never been so exposed as it is with social media. We must, therefore, have a whole different attitude about failing — about trying something that doesn't work, but, just as important, how to address your failure.

Starting the Transformation

Here are some recommendations on how to get started with a transformation:

Create a sense of urgency with information sharing. The opportunity with today's open technologies is that you can share the data and information needed to make your case not only vivid, but also personal. Rather than hearing the need for urgency from the top, you can also hear your colleagues and peers join in on the discussion. So when you start making your case for transformation, be sure to bolster the impact of your message with the voices of others in the organization.

Identify the values that will carry you through the transformation. Every organization has a set of core values, even if they are not expressly laid out, that you as a leader will be able to tap. Decide which ones will form the basis for the new culture and, using social technologies, demonstrate your commitment and connection to those core values in authentic ways. And, by all means, ask that people join you in spreading those core values to others.

Lead by example. To have credibility in the new culture, the leaders have to demonstrate the attitudes and behaviors that will be positively received and rewarded.

Start small to win big. Building up confidence in the transformation and the new culture with little steps will actually speed up the transition, not slow it down.

Institutionalize systems and structures. Processes, procedures and guidelines all help institutionalize the change so that it becomes not only easier, but routine.

Be patient. Although you need to create urgency to spur action, you need patience to guide the change through its sometimes achingly slow first stages.

The advantage of pursuing an open strategy is that you will do it in the company of people who wish you the best, who will be there to support you and will count themselves among the many who will benefit from your success.

Four Behaviors of Open Leaders

1. Hiring, training and promoting the right people.
2. Creating a culture that supports being open.
3. Removing barriers to being open.
4. Encouraging risk-taking and speedy recovery from failure.

RECOMMENDED READING LIST

If you liked *Open Leadership*, you'll also like:

1. ***Trust Agents*** **by Chris Brogan and Julien Smith.** Need to learn more about increasing trust with your audience via social media? Let two preeminent experts guide you to greater transparency.
2. ***Getting Naked*** **by Patrick Lencioni.** In his latest engaging business fable, Lencioni tells the story of a consultant's eye-opening experience and the lessons it provides about the positive impact of transparency.
3. ***Leadershift*** **by Emmanuel Gobillot.** The age of mass collaboration is challenging the very nature of leadership. Gobillot provides key advice to navigate the new frontier.

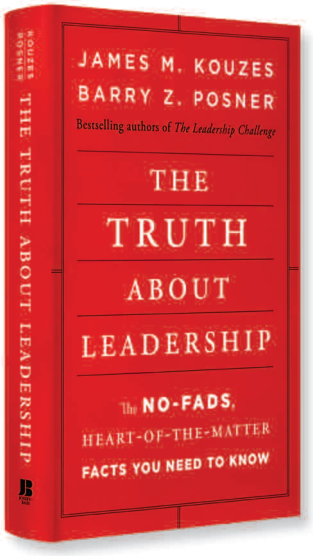
Leadership: Development

The Truth About Leadership

The No-Fads, Heart-of-the-Matter Facts You Need to Know



by James M. Kouzes and Barry Z. Posner

THE SUMMARY IN BRIEF

In these turbulent times when the very foundations of organizations and societies are being shaken, leaders need to move beyond the pessimistic predictions, the trendy fads and the simplistic solutions. They need to turn to what's real and what's proven in order to understand what the evidence tells us about how exemplary leaders get extraordinary things done. This is the imperative that best-selling, award-winning leadership experts James M. Kouzes and Barry Z. Posner have undertaken in their work.

Based on 30 years of research — and more than 1 million responses to Kouzes and Posner's leadership assessment — *The Truth About Leadership* explores the fundamental, enduring truths of leadership that hold constant regardless of context or circumstance. In 10 time-tested truths, this summary reveals what all leaders must know, the questions they must be prepared to answer and the real-world issues they will likely face.

The Truth About Leadership shows emerging and experienced leaders the heart of leadership and what they need to know to be effective. It also offers a dynamic new look at what it means to lead today. The lessons in *The Truth About Leadership* help leaders do their real and necessary work — bring about the essential changes that will renew organizations and communities.

IN THIS SUMMARY, YOU WILL LEARN:

- Ten fundamental truths about leadership.
- How sharing responsibility can help you become a more effective leader.
- Lessons that will sustain you in your personal and professional development.
- How a focus on values, commitment and trust can help you become a successful leader.

Introduction: What Everyone Wants to Know About Leadership

There are fundamental principles that inform and support the practices of leadership that were true 30 years ago, are true today and will be true 30 years from now. They speak to what the newest and youngest leaders need to appreciate and understand, and they speak just as meaningfully to the oldest leaders, who are perhaps repurposing themselves as they transition from their lengthy careers to other pursuits in volunteer, community or public sectors. They are truths that address what is real about leadership.

Here are 10 fundamental truths about leadership and becoming an effective leader:

1. The first truth is that **You Make a Difference.** It is the most fundamental truth of all. Before you can lead, you have to believe that you can have a positive impact on others. You have to believe in yourself. That's where it all begins. Leadership begins when you believe you can make a difference.

2. The second truth is that **Credibility Is the Foundation of Leadership**. You have to believe in you, but others have to believe in you too. What does it take for others to believe in you? Short answer: credibility. If people don't believe in you, they won't willingly follow you.

3. The third truth is that **Values Drive Commitment.** People want to know what you stand for and believe in. They want to know what you value. And leaders need to know what others value if they are going to be able to forge alignments between personal values and organizational demands.

4. The fourth truth is that **Focusing on the Future Sets Leaders Apart.** The capacity to imagine and articulate exciting future possibilities is a defining competence of leaders. You have to take the long-term perspective. Gain insight from reviewing your past and develop outsight by looking around.

5. **You Can't Do It Alone** is the fifth truth. Leadership is a team sport, and you need to engage others in the cause. What strengthens and sustains the relationship between leader and constituent is that leaders are obsessed with what is best for others, not what is best for themselves.

6. **Trust Rules** is the sixth truth. Trust is the social glue that holds individuals and groups together. And the level of trust others have in you will determine the amount of influence you have. You have to earn your constituents' trust before they'll be willing to trust you. That means you have to give trust before you can get trust.

7. The seventh truth is that **Challenge Is the Crucible for Greatness.** Exemplary leaders — the kind of leaders people want to follow — are always associated with changing the status quo. Great achievements don't happen when you keep things the same. Change invariably involves challenge, and challenge tests you. It introduces you to yourself.

8. The eighth truth is that **You Either Lead by Example or You Don't Lead at All.** Leaders have to keep their promises and become role models for the values and actions they espouse. You have to go first as a leader. You can't ask others to do something you aren't willing to do yourself.

9. The ninth truth is that **the Best Leaders Are the Best Learners.** Leaders are constant improvement fanatics, and learning is the master skill of leadership. Learning, however, takes time and attention, practice and feedback, along with good coaching. It also takes willingness on your part to ask for support.

10. The tenth truth is that **Leadership Is an Affair of the Heart.** Leaders make others feel important and are gracious in showing their appreciation. Love is the motivation that energizes leaders to give so much for others. You just won't work hard enough to become great if you aren't doing what you love.

These are *enduring* truths about leadership. You can gain mastery over the art and science of leadership by understanding them and attending to them in your workplace and everyday life. ●

Truth 1: You Make a Difference

Everything you will ever do as a leader is based on one audacious assumption. It's the assumption that *you matter.*

Before you can lead others, you have to lead yourself and believe that you can have a positive impact on others. You have to believe that what you do counts for something.

The Truth Is That You Make a Difference. It is not a question of "Will I make a difference?" Rather, it's "What difference will I make?"

You Are the Most Important Leader

Leader role models are local. You find them close to where you live and work.

You also definitely find leader role models "close to home" in your organization. The media, and many leadership gurus, focus a lot of attention on people at the top of organization — founders, CEOs, generals, presidents and the like. They make it seem as if these top dogs are the only ones responsible for everything that's great, and everything that's lousy, about organizations. It's a subtle thing, but it perpetuates the trickle-down theory of leadership: All things start at the top and trickle down to the bottom. But, when you actually look at the data, you see a very different picture.

The leader who has the most impact on your day-to-day behavior is, in fact, not the CEO, the COO, the CFO or any other C — unless, of course, you report directly to that person. The leader who has the most influence over your desire to stay or leave, your commitment to the organization's vision and values, your ethical decisions and actions, your treatment of customers, your ability to do your job well and the direction of your career, to name but a few outcomes, is your most immediate manager.

This means that if you're a manager, to your direct reports *you* are the most important leader in the organization. ●

The Five Practices of Exemplary Leadership

1. Model the way.
2. Inspire a shared vision.
3. Challenge the process.
4. Enable others to act.
5. Encourage the heart.

Truth 2: Credibility Is the Foundation of Leadership

Leadership begins with you and your belief in yourself. Leadership continues only if other people also believe in you.

The Truth Is That Credibility Is the Foundation of Leadership. What does it take to be the kind of person, the kind of leader, others want to follow, and will do so enthusiastically and voluntarily?

It turns out that the believability of the leader determines whether people will willingly give more of their time, talent, energy, experience, intelligence, creativity and support. Only credible leaders earn commitment, and only commitment builds and regenerates great organizations and communities.

Constituents Have Clear Expectations of Their Leaders

Leadership is a relationship between those who aspire to lead and those who choose to follow. You can't have one without the other. Leadership strategies, tactics, skills and practices are empty without an understanding of the fundamental dynamics of this relationship.

In every relationship people have expectations of each other. Sometimes these expectations are clearly voiced, and other times they're never discussed, but nonetheless, expectations are present in every human relationship. By surveying tens of thousands of people around the world, asking them to select the qualities that they most want in a leader, the results reveal there are a few essential "character tests" someone (you) must pass before others

are willing to grant the designation of leader.

Before anyone is going to willingly follow you — or any other leader — he or she wants to know that you are *honest, forward-looking, inspiring and competent.* Before they are going to voluntarily heed your advice, take your direction, accept your guidance, trust your judgment, agree to your recommendations, buy your products, support your ideas and implement your strategies, people expect that you will measure up to these criteria. Credibility ties it all together.

In the investigation of admired leadership qualities, the data reveals that more than anything people want to follow leaders who are credible. Credibility is the foundation of leadership. ●

Truth 3: Values Drive Commitment

Imagine you're sitting in a meeting with a group of your colleagues. The door to the conference room opens and in walks someone you've never met before who says, "Hi, I'm your new leader." What questions immediately come to mind that you want to ask this person?

People have lots of questions they would want to ask, but by far the most frequently asked is: "Who are you?"

People want to know your values and beliefs, what you really care about and what keeps you awake at night. They want to know who most influenced you, the events that shaped your attitudes and the experiences that prepared you for the job. They want to know what drives you, what makes you happy and what ticks you off. They want to know what you're like as a person and why you want to be their leader. They want to understand your personal story. They want to know why they ought to be following you.

Before you can effectively lead others, you have to understand who you are, where you come from and the values that guide you.

The Truth Is That Values Drive Commitment. You cannot fully commit to something that isn't important to you. No one can. You can't fully commit to something that doesn't fit with who you are and how you see yourself. In order to devote the time, to expend the energy and to make the sacrifices necessary, you have to know exactly what makes it worth doing in the first place.

Your ultimate success in business and in life depends on how well you know yourself, what you value and why you value it. The better you know who you are and what you believe in, the better you are at making sense of the often incomprehensible and conflicting demands you receive daily. You need internal guidance to navigate the turbulent waters in this stormy world. A clear set of personal values and beliefs is the critical controller in that guidance system.

Listen to Your Inner Self

If you are ever to become a leader whom others willingly follow, you must be known as someone who stands by his or her principles.

Values represent the core of who you are. They influence every aspect of your life: your moral judgments, the people you trust, the appeals you respond to, the way you invest your time and your money.

Clarity of values gives you the confidence to take the right turns, to make the tough decisions, to act with determination and to take charge of your life. ●

Truth 4: Focusing on the Future Sets Leaders Apart

Angela Gu was in her first year as assistant controller, overseeing the accounts payable function in Finance for Wal-Mart China. While Wal-Mart had opened 11 stores in six cities across China, it had expansion plans to triple the store count and enter into more new cities over the following three years. At that time the Finance Department was set up by city, and Angela could see that if the accounts payable function grew at the same rate as the company expanded they would grow from about 200 people to more than 800 people within a few years. She explained how she imagined the challenges and problems this would create for her area, "including the people management, procedural control, and compliance and costs related to personnel, travel, training and telecommunications."

Anticipating the future challenges the company would face, Angela proposed an alternative to the CFO — a centralization initiative — and received approval to move ahead. The program involved all divisions in the home office and local cities, including human resources, merchandising and operations, in addition to finance. The effort paid off almost immediately in terms of productivity, improved control and standardization, and established a platform for future efficiency-driven programs. Within a year the average number of accounts payable associates serving one store was reduced by 40 percent, and within three years the actual headcount in accounts payable had been reduced by nearly 50 percent, despite the almost fourfold expansion of new stores. Angela explains:

The initiative was quite new, with no other precedent to refer to, but the vision of a national accounts payable center excited me. You can always choose to follow whatever you have been doing — which demands from you no extra thinking or efforts — or you can focus on accomplishing something different that would do good for the enterprise.

Being forward-looking paid dividends for Angela and for Wal-Mart. This kind of anticipatory thinking can do the same for you.

The Truth Is That Focusing On the Future Sets Leaders Apart. Your constituents expect you to know where you're going and to have a sense of direction. You have to be forward-looking; it's the quality that most differentiates leaders from individual contributors. Getting yourself and others focused on the exciting possibilities that the future holds is your special role on the team.

Spend More Time in the Future

Developing the capacity to envision the future requires you to spend more time in the future — meaning more time reflecting on the future, more time reading about the future and more time talking to others about the future. It's not an easy assignment, but it is an absolutely necessary one. It also requires you to reflect back on your past to discover the themes that really engage and excite you. And it means thinking about the kind of legacy you want to leave and the contributions you want to make.

None of this can be done by a pessimist. You must remain optimistic and hopeful about what is yet to come. A positive difference can only be made by a positive leader. ●

Truth 5: You Can't Do It Alone

Leadership is not about the leader *per se*. It is not about you alone. It's about the relationship between leaders and their constituents. It's about the connection you and your teammates have with each other. It's about how you behave and feel toward each other. It's about the emotional bond that exists between you and them. Exemplary leaders know that they must attend to the needs and focus on the capabilities of their constituents if they are going to get extraordinary things done.

Ask Great Questions

Rather than thinking that you have all the answers, you need to be able to ask great questions. Great questions send people on pioneering journeys in their minds. They're a lot more likely to discover novel ideas when you set them free to explore on their own. The answers are out there, and they will be found among your constituents as long as people feel safe in offering them.

Asking questions is just one way that you can communicate that you believe in other people's abilities. Giving them choices, providing them with discretion over how things are done and fostering accountability are other ways. People want to feel in charge of their own lives. They want to be in control. They want to determine their own destinies. They want to know that their input matters, that their ideas are good ones, that their answers are correct and that their decisions will be supported. It's your job as a leader to increase people's sense of self-determination, self-confidence and personal effectiveness.

Interact With Others

High-quality relationships don't happen spontaneously. They require leadership. It's your job to interact with others in ways that promote connection, collaboration, confidence and competence. When you do, you'll see learning, innovation and performance soar.

The Truth Is That You Can't Do It Alone. Leaders alone don't make anything great. Leadership is a shared responsibility. You need others and they need you. You're all in this together. To build and sustain that sense of oneness, exemplary leaders are sensitive to the needs of others. They ask questions. They listen. They provide support. They develop skills. They ask for help. They align people in a common cause. They make people feel like anything is possible. They connect people to their need to be in charge of their own lives. They enable others to be even better than they already are. ●

Truth 6: Trust Rules

A PricewaterhouseCoopers study of corporate innovation among the *Financial Times* 100 showed that the number one differentiating factor between the top innovators and the bottom innovators was trust. That means that if people don't trust you, your organization is likely to underperform and be slow to innovate.

If you are going to build cohesive teams, then you must also create a structure for trust in your organization. Without it you can't lead.

The Truth Is That Trust Rules. Trust rules your personal credibility. Trust rules your ability to get things done. Trust rules your team's cohesiveness. Trust rules your organization's innovativeness and performance.

Trust rules your brand image. Trust rules just about everything you do.

Increase Your Trust, Increase Your Influence

Researchers have found that the level of trust that constituents have in their leaders determines the amount of influence they will willingly accept. In an experiment on the impact of trust on group problem solving, leaders in a high-trust condition had greater influence on group members and were more willing to accept influence attempts by group members than were leaders in a low-trust condition. This same study also found that high trust led to greater acceptance of group member interdependence, more cooperation and enhanced information flow among all group members.

Studies involving soldiers in combat in Iraq found that the more the soldiers trusted their platoon leaders, the more willing they were to accept their leader's influence concerning their motivation to become better group members, strive for excellence and improve as people. Even in a traditional command-and-control environment, trust comes first and following comes second, not the other way around.

Trust motivates people to go beyond mere compliance with authority. It motivates them to reach for the best in themselves, their teams and their organizations. ●

Truth 7: Challenge Is the Crucible for Greatness

When people think of the business leaders they admire, they think about people who have turned around failing companies, started entrepreneurial ventures, developed breakthrough products and services, or transformed industries. Challenge was the context in which these leaders operated and change was the theme of all their campaigns.

You don't have to study historical leaders to learn this lesson. You can just look at everyday leaders such as yourself and those down the hall or across the street. For example, here is what Katherine Winkel, marketing communications coordinator at Monsanto, had to say about a discussion in a seminar about peers' personal best leadership experiences:

The similarity that most stuck out in my mind at the time, and indeed remains with me, was that in each story the person described having to overcome uncertainty and fear in order to achieve his or her best. Whatever the case, staring down uncertainty and ultimately overcoming this hurdle was a major theme.

Typically, you would think people would describe uncertainty and fear as negative or even de-motivating factors in leadership, but here it seems they are almost prerequisites for success! It teaches us that uncertainty is a necessity that drives us to do our very best.

The personal best leadership cases, as Katherine observed, are about triumphs over adversity, about departures from the past, about doing things that had never been done before, about going to places not yet discovered. They are all about challenge and change.

The Truth Is That Challenge Is the Crucible for Greatness. The study of leadership is the study of how men and women guide people through uncertainty, hardship, disruption, transformation, transition, recovery, new beginnings and other significant challenges. It's also the study of how men and women, in times of constancy and complacency, actively seek to disturb the status quo, awaken new possibilities and pursue opportunities.

As the late John Gardner, adviser to four U.S. presidents and founder of Common Cause, was fond of saying: "What we have before us are some breathtaking opportunities disguised as insoluble problems." Sometimes leaders have to shake things up. Other times they just have to grab hold of the adversity that surrounds them. Whether challenge comes from the outside or the inside, leaders make things happen. Leadership and challenge are simply inseparable. ●

Truth 8: You Either Lead by Example or You Don't Lead at All

Jazz virtuoso Dizzy Gillespie once said, "That trumpet is lying in the case every day, waiting for me." In the same sense, leadership is waiting for you every day. It's waiting for you to take action. It's waiting for you to show others that you mean what you say. It's waiting for you to demonstrate that you know how to get people moving. In the final analysis, leadership is about playing that instrument called "you." But when you perform, you have to make sure that you play in tune. Your audience won't applaud dissonant notes.

That was certainly the insight that Casey Mork, manager of the new product team, shared about one of his supervisors, someone Casey felt wasn't clear about his values, never "had a true voice," and said one thing and did another. "As could be predicted," explained Casey, "with the lack of a model at the top, our group failed in internal cohesion, customer experience and business results." Casey learned what every aspiring leader must realize:

You've got to walk the talk, not just talk the talk. Leaders are responsible for modeling behavior based on the values they communicate. The leader must then live by them, in plain view of those he or she expects to follow the values. A leader must go beyond just talking about organizational values — such as "customers are always different" — he or she must actually demonstrate how to do this.

Casey understood that leading is not about telling others what to value and what to do. You have to model the way you want others to feel, think and act. You have to show others that you are going to do exactly what you are asking them to do.

The Truth Is That You Either Lead by Example or You Don't Lead at All. Enduring leadership truth No. 2 is *"Credibility is the foundation of leadership."* Your actions had better be consistent with your words. In the final analysis, people believe what you do over what you say. As journalist and author Alan Deutschman writes in his book *Walk the Talk*, "Leaders have only two tools at their disposal: what they say and how they act. What they say might be interesting, but how they act is always crucial." ●

Truth 9: The Best Leaders Are the Best Learners

The potential to lead exists in you. If you apply your head, your heart and your courage, you can learn to lead.

Leadership is not preordained. It is not a gene, and it is not a trait. There is no hard evidence to support the assertion that leadership is imprinted in the DNA of only some individuals and that the rest of us missed out and are doomed to be clueless.

The Truth Is That the Best Leaders Are the Best Learners. Leadership can be learned. It is an observable pattern of practices and behaviors, and a definable set of skills and abilities. Skills can be learned, and when we track the progress of people who participate in leadership development programs, researchers observe that they improve over time. They learn to be better leaders as long as they engage in activities that help them learn how.

No matter how good you are, you can always get better.

Learning Is the Master Skill

Studies show that leadership can be learned in a variety of ways. It can be learned through active experimentation, observation of others, study in the classroom or reading books or by simply reflecting on one's own and others' experiences.

Certain styles contribute to more effectiveness in some practices, but there is no one best style for learning everything there is to know. The style is not the thing.

What is more important is the extent to which individuals engage in whatever style works for them.

Passion for Learning

You have to have a passion for learning in order to become the best leader you can be. You have to be open to new experiences and open to honestly examining how you and others perform, especially under conditions of uncertainty. You have to be willing to quickly learn from your failures as well as your successes and to find ways to try out new behaviors without hesitation. You won't always do things perfectly, but you will get the chance to grow.

Another dynamic that gives rise to the need for aspiring leaders to be first-rate learners is the astounding pace of change in the world. Not only do you have to be able to learn, but you have to learn how to learn, constantly absorbing and teaching yourself new ways of doing old things and new ways of doing new things. ●

Truth 10: Leadership Is an Affair of the Heart

Leaders shouldn't turn a blind eye to reality or hide it from their teams. You must be honest with your constituents about the state of the organization's or the nation's health. Then you have a choice.

You can tell people they're doomed, criticize the ideas they present, contradict them at every turn and offer little or no support as they struggle to survive. Or you can give them hope. You can tell people that if they apply themselves — and if they're willing to struggle and suffer — they will overcome one day. You can tell them you have confidence in their abilities, help them to broaden their perspectives, build on their ideas, support them as they look for solutions and recognize their contributions. It's not hard to recognize the right option to choose.

Positive energy is especially important in volatile times. When the news is worrisome, and often downright scary, it's pretty easy for folks to become negative. And people become negative even faster when they see it in their leaders, whether overtly in speeches or even if they just mope around a bit. Negative leadership breeds negative emotions. And these negative emotions are far more damaging to an organization's and an individual's

health than doing nothing at all. In uncertain and challenging times, it's your obligation as a leader to accentuate the positive. If you don't, you're either keeping things the same or making them worse.

The Truth Is That Leadership Is an Affair of the Heart. Leaders put their hearts in their businesses and their businesses in their hearts. They love what they're doing and they stay in love with leading, with the people who do the work, with what their organizations produce and with those who honor them by using their products and services. They show they care by paying attention to people, sharing success stories and making people feel important and special. Exemplary leaders are positive and upbeat, generating the emotional energy that enables others to flourish.

Epilogue: Leaders Say Yes

Everything you do as a leader begins with one word: *yes*. Until you say yes, nothing great can happen.

Reminders About the Truths

You can make a difference. Leadership begins when you believe in yourself and believe that you can make a positive difference in the world.

Others have to believe in you too, and gaining followers can be tough. Followers comes when you work hard to earn their faith and confidence.

You have to be clear about what's important to you if you're going to devote yourself fully to something. Values drive commitment.

Leaders focus on the future, whether it's the future of a group, organization, nation or the planet. Big dreams that resonate with others inspire and energize.

While the leader may initially provide the spark of an idea, it takes a group of people — sometimes small and sometimes large — to make something extraordinary happen. And when beginning something brand new, the truth that trust rules is especially relevant. There isn't much else to go on. You just have to show that you trust others. Your trust in them will bring greater trust in you.

All leaders are severely tested and there will always be detractors — those who will tell you it's impossible, that it can't be done, that you're not capable and that your dream is foolish. Despite the obstacles and despite the naysayers, you just have to go out there and do it. You have to make mistakes, bounce back and persist. You have to go first as a leader. You have to be the example that others can follow.

How to Show You Are Trustworthy

Research has shown that a few key behaviors contribute to whether or not others perceive you as trustworthy. Here are four actions to keep in mind:

- Behave predictably and consistently.
- Communicate clearly.
- Treat promises seriously.
- Be forthright and candid.

Leadership is not about wishful thinking. It's about determined doing. There are no shortages of problems to solve. Leadership is not about telling others that they ought to solve these problems. It's about seeing a problem and accepting personal responsibility for doing something about it. And it's about holding yourself accountable for the actions you take.

Leaders aren't bystanders. They are active participants who work tirelessly to mobilize others to want to struggle for shared aspirations. Leaders believe that they have an obligation to do something to bring about change and that, with the active engagement of others, they can move things forward.

You Have to Say Yes to Leadership

You have to say yes to begin things. You have to say yes to your beliefs, you have to say yes to big dreams, you have to say yes to difficult challenges, you have to say yes to collaboration, you have to say yes to trust, you have to say yes to learning, you have to say yes to setting the example and you have to say yes to your heart.

Are you ready to say yes to leadership? When you are ready to say yes, doors will open to entirely new adventures in your life. When you are ready to say yes, people will join you on the quest. When you say yes, you will discover your own truth about leadership.

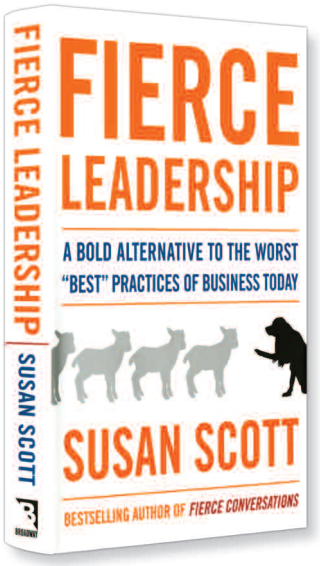
Fierce Leadership

A Bold Alternative to the Worst "Best" Practices of Business Today



by Susan Scott

THE SUMMARY IN BRIEF

Provide anonymous feedback. Hire smart people. Hold people accountable. These are all sound business practices, right? Not so fast, warns corporate training expert Susan Scott. In fact, these mantras — despite being long-accepted and adopted by business leaders everywhere — are completely wrongheaded. Worse, they are costing companies billions of dollars, driving away valuable employees and profitable customers, limiting performance and stalling careers. Yet they are so deeply ingrained in organizational cultures that no one has questioned them. Until now.

In *Fierce Leadership*, Susan Scott explains how to spot the worst "best" practices in our organizations using a technique she calls "squid eye" — the ability to spot the disastrous behaviors to which we have fallen prey — so we can apply the antidote.

With fierce new approaches to everything from employee feedback to corporate diversity to customer relations, *Fierce Leadership* offers fresh and surprising alternatives to six of the so-called best practices permeating today's businesses. *Fierce Leadership* will help any leader at any level who is ready to take a long, hard look at what trouble might be lurking in his or her organization — and do something about it.

IN THIS SUMMARY, YOU WILL LEARN:

- How to positively influence situations and organizations.
- How to marry how you are with who you are.
- How to answer some of the most compelling questions in business today.
- How to re-energize leaders, employees and managers alike.
- Why "received wisdom" is wrong and how to get it right.

Introduction

Leaders are usually highly intelligent people with invaluable experience on the firing line, a decent amount of humility, a wicked sense of humor and a strong desire to grow their companies and champion change. They are usually on the right track, and much of what they do works. Yet so many pour considerable time, intelligence and cash into significant sinkholes — *practices* — with no good outcomes and, in fact, costly implications.

It's not that we're trying to deliberately sabotage our companies; it's just that we don't always recognize the implications of our practices, because most of the time, those on the receiving end of our questionable ideas don't bellow, "Are you nuts?!" Instead, most flinch, then shrug it off as life in a *Dilbert* world, to be expected, what can I do, I'll lay low until this latest hell blows over.

What we need is "squid eye."

Squid Eye

Paul Lindbergh, an advanced aikido practitioner and killer jazz musician, moved to Hawaii as a teenager and soon began diving with native Hawaiians for squid, a highly prized catch that could be sold for a tidy sum or taken home and served for dinner. But after weeks of diving, despite the fact that the local guys always caught plenty, he had caught only one squid.

When he expressed his frustration — "How come you guys catch squid and I don't?" — the Hawaiians laughed and said, "You gotta have 'squid eye.'"

"What is squid eye?"

They explained.

"It's the ability to see the squid while he is blending into his natural environment. It's the ability to see him just being himself. It is the ability to see him even when he doesn't want you to see him, to see him even when he is hiding. Be advised, he is very skilled. You must understand, he is there."

The Hawaiians began to tell Lindbergh many things about the squid. For example, one might see a few small stones lying on the bottom of the ocean and understand that the squid put them there. When he saw those stones and maybe some shells, they told him to look for a small hole at the base.

It was tough to spot the first mound of stones, like looking for morel mushrooms. You can't find any and then suddenly stumble across one. Once you know what you're looking for, you realize you're standing in a patch of them.

Once Lindbergh learned the tells, like that mound of stones, he had no difficulty finding squid ever again. And then he learned the tells for lobster, kumu, papio and other Hawaiian fish and thereafter began to eat extremely well.

Spotting the Tells

For Lindbergh, tells signaled the presence of a potential feast, famine, even danger.

Even some of the most successful organizations fail to outlast a few generations of management because they are unable to see the threats they face and the imperative to change. And while there are threats we can do little about — a competitor's new gizmo, the price of oil, a

housing-market crash, an economic downturn, Mother Nature, etc. — there's plenty going on right now under our noses that we *can* do something about. But we don't because we can't see the *tells* signaling that something we're doing is not working, perhaps never did work, is in no danger of working and that, indeed, something is very, very wrong.

The Idea of Fierce

The idea of *fierce* is simple, yet not simplistic.

A culture — whether global, national, corporate or familial — is shaped by our daily practices, and the most powerful practice of all is conversation. Our careers, our companies, our personal relationships and our very lives succeed or fail, gradually then suddenly — one conversation at a time.

The conversation *is* the relationship, and while no single conversation is guaranteed to change the trajectory of a career, a company, a relationship or a life, any single conversation can.

This is true if your company has five employees or 50 or 50,000; if you're in retail, banking, graphic arts or moviemaking; if you're a teacher, a professor, a researcher or a rabbi; or if your expertise is in architecture, manufacturing, dog training or software.

No matter what you do, business — small or global, simple or complex — is fundamentally an extended conversation with colleagues, customers and the unknown future emerging around us. While meetings pile up, add up, the real work is being done by someone offering a nourishing drink to others — one conversation at a time. What gets talked about in a company and how it gets talked about determine what will happen — or won't happen.

Quality Matters

But simply having the conversation isn't enough. It's the *quality* of the conversation that matters.

Conversations provide clarity or confusion. They invite cross-boundary collaboration and cooperation or add concertina wire to the walls between well-defended fiefdoms. Conversations inspire us to tackle our toughest challenges or stop us dead in our tracks, wondering why we bothered to get out of bed this morning. A conversation can be deadly boring or a profound experience of humanity, of intimacy.

A leader's job is to engineer the types of conversations that produce epiphanies: conversations that reveal we are capable of original thought; intelligent, spirited conversations that provide clarity and impetus for action, for change. Yet too often, we, the results-smitten, speak only of measurable goals, key business indicators, action plans, cash-flow projections, economic indicators, process and procedure. All are worthy come-ons, yet true success requires conversations that exert a deeper magnetism, a pull as powerful as the tides. Conversations that are intelligent and impassioned. Personal and universal. Meaningful, authentic conversations during which we wouldn't willingly trade places with anyone. Conversations that feel like they could be taking place in a concert hall or a sanctuary — *fierce* conversations.

Why Fierce?

The simplest definition of a fierce conversation is one in which we come out from behind ourselves, into the conversation, and make it real. While most people are uncomfortable with *real*, it is the *unreal* conversations that should scare us to death. Why? Because they are incredibly expensive, for organizations and for individuals.

Most organizations want to feel they are having a real conversation with their employees, their customers and their evolving marketplace. And most individuals want to feel they are having conversations that build their world of meaning.

What Is 'Fierce' Leadership?

There's a bold, compelling line between "leadership" and *fierce* leadership. It's OK to cross the line.

Practicing Squid Eye

What might you notice if you were practicing squid eye that would suggest you and/or your organization are not "seeing" your customers and clients as individual human beings? Check any of the following tells that apply to *your* organization:

- **You have an initiative called "client centricity."** The fact that there is an initiative on the subject in the first place is a tell to your customers (and to everyone else) that you are *not* client centric, you are the exact opposite; otherwise, you wouldn't need an initiative in that area.
- **You use the term *customer facing*.** This implies that you have a special face that you pull out of a drawer and slap on when you're about to talk with a customer. What happened to you being *you*, consistently, no matter whom you're with?
- **You confuse "presentation training" with sales training.** Your employees are rarely taught how to have conversations — two-way *exchanges* of ideas and sentiments — with your customers.

Here is the short definition of *fierce leadership* (noun, verb):

1. A fast-acting anti-venom to the business-as-usual mode of high task/low relationship, self-serving agendas, directing and telling, anonymous feedback, holding people accountable, excessive use of jargon and mandating initiatives that cause people to weep on too many fine days.
2. Acquiring your most valuable currency: emotional capital.
3. The acquisition of squid eye and the demise of truth-telling squeamishness and ethical squishiness.

You will begin to cross the line, dropping into a different kind of serious, a different way of being, a different quality of relationship, once you understand and act on the central premise at the heart of everything fierce:

If you want to become a great leader, gain the capacity to connect with your colleagues and customers at a deep level … or lower your aim.

Your most valuable currency is relationship, emotional capital. This is far from a naïve, feel-good notion. It's good business sense. ●

Fierce Practice #1: From 360-Degree Anonymous Feedback to '365' Face-to-Face Feedback

Anonymous feedback doesn't tell us what we really need to know because it is ANONYMOUS, and most people don't provide specific examples to support their evaluations because more specifics might help the recipient guess who wrote them! So we avoid specifics and instead use sanitized phrases and a "score" of some sort, all of which tells the recipient very little about how to improve his or her performance.

The Fierce Practice: '365' Face-to-Face Feedback

Here are the simple rules of 365 face-to-face feedback:

- Stay current by exchanging feedback 365 days a year.
- Do it face to face whenever possible (and never via e-mail).
- Give it as soon as possible after something occurs.
- Praise is as important as criticism. *Actually, it's more important.* So don't just give feedback when it's negative.
- Always own your comments. Feedback is invaluable. It's anonymity that is the problem.

The goal of the fierce practice is to have open, honest, face-to-face conversations, 365 days a year, with the people central to your success and happiness. Give it and receive it.

Praising With Courage and Skill

Feedback is all too often associated with the word *negative*. But in fact, positive feedback — praise, recognition and acknowledgment — is the most powerful feedback of all. Fierce leaders express appreciation and gratitude up close and personal, in the moment. Their comments are authentic, specific, heartfelt. Consequently, the message is received and people glow.

Does praising people require courage, compassion and skill? Yes. As crazy as it sounds, we're just as lousy at praise as we are at confrontation. Maybe worse. Too often, our meager attempts fail to truly reach the people we acknowledge, and that's a shame! What to do?

Ken Blanchard got it right years ago with a simple statement in *The One Minute Manager*: "Catch people in the act of doing things right." Praise doesn't have to come in a group exercise; it's wonderful one on one, face to face, in the moment. Or pick up the phone, write a note, send an e-mail. And don't wait for perfection; acknowledge behavior that is heading in a positive direction. Fierce leaders practice this.

Whole Again

Our most valuable, enduring relationships require that we stay current with one another at work and at home — face to face. While most leaders fulfill their basic job descriptions, including conducting performance reviews, filling out surveys and listening politely (with gritted teeth) to anonymous feedback, fierce leaders do something more interesting, more real. They engage in meaningful conversations that truly connect.

When our achievements, talents and positive results are noticed and acknowledged and our missteps are addressed and resolved, we deepen our commitment to bringing the best of ourselves to our work and to our families every day. And this, in turn, translates to stronger relationships and better performance, which translates to success and happiness.

Who deserves your praise? Who deserves an apology? Whose behavior or attitude is causing serious problems? What are you waiting for? ●

Fierce Practice #2: From Hiring for Smarts to Hiring for Smart+Heart

In 2003, Howell Raines was fired from his post as managing editor of *The New York Times*. Raines had every managerial advantage and a brilliant strategy, but

he "lost the newsroom." He failed to win the hearts and minds of his staff, without which he could not hope to implement his change strategy.

In 2007, Bob Nardelli was dismissed from his position as CEO of Home Depot. He had arrived with impeccable credentials and achieved dazzling financials, but he failed to connect with the shareholders, deal makers, legislators, regulators and nongovernmental organizations who wanted to have a say in how the company was run and on whom the company's continued success depended.

The problem for Raines and Nardelli and so many other brilliant individuals was that reason did not prevail. Raines and Nardelli alienated people, so their reasoned arguments fell on deaf ears.

Yet despite all the evidence pointing to the fact that it is the deeply feeling, emotionally intelligent people who are best equipped to deliver these results, many leaders continue to focus on hiring and promoting people with pedigrees, graduates of the best business colleges, who, talented though they are, do not view human connectivity as relevant to their success. Why? Because nowhere in their education have they been taught to focus on the human side of their subjects.

Good Doctors

In *Blink*, Malcolm Gladwell points to Dr. Wendy Levinson, an international expert in the field of the physician-patient relationship. Dr. Levinson looked at why some doctors who make mistakes that put their patients' lives in jeopardy get sued, and others don't. Dr. Levinson found that patients sued doctors they didn't like and didn't sue doctors they did like, even if the doctors they like made mistakes.

And why do patients like or dislike their doctors? The decision was not rational. Physicians who don't get sued take a little more time — three minutes more than physicians who do get sued. And it was the quality of the physician-patient conversation, *how* the doctors talked with their patients — notice *with*, not *to* their patients — that made the difference. Patients like doctors who really listen, draw their patients out (*tell me more about that*) and answer their questions fully. Those three extra minutes and how they were used were the differentiator. In the blink of three minutes, the patient felt seen, heard, understood, valued and respected. You don't get that in every doctor's office — or in every executive's office.

Book smarts don't guarantee good teachers, good doctors or good leaders, because these aren't cognitive skills. No one's knocking an excellent education from a good school. It's just that this isn't enough. In fact, fewer young people are interested in attaining an MBA, because they recognize that the emerging right-brain economy requires a set of skills and characteristics not taught in most business schools. Many Gen Xers and Yers say they see value in forging more meaningful relationships at work, while struggling to get beyond the usual, superficial agenda they can't quite put their fingers on. These are the people — the ones who are both smart and engaged, who value human connection — who we are choosing for leadership roles today, globally. They understand that, while no single conversation is guaranteed to change the trajectory of a career, a company, a relationship or a life, any single conversation can.

Fierce Practice #3: From Holding People Accountable to Modeling Accountability and Holding People Able

Initially, for most people, the notion of "fierce accountability" sounds frightening, aggressive, full of conflict, smacks of a heavy workload. Yet if you think of fierce in the most positive light, like fierce loyalty, fierce resolve or fierce friendship, you might associate fierce accountability with a bias toward action and passionate commitment to exceptional results, even in the face of obstacles.

Here's the official definition of fierce accountability:

A desire to take responsibility for results; a bias toward solution, action. An attitude; a personal, private non-negotiable choice about how to live one's life.

The question is, given my goals, how will I achieve them? Given the barriers to my progress and the current results on my plate, some of which are troubling, what am I going to do?

Complicated times call for simple answers. Simply put, "if it's to be, it's up to me."

Accountability is not a process or a tool. It's what helps a process or tool become effective. Can you think of a very good structure or process in your company that sings in the hands of some people and weeps in the hands of others? Most processes, procedures or structures are not inherently good or bad. It's who's got their hands on it.

What if, instead of holding others accountable, we held ourselves accountable and others able — able to take charge, take action and effect change? What if, instead of pointing fingers and laying blame, we mod-

eled accountability and inspired others to do the same?

The fact is that no one can mandate accountability for another person. To say "I'm holding you accountable" is pointless. The only person I can hold accountable is myself. Personal accountability is a way of life — and like all fierce practices, it's an inside job. The accountability conversation is one I have with myself and only with myself. But the good news is, it's contagious.

The Fierce Accountability Cycle

Let's look at the steps in the "fierce" practice of modeling accountability and holding others able:

Step 1. Prepare yourself. Taking an accountable stance requires a great deal of courage. We may have to give up being "right."

Step 2. Prepare others. So far you've had a fierce conversation with yourself, which is where accountability begins. Now what about "others" in your life — colleagues, friends, family members — whose results and the results of everyone around them would be greatly improved if they chose personal accountability as a way of life?

Step 3. Do it! Take these steps:

- Identify the issue.
- Clarify the issue.
- Determine current impact.
- Determine future implications.
- Examine personal contribution to the issue.
- Describe the ideal outcome.
- Commit to action.

Step 4. Debrief. Even if you're convinced the conversation went well, check in with the other person to see how he or she felt it went. The conversation wasn't merely a task on your to-do list. There's a lot riding on the outcome.

Step 5. Do it again, only better.

Fierce Practice #4: From Employee Engagement Programs to Actually Engaging Employees

If employees aren't engaged, your company will suffer. Good people quit, defect, disappear or worse, show up every day — in body — but their souls are occupied elsewhere. They become disgruntled, disenchanted, disillusioned. And this affects your bottom line.

Yet despite all that companies are doing to promote employee inclusion and engagement, which go hand in hand, many still see this as merely something that makes people feel good — or at least better — about their jobs. Of course inclusion and engagement make people feel good. They also increase productivity, reduce turnover and build revenue.

Think of it this way: inclusion + engagement = execution muscle … and without execution muscle, you might as well hang it up. Let's define terms.

Employee inclusion suggests that people of every stripe — gender, age, sexual orientation, ethnicity, religion, aspiration, disability, position or title and whatever other differences are possible in the human population — feel that they have a place at the table, that they are seen, heard and valued and that given stellar performance, they have an opportunity to advance; that they do not feel marginalized, "less than," left out, overlooked, invisible, made wrong, taken advantage of, disrespected, ignored or mistreated.

At its heart, inclusion is about membership, belonging to a community, whether a family, a school, a company, a country or the human race.

Employee Engagement

Employee engagement is generally viewed as the degree to which employees view the goals of the company as in line with their own lives so that when they have choices, they will act in a way that furthers their organization's interests and vice versa. In *Getting Engaged: The New Workplace Loyalty*, author Tim Rutledge explains that truly engaged employees are attracted and committed to, inspired and fascinated by, the work that they do.

It's no surprise that "employee engagement" is a key initiative within many companies. After all, engaged workers are more productive, make more money for the company and create loyal customers. They contribute to good working environments where people are happy, ethical and accountable. They stay with an organization longer and are more committed to quality and growth — in fact, engaged employees outperform their unengaged counterparts by 20–28 percentage points.

Yet according to the *Gallup Management Journal*'s semi-annual Employee Engagement Index …

- 20 percent of employees are actively engaged in their jobs;
- 54 percent are not engaged; and
- 17 percent are actively disengaged.

If companies are so committed to including and engaging their employees, why these dismal numbers? Because inclusion and engagement can't be feigned,

trained or forced. They can't be mandated or taught in some dry management seminar. Because like the other fierce practices, inclusion and engagement start with you.

The Fierce Practice: Include! Engage!

Stop *talking* about inclusion and engagement and start *including and engaging* in every conversation, every meeting. And yes, there is a bit of serious business that will influence the outcome before you walk into a room or open your mouth. That bit would be your intention, your motivation. What do you want and *why* do you want it? We often forget to consider the "why" part, and it's the more important of the two questions.

Fierce Practice #5: From Customer Centricity to Customer Connectivity

"Customer centricity" is one of the most common terms in business today and a key initiative for many companies. In service to this "best practice" — which refers simply to focus on customers — companies invest millions in "CRM" (customer relationship management) initiatives aimed at training "customer facing" employees. There's no question that acquiring and retaining customers is vital to every company, but it's the way companies are going about it that's dead wrong.

Consider the fact that 55 to 75 percent of all CRM and customer centricity initiatives fail to meet objectives. Charles Green, co-author of *The Trusted Advisor*, points out that many companies have the client focus of a vulture — they pay close attention to what the clients are up to, but only in order to figure out the right time to pounce and tear at their flesh. Green suggests that most CRM systems are not really plans to build a relationship at all — they are just a list of features and benefits advertising the wonderful things the company could do for customers.

In short, customers don't want to be treated like customers; they want to be treated like people. That is *real* customer centricity. And in addition to considerable professional expertise, it requires deep listening and the ability to connect as human beings — proven time and time again to win customer loyalty, boost profits and make your company the kind of place where customers like to do business and talented people like to work.

The Fierce Practice: Customer Connectivity

If you want to become a great organization, one that endures and thrives despite economic downturns, fluctuations in the global stock market, climate change and escalating costs of doing business, then gain the capacity to connect with your customers at a deep level, or lower your aim. And this practice starts with *you*; it is the individuals in our organizations who build relationships with customers and consistently win new business one conversation at a time.

Connecting with customers is neither a naïve notion nor a "soft skill." It is an essential skill, one that requires courage, because it involves a fair degree of intimacy, which is initially uncomfortable for many people.

Focus on Individuals, Not Companies

Remember, you are selling to an organization via an individual. Or several individuals. Don't forget that ABC company didn't buy your services, Andy did. Or Susan, Katherine or Chad. So how do you sustain relevant relationships with individuals with the decision-making power in their organizations?

Do all that you can to ensure their success. Work to understand and embrace their agendas. Make their agendas your own. Understand what individuals are trying to do, and personalize your work with them. Be voracious about learning. Sit in on meetings. Understand their competition. Make your interest personal, authentic and passionate. Strap on your helmet and take the field with your customers. Then stay in the game until the whistle blows.

Fierce Practice #6: From Legislated Optimism to Radical Transparency

Legislated optimism is the purview of the one-way leader. When optimism is legislated, meetings produce more nothing than something. Ideas die without a funeral or proper burial. Communication is primarily from the leader to everyone else. The reverse is not valued, not welcomed, because the leader and his inner circle of advisers know best. Always have, always will. And the message is always upbeat. Accurate information is presented with a coat of whitewash and abracadabra laid over it.

In a culture of legislated optimism, leaders know only the sound of one hand clapping. They ask questions not because they want answers, but because they want to hear the *sound* of asking them. In this environment, conclusions are reached at the point when everyone stops thinking, which is often short of brilliant. The leaders have already done the thinking for us and have called it

good. No point in telling them what we're actually dealing with every day, since to do so would not be a career-enhancing move.

What Is Radical Transparency?

A post on Wikipedia describes radical transparency as "a management method where nearly all decision-making is carried out publicly. All draft documents, all arguments for and against a proposal, the decisions about the decision-making process itself, and all final decisions, are made publicly and remain publicly archived."

Human connectivity is the key to exponential growth for companies and for individuals, a sustainable, competitive edge. Radical transparency is at the very *center* of our increasingly hyperconnected world. In fact, it is already a trend. If you're not moving toward open-source thinking and full disclosure, please note that this particular train has left the station. But if you run, you can still jump on.

Virtual Reality

To truly understand our own leadership potential is to truly understand ourselves — capital R reality. It's about taking ownership of our results and making choices with clear intentions. We can learn the skills and the tools, but true leadership is about learning to maintain a state of being that is both authentic and powerful.

Leaders are ineffectual if they fail to move quickly and honestly to their own inward essential character.

Conclusion: Crossing the Bold Line

One of the greatest challenges we all face is understanding and embracing our own leadership potential. Even the most highly paid executives struggle with internal questions about their personal effectiveness as leaders. This is normal. Our results, attitudes, beliefs, prejudices, fears, hopes, glories and broken places have led us all to practices that others celebrate or question, that *we ourselves* celebrate or question.

At the same time, we are all leaders in some capacity or another. It doesn't matter if we have the title or not. But there is a profound difference between having the title and being the kind of leader to whom people are drawn and to whom people commit at a deep level. The former are just leaders, while the latter are fierce leaders. These are the leaders others look to for advice and opinion and gratefully follow wherever they go. These are the leaders who engage others whenever they are present. Call them natural leaders, if you will.

Courage

Fierce leaders aren't born that way; crossing the bold line between leadership and "fierce" leadership takes courage and work. It requires that you hone your faith in others and in yourself. Not blind faith, but rather the faith that comes from paying attention, being present. Crossing the line requires that you screw your courage to the sticking place and summon all your skill; reach, in fact, for skills you don't yet have.

Replacing worst "best" practices with fierce practices is challenging, and that's the point. *And, so what*? You cannot differentiate yourself or your company by taking the well-worn, familiar path.

Mythology expert and writer Joseph Campbell explained that the "hero" is heroic because at some point he steps off the path that everyone else is on and heads into the woods where there is *no* path and no indication of help. But he does it anyway. It's the first step into the woods that is the heroic moment. And then everything changes. Help appears that is exactly what he needs, when he needs it. It is there for him alone.

What is the path you have to step off of?

Make Connections

It is not enough to be a leader. This world is full of leaders who cause us to wonder how in the world they achieved that position.

We've got to make connections — at a deep level. Create them, every day, on purpose. Make more and more of them. Connect the people in our homes and businesses and cities and countries, so that we and our children and our colleagues and customers breathe connection in and out like oxygen. Souls rising. Resulting ultimately in that elusive concept we call peace on earth.

Love is a practice too. Give it a try. When outside influences are challenging, allow your quiet heart to lead you.

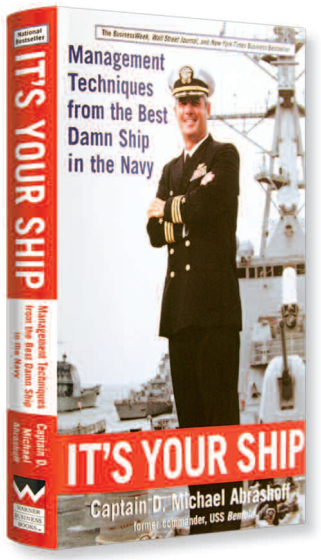
Management: Hands-on

Bonus Summary

It's Your Ship

Management Techniques from the Best Damn Ship in the Navy



by Captain D. Michael Abrashoff

THE SUMMARY IN BRIEF

For an organization to be successful, everyone who works for the organization, from the CEO down the ranks, has to feel that it is their company. *It's Your Ship : Management Techniques from the Best Damn Ship in the Navy"* — describes the 20 months Captain D. Michael Abrashoff spent in command of the U.S. Navy guided missile destroyer *USS Benfold*. The author uses his experiences from commanding the *Benfold* to formulate lessons for management leaders in general, with the bottom line being that people are the core resource.

Technologically, the *Benfold* was the same ship before and after Abrashoff took over. However, he recognized the need to give his sailors a stake in the ship's effectiveness. This "ownership" improved the sailors' performance and made the ship far more effective, as well as a model for the rest of the Navy. Abrashoff recounts how he taught his crew to "listen aggressively" — not just hearing what someone has to say, but listening and understanding the situation clearly — as well as the importance of building up the people under your command or management.

Using an array of forward-thinking techniques that were often contrary to traditional Navy practices, Abrashoff turned his ship's dysfunctional crew into confident and inspired problem-solvers eager to take on initiatives. Within months of Abrashoff's coming aboard, the slogan on *Benfold* had become "It's your ship." Over time, the destroyer became known as one of the best examples of a Navy sea command, setting precedent and raising the bar in many areas.

IN THIS SUMMARY, YOU WILL LEARN:

- How to take command, as well as lead by example — don't just say, do it.
- The importance of communicating purpose and meaning.
- When to go beyond standard procedure — the traditional approach may work, but something new may work better.
- How to generate unity — it's not just your ship, it's our ship.

THE COMPLETE SUMMARY: **IT'S YOUR SHIP**

by Captain D. Michael Abrashoff

The author: Captain D. Michael Abrashoff, USN Ret., is a graduate of the U.S. Naval Academy in Annapolis, Md. Beginning in June 1997, Abrashoff commanded the guided missile destroyer *USS Benfold* for 20 months. He left the navy in 2001 to become the founder and CEO of Grassroots Leadership, Inc. His second book, *Get Your Ship Together*, was released in January 2005.

Opportunity in a Troubled Industry

In 1997, when it received a new commanding officer, the *USS Benfold* was a state-of-the-art, 8,600-ton guided-missile destroyer. To be given this spectacular vessel as his first sea command was thrilling to Captain D. Michael Abrashoff, yet there were serious challenges as well. The ship had the Navy's most advanced arsenal of computerized missiles, a radar system that could track bird-sized objects 50 miles away and four gas turbine engines that could power the ship into combat at 30 knots — more than 33 miles per hour. However, while its systems and technologies were cutting-edge, many of the ship's practices and protocols were outdated and inefficient — some were even detrimental. The Navy, like the rest of the American military, had spent a lot of time and money preparing for tomorrow's battles with antiquated methods, and this lag was creating substantial challenges. To make matters worse, the Navy was in the midst of a personnel crisis. Morale among the sailors was low, resulting in a dismal retention rate. In the military, people literally provide the fighting edge, and the Navy was losing its own.

Fighting a Losing Battle

The statistics were startling. Prior to 1997, nearly 35 percent — or almost 70,000 — of the 200,000 people who joined the military annually wouldn't complete their enlistment contracts. Of those who completed their first hitch, a very small percentage re-enlisted — not nearly enough to keep senior billets filled. Worse yet, the best talents were often the first to leave. Since it took $35,000 to recruit a trainee, and tens of thousands more in additional training costs to get new personnel to the basic level of proficiency, the price of this attrition to the taxpayer was staggering. That was only the beginning, since the dropouts went home discouraged, making it even harder to convince others to join.

The government was certainly not getting its money's worth, but neither was it providing life-forming experiences that would shape the character of those in the military and enable them to continue to contribute once they returned to civilian life. Despite technological and military potency, the *Benfold* was not prepared for its primary role: combat. With a sullen crew that resented being there and could not wait to get out of the Navy, the ship was, in effect, dysfunctional.

Over the course of two years, Abrashoff improved the situation aboard ship by pursuing progressive alternatives to traditional Navy management and leadership methods. In order to make his warship more effective, Abrashoff focused on challenging, and getting the most from, his people. The captain sought, and usually found, ways to make his crew grow, to make them feel part of a unified crew, and to feel that they could make an individual contribution to benefit the whole. Leaders have to realize that change, if handled properly, is possible, starting with their piece of the world. ●

Take Command

After formally assuming command of the *Benfold,* Abrashoff remembered flushing with embarrassment at how some of the ship's crew did not give his predecessor a respectful send-off. His first thought was about himself. How could he ensure that his eventual departure wouldn't be met with relief when he left the ship in two years? He knew he was taking over a very tough

crew who hadn't exactly adored their previous captain.

Abrashoff knew he would have to come up with a new leadership model. Considering his role as leader in the context of his new post, the captain decided to first fix the people-problem on his ship. He read exit surveys conducted by the military to find out why people were leaving. He assumed that low pay would be the first reason, but in fact it was the fifth. The top reason was not being treated with respect or dignity; second was being prevented from making an impact on the organization; third was not being listened to; and fourth was not being rewarded with more responsibility.

In 1997, the Navy had a horrible retention rate. Less than half of all sailors re-enlisted for a second tour of duty; the fact that they could retire with generous benefits after only 20 years of service tempted very few. The *Benfold*'s retention rate was even below the average — a dismal 28 percent. In short, the ship was souring nearly three out of four of its youngest sailors, the people the Navy needs the most if it is going to develop a critical mass of reliable petty officers (the Navy's enlisted ranks) and long-term specialists.

A New Approach

Abrashoff realized that no one, including the man or woman at the top, is capable of making every decision. As the *Benfold*'s new leader, Abrashoff would have to train people to think and make judgments on their own. Empowering means defining the limits in which people are allowed to operate and then setting them free.

Abrashoff began by first assuming that there is always a better way to do things and, contrary to tradition, the crew's insights might be more profound than even the captain's. Several months were spent analyzing every process on the ship, and each crew member was asked if there was a better way to do his or her job. Time after time, the answer was yes, and many of the answers were revelations.

A second assumption Abrashoff acted upon was that the secret to lasting change is to implement processes that people will enjoy carrying out. Focus leadership efforts on encouraging people not only to find better ways to do their jobs, but also to have fun as they do them.

Little gestures go a long way. At the San Diego Navy base, for example, Abrashoff decided to stop feeding the crew official Navy rations and instead to use the ship's food budget to buy quality civilian brands that were cheaper and tastier. Some cooks were sent to culinary school, and what they learned turned the *Benfold* into a lunchtime mecca for sailors from all over the San Diego base.

Captain Abrashoff on Learning the Ropes

For a Navy officer, your first posting depends on your class rank at the Academy, and if you choose to be a ship driver, as I did, you find that the sleekest, newest ships go to the people at the top of the class. My first assignment was to an old rust bucket frigate, the *USS Albert David*. Oddly, that turned out to be an advantage. On the fast new ships, the Academy hotshots continued to compete with one another for training time and opportunities to learn. On *Albert David*, competing with officers at the bottom of the list, I still had to bust my butt, but it was easier to break out.

But the officers I was reporting to were also considered to deserve the *Albert David*, and it was their leadership style I was learning. Unfortunately, that was old-fashioned command-and-control; they barked orders and micromanaged everything. The captain was abusive. He yelled at us so hard the veins on his neck and forehead would bulge.

At one point, the captain fired the antisubmarine warfare officer and told me, who had no training at all, to replace him. I was able to do some good things by studying my job and telling my dysfunctional division what to do. I was getting semi-good results and moving up the career ladder, but I was still handicapped by my micromanaging style.

Similarly, a resourceful sailor created outdoor entertainment by projecting music videos on one of the ship's vertical surfaces for crews to enjoy as they refueled. The shows generated a lot of buzz throughout the fleet and lightened up a tedious and sometimes dangerous job.

How did the new approach affect the *Benfold*'s retention rate? For the two most critical categories, it jumped from 28 percent to 100 percent and stayed there. All of *Benfold*'s career sailors re-enlisted for an additional tour. Replacing them would cost about $100,000 per new recruit for training, but the considerable dollar savings are only the beginning. The ultimate benefit, retaining highly skilled employees, is incalculable.

Functional Innovations

The innovations on the *Benfold* were not all lighthearted. On the way to the Persian Gulf in 1997, the *Benfold* was one of three ships sailing together and scheduled to stop in Honolulu, Hawaii. The ships were involved in an exercise with an American submarine posing as the enemy. The submarine's task was to sink

the ship carrying the commodore, the commander of the three-ship force. While awaiting official plans for the exercise, the captain asked his junior sonar operators, the people who watch for enemy submarines on electronic equipment, to create their own plans. They were told to put themselves in the mind of the submarine commander, determine his likely plans and come up with ways to stop them.

To everyone's surprise — including Abrashoff's — they devised the most imaginative plan he had ever seen. Abrashoff submitted it, but both the commodore and the captain of the sister ship in charge of the exercise shot it down in favor of a last-minute plan based on the same tactics the Navy has been using since World War II. Now more than ever, the Navy and the U.S. military overall needed to stop preparing for past battles and start preparing for new ones.

When he heard the decision, Abrashoff argued with them on the ship-to-ship radio. The radio is a secure circuit, but also a party line that any sailor can listen to by punching the right button, which all his sailors did. They heard the captain challenge his bosses to try something new and bold. Unfortunately, tradition, plus outmoded business practices, carried the day.

As a result, the submarine "sank" all three of the ships. Talk about dejection. But the captain's sailors knew that Abrashoff had gone to bat for them. He could not do less; the sailors' innovative solution was well-deserving of their captain's allegiance.

Lead by Example

While the image of a Navy captain conjures up gold braid and firmly barked orders, neither of those things makes a leader. A leader will never accomplish what he or she wants by ordering it done. Real leadership must be done by example, not precept.

Whether you like it or not, your people follow your example. They look to you for signals, and you have enormous influence over them. If they see you fail to implement a policy you disagree with, they may think they have a green light to do the same.

If they see you not telling the truth, they may feel free to lie as well. Likewise, if they see you challenge outdated business practices, they will follow suit. Doing so will become ingrained in the culture. Whenever an officer proposed a plan, Abrashoff asked, "Why do we have to do it that way? Is there a better way?" So they always searched for better ways before coming to him. You train your crew how to operate through every decision you make and every action you take.

Never Forget Your Effect on People

Leaders need to understand how directly they set the Leaders need to understand how directly they set the tone and spirit of everyone around them. Mediocre leaders often don't take the time or trouble to know their people.

Abrashoff learned of an incident between his predecessor on the *Benfold* and a sailor. It was near the end of the previous captain's tour when he stopped the sailor in the passageway and asked if he was new to the ship. The sailor had been one of the first to report to the *Benfold* as the ship was being built and had served two years under that captain. But he answered, with a straight face, "Why, yes sir, I am. And what is it that you do aboard the ship?" The captain then fingered his gold command-at-sea pin and said, "Do you see this pin? This means I'm the commanding officer of this ship." The veteran sailor responded that it was a pleasure to meet him. A couple of sailors who witnessed this exchange enjoyed a good, long laugh.

As a manager, the one signal you need to steadily send to your people is how important they are to you. In fact, nothing is more important to you. Realize your influence and use it wisely. Be there for your people. Find out who they are, literally. Recognize the effects you have on them and how you can make them grow.

Listen Aggressively

It didn't take long for Abrashoff to realize that his young crew was smart, talented and full of good ideas that frequently came to nothing because no one in charge had ever listened to them. Like most organizations, the Navy seemed to put managers in a transmitting mode, which minimized their receptivity. They were conditioned to promulgate orders from above, not to welcome suggestions from below.

Abrashoff decided that his job was to listen aggressively and to pick up every good idea the crew had for improving the ship's operation. Some traditionalists might consider this heresy, but it's just common sense. After all, the people who do the nuts-and-bolts work on a ship constantly see things that officers don't. It seemed to him only prudent for the captain to work hard at seeing the ship through the crew's eyes.

This resulted in finding a simple way to limit the frequency with which the ship had to be painted. One sailor suggested changing the ferrous-metal bolts, which rusted and streaked the sides of the ship, with stainless steel bolts, which did neither. Because the Navy did not

have stainless steel bolts, the ship's credit card was used at The Home Depot to buy enough bolts. Painting decreased from six times a year to once a year. Because of this suggestion, the entire Navy has now adopted stainless steel bolts.

Communicate Purpose and Meaning

The whole secret of leading a ship or managing a company is to articulate a common goal that inspires a diverse group of people to work hard together. That's what Abrashoff's sailors got: a purpose that transformed their lives and made the *Benfold* a composite of an elite school, a lively church, a winning football team and — best of all — the hottest go-to ship in the U.S. Navy.

When Abrashoff took command, he kept walking around the ship trying to understand why everything seemed so desperately wrong, why there was no energy anywhere. It finally hit him that people were just showing up to collect a paycheck every two weeks. They were locking their passion and enthusiasm inside their cars in the parking lot and just bringing their bodies to work.

No one had ever thought to give them a compelling vision of their work, a good reason to believe it was important. So Abrashoff came up with a vision they could believe in and began making improvements. Slowly the sailors stopped leaving their enthusiasm in their cars and began bringing it to work.

Abrashoff appreciated communication from top management. He believed in the practice of telling everyone personally what's in store for him or her and explaining why changes are made. People can absorb anything if they are not deceived or treated arrogantly.

Some people feel that by keeping people in the dark, they maintain a measure of control. But that is a leader's folly and an organization's failure. Secrecy spawns isolation, not success. Abrashoff found that the more people knew what the goals were, the better buy-in he got — and better results were achieved.

Open Clogged Channels

Communicating includes management not only keeping "the ranks" informed, but also openly receiving information from below. Building up the passion and confidence of subordinates includes seeking out and taking good ideas. One dramatic example on the Benfold occurred in 1997. The Navy was having major technical problems with communications. Messages were secure, but they just did not get through to the intended parties. Some messages took five to six days to get to captains — an eternity in a military situation where seconds could count.

A *Benfold* radioman on the front line of ship communications spent hours reading technical manuals on a new satellite system the ship had received. The radioman told the captain he could unclog the backlog in Persian Gulf communications. The captain knew the three-star admiral in charge of naval forces in the Gulf should know this, but thought it wise to go through the necessary channels. First, he went to the communications chief of staff for the two-star admiral in charge of the *Benfold*'s battle group. The chief of staff vetoed the idea on the ground that it would divert manpower and use the system for a purpose not intended.

Six weeks later, with a worsening communications situation, Abrashoff decided to bypass the chief of staff and go straight to the two-star admiral. The admiral liked the idea and ordered its implementation. The radioman was flown to other ships to train them on how to use the new system. The new system worked and cleared up the communications problem. After he left the *Benfold*, the radioman was sent to help upgrade White House communications.

Look for Results, Not Salutes

Like military services around the globe, the U.S. Navy is a hierarchy. Rank, seniority and military discipline govern nearly everything. "Officer Country" signs ban enlisted people from parts of nearly every ship.

As gently as possible, Abrashoff set out to chip away at this rigid system. Formal etiquette is never out of style in the Navy, nor was it on his ship. When the captain walked on deck, sailors cleared gangways, threw salutes and stood at attention. They were honoring the office, as sailors must. But in a short time they learned that Abrashoff was not interested in flattery or fluff. Rigidity gets in the way of creativity. Instead of salutes, the captain wanted results, which meant achieving combat readiness.

As captain, Abrashoff was charged with enforcing 225 years of accumulated Navy regulations, policies and procedures. But every last one of those rules was up for negotiation whenever his people came up with a better way of doing things.

Go Beyond Standard Procedure

In the Navy, as in business, SOP — Standard

Operating Procedure — tends to rule. You will seldom get in trouble for following standard operating procedure. On the other hand, you will rarely get outstanding results.

Innovation and progress are achieved only by those who venture beyond standard operating procedure. You have to think imaginatively, but realistically, about what may lie ahead and prepare to meet it. You have to look for new ways to handle old tasks and fresh approaches to new problems.

Don't Work Harder — Work Smarter

Abrashoff applied this principle to attack an epidemic of mechanical failures that was sweeping all the Arleigh Burke-class destroyers in the Atlantic and Pacific fleets. These ships, including the *Benfold*, have an enormous demand for electricity, which they get from gas turbine generators. The ship can run on two of them, with a third on board for emergencies. The generators' critical cooling mechanism is a heat exchanger that runs seawater through metal tubes in the lubricating oil reservoir. The generators cost upward of $1.5 million each, but some designer had decided to save money by using cheap metal for the reservoir tubes. The tubes cost about $7,000. The upshot was that the tubes corroded, the pipes cracked, seawater contaminated the oil and the motors broke down.

When the *Benfold* lost two generators in a short period of time and had to limp back to port, Abrashoff started digging and learned that there had been around 60 similar failures. He wrote a message to the three-star admiral in San Diego blasting the design.

Abrashoff's message informed the admiral that not only had the poor design cost the Navy $60 million in lost generators, but that they could not be replaced fast enough, so the Navy was losing combat capability.

An obvious solution was to replace the tubes with a tougher alloy, such as Monel. But the way the Navy worked, Abrashoff knew it would take a year of studies before anything was approved. Abrashoff's ship was down to one generator; the captain needed a fix now and took matters into his own hands.

One of the *Benfold*'s broken lube-oil coolers was taken to a local engineering shop where Monel tubes were installed. It was tested and it worked, so Abrashoff had the other one fixed; those heat exchangers are working to this day.

According to Abrashoff, when you see a bad trend developing, yell and holler until people pay attention to it. By flagging the breakdowns, Abrashoff allowed the admiral to push the Navy to focus on the broader problem, while, simultaneously, the captain saw through a more immediate initiative. None of this happened simply by following standard procedure.

Build Up Your People

Once a year, all Navy ships undergo a thorough assessment in which outside inspectors validate the ship's readiness. The ship as a whole, and the crew's abilities and proficiencies, are rated in 24 categories, on a scale ranging from basic Level One to advanced Level Four.

The purpose is to determine how much additional training the crew needs to be ready for combat. But regardless of its readiness rating, every ship spends the next six months training at sea. Thus, there was no incentive to reach Level Four, and in fact, no ship ever did. Level One was the required minimum and that was usually considered good enough. Then, the *Benfold* came along.

Originally, the goal was for the *Benfold* to reach an overall rating of Level Two. But because of the enormous potential of the crew, it was raised to Level Three. The first challenge was finding enough senior people to supervise the 24 areas of testing. The combat systems officer told Abrashoff they only had 20 qualified people who were not involved in other critical operations.

Thinking fast, the captain responded, "Fine — pick supervisors from the next group down. You don't always need a senior person in charge."

"That's never been done before," the officer said.

The captain then responded, "See what they can do. Let's assign senior people to the most demanding areas, and work our way down to the junior ones. We have nothing to lose."

As it turned out, the third- and second-class petty officers were so honored to be chosen that they worked hard enough for several of their teams to outshine those supervised by senior people. The outside inspectors protested, saying they could not validate the work of an important team that wasn't headed by a commissioned officer. But the captain insisted, and his sailors did such a fantastic job that the inspectors ate their words and gave the *Benfold* Level Four in that category.

Breaking out of the stratified systems to trust people, especially those at or near the low end of the hierarchy, was a useful, progressive change. It allowed individuals with talent to rise to levels that no one had expected, simply by challenging them: Make the *Benfold* the readiest ship afloat. In that context, how could they not have done well?

Be the Rising Tide That Lifts All Boats

Since World War II the Navy has issued foul-weather jackets that are made of ugly blue duckcloth that keeps sailors neither dry nor warm. To the *Benfold*'s young sailors, they were a fashion statement not worth making. While browsing in a marine gear store, one sailor spotted a civilian version he loved that was made of blue Gore-Tex with reflective stripes and a built-in flotation device.

Naturally, he told the captain about it immediately. The Navy jackets cost $150 apiece; these were $90 and superior in every way. They would actually keep the sailors warm and dry, and they'd be safer than the standard issue because of the flotation device. As a bonus, "USS Benfold" could be stenciled on the back.

This was not the usual Department of Defense procurement; instead, this was more value for less money. "Great idea, sign me up," Abrashoff said. They used the ship's credit card to buy 310 jackets, passed them out to all hands, and had a very cool-looking and inspired crew.

The next day, when another ship pulled into *Benfold*'s pier, its sailors saw the Benfold crew wearing the jackets. Half an hour later, that ship's command master chief strode over to say, "My captain has ordered you to stop wearing those jackets."

"Really? Why?" Abrashoff asked.

"We almost had a mutiny over there — our crew wants the same jackets."

According to Navy protocol, the senior officer present is responsible for a pier's security, and he had decided that pier security was endangered because his sailors coveted the *Benfold*'s sailors' jackets.

The master chief of the other ship was informed that Abrashoff considered the other captain's order illegal and refused to obey it. If he insisted, Abrashoff would be happy to go to the admiral's office and accept an immediate court-martial. The command master chief delivered the message and returned half an hour later with a new directive: "My CO has decided you can wear your jackets after all."

That ship could have bought those jackets but never did. Meanwhile, the so-called "Benfold Jacket" became the rage, and the ship's squadron commander ordered them for the five other ships under his command.

Jealousy and envy are powerful emotions and, if acted upon, can cause serious problems. A jealous commander may behave in ways that inhibit and paralyze his or her subordinates, who eventually turn off and tune out. The antidote lies in trying to make the people who work for you feel needed and highly valued. Help them believe in that wonderful old truism, "A rising tide lifts all boats." With only few exceptions, every organization's success is a collective achievement. ●

Generate Unity

One of the harder tasks of a leader or manager is to convince people to accept that they are all in the same boat. In the case of *Benfold*, this was literally true. Either they would support one another or the whole ship could be in critical trouble that no one could escape.

One of the toughest things for organizations to accomplish is to get people to set aside personal differences and work for the good of everyone involved. The task of the leader is to assemble the best team possible, train it, then figure out the best way to get the members to work together for the good of the organization.

Treating people with dignity and respect is not only morally right, but practical and productive. Unity became the fundamental purpose of Abrashoff's leadership model. He achieved it because he and his crew learned how to make people want to belong to their 310-member club, ready to give their best to a fair-dealing ship that clearly valued them. ●

Improve Your People's Quality of Life

Abrashoff feels that corporate America, like the military, is headed for a nervous breakdown. We are now permanently wired to our work, wherever we are. Even on vacation, we're tethered to pagers, cell phones and laptops so we can log in from the beach. This is OK, in moderation.

In excess, it eats away at the inner reservoir of spirit that people need to draw on when life gets tough. If you work 70 or 80 hours a week and never take time out for a work-life balance, the reservoir doesn't refill and soon you're running on empty. When times get tough, the body may be willing, but the spirit will be out to lunch.

Abrashoff wanted to change that. When he interviewed his sailors, he asked them not only how to improve the ship's performance, but also how to have fun at work. The responses were amazing.

Fun With Co-workers Makes a Happy Ship

One sailor said it would be neat if the ship had a stereo system and maybe once a week at sea the crew

could gather on the flight deck and watch the sunset while listening to jazz. Abrashoff did that.

Another sailor suggested a happy hour every Friday night at sea. Abrashoff was ready to break a lot of rules, but definitely not the one that bans serving alcohol on a ship at sea. Still, it's possible to have happy hour without alcohol, or so Abrashoff decreed. Every other Friday night, the crew gathered on the mess decks for a feast. The ship also bought a karaoke machine.

Still another sailor said, "Why don't we put a sheet on the back bulkhead on the flight deck and get a movie projector and show movies under the stars at night?" Abrashoff thought it was a fantastic idea and a step forward in unifying his crew.

Abrashoff tried to instill fun in everything he did, especially mundane, repetitive jobs such as loading food aboard the ship. He decided that music would make the job go faster. With the ship's huge stereo system playing great tunes, it was a whole new scene. Everyone danced to the music, and the officers and chiefs supervising the work force ended up pitching in themselves. Music seemed to make even the most boring task fun — a lesson that somehow had escaped the U.S. Navy.

Having fun is a notion you can apply to any workplace, anywhere. Not long ago, Abrashoff proposed it to a conspicuously dour bank, and the managers looked alarmed. They said, more or less, "Fun isn't allowed here. It goes against the culture of the organization." But one of the managers broke ranks: "Why don't we have Laugh-In once a month?" she asked. The others softened, albeit slowly, and the light finally dawned.

So now, one day a month, the bank's once mirthless employees gather for a brown-bag lunch and sit together watching reruns of TV classics. These people had barely said a word to one another for days, if not decades. The last Abrashoff heard, they were actually laughing.

All this shows what you can accomplish when you throw formality to the winds and free your people to have a life on your time, which soon becomes the time of their lives. None of this required big money — only imagination and good will. ●

Life After Benfold

When Abrashoff's tour of duty was over, it was time to hand over the *Benfold* to its new captain. The day before he was relieved, Abrashoff's successor took him aside and said the *Benfold* was unlike anything in his experience. He did not want to become known as the one on whose watch the *Benfold* had declined. He asked Abrashoff what he should do, and Abrashoff summarized the *Benfold* playbook. His successor became a great leader. He was so highly valued that he was ranked the number one commanding officer in his squadron.

Abrashoff's approach to leadership began as an experiment born of necessity, but it is not unique. In all sorts of thriving businesses, the managerial role has changed from order-giver to people-developer, from authoritarian boss to talent cultivator. The bottom line: It's your ship. Make it the best. ●

Create a Climate of Trust

Once leaders have set the terms of the new social contact with their workers, they need to have the courage of their convictions. The best way to keep a ship — or any organization — on course for success is to give the troops all the responsibility they can handle and then stand back. Trust is a human marvel — it not only sustains the social contract, it's the growth hormone that turns green sailors into seasoned shipmates and troubled companies into dynamic competitors.

But trust must be earned, and you earn trust only by giving it. When Abrashoff took over the *Benfold*, he found distrust throughout the ship. When an adversarial relationship among department heads is built into the system, it poisons the whole atmosphere. It divides the crew into factions, erodes their trust in one another, and reduces combat readiness.

One of the first things Abrashoff did was to tell his four department heads that their futures in the Navy depended on the overall success of the *Benfold*. Together, they would sink or swim; it does no good to have the best weapons department if the engineering department could not keep the engines running to get the ship into combat.

How to Put More Minds Together

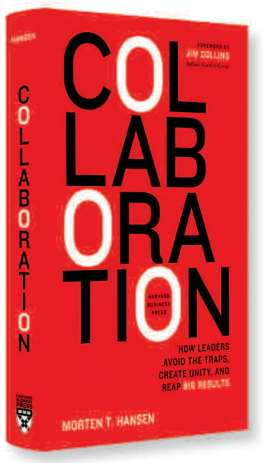
Review by Chris Lauer

COLLABORATION: HOW LEADERS AVOID THE TRAPS, CREATE UNITY AND REAP BIG RESULTS

by Morten T. Hansen

Harvard Business Press © 2009, 231 pages, $29.95, ISBN 978-1-4221-1515-2

Everyone cheers the benefits of creating collaboration, but every leader who has tried has discovered that it is much easier said than done. Building teamwork is difficult partly because it is so hard for us to relinquish our personal responsibilities to other people. Recently, a handful of researchers have figured out some critical ways to weave collaboration into the fabric of their organizations.



Dr. Morten Hansen has been studying how the best leaders and organizations get teamwork right. Along the way, he has also discovered how other leaders have missed the mark. Hansen is a collaboration expert. His research on the subject earned him a Ph.D. from Stanford University. With his doctorate in hand, he joined the faculty at Harvard Business School where he continued his research into collaboration while teaching in the school's MBA program. Today, he specializes in collaboration as a management professor at the University of California and the international graduate business school INSEAD. For the past 15 years, Hansen has compiled a compendium of valuable information on the power of working together. In his book *Collaboration*, he describes the results of this groundbreaking research.

To start, Hansen points out that bad collaboration is worse than no collaboration, so pay attention when creating teams. The trick is to do it well, like Apple did when it created the iPod. With a variety of examples fresh from the headlines, Hansen shows business leaders how great and awful attempts at collaboration look in real life.

Hansen writes that the most effective forms of collaboration come from a combination of decentralized work and collaborative work. Each work style has its benefits, so it's up to the organization to decide when each one works best.

Decentralization

Lately, more companies than ever are adopting some form of decentralized work. More people are being given the freedom to control their own work. Hansen recognizes the benefits of a decentralized work unit, but he also believes that leaders should put more effort into creating "disciplined collaboration."

Balancing autonomy with collaboration creates many challenges for business leaders. The best companies are conquering these challenges by creating internal processes that enable collaboration. For example, Procter & Gamble (P&G) has created more than 20 "communities of practice." So far, about 8,000 employees are participating in these communities. A community of practice is made up of volunteers from all corners of P&G's many divisions. Together, these groups work together to solve

problems and share ideas. Other employees in the company are encouraged to communicate with these groups by using an "Ask Me" feature that is part of P&G's intranet.

Another way leaders at P&G motivate collaboration in the organization is by promoting from within. By moving people across business units and locations, P&G facilitates the growth of cross-unit networks among its many employees.

Crest Whitestrips

One result from P&G's efforts to cross-pollinate its business units with ideas from different groups is the tooth-whitening product Crest Whitestrips. P&G employees from three separate units worked on the product, including experts from the oral-care division, researchers from the fabric and home-care division and scientists from R&D. Their unique collaboration created a successful new product.

Innovations like Crest Whitestrips happen at P&G because the company's CEO, A. G. Lafley, encourages product developers to work with people outside of their own departments. Since he became CEO in June 2000, Lafley has worked hard to make the company more collaborative on every level. That sense of collaboration permeates the top ranks of the company. Studies show that the company's global leadership team works remarkably well together. Hansen points out that P&G has seen about 5 percent organic growth every year since Lafley took the lead.

Disciplined Collaboration

Hansen summarizes his collaboration model in just a few words: "Disciplined collaboration requires that organizations be decentralized and yet coordinated." Some leaders will be prepared to create more disciplined collaboration in their organizations, others will need to make some changes to the ways they lead.

Cisco's CEO John Chambers admits that he had to change his old command-and-control leadership style to adapt to a new era when collaboration within organizations is required. In an interview with *Financial Times* editor Chrystia Freeland, Chambers explains that leaders "make better decisions through collaboration. And while you might spend more time discussing it than you'd like, once the team has discussed it with different backgrounds, then they can build upon that base much faster than before."

If Chambers can break old habits and create a more collaborative mindset at Cisco, Hansen muses, then any leader can develop a more collaborative leadership style.

California Governor Arnold Schwarzenegger is a great example. He went from "Terminator" to collaborator almost overnight. One day he was hunkering down with Republican allies, going it alone, pushing to get voters to pass four of his new ballot measures. On Election Day in November 2005, all four initiatives failed.

The governor opened his eyes to a new reality. He noticed that he was down from a 60 percent approval rating to a 33 percent approval rating. Voters were telling the governor that they disapproved of his partisan, non-collaborative ways.

Suddenly, he switched to a different approach. The governor started reaching out to state Democrats. He demonstrated his commitment to bipartisanship by replacing his Republican chief of staff with Democrat Susan Kennedy. State lawmakers were finally able to sign laws to increase the state's minimum wage, reduce greenhouse gases and allocate money to rebuild roads, schools and bridges. Together, California's Republicans and Democrats solved key problems.

The Not-Invented-Here Barrier

One of those obstacles that blocks collaboration is what Hansen calls the "not-invented-here barrier." This obstruction pops up when the members of one group are unwilling to reach out to other groups for input. Hansen writes that this is a motivational problem that can occur when people develop an insular perspective that excludes outsiders. This can cause them to shun new ideas and perspectives.

The not-invented-here barrier played a pivotal role in the U.S. government's inability to stop the 9/11 hijackers, Hansen writes. Better collaboration among U.S. intelligence agencies would have made it easier for agents in the FBI, the CIA and the State Department to share important documents.

A study of the intelligence breakdown before 9/11 shows that U.S. agents tended to stick to their own agencies when looking for information. Months before the 9/11 terrorists destroyed the World Trade Center, the FBI had information that could have been used to catch one of the hijackers, Hansen explains, but that information was not distributed to other agencies. That's why the hijacker's name never made it to the State Department's watch list.

If the information had been distributed rather than held until it was requested, agents might have been able to stop him from entering the United States when he reapplied for a U.S. visa three months before the attacks. Hansen writes, "At the FBI, agents rarely reached out to ask other federal agencies with potentially valuable information databases to assist in searches." Better collaboration among U.S. intelligence agencies before the 9/11 attacks could have saved many lives.

The Hoarding Barrier

Another thing that might be holding collaboration back in your organization is what Hansen calls "the hoarding barrier." People hitting this wall do not return phone calls. They drag their feet when somebody else needs something. If the divisions within your company are having trouble sharing their resources because they have developed competitive relationships, then you have hoarders in your midst.

The 9/11 Commission investigation showed that massive hoarding was taking place within the country's intelligence services. The CIA didn't share with the FBI and the State Department. The FBI agents didn't share with each other. As a result, a crucial memo was never passed along. Hansen writes, "A decentralized structure of the intelligence community, narrow incentives and fear of revealing information all contributed to a climate of hoarding in the intelligence community."

The Search Barrier

Another problem that plagues great collaboration is an inability to find who and what you need within your organization. If your searches for people or facts become endless mazes of wrong turns, then the "search barrier" has you trapped. Although this problem can be rampant in large companies, smaller companies can suffer from it as well. Global companies with people spread around the planet have to work extra hard to make their information accessible to employees if they want collaboration to take place.

The final barrier to collaboration that Hansen describes in *Collaboration* is the problem of transferring experience, skills and technologies across people from different units. Tacit knowledge, which includes anything that you cannot easily write down in a manual, is hard to share. That's why it is so difficult to teach somebody how to close a difficult sale, or execute a successful merger between two unique companies. Unlike explicit knowledge, which can be shared with a written document, tacit knowledge takes a while for people to acquire.

Studies show that collaboration is easier when people work with the types of information that are easier to share, such as clearly documented diagrams or straightforward information. On the other hand, Hansen writes, it is much harder for people to work together when they have ambiguous goals or deal with unknowns.

Solutions for Collaboration

Hansen's research has revealed three management strategies for leaders who are trying to motivate employees to collaborate: Unify your people, cultivate collaboration through "T-shaped" management and construct nimble networks. Unifying people and cultivating collaboration through your management structure can help you conquer hoarding and the not-invented-here barrier. Building agile social networks and cross-unit relationships is a great way to combat problems with searching and transferring information.

The first solution for increasing organizational collaboration is unifying people. Hansen writes that successful leaders do this by creating a goal that unifies people, clearly stating that teamwork is a core value and showing executive support for collaboration initiatives.

Leaders still have a long way to go regarding collaboration. Beyond the organizational barriers that can stand in their way, there are a few other things a little closer to home that are preventing them from creating teamwork. Hansen lists four: arrogance, bad attitude, fear and ego. The worst of these is arrogance, he writes. Some people are under the firm, but erroneous, assumption that everything they say and do is right. When a leader or team member thinks he or she is smarter than everyone else, that arrogance can stifle collaboration.

Conquering Defensiveness and Fear

Defensiveness can also be a problem. If you are defensive, then you might get stuck in a very narrow perspective and ignore important criticisms. Defensiveness can also make you less inclusive, Hansen writes, which can shut down efforts to grow collaboration.

Fear is another destructive element that can limit the possibilities of collaboration. When a leader is afraid to lose or afraid to be humiliated, he or she will usually stick with a very narrow agenda. Hansen explains that collaboration works better when everyone is open to everyone else's ideas and the possibility that their own ideas are less important than the team's goals.

Finally, big egos can kill collaboration. Hansen's research shows that big egos were the least powerful of the collaboration killers, but they can stop collaboration dead when a leader is enraptured with his or her own agenda. An egotistical leader does not usually involve other people in his or her decision-making process.

Unify People

Collaboration starts with unifying people. To create a unifying goal, Hansen proposes four criteria to help leaders get started. First, make sure your goal creates a common fate for all relevant groups. Sometimes your message will be designed to unify only part of your organization.

Jack Welch had a unifying message when he took over as CEO at General Electric(GE), but it was just for GE's business units. "Be number one or two in every

business globally," Welch said. This was a unit-specific goal, as opposed to a "common-fate goal."

Another way to unify people is to create a goal that is simple and concrete. President Kennedy wanted to land a man on the moon. It was a difficult endeavor, but it was a simple message. About 400,000 people coordinated their efforts to make this goal a reality. The country rallied around the message and made it happen. Hansen advises leaders to strip away any clutter from a message so people can connect to it. They must also make sure it stirs passion.

Finally, remember to put your competition on the outside. As Hansen writes, "Few things unite people better than having a common enemy."

Words alone will not make a campaign for increasing collaboration a success. Leaders need to state their commitment and follow up with concrete action. Many people will be involved because that commitment will need to be reflected in how people are recruited, rewarded, promoted and fired.

'T-Shaped Management'

In 2001, Hansen and author and business strategist Bolko von Oetinger wrote an essay for the *Harvard Business Review* titled "Introducing T-Shaped Managers: Knowledge Management's Next Generation." They called their strategy for getting collaboration to stick a "T-shaped" management approach. In their model, the vertical line of the T represents how you deliver results in your job. The horizontal line stands for getting results while collaborating with other people across the organization. A T-shaped manager balances horizontal knowledge-sharing responsibilities and business unit responsibilities.

How does a leader implement T-shaped management when individual and group concerns are equally important? Start with training. Then move to the organization's appraisal process. To show leaders how this works in the real world, Hansen presents a popular Harvard Business School case study from Professor Diane Burton.

Burton's case study describes the dilemma of a senior banker at Morgan Stanley. Executives will likely be able to identify a similar problem player in their own organizations regardless of industry.

The banker had an employee who was a great producer but a terrible team player. The senior banker had to decide whether to hire his star performer as managing director.

Two years earlier, leaders at the company had launched a campaign to ensure that collaboration was taken seriously throughout the organization. To demonstrate their commitment to the program, leaders set up a 360-degree performance appraisal process that assesses contributions to the company and "team player skills." Morgan Stanley's annual performance appraisals include comments from bosses and colleagues on how well an employee demonstrates teamwork. When the senior banker's "lone star" was up for a promotion, those performance reviews showed he was great with clients, but horrible with partners and traders. This kind of information helped the senior banker make his decision.

Nimble Networks

In his bestseller *The Tipping Point*, author Malcolm Gladwell asserts that knowing more people is the key to becoming more connected.

Hansen disagrees. He writes that "the more, the merrier" does not always work better than a nimble network of great contacts. He also offers this tip: The goal of networking is not simply more networking. The goal of networking is better results. A strong contact list, he adds, includes a variety of people whose jobs span different disciplines, technologies, experts, customers, colleagues and industries.

Most leaders already know that better collaboration boosts performance, but few have mastered the ability to cultivate collaboration throughout an entire organization. Hansen spent many years studying the successes of collaboration masters and the mistakes of collaboration failures. He then shaped that research into a collection of smart ways leaders can leverage more teamwork into their organizations. The result is a practical guide to building fruitful collaborations.

The author: Morten T. Hansen is a management professor at the School of Information, University of California, Berkeley, and at the international graduate business school INSEAD. His articles have appeared in the *Harvard Business Review* and the *Sloan Management Review*.

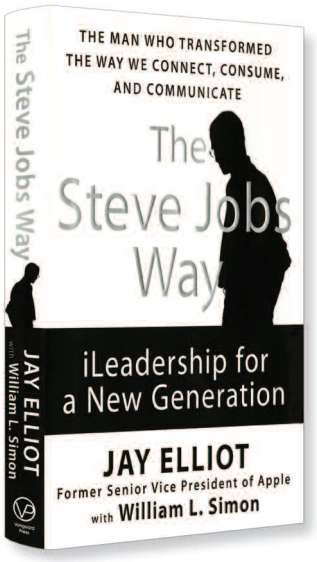
Leadership



The Steve Jobs Way

iLeadership for a New Generation

by Jay Elliot with William L. Simon

THE SUMMARY IN BRIEF

In *The Steve Jobs Way*, Jay Elliot, former senior vice president of Apple Computer and close colleague of Steve Jobs throughout his tenure, takes readers on a remarkable tour through Jobs' astonishing career. From the inception of game-changing products like the Apple II and the Macintosh, to the development of the iPod, iPhone, iPad and much more, this summary presents real-life examples of Jobs' leadership challenges and triumphs, showing readers how to apply these principles to their own lives and careers.

Packed with exclusive interviews from key figures in Apple Computer's history, *The Steve Jobs Way* provides a rarely seen, intimate glimpse into the Steve Jobs you won't see on stage at one of his legendary presentations at Macworld. It also thoroughly explores his management and leadership principles. From product development meetings to design labs to the world outside of Silicon Valley, readers will see the *real* Steve Jobs, the "Boy Genius" who forever transformed technology and the way we work, play, consume and communicate.

The Steve Jobs Way is the "how to be like Steve" book that readers have been waiting for.

IN THIS SUMMARY, YOU WILL LEARN:

- Why Steve Jobs is in a class by himself.
- How Steve Jobs runs an organization that brings such convenience, time-saving and pleasure to so many people around the world.
- How Steve Jobs' unique leadership style has forever changed our everyday lives and the world around us.
- How to shift your paradigm and get your organization to shift with you.

THE COMPLETE SUMMARY: **THE STEVE JOBS WAY**

by Jay Elliot with William L. Simon

The authors: Jay Elliot served as the senior vice president of Apple Computer, responsible for all corporate operations, reporting directly to Chairman of the Board Steve Jobs. He also helped Jobs create the Macintosh computer from development to introduction. Elliot's articles and interviews have been published in *The Wall Street Journal, The New York Times, Time Magazine* and *Fortune*. He is also the CEO and founder of the software company Nuvel, Inc.

William L. Simon is the author of two *New York Times* bestsellers, including *iCon*, which is currently the best-selling Steve Jobs biography.

PART I: PRODUCT CZAR

Steve Jobs is the *world's greatest consumer*. I saw it from the day I joined Apple. He breathed life into the Macintosh as "the computer for the rest of us." He stirred the iTunes Store and the iPod into being out of his love for music and the desire to take music everywhere with him. He loved the convenience of the cell phone but hated the heavy, clumsy, ugly, hard-to-use phones on the market, and that dissatisfaction led to his giving himself and the rest of us the iPhone.

Steve Jobs survives, thrives and changes society by following his own passions.

"I could be doing a lot of other things with my life," he said. "But the Macintosh is going to change the world. I believe that, and I've chosen people for the team who believe it, too."

This product passion goes through the entire Apple corporation — from the receptionists to the engineers to the members of the board of directors. If the employees of any company do not feel this passion as passed on from the leaders, then the leaders need to be asking, "Why not?"

From the Drawing Board to Delivery

As his own product czar, Steve wore a dazzling number of hats in the Macintosh team, starting with product conceiver-in-chief. From the drawing board to delivery, he *inhabited* the product, living every detail of what it would experience as if it were a living, breathing organism.

He knew he had to be surrounded by people as invested in achieving excellence in the products as he himself was. His passion is one of the great underlying secrets of Steve's success. He is exacting, demanding and, yes, at times, inconsiderate. It's all a reflection of the fiery passion that drives him. ●

Success Is in the Details

Steve Jobs understood something that a lot of companies try to do, but are rarely successful at. The more he advanced, the simpler his products became. In some instances, it's less about the product and more about the user.

For Steve, nothing is wasted, nothing is unnecessary. It doesn't happen by cramming in more, it happens through creativity and innovation, with a relentless pursuit of perfection. It means thinking through everything with the laser-focused goal of making it intuitive to the user. The irony is that this takes more work, more detail-oriented planning.

You probably know a few people — or perhaps more than a few — who consider themselves "detail oriented." Maybe you'd even put yourself in that category. Steve's level of focus on details is one of the most crucial aspects of his success and the success of his products.

As Simple and Uncomplicated as Possible

When Steve Jobs had his best engineers working on the top-secret project to develop the iPhone, he had to wage a battle. Trying to create a cell phone product was a monumental effort for a company with no background

in the field. One of his big reasons for taking on this unlikely challenge was that every cell phone he had ever seen was, in his view, far too complicated to use: a perfect challenge for a man so dedicated to detail and to its companion quality, simplicity.

So Steve had decided early on that the cell phone being developed at Apple would have only a *single* button.

His engineers kept telling him over and over in their once-or-twice-a-week review meetings that it was not possible for a cell phone to have only one button. You could not turn it on and off, control the volume, switch between functions, go to the Internet and use all the other features the phone was to have, if you had only a single control button.

Steve was deaf to their complaints. He kept demanding, in effect, "The phone will have only one button. Figure it out."

Though he has, through the years, been an incredible solver of problems and originator of clever ideas on all the products developed under him, Steve didn't know how the phone could be designed so it would need only one button. But as the ultimate consumer, he knew that's what he wanted. He kept sending the engineers back with the demand that they figure out the necessary solutions.

You know the end of the story: The original iPhone had only one control button. ●

PART II: TALENT RULES

I should have known it would hardly be your typical business product retreat. The oversized glass windows in the second-floor restaurant of the Carmel Inn gave everyone in the room a perfect view of the sparkling blue swimming pool. A bunch of young guys and a couple of young women were happily cavorting in the water below — stark naked. At 8:00 in the morning, no less. Most of the diners didn't know where to look. Two dignified, gray-haired old ladies lingering over their coffee appeared to be in shock. I was almost as surprised as they were. Those kids out there splashing and hooting were members of the Macintosh team.

Forming a Team Culture

Every leader and every manager wants his or her people to work together; all pulling in the same direction, supporting each other, everybody pitching in to do their part in achieving the goal of the group. Yes, the business of the swimming pool was way over the top, not exactly the best example of what a leader should be striving for …

Encouraging the 'Artist' in Everyone

Steve took advantage of the artist sensibility in his engineers. Always in hyper-mode about having new products ready to show, he whips the troops into shape like a lion tamer with lines like, "Real artists ship on time."

Andy Hertzfeld, a key member of the original Mac design team, put it this way: "The Mac team had a complicated set of motivations, but the most unique ingredient was a strong dose of artistic values. The goal was never to beat the competition or to make a lot of money; it was to do the greatest thing possible, or even a little greater."

but it certainly did show that Steve had indeed created a sense of community among the Macintosh group.

By this time, the Mac team had grown from the original core group of five people formed to create a breakaway computer, to about 30, including the newbies Steve had been adding to the teams. He had planned this offsite to make sure everybody was on the same wavelength and moving in the same direction.

These folks, mostly 20-somethings, were being challenged to come up with completely fresh, original ideas in what could be called a near-hostile setting: within the confines of a company thriving on a product line that Steve now saw as dated and no longer relevant. The skinny-dipping should have come as no surprise. He had scoured the halls of Apple and elsewhere for people with the courage to be different, to be unconventional, to go beyond. I saw the naked swimming as a sign he was succeeding.

Elements of Team Building

As everyone walked into the opening session of the business retreat in Carmel, guys and gals were standing by with handouts: Each arriving team member was handed a T-shirt imprinted with what was to become the iconic logo of the Mac team: Pirates! Not the Navy!

I never did ask Steve where that line came from. I now think it may have been a line made up by the late Jay Chiat, the incredibly talented co-founder of Chiat/Day, the ad agency that, through the years, was to work such magic for Steve and Apple. But it was Steve who took it up as a catchphrase that would stir the troops. He recognized it as a rallying cry that would help build a cohesive team, a team of people who would bond and rely on one another. ●

Tapping Talent

If you were starting a new school, you would want to hire the very best teachers you could get. If you were starting a Web site aimed at people who compete in horse shows, you'd hope to staff up with fine riders who were or had been medal-class winners and had won Best of Show trophies. And so on.

That's easy to say but obviously not so easy to do. Yet it's one of the keys to the success of Steve Jobs. Each time he has been faced with the challenge, he has managed to come up with extraordinary people.

Discovering a Pirate Where You Least Expected

Steve doesn't hesitate or waste time once he's made up his mind about somebody.

Although he operates from the gut level when hiring, he's also very thorough. Before an interview with attorney Nancy Heinen — who later became the company's general council — Steve asked to see some contracts she had written so he could evaluate the "aesthetics" of her work.

Sometimes after an interview by Steve, I'd talk to the candidate myself. Most of the people I talked with didn't even feel the time with Steve had been an interview; in their eyes, it was more like a college lecture or a VC pitch on Apple products, followed by a final exam of you explaining how you were going to contribute to Mac and the team.

In searching for talent, you mustn't be put off by first impressions. You must find the real person, sometimes discovering a pirate where you least expected. ●

Rewards for the Pirates

Most corporations acknowledge employees by holding a little celebration for birthdays, employment anniversaries and so on. But for a product-centric company like Apple, celebrations, rewards and recognitions are focused around the company's stars: its talent and its products.

Steve truly cherishes his people. It's not just that he knows he couldn't be doing all these great things without them: He lets his people *know* he knows. The lengths Steve goes to shower recognition, appreciation and reward on his people often left me in awe.

The most memorable example came when he told me, "Artists sign their work," and decided that the signatures of the original engineering team members would be etched on the inside of the cases of the first Macs. The signing party was held after a weekly staff meeting on Feb. 10, 1982, with each person on the engineering team putting his or her signature on a big piece of drafting paper, including Steve Wozniak, using his familiar nickname, Woz.

Mac buyers would never see the signatures inside the case or even know they were there. But the engineers knew it, and that meant a lot to them. Even to this day, every time they see a classic Mac in someone's garage or in a computer museum, they have the satisfaction of knowing their names are inside. For most of us, there are few greater satisfactions than knowing we were part of a great product. ●

PART III: TEAM SPORTS

The product-driven organization has the product as the most important element in everything it does. Steve is a towering example of being the face of your product wherever you go. The most obvious place to witness this is when he is about to make a presentation at a press conference or Mac Expo. Steve often pays little attention to the prepared remarks. At the same time, he is always fiercely demanding about the smallest detail — down to the exact placement on stage of the key product being introduced, exactly how it will be lighted and on exactly what cue it will be revealed.

To watch him on stage at one of these presentations was to see a consummate actor; no, in fact, he was better than a great actor, because actors mouth words written by others, while Steve would speak *impromptu*, knowing in advance, of course, precisely what messages he wanted to get across, yet not following any script. He could hold a huge audience spellbound like this for an hour or even two.

Unparalleled Confidence in the Product

He is always in hyper-mode about having new products ready to show. No matter what the product, his confidence in it is unparalleled. And he is remarkably imperturbable. When he was introducing Apple's first laser printer, the LaserWriter, he went through his lengthy build-up, finally pressed the button on the computer keyboard to give the print command … and nothing happened. Steve went right on talking as if this was the way he had planned it while a gaggle of white-coated techies flocked to the stage, found a loose cable, plugged it in and vanished.

Steve returned to the computer, pressed the button and the pages began pouring out. He was not the least bit flustered.

When he introduced the iPhone 4 and could not get a signal, he simply requested that the audience turn off their iPhones and, voilà, with the interference problem solved, he got the signal. ●

Maintaining Momentum

In the fall of 1985, Steve Jobs, the ultimate product guy who didn't want to bounce from company to company, was in crisis mode. Being worth $200 million didn't take away the sting that he was no longer with the company he co-founded. The Macintosh project he so deeply believed would change the nature of computing had been suddenly snatched away from him.

Staying in the Game

For a time, it looked as if Steve had indeed quit the game. That surprised me — it didn't seem like what I expected from the Steve I knew.

But he hadn't quit. He turned out to be the model of how to act in a time of crisis: Keep charging ahead until you find that new road. He was to show the guts and gumption that marks the product-inspired person.

Steve started NeXT Computer, Inc. — at first spelled Next — and set to work creating what was for all practical purposes the next generation Macintosh he had wanted to do at Apple. He would show he could do what he told everyone he could: build a great product even outside of Apple's protective umbrella.

Steve Jobs at Pixar

While Steve was trying to make the NeXT computer into his dream machine, he came across another powerful computer for a specialty use. And the man who had been paying the bills was looking to unload the whole package: the whole team of people plus the computer technology and the software they had created.

This was the digital graphics animation unit of Lucasfilm, George Lucas' film studio in Marin County, Calif. That unit was, of course, what would come to be known as Pixar.

It took some five years from contract-signing to premiere for *Toy Story*, but for everyone involved, it had been well worth the struggle and the wait. Many people had been skeptical that a company headed by Steve Jobs, the technologist, could produce a praiseworthy work of art.

After its premiere during Thanksgiving week 1995, the film won great accolades from critics, parents, children — viewers of all kinds, all around the world. A film that eventually cost some $30 million went on to earn $190 million in the United States and a total of more than $300 million globally. It established the production company, Pixar, as a star in the Hollywood firmament. ●

Recovery

In 1996, with both NeXT and Pixar still draining money, the happy chance that would save Steve's neck and set him up for all the great things he was to do came from the least likely source, the last place he could possibly have expected.

Apple Computer desperately needed a new operating system.

The company was then in the hands of a skilled Ph.D. technologist, Gil Amelio, who had engineered a remarkable turnaround at chip-maker National Semiconductor and been brought in to Apple to provide technology leadership and solve the financial problems. When it was clear that the Apple engineers were not going to come up with a viable new operating system, Gil began looking outside the walls of Apple's headquarters at One Infinite Loop.

In the end, Apple didn't contract with NeXT for the development of a new Macintosh operating system; instead, Apple purchased Steve's entire company, gaining all rights to NeXTStep, many of NeXT's best talent … and Steve Jobs, in the role of consultant to the CEO. People warned Gil that if he allowed Steve back into Apple, Steve would soon take the company away from him. Gil's answer was that he had made the decision that was best for the company.

Back in Full Command

In 1997, Steve Jobs was back and he was, for the first time in the history of the company, in full command. *Fortune* editor-at-large Peter Elkind beautifully described the New Steve, the Takeover/Business Manager Steve: "Right away, Jobs dug into the mucky details of the business, creating a sense of urgency, radically reducing Apple's product line and accelerating a wholesale cost cutting that would shrink the company back to profitability. Jobs had become a far better leader, less of a go-to-hell aesthete who cared only about making beautiful objects. Now he was a go-to-hell aesthete who cared about making beautiful objects that made money. No engineering spec, no design flourish was too small for his scrutiny."

The observation was only partly correct. For Steve, it's never really been about making money, but the first order of business called for remaking Apple in some

painful ways to save it from the dust heap of failed technology companies. He began taking a hard-eyed look at every product and project in the company.

As Steve became more visible, it generated a mixture of excitement and trepidation, somewhat typical in any transformation, but, at the same time, software engineer Winston Hendrickson remembers, also unique with an uncomfortable air of "what's next?" Decisions and changes were finally happening — and at an unprecedented pace for Apple in that era. This generated a high level of excitement, in part from the fact that "the scale and velocity of the actions made it progressively more clear there was a new sheriff in town." ●

Holistic Product Development

Today, most products of any complexity — as well as a lot of very simple ones — include components or ingredients not created on-site but purchased elsewhere, from some other company.

It's why the rim at the top of the can of Gillette shaving cream always turns rusty: Gillette makes the shaving cream but buys the cans from a supplier — a nameless manufacturing company that doesn't have to take any flak from Gillette customers. (And one wonders whether Gillette's top managers aren't using their own product; if they were, wouldn't they have corrected the problem a long time ago?)

A Fundamental, Essential Question

By the time of his return to Apple, Steve had begun to understand what he would come to consider a fundamental, essential question: How is it possible to produce a product that works well if the group creating the software and the group creating the hardware work entirely independently of each other?

His answer: It's not possible.

But if you think that question only applies to companies in high-tech, you're in for a surprise. We are rapidly reaching a time when many mundane, everyday products will have a computer chip in them, and these products will communicate with one another in ways we're only just beginning to conceive.

Many home washing machines have been controlled by computer chips for years. And have you noticed how a Prius or Lexus owner unlocks his or her car and starts it? Not with a key, but with a "keyless" gadget containing a computer chip. Electronics in the car recognize a signal being emitted by the gadget and unlock the car as the driver approaches, then allow him or her to start the car just by pressing the ignition button.

That's a foretaste of the future.

An Essential Part of Steve Jobs' Product Philosophy

I've come to call this marriage of software and hardware the "Holistic Product Development" concept; it has become an essential part of Steve's product philosophy, and of mine. And even if you're not in high-tech, it will need to become part of yours sooner than you imagine. ●

Evangelizing Innovation

In Steve Jobs' world, products are not created by one or two or three product idea-people supported by a flock of hands-on engineers or artisans who turn the ideas into working products. That's not the Steve Jobs way and it never has been.

This isn't something he thought on for a while and finally had a bright idea about. He works from the gut, intuitively, and knew from the first that if he assembled the right team, they would together provide enough creative horsepower to turn his dreams into real-life products.

Steve understood, without having to think about it, that innovation is not only a team sport, it needs to be evangelized — both internally and for outside partners. When you have opened up innovation to outside resources, they need to operate as part of your team. The Mac group practiced it in the early days, when a team of "evangelists" was out beating the drum with developers to create applications.

The Whole-Product Theory

From day one, Steve has lived a philosophy that is an extension of the holistic product development concept. This one says that you cannot produce successful technology products — products that work well and live up to expectations — unless the company that created the hardware also created the software. I came to call his stance on this "the Whole-Product Theory."

For a time, I argued with Steve about the notion. I thought that if we sold our software, as Microsoft does, we could have a better product and control the software market.

He convinced me I was wrong, and he did that not just with his reasoned explanations but, over time, by my witnessing the success of Apple's products and the deficiencies of just about everybody else's. In order to get the best performance of the software running on the hardware, you need to control the total system. The principle isn't just for technology companies: If Steve

made mattresses, he wouldn't just design the frame and then buy the springs from the lowest bidder.

PART IV: BECOMING COOL: A DIFFERENT VIEW OF SELLING

When studying Steve Jobs for lessons in the art of branding, you soon realize he has a master craftsman's ability to create a consistent, positive product image in the minds of his customers. He combines stick-to-itiveness with an intuitive sense of exactly what it takes to get the public enthralled with a product. He understands that this isn't just a question of how well the product is designed and how smoothly it works — although these are critical factors — but of how it is perceived by the user, which, of course, is the key to product success.

When Steve introduced the Apple II in 1976, he made well-known television talk-show host Dick Cavett the company's first celebrity spokesperson; Cavett had tremendous credibility among the educated Apple II target market. By 1980, the Apple II had an 80 percent market share and was so strong a product that developers had created more than 1,000 applications to run on it.

In fact, the overwhelming success in branding the Apple II — the glory that the press showered on Apple (as well as on Steve) — was what drove IBM to the decision that they needed to enter the PC market. They weren't exactly a newcomer to the arena: I had seen personal computer products in the IBM labs as early as 1976. But they were in the business of leasing mainframe computers to large companies and didn't understand the consumer marketplace. Having IBM as a competitor made Steve nervous at first, but IBM never figured out the things that, for Steve, were second nature. The first IBM PC was introduced in 1981; IBM closed down its PC business nine years later.

Meanwhile, upstart Apple ascended to the hallowed ranks of the Fortune 500 in shorter time than any other company in history.

Getting the Equation Right

Apple is a prime example of the rewards that come when you get the equation right: products that people truly want and great branding, which is the door opener for waking people up to the products.

Riding the Retail Juggernaut

Steve was on a tear when he relaunched his ascendancy — and Apple's — after his return in 1996. With his left hand, he was using his now-honed business experience to reshape the product line and trim the corporation to a survivable size, while with his right, he began laying the groundwork for what a few would consider visionary and many would consider foolish: a move into retail.

Launch Time

On May 15, 2001, at Steve's invitation, a gaggle of reporters toured the first Apple Store located in the Tysons Corner Center, in McLean, Va. — the early locations chosen to be somewhat off the beaten path. Despite all the elaborate designing and planning, if Steve was hoping the event would come off like one of his ecstatically popular annual presentations at Macworld, he was quite disappointed. The location was hardly one of the mall's retail anchors. After trooping up to the second level and being given a peek at the store, located next to an L.L. Bean, many of the unimpressed journalists remained skeptical. For a time, it looked like their negative impressions might be right.

A sister outlet located in another upscale mall, the Galleria, in Glendale, Calif., opened four days later.

With the Apple Stores, Steve Jobs was taking one more giant step on the path of selling directly to the consumer. It was a direction plenty of product companies had tried, most with little success. A lot of people were watching to see if Apple's esteemed leader would take a belly flop this time.

Despite the dire predictions by experts in the retail field and others, the Virginia store racked up more than 7,000 sales on its first day. And that was just the beginning.

In the fall of 2010, Apple had more than 300 stores, including in China. The showcase store on Fifth Avenue in Manhattan is open 24 hours a day, every day of the year. And you won't be surprised to learn that design awards have been heaped on the stores.

Achieving the Definition of Cool

There is nothing more cool in the world of business than creating a product that millions of people immediately want, and many who don't have are envious of those who do.

And there is, as well, nothing more cool than being a person who can imagine and create a product like that.

Add one more element: creating a series of these way-cool products not as separate and isolated efforts but all parts of a high-level overriding concept.

Finding an Overriding Theme

Steve's Macworld keynote speech in 2001, delivered to a live audience of thousands at the Moscone Center in San Francisco and to an untold satellite audience around the world, took me completely by surprise. He laid out a vision that would cover the next five or more years of Apple's development, and I could see where it was leading: to a media center you could hold in your hand. Many people found the strategy a brilliant view of where the world was likely to be going.

Steve recognized that only a PC was smart enough to run complex applications, that its large screen provided a broad canvas for users, and its cheap storage far surpassed what any of these devices could offer on their own. And he was transparent about Apple's road map.

Any of his competitors could have emulated this blueprint. No one did, which gave Apple a lead for years: Mac as a Digital Hub — the nucleus of the cell, a powerful computer able to integrate the range of devices from television sets to phones so that they became a seamless part of our everyday lives.

PART V: ON BECOMING STEVIAN

Can you really follow in the footsteps of Steve Jobs — applying the principles explained in these pages to improve your way of doing business and forever improve the products you create?

My answer is yes, and my evidence is that I've done it myself, repeatedly.

In 1987, I was invited to speak about employee entrepreneurship at a Fortune 100 CEO conference in Williamsburg. About a week later General Electric's (GE's) vice president of human resources got in touch. The company was developing a program to promote more employee input and was I interested in taking part?

I went to New York to meet with the team that was building the new program, and Jack Welch came in to address the group. Jack was seen as a very strong-willed businessman who had a reputation for a tough attitude and not listening well. I didn't see him that way. He wanted to create an environment where GE employees could feel they were part of the business and would participate in solving its problems.

The program aimed at capturing and implementing the good ideas employees had for improving the company's operations — with something more inviting and more effective than a suggestion box. In other words, give GE employees something like the experience of being pirates at a startup.

More Steve Jobs Principles

Here are some other Steve Jobs principles that served me well:

- Be passionate about each project you work on.
- Be driven by an opportunity and create a product for it.
- Always be open to talent who can help.
- Do your best to make the product intuitive, so a user's manual isn't needed.
- Be really honest with yourself about your products.
- Ensure that the products represent you and your traits as a person.
- Work through your people and celebrate as a unit with every success.
- Keep innovating to get closer and closer to your ideal, your vision of perfection that goes beyond the currently achievable reality.
- Don't listen to people who say it can't be done.

'Work Out' at General Electric

Working with a Boston consulting firm, we created a program called "Work Out" to achieve these goals. We tested it at a GE plant in Buffalo that had a reputation for being one of the company's most bureaucratic operations.

Work Out proved to be an overwhelming success. Jack himself said, "Work Out is meant to help people stop wrestling with the boundaries, the absurdities that grow in large organizations. We're all familiar with those absurdities: too many approvals, duplication, pomposity, waste." He also said the program "turned the company upside down, so that the workers told the bosses what to do. That forever changed the way people at the company behaved."

For me, the experience was one more proof that the principles of iLeadership can be applied by people at every level, and can make a profound and lasting difference.

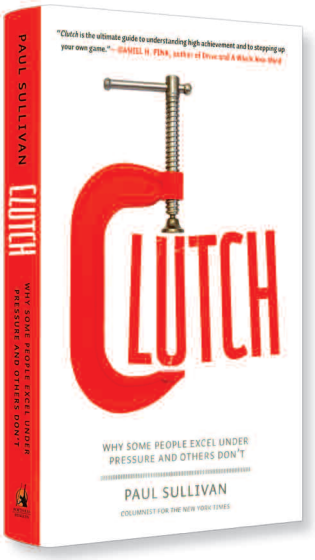
Leadership: Development



Clutch

Why Some People Excel Under Pressure and Others Don't

by Paul Sullivan

THE SUMMARY IN BRIEF

Sooner or later everyone encounters a situation in which the stakes are high and the outcome is vital. And even top performers can crumble when faced with such extreme pressure. Consider the CEO who panics in a desperate attempt to shore up his company's earnings, the veteran politician who grows overconfident and loses to the upstart candidate, the quarterback who carries his team to the Super Bowl but falls apart in the final quarter. All of them choked.

But then there are the performers who thrive under such conditions: the ER doctor racing the clock to save someone's life, the lieutenant who leads his platoon to victory after an ambush, the young attorney who refuses to be intimidated in court and wins the crucial case.

These people are clutch. Their ability to overcome extreme pressure consistently and beat the toughest odds fascinates us. How do they do it?

According to financial reporter Paul Sullivan, clutch performance does not stem from an innate ability. It's a learned skill — the art of operating in high-stress situations as if they were everyday conditions. Some of the most experienced and talented performers lack this skill, but *Clutch* shows that anyone can develop it.

IN THIS SUMMARY, YOU WILL LEARN:

- How a rookie baseball player pitched his team into its first World Series.
- Why some people choke.
- How to cultivate the shared traits that define clutch performers.
- How to overcome extreme pressure and achieve greatness.

Introduction: What's Clutch?

What does it mean to be clutch? Most sports fans are pretty sure they know the answer.

Most people associate clutch performances with a triumphant sports moment: the home run that wins the game or the basket or stolen pass at the buzzer. But each of these contains an element of luck, and clutch is not luck. Being clutch is not the hole-in-one to win; it's the well-struck shot close to the flag and the putt that drops in with the tournament on the line. It's the precisely executed series of plays in football, not the Hail Mary pass. It's the fortitude to continue battling out a Wimbledon final as you always have — even though the whole world is wondering whether you are going to choke.

Clutch, simply put, is the ability to do what you can do normally under immense pressure. It is also something that goes far beyond the world of sport. And while it has a mental component, it is not a mystical ability, nor somehow willing yourself to greatness. After all, every professional athlete is mentally tough or he or she wouldn't have made it that far. For that matter, every chief executive of a company has shown leadership to get where he or she is. But that does not mean he or she will be clutch.

Being great under pressure is hard work. This is part of the reason why we are so impressed by people who seem immune to choking. These people come through in the clutch when others don't. If they're business leaders, they become gurus other executives want to emulate. In politics, the person who runs the gauntlet wins the election, but if he or she can do so in a particularly cunning way, he or she becomes an example of strategic excellence. In combat, it is the leaders who come under fire and get their platoon to safety who are recognized as war heroes. If the people are sport figures, their triumphs become legendary.

PART I: WHY PEOPLE ARE CLUTCH

Focus

Focus is the foundation for any clutch performance. It is the basis on which the other traits of pressure performers are built. Yet being focused is not as simple or obvious as it may sound. The reason is, many people confuse focus with concentration.

David Boies represented the United States in the antitrust case the United States Department of Justice brought against Microsoft in 1998 and, 10 years later, he faced off in a lower Manhattan courtroom against a formidable opponent in Ted Wells, of the litigation department at Paul Weis, a major New York law firm. The two sides were fighting over $4.2 billion and whether Hank Greenberg, the longtime head of the insurer AIG, essentially had the right to the money when he was ousted as chief executive.

Boies has defined his career through high-profile cases that have been intense, pressure-packed and public. Early in his legal career, he started to focus on the same two questions for every trial. First, "What are the facts?" and second, "What are the basic principles of law here — not what were the detailed holdings of 50 cases, but just what are the basic principles of law that apply to this area?" Such an approach seems too simple to have led to Boies winning a half-dozen major cases in his career. But Boies' focus on having a clear understanding of the issues and laws creates a solid foundation. He builds the

morality play around that. However, it is not the play that helps him excel under pressure, but his focus on telling the story in court. That ability allows him to withstand the immense pressure of any high-profile trial.

In the Bubble

Once the trial starts, Boies' focus puts him into a bubble. At times, he said, the only people he will socialize with are lawyers on his team and the opposing team. He doesn't want to lose his edge and start thinking of other things. In the courtroom, he said he not only has no idea how the trial is going on a broader level but he does not care. "It's totally irrelevant," he said. "I judge it by how the evidence is coming in — whether you can support what is being said. You sometimes get a sense from the judge, sometimes the juries, but that's very hard." How can the progress of the trial not be relevant? How else would he know where he stood? But that is actually one of the keys to being clutch.

If Boies stopped to congratulate himself on a particularly deft cross-examination or tried to tally up where he stood, he would lose his focus; he would be out of the bubble. He is concerned more with tangible measures. Whether he is winning or losing at any given point, he said, is "a very abstract concept while it is going on. What you're really focused on is the next step, the next witness, the next argument." His focus does not make him myopic. It allows him to follow the tack that he or his opponent is taking at that moment and recalibrate his argument. That is what he can control. "When you're doing a trial, you're so focused, you're not thinking about anything else," he said.

Discipline

Discipline is almost always a battle against yourself. You may be in front of a Senate committee, but the true battle is against your own will. Members of the Olympic riflery team in the 1970s realized this when they sought out Ari Kiev with a simple question: How could they calm themselves enough to shoot as well in competition as they did in practice? As the first psychiatrist on the U.S. Sports Medicine Committee, Kiev's task was to teach top amateur athletes how to perform under the stress of elite competition. At the time, sports psychology was little known and less understood. Many were suspicious of psychiatry in general, and several athletes begged off working with him. One exception was the riflery team. They went to him because they knew their success was based on becoming more disciplined. They knew they needed to master their emotions to achieve success under pressure. Unlike hockey or soccer players, riflemen had no opposing player and no team to fall back on. A rifleman simply had to stand in competition and shoot the same way he stood and shot in practice.

But the best in the world missed. In the clutch, the pressure got to them. And that was where Kiev, a Harvard- and Cornell-trained psychiatrist, came in.

"I was interested in learning how to help them manage stress," Kiev said. "I looked at what helped them focus and not get distracted."

Pressure at the Highest Level

Working with the riflery team, Kiev gained a greater understanding of how pressure affected someone at the highest level. What they did was a pure example of how being disciplined affected their success or failure in competition. He found that the key for the riflery team was to learn to shoot between breaths. This was something they could focus on and, with discipline, control.

Kiev was a serious medical scientist, not some snake-oil salesman. He was trying to get people to realize that when it came to making big decisions under pressure, they failed because they lacked the discipline to evaluate their choices in the present, without interference from the past. This interference could come from a family crisis — a bad childhood, a difficult relationship — just as it could come from a decision that had not turned out as the person thought it would — a missed shot.

Clutch Player: Tiger Woods

When golf champion Tiger Woods was asked how he always seemed to win a tournament when the pressure was greatest, the simplicity of his answer was striking. "I've put myself there, in that situation, more times than anybody else," he said. "I've also failed more times than anybody else. But along the way, you do succeed."

Adapting

The Secret Service's plan is for nothing to happen, but that is not always realistic. Adapting is key.

John Hinckley emerged from the press pool and shot President Ronald Reagan in March 1981. That he succeeded in shooting the president was an enormous failure on the Secret Service's part, but how they adapted showed the service's strength. Each man fell into his role. Timothy McCarthy stepped into the line of fire

and took a bullet meant for Reagan. Jerry Parr and Ray Shaddick threw the president into the bulletproof limousine. The one, though, who stood out most was Drew Unrue, the driver. He was initially told to drive to the White House, but when it was clear Reagan needed immediate medical attention, he was redirected to George Washington Hospital, finding it quickly in an era before every car was equipped with a global positioning system. Every man had a job to do and did it. They did not bemoan the enormous breach of security that had enabled Hinckley to fire five shots. That would be handled later. They fell into line to save the president, allowing the others to clean up afterward. Their plan of protecting the president had failed completely when he got shot. But they didn't focus on that. They adapted and saved his life.

The Plan vs. the Fight

They relied on their training to adapt to any possible scenario and focused on the outcome: protecting the president. This is the key difference between people who are great under pressure and people who are not. Those who wilt when the pressure is hottest fall back on what they expected to do ahead of time, as if it were a security blanket or the only way forward. Those who succeed under pressure readjust: They focus on the goal that needs to be accomplished, not a specific way to accomplish that goal. ●

Being Present

In David Rabe's play *Streamers,* the actor who plays Sergeant Cokes only appears onstage twice. The play takes place in 1965, and the Vietnam War is about to heat up. Set in a barracks in Virginia, *Streamers* tells the story of a group of recruits contemplating going off to Vietnam as their fears, prejudices and innocence rise to the surface. The 20-minute monologue Cokes delivers, the last words of the play, has become one of the most important in contemporary American theater. Whether the play succeeds or fails rests on the shoulders of the actor who plays Cokes, making it a moment ripe for stage fright.

On a late fall night in Boston, the play opened at the Huntington Theater, a respected regional venue, and Larry Clarke was playing Sergeant Cokes. This was the first major revival of *Streamers*, considered by many to be the best of Rabe's four "Vietnam Plays," in 30 years.

The popular image of opening night is one of actors pacing and full of nerves as they wait for the curtain to rise. For seasoned professionals, it is different: That pressure charges them up. It signals that this is not a rehearsal, this is what they have been working toward. They are completely committed to the present. Regardless of what their fellow actors or the audience throws their way, they're prepared to react under the pressure of live theater.

'Fight the Fight, Not Fight the Plan'

Colonel Thomas Kolditz, the head of the behavioral studies department at the United States Military Academy at West Point, said: "We teach our cadets to fight the fight, not fight the plan. There is a break point where the plan goes in the trash. That's the skill. The focus is on intent. It's outcome based."

Clarke, a veteran stage actor whose everyman look became widely known through a recurring role on *Law & Order*, was excited for the curtain to rise in Boston.

Becoming Present

It might seem hard to believe that Clarke was not nervous to take on such a risky and important role. But he had long ago mastered the art of being present.

What does it mean to be present? Being present is a learned behavior. It is partly the result of the previous three clutch traits — focus, discipline and adaptability. But being present is more than the aggregate of these other traits. Being present is a state that makes someone ready for whatever comes his or her way. It is a heightened awareness that prepares him or her to respond. It can be a bit edgy, but it is more that feeling of being aware of nothing other than what you are doing.

Clarke was in a difficult role, but he was not thinking of the people who had done it before him, of failing and taking the play down with him, or of what he was going to do after the show. He was present, and that was why he could be clutch with one of the most challenging roles in contemporary American drama. ●

Fear and Desire

The force of fear is a remarkable factor in helping someone make crucial decisions under pressure.

In 2007, researchers at the University of Bath, in England, found that fear of something less desirable provided great motivation under pressure. They studied 281 university students, two-thirds of whom regularly went to the gym. The researchers were focused on physical

fitness and what motivated some students to work out and others not to. Half of the students were asked to imagine themselves as overweight and unattractive. The researchers then further divided the sample by asking half of the group to imagine themselves failing at their workout regime — and thus becoming even less attractive — while telling the other group to see themselves succeeding wildly and in doing so becoming much more attractive. Over the course of the study, the researchers found that the group that was motivated by the fear of looking awful, stuck to their workout better than the group that was doing it with the hope of looking better. The gap between the two groups was significant, with 85 percent who wanted to avoid becoming unattractive continuing their workouts when told they were failing compared to 65 percent who were told they were succeeding. Even if both groups started out going to the gym regularly, the ones that were doing it to look better than they already did dropped off, while those who felt, in essence, that they had to dig themselves out of a hole were the ones who continued.

It would make sense that once someone has attained something tangible, like a degree of physical fitness, fear would not work as a motivator anymore. For executives who have motivated themselves through the push and pull of fear and desire, the pressure is always on and there is no end zone. They feel that they need to keep going or else they will be drawn back to where they started. That combination of fear and desire allows them to be clutch when someone motivated by just one of these emotions might fold.

Lousy Childhoods

Some people show skills that have made them clutch in particular events. But those who have navigated through pressure-filled upbringings to successful lives are different. Theirs is an overarching life strategy for being clutch. It is macro, not micro. Fear and desire enable them to be clutch, but these are not strategies they can turn off. Obviously not all people who had a lousy childhood or suffered a business setback will learn to succeed under the pressure of leading an entrepreneurial life. But some people can use fear and desire to succeed under pressure. ●

Double Clutch: What Billie Jean King Did for Women

On Sept. 20, 1973, Billie Jean King and Bobby Riggs entered the Houston Astrodome in a procession worthy of gladiators. King, one of the greatest female tennis players of her day, was carried in on an Egyptian litter by four barrel-chested men in togas. Riggs, a player once ranked No. 1 in the world, was wheeled into the stadium by a bevy of voluptuous women pulling a rickshaw. Some 30,000 people had filled the stands, and the match was broadcast live to an estimated 48 million American homes as well as beamed via satellite to 36 foreign countries.

Riggs, 55, had been shooting his mouth off about women being inferior athletes compared with men, and King, 29, had stood up to prove him wrong.

From the outset, King ran Riggs all over the court. She served and volleyed to beat him at his own game. She went on to beat him 6–3 to win. In the *New York Times* story the next day, King was lauded for her victory. The paper reported that she took just over two hours "to reaffirm her status as one of the most gifted and tenacious competitors in sports, female or male." King proved that women, under extreme pressure, could be as clutch as men.

The Burden of Double Clutch

When a woman succeeds under the inherent pressure of what she is doing but also while being judged against men, she is double clutch. Here's why. If one woman beats another under the pressure of a major tournament, coming from behind to do so, against expectations, she is clutch. But transpose that to worlds where women have not historically been leaders — the business world, scientific research, the military — and the woman who succeeds there is double clutch. She first has to perform under the pressure of the task at hand as anyone would, but then she also has to navigate through an inherent bias that says women have not succeeded historically in these fields. She has combined all five elements that would make us say she was a clutch performer but then taken her skills to a higher level. She has made her sex irrelevant and her performance paramount. She has done this against the inherent pressure of the task and also the pressure of institutional bias.

What Does It All Mean?

How Billie Jean King prepared to play Bobby Riggs was a lesson in combining the five key traits of being clutch. One, King was focused on preparing for the match as if she were playing a top female competitor, not an old man. Two, she showed tremendous discipline in the shots she hit, picking the ones that would put Riggs at a disadvantage. Three, she had a plan to tire him out, but if, after the first of five sets, that plan was

failing, she was prepared to adapt it. She was concentrating on winning the match, not winning it in any particular way. Four, after she had prepared, she put herself in the present, embracing the moment but never getting ahead of herself. Five, she was driven not only by the fear of losing to Riggs and the setback that would have been for women's rights but also by the desire to shut Riggs up. This was the total clutch package.

The flip side of this was Riggs, who made two of the three cardinal errors of people who choke. First, Riggs was shockingly overconfident. He had beaten Margaret Court and thought he would beat King just as handily. Second, he was already thinking of the accolades that would be bestowed on him when he beat her — before they had even played. While he was talking, he was not training, and that showed in how quickly he tired out. Yet, after his defeat, he did what many chokers do not or cannot do: He took personal responsibility for his loss. As King threw her racquet in the air to claim victory, he leaped the net and, in congratulating her, he said, "I really underestimated you." ●

PART II: WHY PEOPLE CHOKE

A Leader's Responsibility

Just as there are five traits shared by people who are clutch, there are three common causes of choking. An inability to take responsibility for your actions is one of them. The other two are overthinking and overconfidence.

When it comes to choking, a refusal to accept personal responsibility is often the starting point. The unwillingness to take blame for bad decisions and tolerate criticism for tough ones is a telltale sign of a bad leader under any conditions. It becomes a critical flaw, though, if he finds himself in a situation where serious, tough and probably unpopular choices are necessary. The longer he has to navigate under pressure, the worse he is going to make the situation. His desire to dodge responsibility is going to become more apparent and magnify his choking.

Pressure Reveals Who Has It and Who Doesn't

The psychological literature around personal responsibility has two strands. The first veers toward self-help. Most books are geared toward getting people out of bad relationships and bad behaviors. They take a consoling route: *I did this; I should not have; and I'm going to stop.* The second is the objective philosophy associated with Ayn Rand. It advocates a form of enlightened self-interest that requires people to take responsibility for what they do and be rewarded for it: *I did this well, and I deserve to be compensated for it.* The psychology of self-help and Rand's enlightened self-interest share an emphasis on taking responsibility for what you have done, good or bad, and either becoming better or becoming recognized for it. The reward for the responsibility, though, comes after the fact. It's reactive.

The type of personal responsibility that is needed to be good in the clutch is different. It is always there, but under pressure it becomes purely focused and is the underlying force in the action*: I am doing this because it is the right thing to do, and if I fail, I know I tried.* Responsibility here is not an accounting for your actions; it is your actions. And however it turns out, you are the one who did it. You are the one in your office working on the deal; you are not letting someone else iron out the details.

Responsibility is doing what is right and leaving the rest to be sorted out. ●

The Perils of Overthinking

The baseball world was turned upside down in 2008. The New York Yankees missed the playoffs for the first time in 13 years and the Tampa Bay Rays, a perennial last-place finisher in the same league, made it to the World Series. Many factors guided the two teams to victory and defeat, but two players came to represent each team's divergent fortunes: an experienced, highly paid choker and a rookie who was amazing in the clutch. Both had been No. 1 draft picks in their respective years, but that was where the similarities seemed to cease. This is where we look at the second trait of chokers, overthinking, through how Alex Rodriguez (A-Rod) and David Price saw themselves during that time.

Overthinking What You Do

How could a young, untested pitcher be so clutch in the most pressure-filled moment in his team's history, while a seasoned player, a three-time American League Most Valuable Player, could spend season after season choking when it mattered most? The answer lies not in how they went about doing their jobs but in how they *thought* about doing their jobs.

Price threw the ball as he had been trained to do — hard and fast or with a curve to it — and struck out batters. Rodriguez was the one who struck out, hit into double plays, popped up weakly or otherwise hurt his team when it needed their greatest player most. The reason was, in the clutch, A-Rod overthought his every

move; in fact, he thought of most of his moves in their historic place in baseball. Price, on the other hand, channeled his college success and his failures to get himself ready to pitch. Under pressure, Price pitched normally, but A-Rod played differently, as if the weight of expectations was sitting on the end of his bat.

Just as the Yankees won all the time, the Rays lost. It was the natural order of baseball: New York had the best players money could buy; Tampa Bay had rookies, middling players and aged veterans cut from other teams.

But by October, the feeling had changed.

The greatest piece of insight into A-Rod's mindset was a 2001 *Esquire* profile by Scott Raab. "It's hard to compete when you don't have a place in the game now as a shortstop, so you have to look years back to find someone to compete against," A-Rod said before signing the largest baseball contract ever. "That's what I do. I'm playing against guys like Ernie Banks or Hank Aaron or Ozzie Smith." All three are considered among the best to have ever played the game.

A-Rod's mind was filled with lofty assumptions: He expected to make the clutch plays fans crave, to be the perennial subject of ESPN highlight clips, to leave glory in the path to the Hall of Fame. Three years before pitching his team into the World Series, Price was considering a job at McDonald's. A-Rod imagined himself playing alongside Banks, Aaron and Smith when he needed to think about hitting the ball. Price focused on trying to pitch as well as he could whether it was a Vanderbilt *[where Price played college baseball]* game or the World Series. That is the difference between thinking and overthinking.

To avoid the perils of overthinking, a person needs to just do what he does — and not think of what he could, would or should do in that situation. ●

Overconfidence Starts the Fall

Overconfidence is the bigger, more destructive cousin of overthinking. It might be the most pernicious form of choking for one reason: its magnitude. When someone like A-Rod overthinks the situation, he fails personally, but other teammates can make up for his shortcomings. When the leader of a company becomes overconfident, his choking can be systemic. (The opposite is also true: A company that overthinks things may miss out on a deal and lose market share, but it can probably correct things. And a person who is blithely overconfident on his own most likely spirals into ineffectiveness — or barroom solipsism — without doing greater harm.) But the collapse overconfidence brings about is a complicated thing. It usually starts off as a feeling of unease, and that uneasiness may manifest itself as a sense that something is not sustainable, perhaps even at the top. Then, it abates, with months, years passing before anything more happens. But when the collapse comes, it is usually swift. And those left in its wake start to wonder how they missed something so obvious. The lies, the tales, the trumped-up reports were, of course, too good to be true. If it was fraud, and not mismanagement, the sense of betrayal is worse. And if it wasn't, then the steps to arrest the decline become obvious in retrospect.

Four Causes of Overconfidence

Tony Alvarez and Bryan Marsal, two of the go-to guys in the business that clean up when leaders fail under pressure, said one of four reasons always causes the overconfidence:

- The least pernicious reason is the business cycle. If your business is built on oil trading no lower than $30 a barrel, when it is at $50 a barrel, you're fine; if it goes to $20 a barrel, you could be in trouble.
- The second state that creates overconfident executives is easy money. When Lehman Brothers filed for bankruptcy, a victim of too much debt and misplaced bets, Marsal was named the company's chief restructuring officer. He said: "They shouldn't have had so much leverage. They shouldn't have had such a disproportionate concentration in real estate assets. And they should have been smarter about using short-term debt to finance long-term assets."
- The third reason is the bad manager thinks he knows more than he actually does.
- The fourth reason that causes overconfidence is the fraudulent manager is uniquely and supremely overconfident. He thinks he can get away with something and never be detected. ●

PART III: HOW TO BE CLUTCH

How to Be Clutch with Your Money

"Money is the most powerful secular force in the world," Brad Klontz, financial psychologist and author of *Mind Over Money*, said. "Money is linked to everything — safety, health, relationships, creativity and spontaneity, social belonging. It's the one thing that intersects everything, and as soon as I'm talking about money, all the family dynamics come out."

When many people saw their portfolios plummet in

the Great Recession, loss led to anger and, worse, blame. However, there are lessons to be learned and clear ways to be clutch with financial decisions in the future. Here are five specific steps to take when the pressure you face is financial:

- **Accept.** The first step to getting out of a tough financial bind is to admit that you're in one. That's not as easy as it sounds. Americans are generally a future-focused group. Accept that your financial situation is not as you thought and the longer you wait to act, the more pressure will be on every decision.
- **Psychologically Readjust.** The faster this happens the better. You have to become aware of the feelings you're having about your money. In a crisis, it may be gone and that's not good. But obsessing about it is not going to make it come back.
- **Prioritize.** Once you have come to terms with what has to be done, you have to decide how to divide things up: What do you need, what do you want to keep and what needs to go immediately? Getting rid of what you can't afford in a crisis will go a long way to bettering your financial position.
- **Take Responsibility.** No one made you buy a house or anything else you could not afford. Regardless of what kind of deal or incomprehensible mortgage you were offered, the ultimate responsibility lies with you.
- **Focus on the Outcome.** You want to live to fight another day. Your goal is not to sell one thing to buy another. Your goal is to shore up your personal balance sheet. Once you have restructured your cash flow, you will be better positioned to make money decisions under less pressure.

Ultimately, being clutch in a personal financial crisis means embracing thriftiness to keep yourself out of such crises in the first place. ●

How to Be Clutch in Sports

Dale Lynch's breakthrough as a golf coach came when the mechanics of the golf swing began to make sense to him.

Making a player's game complete so he had no weaknesses under pressure became Lynch's goal. The player could still hit bad shots or get lucky or unlucky, but when he stood over the ball, he would feel confident that he could hit whatever shot was required. To get to this end, Lynch started to simplify everything in order to dissect the different shots. Then he measured the results so he could quantify what a player needed to work on. His work was noticed by the Australian government, and, in 1991, he was hired to start a golf training school at the Victorian Institute of Sport, an Olympic-level training center.

From the start, there were five areas that Lynch emphasized:

- **Technique.** This was first and foremost. If a player was not technically sound, his swing would break down under pressure.
- **Physical Conditioning.** If you run out of steam on the 15th hole, no theories or tips are going to help you win.
- **Simulated Pressure.** Instead of letting students hit a particular shot 20 times, the coaches forced them to hit it right the first time or not at all. They began to emphasize quality over quantity.
- **An Unwavering Routine.** "When we work with young players, part of the coping package is working on their routine and making it consistent," Lynch said. "That helps their mental skills to cope."
- **Success on the Road.** Because of Australia's distance from the rest of the world, all young players had to travel. But this allowed Lynch to test their progress. On unfamiliar terrain, their deficiencies become apparent. This quickly increases their frustration and puts pressure on their game.

With all five points, Lynch's goal was to create a complete player.

Lynch's way to handle pressure is to get your fundamentals solid, and you'll know you can rely on them under pressure. Have any weaknesses and they will haunt you when your adrenaline is pumping and you are struggling to stay focused. The same can be said for any recreational sport, from tennis and squash to skiing, rowing or any number of activities in which you pit yourself against the elements: If your fundamentals are sound, you will do better under pressure.

It all starts with a know-thyself moment followed by hard work on the fundamentals of the game. Being clutch is not a mystical state; it takes work. ●

RECOMMENDED READING LIST

If you liked *Clutch*, you'll also like:

1. ***Mojo* by Marshall Goldsmith.** Performance, both on and off the job, is linked to a quality that Goldsmith refers to as mojo. In this title, he shows you how to get and maintain your mojo.
2. ***Executive Presence* by Harrison Monarth.** Monarth helps readers understand the power of perception and provides the techniques needed to take a career to its highest level.
3. ***Talent is Overrated* by Geoff Colvin.** Colvin dispels the myth that otherworldly abilities come from out of the ether. In this title, he explores the concept of deliberate practice and how it can be applied to business and life.

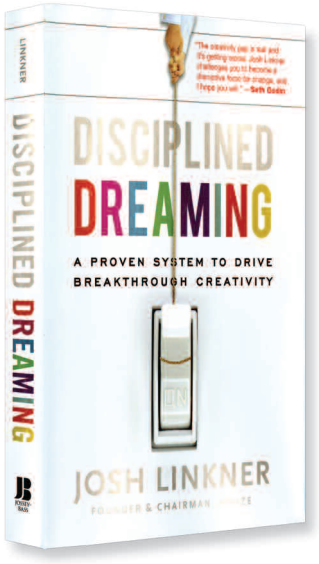
Leadership: Development

Disciplined Dreaming

A Proven System to Drive Breakthrough Creativity



by Josh Linkner

THE SUMMARY IN BRIEF

If you are not tinkering with your business every day, sooner or later the markets will begin to tinker with you — and it won't be pleasant.

In *Disciplined Dreaming*, business innovator and jazz musician Josh Linkner shows exactly how you can create profitable new ideas, empower employees to flex their creative muscles and tap into the power of creativity to sustain a competitive advantage over the long haul. Drawing on interviews with hundreds of successful CEOs, entrepreneurs and artists, Linkner distills exactly how creativity can be encouraged, as well as its impact on the bottom line.

Disciplined Dreaming outlines a proven, easy-to-apply five-step process — Ask, Prepare, Discover, Ignite and Launch — that will help you and your team develop your creativity chops. Through illustrative stories, real-world examples and fun, yet practical, exercises, Linkner shows leaders and team builders how to become immediately more effective in discovering new routes to profitable solutions.

Designed to be flexible, *Disciplined Dreaming* clearly demonstrates how creativity can be used for everything from innovative, game-shifting breakthroughs to incremental advances and daily improvements to business processes. With *Disciplined Dreaming*, even the most resistant corporate bureaucracies can cultivate creativity and become more competitive in today's shifting marketplace.

IN THIS SUMMARY, YOU WILL LEARN:

- A road map for individuals, teams and companies that leads to new ideas.
- How to use a systematic approach to becoming a winning improviser.
- How to avoid unpleasant pitfalls in the marketplace.
- How business leaders at all levels can unleash creativity in order to reach their full potential.

Introduction

Disciplined Dreaming is a system for expanding creative capacity, fueling competitive advantage and building personal and professional growth. Businesses have systems and processes for everything, from answering the phone to taking out the trash. Remarkably, most companies have no such system for the one thing that matters most: developing and growing creative capacity. Disciplined Dreaming provides a specific system to attack any Creativity Challenge, big or small, and, in the process, build a culture of creativity and sustained growth for individuals and their organizations.

Companies that have "innovation processes" often stifle the creativity of their organization by making those processes too rule-driven, formal and restrictive. In contrast, Disciplined Dreaming is an open system that focuses on the creative mindset and philosophy along with specific techniques, rather than a rigid code of rules.

The Case for Creativity

Microsoft is a great example of the dangers of betting on the past instead of the future. Windows and Office remain dominant in the market and have generated more than $100 billion in profit for Microsoft in the last 10 years alone. For years, Microsoft was the poster child of innovation and thought leadership; but then its focus began shifting to past successes, causing the company to miss out on important advances. While Microsoft placed its bets on an established customer adaptation cycle, its competitors innovated. So the company lost to Kindle, Sony and Apple in the e-book world; it lost to Google in the Internet search world; it lost to Wikipedia in the online encyclopedia market; and it lost to Apple in the digital music sphere. And Microsoft completely missed mobile phones and tablet PCs.

The rate of change in the new era of business has dramatically accelerated and ever-shorter product life cycles put ever-greater demands on creative capacity. The new model for winning a better future is to remain on the forefront of innovation. To do that, organizations have to use their resources to place smarter bets earlier and faster. That requires the creative foresight to know when it's time to shift investments forward — even if it means sacrificing the golden goose.

Are You Ready to Become a Disruptive Force of Change?

You may not like it, you may wish things were different, you may look fondly at the past, but none of this matters: The rules have changed. The financial meltdown and global recession of 2009, combined with globalization, rapid advances in technology and communications, population trends, geopolitical movements and a next-generation work force, have made the past irrelevant. These changes punctuate the end of an era and signify the beginning of a new one.

For you and your company to win in the Age of Creativity, you need to nurture and develop your creative skills to become more like an artist than a technician. In this marketplace, you have to be able to add value in the face of uncertainty. You can't rely on a rulebook to figure out what to do next. Instead, your rewards will be based on fresh ideas, improvisations and a willingness to release your grip on the status quo. You need to be the disruptive force of change or you run the risk of getting knocked out of the competition.

Disciplined Dreaming: Your System for Creativity

As you practice the Disciplined Dreaming system, you'll find ways to inject creativity in every setting of your business life, from your Monday morning staff meeting to setting up the trade show booth, from finding a better way to install the tires on a new car to coming up with a new cocktail recipe in the bar of your hotel chain employer. Don't limit the system to product development meetings; think of Disciplined Dreaming as part of your personal and organizational DNA.

Expanding Your Creative Vision

Here are some tips to consider as you allow your mind to explore in new directions:

- **Tolerate ambiguity.** There will be times when things don't add up or you feel as though you are off track. These are often the situations where you are getting very close to a breakthrough. Keep pushing forward!
- **Avoid "right" and "wrong" answers.** Focus more on the questions — especially open-ended questions — than on the answers.
- **Accept ruts and grooves.** There will be times when you feel as though nothing is clicking, then out of nowhere, the ideas begin to pour out of you. Focus more on the process and on driving curiosity than on trying to force results.
- **Listen.** Renowned creative director and television producer Lori Weiss believes that listening is the key to creativity. She urges her colleagues to always be open-minded and to listen — to what people say, what they don't say and what the environment is telling them. You will connect to a wellspring of creativity if you clear your mind and listen.
- **Don't be rigid or stubborn.** Don't let your experience translate into your being hardwired to the past.
- **Seek input.** The more diverse minds you can deploy against your Creativity Challenge, the more possibilities you will be able to consider. Seek input from unrelated fields and different perspectives.

Above all, remember to challenge everything. Challenge assumptions. Challenge the status quo. Challenge the "complacent incumbents." Challenge the rules. Challenge yourself.

Step One: Ask

The first step of the Disciplined Dreaming process is to define your Creativity Challenge — the specific problem you want to solve. As the old saying goes, "You'll never hit a target you cannot see." The more clearly and thoroughly you detail your Creativity Challenge, the more effective you'll be at resolving it.

In Disciplined Dreaming, the *Creativity Brief* is a tool you can apply to make any creative pursuit more successful. By providing a system for organizing your thoughts up front, the Creativity Brief will serve as your North Star and guide you toward the best possible creative outcome.

The Creativity Brief

Here is a review of each of the sections included in the full Creativity Brief:

Section I: Describe the Desired Outcome. Your first task is to write a *one-sentence* description of the desired outcome of your Creativity Challenge.

Section II: Define the Creativity Challenge. What is the problem you are solving for? Can you restate it in a few different ways? What about reversing it? Write 20 questions about your challenge. What is the need for change? What value is created by doing something new? What is a simile for the challenge? Can you establish a "spine"? If so, what is it? List key observations and assumptions about the challenge. Could you paint a picture or make a model of the challenge?

Section III: Situation Analysis.

a. Past: What worked and didn't work, and why? What consequences have occurred? What baggage exists?

b. Present: What are you currently doing? What is conventional wisdom? What is the status quo and who is trying to protect it?

The Growing Creativity Gap

We have an increasing need for creativity in the business world, but a decreasing supply — conflicting trends that have created a large and growing creativity gap. For perhaps the first time in our history, American creativity is on the decline. In fact, researcher Kyung Hee Kim at the College of William and Mary has found that predictors of creativity among our population rose steadily until 1990, but have been inching downward ever since, in what Kim describes as a "very significant decrease."

The creativity gap will determine the economic potential of every individual and organization in the years ahead. Closing the creativity gap is what Disciplined Dreaming is all about.

c. Future: What does the ideal solution look like for this challenge? How will the world be better if you get this right? What difference will a great outcome have on your company, your career or both?

Section IV: Resistance. Who would lose if this problem were solved? List the roadblocks that may get in your way. What are the financial considerations that could limit your creativity? What do you and your team fear? Complete this sentence: We would be completely successful in this effort if only …

Section V: Target Audience(s). Whom is the idea for? Whom do you need to convince? Once implemented, whom will this idea impact?

Section VI: Communication Strategy. How will you communicate to others about the idea? Will you seek feedback along the way or keep it quiet until launch? What is your plan to roll out the idea once complete?

Section VII: Competition. Who else is trying to solve this same challenge right now? Are there competitive ideas? Is your idea competing with other Creativity Challenges for resources?

Section VIII: Project Plan. Break the Creativity Challenge into smaller mini-challenges to make it easier to manage. Establish the tone and style of the project. List the rules of the road — the dos and don'ts. Set specific deliverables or outputs you expect from taking this Creativity Challenge. Establish the budget. Create a timeline including key milestone dates and the people responsible for various tasks along the way.

Section IX: Key Metrics. How will you define success? List three to five key performance indicators (KPIs) for measuring the success of your Creativity Challenge. If everything goes well, what level of return on investment could you realize?

Your Creativity Brief will be your guide to vision, clarity and action as you resolve your Creativity Challenge. ●

Driving Curiosity and Awareness

Three simple questions can lead you to more (and more astounding) breakthroughs. Tape these to the walls, make them into a screen saver and tattoo them on your teammates:

1. **Why?**
2. **What if?**
3. **Why not?**

These questions can help you address issues of any size, and you can certainly use them when tackling your Creativity Challenge. Asking "Why?" helps you understand the current state of affairs, and challenge the status quo and conventional wisdom. When you ask "What if?" you are exploring fresh possibilities and imagining how the world would look if you made a change or if a new idea came to life. Asking "Why not?" helps you understand constraints. It allows you to connect with the limiting factors that are currently blocking positive change.

Opening Your Beginner's Mind

An exceptionally bright student was training to become a monk with a master at a Zen monastery in Japan. The student was a bit arrogant and liked to show off his knowledge to other students. One day, the master sat down with the student for tea. The master poured tea into the student's cup until it ran over and the tea spilled over the table.

"Master!" cried the student. "Can't you see the cup is already full and cannot accept any more tea?"

"Exactly," said the master. "Just like you, so full of ideas that you cannot accept any new ones. You must approach your study with an 'empty cup' so you leave room to accept new ideas. How can you accept anything new if your cup is already full?"

This story illustrates a concept known in Eastern philosophy as having a beginner's mind — a mind that remains completely open to new concepts. As people progress in life (and their careers), they become filled with preconceived notions, assumptions and history that can cloud their thinking.

To spur curiosity, you want to develop your beginner's mind. As you embark on the creative process, for example, shake things up. Change reading habits, patterns, food, music, the route you take to the office, sleeping habits and anything else you can think of. These changes will raise your awareness and help you connect with the world in fresh ways. ●

Step Two: Prepare

You need to be in the right frame of mind to free yourself from creative barriers and release your true creative potential.

Tony Robbins, the world-famous motivational speaker, jumps on a portable trampoline for three to five minutes before every speech. Lennox Lewis, the former heavyweight boxing champion, listened to fast, intense jazz music on a headset before every fight. In the same way that a musician warms up with scales and stretching exercises before giving a concert, you can warm up your

mind and get in the zone. Preparing yourself to be creative will allow you to unleash your best ideas right out of the gate.

Building Creative Cultures

Mental preparation is a good place to start getting ready for the creative process, but a creative mind needs a creative culture in which to flourish. There is an undeniable correlation in organizations between high levels of innovation and cultures that nurture creativity.

Every great structure requires ongoing maintenance. You can keep your creative culture alive and flourishing by making sure your operation is guided by these seven critical rules:

1. **Fuel passion.** To promote passion in your team, develop a sense of purpose, promote collaboration and have fun.
2. **Celebrate ideas**. In a creative culture, rewards come in many forms: money, yes, but great businesses also celebrate creativity through praise (both public and private), career opportunities and perks. If you want your team to be creative, you need to establish an environment that celebrates and rewards them accordingly.
3. **Foster autonomy.** People and teams that can call their own shots are better able to produce valuable creative output, whereas a person who has to run every minute detail by his or her boss for approval will quickly become numb to the creative process. That's why fostering autonomy is a critical step in maintaining a creative culture.
4. **Encourage courage.** Netflix is known as much for its creative culture as its innovative business model. The company has continued to grow and thrive by encouraging employees to take creative risks without fear. They tell their employees to "Say what you think, even if it is controversial. Make tough decisions without excessive agonizing. Take smart risks. Question actions inconsistent with our values."
5. **Fail forward.** As a business leader, you need to be very tolerant of risk-taking and setbacks. Rather than thinking of something that doesn't work immediately as a "failure," think about it as an experiment. I call these experiments Failing Forward, because each one leads you one step closer to the perfect solution.
6. **Think small.** When you want your creative culture to foster big ideas, it's important to think small. Smaller companies tend to be more curious and nimble. They have a stronger sense of urgency and are not afraid to embrace change. In contrast, larger organizations often exist to protect old ideas rather than to create new ones.
7. **Maximize diversity.** As competition increases, generic one-size-fits-all products and services are easily supplanted by products tailored to niche audiences. To connect with customers, you need to really understand the world from their perspective, not yours — this is one area where a diverse culture can make a huge difference.

Preparing Your Environment to Promote Creative Passion

Your physical environment has a direct impact on creativity.

If you want to see how important the physical work environment is to a creative company, visit Google's headquarters in Mountain View, Calif. The "Googleplex" looks and feels like an energetic college campus. Going from building to building is easy — jump on a Razor scooter or Segway and head to your destination (just leave it there for the next person to use when you're done — no need to sign it out). Each building is decorated with funky artwork and cool colors, and is well stocked with free food and drinks. Employees are encouraged to bring their friends and family for free meals in the warm and welcoming cafeteria. This dynamic and family-like environment sparks creativity and passion throughout the team.

A creative environment is an incredible recruiting and retention tool. If you were a bright, creative person at the top of your game and had your choice of nearly any company to work for, what would be attractive to you? A bland, beige cube farm filled with old-school, bureaucratic clutter? Or a surprising and stimulating environment designed to delight and inspire?

Shaking Things Up

The way you use your environment plays an important role in how much creative "juice" it produces. Eric Lefkowski, co-founder of Groupon, is an incredible serial entrepreneur who has taken four companies public, has invested hundreds of millions of dollars in new ventures and employs thousands of talented people. To keep things fresh, he randomly reassigns seating for hundreds of people in his main Chicago facility on a regular basis (every month or two). Lefkowski believes that this kind of periodic shake-up provides his team with a fresh perspective, a new vantage point. By being moved around,

people make different connections with other team members and never get too comfortable. This approach is a powerful stimulus for creativity.

Step Three: Discover

Discover is the third phase of the Disciplined Dreaming process. In this stage, you break free of the straitjacket of "We've always done it that way" or "This is our usual approach" or "We don't have the luxury of trying something new."

Legendary jazz trumpeter Miles Davis believed that musical creativity was an act of discovery. Simply put, he thought that the music already existed and it was his role as an artist to discover it. Throughout the four decades of his extraordinary career, Davis constantly searched for inspiration from a wide variety of sources, exploring new boundaries at every turn, going well beyond the normal confines of the jazz of his day. We've seen how your mental cultural and physical state can boost your creative abilities by preparing you for the creative journey. That journey is all about discovery.

Looking Through a Different Lens

Looking at a problem from a new perspective, perhaps by playing a particular role, is an excellent way to discover creative new approaches and solutions. This approach can be called "a Different Lens," and it involves, quite simply, looking with fresh eyes at a problem you're thinking about.

In your next brainstorming session, for example, think about the issue from the perspective of a musician — or a villain or an architect. By role playing, you can find that fresh perspective yourself, even when looking at problems you've been struggling with for a long time.

Capitalizing on Inflection Points

Andy Grove, the former chairman and CEO of Intel, often said that opportunities are hidden in inflection points — a point where one social or business trend changes trajectory and starts off in a new direction. Points of change have marked business breakthroughs more often than not and offer perceptive entrepreneurs irresistible chances to launch new enterprises. By carefully examining inflection points, we can discover spectacular business opportunities.

Today inflection points occur constantly. They happen when we see changes in political administrations, climate, consumer preferences, foreign relations, technology, health and fitness, travel habits, fashion and music. The trick is to spot the point of change — the point where you can define a "pre" and a "post" condition that signals an inflection point. The entire trend-spotting industry labors to help us see these inflection points while they're first developing so that we can capitalize on the opportunities they create.

Step Four: Ignite

Think about your creative potential as a raging forest fire. Extraordinary heat and furious energy, growing and spreading with explosive power. Forest fires don't magically appear out of the blue. There's no such thing as an entire forest spontaneously combusting in the blink of an eye. Instead, they begin with a spark. The spark could come from a cigarette butt, a leftover campfire or a lightning bolt, but a single spark is required to begin. The same is true for your creativity and, specifically, for beginning a creative project.

Often, the first part of generating an idea isn't formulating a complete and thorough concept, but rather looking for sparks.

Look for Little Flashes of Inspiration

A creative spark need not be a fully baked idea. In fact, most aren't. Look for little flashes of inspiration or thoughts to get your work under way. If you are working on a new ad campaign, a spark could be a collection of a dozen of your favorite campaigns by other companies. A chef's spark may be a single ingredient, such as cilantro, to begin a new chicken recipe. A product design spark may be a simple idea for a new grip on a toothbrush.

When trying to spark your creative flame, remember these two points: (1) start with a number of small sparks, no matter how incomplete, to begin the creative process; and (2) be very careful not to quickly extinguish those sparks.

Your initial creative sparks are fragile and need support and nurturing to grow into your own creative fire. The most common way to prematurely kill your sparks is to switch into left-brain, analytical mode. Your little, young, fragile spark is no match for the brutal attack of fear-based thinking.

Don't forget to keep your creativity directed toward solving your Creativity Challenge. Focus on finding the best — not the most complex — solutions. Let your creativity flow completely unrestricted throughout the creative process, but then select the solution that will create the best results, not the most dazzling display.

Igniting the Sparks of Creativity: The Four Most Powerful Techniques

Here are four of the most effective exercises to keep the excitement building during brainstorming sessions:

- **EdgeStorming.** To begin your own EdgeStorming session, conduct a normal brainstorming session where various people from the group toss out ideas, but ask the group to take each idea to its furthest possible extreme. To make the list, ideas must be outrageously big or small, loud or soft, expensive or cheap. By forcing yourself to the edges, you'll uncover countless fresh and new ideas.
- **The Long List.** This is a technique for developing fresh ideas that I first learned back in college, and still use today with great results. I was in a course about creating magazine and newspaper ads. The class was divided into teams and we were assigned the task of developing headlines for a Florida State Lottery ad campaign. No problem, we thought, until the professor dropped the bomb. Each group was to return with no less than 200 headline ideas. We had 60 minutes. Wowza!

To get the most from the Long List technique, follow these four simple steps: articulate the objective, set your idea goal, do short bursts and let it rip.

- **RoleStorming.** We've talked about adopting different personas and role playing as a way to prepare for the creative process. RoleStorming takes this idea one step further to help you develop your creative ideas without hampering them with too much left-brain editing or execution. In effect, you invite Steve Jobs to join your team.

If you have a six-person team, it has now grown to seven because Steve Jobs has joined the group. Imagine that he is actually sitting there as you and your group launch the brainstorming process. In addition to each person contributing as him- or herself, have each person also suggest ideas on behalf of Steve Jobs. What ideas might he have to create a transformational breakthrough?

- **SCAMPER.** Advertising legend Alex Osborn not only founded one of the most successful ad agencies in the world, BBDO, but also coined the phrase *brainstorming* and is credited for inventing the technique. Later in his career, he invented another technique that is less well known but incredibly powerful: *SCAMPER*. This name is an acronym and stands for:

Substitute. Corn flakes led to Bran Flakes (substitute ingredient).

Combine. Raisin Bran was born from combining bran flakes with raisins.

Adapt. Cinnamon Toast Crunch came from borrowing the flavor of cinnamon toast and then adapting it into a cereal recipe.

Magnify or minimize. Frosted Wheat became Frosted Mini Wheats.

Put to other use. Rice Krispies Treats are now packaged in separate units and sold as a competitor to the candy bar.

Eliminate. Without nuts, reduced fat, sugar-free, only whole grains — Eliminating one or more aspects of an idea is a clever way to uncover brand new ideas.

Rearrange or reverse. Post launched Honey Bunches of Oats in 1989. Today you can enjoy your Honey Bunches packaged with almonds, bananas, peaches, strawberries, chocolate clusters, cinnamon clusters or vanilla clusters. What did Post do next? The company launched Just Bunches, eliminating the other elements of the cereal altogether.

Step Five: Launch

Welcome to step five of the Disciplined Dreaming process: Launch.

You've come up with a range of good ideas and now it's time to select the best of them. Here is one technique for narrowing down your choices to a single, best idea: the Matrix.

Scoring Your Ideas: The Matrix

The most common approach to idea selection is the Matrix Scoring technique. This is a powerful technique and can help you choose your best ideas and sell them to outside stakeholders. Using it, you will take a handful of your best ideas and score them on several factors that are most important to you. You'll then add up the total scores.

The scores from this technique should guide your decision-making process, not determine it. Use the numbers to support your judgment; you aren't subject to them.

Testing Your Selections

Prototyping is a powerful way to carefully examine ideas and begin to assess their real-world potential. Prototyping need not involve complex machinery or big investment. No matter how crude, anything you can do to bring your idea to life so that you can examine it in a 3D format will help you determine whether it should receive further support or if you should move on to the next idea.

What about when the idea involves a service? Or experience? Or people? Role playing is the ideal technique to help determine which ideas make the most sense and to identify any "soft spots" that may exist. Simply act out the customer experience or service you are proposing. The more realistic the better.

Setting Your Metrics: Measurement

Once you've narrowed the field to one or two of your best ideas to pursue, you should think about how you plan to measure them. Solid metrics will help you not only determine the success of your idea as it relates to your Creativity Challenge, but also secure necessary buy-in from others (bosses, investors, the board of directors, partners, suppliers and so on). Zeroing in on key metrics and measuring against them as your idea comes to life will also help you refine the idea as it evolves.

Select the top key metrics that you plan to measure and track as your creative project moves forward. Warning: Don't choose too many metrics to monitor or you will quickly lose focus. Narrow the field to a handful of the most important data points and stay focused on those.

Building Your Action Plan

You've finally made it to the exciting point of launch. You and your idea are about to blast off, and you'll soon be enjoying the benefits of your creativity. It is critical that you build a detailed execution plan to ensure that your great idea doesn't explode on takeoff.

Make sure that you've covered the basics, including:

- Budget, forecast and anticipated return-on-investment model.
- Roles and responsibilities of team members during the execution phase.
- Detailed timelines with clear milestones and checkpoints.
- List of the top risks and contingency plans if they occur.
- Resources needed (money, people, time, equipment, facilities, travel and so on).

Building Your Creativity Chops

Jazz musicians call the time and effort they invest in developing their musical skill "building chops." The Disciplined Dreaming system suggests a framework of ideas, processes and practices for building *your* chops by expanding your creative capacity.

Answer the following questions to gain a clearer picture of the way you currently approach the creative process:

1. What percentage of your time is spent creating something new, as opposed to working out operational details or protecting the past?
2. List five ways that you can beat your competition. How could they beat you?
3. If you were entering your industry as a startup, how would you break the mold to beat the incumbents?
4. What elements of the past or status quo are you clinging to? What do you need to let go of?
5. How could placing your bets earlier drive your bottom line?
6. List five ways your company is stagnating; for each of these, list at least two ideas addressing how you can break through those barriers.

- Communication and rollout plan.

Take Care of Business

It is time to gracefully transition back into your normal business processes. You'll need to integrate your idea back into your own systems, as most ideas will not live in isolation but as part of a larger organization or community.

Move forward with boldness and thoughtfulness, with urgency and passion and with a renewed sense of purpose and wonder. Congratulations! You have created and implemented a fresh, new idea. Whether it is big or small, you have made a difference. In some way, you have changed the world. ●

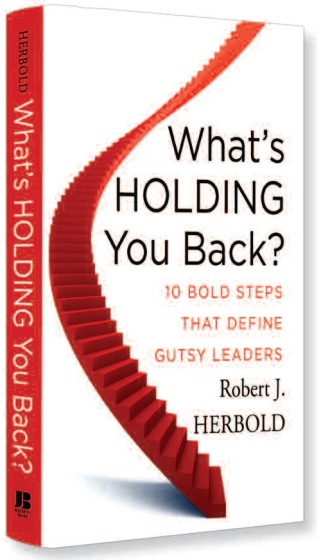
Leadership: Development



What's Holding You Back?

10 Bold Steps That Define Gutsy Leaders

by Robert J. Herbold

THE SUMMARY IN BRIEF

The more responsibility a manager has, the more likely it is he or she will face tough decisions. Often, these hard choices determine the difference between success and mediocrity; yet many managers, when faced with tough decisions, crumble. Whether making decisions for a small group, a department, a division or the whole company, all managers have experienced situations where they know what they need to do, but also know that these steps will be unpopular. They worry that there is no ideal option, a lack of data, guaranteed disappointment or no quick fix — they need a long-term perspective. And they worry that their choices might be dead wrong. They will decide to delay, further analyze, massively compromise, ignore the whole thing or employ any other tactic to avoid dealing with the situation.

What's Holding You Back? offers leaders and managers the road map they need to confront difficult situations head-on. Robert J. Herbold clearly explains why managers fall victim to very human behaviors, such as avoiding conflict, striving for certainty, avoiding a career risk, a lack of self-confidence, a lack of a sense of urgency or protecting their turf, and details the larger consequences of this lack of courage. He then spells out the 10 core principles of confident leadership.

IN THIS SUMMARY, YOU WILL LEARN:

- How to confront your inner wimp and call upon your inner courage.
- How to deliver accountability and decisiveness.
- How to grapple with the toughest dilemmas.
- How to cultivate operational and innovative excellence with gutsy leadership.

Introduction

Courageous management has real impact. Gutsy leaders are constantly making sure that their organizations have simple, understandable, clear game plans for the future. In addition, headcount is kept as low as possible, and processes are constantly simplified and standardized in order to minimize distractions.

Just as important, strong, courageous leaders create a culture that is curious, even paranoid, about the future, to keep people always looking for new ways to help the company grow and improve. They make sure that decision making is crisp and accountability is clear. They constantly look for important new trends in consumer behavior and technology that they can use to their advantage. Once important change is planned, they reconfigure the organization to implement that change quickly and effectively.

It's tough to stay lean and agile as an organization. It's tough to constantly innovate and execute new, bright ideas that will increase the satisfaction and loyalty of your customers. But it can be done and you can do it.

The Big Issue: Managers Lacking Courage to Make Tough Decisions

There are huge implications when managers lack the courage to make the tough decisions. The problems to which this sort of behavior can lead usually fall into one of the following two categories:

1. *Operational complexity.* Weak leaders often lack the courage to turn down the never-ending requests for more manpower; their failure to do so results in excess personnel. Organizational fragmentation (various groups going off in separate directions) and non-standardized processes emerge as the manager fears confronting and denying the endless requests of groups wanting to do their own thing. Ever-increasing bureaucracy and complexity are the results.
2. *Lack of innovation.* In dealing with new ideas and change, insecure or inexperienced managers often seek the safety of consensus-oriented decision making, thus suffocating innovation. There are often no clear goals regarding innovation and the qualification process for new ideas is random. Weak leadership also tends to cause a lack of clarity regarding who is responsible for spotting key trends and innovating accordingly.

What to Do About It

The key question is: How can managers avoid such problems and significantly improve their ability to be courageous, gutsy leaders? The truth is, you are probably never going to turn the inherently timid person into a naturally charismatic, hard-charging leader. But all managers can learn 10 fundamental principles that will enable them to spot what needs to be done and provide the leadership to make it happen.

Principle I: Devise a Demanding Game Plan to Confront Reality

It's exciting to be the leader of an organization. It gives you the chance to have some real impact on the efficiency and effectiveness of what the group is doing.

Rebecca S. Clement, Publisher; **Sarah T. Dayton**, Editor in Chief; **Andrew Clancy**, Senior Editor; **Edward O'Neill**, Graphic Designer; **Chris Lauer**, Contributing Editor

The exhilarating part of being a leader is diving in and figuring out exactly what is going well and what isn't, and how you can put together a demanding game plan that will improve the group's overall contribution to the organization. A "demanding game plan" refers to an aggressive and clear vision, the selection of the right strategies to fulfill the vision and proper, well-defined measures of success.

Most People Within an Organization Fear Change

A real change agent is typically going to run into some resistance within the organization. However, a strong leader doesn't let this stand in his or her way. Instead he or she tries to alleviate those fears by making it clear that there is big opportunity to improve the way the group works and how it contributes to the organization.

Good leaders, regardless of the size of their organization, create a sense of urgency. When things aren't going well, they implement a focused and demanding game plan to achieve significant improvement.

So how can you achieve the kind of crystal-clear direction necessary to create and implement a game plan that will ultimately lead to exciting innovation and operational excellence? Three things must be in place:

1. **A clear vision with impact.**
2. **Aggressive strategies to achieve that vision.**
3. **A defined way of measuring success.**

Principle II: Staff for Success

The more responsibility you bear as a leader, the more you realize how critically important talent is. You soon learn that you can't do everything yourself. You need to acquire the best talent possible, develop those individuals and put them into the key assignments that are going to make a difference in achieving the vision and strategies of the organization. The situation within one consumer products company can shed light on just how important it is for a leader to come to grips with personnel issues and possess the ability to obtain quality information about performance in the organization.

The eastern regional sales manager of this company was a talented individual who had made rapid progress up the corporate ladder but who was having some very significant problems in his current assignment. His region was rated the lowest of the four U.S. regions in revenue growth during the previous 12 months.

His region had been struggling for years, which was the primary reason he had been put into the job 18 months earlier. The company was confident that he could turn the situation around. However, he had two direct reports who were problematic. The district manager who had responsibility for Philadelphia had the worst numbers of all his direct reports. The Boston district manager was a close second. Unfortunately, there was no reliable performance appraisal system at the company, so the personnel files of both the Philadelphia and Boston district managers really didn't document any serious conversations about performance. HR sent forms out on an annual basis, but no one paid much attention to the process.

Matters Get More Complicated

The regional manager was told at the orientation for this role that these two individuals were extremely well regarded within sales and that their relationships with customers were always viewed as exemplary. To make matters more complicated, the two problem district managers were close friends of the VP of sales.

The regional manager gathered as much data as possible on the sales results over the last five years for these two problematic managers. It turned out that they did very well with their food chain customers, but poorly with the drug chains and mass merchandisers in their areas. Going back 10 to 15 years, most of this consumer product company's sales were to food chains. During the last 10 years, drug chains and mass merchandisers had

Move Weak Performers Out Quickly

Here are some simple guidelines to follow on an ongoing basis to avoid performance problems:

- **Implement high-quality performance appraisals.** You need a system that regularly and clearly makes every member of your organization aware of his or her strengths and weaknesses and how his or her overall performance is regarded.
- **Give early warnings**. You have to confront weak performance as soon as you detect it and make it clear to the individual that things have to change.
- **Strengthen the talent pool**. You need to be constantly developing talent so that when you do make changes, you'll have people ready to take on the new responsibilities.
- **Move people around regularly**. By moving people around, you can further develop their skills and benefit from their prior experiences.

become the major growth channels.

The regional manager took a month to visit with some of the sales reps in each district to learn how they felt about the business and about their district sales managers. What he found out was that there was significant de-emphasis of anything but food chains, and although any bright ideas on how to stimulate the drug and mass merchandiser business were received graciously, nothing was ever done. The conclusion was very clear. These two district managers hadn't grown with the company and weren't doing anything differently than they had 15 years earlier. They also hadn't receiving feedback about their weak performance over the years.

Confront Leaders with Unsatisfactory Performance

Fortunately, the remedies were also clear. The eastern regional manager had to confront the VP of sales with the unsatisfactory performance of these two individuals and immediately move them out. Also, HR needed to be confronted about the inadequate performance appraisal process, as that department was the reason for the lack of quality performance data on people in the company. Given the weakness of the two individuals' businesses, and the strength and thoroughness of the regional manager's analysis and recommendations provided to the VP of sales, the eastern regional manager was given the OK to move into action to clean things up.

Remember, don't wait long to get rid of weak performers. You have to fight off all those human tendencies to accept the status quo, and deal with the situation. Hesitation can have serious consequences for the entire organization. ●

Principle III: Clean Up the Sloppiness

Most people have experienced the frustration of having roadblock after roadblock thrown in front of them as they tried to get something accomplished. They reach the point where they realize that the world just can't be that complex. When easy things are hard to do, it's an obvious sign that it's time to clean up the organization and get back to the simple world we all love to operate in. Typically, complexity and sloppiness in a company are due to excessive headcount, fragmented and independent organizations, lack of standardized practices, and disjointed and antiquated information systems. The tough part for a manager is getting up the courage to tackle these problems, knowing full well that many people will feel the impact or even be eliminated.

Clear Vision, Courage and Support

It takes clear vision, courage and support to effectively simplify an overly complicated organization and also to prevent an organization from becoming overly complex in the first place. Here are some guidelines to keep in mind as you pursue that desired simplicity:

- *Put one leader in charge of each system or process.* The goal of the person responsible should be to standardize his or her assigned process across the whole company.
- *Tell the organization.* The troops need to know that you have every intent of operating the organization in a simple manner and do not want to see processes and systems become complicated and bloated.
- *Keep things simple and effective.* The person in charge of a particular system or process needs to constantly re-evaluate his or her system or process and its role within the company, keeping an eye on how things can be kept simple and highly effective.
- *Require 100 percent participation.* ●

Principle IV: Institutionalize Tight-Fisted Cost Control

In general, most employees and managers believe that they need more people in order to get their work done. They also need more equipment, more systems, more of everything. Because of this inherent human tendency to bulk up, a leader needs to be tough, objective and very visible regarding cost. He or she needs to be constantly working to make the organization very lean and cost conscious. It requires guts, but it's essential. As a leader, you must take a very clear and continual stand on the need for tight-fisted cost management.

Key Ingredients of Tight-Fisted Cost Control

Here are some key guidelines that you need to follow to take a stand on complexity and achieve tight-fisted cost control:

- *Take a tough, visible stand on cost.* The troops need to know that you are making cost management a high priority. You need to send this message over and over. Use all the communication tools available to constantly reinforce the message.
- *Match your actions to your words.* Don't allow exceptions that will be talked about in the halls that clearly show you are willing to back off the cost objective. Employees will be watching closely to learn how they can best protect their assets and ideally acquire more.

- *Take budgeting seriously.* Know your budget well. As the leader, you need to be very thorough in scrutinizing each element of your budget. The planning and budgeting process must also be interactive so that the troops clearly understand your thinking. They must understand why you are making certain financial decisions and what pressures you are facing, which will enable them to trust that you are being an objective and effective leader.
- *Be prepared for faultfinding.* One of the toughest things to do in an organization is to constrain or tighten resources. It brings out some of the worst emotions in people. You, and the managers who report to you, will need to be prepared for criticism and faultfinding. At times, your determination will be perceived as rudeness and stubbornness, but you can't let this affect your decision. You must constantly remind folks why you are doing this in the first place. You and your team will need to be very gutsy leaders.

As a leader, you need to be very clear and very visible with plans and rationale for achieving tight-fisted budgets. You also need to continually reinforce the message that cost is very important. That's how you institutionalize aggressive cost management. ●

Principle V: Insist on Functional Excellence

As leaders get promoted and gain more responsibility in an organization, they don't immediately acquire all the in-depth knowledge required to fully understand every area that falls within their authority. When leaders lack knowledge and lack someone who can be a reliable source of knowledge, things get messy. Huge amounts of complexity are caused all the time by sloppy functional leaders and sloppy practices. It is often the major source of operational chaos in an organization.

Balancing Your Organization

Achieving balance isn't easy, but it can be done. Following are some key principles you can use to strike the ideal balance between the thought leadership and discipline of a centralized operation and the responsiveness and effectiveness of a distributed organization.

- **Manage the key functional fundamentals.** There are three guidelines to follow for managing these key functional areas:

1. *Create one universal system where possible.* Do things one way across all divisions where you can. If it's an area that doesn't give you competitive advantage, it's probably best to do it one way throughout the entire company.
2. *Only allow exceptions when truly necessary.* If a particular division can really and truly gain advantage by customizing a particular process to meet its unique needs, let that division do so. But beware that everyone has a tendency to claim that he or she has very special needs. Require divisions to present a clear business case for exceptions and hold yourself to extremely tough standards when judging those cases.
3. *Carefully measure efficiency and effectiveness.* Develop concrete measures and benchmarks for tracking both the effectiveness and the efficiency of the various processes associated with these functional areas.

- **Organize for functional excellence.** For each of your functional areas, such as finance and HR, you need a strong centralized group to make sure that up-to-date, sound technology is being used and that efficiency measures that cut across all the operating divisions are in place. Personnel from functional areas that support an operating division should reside within and be paid for by that division.
- **Assign clear responsibility.** Once you create a strong, centralized group in your organization, you need to ensure that the group's responsibilities are clear. The key responsibility for your centralized functional group is to make sure that both the personnel assigned to each operating division and the personnel in the central group are operating efficiently and effectively. ●

Principle VI: Create a Culture of Innovation

It takes real courage and hard work to consistently, day after day, challenge your organization to be innovative. Once you achieve some sort of success, it is easy to sit back and view the situation as mission accomplished. The secret is getting the people in your organization to understand that the competition is always right around the corner with yet another bright idea that will drive your product to commodity hell, causing you to compete only on price. To avoid that, they need to be constantly coming up with innovative ideas that make your products exciting and distinctive in the marketplace.

Innovative Leadership at Deere and Co.

Deere and Co. has been around a long time, perhaps because the leadership at Deere has always understood

that innovation is the key to product superiority.

When Robert Lane became CEO of Deere in 2000, the company had great strengths in its brand, dealer organization, products and loyal employee base. What it didn't have was a great business. Lane's goal was to achieve 12 percent operating return during economic droughts and 28 percent in good times. His plan was to achieve this by continuing to innovate new and better products. His point of view was simple: "You cannot get into commodity hell." Lane fully realized that the only way to sustain strong economic performance is through innovation that will keep you ahead of your competitors.

All of this is paying off handsomely for Lane and Deere. When Lane became CEO in 2000, the stock price had been stuck in the $20 range. By mid-2008, it was in the $70-$80 range. Deere was hit hard in late 2008 by the global recession, but continued to invest heavily in technology to avoid commodity hell.

Creating a Culture That Nurtures Innovation

To achieve this level of innovation and subsequent financial success in your organization, you need to create a culture that nurtures innovation. Here are some key tips that will help you and your organization stay out in front:

- *Communicate your goal of innovation, regularly and thoroughly.*
- *Encourage and inspire innovation.*
- *Reward innovation.*
- *Instill a sense of urgency in the troops.*
- *Never get into a price battle.*

Principle VII: Demand Accountability and Decisiveness; Avoid Consensus

Innovation is often viewed as incompatible with things like accountability, goals and measures. This is just not true. When you are pursuing innovation, accountability is necessary to keep the innovators focused.

When creating a system of accountability, however, you need to emphasize the pitfalls of consensus management to the person accountable. New products, product features or processes typically affect a lot of people in the organization, so there will be a lot of input. Requiring a consensus from all the people involved or affected would kill the innovation; it would strip away the unique and distinctive aspects that make the idea innovative.

Put Some Degree of Focus Around the Task of Innovating

Here are some guidelines that work well in companies to generate fresh thinking and new ideas that can really pay off:

- *Put one person in charge.* Any group that is assigned the task of innovating needs one leader who is accountable for the group's progress.
- *Find strong-willed, senior talent for the job.* The person you pick for this job should give his or her staff strong guidance, but also the freedom to do their jobs.
- *Create focus.* You need to carefully define what innovative success looks like so that you get the results you want and can measure them.
- *Agree on measures up front.* At the start of the innovation search, you can save a lot of time by giving adequate attention to the issue of how things will be measured.
- *Keep the focus on impact, not internal politics.* The leader of the innovation process needs to train his or her innovators to focus, first and foremost, on the customer impact of what they are doing.
- *Challenge outside input.* You need to make it clear that all input, no matter what level the organization it comes from, will be challenged concerning its credibility.

Principle VIII: Exploit Inflection Points

Significant shifts in the technology or the consumer habits and practices underpinning your industry are often referred to as inflection points. They are very important because they can cause the existing products or services in the industry to be rendered inferior, out-of-date or old fashioned. To take advantage of inflection points and to keep from becoming obsolete, you must either replace your current offerings with up-to-date new products or modify your existing products.

Kodak Faces a Major Inflection Point

By the late 1990s and early 2000s, digital photography became the rage, and digital camera sales were growing 30 to 50 percent per year. Kodak was nowhere to be found. Although it did launch some digital cameras that were respectable in their performance, Kodak was always late to market and could not keep up with the rapid pace of technology improvements being introduced in the marketplace by Canon and several other vendors on almost a monthly basis.

The story has a sad ending. It's not clear whether Kodak will survive. It is currently pursuing a line of printer products to generate some revenue, but it's a company that absolutely lost its way because it missed a key inflection point.

Assemble the Right Group of People

Assembling the right group of people to keep your organization on the cutting edge of technology isn't easy. Making sure they have the space and resources they need to do their jobs well is no easier. Here are some characteristics to look for when putting your team together and some guidelines for keeping them productive:

- *Assemble a strong team.* Some things you should look for when assembling your team are breadth of experience, total commitment to consumers and intelligent risk-taking.
- *Don't encumber creativity with bureaucracy.* The worst thing you can do to people who are charged with finding and exploiting inflection points is put them in a bureaucratic environment.
- *Keep the group very small.* Strong performers know how to get work done and don't like to be encumbered with an excess of people. Also, involving too many people dilutes responsibilities and creativity.

The most important decision in identifying and exploiting inflection points is in the selection of talent.

Principle IX: Value Ideas from Anywhere

One thing that is certainly true about innovation is that you can't program it. Bright ideas can emerge from just about anywhere. It's tough to know exactly what background and characteristics enable a person to generate valuable ideas.

The practical implication of this truth is that you must be open minded to encourage and consider ideas from anywhere — not just from your product development staff, but from all employees, consumers, industry analysts, universities and so on.

You need to make sure that within your organization, processes are set up to receive input from the outside and properly evaluate it.

One thing that seems to be true in the pursuit of innovation is that the closer you are to the actual use of a product, service or process, the greater your chances are of observing or experiencing something that might generate a new idea or insight that brings a new capability or big improvement.

How to Turn Up Successful Ideas

Here are some key points for you to keep in mind to turn up successful ideas:

- *Get ideas from your customers.* As an organization matures and has some experience with success, too often it becomes internally or technologically focused. Studying and understanding consumers can be seen as a low priority. Your job is to make sure the people charged with innovation are getting out of the office and spending quality time observing and talking to customers.
- *Don't rely solely on quantitative market research.* Consumers simply aren't going to go out of their way to answer questions you don't ask.
- *Avoid qualitative research.* Qualitative research, such as focus groups and one-on-one interviews, are generally too intrusive. Most focus groups are not trustworthy because you don't know if one particular participant intimidated the rest of the group or even if the interviewer biased the conversation. The same holds true in regard to one-on-one interviews done by a professional researcher. You just don't know how comfortable that consumer was in expressing his or her views or, again, if the researcher was biased.

Strong leaders know that there is no substitute for observing how customers use their products. Although unstructured activities with customers may test your patience, they are more useful and provide more insight into developing your products and services than any amount of market research can.

Principle X: Shake Up the Organization

Established organizations often have a very difficult time achieving dramatic innovation that will have a major impact on the performance of the company. This is because they have comfortably settled into a routine for managing the business, and it's natural to become convinced that you have figured things out and there is no need to change.

When you leave organizations alone but ask them to innovate, in all probability, the ideas that emerge will be subtle variations on what they are already doing. If you want major innovation, you really have to shake up the organization.

Create Intense Marketplace Focus

A strong leader needs to make sure everyone in the

organization understands that focusing on a small number of product areas where you can clearly win and making that win happen via laser-like market focus are key.

Here are some courageous practices that you need to put into place to create the same kind of marketplace focus in your organization:

- *Do business in a small number of industries where you can win.* Take a look at your organization and objectively assess how many totally different and independent efforts are being pursued. You'll need real courage to set priorities and shut down efforts that have been going for years.
- *Move in the merchants.* You need to select people for key positions who have a real sense of the marketplace and enjoy creating excellence with regard to products, distribution channels and consumer experiences.
- *Focus on product, channel and consumer excellence.* A strong leader needs to provide intense focus on these things.
- *Create a sense of marketplace urgency.* You need to remind your organization regularly that success in the marketplace is your most important measure.

Reorganizing, putting strong performers in key jobs and keeping the focus on customers are powerful tools you should be using to shake up your organization so that it can implement new, high-potential, innovative ideas. By doing this, you will be on your way to establishing a strong business driven by strong leadership.

Conclusion

You — yes, you — can be that leader who has the courage to face the tough decisions and achieve operational and innovative excellence.

Implementing these principles requires courage, but these principles and the reasoning behind them are easy to explain to your people. Taking action will earn you their respect and will generate the excitement that is required to get your organization going in a positive direction.

Now go out there and be bold. Be very clear that you have a decisive plan and that you are not afraid to take action and do what's right even when it's hard. It's difficult for any leader to put him- or herself on the line, to take a public risk, but that is exactly what you must do. No one needs a leader for inaction, to preserve the status quo.

Your newfound energy and resolve will inspire your team and, even should they not agree with you, they will respect you. With these 10 principles to guide you, with this road map of the difficult situations that require your decisiveness, nothing will hold you — or your organization — back.

Think Globally

Becoming global isn't simply something that is appropriate only for companies with hundreds of thousands of employees. Even small companies should be thinking this way.

There are some basic rules you should follow when you start to think globally:

- *Consider outsourcing non-strategic activities.* Non-strategic activities are those tasks that aren't going to give you a competitive advantage, things like administering a benefits program, or manufacturing products that don't require highly specialized expertise.
- *Choose the right location for strategic activities.* Strategic activities affect the nature of your products and services. The marketing and positioning of your products are strategic because they affect the way a product is received in the marketplace. Examine the needs of your business to decide if putting some of your strategic activities in an international office would make sense.
- *Be strong.* Whether you're outsourcing your non-strategic activities or setting up a global office to handle some strategic ones, chances are that your organization will aggressively fight these decisions. Employees will argue that the company has unique expertise to do the tasks or that the tasks require intimate knowledge that only they have. As a leader, you need to be aware that this pressure will always be there and you need to be tough.

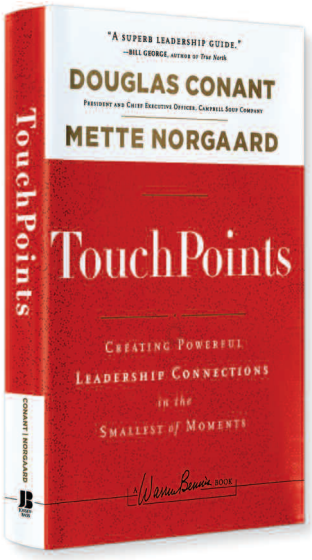
Leadership



TouchPoints

Creating Powerful Leadership Connections in the Smallest of Moments

by Douglas Conant and Mette Norgaard

THE SUMMARY IN BRIEF

Leadership is tough. You must hit your marks — despite back-to-back meetings, endless e-mails and chance encounters in the hallway.

Most leaders feel that these inevitable demands keep them from doing their "real work." But in *Touchpoints*, authors Douglas Conant and Mette Norgaard argue that these interactions are overlooked opportunities to expand your influence and deliver measurably better results.

TouchPoints shows how a leader's legacy and impact are, in fact, built through hundreds, even thousands, of interactive moments in time.

The good news is that everyone can attain greater "TouchPoint" mastery by delving into three essential assets: your head, heart and hands. As the authors explain, one of the greatest investments you can make is constant attention to your mental model, your emotional maturity and your bias for action.

TouchPoints speaks to the theory and craft of leadership by promoting a rational, authentic, active and wise approach. With greater skill and energy, you can start transforming otherwise ordinary interactions into powerful leadership moments — one TouchPoint at a time.

IN THIS SUMMARY, YOU WILL LEARN:

- The three essentials of mastery.
- How to create your own unique leadership prototype.
- Why "walking the talk" is essential to your success as a leader.
- How to listen exponentially.
- The four magic words of any TouchPoint.

THE COMPLETE SUMMARY: **TOUCHPOINTS**

by Douglas Conant and Mette Norgaard

The authors: Douglas Conant is president and CEO of Campbell Soup Company. Under his leadership, Campbell reversed a precipitous decline in market value and employee engagement, improving its financial profile, enhancing its diversity and inclusion and raising its corporate social responsibility profile. Mette Norgaard is an expert on strategic leadership and learning. She advises executive teams around the world on how to create distinct learning solutions that advance their companies' strategies. She has worked with senior-level leaders from Microsoft, Procter & Gamble, GE Capital, Nucor Corp, Harley Davidson and more.

The Power of TouchPoints

It's 3:30 p.m. You're holed up in your office, trying to grab some time to finish a proposal that's critical to the future of your department — and your own career — when a team member knocks on your door to ask for advice. How do you respond? Do you give in to the flash of irritation and tell him to come back later? Or do you stop what you are doing and help him right now? It's your choice.

As a leader, you make these choices all day, every day. The "knock on the door" happens over and over again — phone calls, meetings, e-mails and text messages, all with questions to answer and fires to put out. The workload is expanding and the time you have to deal with each issue is shrinking. Some days it feels as if the information age has morphed into the interruption age.

But what if you could step back and look at these interactions with a fresh perspective? What if, instead of seeing them as interfering with your work, you were to look at them as latent leadership moments? What if these moments held the answer to leadership in today's busy world, turning ordinary moments into TouchPoints?

TouchPoints take place any time two or more people get together to deal with an issue and get something done. TouchPoints can be planned or spontaneous — in hallways, on factory floors, in conference rooms, on the phone and via e-mail. Some deal with straightforward issues; others involve complex challenges.

These TouchPoints *are* the real work. They are the moments to bring your strategies and priorities to life, the interactions that translate your ideas into new and better behaviors.

The Exponential Effect of a TouchPoint

TouchPoint leadership capitalizes on the social networking effect, what we call the *exponential effect*.

Every person you engage with is embedded in webs of relationships. Whatever you say or do in a TouchPoint may be quickly transmitted to five or six people in that person's network — and then relayed to their colleagues and so on. Therefore, when you impart a sense of urgency, people may pass that on; when you inspire confidence, that too may be transmitted; and when you blow it, people are bound to hear about it.

You can choose to bring a sense of positive energy and direction to your very next TouchPoint, and then do it again. To get started right away, simply take the next unplanned interaction as an opportunity to help. Twenty TouchPoints a week would add up to more than 1,000 TouchPoints in a year. This would be a very small commitment, yet the impact would be significant because you would not only feel more in control of your time, but you would also gain more influence. ●

The Commitment to Mastery

To succeed in the work of leadership, you need to be good at it. And to become really good at it, you have to prepare. Frankly, if you don't love the pressure, the sweat and the grind, it just isn't worth it. Life is too short to be halfhearted about your work. More important, people deserve someone worth following. That is why we encourage you to make the commitment to mastery.

The Mastery Essentials

If you aspire to mastery, you must use your head, heart and hands. You need a *logical* model that guides your approach to leading people and change (head), a clear sense of purpose and an *authentic* way of engaging with others (heart), and practices that enable you to be prepared and *competent* in the moment (hands).

Your touch is where the three strands (head, heart and hands) come together in the art of the moment, enabling you to make clear judgments in the TouchPoint. When you have the touch, you can have a dozen balls in the air and juggle them all with ease. You may stand in the midst of escalating tensions and naturally diffuse them. You can make split-second decisions in a way that seems effortless to others. The way you do that is by blocking out noise, stripping away everything extraneous and being fully present to the possibilities of the moment.

1. Use Your Head: To begin with, you need a clear approach to leadership. As a leader, you must be prepared to parse through countless data points, detect the patterns and frame what is going on in the TouchPoint. To do so quickly, intelligently and consistently, you need to create a personal leadership model that works for you in your unique situation.

2. Use Your Heart: Next, you need to become incredibly clear about your intentions so that you can develop a healthy and dynamic core. Think about the core of a golfer, the axis around which the rest of the body rotates when he or she takes a swing. Having a strong core allows the golfer to wind up the body's inherent energy and release it in a natural and controlled way until the rotation is completed. To achieve such grace and power in the moment, you need to be very clear about who you are and why you choose to lead. You need to have the heart for leadership.

3. Use Your Hands: Finally, you need to become clearly competent so that you can engage with confidence and extend that confidence to others. You need to be able to draw on a variety of skills so that regardless of what is thrown at you, you can handle it. You may need to diffuse tension with humor, push people by asking tough questions or tell stories that stick. Whatever is needed, you want to do it skillfully.

Missing the Mark

If you like the *idea* of mastery but wonder whether it is worth the price, take a moment to consider the costs of not aiming for mastery.

- *If your head is not in the game:* When you don't have a clear approach to leadership, people don't understand why you make the calls you do. Why was that project given to another department? Why don't they get that report anymore? People search for the underlying logic, but it doesn't seem to be there.
- *If your heart is not in the game:* When you don't know (or don't show) what's in your heart, you cannot make a real connection with others. You may genuinely care about the people on your team, but if they can't tell your true feelings, why should they trust you? Also, if you don't convey what you care about, they will be less forthcoming with their own concerns and cares.
- *If you are not prepared for the game:* When you don't do your homework, people don't count on you to prepare and put forth your best effort. They just don't feel they're in good hands with you as a leader.

Leaders who want to be influential look at leadership as something they must get really good at. Because they work at it, they improve, which makes them feel more committed, so they practice more and continue to accelerate their own development. What type of leader do you want to be? And do you want it enough to make the commitment to mastery? ●

Use Your Head: The Commitment to Inquiry

Developing a leadership model is one of the most practical, energy-saving, and stress-reducing things you can do as a leader. To lead effectively in a TouchPoint, you need a leadership model that is uniquely relevant to your situation, one that can engage people and improve performance. Every leader's model is different, because everyone's situation is different.

Make a Commitment to Inquiry

The first step in creating your own leadership model is to become aware of your current assumptions — the ways in which you almost instinctively think about people and performance. Next, search for answers to two vital leadership questions by drawing inspiration from various sources and thinking about your own experience. Finally, organize your answers into a meaningful flow — an *ideapod* where you have "downloaded" the best thinking available, added your own experience and created a set of ideas that works for you.

Consider Your Underlying Assumptions

You first need to surface your assumptions about leadership. As you read the examples below, which ones fit your way of thinking about leadership most closely?

- *Competition* or *collaboration*
- *Instructing* others or *inviting* them
- *Expanding* rapidly or *evolving* gradually
- Aiming for *efficiency* or creating *communities*

You can think of the word pairs as representing two distinct world views, two different ways to think about motivation and change. When you gravitate toward stories that build on the first word in the pair, you will tend toward an *assertive* way of thinking about issues and people. If you are inclined toward the second word in the pairs, you will have an *adaptive* approach.

But why limit yourself to one approach or another? Instead of having an assertive or adaptive approach, leaders need an *integrated* approach. It makes no sense to think of people as being altruistic *or* selfish, competitive *or* collaborative because, as human beings, we are both. Likewise, it is nonsense to look at an organization as if it ought to run like a machine *or* evolve like a living system. There are ways to create both efficiencies *and* communities. In fact, the best solutions often lie in the creative tension between these natural dualities.

Answer Two Vital Questions

Just as a potter must know his material (clay) and understand how to transform it (process) into a strong functional object, a leader must know his or her "material" (people's talent, energy, creativity and commitment) and understand how to transform that into performance.

To comprehend these basics and how they apply in your culture and context, you need to ask two vital questions:

- *What makes people give the very best of themselves?* This question is about what makes your people engage wholeheartedly. Consider each member of your team. What do you think engages each person? What turns each person off? What about the team as a whole?
- *What makes for ever stronger performance in an ever changing world?* What are the lessons you have learned about achieving results and then doing it again and again? Have you ever been part of a team that came from behind, beat all the odds and won? If so, what created the magic? Also consider your best-performing colleagues and bosses. How did they approach major initiatives? What did they do to create momentum and deliver results?

Move From Prototype to Primetime

The value of prototyping is that it allows you to take your best ideas and make them tangible. The aim is to develop a model that you can draw on the back of a napkin while explaining your leadership approach to someone else. (For valuable examples of leadership prototypes, please visit www.conantleadership.com)

To start developing your prototype, reflect on the assertive, adaptable and integrative points of view and the way you responded to the two vital questions. Jot down your insights.

Sort your thoughts and ideas into clusters. Some might deal with relationships while others focus on results; some might concern people's character and others, their competencies. Play around until the clusters seem clear.

Next, step back and think about how the ideas relate to one another. When you have a good understanding of how your ideas are connected, quickly draw several rough prototypes until you have something that makes sense. Once you have come up with a prototype that you think accurately expresses your own unique approach to leadership, see whether you can explain it to someone else. If things are not flowing well at this stage, go back and create a few more prototypes. Once you are confident that your model is clear and coherent, you will be ready for prime time: to share it with your team, your boss and other people you work with.

Be Consistent and Flexible

Once you have a solid model, you need to execute it consistently. Using your head means you become disciplined in both your thinking and implementation. But there are, of course, times when you need to make adjustments to your model as you gain an even better understanding of human nature and the nature of change. Another reason to adjust your model is perhaps because you need better and faster ways to engage people and accelerate the pace of change.

Einstein once observed that the person who "can no longer wonder, no longer feel amazement, is as good as dead." To be fully alive in the way you lead, you need to be curious, ask good questions, and find an approach that works for you in your unique culture and context. In other words, make a commitment to inquiry. ●

Use Your Heart: The Commitment to Reflection

When you use your heart, you will make better judgments concerning *the issue*; you will make stronger connections with *other people*; and you will develop your personal authority *as a leader.*

Lead With Your Head and Your Heart

Some of the decisions you need to make in a

TouchPoint are clear-cut. You simply get the best data available, do the analysis and make the call. In most cases, though, you need to consider more than numbers. There are even times when the numbers reveal one course of action to be the *smart* thing to do, yet you know it is not the *right* thing to do. In such cases, you need to trust your intuition and connection to your principles. You need to use both your head and your heart to make a wise decision.

Even when making minor decisions, you will want to use your heart. For example, you may need to decide whether to start an off-site meeting on a Monday or Tuesday, a decision that determines whether people get to spend Sunday at home instead of at an airport. Each day, dozens of such minor decisions affect the trust people have in their leader, the pride they take in working for the team and the strength of their commitment.

To make genuine connections with other people, you need to bring more than information and experience to the interaction — you need to bring yourself.

Answer the Questions of the Heart

Previously, you considered two questions that encouraged you to look at the way the *world* works. Now reflect on the way *you* work through three questions of the heart:

1. Why do I choose to lead? All too often, people become leaders because doing so was the next logical step in their careers. They know what they want to *get* from their position (such as a new challenge, more influence, more prestige or better pay), but many are vague about what they want to *give*. Many have a good reason to lead, but are tentative about their *purpose*. (*For resources on leading with purpose visit www.mettenorgaard.com.*)

Knowing *why* you want to lead gives you a well of energy to draw on that is deeper than merely finding meaning in your work. The challenge is that most of us don't take the time to connect with our passion and purpose.

2. What is my code? Every leader needs a code to live by, a set of principles that provides an underlying consistency in every TouchPoint. Your code is based on the principles you believe in and captures what to you is the right thing to do. When you live by your code, you have a good conscience; when you violate it, you disappoint yourself.

Through personal reflection, you can start to capture the principles you choose to live by. Think of a time when you took a stand. Why did you do it? What principles were involved? How did it make you feel? What about a time when you didn't take a stand but felt that you should have? What principles were you ignoring? What were the consequences?

Having a code helps you keep your perspective when you are doing well and take the high ground in times of adversity.

3. How well do I walk the talk? Each TouchPoint is a small test: You say you want people to be candid, but do you really want to hear what they have to say? You say you want to let them run with the ball, but do you really let them? When you "walk the talk," people find you more credible. As a leader, your goal is to walk the talk in TouchPoint after TouchPoint.

How well do you walk the talk? Be honest with yourself and keep in mind that it's common for people to think they are doing better than they actually are. Let's say your code includes "honesty" and "respect," and you see yourself as someone who talks straight and pays attention when others talk. OK, that is what you *say* is important, but is it what other people see you *do*?

The easiest way to keep yourself honest is to become clear-eyed about how you use your time. How tenacious are you about making time for things that matter most? A more data-driven way is to get unfiltered 360-degree feedback on your behavior. Yet another way is to find a couple of trusted advisors who care about your success and will be candid with you.

Beyond the three questions of the heart, leaders often struggle with a fourth question, which is about accountability. *First and foremost, you are accountable to yourself.* To be true to yourself, continue the process of self-discovery by answering the questions: "Why do I choose to lead?" and "What is my code?" at even deeper levels. To reinforce the insights you gain, start each day with something that inspires you. During the day, try to spend time with people who bring out the best in you. And end the day by asking yourself: *How well did I walk the talk today? What could I have done better?* ●

Use Your Hands: The Commitment to Practice

TouchPoints are intensely practical because each one deals with real people and real issues in real time. Therefore, it is not enough to be clear-headed and clear-hearted in a TouchPoint; you must also be clearly competent.

Developing the skills so that you can be proficient in TouchPoint after TouchPoint requires continuous practice. TouchPoints are all about communication. To han-

dle whatever might be thrown at you in the moment, you need to be incredibly skilled at understanding what others are saying and at making yourself understood.

Lead With Listening

Listening is one of the most amazingly efficient things you can do as a leader. But listening can be very hard to do. One reason is that most leaders have a bias for action and when they are listening, it does not feel as though they are doing anything. And listening is even more difficult in today's interruption age.

In a TouchPoint, listening with your head and with your heart is critical if you are to gain a good understanding of the issue. Without that understanding, you can easily waste everyone's time by solving the wrong problem or by merely addressing a symptom, not the underlying disease.

To use people's time and energy wisely, you want to listen with your head for the evidence, listen with your heart for the energy and listen exponentially for all the other voices that touch the issue.

Listen With Your Head

Listening with your head means listening for the evidence — facts, figures, actions, events and conversations — that led to that current TouchPoint.

Most TouchPoints deal with quick updates and straightforward tactical issues; in those interactions, you can simply get the information, find out what the other person needs and provide it. But when the issue is more complex, you need to give the other people more time to describe the situation. To make sure you stay with them on their agenda instead of hijacking it, here is a small practice to try. Whenever someone is seeking to explain something to you and you feel a question or piece of advice bubbling up, bite your tongue and ask yourself, *How exactly will this comment be helpful to the others?*

Listen With Your Heart

When you listen with your heart for the energy in a TouchPoint, you tune in to how the other people are feeling. This means you pay attention not only to the words, but also to the facial expressions, tone of voice and body language that reveal whether people feel excited, nervous, upset, unsure, committed or confident. An easy practice that can help you tune in to the feelings of a TouchPoint is to imagine the energy as being red, yellow or green. It's like coming to a traffic light: you stop if it's red, slow down if it's yellow or go through if it's green.

- **When the energy is red:** We say the energy in a TouchPoint is red when people are testy or angry, when they become vocal about why your proposal won't work, or when they withdraw, avoid eye contact and shut down. If you sense that this is taking place, stop and listen. Try to find out what is going on. If they are disagreeing with you, try to understand their reasoning.
- **When the energy is yellow:** In a TouchPoint, people may seem to express doubt, keep questioning something, or seem hesitant or unsure about how to handle the situation. When that happens, slow down and listen with your heart. Giving people a chance to express their concerns can help both of you.
- **When the energy is green:** Green energy means that the way is open for you and others to move on; the other people in the TouchPoint feel curious, engaged, confident and keen to move forward. Green energy doesn't mean you stop listening. In fact, the more engaged the other people are, the more you might want to tune in, because they will probably be eager to offer good ideas and take on the responsibility for implementing them.

Listen Exponentially

Just as every TouchPoint you engage in can potentially impact many people beyond those who are immediately involved, every conversation you have with an individual or group has been triggered by many prior TouchPoints. To gain an accurate and complete understanding of what is really going on, you need to think about all the stakeholders and listen for all the voices that touch the issue, even those that are not present. That kind of listening demands extraordinary attention.

Here is a solid practice you can use to get the full picture. When people schedule time to meet with you about an important issue, ask them to come prepared with the answers to a few diagnostic questions, such as: What is the problem? Whom does this problem affect and how? What are the behaviors that are contributing to the problem? and so forth. Then begin the meeting by giving them 8 to 10 minutes to lay out their answers without interruption.

Follow Through With Speaking

In a TouchPoint, you want to speak from your heart so that people become engaged and you need to speak from the head so that what you say makes sense to them. Furthermore, you need to speak skillfully and exponentially so that your message will be clearly understood through several degrees of separation.

Speak From Your Head

One of the most important things to do in a TouchPoint is to clarify expectations. When a leader is not sufficiently clear, people fill in the gaps themselves. They decide what a "quality outcome" looks like, make assumptions about what "within a reasonable time" means, or figure out when and how to hold themselves accountable. If their assumptions are wrong, as assumptions often are, people may not meet your expectations, which may result in feelings of disappointment and frustration, wasted time, loss of confidence and, sometimes, higher costs.

Speak From Your Heart

When you need to engage people on your issue, you need to make a strong personal connection. The more you are asking of them, the stronger that connection needs to be.

When leading major change initiatives, one of the greatest challenges is to get people excited and committed to the change. To do so, you need to speak from your heart and share your enthusiasm for the project.

Here's a practice you can try with the help of a colleague and a copy of a classic speech, like the Gettysburg Address. Read your speech to your colleague. Every time your colleague is moved, he or she is going to move toward you. When your colleague isn't moved, he or she is going to move away from you. Practice reading the speech until the person ends up standing right next to you.

Speak Exponentially

In this interruption age, we engage in smaller and smaller TouchPoints, and in many more of them. Those brief interactions also travel faster and farther than ever before: a quick text message to a colleague in another building can make it around the world in seconds. Consequentially, it has become imperative for leaders to master the power of exponential communication, both face-to-face and in writing.

One executive does this by writing 10 to 20 personal notes every day to thank people for their contributions, welcome new hires, or congratulate leaders on promotions or other successes. He writes the notes to individuals who often share them with other people. Over the years, these notes have added up to tens of thousands of TouchPoints.

Lift Your Game

The more difficult a TouchPoint and the higher the risk, the more skilled you need to be. For people to count on you in highly visible and highly sensitive situations, they need to trust both your intentions and your skills. To reach that level of competency requires intense practice.

Performers who are world-class in their fields practice intensely for about three hours a day to stay on top of their game. That is probably not realistic for you. But it is realistic to select one skill that you will practice during the coming week. For example, you might ration the number of times you allow yourself to speak during a meeting. As you practice, focus on how good you are compared to how good you *could become*.

Wynton Marsalis, director of the Lincoln Center Jazz Orchestra, considers pristine technique to be a sign of morality. Not mastering the technique is, to him, like an athlete who comes to a game out of shape. "Don't start professing a love for the game. The love is what would have made you get your ass in shape." To Marsalis, love is the spiritual essence of what we do. Technique is the way we tangibly demonstrate it.

Whether you are a leading artist or a world-class leader, real learning requires both *passion* and *practice*. Yes, it is hard; it is also intensely rewarding. ●

Mastering the Touch: How Can I Help?

Every leader has his or her own unique style. But when it comes to mastering the touch, they all have one thing in common. When dealing with others, they think less about what they can *get* and more about what they can *give*.

Four Magic Words: How Can I Help

Leadership is not about *you* — it's about *them*. Whether the TouchPoint is about your issue, their issue or an issue you share, asking "How can I help?" at the start of an interaction opens up space for people to voice their ideas, concerns and viewpoints. Those four magic words shift the focus from what you want to communicate or accomplish to finding out what they want and need from you.

The Touch Point Triad

In music, a triad describes the three notes you need to form a complete chord, the three notes that create the harmony. Likewise, a TouchPoint triad describes the key notes you have to hit to be helpful in even the briefest of moments. Asking the magic question "How can I help?" prepares you for the triad.

The first note, listening intently, helps you figure out what is really going on and what others need.

The second note, framing the issue, ensures that everyone in the TouchPoint has the same understanding of the situation.

The third note, advancing the agenda, means deciding what next steps to take and who will take them. After the TouchPoint is over, following up with a question such as "How did it go?" or "Is there anything else you need from me?" is a reminder that you care. In addition, the other people's response lets you know how things worked out and whether you were genuinely helpful.

As you engage in a TouchPoint, all you need to remember is "listen-frame-advance," "listen-frame-advance." And you do it dozens of times each day, day after day.

The Four A's of an Effective TouchPoint

Having the touch is really about connecting, being present to the possibilities, advancing the agenda and improving performance. It is about engaging in a way that is alert, abundant, authentic and adaptable.

- **Alert.** Being alert is about developing great situation sensing. As a leader, you can be so alert that you become superb at identifying the real issue. When you are fully present, you can see gaps in someone's line of logic and pick up bits of information that provide clues as to what is going on.
- **Abundant.** To think in a way that is abundant, you need to reject the scarcity mind-set that says, "I can either hit the targets this quarter *or* build the capacity to deliver long term," and instead find ways to "get the job done now *and* next time." Instead of thinking "I can either be tough-minded *or* tender-hearted," you can be "tough on standards *and* enthusiastic about people."
- **Authentic.** Being authentic means that leading is not just your job; it's your passion. If it is something you love to do, you will spend a lot of time thinking about it and becoming really good at it, which will make you enjoy it even more. As you share your enthusiasm for leadership with others, they will *want* to join you. In addition, being authentic also comes with a certain level of authority, because it means you will live by a very clear code that provides an underlying clarity and consistency in every TouchPoint.
- **Adaptable.** The secret to being adaptable is to develop a broad range of skills so that you can adjust and adapt in the moment. Does the situation require you to be directive ("Do as I say"), consultative ("What do you think?") or inspiring ("We are changing the world.")? Do you need to push people or be patient? Show strength or share a vulnerability? Step forward and take charge or fall back so that someone else can take the lead? Whatever you do, the key is to do it skillfully.

How Can I Do Better Tomorrow?

You know what it feels like when you have touched someone in a positive way. Conversely, you also know what it feels like when you blow it. When you do mess up — and you will — the key is to course-correct and to do it quickly. People will forgive you for messing up, as long as they can see you are doing your best to improve.

If you really want to make progress, do your own "post-game analysis" of your TouchPoints at the end of each day. Reflect on the dozens of connections you have made and ask, *What worked? What could I have done better?* This is not only about getting experience, but, more important, learning from your experience.

The ongoing discipline of inquiry, reflection and practice will help you become an ever better leader. And there will always be more to learn.

Coda

Leadership is hard. The pressures are mounting, the complexities are escalating, the demands are never-ending and even if you were to work 24/7, you could never get everything done. That is just the way it is.

Yet no matter how hard it can be to achieve ever higher levels of performance, we believe you can approach each day with a sense of optimism and focus your energy on the things you can control. When you are clear-headed and clear-hearted, you can consistently direct your attention to *the issues* that are material to the business, a matter of principle or both. When you are clearly competent, you can engage *the other people* in a way that increases their commitment and confidence.

Stop Workplace Drama

Train Your Team to Have No Complaints, No Excuses and No Regrets

by Marlene Chism

THE SUMMARY IN BRIEF

Gossip. Power struggles. Poor team coordination. These are all symptoms of workplace drama. They are obstacles that can drain your company of its best talent, get in the way of true productivity and profit, and eat away at the effectiveness of your organization — that is, unless a leader steps up and takes responsibility for changing course.

Communications consultant and national speaker Marlene Chism has created an eight-step methodology that breaks through the negative thinking that can contribute to drama in organizations of every kind and size. She has identified the gaps that drama creates — a gap between where your company is and where it aims to be, and the psychological gap that occurs when people are faced with change and the fear that goes with it.

In *Stop Workplace Drama*, Chism shows how to change the way you and your organization confront and work through problems, implement effective management strategies in a drama-filled organization, and find new solutions that create positive growth for every member of your company.

IN THIS SUMMARY, YOU WILL LEARN:

- How to create healthy boundaries, get your work needs met and make the most of your valuable time.
- How to seek viable opportunities and take responsibility for your efforts.
- How to instill necessary changes without unleashing fear in your organization.
- How to cut through your personal drama so that it doesn't create further issues at work.
- How to boost morale, maximize your company's potential and put your organization on the road to success.

THE COMPLETE SUMMARY: **STOP WORKPLACE DRAMA**

by Marlene Chism

The author: Marlene Chism is a consultant, trainer and professional speaker. She is the founder of the Stop Your Drama methodology — an eight-part process for helping managers and small-business owners identify the barriers that are holding back their teams. She is also the creator of Attitude Builders, a monthly teleseminar program developed for busy managers who want easy staff development with no prep, no plan and no problem. She has shared her processes and programs with companies such as NASA and McDonald's. *Stop Workplace Drama: Train Your Team to Have No Complaints, No Excuses and No Regrets* by Marlene Chism. Introduction: We Don't Do Drama Here

The Society for Human Resource Management (SHRM) has estimated that it costs $3,500 to replace one $8-per-hour employee when all costs — recruiting, interviewing, hiring, training, reduced productivity and so forth — are considered. And SHRM's estimate was actually the lowest of the 17 nationally respected companies who calculated this cost!

Other sources provide the following facts and figures: Employee replacement costs range from 30 to 50 percent of the annual salary of entry-level employees, 150 percent of middle-level employees and up to 400 percent for specialized, high-level employees!

Despite our ability to amass this kind of information, it's difficult to identify where the real drama lies. Some people assume it's all due to turnover, when in reality it comes from an ineffective supervisor and poor interpersonal relationships. In fact, the No. 1 reason for turnover is relationship problems with the boss.

You may think the real drama at home is about the fight you had with your spouse, but it's really about all the times you avoided having the difficult conversation, failing to listen or speak your truth to others or even yourself.

Drama impacts all of us — both at home and at work. It hampers productivity and inhibits personal effectiveness. And the worst part, of course, is that if you can't spot the drama, you can't stop the drama. Nonetheless, most of us try to fix the symptoms instead of identifying the core issues.

The Drama Versus Your Drama

The drama is the situation. *Your drama* is how you react to it. Therefore, while you may not be able to stop *the* drama, you certainly can stop *your* drama. In other words, you may or may not be able to control or change the circumstance, but with some training, you can learn to manage — and alter — your response.

One quote on this concept is by Vivian Greene: "Life is not about waiting for the storms to pass. It is about learning to dance in the rain."

Most people do not know how to separate the drama from your drama, but you can learn to navigate the ship even in a storm — with the right equipment, maintenance and planning.

What Composes Drama

When trying to identify the common elements in drama, you will always find at least one, if not all three of these core components:

1. A lack of clarity (which can also be referred to as *fog*).
2. A relationship issue.
3. Resistance.

In addition, you may also see any combination of the other five principles in the Stop Your Drama Methodology (the gap, truth, reinvention, energy, creator). These principles work as a system rather than a step-by-step linear process. When you make a shift in any one of the eight areas, the impact will have a ripple effect.

When you experience drama, three questions to ask yourself are:

1. Where am I unclear?
2. What is the relationship component?
3. What am I resisting?

Once you are able to identify how clarity, relationships and resistance negatively impact your business, you can effectively create a quick solution to help you navigate positive change. ●

Clear the Fog

There are a million and one potential excuses as to why you are frustrated, stuck and not getting what you want, but there is only one real reason: You are unclear. You have fog that is clouding your vision.

The premise of the first Stop Workplace Drama principle, "Clear the Fog," is:

1. **The one with clarity navigates the ship.**
2. **Clarity can change any situation.**

Once you are clear in your business, you are in charge. You attract the right people to your team. They are working toward the same goal. They are motivated. You become excited. You make decisions that are in agreement with who you are and the values that you hold dear. Your choices support and work in harmony with other parts of your life.

The Fog

The fog is your inability to focus and your lack of willingness to see the bigger picture. Occasionally, you might have two desires that do not align. For example, your desire for free time is competing with your desire to finish a project, so you procrastinate and start drifting aimlessly.

The fog is any distraction or division that clouds your vision and threatens your commitment. When you are in the fog, you feel confused instead of motivated.

In short: Any time you lose focus and your level of commitment diminishes, you are in the fog — and you are splintered.

How to Gain Clarity

Being stuck in the fog can cause a lot of confusion and a lack of alignment. The first step to clearing that fog is to gain clarity on your values and goals. Here are three questions you must answer in order to become clear on your objectives:

1. Who am I?
2. What do I want?
3. What am I committed to?

Spend time thinking about this, and put pen to paper.

The Leader vs. Denial

As a leader, you are required to be open to and see the reality of the situation — and you are required to bring your staff out of denial on a regular basis. If you are letting substandard performance, bickering, backstabbing and other forms of drama erupt in your business, someone is in denial. You may justify this person's behavior because your company is going through a big change, or you may procrastinate about bringing unwanted behavior to light because you dread the conflict. However, the longer you let it go on, the uglier it is going to get. You can't escape the responsibility before you. You must constantly balance the task of motivating and leading with bringing your people out of denial.

How you define yourself, what you say you want and what you claim to be committed to will not only help clear the fog, it will also give you your "true north," so to speak. If you aren't sure about what you want, you now know what your next step is — to define it. Answering the "what am I committed to" question will clear a lot of fog. If you meditate on these three questions and think deeply about your life and business, you will come to know what behaviors to eliminate, where you are wasting time and what exactly is draining your energy.

Your actions and words either align with what you have just said or they point to significant problems. Either way, you have now gained awareness and cleared the fog. ●

Identify the Gap

Besides a lack of clarity, the most likely reason that you're experiencing drama is that you get *stuck in the gap* — the place between where you were and where you want to be. If your goal stretches you even a little, it's important to keep in mind that your goal always looks easier to achieve than it is.

As a leader, it takes wisdom and recognition to realize that no matter how accessible a goal seems, it nearly always looks easier to achieve than it is. You don't always know what will be required upfront or the changes and obstacles that may occur along the way.

Whether you are initiating change or being forced to change because of the economy, outside threats, someone else's decisions or new legislation, any significant adjustment throws you into that gap of the unknown. It's a place that's full of surprises where much is required

of you. Very often, the power of newfound vision and clarity is so strong that it is tempting to jump into the boat with no map and only one oar.

Even small changes can create big drama. This phenomenon is as true for the individual as it is for a small business or large corporation. Identifying the gap is about giving yourself and your team the resources to weather the storm and withstand the drama in the gap. Prepare your team for the gap, and you will enjoy a successful journey.

The premise of "Identify the Gap" is:

1. **The gap is the distance between point A and point B in reference to achievement.**
2. **The bigger the gap, the bigger the potential for drama.**

If you lead a team of people, it is very important to identify the two types of gaps always present in change. It is equally vital to manage these gaps and communicate their existence to your team. Let's talk about the two kinds of gaps.

The First Gap: The Physical Journey

The first gap — the physical journey — involves all the practical ways you get from point A to point B. You plan, do a SWOT (Strengths, Weaknesses, Opportunities and Threats) analysis and hire the right team. You strategize, put together a marketing plan and so on.

The Second Gap: The Nonphysical Journey

The second gap — the nonphysical journey — comprises all the components of the spiritual, emotional and mental processes you experience while getting from point A to point B.

The second gap is often the more challenging one. Even though you are operating on the nonphysical level, these nonphysical lessons eventually also manifest in the physical realm. These losses may teach you the importance of self-forgiveness, patience and tenacity.

As a leader, you must be aware of the psychological and physical changes your team undergoes when they are threatened with change. One way you lessen the drama is to identify the gap and develop a realistic view of your starting point — including your weaknesses and limitations individually, as a team and even as a company. If you don't recognize any limitations and weaknesses before your journey begins, you are sure to see them along the way.

Any significant transformation will challenge you to overcome the drama in either the first or second gap. The sooner you accept this truth, the more fun you can have while navigating the changes you are about to make. ●

Tell Yourself the Truth

In a nutshell, your unconscious mind controls much of your life. You have programmed habits that run on autopilot. That is why there are so many versions of the truth and so many misunderstandings, hurt feelings and drama. Although our stories protect us — by helping us avoid distasteful information — they can also hamper productivity.

You might be wondering — if our stories are based upon the unconscious, how is it possible to tell yourself the truth?

The premise of "Tell Yourself the Truth" is:

1. **All people live their lives from the stories they believe.**
2. **Your truth is only one version of a larger reality.**
3. **Denial is a way to avoid responsibility.**

No matter what you think the truth is, there is always another, bigger reality. Listen for the red flags in the stories your staff tells you: the excuses about why things cannot change, why things just are the way they are and how someone is doing someone wrong.

None of these excuses adds one iota to problem-solving or moving forward — and chances are that a big portion of what you hear is just the story. People resist looking at the bigger reality. We all trust our version of the truth; in fact, most of us initially defend our bad behavior whenever we're asked to change.

Justification Keeps You Stuck

Have you ever noticed that when you ask someone to change his or her behavior — be it sarcasm, eye-rolling, angry outbursts or stubborn attitude — they will usually respond with something like "Oh, that's just the way I am"? Justification is one way that people regularly avoid taking personal responsibility. We make excuses for our behavior based on a litany of reasons — personality theory, horoscope and the way we were raised.

A better way to approach these self-awareness tools is to use them to better understand your strengths and weaknesses as a way to make positive change — not to make excuses for bad behavior or irresponsible patterns.

One of the best systems of self-discovery and personal development is the "enneagram," a personality assess-

ment based on nine distinct patterns of thinking, acting and feeling that determine the nine major personality types. Dr. David Daniels, author of *The Essential Enneagram: The Definitive Personality Test and Self-Discovery Guide*, explained: "Every human being has three basic needs, the need for security, the need for relationships and the need for getting what we want.

"We try to get these needs met in different ways depending upon our personality type. Sometimes our ways work for us in a leadership capacity and sometimes our methods work against us."

Dr. Daniels elaborated, "If we want to expand into self-mastery there is a universal growth process [which he calls] the 4 A's: Awareness, Acceptance, Action and Adherence. You can own your personality instead of letting it own you. Once you own your personality then you are liberated."

Imagine how liberating a workplace could be if each individual took charge of his responses in a team capacity — without being held captive by dysfunctional thought patterns, actions and truths that do not serve him.

Look differently at what you consider to be the truth about who you are — and consider that no matter what your astrological sign, personality type, life history or habits, you still have choices and the ability to influence change. ●

Reinvent and Realign

The way you see yourself has everything to do with how you lead. When your view of who you are changes, so do the results you produce. **"Reinvent and Realign" is all about becoming the person you want to be so that you can align with your values with clarity.** This process will also allow you to mentor your employees to create their identities as individuals who not only empower themselves personally, but also support the team and your organization's mission.

The notion of self-reinvention is an interesting one; it's the area of personal development where you will find the most excuses and regrets until action is taken. How many people prefer the status quo even when it is detrimental to their leadership? You have probably heard the excuse "that's just the way I am" used as a way to justify rude behavior. That rude behavior may eventually lead to a lawsuit and turn into the regret of resisting change.

Eliminating excuses and regrets means aligning with your highest values so you can effectively lead others by example. Leadership is more than a title.

Stepping Into a New Identity

To anyone seeking positive change: You can do it — and the time is now. Be who you want to be right this second. Give yourself permission to be excellent, and stop letting others define you. If you need to clean up some old baggage or make amends to move on, then do it now — so you can be proud of who you are now instead of making excuses for who you could have been. In fact, no matter what your previous experiences have been or how you have behaved, your past does not have to equal your future. You can start reinventing and be successful today right from where you are.

Eckhart Tolle, in his book A *New Earth: Awakening to Your Life's Purpose*, has introduced the following concept concerning success: "Don't let a mad world tell you success is anything other than a successful present moment. You cannot achieve success; you can only be successful." Doesn't that take the pressure off? Success is a state of being, just like the fact that you are a woman or a man. You can't seek that which you already are.

The four questions you must ask yourself are:

1. Who am I?
2. What am I committed to?
3. What actions and behaviors are out of alignment with who I say I am?
4. As a leader am I getting my desired results?

Since you already asked yourself the first two questions in the last section, you should already know what you want. Now ask yourself: Are you taking a left-hand turn to the island called "excuses," or are you rowing straight to the island called "leadership"? From there, you start reinventing and realigning. Each word, behavior and habit ultimately shines the light on where you really are and whether your deeds match your thoughts and words.

Keep track of all the ways you define yourself, and correct yourself when you are misaligned with your word. As a result, you'll have a great relationship with yourself — something that becomes the foundation for your relationship with others. ●

Stop Relationship Drama

Everything in life is centered on relationships, and relationships exist because of the way in which you think. You can only experience someone or some situation in relationship to yourself; therefore, in order to change anything in your life, you must change the way

you think about it. When you are willing to see another person differently, you can change your relationship with that person.

The Premise of Stop Relationship Drama Is This

Relationships are always active first on the nonphysical level. In other words, they exist because of your thinking. You can't even have a relationship with someone until you think about that person, right? When you first meet someone, you form an impression, and your views of that person build and shift as you interact with and observe him or her. In essence, your thoughts influence your behaviors — and thus, your relationship — toward that person.

When your thoughts about yourself change, so does your experience.

But what about all the other relationships you have — to time, money, your past, your imagined future, your body and every other aspect of your life?

Why Relationships Matter

Your success and ultimately your happiness in life are directly related to the quality and quantity of your relationships. The more connected you feel, the happier you are.

This is equally true in your workplace. Research company Gallup reports on its website that having one good friend at work is essential for employee satisfaction. Good workplace relationships are simply good business. Why? Because nine out of 10 problems that employees encounter at work are people-related. Therefore, you have solved nine out of 10 problems when you focus on developing better workplace relationships.

Denial Is the Drug of Choice

Managers or business owners frequently know and even admit that drama is present in their workplaces. Denial is the drug of choice for many of us when we face difficult choices.

Awakening from the drug of denial can be painful. When you shed light on another person's incompetence, rude behavior or pattern of which the person was unaware, the person will become defensive. Your staff member may feel attacked or belittled, so make sure you approach these issues with kid gloves. Observe these two rules:

1. Never catch anyone off guard.
2. Always correct in private and do it within a positive, team-oriented approach, with the intention of bringing out the employee's best. ●

Master Your Energy

All drama has three common elements: a lack of clarity, a relationship component and an energetic component. We have already talked about clarity and relationships; this section is about the energetic component.

The premise of "Master Your Energy" is: Everything in the universe is made up of energy, and all energy systems work together. Therefore, the leader who understands how to master energy can help bring out the best in others. In turn, this will help to eliminate much of the complaining and excuses — not to mention turnover, burnout and power struggles.

The cause behind many illnesses is an inability to comprehend energy mastery. Working harder with less contributes to more workplace drama due to misunderstanding and the perception of the lack, limitation and fewer resources to handle the workload.

Energy mastery works from this premise: Since everything in the universe has energy, productivity and well-being are directly related to mastering energy. Mastering energy occurs when we create boundaries, have our needs met, and develop systems to help maximize and leverage time. The better you are at mastering your energy, the higher your personal effectiveness — and the more positive the impact you have on others.

Being in charge of your emotional, mental, spiritual, environmental and physical energy can make you a very positive role model. As *The Power of Full Engagement* authors Jim Loehr and Tony Schwartz state in their book, "The more we take responsibility for the energy we bring to the world, the more empowered and productive we become. The more we blame others or external circumstances, the more negative and compromised our energy is likely to be."

Think of it this way: Energy is power, and we all lose power in various ways. Some of us do not get enough rest, while others let their minds wander endlessly over problems. By mastering your energy, you can become more empowered and productive.

Manage Your Goals to Sharpen the Focus

The five kinds of energy are *physical, mental, emotional, spiritual* and *environmental.* All of these work together and impact one another. For example, everyone knows how easy it is to have an emotional outburst (or excess emotional energy) when you're overly tired (lacking physical energy).

Everything is energy — and each type of energy is a portal of sorts. Rather than looking at each component

separately, realize that any one of these areas can bring about positive changes. If you require rejuvenation and get it, you will have more mental clarity. When you get your team excited about how the company goals contribute to their well-being, you add gas to the tank. When you set boundaries, you create calm instead of chaos. ●

Release Resistance

Wouldn't it be awesome if leadership were as easy as setting reachable goals and having a few authentic conversations and everyone would be rowing together? The reality, however, is that life is not that simple. No matter how great you are as a leader, you will face one of the biggest roadblocks to productivity and personal effectiveness: resistance.

Leaders face resistance on a daily basis. Teams resist working together. Individuals resist change. Perhaps you even resist the most difficult parts of your job.

The core of resistance is what author Eckhart Tolle describes in *The Power of Now* as the "non-acceptance of what is." You avoid because you don't want to face whatever it is that you don't want to face. You complain because you can't deal with a certain situation, or you justify an angry outburst because you cannot accept the hand that has been dealt to you. How many times have you heard the same friend complain about her mean boss or sloppy husband? Complaining denotes an unwillingness or inability to let go of what can't be controlled, or to face and act on what can be changed.

The premise of releasing resistance is: You cannot solve a problem until you accept the situation. When you jump into a solution before releasing resistance, you will just experience more drama. The solution only comes after you let go of your resistance.

The Four Main Patterns of Energy

Resistance can be identified by four main energy patterns. When these are broken, they allow the one who is resisting (you or someone else) to take full responsibility for facilitating or navigating change. Those four main energy patterns are *blame, resentment, justification* and *judgment*. Resistance is always a state of non-acceptance and an avoidance of responsibility.

Non-acceptance starts as a thought impulse such as "I don't want to go through this (fill in the blank)." That thought triggers an emotional response such as frustration, dread, irritation or guilt, then quickly materializes into more observable behaviors such as angry outbursts, finger-pointing, blaming as well as subtle behaviors such as avoidance and procrastination. In the end, resistance boils down to an unconscious avoidance of responsibility, which spirals into negativity, then finally into full-blown drama.

Responsibility Is the Recognition of Choice

Here is a concept to memorize: Responsibility is the recognition of choice.

You need to teach your employees to bring an idea, partial solution or suggestion for moving forward when they come to you with a complaint. The options don't necessarily have to be the best choices or the right ones — but simply recognizing that there are choices will enable someone to leave the victim role behind. They can then find the power to make a suggestion, accept what is or ask for what they want in a way that benefits the whole organization. ●

Become a Creator

Always seek out and encourage creative employees who see choices even in difficult times. A key distinction of a creator is someone who recognizes choice. Great employees are the ones who believe in free will.

Dr. Roy F. Baumeister, professor of psychology at Florida State University in Tallahassee, said that a belief in free will predicts better job performance. We are not arguing the point of whether free will exists or not; we are discussing the belief that it's beneficial to act on it. What if there was one question you could ask during job interviews that would determine who would be a responsible worker?

Our belief in choice allows us to create a better workplace.

The Premise of Becoming a Creator Is This

The path to developing a great team and positive workplace is empowerment. Leaders must be able to develop other creators. Creators take responsibility and see opportunity. They don't blame the economy, another person or a situation. They live life in the flow and from the field of possibilities. "Become a Creator" is a fancy way of saying "take responsibility."

Recognize Choice

In order to create, you have to first see yourself as a creator and be willing to recognize the choices that you have.

Self-regulation is important to human performance, not to mention avoiding a lawsuit or keeping a cus-

tomer. In terms of your business, this means that when a customer is rude, a co-worker is disrespectful or an unwanted change occurs, the damage will be minimal with the person who can self-correct and self-regulate. Even when the boat springs a leak, the empowered and creative employee will choose instead of react. There will be a bigger gap between stimulus and response. Exercising the power of conscious choice lets people feel more empowered; eventually, their programming is changed to a place where emotional intelligence and reacting with grace under fire is the norm rather than the exception.

The first part of being a creator is to recognize choice. Since leadership is about influencing others, a leader's No. 1 duty is to be a role model and teach others about personal responsibility. That means helping others to step out of the old programming of the victim mode and recognize choice. ●

Conclusion: No Complaints, No Excuses, No Regrets

As long as you are living on this earth, you will experience some obstacles to your peace and prosperity.

But drama is not really the problem. The amount of time you stay in the drama — and the effort you put toward it — is the problem.

Complaints, excuses and regrets only serve to keep the drama alive. We complain when we believe that we're powerless. However, even when you are at the mercy of some unfair action, you still have a say in what happens.

An excuse is just a thought that keeps you stuck. It lives in sayings like "It's too hard," "It may not pay off," "I'm too old," "They may not understand," "Because of my past, it is just not possible."

Any time you are really stuck, ask yourself what excuses keep you from moving forward. Most of us make excuses on a regular basis without even noticing.

The reason I didn't return your call is because I was too busy.

I would have been on time but the traffic was horrible.

Every excuse is simply one more indicator that you are letting outside circumstances control your life. Excuses strip us of personal power. Try to ask yourself "Where could I be without that excuse?" once in a while; you will see that a self-awareness exercise like this one helps pinpoint places where you get stuck in the old story instead of reinventing and stepping into a new truth.

Regret is often the result of too many excuses. Fail to be responsive one too many times (even though you were busy) and you lose a customer. Show up late one too many times and you lose credibility with your peers.

Regrets also come from reacting instead of responding, from failing to think ahead, and from doing what you want to do now without recognizing how it may negatively impact your future. When you are clear about your core values and are more committed to the discipline of living congruently, you will find that you have fewer regrets.

Ask These Three Questions

So, the next time you experience drama, ask yourself these questions: Where am I unclear? What is my relationship issue? Where am I resisting? Train yourself to ask these each time you experience the chaos of change, the urge to retaliate, the desire to win an argument or the thought that you simply can't go on.

There is no reason to deny or be afraid of the drama — or even your own drama. Embrace what drama has to teach you about yourself, your values and your opportunities for growth. ●

How Creators Concentrate on Outcomes

According to *The Power of TED (The Empowerment Dynamic)* author David Emerald, creators concentrate on the outcomes they are committed to achieving. Rather than merely reacting to problems and focusing on what they don't want, they focus their vision on what they do want. Emerald claims that becoming a creator can definitely make a bottom-line difference for your business. One of his clients — the CEO of a technology services company — reported that they increased the pipeline of prospects four-fold and experienced a 32 percent growth over the previous year — during a period in which many competitors struggled or went out of business. The CEO attributed this growth to implementing TED and focusing everyone in the organization on becoming a creator.

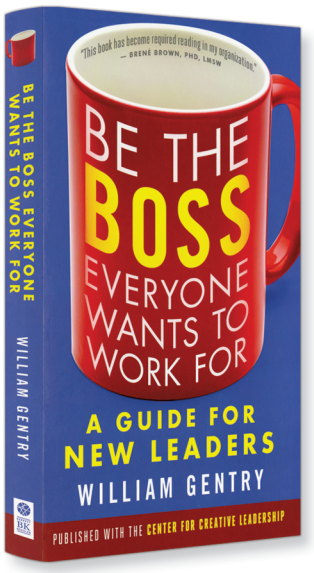
Be the Boss Everyone Wants to Work For

A Guide for New Leaders



by William Gentry

THE SUMMARY IN BRIEF

You've been promoted to leadership — congratulations! But it's nothing like your old job, is it? William Gentry says it's time to flip your script.

We all have mental scripts that tell us how the world works. Your old script was all about "me": standing out as an individual. But as a new leader, you need to flip your script from "me" to "we" and help the group you lead succeed.

In *Be the Boss Everyone Wants to Work For,* Gentry supports and coaches you to flip your script in six key areas. He offers actionable, practical, evidence-based advice and examples drawn from his research, his work with leaders, and his own failures and triumphs of becoming a new leader.

But this book is more than a series of best practices — it's your guide to internalizing a leader's perspective. Gentry helps you flip your script so you'll know what to do to help yourself and the team you lead succeed. That's the kind of boss everyone wants to work for — and the kind of boss who accomplishes the most.

Get started flipping your script, and become the kind of boss everyone wants to work for.

IN THIS SUMMARY, YOU WILL LEARN:

- Why becoming a new leader brings a sea change in roles and expectations.
- The six ways you can "flip your script" to become a boss everyone wants to work for.
- The importance of non-verbal communication among leaders.
- How to adjust to new relationships with subordinates and teams.
- How to gain a leader's perspective and develop and focus on others.

Introduction

Exceeding expectations and having a very special set of technical skills helps a person stand out from others and makes a high-performing employee and possibly a kick-ass movie hero. It does not necessarily make a boss everyone wants to work for.

New leaders must do something much more substantial and, frankly, much more different from anything they've ever done before in their professional careers. It's probably why so many are struggling, even failing, in their new gigs as bosses.

Consider the following findings over the past decade: 82 percent of frontline leaders (where many new leaders are in organizations) are not rated as "excellent" in skills and capabilities as leaders; 80 percent of frontline leaders are dissatisfied with the job they are doing as leaders, and 70 percent of their senior managers agree; 40 percent of newly promoted leaders fail within the first 18 months; 50 percent of managers are labeled as incompetent, a disappointment, a wrong hire or a complete failure by their co-workers.

New leaders get a raw deal. Actually, many of them get no deal at all. Almost 60 percent of new leaders receive nothing in formal training or development when they become a boss for the first time. Nothing. Just a "We can make this official on Monday" congratulations and an expectation that as soon as HR approves the promotion, they will lead others just as effectively, if not better, than middle-to-senior-level executives who have had years of leadership experience.

Becoming a leader for the first time in your life is no doubt one of the biggest psychological and emotional shifts you will ever experience in your career. It's totally different from what you do in your normal, everyday work as an individual contributor.

If you want to be more than that title on your business card and you want to step up your game, there's hope. This is your fresh start. You can be a new leader and the boss everyone wants to work for.

Flip Your Script So You Won't Flop as a Boss

There is one overarching theme for new leaders to be the boss everyone wants to work for: Flip your script.

First, let's be clear on what a script is. Think about a play, musical, movie or television show you've watched. It was scripted. It used written text to guide the performance.

But scripts aren't just for jocks, nerds, villains, heroes and heroines on stage and screen. We all have scripts in our lives. In your own life, you write your own script and live your life based on what your script says about the various roles you have: parent, child, partner, spouse, sibling, community activist. Your script helps you understand who you are and how to live. It's what is expected of you.

When you write your own script, you provide details about how you are supposed to think; what you are supposed to do; how you should act, feel, relate with others; how you should view the world; and how you should view yourself. Scripts help us understand our roles and our purpose.

The script for individual contributors is all about "me" and "my" own abilities, achievements, technical expertise

and personal desire to get ahead. That's not necessarily a bad thing; having ambition and seeking personal excellence are worthy traits. It's perfectly normal for us to be motivated to succeed and do well in life.

But to be a successful leader, to transition from a technical expert to a leader of people, you must be willing to shed the "individual contributor" role that got you the promotion to leadership in the first place and stop shining the spotlight on "me, myself and I."

Flip from a "me mentality" to putting attention on "we" and "us." That old script — that relentless determination to complete work, reliance on technical savvy, being a subject matter expert, that focus on "me," to get rewards, recognition and impress others — is nowhere in the script of a new leader who wants to be the boss everyone wants to work for.

Realize that the biggest driver of any new leader's success is not about "me" anymore. Make others — your staff, your team, the people you lead and serve — successful and help them fulfill their potential. Flip from being the center of attention to shining the spotlight on others.

Six Ways to Flip Your Script

Flipping your script is a huge idea, a big deal. It goes against every normal and natural instinct you may have. It's so different from everything that has made you successful up to this point in your career. But leading others is so different from anything you've ever done before. Here are six parts of the script you must flip in order to be the boss everyone wants to work for.

- Flip your mindset.
- Flip your skill set.
- Flip your relationships.
- Flip your do-it-all attitude.
- Flip your perspective.
- Flip your focus.
- Stick with your flipped script.

Flip Your Mindset

Research on new leaders suggests that you flip your script by flipping your mindset.

According to Carol Dweck, author of *Mindset,* there are two predominant mindsets. Some people have a *fixed mindset* (what some academics call entity theorists). They think what gets them ahead in life are their innate abilities, intelligence, talents and hard work. They must constantly prove themselves to others. They want to look smart. They are motivated by extrinsic motives (external rewards, approval from others, wanting to look good in front of others or wanting to prove they are better than others). They also have a fear of failure because failure says something negative about their abilities.

Others have a *growth mindset* (what some academics call incremental theorists). They think their abilities can be developed through learning, training and persistence. They believe they can improve from their own failures. They want to learn because it's fun, engaging, intrinsically pleasing and challenging. This attitude resembles a flipped script.

The research of Dweck and others clearly demonstrates the positive effects of a growth mindset in parenting, school and relationships. And regardless of leadership experience, their research provides evidence that leaders with a growth mindset, a flipped script, are much better off than leaders with a fixed mindset.

In one study, Peter Heslin, Don Vandewalle and Gary Latham focused only on managers with a fixed mindset. They purposefully split fixed-mindset managers into two groups, each taking a 90-minute workshop. The formats of the workshops were nearly identical, with one critical difference:

- One group's 90-minute workshop emphasized the fact that people have multiple abilities, and in some areas they are strong, whereas in other areas, they are weak.
- The other group's 90-minute workshop focused specifically on adopting a growth mindset through "self-persuasion." In that workshop, managers tried to talk themselves into adopting a growth mindset — in other words, flipping their mindset.

So what happened? The fixed-mindset managers who attended the "self-persuasion" training were more willing to provide coaching and had higher quantity and quality of performance-improvement suggestions. These changes were not seen in the fixed-mindset managers who attended the other workshop.

If you think you have a fixed mindset, the research offers you hope. If given the proper time, energy and support you can flip your mindset.

What You Can Do to Flip Your Mindset

The one big thing you can do to flip your script by flipping your mindset? It's your "mindchatter": talk to yourself differently. Mindchatter is that inner dialogue we have providing us opinions and evaluations on how well (or not so well) we are at doing things. It's the

play-by-play commentary. It's the positive, optimistic and validating chatter we hear when we do something right. It's also the critical, harsh, crippling, destructive chatter we hear when we aren't at our best and are struggling.

We all face doubt and uncertainty. We all have times when the voices in our head say something like, "I've never been a boss before. Can I do it?" Or, "I've never failed at anything. What happens if I fail at this?" Or worse, "I'm not good at this. I'll never be able to flip my script."

When things start to go sideways, we tend to start focusing more on ourselves, our own talents and keeping our egos in check. When you hear these sorts of lines in your head, recognize it's not the mindset of the boss everyone wants to work for. Shut it up. And flip it. Mindchatter matters.

As a new leader, make sure your mindchatter is constructive. Be perceptive, motivational, realistic and positive. Listen to the right mindchatter. Use your mindchatter to tell yourself, "You can do it in time," or "You do have the power to learn about leading others," and "You can be the boss everyone wants to work for." And it's really important to use "you," not "me."

Even the Pronouns Matter

In her book, Dweck discussed the "I" versus "you" pronoun among chief executive officers (CEOs), the people at the very top of organizations. CEOs who wanted validation — superstar or hero status, or wanted others to believe they were the smartest, most talented person in the room — tended to have a fixed mindset. They used the pronoun "I" more.

Others mentioned, like Jack Welch of GE, Anne Mulcahy of Xerox or Lou Gerstner of IBM, had a growth mindset. They hated using the word "I" and preferred to use "you" or "we" or "us" in their writings and speeches. They also emphasized the importance of learning and growing as a leader, not being the smartest and best and brightest in the room. "It's not about me anymore," right? They got it. They flipped their script by flipping their mindset.

Flip Your Skill Set

As a new leader, when you get promoted to be a boss, it's not about having the skills of an individual contributor anymore. It's not about technical smarts and savvy, knowing the lingo, mastering the program, operating the machine, closing the sale or having the work-arounds at your fingertips. Instead, you need to flip your skill set.

In a study, new leaders took a 360-degree assessment. Over and over again, the following four skills were consistently picked as being more important for success than others as well as being skills new leaders often struggled with more than others: Communication, Influence, Leading team achievement and Developing others.

Communication — It's More Than Words

As an individual contributor, people look at your work. As a new leader, people look at you — your face, body language, behaviors and actions. Your ability to communicate with others is valued and relevant in accomplishing your work and connecting with your direct reports and other co-workers.

One area new leaders should understand, enhance and improve is nonverbal communication — whether it's getting your point across, tailoring your communication to your audience or saying something other than "Because that's what I said."

When you are talking with others in the hallway, during one-to-one meetings or presentations or anywhere else at work, are you really "saying" what you think you are saying? The actual "words" said really make up a small portion of what's actually being said. Science agrees. Researchers Ray Birdwhistell and Albert Mehrabian believe that nonverbal communication makes up anywhere between 65 and 93 percent of the total emotional interaction between two people. And when the words don't match the behaviors? We believe what's not being said, the nonverbals, rather than the words.

To flip your communication skill set, be aware of every type of way you communicate nonverbally. These ways are what psychologists Steve Nowicki and Marshall Duke, among others, term different "channels" of nonverbal communication. Here are six:

1. **Rhythm and use of time: not just for music.** Rhythm plays a role in the way you communicate with others. Being "out of sync" with others may cause confusion, anxiety or discomfort for both you and the other person or people you are with. How you organize time and commitments also says a lot about you.

2. **Interpersonal distance (space) and touch: not being touchy-feely.** There are several "zones" we use for communication, and if someone invades a zone and the rules that are part of them, that causes problems. In the workplace, touch carries extreme meanings and should definitely be used with caution. You don't want a lawsuit on your hands, or a negative

reputation (i.e., being that person who gives people the creeps).

3. **Objectics: more than "dress for success."** Think about your clothes, hair, tattoos, jewelry, cosmetics and fragrance. Many times, it's the first thing people notice about you, and these objectics may tell people a lot about you in that split second: who you are, what you do, what you believe in, what you support and your own personal values. And you didn't even say one word.
4. **Gestures and postures: you reveal a lot with your hands and stance.** You can say a lot with your hands and body without uttering a single word. Your posture can say things as well. If you have a slouched posture, people may think you are tired or disinterested. Hands in pockets may convey boredom. But standing straight may tell others you are attentive, excited, enthused or confident. Leaning in may tell someone you are interested in what is being said.
5. **Facial expressions: you can read it all over my face.** In face-to-face interactions, a smile, frown, grimace, raising your eyebrows, eye contact — all of that can tell people something that words may not.
6. **Paralanguage: say what?** This is all the things that make up the sound that accompanies the words. Think about your tone of voice — the loudness, speed and intensity of your speech. Silence (or absence of it) too. And don't forget those "credibility killers" that ruin your credibility, authority and reputation, like, well, "like" and "you know" and "uh" and "um." All of these examples are part of paralanguage.

The Platinum Rule of Communication

The golden rule of "treat others the way you want to be treated," can be flipped to the platinum rule: Treat others the way *they* want to be treated. It can greatly help new leaders flip their script, communicate better and be the boss everyone wants to work for.

The platinum rule is a good tool to remember when you communicate with others. Say you only want to hear the bare minimum. You'll tend to converse with others in that manner too. But others (possibly the people who report to you) have a desire to hear more and be engaged in conversations and decisions. They want to be heard. So, flip your script by flipping your communication. Talk with others more, understand what others are feeling, and become more aware of the verbal and, in particular, nonverbal messages.

Influence

Influence is all about your power, authority and ability to shape or change your audiences' actions, decisions or opinions. Influence happens all the time at work. If you influence well, you'll be successful at work. But influence is more than just "Do it because I'm the boss." The "3 H's" are three ways that you can influence others:

Head: Influence people using rational approaches. Use your intellect, reason, logical arguments and facts.

Heart: Influence people using emotional appeals. Let people know how a decision will affect their own lives, work, values, beliefs or those of the people around them.

Hands: Influence people using a connection you have with them. Work together to accomplish a common goal.

The one big takeaway to flip your script by flipping your influence skill set? Follow the platinum rule — influence others the way *they* want to be influenced.

Though you may love talking about data, others may be bored to tears when they hear it. Maybe that's the way you've done it before, and your influence attempts fell short. Now is your chance to flip your influence skill set by talking about values, beliefs and feelings ("heart") or through reciprocity and collaboration ("hands").

Flip Your Relationships

When you officially become part of management, you start wearing the imaginary T-shirt that says, in big bold letters, "Leader" across your chest and the imaginary hat that has "Boss" stitched in, and everybody can spot your new wardrobe. Once that happens, people immediately see you differently. Adjust, get used to it and flip your script.

When you flip your script by flipping your relationships, you now pay attention to others, their needs and their well-being. There are two major relationships you have to flip: one with your peers (some, your friends) and one with your team.

From BFF to Boss

Many new leaders have difficulty displaying authority, particularly to those with whom they have a history and friendship. It's the biggest challenge new leaders have, and many just don't know how to go about flipping that relationship. Here are four ways to get you started:

Be clear. It's your job as the boss to talk about the new responsibilities you face in your new role and to set clear expectations and boundaries from the start. Explain that you are accountable for the development and performance of everyone who reports to you, not just your BFFs.

Be aware. People will observe, notice and go so far as to scrutinize every decision you make (or don't make), and whom you give your time and attention to (or whom you don't). Be aware of what you are doing and not doing. Build high-quality relationships with as many of your subordinates as possible.

Be fair. New leaders (and many well-seasoned ones too) often treat some followers differently than others. And that's okay, so long as you treat everyone fairly. Treating everyone equally isn't mandatory. You don't have to give each and every subordinate you have the same amount of equal time. You don't have to give equal bonuses or raises for every individual on your team. In fact, research indicates that treating everyone in a group the exact same way may be as dysfunctional as treating a few selected people especially well. If you develop higher-quality relationships with some employees and not others, base those relationships on merit, not blatant favoritism. If some are provided opportunities to grow and expand in their roles and responsibilities, and if they receive development, support, encouragement and rewards *based on their performance,* then different levels of treatment actually represent your fairness.

Be prepared. When you go from BFF to boss, the friendship as you and your BFF knew it has ended. It's over. Done. You and your friend must choose whether a new relationship begins. If you or your friend can't adjust, be prepared to move on. But don't burn bridges. You never know who may be leading you one day.

Why You Should Flip Your Relationships with Your Team

Two things describe effective leaders: They get the job done, and they are really good at relationships.

With task-oriented behaviors, you lead others doing the work. You drive results, helping others be productive and complete work efficiently and effectively.

Relationship-oriented behaviors are all the things leaders do to make others feel comfortable. It's not just about being friendly. Flip your script by understanding the importance of the relationships you have with your team.

When you are the boss, you can make or break your team's effectiveness, performance and ability to learn not just by leading them in doing the work, but especially through building your relationships with team members.

Anytime you have a collective of people with shared work, such as the teams you lead, you know that leadership is happening when you see three outcomes: direction, alignment and commitment.

Each and every person on your team should agree with what the team is trying to achieve and that the goal is worthwhile.

Each person should know his or her roles and responsibilities and what others are doing.

Each person should be dedicated to the work and committed to the team.

It is your responsibility to check in with your team, both individually and as a collective.

Flip Your 'Do-It-All' Attitude

As a new leader, your work is different. The work you once did won't earn you recognition and won't make you a successful leader. So what do you do? What's your script?

First, you don't do all the work anymore. Second, you develop others.

Some new leaders feel they must do the work because there is not enough time or resources to get the work done. But many others do the work because they know it better than everyone else.

According to teams expert Dr. Eduardo Salas and his colleagues, team members should have all the information they need at their fingertips to get the job done and know all the procedures necessary to get the work accomplished. When you flip your "do-it-all" attitude, you drive results and productivity by leading others to perform the work, and you reduce ambiguity and provide structure to the work.

One other thing you do when you flip your "do-it-all" attitude is delegate. You should give someone important work and more responsibility while providing authority, resources and support. And by delegating effectively, you free up your time to do other work that may need more of your attention. You also build trust among the people you delegate work to and provide autonomy.

Developing Others Is Like a Gift

The people you lead want to know that someone — you in particular — prioritizes their development and growth. Developing others is one of the biggest skill gaps of new leaders, yet the boss everyone wants to work for is known for making time to develop others and believing that developing others is a top priority. Developing others is like a gift, as good to give as it is to receive.

Do these three things to develop others: support others, create goals and give feedback.

Support others the right way. Researcher Kathy Kram believes (and dozens of studies affirm) that there

are two types of support you should provide when you develop others. One is career-related support. Four ways to provide this type of support are build the reputation of people you are developing by bragging about them; help others develop their skill sets; protect others from things they don't need to know; and give them interesting, challenging assignments.

The second type of support you should provide is emotional support. Those you develop often find great support from you that inevitably increases or builds up their competence, identity, self-worth and effectiveness. Two ways to provide this type of support are by (1) being a role model and (2) accepting others for who they are.

Create goals the right way. Goals should be (1) specific, (2) difficult, (3) yet attainable, according to researchers Ed Locke and Gary Latham. According to Locke and Latham, specific, difficult, yet attainable goals are linked to reduced absenteeism, fewer injuries and increased production.

Give feedback the right way. From this point forward, it's not about "me" and how "I" am doing; instead, flip your attention toward developing others by providing feedback. Providing positive and negative feedback to your direct reports, staff or team is the only way they will know how they are performing well or, if they are not, how they can become better. It's what the boss everyone wants to work for does and is part of your script now.

Flip Your Perspective

Most individual contributors have a narrow view of what goes on in their organizations. Now that you're a new leader, flip your perspective. See things more broadly. Expand your vantage point.

As you flip your script by flipping your perspective and you start to take on that bigger view, you'll quickly see the organizational politics at play. Your ability to flip your perspective has a bearing on how well you manage politics, how well you work with co-workers and stakeholders (up and down as well as across the organization), how you feel about your organization and how well you do your job.

Those who flip their perspective understand that there are competing interests, scarce resources, ambiguity, unclear rules and regulations and a lack of information. They see it all. They don't let politics get in the way of their goal to bring transparency and clarity to their teams, their co-workers or stakeholders they work with. They remove uncertainty in the environment.

When you flip your perspective in this way, you'll survive — even thrive — at navigating politics in your organization with your political savvy, and feel good about yourself and the way you do it too.

What You Can Do to Flip Your Perspective

Here's the skinny: Understand what you want, what others want and determine where there is common ground so everyone wins and benefits. To do that, you need political savvy. There are four different aspects of political savvy that you can develop.

1. **Read the situation.** Objectively scan, observe and gather information about yourself and the people and the environment around you. You are highly self-aware with your own thoughts and behaviors. You also thoroughly understand the thoughts, behaviors and needs of co-workers and stakeholders you interact with.
2. **Determine the appropriate behavior before acting.** Based on observations of what is going on around them, politically savvy bosses learn what to do in a given situation. Find common ground and do what needs to be done, so everyone wins something and feels good about the final result. You don't manipulate others to get what you want. Instead, work through the system to ensure everyone's needs are served.
3. **Network strategically.** Networking strategically is building strategic relationships and garnering support for your goals and those of your co-workers and stakeholders. By connecting with influential individuals who hold different resources and valuable assets, you'll gain a voice where you might not have been heard otherwise. More importantly, you could gain access to important information from key insiders. So what does a strategic network look like? ODD: open (people you know in your network should not all know each other), diverse (people in your network should not all be from the same group or division) and deep (understand what people do, the situations they are in, and their motives, values and needs).
4. **Leave people with a good impression.** As a boss with political savvy, be sincere and authentic in all that you say and do, and leave people with a good impression.

Flip Your Focus

Now that you are a boss, your focus must constantly be on your character, integrity and doing what is "right." Let's face it: people look up to leaders and expect a lot out of

them. You clearly have a lot of power and influence over others. And so you have the potential to affect the lives of people outside of your own. When you flip your focus, you understand that your actions and decisions affect more than just you.

One study investigated the character strengths of integrity, bravery, perspective and social intelligence among 191 top leaders of organizations. The direct reports of these 191 leaders supplied the ratings of the four character strengths, and the bosses (in this case, board members) of the 191 leaders reported on how effective these top leaders were in their jobs. After crunching the numbers, integrity, bravery, perspective and social intelligence each positively related to performance.

The data also showed which of the four character strengths was most important. Integrity came out on top. Character and integrity are even tied to the financial performance and bottom lines of organizations and how people feel about their jobs, too. According to research by KRW International, CEOs rated as having high character, including integrity, had a five times greater average of return on assets than CEOs with low character. They also found that employee engagement was 26 percent higher in organizations with CEOs high in integrity.

What You Can Do to Flip Your Focus

When you flip your focus, you understand that your impact is bigger. Pay attention to integrity because you need it in many things you do as a new leader. In particular, you need integrity when making decisions and when building trust. Here are some tips to increase your odds of doing the "right" thing when the time comes.

What would others think? Ask yourself if the behavior you are about to engage in or the decision you are going to make would be something you want your friends to read about in the local paper or the *Wall Street Journal*.

Promise and then deliver. Be clear about what you can do and the timeframe around it. Confidently commit to what you can do. Then deliver on it.

Learn from why good people do bad things. We oftentimes don't do the "right" thing because we don't fully comprehend the entire situation; we don't see the big picture or understand the actual choices we can make. Think about the future. Fully understand the possible aftermath of your decisions, and be transparent to all parties involved about why you are making that decision. Also, know the triggers and pressures that prompt making the wrong decision. Research indicates that we are more likely to act unethically when we work in uncertainty; we are under extreme time pressure; we work alone; or there are big rewards (usually monetary) tied to our work. If you are in any of these situations, you are more likely to go down a path you shouldn't go or make a decision you don't need to make.

Stick With Your Flipped Script

Stick with your flipped script, the script of the boss everyone wants to work for, and do not revert back to the "It's not you; it's me," script.

Psychologist Robert Eisenberger believes that if we feel our organization cares for us, we "pay back" the organization through our efforts, increased performance and commitment, and by going above and beyond our jobs to help our colleagues and our organization reach goals.

As a leader, you represent, symbolize and personify the organization to your direct reports. So those who report to you attribute how well the organization supports them based on how well you support them. Shine the spotlight on others.

If the people you lead and serve are successful, you are successful. Think about it. Maybe you are leading a small team right now. If they are successful, you'll be seen as a driver of results and developer of talent. You'll be given more responsibility. You'll lead more people. If they continue to be successful, maybe you'll lead an entire department, division or function one day.

Ultimately, as leaders, we are called to serve others, help others grow and make the world around us a better place. You have the capability and capacity to make others feel wanted, needed and special at work. You have the power to make them feel valued and appreciated. You can outline exactly what they do and how it matters to you, your organization and even society at large. That's a rare commodity in organizations right now.

You have the potential and ability to be the boss everyone wants to work for. Now, go do it.

MORE SV CONTENT FOR NEW LEADERS

Access these and more in your Soundview Online Library:

Summary: *From Bud to Boss* by Kevin Eikenberry, Guy Harris. Eikenberry and Harris identify the difficulties that new leaders experience and offer help to get new leaders beyond the stress and fear to focus on becoming the most effective leader they can be — starting right now.

Webinar: *360 Degrees of Influence* by Harrison Monarth. Harrison Monarth provides everything you need to gain the trust and respect of those around you — no matter where they're positioned in the organizational hierarchy — and expand your influence well beyond your immediate environment.

Beyond Belief

Awaken Potential, Focus Leadership

by John Grinnell

THE SUMMARY IN BRIEF

The word *leadership* has been grossly overused to the point that many do not know what it really means and are unaware of the personal commitment required. Today's interconnected world, with its serious economic, environmental and social challenges, cries out urgently for real leadership, yet few know what it is or how to develop it.

Beyond Belief uses seven powerful models, case studies, and research from John Grinnell's more than 25 years of experience to clarify the intangible psychosocial basis of organizational life so outcomes of leadership are more predictable. A lucid explanation of the way a leader's self-awareness of personal beliefs influences outcomes lays a solid foundation for pointing out how to more rapidly cause followers to gain perspective, act accountably, and rapidly align to adapt faster in the marketplace.

Beyond Belief will show you how to step up to the personal challenge of real leadership. And as Grinnell suggests, whether you do or not is entirely up to you.

IN THIS SUMMARY, YOU WILL LEARN:

- To increase self-awareness in yourself and your organization in order to move beyond the old, habitual behaviors that have been holding you back.
- To use your new awareness to align you and your organization with its goals to become "on-purpose" and to motivate others to do the same.
- To use accountability, including its positive side, to hold everyone responsible for achieving their part in reaching set objectives — including you.

We Need Leaders Now: Awaken Leadership

Real leadership is one of the most rewarding but difficult challenges a human being can undertake. To step up and do what others can't do or will not do is why there are so few real leaders. It always starts from within oneself and moves out to others. It has less to do with intelligence and analytical ability and everything to do with perspective, integrity and courage.

The problem is that we call people leaders when they are not. They then think they are leading when they can't. Most can't because they don't really understand what it is or are unwilling and don't have the stomach for it. Leadership can be learned, but just because a person is a boss or can charismatically stand up in front of a crowd doesn't mean that person can lead.

Failure of leadership and the consequences of that failure are all around us. Think back over the past decade. The Enron debacle. Then there was the mortgage crisis. More recently, we've seen the IRS appearing to target certain populations in our country. Little is learned, with history repeating itself over and over again. Many have given up hope, believing with grim resignation that we will never be able to escape the gravitational pull of human nature and unaware leadership. These failures represent the next major challenge in the evolution of leadership. That is, to awaken and learn to look within with awareness to become more effective.

Types of Leadership: A Model

Interpersonal leadership is the leverage point of all organizational success, yet it is probably the least focused on and least understood. The usual reasons people become leaders are ego gratification, pleasing family and friends, money and security, power over others, achievement and prestige. These reasons often work at first for young leaders, as they underpin the necessary drive and ambition for leadership; but in the long run, if they are not coupled with awareness and clear purpose and values, they can never help a leader reach his or her potential and the potential of the organization that leader serves.

Happy leaders usually have become leaders by choice, have prioritized their values, and often find meaning in serving others, not just themselves. This highlights a key point: Leadership is the most important service a human being can provide for our society. Yet many executives don't realize this truth and don't see that each decision and action is either contributing to or damaging the fabric of society.

Leading others with meaning and toward full potential begins with self-knowledge. It has more to do with our beliefs, relationships, ways of communication and actions than the content of what we say. The mind prompts people's perceptions, reactions and behavior, which are what cause the results in organizational life. By using this insight, leaders can consciously create conditions that allow people's motivations to be directed toward a chosen, better outcome. While the mind is abstract, and reaching the hidden self involves working with the abstract, the insights we can develop about how to reach it are practical.

The Grinnell Leadership Vitality Model

Awareness — both self-awareness and awareness of how others think, feel and work together — is the first essential step in developing leadership, in tandem with grasping

the organization's purpose. Out of awareness, linked to the vision and goals arising from purpose, flow the other components: alignment and accountability. Together, these elements compose the Grinnell Leadership Vitality Model. Alignment coordinates the insights that come to the aware leader with the envisioned goal and with other goals that awareness and knowing the purpose produce. Accountability ensures that the leader, the organization and the leader's followers will carry out the actions necessary to reach those goals.

Real leadership requires the leader to align the work of others with his or her goal by understanding what actions on the leader's part will elicit the necessary motivation to achieve it. And to do so, the leader must gain an awareness of how individuals' minds work and the ways their perceptions and behavior cause them to interact with and relate to each other. A real leader asks, "What can I say or do to get individuals to cause them to motivate themselves to do what I need them to do?"

Self-awareness, the entranceway to the awakening of human consciousness is the next great "age" for humanity as we find our place among the computers and "big data" of the future. Self-awareness is the taproot of leadership and the first step in awakening personal leadership and organizational potential.

Jump-Start Real Leadership: The Challenge of Real Leadership

Not all organizational leadership is real leadership. Some form of leadership, after all, is inevitable: Someone has to make decisions. But a "decision" can occur by default, a failure to act, what I call "indecision making," and the resulting non-action constitutes a decision. Leaders of organizations abide by conventional patterns of behavior within the organization because doing so seems the safe course. However, when an organization has to adapt to changing conditions, it's not so safe after all.

Real leadership recognizes that changing or transforming an organization requires a change in mind, a change in belief, and a change in behavior. Such change is usually rife with uncertainty. Change is mowing the grass. Transformation is replacing the lawn. And the key to transformation is awareness.

The Quit Zone

When leaders disrupt the deep sleep of habitual belief and behavior with conflicting intent, different information and new behavior, they often meet the quite normal resistance of established habits and beliefs, first within themselves and then from others. This area where the new path is glimpsed but avoided is the "quit zone." Most of us operate in a memory-based zone, which is comfortable — it's based on beliefs we've accrued in the past. The quit zone, though, is a place of uncertainty and, therefore, for many a cause of anxiety, but it is also a place of exhilaration when we glimpse the future that could exist.

The quit zone is an area full of creative tension: The future is unknown, but if we are aware of ourselves, our core values, other people, and the purpose of our organization, we can form a new belief, one that aligns with our purpose, and engage in new behavior. What separates a real leader is the ability to jump off the edge of the cliff in the quit zone and start a new venture or expand an existing one when success is uncertain and when chosen values, behavior and beliefs are unproven.

Don't underestimate the challenges: making the jump is difficult; sticking to the old beliefs is too easy, and excuses and rationalizations are readily at hand. The force of this inertia is why, once you become aware of how your mind works and what drives your behavior, aligning your behavior with the purpose glimpsed in the future where the leader path (unknown but believed in) will take you becomes the inescapable task if you want to succeed.

Aligning your own behavior, however, is not enough. You also must align the behavior of those working with you. To equip yourself to align behavior with purpose, you have to fulfill two conditions:

- See a goal the organization must drive toward in order not only to survive but also to thrive.
- Perceive what specific actions should occur to accomplish that change.

A stumbling point here is that many people expect to have a clear step-by-step plan that will not change before they take the jump. This is not possible, and there must be an agreement to "building the bridge as we walk on it." Commit to the better future together. Promise persistence, not perfection.

The Grinnell Leadership Vitality Model

The stages of leadership are awareness, alignment, accountability and purpose. Expanded awareness forms the foundation of every other part of real leadership, and all the stages build toward fulfilling the purpose. Each stage builds on the previous one to show the logical connection

from awareness through service to customers, partners in success, and the social environment. Once I am self-aware and aware of others, I will realize how to align my behavior and cause others to align theirs with the mission. When I know how to align behavior, then I need to be accountable to our purpose, myself and my associates; they need to be accountable to me, to themselves and to their colleagues, too.

These stages also interpenetrate; just like alignment, on-purpose leadership flows out of awareness. And just as you can't change to more fully align behavior until you are aware, you can't align it until you have a firm sense of what the purpose is. The purpose, which includes our chosen core values, also fills out the framework of accountability. You're accountable for whether your behavior matches the purpose.

Being On-Purpose: Focusing Mission and Values for Breakthrough

Leaders create the "new abnormal." They don't make their target the one that accompanies their feeling of certainty. This is also why people don't usually like real leadership at first, as it creates feelings of uncertainty. But it also is their ship bound for the future.

With a clear purpose, a leader can assess the current conditions of his or her life, leadership and organization, and see the gaps between where he or she is and where he or she needs to be. With a clear purpose, leaders can see what is "at gap," or out of alignment with the target. They then go about with purpose, changing those aspects of the organization, including their behavior and that of their followers, technologies, infrastructure and people, that stand out in stark relief and that are important. To change them, a leader turns the gaps into objectives and plans how to meet those objectives.

Being on-purpose with our behavior has to start with being on-purpose with our mind. All outward behavior is driven by the mind and its beliefs, so all real transformation starts with a shift of mind. The real leader holds the organization to its purpose and manages his or her mind to be on-purpose when others can't or won't.

If a true transformational change is to occur, the leader and his or her followers must behave in new ways. The key to this new behavior is being on-purpose. The new behavior required for transformation to a satisfying future grows out of awareness of purpose tied to self-awareness. Once your organization's purpose — and yours — is clear, then you can expand awareness and seek alignment.

Making Purpose Visible

Make clear to the people you are asking to be real leaders the logical connection between the values, beliefs, behavior, structures and processes you are asking them to change and the approaching future. Translate vision into a meaningful mission and core values, which together are your organization's purpose. Hold regular accountability group reporting sessions on objectives. This is a way for real leaders to tell the truth about progress and problems and to ask for help early.

Values are the light beam guiding you through the uncertainty and darkened unknown of change — getting you from here to your chosen there. We can choose to change to address the future in a manner that will result in our getting the experience we want, or we can go back to sleep and accept what we are programmed to experience. Values are the basis of the path we choose through life. Beliefs drive organizations until leadership decides to choose values that fully align with purpose.

Setting Core Values

Values need to be part of the most significant leadership decisions and actions. Core values must be set at three levels. The first is conceptual alignment, which means it makes good business sense in terms of where we are going. The second level is ensuring there is behavioral alignment. The third level is "heartfelt." It is part innate, as deeply held beliefs guide a sense of knowing that the values are right for you. It is a commitment of one's life, energies and focus. This gives a tremendous advantage to the organization as it goes through transformation.

Things you can do to strengthen your core values:

- Make sure you know what your core values are, and use them repeatedly to make tough decisions.
- Communicate the core values over and over and over again.
- Hold people accountable to them.
- Make the values discussion a part of every planning process, strategic or otherwise.
- If you want to alter the culture and values, focus on the positive.
- Demonstrate the cause and effect of your values. When success occurs, look at how the values play a part in it.

Expanding Awareness: Perspective or Ego Satisfaction — A Choice

The problem with beliefs is that because they're part of a survival mechanism in our minds and because they're our theories about reality in our minds, they become ingrained, and they lead us to act habitually. Self-awareness on both personal and organizational levels enables us to recognize the beliefs of an organization and individuals within it — including, first of all, ourselves. When we are not aware of our beliefs, they run the show instead of us. The degree to which a leader or leadership team running an organization is unaware of the beliefs that drive their decision making and behavior is the degree to which they are out of control of the situation that confronts them now.

To expand our awareness zone requires us to go beyond ego or beliefs and our defense mechanisms. This is why self-awareness and knowledge of human nature is so critically important for seeing issues and reaching effective outcomes. To get out of the box, you must understand the box. To go beyond these ego-imposed limitations, to maintain curiosity in the face of perceived critical feedback, and to stay conscious while feeling vulnerable constitute the fundamental path to reducing mistakes of leadership. It should be a primary focus of team leadership to create safe environments where people will step out into this new behavior.

The Controlling Force

Being self-aware involves cultivation of a free consciousness that can stand outside yourself and look at your actions and beliefs from an observer's perspective, then move beyond the confines of habitual emotion, judgment and thinking. If you want to attain free consciousness, the process starts with understanding how you form your identity, your ego. Your ego is a rigid system of beliefs about yourself that you maintain and reinforce through perception. Over time, by paying close attention, we can develop the ability to recognize behavior, thoughts and perception flowing from our personality. We can then move beyond its constraints to consciousness — of our minds, our emotions, our actions and where they spring from.

Breaking free of blind spots, denial and the fear of change is not easy. It is uncomfortable. You must go through that discomfort and pain the ego generates to reach a better place. You first need to be honest with yourself, and recognize and understand the beliefs, judgments, perceptions and resulting behavior that produce unsatisfying outcomes.

Once you understand them, you have to accept responsibility — an important step in human growth and leadership development. Everyone makes mistakes or gets negative feedback. What the real leaders, young or old, seem to do is hurt for a bit, then pick themselves up by the bootstraps and figure out how to solve the problem. We can meet the challenge and lead, or we can stay in our familiar unaware state and play victim.

If you believe your team or organization would benefit by becoming more adept in expanding awareness, here are some recommendations: Have your team members attend a self-awareness-based leadership development program. Hold facilitated feedback sessions. Have your executive team participate in personality assessments, and make sure they are tied to the business. Finally, build a common language and model of leadership and self-awareness. Use systematic reinforcement.

Seeking Alignment (With Purpose, Self and Others): Integrity or Hypocrisy in Leadership

Awareness of old patterns of belief and behavior is only the starting point. Aligning, focusing and realigning mindsets, beliefs and behavior around a common purpose is the next step. Organizational self-examination — of its purpose, anchored in those core values — provides a vision of where the organization should go. That vision will guide you as you align the organization, peers and followers, and yourself with the purpose and new behavior so that the business can fulfill that purpose.

No leader can achieve his or her goals without the efforts of others. The follower supplies the energy for achieving an outcome. Do you want to create dependents requiring your help and energy or strong adults taking on responsibility and getting the monkey off your back? Real leaders who perceive the needs of their followers respond to them with appropriate action, which means not only understanding those needs but consciously adapting their own behavior to take them into account. Once followers know you understand their views and have considered them with openness and transparency, they will usually go along with you even if you don't accede to their requests.

Integrity in Self-Alignment

Showing subordinates that you value honest feedback about your actions leads them to trust you and to share

more personal, valuable information about processes and operations in the organization. Some feedback may be painful to your ego to hear, but real leaders expand beyond the pain, realizing it is temporary and wanting to see clearly and listen for any valuable information. It's easy to get good news, but you have to dig deep to get the bad, which is often the most useful. Since hearing criticism and interpreting the thinking behind it helps you discern a follower's needs, it provides valuable information indeed.

When leaders change their own behavior to align with the organization's purpose and goals, followers have permission, so to speak, to change their own behavior — they are encouraged to do so by the example of the leader. Leaders must be all in, or others will not follow fully.

The Art of Causing Followership

The essence of instilling new beliefs, perception and behavior in followers is "need-goal alignment." The leader works to align the satisfaction of the followers' needs with the goals for which the leader is responsible. The art of causing followership rests on three fundamental principles:

- People do what their minds and emotions tell them to do, not what the leader says to do.
- The follower provides the motivation.
- All motivation is self-serving.

By seeing clearly what the organization's goals are and the changes they call for and by understanding your followers' needs, you gain the ability to link those needs to the goals by demonstrating how the new behavior will benefit the followers. If they see no benefit, they are unlikely to change their behavior regardless of how inspiring a speaker you are.

Followers also must clearly see the connection between the new behavior and processes and the bigger strategic picture — the purpose and goals. Your picture must present all these factors in images that are personally meaningful to your followers. The employees who are going to freely exert the most effort to change will be those who see that the perceived gain outweighs the perceived cost.

No leader can motivate others. A leader can only move followers to motivate themselves. An individual's efforts toward achieving a goal are done for personal, satisfying reasons. All human action fulfills a personal need and is self-serving. If you can align your followers' needs with the organization's goals, creating an environment in which followers will achieve those goals when they satisfy their own needs, the rewards will far outweigh the costs.

Acting Accountably: Courage or Compromise of Leadership

Unless the new beliefs and new habits you introduce into your organization's new culture include accountability at every step, then your effort to change course is likely to flounder and ultimately fail. Just as awareness begins with self-awareness and builds from there to awareness of others' motivations, for leaders, accountability starts with themselves and then spreads to their followers. Without accountability, habitual behavior kicks back in.

Accountability is a way of sharing the consequences of failure — but it's also a way of sharing the consequences of success. With accountability, the likelihood of success goes way up. Accountability is a way to know that an individual or organization is making progress toward an objective. The more objective and measurable the gauging of that progress is, the more accountable it is — and we are.

Accountability is inseparably tied to responsibility. We are responsible for something, and we are responsible to someone or something. Holding oneself accountable means accepting responsibility for the outcome. "When accountability is seen as a positive tool that can foster development and full communication as opposed to the 'witch hunt' that it is sometimes perceived to be," said one executive, "the organization's potential can be unleashed, and success beyond our most optimistic hope can be realized."

Measuring Expectations

To use metrics most effectively to gauge performance, the leader must let followers know from the beginning, and clearly, what standards he or she will use to assess them. Equally important is keeping tabs on progress and keeping in touch throughout the process. This, again, can be a positive experience rather than the grown-up equivalent of going to the principal's office. Leaders who can empower followers through sharing the organization's vision can enable them to claim ownership of the organization's goals, which is an effective approach to both alignment and accountability.

Accountability to the Future

Holding yourself and your followers accountable might seem to cover the subject, but leaders have broader responsibility. They are accountable to the organization itself as future conditions shift and change, but also to immediate society and beyond. Being accountable to the organization means you have responsibility to the future in three ways:

• Stay on-purpose: You as leader must ensure that the direction and values remain viable but also that everyone

remains on-purpose, aligned with an organization's vision and its goals and accountable to that purpose.

• Anticipating gaps: A leader must anticipate problems by projecting the company's activities into the future or re-examining current practices to discern where they could come up short or go wrong.

• Invisible social contracts (that bind the leader): Who is going to lead the organization in the future? Developing future leaders is one of the most important tasks an organization can undertake. Yet frequently organizations thwart it by playing favorites and not basing these decisions on what's good for the organization going forward.

Transforming Organizations: Changing Minds to Change Performance

Transformation requires expanded awareness, alignment and accountability — always in support of the mission and values, which is the organization's purpose. Leadership is the adaptive force of the organization. In nature, organisms that don't change fast enough to meet the demands of the environment don't survive. The same is true of organizations. Leadership is not an external factor; it is an internal, personal commitment.

Leaders don't make certainty their purpose. Until a leader makes the jump into uncertainty, he or she is not really leading; few, if any, will follow until that leader does jump. Leaders lead minds. Organizations are composed of individuals working together using certain processes and following policy to achieve a common outcome. These individuals hold a set of beliefs in varying degrees of alignment with the values and goals of the organization, and they act out of those beliefs.

All organizational transformations come from a change of mind and perspective. Until this occurs, with the accompanying decisions, actions and behavior that arise from those changed minds, nothing in the organization really changes.

The leadership system is the network of individuals who are the "keepers of the culture" and all the perspectives, behavior, judgment and expectations therein. Transforming the organization begins with changing the perspectives, behavior and expectations of those keepers and thus changing the culture. Once they are able to expand awareness, seek alignment, act accountably and be on-purpose, you have a powerful leadership culture in place to balance the need for stasis.

Leaders must change their own minds before others will change theirs. Some have to "fake it until they make it," acting behaviorally in alignment even when their passion isn't there yet. Often this requires a "leap of faith" and the ability to "stomach" many difficult decisions and actions that must be undertaken.

Here is a list of steps to keep in mind while going about the work of transformation:

- Find a better way, a difference that makes a difference — and commit!
- Articulate the new direction; contrast it to what you have been doing.
- Make sure your top team is clear and in true agreement with the new direction.
- Overcommunicate the new direction, and invite your key people to help you figure out how to get there.
- Translate the new strategies and tactics into key objectives, and assign stakeholders in achieving the objectives.
- Stay intensely focused for 18 months to three years. Follow up regularly. Hold regular accountability meetings.
- Make the change experience a "leadership development" experience.
- Never get mad or show frustration when people bring problems to you.
- Never, never, never get so busy that you forget to celebrate success!
- Give feedback quickly, and coach the "good people with old habits."
- Quickly change processes and people that aren't going to work.
- Communicate the vision to people three or four levels down. Build the culture there.

Leading and Living Beyond Belief: Experience Your Experience

Seeing clearly beyond the limitations of existing beliefs is the hallmark of a real leader. This is not a typical definition of leadership, but it is true. Think of what leadership requires in this way: Real leaders are the few who can kick themselves out of the nest.

We must learn to use our new interconnectedness, technology and big data effectively. The challenge is to go beyond the beliefs that no longer serve us with a process of increasing self-awareness. We are naturally bound to

our past and the comfort these past mindsets and beliefs provided us. To go beyond belief is the heroic act of the leader who wishes to attempt to make a real, meaningful "difference that is a difference."

How do leaders take themselves and their people beyond the dictates of the past, and how do they consciously choose values and achieve what I call "awakened leadership"? This is a realization of consciously chosen beliefs, values and purposes that guide us to what we want, not what is habituated and unconsciously expected. Leaders who live their lives by choice beyond automated beliefs are the ones who also can help free others to reach their full potential.

Bringing Potential into the Open

Organizations are extensions of the humans who work within them, driven by the collective minds and beliefs therein. Many who lead an organization mistakenly believe their task is changing processes, policy and technology. Culture is the hardest and most important task for leaders to do well. Once the minds of employees change, the organization can change; and the key to this is alignment. Once there is the capacity and ability to truly learn, that is, change so as to go beyond ego-defended limitations with expanded awareness, the result will be a platform from which one can find not only new but truly different and better paths and a purpose and solutions that will allow that alignment to go beyond the ego and achieve a shared, purposeful future.

Integrity is also an essential characteristic for successful alignment within an organization. Integrity comes from knowing oneself and having the emotional discipline to say "no" to wrong impulses. At its root is a variation of the Golden Rule — to help or hurt another in our society is to help or hurt ourselves. Real leaders contribute enormously to both their organizations and society when they improve the likelihood of sustainability of those organizations so that families can provide for themselves, organizations prosper and hiring increases, helping our world economy recover more fully.

Given the scope of challenges organizations and society face, encouraging an individual to look inward may seem a backward approach, a turning away from confronting the problems, but it is instead the key to doing so. Real leadership flows from an earned perspective, reflecting a subtle but significant shift inside oneself. Looking inward cultivates the ability to examine problems outside the self clearly and discern which actions will be most effective and adapting to change. It is the only way to truly prepare people to use the power of the mind to create the future that leaders want and that we will share in.

The Big Ten Collaborative Leadership Behaviors

1. Communicate openly, accurately and quickly: Interorganizational process issues as well as interpersonal problems are made worse when not brought up soon enough within the team.
2. Lead strong: All organizations have crises. The worse the storms, the stronger the leadership and courage required — feel the gut tighten and act well.
3. Trust, verify and urgently solve problems: The sooner you can spot a problem, the better. Trust is essential for success, but verification helps find blind spots and issues early.
4. Decide with the purpose in mind: Be on-purpose by keeping what's best for the larger enterprise and values in the forefront of your thinking and decision making.
5. Recognize vulnerability: Team members need each other to meet the organizational purpose and aren't completely in charge of their own destiny — you are vulnerable to your teammates' performance.
6. Know when to lead and follow: You may be leading today but following tomorrow. It's about getting the job done — not who's in charge.
7. Keep the transformation moving: To keep things moving may require help from a higher authority when goals of team members are misunderstood, misaligned and in a logjam.
8. Forgive (self and others); it's practical: Learn the lesson and take action. Let go of the embarrassment (shame), and move forward — fast.
9. Find opportunity: While the team is busy, make time to look ahead, and find ways to work more efficiently and collaboratively.
10. Show appreciation: Catch people "doing it right." If you see on-purpose behavior, thank them.

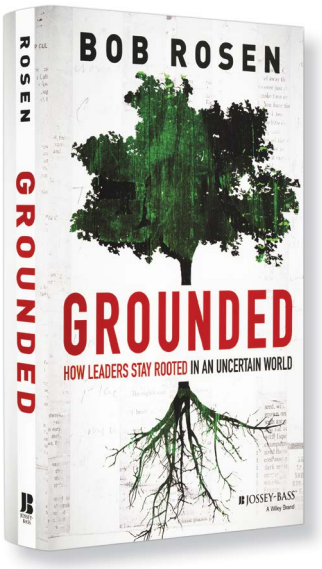
Leadership

Grounded

How Leaders Stay Rooted in an Uncertain World



by Bob Rosen

THE SUMMARY IN BRIEF

Confronted by disruptive change and worldwide economic turbulence, leaders at all levels — across all industries and sectors — find themselves ill equipped to manage the challenges they now face. They must contend with chronic uncertainty, intense competition, personal burnout and a new world order of global interconnectedness. Most leaders are poorly served by the prevailing paradigm that obsessively focuses on what we do to produce short-term results while sabotaging who we are as healthy human beings. Few have seen alternatives, until now.

In *Grounded*, internationally renowned CEO advisor Bob Rosen proposes a new approach to leadership that speaks to our better selves and is designed for any leader who grapples with the unrelenting and complex demands of today's marketplace. Rosen argues that leaders at every level can become more self-aware, develop their untapped potential, and drive significantly better results — for themselves, their teams and their organizations. Based on long-term research with hundreds of CEOs and leaders from around the world, this groundbreaking approach is drawn from Rosen's Healthy Leader model and highlights the six personal dimensions that fuel — and refuel — the world's top leaders: physical, emotional, intellectual, social, vocational and spiritual health.

Now, any leader can master the six dimensions needed to develop the stamina and strength to not only weather tough times but also to achieve exceptional results.

IN THIS SUMMARY, YOU WILL LEARN:

- To understand the links between who you are and how you perform.
- How to cultivate the six roots of healthy leadership in yourself and those you lead.
- How to build a personal leadership model that works with your values, goals and capabilities.

PART I: A CRISIS ON THE HORIZON

The Winds of Change

The winds of change are flaming both a personal and public emergency in leadership. The debt crisis. Stagnant growth. Climate change. Tax reform. Indicted CEOs. Business bankruptcies. Many of our so-called leaders are having trouble leading under these conditions. Whether you lead a multinational conglomerate, an entrepreneurial startup or a modest-size nonprofit organization, you are encountering forces of change that are as dramatic and potentially life altering as any violent storm. Leaders at all levels are buffeted from every direction by six forces:

- **The speed of change:** People can't keep up with the pace of change.
- **Impermanence:** Uncertainty is the new normal.
- **Complexity:** Business leaders often struggle to keep up-to-date with technology.
- **Transparency:** Regulations, consumers and employees are demanding it.
- **Intense competition:** Being driven by competitiveness at any cost will preoccupy you with short-term results at the expense of creating long-term value.
- **Globalization:** Work and business are no longer local, and work has been woven into our lives a nd lifestyles.

Leaders are juggling the best they can, but many see that their results are falling short. We have discovered that leaders who are truly healthy in all senses of the word are evolved human beings and extremely effective leaders. In researching the qualities that make up this healthy leader, we unearthed three unequivocal truths:

- Who you are drives what you do.
- Who you are is grounded in your healthy roots.
- Healthy leaders build teams and organizations that outperform.

Are You Bending, Breaking or Staying Rooted?

Whether internal or external, the gale-force winds of change add layers of uncertainty and frustration to life. They can make it particularly difficult for the leader to find a balance in life while he or she is having to pursue growth and higher performance.

Many leaders cling to old mindsets and accept outmoded ways of thinking. Primary among their misconceptions is focusing too much on action and too little on introspection. They haven't examined what it is inside them that is informing, motivating and inspiring their actions. Another reason that leaders are foundering is a climate of acceptance and tolerance of dysfunctional behavior in themselves and others.

Leaders react to the forces of change in one of three ways. A large proportion choose to ignore the obvious and put their head in the sand. Others make halfhearted, uninformed attempts to handle all that's coming at them, and when these fail, they move on to another task or simply give up.

Leaders who recognize the forces battering an organization and its people see reality clearly, anticipate future pressure points, and get ahead of the storm. These leaders consider the winds of change to be an opportunity, not an obstacle. These individuals are personally grounded, with well-established qualities and values.

Who You Are Drives What You Do

When we say a leader must be grounded, we are affirming that a person possesses a strong root system. Well-developed roots are important to a leader for the same reason they are essential to a tree. They support and nourish what you see. In leaders, the aboveground portion is their behavior or actions. Yet what a leader does will inevitably fall short or fail unless it is supported by healthy roots. These roots define who you are and who you aspire to be — your life purpose, your character and deepest values, and your true self. These roots give you the inner strength and mindset needed to handle all that is coming your way.

PART II: THE ROOTS OF HEALTHY LEADERSHIP

Physical Health

You can't be an effective leader without paying attention to your body; it needs constant care and maintenance, just as your company does.

Strong personal health begins with body-mind awareness. The body's primary systems depend on each other. If one malfunctions or is weak, others suffer too. The mind is a vital partner in this integrated system. Physically you are probably more able than you realize, but optimizing your physical health means getting your mind on board.

What connects the mind and body is energy — a steady flow of electrical signals that activate cells and muscles in the body and neurons in the brain. This energy initiates actions — it sparks movement and consciousness. This dynamic flow of energy influences everything you think about, are aware of, and all that you do.

Energy Management

Energy management is a twofold challenge. It's contending with the physical and mental stress of running a team or organization, and it's using these demands as a springboard for renewing and reinvigorating yourself. Energy management asks you to think about your inner physical and mental reserves and then to use your interactions with your environment to create positive energy. You are harnessing personal energy while simultaneously generating organizational energy.

Achieving the right energy balance comes with avoiding extremes and finding a middle ground that works for you. This is your personal homeostasis, a state where your energy production makes you optimally healthy and productive.

Peak-Performance Lifestyle

Think about your own personal and work life. Are your attitudes and habits geared to peak-performance living? Ask yourself:

- What changes do I need to make to advance my physical health?
- Do I make sure I have time to exercise regardless of where I am or what is going on?
- Does my schedule include regular breaks for rest and relaxation?
- Do I set a good example for my team and my organization?

Maintaining a peak-performance lifestyle demands more than a daily run or having salads for lunch. It's also about prevention — keeping illness at bay and your immune system strong. Seventy-five percent of medical costs are preventable. Thirty minutes of moderate physical activity each day can reduce the risk of a heart attack by up to 50 percent.

For these and other reasons, the payoff to a company from investing in the health of workers is huge. The benefits can be seen in worker attitudes and commitment, productivity and the financial return on investment.

Emotional Health

There are many theories as to what constitutes emotional health. There are no hard-and-fast formulas, but when we focus on emotional health with executives, three aspects keep showing up: self-awareness, positive emotions and resilience.

Self-Awareness

Developing self-awareness can be an uphill battle against all the pressures of a world that values action over introspection. Being honest with yourself also means recognizing when you are in denial about your abilities (strengths and weaknesses), your feelings and your behavior.

We all like to believe that we're good critical thinkers and don't let our emotions get in the way of sound judgment. But few of us are consistent in thinking clearly.

We overgeneralize, jump to conclusions, engage in obsessive thinking, ignore the positive, and magnify or minimize situations.

At the heart of internal communication is self-reflection. This entails asking yourself questions about your values, assessing your successes and failures, thinking about your perceptions and interactions with others, and imagining where you want to take your life in the future.

Put on hold your natural inclination to take action, and instead devote your energy to internal inquiry. Extraordinary leadership stems not from your day-to-day behavior but from what's inside you.

Positive Emotions

Healthy leaders who express hope and optimism imagine and invest in a better future. They believe in people and give them the benefit of the doubt, and they avoid getting blindsided by crises, using them instead as challenges. Without hope, it is easy to become overwhelmed by your problems. With hope, you are motivated to push past obstacles and strive for something better. Often rooted in experience, optimism is hope coupled with realism. It is the wisdom to know what is possible and having faith in your ability to reach your goals.

Resilience

Handling the ups and downs of work along with the constantly changing business environment requires the presence of mind to calmly assess the true nature of the problem. Staying calm ensures that you won't react without careful thought and before collecting relevant information from everyone involved. It's vital that you take a deep breath and calm down when something has shocked you or your company.

Getting comfortable with uncertainty demands that you prepare yourself emotionally for a constantly churning world. The quality that best handles uncertainty is emotional flexibility. This is a readiness to shift gears, bounce back, and move in a different direction when calamity is headed at you.

Intellectual Health

We need a greater capacity to deal with mental complexity, and intellectual health is the key to enhancing that capacity. By expanding your mental range, you can broaden your thinking, solve complex problems, and focus on what is truly important.

Many leaders are linear thinkers, seeing problems as a straight line with direct cause-and-effect explanations. But today's world is not linear; it's weblike and interconnected. Your thinking needs to be flexible and systemic, able to make jumps that defy logic, and understand the complexity of a multidimensional and multidirectional world. Healthy leaders possess three features of intellectual health — deep curiosity, an adaptive mindset and paradoxical thinking — that equip them to handle the complexities that beset an organization.

Deep Curiosity

Deep curiosity prompts new learning that actually creates new connections and associations in your mind. It's like building a web of thoughts, information and mental processes. If you are continually curious, this strengthens your brain's wiring and communication systems. Curious people tend to be more eager to learn and tend to remember more. Leaders who are constantly learning and growing have a unique mindset that gives them a distinct advantage. They see learning as their primary task, and they value deep curiosity.

Deep curiosity is intentional, conscious and focused. It hones in on the knowns and unknowns, sifting through what is necessary and what is extraneous and settling on the best ways to fill in the blanks. To be curious is to be on a journey of deliberate personal education. The most common reason we shut down our curiosity is that we are simply running too fast. We don't take the time out of our busy lives to be curious.

Adaptive Mindset

An adaptive mind is a self-transforming mind. It is agile and flexible, open to the unexpected, and able to handle the uncertainty of change. It possesses a clear point of view, but it's open to other ideas and thus has a great capacity to expand in the face of increasing mental complexity.

The higher you go inside organizations, the more capacity you need for dealing with mental complexity. The ability to develop an adaptive mentality that course-corrects in real time has a direct effect on your leadership performance.

There are two modes of thought going on inside each of us. One is fast, instinctive and emotional. The other is slower, more deliberative and more logical. Both systems can cloud our thinking, yet both are necessary for leading in a complex world. This is why healthy leaders spend so much time cultivating an adaptive mindset: digging deep for data, questioning their mental assumptions, acting with instinct and intellect, learning how to multitask, and asking challenging questions of themselves and others. The more unknowns they can surface and the more levels they can think on, the more prepared they are.

Paradoxical Thinking

Lateral thinking generally defies logic, making mental leaps away from analytical, sequential thoughts and arriving at novel and unusual solutions. Most of the time, people use linear thinking. It is a predictable way of thinking, being a series of steps each depending on a yes or no, correct or incorrect answer before moving on. Yet in a complex world, such thinking doesn't create a broad range of options or inspire creative possibilities.

Leaders need to be able to tap into cognitive opposites. A leader today lives in a world filled with tension generated by opposite forces. There's a constant tug of war between today and tomorrow. You're pressed to meet demands for meeting monthly targets while articulating and pursuing long-term growth strategies. You have to cut costs and boost revenues.

If you examine your thoughts and actions, you will probably find a number of paradoxical forces. It is useful to remember that you need both. They give you balance and shield you from extremism. Common and useful leadership paradoxes include constructive impatience, realistic optimism, confident humility, committed detachment and passionate rigor.

Healthy leaders must live in the present and future simultaneously. They must balance speed and urgency with discipline.

Social Health

Everything you do in business affects who you are and your relationships with others. Business is immensely personal, and the sooner we realize this the better we will be.

Leadership follows an inside-outside progression. Social health starts with authenticity, advances to mutually rewarding relationships, and culminates in nourishing teams and communities.

Authenticity

Being your real self is reflected in what you disclose and how you interact with others. Building authenticity requires self-awareness. Guidelines for self-examination include knowing yourself, being yourself and sharing yourself.

Personal core values are the bedrock of any trust. When you have a firm handle on your values, trust follows. The following qualities can help you earn trust and strengthen your social health:

- **Credibility:** This comes down to being truthful.
- **Dependability:** You must consistently make good on promises and commitments.
- **Predictability:** Consistency in your values and temperament.
- **Valuing the common good:** Driven not solely by self-interest but also by a desire for everyone to benefit.
- **Emotional safety:** You do not abuse people's health, feelings, self-image or principles.

Mutually Rewarding Relationships

Human beings are biologically programmed not only to form social bonds but to connect in deep, personal ways. A leader needs a repertoire of social skills to foster healthy, productive relationships. The most powerful tools are

- **Empathy:** Deep understanding on an emotional and cognitive level about the fears, frustrations, aspirations and concerns of people.
- **Fairness:** Leaders who are evenhanded and fair generate trust and cooperation.
- **Communication:** The ability, in spoken and written word and deed, to express yourself and understand what others are trying to communicate.
- **Appreciation:** Studies confirm that appreciation is at least as important as money.

When leaders exhibit these attributes of social health, they shed light on everyone; when they don't, they are quick to cast shadows on the people around them.

Nourishing Teams and Communities

Communities make us feel good — they support and rejuvenate us. We are born to bond into groups, and when we don't, we suffer physically and psychologically. Teams have a special place in all organizations. Flatter organizations foster shared information, authority and decision making, and this changes how leaders and teams must relate to each other.

Social networks are not on your formal org chart but are critical to how your company executes its strategy. People with larger and more diversified personal networks are higher performers. Most significant is their ability to energize rather than de-energize people in their networks. Companies with well-managed network conductivity simply outperform their competitors.

Vocational Health

Vocational health is directly linked to results and performance. It enables you to convert dedication and hard work into tangible success. A direct benefit of being vocationally adept is that you become more successful and fulfilled, and your company becomes a much more attractive place

to work. To develop vocational health, you need to find a meaningful calling, develop personal mastery, and cultivate a drive to succeed.

Meaningful Calling

As workers, people fall into three groups. There are those who feel that what they do is solely a job, those who feel that their work reflects who they are, and those who feel that their work is a personal calling. Discovering what inspires you is fundamental to meaningful work. Some get inspired by historical figures; others are inspired by a parent, a coach or a great boss. Those lucky enough to find that perfect combination of talent and passion known as the "flow state" are the ones who achieve harmony in their work.

If you are to shape events instead of being shaped by them, you need to know what you want to achieve. What is your desired legacy?

To tap into the passion of others, talk to people about what they love to do. Identify their unique talents, and let them excel in that space. Share your compelling story and guiding principles with others, and ask about theirs.

Personal Mastery

Personal mastery is best summed up as an innate desire for growth, self-improvement, and the inner satisfaction that comes with being able to do or know something thoroughly. Your ability to master a skill or body of knowledge depends on a commitment to lifelong learning.

As we grow, we confront and master each new challenge, and the stages build on each other. To some, pursuing personal mastery may seem like a self-absorbed process. But finding the right balance between self-improvement and helping others is the secret to great leadership.

Drive to Succeed

Success requires both personal talent and an environment that supports your efforts toward achievement. The critical quality for a leader is to be constantly pushing forward, making progress, eschewing the status quo, and seeking out new horizons. It's the love of pursuit that matters.

Go after what you want; be comfortable with success *and* failure; don't feel the need to prove anything to others; don't be afraid to win or lose; keep getting better and raise the bar; and enjoy the journey and the destination.

Healthy leaders are crystal clear on the leadership legacy they want to create. By starting with the end in mind and thinking about your legacy before you break new ground, you can visualize the big change you'd like to make and create a blueprint for the future that gives form to your values and goals.

Spiritual Health

The essence of spiritual health comprises three qualities: believing in a higher purpose that gives you a mission in life, feeling a global connectedness that transcends cultures and borders, and showing a generosity infused with kindness and gratitude.

Higher Purpose

We all possess a higher purpose, yet many of us have no idea what it is. Finding the answer begins with the knowledge that this is not a formula. Instead, you are on a journey of discovery as you look for ways to use your unique gifts while also helping others, improving the world as you go along.

Leaders and organizations realize meaningful benefits when they care how their activities and products affect their employees, the lives of their customers, and the communities and environment in which they operate.

Leading according to your higher purpose can mean holding firm to values even in times of doubt and economic uncertainty. With a higher purpose as your driving force, you inspire others to make a difference. You also imbue your organization with a spirit of authenticity and meaning that helps people get through tough times.

Global Connectedness

Cultural forces have a huge impact on an organization, regardless of whether your business has dozens of overseas offices or is strictly a local enterprise. Your employees undoubtedly represent a melting pot of cultures. It's vital to understand these diverse cultures.

Healthy leaders have a deep appreciation for what makes people unique. They believe people are created equal and different and that each person has a special contribution to make. They understand their own biases, how to tap into diverse talents, and build cultures of mutual respect.

Becoming culturally literate is a complicated and ever-evolving process. The development path of the global leader typically begins within oneself and one's family, then gradually radiates outward. You can expose yourself to other cultures by traveling, reading, listening to music from other countries, even learning the basics of a foreign language.

Generosity of Spirit

Gratitude is the lifeblood of spiritual health. When we show appreciation, we are saying that we care. Showing gratitude is highly personal: you have to accept who you are and what is both good and not so good about yourself. It reflects a humility which recognizes that you are human like everyone else on this planet.

Gratitude radiates outward and touches the lives of everyone close to you. Expressing gratitude in the workplace is critical. Not only does it create an atmosphere of loyalty and engagement, but it also has bottom-line effects. Gratitude begets gratitude.

On Becoming a Healthy Leader

As a leader, you need to understand what sparks your actions. Your well-being, success and organization depend first and foremost on who you are. You need to examine the internal stuff — what goes on in your mind and heart — before doing anything. The roots of healthy leadership form the core of who you are. You may be wondering how to cultivate robust, healthy roots. The answer lies in the four channels of learning:

- **Seeing:** This channel is dedicated to self-awareness, perceptions, and the level of consciousness that enables a person to see himself and others clearly and honestly.
- **Thinking:** Conscious and unconscious thoughts generate ideas, help you interpret people and events, and fuel the internal dialogue you constantly have with yourself.
- **Feeling:** Your emotions are essential for helping you form bonds and survive threats to your life and well-being.
- **Acting:** The acting channel comes alive through verbal and nonverbal communications; in your decisions, interactions and habits; and in how you conduct yourself on a day-to-day basis.

PART III: PUTTING LEADERSHIP INTO ACTION

How Healthy Leaders Build Healthy Organizations

Business success emanates from developing the roots of healthy leadership and mastering the leadership actions by mobilizing people around you. When who you are is translated into what you do, you create an environment that makes all the difference. Consider the following six leadership actions that build healthy, successful and sustainable enterprises.

Tapping into a Higher Purpose

Healthy leaders first must tap into the higher purpose of their organization. The grounded leader understands that everyone is rooted and enriched when people pull together for something greater than themselves. When individuals pursue more than simply a livelihood, they fulfill a quintessential human need to contribute to the community of their fellow man.

Leaders who do this well understand the importance of others' believing in a higher purpose. Ultimately most people are motivated less by external rewards than by deep personal values. People want to feel that they matter and that what they do adds to a greater good.

To tap into this intrinsic motivation, a leader must inspire. Inspiration arises from what gives people hope — hope that they can make a difference and hope that they are helping others. The challenge for a leader seeking to instill a higher purpose is twofold: creating the vision and inspiring people to pursue it.

Forging a Shared Direction

A healthy leader brings people together to push for a common goal, something everyone can commit to — an inspirational objective that is bold enough to challenge people and bring out the best in them. Getting to the goal line entails change for both the company and the people making it happen. Priorities are reconsidered and realigned, and people learn new ways of doing things. A leader cannot pursue a bright, new future without the support and dedication of others.

The second step is to design a clear road map, a blueprint for success that includes strategies for moving ahead, metrics for measuring progress, and an always-humming communication network binding people together and renewing their commitment.

Evaluate the scope and boldness of your vision. Ensure that you have a strategy and plan for implementing it. Don't let yourself drift along. Be prepared to make adjustments.

Unleashing Human Potential

The big hurdle for many is that although they believe that a company's success depends on its people, they don't always know how to engage people.

Today's workers are younger, better educated, more mobile, and determined to have a full, rich life in which work gives them meaning and value. Engaging employees as whole people motivates them to pass their enthusiasm onto the customer. Three tools are particularly effective in unleashing potential. Number one is appreciating and recognizing people. We all desire to be acknowledged and praised.

Another approach is through teaching and mentoring people. This signals that they are capable of learning and worthy of attention and personal growth. The third approach is about protecting and stretching people to unlock their full potential. This means giving them jobs that challenge them just enough and encouraging them to take risks.

Believe in your people, and help them believe in themselves. Get the right people in the right jobs. Ensure that your leadership is personal. Let them know that you care about their feelings and personal lives.

Fostering Productive Relationships

Relationships are at the heart of business. The grounded leader knows this instinctively. Relationships are what make people's lives enjoyable and gratifying. Healthy relationships are the essential fuel for productivity.

A healthy leader fosters productive relationships in a variety of ways. Reaching out with heartfelt generosity immediately drops people's defenses and opens the door. Straight talk, a willingness to share power and control, and being considerate help people trust you. People like doing business with people they like.

Cultivate acquaintances, and turn familiarity into friendships. Use diverse teams to yield better solutions. Think about relationships in terms of your connections to the larger community and the world.

Seizing New Opportunities

A healthy leader always needs an eye on what's directly ahead, making sure there's a firm foundation of innovation and imagination. An essential aspect of leading is finding new avenues for both corporate and individual growth.

Great organizations are always learning and innovating. Whether it comes to acquisitions, organically from inside, or as the result of small improvements in performance, growth begets an expanding customer base, fends off competitors and fosters innovation.

A growth mindset is essential. Thinking and acting like an entrepreneur is also part of the package. A leader cannot be afraid of taking chances. The growth-minded leader is always looking for new trends and tapping into the best thinking and practices.

Driving High Performance

What pushes performance is individual behavior, and what shapes behavior is inside a person. When your healthy roots are strong and fully developed, that's going to determine what you do.

High performance is the result of a holistic synergy among all six types of health. A leader with a full complement of healthy roots pushes performance to ever higher levels of achievement by taking ownership of his role in leading. He creates a culture of freedom and responsibility so that people feel that they can make a difference and know that they are accountable. He makes bold commitments, then acts with speed, urgency and agility. The leader is constantly raising the bar on learning and execution and measures only what matters.

Solidify what you know, and admit what you don't know. Share power and responsibility. Promote trust and collaboration. Keep your eye on both the present and the future. Set big goals, and push people to get ahead while providing them with support.

Grounded: A Change in Consciousness

You can change the way you see the world and your place in it by examining your thought processes, your emotions, and how you interact with others. You can tap into a new level of consciousness.

This means turning off your autopilot and choosing to direct your mind toward all the choices you have. Attend to the healthy roots of your leadership, and have the courage to be who you truly are. By discovering and demonstrating your true self, you can lead the way into a new age, a time of health and prosperity.

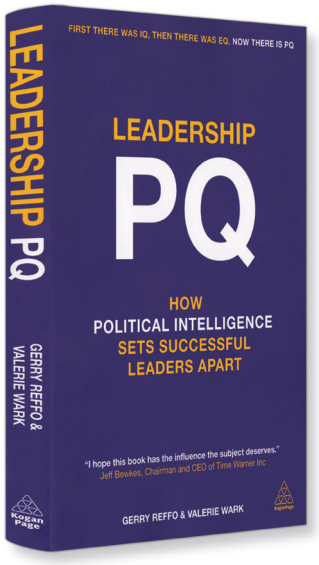
Leadership PQ

How Political Intelligence Sets Successful Leaders Apart



by Gerry Reffo and Valerie Wark

THE SUMMARY IN BRIEF

Most of today's leaders cut their teeth in a different world, where the best recipe for successful enterprise seemed to be for governments to provide a stable, market-oriented regulatory regime and allow companies to get on with the business of creating economic growth. The job of government was to get out of the way. Today, much has changed in the way governments govern and in the attitudes of government to business. Leaders must find better ways to enable business, government and society to work together to deliver profit, growth and better lives for future generations.

Political Intelligence is a new leadership requirement that allows governments and businesses to build relationships and work together in a new and more effective way. Successful leaders have built the capability to interact strategically in a world where government and business share power to shape the future.

Leadership PQ explains why political intelligence is now a critical leadership requirement; presents exclusive case studies and interview material to demonstrate the impact of PQ in action; and provides practical advice on how to develop it effectively by navigating the Golden Triangle of business, government and society.

IN THIS SUMMARY, YOU WILL LEARN:

- Why PQ is necessary in a shared power world.
- The five key facets of the PQ model and specific indicators for how to develop them.
- Practical tips for how to develop PQ both as an individual and in your organization, including how to integrate PQ into HR systems.

THE COMPLETE SUMMARY: **LEADERSHIP PQ**

by Gerry Reffo and Valerie Wark

The authors: Valerie Wark is an Associate of Ashridge Business School in the UK, a leadership tutor, and an independent executive coach. She works as an executive coach with Vodafone, and her other international corporate clients include The Body Shop and BBC Worldwide. Gerry Reffo is a senior independent HR consultant and an Ashridge Business School accredited executive coach. For the last 11 years she has designed competency frameworks and designed and run assessment centers to identify senior leaders.

PART I: INTRODUCING POLITICAL INTELLIGENCE (PQ)

What Is PQ and Why Does It Matter?

The future demands leaders who can do more. Globalization, complex societal challenges, changes in the planet, population, wealth and technology mean that the world is becoming more interdependent and power is more broadly distributed. It's happening now and will intensify.

Political Intelligence (PQ) is the leadership capacity to interact strategically in a world where government, business and wider society share power to shape the future in a global economy. PQ is rooted in the relationship between citizens, government and business.

PQ is more than working together with one or more people to achieve a purpose. PQ is for leaders with enough insight, vision and humility to recognize that they are working within a wider system. What they offer has to meet the needs of customers, consumers, citizens, the environment and future generations. Government, business and society share the power to provide better outcomes for all.

Why Has the Need for PQ Arisen?

The world is different now. Most businesses don't operate in a stable long-term economy, nor do they have the regulatory environment they want. The world is becoming more regulated. And few countries would be described by business as "well-governed," with the promise of predictable, business-friendly policies.

In addition, according to Sir John Grant, Executive Vice President, Policy and Corporate Affairs at BG Group, electorates/citizens are better educated, better informed, better networked and, as a result, better organized and more demanding than ever before. Governments face greater constraints than ever before, largely as a result of globalization, which puts international capital in control and reduces governments' room for maneuvering and has created a whole set of problems which governments can't resolve by themselves. Business struggles with the speed in which reputations of companies, products and services change.

Business leaders must understand this more complex "political" environment. Businesses need to be able to work with government to anticipate where the problems are coming from, exert as much influence on the political world as the campaigning NGOs, Twitter campaigns and media stories that dictate so much of modern government, and become part of the solution rather than one of the problems.

It's a Shared Power World

A shared power world is one where no single organization is in full control of its destiny. Making profits, governing nations, providing public services and helping society are done more effectively when organizations work with others. Business, government and non-profit organizations raise their game when they embrace working with partners and stakeholders to achieve what they

want individually and jointly. Leaders with the capacity to work in a shared power world and deliver better individual and joint outcomes are the new rock stars.

Change Drivers

Thought leaders, authors and journalists draw attention to the drivers for environmental change:

Market failure: Many of today's top business leaders grew up with the belief that the phenomenon of globalization and the development of large multinational corporations would mean that national governments would become increasingly less influential. The global economic crisis and the apparent failure of the market to deliver prosperity in developed economies changed this.

Wicked problems: Problems in the 21st century include climate change, resource scarcity, debt, inequality, poverty, disease, conflict, and religious and ethnic intolerance.

Demographics: By 2050, world population will reach between 8.1 billion with low fertility and 10.6 billion with high fertility. Economic development and rapid urbanization in emerging economies is predicted to move 3 billion new people into the middle classes. Economic growth, improved education and political stability are potential benefits that ought to flow from this seismic shift. On the down side, natural resources will become scarcer.

Struggling political systems: China's autocratic political system and state capitalism enable it to pursue and implement long-term policies and make short-term corrective changes quickly. But it has yet to effectively challenge the corruption arising from the nature of the political system. In the Western democratic system, private capitalism and the market form the economic platform. People enjoy freedom of expression and take for granted a free media, the rule of law and an independent judiciary. Despite these strengths, governments struggle to govern effectively. Neither bipartisan or multi-party systems work well. The electoral cycle encourages short-termism.

Finding solutions that offer good outcomes for society, business and national governments is a challenge.

Doing Business Differently

Leaders need to build into their organizations' DNA an understanding of shared power and the perspective of being part of a wider societal system. Operational decision making is messier when power is shared. Control is reduced. More people are involved. Information must be shared. Activities must be more transparent. Different views must be taken into account. Finding solutions takes longer.

Business is under pressure to become part of the solution. The need for co-operation both remains and increases with political, economic and demographic change. Society has the power to hold business and governments more to account for how they attend to what is important for all of us.

PART II: THE PQ MODEL

Introducing the Model

The PQ model is a set of skills, behaviors and processes designed for leaders and future leaders in business, government and non-profits who want to work together to deliver better outcomes — to deliver profit, growth and better lives for future generations. The model consists of five facets, each of which is supported by five indicators. The facets are

- **Futurity**
- **Power**
- **Empathy with purpose**
- **Trust**
- **Versatility**

The concept is that all five facets work together in harmony to create PQ. A politically intelligent leader is able to hold each facet and seamlessly move around, judging the right moment to use each one.

Shared power brings opportunities for innovation, diversity, scale and groundbreaking changes. It also brings complexity, competing interests, politics and misunderstanding. The challenge for leaders is how to maximize the opportunities and overcome the difficulties.

Futurity

Futurity means being in a future state. Leaders with PQ think about posterity. Reflecting on the big issues, problems and challenges that face society, they imagine a better future where these are overcome. Perhaps most importantly, they see how to create the conditions to make that better future happen.

Futurity is more than the strategic thinking process. With futurity, you start from the future and continually look back to where you are now. So unfolding events, risks and opportunities are viewed through the lens of a future state. Futurity in a PQ context is anticipating the needs of consumers, citizens and future generations, generating

ideas about how to meet those needs, and finding the right partners to make it happen.

Here are the indicators of effective performance in this facet:

Shapes the future: reflective, well informed, thinks holistically; spots the patterns and makes the connections with the present. Many of the clues to the future lie in the present and the past. PQ leaders make time to find out what is going on across the globe and to reflect on what it means for their own operations and for humanity. The best leaders understand history and draw on the past to bring context to today's events.

Sets the strategic direction; identifies partners; mobilizes and aligns stakeholders. As soon as an idea forms, leaders start to think about how to turn it into reality. Finding the right partners (just like the right staff) is serious work and determines the success of your project. Aligning strategies with partners and relevant stakeholders enables leaders to increase scale and impact. Finally, building an inclusive relationship with stakeholders so that they feel empowered and able to contribute creates the conditions for alignment and a productive outcome.

Registers changing currents; re-sets delivery to seize opportunities and mitigate risks. A strategy is a map to inform implementation of a future vision. It's not a blueprint of the future. It must be refreshed, changed or adapted as necessary in response to changes in the environment. Disruptions will occur. Addressing them openly and creatively usually improves the original strategy and provides opportunities not previously envisioned.

Balances different ways of thinking. Futurity requires our whole brain to be engaged: the analytic and the innovative, the strategic and the operational, and the emotional and rational. By engaging the whole brain, you approach every issue and decision from multiple perspectives, thereby increasing the odds of focusing on the right things.

Delivers the future: bringing focus and clarity to complex decision making and implementation. Futurity is more than imagining the future. It is equally driven by a passion to get things done — to move towards delivering the future vision with as much speed as possible.

PQ leaders are both visionaries and realists. They create and shape the future, stretching their own imagination and triggering the imagination of others. Seeing the challenges facing society, PQ leaders create the conditions for tackling those problems in their own organizations and in partnership with others.

Power

In a PQ context, power is the ability to build relationships and influence others with the intention of shaping the future towards both profit and a better society. In a shared power world, thoughtful leaders know that, however important their job title, they don't have ultimate power. Power to shape the future is held in many hands.

How PQ leaders interact with others determines how much influence they exercise. PQ leaders encourage modern business leaders to deliver value for shareholders and contribute to wider societal benefits; public policy leaders to interact strategically and inclusively with business to deliver for citizens; and non-profit organizations to harness the power of government and business to deliver effective outcomes.

Here are the indicators of effective performance in this facet:

Find outs where power and influence reside in each stakeholder group; builds and nurtures relevant networks and relationships. In a shared power world, stakeholders are critical to the success of any operation. Understanding this is vital. So is changing the way you interact with them. It's less about managing stakeholder relationships so that you get what you want. It's more about engaging with them to find mutual benefits. Why? Because stakeholders are more powerful, more broadly based and better organized.

Takes opportunities to influence and advances the future vision. PQ leaders focus on the future vision. Recognizing and creating opportunities to influence, they use them to advance towards their future vision. In so doing, they find allies, build support, and influence those with power to make their future vision a reality. In the past, those with huge financial muscle have been able to exert unfettered influence. But things are changing. Corporate reputations have taken a hit. While large companies exercise less influence than before, the influence of the general public is increasing. Most business leaders have yet to work out how to deal with this change in the balance of influence on government.

Acts courageously, takes risks and upholds ethics. Working in a shared power world to secure a future vision is not easy. You face multiple issues: different stakeholder interests, competing visions and mutual dependency. It takes courage and an appetite for risk. But these characteristics must sit within an ethical framework. Ethics shapes how leaders should behave in terms of rights and responsibilities and fairness to society. Strong ethics and values offer a solid basis for attracting others to work with you.

Influences stakeholders by combining charisma and purpose. Charisma combined with a strong purpose is a powerful combination that inspires and influences others. Joseph Nye identified three elements of charisma as vision, confidence and communication skills. Nye then added emotional intelligence to describe an inspirational style of leadership. To be more charismatic, you must describe your future vision and how to make it happen in a way that captures the imagination of others.

Understands complexity and explains it simply and memorably. Communicating regularly and persuasively with the stakeholders is a key part of a PQ leader's role. Persuasive communication that is meaningful and captures the interest and energy of the audience is central to influence. Communicating simply and memorably requires effort and discipline. You need to be clear about what you want to say; then refine it through reworking until it is sharp and lucid. Also, most people want to know the facts, but touching people's emotions increases impact and memorability. A strategic narrative links the future vision and why it matters to all project communication.

Empathy with Purpose

Empathy is the capacity to imagine oneself as another person, emotionally to feel what the other person feels, cognitively to know how the other person sees the world. Empathy with purpose in a shared power world means building strong and trusting relationships with stakeholders who are central to the success of a shared project and using the shared relationship to achieve outcomes that offer mutual and wider benefits.

Empathy with purpose in a PQ context works at four levels. It includes developing empathy in relationship with individuals: the ability to listen, understand and develop a deeper relationship that in the longer term may increase your capacity to influence partners and stakeholders; creating empathy among others by doing things that attract them to connect with your organization or country; building and maintaining empathy amongst those engaged in delivering a shared project as partners or stakeholders; and having empathy with humanity: PQ leaders feel a responsibility to others and want to leave a positive legacy for future generations.

Here are the indicators of effective performance in this facet:

Studies key stakeholders: sees and feels the world from their perspective and does things that they value. PQ leaders have a two-pronged approach to stakeholder management. First, they take a systematic approach to stakeholder identification and means of engagement. Second, and this is what differentiates them, is that they believe it's important and therefore invest time in both emotional and cognitive empathy to understand how other people and organizations see the world and what they want.

Relates to wider society; culturally competent and respectful. Cultures are an expression of beliefs, values and deeply held assumptions that influence the way people, organizations and nations behave. PQ leaders are curious about and understand other cultures — through being well informed, travelling, job assignments, learning foreign languages and customs, and by encouraging diversity in their workplaces. They are fluent at the level of both organizational and international culture.

Builds shared empathy by attracting others through values, behaviors and innovation. People attract other people by expressing their values. Organizations and institutions are attractive when they behave in accordance with accepted values and when they display creativity and innovation. Attraction, in turn, builds empathy.

Inspires passion and commitment from other stakeholders to the shared project. Nothing that ever mattered was easy. The role of the leader is to keep people focused on the shared project, especially when the project is complex and competing interests abound. PQ leaders are committed to delivery and have a strong empathy with the overall mission. It drives them. And it enables them to inspire a similar empathy in others. Common themes that leaders use to create commitment include clarity about the mission, instilling fear and good communication across projects.

Feels empathy with humanity and acts to make the world a better place for future generations. PQ leaders care about the world they live in and the world they will leave behind. They feel personally responsible to work and behave in ways that will create a legacy to "future-proof" the planet. Feeling responsible towards humanity is not the same as traditional corporate and social responsibility (CSR), so often an adjunct to core business. PQ leaders are zealous about improving people's lives and sustaining the planet. It's integral to their work.

Trust

Trust is the foundation of all great relationships and the strongest determinant of their success. Trust binds relationships and enhances reputations. Behaviors that create trust include integrity, transparency, inclusivity, consistency

and reliability, and concern for the best interests of others. Unlike the other PQ facets, trust is binary. People either do or do not trust you; there is no continuum for trust.

So why does trust matter in a PQ context? Leaders working in a shared power context don't have the traditional hierarchical position that gives them sole legitimacy and authority. They operate within a web of relationships, where positional power is not enough. The leaders whom others trust to serve their joint interests achieve more.

Here are the indicators of effective performance in this facet:

Consistently acts with integrity and honesty. Trusted people behave consistently. What they believe, say and do "stacks up." Their values and behaviors are aligned. This strong inner core and sense of purpose is expressed through their behavior. They consistently model their beliefs through their behavior at work and in their personal lives. Through their behavior, they inspire, motivate and win the support and trust of others. They are straight talking, use simple language and communicate clearly.

Operates ethically, inclusively and transparently. In a shared power world, the importance of ethical behavior and transparency increases. Leaders want to partner with people they can trust. Customers and consumers make choices based on reputation. Reputation counts in all sectors and affects how others interact with you. In business, it determines whether consumers buy your product or use your service; whether others, including a sought-after, smart, innovative startup, choose you as a partner.

Values and puts effort into projects and relationships that deliver long-term and societal benefits. This indicator of trust describes the behavior of leaders who choose to put effort into projects that deliver innovative, sustainable and long-term outcomes. Businesses that are struggling to maintain or to build public trust have a powerful incentive to partner with NGOs to deliver long-term societal benefits, as NGOs enjoy public trust. Partnering with them to deliver tangible societal benefits enhances the reputation of the business and the leader with consumers and customers.

Manages competing interests without compromising trust and long-term benefit. In a shared power world, leaders have to find solutions that take account of competing interests. Business leaders look for ways to become more sustainable without pricing themselves out of the market. The leadership challenge is finding a way to meet stakeholders' short-term needs while remaining focused on delivering the long-term vision and doing it in a way that maintains the confidence and trust of society.

Establishes a track record for delivering consistent and reliable results. In a shared power world, people are mutually dependent. They rely on others to deliver what they promise. Reliability depends on capability as well as values. Making sure that you have the necessary competences, skills and resources to deliver what you promised at the agreed level of quality is part of the trust equation.

Versatility

Versatility is about having a broad range of thought and behavior and the self-command to use it intentionally. It's responding swiftly and fully to demanding situations, knowing when to be flexible and subtle and when to be strong and focused.

In a PQ context, leaders are working on complex multidimensional problems in a partnership with a range of stakeholders. Second, they're versatile: whether dealing with crises or anticipating the future; behaviorally moving up and down the scales — between firm and flexible, analytic and empathetic, vision and rigorous implementation. Third, they understand the importance of image, symbolism and behavior; and they make choices based on these criteria. Fourth, and this is an overarching point, they must be masters in PQ, able to use all five facets in harmony.

Here are the indicators of effective performance in this facet:

Changes tack to fit new demands ranging from crisis to evolution. Leaders who are future-focused understand that the environment is continually changing and are ready to move with it. Changes are often gradual and subtle and frequently invisible to those involved. Monitoring tools should be in use to spot patterns and trends indicating change early enough to allow timely evaluation and action. Punctuating these evolutionary changes in the landscape are spikes of crisis that burst on to the scene and demand immediate attention. If mishandled, they too have the potential to derail any project.

Exercises self-command to calibrate responses and pace change to fit the circumstances. PQ leaders are operating in complex environments. Self-command is necessary in order to calibrate responses to get the pitch right and move at a speed that brings others with you. Having the self-command to calibrate our responses appropriately is driven by our own personality and how well we deal with pressure, the quality of our relationships with

key stakeholders, which will determine the level of support we get, and our ability to read the mood of different stakeholders and say what is needed.

Maintains focus and strength of purpose; brings rigor and discipline to measurement of results. Strategies often fail because leaders lose sight of their goals. Leaders know when they set out on a journey what they want to achieve. But as the environment inevitably changes, leaders have to adapt their strategies to fit the new contexts. They must do this without losing focus on their overall vision.

Exudes confidence, at ease and in touch with others' needs. PQ leaders who are confident in their own abilities inspire confidence in others. Common characteristics include courteous but not deferential; say what is necessary with energy, pace and concision, but no rush; avoid self-justification; defend the points that matter; not seeking validation or praise; not knocked off balance by criticism. In addition, PQ leaders all have a powerful presence, but whether their influence comes from business, politics or religion, they know what matters to them, and they're at ease with themselves. This frees them up to be curious, challenging, gracious and remarkably lacking in personal ego.

Recognizes political reality; knows when to push and when to concede; and works with the politics to achieve objectives. There will be times when, however strongly you believe in something or however important it is to your strategic objectives, the timing isn't right, and it's not possible to exercise influence. Public opinion might be too strong or the political imperative too great. Versatile leaders know when to persist and when to concede. It's a delicate judgment. Both require courage and vision.

PART III: HOW TO DEVELOP PQ CAPABILITY

Developing PQ as a Leader

PQ leaders want to make a positive difference to the world. They achieve this through their determination, skill and capacity for learning. They mobilize people from across their networks to see and deliver a better future through shared leadership.

We know that PQ capability comes from the ability to use all five facets in harmony. However, you need a good level of capability for each facet before you can harmonize them.

Developing PQ Capability Across the Five PQ Facets

Futurity: To develop futurity, keep up to date with political and business news — national and international. Use a range of media to get different perspectives. Talk about the news. Raise conversations with colleagues and friends that are far reaching: "What if..." Actively seek out people who work in different organizations. Attend conferences and training programs that have participants from a wide range of backgrounds and sectors. Embed thinking about the future into your business schedule.

Power: Remember that power is fragmented. You need to think broadly about stakeholders. Hold a brainstorming session with colleagues and some stakeholders to work through the stakeholder questions. Think broadly and creatively about how to engage the different groups. In personal terms, watch television and films, noting the most powerful communicators. Borrow some of their techniques, and make them your own. Read books about storytelling and the power of story. Make sure your body language is aligned to your message. Work with a coach, mentor or actor to explore and develop your personal impact.

Empathy with purpose: Think about other people, their situation, their wants and dreams. Be generous with your time; get to know people; actively listen; observe and ask probing questions. Think about those with whom you have empathy. How did you develop that empathy? What could you be doing more or less of to achieve empathy with others?

Trust: PQ leaders are trusted because they are clear about who they are and what they stand for. To elicit your leadership brand, ask yourself, "What are people saying about you? How do they describe you? How would you like to be perceived? Is your brand a clear manifestation of what you stand for? Does your behavior make it easy for people to work out your brand? Are you and your brand aligned? Can you be trusted to deliver this brand consistently?"

Versatility: PQ leaders can flex both analytically and behaviorally in pursuit of their goals. What scanning and monitoring systems do you have in place? How robust are they? How do you ensure that you are innovative and ahead of the trend? Think of leaders you know who remain consistent in their beliefs and yet can seamlessly shift their style to engage a wide range of people. Observe them closely, and try to integrate some of their behaviors into your own leadership style. Seek feedback to understand how you might improve your performance.

Developing PQ in Your Organization

PQ is a good-news story. It offers an opportunity to motivate and inspire employees and to re-energize collaborative efforts. As you work with your colleagues to interpret and apply it in your organization, make the most of the opportunity it offers to reinvigorate the way people feel and think about their work.

PQ Skills Audit

A first step to understanding the existing levels of PQ capacity in your organization is to conduct a skills audit. The aim is to find out which roles need PQ, the skill level of the people in those roles and their development needs. The first job is to assess PQ relevance to each role. This involves considering each role against defined criteria and making a judgment about whether PQ has high, medium or low relevance to successful completion of the role.

For example, for each function, such as the CEO, executive board, heads of departments, team leaders and so forth, evaluate how relevant PQ is to the role. Once you know which roles have high or medium PQ relevance, it's the role of senior line managers to review the performance of individuals in those roles and assess their skill level based on their track record. Once there is agreement on the data, the next stage is to decide how to develop the individuals concerned.

Integrating PQ with Other HR Systems

One way of developing PQ in organizations is to integrate it with HR systems. PQ is the basis for explaining to everyone "how" they should do their job — not the processes but the values and behaviors.

We recommend that five aspects of learning and development are reviewed as part of the implementation of PQ:

Formal training programs: Review your formal training offer to align it with the PQ facets and indicators. The level of redesign will be dictated by how important PQ is to the role. Inviting speakers with PQ skills from other sectors to contribute to your leadership programs will give participants a broader view of how PQ is applied in different spheres.

Online learning: Online learning is also a good tool for awareness raising and for providing information to teams. PQ should feature in induction packages and other tailored, online courses. Using the intranet to feature news of cross-sector partnerships gives employees a feel for the innovative and valuable work going on across the organization.

Coaching: Individuals in roles with a high or medium PQ relevance and who are too senior to attend a generic leadership program are most likely to respond best to tailored PQ coaching. Coaches should understand PQ both in terms of the context and how to apply it.

Mentoring: Mentors should be senior leaders who have demonstrated PQ leadership and are able to share their experiences with individuals developing their own PQ. Running facilitated sessions with these mentors to share ideas, experience and learning with each other will prepare them better for supporting their individual mentees.

Assignments/secondments: Some individuals will show potential for PQ through their attitudes and behaviours but may lack experience of leading or working on complex projects or of working across cultures. Those with potential to be senior leaders should be directed to specific assignments to enable them to develop their PQ skills and experiences. Others may have strong credentials in visionary thinking, focus, rigor and getting things done, but lack sufficient empathy to build trusting relationships. Working on secondment with a cross-sector partner offers another way to understand their issues from "the inside out."

We believe the future needs more leaders who understand that integral to their leadership role is helping their community and society to solve their biggest challenges. Society craves leaders who create and shape a better future. Shaping that future when power is shared relies on empathy with both individuals and humanity, building strong and trusted relationships, the courage and conviction to do what is necessary while persuading others to join in, and telling a story that helps everyone understand the balance between the needs of society and business, the global community and nation states, the future and the present.

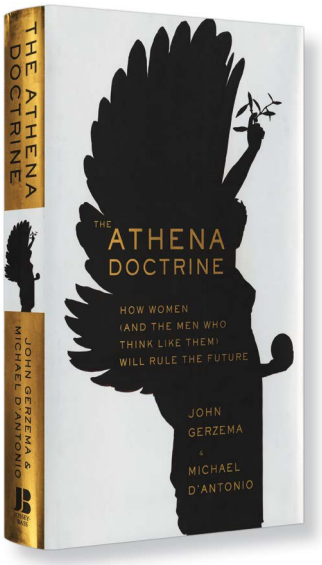
Leadership

The Athena Doctrine

How Women (and the Men Who Think Like Them) Will Rule the Future



by John Gerzema and Michael D'Antonio

THE SUMMARY IN BRIEF

John Gerzema and Michael D'Antonio traveled the world to uncover stories of women and men who lead innovative organizations with the skills and values commonly associated with women. By emphasizing cooperation, communication and sharing, these pioneers succeed in a super-connected world. In *The Athena Doctrine*, the authors show why femininity is the operating system of 21st century prosperity.

Among 64,000 people surveyed in 13 nations, two-thirds said the world would be a better place if men thought more like women. Values traditionally associated with women create more effective leaders and organizational strategies in today's society; traits associated with women — flexibility, empathy and honesty — underpin career mobility and personal fulfillment; and feminine traits help us adapt seamlessly and effectively to today's changes.

Brought to life through fresh stories from around the world and backed by rigorous data, *The Athena Doctrine* shows how feminine values are ascending. By nurturing, listening and collaborating, men and women alike are resolving conflicts, finding profits and redefining success in every realm. Rich with implications for leadership, change management and even career management, these stories will inspire you to find the same success.

IN THIS SUMMARY, YOU WILL LEARN:

- Why women inspire more trust in consumers, coworkers and investors.
- Why "feminine" kindness and collaboration have become essential values.
- How the revision to Iceland's constitution typifies the Athena Doctrine.
- Why Athena-style values are being adopted all around the world.

THE COMPLETE SUMMARY: **THE ATHENA DOCTRINE**

by John Gerzema and Michael D'Antonio

The authors: A bestselling author, speaker and consultant, John Gerzema is a pioneer in using data to identify social change and help companies adapt to new trends and demands. He wrote *The Brand Bubble* and coauthored *Spend Shift*. Michael D'Antonio is the author and coauthor of many books, including *Spend Shift*. While at *Newsday*, he won the Alicia Patterson fellowship and was a member of a team of journalists who won the Pulitzer Prize.

Introduction: The Athena Doctrine

Although women still haven't achieved parity, their steady progress points to the value of feminine traits in the modern economy. Patience, sensitivity, and the ability to understand others are extremely valuable traits in a fast-paced and interconnected world. In our surveys, 78 percent of people said that, "today's times require we be more kind and empathetic"; another 79 percent affirmed that, "a successful career today requires collaborating and sharing credit with others." These numbers affirm that "feminine" kindness and collaboration are essential values in the workplace as well as in the larger society.

Boiled down to a manageable number, the keys to success, as our 64,000 respondents saw it, were

- **Connectedness:** an ability to form and maintain human networks.
- **Humility:** an approach to life that allows for listening, learning from others and sharing credit.
- **Candor:** a willingness to speak openly and honestly.
- **Patience:** a recognition that some solutions emerge slowly.
- **Empathy:** a sensitivity to others that promotes understanding.
- **Trustworthiness:** a track record and strength of character that inspire confidence.
- **Openness:** being receptive to all people and concepts.
- **Flexibility:** the ability to change and adapt when circumstances require.
- **Vulnerability:** the courage to be human and make mistakes.
- **Balance:** a well-rounded sense of purpose.

Gathered together, the qualities most favored in our study resembled the character of the Greek goddess Athena. Venerated for her intelligence, skill, civilizing influence and fairness, Athena was a goddess of industry, arts and crafts. It is Athena who gave the Greeks the olive tree, which sustained their economy and culture. When conflicts arose, she responded with clever strategy and wise tactics, whereas her brother Ares acted in violence.

If Athena is the personification of the qualities that suit our times, then the ideals she represents can be considered a kind of doctrine, guiding us toward effective leadership and success in our work, our communities and our personal lives. Mainly feminine in a traditional sense, the Athena model is nevertheless available and essential for men who hope to thrive in an era of constant change.

What follows are insights garnered from our global survey and the stories of people all over the world who struggle with economic adversity, rapidly changing technology and stubborn social problems. Their Athena-style values didn't guarantee any of them eventual success. But the sincerity, energy, curiosity and creativity they brought to bear in the pursuit of sustainable solutions were extremely inspiring and gave us reason to hope that successful, inclusive and humane initiatives will emerge from the current state of crisis.

Great Britain

In 2011, no social development was more significant than the rise of the "Occupy" protest movement, which was a loosely organized effort that allowed people to

express their thoughts and feelings in a time of great uncertainty. In London, the Occupy activists built tent cities and intended to focus public attention on their opposition to bailouts for banks and cuts to government spending on education and social programs.

With politicians failing to deliver progress, and austerity making daily life tougher, ordinary citizens became impatient and then angry. But while they forcefully declared the current system "unsustainable," the London protesters did not offer a considered second step toward reform or improvements in "the system." With no further outlet for the energy of the movement, it became mainly a matter of outcry rather than action.

However, at scattered locations around the city, inspired individuals and groups were quietly working on their own alternatives. Although we happened to arrive just in time for the noisy protest, we had come to London to meet a number of revolutionaries who were both quieter and more deliberate. Here we would find women and men who were practicing business, community activism and crafts with a true Athena spirit. In every case, they stressed the power of connection — to individual customers, colleagues and communities — to multiply the effect of their efforts and produce innovative solutions to common problems.

Traditional pathways to work and security were disappearing and it was easy to feel unsteady. Unless you were blazing a new path.

WhipCar

Tom Wright and Vinay Gupta were in fact acting as pioneers of the new economy, turning an idea into an asset. Their small company, WhipCar, allowed anyone with a safe and reliable automobile to rent it by the hour, day or week to a neighbor who needed one. The car and the transaction would be secured by WhipCar and its insurers. The service would take a small slice of the transaction but charge no membership fees.

When we caught up with the founders of WhipCar, they were adding more than 100 vehicles to their listings every day, and each week saw an uptick in the number of rentals they had facilitated. Soon to exceed 15,000 vehicles, the fleet of cars available through WhipCar was worth in excess of $20 million and would rank the service among the largest rental outfits in the market. This resource was marshaled not with a bank loan or stock offering but on the basis of a simple but courageous idea: people are essentially honest.

As it turned out, drivers who actually met the individuals who owned the cars they rented drove more carefully than Vinay or Tom expected. "We think that the human element actually reduced risk," noted Tom. With WhipCar, "you are in someone's car. It's not a faceless car owned by some corporation. Everyone is acutely aware that they have to bring the car back to someone who owns it ... This is a human marketplace, and that human aspect brings out the best in the people."

Most of the innovators we met in Britain had established new business models that engaged consumers and citizens directly and made things better, one person at a time. But these kinds of direct efforts were not the only signs of innovation we discovered. Though no longer the seat of an empire, London remains a place where people with a broad vision for changing the world cultivate new ideas.

Iceland

We visited Iceland in early 2012 to see what happens when an entire country must respond to a profound economic crisis caused by a serious lapse in social values, precipitated by excessive financial risk-taking.

The craziness culminated with the collapse of the banks in October 2008. As the government authorities took them over, the krona became worthless abroad, and prices for imports — and almost everything except for fish must be imported — skyrocketed.

The Pots-and-Pans Revolution

Called the Pots-and-Pans Revolution, public protests grew to the point where the government finally resigned. It was replaced by a new coalition, including the country's first female prime minister, Johanna Sigurdardottir. Johanna promised to act with "prudence and responsibility."

Iceland's new government dealt with the financial crisis with swift measures that were the opposite of the austerity impulse that swept Europe. Spending on social programs was increased to ease the suffering of families, and the krona was devalued. The devaluation made imports so expensive that the local people focused their spending on domestically produced goods. It also made Iceland's fish available to the world at bargain basement prices, which led to increased production and employment.

As Iceland's new leaders moved to deal with the immediate crisis, they also looked for ways to revive the balanced values that had made the country stable in the past. The vehicle for restoring the country would be a new constitution. In a remarkable display of egalitarianism, the government sent invitations at random to 1,000

citizens who were asked to join a constitutional forum. Streamed continuously on the Internet, the forum settled on eight themes, ranging from democracy to transparency and the separation of powers, that should dominate the new constitution.

Considered in the context of our global survey, the ambitions of the constitution, including harmony, security and happiness for today's citizens and future generations, are traditionally feminine. In writer Orn Barour Jonsson's view, they are also classically Icelandic, because they tie together the practical and the spiritual while honoring both humanity and the power of nature.

Just three generations ago, most Icelanders depended on the land and the sea for their survival. "We lived because the Earth gave up something for us," he said. "A sheep or a fish gives its life so we can survive. Nature is the basis."

After the fall, people across Iceland looked for ways to feel good about themselves and their country while they nursed both anger and a feeling of innocence lost.

"All of this doesn't have to end badly," said Sandra Hrafnildur, a college graduate who has been unable to find work in her field and who admits she feels "a little bit angry" at the executives and politicians who knocked Iceland off its slow but gentle path toward prosperity and made prospects so tough for her generation. "Most of our problems come from not understanding who we are and what we are doing. Now more voices are being heard, and I think more people are being understood. We're becoming ourselves again."

Israel

Isolated in a region where many of its neighbors are avowed enemies and recent battlefield opponents, Israel faces more external threats than any small country on Earth. With a population of roughly eight million, Israel can't afford to exclude anyone from the work of building and preserving the nation.

Like Israeli men, Israeli women have always been subject to conscription — today, even combat roles are open to them.

According to the Israeli cliche, raw power elicits respect, and anything softer invites defeat. But a counternarrative, one that elevates community, cooperation, emotion and creativity, has always been a part of the national story too. When older, native-born "sabras" talk about the nation's founding and early decades, they invariably speak of the shared sacrifice and cooperation that were essential to survival. These traditionally feminine responses to a profound challenge are as much a part of the Israeli character as physical courage and mental toughness.

In a country of sharp elbows, it takes a special blend of toughness and commitment — to one's home, one's neighbors and one's ideals — to speak truth to power. As a host of a TV news show called Uvda (Truth), Ilana Dayan may be the most outspoken journalist in her country's mainstream media. A military veteran with a law degree, Dayan has endured repeated lawsuits for her reports on corruption and crime.

Dayan told us that she had recently begun to approach her subjects with more empathy and patience. By acknowledging the feelings and needs of the people she interviews, she wins their trust and cooperation. In the end, the product of her work is improved by the person-to-person bonds she forms with even the most challenging people. Dayan sees her growth into this way of working as an example of change in the larger society. She sees Israel as becoming a kinder place, more cooperative and receptive to different styles of work and leadership.

She says, "One of the most important changes is the ascent of women to real power. Right now women are the leaders of three Israeli political parties." Dayan also counts women in finance, the military and business as major influences, leavening the old, macho military way.

Israel cannot afford to leave the strengths of women on the sidelines as it develops into a mature country, and, as Israel's President Shimon Peres insisted, the world cannot thrive by neglecting the feminine half of human nature.

Japan

One scientist who measured the force of the 2011 Sendai earthquake reported that it was so strong that it literally made the Earth move. The tsunami caused as the quake buckled the seabed reached a height of 30 feet and raced toward the main island of the Japanese archipelago with the speed of a jet airplane. The zone of devastation stretched for more than 150 miles along Honshu's coastline. The press revealed that radiation was leaking from nuclear power reactors at Fukushima. Three reactors had melted down, and hydrogen explosions had blown holes in containment buildings.

The grief suffered by individuals and the nation as a whole filled the world press but was quickly joined by images of outrage, empathy and action.

Remarkable as they were, the protests paled in comparison with the spontaneous efforts made by Japanese citizens who noted their government's failure and acted on their own. This was the phenomenon we visited Japan to explore. To us, the citizens who sprang into action represented the Athena value of personal responsibility.

Roomdonor.jp

Within a week of the earthquake, a Keio University sophomore name Kohei Fukuzaki had launched the website Roomdonor.jp to match displaced individuals and families with those who volunteered vacant houses, apartments and rooms. In two weeks, Fukuzaki recruited 2,000 spaces and placed hundreds of homeless in free accommodations. Everyday citizens like Kohei became leaders who took moral responsibility for dealing with the crisis.

When we pressed Kohei to consider the cultural and historical import of his effort, he said he saw it in the context of Japan's continuing adjustment to an era of limited economic opportunity and overstressed government services. "Japanese people had become very quick to criticize," he observed, noting the impatience people expressed over the faltering official response to the disasters. The lesson he took away from 3/11 points to a revival of individual responsibility and a one-to-one, personal response to serious social problems.

In Kohei's view, massive corporations and government agencies came to dominate society during Japan's great boom period. While they provided financial security that was practically cradle to grave, "neighborliness disappeared." The generation born and raised in the so-called Lost Decades — Kohei's generation — didn't know this time of plenty mixed with dependency. (The Lost Decades refer to Japan's long period of low or no economic growth, beginning in 1991.) When 3/11 came, they responded with "an old Japanese spirit people used to show whenever there was a fire or some other emergency. They helped each other directly. I think social media triggered a memory of the old, traditional Japanese personality," said Kohei with a smile. "We returned to a persona that is truly Japanese."

Japan may indeed be a window into the future of many developed markets: aging population, slow growth, new pathways to happiness. The young people of Japan — without any context for the excess and materialism of the 1980s — are building business models based on valuing values. They care less about affluence and more about influence.

Columbia and Peru

From the late 1970s into the early 1990s, the Medellin drug cartel, ruled by the notorious Carlos Escobar, used murder and intimidation to control a cocaine trade that did millions of dollars in business per day. At the peak of the drug trade, Medellin's murder rate reached more than 20 per day in a city of less than two million.

Escobar's death heralded a steep decline for the cartel and an opening for the people of Medellin to remake their city. Already a university city and home of the widely acclaimed artist Fernando Botero, Medellin had always been a cultural and commercial hub, and these sectors came back quickly. But city development officials recognized that a culture of crime and violence festered in the poor, overcrowded slum neighborhoods that sprouted on Medellin's hillsides.

Metrocable

Officials recognized that because of difficult terrain, these neighborhoods were isolated — people had to walk long distances to reach business districts. To knit Medellin's neighborhoods together, officials designed and built a system of cables and gondolas that, like the lifts at fancy ski resorts, would carry people up and down the hillsides in style.

The first line of the Metrocable, promoted with a code of behavior called Metrocable Culture, opened in 2004. The gleaming stations and cars became a source of civic pride, and hours-long commutes were reduced to minutes.

The metro culture imbues citizens with a sense of ownership and personal investment; from the beginning, neighborhoods were part of the planning the system, helping to choose sites for the stations as well as helping to make improvements around those areas.

The widely publicized efforts made to include all citizens in the life of Medellin and to foster peace and unity put the city on our itinerary as we searched the world for stories that showed the Athena Doctrine at work. Here, some very brave men and women have responded to violence and chaos by opening their arms to bring people close. Similar stories were unfolding elsewhere in Latin America as innovators sought to deal with long-term social, economic and political problems.

Do-It-Yourself Efforts

In neighboring Peru — where through most of history, everyday people have struggled with high levels of poverty and limited public resources. Inequality remains a stubborn problem, but the country's economic conditions

have improved more in the past decade than any nation on the continent.

Compared with Colombia, Peru seems to have advanced on the strength of do-it-yourself efforts that have succeeded despite its grave political problems. Three successful elections seem to have stabilized politics enough to motivate entrepreneurs and individuals to remake the country and its image. Emphasizing local culture, especially its food and food products, they have sparked a kind of renaissance, stimulating pride among Peruvians and worldwide interest in the country's blend of Pacific, indigenous and European influences.

Visitors to Lima rarely leave the upscale Miraflores district; when they do, they quickly discover a city where huge numbers of people live in shantytowns where security, utilities and money are in very short supply. For the poor, basic services remain the key to survival; and in Lima's busy streets, no one has done more to help them than the women's police unit founded by activist Silvia Loli.

Certain that police services would improve if women were welcomed onto the force, Loli began pressing for them to be recruited. The idea gained some traction when public anger over corruption in the transit police reached a boiling point.

With a sense of wonder at what has changed in her country, Loli told us about the progress made in public safety. Data gleaned from police units that included women led to the development of offices for women inside police stations. Although men, women and children benefit from the police reforms and new laws, the energy behind the changes came almost entirely from women.

Kenya

Small-scale agriculture is the beating heart of Kenya's economy, sustaining more than half its people. National leaders in Nairobi may anticipate growth spurred by a more stable democracy, but in the countryside, people are more focused on rainfall and soil conditions. And it is in the realm of these very basic concerns that Athena-style trust and cooperation, enabled by technology, are making a big difference in everyday life.

Rose Goslinga

Eager to do something to combat poverty in the country, Rose Goslinga first focused her attention on the fact that many farmers held back on planting costly seeds or cultivating all their acreage. With a little more research, she discovered that many of these small-scale farmers were reluctant to risk bigger investments in seed and fertilizer because a drought or a flood could wipe out their crops. If she could figure out a way to limit their risk with insurance, just as big agricultural firms do in the developed world, they might make the moves required to get more out of their land.

Rose turned to inexpensive, automated weather stations that could measure wind, rainfall and temperatures. One station might cover hundreds of farms. With a network of stations reporting by wireless telephone, great swaths of the country could be observed. Analysts, equipped with the right computer program, could take the readings from the stations and determine when farmers enjoyed the conditions to thrive and when their crops would suffer. In bad times, farmers wouldn't even have to make an insurance claim. They would be paid automatically and have the money to try again.

Today, farmers across Kenya make insurance a routine part of their seasonal planning. The repeat business has allowed the service to become self-sustaining, which was one of Rose's primary objectives. She said she wouldn't have been interested in a charitable enterprise that subsidized an outcome that wouldn't be possible otherwise. "The idea is we've got to run it as a business," she noted. A farmer's willingness to pay indicates that "it has value." The value is also evident to farmers who can try new crops and techniques and expand production. This kind of development is essential, as small farms cannot sustain ever-growing numbers of people.

In Kenya's domestic economy, technologies, policies and relationships that build trust form the foundation of hope and well-being.

India

For all its progress, India remains an extremely poor country where 70 percent of the people live in rural isolation. India's future depends not so much on software engineers and industrial moguls as it does on the rural poor becoming middle-class workers and consumers who enjoy the kind of life promised by independence and democracy.

Nowhere is the promise and peril in India more evident than it is in Gujarat, where we traveled to discover stories of innovators practicing openness — to other people and new ideas — in the pursuit of progress.

DBS Communities

The founders of the development company DBS Communities were inspired by the book, *The Fortune at the Bot-*

tom of the Pyramid written by the late C.K.Prahalad. The book argues that huge opportunities for profit, and social good, await those who tap into the multibillion-person market represented by those who live on less than $2.50 a day. Goods and services priced to serve these customers will find almost limitless demand. Prahalad also offers a strong argument for businesspeople to consider PPP — purchasing power parity — to gauge a market's opportunities. PPP takes into account huge variations in the cost of basics like land, transportation, raw material and labor.

DBS did the same thing as they considered building affordable housing in Gujarat, where construction workers earn modest wages, and materials such as cement cost less than they do in industrialized countries. Powered by these cost savings, DBS launched two housing developments in the city of Ahmedabad and one in the coastal city of Surat. Equipped with modern kitchens and baths, they will be priced between about $8,000 and $20,000.

The Indian market is filled with potential buyers who rent substandard and even slum housing but could afford to buy low-priced condominium-style homes. However, many of these people don't have bank accounts and have never taken out loans or credit cards that would establish a credit record. To overcome this problem, DBS approached nonprofit agencies that could help buyers gather documents for mortgage applications and put their finances in order. These agencies also counsel buyers on setting household budgets. "We understand the customers much better," explained Rajendra Joshi, who founded a nonprofit development agency called Saath, which formed an alliance with DBS.

After consulting with groups of potential buyers, the partners determined that buyers who made $150 to $200 per month could afford new apartments ranging from 200 to 400 square feet. Economies of scale could be achieved by constructing hundreds of units at sites near existing slums, creating new communities that would represent a higher standard of living for people who had achieved a certain level of financial stability.

The DBS-Saath plan depends on pride of place and homeownership to create upward momentum for the poor and the development of a strong middle class in India. Success depends on the fact that real incentives are driving everyone toward the same end point: an India in which more people can raise themselves up.

China

After 25 years of economic boom, the Chinese definition of success has begun to shift. In addition to the pursuit of wealth and status, people with drive and ambition want to feel fulfilled and that they are creating a better way of life. As experts have noted, the people of China seem to be yearning for a kind of spiritual fulfillment, which might be expressed in connection and service to others, or perhaps in the restoration of pre-Communist values. They seek to do this mainly through individual initiative and not through political organizing.

A first-generation Chinese American, Calvin Chin immigrated to Shanghai in 2004. He joined a startup called Semiconductor Manufacturing International Corporation (SMIC), which had grown rapidly thanks to partnerships with city governments eager for job-creating industry.

Taking what he learned and what he earned with SMIC, Calvin cofounded an organization called Qifang, which pools small investments to provide tuition loans to college students. In a matter of months, Qifang arranged for 2500 students to get financing at interest rates that varied according to the student's credit worthiness. Not one borrower fell behind on his or her payment schedule, and Qifang attracted worldwide attention for its success. His next initiative, called Transist, provides technical assistance and financing up to $1 million for startups that seek both "profit and purpose." Transist has already put money into four promising companies.

"Thirty or 40 years ago, the government filled the space for values," he noted. Today Chinese people can set their moral, social and commercial priorities. That change is expressed in the development of socially conscious businesses and, for the first time in Chinese history, the rise of philanthropy and private service organizations.

Sweden, Germany and Belgium

In Stockholm, Brussels and Berlin, we discovered how a long tradition of civic action inspires people to the heights of Athena-style innovation.

It is in the Swedish nature of things to simply open up conversations and include as many voices as possible. And everyone in the country seems to have a growing interest in both self-expression and discovering the perspectives of their neighbors. When we asked Maria Ziv, marketing chief for VisitSweden, about this phenomenon, she said she believes that Swedes and visitors to their country hunger for direct connection, whether it means sharing a week, a day or an hour with each other. Tour buses are out. Welcoming visitors to your home is in. "We've got this hunger to learn about others."

Friendsurance

Headquartered within sight of a remnant of the Berlin Wall, Friendsurance is based on an ingenious scheme that promises to make its customers safer, healthier and happier while saving them money. It accomplishes these goals by letting people form their own buying groups for basic insurance products.

Tim Kunde, the young innovator behind Friendsurance, is like other European entrepreneurs who strive for a combination of social and financial rewards. His breakthrough idea involved harnessing the power of friendship to save people money and make their lives less susceptible to losses.

"People pay the same insurance premiums at the start of the year, and then we give them a payback at the end of the year," explained Tim when we met. The refunds, which can total as much as 50 percent, are based on the number of claims against the insurance made by your network of friends.

Friendsurance adds accountability to the insurance process by linking premiums and rebates to one's network of friends and acquaintances. Once the deal is made, friends naturally feel a moral duty to behave well, and this feeling is reinforced by peer pressure.

Well-knit groups that function in an open and cooperative way can represent Athena values even when they engage in a pursuit as mundane as insurance.

Bhutan

For generations, Bhutanese kings have permitted only the most gradual modernization of the country. With the introduction of each new technology and social concept, including democracy, officials have painstakingly weighed the benefits against complex ancient values. They do not assume that "newer" equals "better" or that "modern" is the same as "advanced."

The overriding principle of the national religion stresses personal enlightenment for the benefit of a universe full of interconnected souls. In this view, individual achievement is encouraged, especially if it produces a benefit for all of creation.

The local culture also promotes a remarkable level of mutual respect. Historically, Bhutanese men and women have known substantial equality in marriage, community affairs and commerce. Indeed, the feminine spirit is highly regarded in Tibetan Buddhism, and property in Bhutan is passed from mother to daughter.

In Bhutan, we found that officials were concerned about improving economic conditions and reducing poverty. Tourism and hydroelectric exports to neighboring India have brought revenues into the country, and some of this money has gone toward raising the standard of living. But as material conditions improve, officials seek matching gains in the physical, emotional and spiritual wellbeing of the population.

In most global reports on economic activity, Bhutan ranks in the bottom third, sometimes the bottom quarter. Bhutanese people, however, don't seem to regard themselves as suffering or deprived. People in Bhutan feel content if their health, relationships, spiritual lives and families are all in good shape. Officials in Bhutan have identified three general uses for time — work, rest and leisure — and set the ideal for a happy life at one-third for each purpose. Surveys show that Bhutan is very close to that ideal.

Conclusion: The Age of Athena

Wise, courageous, humane and cooperative, Athena represents the best in all of us. Athena businesses make profits while creating lasting and mutually beneficial relationships with customers and communities. Athena governments serve all constituencies. Athena nonprofits find self-sustaining ways to do good.

Fortunately for all of us, the young adults who will determine the wellbeing of future societies seem poised to live up to the Athena Doctrine. Among our respondents, these young adults were less rigid in their definitions of masculine and feminine and more likely to appreciate the full range of human strengths and talents. We believe that this starting point makes them more resilient, more willing to experiment, and more open to unconventional ideas.

It's enough to give anyone hope for the future.

The Littlest Green Beret

On Self-Reliant Leadership

by Jan R. Rutherford, Jr.

THE SUMMARY IN BRIEF

Leadership, like life, presents us with numerous challenges. Some of the challenges are external while many of the obstacles are internal. Becoming a self-reliant leader is about embracing all challenges, and doing more than you ever thought possible.

No one has the "formula" for optimal leadership. There is no set of traits, or a perfect template. What we all have, however, is the opportunity every day to develop self-awareness, selflessness, and self-reliance, which are at the heart of effective leadership, says Jan Rutherford. Overcoming the stigma of whatever limitation one may have, is part of the self-reliant aspect Rutherford talks about. Setbacks and even failures are valuable learning and growth experiences provided one uses solitude for introspection. How to learn from the everyday crisis is the crux of leadership development, according to Rutherford.

Rutherford provides a pathway for leadership growth that is exemplary and positive, inspiring and trustworthy, and influential and impactful.

The Littlest Green Beret provides guidance that will help you develop a pathway to learn from your own experiences and build effective leadership skills.

IN THIS SUMMARY, YOU WILL LEARN:

- What is self-reliant leadership?
- How do crucibles, adaptability and discipline help form someone as a leader?
- How does an effective leader navigate change and dysfunction?

THE COMPLETE SUMMARY: **THE LITTLEST GREEN BERET**

by Jan R. Rutherford, Jr.

The author: Jan Rutherford entered the U.S. Army at age 17, measuring five feet four inches, and weighing 114 pounds. He spent six years in Special Forces as a medic and "A" team executive officer and three years as a military intelligence officer. Since then, Rutherford has acquired over 25 years of business experience and has held executive roles in business development, marketing, sales, training, product management, and as a CEO. In 2011, Rutherford founded Self-Reliant Leadership, LLC – a leadership development firm focused on helping leaders and teams develop self-reliance to create powerful results through executive workshops, custom programs, coaching, keynote speeches, and wilderness expeditions. As a Senior Instructor at the University of Colorado Denver Business School for over a decade, Jan teaches leadership courses to MBA students and Doctor of Nursing Practice candidates, and a class each summer in Ireland." *The Littlest Green Beret: On Self-Reliant Leadership* by Jan R. Introduction

Leadership can be an illusion of control, but changing your perspective on everyday experiences can provide inspirational learning opportunities for personal growth and development. Self-Reliant Leadership is synonymous with knowing which questions to ask yourself and having the courage to answer them and act.

What questions should you routinely ask yourself? On a daily basis, what steps should you take to find personal success in your life's work? A key determinant of success is whether you can rely on yourself for self-coaching. However, self-reliant leadership is dependent on achieving a balance between independence and the interdependence of working with others to accelerate your own personal growth and development.

Self-reliance and Leadership may seem to be contradictory notions, but there are three mutually supporting concepts.

Self-Awareness: Leadership requires Self-Awareness. Leaders understand their strengths and shortcomings and how those traits affect their ability to create willing followers.

Selflessness: The second is Selflessness. A leader needs to have a steadfast passion for serving others, and that requires putting others first.

Self-Reliance: Lastly, Self-Reliance is essential because leading means being out front, and there are more naysayers than supporters, when trailblazing. Self-Reliant Leaders believe in leading by example to develop followers who have initiative, persistence and determination.

Self-awareness, Selflessness and Self-Reliance are the three character traits that are the lifelong pursuit of effective and outstanding leaders.

Self-Reliance

It's fascinating to study why some lead and some follow.

It takes the same self-reliance to survive in the brush as it does to survive in a position of leadership. A person needs the same ability to take risks if he or she is jumping out of a plane or taking an organization in a radical new direction.

To become a leader who inspires others to greatness (or at least to do their best), you need to turn yourself into a "living laboratory." Everyone is molded by his or her experiences — including and especially by his or her mistakes. Great leaders learn the lessons from their experiences faster than other people.

You may have heard the suggestion that you should "dress" for the position you want. You should start your career in leadership by thinking like a leader, no matter what your position.

Even under the best circumstances, your current trajectory will require periodic adjustments. During land navigation training in the Army, for example, you learn that even the tiniest error with a compass becomes more significant the farther you travel. You learn to focus on a point that you can see, such as a large knot on a tree, and make sure you have the correct heading to that particular point. You then do the same thing over again

once you get to each marker. A five-mile trip through the underbrush might really be 20 short trips with constant course corrections.

This same principle applies to your own leadership development: Your journey will include many measurements with plenty of course corrections that sometimes involve going back a few steps to ensure the path is correct.

You must constantly adapt and change — constantly change — not because of outside demands but because your internal laboratory will be telling you, "This doesn't work," or "This works much better" and "This is the way a great leader would act."

Experience is the best teacher. Seventy percent of success is really about showing up, and that idea encompasses whole worlds of thought. You show up and bring your body and your mind and your spirit. To spend your time in the right place, you will need to sacrifice something. That shouldn't be a scary word. Sometimes you have to forego immediate gratification for later gain. You must stay focused, and to do that you need unwavering discipline to persevere. Embrace obstacles and adversity, as they can serve as a source of strength and personal growth.

Leverage your time, and enhance your powers of observation to gain insights that accelerate your own personal growth and development. Think like a descriptive writer. Observe everything and make mental notes: Connect the dots, see complementary and opposing forces, make correlations and draw conclusions (even if you're wrong, you'll learn from it!). Make new behaviors a habit that will strengthen your character to make a difference in the lives of others.

But first, you have to know yourself.

- What was the earliest adversity you faced, and how has it affected your life?
- Who are the leaders you admire, and what are the traits that make them effective?
- What does self-reliance mean to you?

Crucibles

Effective leaders are known for having an inquisitive mind and an insatiable appetite for learning about what makes people tick. A crucible provides the opportunity to reflect on what you see, hear and process — especially during the tests of adversity.

One day, while sitting on the edge of the school's track during lunch, a bunch of kids grabbed me from behind, picked me up and threw me in the cafeteria's dumpster. Instead of being covered with food, I was covered in pencil shavings and had some pencil lead poked under the skin on my arms and hands. I was humiliated, and I was mostly frustrated that I had no control over the situation.

I decided then and there that I would show the kids that I wasn't just some smaller version of them. Despite society's obsession with a child's growth, as if it's controllable, I'd have to use my wits to build credibility as a "normal" kid. I surely didn't understand the concept at the time, but I was making a conscious decision to become a fake extrovert to exert more control over my own fate and put forth some semblance of self-control and influence over others. The outcome of my own forced personality transition was that I was becoming an astute observer of human behavior. If I indeed took control of how I responded to the environment, I could change, enhance or temper a given situation, and that meant I had to be proactive and goal-oriented. The sharper the goal in my mind's eye, the more optimistic I became at achieving the goal, and when I achieved small wins, I became more optimistic about accomplishing goals that were more ambitious.

Understanding how you'll react to adversity helps to remove doubt, while focusing on short-term sacrifices for long-term gains. There's nothing like a crucible to help you understand what you're good at and what you enjoy. There are a number of resources available for self-discovery, and a first-rate and down-to-earth starting point is to write out your own beliefs and core values. Values are the foundation upon which a leadership philosophy is honed that fits your interests, skills and expectations.

Whether you are looking for concepts to jump-start an idea or because you are looking for motivation or inspiration, consider three of the most important questions you can ask when facing an obstacle or trying to advance your objectives through others:

- **Where am I?** It's a broad question that requires a great deal of introspection. This is difficult because it requires you to be painfully honest with yourself — honest about your strengths and honest about parts of your character that may be holding you back.
- **Where do you want to be?** This helps you focus your purpose. What does success look like and feel like to you? It is fine to dream big, but the important thing is to dream. It is critical that you decide your life's passion, because creating a vision will mean making a difference in the lives of others.
- **How will I get there?** What are the details of how you will make a difference? The difference you want to make in this world requires some degree of influence with others. Think of the difference you will make as a form of service. How will you get to the

place you so eloquently described for your team? How will you track your progress in order to adjust for optimal performance?

Coaching

Teaching and coaching can be interchangeable when the objective is to guide people to the source of their own power, and coaching is a fundamental skill of effective leaders.

Growing up, my neighbor was a good old boy from Alabama and a former Marine. Jerry Snell was still in great physical shape, and he took me under his wing to teach me how to hunt and fish — the first person who inspired in me the concept of self-reliance. You have to be squared away first before you can ask anything of anyone else.

One time, when we were out all day in waist-deep water with water moccasins and alligators all around, he said, "Now take us back to camp."

I protested and said, "I can't do that — I've just been following you and watching for snakes."

He said, "Well, it's going to be a long night then."

I led us back to camp eventually, and we got in as darkness descended. Instead of congratulating me on my land-navigation skills, Jerry said, "Next time, pay attention. What would you do if something happened to me?"

He had a point — actually, he had two points: I needed to rely on myself, and I needed to think about contingencies for others. Adapt, conserve energy and keep it simple: Leadership defined.

Consider the people who have truly touched your life. Chances are they mentored you in some way, i.e., they illuminated and brought out a passion that you developed into a strength. The teacher/mentor/coach truly demonstrated leadership by communicating to you in a clear, respectful, stimulating and consistent manner. He or she inspired you to reach higher.

Coaching requires different skills and approaches based on where an individual is with regard to performance. If you're new to a team or have a new member on your team, the first order of business is to establish trust and set performance standards so you can assess performance and results. Your team will be assessing whether they can trust you, whether you care about them and if you are committed to their success. The best way to answer those concerns is to do what's right, do your best and treat others the way you would like to be treated (simple stuff you learn at an early age, but behavior that requires constant tweaks and reminders).

Coaches are people who have the ability to hold a special mirror in front of you that provides insight that others cannot. This comes from understanding a person's values and beliefs and elevating that person's own esteem and expectations.

Adaptability and Discipline

What separates runners of equal ability on the hills is their disciplined ability to adapt and endure suffering a little more than the other racers. In other words, understanding when and how to channel energy for that extra edge is a critical determinant of success — especially for leaders.

I learned a lot about myself in basic training through my interaction with other trainees and the drill sergeants. Some of the soldiers were coming from far rougher environments than anything the Army could throw at us, and it was an eye-opener for me to be around some pretty tough people.

During the first part of basic training, my squad leader got caught leaving the area and lost his leadership position after just a few weeks. The drill sergeant had noticed that I assumed a role in coaching other soldiers and picked me to be the new squad leader. I was more organized and had picked up on things quicker than some of the other soldiers.

So, here I was, the smallest soldier in the platoon. I was in charge of a kid who just got demoted and an assortment of characters who weren't accustomed to taking orders in any form — from anyone. I adapted and chose to coach and collaborate rather than dictate. My efforts paid off, as I was picked by the drill sergeants as the top trainee of the platoon. More than anything, this phase illustrated the value of adapting to an environment and having the self-discipline to thrive. The most valuable lesson is that if you want something bad enough and you're willing to sacrifice comfort and pleasure, the goal is quite attainable.

A great deal has been written about leadership crucibles as severe tests of how people handle adversity. How a leader handles adversity and hardship can certainly highlight strengths and weaknesses, and it's good to know how you'll react before leading others because leaders will inevitably be tested with a crisis at some point.

In the absence of crisis, leadership can be collaborative, managerial and mundane. It can also involve strategy development, planning and contingency preparations. In a crisis, a leader's decisiveness and ability to focus will be tested, and it's good to know how you'll respond when others are dependent on your ability to pass the ultimate test.

As an Art … from the Heart

The goal of leadership is to gain willing followers who are committed and not merely compliant. Leadership is ultimately a balancing act, much like the concepts of yin and yang — two opposing but complementary and interdependent forces found in all things. Leadership, like yin and yang, is something that requires balance — as one increases, the other tends to decrease, and vice versa. A highly energetic person can also be a very impatient person; that is, a strength can ultimately be a weakness.

Self-reliance can serve as a fulcrum on which to balance compassion and discipline as indicators of leadership effectiveness. Articulating where you're going, how you'll get there and why it's important is the mechanical part of leadership. The art is in working towards a balance to build trust and gain a voluntary commitment from those you seek to influence (also known as emotional intelligence).

For example, missions need to be accomplished but can only be done through the successful management/balancing of human relationships. A leader needs strength of character but also needs a measure of humility. A leader needs to do the right things while also managing to do things right. Tasks need to be accomplished, processes need to be initiated and followed, and creativity needs a good dose of pragmatic behavior. One can drive compliance, but having true commitment is another matter. Micromanagement is the bane of most teams, while unchecked autonomy is not conducive to great team accomplishments, either.

In the end, it's really about communicating a vision in such a way that the leader is able to gain willing, engaged and motivated followers who are truly committed, not blindly obedient drones. The vision needs to strike a balance between expending energy on short-term objectives while achieving long-term goals so people are engaged, energized and passionate.

Learned Optimism

We only possess two innate controllables: where you spend your time and how you respond to your environment. How you respond to your environment is analogous to choosing your attitude by way of controlling your emotional response to other people and situations.

While I served at the John F. Kennedy Special Warfare Center and School, the Army's special-operations university, I had the honor of working with a man who had a phenomenal story of demonstrating hope and optimism in dire circumstances. His name was James Nicholas (Nick) Rowe. In 1963, he and two other soldiers were captured by the Viet Cong, and he was taken and kept prisoner in the U Minh Forest, known as the "Forest of Darkness," in southern Vietnam. He was held for five years, spending most of the time bound and suffering from dysentery, in a small bamboo cage. He was hopeful for escape yet realistic with how long he might be held against his will. He confronted the brutal facts of his situation and did everything possible to survive physically, mentally and emotionally. He controlled how he responded to his environment and prevented his captors from entering his remaining area of control and stealing his hope. In 1968, on his way to be executed, he managed to escape and was rescued 11 days later by a U.S. helicopter. He was one of only 34 American prisoners of war to escape in Vietnam and the only one to have escaped from the Viet Cong. Rowe had the unwavering optimism that the enemy could not break his spirit and that he would eventually be rescued or escape.

When people face adversity, you see different things in them than when they're relatively comfortable. No pain, no change.

A plethora of new research is demonstrating that developing an optimistic outlook and approach can be a learned behavior that has benefits for your health far beyond leadership. One such study was by Toshihiko Maruta, M.D., a psychiatrist at Mayo Clinic. Maruta found, "It tells us that mind and body are linked and that attitude has an impact on the final outcome — death." He went on to say that optimists might be less likely to develop "learned helplessness," which is the polar opposite of self-reliance.

Becoming an effective leader starts with a passion to enhance the human condition and the realization that you can't go it alone. Developing effective leadership skills is the desire to understand others and your effect on them. Human interaction is not like a science experiment, with controlled conditions and repeatable results. Interactions and interventions amount to infinite possibilities. Every day, every person and every situation are nuanced in some intricate and fascinating circumstance. If the recipe existed, we would be able to test aptitude and leadership quotients and make effective leadership easily repeatable. But we can't. Since the beginning of recorded history, philosophers have opined about the dearth of leaders. What we can do is embrace the apprenticeship and become extraordinary learners who constantly and consistently study what works within the context of different events, different times and different people.

Learning to lead boils down to focusing your time and managing how you respond to your environment. Your passion about a given undertaking and your attitude to-

wards the people you lead must match your rhetoric.

Conflicts and Dysfunction

Leaders will always encounter disruptive and negative individuals, and like bad apples, they can sour the entire team. When there is poor morale and high turnover, it can usually be traced back to misaligned expectations due to failed communications. This creates a dysfunctional team.

For any organizational position, the people who support your leadership position need clear and concise job descriptions with enough detail, so roles and responsibilities are clearly understood and acknowledged. The coaching sessions and formal appraisals that follow need to be consistent with what was initially outlined as the expectation.

Misaligned expectations are expectations that could have been aligned had there been mutual trust, communication with candid assessments and frank feedback. Being transparent when it comes to balancing rewards and reparation is the best way to align expectations and facilitate healthy communication.

After every exchange with the people you work with, ask yourself, "As a result of this interaction, am I exerting influence and in what way? Am I viewed as an adversary or an ally for the people who depend on me?"

The language of leadership needs to be clear, respectful and congruent. Clear language reduces ambiguity and aligns expectations. Respectful language is the basis for trust and a collegial relationship. Congruent language means the leader walks the talk — i.e., there is alignment between his or her words and deeds, which leads to a model of integrity.

Building Teams

When I was a platoon leader in the military intelligence battalion that supported the infantry division, my platoon sergeant would take care of the day-to-day minutiae. He taught me that I needed to understand my role as a leader.

I needed my interactions with the platoon to be "measured." I needed to ration my time to enhance my impact. I needed to spend time thinking about what I wasn't going to do, because overexposure actually detracted from my ability to be seen as the leader when it counted. I needed to prioritize and focus on just a few things. I decided the top three things were training discipline regarding job skills, the ability to absolutely rely on each other (teamwork), and the endurance and stamina that only come from a high level of physical fitness. This lesson of discerning activity from results has served me well and is a lesson many leaders frequently fail to heed.

When new initiatives are started, the effective leader has to spend time deciding what will be discarded. It is the art of focus. After all, a leader cannot be all things to all people; this leads to confusion, failure and a lack of clarity. Even the questions leaders ask convey insight as to what is an important priority. It's often said that you can't manage what you don't measure, but questioning everything ultimately means you lack focus on the important priorities for the team you lead.

Leadership can take two tacks. One approach is that the leader initiates change without any external stimulation to alter and improve the organization. The other is when a crisis is thrust upon the person in a leadership position and tests him or her, for all to see. The latter requires a different set of skills and the ability to see the situation, gather the facts, confront the realities, develop and test courses of action and decisively move the organization beyond the crisis. In both instances, the leader must create a vision for the organization and articulate that vision in such a way that the team willingly commits and executes the strategy based on the leader's vision. The vision is the *why* that creates purpose and a sense of optimism for the team.

As a leader, you need a vision that comes from passion. You need to deeply yearn to accomplish something you can only do with the help and assistance of others who are equally committed. Your success lies in knowing the difference between activity and real results. Achieving real results will require you to lead by example.

Characteristics of an Effective Team

The three major characteristics of an effective team are shared accountability, a distinctive purpose and real work. Is the accountability truly shared? Did you give up some measure of power and control so your team members are empowered beyond a doubt? Do team members know their distinctive purpose — where they're going and why?

While figuring out how to build a team to make a difference, how you approach your goals will be a key determinant of your success. Along with knowing where you want to go, you will need unbridled energy and enthusiasm, because optimism (or pessimism) is contagious. You'll also need an eye for the external environment, for purposes of adaptation (i.e., course correction). Lastly, you will need a disciplined focus for your energy to ensure you make small steps daily towards your higher goals. Self-awareness and self-coaching are the catalysts for leading yourself, building your team and motivating team members to new heights of accomplishment.

Instigating Change

Leadership is nothing if not change. As leaders, we know affecting positive change starts within. We tend to think change is something we do rather than something we think. As a lesson in leadership, pay close attention to what works for you when it comes to successfully navigating change. Any Boy Scout remembers to be prepared, and the role of the "10 Essentials" serves as part of an outdoor creed and checklist for safe passage through the woods of any eventuality: compass, map, headlamp/flashlight, fire starter, first-aid kit, extra clothes, extra food and water, matches, knife and sun protection. It takes 10 Self-Reliant Leadership Essentials to affect change — first in yourself and then in others.

1. Passion. Your passion serves as an internal compass and helps establish direction. Zeal for your mission's purpose begets commitment.

2. Vision. Passion can be fleeting, so you need a vision that will sustain you when the going gets tough. Knowing where you're going is needed before you can convince others to willingly follow you to the destination. What you see as your vision also serves as the map for others to "see" your destination.

3. Consideration. Considering and contemplating all available options for a vision provides insight the same way a headlamp/flashlight illuminates what was previously unseen.

4. Intention. Intent ignites passion the same way a spark precedes a fire. It's analogous to transposing thoughts into action. Clarify what's possible and what others can contribute.

5. Planning. Planning is all about anticipating alternatives, just as packing a first-aid kit is a thoughtful contingency for any adventure.

6. Commitment. Commitment is defined as the act of binding yourself (intellectually and emotionally) to a course of action. Packing extra clothing for an outing in the woods means you're determined and committed to the journey, and no matter what's thrown at you, you'll persevere.

7. Sacrifice. There is no single trait that's a more important determinant of leadership success than the ability to unreservedly sacrifice in order to achieve deliberate outcomes for the greater good. The act of bringing along extra food on a hike means you're carrying extra weight and have as a contingency the knowledge that current provisions could run dry. It means knowing that whatever discomforts you'll experience, the destination will be worthwhile.

8. Discipline. It's hard to sacrifice anything without self-discipline, much less sustain momentum towards a goal. Matches are essential to start a fire and provide a sense of security, just as discipline is required for a desired outcome to be achieved.

9. Action. Before a knife is used to cut, the user envisions what the knife will help create or alter. Action is the tool that follows intent and planning. The sharper the knife, the easier the cutting, and the more focused the action, the greater chance for momentum and achievement.

10. Habit. A result of repeated sacrifice, discipline and action are something analogous to a routine. Just as you know sun protection can prevent painful sunburn in the short run and prevent cancer in the long run, you're also aware that good habits have short- and long-term benefits. Predictability creates trust in others, which is a result and benefit of discipline and sacrifice.

The last marker of personal change is not so much an action but a result of a disciplined approach to the 10 steps: Character (moral fiber) is built through the process of making a positive difference in the lives of others.

Continuous Learning

If you don't learn from your mistakes, you're apt to repeat them until you do. Successful leaders have the ability to know where they belong and where they can apply their strengths to succeed.

The ability to identify and attract quality mentors is a skill that provides an extraordinary advantage for learning to lead. With job changes becoming more and more frequent, the ability to attract mentors will be a critical success factor for aspiring leaders.

Your continuous learning can take place at work, on your own or through charitable organizations. Your learning can take place anywhere you are able to work with others with similar convictions but where you are likely to have next to zero positional authority.

Since leadership is part psychology, part sociology, part anthropology, part philosophy and part political science, verbal communication skills and interpersonal skills are important determinants of effectiveness and success. Of course, there are traditional means by which to learn: seminars, courses, classes, tradeshows, lectures, journals, articles, magazines and books.

A learner mindset will require a steadfast commitment to enhance your experience, and the real challenge will be to develop candid channels for feedback on your progress.

The Ultimate Team

Successful journeys all start out the same way — a vision with detailed planning. Lewis and Clark co-led the ultimate team as the Corps of Discovery. The expedition was extraordinary in so many ways — not the least of which was extreme hardship, unspecified timeframes and an unknown outcome.

President Thomas Jefferson created a vision for the journey through a very specific question: Where is the United States with respect to the fur trade, and is there a quick overland route to the Pacific?

Jefferson and Lewis rolled out a map and said, "This is what is known about the United States." They made an assessment of where they were. The second thing Jefferson and Lewis did was point at the area that was uncharted. Jefferson said to Lewis, "Your goal is to explore the Northwest Territory via the Missouri River and find an overland route to the Columbia River and on into the Pacific Ocean."

The direction Jefferson provided (oral and written) was crystal clear and focused on the *what* versus the *how*. The instructions Jefferson wrote for Lewis left no doubt what his objectives were. Lewis knew where he needed to go, what he needed to report and what success looked like.

It was then left to Lewis to choose how to get there. He determined the structure, logistics, and most importantly, decided what type of men he needed on the expedition to be maximally effective and successful.

First, he took ownership of the mission and responsibility for his own self-development. Lewis knew which questions to ask himself, and he had the courage to answer them and act. One of the smartest decisions he is credited with, in planning, was asking William Clark to be his co-leader. Lewis knew his strengths, and he was acutely aware of his shortcomings. He knew Clark was better with people.

How would he evaluate the success of the journey? His ultimate measurement was the successful exploration, mapping and intelligence collection for his commander in chief. It was clear where the mission started, how it concluded and what the outcome would mean to the leaders, their men and their country.

Where are you? Where are you going? How will you get there?

Plot your **location**, determine your **destination**, navigate with clear **direction** and constantly **evaluate** the team's progress. But remember, the real learning will take place during your crucibles as your adversity quotient is tested. It's how you respond when you get lost, run out of supplies, lose people, forgo sleep and make apparently mutinous decisions.

Hear the Unheard

Hearing the unheard refers to a commitment to develop your communication skills by being observant, empathetic and listening. It's a matter of self-reflection and self-discovery, along with accumulating expertise in the field in which you lead. The unheard is hearing your inner voice. It's about asking yourself hard questions and working long and hard on the answers. It is not about immediate answers. How can you focus your energy to produce the greatest impact? For whose good do you serve? Are you easy to follow?

Epilogue

We are in desperate need of leaders. Mastery of any art only comes from practice and experience. You need to stick your neck out.

If so, you are accepting a heavy burden and a privilege: leading men and women to accomplish great things. A good leader remains a student of leadership and uses his or her acquired experiences to teach, coach and inspire others to reach their potential. Learn to inspire yourself. Your leadership impact might influence only one person a little bit. At the same time, it could impact thousands.

Use what you have learned to speed up the learning process. Challenge yourself to change, and be open to more change. Accept and even welcome adversity because it will be your prime teacher.

I believe you have control over two things in your life: how you spend your time and how you choose to respond to your environment. If you do each well and wisely, you will become an extraordinary leader.

RECOMMENDED READING LIST

If you liked *The Littlest Green Beret*, the author recommends:

***Undaunted Courage* by Stephen Ambrose**. A look into the exceptional leadership of Lewis and Clark during one of the great journeys of discovery.

The Social Animal: The Hidden Sources of Love, Character, and Achievement by David Brooks.

The Future of Management by Gary Hamel. A call for leaders to create new ways to manage the energies of others.

Creating the Good Life: Applying Aristotle's Wisdom to Find Meaning and Happiness by James O'Toole.

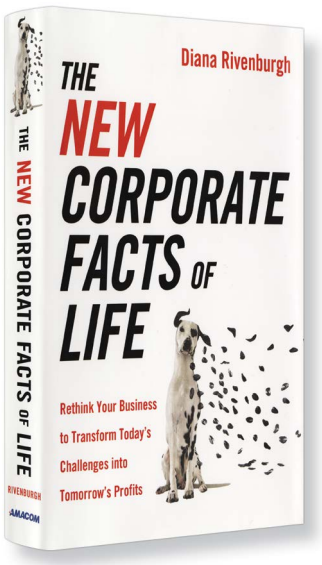
The New Corporate Facts of Life

Rethink Your Business to Transform Today's Challenges into Tomorrow's Profits



by Diana Rivenburgh

THE SUMMARY IN BRIEF

If your company does business the old school way, you may not be in business for long. Disruptive innovation, economic instability, environmental degradation, increasing stakeholder power, and other irresistible forces can pummel your company or provide the stimulus for you to alter your strategies in ways that solve the very problems old school practices often caused.

The New Corporate Facts of Life provides a penetrating analysis of the global forces impacting organizations and creates a map for charting a sustainable, profitable future. Whether you lead a multinational operation or a tiny startup, you cannot avoid the game-changing forces permanently altering the business landscape. A product innovation can blindside your strategy; angry customers can tap the power of social media to tarnish your brand overnight; harmful business practices in your supply chain can make your company look like a heartless, greedy enterprise.

Learn how leading-edge companies have already taken steps to harness The New Corporate Facts of Life to devise innovative and responsible solutions that benefit society and the bottom line. In today's unpredictable, interdependent world, you need new strategies that can harness seismic changes to your competitive advantage. You'll find them in *The New Corporate Facts of Life.*

IN THIS SUMMARY, YOU WILL LEARN:

- To create compelling visions to shape a radically different future and engage diverse stakeholders for innovation.
- To forge ahead with industry-changing strategies and develop bold leaders to thrive in uncertain times.
- To foster vibrant cultures with committed, inspired employees and design resilient, prosperous organizations.

Meet The New Corporate Facts of Life

Few logos enjoy as much global recognition as the Nike Swoosh. You see it on people's clothes and shoes all over the world. Like many companies, though, Nike constantly strives for excellence but cannot avoid its share of serious business problems.

In the late 1990s, Nike came under attack for some of its suppliers' terrible labor practices. The press and the public condemned the unsafe working conditions, forced labor and child employment involved in the manufacture of some products bearing the Nike Swoosh.

Redefining its entire perspective on supply chain management, Nike moved to clean it up by training and auditing suppliers and choosing to do business only with those who adhere to fair and legal labor practices. Nike moved beyond managing risk and rebuilding its brand, and assumed a leadership position, with the overriding goal of redefining every aspect of its business and thereby transforming an entire industry.

My research into Nike and scores of other forward-thinking companies has identified seven powerful, interconnected forces that will trigger a catalytic change in the global business landscape:

1. **Disruptive innovation:** This occurs when a new product, service or business model renders the old way of doing business obsolete. The Internet has disrupted everything from health care to shopping to dating. Telemedicine puts patient records on handheld devices and in the cloud, while smart grids redefine energy use. Personal computers bring instant information, interactive communication, productivity software and endless entertainment to our desks and laps, while smartphones put it all in the palms of our hands. To keep up with such changes, companies must redefine how they foster innovation.

2. **Economic instability:** Financial uncertainty threatens all countries, industries and people. Our hyperconnected world links economies around the globe in which events in even the tiniest countries impact the biggest ones. Economic instability swings both ways. Booming economic periods usher in their own challenges and opportunities. As economies thrive, companies must manage growth while creating contingency plans should new bubbles burst and threaten their very existence.

3. **Societal upheaval:** Corruption, political unrest, poverty, food shortages, terrorism, pollution, unemployment, unfair labor practices, limited education, inadequate health care and crimes against humanity erode the quality of life for people around the world. Conventional corporate social responsibility, which often receives more lip service than serious strategic investment, has become an imperative in today's turbulent world. Business leaders who fail to anticipate and manage societal issues make a big mistake because those issues can take down a company. Smart executives look for the opportunities hidden in all the noise of revolution.

4. **Stakeholder power:** Companies must pay equal attention to an expanded universe of people who touch and who are touched by their organization: employees, customers, competitors, suppliers, community leaders and citizens, governments, NGOs and alliance partners. When

they involve all stakeholders, companies can reap the benefits of greater collaboration, innovation, loyalty and awareness of both challenges and opportunities.

5. **Environmental degradation:** The old model that humans can plunder the earth at will and suffer no consequences has become obsolete. Environmental degradation brings drought, floods, unclean water, disease, death, security threats and pollution. Negative perceptions of a company's impact on the environment decrease brand value; positive perceptions increase it. Smart companies can convert the threats into opportunities.

6. **Globalization:** Globalization has created hyperconnected markets where communications technology and rapid transportation link citizens of the world together as never before. Just as information, ideas, talent, products and services, and investments travel the globe, so too do problems stemming from overpopulation, resource depletion and income disparity. Peace and stability will provide the best solutions not just for individuals and government but also for the world's business enterprises.

7. **Population shifts:** The expanding global population and shifting demographics change the game for all organizations. The UN has declared population growth the biggest problem of the new century, posing serious threats to human health, socioeconomic development and the environment. The more people on the planet, the more stuff they need. This puts tremendous pressure on finite resources.

These irresistible forces have created The New Corporate Facts of Life (NCFOL). They cannot be ignored. The changes emerging from this era of catalytic change demand a major shift in strategic thinking. We stand on a brink of changes every bit as massive as those that shaped the Industrial Revolution and the Information Age.

Every time you make a business decision, whether large or small, local or global, strategic or cultural, you should consider its implications with respect to The New Corporate Facts of Life.

Reset Your Mindset

Mindsets, mental models, paradigms, perspectives, whatever you call them, they consist of all the basic assumptions, beliefs, images and stories that shape the way we define ourselves, other people, organizations and every facet of the world. They determine how we interpret and respond to situations. They are the lenses through which we view the world. Of course, these lenses often distort what actually exists to match our own individual way of looking at the world. We don't see Reality with the capital R, we see our own unique brand of reality.

From each event we experience, we observe data in the world around us, select which data we will use, add meanings to the data, and draw conclusions based on those meanings. These conclusions become beliefs that spur us to take action. To make matters worse, our beliefs continue to influence the data we select and accept. We continue to reinforce our beliefs and justify our actions based on how we view the world around us. Often, even the most prominent leaders in their fields resist new ideas that eventually replace the old facts of life.

Replacing Old Rules with New Facts

Forward-thinking businesspeople are replacing the old shareholder-centric mindset with a much more inclusive shared-value one. They know that sustaining long-term growth in the 21st century will depend on both businesses and governments recognizing that they cannot survive if the seven billion people inhabiting our planet cannot attain healthy standards of living without depleting the earth's resources or running up colossal public debt. By looking through a fresh lens and adopting a shared-value model, a new breed of companies is finding ways to save money, make money, enter new markets, and create new products and services that delight customers, improve their quality standards and processes, and attract talented and engaged employees.

Resetting our mindsets with the profoundly different perspectives we need to prosper in the future starts with opening our minds and our hearts. Opening our minds takes real effort. Opening our hearts helps us connect emotionally to a future we had not previously imagined.

The human brain responds to change the same way it responds to any physical threat, as our fear urges us to flee or fight the danger. No wonder we find it so challenging. Transformational change toward a better future requires us to conquer our biases and fears.

Questioning Organizational Mindsets

Before you can adopt a new mental model, you must comprehend the existing one. It all starts with developing an inquiring mind and engaging in deep reflection and introspection. Ask the hard questions. Capture a belief in one sentence, and then ask yourself, "Why do I believe this? What facts support this belief? Will this belief withstand the test of time?" Then frame a new belief, and ask the same questions. You can perform the same exercise with groups.

Resetting the prevailing mindset of an organization begins and ends with hard questions, open minds, keen ears, respect for the opinions of others, and a willingness to weigh all options. That sort of environment not only generates the best ideas and solutions; it paves the way for people to take new directions.

Although we can't go through life without making certain assumptions and attaching meaning to events, we can learn techniques to understand and question our own assumptions and those of others. The inquiring mind

- Reflects: Examine the thoughts and assumptions that lead you to your beliefs.
- Informs: Share your thoughts and assumptions with others.
- Inquires: Ask questions to learn about the thoughts and assumptions of other people, especially if they differ from your own.

You must look beyond the facts surrounding a specific belief because a person's unique experiences and emotions always add a good deal of subjectivity to their thinking. That's why you cannot easily change a mindset by simply stating the logical business case for it.

Engaging people in the process of looking at issues from many different perspectives not only surfaces opportunities and reduces risks; it also fosters closer working relationships. Change occurs faster and is more likely to stick over time when the people involved enjoy strong interpersonal relationships — when they care deeply for one another and about the results they achieve together. If they believe change will help them get better results, they work harder to implement it. On the other hand, people don't care much for what they didn't create.

Create a Compelling Vision

Many equate vision with mission, strategy or goals. We define it as a compelling, vivid image of an aspirational future that aligns to your values and purpose and that requires substantial effort to achieve. Farsighted companies look past traditional business boundaries when they shape their visions because they know that, despite the importance of profits, value extends beyond the bottom line.

The best vision provides a guiding beacon. You should adhere to four important principles to discover more than just a lot of fancy words to insert into your annual report:

1. **Keep true to your organization's purpose and core values:** What should remain intact despite whirlwind forces reshaping the business landscape?
2. **Engage key stakeholders to co-create your vision:** Which influential stakeholders can provide new and diverse perspectives?
3. **Think big, bold and beyond today's obvious possibilities:** Can you imagine a seemingly impossible future for your organization?
4. **View the future through the NCFOL lens:** Which sweeping changes will most dramatically affect your business?

Let's imagine you run Childco, a toy company that specializes in plush toys and stuffed animals. You begin to imagine a better way to do business by combining your need for profit with your desire to become a better corporate citizen in the world. For each NCFOL, you consider what Childco might do:

Disruptive innovation: What sort of toy animals will delight children 10 years from now? Twenty years from now? How about robotic teddy bears? Can Childco discover innovative ways to promote learning?

Economic instability: The U.S. Bureau of Labor Statistics in 2005 reported that one-third of U.S. workers, more than 42 million people, belonged to a growing freelance segment of the labor force. How will this trend affect Childco in the future? You begin to imagine a virtual organizational structure using entrepreneurs to bring greater design innovation that will expand the market for your products.

Societal upheaval: How do we find out if any suppliers use forced labor? You decide to develop a higher level of social conscience by going beyond conventional notions of corporate social responsibility and philanthropy. You vow to find ways to improve working conditions within your own supply chain.

Stakeholder influence: Retailers now insist you sign an agreement committing you to ethical practices in your supply chain. You commit to maintaining engagement with multiple stakeholders inside and outside the company and to insisting that all managers encourage new ideas, listen carefully to complaints, and never exact punishment for honest opinions that differ from their own.

Environmental degradation: You assume that someday Childco might be required to measure and report on the materials and energy it uses and on its impact on the planet. You resolve to go beyond compliance and adopt a vision of Childco as a responsible environmental steward.

Globalization: Considering the global reach of your supply chain, you commit Childco to use raw materials that will not force it to raise the price of the next generation of plush toys to levels that most families cannot afford and that will not cause irreversible harm to the areas from which the materials are obtained.

Population shifts: You anticipate both opportunities and threats. Parents in developed nations are spending more per child. Childco could tap into the rising middle class in other countries. Childco must continue to keep a sharp eye on population shifts and demographic changes around the world.

Articulating the Vision

After progressing through the various stages of vision creation, you pull your core team of forward-thinking stakeholders together to consider all that you have learned. The team comes up with a working draft of a new vision for Childco:

"We create products that delight and educate children in ways that respect the world's resources and communities. Our innovative people and partners do this by merging profit and purpose to protect the future for the generations to follow. We have fun. We make people smile."

Map the Strategic Journey

Although vision paints the picture of where you want to go and how you want to grow your business, strategy sketches a roadmap to your destination. A great strategy does not follow an arrow-straight path but allows for surprising twists and turns along the way. It provides a way of thinking about your future in concrete and tangible terms.

UPS serves as a good example of strategy in action. The company, started in 1907 as a messenger operation, initially delivered messages, packages, and food, in addition to running errands on foot or by bicycle. UPS now operates one of the largest private ground delivery fleets and one of the largest airlines in the world. Clearly, its strategic planning and execution have passed the test of time. Imagine your company dominating its market 100 years from now.

UPS leaders constantly ask fundamental questions such as, "What does this company really do? Why does what we do matter to the world? What will we be doing 15 years from now?" The company's strategic planning team constantly brings employees with cross-functional backgrounds together with external experts to scan the business environment, test the company's own assumptions, and inspire innovations.

Delivering Today's Commitments and Tomorrow's Promise

NCFOL strategies go beyond lip service and incremental changes. Smart organizations look for truly transformational ways they can maximize their core business while recreating themselves for a dramatically different future. This process usually occurs in three overlapping phases: In Phase 1, the company grows and protects its core business, enabling it to finance the future while preserving the present. At the same time, in Phase 2, it develops business opportunities that it can begin to grow today. In Phase 3, it invests in initiatives that allow it to experiment with opportunities that might fuel future growth and profitably propel it well past its competitors.

UPS has always strived to integrate short- and long-term business plans, emphasizing growth that preserves its core business (Phase 1, package delivery), while investing in new ventures (Phase 2, global logistics management), and exploring future opportunities (Phase 3, harnessing big data, alternative-fuel vehicles and next-generation technologies).

The New Corporate Facts of Life present game-changing opportunities. Interestingly, UPS has contemplated them all as it continuously monitors global and industry trends and seeks ways to build greater capabilities. It does so with its basic purpose and vision in mind: to "enable global commerce" and "synchronize the world of commerce by developing business solutions that create value and competitive advantages for our customers."

Consider how you might integrate each of the NCFOL into your own company's strategy. What, specifically, must you do to put it at the forefront of your industry? How will you preserve and grow your Phase 1 core business while ensuring future growth and profitability by investing in Phases 2 and 3?

Build a Unique and Vibrant Culture

Research consistently proves a strong correlation between culture and all aspects of business performance. A vibrant, high-performance culture brings a smart strategy to life. Dysfunctional cultures crush strategy, frustrate people, and hamper business success. Great cultures capture people's hearts and minds to drive greater creativity, collaboration, engagement and excellence.

The work of nurturing a culture never stops. Culture creation or transformation progresses through four key phases:

1. **Define your desired future-state culture:** Start with your strengths. Every company does some things well. Identifying your strengths and assets provides a foundation of pride and optimism on which people can build new cultural traits. Engage all stakeholders, and research the state of the art. Scan the business media; visit with

leaders at other organizations; review the research; and consider your competitors. Review your company's strategy and vision, and consider whether they need to change. Communicate the desired cultural traits to all stakeholders.

2. **Assess your current culture:** You can use a lot of different tools to assess your culture, including contextual observation, group and individual interviews, organizational practices review, crowdsourcing and culture surveys. Look for what's working well and not so well. What differentiates the highest-performing locations from the lowest-performing sites? What do their leaders do differently? What principles and values guide their practices? How can you get more people doing what they're doing?

3. **Create your culture by leading, engaging and aligning:** You need to simultaneously exercise leadership, engage your key stakeholders, and align your organizational practices with the new culture. Dysfunctional cultures come from the top. So do vibrant cultures. The right culture starts with the right leadership. Leaders must embody and promote the desired culture. Foster employee engagement by providing meaningful work clearly linked to key goals, clarifying the context of the work, and practicing full transparency. Review the results of your earlier assessment of management practices; list practices that require adjustment; and take steps to modify ineffective or damaging practices and/or create new ones.

4. **Measure the results:** Decide at the outset exactly how you will determine whether new beliefs drive new actions that, in turn, drive business results. Go beyond the customary financials to include factors such as employee happiness, customer satisfaction, brand image, community appreciation and environmental impact. For each priority area, indicate how you will measure progress.

Organizations that choose to embrace The New Corporate Facts of Life define and align their cultures to achieve their visions of a strikingly different tomorrow, where their workforce moves from compliance to commitment to creation.

Lead on the Edge of Change

As our incredibly complex world continues to change, so too must our leaders. Huge but not insurmountable challenges loom on the horizon. Tackling these challenges and turning them into breakthrough opportunities require a new breed of leader.

A new model of leadership competence for an emerging breed of leaders who will help create more profitable organizations in a better world is the BOLDEST Leadership Competency model. BOLDEST stands for Boundaries, Opportunities, Learning, Deliverables, Emotions, Systems and Talents:

Boundaries: Leaders must reach across many boundaries to forge relationships and alliances to accomplish the seemingly impossible. They must bring people together to solve big, complex challenges. When leaders lack sufficient knowledge about key issues such as supply chain traceability, cultural nuances in emerging markets and energy alternatives, they must tap the expertise of specialists in everything from trash to biophysics. They must build coalitions across borders, influence key stakeholders, and break down functional silos.

Opportunities: Leaders must do more than hit their numbers. They must possess the confidence and imagination to see possibilities much further away than the current bottom line. Visionary leaders redefine the problems speeding toward their organizations as opportunities for finding innovation and promoting optimism. They see around the bend, create compelling visions, and inspire people to action.

Learning: Continuous learning has become essential in our fast-changing world. Everyone in the organization must quickly absorb complex information every day. Formal or informal, education is the mother of innovation. Bold leaders foster a culture of continuous learning at all levels.

Deliverables: Leaders must create a better tomorrow while delivering profitable results today. Achieving the organization's vision and strategy requires holding people accountable and aligning goals across the business. Strong, responsible growth comes from leaders who know how to merge innovation with operational excellence.

Emotions: Long-term success in life requires a high degree of emotional intelligence. Leaders who display self-awareness and self-management operate with integrity and self-confidence. Those who do well with social awareness and relationship management demonstrate the empathy and other skills essential for effecting social interaction, influencing others and building strong teams.

Systems: Leaders must rise above the trees to see the forest. Everything they and their people do functions like a gear in a larger system. Top performers think and operate systematically by managing complexities, recognizing patterns and making connections. They consider opposing ideas simultaneously to gain different perspectives and surface innovative solutions. And they manage complexities.

Talent: BOLDEST leaders spend a lot of their time creating more leadership capacity throughout the organization. Hiring, retaining, developing and deploying the

best talent available must become their top priority. They build organizational capacity and develop leadership at all levels.

Top performers progress from beginner to capable, competent, proficient and finally expert. Experts know that the mastery of their craft or profession depends on three key factors: experience, knowledge and skills. Experts never stop learning, and that keeps them consistently at the top of their fields. Just as no one is born an expert, no one is born a leader.

Engage to Excel

Every stakeholder plays a role in a company's future success. Companies affect their lives; they affect the success of their companies. That makes stakeholder engagement an extremely important activity, one that creates an ongoing dialogue about issues that concern all parties.

You can build and maintain relationships with stakeholders in a variety of ways. One-way communications, such as email blasts, may send an important message, but they do not engage people in the sort of dialogue you need to grow a relationship. Rather, you need to adopt methods that pull people into your circle where you can engage them in a meaningful dialogue. Companies, governments, NGOs and others realize that success increasingly requires greater collaboration both inside and outside their organizations.

You want to design a stakeholder engagement process that draws everyone into your company's circle of relationships. I recommend a six-step process, which has gotten great results for a lot of organizations:

1. **Identify:** Define the issue, identify the relevant stakeholders, and consider both the opportunities and risks for engagement.
2. **Plan:** Set the objectives and scope for engagement, and prioritize stakeholders according to their relative significance in accomplishing goals and strengthening relationships.
3. **Design:** Establish principles for engagement, make initial stakeholder contact, and determine the best ways to involve diverse groups. Agree on mutual objectives, set expectations, and design the engagement.
4. **Engage:** Each engagement effort should progress through three distinct phases: preparation, implementation and follow-up. Once you have designed the method you will use to engage stakeholders, you must set the stage for its implementation, arranging logistics, issuing invitations, sending out materials, training facilitators, gathering background information on those who will attend and so on.
5. **Assess:** Assess the outcomes of each and every engagement activity. Compare what actually happened to what you expected to happen when you originally designed the process. List what went well and what went wrong, adding notes about specific ways you could improve subsequent efforts.
6. **Act:** Decide what you will actually do with ideas that emerged from the engagement process. The same applies to the stakeholders. What steps can they take to help achieve mutual objectives?

Design a Resilient Organization

Resilient organizations consistently focus on and align with a coherent set of values and a sound business strategy while remaining flexible enough to adapt to whatever surprises pop up on their radar screens. They design their companies to harness today's powerful economic, social and environmental forces in a way that serves all stakeholders by engaging employees, thrilling customers, outpacing the competition, satisfying shareholders, serving communities and strengthening the bottom line. They do this by design. Without the right organization design, even your most brilliant strategy will ultimately sink. With a resilient one, you can weather any storm.

True organization design encompasses much more than a company's structure. It means aligning structure, processes, management and people practices with business strategy. Companies must not only see the winds of change coming their way; they must react to them swiftly and effectively. But you can't do this willy-nilly. You must do it by design. Resilient organizations always keep scanning the horizon for the next competitive threat or disruptive innovation.

Ten Strategies for Designing a Resilient Organization

Ten strategies determine success in designing a resilient organization:

1. Design an organization to manage anticipated and unanticipated challenges. Resilient organizations prepare themselves for what they can and cannot see down the road. They constantly monitor the market for potential risks and opportunities.
2. Put in place a future-oriented structure that builds on your organization's current strengths. Sustainable

expansion means prioritizing investments for the future while building on the strengths of the past and present. Future-focused organization design emphasizes preparing for future flight over making minor corrections to an existing flight plan.

3. Create an all-encompassing structure for systemic change: Isolated solutions attack problems one tree at a time; systemic solutions take the whole forest into account.
4. Distribute accountability and authority throughout the organization: Whereas formal structures often set up boundaries and define restricted roles, integration systems and processes connect functions and people across boundaries.
5. Link functions with networks to get things done: Work really gets done through flexible webs of networks that connect people with various systems and processes. Networks facilitate agility and the ability to handle complexity.
6. Engage internal and external stakeholders to address major issues: Transforming to a sustainable business model brings people together to collaborate across boundaries inside and outside the organization. Internal functions work with external partners in an effort to keep improving and transforming industries.
7. Amass financial, social and natural capital: A company's traditional profit and loss statement doesn't show all the costs and benefits associated with its activities. Business activities create measurable costs and benefits with respect to human beings and their communities.
8. Foster leadership at every level: The journey toward an aggressive sustainability strategy begins with cultivating the right leaders at all levels of the organization. Real progress demands more than a cosmetic effort.
9. Create a stimulating work environment that promotes diverse thinking: It's the out-of-the-box thinker, the maverick or the positive deviant who often comes up with the bright ideas that make a company more efficient, more sustainable and more profitable.
10. Attract, develop, deploy and retain the best people: It takes more than a bunch of superstars to bring home the trophy. You must provide the right training and coaching for them to work harmoniously as a team.

No single organization design approach will work for every business. If you keep the 10 strategies in mind as you design and redesign your own organization, you will solve many of the problems that plague companies that are struggling to prosper in an NCFOL environment with outdated organization designs.

Lessons for the Road

Four lessons can help companies adopt a new business model around The New Corporate Facts of Life:

- You can meet the people you need to meet: Be a connector and get connected. One introduction can open a thousand doors. Strands of the same web connect all of the people on the planet.
- You can learn what you need to know: Learn to look at every activity as a potential school, every new contact as a potential teacher. Try to return favors.
- You can turn every problem into an opportunity: Effective leaders do not see problems; they see opportunities for innovative, sustainable and profitable solutions.
- You can lead from where you stand: You can lead without an official title or a big budget. You can start small, learn quickly, and bring others along the path to success.

If change doesn't happen in our organizations or our communities, we can't blame it on too few resources, the lack of mentors and partners, too little information and knowledge, or a closed door. Failure to change would come only as a lack of leadership.

As Gandhi put it, "Be the change you wish to see in the world."

by Bob Johansen and Karl Ronn

THE SUMMARY IN BRIEF

A powerful new kind of competitive advantage is now possible thanks to technological and social disruptions that are already occurring. These disruptions revolutionize how companies can partner to create new growth.

The Reciprocity Advantage shares a model for creating that growth: define your right-of-way (the underutilized resources you already own that you can share with others), partner to do what you can't do alone, experiment to learn and scale the new business at low risk.

"Reciprocity" and "advantage" are words that are not normally seen together, but reciprocity — giving now to get later — will become a normal part of winning in the future. Provocative and pragmatic, leading 10-year forecaster Bob Johansen and experienced business developer Karl Ronn describe how to lean in to disruptions to create new growth for your business. They show you how to leverage new forces like digital natives and cloud-served supercomputing into massively scalable, profitable, incremental growth for your business.

Distilled from hands-on work, *The Reciprocity Advantage* will get you started on creating your own reciprocity advantage.

IN THIS SUMMARY, YOU WILL LEARN:

- The future forces that will disrupt your business.
- A three-step process for uncovering your right-of-way.
- Why reciprocity will be key to business growth in the future.
- How to scale a new business at low risk.

THE COMPLETE SUMMARY: **THE RECIPROCITY ADVANTAGE**

by Bob Johansen and Karl Ronn

The authors: Bob Johansen is a distinguished fellow at the Institute for the Future in Silicon Valley. He works with corporations such as McKinsey, UPS, Kellogg, Disney and McDonald's. Karl Ronn is the managing director of Innovation Portfolio Partners, which helps Fortune 500 companies find and develop new products and services. Previously, he was vice president of research and development and general manager of new business for Procter & Gamble. *The Reciprocity Advantage* by Bob Johansen and Karl Ronn. Introduction: The New Way to Grow a Business

Reciprocity lives in the space between transactions (buying and selling) and philanthropy (giving for good causes). Advantage lives in a world where businesses seek a superior position that leads to profit and growth. Advantage means achieving a winning position, but it doesn't necessarily mean that others must lose in order for you to win.

Reciprocity advantage will be a new type of competitive advantage.

- It will be grounded in a right-of-way that you already own.
- It will require that you give away some of your assets in intelligent ways now in order to make money and grow your business over time.
- It can happen only when a company is able to *both* practice reciprocity and make money.
- It must be designed to be massively scalable.

Society is just entering a unique period when doing good and doing well will have to be combined in ways that have never before been imagined. A reciprocity advantage is a chance to do good while also doing very well.

PART I: RECIPROCITY ON A MASSIVE SCALE

Reciprocity Right-of-Way

Right-of-way is an unrealized opportunity space where you can create a new large-scale practice of exchanging with others for mutual benefit. Right-of-way is the space within which you can create your reciprocity advantage. Indeed, a reciprocity advantage becomes possible only within your right-of-way.

The Historic Right-of-Way Story

The transcontinental railroad was cutting-edge technology for its day when finished in 1869. Suddenly it became possible to travel or send goods across the continent in what, at the time, was amazing speed. The railroad developed into the major growth industry of the late 19th century. But commuter trains, planes, trucks and cars have now replaced the bulk of the transportation — and disrupted the trains business.

As much as the railroad companies missed the transition from trains to modes of transportation that did not require rails, the big miss was not foreseeing the potential that arose from thinking differently about the land that was under and above the rails. The land under the tracks is the classic right-of-way. But above those tracks, invisible in plain view, was a right-of-way that railroads owned but completely missed: communications.

The railroads already had the land underneath their trains when the telegraph developers approached them and wanted to string wires above the tracks. To the railroads, this new telegraph technology allowed them to know where all their trains were, for free.

It was a windfall to the railroads at the time, but years later we all now realize that the railroads missed claiming most of the benefits from their own right-of-way. The railroads completely missed the communications revolution — which turned out to be even more important than railroads.

Uncovering your own right-of-way involves understanding what the railroads never did learn, that every company is really in three businesses.

- **Product:** Railroads that move people and goods.
- **Service:** Transportation, any way that moves people or goods en masse.
- **Experience:** Communications, any way to get the benefit of travel without physical movement. (The railroads' missed reciprocity advantage.)

Each business has the potential to create massively scalable reciprocity if it can uncover its right-of-way for complementary growth. Land for the railroads was a physical right-of-way, embodied in the air over the tracks. But the right-of-way can include products, services and experiences.

Uncovering your right-of-way is the first step to creating a reciprocity advantage. Then you look for the partner who can help you do what you cannot do alone.

Partnering to Do What You Can't Do Alone

Reaching out to others — potential partners and potential customers — will become increasingly possible and increasingly necessary. Partnerships are basic to creating your reciprocity advantage, and partnerships will be possible on a scale never before imaginable.

New Ways to Partner on a Global Scale

Connectivity has grown dramatically, and potential partners can come from anywhere. Innovation in the cloud will focus on value, not just price. The greatest value and the largest margins will come from services and experiences that link to products, not just on selling for the lowest price. Price-based competition will be cutthroat and unattractive. Value-based partnerships will be the key to growth, scalability and profitability. Larger social value, beyond just transactional value, will become possible on a much grander scale.

What if the railroads had viewed the telegraph companies as potential partners to explore the emerging communications space, instead of seeing their proposal as a narrow business transaction?

As Internet connectivity expands, new potential partners become available who were simply not reachable before. The best partners will demonstrate their worth by looking out for one another.

Asymmetrical partnering, where one partner is much larger than the other, will become increasingly possible because anyone can link to anyone else through the cloud. Non-obvious partners will become more common. Everyone will need to learn how to fish for partners efficiently and effectively. It will be easier to find partners, however, within established networks of trust.

What would your company love to do but could not do without a good partner that is unlike you? What does your right-of-way give you permission to do with others but that you are not yet doing and could not do alone? You will have to experiment to learn how to answer these questions and to create your reciprocity advantage.

Experimenting to Learn: How to Make Money in New Ways

In their current business, most companies already do prototyping. They make models of the product or service and share it with potential customers and then take the best versions to management to gain alignment to the new direction. The range of prototypes is bound by the limits of the existing business. This type of testing is done to prove you are right before going to market.

The market for your reciprocity advantage business probably doesn't exist yet. Therefore, you will need to prototype more broadly than you ever have before. To learn about the future, you will need to be able to produce thousands of prototypes rapidly and at low cost. This skill is called *design thinking*. Common language in the design community is to refer to these efforts as *low resolution prototypes*.

You will have to experiment to learn and do so with your partners in order to find your reciprocity advantage. Hundreds or thousands of low-resolution prototypes are needed to find the reciprocity advantage that will add onto your core business in complimentary ways without cannibalizing it.

Rapid prototyping is the ability to create quick, early versions of innovations, with the expectation that later success will require early failure. In Silicon Valley, if you haven't failed, you are perceived as not having taken enough risks. The future will be created with smart, fast, cheap experiments in the real world.

Amplifying to Create Scale

A reciprocity advantage happens only when people learn new ways to make money through practicing reci-

procity. It's not a reciprocity advantage until you scale it. Once you find your reciprocity advantage, you must let it propagate as fast as it can. Competitive advantage is often fleeting. Reciprocity advantages can be enduring. The good news is that propagation will become much easier.

New Tools and Practices for Scaling

The future tools for propagation and scaling will become much more lightweight and practical, in several senses. The digital technologies that enable scaling are literally lighter than the massive industrial technologies that they are replacing. Beyond this, organizations themselves have become more lightweight because now a few people can produce economic value that in previous years would have taken an organization of hundreds to manage.

Perhaps the most dramatic example of this shift is 3D printing. Imagine going to a website to browse an online catalog. You choose a toy that looks like the perfect present for a child's upcoming birthday. At the end of the transaction, however, you do not select the "ship" option. Instead, you hit a button that says "print" and watch as the gift is mechanically fabricated before your eyes.

Increasingly, design and distribution can live in the cloud, with local manufacturing in the form of 3D printing. For some products, this will be a game-changer. 3D printing will disrupt Home Depot, Lowes and parts stores of all kinds. While the technology is in its early stages, the potential for streamlining the scaling process is staggering. 3D printing will accelerate the move to mass customization and scaling, where production is done on a large scale, and yet products have a personal or customized feel.

With the emergence of the Internet, online software and services have become increasingly important. Indeed, we are now at an inversion point. As centralized systems enter their twilight and mobile platforms reach their zenith, the cloud is the place to look for future innovations in computation. The cloud will be the amplifier for propagation — not just innovation.

Shoppers, too, will have the power of supercomputing driving their purchasing decisions. They will have access to as much or as little information as they desire, and neither manufacturers nor retailers will be able to control the flow of this information, even in the buying environment. However, they could offer trusted filtering options. Indeed, competition for trusted filters at the point of purchase will be fierce. Trust will fuel scale. Reciprocity will be increasingly scalable.

PART II: FUTURE FORCES THAT WILL DEMAND RECIPROCITY

One of the biggest challenges in creating new businesses is designing for a changing world. Four future forces will shape and disrupt your ability to uncover your right-of-way, to find the best partners, to develop a give-to-learn strategy and to scale your business for greater impact: The digital natives, socialstructing, gameful engagement and cloud-served supercomputing will disrupt old economic models and create opportunities for new ones.

How the Digital Natives Will Disrupt Rights-of-Way

In 10 years, everyone on the planet 28 years or younger — rich or poor — will be a digital native, someone who grew up in the interconnected world of early-stage social media, vivid video gaming interfaces and early-stage cloud-served supercomputing. The digital natives will demand new rights-of-way in physical and virtual space. They also will speak or text or videotape their own languages, tell their own stories and embody a wild mix of cultures — all amplified through the cloud on a global scale.

Kids becoming adults in the next 10 years will have a sense that they can connect personally with anyone on the planet — and they will be correct. This sense of global connectedness could spawn a new era of global empathy, although it is too early to tell. What is apparent is that growing up in a digitally enhanced world will be different — *very* different — for better *and* for worse.

Language Will Change as the Digital Natives Become Adults

As we think 10 years ahead about reciprocity advantage, consider the importance of language and how the digital natives write, think and communicate. Careful framing of the future with just the right words will be very important to reach them. If you use the right words and concepts, digital natives will draw you toward the kind future you want to create. If you don't use the right words, your failure to communicate will constrain you. For example, instead of calling them consumers, the best companies are already calling them what they should have been called all along: people.

Rights-of-way will be uncovered, cultivated, nurtured and grown through cloud-amplified networks of trust. Instead of calling it *marketing*, *advertising* or *commercials*, the best companies are already calling it what they should have been calling it all along: engagement. The digital natives will distrust traditional marketing and not want to be marketed to; they will want to be engaged with. The younger you are, the more you already expect this kind of engagement.

The Digital Natives Will Be Attracted by IP-Free Practices

What will right-of-way mean in a world where it is becoming increasingly difficult to own intellectual property (IP)? The space where you are trusted may well be a space you cannot own.

The direction for intellectual property over the next 10 years will go from closed to more open, but it will be a very messy process along the way. In many cases, it will be much more attractive to think of IP as currency that must be exchanged to derive value rather than property that must be protected.

In many cases, it will be smarter to uncover your right-of-way and give away small amounts of access to these assets in order to learn how to make money in new ways. This is the essence of the reciprocity advantage and why it will be the wave of the future in a world led by digital natives.

How Socialstructing Will Disrupt Partnering

Socialstructing is a term invented by author Marina Gorbis, and it refers to a process that includes microcontributions, nonmonetary rewards, technology-enabled sociality, community organizers, not managers, and large network participation. Socialstructing will mean radically new ways of partnering. Expect a big shift in the diversity of potential partners — and the diversity of ways in which the partners will be able to work together.

In a socialstructed world, partners can come from anywhere, and they can be any size. In particular, we expect more partnerships involving very large and very small players because it will become much easier to find potential partners and work together. Collaboration, teaming and partnerships will become possible on a scale that could never before have been imagined.

Traditionally, corporations and jobs have evolved out of necessity and have been effective ways of organizing work. But it is becoming possible to break tasks down much more precisely than before, and new ways of structuring work are developing rapidly. Innovation can be broken down into tasks and microtasks. The leadership challenge will be one of coordination and clarity. Leaders in these kinds of socialstructed organizations will have to be very clear where they are going but very flexible about how they get there. All partners will have to be committed. And the terms of engagement will need to be both flexible and robust.

Diasporas as Partners

In today's world, think of a diaspora as a network of trust. Modern diasporas are social networks with shared values that are amplified through the social networks and — increasingly — social media. People have always lived in the context of social networks. Now these networks are more varied, more visible and more electronically connected than in the past.

Partnering with members of diasporas is possible but tricky. Diasporas will amplify commercial innovation, scale and disruption — *if* their members become committed to a product or service. Companies will need to grow relationships based on trust in order to engage with diasporas.

The reason innovation happens faster within diasporas is because of shared values and great trust. Within diasporas, brand trust building happens quickly. If a brand or a company is perceived to be consistent with a diaspora's values, then it will have permission to experiment with new products and services, as long as it stays within the envelope of trust that has been granted. Networks of trust will shape how rights-of-way are perceived and accepted.

How Gameful Engagement Will Disrupt Experimenting to Learn

Think ahead 10 years — how will corporations experiment to learn about the business they want to create? In other words, how will you prototype your new business? The answer: you will game it.

In order to learn how to make money in new ways, you will need to get others gamefully engaged with your idea. How might you get people engaged? You make it fun. You make it meaningful. You lower risks by simulating rather than playing for real right away.

We expect that the word *game* will become more acceptable within business cultures, but it may take time. The key element is first-person immersive experiences rather than the usual third-person learning associated

with lectures or training programs. Gameful engagement emphasizes the playful element but also the necessity for first-person engagement.

The next decade will be boiling with emotionally enhanced attention that will allow companies — indeed require companies — to rethink how they experiment to learn and ultimately how they do marketing, advertising and commercials. Corporations will need to engage in playful and authentic ways. Commercials and advertising as we know them will cease to exist and will be replaced with exchanges that are more personalized, playful and engaging. What corporations tell people will become less important than what people tell each other about corporations and their products.

Corporations will need to learn about new business opportunities by using game-like approaches to try them out in low-risk ways. They will need to engage with their customers — especially the digital natives — not just market to them. They will need to learn how to experiment to learn, in a spirit of gameful engagement.

How Cloud-Served Supercomputing Will Disrupt the Practice of Scaling

Like so many other emerging technologies in the past, the cloud has been oversold and —so far — has underdelivered. That, however, is about to change. The cloud is not just about outsourcing information technology functions and providing storage. Soon the cloud will function like a supercomputer, providing a virtual overlay on the physical world to allow us to do things we've never done before. This cloud-served supercomputer will allow us to scale and propagate in ways we have never before imagined.

Cloud-served supercomputing will be characterized by dramatically increased global connectivity, with parallel processing power that will be available to a much larger portion of the world's population. Expect powerful amplification of almost everything, with public demands for transparency and grating uncertainty about privacy. The cloud will amplify reciprocity *and* it will introduce new risks of criminal hacking.

Cloud-served supercomputing will be characterized by

- global and increasingly open access;
- multimedia and multilingual capabilities;
- increasingly mobile access;
- links to sensors that will be cheap, ubiquitous and often connected (some of which will be in our bodies);
- filters of the physical world, using a range of criteria and offered by a wild mix of players;
- flexibility in ways that we can only imagine now;
- lower costs for computing and communications.

From a consumer products standpoint, we are within a decade of cloud-based coordination that could, for example, facilitate self-organizing supply chains or bring insights from the most sophisticated business analytics engines to the local street-corner market in Delhi. Amplified by the cloud, people with initiative and energy to innovate can bring themselves up to speed — using the most powerful business tools in existence — no matter where they happen to live.

The best way to think about the cloud will be as a very large and sometimes unpredictable amplifier. Whatever you do, for good or for evil, will be amplified by the cloud. Your reciprocity advantage will be empowered and amplified through the cloud.

PART III: HOW TO DEVELOP YOUR OWN RECIPROCITY ADVANTAGE

The hardest part of thinking about the future is figuring out what to do next — given the external future forces. While not completely predictable, the reality is that to innovate you must choose where you want to go but then be flexible about how to get there.

How to Uncover Your Right-of-Way

Finding your right-of-way will require a deep understanding of your business — beyond day-to-day operations. Rethinking your business will open your management team's eyes to new possibilities. The first stage has three parts:

Right-of-Way Step 1: Agree on Your Core Business. What industry are you in? What is responsible for two-thirds of your total company's profits or sales? Typically one or two product lines and one or two channels or geographies are your core. The core is where you will find your right-of-way for extending into new businesses. Keep making your core business better and better.

Right-of-Way Step 2: Reinvent Your Business as a Service. If the first business is drilling holes, the second business is selling anything that makes a hole — even if it requires no drill. We refer to the second industry as a service because it involves hiring you to do the same job you do today but doesn't necessarily use your assets. Once you

have defined your core industry, step back and ask, "What do people hire us to do?" Forget how you do what you do. Rather, focus on the end result, or the benefit. See the hole — not the drill.

It is not optional to get into these service businesses. If there is a business that does what you do a great deal faster or more cheaply, it will eventually be the dominant way of doing business. Rather, you need to make multiple investments in emerging industries that do what you do in radically different ways.

Right-of-Way Step 3: Redefine Your Business as an Experience. Once you have defined your core business and your service industry, ask yourself, "If my business were an experience, what industry would I be in?" Only rarely does a new medium replace an old one. Rather, the new medium tends to disrupt the way we use existing media — and those media blend with each other. Kodak sold cheap cameras at Disneyland because the quality of the picture from your expensive Nikon camera was irrelevant if you forgot to bring it. The goal of new-experience businesses is to augment the sales by getting people to pay for things they are not currently buying.

Once you've uncovered your underutilized right-of-way, the next step will be searching for a partner that will enable you to accomplish what you cannot do alone.

How to Find the Best Partners for You

Partnerships are hard. Don't form one unless you have to do so in order to do what you want to do. To find and grow your reciprocity advantage, you have to find a partner with whom you can create a new business — a business that you could not create alone.

Partnerships are very different from transactional relationships. If you work for a large corporation, chances are that your company was formed as a partnership. More often than not, it was two people — Hewlett and Packard, Procter and Gamble. These kinds of deep partnerships are not just transactions. They brought together people with complementary skills to create a new business. Because each partner brought specific proficiencies to the relationship, neither one could be easily substituted.

If you are to discover your reciprocity advantage and succeed in creating new reciprocity-based companies, you will bring one half of the equation to your new business. Your first challenge, however, is to understand that you aren't just looking for another person or corporation who can give you something — you need to find your missing half.

What Right-of-Way Should You Share?

You must know your right-of-way *before* you seek a partner because that will help you understand what kind of partner you need. A core question to ask yourself is this: "If I share my right-of way away for free, will it hurt my existing business?"

The concept of free is a hard one for many financial managers to grasp. Most times the answer to the question above is that it would hurt your business to share things you own. The reciprocity advantage involves sharing assets in intelligent ways *now* that will result in new growth over time.

How to Learn by Experimenting with Many Open Iterations

When designing experiments, big dreams matter. The experiments need to be fast and cheap, but the prize needs to be worth your trouble.

You must embrace creating new businesses in order to find your reciprocity advantage. But a sticking point for taking action is the belief that new businesses are very risky. New businesses do have a high failure rate, but that doesn't mean they are risky. The problem is that companies treat new business like current business. When you move away from the core, you need to behave differently. New strategies are required for managing risk so the pain of failure is reduced. Starting new businesses requires becoming a great risk manager.

Most startups fail because they can afford to make only a few bets before they run out of cash. But big companies can afford to make thousands of bets to learn their way to success. Yet, big companies usually don't succeed either. Why? Many big companies place too much money on each bet. They need to find ways to construct and manage incredibly small bets.

Writing Options on Your Future

The tool you need for managing high risk is an option. An option is a specific right to buy something of value at a predetermined price at a particular time in the future for a specific cost today. Options are placed to make your money go further when there are larger unknowns. The key options concepts include 1) You pay a very small percentage of the cost. So, you can invest in many possible projects. 2) Options expire. They don't have a life of their

own, unlike stale development projects that never seem to die. 3) The risk is limited to the initial investment. Every 60 days you can walk away or reinvest.

The common error is to create a big team and spend a million dollars and one year on one idea. An options approach takes that budget and cuts it into small chunks. As with the uncertain stock market, many small bets to find the winner are better than one single investment. The solution to starting new reciprocity businesses is using options thinking and rapid prototyping. Make to learn, not make to sell.

How to Scale Your Reciprocity Advantage

Scalable reciprocity will require designing for scalability from the beginning. Reciprocity is good, but massively scalable reciprocity is growth that reshapes industries.

You will know your reciprocity advantage is ready to scale when your service or product meets three criteria — it's desirable, viable and ownable. Failing to meet all three criteria will severely limit or even doom your reciprocity advantage.

Start with something that has two out of the three criteria: you know people desire it, and you know the viable business model — you just need to make it ownable. Two out of three is easy. When you have all three, you will be ready to scale rapidly.

When you know your product is desirable, you know you have a viable financial model, and you know how to sustain the business long enough to get a return, you have created a low-risk, high-potential business. When that happens, scale it!

The main reason new businesses fail is that they scale before having all the needed answers. A second reason is that they fail to go all in when they have a clear path to success. When your reciprocity advantage meets all three criteria, you have a winning idea. Speed is on your side. Run!

Knowing When to Quit

Not everything will work. You will need agility to read and react quickly to whatever happens. How do you know if it is time to go home? Only two things correlate with success for a disruptive new business idea: passion and keeping commitments. If after trying something for a period of time, you or your team loses passion for it, stop doing it. An iterative, team-led milestone process is the best way to get a breakthrough. Be disciplined. Luck is part of what it will take to be successful, but discipline will help you be lucky more often.

When the Future Is Reciprocity

Interestingly, most of the world religions teach the value of giving, but now neuroscience and the psychology of happiness are teaching us the same principals — backed up by data. A new appreciation for the value of giving will fuel new models for reciprocity advantage.

There are many things you can do right now that will make the future of reciprocity both possible and practical. Uncover your reciprocity right-of-way. Partner to do what you can't do alone. Experiment to learn. Amplify to create scale. Create your own reciprocity advantage.

This model will work at the corporate level, but you can also use it on yourself to create your own personal reciprocity advantage.

The world of transactions — buying and selling stuff — will continue to exist, but it will become increasingly difficult to make money in this space alone. The core of any business will continue to be removing unnecessary costs and meeting the needs of existing customers. But companies will need new avenues of growth. To drive growth, you will need to focus on increasing value for your customers, value that will grow overall market size. Master your transactional business, but grow it by creating your own reciprocity advantage.

Your reciprocity advantage will create new opportunities for high-margin businesses that can complement your core business.

All businesses — and all individuals — have an opportunity to find a reciprocity advantage. Reciprocity and advantage, long thought of separately, will be increasingly synergistic.

RECOMMENDED READING LIST

If you liked *The Reciprocity Advantage* you'll also like:

1. ***Get There Early*** **by Bob Johansen.** Johansen and the Institute for the Future provide their insights into the next decade and show readers how they, too, can begin to navigate the road to the future.

2. ***Finding Allies, Building Alliances*** **by Michael Leavitt, Rich McKeown.** The authors present a guide for anyone tasked with fostering and maintaining an effective, productive and collaborative venture.

3. ***The Wide Lens*** **by Ron Adner.** Adner shows that many companies fail because they focus too intensely on their own innovations and then neglect the innovation ecosystems on which their success depends.

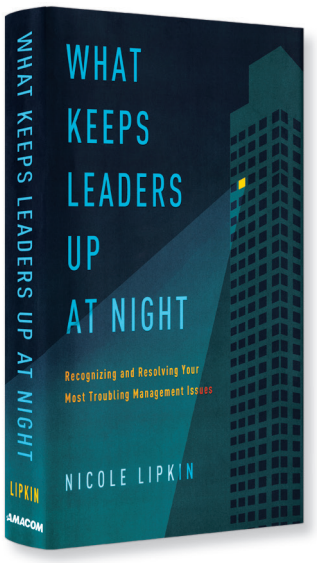
Leadership

What Keeps Leaders Up at Night

Recognizing and Resolving Your Most Troubling Management Issues



by Nicole Lipkin

THE SUMMARY IN BRIEF

No matter how successful you are, if you're like most leaders, you're occasionally plagued by the doubt that accompanies typical management questions.

In *What Keeps Leaders Up at Night*, psychologist and business consultant Nicole Lipkin shows you how to recognize and resolve eight of the most troubling management issues leaders face today: miscommunication, stress, change, unhealthy competition, damaging group dynamics, loss of motivation and engagement, elusive success, and the typical leadership snafus that make us temporarily go from good to bad.

Explaining the mental processes that play pivotal roles in the workplace, *What Keeps Leaders Up at Night* helps you to gain greater awareness of what causes these recurring problems and to find better solutions by recognizing and addressing those causes more quickly and effectively.

Lipkin uses real-life case studies coupled with psychological and neuroscience research to demonstrate how to solve complex and fascinating problems that leaders encounter every day.

IN THIS SUMMARY, YOU WILL LEARN:

- The three overarching reasons good bosses sometimes go bad.
- How confirmation bias affects our assessments of personality and leads us to terrible business decisions.
- The neurological fire alarms that blare inside your mind when experiencing the negative effects of stress.
- How to get the most from your team by understanding the mental processes inherent in group dynamics.

I'm a Good Boss. So Why Do I Sometimes Act Like a Bad One?

When you take a close look at why good bosses go bad (temporarily versus the chronically horrible bosses that go bad every minute of the day), you usually find three overarching reasons: too busy to win, too proud to see and too afraid to lose. Once you understand why you sometimes display the symptoms of the *good boss gone bad* syndrome, you can use your newfound self-awareness to cure what ails you.

Too Busy to Win

Keeping busy may make you happy, but at some point excessive busyness can overwhelm your coping capabilities. That's when we become too busy to win. Excessive busyness can impair performance and productivity, making you increasingly forgetful, fatigued, and prone to poor decision making and problem solving.

You can deal with an increasing number of tasks and responsibilities, but at some point you begin to bend under the pressure. If you're not paying close attention, you do not feel the bend until you snap under the final addition to your workload.

The human brain simply cannot concentrate on more than one, or in rare cases, two, cognitive tasks at once. Sensory overload will cause the brain to focus on one immediate task at the expense of others, or it will prompt it to take on a set of mindless tasks that soothe it. That explains why super busy people love making lists.

Bosses who become too busy to win can easily fall into a cycle of self-sabotage. When your workload grows too heavy to bear, you get mired in the little stuff and lose sight of the big stuff. The forest (managing others) disappears as you wander among the trees. Without enough of your skillful management, your people start making more mistakes, adding even more to your workload because you must now devote time to fixing those mistakes. It becomes a vicious cycle. The more you mess up, the more your people mess up, and the more your people mess up, the more you mess up.

You need to keep a wary eye on your workload and the appearance of any too-busy-to-win symptoms. It all boils down to gaining and maintaining self-awareness. When the symptoms appear, force yourself to take a break.

Too Proud To See

Although most of us don't like to admit it, we often all get wrapped up in our own ideas, not because we are idiots but because we are human. It's natural to think our ideas are best, especially when we're the boss. The too-proud-to-see variation on the *good boss gone bad* syndrome involves three problem-bound behaviors:

1. Letting yourself get so tied to an idea that you won't let it go.
2. Refusing to heed the advice of others.
3. Relying on your past successes at the expense of weighing different patterns, options or solutions.

All three of these behaviors not only damage performance and productivity but also can undermine your credibility as a leader. Avoiding them requires a strong dose of self-awareness.

The phenomenon called *confirmation bias* causes us to seek out information that supports our views or beliefs and to give more weight to confirming information, while discounting or not noticing information that contradicts our point of view.

This can wreak havoc, however, when we are managing other people because it can prevent us from making accurate and effective judgments and decisions. Confirmation bias interferes with our ability to gather all sides of an argument, consider all possible points of view, and weigh a situation with a cool, objective mind.

Too Afraid to Lose

A leader who shies away from certain risks not only hurts himself but also hampers everyone else's ability to forge ahead and get the job done. Those suffering from the too-afraid-to-lose variation

- Worry excessively about failing to get the right results.
- Question and second-guess every step along the way.
- Avoid decisions and commitments that might cause mistakes.
- Get involved in every detail, particularly as deadlines loom.

These toxic behaviors will destroy a leader's credibility. More than the other variations, the too-afraid-to-lose form thwarts creative problem solving and impedes team progress.

Good bosses who fall into the trap often worry about appearing weak. They mistakenly associate failure and mistakes with weakness and incompetence. This false relationship causes them to behave stupidly and out of character, micromanaging details or becoming immobile. Those suffering from this common ailment are experiencing a problem with what psychologists call *self-efficacy*.

Good bosses tend to possess a strong sense of self-efficacy. However, any number of circumstances can diminish or even destroy it. When your self-efficacy gets swamped, you immediately sink into too-afraid-to-lose quicksand.

Many screw-ups result from the three variations on the *good boss gone bad* syndrome. The path back to the ranks of the good boss is paved with self-awareness. Just pausing to cast an objective eye on your maladaptive or unproductive behavior or asking a trusted ally to tell you the honest truth about how you've been acting lately can get you back on track.

Why Don't People Heed My Sage Advice?

Most of us cringe when we watch someone fail to influence and persuade other people. The speaker struggles earnestly to capture and hold the audience's attention, only to be met with blank looks, tilted heads, yawns and confused stares. Nothing devastates a boss more than losing the ability to persuade, influence and motivate others to get results.

When you drill down through all the research to the basic bedrock issues, you hit two simple but hard facts. You lose your influential powers when people do not buy into you and when people do not buy into your message.

Many people use the terms influence, persuasion and manipulation somewhat interchangeably. But each carries its own meaning. Influence requires winning the minds and hearts of your audience and thus inspires action. Persuasion stimulates a person to action because it makes intellectual sense. Manipulation crosses a fine line between persuasion and influence. It replaces the welfare and benefit of the group with the selfish desires of the individual.

Why Don't People Buy Into Me?

Focus, for now, on influence because influence hinges on personal buy-in. Why do some people stimulate buy-in so easily, while others find it so hard? The answer is power and its unique relationship with credibility and influence. For purposes of this discussion, we'll define *power* as the ability to exercise influence. You can't achieve influence without power. You can't exercise power without a relationship. This brings us back to the premise that influence occurs within relationships.

In 1959, psychologists John French and Bertram Raven developed a framework for understanding different types of power. Raven, Arie Kruglanski and Paul Hersey, working with Marshall Goldsmith, expanded that original framework into seven distinct types of power:

Legitimate Power. This power arises from one's title or position in the pecking order and how others perceive that title or position.

Coercive Power. This power comes from fear. Someone who uses coercive power influences others by threat and force.

Expert Power. This power comes directly from a person's skills or expertise or from perceived skills or expertise. Expert power is knowledge-based.

Informational Power. This power comes from the possession of needed or wanted information.

Reward Power. This power motivates people to respond in order to win raises, promotions and awards.

Referent Power. This power depends on personal traits and values, such as honesty, integrity and trustworthiness.

Connection Power. This power creates influence by proxy. People employing this power build important coalitions with others.

In the workplace, these seven types of power generally fall into one of two categories: formal (legitimate, coercive and reward power) and informal (referent, expert, informational and connection power). When it comes to influencing people without creating potentially negative effects, referent, expert, informational and legitimate power tend to get the best results.

A successful leader often relies on referent power to influence people because it most effectively breeds credibility. Who will most likely heed your sage advice? Those people with whom you have built strong, positive relationships.

The effective use of referent power involves developing a number of important and not easily acquired skills, including the ability to manage boundaries, maintain strength of character, make a clear and compelling presentation, adapt communication to the listener, forge trust and display empathy.

Given our natural tendency toward trust, this shows why we respond so positively to referent power, which depends on personal traits and values we admire. Influential relationships thrive in the presence of referent power.

Why Don't People Buy Into My Message?

Even if people admire a leader's personal traits and values, they might still ignore the leader's message. In most cases, the breakdown occurs because, somehow, people did not find the message compelling. How, then, do you create compelling messages that always get through?

Nothing can help a leader become more convincing than coupling an important message with an unforgettable story.

A story provides common ground where people can share an experience with others. Although each person may interpret the story differently, everyone gets the point. As a universal connector, the story triggers different parts of our brain, including our emotional powerhouse (the amygdala), and those stimulated by a simple presentation of facts and figures (i.e., the prefrontal cortex, which controls our working memory). It helps us make sense of our world. When someone hears or reads it, that person's mind fills in the blanks until he or she can see it all happening.

Don't overdo storytelling. The best storytellers tell their stories judiciously, tailoring them to the context, personalizing and adapting them to themselves and their audience, and making sure they deliver the right message.

Why Do I Lose My Cool in Hot Situations?

Whether you are dealing with sudden acute stress or ongoing chronic stress, only knowledge and training will see you through it all. Psychologists know that people perform well under stress if they possess the information they need to take effective action. Under stress, they feel they can take control of or at least strongly influence what happens next.

Physiologically, your body, for the most part, reacts automatically and predictably to acute and chronic stress. Your brain does not. Our perceptions and beliefs strongly influence which situations stress us out and how we respond to the high-pressure ones.

When it comes to all the little stressors (or big ones that impact us personally), demanding deadlines, noise pollution and relationship problems, we bring a unique set of beliefs and perceptions to those situations. They cause reactions that run the gamut from a minor grimace to a full-scale meltdown.

In the late 1970s, Dr. Susan Kobasa, a clinical psychologist at the City University in New York, found that three personality traits could actually protect someone from the negative health effects of prolonged stress:

Commitment: Maintaining a purpose in life and nourishing your social and community involvement. Positive beliefs foster successful reactions to stress.

Control: Perceiving control over a situation. People can choose how they react to a stressor and thus exert some degree of control over it.

Challenge: Viewing stressful events as problems or opportunities. Those who cope successfully with stress tend to look at the silver linings as well as the clouds.

A 180° Shift

Tape this motto to your desk: I CANNOT STOP STRESS. Striving for success, balancing work and personal life, dealing with the intense pressure that characterizes most workplaces, and just living in this

revved-up, high-pressure world with so many people and devices vying for our attention will create stress. Count on it. But also tape this motto beside the first one: I CAN CONTROL MY REACTIONS TO STRESS. You can minimize the adverse effects of stress, the meaning you attach to stressful situations, and your poor responses to the inevitable stressors that come your way. In other words, the stress response is negotiable.

Not surprisingly, negative self-talk can prompt our stress response because negative musings often distort reality. Those of us who cope well with stress more often listen to an inner voice that serves as a friendly inner drill sergeant, encouraging us to suck it up, push harder, stop whining. That's a good thing. But taking orders from an unfriendly inner drill sergeant — one screaming at us to crawl back into bed, bury our heads under our pillow and cry our eyes out — doesn't do us any favors.

Negative self-talk or cognitive distortions can resist even our best efforts to change them. They can become so deeply ingrained and habitual that it takes an almost superhuman effort to break their hold on our mind. You can take the following practical steps to get that unfriendly drill sergeant out of your head:

Step One: Become cognizant. What triggered the event? What negative thoughts popped into my head? What emotions did I experience? When you start analyzing your negative self-talk you should begin to appreciate how the perceptions they express instigate or further a stress response.

Step Two: Obliterate the negative thought. Once you identify the negative thought(s), you can ask another series of questions to help change them. Ask yourself,

What is my negative thought?

What evidence proves this thought true?

What evidence proves this thought false?

What advice would I give a friend who feels this way?

What conditions should I accept right now?

What won't change?

What words will express my new healthy thought?

Stress management does not mean stress obliteration. Rather, it means learning how to negotiate your own reactions to the stress that inevitably occurs every day of your life as a leader. Choosing to mind what's going on in your head and observing your body's physiological responses and how others perceive you mark the first sure steps toward coping effectively with stress.

Why Does a Good Fight Sometimes Go Bad?

Like most deeply rooted human behavior, competition is perfectly normal and healthy. Competition can make the office an exciting and rewarding place to work. Conventional wisdom insists that cooperation and collaboration work better than competition, but the inevitability of social comparison argues quite the contrary. Comparison is the mother of competition.

When we watch others succeed or fail, we often compare ourselves to them, and our observations can stimulate powerful emotional and behavioral responses. Many factors influence the nature of our feelings and reactions, including past experiences with similar situations, our level of self-esteem, and our judgment about whether someone deserved to succeed or fail in a particular endeavor.

What if we delight in someone's setback or despise his or her advancement? Then we can easily slide into envy, jealousy, even rage and end up disliking ourselves even more than the target of our ill will. Herein lies the psychological dilemma where the collision of social and self-expectations can shift a good fight into a bad fight.

You should keep in mind, however, that such negative emotions are part of being human. You can't avoid them; but left unchecked, they not only create turmoil; they can also damage both the target of those feelings and the one experiencing them. They do not pose serious problems or threaten a relationship unless you ignore them and let them fester into a deep psychological wound.

Promoting Good Fights

To create a healthier environment that keeps the good fight from going bad, as a leader you can cultivate certain norms:

- *Supportive, Friendly Competition*: Create friendly competition but not an ultimate "win or lose" challenge among team members.
- *Transparency*: Maintain an open-door policy that encourages people to speak candidly about their feelings. When you must do something that might cause feelings of envy or taking pleasure in the misfortunes of others (e.g., adding a teammate, promoting, demoting or rewarding someone), do it openly and make your reasons perfectly clear to all concerned.
- *Mentorship*: Mentoring opens up the line of communication and reduces preconceived notions and assumptions that can fuel the envy flame.
- *Address Conflict*: Nip problems in the bud. A good leader notices the emotional nuances that occur between people. The minute you see it, address it.

Why Can Ambition Sabotage Success?

We all create what psychologists call *self-schemas*: personal stories we use to define ourselves. For many of us, our internal monologues are like comfort food. For others, our stories are like swallowing shards of glass, causing such pain and suffering that they interfere with our ability to function. Whether positive and optimistic or negative and pessimistic, our stories become so deeply ingrained, so taken for granted, they cannot be easily changed.

Only with deep self-awareness can we detect the patterns and alter them in ways that will help us get more of the success we desire.

I call a self-centered or focused schema a *myopic schema*. Myopic suggests a narrow and exclusive perspective. In contrast, a *panoramic schema* encompasses the "big picture." If you imagine a spectrum, with myopic on the left and panoramic on the right, most of us fall somewhere in the middle. Those who live on the far left of the spectrum often find it harder to sustain long-term success than do those who operate on the far right.

What turns an ambitious leader into a bad character or even a criminal? More often than not, it's an unbridled drive to serve oneself at the expense of all others. So how do leaders start down the path to wrack and ruin? It all comes down to the lies we tell ourselves.

Lies We Tell Ourselves

Cognitive dissonance is a concept proposed by Leon Festinger in the 1950s. Cognitive dissonance means that our schemas impel us to hold onto our existing attitudes and beliefs while avoiding disharmony (or dissonance).

To cope with cognitive dissonance, we use three different tactics to reconcile disharmony. First, we can change our beliefs ("Cheating is ok"). However, our schemas make it hard for us to alter our basic beliefs and attitudes. Second, we can change our actions ("I'll never cheat again"). While powerful emotional motivators such as guilt or anxiety can encourage us to whip our behaviors into shape, we often tamp down feelings of guilt or anxiety over an action or decision because we can easily train ourselves not to feel that way. Guilt seldom sustains learning over the long haul. The third and most common tactic for resolving cognitive dissonance involves changing our perception or memory of an action ("Since everyone cheated on that test, why shouldn't I?"). Reconceptualizing the behavior provides a pleasant and convenient way to deal with disharmony, and it supports our natural human desire to see ourselves as basically good and reasonable people.

Given our imperfections as human beings, our minds have created a whole host of defense mechanisms and biases to cope with cognitive dissonance, including self-justification, rationalization and the self-serving bias. While we readily observe those behaviors in others, we find it much harder to see them in ourselves.

No matter how much bad behavior, faulty decisions, abusive leadership and unethical practices some leaders commit, they will not change their ways. They will, instead, do whatever it takes to preserve their positive view of themselves.

Leaders who work with a panoramic view of success do not operate with total selflessness, but they do define their own success within the context of the bigger picture. If "we" don't succeed, "I" don't succeed.

The best leaders evolve from a myopic view (conventional) to a panoramic (postconventional) view as they gain more experience. Why do so few leaders adopt a panoramic approach to success? Part of the answer lies in the fact that every leader must deal with so many competing forces and priorities, both internal and external. When you are working inside a tornado, it's hard to step back and see yourself, your stakeholders and your situation clearly.

Shifting from a myopic to a panoramic approach to success and leadership takes a lot of willpower and an extreme commitment to counteracting the lies that we tell ourselves.

I offer this advice: Never shy away from saying, "I was wrong." Leaders hate to admit their failings, but doing so makes people respect you more than all the rationalizations and justifications in the world.

Why Do People Resist Change?

Brain analysis technology has proven that change activates the prefrontal cortex. However, analysis has also shown that, because the thinking part of the brain connects to the emotional part, an assault of unfamiliar information can upset the emotional part of our brains. The mere prospect of change can ignite a firestorm of emotions (intense fear, anger, depression, fatigue, anxiety) that make us want to fight for the comfort of the status quo.

No matter how much clear writing you can see on the wall, you can easily succumb to the powerful forces of

psychological biases that can blind you to the need for change. Many cognitive biases can immobilize us, but sometimes it simply comes down to mental exhaustion.

New and unfamiliar routines and choices challenge the comfort zone of our ingrained habits. When you effect a change, you force yourself out of that comfort zone. It takes a lot of energy, and it can wear you out. In the same way that your muscles eventually give out during a strenuous workout, your mental muscle starts to lose function at full speed, hampering your ability to care, make choices, maintain motivation, weigh decisions and ultimately take action. Psychologists call this *ego depletion*, a state of mind where you can lose critical elements of your self-control and all the other mental processes that require focus and conscious effort.

Given all the forces that conspire against a decision to paddle through unknown waters, what's a poor leader to do? Research into brain plasticity (also known as neuroplasticity or cortical remapping) has shown that the brain can change and adapt as a result of learning and experiencing new behaviors, environments and neural processes. Leaders who want to move forward can take the following steps to survive the rapids.

Challenge Biases. When change slips into town, a leader must confront it head-on. Bring together all the people who feel a sense of ownership in the status quo and encourage them to ask and answer some key questions:

- How do we define our status quo?
- What benefits have we derived from our status quo?
- How are we limited by our status quo? Would we choose to make the same investments? Which business forces require a bold response?
- What specific changes can we make to ensure a bold response?
- How will we benefit or not benefit if we make those changes?

Simply guiding yourself and your people through this process will shake up people's minds, get them thinking in a forward direction, and loosen the shackles of the status quo.

Reframe. Here's a strategy I like to use with clients who are wrestling with decisions about confronting change.

- Gather people with similar and different business interests in a room.
- Write a one-sentence summary of the business challenge on a white board.
- Invite people to offer different ways to state the challenge.
- Cross out all value-laden terminology: fair, smart, dumb, beneficial and problematic.
- Reframe the question in a neutral sentence.
- Ask different stakeholders to frame the challenge from their particular point of view.
- Help the group analyze gains and losses from each point of view.

Effective reframing shifts emphasis from symptoms to causes. It replaces a Band-Aid with the antibiotics to heal the infection.

Recoup. When facing decisions that involve shaking things up, you need to recognize that being avoidant, stuck, resistant or delaying is sometimes simply due to mental exhaustion or burnout. Despite the tremendous resilience of the human brain and body, sometimes we need to give them a rest so they can recoup their full abilities. It's easier said than done when we find ourselves up to our eyebrows in quicksand.

As always, the simplest advice applies: eat well, get enough sleep, exercise, engage in play and social activities with friends, read a book or go to the movies or theater, spend time enjoying your hobbies, meditate or do anything else that lets off steam.

Developing habits takes time. However, our brains love to form new ones, especially healthy, positive ones that will prevent exhaustion, help you switch gears, and give you the break you need to reenergize and make clear-headed decisions.

Why Do Good Teams Go Bad?

According to *social identity theory* (SIT), a term coined by Henri Tajfel and John Turner in the 1970s, people derive a sense of their self not only from their personal identity (unique personal characteristics) but also from their association and identification with one or more social groups (male, female, black, white, brunette, blonde, workgroup A, workgroup B, etc.). Social identity allows us to identify with each other and act together by reaching consensus on what matters, on what rules/norms will govern behavior, and on how to define and work toward shared goals. Group membership provides people with a sense of belonging, a basic and universal human need to know who we are and how we fit into the world. No wonder we gravitate toward groups of all kinds. Once we join a group, however, some truly fascinating dynamics kick in.

In a world of constant choice, our selections, from friends and lovers to computers and cars, define who we are and separate us from other groups. Once you ally yourself with a group, you begin to enjoy wonderful benefits, such as cooperation and cohesiveness, but you also begin to fall prey to some disturbing liabilities, such as prejudice and corruption. "We" can accomplish anything; "we" are good. "They" are incompetent; "they" are bad.

While cohesive groups can accomplish amazing results, extreme group conformity can stifle creativity,

innovation, critical thinking, decision making and problem solving. On a large scale, social conformity can breed a productive and supportive culture, but taken to the extreme, it can cause people to turn a blind eye to wrongdoing, the equivalent of jumping off the Brooklyn Bridge with your friends.

Leaders who see a good team going bad must intervene immediately. Quite often a leader can't see it happening because he or she has also conformed to the group. In that case, a trusted adviser or a coach can provide objective advice on getting the team back on track.

Psychologists have postulated three main theories to explain why people participating in group decision making increasingly polarize and strengthen their initial preferences and why those people who hold dissimilar preferences at the outset often end up changing their minds and accepting the majority opinion:

1. *Persuasion*. People change their minds when they pay attention to what they deem rational arguments offered by other group members.
2. *Comparison*. People change their minds to conform to the group, especially when they accept those norms as socially desirable.
3. *Differentiation*. People change their minds to accommodate a decision they think the group should make.

Not all groups polarize. In fact, in well-established groups, especially under time pressure, people will more likely compromise and reach a middle ground in their decision making.

Counteracting the Traps

Setting up and managing good groups require careful thinking about the team's composition, size, objectives and protocols. To counteract some of the common problems that can make a good team go bad, establish group diversity, define expectations, emphasize collective awareness, provide the right training, stress freedom of thought, insist on information sharing and promote innovation.

Every group, from a mixed-doubles tennis team to a 250-person sales force, comes under the influence of group dynamics. Understanding those dynamics helps leaders to create and manage teams more effectively and to keep them from falling prey to negative group behaviors that can make a good team go bad.

What Causes a Star to Fade?

In psychological terms, engagement is a state of mind driven by behavioral, cognitive and emotional factors. Regardless of why and how engagement occurs, research and surveys have consistently shown that engagement applies to every type of work environment and figures prominently in business outcomes.

You must build engagement into the very fabric of the organization. Busy with the business of busyness, we lose sight of what really matters to our people and unintentionally disengage the very people on whom the success of our organization depends.

High levels of engagement cushion the effects of a poor work environment, and that can influence people's motivation to cope with challenging deadlines, limited resources, or even nasty bosses.

In a positive culture of engagement, people naturally go the extra mile for your team, for your customers and for your company. That's why you need to watch for organizational decisions, environments, attitudes and behaviors that interfere with engagement.

Engagement is not a luxury these days; it's a necessity. Companies that have begun to believe in this concept have gained a competitive advantage. What exactly, can you do to engage your people and keep them engaged?

Our basic and powerful need for social connection figures prominently in our work lives. Engagement, retention, performance, productivity, cultural commitment, wellness and stress reduction depend on it. That's why a leader must concentrate on fostering relationships. Stronger social connections lead to higher levels of engagement.

Here are the three simple rules to get back on track as a good boss: seek self-awareness, help others gain self-awareness, and remember we're only human after all.

RECOMMENDED READING LIST

If you liked *What Keeps Leaders Up At Night*, you'll also like:

1. ***360 Degrees of Influence by Harrison Monarth***. Monarth provides advice on how to gain the trust and respect of those around you and how to expand your influence well beyond your immediate environment.

2. ***Just Listen*** by Mark Goulston. A veteran psychiatrist and business coach, Goulston reveals the secret of how to get through to anyone, even when productive communication seems impossible.

3. ***The 360 Leader*** by John C. Maxwell. According to Maxwell, you can learn to develop your influence from wherever you are in the organization by becoming a 360-degree leader.

Leadership 2030

The Six Megatrends You Need to Understand to Lead Your Company into the Future

by Georg Vielmetter and Yvonne Sell

THE SUMMARY IN BRIEF

Massive global forces will reshape your business by the year 2030. Formidable competition from China, environmental pressures, talent wars and technological leaps will divide the short-term thinkers from the prudent few looking for long-range opportunities.

Drawn from research conducted by Hay Group, a global management consultancy, and Z_punkt, an international leader in strategic foresight analysis, *Leadership 2030* pinpoints six converging megatrends and provides direction for leading your organization through profound change. The megatrends are globalization 2.0, environmental crisis, individualism and value pluralism, the digital era, demographic change and technological convergence.

Thought-provoking analyses assess the transformative effects of the megatrends on leaders and their organizations. Case studies, examples, interviews and data drive home the evidence. Fictional profiles clarify the effects each megatrend has on decision-making processes. Together, they make *Leadership 2030* your most sweeping, nuanced guide to the monumental challenges ahead.

IN THIS SUMMARY, YOU WILL LEARN:

- How the six megatrends will impact every organization.
- Why leaders will need to focus on the diversity of employees and consumers.
- The importance of being an altrocentric (rather than an egocentric) leader who is prepared to face new global and environmental challenges.

THE COMPLETE SUMMARY: **LEADERSHIP 2030**

by Georg Vielmetter and Yvonne Sell

The Authors: Georg Vielmetter is a member of Hay Group's European Leadership Team and the regional director-Europe of Hay Group's Leadership and Talent Practice. He works with executives and top teams on leadership transformation, and he also publishes and speaks on these topics. Yvonne Sell is the director of Leadership and Talent-UK & Ireland for Hay Group. She also works with Daniel Goleman and Richard Boyatzis on researching emotional intelligence.

Introduction

Nobody knows what the future will look like. It is all too easy to focus on one single trend, development or incident, then extrapolate and jump to the wrong conclusion. But there comes a time when people have a feeling that change is in the air. We live in such a time. Something is in the air. But it is difficult to get a grip on exactly what is changing, how and why, and what the future will look like as a result.

Answers lie in the science of foresight analysis (sometimes called future research). Foresight analysis is a robust, cross-disciplinary, scientific research that focuses primarily on social science. After extensive research, it was decided that the most fruitful way to analyze the changes occurring would be to identify the current megatrends in global society.

It is important to understand that a megatrend is a long-term, transformational process with global reach, broad scope, and a fundamental and dramatic impact. More specifically, there are three dimensions that define a megatrend:

- **Time:** Observable over decades, megatrends can be projected with a high degree of probability at least 15 years into the future.
- **Reach:** Megatrends affect all regions and stakeholders, including governments, individuals and businesses.
- **Impact:** Megatrends fundamentally transform policies, society and the economy.

Using these dimensions and working with research partner Z_punkt, six megatrends were identified that are creating — and will continue to create — the greatest shifts in the business environment: Globalization 2.0, Environmental Crisis, Individualization and Value Pluralism, The Digital Era, Demographic Change and Technological Convergence.

Globalization 2.0

Five Essential Points of Globalization 2.0

1. Globalization 2.0 is fundamentally different from version 1.0. The East will progress from just being the workplace of the West; Western companies will still operate in the East, but under different circumstances. Goods, people and capital will flow in multiple directions, not just from West to East, but also very much from East to West.

2. Traditional trade patterns will be disrupted. As economic power shifts eastward, trade between emerging markets will flourish. The East will rely less and less on the West for goods and services. Organizations will need to think differently about marketing.

3. Beware of "glocalization." New middle classes will emerge in more and more countries, each with its own set of consumer demands, thereby "glocalizing" the market. A single, centralized strategy and operating model will no longer be adequate for multinational organizations.

4. The burden of complexity will intensify. Globalization 2.0 will demand a complexity of thinking that few organizations or leaders have encountered — significantly intensifying the cognitive and, in particular, the conceptual and strategic demands on already overstretched leaders.

5. Contextual awareness will be critical. Organizations will need to be more adaptable and encourage diversity

of thought in order to enhance their contextual awareness and ensure that communications is truly two-way.

Globalization 2.0 is characterized by two unique and interrelated attributes: the shift in the economic balance of power to Asia and the rapid expansion of the middle class in the emerging nations.

Out of the Loop

A side effect of the shifting balance of economic power under Globalization 2.0 will be a sea change in world trade patterns. Increasing levels of commerce between emerging nations will present another significant threat to Western economies and corporations. Business relationships, strategic alliances and economic agreements that exclude the West altogether are increasingly being struck.

With dizzying economic expansion and strengthening corporate success comes the growing wealth of the local population. Under Globalization 2.0, this means improving purchasing power for hundreds of millions of people in low- and middle-income economies. However, it's important to recognize that we are not talking about a globally homogenous group of increasingly affluent workers with identical consumption patterns. Significant cultural differences and unique local preferences will drive demand for different products and services in each local market.

The Demands of Globalization 2.0

Organizations and their leaders are grappling with unprecedented complexity in the macro-business environment brought about by Globalization 2.0. Here is a summary of the key challenges businesses are facing and the demands these challenges will place on leaders.

- *Contextual awareness and conceptual thinking.* More agile structures will be necessary to enable localized strategic decision making in order to take advantage of globalization. Strategies, business models and operating models will need to be adapted to the demands of different markets. Leaders will require highly developed contextual awareness and conceptual thinking to identify and implement the right structures for their organizations.
- *Cross-collaboration.* Deeper and more frequent collaboration will be required between functions and across regions and countries to fine-tune businesses' local radars. And not only internal collaboration. Glocalization will demand more collaboration with external partners in order to enter local markets. For leaders, this means being able to manage effectively across multiple functions, regions, countries, nationalities, cultures and markets.
- *Diversity.* Stronger contextual awareness, improved local sensitivity and greater cross-country collaboration will necessitate more diverse teams. And they must be diverse in all senses of the word: nationality, ethnicity, culture, age, gender, function, career background, etc. Intercultural sensitivity and adaptability will be essential attributes in leaders.
- *Loyalty.* The global war for talent will be transformed by Globalization 2.0. Loyalty will be at a premium. Talented employees and future leaders will be able to take their pick from among employers the world over, as competitors spring up throughout the emerging regions to challenge established Western corporations. Only the most compelling and inspiring leaders will be able to attract, retain and engage the best people in a talent market devoid of loyalty.

The Environmental Crisis

Five Essential Points of Environmental Crisis

1. Climate change is real and almost irreversible. Global warming as a result of economic activity has caused extreme weather events around the world, leading to death, displacement and considerable economic damage. The earth's temperature is approaching catastrophic levels.
2. Critical resources are being depleted. Peak oil supply from conventional sources was reached in 2006. Yet global energy consumption is rising as millions of consumers worldwide join the ranks of the middle class. Water shortages are becoming increasingly drastic. Rare earth minerals — essential to modern technology — are becoming scarcer, more expensive, and more difficult to reach.
3. The implications are potentially catastrophic. This creates a recipe for, at best, drastically reduced margins for organizations, and, at worst, deep global recession, famine and widespread social turmoil.
4. Carbon footprint moves from corporate social responsibility to the bottom line. Carbon reduction will become essential to market competitiveness. Organizations will need to embed environmental awareness into their processes and decision making in order to create a culture and operations that minimize environmental impact.
5. Transformational thinking and operations will be necessary. Leaders will need to think transformationally to achieve this, communicate a clear rationale for such radical change, and ensure that they execute the vision. New kinds of collaboration, including joint ventures with competitors, will be required to find innovative solutions.

The environmental crisis is perhaps the most profound of the six megatrends. It calls into question the very fundamentals on which economic prosperity and development are based. And at its heart are grave implications for

global society and prosperity and, therefore, for businesses and their leaders.

The environmental crisis facing the earth comprises a complex web of factors. Two of these are the changing climate due to global warming and a growing scarcity of natural resources (principally oil, water and rare earth minerals).

Moral Dry Ground?

Clean technologies will present new opportunities for organizations to operate more sustainably. But ultimately, businesses will be driven by one of two clear motives: inherent eco-ethics or the laws of market economics.

Some businesses are undoubtedly driven by the desire to operate as sustainably as possible, minimize ecological impacts, and safeguard the future of the planet. Eco-ethics are the founding norms of these companies. To them, environmental protection is a guiding principle, not a CSR exercise or market response.

But it would be naïve to expect every company to be motivated by inherent eco-ethics — tantamount to asking them to forsake the rules of capitalism. The moral case alone is not sufficient for most businesses. Until society accepts a different kind of market economics, where profit motive is no longer all-consuming, the market will determine the need for sustainable operations for most companies.

The Demands of the Environmental Crisis

How do leaders create sustainable operations and cope with rising costs as resources dry up? Here is a summary of the main challenges for businesses and their leaders.

- *Transformational thinking.* Strategies, structures, decision making, operations, cultures, processes and procedures must all evolve to minimize environmental impact. Innovation will be necessary on a massive scale. Creative, strategic and conceptual thinking will be critical leadership skills.
- *Execution.* Change initiatives rarely fail at the conception stage; successful execution is what so often eludes organizations. Leaders with a track record in delivering business change will be prized.
- *Visionary communication.* Organizations invariably suffer from a natural state of inertia. As agents of transformation, leaders will need to inspire employees to strive to achieve the new, sustainable organization. And they will need to spell out with total clarity what it means in practical, everyday terms for individuals' roles and performance.
- *New forms of collaboration.* The intellectual power to deal with climate change will be beyond any one leader or even organization. Collaborations across functions and with external partners will become essential. Competitors will be forced to come together to find shared solutions.

Individualization and Value Pluralism

Five Essential Points of Individualization and Value Pluralism

1. Mounting affluence will drive growing individualism in emerging societies. Greater income levels will give people easier access to cultural influences, which will expose them to a wider range of life and career options.
2. People's values will increasingly pluralize. Higher incomes will also grant individuals the freedom to follow their unique priorities and tastes when choosing between these new options.
3. Niche opportunities will emerge in local markets. Societies will individualize at different paces. Agile businesses will be able to identify and capitalize on local market opportunities created by individualization.
4. Organizations' internal and external environments will fracture. As the expectations of individuals are transformed by increased wealth, companies will need to consider every employee and every customer as an individual. Failure to do so will mean loss of talent and business.
5. Greater flexibility and sensitivity will be essential. With loyalty at a premium, organizations must get closer to their markets and workforces than ever before. More flexible, less centralized and flatter structures will be needed to understand and respond to customers' and employees' needs.

As societies industrialize and their citizens become wealthier, everyday life becomes increasingly governed by more individualized choices and decisions.

With more money in their pockets, people find that they can leave behind the economic strictures of the past. Prosperity frees a society from scarcity of the basic requirement of human existence, such as food and shelter. As a result, people's priorities move up through Maslow's hierarchy of needs as they look to improve other aspects of their lives. People are driven by more profound values, like humanism, religious faith, social justice and protection of the environment. And they are at liberty to indulge in more emotionally fulfilling activities, seeking intellectual challenge and pursuing their aesthetic preferences.

As a society's wealth grows, so does its citizens' access to education and a diverse range of media. Exposure to this cultural capital opens their eyes to new lifestyle options.

A Shattering Effect

On the surface, growing wealth and increased freedom of choice for billions of people around the world would seem to be a wholly positive development. But for organizations, the consequences are likely to be deeply perplexing. Individualism and value pluralism will fracture companies' external and internal environments, shattering established structures and existing market dynamics.

As the emerging middle class flexes its newfound financial muscle, freedom of choice will splinter demand patterns, creating the need for an ever expanding array of products and services to satisfy increasingly varied tastes. Individualization will give rise to niche opportunities — some fleeting, some more sustained — on an unprecedented scale.

While playing havoc with the external environment, individualization will also skew the internal landscape for organizations, bending attitudes to work and careers and changing the structure, quantity and quality of people's relationships — with each other and with their employers.

Changing expectations among workers lead to accelerated staff turnover, as workers move around in search of their life goals. Changing expectations also attract more people to careers in professional, service and creative industries, which are perceived as being more fulfilling — as well as more lucrative.

Individualization also drives the desire to shape not just our careers but our entire working lives as we see fit. The traditional three-phase life cycle — youth, professional life, retirement — is no longer the rigid template it once was.

The Demands of Individualization and Value Pluralism

Individualization and value pluralism will likely lead to fragmenting employee and customer values, more diverse teams, less centralized structures, flatter hierarchies, flexible working practices and greater employee turnover. As a result, organizations and leaders will need to

- *Display intellectual openness and curiosity.* Sensitivity to individuals' needs and the flexibility to respond accordingly will be crucial to generating loyalty. Leaders will need to be curious about and open to employees' and customers' pluralistic drivers, so as to understand what motivates people and be able to attract, engage and retain them.
- *Provide bounded autonomy to unite diverse teams.* Leaders will need to draw on the appropriate leadership styles in order to make staff members appreciate each other's strengths while respecting differences and to manage and engage diverse teams and highly individualized team members. Providing autonomy within a clear set of boundaries to create stability and direction will be necessary to foster the right conditions for teams to perform.
- *Redefine loyalty and manage extended networks.* When staff retention can no longer be expected, loyalty will depend on leaders' ability to develop and maintain lasting relationships with current and former employees within and beyond the organization.

The Digital Era

Five Essential Points of the Digital Era

1. The digitalization of our lifestyles is becoming the norm. With ubiquitous Internet connectivity, the proliferation of mobile devices, and the popularity of social networking, we are now "always on," at home and at work. This is eroding traditional boundaries between our personal, private and professional lives.
2. Digital natives have increasing influence. The inexorable progress of digital technology is creating a divide between younger, tech-savvy "digital natives" and older generations. Younger people have a technological edge over their more senior colleagues, yet in many cases lack the attitudes and social skills expected in the corporate world and tend to challenge authority. Organizations must find ways to accommodate and cross-skill both groups.
3. Virtualization is disrupting power relationships between companies, customers and employees. The digital era has given rise to new virtual business models and platforms, enabling consumers to pick and choose more easily and trade among themselves instead of with commercial providers. This gives customers unprecedented levels of choice. In addition, reputations are at risk as disgruntled employees can publicly hold employers to account online.
4. The workplace is fragmenting. When employees are always on, the concepts of work and the workplace become fluid. Often employees can perform tasks anywhere, anytime, challenging the need for a central, bricks-and-mortar location and traditional organizational hierarchies. This will appeal in particular to digital natives, who readily embrace virtual working methods and tools and have little respect for orthodox structure and hierarchy.
5. Leadership will need to "go remote" and prioritize loyalty and reputation management. Leaders need to get a grip on managing diverse, loose-knit teams whose members are dispersed around the world and have varying degrees of digital competence. In order to create loyalty, leaders must foster a sense of unity, engagement and collaboration among people who rarely meet, and ensure that

there is effective decision making among these groups. Openness, integrity and reputation management will be key in a transparent, virtual world.

Digitization is a booming worldwide phenomenon. It is not only changing the way we communicate; it is also transforming the way we work and the nature of our professional and personal relationships. It is opening up new divides, blurring long-established boundaries, and turning traditional hierarchies upside down.

This state of technological affairs is producing a new breed of digital citizens. Younger generations have never known life without the Internet and mobile technology. Living life in such a public and always-on manner breaks down the barriers that traditionally divided people's personal, social and professional lives.

The digital era is also disrupting conventional power relationships between companies and their customers, fragmenting traditional market structures and value chains, and creating a constantly shifting kaleidoscope of opportunities and threats.

In an inescapably digital environment, younger employees gain a clear competitive edge in the workplace, contrary to traditional organizational hierarchies. Younger, tech-savvy individuals find themselves with more influence and able to have more impact than 50-something managers, who may lack technological skills and essential knowledge of the sphere in which so much business is done.

The Demands of the Digital Era

- *Bridging the gap.* Organizations will need to address the digital divide between younger and older generations in the workplace, as well as digital natives' less traditional attitudes toward corporate life and leadership roles. Organizations will need to embrace the creativity, curiosity and innovation that digital natives bring, while providing frameworks, guidance and coaching to help them cope with corporate life and acquire the necessary social skills.
- *Virtual working.* New structures, hierarchies and IT infrastructures will be required to enable work to be carried out anywhere in the world, at any time, and to allow dispersed teams to collaborate effectively. Organizations will also need to figure out the infrastructure and security implications of an ever-increasing proliferation of devices, many of them owned by employees rather than the company.
- *Digital wisdom.* Leaders will face the challenge of making decisions on and rolling out programs that they may not fully comprehend. They will need to understand the implications of these decisions in terms of structures and processes and the skills and abilities required.
- *Remote leadership and loyalist management.* Leaders must find ways to organize, manage and motivate teams that rarely meet and are located all over the world. Leading disparate groups will demand new decision-making processes and new ways to foster loyalty.
- *Integrity and reputation management.* In a transparent world, where reputations can be publicly trashed at the click of a mouse, organizations will need to behave impeccably. For leaders, this will demand high levels of openness, sincerity and integrity, which will mean consistency of values, words and deeds.

Demographic Change

Five Essential Points of Demographic Change

1. The world's population is expanding and aging in parallel. The global populace is expanding, particularly in developing and emerging markets, and rapidly maturing, especially in the industrialized world. Both trends are forecast to continue and even intensify well into this century. International migration is also on the rise and will be magnified by an array of "push" and "pull" factors in the coming decades.
2. Demographic change is placing great pressure on social structures and (especially Western) companies. National welfare systems are being stretched to the breaking point by growing populations as well as by faltering support ratios (numbers of working-age adults to dependent citizens) as a result of aging. In addition, many Western societies (and also China) are maturing beyond the point at which they will begin to perform less effectively in socioeconomic terms.
3. The war for talent will intensify. An aging global population will mean a shrinking global workforce, stepping up the competition for specialized skills, high performers and effective leaders. Corporations and even nations will find themselves in a global war for key talent.
4. Workforces will diversify as companies adapt. Successful organizations will need to develop an increasingly diverse workforce to ensure an adequate talent pipeline. This will mean recruiting men and women of all ages and from a variety of cultural backgrounds, relying on migration where necessary. Working practices, employment conditions and HR procedures will evolve to reflect the varying needs of different ages, ethnicities and genders.
5. Managing diversity will be a core leadership competency. Leaders will need to display exceptional sensitivity

to their employees' needs and abilities to earn the loyalty and maximize the performance of diverse teams. This will demand a thorough knowledge and depth of understanding of their teams.

Demographic change is primarily a combination of three concurrent phenomena: population growth, aging societies and increasing migration. As these trends alter the dynamics of the world's populace, they will wreak havoc on organizations' product and employment markets.

Organizations will have to work harder to attract, integrate and develop an adequate pool of potential star performers, which will include international migrants, older workers, a higher proportion of women, and employees with eldercare as well as childcare responsibilities. This will mean finding new approaches to recruiting and identifying talent.

The Demands of Demographic Change

Here is a summary of the key challenges leaders face from demographic change:

- *Enabling new levels of diversity.* Loyalty and commitment — not to mention performance — will depend on an organization's ability to let each team member thrive, whatever his or her nationality, cultural background, gender, age, personality, approach to work, experience, skills or abilities. Organizations will need to provide the structures, policies and environment to harness such considerable diversity.
- *Connecting generations and cultures.* By fostering understanding, collaboration and knowledge exchange, leaders will play a pivotal role in overcoming divisions between generations and cultures, and ensuring that they all work productively together.
- *Managing and motivating diverse teams.* A challenge for leaders will be to understand what is and what is not negotiable from each individual's cultural and personal perspective. Considerable listening skills and empathy will be required to identify what motivates each team member. A single rallying cry to the whole team will no longer suffice. Leaders will have to learn to live with ambiguity and base decisions on conflicting trends and demands.

Technological Convergence

Five Essential Points of Technological Convergence

1. Technological progress is likely to transform many aspects of our lives. Advanced scientific disciplines — nanotechnology, biotechnology, IT, cognitive science and robotics — will drive major innovations in important areas such as healthcare, logistics and nutrition.
2. Convergence will drive the greatest innovations. The coming together of these scientific fields will make possible the greatest leaps forward, transforming some industries, threatening others, and creating a myriad of new product markets.
3. R&D will take center stage. Research and development will become an interdisciplinary function, requiring an even higher skill base. Making sure that R&D has the right mix of skills will be a key leadership responsibility.
4. Convergence will necessitate new levels and forms of collaboration. Diverse scientific disciplines, businesses, academia and even competing companies will need to work together on pioneering research programs. Meanwhile, companies will need to do away with conventional organizational boundaries to enable unprecedented levels of collaboration and knowledge sharing.
5. Societies will debate the ethical boundaries of technological advancement. Societies will need to question the rights and wrongs of some areas of innovation — for example, the potential to slow aging and enhance human cognition — and set a framework for acceptable progress. Businesses will need to respect this debate.

Nobody knows what the future will look like. What we can be certain about is that people will grasp the opportunity to enhance their knowledge and capability. Also certain is, as technological convergence progresses, it has the potential to create new industries, transform sectors, and threaten the very existence of some business models.

The Demands of Technological Convergence

In summary, leaders will need to

- *Learn to live with uncertainty.* The outcomes, implications and applications of technological convergence are highly unpredictable. Leaders will need to be comfortable with uncertainty and ambiguity, and they will have to keep constantly abreast of progress and its consequences for their customers and staff.
- *Foster new forms of collaborations.* Intensive cooperation within the company, with other companies and with academic institutions will be essential. To enable this to occur, organizations will need to dismantle the boundaries between disciplines and departments. Leaders will need to promote and manage knowledge exchange internally and with partner organizations, including competitors.
- *Innovate ethically.* Products that overstep the boundaries of acceptable progress will not be tolerated. Businesses and their leaders will be expected to act with integrity and respect the societal debate on technological advancement.

Reinforcers, Dilemmas and the Perfect Storm

Each individual megatrend will create tough challenges and enormous complexity for organizations and leaders. However, the megatrends do not develop in isolation. They develop together, and as such, they will greatly intensify the difficulties for business leaders.

The megatrends combined will result in a set of five key reinforcers (consequences driven and strengthened by several megatrends at once) and four significant dilemmas.

The five reinforcers are

1. *Stakeholder proliferation.* Leaders must be sensitive to the expectations of a rapidly expanding network of stakeholders, which will increase complexity just at the point where leaders are looking to create simplicity.
2. *Power shift.* Leaders' power will shift to their various stakeholders, reducing the authority of leaders to lead organizations through the challenges presented by the megatrends.
3. *New working practices.* A new "social practice" of work will emerge as work and the workplace go mobile, the boundaries between personal and professional life break down, and a resistance to formal authority takes hold among younger generations.
4. *Cost explosion.* The costs of businesses will explode as a result of a scarcity of talent and natural resources; the research into, development of, and use of advanced technology; and the demands of globalization.
5. *Ethicization of business.* Concerns over the environment and NBIC technology, combined with the transparency of the digital era, will demand the highest ethical standards of organizations and their leaders.

The four dilemmas relate to

1. *Mobility.* While globalization will drive a greater need and desire to travel, environmental concerns will demand that travel is seriously reduced.
2. *Resources.* Scarcity of natural resources will coincide with spiraling demand for them.
3. *Hierarchies.* Complexity tends to generate more intricate structures, yet growing individualism will call for flatter organizations.
4. *Horizons.* The immediacy of the digital era is at odds with the need for long-term solutions to climate change.

The Altrocentric Leader

Leadership in 2030 will call for individuals who choose not to see themselves as heroes, as headlines or as patrons and who do not put their egos first. The leaders of the future will not be egocentric. They will be altrocentric. The defining characteristic of altrocentric leaders is a primary focus on and concern for others rather than themselves. They see themselves as just one integral part of the whole. Altrocentric leadership is based on a firm grasp of the relational, contextual and shared nature of leadership.

Good leaders — great leaders — will understand that the key source of their power is other people. And they will use this to empower those around them. Ideal behavioral competencies of the altrocentric leader are

1. **Inner strengths:** ego-maturity, intellectual curiosity and emotional openness, and empathy.
2. **Values:** ethical standards, concern for diversity.
3. **Strategic business thinking:** contextual awareness, stakeholder recognition.
4. **Stakeholder interaction:** meaning-making, cross-boundary partnering.
5. **Execution:** bounded autonomy, senior team leadership.

Developing altrocentric leaders will require considerable time, energy and investment. Leaders need to start thinking differently about how they will operate. They will need to think outside the box, the building, the organization and sector. They will need to think out of the ordinary if they are to stay afloat amid the megatrend storm.

360 Degrees of Influence

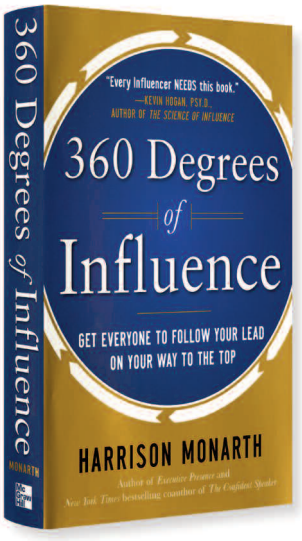
Get Everyone to Follow Your Lead on Your Way to the Top



by Harrison Monarth

THE SUMMARY IN BRIEF

Leadership doesn't have to be a top-down proposition. In fact, the best leaders influence those who are below and above them, as well as people external to the organization, such as customers and partners. This 360 degrees of influence is what separates the good leaders from the great leaders.

Founder of the global executive coaching firm GuruMaker, Harrison Monarth makes a living helping top figures in business and politics hone their influencing, communication, persuasion, impression management and media skills. He teaches leaders how to operate without relying on spin or manipulation.

In *360 Degrees of Influence*, Monarth provides advice on how to gain the trust and respect of those around you — no matter where they're positioned in the organizational hierarchy — and how to expand your influence well beyond your immediate environment. Providing valuable insight into human emotion and behavior, Monarth reveals the secrets to becoming the most psychologically astute person in the room — so you can be the most influential leader in the room.

In addition to sharing insight he has gleaned during years of coaching top executives, Monarth includes techniques and tips to help you tackle the challenge of influence and leadership head-on.

Right now, one of your own counterparts might be exerting influence over you and your boss. You can do the same thing. Apply the lessons of *360 Degrees of Influence* to place yourself in the best possible position to lead the leaders.

IN THIS SUMMARY, YOU WILL LEARN:

- How to assess your current influencing power.
- How to overcome resistance to your ideas and proposals.
- How to know what people are thinking and feeling — even better than they do.
- How to use five valuable decision-making strategies.
- How to create an influence strategy tailored to your organization's hierarchy.

Swayed, Nudged and Driven: Influence Is Constant

A New Zealand bank helpfully nudges customers to save money on impulse by just pressing a button on their iPhone. Apparently there's an app for that.

New York taxicabs have a touchscreen on the back of the front seat suggesting how much passengers should tip the driver upon arriving at a destination. Big colorful buttons give the option of paying $2, $3 or $4 if the fare is less than $15. If your fare is more than $15, the buttons display percentages from 20 to 25 to 30 percent. Clearly counting on people's laziness or inability to calculate and self-select a fair tip, cabbies are happy to report that gratuities have shot way up, again due in part to these highly suggestive buttons that are tilted toward generosity.

We face tens of thousands of minor and major interactions every day that guide or steer us in one direction or another. While all this influencing and nudging is perhaps becoming more obvious as we get older, it's been a factor from the moment we released our first gut-wrenching screams upon entering this life.

We Are Born to Influence

These days, it's impossible to walk down the street without experiencing the power of influence. Even if the street is completely empty, beckonings, warnings, sales pitches and opinions fill every conceivable angle of our vision. This exposure to influence begins with our earliest sense of self, at the moment we acknowledge we are not alone and experience desire in some form. For most of us, this begins at birth.

With that first infantile desire emerges a natural instinct as to how to obtain what we want. Infants are not able to rationalize, prioritize or otherwise communicate outside of their own desires, yet they get what they want by opening their cute little mouths and letting it rip.

This first taste of the power of influence begins a process of developing and understanding our inherent powers in that regard. While social and domestic variables conspire to take this ability to different places and levels, the universal fact is that it is there within us, always available as a power to be reckoned with. Whether that power emerges as harnessing influence to get what we want, or succumbing to it and becoming helpless against the desires of others, remains an issue not so much of fate as of comprehension.

In other words, some get it and some don't.

Your Personal Influencing Arsenal

Edward M. Hallowell, M.D., an instructor of psychiatry at Harvard Medical School, says that relying on face-to-face meetings is the most effective influencing strategy of all.

Perhaps more than any other aspects of leadership and career empowerment, the art of influencing others in a 360-degree manner depends on two realms of skill: the ability to craft your thoughts and presentations clearly, strategically and persuasively, and the ability to apply the proper tools and the power of scientifically proven human psychology to the effort. It all begins and ends with an outward-facing understanding of your audience and shaping your intentions to create a win-win situation that plays into their sense of worthiness, fulfillment and the better good of all. ●

360-Degree Influence Starts with You

If you want to advance toward a goal, you have to pay attention to the goal and to your progress toward it. If you set an unreasonable goal (too hard and you'll lose motivation; too easy and you'll coast) or don't keep your behavior in line with that goal, nothing happens.

Actually, "nothing" is only one possible outcome. In our daily lives, we constantly risk losing credibility for lack of focus, inability to meet deadlines, fiscal irresponsibility or any other reason closely connected to not being able to self-regulate. Thus, many people find themselves puttering away in the same cubicle they were assigned when they first started at the company. Or worse.

If you are motivated enough to learn the nuances for influencing others, you have to discipline yourself in terms of the goals you set and in monitoring your progress toward those goals.

Tips to Master Self-Regulation

- **Determine exactly what you want to work on.** Be specific. Maybe you've identified an opportunity for improvement or your boss has given you a gentle nudge. Either way, you'll have to define the issue in clear language. Clear thinking and language are critical to being seen as an influencer.
- **Recruit additional resources.** Whether you're trying to get in shape or become a more compelling presenter, it's difficult and unnecessary to go it alone. Ask a coach and watch others who do it well. Influencers keep their eyes and minds open for any tool and information that will help them reach their goals.
- **Seek feedback everywhere.** Work on your emotional intelligence as you learn about yourself from others' feedback and your own feelings. The more feedback you can gather and the better your perceptions, the more you can adjust or stay the course. Drop what doesn't work and keep what does.
- **Start small.** Incorporate new ideas you learn about. Note the results. Then add some more.
- **Treat your life like a laboratory.** You are experimenting with a new approach, and experimentation means failing is OK. Failure just means that one method isn't working, so you search for another. Always head forward. Thomas Edison once said, "Hell, there are no rules here. We're trying to accomplish something." Smart influencers don't give up; they look for other angles. ●

Breaking Through Resistance

How do we convince those around us who think they already know everything they need to know? Ken Broda-Bahm, writing about the influence of scientific testimony on a jury, notes that the mere presentation of the facts is not enough to convince skeptical jurors. "Scientists like to present new knowledge in a revolutionary framework ('this changes everything'), but human learning tends to be more evolutionary." Because discovery is so often disruptive, it can work against you. Therefore, "instead of offering scientific evidence as a challenge to current beliefs, offer it as a supplement."

This advice easily translates to the workplace. How many people do you know who are highly protective of their turf and unwilling to entertain even the thought that someone else might know more than they do? Probably plenty of them! Here's how to gently influence their beliefs. First, instead of outright demolishing their convictions, build off of them; it's much easier to coax people over a bridge than it is to convince them to jump across a chasm.

Second, teach them about the issue before attempting to persuade them. This can work as a kind of priming: by reminding your audience of knowledge they already have and treating them as capable of learning more, you connect their prior knowledge to your "new" facts. Lay the groundwork, then build your story on top of it. In litigation lawyer terms, prepare them to accept your version of events.

Finally, Broda-Bahm states, "The most complete explanation wins." While jurors (and co-workers) are not always impressed with reams of data, lacking those data can certainly hurt your credibility. If you want to persuade others to follow your lead, you have to demonstrate that you have the knowledge to lead, a demonstration that requires you to run down as many objections as possible.

Three Keys to Overcome Resistance

To help you on your path toward greater influence, here are three common types of resistance and how you can overcome them:

1. **This has nothing to do with anything.** Connect your change to the overall goals of the organization or project, pointing out how it fixes ongoing problems or will improve the current situation.
2. **Been there, done that.** Ask them to explain the prior innovations and why they failed. Then walk them through your proposal and show them how the

two differ. Respect their prior experience and invite questions about your proposal as a way to hook them into seeing the proposal through your eyes.

3. **Another year, another fad.** Be as specific as possible in your suggestions and tie the changes to particular behaviors or proposed outcomes to demonstrate the real effects of the change. ●

Know What Really Motivates People and What People Really Care About

If you had to boil down the challenge of influence to one word, it would be *empathy*. Derived from the Greek *pathos* and the German word *Einfühlung*, it is defined as "the ability to identify with and understand somebody else's feeling or difficulties."

The very definition parallels that of reading minds. Common social myth holds that women are better at this than men, but research hasn't sufficiently substantiated that theory. The field here is actually level, at least in one area. While men do just as well with empathy on issues of economics and commerce, research does show that women still rule the empathic roost when it comes to relationships, where keen skills are even more critical to attempts at exerting influence.

Mastering the art of empathy depends on the successful interpretation of both verbal and nonverbal cues that link to the thoughts and feelings of others in a given moment or span of time. Body language, facial expression, content, vocal tone and volume, and how people interact with others on their side of the issue paint a clear picture for astute influencers who have developed the ability to assign meaning instantly to what they see, hear and perceive.

One Columbia University experiment attempted to measure "empathic accuracy," that is, the ability to perceive correctly what others are experiencing. Researcher Jamil Zaki and his colleagues noted that perceivers were most accurate when they could both see and hear the targets, less accurate when they could hear and not see and least accurate when they could see but not hear the targets. Clearly vocal cues are terrifically important to the ability to infer what another person is feeling.

No surprise there, perhaps, but it was surprising that those discussing negative experiences tended to be far more expressive than those discussing positive experiences. The researchers suggested that because the expression of negative emotions is less socially acceptable, perceivers are far more likely to pick up these cues and thus to analyze those emotions more accurately. The conclusion was that negative energy and resultant empathy is more easily perceived than positive energy. While this may be obvious, it sharpens the influencer's strategy at both ends of the spectrum. Bottom line — it's easier to sense when you're bombing than when you're nailing it. ●

Practice Moment Awareness

One skill that astute influencers practice is that of nonjudgmental *moment awareness*. In essence, this is the sorting out of positive and negative aspects of perception, an analysis that leads to an empathic response. For this to work, we influencers must be self-aware and in the moment to ensure accuracy of perception and to avoid the very human tendency to hear and see what we want to hear and see.

One subtlety involves the *choice* to be empathic, the intention to perceive incoming verbal and nonverbal cues to truly understand how other people feel rather than using those cues and feelings against them. An *agendized* intention risks skewing perception, while the choice to be "in the moment" with someone yields a more accurate read, which is vital to how well we exert influence.

How Our Decisions Define Our Ability to Influence

The decisions we make — in the worlds of politics and business, in particular — hardly ever affect only us. The benefits of smart decisions and the fallout from bad ones have a potentially wide-ranging impact on the lives of colleagues, peers, families and communities — the net results from this often being a measure of our personal influence in the aftermath.

Making decisions involves taking responsibility, not just for the decision itself, but also for the *consequences* of that decision. This means you have to think beyond just the decision. Consider its implementation and the impact of your choice, and recognize that despite never having perfect information, you nonetheless have to choose. To decide, in short, is to risk.

If that sounds a tad dramatic, maybe you should reflect on why so many people refuse to decide. Ask yourself why you sometimes avoid or dislike making decisions. While the aforementioned inevitable lack of "perfect" or even sufficient information is to blame, the truth is that sometimes people don't want the responsibility that comes with a decision — or more specifically, they

don't want to deal with the possibly unpleasant outcomes of a disputed decision.

However, 360-degree influencers can't afford such immunity. Just look at the people you admire or strive to emulate. Do they waver or equivocate? Do they unload responsibility on someone else?

The fact is leadership and influence are inseparable from challenging decision making, and the more we know about the process, the better equipped we are to bolster our influence in all directions with the making of sound decisions.

Five Decision-Making Tools

So what can we do to ensure that we make good decisions? Here are five strategies that can help you cut through biases that can cloud your thinking and give you ways to make hard decisions with clarity and without — or with far less — regret:

1. **Focus on the process, not (primarily) the outcome.** It makes good sense to use a solid decision-making process that can offer a better chance for delivering good results.
2. **Be skeptical.** Critical thinking is underrated, and testing the validity of assumptions and evidence means you'll be in a better position to defend your decisions than those who merely believe or take the word of pseudo experts.
3. **List the relevant variables.** Tom Davenport, President's Chair in Information Technology and Management at Babson College, cautions, "Without some inventory, all decisions will be treated as equal — which probably means that decisions won't be addressed at all."
4. **Sort the relevant information.** After making your lists (and checking them twice), draw up consequences tables and scrutinize your objectives; do anything that forces you to separate out the significant variables from background noise.
5. **Eliminate irrelevant information.** In some situations, you might simply want to go through your lists and eliminate those items that are less important to you. ●

Setting the Stage: Strategically Influencing People's Decisions

Now that you've got all of *your* decision making figured out, how do you go about influencing the decisions of others?

Reason and evidence do matter a great deal and having them on your side via diligent research and preparation can make influencing easier. But if you don't consider all of the other variables at play in the decision-making process, you are likely to be pushed aside in favor of someone who has — someone who has pitched his or her argument in a way designed to appeal to the people with the final word.

Perception Shapes Thinking and Behavior

Depending on the interactions you have and to what degree and purpose others seek out your company, expertise, help or input, you are somewhere along the continuum of likeable, contributing, valuable resource, influential. It's important to know where.

Having an unbiased view of how others perceive you is an absolute must in any quest for leadership. You can't lead, guide, teach and inspire if you don't have an accurate picture of your level of influence with others. You have to know whether people see you as competent but intimidating. Whether they don't take you seriously or take you way too seriously. Whether they feel they can trust you or that you're someone who hogs all the credit. The list of variables is inexhaustible, just like the range of human judgment with all of its nuances and shades of gray.

High-potentials and executives on the fast track are given all kinds of tests to help them see the blind spots in their communication and leadership styles. From 360-degree multirater feedback to Myers-Briggs Type Indicator to DiSC and our colors on the Personality Dimensions scale, there's no shortage of assessment tools to tell us where we fall short or hit the mark on leadership.

Avoiding Groupthink

Research psychologist Irving Janis defined the term *groupthink* as follows: "A mode of thinking that people engage in when they are deeply involved in a cohesive in-group, when the members' strivings for unanimity override their motivation to realistically appraise alternative courses of action."

Professors David Garvin and Michael Roberto suggest that influencers try to build "constructive cognitive conflict" into the decision-making process as a way both to try to head off affective or personal conflicts and to inoculate against groupthink. They suggest creating a "point-counterpoint" or "intellectual watchdog" process, whereby some members of the team are tasked with creating alternative proposals (point-counterpoint) or are designated critics of any proposals (watchdog). The process is repeated as proposals are revised to meet objections until all members reach a point of common agreement.

Whether it is the dreaded groupthink phenomenon that results from a particular context or any other choice that you see as a threat to your ideas or business, try to influence the setting or change the environment so you have a chance of influencing the outcome. ●

Mastering Organizational Politics

Organizational politics can be a constructive and positive aspect of a manager's career, if it's properly understood and practiced. Rather than engaging in behavior that undermines trust and seeks to gain personal advantage with oblique maneuvers, enlightened professionals influence organizational culture in a more principled way. They cultivate mutually productive relationships with key players; they recognize and negotiate existing power structures; and they purposefully seek buy-in for ideas with more than a peripheral understanding of people's individual agendas and personal values.

To refuse to acknowledge the value of constructive political behavior is to leave yourself unprotected and vulnerable to having your agenda blindsided and your best efforts derailed by prevailing forces. Cynicism, and resulting behavior that leads to defensive and possibly underhanded politics in return, is self-serving rather than in service of the organization, which leads to a culture-defining deterioration of trust, teamwork and the greater good. Likewise, capable and upstanding executives and managers who persistently view all politics with suspicion may routinely watch their more politically savvy colleagues pass them by for otherwise deserved recognition, rewards and increased responsibility.

Political Strategies and Tactics

There are a number of ways to strategically leverage your cultural influence.

Working off the insights of Andrew Durbin, Professor Rex Mitchell notes that there are three main types of strategies: those aimed at gaining power, those aimed at building relationships and those designed to avoid political errors. It is important to recognize what your goals are within your organization. Do you seek to move up or expand your range of responsibility? Or are you more interested in networking across the organization and throughout the hierarchy? Those tactics necessary to move up — displaying dramatic results early and often, mastering key information and controlling lines of communication — may not work as well if you seek a power base built on relationships. In the latter case, you want both to consult and to be consulted, as well as to develop a reputation as someone who's both knowledgeable and willing to help. There is overlap in these two types of strategy, particularly in the necessity of demonstrating your mastery over a knowledge base or skill set, but how you leverage that mastery may vary with your goal.

Executive presence and 360-degree influence is based on what you know about the needs, values and perceptions of others, and information is the first line of both offense and defense in that department. ●

Influencing Up

The objective of pleasing your boss is nothing new to the science of career advancement. But with everyone aiming for that goal, a keen understanding of the issues that keep senior management up at night and sequestered in daylong meetings becomes the context for performance excellence and project success, rather than something you learn about in sterilized form in weekly departmental assemblies in conference room C. Showing genuine interest in what senior executives are dealing with as they chart the course and navigate the treacherous waters of business competition in the battle for market share lets upper managers notice the performer as well as the performance.

Getting there isn't solely about giving management what they want. While it may seem a subtle difference at first, success comes from actually *wanting* what they want and making sure your aligned desire is visible so that it contributes to your career equity as much as any tangible results you deliver.

When you genuinely want what your leaders want, you have successfully adopted *their* agenda, not merely promoted yours. That's half the ball game when it comes to influencing the perceptions of upper management.

Be Yourself

Make no mistake, you are always being evaluated and judged. From your cool in front of the executive team as you justify quarterly results to your banter on the 10th tee. Your ability to influence is partially dependent on how socially intelligent you are perceived to be in the presence of another executive, regardless of the pressure or agenda.

Just as with any presentation opportunity, you need to be prepared for either a planned or a chance encounter with a manager or an executive who is on the short list of people who can impact your career for better or worse.

Above all, be yourself. The oldest Dale Carnegie technique in the popularity manual applies here: Show interest, ask questions, listen, engage, add value, be empathetic ... and, by all means, be yourself. ●

Influencing the Opposite Gender for Mutual Success

We may believe or want to believe that we see only individuals and are able to work with whoever can work, but our unexamined biases keep getting in our way. For example, one study found that mixed-gender mutual fund teams performed worse than either all-male or all-female teams. One commenter suggested that this was due to communication problems across all genders.

The first step to working together, then, is to recognize that we *all* have biases. We may each like to see ourselves as clear-thinking individuals guided only by evidence and reason, but alas, our biology and psychology conspire against such clarity. Clarity *is* possible, but you have to work for it.

The second step is to recognize that leadership skills are just that — skills. Assertiveness, verbal dexterity and problem solving are not exclusively encoded in our genes; they are behaviors that can be learned. There's no reason to believe that men are born leaders and women are not.

The willingness to develop and make use of our entire repertoire of skills is the third step. There are advantages to both the agentic and communal styles; cultivating our ability to make use of every tool in the kit allows us to adapt to each particular situation, taking charge when that's needed and inviting participation when that will lead to the best result. ●

Influencing the Public's Impressions of Your Organization

Andy Beal, co-author of *Radically Transparent: Monitoring and Managing Reputations Online*, declares that everyone has a reputation, online and off; every reputation has its weak spots and every reputation will come under attack.

Two of the more important aspects of reputation management are strategy and tactics. *Strategy* is the overall plan, usually encompassing a goal or purpose; *tactics* are the specific actions you take or tools you use to implement that plan. The distinction is important, as the strategy must guide the tactics, not the other way around. It also helps to think of strategies as long term and often behind the scenes, something developed over time and in sync with the products and ethos of the company, whereas tactics are more flexible and utilitarian, tools that can quickly be adapted to a changing environment.

Key Lessons on Influencing Perception

Trust, authority, innovation, admiration and the competitive advantage of their products all help to define the top-rated companies as the best.

What should you pay attention to? Different advisers generally agree on a few main themes:

- **Reputation matters.** Companies at the top integrate the concern for their reputation into the structure of their business rather than treat it as a public relations adjunct.
- **Reputation management is an activity, not a slogan.** You must actively monitor media coverage about your company and be in a position to adjust your message as needed.
- **Tell the story.** Recognize that if you don't tell the story of your company, someone else will.
- **Know your base.** The companies that succeed are those that know what business they're in.
- **Earn the trust of all stakeholders.** Aloof no longer cuts it in the wide-open, social media age.
- **Acknowledge errors.** Those employees who are in a position to fix the problem should be adequately trained and empowered to do so.
- **Fix the error.** Reward employees for doing so.
- **Recognize emergent concerns and respond to them.**
- **Never complain, do explain.** It's never good to get a reputation as a whiner. No excuses. ●

Using Your Words to Influence and Change Minds

As you look for ways to broaden, develop or start building your sphere of influence in all directions, the power of speech is part of the foundation you have to master. It's more than public speaking and giving presentations, which most people have learned to see as necessary evils and unpleasant spectacles best performed on autopilot with a navigator named PowerPoint in charge.

Speaking to influence and change minds takes more than a routine approach. While useful for anyone, it's most critical to those up-and-coming leaders and professionals who passionately care about making a difference, and who won't stop before they've succeeded in stirring the emotions and engaging the minds of those who can help make it all happen. It's not enough, however, simply to stir the emotions of your audience if you want to influence them; instead you have to *shape* their emotions to direct them to your preferred outcome.

That's where framing comes into play. The skill of framing is critical in the tool chest of anyone looking to influence others because people automatically look to assign meaning to the communication signals they perceive around them. And to frame strategically is to manage the meaning people take away.

When we attempt to frame an issue, we carefully choose our words in a way that focuses attention on a particular meaning — the one we want to convey — among several possible meanings. The facts are spiffed up, dressed up in partisan clothes and lined up as part of the consideration.

Considering the impact language can have in creating meaning in people's minds, and considering the ways language affects the way they perceive reality, we have to be aware of how this influence is exerted. Even in a free speech society, it becomes incumbent on the sender of words to understand and weigh how those words may be interpreted and acted on.

Managing the Influencing Power of Your Personal Brand

A quick online search of "personal branding" will quickly overwhelm you with more than 3.9 million related sites, many with advice on how to build your brand. Less apparent, however, is how to leverage that brand into real influence. This is key: Recognize that your brand is not simply a kind of label but also a *process*, one that you continually manage to expand your opportunities; a brand is not the end but the *means* to the end.

Creating an Influential Brand

So how do you create an influential brand for yourself? First, cover the basics. Many of us have been in situations where one guy talks about how hard he works, and one guy simply works hard — and we all know who we'd rather work with. Yes, when you want that promotion you do have to highlight your effort and results, but it will only resonate *if you have actually produced those results*. Shouting "I'm impressive!" is unlikely to impress your colleagues, at least not in the way you intend.

Which brings us to the first step: figuring out what you intend. How do you want others to perceive you? It helps to think in terms of narrative: What is your story and what character do you play in your story? Create a vision or big picture that has you as the protagonist, and use that as a guide for your behavior.

The second step is to get a sense of your environment. Find out what makes your associates tick — and what ticks them off — and adjust your behavior accordingly. Some firms frown on exuberant self-promotion, whereas others expect it; some have tight hierarchical structures, while others are more open; some assign new hires a mentor with whom they are expected to work closely, whereas others take a sink-or-swim approach. Figure out what's rewarded and what's punished, then do your best to cultivate the former and avoid the latter.

It helps to think in terms of "If you want to be perceived as ... you need to ...; in order to influence others, you need to ..." Here are some examples:

- If you want to be perceived as an expert, you need to demonstrate credibility; in order to influence others to accept your claim, you need to tailor your message with the audience's beliefs, values and predispositions in mind.
- If you want to be perceived as reliable, you need to show up to meetings prepared, meet deadlines and consistently produce good work; in order to influence others, you need to work with those others and be willing to share what you have learned.
- If you want to be perceived as a leader, you need to demonstrate a willingness to take charge, make difficult decisions and accept the additional obligations of leadership; in order to influence others, you need to take advantage of leadership opportunities that are presented to you, asking to head a team or volunteering to take the lead on solving a long-standing or emergent problem.

Whatever value you want others to associate with you, you must first demonstrate it in your behavior.

Summing It Up

Having influence in virtually every direction is more than a skill. It's a lifestyle and a mindset based on a foundation of critical principles that every modern professional needs to master in order to reach the top of his or her field and achieve personal and career goals, as well as larger objectives that can make a difference in the world.

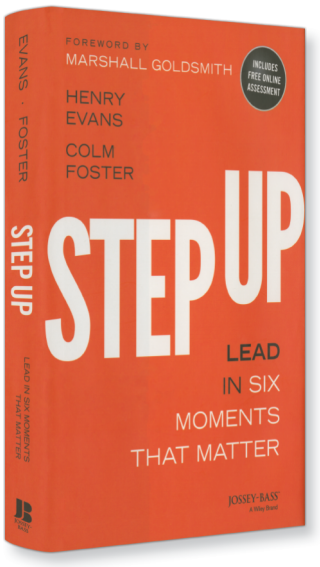
Leadership

Step Up

Lead in Six Moments That Matter



by Henry Evans and Colm Foster

THE SUMMARY IN BRIEF

No matter what your title or place on the organization chart, you have the potential to be a leader — or more precisely, the potential to exercise leadership in the moments that matter most. Leadership is not a job title or position, but rather an action. In certain moments and situations, anyone can rise to the occasion to act as a leader — gaining respect, confidence and ultimately greater success in the organization. But how can you recognize these moments where leadership is required and then know what to do?

Step Up explains six critical "leadership moments"— everyday instances when you have a choice to shine or let opportunity pass you by. Based on their own research and extensive client work, Henry Evans and Colm Foster identify six regularly occurring moments and help you understand how to act wisely and decisively when those moments arise.

Anyone can take advantage of opportunities to act as a leader when the time is right — and reap the rewards. *Step Up* is a guide to exercising leadership when it matters most, boosting your personal impact and effectiveness, and making a real difference.

IN THIS SUMMARY, YOU WILL LEARN:

- How to recognize and seize the six critical leadership moments and lead with, or without, the formal title.
- How to leverage negative emotions and become more decisive for better business results.
- How to create emotional safety and, as a result, be the most informed person you can be.

THE COMPLETE SUMMARY: **STEP UP**

by Henry Evans and Colm Foster

The author: Henry Evans is founder and managing partner for Dynamic Results, LLC, specializing in strategy execution, executive development and emotionally intelligent leadership. His best-selling book, *Winning with Accountability*, was published in 2008. Colm Foster specializes in working with executives and their teams to improve individual and team effectiveness and conducted much of the research which was used in the book.

Introduction: The Six Moments

We are going to share six critical leadership moments and what the highest-performing people — whatever their title — do when they are in one of those moments. Stepping up to exercise leadership in those moments will make the biggest difference to you in your own leadership journey.

1. **Using anger intelligently in the workplace.**
2. **Recognizing and dealing with "terminal politeness."**
3. **Making decisions when no one else is making them.**
4. **Taking ownership when others are externalizing a problem.**
5. **Identifying and leveraging pessimism.**
6. **Reversing the momentum of negative interactions.**

By adopting the ideas and tools that follow, you will be able to "step up" in leadership moments as they present themselves. Through practice and reflection, you will increase your skill in predicting when these opportunities will arise and improve your ability to exercise your leadership.

The six moments do not follow a strict sequence or pattern. Your ability to create change in one of these moments will actually cause positive effects in the others. You will gain maximum benefit if you can work on each of the moments consistently over a significant period of time. By using the tools presented here, you will cease being a bystander and become an active participant who can catalyze change in the moments that matter.

Get Angry, Not Stupid

Everyone has heard that people should suppress or even completely avoid feelings such as anger and frustration in the workplace. However, used intelligently, these feelings can actually build relationships. People can leverage their "afflictive emotions" — those that make them feel bad, such as anger, greed, hate, guilt or longing — to drive outstanding results.

The Anatomy of Anger

Anger is a good example of an afflictive emotion that is highly leverageable. Consider anger as a fuel that you can use to generate the energy required to move to productive action. A great example of this is the case of Reddit, a web search company that was sold to Conde Nast 18 months after it was founded. While trying to get Reddit off the ground, Alexis Ohanian and Steve Huffman were called to meet a Yahoo executive who was interested in their project. When the executive heard that Reddit had only a few thousand users, he scoffed, "You're a rounding error compared to Yahoo." Ohanian returned home and wrote on the wall beside his desk, "You are a rounding error." He used that comment to recall the anger he felt at being dismissed, causing two things to happen. First, he was convinced that he was not a rounding error and that his business was sound. Second, he used the energy his anger gave him to set out to prove the Yahoo guy wrong.

The problem for most people is not that they get angry; it's that they *become less intelligent* when they do. Our beef is with stupidity, not anger. So we don't want you to stop getting angry, as that would rob you of emotional fuel that you sometimes need to succeed. We simply want you to be *intelligent while angry.*

The key to developing your ability to remain intelligent, even as your blood begins to boil, is to recognize that anger is not a binary, "either-or" emotion. There are many levels of anger. At the mildest, you are slightly irritated, and then you become frustrated. If the situation persists, you become angry; and if the emotion continues to build, you may become enraged. You must start small — that is, learn to retain your thinking ability when you are merely irritated, and then move on to frustration, and so on.

Respond … Don't React

Our goal is to have you *respond* rather than *react*. A reaction is a somewhat thoughtless and sudden event, usually involving you saying or doing something you will later regret. A response comprises the behaviors and actions you thoughtfully planned to demonstrate when and if you were ever in a particular situation.

The first step is to identify your "triggers": the types of people and situations that lead you into a highly charged emotional state. Ask yourself, "What type of behavior in others tends to make me feel upset?" and "What types of situations tend to make me feel upset?" After you have identified your triggers, you are equipped to do something about the anger that results.

The feelings you experience are preceded by physiological changes in your body. Becoming angry is your body giving you a sign that you are about to go primal. When you sense that this process is beginning, use the following techniques to help you stay intelligent.

Breathing. Deep, controlled breaths help restore blood flow and stop the production of the chemicals that cause you to react suddenly and with great force.

Questioning. When you ask your brain a question — any question — it forces blood back into the neocortex where intelligent thought occurs. Your body stops producing the "bad" chemicals and restores your ability to think and act more rationally.

Palms Up. You may notice that when you are triggered, you put your palms down or cross your arms. Uncross your arms, and focus on keeping your palms in an open and up position.

Time-Out. Sometimes all the techniques and leadership approaches in the world aren't going to help because you're simply too stressed. Admit your own feelings to yourself and, without blaming the other party, remove yourself until you can find balance.

Plan for the times that you expect to be irritated, and rehearse the responses suggested. Remember that your body will give you a heads up. If you are aware of what is happening in your body, you can interrupt the cycle, stay at the stage in which you are simply irritated and not let the emotion get out of hand.

In Position to Lead

Leadership moments often show up when you are working in a group — and you can take those opportunities whether you are the formal leader or simply a member. Sometimes you want people angry in order to drive the best business result. You may also wish to catalyze a spectrum of emotions, focusing on certain ones during particular stages of a process or project.

There is an optimal mood for every task that a group might undertake. Knowing this provides you with leadership opportunities, in that you can help create the mood. Doing so requires that you become sensitive to the moods of those around you and develop your own repertoire of things that you might do or say to affect those moods.

Armed with awareness of a group's mood and tasks, you are in position to lead in one of two ways. First, you can **leverage the existing mood** by introducing a task that meets that type of mood. If your group has worked for some months to retain a reluctant client who eventually left, this is a great time to diagnose why you lost the client.

Another approach is to **change the mood** so that it is appropriate to a required task. For a group that's in a down mood because of having lost a client, rather than leveraging that mood, you can use your own energy, enthusiasm and words to move the group into a high-energy and pleasant state.

Avoid Terminal Politeness

In many organizations, authentic, robust debate and challenge have been replaced by what we call *terminal politeness* — when people are being so polite that serious issues never come to the surface. People often avoid having the most important conversations, even when such avoidance can damage their organization or their careers. They usually do so for at least four possible reasons:

- They don't feel emotionally safe having such conversations because "messengers get shot."
- The organizational culture encourages people to be too nice.
- They aren't honest with themselves. They tell themselves things like, "I've been too busy to address the issue," instead of admitting, "I'm afraid to have that conversation."

- They think they're being considerate of someone else and "never find the right time" to have the discussion because the other person is "too busy" or "having a hard time right now."

Our clients often talk about igniting the "spark of innovation." But you need friction to ignite sparks. Without healthy and productive conflict, you can't generate friction. The challenge then is to ignite enough of the **right type of conflict** to bring the best out of people. Performance rises as conflict rises — up to a point. However, too little conflict and too much conflict *both* obstruct performance.

If you fail to understand the value of conflict and consistently slip into terminal politeness, your organization can't reap the benefits of a diverse workforce.

The best organizations are filled with a diverse group of people who leverage their diversity in a collaborative way. Diversity is supposed to incite friction and conflict. If your diverse workforce is not causing you headaches in terms of managing the different opinions and values that the various individuals hold, you may be suppressing some conflict and losing the potential innovation benefit that comes with dealing with that conflict in a constructive way.

The Need to Be Liked

People tend to avoid conflict because they're seeking to fulfill two fundamental needs: to be liked and to be right. Human beings are hardwired to make connections and to form an impression of what other people are thinking, especially about us. The need to be liked, to be included and accepted, is indeed one of our most powerful needs.

There is considerable evidence that we like others better — that is, resonate with them more easily — the closer they resemble us on important qualities. The similarity might be a matter of simple demographics, such as age, gender or race, but also operates at the level of attitudes, beliefs and personality. When people hold opinions similar to ours, we presume that they hold similar attitudes, beliefs and values, and we like them better for it.

When people agree with us, they are confirming that our opinions or decisions are accurate — and we all like being right. We are designed to seek out evidence that confirms our decisions and to ignore evidence that suggests we are wrong. The more people disagree with us, the more we associate them with dissonance, the less we like them, and the lower we rate their capabilities.

The heart of the problem lies in our failure to adequately distinguish between the person and the idea. All of us can become better at keeping conflict from becoming destructive by learning how to skillfully distinguish between conflict with a person and conflict about his or her idea. Once you do this, you can learn how to avoid terminal politeness and achieve the optimum conflict level that will bring about successful ideas and solutions. When your intentions are good and you are not launching personal attacks, you can be quite assertive in challenging or disagreeing with people and ultimately still be liked, even if people have to struggle with you in certain moments.

On our best day, we might begin to appreciate people who alert us to alternative points of view. When we keep an open mind, we can understand that they present us with learning opportunities that the people who always agree with us do not deliver.

Decide Already

We don't expect our leaders to be right all the time, as the only way to be right all the time is to constantly operate inside your comfort zone. We *do* expect them to be decisive and to be able to bring people along with them once they have made the call. And although they may seem completely confident and convinced of their position, many leaders face the same self-doubt and anxiety as those who don't consider themselves leaders.

Leaders do not have perfect information. What they do have is the ability to decide on a course of action, commit to it, and then communicate that decision confidently and convincingly. They exercise decision leadership, which is the ability to balance intuition with data and to proactively take intelligent risks. When others are "stuck" or "frozen" in a state of indecision, the person who steps up and declares a decision is the leader in that moment or interaction.

Great leaders truly commit to a decision, even though they are a little anxious, and honestly display an authentic commitment. Whatever your job title, nothing will undermine your leadership credibility more than the inability to make and *stick* to a decision that affects others.

The Why of Indecisiveness

A number of factors can undermine your ability to decide, communicate and execute in uncertain environments:

- You may not even realize how often you do fail to face problems: Human beings are notoriously inaccurate in our ability to self-assess. And few of us rarely, if ever, get quality feedback on our leadership behaviors.
- People want to both *be and be seen* as a nice person: You can often be tempted to sugarcoat or downplay difficult information. You probably feel anxiety about

your ability to make the point or intervention, and you worry about how people will receive the message.

- Many people simply doubt their ability, which can keep them from exercising leadership: This can become a self-fulfilling prophecy; after all, if you don't believe in your ideas, why would anyone else?

In order for you to effectively exercise leadership, you need to be able to see yourself as a leader. The U.S. Army has a much more succinct way of saying this: "You can't lead a cavalry charge if you think you look funny on the horse."

The most fundamental point is that there is no link between anxiety and accuracy. Just because you are nervous does not make your point or decision invalid. Just because the other people appear confident doesn't make their perspective valid. They may simply handle their anxiety better. You are less likely to offer your opinion or to tell it like it is when you are nervous or anxious. But anxiety can become the fuel that propels you to do better next time.

The more often you take action, the more confident you will become in doing so, and the easier it gets. With practice you will get better at exercising decision leadership, and as you get better, you will find it easier and easier to recognize these moments and step up.

Decide or Decide to Not Decide … Don't Procrastinate

Here are a few suggestions for improving your ability to be decisive when it matters.

Look back over decisions you've made in the last ten days. How timely were they? How clearly did you communicate them? How transparent and accountable are you for these decisions? Even just heightening your awareness of the habitual issues will make you focus on improving this aspect of your decision leadership.

Decide when to decide and when not to. The idea is not to turn yourself into an action junky, running around making decisions to demonstrate your decisiveness. There is a right time to hold off. We call this systematic waiting or masterful inactivity — purposefully deciding that you are not going to decide or act.

Know when to change your decision. Human beings tend to want to stick by their ideas and opinions. You should generally stick to your guns once you make a decision. But beware of becoming so emotionally attached to a decision that you're merely out to prove that you were right in the first place. If this is the case, it's time to make a different decision.

About Managing Anxiety

You can better manage your emotional reactions, such as anxiety, by understanding the connections between your physiology (how your body acts), your cognition (what and how you think) and your emotions (how you feel). Because all three elements are connected, you can intervene in any one of them in order to affect the other levels. Essentially, you can *act* your way into a new approach to thinking and feeling, *feel* your way into a new approach to acting and thinking, or *think* your way into a new approach to feeling and acting.

People who struggle with anxiety can usually deal with their nerves successfully when they can control their physical reactions. When you are nervous, the principal physical symptom has to do with your breathing. Concentrate on deliberately slowing down your breathing, and ensure that you are taking full, deep breaths. Use a rhythm: breathe in for a count of three; then hold your breath for a count of three, then breathe out for a count of three, followed again by a hold for a count of three. Do this at least three times.

In addition to managing your physiology, you can adopt either a cognitive or an emotional approach by seeing the situation from another perspective; thinking through the worst that could happen and identifying how you would handle that; and helping yourself feel differently about the situation.

Act When You Are the Problem

Moments of leadership arise when the people around you are stuck in old ways of thinking and behaving. However, catalyzing change in others requires that you are comfortable with changing yourself.

Unfortunately, history has shown that the more successful you are — both as an organization and as an individual — the more difficult the transition may be. The trap of success dictates that both companies and people start to believe in their success recipe. The more successful they become, the more they emotionally invest in their success recipe — especially those senior leaders who may have been responsible for crafting and codifying the recipe. This kind of thinking can render an organization learning disabled.

Remember that there are no best practices or success recipes. There are only *next* practices: your current best thinking, which is subject to continuous challenge and stretch. Genuine transformation and the ability to continually learn and adapt only come when people open up to

the possibility that they themselves will need to alter their attitudes, beliefs and behaviors.

Step Up

When you start to make changes in your own behavior, you will start to exercise real leadership in the moments that matter. Here are some suggestions for how to do that:

Get Assessed. Being genuinely curious about others' observations and feedback is the most crucial way to make personal change. Receiving 360-degree feedback is most useful in understanding others' perspectives. It includes direct feedback from subordinates, peers, supervisors and others. Most leaders rate themselves dramatically higher or lower than others rate them. Once you have solicited feedback, don't just ignore it; declare what you will work on.

Ask the "Magic Wand" Question. The magic wand question is, "If you could magically and permanently change one thing about me for the better, what would it be, and why?" You might also ask the magic wand question about your organization, by saying, "I know we've got a 30-year legacy of doing what we do really well. But what might our clients, suppliers and shareholders change about us permanently and instantly if they had the power — even if they were wrong?"

Understand Someone You Don't Understand. Find the smartest person you know who often disagrees with you, and seek understanding with that person. Clients often complain about people who frequently disagree with them and with their ideas. We usually advise them to appreciate those people even if only for the fact that they give them a developmental opportunity that like-minded people don't bring to the table. When you feel yourself shutting down to someone else, it's a signal for you to say, "Tell me more about that. Where does that idea come from? What has your experience been?" Such an approach will likely help you forge a connection that makes it easier to catalyze change.

Learn New Things. To keep up with the times and with ever-changing demands, you will need to learn new skills. Read subjects that you have not read before; play games you've never played. Go to see things you would not ordinarily see: an opera, an art exhibit, a sporting event. Go talk to your company's interns or entry-level employees about what they are experiencing and what they think your company could do differently.

Become Comfortable with Uncertainty. We must become comfortable with uncertainty in order to inspire and incite others to change and, perhaps more important, innovate our way through change. Accept your strengths, and work on developing new ones. This begins with a general openness to change and a willingness to be "comfortably uncomfortable."

Leverage Pessimism

The popular belief in the power of positive thinking has led many people to be suspicious of any form of negativity. People who point out risks or issues are described as Chicken Littles. But what if the sky really is falling? What if your group or organization is facing real challenges of which you are not aware? Worse still, what if some people in your group or organization are aware of issues — but you are not listening to them? Leveraging pessimism is like taking medicine; you don't have to like it, but you do have to do it.

Optimism expert Martin Seligman notes that when bad things happen, pessimists tend to think in terms of what he calls the Three Ps to explain negative events:

Permanent. A pessimist tends to see a problem as something that won't change, whereas an optimist can view it as a temporary setback.

Pervasive. A pessimist thinks globally; the issue has implications beyond this specific incident. In contrast, an optimist tends to see the problem as related only to the specific isolated event.

Personal. A pessimist assumes personal blame, whereas an optimist sees a broader picture.

Pessimists get a bad rap. Yes, they can be a true pain, but they also point out problems and shed light on tough issues that others may be avoiding. You may be undervaluing pessimists; they can actually serve a purpose and have a role to play in your organization. However, we don't think pessimists should be in leadership roles. No one wants to be on a team led by someone who is telling them they will lose the game before the game has even begun. Our experience has led us to conclude that the best leaders are optimists who have good reality testing. They say things like, "I am fully aware of the challenges we will face, but in spite of that, I am confident that this team can deliver."

Optimists and people with positive bias see a munificent and benign universe where good things generally happen. People with a negative bias tend to focus primarily on the bad experiences in life — and this perception of the world colors their reality. These people are not *inventing* issues and obstacles; rather, they tend to be sensitized to these issues and more likely to see problems than do people with a positive bias.

Empathy Is Critical

To leverage pessimism, you need to be able to empathize with those who hold pessimistic views. Empathy is about *feelings*, not facts. Being empathetic requires you to express understanding of how another person feels and to do so in a way that he or she recognizes. People respond to and interact with us based on what they think of us, not on what we think they should think of us. We must care about how they feel, express our understanding of that and — once we've acknowledged the other person's feelings — move on to the facts. Empathy is a powerful antidote to the kind of misunderstanding that destroys relationships.

How To Handle Objections

The objections that people raise to ideas, plans or processes are often openings to the Vortex; that is, they can lead a conversation down a negative path. We have developed a five-step process for responding to such objections:

1. Listen/inquire: Make sure you understand the objection thoroughly before moving on. Ask a question that gets the person to fully express her point of view.

2. Empathize: Speak to feelings before you speak to facts. Remember that empathy is about the expression of your understanding of how the other person feels.

3. Isolate and restate: The person making the objection may have mentioned five things going wrong with her day, but she probably came to you to discuss only one.

4. Answer: This is the step most people skip to as soon as they hear a problem: offering an immediate opinion or solution. Navigate the first three steps before taking this one — where you tell the person what you will or won't do for her.

5. Complete: Check in to see if you have resolved the situation to the best of your ability. If not, go right back to step one, and ask what else you can do.

Reverse Momentum

Pessimism isn't the only thing that gets you stuck. Anyone can get stuck in redundant discussions that seem to be plummeting into a spiral of negativity. Although these discussions are horrible time wasters, they provide the opportunity to step up and exercise leadership by being the one with the tools and skills to reverse the negative momentum.

Look for the following signs of redundant, negative conversations:

- People are repeating a point (particularly something they don't like or are worried about).
- You're having that déjà vu feeling: "We identified this problem last week and didn't do anything about it then."
- You recognize that the subject at hand is outside of your or your team's control or influence.

The actual cost of having you sitting in a redundant meeting is a hard fact that is pretty inescapable. We'll sometimes point to it and ask whether the discussion we are currently engaged in is a good use of everyone's time and also a good investment for the organization.

Groupshift

Groupshift is the propensity for the early ideas presented in a group to become disproportionately persuasive and carry more weight. Thus, when someone in a group offers a negative opinion early on, it can sway the whole discussion. It is at that point you can step up, exercise leadership, and reverse the conversation's direction before it gathers momentum.

Momentum is essential to making progress. However, it can lead to poor outcomes when it is destructive in tone. We all need to be thoughtful in our conclusions and remain wary of being carried along by a discussion's momentum. When groups start to agree on a topic and coalesce around the problem's diagnosis and potential solution, they begin to form closer bonds. They take comfort in the fact that they are agreeing and become convinced that their argument is a good one. They tend to speed up in their thinking and can make potentially fatal jumps in logic that are not soundly rooted in either evidence or robust inquiry.

Negative interactions can spiral out of control, and if you have engaged in groupshift early on, they can lead you and your team to places and conclusions that may not be appropriate or justifiable.

What would it take for you to be the one to stand up and interrupt this flow the next time it happens?

State It Once

Name a problem if a problem exists, and do so in a productive and constructive way. It is never a good idea to just leave it alone and not mention it. By stating it once, you call attention to the problem; you put it on the table where people can look at and acknowledge its existence.

After you state a problem once in a productive and constructive way, the best thing to do is change the conversation's momentum, shifting from a focus on the problem toward a focus on the solution.

The leaders in an organization are the people who *habitually move* from stating problems to finding solutions. When-

ever they sense that negative momentum is building, they immediately convert it to a solution-oriented dialogue.

Just as you can reverse negative momentum in one-on-one conversations and in the meetings you attend, you can also reverse your own negative momentum by choosing thoughts that start a positive cycle.

Create Emotional Safety

The higher you are on the organization chart, the more power you wield. You make higher-leverage and potentially riskier decisions. You receive an ever-growing quantity of information. Unless you make it safe for people to bring you bad news and to honestly discuss problems and failures, you'll get information that's distorted by people's fear of your reactions, especially if the news is about you. Bad news is suppressed until it *has* to be shared, and good news is overplayed. We believe that when someone high up who makes big decisions fails to create emotional safety, he or she is not only one of the most powerful people in the organization but also one of the most dangerous.

Emotional safety brings together the ideas we have already shared. You can now use negative emotion wisely, avoid terminal politeness, be more decisive, be more aware of your own need to change, leverage the wisdom of pessimists, and reverse the momentum of negative interactions. However, you won't be successful unless you can enact these in a way that is emotionally safe for others as well. You need to become your organization's Director of Emotional Safety.

In your role as Director of Emotional Safety, you'll be the person who is given a clean and accurate read of situations; the one who hears first, not last, when there is a problem; and the one who operates with good rather than bad intelligence. You will make people feel safe, appreciated and perhaps even rewarded for bringing you bad news.

The job of the Director of Emotional Safety is to create the context or environment that encourages others to produce excellent work. It requires a genuine focus on others and less of a focus on yourself. Creating emotional safety is a smart thing to do. There are three reasons why this works:

- The quality of your information deteriorates when people don't feel safe talking to you.
- Without emotional safety, your people may pursue goals beyond the point where the pursuit continues to make good sense.
- People do not grow in a fearful environment.

Two Keys

Being the Director of Emotional Safety is not always about making people feel good. There are two key principles to keep in mind as you assume the role.

First, you must get the balance right between supporting and challenging your people and between nurturing them and holding them to account for their mistakes and missteps. People perform best when they strike a balance between their competence to do their work and the level of challenge in that work.

When your people feel bad about making a mistake, you have to allow them to feel bad. Don't rush in to rescue them, and don't add your own anger to the mix. When people don't recognize their mistakes and need a judicious boot in their rear end, it is okay for them to experience a bit of your anger or frustration. Just make sure that you, not your anger, are in control.

The second principle is that making it safe for people to be honest with you frees them to be vulnerable around you. When they are, reciprocate. Being vulnerable to someone is crucial to building trust, and trust is the foundation of relationships. As a leader, you have to make the first move. The ability to be authentically yourself is critical to building a trust relationship with others.

Your ability to create emotional safety will prompt people to be open and honest with you about your ideas and suggestions and their own performance. Recognizing when you are at risk of creating an emotionally unsafe environment requires that you really tune in to what others are saying — and just as important, not saying — and reflect on how you've contributed to that environment.

A leadership moment is an instance when you must make a choice. Will you step up in those moments that might seem small but that significantly impact business results and relationships? Will you intervene, or will you let the chance pass you by?

The Next Gen Leader

Cutting Edge Strategies to Make You the Leader You Were Born to Be

by Robert C. McMillan

THE SUMMARY IN BRIEF

What if we all realized we could reach our personal, career and organizational dreams by maximizing our potential and discovering the Genius Leader inside each of us? How would our lives, organization and teams be different?

While today's global economy is experiencing a significant cycle of outsourcing across industries, leadership cannot be outsourced; it must be organically transformed. The truth of the matter is that you control in your mind, heart and hands the ability to release your genius in leadership by maximizing your potential and releasing it to the world! *The Next Gen Leader* will show you how to discard outworn traditions and become the next-generation leader you were born to be!

Through his groundbreaking 6G Leadership System, leadership expert Robert McMillan provides the solution that integrates organizational and professional goal congruences, maximizing the leadership potential of every professional. Through leadership traits, features and profiles as well as secrets to increase performance, value and productivity, *The Next Gen Leader* offers a system designed to help maximize individual, team and organizational potential.

IN THIS SUMMARY, YOU WILL LEARN:

- Why everyone is a leader.
- The Seven Leadership House Rules of Engagement.
- How to use the Circle of Life Apps to foster balance in your life.
- The six networks and six applications of the 6G Leadership System.

PART I: THE 6G LEADERSHIP SYSTEM

You Are a Leader!

In today's competitive world of doing more with less and becoming more effective and efficient, followers will not be the competitive force that innovates, breaks ground, or discovers more effective ways of doing business. This will come from leaders. Every person is born with the innate talent and gift of leadership, but we require constant maintenance and application upgrades in order to operate at our maximum leadership potential.

What Is the 6G Leadership System?

Leadership is a network of applications embedded in each of us, which I call the 6G Leadership System. In order to effectively lead, leaders must operate in a leadership network infrastructure designed to identify, cultivate and build leadership aptitudes within an existing network of leaders that allow behavioral replication and synchronization of the desired leadership state. For example, to be effective and meet market demands, cell phones have to be adaptable to operate on multiple cellphone carrier networks. Similarly, leaders must be able to operate on various leadership networks based on a specific scenario or situation.

Through time, people have morphed into different types of leaders. With so many different leadership models, styles and approaches — and the significant increase of external leadership recruiting — a clear leadership model is much needed in today's challenging times. The 6G Leadership System has been narrowed down to six networks that provide insight on the features, benefits and limitations of each network. The six networks are 1G-Genetic Leader, 2G-Generic Leader, 3G-Go-To Leader, 4G-Growth Leader, 5G-Gateway Leader and 6G-Genius Leader.

Professionals have different experiences, and many are in different places in their career journey. The 6G Leadership System provides a tracking system to identify exactly where you are, and it provides a pathway forward. The philosophy is that everyone is a leader and the difference between leaders is simply where they fall within the leadership network.

Overview of the 6G Leadership System

The leadership applications help us understand what truly makes us leaders and also provide solutions to help improve our ability to lead through the leadership apps that most often lay dormant in us all. Listed below are the six maximum potential leadership applications accompanied with descriptions of why others allow us to lead:

1. Awareness App: We are leaders because our actions demonstrate awareness of our innate ability to lead others.

2. Acceptance App: We are leaders because we are accepted as leaders by others based on actions.

3. Acknowledgement App: We are leaders because others acknowledge our actions.

4. Achievement App: We are leaders because our actions are recognized as business achievements.

5. Acceleration App: We are leaders because our actions accelerate business performance and results.

6. Agility App: We are leaders because our actions create agility to grow the business or organization and its people simultaneously.

Leadership Network Styles

The six Leadership Networks, 1G to 6G, coincide with the applications described above. These Leadership Networks help us understand the various leadership networks, the type of leaders we are and the value of each:

1G-Genetic Leader Network: People value you because they see potential.

2G-Generic Leader Network: People value you because you accept leadership.

3G-Go-To Leader Network: People value you because they recognize your results.

4G-Growth Leader Network: People value you because of your consistent achievements in business performance and growth.

5G-Gateway Leader Network: People value you because you create opportunities and change for others.

6G-Genius Leader Network: People value you because they respect your leadership agility and ability to influence success.

Before discussing in detail how these networks and applications function, let's talk a little about leadership — the good, the bad and the ugly. It is important that you fully recognize and understand that you were born to lead.

PART II: YOU WERE BORN TO LEAD!

The Truth About Leadership

Leadership is a choice. Offices and cubicles are filled with both people who choose to lead and those who choose not to lead. True leadership does not start with the acquisition of power, position or pay. It starts with the conscious choice to be a leader.

Leaders have to be excited about leadership. No one wants to associate with leaders who are not excited about the journey they are leading. Leaders should see leadership as an opportunity to influence actions and outcomes, a gift of help and inspiration, and a reward to share with others, placing egos aside.

What does true leadership look like in action? Envision everybody in your organization leading and taking turns doing it.

More often than not, the leaders you find in the workplace are appointed. It is the appointed leaders who often have responsibility for the issues, challenges and complexities found in the operation of the business. Those issues, complexities and challenges exist primarily for two reasons: a lack of leaders and too many followers who watch, wait and debate before taking action.

If you have more followers than leaders, you are in an Organization of Followership. If you have more leaders than followers, you are in an Organization of Leadership.

The followership system, mindset and organizational design are outdated and invalid. Organizations and professionals must shift from a followership system to a pure leadership system due to the competitive economy, business complexities and industry challenges. It all starts with believing you are a leader and empowering others to become the same.

Here are the Seven Leadership House Rules of Engagement that you, your team and your organization can apply in your daily actions to build leadership behaviors and a system that maximizes potential.

1. Everybody is a leader!
2. Be a leader, not a follower!
3. Act first, then ask!
4. Choose to lead.
5. Seek growth opportunities.
6. Leadership is always greater than ownership.
7. Leadership is 3D = lead, leader, leaders.

Let's Talk Potential

Now that we have defined leadership, let's talk potential. Potential is something that every human being uses each day to survive and succeed. Some of us use a lot, and some use a little. The amount used determines our aptitude of success.

We all have a well of potential within us. I'm going to share with you a strategy to help you pump and prime your well so that you can reach your maximum potential. First, you must start pumping your mind with positive thoughts about your abilities. Second, you must prime your well of potential. Confidence, skill, information and positive proclamations will multiply potential. Fear, complacency, negative thoughts and non-productive environments will reduce potential. What you put into your well of potential is what you will get out of it. That is called "priming the well."

No one can release your potential but you. No one can grow your potential but you. I love the saying, "Anything worth doing poorly is worth doing until you can learn to do it well." That is how leadership potential works. You work at it until you learn how to do it well.

Here are several mindset potential affirmations and action strategies to help you realize and maximize your true leadership potential.

- I am a leader.
- There is greatness within me.
- Each day is an opportunity to become better than I was yesterday.
- Within every failure is a hidden opportunity.
- I have a well of potential that never runs dry.
- Leadership is action.
- I control my destiny.

Leadership Is All About Connecting

There are positives and negatives in leadership. The positive part of leadership can be found when you work with good people in a good culture producing a good connection. The negative part of leadership is when you are a good person who has to maneuver and navigate around bad people in a bad culture that, in turn, creates a bad connection.

Bad leadership connections are made up of leaders who use and leverage others to attain compensation, bonuses and recognition goals that are tied to their performance plan and the organizational scorecard. Good leadership connections are found in organizations that put people ahead of the achievement of organizational or personal goals. It's not that these goals are not important, but good leaders recognize that attaining goals cannot be achieved at the expense or detriment of others.

Good leaders engage employees to define goals, they promote and recognize their employees once the goal is obtained, they share in positive financial and social recognition, and they invest and retain resources to achieve future goals. Good leadership connecting organizations, teams and leaders takes considerable amounts of time and effort to ensure that employees are operating in the optimal work environment, have clear roles and goals, and are provided a work-life balance to limit attrition, morale erosion and talent depreciation.

Circle of Life Apps

Before you can truly maximize your leadership potential, you must have universal balance in your life. Life can be hectic, confusing, tempting, chaotic, painful and sometimes just downright boring. But maximizing your potential can change your life.

Maximizing your potential requires what I call the Life App System, which consists of six applications similar to those on iPhones and tablets. The secret is that we all have applications embedded in us, and we must master and maintain them in order to reach extraordinary success in our lives. Your destiny is contingent upon monitoring, evaluating and upgrading your life applications based on what you aspire to become.

Universal Faith App: The core of your potential is based on abundance, not on a limited view of life. Operating in a universal faith takes dedication, utilization and solidity of principles that connect your mind, heart and soul with the universe.

Moral Purpose App: It is not only essential to have a purpose-driven life; it is critical to align purpose with morality. Attaching yourself to a moral purpose that is bigger than you are will give you satisfaction and gratification in pursuing a mission, goal and objective.

Intellect App: What you feed the mind resembles what you will get out of it. All actions in the past, present and future will be based on data points, observations and information you allow into your mind. This is the most important application, because your thoughts determine your actions, and your actions determine your future.

Self-Awareness App: This boils down to your complete understanding of you: how you respond to conflict; how you react to personal challenges; and how others' behaviors, actions and agendas impact you both mentally and physically. It is up to you to become self-aware of your likes, dislikes, strengths and weaknesses. Once determined, strategically place yourself in a position to realize your purpose and maximize your potential.

Relationships App (Family, Friends and Associates): The key to setting relationship priority is in understanding how these relationships align with your purpose and potential. Those relationships that align, you continue to develop. Those that do not, you learn to let go.

Wealth App (Spiritual, Health and Financial): Wealth is contingent on spiritual, health and financial solvency. Having spiritual wealth is the ability to value others and to recognize their differences and beliefs without devaluing them. Your body is the vessel that stores your talents, gifts and skills — your potential. The fact is that health must be your top priority. Do you have at your fingertips the financial ability to make optional decisions based on circumstances? Or do your decisions become

actions as a result of your circumstances? What are you doing to increase your wealth? How are you investing in your and others' potential?

When you have all six of these Life Applications installed within you, you reach life optimization. You will be able to respond in stride to any life-challenge virus, system crash or attack.

PART III: THE SIX GENERATIONS OF LEADERSHIP

1G-Genetic Leader and the Awareness App

The first network on the 6G Leadership System is 1G-Genetic Leader. Being a 1G-Genetic Leader puts you in the company of those in the beginning stage of leadership who have high aspirations to be leaders of significance. In many ways, you are leading without a "badge." You have heart, desire and raw potential. You have broken the traditional mindset and philosophy that leadership is a position, and you have proven that leadership is awareness.

Every leader has spent time on this network at some point in their professional and personal lives. If you really think about where you are in your leadership journey, you might recognize a few leaders who started out like you did: Martin Luther King, Nelson Mandela, Mother Teresa and Mahatma Gandhi. How could you be compared to them, you may ask?

Each of these leaders started by simply being aware that they had the potential to lead. Each of them relied on their Genetic Leadership gifts to get started on their leadership journey. You have discovered the same potential in yourself. The only difference between you and those exceptional leaders are your unique results and outcomes.

Features of the Genetic Leader

Genetic Leaders believe they can lead others without titles. They do not allow the lack of formal title, position or appointment to limit their abilities to influence outcomes or demonstrate leadership behaviors. This is contrary to how most people view leadership. Most of the time, people display leadership behaviors only if appointed, authorized or given permission.

Genetic Leaders are individual contributors. Professionals who fall within this category are not in formal leadership positions. They are not in the spotlight, but they are on others' radar because they are valuable. They help achieve goals, objectives and initiatives that otherwise would be failures rather than successes.

Genetic Leaders are growth engines. They aspire to be the best leaders they can be. They have an extraordinary capacity to grow given the complexity and challenges of tasks and assignments. They have a growth engine that has to be fed with stretch goals and assignments. The more challenging the assignment, the more energy and excitement unleashed. Genetic leaders are self-empowered and self-motivated. They are the type of professionals who solve the problem first and report the solution later.

Limitations

Genetic Leaders have the natural gift of leadership, but many lack the awareness of their full potential. Genetic Leaders who are aware of their potential often become frustrated because of their inability to change the course of direction. For a Genetic Leader, a non-competitive environment introduces boredom and complacency. These leaders are innately competitive and are often misdiagnosed as being overly confident and aggressive.

The Awareness App

The Awareness App within the 1G-Genetic Leader is an upgradeable application that runs unconsciously in your mind, constantly fighting off internal and external negative beliefs that stunt your potential. Actions or words expressed by family, friends or coworkers can defuse your energy, confidence or belief in your potential. This App stores both positive and negative information — past, present and future — that can be overwritten based on what you code into your App. If you code negative thoughts into your App, you will have negative thoughts. If you code positive thoughts about your potential, then you will have positive thoughts. The bottom line is that you can control your awareness, or you can let others control it and pilot your course.

2G-Generic Leader and the Acceptance App

Acceptance is the key to accessing the 2G-Generic Leader Network. Leadership acceptance is different than leadership awareness. Leadership awareness is a result of recognizing one's ability to lead others. Leadership acceptance is embracing one's leadership potential and releasing it into action.

Features of the Generic Leader

Generic Leaders are accepted by others to lead. The 6G Leadership System is structured so that nobody is placed in a leadership position or role until several things occur: they demonstrate acceptance of their potential to lead others through action, they fully accept leadership responsibility, and they consistently demonstrate leadership behaviors. Generic Leaders have been observed by peers, supervisors and management as professionals with the ability to lead a task, assignment, function, process or project well before they are considered for a formal leadership position.

Generic Leaders lead while doing. They are consistent in delivering results by establishing predefined goals and using teams. When professionals are placed in leadership positions, whether in a formal management position or a position informally created for them, they are usually selected because they make sure things get done.

Generic Leaders are generalists and good communicators. They are generalists in the sense that they have broad general knowledge and skills in several areas, which is often why they are placed in leadership positions with responsibilities over tasks, functions, processes or projects. They have the ability to communicate in both visual and auditory mediums.

Limitations

Within organizations and, for that matter, in the 2G-Generic Leader Network, there exist leaders who have not necessarily accepted their leadership potential, have not taken the oath of responsibility, or have not been accepted by professionals as a leader. Generally, these events place the leader and the organization at a huge disadvantage because professionals are clueless about the leader's abilities, potential and capabilities, and often are resistant to that leader.

The Acceptance App

As a 2G-Generic Leader, you require a mindware application that will operate as virus protection software to protect your self-esteem and confidence, and, at the same time, help you process and accept the reality of your leadership situation in your professional and personal life. To maximize your potential as a 2G-Generic Leader, you must have an application that accepts the following leadership realities: Your leadership role will have its difficulties; you are a minority among many; and there are professional haters who will envy you. Accepting the environment you are operating in is critical to assessing your situation, defining your role and determining your approach. Generic Leaders accept what they can't change and accept what they can, and know the difference between them.

3G-Go-To Leader and the Acknowledgement App

One of the most gratifying feelings for a professional is when they are acknowledged for their actions. But what is even more gratifying is when a team acknowledges their leader for their results.

Go-To Leaders stand out among the crowd, and people are drawn to them because they do amazing things and achieve great results, all the while working with a team. They do things that Genetic and Generic Leaders just aren't at a level to achieve in terms of talent and skill. Go-To Leaders in Corporate America are game changers. When an organization or team is down or under the gun, they are the ones you go to.

Features of the Go-To Leader

Go-To Leaders lead from the middle. Not from a hierarchy standpoint but from a relational standpoint — relating to professionals and other leaders. Go-to Leaders have relationships with stakeholders, peers, teammates and colleagues who give them a keen sense of ability to get right in the middle of things and lead others to achieving extraordinary results.

Go-To Leaders cut through politics. They leave politics aside and go after business goals and objectives without affiliations, relationships or aiming for personal gratification. They forget about themselves and take care of the customer first. Everything else is secondary.

Go-To Leaders are franchise players who have developed a brand. They are acknowledged by others because they have developed a uniquely defined positive image, perception and brand of their ability to achieve extraordinary results. Professionals and leaders acknowledge them as those who are willing to take the last shot with one second left on the clock. They are risk-takers who worry about their careers last and place the company first.

Limitations

Go-To Leaders do what they love, not love what they do. They are consistently at their best when they choose to do what they love. When you do what you love, dedication, motivation, interest, energy and joy are omnipresent. A Go-To Leader's ability to deliver time and time again can sometimes be considered a dumping ground or solution center for all organizational issues. This can cause disinterest, demotivation and disengagement.

The Acknowledgement App

When leaders become Go-To Leaders, they come into complete acknowledgement of their potential relating to their strengths and weaknesses. Because Go-To Leadership is a choice, leaders must be able to fine-tune areas of development. It is that acknowledgement that allows them to take calculated risks to pursue the opportunities that others avoid. To maximize your potential as a 3G-Go-To Leader, you must have an application that routinely provides the following upgrades to your mindware: acknowledges your strength zone as a leader; acknowledges your weak zone as a leader; acknowledges your opportunity zone as a leader.

4G-Growth Leader and the Achievement App

Growth Leaders are highly influential leaders because they can grow the business by growing leaders. Growth leaders understand that leadership development is not transactional. It is transformational. They understand that development does not consist only of investment dollars but also in time committed to training, independent coaching, development of career opportunities and on-the-job experiences.

Features of the Growth Leader

Growth Leaders operate using the Leadership Law of Attraction. If you follow a growth leader back to their home network of leaders, you will find others who want to grow and develop. That is the Leadership Law of Attraction — "like leaders attract like leaders."

Growth Leaders go beyond business relationships; they truly know their leaders. Knowing a person is what makes Growth Leaders go above and beyond the call of duty for their team. It attributes to the business results — growth and outcomes that high-performing organizations realize — and it starts with knowing the person behind the leader.

Growth Leaders replace themselves rather than secure a position. They trust, hire and develop leaders, giving them full power and authority and the proper training and information to achieve desired results. They replace rather than secure themselves. Growth Leaders understand that in order to increase business results, lead teams and develop leaders, you need leaders who are smarter, brighter, faster and broader than one individual could ever be.

Limitations

Growth Leaders have pet peeves and quirks requiring leadership emotional intelligence. They are unique in that they do three things very well: they lead teams, develop leaders, and achieve extraordinary business results. However, they are human and are not perfect. The key is to recognize each person's uniqueness and effectively utilize emotional intelligence as much as possible to ward off competitiveness that negatively impacts emotions, actions and behaviors.

The Achievement App

Having a mindset to achieve your personal best is a significant distinction for leaders on this network. The Achievement App helps drive Growth Leaders to achieve extraordinary results by optimizing effective catalysts of change, attitudinal intelligence fluency, and goals and success sharing. If you as a leader can maintain attitudinal intelligence, establish goals, share success and operate as a change catalyst, you will achieve extraordinary results through leading teams and developing leaders.

5G-Gateway Leader and the Acceleration App

The 5G Gateway Network serves as an igniter of change, transformation and opportunities benefitting both business and its people. Gateway Leaders create accelerated growth opportunities for the business and their leaders — they, in essence, create jobs. Gateway Leaders break through barriers to create opportunities and, within their success, change the landscape. They are visionaries and accelerate outcomes that benefit the industry, organization and teams.

Features of the Gateway Leader

Gateway Leaders have 5G Vision (Hindsight, Nearsight and Farsight). They have the ability to see and reference those things in the past, present and future. Gateway Leaders have the ability to predict, envision and create vision for the organization on an accelerated timetable, creating opportunities for the organization and its leaders to capitalize on by using 5G Vision to work in the present.

Gateway Leaders set C.H.A.N.G.E. goals. Gateway Leaders transform vision into goals, and they develop C.H.A.N.G.E goals — goals that are Congruent, Healthy, Action-Based, Necessary, Growth-Oriented and Excel-

lence-Driven. They continuously strive for excellence and have specific goals for market position, cost position, service position and brand position.

Gateway Leaders don't typecast; they recast. They do not typecast themselves or other leaders by limiting them to a job description — doing things as they've always been done. They allow role creation and flexibility in assignments, initiatives and projects.

Limitations

Gateway Leaders act quickly but must remember to accelerate together. They have the ability to anticipate windows of opportunity. But because of their accelerated pace, their actions, decisions and influence can be out of step with the rest of the organization, leaders and teams.

The Acceleration App

The 5G Acceleration App is the mindware that motivates teams, leaders and organizations to accelerate change and business results by maximizing the potential of the organization through creativity and innovation. To maintain their motivation, Gateway Leaders require mindware that runs on their operating system and that helps them achieve extraordinary results by programming their mind with an attitude to overcome insurmountable odds, an unconscious ability to think of the team first, and the courage to turn personal failures into lessons for others.

6G-Genius Leader and the Agility App

Navigating on the 6G Leadership System and connecting to every leader regardless of pay, position or power is challenging. It requires a constant twisting and turning motion — like perfecting a golf swing. Size, age or strength doesn't matter in golf — just acceleration, precision and consistency. Size, age and strength don't matter in leadership either; but acceleration, precision and consistency are critical in leading others — that's called having "leadership agility."

Features of the Genius Leader

Genius Leaders lead from the back (Ubuntu). When Nelson Mandela was a young boy, he spent long hours herding cattle. He explained that if you want to move cattle in a certain direction, you stand in the back and send several of your smartest cattle to the front. You then move the back in the direction you want the cattle to go. The leading cattle will adjust, and the others will follow them. If you are leading from the front, that means many people are watching your every move. Genius Leaders understand that this can limit progress and, in some instances, become a distraction.

Genius Leaders are continuously coaching and learning leaders. They create a culture of knowledge-mining, transferring and sharing information throughout the organization for all leaders to learn and develop. Genius Leaders view every employee as a valuable asset and in a leadership position.

Limitations

Genius Leaders can become info-intoxicated. They have capacity constraints to transmit, receive and process information, just like every other human, but their success is limited to their ability to zero in on key points and make the right call to action. Also, because of their vision, approach and ability to connect things that perhaps others cannot understand, Genius Leaders are often criticized and questioned by peers. Unfortunately this is a major challenge in leadership and is one of the reasons why many leaders do not take bold, decisive action.

The Agility App

To be a Genius Leader requires an Agility App, mindware that unconsciously helps them navigate through all the different nuisances of leadership, creating relationships and engaging with people of different backgrounds, ideas, philosophies and cultures, in pursuit of redefining business and personal success.

Organizations and leaders of High Significance understand that "leadership is everything!" What transformational leader is lying silent in you, encompassing all of the talents and gifts that can enable you to become the "next generation" you? Search deep within your well of potential, and release that Genius Leader in you to the world!

Lead Positive

What Highly Effective Leaders See, Say and Do

by Kathryn D. Cramer

THE SUMMARY IN BRIEF

Conventional wisdom points to industry expertise, strategic capability and operational savvy as the essential components to leadership, but the best leaders never lose sight of a simpler truth: Effective leadership means inspiring your followers to action, and the secret to truly powerful, inspiring leadership is not strategic know-how but rather a sense of self-confidence and optimism. Leaders at every level must learn to establish a foundation of positivity in everything they see, say and do.

In *Lead Positive*, author Kathryn Cramer weaves neuroscience and positive psychology to create effective leadership strategies. Cramer takes the fundamentals of her pioneering Asset-Based Thinking (ABT) system and turns them into a playbook for successful leadership. She shows leaders how to apply ABT to shift their attention away from what is negative and learn to intentionally shine the spotlight on the positive, beneficial facts of a situation.

As leaders make this mental shift from negative to positive aspects, they improve their optimism, empathy and confidence. When their mindset zooms in on what is strong, valuable and possible, what they say and do is far more likely to inspire others to action. In short, ABT helps leaders shift internally so they can excel externally.

IN THIS SUMMARY, YOU WILL LEARN:

- How to be aligned in all that you see, say and do.
- Why our brains are wired to imitate leaders' actions.
- How to become responsive rather than reactive.
- How to drive positive change.

Introduction

What if the leaders in our midst learned to *see* more possibilities than problems, *say* more about "why" and less about "what" and "how," and *do* the courageous thing instead of operating out of the comfort zone? How much more effective would they be?

When you Lead Positive, you offer a compelling vision of the future by reframing problems into possibilities and appealing to a higher sense of purpose — a noble and mighty cause. When you think, speak and act out of the positive side of the ledger, others feel more hopeful and confident about the future.

And when you articulate why your vision is so important to those you serve, they trust and respect who you are, not just your ideas. Then, when you take a stand that requires courage and sacrifice, you can rely on their support and determination as you walk together toward a new positive direction.

Conventional leadership emphasizes planning, organizing, setting a direction, developing strategies and then executing. Relying on these practices alone leaves out the most powerful act of leadership: inspiring followers to action. And in order to inspire, leaders must be self-confident and optimistic in all they see, say and do.

Research tells us that when people at every level feel they are part of creating the vision, their ownership and commitment to execution grow exponentially.

Asset-based thinking (ABT) means to look at yourself and the world through the eyes of what is working, what strengths are present, and what the potentials are. Conversely, deficit-based thinking means to look at yourself and the world in terms of what is not working, what is lacking, and the gaps between where you are and where you want to be.

While conventional leadership approaches focus on acquiring industry expertise, strategic capability and operational savvy, ABT is an internal development process that zeros in on transforming what the leader sees, says and does.

PART 1: WHAT HIGHLY EFFECTIVE LEADERS SEE

What You See Is What You Get

Have you ever noticed that you respond faster and more intensely to problems than you do to possibilities? Leaders and followers alike are much more likely to be playing defense than offense. One explanation for this bias toward the negative is that the neural circuitry in the "avoid harm" parts of our brain is triggered faster than the neural circuitry in the "pursue rewards" part is.

The negativity bias is set up to protect us from harm and provide for our survival. From the perspective of survival of the fittest, it offers a great evolutionary benefit. However, rarely in everyday life do we truly need these emergency, survival-oriented responses. In fact, the flight-flee-or-freeze reactions to situations often put us on the wrong path altogether.

When a leader is caught up in negativity bias and is blind to the assets and advantages inherent in a stressful situation, it can trigger a downward spiral. In contrast, every time you intentionally shine the spotlight on assets — what is positive, valuable and worthwhile — you change your brain for the better.

The see-think-feel awareness tool is a way to set yourself up for generating the positive feelings you need to stay on the course to success. If you are *seeing* the downsides of a situation, then you might *think* "problem" and *feel* "overwhelmed." But if you see the upsides in that same situation, then you will think "possibility" and feel "exhilarated." This is a self-reinforcing process that can either create a virtuous cycle that spawns solutions or foster a downward spiral that only makes matters worse.

The ASA Shift

To create a more useful perceptual set, use the ASA shift, a "good-brain" exercise that helps you to shift your perspective just enough to begin triggering the positive feelings that set a virtuous cycle in motion. The ASA shift is a mental process with three steps:

Acknowledge: Use the see-think-feel awareness tool to identify your negative emotions and trace them back to the negative aspects of the situation that you are focused on. If you look more closely, you will be able to glimpse some beneficial aspects of the current situation that are also true.

Scan: Look for the positive side of the ledger. Ask yourself, "How can my team or I benefit from tackling this situation head on? Scan for one potential gain or upside. Think about the reward that comes with dealing effectively with the challenge.

Act: Take one step toward realizing the benefit you now see is possible. Act on that potential gain, and feel how it makes the negative thoughts and feelings recede.

The ASA shift is not about denying that bad things are happening. Rather, it is a tool to interrupt the negative downward spiral before it gets out of hand (acknowledge), reshape your awareness toward the positive (scan), and begin a virtuous upward spiral aimed at productive action (act). This exercise helps you discover the hidden assets in any stressful situation.

Focus on the Past

Looking at your professional experiences through the rearview mirror can run the gamut from inspiring to downright depressing — it all depends on the aspects of the past you choose to remember.

A positive focus on the past is an indispensable leadership tool. As a leader, you have a major responsibility to give yourself and those you want to influence a positive orientation to the past so that you can learn from it, move faster in the present, and move toward the future you want to create.

Here is a quick yet thorough process designed to help you and others dwell on the details of a collective success. First, work through it yourself; then share the exercise with your team:

- Ask your team to remember a time that they achieved something that at first seemed impossible.
- Ask members of the team to recall what actions they took. Ask them to describe their thoughts, the effort, the behaviors that drove success.
- Reflect on the positive impact those actions had on you, on others and on the situation.
- Reflect for a moment on how you and the team felt when you realized beyond a shadow of a doubt that what you were doing was going to work.
- Ask the team to identify thoughts and behaviors they want to repeat for future situations.

Leaders are much more likely to look for learnings in the wake of failures than they are in the aftermath of successful ventures. Do not overlook or take your successes for granted. Creating positive memories around collaborative efforts triggers your appreciation for your team, making it easier to recognize and reinforce the positive behaviors and attitudes of others.

Focus on the Present

We know that our frame of mind, decisions, and the actions that we take in the present moment set the stage for things to come — sometimes for the better, sometimes for the worse. The quality of our attention, concentration and creativity in the present dictates the quality of our future.

But so often our daily routines are brimming over with meetings, conference calls and last-minute urgent requests that we do not stop to engage in top-quality thinking in the moment.

Neuropsychologist Rick Hanson calls dwelling on the positive facts happening in the here and now "taking in the good." I recommend that you "take in the good" by intentionally focusing your attention on

- What makes you feel strong, safe and capable (focus on self).
- What provides you with deep, meaningful connections to other people (focus on others).
- What gives you a sense of progress or achievement (focus on situation).

Scan-Snap-Savor

Scan-Snap-Savor is a tried-and-true ABT exercise to help you take in the good of a given moment.

Step One: Scan. Look for the positive facts that are happening in the present or immediate past — something that just happened. You can direct your attention toward any one of the three focus areas: self, others or situation.

Step Two: Snap. Think of "snap" as aiming your mind's camera at a positive fact from your scan and then clicking the shutter to capture it and burn it into your memory. Zero in on just one of the positive facts from your scan in step one. Create a mind's-eye picture of that fact complete with sensory details of the setting and your state of mind.

Step Three: Savor. Dwell on that image, and relive your internal experience of the moment. Spend 30 to 60 seconds cherishing the positive emotions associated with that positive fact. Let the full measure of the experience sink deeply into your implicit memory.

Use Snap-Scan-Savor whenever you need a brief respite from the unrelenting hurry and pressure of time. By momentarily transcending the tyranny of chronological time, you are refreshed and energized — primed to see and seize the opportunities right in front of you.

Focus on the Future

When a leader can see beyond the present to a future worth marching into, it is like a beacon lighting the way and pulling everyone involved forward. A rewarding vision motivates both leaders and followers to perform to their full potential.

I often encourage leaders to apply the Self-Others-Situation framework to envision a rewarding future. You can conjure up your vision by entering any one of those three doors first. Many visions of a rewarding future start with the leader seeing a solution or opportunity (a situation) that will make a significant positive difference to his or her products, services, customers and organization. Alternately, a leader may start the visionary process by identifying a new or hidden team capability or desire (others). Your positive vision of the future could also begin with you (self).

When you start imagining a positive future for yourself, you can rest assured you will be personally committed to achieving the rewarding outcomes. But the main point is that no matter where you start, you will also need to consider the other two parts of the framework to empower and complete your vision.

As a leader, you need to take the pulse of what your team wants to happen before setting a vision. Once you have assessed their needs and wants, you can hook your vision to their aspirations.

Leadership by Lightning or Listening

Leading by listening is a leadership style that many would do well to develop. It is in contrast to leading by lightning. To lead well you need to master both.

When you lead by listening, you wait, watch and listen deeply, looking for patterns of ideas. Then, you speak up, inviting others to see what the future could be from their point of view. When this style works, people are grateful and inspired.

Leading by lightning relies on leader-driven ideas. When using this style, the leader has a big idea. He or she rides in on a white horse (metaphorically), announcing to the team: "How about THIS!" When this style works, people are also grateful and inspired. The leader has saved the day. The heavens have opened up, and lightning has struck to reveal a brand new future.

Leaders need to be flexible and competent at both approaches. Part of being effective as a leader is knowing which approach is appropriate for the situation and the audience - and for your own leadership style.

PART 2: WHAT HIGHLY EFFECTIVE LEADERS SAY

From See to Say

Your speech will always reveal what you see and, as a consequence, what you want, what you fear and what you value. No matter how hard you try to disguise or dress it up, what you say will uncover what you see.

If we are fearful and would rather come off to others as courageous, then we should shift how we are viewing the circumstance, changing what we see to match what we want to say.

Speaking with courage, hope and authenticity are the marks of effective leadership, and they are possible only if we focus more of our attention and effort on our assets than our deficits. This is the essence of the asset-based thinking (ABT) approach to leadership.

Say It with Substance, Sizzle and Soul

There are three assets you can leverage when you speak: substance, sizzle and soul. Each is important enough to call out as a separate element, but in reality, they overlap and reinforce each other.

Substance refers to the content of what you say. *Sizzle* is about using your words and your voice to evoke emotion in your listeners. It is a true, heartfelt expression of your feelings about your message. The *soul* of what you say refers to the why — why the message is so important to your listeners, your mission and you.

What You Say and How You Say It

What you say has high impact when listeners remember your message beyond the conversation or presentation; have a change of heart brought about by the message; take action as a result; and influence others to join forces with you.

For truly high-impact communication, you must take into consideration the substance, sizzle and soul not only of your words but also of your delivery. To be an effective leader, what you say and how you say it must be aligned.

What you say prepares you and the people you lead for what you need to do, for walking the talk. And ultimately what you do creates the results you seek.

Say It With Substance

As a leader you must be substantive and have substantive ideas. The result is that when you speak, people know that you have done your homework. Your wisdom shines through loud and clear.

In establishing their case for change, leaders need to say what they see as the assets of the past, present and future if they want listeners to fully appreciate their role and contribution. This positive context shows people how much their efforts truly matter to achieving the positive vision of the future.

Regardless of your leadership domain and innate talents, saying it with substance takes practice. You may have heard that it takes over 10,000 hours of practice to master a skill. It means that when it comes to saying it with substance, sizzle and soul, practice will get you there.

As a leader, you can use your own credibility as an asset to move your team forward. The strong substance of your words and your delivery can create a magnetic pull that draws listeners in. People want to achieve, they want their efforts to count toward something important, and they want to join forces with a leader who they believe in.

How to Say It with Substance

Use the ABT Self-Others-Situation framework to craft a substantive leadership message.

Self: Identify what you want to contribute to the substance of your message. As you craft your message, ensure that the substance reflects the goal of your speech act. Think of speech acts as clarifying your role in delivering your message. Substance-oriented speech acts give you a strong platform and frame your point of view.

Others: What do you want from those who are listening to your message? Always be sure you have a clear call to action — even if the action is a change of heart or shift in attitude rather than an actual step to be taken.

Situation: The situation framework helps you communicate the context, timing, urgency and feasibility of your message. Think of it as your case for change. You don't need to speak volumes to describe the situation. Say just enough to ensure your call to action and positive vision for the future make sense in the minds of your listeners.

Say It With Sizzle

While the substance of what you say may be your credibility card, it is the sizzle of your words that makes them stick. When you say it with sizzle, you are engaging the hearts and minds of your audience, inviting them to feel and invest in your message. In short, the sizzle is your leadership story.

A story well told transports listeners to a different time, place and plane. It captivates emotions and provides an exciting trajectory of experiences full of hope, struggle, uncertainty and surprise. Stories show us how to live life. Stories help us lead.

How to Say It with Sizzle

Using the ABT Self-Others-Situation framework, we'll explore how to incorporate yourself, others and the situation into a leadership message that sizzles.

Self: Identify what you want to be memorable and motivational in your message. Ask yourself, "What do I want to accomplish with this message?" Sizzle-oriented speech acts include invite, empathize, apologize, celebrate, encourage, empower, support, enroll and connect.

Others: What emotional response do you want from those listening to your message? When it comes to sizzle, be sure to have a clear invitation to feel. Sizzle-oriented invitations to feel include uplifted, enthusiastic, curious, decisive, courageous, safe, relieved, strong, honored, respected and worthwhile.

Situation: The situation framework helps you determine how best to engage your listeners at a particular moment in time. Knowing your audience's frame of mind — uncertain or clear, hesitant or ready, worried or excited,

or in the dark or knowledgeable — is essential to selecting the right stories and engagement strategies.

Say It With Soul

Saying it with soul is about meaning what you say — and saying something meaningful. We are socialized not to brag and to view ego as a turn-off. But authentic humility is about having the confidence and transparency to own and express the best of who we are as well as being able to admit our failures and shortcomings.

Leading with soul is not just a matter of what you do and say in the moment; it is what you do and say over many moments — the high points, the low points, and all the other points in between. When it comes to saying it with soul, you, not your words, are the message.

When it comes to soul (the why), we are talking about something highly subjective — the meaning, the value and the deeper purpose that underlie your commitment to the cause. People listening are scanning for how sincere, congruent and authentic you are. Your team is taking a good look at you to judge how much they can trust you.

It is important to remember that people will also tune into your body language and facial expressions to evaluate your authenticity. This underlines the power of the soul asset when it comes to building bonds of trust.

Self-Others-Situation Framework for Saying It with Soul

Self: Identify what you want to be meaningful and inspiring in your message. Use the pronoun "I" often — I pledge, I believe, I am committed — as you craft your messages. The soulful speech acts you claim with "I" help you signal to listeners your deepest purpose.

Others: How does the message you are about to deliver relate to your mighty cause? Why is this message meaningful to the group? With substance, you give others a clear call to action. With sizzle, you offer others an invitation to feel. And now with soul, you provide others meaning and purpose.

Situation: Timeliness can contribute substantially to the meaning and value of your message. You have heard the phrase, "timing is everything." This adage is especially true when it comes to communicating soulfully. Look through the situation lens to determine how best to capture why your message is so important at this moment in time.

Revealing your "why" — that is, saying it with soul — gives others a reason to trust you, trust the process, and believe in the meaning and importance of your message. Saying it with soul gives you a sound platform from which to lead and paves the way for taking action that is also meaningful and authentic.

PART 3: WHAT HIGHLY EFFECTIVE LEADERS DO

From Say to Do: It's a Very Short Trip

The brain, it seems, does not make much of a distinction between second- and firsthand experiences. Research shows that the same pattern of neurons, called mirror neurons, fires in the observer as in the person performing a task or telling a story.

When you perform an act of leadership, the same neurons that fire in your brain will fire in the brains of your team members. Thanks to mirror neurons, the *do* — and the feeling or tone behind that *do* — is highly contagious. These findings highlight the ABT principle that leaders must set the example for what they want their followers to see, say and do.

The See-Say-Do chain reaction starts with you as the leader. What you see influences your desires, intentions, goals and actions. What you say — through substance, sizzle and soul — lets others place themselves in your mental shoes. What you do leads others to imitate your actions and develop the complex skills that form the culture of your team.

It is also important to note that what your followers see, say and do can and should influence your leadership actions. Your job as leader includes being aware of and receptive to what others are seeing, saying and doing.

Reactive or Responsive: It's Up to You

In psychological terms, *responding* means to thoughtfully and intentionally adapt your behavior to the current circumstance. In contrast, *reacting* means to automatically go into high-alert stress mode.

Highly effective leaders tend to be highly responsive leaders. They take time to digest what is happening, step back and take stock, and exude high energy and excitement, not fear and stress. In a difficult situation, a deficit-based reactive mindset is natural at first. But if you can shift into responsive mode, you can choose to channel

your adrenaline to serve you. Respond or react: it's up to you. The goal is to learn how to respond effectively so that what you do as a leader takes you and the team further toward the goals you seek.

For decades, psychologists have known that by shifting your behavior, you can change your internal state, and vice versa. Like most other people, you exhibit distinct and unique patterns of behavior when you are in responsive and reactive modes. A keen awareness of what happens when you are angry, afraid, energized or engaged is the key to making that shift from responding to reacting when necessary.

Asset-Based Thinking Leadership Strategies for Responsiveness

Remember the lesson of mirror neurons: your behavior is contagious. The following asset-based stress management strategies will help you increase your ability to be responsive while supporting you in lowering your reactivity.

Strategy 1: Take Ten. "The only difference between fear and excitement is breathing." Adopt this phrase as a kind of mantra when you start to feel stress-induced anxiety coming on. Try taking ten deep breaths when you would rather be excited than fearful. This creates a break in your reactivity, clearing the way for your parasympathetic nervous system to kick in.

Strategy 2: Get Off the Field and into the Stands. In our day-to-day activity, we spend most of the time "on the field," intensely immersed in making the best plays to win the game. When the pressure gets too intense, you can reduce your anxiety and facilitate responsiveness by going "into the stands" to see the bigger picture. Going into the stands allows you to mentally extract yourself from your reactions and immediate demands of the moment. From that more elevated perspective, you can better interpret the behavior of others to find the assets of the situation and see new possibilities.

Strategy 3: Act, Observe, Reflect. Once leaders commit an act, they must stop to observe what happened and then reflect on what was done well (or poorly) and what lessons they can carry forward. Taking time to observe and reflect on your actions automatically puts you in the responsive mode.

Start Being Before You Start Doing

It is difficult, in fact nearly impossible, to see yourself as you are. As a leader, you must be rigorously introspective and at the same time open to feedback in order to develop a clear picture of who you are and how others experience you — what is called your signature presence. Just as we all have a unique way of signing our names, we all create a unique signature as leaders.

The Three Cs

Three qualities of being are vital to leading effectively in the three types of situations you are bound to face as a leader:

Confident in response to a crisis. A leader who is confident in times of crisis inspires hope and determination in others. The hope that equilibrium will be regained and that the organization will bounce back is essential when dealing with a crisis. The confidence you wear on your face and express through your body language, words and actions will be contagious.

To do this, here are a few key lessons:

- Keep focused on your ultimate goal and mighty cause.
- Surround yourself with people who believe in you.
- Do not blame the people who set up roadblocks.
- Move into action. Experiment until you find the right path.
- Play to your strengths to find the winning strategy that resolves the crisis.
- Believe in yourself. Remember how your confidence in past crises served you well.

Curious in response to conflict. Business leaders encounter pushback from all sides. Maybe there is someone who does not agree with your position on a key issue. The best ABT strategy in response to conflicting points of view is to be curious enough to find out why people oppose you. Curiosity sows the seeds of trust and creates opportunities to see value in somebody else's points. When conflicting parties trust and can see the value in each other's positions, the bar to finding a way out of the conflict altogether is significantly lowered.

Courageous in response to challenges. While the nature of the challenge may differ for those in different professions, the quality of being courageous is universally beneficial. Here are two sets of opposing qualities that apply to any set of challenging goals.

Being Courageous

- Making a tough decision and standing by it
- Admitting when things are not ok
- Asking others to do what's difficult
- Being able to stand alone
- Staying the course

Being Fearful

- Saying, "I'll think about it," when a decision has already been made
- Pretending everything is ok
- Hesitating to make difficult requests
- Seeking approval
- Changing direction too soon or too often

The point is to decide which qualities of being you most want to display, given your specific circumstances.

Driving Positive Change

Change — positive or negative — can be provoked by crisis, chance or choice. But, really, the source of change is irrelevant. It is what you do to lead your organization through the stages of change that makes the difference between success and failure and ensures that the change is positive and transformational. In the end, it all comes down to choice. Driving positive change is a matter of choosing to see whatever the provocation may be as a great opportunity to leap forward.

It is important for a leader to be intimately familiar with the stages of change that an organization undergoes in moving toward a vision. Each stage comes with a different emotional resonance and requires different leadership behaviors in order to progress to the next one.

The Seven Key Dos of Positive Change

Highly effective leaders behave in certain, specific ways as they move through the progressive stages of change. Here are the important "dos" — behaviors at each stage and what you want your followers to feel and do as a result.

Envision. Highly effective leaders must *respond*, not *react* to whatever has initiated the process of change. By reflecting on the prevailing winds of change, leaders can get a glimpse of what might be possible. As they step back and take stock, they can choose the response that creates energy and stimulates the curiosity of their followers so that they, too, can embrace the change.

Acting as if requires that you take actions that indicate the vision is already happening in small but important ways. For example, you might develop a business plan or hire a person with specific expertise. Such actions signal that you are serious and committed to creating a new and better future.

Explore. As optimism and ownership build, the leader's next task is to *shape the new path forward*. This requires giving yourself and your team the space and time to generate the robust strategies and the specific behaviors that will secure the desired future.

Invent. With new behaviors and strategies in hand and your enthusiasm building, you and your team will begin to *invent new ways of operating* that bring you closer to your vision. You may find that the organization is lacking necessary skills and competencies to achieve the vision. That may mean hiring the right expertise and restructuring roles and responsibilities. Leading such an effort requires *fierce resolve* and commitment to your vision.

Behaviors that show *fierce resolve* are cousins of behaviors that show your ability to *bounce back*. Bouncing back is about regaining your equilibrium and showing up with at least as much enthusiasm and energy after confronting a major setback or disappointment as you had in the very beginning.

Transform. This final stage is the one that yields results: the vision has been achieved. Most primary metrics of success are financial, operational, customer-centric and cultural. But highly effective leaders should not just let the metrics speak for themselves. Instead, they must find ways of drawing attention to the victories and leaps forward by *celebrating and learning.*

Driving positive change in all that you see, say and do is the true asset-based leadership advantage. ABT means you look at yourself and the world through the eyes of what is working, what strengths are present, and what the potentials are. This is what is required of leaders as they cascade positive change throughout an organization and inspire others toward achieving a shared vision.

"We don't see things as they are, we see them as we are." This famous quote, widely attributed to author Anais Nin, will forever be true. Through ABT, we all have the power to make the things we see and who we are as leaders more positive and, ultimately, more effective.

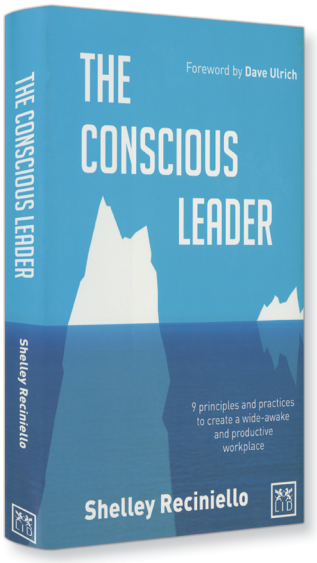
Leadership



The Conscious Leader

Nine Principles and Practices to Create a Wide-Awake and Productive Workplace

by Shelley Reciniello

THE SUMMARY IN BRIEF

Why do things go wrong in companies that shouldn't? The answer, according to Dr. Shelley Reciniello, often lies deep beneath the surface in the unconscious processes of leaders and their employees.

Working as a sort of psychological detective, Reciniello consults with organizations and individuals to figure out what the real problem is when a posed-for-success corporate initiative fails, when a promising individual or team can't perform, or when a well-conceived departmental project doesn't deliver. When what has gone wrong doesn't make sense, Reciniello looks for the unrecognized, underlying problem and often finds that what's going on unconsciously, out of awareness, is more important than what is happening on the surface.

How can you wake up and become conscious of secret motivations, unrecognized Achilles heels, and hidden agendas in yourself and your employees? *The Conscious Leader* describes the nine most fundamental but often neglected truths about human beings and their workplace behavior in jargon-free, accessible concepts and examples. With humor and inspiration, Reciniello provides the principles and practices necessary for conscious leadership that you can immediately apply in your organizations.

IN THIS SUMMARY, YOU WILL LEARN:

- Why success depends on making "the unconscious conscious."
- The nine psychological principles that undermine companies and leadership.
- How to overcome classic defense mechanisms and help organizations achieve positive growth.

Introduction

People don't leave their psychological selves, conscious or unconscious, at home when they come to the office, and there are many permutations of how work and self, and self and others, collide. You may know your business, have brilliant ideas and an eager workforce, but if you don't know what happens to people — and that includes you — when they enter the workplace, you will undoubtedly waste time and money and minimize your success.

Someone once asked Sigmund Freud, "What do we have to do in order to be mentally healthy?" He answered that we must be able to "love and work." He meant that we need to love and work with an awareness of *both* conscious and unconscious variables.

You're thinking, "Isn't running a business difficult enough without worrying about what I don't see?" But like it or not, doing business today also requires navigating the underground psychological terrain of people at work: egos that run amok putting personal success ahead of corporate achievement; palpable, underlying anger that surfaces in response to company policies, ill treatment by a manager, or even your own grandstanding.

In the incredible pressure cooker that is the modern workplace, how do you keep your eye on a ball that is increasingly invisible? By understanding the basic psychological principles of people at work and applying them daily. Corporations are *not* people, but they are made up of people, and to ignore the imperfect humanness of professional interactions is a foolish omission that will always undermine success and satisfaction. You can have no illusions about how that affects your bottom line.

There are nine important psychological phenomena that undermine companies and leadership every day. But there are also antidotes to these phenomena and practices necessary for conscious leadership that you can immediately begin to apply in your organizations.

From the boardroom to the mailroom, employees are often elated when they understand how these nine challenges and the accompanying insights operate in their lives. This information helps them to normalize their reactions so they can see themselves without judgment and become open to changing their opinions and behaviors.

Knowing ourselves, our complexities and our triggers, handling the quirks of others instead of letting them affect us, valuing and maximizing the challenge of diversity, understanding how to deal with anger coming at us or from us, learning how to increase our personal power and use it appropriately, and dealing with change positively are some of the ways we can enhance our personal and professional effectiveness.

All this becomes possible when we learn to look beneath the surface. The effort will be worth it. Beginning with yourself, you can create leadership and a culture that is conscious, wide-awake and productive.

Why Everything Goes Wrong When Everything Seemed Right

Psychological Principle #1: Human beings are not rational, and every day their illogical, unconscious minds are walking into offices with hidden agendas.

Every day all over the world, people enter the workplace with their own personal preoccupations: work pressures, health concerns, money worries, family problems, relationship issues, political viewpoints and more. That's a lot of variables to consider. And these are the easy ones because they're the things that people are generally aware of — conscious of — although they can still impact their work and be difficult for others to cope with.

But the ones they haven't got a clue about — the ones that are unconscious — are the really tricky ones, like unresolved childhood and family issues, fears, anxieties, fantasies, drives, prejudices, obsessions and complicated emotions like anger and guilt. That's what is happening when you sabotage something you've been striving for, such as a promotion or a deal — or when someone gets angry with you for no obvious reason. You become upset and confused because the behavior is illogical. And that is indeed the problem.

According to psychoanalytic thinking, we act irrationally because we are motivated by unconscious forces that our conscious minds are constantly struggling to control. We keep them out of our conscious awareness because we feel that they are shameful or frightening or dangerous. Things like impulses, feelings, fears, motivations and desires that come from ourselves, our childhood experiences, life events and interactions with other people.

Why Being Conscious Matters

Your organization is shaped by the hidden feelings and fears, desires and needs, motivations and ambitions of each of your employees and, most definitely, your own. Secret motivations and hidden agendas are time bombs that threaten success. The only antidote is to make "what is unconscious conscious." That is how we strengthen our rational selves. By knowing the whole story about ourselves and the people we interact with.

Because we have become too focused on behavior in our approach to problems, we have also become more and more action-oriented, less reflective and, therefore, less insightful. As a leader you must be alert to the pull to act for action's sake — to shoot first and ask questions later. This kind of movement is the result of faulty logic and leads to bad decisions. The rational mind, both the individual one and the corporate one, can only be strengthened by dealing with unconscious issues, not pretending they don't exist.

Without reflection and introspection, irrationality stays underground where it grows more potent every day. Consciousness requires that you become wide awake and that you stay wide awake and alert to business practices that are not conscious.

Becoming comfortable with not knowing, with taking the time to understand the conscious and unconscious elements of a situation as well as the motivations of everyone concerned, including yourself, to ask appropriate questions of the right people, to reflect and to decide what, if any, action is warranted, is the work of the leader who strives to stay conscious.

When Leaders Don't Know Their Achilles Heels

Psychological Principle #2: Self-delusion is the single biggest trap for a leader.

In order to avoid fantasies and delusions, leaders must be open to self-knowledge and how they are actually perceived by others. How do you ensure this in yourself? You start by taking a deep dive into your history, your life and your work experiences — all of which are responsible for most of who you are — and answering a lot of questions about yourself honestly.

What Do You Carry?

We all carry things with us that no longer apply to our lives, yet we act like they do: memories of parents, schoolteachers, friends, classmates; words and incidents that hurt, embarrassed and frightened us. We suffer neurotically when we react to something that no longer pertains to our lives as though it were happening now. But without understanding that and without knowing what we are unconsciously clinging to, we have these unconscious needs and forces directing our present days.

What from your past are you still reacting to in the present? What pain, injustice or anger do you cling to? How might these unconscious memories influence your choices and behaviors? What unacknowledged attitudes, prejudices fears or resentments do not serve you well? What pretensions and possessions do you use to distance, define and protect yourself?

True self-knowledge without delusion is power; the lack of it is self-deception that will always leave you powerless and vulnerable to others.

Easy Wins 101

To be successful, it's important to score easy wins. Easy wins are the things you can do that will stand you in good stead so that you can succeed with the harder challenges. But if you get these wrong, you will annoy people, and they will not even consider you for the rest.

The first easy win is about being on time because time is an important way that we communicate with others. If you are always late, you are saying that your time is more important than theirs, and therefore, that you are more important. Become conscious of whether you ever use time to assert power and control over others.

The second easy win is similar and involves getting back to people and delivering what you say you will. Whether it is a promotion you promised, an initiative you pledged to support, or financial backing you allocated for a new business, people will hold you to your word.

The third and last easy win has two parts: watch being negative in your word and deed, and don't gossip, especially not about your people. The easy wins are a good place to begin because they really speak to cultivating accountability, professionalism, respect and consideration for others, and having a positive, nonjudgmental attitude. These are basic qualities upon which you can build your leadership.

The more you learn about the irrational in you, the unconscious issues, the conscious secrets, the more you can strengthen your rational self.

When Personalities Get in the Way of Business

Psychological Principle #3: Everyone can't be like me.

All human beings have traits which are really defense mechanisms. These traits are the methods by which we attempt to keep all those feelings and thoughts that we find objectionable or shameful away from our awareness and tucked into our unconscious minds. When we become open to an awareness of which defenses we tend to use and how and when we use them, we increase our self-knowledge a hundredfold.

What defense mechanisms are your personal favorites, and which ones do you recognize in the people you work with?

Denial. If you don't see it or hear it, then it doesn't exist.

Repression. Similar to denial, but it stops things before there is anything to deny. People "forget" what has happened to them, as is common with victims of trauma and abuse. In the office, repression is often the reason people may claim that they were not told something, because they didn't want to know it or do it. In most cases, they are not lying; repression has kicked in to save them from recalling the offending comment or task.

Projection. If someone has a trait or a desire or a fear that he finds deeply unflattering or bad, he needs to get rid of it. So he tosses someone else the hot potato, he no longer has it, and the problem is "solved."

Displacement. Redirected aggression. It is what is behind the classic example of the man who kicks his dog when he is angry at his boss.

Intellectualization. A way to focus on an idea in the abstract and in great detail in order to alleviate anxiety.

Remember, the use of a defense happens unconsciously — the undesirable trait is not consciously acknowledged nor is the antidote. The overall purpose is always to keep the image we have of ourselves consciously untainted by characteristics we find objectionable, which are rooted to what happened to us in our past. The main objective is that you start to think in an insightful way about how you and other people function psychologically.

When Organizations Repeat Family Dynamics: Who's Your Daddy?

Psychological Principle #4: Organizations repeat family dynamics.

The déjà vu of the workplace is a real phenomenon because corporations and other entities have structures like families. There are authority figures who become like parents, and our peers and co-workers become the siblings.

Transference doesn't only happen in therapy or in coaching. It happens at work. We project qualities from old relationships, or from relationships that live only in our fantasies, onto the people we work with. They, in turn, may experience a **counter-transference**, wherein they become or resist what we project upon them.

Like families, companies require that we belong to them; they demand loyalty and obedience, and for this we are rewarded. Like our familial homes, they are more or less welcoming, more or less safe, and we don't want to be chucked out until we are ready to go. Working with others inspires us to recreate relationship patterns we have known in the past or wanted in the past. These relationships can be positive or negative. They can be triggered by something that is actually occurring, but they are usually unrelated, in reality, to what is going on in the present interaction. The workplace can provide the opportunity, but we are the ones who create the roles and write the dialogue.

Leadership, Transference and Counter-Transference

Transference is built into leadership. People look to someone who is powerful to solve problems, make promises and create possibilities, someone who will deliver them out of the wilderness. But if the transference is excessive, if the need is too great, something dangerous can happen. That is when people follow leaders who encourage them to violate their previously held values.

We happen to be living in an age and in a culture where business leaders are the new heroes on the much-preferred battleground of fame and fortune. People fantasize about being a Steve Jobs, and he is held up along with Bezos, Buffett and others as the new ideal. The media stokes the fire that turns transference into hero-worship, and admirers are plunged into the infantile posture of dependence and compliance.

Think about your style and whether or not you encourage transference. What are your fantasies about the people who work for you? What is your counter-transference? How do you think of them? What do you call them? Are they your kids or your other kids? Are they your troops or your guys (in the generic sense)? Are they your people of your team? Folks? Minions? Girls and boys?

You want to be clear with your employees about the actual relationships you have with them so as not to feed their imaginations. It is easy to take advantage of people in the workplace, so keeping appropriate boundaries is essential, and you should encourage a culture that is alert to not giving mixed messages.

Your responsibility is to stay on target. Don't muddy the waters. When things seem off, ask for clarification and reinstate boundaries. You help people to remember why they are here, what their role is, and what they contribute to the organization. You root them in the present reality; no more and no less.

When People Regress in Groups: Teams or Gangs?

Psychological Principle #5: People regress in groups.

Group spirit is hard to resist, and people often act differently when they belong. Groups at their best can become teams wherein several individuals work together collaboratively to complete a task for a common goal. Or groups can become gangs wherein people lose their individual views and values and act in ways that they never would act on their own. That is because of Principle #5.

The most obvious characteristic of a group is that it can obscure individuals and, therefore, individual responsibility. Responsibility gets diffused. People can hide in groups and get away with bad behavior. If you are thinking that this sounds very childish, you are right. Regression is a defense mechanism that lets us return to an earlier time in our lives and a more primitive way of behaving.

Why do people regress? We do it in response to some feeling or situation that we want to avoid knowing. When people come to work, they want to feel protected, safe and accepted. Sometimes organizations are not very secure places, and this causes employees to regress. If the organization doesn't seem to be a safe place, people will seek safety in numbers, in their work group or teams. If employees are not appreciated for who they are and if the message they receive is to conform, blend in, agree with and support the company at all costs, the whole organization will be in a regressive state.

How to Create Progressive not Regressive Groups

Perhaps the easiest measure of the consciousness level of an organization is to observe how well its teams really function. If you lead groups and are a member of groups, think about what goes on. In the groups you lead, are you the designated leader, or did you assume the role? Do you create a climate where people can disagree? Who tends to dominate, and who is mostly silent? Are there running jokes? Are they at anyone's expense?

When you are a team member, do you feel free to express your viewpoints even if they run contrary to the leader's or to the group's at large? Do you feel safe with your colleagues? Do teams meet their deadlines and accomplish their goals?

Teams can get past issues when they are run by responsible, conscious leaders who insist on respectful and productive collaboration. If you want to have groups that are respectful of each other and a culture that puts people first, you need to figure out how the difficult calls should be made and make sure you model that behavior. Work with human resources to create consistent policies and practices, and give HR professionals the authority to make sure business partners work with them to get it right.

Start by putting in programs to bring back manners that include rules defining how people are expected to act. For example, if there is an email disagreement, employees must arrange a face-to-face meeting or phone call to discuss the

issue, rather than leave behind a trail of snarky emails that have been copied to everyone and his aunt Lillian.

We also need to establish some taboos in order for groups and individuals to resist regression. Your leadership must provide the structure and the sense that what goes on here does indeed matter in small ways and big ways. The taboos that restrain regression must come from you. You must let it be known that you will not accept bullying, scapegoating, rudeness, meanness and inappropriate, unethical behavior of any kind.

Making Diversity Real

Psychological Principle #6: Everyone has preconceived notions of others, and these are largely unconscious.

With a globalized economy comes the need for the capacity to relate to people who are from different worlds, who look and act in ways that are different from you. If you and your workforce can't match those differences with openness and curiosity and respect, your competitors will. And the best way to achieve that edge is to make sure that you have a workforce that understands, through its own experience, how to communicate and relate and negotiate across difference.

That means that you need to hire, train, mentor, sponsor and promote people who are not the same as you. It means that if you do not want to be caught in a talent vacuum, you accept that talent now comes in different packages. But the majority of diversity programs have not produced the kind of results hoped for or required. This is because of Principle #6.

You may feel yourself becoming uncomfortable with this and react with, "This doesn't apply to me. I am not a prejudiced person." Think about it this way: evolutionary instincts and primitive cognition still cause us to seek out faces that look like ours for comfort and safety. We are still hardwired to recognize features that are similar to our own. But we also get into trouble if we do the opposite.

We Look for Differences and Overlook Similarities

If we are not conscious of what our individual prejudices are or might be, we may not realize how much attention we direct toward the differences between ourselves and others. We may seek them out with a vengeance to assure ourselves that the "other" is not like us, so that we can remain safe. If we keep things black or white, so to speak, we will know where we stand, secure in our comfort zone of familiarity.

When we focus on what is different in others, we can stick to our preconceived notions of them, and the possibility of real connection is lost. When we recognize that we share the essentials of being human and all that entails, differences become opportunities for our enrichment rather than psychological barriers.

There is clearly a time to look for the meaningful similarities we share with others that will help us overlook unessential differences. In order to do this properly, we must be conscious of what it is that we carry that influences how we are looking at people and situations. Unless we do the work, we will get it wrong. The poet and professor Dr. Maya Angelou was asked how what she says and writes resonates so thoroughly with such a wide spectrum of people, and she said that it came from "seeing us as more alike than unalike."

When we become comfortable with our essential sameness, our basic humanness, then we can delight in our wonderful differentness. As leaders in the globalized economy, you must take the landscapes of your organizations out of the dreary blue and grey that meant success in years gone by and embrace the true colors of world citizenship.

Learn How to Wear the CAP

Psychological Principle #7: Conflict, anger and power are forces you must work to master, or they will master you.

Conflict makes most people uncomfortable, and yet it is a prevalent part of our lives because inevitably we will all have differing views, opinions, needs and desires that will cause us to be in conflict. What do we do, then, with the feelings created by conflict? We are going to choose to live in a state of conflict-anger-power so that we can learn Principle #7.

Conflict: Why do people avoid conflict? Because they are afraid someone is going to get angry — either themselves and/or someone else. If they become angry and say something in the heat of the moment, they risk losing a relationship or an opportunity. And if it's the other person who gets angry and that person has power over them, there could be an even more disastrous outcome. That is why as soon as there is a whisper of conflict, people know that they are on a slippery slope and avoid it at all costs.

Most of the time, people simply need direct, honest feedback and coaching on how to deliver what is required of them. If you resist doing that because it feels too conflictual, you must stop and examine what you are holding

onto in your unconscious. If you think, "I don't want to hurt this person," think again, because your reticence will surely hurt them. The only person you are helping is you, not to feel uncomfortable. You need to let go of that conflicted state and get your passport to the state of conflict where you can deal with reality and not your fantasy.

It has always been true and always will be true that people leave or stay because of their relationship with their immediate manager. The litmus test of a good relationship is the ability of both parties to communicate clearly and to consistently confront conflict. Conflict itself is not the problem. In fact, intellectual conflict often leads to creative ideas and inspired discoveries. It is people's reticence to engage the conflict in a constructive, respectful manner without anger that is the issue.

Anger: Anger — and we are not talking about aggression — is simply a basic human emotion that has had the evolutionary purpose of telling us that something is not right in our world. It is a natural way to feel when someone takes advantage of us, lies to us, breaks a bond of trust, leaves us, dies or in some way breaks our hearts. Consciously and unconsciously, our anger history is always with us.

We engage in many defensive acts to keep ourselves from becoming conscious of our anger, and these don't help us deal with the anger; they camouflage it while it continues to grow. These eight behaviors are passive attempts to keep from feeling anger and represent what we shouldn't do with anger: denial, displacement, indirect attack, blame yourself, depression, sickness, anxiety and self-sabotage.

The first thing to do with anger is to recognize that you are angry. Feel it and own it. Now that you feel it, ask yourself, what is not right in my world that my anger is telling me? Next, review your issues, and honestly think about what angers you. Look at the present and what you might be misinterpreting or over-reacting to, and look at your past and what unresolved anger issues may be playing a role.

What is it about this situation, then, that is really making you angry? Think about the problem and its potential consequences. Is immediate action warranted? If you decide that confrontation is the appropriate course of action, think about the times in your life when you handled your anger most positively and achieved the desired result. How can you get yourself to act like that again, where you are likely to be successful?

Power: With leadership comes the responsibility of understanding and being aware of your power and how it is seen by others, so that you use it wisely, without unconscious agendas, without anger and with compassion. When people in power deliberately use anger to control more vulnerable people, it usually works. It is not uncommon in the workplace, because people depend on having jobs.

Still, abusive bosses who create workplaces that function on fear will never be as powerful as they think they are nor as productive as they could be. Being aware of your power and your anger quotient is essential for conscious leadership. A workforce that walks on eggshells and is constantly fearful of your latest whim or tirade can never be a conscious one.

Having real power today is about being able to look clearly at the big picture and understand where and how you want to influence strategies and policies. It is about building formidable loyalty in your power base, starting with getting those easy wins right so that you are seen as a person of integrity who can be trusted. It is being comfortable with confronting conflict and being seen as a peacemaker rather than a war monger.

When Change Is a Constant

Psychological Principle #8: Change is a constant in every workplace.

Like conflict, most people will say that they dislike change. Yet, it is generally acknowledged that more change has occurred in the last decade, largely due to advances of technology, than at any other time in human history. And there appears to be no end in sight.

Our natural, evolutionary response as human beings is to fear change and resist it. It represents the unknown and unfamiliar and carries with it the possibility that we will suffer harm. The complete truth about change is that it is always hydra-headed; it is about both winning and losing.

Since change that you will instigate and change that will befall you is inevitable, it is essential to first understand yourself and how you feel about change, before you can do any justice to it for your employees. How do you, personally, deal with change? Do you try to run from the unknown and seek a solution by rushing to action?

To accept uncertainty is to also become open to the feelings of vulnerability that come with it. Leading from that place is authentic, courageous and inspiring. In order to do that, you need to create a psychological structure for people, a holding tank if you will, to contain the emotions that threaten to swallow them up. You must acknowledge that loss accompanies the change in question and not try to minimize what they feel and how their lives will be altered.

Getting to Growth and Opportunity

The plus side of change is always growth. If we allow ourselves to move through the initial resistance and accept and mourn the loss that comes with the change, then we can make the transition of the change into a transformation of ourselves and our lives.

Creativity depends on the logical, rational mind collaborating with the illogical, undefended thoughts, feelings and memories that the unconscious mind entertains and embellishes in dreams and fantasies. Change encourages our capacity to be creative, to have a vision in the emptiness, to see how different things could be. When we allow uninhibited brainstorming, we allow the unconscious content to surface and be used positively. In order for this to happen, you must show that creativity is valued. The next time you are tempted to reply, "We always do it this way," say instead, "Why do we do it this way? How could we do it differently?"

Leadership through change doesn't mean clairvoyance; it just means guidance. You can't promise people that everything will be all right; that infantilizes them, and these days no one will believe you anyway. You tell them what the plan is and help them stay the course.

The Mind Does Not Take Care of Itself

Psychological Principle #9: Bad mental hygiene destroys thinking, productivity, creativity, and your ability to own the other eight principles.

Left on its own, the human mind doesn't take very good care of itself. It develops some bad habits. Like having an unwashed body and a mouth full of unbrushed teeth, we may begin our days without the daily maintenance and preparation that our minds require to function properly to meet the day ahead.

Daily Maintenance

Every day you will need to remind yourself of who you are. It has become very popular of late to have people craft a story of themselves in leadership development workshops. But it is important to keep your story honest, so that it doesn't become a method for hiding from your own truth. It also needs to be current — with updates and new observations — and descriptive of who you are in the present moment.

If daily maintenance sounds onerous, understand that the more you do it, the less time it takes. When leaders and their employees do not prepare, they are constantly caught unawares, and so many unwanted problems ensue: misunderstandings, arguments, faulty judgments, bad decisions and stunted creativity. Preparation means that your focus is on getting ready to meet the challenges of the day ahead.

Slowing Down

Probably the biggest deterrent to good mental hygiene is the speed with which we live our lives. We have been consistently losing our ability to reflect and calm ourselves. All day long, we make technological efforts to be connected —we email, text, tweet, link, befriend, but is anyone really connecting and reaping the calm and comfort of true connection?

People need breaks, empty mental time without outside stimulation. We need time to center ourselves, to be introspective, to reflect. When you create empty space, you can have your own thoughts. You can connect to yourself free of the agendas of the world, the media, your office or your family. Only then will you know who you are and what you really want from life and from your work. If you don't make the time to have this kind of relationship with yourself, you may wake up one day only to find that you have been living someone else's life.

Human progress has always depended on strengthening our rational capacities. That is what "making the unconscious conscious" does. If you are a leader, if you want to be a leader, if you want to be a better leader, consciousness can be your guide to worthwhile achievement and contribution. It is the doorway you must pass through to lead in an awake and mindful state. It is the only way you can hope to embrace the responsibilities of morality, legacy and dignity that come with your great privilege of leadership.

The leadership that needs to be made for our times awaits you.

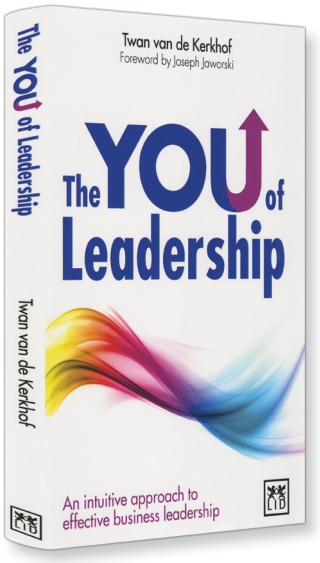
Leadership

The YOU of Leadership

An Intuitive Approach to Effective Business Leadership



by Twan van de Kerkhof

THE SUMMARY IN BRIEF

The YOU of Leadership describes the quality of leadership that is required in the face of the profound change and rising complexity our organizations are facing. The complexity is accelerating at a scale, intensity and speed never experienced before. To succeed in this new environment, author Twan van de Kerkhof argues that organization leaders must create new realities by connecting to both the world outside and the world inside.

Authentic and practical in style, van de Kerkhof takes the reader into complex scientific, psychological and spiritual territory with clarity and coherence. His emphasis is on a balanced approach to developing what Joseph Jaworski calls "Stage IV Leadership" — those with a healthy balance of power motive, achieve motive and service motive — all resting on a solid foundation of authenticity and core values.

The YOU of Leadership calls for the creation of a more advanced generation of organizations led by leaders who are willing to "start the journey inside." The success of an intervention is dependent on the inner state of the intervener. The way forward is the way inside. As van de Kerkhof puts it, "This may seem soft, but soft is the new tough."

IN THIS SUMMARY, YOU WILL LEARN:

- How to clear away the apparatus of the old industrial paradigm and begin to see everything with fresh eyes.
- How to take a journey inside to discover what drives you and access a source of wisdom.
- How to use your newfound inner wisdom to inspire others, help create the new paradigm, and transform the world around you.

Introduction

We are living in one of those rare moments in history in which we experience a shift of the organizational paradigm. We are going from the dominant industrial paradigm to a knowledge paradigm characterized by changes in how we lead, follow and organize.

The belief system of the old paradigm has outlived itself. The drivers of prosperity in the old system, like using our natural resources to the max, are blocking progress in the new system. In the emerging paradigm it is time for new assumptions, new language and new meaning. Leaders can help by fostering new ideas and showing new ways of behaving.

People want a leader who gives them space, who cares, who is trustworthy, respectful, compassionate and visionary. Leaders can only embody these qualities if they know who they are. To know who they are, leaders need to make a journey inside. They will not only become a better leader but also a better person from the journey. The journey inside is not easy. Self-awareness and showing your feelings are perceived as too touchy-feely and soft. Self-awareness is not soft but tough and a necessity for leaders in the new age.

The essence of leadership is perceiving the world as a place of opportunities, making an inner journey to discover deep personal drives, and, based on these perceptions and inner realizations, connecting with others in order to realize results. This practice of leadership involves a journey: In the first stage, you suspend your assumptions of current reality and see the world with fresh eyes. Next, you are invited to take a journey inside yourself. Finally, it is time for action. Based on your changed perceptions and your self-awareness, you will be ready to tackle the challenges that are facing you.

Many organizations can be more fun to work at and more effective than they currently are. Leaders have an enormous impact on that. Leadership improves when leaders start their journeys inside. If you are interested in your inner journey, you are in for a ride.

PART I: SEEING WITH FRESH EYES

Our current belief system is no longer capable of handling the challenges in today's world. Reality is shifting, and the shift invites us to look with fresh eyes on what we see before us. We don't need to break away from the old paradigm totally, but we do need a change in our belief system.

Leaders of large companies are best equipped to take the lead in this journey. First, because other actors in society, such as politicians, are letting us down. Second, because leaders have two important characteristics that qualify them for this job: courage and optimism. Courage is required to deviate from the security of the traditional collective belief system. Leaders are also much more optimistic than other people. They have a strong preference for what is possible and don't want to see or hear what cannot be done.

Society

The optimism and can-do mentality of leaders can be useful in answering the call of our time. Many challenges are currently facing the world and our societies. Who can

and will play a part in their solution? Large corporations can make a difference, and their leaders in particular.

Why Nobody Is Answering the Call of Our Time

True leaders have the courage to go left, even if everybody else wants to go right. That's not what politicians do. When the herd wants to go left, they follow. There is a lack of direction and vision for the future. Many politicians also think of themselves as more important than the issues they should take care of. They often measure their success in terms of media coverage instead of what they have accomplished.

Do grassroots initiatives offer an opportunity? There are tremendous examples of citizen initiatives that have had huge impact, from people who fought for liberty in the Arab Spring to the Pakistani girl, Malala, who defended girls' rights for education. But Robert Reich concludes that we prefer our interests as consumers and investors over our interests as citizens. We abhor child labor, for instance, but we still want a cheap pair of jeans. As investors, we allow our pension funds to buy shares of Shell, while as citizens we can vote against Shell's explorations in the Arctic. Sometimes some individuals stand up and make a real difference, but not enough to put our trust in them as the drivers of change in society.

So, will large corporations be our saviors? I think they will, if only by default. Companies don't have democratic legitimacy and some have messed up in the past. Nonetheless, I do believe that they are the only credible force of change in current society.

Business leaders and other members of the elite have more opportunities than most of us to exert influence. They have a disproportionate decision-making impact. They appear in the media and set the tone of the public debate. Therefore, they can be held responsible to use their influence for the better.

From Old to New World

We are living in a new world. Since the end of the Cold War, the world has become multipolar. Supply chains have become global, enabled by ICT. A product may be designed in one country, assembled in another, use the knowledge of dozens of specialists from all over the world and source components globally. The Internet is making everything available to everyone everywhere at any time.

The Western model of capitalism and democracy hasn't become the universal model for the world that some expected it to be. The bulk of revenues of international companies still come from the American and European markets, but other markets have been emerging. Growth of revenues is coming mainly from fast-growing economies like China, Brazil, Russia, Indonesia and South Africa. Companies are reallocating their budgets from the West to these fast-growing economies for marketing, innovation and talent development.

Leaders see globalization as a fantastic opportunity, yet they also need to deal with the fears from blue-collar workers who see their jobs disappearing. Leaders must acknowledge and cope with these fears while embracing globalization. Leaders also need to be aware that the future rarely follows a linear path from the present. It rarely unfolds as we think it will.

The Organization

Service industries, especially the knowledge-intensive kind, have become the dominant and most vibrant part of our economy: IT services, apps, gaming, music, film, consulting, coaching, etc. These services are tightly connected with information and communication technologies. Industrial companies have become less dominant in the overall economy.

From Pyramids to Pancakes

The emerging knowledge paradigm has a few key differences from the industrial paradigm. The first difference is that control was key in the industrial paradigm, but it is nearly impossible in the new paradigm. The production process of most services cannot be planned ahead. To let go of control, leaders need trust in themselves and in their people. People flourish if you treat them as if they are already great.

A second important difference is the position of the leader. In the industrial paradigm, employees worked for their boss. In the new paradigm, the leader works for his people. He creates the conditions that enable professionals to give the best of themselves. The leader is more at the heart than at the head of the organization. As Josephine Green, a former trend-watcher at Philips, says, "We are going from pyramids to pancakes."

A third difference is in the attitude towards failure and learning. In the industrial paradigm, there was an intolerance of failure. In the new paradigm, continuous learning is key. Failures are unavoidable and are seen as something to learn from.

A fourth difference is the attitude towards motivation. In the industrial paradigm, people had to be motivated

to accomplish tasks they would rather not do. In the new paradigm, professionals are already motivated to engage in their work. Leaders just need to make sure that they don't demotivate them.

The Rise of the New Generation

Generation Y and even later generations are entering the labor force with different needs than the Baby Boomers. The new generations are going straight for the top level of Maslow's pyramid: self-realization. They are not in it for the money, but rather to contribute to a better world and to develop themselves.

Young people want freedom and a vision, autonomy and acknowledgment, commitment and work-life balance. They want to contribute to a worthy purpose. They want to see the human being in their boss, not the functionary. Many leaders like to be in contact with the younger generation. Through the eyes of young people, they can see the new reality emerging. But to further that process, they first need to look into themselves.

Individual Leaders

Leaders cannot lead from a position of power anymore, but only from who they are. Therefore, they need to know themselves. The problem is that there is often a gap between who leaders think they are and who they really are. To address this gap, leaders should develop their self-awareness. Self-awareness precedes a potential change in behavior.

There are three primary social motives that explain up to 80 percent of our social behavior. They are the Power motive, the Achievement motive and the Affiliation motive. Most of us have all these motives to a certain extent, but usually one is dominant.

The Power motive is the most important and most archetypal motive for leaders. People with a strong Power motive like to use their authority to influence people and events. Research differentiates between personalized and socialized power. Leaders with a personalized power motive attack, argue, hide information and use threats, fear and force to show others their strength. Socialized power means "power-to": to get things done and inspire others to accomplish what is needed. A leader who is driven by socialized power is more effective.

The Achievement motive is about improving your individual performance. Achievement-motivated people prefer independence, control and efficiency. They work hard and fast. They are often creative and innovative in the way they do their work. As leaders, they are more interested in results than in the needs of their staff. Achievement-driven leaders are most effective in small and medium-sized organizations.

People who are moved by Affiliation are driven by relationships. They have high levels of empathy and are sensitive to the feelings and needs of others. They give more attention to building relationships than to performance. They don't like competition or conflict. They are considered less effective than leaders who are driven by the other two motives.

Leaders need to score highly on the Power motive to be effective in large organizations. Yet, my hunch is that leaders will have a higher Affiliation motive in the new paradigm. Leaders will also continue to score highly on socialized Power, in order to get things done.

PART II: THE JOURNEY INSIDE

Leaders not only need their brains but also their hearts and souls. They need to be aware that they are more than heads on feet. When they know themselves better, they can connect more deeply with other people. Their inner core should be aligned to their outside behavior.

Leaders base their decisions on intuition and subsequently use logic and rationale to explain their decisions to themselves and others. Their intuition is often right. That is why they have come so far in their careers. According to Joseph Jaworski, it is not only about inner wisdom but also about connecting to a greater and deeper source of wisdom. If you as a leader are able to tap into that source, you can access a much greater wisdom than you have inside yourself individually.

Become Shockingly Effective

As a freshman at Baylor University in Waco, Texas, Joseph Jaworski experienced one of the deadliest tornadoes ever in the U.S. and afterwards found himself helping in the streets. With a small team, they searched for and dug out survivors and recovered bodies from the debris. Says Jaworski, "While we worked together, I experienced a palpable energy field surrounding us. My sense of awareness was acute. I possessed an uncanny clarity, a sort of panoramic knowing. Time slowed down. We were able to perform very difficult tasks with apparent ease... We operated as a 'single intelligence' — as one organism … I was struck by the deeper level of knowing that I embodied."

Joseph has been looking for the spirit and nature of this experience to be able "to harness this phenomenon in organizational settings for the benefit of all society." How can we repeat the miracle of the effectiveness he experienced in Waco in organizations, without having to experience a tornado or a crisis in general? His answer is that we can all access a "Source" and have similar experiences to his "shockingly effective" work in Waco. But to access this "Source," we have to first make our journey inside.

Astronaut in Inner Space

All spiritual traditions have their own ways for this journey inside. I have been influenced the most by the Diamond Approach and by tantra.

The Diamond Approach to Inner Realization says that we can experience our true nature as a transcendent eternal truth. This contemporary spiritual teaching takes everyday experiences as its starting point for deep reflection. Every experience can be inquired into and harbors lessons about who we really are, how we became who we are now and what we can still learn. This inquiry and subsequent awareness supports and cultivates each individual's uniqueness to his or her fullest potential.

Tantra is an ancient tradition from India. At the core of tantra, similar to the Diamond Approach, is the inner realization of the truth that the Divine can be experienced in everything we do or think.

Both the Diamond Approach and tantra work with the concepts of essence, ego and superego. Our essence is our essential being, that unchangeable core. Tantra says that we lost the natural contact with our core being at a very young age. Because it is too painful to experience the disconnect from our essence, we construct the layer of the ego to cover the holes we feel.

The ego is our winning formula in the world. It helps us get externally what we feel lacking internally. We collect lovers, cars, shoes or antiques to fill these holes. We become so good at this that we even forget about the holes and essence beneath them. The ego is basically a structure of lies, and we are addicted to it. It is hard to give up the addiction. Letting go of our winning formula creates fear, even if the formula doesn't make us happy anymore. Our ego is like a Band-Aid around our essential qualities, but we cannot just rip it off. Compassion is needed.

The superego is formed by all the voices that disqualify or reject our experiences. The superego's function is to keep our ego intact. The superego is our inner critic, constantly judging us. We have internalized many external voices, and most of them have become unnecessary baggage. It is difficult but very necessary to silence the superego, because it blocks the unfolding of our essence.

To know oneself is a lifelong journey, an unending open inquiry, a great ride into the unknown of the consciousness. It is being an astronaut in inner space.

The Journey Begins

It requires guts to stand apart from the marching crowd and look inside. Leaders are used to operating from their egos. For them it is even harder than for most people to let go of their winning formula.

Leaders need relaxation to let go of control. Relaxation starts by feeling in your body where you are holding contractions or tension, both physically and emotionally. You can't force it. If you try too hard, you will only contract more. Your body will open deeper and deeper in its own time. Relaxation is difficult for leaders, with their full schedules and their high adrenaline.

Once you have relaxed, the next step is to observe your feelings without changing them. If you follow the feeling deep inside, you might discover its roots. When you can observe your feelings, you can start to process them. You are not a hapless victim of your feelings but the driver of them. Taking responsibility for what you feel and what you'd rather not feel is part of this process.

Don't avoid any feelings or experiences, however unwelcome. Wherever you are in your self is completely fine. The art is to stay present without a preference for what you are experiencing. Presence opens up the power of acceptance; it allows us to be with whatever arises.

Being present is tapping into a deeper knowing, which Joseph Jaworski calls "Source." Presence is an eternal field from and in which all experiences develop and to which they return. Presence is always there, and you can always connect to it. If we are open to it, we will meet people with similar intentions or mindsets. We get help from hidden hands, and doors are suddenly opened.

The L-word

It is an act of love to support another individual to fully bloom without having any interest in the outcome yourself. In that sense, leadership can be perceived as an act of love. But the most important love is not the love for others, but the love for ourselves. You can only truly love someone else if you love yourself. Otherwise, what seems like love for the other person is probably your own inner need that you are trying to fulfill through someone else.

But love is not enough for leaders. Love is necessary for leadership, but so is power. Writer Adam Kahane defines

power as "the drive to achieve one's purpose, to get one's job done, to grow." Power is also the ability to be yourself in the world, to make yourself visible, to occupy your own space. Power embodies your singularity and independence.

Real power comes from Source; false power from your ego. False power looks robust and strong but is inflexible and stiff. It expresses itself in statements like, "I don't need anyone" and "I am not afraid of anything." False power places a barrier between the heart and the world. Real power, however, enables you to remain sensitive while expressing your power.

Kahane's central point is that power and love need each other. Love without power will reinforce the status quo instead of bringing about changes. This combination of power and love is also necessary for the journey inside. Power is needed in order to stay true to whatever you experience. But it is also an act of love to accept everything you discover in yourself as yours. Power is necessary to stay present if things get scary and if the superego attacks. You need compassion for yourself. Finally, power is needed to let go of your old assumptions, even if the future is not yet clear.

Power is never absent in life; it can only be concealed. Power is often concealed because it is confrontational. When nobody talks about power, it is much harder to deal with. But not only is power concealed, love is, too. In most corporations, love is not mentioned at all. It is practiced but concealed. Leaders have to reconcile power and love.

PART III: THE WAY FORWARD

Now it is time to show yourself to the world. Because of your journey inside, your inner state has been altered, thus changing the impact of your interventions. You will create a new reality by being who you are, not by doing. It is non-doing with the impact of getting things done.

In this step, we will ascend from the position of the individual leader to the organization and on to society.

The Individual Leader

"Learning is reflecting on doing," according to management professor Henry Mintzberg. The greatest pitfall for leaders is to immerse themselves in actions, in doing. They can forget about reflection and therefore miss opportunities to learn from their actions.

The process of setting a strategy and executing it is an ongoing combination of action and reflection. In a full life, harmony exists between action and reflection. It is a dance between the inner and outer world, doing and contemplating. You act, you experience the consequences, you reflect. Having become wiser, you then make your next move.

To access inner wisdom, spiritual traditions suggest that you start by finding the silence within yourself. Temporarily stop the noise of the activities in your body and mind and in the outer world. When the mind is silent, something beyond thought comes into operation. The bandwidth of our receiver becomes wider, which enables us to receive signals that were too weak to hear before. Our filters and barriers are temporarily out of operation. Our ego and superego might shut their big mouths for an instant.

From this deeper place of knowing, you can take decisions for situations for which analysis doesn't offer the solution. Access your inner wisdom, let go, and the answer will come. Your personal journey can take many forms, but accessing silence and working on your relaxation do need to be part of it. Some people access their creativity and silence while running, listening to classical music or sailing. Find the path that fits best with you at this stage in your life.

Creating Countervailing Powers

A leader needs to find the people who will speak up to her, who are not afraid, who are not attached to their positions too much. The more successful a leader is, the less contradiction she will encounter. The countervailing powers fade away, unless they are invited. Followers start to believe that the leader is always right. It is very important, then, that the leader finds a few people who have the courage to be honest and who she won't punish for their honesty.

Leaders have to face the fact that they can be wrong, that they don't always know the answer. Contradicting voices can be found within the organization or externally. Within the organization, contradicting voices usually come from people who have worked with the leader for a long time and who are not necessarily in a comparable position. Countervailing power can also be built into the top structure of an organization. Shell, for example, explicitly chose a model in which the CEO was not given sole decision power.

The Organization

"Who am I?" and "What am I here for?" are excellent questions for individuals but also for organizations. Leaders need a sense of direction for where they want to go with their organizations, based on who they are and what opportunities they see around them. It is important that this is not a detailed image. It is more about intent than content. It should offer employees, citizens and other stakeholders guidelines for what they should and shouldn't do. It provides them with a sense of purpose. The leader will navigate the organization in that general direction, facing all the complexities along the way, trusting in his deeper knowing as a compass that will tell him if the organization is still heading the right way.

A dream, or sense of purpose, is by definition about the long term. However, many leaders, especially in the West, are currently plagued by myopia. Leaders are caught up in the quarterly disease. When leaders navigate their organizations toward the future with a dream as their compass, they cannot measure success by earnings per share or total shareholder return. Totally different key performance indicators are needed, like employee engagement and customer satisfaction.

Leaders should consider limiting the use of bonuses. Research shows convincingly that bonuses are not an effective way to steer the behavior of managers. Bonuses lead to poor decision making: everything that is important yet hard to measure will be left out. Managers will only take into account what contributes to getting their bonus.

When leaders start to navigate their organizations in this way, they need followers to take their responsibilities seriously. The phrase "light leadership and heavy followership" describes this approach. The rise of knowledge work, the continuing professionalization of jobs on all levels, and the increasing emancipation of people from all backgrounds — these are examples of the trends that demand a lighter form of leadership than command and control.

Heavy followers take responsibilities; their following is active and engaged. They do not passively wait for their leader to lead. A professional with ample experience in a specific subject may lead a project team on one issue but may be a follower in a different setting. The key is empowering employees by letting go of command and control.

Leading Change

Change in the new paradigm is different from the industrial paradigm. To push through what leaders want regardless of the preferences and worries of others doesn't often work. The others will push back, stall necessary actions or even obstruct them.

The alternative is a much more organic practice, in which change is perceived as an open-ended journey. DSM, a Dutch international nutrition and life sciences company, focuses on the *why* of change, and only much later on the *what* and the *how*. Microsoft Netherlands decided to create an environment with much more freedom. Based on a joint sense of direction, every manager has the ability and responsibility to decide for himself or herself how to contribute to that joint purpose. Managers agree upon commitments, not results. People decide for themselves if they come to the office or work from home. Productivity and employee engagement have increased because of this new way of working. People feel they have their fate in their own hands.

Engaging in Dialogue

An overwhelming majority of meetings and conversations are conducted as discussions or debates. Complex issues are hushed. Debaters just omit the parts of reality they don't like and obscure their doubts.

In a world of increasing complexity, we need dialogue instead of debate. A dialogue gives leeway for searching, nuance and doubt. Having dialogues instead of debates is one of the most important contributions a leader can make to his organization. To talk honestly and to discuss what used to be undiscussable makes the organizational discourse much richer. If participants collectively inquire into their assumptions and values, unity will arise in the group.

Time and attention are key words for dialogue. Those are difficult words in the 21st century, in which speed is everything. Organizations are governed by speed. We expect leaders to make their decisions quickly. So who is taking the time to reflect and think about what really matters?

Every leader can start dialogues in his or her organization. Be ready to acknowledge that you don't know everything; be prepared to say what you find difficult, that you have been sad or angry. Don't avoid difficult issues, but deal with them. Listening is even more important than talking in a dialogue. Listening is also about being aware of your own thoughts, being sensitive to physical signals, observing the body language of other participants and reading between the lines. Sometimes a world lies hidden beneath the words that people use.

Dialogue requires that we each travel inside ourselves to see what's going on. Be personal, be vulnerable, be human.

Modernizing Governance

Theoretically, the Supervisory Board is the best countervailing power for top management, but currently they don't realize their potential. Boards are usually a collection of very large brains on feet, throwing analyses and testosterone around. They talk *to* rather than *with* each other. Dialogues are almost nonexistent in boardrooms.

There are four problems with Supervisory Boards:

1. **They avoid sensitive issues:** They focus on the company performance and don't deal with the "soft," underlying dynamics. They should ask penetrating questions without stopping if executives become defensive.
2. **They are not a team:** You don't get to know each other if you only discuss performance and strategy. You have to talk about who you are and what drives you.
3. **Their information is insufficient:** Nearly all the information they get is provided by the top management they are supervising. Don't ask for permission; go where you think you should go. Visit the accountant, the union, the investors, suppliers, customers, bankers or a subsidiary.
4. **They are too close to top management:** They empathize so much that executives and non-executives bathe together in a glow of mutual sympathy. They can be reluctant to do what might not be well received.

There is an irrevocable trend that non-executives will get more involved in the organization's daily business. The distinction between one- and two-tier boards will fade.

Protecting Ponytails

Diverse organizations deliver better performance. So organizations need diversity. This can be diversity in gender, culture, age or education, but above all diversity in mindset and perspective.

It requires a conscious effort to not only understand why others behave so differently but even appreciate the added value of these differences.

Diversity brings in free spirits. Free spirits are necessary to think outside of the box. They have the courage and curiosity to question and don't accept the status quo.

Diversity needs the active support of leaders. Every system tends to shut out unfamiliar elements. Systems don't like elements that are different from the majority. The stronger the culture of the organization, the more likely that it will oust whoever or whatever it considers alien.

Leaders should therefore protect the free spirits. At Heineken they used to call their free spirits "ponytails." Managers at the beer multinational are usually neatly groomed, and ponytails became the nickname for those who were different. Every system needs its own ponytails to enable innovation and renewal.

Society

Large corporations are the most important vehicle for change in society. Business leaders in particular have to step up to the plate as part of the global elite. Society needs them to develop a vision beyond the next quarter and beyond the interests of only their company.

Some leaders are completely rethinking the way our economies operate in order to prepare us for the future. Most leaders have stopped repeating the mantra that external effects are none of their business. They are taking their responsibilities seriously toward their employees, clients and the world at large. Surprising coalitions and initiatives are springing up that are beyond philanthropy or corporate responsibility. Change seems to be in the air.

Corporations have become suppliers of meaning. The traditional suppliers of meaning, like church and state, have become less relevant. Companies have stepped into the vacuum. They ask themselves what they add to the world. How can they deliver greater social benefits? How can they benefit the communities that they are part of?

The societal functions of the organization have both moral and economic dimensions. The business of business is more than business. Social problems create additional costs for business, and it is in their interest to solve these problems. Reducing the input of energy or raw materials not only helps the planet but also saves costs. Increasing safety not only saves lives but also reduces the cost of accidents.

Business leaders have to take the lead, but they need all the other stakeholders to answer the call of our time. They cannot tackle big issues like global warming by themselves. They need respected governments to change laws and robust communities of citizens to act more responsibly. It is complex, but that is what change is.

The way forward is the way inside.

The Decision Maker

Unlock the Potential of Everyone in Your Organization, One Decision at a Time

by Dennis Bakke

THE SUMMARY IN BRIEF

Who makes the important decisions in your organization? Strategy, product development, budgeting, compensation — such key decisions are typically made by company leaders. That's what bosses are for, right? But maybe the boss isn't the best person to make the call.

The Decision Maker, a leadership fable loosely based on bestselling author Dennis Bakke's experience, shows us how giving decisions to the people closest to the action can transform any organization. As a student at Harvard Business School, Bakke made hundreds of decisions using the case-study method and realized two things: decision-making is the best way to develop people, and that shouldn't stop at business school. So Bakke spread decision-making throughout his organizations and has given thousands of people the freedom and responsibility to make decisions that matter. He used it to build AES into a Fortune 200 global power company with 27,000 people in 27 countries and to create Imagine Schools, one of the largest non-profit charter school networks in the U.S.

When leaders put real control into the hands of their people, they tap incalculable potential. *The Decision Maker*, destined to be a business classic, holds the key to unlocking the potential of every person in your organization. The idea is simple. The results are powerful.

IN THIS SUMMARY, YOU WILL LEARN:

- Why bosses aren't always the best people to make every decision.
- Key assumptions underlying a decision-making organization.
- How to create a decision-making culture in your organization.

Introduction

Nothing tells you more about an organization than the way it makes decisions. Do leaders trust team members? Do the people closest to the action get to make the call? Do team members have real responsibility and real control? All of these questions can be answered by one other one: who gets to make the decisions?

Nothing affects an organization more than the decisions the people in it make.

Decision-making is at the heart of all business education. Nearly a hundred years after the case-study method was invented at Harvard, it's still the foundation of the world's best business programs. Why? Because the case-study method puts top business students in the role of decision-maker. Decision-making is simply the best way in the world to develop people. And real life decisions are more important — and more fun — than any case study.

But outside of business school, few business leaders tap into the value created by putting important decisions in the hands of their people. Instead, "team players" are taught to do what they're told. This robs people of the chance to contribute in a meaningful way. Or, organizations will use a participatory style of decision-making in which recommendations are given to the boss, who then makes the final decision. These approaches fail to fully realize the value of the people in the organization.

In a decision-maker company,

- the leader chooses someone to make a key decision;
- the decision-maker seeks advice (including from the leader) to gather information;
- the final decision is made not by the leader, but by the chosen decision-maker.

The idea is simple: treat people like people, not machines. When leaders put control into the hands of their people, at all levels, they unlock incalculable potential.

The Decision Maker is a fable that shows how the ideas that transformed AES and Imagine Schools can transform any organization. The events are fiction, but the passion, purpose, moral questions and common sense are rooted in decades of the author's experience. These ideas can affect the bottom line, but it's not just about the numbers. It's about people: what makes them tick and what they can achieve when they're given real responsibility and real freedom.

All of us can make good decisions. This story is not just for people who currently lead organizations. It's for managers at any level who want to unlock the full potential of the people around them. No matter where you stand in your organization, change can start with you.

Bosses Are Less Informed Than People Closer to the Action

Tom Anderson could see the smoke rising from the manufacturing floor long before he reached the site of the explosion. When he arrived, the machine wasn't just broken. It seemed to have been obliterated.

His partner, Jim Travers, was there already. "This one's a total loss."

Columns of numbers began to run through Tom's head. He and Jim had taken over the medical device company only two weeks ago. They'd sunk everything they had into it. Their business plan was aggressive but lean. Tom knew it couldn't withstand a shutdown for long.

"Are you kidding? Where was he?" Tom said, referring to Anton, the worker supervising the machine.

"Doing what he was told," Jim said. "He caught the indicators right away. He knew something was wrong. So he went to get his shift supervisor."

"He didn't know how to shut it down on his own?" Tom asked.

"Oh no," Jim said. "He probably knew better than anyone in the plant. He does it at the end of every shift. But he wasn't authorized. Only the manager could shut it down mid-shift."

Tom glanced around at the clusters of workers in the aisles. One man glanced back at him and then quickly averted his eyes, as if he was worried any contact with the boss might lead to trouble. Tom recognized the look.

As Tom followed Jim away from the broken machine, it wasn't the machine that stayed stuck in his mind. It was the faces of their people. They knew how to get a machine into good working order, but people weren't machines. They were a lot more complicated, and they didn't come with a simple handbook.

What about them? he wondered.

The Big Game

"Paid breaks," Tom said, listing the advantages of life at MedTec to his wife over the squeak of sneakers and slap of the basketball on the court where his son Jason played below.

Out on the court, the game had been hard fought. Now the score was tied. In the last scramble for a shot, one of the players on the opposing team fouled as the clock ran out. Jason was handed the ball and stepped to the free-throw line.

Everyone watched Jason anxiously — the coaches, the refs, his team members. When Tom looked at Jason's face, though, it was concentrated and confident. Jason was totally focused, in a world of his own. He looked, Tom realized, like the happiest guy in the place.

The ball arched through the air and dropped through the net with a barely audible swish. A roar of victory thundered through the court.

As they headed to the parking lot, Tom still couldn't get the look he'd seen on Jason's face out of his head. It should have been a hard spot to be in: serious pressure, with serious consequences. So why had Jason looked so happy?

The answer struck him as he opened the car door. Jason had been happy because he had the ball. For that one moment, he was the only person in the gymnasium who had control over what was about to happen.

"It's fun to have the ball at the crucial moment," Tom said to his wife. "And that doesn't happen for our people at MedTec. That's why Anton couldn't shut off the machine before it blew. Because we didn't let him have the ball. We need to let our people make decisions about the things that really affect them. They're the ones on the line. They're the ones who understand the research and the manufacturing. They know best, not us. We need to free their hands so they're able to make the shots that count, when they matter most."

Tom thought about it more. "We're the coaches, but we've been trying to play the game, too. You don't see the coaches dribbling up and down the basketball court. That's not what they're supposed to do. They choose the players to send in. And then they stand back and let the players play the game. You can't tell a player what to do every single play. It'd ruin the game."

That's Your Decision

"This isn't exactly a new pinball machine for the employee lounge," Jim said, looking up at Tom from behind his desk. His expression was clearly skeptical.

"Exactly," Tom said. "It's a whole new way of doing things."

"Right," Jim said, with the tone of forbearance he used when he was waiting for Tom to come back to earth again from one of his visionary flights. "But there's a reason not everyone in a company makes the big decisions. Not everyone has been trained and has the experience."

"They don't have it because we never give it to them," Tom countered.

"Look," Jim said. "Say this was the best idea in the world. We're still easing into our leadership roles here. We've got a fiduciary responsibility to our investors, and they signed on for MedTec as it stands, not for some grand experiment in changing the face of the way we do business. I don't think this is the time for a big change. Especially not one that could have a negative effect on profit."

"But these problems are costing us *now*," Tom insisted. "We're not going to hit the first-quarter numbers we could have because Anton wasn't allowed to make the decision to turn off his machine. This is good business sense."

Tom continued, "Money isn't the best motivator. People want all kinds of things money can't buy. They want time with their family. They want to enjoy what they do. They want to feel like they're part of something meaningful. They don't just want to get paid. They want to live a good life. And when we tap into that, we release all kinds of

productivity and efficiency — because our people care about what they're doing, and they're working for something they really want."

"It's just like a basketball game. A coach can't play all the positions at one time. He can't even tell each player how to play the game. He coaches the players and chooses who to send in. But he can't play the game for them."

Jim sighed and lifted his hands from the desk in a "you got me" gesture. "I'll tell you what. You go ahead and try this new idea. That's your job. I'll watch the bottom line. That's mine. And if what you do in your job starts to affect mine, we'll need to have another conversation."

"But you're willing to try," Tom prompted. "That's your decision."

"That's my decision," Jim said.

Basic Assumptions

About two hundred people gathered in the MedTec lounge for an all-company meeting. Tom and Jim had met with a handful of managers and team leaders to discuss Tom's ideas before rolling them out to the company.

"What are the basic assumptions of the modern workplace?" Tom asked the group. "We've got a lot of rules, because we assume people can't think on their own. We've got managers and consequences to keep us in line, because we assume people are going to break the rules we give them. We aren't supposed to color outside the lines. We're always supposed to ask for permission. We take grown people, and we treat them like kids. Not even good kids. Like kids we're pretty sure can't be trusted."

"What that means," he went on, "is that the bosses end up with all the decisions. It can be a lot of fun to be the guy who's got the ball on the line for a game-winning free throw. Not because there's no pressure or consequences. But because the decision is yours."

"We don't want you to be cogs in a big machine. We want you to have a say in what happens around here. Especially in your own areas and about your own jobs. Because you're the expert there. We aren't. Your boss isn't. We want to put you in a position to use your abilities. We want to put you in the game."

The applause as Tom stepped away from the podium wasn't exactly a standing ovation, but it was a shade less tepid than he'd heard in other business settings. His management team, on the other hand, looked even less enthusiastic now than when he started talking.

The People Closest to the Decision Know the Most and Feel the Most Ownership

"Ben," Tom said. "Great to see you. Please have a seat." Ben, a stocky, silver-haired man, was the area manager who oversaw the manufacturing shop, as well as Anton and the ill-fated machine.

"I thought it'd be good to talk," Ben said, "about some of these new ideas you're rolling out."

"I've got to tell you, sometimes there's an ugly ditch between what you'd like to see happen and what does. I'm not really sure the people we've got here in manufacturing are cut out for this kind of thinking," Ben said. "People who take these line jobs lead a bit more of a punch-the-clock life. These guys on the floor, they just want to get the job done and go home. These aren't the college-educated guys you've got over in research. These are line workers."

"I understand that," Tom said. "But it doesn't matter whether you have a degree or not. Nobody knows more about how to do your job than you do. And they've got years of experience actually doing the work."

"But what if they make a bad decision?" Ben objected.

"Have you ever made a bad decision?" Tom asked.

Ben studied Tom's face. "Everybody has," he said, his tone slightly defensive.

"I have too," Tom said. "Probably more bad ones than you have. Just because you've got 'manager' somewhere in your title doesn't mean you're immune from making bad decisions. And not being a manager doesn't mean you can't make good ones. Let's give someone else a chance to make decisions, too."

Watch the Numbers

"They look good," Tom said.

Jim sat in one of the chairs across from Tom's desk, gazing down at a copy of the monthly report.

Tom explained sales were up a significant amount because the sales people no longer needed an approval from a manager, which could take hours for review, giving customers time to cool down, renegotiate or change their minds.

"We've also got a slight dip in personal expenses on the sales team too," Tom said. "They took the limits off the expense accounts and told each salesperson how much had been allotted to them in this year's budget for expenses. And that if anything was left over, they could spend it at their own discretion to build the business."

"Interesting," Jim said.

"Hey," Tom said. "What's wrong? These numbers look good. Better than we expected."

"I know they're good," Jim said. "It just doesn't feel good. I used to know that you were on top of things. You had it all under control. You spent your time looking at the big picture. And now you're spending all your time giving these decisions to someone else. I guess I'm just not convinced they're going to be making the same caliber of decisions you would. I know the numbers look good this month. But I wonder what they're going to look like down the road, long term."

"I can't tell you what's going to happen down the road," said Tom. "Nobody can. But I'm sure we're going in the right direction. And the numbers are good this month. I don't know what else we could ask."

"I trust you," Jim said. "But I trust the numbers most of all. And if they start to turn south, I don't know if I can let this go on."

"That's fair," Tom said.

Advice

Off to the side of Tom's desk was the whiteboard where he'd been working out decision-making ideas over the past few months. In the upper left hand corner, he'd made a permanent list of his assumptions about their people:

- Unique
- Creative
- Trustworthy
- Capable of Learning
- Responsible
- Like a Challenge
- Desire to Contribute

"I think I've got another one for you," Jim said. At the bottom of the list he scrawled: *Fallible*.

Later, Tom added *fallible* to the bottom of the list he'd just scrawled on the whiteboard in the company lounge. When he turned back, the entire staff, assembled again, stared back at him, some with interest, some with familiar blank stares.

"We believe all these things are true," Tom said, pointing to the words he'd listed above it: Unique, Creative...Desire to Contribute. His finger stopped again at *fallible*.

"But we also have to face the fact that we all make mistakes. Me just as much as you. The most experienced person in the world can't make good decisions if they don't have the information they need. So we're going to add another piece."

Advice, he wrote on the board. "It's pretty simple. When you've got a decision to make, you get advice about it. From here on out, we want you to consider this part of your job. Not every decision has to be perfect. But absolutely every decision-maker needs to seek advice. To us, that's even more important than getting it right every single time. But I think we'll get it right a lot more often with this process than we would without it."

The Big Picture

Helen Harris, one of the savviest private-equity investors in their field, had financed a large part of MedTec when Tom and Jim took it over. Now, she swept into the room, her skepticism unmistakable. Learning about the company's plan to bring transparency to MedTec's finances, she demanded an immediate sit-down with Tom and Jim.

"And how has that gone so far?" Helen asked, with a slightly sardonic air. "Letting the teams set their own budgets?"

"Well," said Angela, the company's director of human resources, "in the short term, it's cut costs. I'd expected to see some efficiencies, but not this many."

"I would have expected that we would already be seeking efficiency in our budgeting," Helen said, with a meaningful glance at Jim.

Jim shifted in his chair. "Of course," he said. "But the reality is that the budget is created by hundreds of decisions at every level of the company. Until now, only owners and executives got to see the big picture. And benefit from any profit. Nobody else was able to see how their spending affects the rest of the company. And they didn't have much incentive to curb it, because we hadn't had a system of profit sharing or bonuses."

Angela said, "Coupled with the transparency, it's been powerful. It's not that we'd negotiated bad deals with our suppliers. But when we gave our people responsibility for their own budgets, we saw them go back and negotiate even better deals. Now they're using only what they really need. In some categories, spending has dropped drastically."

After reviewing more financial information, Helen said, "I can tell you one thing. I've been in business for 32 years, and I've never seen this degree of upheaval in a company before. You've taken on a lot all at once. New owners. New leadership style. I agree that you've got a handful of nice stories. I'm just not convinced you've got a healthy business."

"Well, I can tell you what we're seeing," Tom broke in. "When we started giving decisions to our people, they started making better ones, and faster ones, everywhere in the company. Costs have dropped. Sales are up. We're seeing fewer accidents, and less waste. And we're seeing

higher productivity on the manufacture of our original products, even as we're ramping up the new ones."

Jim took a deep breath. "I know it sounds crazy," he said to Helen. "Because it sounded just as crazy to me. But I'm actually glad you came in today. This is still a good business. You can see it right there in the numbers you've got on the page. But there's something going on here that you can't see from the numbers, no matter how good they are. There's something special about this company. We're doing something that matters here. It's a place people want to be."

"I make it a practice to trust my leadership," Helen said. "And I do trust you two. That's why I invested in MedTec. Because of you — not the company or the product. But I'm going to keep an even closer eye on things than I have been."

At the door, she turned and looked back. "And if I have to get involved," she said, "I don't think you'll like it."

People Are Often Treated Like Machines, Not Human Beings

"Hey," Tom said. "What's going on?"

Vanessa Dominguez, Tom's administrative assistant, crossed to the chairs opposite his desk and sat down. "I'm working on the section about manufacturing standards for the new product," she said, and stopped.

"Yes?" he said. "Is something wrong?"

"It's the advice process," Vanessa said. "As far as I can tell, there wasn't one."

That wasn't great, Tom reflected. But it wasn't a disaster by any stretch of the imagination. "Who was the decision-maker?" he asked.

"Ben Malkmus," Vanessa answered.

"Okay," Tom said, and frowned. It might not be a big deal but he wasn't looking forward to confronting Ben about the problem. They hadn't ever had a manager of Ben's stature totally ignore the advice process.

Tom forced a smile. "I'm glad you brought this to me," he said.

"So what do we do?" she asked.

Tom met her inquiring gaze. "I don't know," he said. "Yet."

Their Own Ideas

Tom found Ben on the manufacturing floor, deep in conversation with one of the line workers.

"Tom," he said. "Good to see you. What brings you down to manufacturing? You looking for a tour of the new tooling we're putting in place? We're running two weeks ahead as we speak."

"That's great," Tom said. "So tell me, what was it like to use the advice process to roll out the new product? What kind of input did you get?"

Ben's eyes suddenly became wary. "Ah, you know. Everyone has their own ideas."

Tom nodded. "Like what?" he pressed.

Ben's mouth pressed even tighter, and the color began to rise in his face. He glared down the line.

"You want the truth? I'm an expert in manufacturing. I've been working in it all my life. Nobody knows this shop better than I do. I didn't need anyone's advice. No offense to you and Jim, but you haven't even been here a year. What were you going to tell me that I don't already know?" Ben asked.

"So what you're telling me," Tom said, "is that you set the manufacturing standards for the new product without consulting anyone else?"

"I could have gone out and asked some questions, sure. But what would the point of that be?" Ben asked.

Tom's blood was boiling, but he managed to keep his voice even when he finally did speak. "The advice process isn't optional in this company. It's not just about the bottom line. It's not even just about the right decision. It's about the right way to do business."

"If your decision is as good as you think, the advice process will only bear you out. You're ahead of schedule, right? So it'll give you something to do with all the extra time. We'll work through it together, you and me. And once we've run the advice process, we'll need to talk about the fact that you ignored it."

"And then what?" Ben demanded, his voice rising in alarm.

"And then we'll make any decisions we need to about that, too," Tom said, and walked away.

Is That Your Decision?

"Wait," Jim said, "isn't this supposed to be one of the decisions we get to make?"

Angela glanced at Tom. He and Jim had just sat down in her office to get her advice on the situation with Ben.

"I'm afraid it's not quite that simple," Angela said. "One of the decisions we made is that decisions about hiring and firing should get made by individuals on teams," she said. "They're in the best position to know who they need and to identify hires who are a good fit with the team culture. Individuals on teams have held those decisions for the better part of a year. And it's working: turnover, especially for new hires, is way down."

"Here's an idea," Tom said. "It leaves the decision in the hands of the team. And it takes into account the fact that Ben's the team leader. Make Ben the decision-maker."

Angela and Jim started at him.

"Have him go through the advice process," Tom went on. "Be the one who gets the feedback from his team on what he did and what kind of leader he's been."

"You really think that would work?" Jim asked.

"I think it could work," Tom said. "If we walk through it with him."

A few days later, Ben settled heavily into the chair behind his desk as Tom took the seat across from him. Much of Ben's confidence and bluster were gone, but he looked strangely calm.

Over the past few days, Ben and Tom had worked their way across the whole manufacturing floor, asking questions about Ben's leadership: what it was like, how it had affected the people and the company.

Nobody came right out and said that they thought he should step down, but when they described what they'd look for in a boss, their description didn't line up with the portrait of Ben their stories drew.

"I have to tell you," Ben said. "If I were you, I would have fired me by now."

He stared down at the stack of papers on his desk. Then he looked up at Tom. "I don't think I should be leading this facility," he said.

"Is that your decision?" Tom asked.

"Look," Ben said. "I'm a manufacturing guy. Always have been. I love it. But running this facility isn't about working with machines. It's about leading people. And I've been trying to work my people like they're just another kind of machine.

"The thing is," Ben said, "you need my expertise in manufacturing. But I shouldn't be leading the floor. So here's what I'd suggest. If you're willing to keep me, I'd like to step back. Become the machine and logistics guru, and set up someone else to really lead our people. Someone who can do it better than I have."

He met Tom's gaze. "That's if you're willing to give me another chance," he said.

"That's your call," Tom said. "It's your decision."

This Place Is Special

All of MedTec's people, along with their family and friends, sprawled across the sunny lawns that surrounded the MedTec building, where a tent and barbecue pit had been set up for a company picnic.

As Tom was speaking with Vanessa, Anton came up beside them, hand in hand with a pretty woman in a blue dress. "Sorry to interrupt," he said.

"But his wife insisted he introduce her to the boss," the woman said, sticking out her hand. "I'm Ava. So nice to meet you."

"I've heard nothing but good things about your husband," Tom's wife Sophia told Ava. "He's the hero of a lot of stories Tom tells."

"Well, that's why I came over," Ava said. "I love my husband, and I always used to say, I'm lucky there are a lot of things to love about him, because try as I might, I could never get him to change. But let me tell you, now it's like living with a different man."

Anton gave her a wry smile. "Was I really that bad?"

"He's a smart man. Full of ideas," Ava went on. "Every night he'd come home and tell me about them. And I'd say 'Why don't you go in and tell your boss some of those ideas?' And he'd just say, 'No, no. they won't listen.' Until you and Jim started listening to him."

"I just wish we'd done it a lot sooner," Tom said.

Helen Harris stood a few steps away, waiting patiently.

"Helen," Tom said, shaking her hand. "Thanks so much for coming. And — for everything."

Helen nodded. "I wouldn't miss it," she said. "And I actually came over here to thank *you*. I know we've had our differences this year."

"But the numbers look good, don't they?" Tom said. "You got your first dividend check?"

"I did," Helen said. "But I was always sure you and Jim would at least be able to come up with that. What I didn't expect was that you'd do it by creating a business I'm proud to be a part of. I might not have shown it, but I always liked your ideas, even if I wasn't sure they were going to work. I've never been so glad to be wrong."

"I think we'll be throwing off some really impressive numbers when the new product comes out," Tom said.

"Yes," said Helen. "But that's not what's most impressive to me. I've never seen people this engaged or happy at a company before. And I'm glad you fought me for it."

Sitting down to lunch, Jim looked around the gathered crowd. "I've never been a part of anything like this," he said. "A company where people get treated like people. Not just the execs and the creative types. The guys on the line, and all the way up."

He met Tom's eyes.

"It's not just about the money for me," he said. "It never has been. I watch our bottom line because I believe in

what we're creating here, and I don't want to see it end. But doing something that matters. Creating a company where people know they're a part of something important. Treating them like people, not machines. Giving them a chance to contribute and learn. Seeing how they want to come in every day. Knowing that they're actually happy here — at work. That matters to me."

"That's the reason we went into business," said Tom.

"That's the bottom line," said Jim.

The Decision-Maker Process

The Decision Maker tells the story of a fictional company, but the principles were forged and tested in the real world.

Here is a summary of the basic assumptions of a decision-maker culture, what to look for in a decision-maker, and how the advice process works.

- In a decision-maker organization, the leader leads by choosing a decision-maker.
- The decision-maker must ask for advice.
- The advice process brings multiple perspectives together to guide a successful outcome.
- But the decision-maker makes the final call — and takes responsibility for it.

Choosing the Decision-Maker

The leader leads by choosing a decision-maker.

Proximity. Who's close to the issue? Are they well acquainted with the context, the day-to-day details and the big picture?

Perspective. Proximity matters, but so does perspective. Sometimes an outside perspective can be just as valuable.

Experience. Has this person had experience in making similar decisions? What were the consequences of those decisions?

Wisdom. What kinds of decisions has this person made in other areas? Were they good ones? Do you have confidence in this person?

The Advice Process

In a decision-maker culture, the decision-maker makes the final call but must ask for advice. Deciding who to get advice from can influence a successful outcome.

Get advice from people who have

Experience. Has this person had experience with this problem? There's no teacher like experience.

Position. People in different positions see different things. The decision-maker asks a leader, a peer, someone below them in the hierarchy — and even, if circumstances warrant, experts from outside the company.

Responsibility. Decisions have consequences — and decision-makers should be held accountable for theirs. At the same time, nobody is right all the time. The most important part of any decision is that the decision-maker fully engages with the advice process, not just that he or she gets it "right."

Ownership. When people are asked for advice, they start to feel ownership. Ideally, everyone who offers advice works for the success of the project as if it were their own. The advice process isn't just about getting the right answer. It's about building a strong team and creating a process of communication that will improve all decisions in a company.

Benefits of the Advice Process

Everyone Becomes More Engaged. People feel more ownership when their advice is sought.

On-the-job Education. No training can match real-time experience.

Better Decisions. When decisions involve more people who are fully engaged, an organization has a higher chance of a good outcome than it does with a conventional top-down approach.

Accountability

After the decision is made, the decision-maker follows through by communicating and measuring the results of the decision.

The principals are simple. Some might even say common sense. But building your business on these assumptions, using simple but powerful techniques, can transform a business — and people's lives.

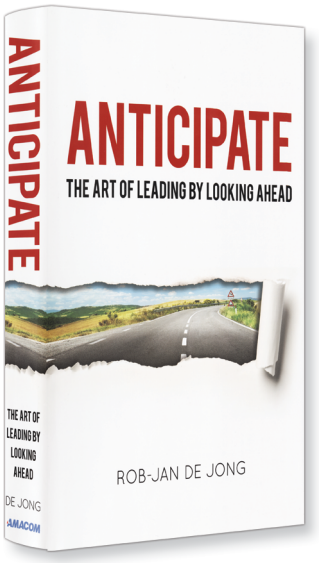
Leadership

Anticipate

The Art of Leading by Looking Ahead



by Rob-Jan de Jong

THE SUMMARY IN BRIEF

Business schools, leadership gurus and strategy guides agree — leaders must have a vision. But the sad truth is that most don't...or at least not one that compels, inspires and energizes their people. How can something so essential be practiced so little in real life? Vision may sound like a rare quality, unattainable by all except a select few — but nothing could be further from the truth. Anyone can expand their visionary capacity. You just need to learn how.

In *Anticipate,* strategy and leadership expert Rob-Jan de Jong explains that to develop vision you must sharpen two key skills. The first is the ability to see things early — spotting the first hints of change on the horizon. The second is the power to connect the dots — turning those clues into a gripping story about the future of your organization and industry. Packed with stories and practices, *Anticipate* provides proven techniques for looking ahead and exploring many plausible futures, including the author's trademarked Future Priming process, which helps distinguish signal from noise.

You will discover how to tap into your imagination and open yourself to the unconventional, become better at seeing things early, frame the big-picture view that provides direction for the future, and communicate your vision in a way that engages others and provokes action. When you anticipate change before your competitors, you create enormous strategic advantage. That's what visionaries do ... and now so can you.

IN THIS SUMMARY, YOU WILL LEARN:

- The purposes and ingredients of a personal vision.
- How to see things early and connect the dots.
- How to find your core values to develop your vision.

PART I: VISIONARY CONTENT

The Groundwork

Creating a vision requires ideas, ideally intriguing and refreshing ideas that trigger people's interest, curiosity and excitement. It requires engagement with your imagination and an ability to think outside the clichéd box.

The Vision Thing intrigues and frustrates at the same time. We look up to people and companies that seem to have mastered it, but feel thwarted in achieving similar results. Most people agree that, when understood and practiced well, vision can be an extraordinarily powerful concept; a tool, in fact, that significantly bolsters your ability to influence.

But when the idea of a vision isn't framed properly, it quickly becomes muddy and fuzzy, incomplete and unproductive, and loses the interest of those you wish to engage.

I want to make a clear distinction between the company vision and your personal vision. We will focus on your personal vision. The aim is to increase your personal visionary capacity and bring out what a powerful vision can do for your personal leadership — whether or not you are hierarchically in a senior position.

Your compelling story has everything to do with igniting excitement in those people who look to you for leadership. Your personal imagination and inspiration is what counts for them. It's your dedication and your authenticity that they are looking for; it's about the story that you bring to them, and much less about what is stated on the corporate website.

Vision 101

Powerful visions have at least four fundamental purposes:

A Vision Shows the Path Forward: A vision provides guidance and direction about where an organization is headed.

A Vision Stretches the Imagination. A potent vision takes us beyond the obvious into the unknown and stretches the boundaries of what we conventionally think up to that point in time.

A Vision Challenges the Status Quo and Breaks Through Existing Paradigms. A well-developed vision can provide new and previously "unseen" opportunities.

A Vision Energizes and Mobilizes. Finally, a powerful vision has the potential to galvanize those you lead. A vision inspires people to put their best effort into the cause. It unites them around a shared purpose, gives meaning to the day job and mobilizes them into action.

Core Ingredients

There are specific core ingredients that combine to create great results on the vision front. There are always elements of guidance and direction setting: A vision shows us a future ideal to strive for. But that's only the rational, cerebral part; it needs something else to make it compelling and powerful. Followers need to feel something in order to really spark their enthusiasm. They need to be touched emotionally; they need to feel motivated and energized.

How can you make your future-oriented story touch your followers emotionally and reach their hearts rather than their heads? Unconventionality triggers emotions such as curiosity, excitement, desire, optimism and empowerment. Connection to a noble cause sparks emotions

such as pride, belonging, willingness, passion, nobility, warmth, empathy and trust.

Furthermore, according to Aristotle, in order to persuade followers, a leader needs (in reverse order) convincing arguments, the emotions they elicit, and credibility. Today we refer to his threefold description as Logos, Pathos, and Ethos — the cornerstones for creating engagement. Logos aligns with the setting direction part of a vision: Followers need to understand clearly and coherently why you are taking them in a particular direction.

Pathos is emotional engagement that makes followers part of something more meaningful and enduring, and ethos refers to the integrity or character of the speaker. Leaders need to exemplify the vision in everything they do, to connect it to personal values, motives and deeper emotions. It's this famous walk the talk criterion that makes us trust or mistrust leaders.

Tapping into Your Imagination

Without imagination, you are stating the obvious or holding on to the status quo; your vision falls flat. With it, however, your vision becomes intriguing, exciting, refreshing. Suddenly, it has the potential to energize and mobilize.

"But I'm not a very imaginative person," people quickly tell me. Think of it like this: The very fact that you can plan a vacation proves that you're imaginative. The ability to look ahead into the future and anticipate events that might unfold is an act of imagination. There's nothing artistic or eccentric about it. It's a unique ability that we, as human beings, have developed and that sets us apart from all other species.

Tapping into your imagination is about being open-minded: It's about having a fundamental willingness to challenge your assumptions about what you consider to be true, and reframing those assumptions when it's called for.

Lateral Thinking

Lateral thinking is a set of systemic, deliberate methods for challenging assumptions and opening up innovative ways of thinking and seeing. One of those methods is the Random Entry Idea Generation Tool. It involves arbitrarily selecting a noun from a list (or the dictionary) and associating it with the issue you are working on. As random as the association appears at first, there's a good chance you will find some connections.

If you're wondering how to improve the performance of your customer service department, for example, and you randomly select the word "pizza slicer," finding connections between the two could help you uncover new opportunities. Because your assumptive framework will try to deny any connections, your mind won't immediately be willing to entertain associations between something as serious as your customer service performance and something as irrelevant as a pizza slicer. But by forcing yourself not to give up too quickly, possibilities will spring to mind. Thoughts of food, cutting, knives and sharpness could lead to speedy delivery, frozen pizzas and specialized utensils. Those might trigger thoughts about the importance of follow-through, delivery of fully prepared spare parts, and the development of a special "utensil" to deal with a common customer complaint — one that could delight customers who report a problem. That which at first glance appears unhelpful and silly can trigger a useful thought you might never have considered if you had looked at the issue within the usual frames.

WWGD

The abbreviation stands for What Would Google Do, a name inspired by Jeff Jarvis's 2009 bestseller. To use this method, ask yourself (or preferably your team, because most of these techniques work much better when applied in a group) how Google — or some other remarkable organization — would solve the issue at hand.

Start by selecting a number of iconic companies that everyone has strong brand associations with: Think IKEA, McDonald's, Southwest Airlines, Zara, Nespresso, Singapore Airlines, Harley-Davidson, Toyota, Expedia, and Amazon. It's good to have a variety.

As you think about how one of these companies would tackle the problem at hand, you're reframing; you're reassessing your assumptions and moving from an intrinsic, static view of the situation to a more liberated, open-minded exploration of options.

PART II: VISIONARY PRACTICES

Developing Your Visionary Capacity

The potential to come up with — and hold on to and cultivate — a brilliant idea or a vision is within all of us. Visionary leadership isn't a personality trait, although it is sometimes confused with concepts like charismatic leadership. The big question is how. How do you go about developing this crucial leadership competence?

There are two critical developmental dimensions for growing your visionary capacity:

1. **Your ability to see things early.** The first signs of change often manifest as random noise or faint warning signals, often at the periphery of our attention and far less explicit in their game-changing nature than they are later. Growing your ability to notice these signals early, and recognize their potential impact, is an essential part of raising your visionary capacity.
2. **Your ability to connect the dots, to create coherence in the future you face and turn it into a "bigger picture" story.** This implies constructively and intelligently working through the complexity of the multifaceted and multidimensional future.

It's worthwhile to reflect on where you currently stand in terms of these skills. Consider these four different archetypes of visionary capacity:

Followers: This is someone neither very good at early noticing nor skilled in creating and communicating a coherent story from the various insights he or she has about what the future might bring. Healthy levels of carefulness, critical thinking and apprehension can work for every leader, including the visionary one. But if you're a Follower all the time, don't expect any of the great benefits to emerge. You won't stretch the boundaries of your people's imagination, reap the fruits of new ways of doing business, or be seen as a source of inspiration and energy to your followers.

Trend Hoppers: The person who has a well-developed ability to see things early, is very much in tune with what's on the edge, and is existentially willing to embrace changing realities. The Trend Hopper is often an early adopter of new technology and among the first to fantasize about how things can become different — most always radically different in their view — soon. But the Trend Hopper isn't very good at turning early-stage insights into a coherent story that justifies an active strategic pursuit.

Historians, or Cynics: The leaders adept at connecting the dots and spinning a story that makes sense. They like to cite patterns, facts, and figures — ideally in PowerPoint — and marvel at making the road traveled so far look very coherent and intentional. When you listen to them, it all makes sense. But they have their eye trained on the factually true past, not on the imaginative uncertain future. They're not very good at spotting where the early signals are coming from and how these could become potential game changers.

The Visionary: The Visionary would not overoptimistically jump on every fad that passes by, as our Trend Hopper risks. Nor would he become a naysayer and launch into the Historian mode. The visionary takes a mindful, future-oriented perspective, balancing the need for a compelling future with the awareness of the inherent dangers of becoming dogmatic and overoptimistic.

To become a visionary leader, you will need to develop both of these essential dimensions.

Seeing Things Early

We're not aiming to become accurate, or even good, predictors of the future. Instead, we're working to develop an increased awareness of changing realities, building antennas for the distant signals that might push the future in a different direction from the one we currently and conventionally foresee. We can then become better at recognizing those signals and their potential impact when they present themselves in some early form. Your ability to see things early is at the heart of what leadership expert Warren Bennis calls adaptive capacity.

Adaptive capacity is what allows leaders to respond quickly and intelligently to relentless change. Those with the highest levels of adaptive capacity are called first-class noticers: They're able to build and sustain a strong level of context intelligence. This sensitivity to context correlates closely with the development of seeing things early; both involve the ability to gather relevant insights that allow you to notice changes before others do. To put it in engineering terms, it strengthens your ability to distinguish the signal from the noise.

FuturePriming

I developed FuturePriming to help executives improve their ability to see things early. This "first-class noticing" process begins with awakening our imagination. Essentially, FuturePriming is about writing your own FutureFacts.

A FutureFact is a manifestation of a possible changing reality. Change is often described in generic, broad terms. For example, a typical strategy paper starts with a list of a whole lot of trends and developments. It speaks of "increased urbanization," "further proliferation of technology," "decreasing welfare support," "growing influence of emerging economies" and so on. The trend description doesn't really hit us in the face, so we tend to agree with it. Or disagree. But it doesn't update our thinking because we weren't provoked.

Now check out what happens to your mind if I describe the following changing reality, to possibly take place three years from now: "Candy industry banned from advertising." This is not an abstract description of a trend, such as

"increasing pressure on unhealthy food" or "tightening regulations to combat rising health care costs." The change has become manifest by imagining a concrete event that largely tells the story. Your mind has now created a tangible, memorable hook about a possible changing reality.

The more specific statement triggers you, intrigues you, and possibly worries or upsets you. It might even make you defensive and resistant; all these emotions are fine, as they show that your thinking has been activated, your brain has become really engaged in how the future might look quite different from today. Although the exact statement in the FutureFact might turn out to be incorrect, the mind is now much more concretely primed to those early indicators of change that we pick up in the news, even if they just closely or even remotely resemble it.

The Four Golden Rules

Four simple rules help you get the most from this practice.

Scope for Relevance and Time. Look for relevant changing realities in your business, industry and geography. FutureFacts are designed to sharpen your sensory capacity, so you want to consider your role, your organization, your industry. Your scope should be wide enough to capture any relevant signals, but not so wide that you have too much information to consider. Scope your timeline to a minimum of three and a maximum of seven years into the future.

Don't Make Your Own Company Part of Your FutureFact. Organizational developments, achievements, and direction are to a large extent affected by influences that are completely outside the company's control. Economic crises, changing customer preferences, the development of the oil price or the interest rate, the arrival of breakthrough technologies, the entrance of a rogue competitor, and new government policies. The point of FuturePriming is to be attuned with the outside world and what might be happening there.

Explore the Area Between the Conventional and the Absurd. It's quite common when you first start with FuturePriming that your thoughts and ideas about the future are pretty conventional. When people realize that their first ideas are too conventional, they typically veer toward the absurd. You should stretch what you — and those around you — currently already believe. Without going overboard. As a general principle, effective FutureFacts provoke, challenge, and play in the mental space where you think, "Hmmm, maybe . . ."

Describe an Event, Not a Trend. Write your FutureFact as an event you might read about in the newspaper. Just as good journalists do, create a memorable hook that highlights something significant about the event. Descriptions such as "ever-growing need for clean water" and "dwindling interest in politics" won't cut it. These are descriptions of trends, not events.

Connecting the Dots

In addition to strengthening the ability to see things early, we must equally improve our ability to create a coherent story going forward. This coherent story must consist of what we expect, foresee, envision, and anticipate. It needs to resonate, make sense, and be the guiding light into the future for our followers. I call this second developmental dimension of visionary capacity the ability to connect the dots.

Before we can become better at connecting the dots, we need to understand some of these psychological challenges we'll inevitably face as we build our vision. Two culprits play a particularly damaging role: frame blindness and overconfidence.

Frames are the mental constructs that help us make sense of a complex world. While processing the signals we receive from our senses, our minds quickly determine the most appropriate frame set to apply and then categorize or label the input accordingly. But as we rapidly, unconsciously select a frame, we rule out other possibilities and might ignore evidence that could lead us to different conclusions.

In addition, we have intrinsic overconfidence in what we think we know. Many psychological experiments have demonstrated the effects of overconfidence, including overestimating your knowledge and abilities, underestimating risks, and exaggerating your ability to control events.

The Mysterious Guru

In the late 1960s, Royal Dutch Shell was unable to accurately predict cash flows. Times with ample funds that gave the green light to drilling projects were followed by sudden periods of shortages, forcing activities to an immediate stop (only to resume once the cash position recovered). Several consultants were brought in to deal with the issue, but none of them succeeded.

That's when Pierre Wack came in. As the head of the business environment division of Shell's planning bureau, Wack had a reputation for being a little "out there," especially in such a cerebral, scientific, numbers-driven organization. He burned incense in his office, went on annual retreats to consult his Indian guru, and was

heavily influenced by a Russian spiritual teacher named Georges Gurdjieff.

Instead of trying to limit, minimize and drive out uncertainty from his view of the future, Wack embraced it, giving uncertainty a central place in his method. Acknowledging that uncertainties would not go away no matter how sophisticated the model was, he placed uncertainty at the heart of his approach.

By embracing uncertainty, we acknowledge the fact of our ignorance, which in turn implies that we need to engage with more than one view in order to enrich our perspective. In other words, this approach effectively deals with the pitfalls of both frame blindness and overconfidence.

Contemplating the future with uncertainties as an integral part of the package means we have to entertain multiple outcomes and work more responsibly on our ability to discover the coherences and the logic of how the future may play out. Wack called these potential outcomes scenarios, igniting a new discipline in strategic thinking: scenario planning.

Scenarios are imaginary yet logically consistent stories of plausible futures. The goal in scenario planning is to develop a rich set of noteworthy and equally plausible futures, including ones that don't conform to conventional wisdom and our current belief system.

Since scenario planning embraces uncertainty, it can be applied to any challenge that is ambiguous: You can develop scenarios for the future of health care to the future of China, the future of civilization to the future of futurists, the future of cycling to your own personal future. Each of these areas of interest has its own set of uncertainties and therefore allow you to follow the steps of scenario planning to arrive at multiple, relevant perspectives to contemplate.

Considering multiple plausible scenarios — including some that are different from your preferred view — and working your way through their implications is a smart thing to do when you are entering into a process of decision making under great uncertainty.

PART III: VISIONARY SELF

Your Visionary Self

Author Warren Bennis promotes an integrated perspective on leadership, consisting of four essential competencies: vision, adaptive capacity, voice, and integrity. Here we'll explore the relationship between your visionary capacity and Bennis' concepts of voice and integrity — the identity-oriented aspects.

Integrity, credibility and authenticity of the leader. This is what Aristotle meant by Ethos. This is where your personal character enters the equation. The importance of *you* in your vision cannot be underestimated. You play a critical role in making your vision powerful through the way you show up, the way you behave and the way you accept the consequences of your words.

IKEA's founder Ingvar Kamprad lives and breathes these values in everything he does (or used to do; he stopped his active involvement in the company in 2013, at the age of 89). Cost-consciousness is at the core of the IKEA model. Without this, it would be impossible to deliver on IKEA's enduring intent to make well-designed furniture easily accessible. One of the richest men in the world, Kamprad is known to fly economy class and to take the bus instead of a taxi from the airport to the hotel. His actions, in other words, are in alignment with the values he preaches. Which means IKEA has no need for coffee mugs or artistically designed gadgets to spread its core messages and beliefs.

Discovery Mode

How can you unleash your passion and let it ignite and inspire your followers? Gaining clarity about your beliefs and values is a critical step. How do you discover your deep-rooted values? Here are two practices that can help you in your process of discovery:

Obituary Exercise: Imagine your time has come, sadly, and you need to write your own obituary. What will it say? To help you reflect deeply on what is really important to you, contemplate and answer the following questions:

- What have been your main accomplishments in life?
- What has been your greatest achievement of all?
- Who are you leaving behind, and who will miss you the most?
- List the people you've helped in your life. How did you help them?
- What has been the main question that life has asked you? How did you respond?

Make a list of the values that come up in this exercise. Evaluate each value, asking yourself, In the one life you've been given on this planet (or so we think), is this value important enough to be remembered for? Your aim should be to limit yourself to a maximum of three to five val-

ues. The end result should be a set of values that you feel warmhearted about, that inspire you, that define what you truly care about and resonate with your character. The true core values of your life.

Stories: Ask a friend to interview you. Your role is to respond honestly to the questions; your friend's role is to identify the values in your responses. Describe three different situations in which you

- Were truly at your best. Think of moments or occasions when you were in a state of flow (as athletes call it), when things seemed to go effortlessly and your actions were spot on; that is, exactly what was needed.
- Learned something profound that has stayed with you ever since.
- Were caught in a conflicting dilemma between something that was expected from you and something you really believe(d) in.

Ask your friend to help you delve deeper into these stories by asking more probing questions, such as, Why did you feel that way? What made this situation so important to you? What were you experiencing? When you describe these situations, you will convey a lot about yourself, what motivates you and what is important to you. With your friend helping you to uncover the hidden layers of your stories, your personal values will be revealed.

Uncovering your most fundamental "whys" and "hows," your core values and beliefs, is key to understanding your authentic self. When your projects, initiatives, and actions are linked to you authentically, passion follows. People notice; your eyes start to shine, your tone of voice changes, your energy is virtually limitless, and your passion comes to life. Authenticity radiates.

Mindful Behavior

Leading with authenticity also means you must practice what you preach. The best evidence of your true feelings and beliefs comes less from your words than from your deeds. When your words are believably connected to what you do, when you behave in line with your vision, only then do you display integrity and build trust with your followers.

What behaviors are essential for growing your visionary leadership? What should you be conscious of, and which practices can help you in your journey toward mastery?

Mindfulness

Harvard psychologist Ellen Langer says mindfulness encompasses a mindset and attitude that leads to discovery and noticing new things. Growing your mindful state boils down to three behaviors, according to Langer: creating new categories, welcoming new information and adopting more than one view.

There are behaviors and practices that can help you. You can't simply tell yourself to start "recategorizing" from now on, or to be open to new information or to stop taking a single perspective. Here are some original, easy-to-integrate behavioral change practices that you can incorporate in your daily leadership to act yourself into a new way of thinking.

Recategorization Practice: Break the pattern. A deceptively simple practice to increase your chances of seeing things differently is to deliberately break your normal pattern of working, communicating, thinking, reacting and responding. For example, if you are normally the first to volunteer, hold back. If you always take the same route to work, choose a different one. Change where you sit. Raise or lower the height of your chair.

New Information Practice: Radical exposure. We are strongly influenced by the small group of people we have direct contact with — for better or worse. And since we tend to hang out with people who are fairly similar to ourselves, chances are we are limiting our perspectives and excluding information. The radical exposure practice promotes a deliberate effort to engage, with some frequency (e.g., once a month), with a subgroup that is profoundly different from the usual suspects you hang out with. Visit a conference of a very different profession, hang out with skaters, join an arts club, buy a magazine randomly off the shelf, things like that.

Multiple View Practice: Opinion swap. Choose someone at work who is least like you — not someone you dislike, just someone very different. Think of a subject you normally disagree on. It might be something simple, like a product, marketing message or television program that you avoid or find trivial and the other person really likes. Imagine adopting this person's opinion, like trying on an outfit. See things from this person's point of view and come up with some reasons why he or she loves what you hate, or vice versa. Once you are comfortable, do the same exercise — live. Have a real conversation with the person, and gradually let go of your opinion and take the other side. Just experiment — what do you have to lose?

PART IV: VISIONARY COMMUNICATION

Igniting Your Followers

You can have great ideas, make the powerful practices second nature, have clarity on your core purpose and values, and exercise the right behaviors for growth. But if you are unable to communicate your vision in a way that engages and energizes others, the Vision Thing still won't work for you. There are several specific visionary communication qualities that, when done right, will transform your story from something future-oriented but technical and uninspiring to something that invigorates your followers.

The Power of Language

Language really matters. Especially if you intend to bring people on board and persuade them to follow you and your ideas. It's not just the message that needs to resonate; the way it's translated into words also shapes its impact and the actions it inspires. If you want your vision to reframe people's mindsets and move them to act, you need to use productive, active language.

Workhorse Verbs. Verbs carry sentences, and the ones that do the heavy lifting, bringing energy to your message, are called "workhorse verbs" or "powerhouse verbs." Compare these two statements: "We discussed the opportunity to develop a new product" with "We explored boosting our offering." Workhorse verbs move your story forward, create powerful imagery and convey a confident tone. Create a list of verbs that attract you but are not yet part of your everyday vocabulary. Pick one a day, and set a target of using it at least three times that day. You'll find that over a short time many of these words will become part of your regular repertoire.

A Picture Is Worth a Thousand Words. When describing the future, you can't use facts and figures. You don't have statistics to prove your points. You must largely rely on your imagination. And to convincingly bring your audience into the future, you must unlock their imagination, helping them envision a different world. Images and visual language such as metaphors and analogies are of vital importance in bridging the gap between the cerebral and the imaginative. They help people "see" it.

Memorable Metaphors. Metaphors do more than just informing and making the message stick. They also add a layer of emotion to the content. By accessing your associative brain, a metaphor immediately hitches emotions to the message. Look around you right now and consider the objects you see as metaphors. Create a sentence for each: "Our future is like . . . a telephone," "Our future is like . . . a watercooler," "Our future is like . . . a vase of flowers," and so on.

Actionable Analogies. To see things in a different light, your audience must reframe their minds. This requires insight plus an acceptance of the fact that there is a different way to look at our future, and even at ourselves. For example, if you are responsible for a hospital, a hospital division or a medical team and you state that you want to be considered the Singapore Airlines of the health care industry, people will get it. They will immediately understand that quality of service matters to you.

Let Me Tell You a Story... Stories inspire; they're catchy and heighten our natural curiosity. Moreover, stories communicate values and make them accessible, understandable, and believable. Brené Brown, a research professor at the University of Houston, says, "Stories are data with a soul. Data wrapped in stories have the ability to move people, to inspire people to take action."

For your visionary communication to become authentic, you need to integrate a special type of story — the personal anecdote. Your personal anecdotes are much more than just insightful recollections; they communicate something about your character. In other words, they provide your story with a soul. Sharing a meaningful personal anecdote shifts your rhetoric from the head to the heart. When you share it, you'll relive the emotions and show what you truly care about. This kind of honesty automatically makes you and your story truly authentic.

A truly powerful vision provides direction and is emotionally engaging and authentic. It's an invaluable tool for (aspiring) leaders that allows you to do what leadership is all about: to ignite others.

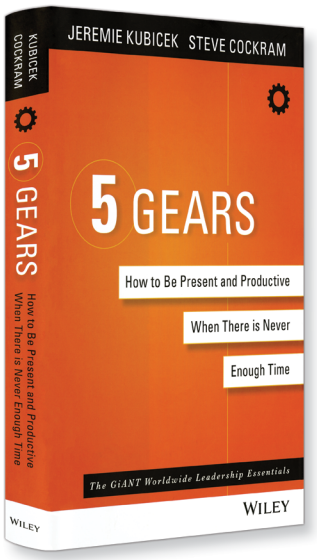
5 Gears

How to Be Present and Productive When There Is Never Enough Time



by Jeremie Kubicek and Steve Cockram

THE SUMMARY IN BRIEF

Would you like to be present and connect more effectively, all while being as productive as possible? *5 Gears: How to Be Present and Productive When There Is Never Enough Time* introduces you to the five different gears, or mindsets, that carry you through various facets of your day, and teaches you to shift into the right gear at the right time so that you can grow in your relational intelligence and increase your influence.

All too often people go through life without truly connecting and can, as a result, miss out on experiences and relationships that have the power to bring them great joy. By understanding how the five gears work, you can improve your ability to connect with the world around you; explore why some people stay disconnected from the people and events around them and why others always seem to have a deep connection to their friends, family and surroundings; learn how to set triggers and markers that help you shift into the right gears at the right time, which will increase your relational dynamics and make you more productive; create positive change in the dynamics of your relationships; and improve your respect and influence.

5 Gears: How to Be Present and Productive When There Is Never Enough Time is the perfect resource for anyone who wants to live and lead connected.

IN THIS SUMMARY, YOU WILL LEARN:

- The five gears and how to identify your dominant gears.
- How to shift gears and match them to the right time and place.
- To challenge yourself and create a plan to obtain greater connection and influence in your life and organization.

SECTION I: CONNECTIVITY

Driving Too Fast

It is not that we want to run people over, and yet we often do. We drive 50 mph in a 20 mph speed zone without being aware — consumed by schedules and agendas — and we run right over those we care about the most.

When someone feels the pressure of a deadline or fears the roar of a boss's voice, it is natural to shift focus to alleviating the immediate concern rather than focus on our long-term relationships. The urgent pressure trumps the important relationships most of the time, which tends to steal, kill and destroy our presence to those we are closest to most of the time.

People run over other people when they are not present or focused on the person or people they are with in the moment. This is where most influence is undermined as people get tired of getting run over. Eventually people move away from those who are not present to others who have more life and less drama.

People don't mean to run each other over, but the truth is that we can all have moments when we are in a different gear than the other person. Our minds can easily get stuck in work mode or kid stories or random thoughts, and we can, unknowingly, run others over with our chatter and self-absorption. Whether it is speaking at the wrong time, failing to listen to those speaking directly to us or ignoring the most obvious social hints, unawareness is pandemic.

It usually gets worse in the office environment. Some leaders become different people the moment they walk into an office setting. For some they shift into the "dominator" mode as they bark orders, forget about an employee's birthday or send emails that would make their mother blush.

Disconnections

This social behavior creates disconnections, which lead to the consequences of fighting, discord and an overall lack of harmony in relationships, both personally and professionally. All of these issues cost organizations and people as these disconnections breed drama and frustration.

Connectivity is about time, settings, people, places and motive. It is not as simple as being somewhere physically but is a combination of emotions, physical connection, spiritual cognizance and mental aptitude. This understanding is a practical view of improving the quality of our lives and leadership through the art and science of connectivity.

Connectivity is directly related to peace, productivity and personal happiness. When you connect deeply with someone, a peace of mind and sense of gratitude occurs. To have this type of connection, you must learn how to be still and present in the moment.

Reality Check

So, let's get to your reality. Do people really know you? Would they say that you are normally present with them or constantly in your own world? It is time to get real and honest with your ability, or lack thereof, to connect with others, to be present with them and to be able to balance work and life in a meaningful way.

Before we get started here on a solution to help you connect more vibrantly with others and to increase your

influence and your leadership abilities, explore a few of these powerful questions:

- What are your priorities? What are they in order? And are they what they should be?
- When do you tend to run people over?
- Is there a character issue in your life that is causing you to disconnect or disengage?
- Is there one relationship that needs to be made right?
- Where has your influence declined?
- What are you afraid of losing?
- Do people want to follow you or simply have to follow you?
- When do you start working? Do you wake up and begin to check your email as the very first thing?
- Do you recharge well at home?
- Do you get quality time with others?
- Would others say that you know them?
- What is the reality of your meetings?
- What is your demeanor when you come home?

Write down your thoughts. Talk to someone who knows you well about some of your answers. The goal here is to help you get to your reality, see yourself in a mirror and begin to increase your influence on those you lead. By doing so you may have just started the process of reconciliation or personal peace, or you may see an uptick in productivity as you address the issues that make your realities unsustainable.

SECTION II: 5 GEARS FOR PRACTICAL CONNECTION

Getting in Gear

Driving is difficult, with all of the inputs and decisions that need to be made. The same goes with leadership. Communicating a vision, managing people, dealing with issues, all as you try to stay focused on your own personal tasks and goals can be quite difficult. Leading well is similar to driving well.

There are parallels with shifting gears in a car and the rhythms and routines of our lives: There is a right order and a right time for each gear. Conversely, there is also a wrong gear for the wrong time.

1st gear is meant to lead to 2nd and so forth. Each gear has a purpose, and if you understand that purpose and apply this driving analogy to the way you "drive" your life, aligning the right gear with the right speed and situation of your day will allow you to have a smooth journey.

With our metaphor, each gear represents a different mode of connecting through living, leading, working and resting. To lead yourself well and connect appropriately in your relationships, your day needs to begin in 1st gear, after which you shift up into other gears. You can go from 1st gear to 5th in life, but it is not recommended, and the consequences can be damaging, just like with your car. You can also go from 3rd gear to reverse, but just because you can does not mean you should, considering cause and downstream effect.

The best drivers understand when to shift and when not to. The same is true with the best leaders. They understand the gears:

- 1st gear represents being fully recharged.
- 2nd gear represents connecting with family, friends or colleagues.
- 3rd gear is the social gear.
- 4th gear is the task gear that allows us to work hard while also multitasking.
- 5th gear is focus mode that allows us to "get in the zone" without interruption.
- Reverse is the responsive gear. It is used when we need to back up and start again or apologize.

If you understand how to drive your life with these gears, you will unlock depths of connection and influence in your relationships that you never knew existed.

In our culture, most adults suffer from one or two of three connectivity problems:

- They rarely understand which gear they are operating in at any given moment.
- They rarely know what gear the other people in their life are operating in.
- They rarely take the time to practice shifting and operating in each gear.

This combined lack of awareness and practice explains why we have so many people suffering from the realities of workaholism, social awkwardness, rude commentary and a rash of disconnection within families, spousal relationships, boards and teams.

5th Gear — In the Zone

5th gear is focus mode. It is the gear where the ability to hyperfocus and experience the flow of your work becoming something productive is key. To someone watching you operate in 5th gear, you might appear to be in a trance, completely unaware of noises, voices and the normal distractions that might cause others less focused to

shift their attention. When people get into 5th gear, they tend to not need anything other than their work.

A car's engine will tell you when it's time to shift gears — so, too, does your work. It simply takes discipline to shut the door, turn off your email and let people know that you are shifting into 5th gear — going into overdrive. When you reach this gear, your productivity reaches the highest levels possible.

Here are some points that will help you understand the correlation of overdrive to your personal 5th gear.

- A healthy 5th gear makes it possible to cruise at a sustained speed for a period of time.
- Because 5th gear occurs mostly when we are either passionate about our work or simply competent at it, our engine speed is actually lower, while our sustained speed can be quite fast. Therefore, less energy is needed to produce quality or high speeds. Focus can lead to high levels of productivity.
- 5th gear can produce great results and high speeds for a period of time. However, people (similar to engines) are not meant to stay in 5th gear all day long.

For executive leaders, 5th gear can be seen as the strategy gear, when you are working on the business and thinking in the long-term strategic planning zone. This might include dreaming, vision casting, exploring ideas or thinking of major changes in life, work or business.

Stuck in 5th Gear

5th gear is helpful, but it can also be damaging. Certain personality types so love this gear that they begin to crave it, longing to escape into their own little world. The problem, though, is the disconnect that results from being in overdrive too much or for too long, Eventually, tensions arise for those relying on the 5th gear enthusiast — the team members who need their communication, the boss awaiting a report or even the family waiting at home.

5th gear can create tunnel vision for people, causing them to miss opportunities to connect with others, learn something new or simply encourage someone in their life.

4th Gear — Leading in a Task World

Eighty-five percent of the time, leaders are in 4th gear. It's no wonder. We live in a task-driven, task-dominated world. To-do lists, task sheets and productivity tools flood the market as adults are trying to get organized, stay organized and become as proficient as possible in their world.

This desire for productivity from individuals, bosses and organizations leads to a tendency to move from one task to the next, checking things off throughout the day without slowing down much, if at all. And so we move in a given day from phone calls to meetings to emails to meetings to calls to texts and maybe some project work before we head home. That is a normal day for the majority of people in the marketplace.

Task-mindedness can become a habit or, rather, a way of life. People can become so married to their to-do lists that the daily tasks begin to control our lives. Do you normally check your email when you first wake up? Do you catch yourself just needing to "catch up on the day" really fast before getting in the shower or getting dressed? Jumping directly into 4th gear is like trying to pull out of your garage and shifting from reverse directly to 4th — it is virtually impossible. We need to start our days in the right gear, and 4th gear is simply not it.

If you have ever left work feeling tired and wired at the same time, it may not be the coffee or the late afternoon chocolate making you jittery. Instead, it may be the overconsumption of 4th gear. When we train our minds to multitask for long periods of time, we receive a garbled mix of data, people and tasks. An example would be if we worked all day on our computers just opening files without closing any of them during the day. Our computer screens are full of information, and consequently it is hard to find what you need in a moment because of the mess that has been made. That is life when we are consumed by 4th gear.

Why Using All the Gears Makes 4th More Productive

If you will take the time to implement the other gears in your life, you will find that your everyday, multitasking 4th gear will become more productive.

- You will finish projects while in 5th gear, which will make 4th gear feel more productive.
- When you insert 3rd gear appropriately, you will become much more at ease with people and will watch your influence climb because you are not too distracted by the cloud of tasks hanging over your head.
- If you insert 1st gear recharge into your task world, you will have more energy and more peace about you.
- When 2nd gear is used correctly, the people most important will become prioritized above the urgent tasks, which will lead to healthy relationships and peace for you.

Practice getting better at 4th gear, and learn to insert the other gears for your best and the best of those you

lead and love. If you have a hard time getting into 4th gear, then find someone who is brilliant at it, and begin to mimic what you see.

3rd Gear — Why Being Social Matters

3rd gear is all about being social. For example, 3rd gear looks like lunch with colleagues, a weekend party, a round of golf, an after-work gathering, a game night or a meal with friends or family. It is a mindset. It is the space between task-driven, hyperfocused work and the no-work, relational connection of being with your family, spouse or close friend.

That in-between space can be onerous to manage. For some, work is comfortable. That is where your identity is and where you are confident in your competency. For others, work is tiring. Your identity lies in your social group, whether that's a club or a sports team or a special group of some sort.

Why Business Happens in 3rd Gear

There is a reason why companies spend resources doing social events. It is where business really happens — in the relationship. Gatherings like these represent 3rd gear time, and it is vital to the success of the organization. Why? Because when you spend time with people outside of the normal 4th and 5th gear time, you are focusing on the relationship — talking about family, history, sports and the like. This time of relationship building allows those you are with to know you better and vice versa. They are observing your character, going deeper than a one-hour meeting, and deciding whether or not they want to be around you for any length of time or do business together.

Shifting into 3rd gear is not as hard as you might think. What are you interested in doing? What are your hobbies? Do you know anyone else who is interested in those same things? Could you gather some people together to talk about or do those things? That is where most connections happen. Here are some questions to ask that help to connect with people and be present in 3rd gear space.

- "Where is your hometown?"
- "Who is the most famous person from your town, or what is something unique about where you live?"
- "What do you love to do outside of your work?"

When you do 3rd gear well, you will notice your influence increase dramatically over time. It is partly due to the respect that others give you because you respect them, but it is also due to the demeanor and confidence that naturally occurs inside you. People are attracted to confident people, and there is a direct correlation between confidence and respectful curiosity. This respect leads to increased influence, which leads to more opportunities.

Overdoing 3rd Gear

3rd gear can be just as dangerous as 4th and 5th gear if abused, especially if a person is insecure and is trying to get their identity from the social space. You know you have an unhealthy 3rd gear if you procrastinate and miss doing real 4th gear work; need a party at all times; have a lack of discipline and professionalism; never go deep enough and remain superficial; double-book relationships and miss the depth; your colleagues think you're lazy; feel like you have a mask and you never want to go deeper; try so hard not to miss out that you actually miss out.

2nd Gear — Connecting Deeply

When was the last time that you truly connected with someone in a meaningful way? How did that experience make you feel? When was the last time you went deep with someone and left the meeting fully recharged? This is what 2nd gear is truly about — the ability to shift into connect mode and become present with someone in your life who brings you joy. Whether work colleagues, family or friends, it is time geared toward relationship building without an agenda or pressure to be productive.

What are your 2nd gear opportunities? Make a list of all the people in your life and the moments where 2nd gear could take place. Are you spending purposeful time here, or are you skipping it?

In the same way that there is a logical flow into 3rd gear, there is a clear path to connect via 2nd gear as well. Here are some tips to incorporate into your life and leadership:

- **Take the time.** When you sense that there is an opportunity to connect, go for it.
- **Listen.** The way to connect comes through your ears, not your mouth.
- **Don't force it.** Be you, be present and be patient.
- **Give yourself away.** When you risk by going deep and giving yourself away to help the other person, you increase your chances to receive far more than you imagined.
- **Cut what binds.** Consider moving things to a different time of the day if they are having an adverse effect on your relationships.

It is amazing what happens psychologically and emotionally when you are at peace with those closest to you.

You work smarter and produce more results. Connecting is an art form. And it takes practice. When you begin to master 2nd gear, you will begin to experience a deeper level of respect and trust.

Warning Signs

You know you have an unhealthy 2nd gear if

- You obsess about the key relationships in your life and not the person you are talking to;
- The desire to go deep in conversation keeps you from 3rd gear connectivity;
- Talking too much and too long is your normal pattern;
- There is an inappropriate amount of time spent caring at work rather than working;
- You put unrealistic expectations on people to connect; make people feel bad and eventually isolate yourself;
- You constantly struggle with having the right conversation in the wrong context; you are so present-focused you struggle to see the big picture.

1st Gear — Learning to Recharge

Do you have an intentional recharge zone or a routine you have disciplined yourself to follow that helps you downshift to rest, refuel and renew your energy?

When you are not recharged or fully rested, it is almost impossible to be present with someone else, let alone add value to his or her life. When you are charged up and rested well, then you have the ability to impact those around you, which will simultaneously impact your influence.

Spending intentional time in 1st gear is the key to recharging. It is the gear needed at the start of the day and the end of the day. Starting in 1st helps you get into the day in a way that will not wreck your own internal transmission.

How We Recharge

Recharging does not happen the same way for everyone, though, and it is important to note that your natural personality and wiring will influence how you need to recharge. Introverts recharge internally, like a battery pack. They need to plug into an energy source directly and recharge on their own from within. Extroverts, on the other hand, are like solar panels: Their recharge happens from external power sources like ideas or people or experiences.

Some examples of typical battery pack-type recharge sources for introverts are sleeping — introverts usually need a bit more sleep than extroverts; reading — like novels or biographies; exercise — long runs or walks alone; devotions — introverts are normally more disciplined with their personal time; meditation — this normally becomes a place for peace; and time to yourself to pursue individual hobbies like art, gardening, cooking, woodworking, etc.

Some typical solar powered-type recharges for extroverts are time with a mentor; ideas — some extroverts are enamored with ideas, which can bring life to them; 2nd gear time — extroverts tend to get recharged with people; enlivened experiences — a concert or movie; speaking; reading; exercise. The method of recharge is not the issue; making sure you know how you need to recharge is.

Some of you are saying, "I rest a lot. I come home and binge on a TV series, lay on the couch, eat some food and zone out." Is that rest? A lot of you think it is because that is all we know. It may look like rest, but crashing is simply stalling out. You work 60-plus hours per week handling all types of issues. You then come home and deal with the family, teenage issues or a frustrated spouse. Your diet is full of heavy carbs and sugars, and you recharge with coffee and more work. Then you get sick, take a couple of days off and literally crash. Crashing is not resting; it is actually just crashing.

In reality, this is a horrible way to live. True rest allows you to come fully alive. Following the battery-recharging kind of rest, you smell the roses, notice the birds, feel the air and enjoy your relationships. True, healthy rest restores you so you can continue being the best you.

Reverse — Being Responsive in a Resistant World

Reverse is a great gear. Having it in your car gives you the ability to parallel park or to hook up a trailer or fit into a tight spot. Without reverse, a driver is severely impaired. To translate this into leadership language, reverse simply means to back up, pull back or apologize — to be responsive.

Do You Know How to Apologize?

Have you learned the etiquette of apologizing to others when you make a mistake? Did your parents and teachers embed this simple concept in your younger years? More importantly, do you mean it when you say it? To master this, you need a few skills in your back pocket.

There are two types of people — responsive and resistant. You hire responsive ones and fire the resistant. Responsive people are self-aware and have a consciousness that is not steeped in victim mentality but rather in responsibility. They understand that they are responsible

for their actions and will make amends when they have clearly overstepped their bounds. Responsive people are the best employees, spouses and children.

Resistant people, on the other hand, are exhausting. They hate to admit their mistakes and will more easily pass the blame than admit a fault. Resistance is basically pride, which shows itself as insecurity. These people do not want to appear weak, so they would rather exasperate others than get to the peace that comes from admission. Resistance will fight rather than resolve, blame rather than admit and run away rather than run toward reconciliation.

Admitting mistakes is a fundamental part of being responsive. When you find a responsive person, you will find someone with deep character and a person to build companies or initiatives around.

People respect people who admit their mistake and then hustle to do better next time. People do not respect others who refuse to own it when they mess up and continue to blame others. Respect, then, is gained or lost directly by the way we apologize or not.

To be authentic and transparent is to be real. If you want to increase your influence, become more transparent. To do that, you must learn how to apologize and use your reverse gear.

SECTION III: LIVING AND LEADING CONNECTED

Master Your Settings — Right Time, Right Place

By using the 5 Gears appropriately, you can minimize being in the wrong in relationships, conversations and situations if you understand time and space. Let's start with time.

There is an appropriate time for everything. To increase your ability to connect, then you must know what season or time you are in before you communicate. That knowledge leads you to knowing yourself, leading yourself and then shifting into the appropriate gear at the appropriate time.

Here is a version of a normal day for those going to an office job. The times will be different for each of us, but for the purpose of illustration, this example gives you an idea of how to tie the time of day with your gears.

6 A.M. — Wake Time — 1st Gear
7 A.M. — Drive Time — 1st or 4th Gear
8 A.M. — Work Time — 4th or 5th Gear
12 Noon — Lunchtime — 3rd or 1st Gear
1 P.M. — Work Time — 4th or 5th Gear
5 P.M. — Drive Time — 4th or 1st Gear
6 P.M. — Dinner Time — 2nd or 3rd Gear
8 P.M. — Social Time — 3rd or 2nd or 1st Gear
10 P.M. — Bedtime — 1st Gear

As you can see, there is a natural time for the gears. Morning time should not start in 4th gear, just like a car shouldn't begin there either. We need to warm up before we shift up to drive through our day.

The Right Place

Have you ever had an experience where someone enters a 3rd gear time, whether at a dinner or a fun social setting, and yet brings their 4th and 5th gear office world with them? Mr. Kill Joy! It feels odd. We shift in our seats and try to listen or speak to them about their topic for a bit. Over time people flee these types by moving seats or turning their heads away from the person who has not learned how to connect with people in the right time and in the right space.

Places and time are tied together. Breakfast restaurants are usually not open for dinner. Drive-in movies were built for nighttime. Places have a natural meaning for the type of connection around a specific time. What types of connection and which gears come to mind when you think of the following places: A Starbucks coffee shop? An office? The golf course? A concert? The romantic restaurant? A hotel? A playground or park? A church?

When a person enters these places in the wrong way, they immediately start in a negative position and often are not aware of it. If you start off a relationship in a negative position, it is always hard to get to a strong positive impression. If the person remains in the wrong gear in the wrong time in the wrong place, then they begin to quickly lose influence and connectivity.

Shifting Well — Learning How to Transition

All of our relationships require us to learn how to shift and shift well. Over time, as our relational shifting skills improve, what begins as a methodical, potentially awkward, step-by-step process evolves to feel automatic as we become unconsciously competent at connecting and being present with those in our lives.

When you begin to know what gear you should be in and what time or place you are in, you can begin to practice. Start by being aware — think. Where are you? Who are

you with? This is when you practice shifting in your mind. What gear should you be in at that moment? Practice!

Using Markers as Trigger Points

Trigger points are actually mind tricks to help shift into a different gear. These markers are vitally important to the success of the 5 Gears to achieve the desired changes you want. Here are some examples of using markers to trigger action to downshift.

- Picking a marker two to five miles from home as your trigger point to downshift into 2nd or 3rd gear. For example, a QuikTrip gas station sign two miles from home can be a trigger to connect with family.
- Using your neighborhood sign to put your phone in your purse or bag. When you reach your neighborhood, put your phone in a bag or purse and leave it in your car or by the front door so that your family gets you, not your phone.
- Using the :58s as a marker. If you have a meeting at 2:00 P.M., then use 1: 58 as your marker to shift from your 4th gear activity to 3rd gear. Think about whom you are meeting and what you are trying to accomplish. When you see that person, start with 3rd gear conversation, and then slide into 4th.
- 5th gear signs at work. A number of leaders have created signs on their office doors or desks to let people know that they are in 5th gear.

Making the U-Turn — Challenge and Plan

Now is the time to begin to work on the U-turn and to make the changes that actually bring new levels of influence and respect. It's time for you to experience the benefits of being present and connected.

If you are willing to accept the challenge of retooling your gears, practicing and implementing them into your life, then you will experience a deeper level of fulfillment that is rarely talked about in most leadership books or conversations. We call this applied leadership learning. And yet, before you can experience this, you need to challenge yourself. This challenge requires that you get to the core of who you are.

At GiANT Worldwide, they share a tool for self-awareness called the Core Process:

Call It — Be honest with the issue at hand. Get real and name it.

Own It — Admit it. Know yourself and admit that the issue is yours to own.

Respond — Lead yourself with a plan to respond to what you have owned.

Execute — Choose a time to implement your plan of response.

Calling it might sound something like, "I am constantly in 4th gear and I can't seem to get out of it. I wake up and check my email, talk to colleagues on the way to work and email until I climb into bed. I think I am addicted."

Owning it would then sound like this: "It is my fault. I have not put boundaries in place at my work to let them know when I can or can't talk. I think, too, that I like being needed and have really created a monster as I am completely out of balance in my life."

Responding to it might look like this: "So, I plan to reorder my gears. I realized that I need to add some real 1st gear into my life, which will help me become more organized in my mind and more healthy as I run. I am then planning to use the marker plan as a trigger to turn off. I have a sign about five miles from my house that is going to be the drop call zone. I plan on coming home connected, not distracted."

Executing would then look like this: "I am starting tomorrow. I know it will take a while for my family to feel the change, but I have already taught the 5 Gears to my team. I plan on teaching my wife and kids after I have done it for myself a couple of days. I am fired up to see the changes!"

The 5 Gears is a lifestyle. Do it well, and experience a life that is fulfilling and the influence that goes along with someone becoming a person that others want to emulate. It will take your self-awareness and intentional willpower to learn to shift well and lead others into their own personal breakthrough.

Give everyone a gift — you. Be present with those in your life and those that you lead. When you do, you will watch your influence thrive and your respect flourish.

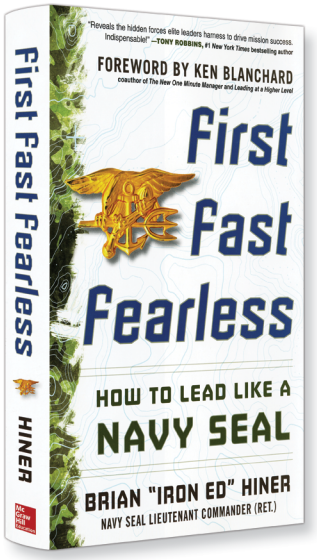
First, Fast, Fearless

How to Lead Like a Navy SEAL



by Brian "Iron Ed" Hiner

THE SUMMARY IN BRIEF

Beyond extreme physical and combat achievements, SEALs are known for mental toughness, bias for action, decisiveness, creative thinking, adaptability and perseverance — all under extreme stress. They get things done through, by and with others. SEALs have a unique way of approaching every challenge and opportunity that enables them to do what others can't — or simply won't.

Competing in the global economy isn't unlike guerilla warfare. Your competitors come at you from unexpected places with surprising force, and the marketplace is constantly shifting. As a leader, what do you do to empower your business and your people not only to survive but to thrive — and win?

First, Fast, Fearless is a practical guide written by Brian "Iron-Ed" Hiner for the business leader who wants to learn from the best of the best how to build and lead effective teams in conditions of volatility, uncertainty, complexity, ambiguity and constant change.

You may not be facing jihadists in the mountains of Afghanistan and the streets of Iraq like Hiner did. But just as his SEALs depended on him to lead them on successful missions and safe passage home, your people are counting on you to empower them, defeat the competition and forge paths to greater success.

Be a First, Fast, Fearless leader!

IN THIS SUMMARY, YOU WILL LEARN:

- To develop your personal leadership brand.
- Rise to the call of leadership when it counts the most.
- Establish and communicate crystal-clear goals.
- Enhance team innovation and problem solving under pressure.

THE COMPLETE SUMMARY: **FIRST, FAST, FEARLESS**

by Brian "Iron Ed" Hiner

The author: In his 20-year career as a Navy SEAL, Ed Hiner commanded hundreds of strategic combat missions and operations in Iraq, Afghanistan and across the globe, for which he earned two Bronze Stars with "V" for valor and combat leadership. In his role as a Navy Special Warfare Training Officer, he managed basic and advanced training for all Navy SEALs on the national level.

Introduction

First, Fast, Fearless leadership, as practiced on the Navy SEAL Teams, is made up of three key elements: Brand, Brotherhood and Battle Rhythm. Whether or not SEALs have direct reports, they are all leaders, and as such, they all develop these three attributes from day one.

Brand refers to your own personal leadership style. The First, Fast, Fearless Brand includes a first strike mindset, an all-in commitment to ethos, a strong sense of humility and humanity, and an always-on nature, among other traits. Once Brand is established, the next critical element is Brotherhood. Among SEALs, little else comes through more clearly than the sense of sacrifice, teamwork and mutual commitment they have to each other. Brotherhood is more than teamwork. It is always on, and it is directed by deep inner values far beyond simply collaborating and leveraging each other's capabilities.

Finally, while Brand and Brotherhood are critically important, they aren't sufficient to accomplish an important mission or goal. A musician can play music individually, but the impact of the music greatly expands when musicians play together in rhythm. What they do in the SEAL Teams is more like jazz; they all have the rhythm in their heads to move forward as a team without the presence of a central commanding leader.

Such rhythm is the highest essence of how the SEAL Teams work. To the extent you can "play jazz" in the workplace, you'll get much further much faster, all with less fear and stress.

PART I: DO YOUR PART FIRST THE BRAND OF A TRUE LEADER

When SEALs load up equipment for a mission, it's done in steps. Loading what's closest to your body is the *first-line step.* These are the critical items — "must-haves," not "nice-to-haves" — that you don't discard even when on the run and discarding other pieces of equipment.

Leadership works the same way. A leader must gear up with certain first-line items before expecting anything of others. Leaders must live by the same principles and values that they expect from their teams and people. Leadership is about action: Leaders must do their part before asking others to do theirs. Walk the walk; don't just talk.

What Do I Mean by 'Leader'

A good leader gets it done — that is, he or she gets the team moving toward the strategic objective, whatever that might be. A good leader gets the team to follow, effortlessly and painlessly. The team members follow in rhythm, to get the right things done, without constant prodding or course correction.

When leadership is right, you don't see it anymore.

Five Pillars of Leadership

The five pillars of leadership are the leader as a moralist, jurist, teacher, steward and philosopher.

- **Leader as Moralist.** It is exponentially more difficult to fight an enemy uphill from you to whom you are exposed. This battle principle becomes a useful metaphor for moral substance. Upholding a strong

sense of values and having respect requires leaders to fight for that moral high ground and to hold it at all cost. Trust is a two-way street: It is vital for leadership at all levels to set the conditions so that their subordinates *are able* to do the right thing. It's important to make the distinction between the rule of law and morality. What is legal isn't necessarily what is moral. Moral leadership is *doing the right thing*, not just "doing things right."

- **Leader as Jurist.** In a trial, the stakes are always high. But in the end, a jurist is compelled to act upon the information given and to render a verdict. The system relies on jurists who have no personal vested interest other than fairness — and ultimately justice. Similarly, leaders of all stripes often must make decisions that aren't black and white and that aren't based on complete information. Yet leaders must act and be decisive when it's time to do so. Their decisions affect the outcomes of their organizations and the lives of their people. Their decisions are personal. In fact, it's far from the truth when people say that "it's not personal" when referring to a hard decision they had to make. Of course it was personal.
- **Leader as Teacher.** In the SEAL Teams, every leader at all levels is expected to pass on knowledge and guide and mentor his subordinates. Good leaders train their subordinates (and others on adjacent teams) to take over when they're not there, whether they're gone for five minutes or permanently. Leaders as teachers have clearly defined goals with high expectations for their people, and they help guide them to attain those goals.
- **Leader as Steward.** A leader is a servant to his or her team. Servant leaders are also stewards of the mission, the people and the position that they hold. They protect what they are responsible for, and they do it with humility and generosity.
- **Leader as Philosopher.** A philosopher is a person who studies ideas about knowledge, truth, the nature and meaning of life and so on. Flexing this mental muscle helps leaders understand abstract and complicated ideas. Ultimately, practicing a philosophical mindset helps leaders find the right course of action during the most difficult times. As a leader, you should be patient, think things through, and assure yourself and others that your actions — or inactions — will be meaningful.

Owning Your State of Mind

SEALs are *first strike thinkers*. They want to be up front. Beyond all else, they are action oriented. They embrace adversity. They channel fear into courage and action. It's what is called the "first strike mindset." It's a central feature of the First, Fast, Fearless Leadership Brand.

In the military, during times of war and insurgencies, leadership has to deal with VUCA (volatility, uncertainty, complexity and ambiguity). Even in the most stressful and VUCA times, SEALs take action (First), move with purpose (Fast), and commit themselves and become fully engaged (Fearless). Leadership is, first and foremost, a choice and a state of mind. You can and must work to control your state of mind to be an elite leader in any organization.

How do you turn fear into courage and courage into action? It boils down to two main things: The first is creating a positive, look-forward environment called a *front sight focus*; and the second, and closely related to the first, is adopting a *first strike mindset*.

Front Sight Focus

As a leader, one of the most important tasks is simply to be there and to create a positive environment. Leaders present in times of stress are far more valued than those who stop by once in a while when things are going well.

Just being there, however, won't suffice. The next task is to keep the troops moving forward, letting them know you're there alongside them. Approach what lies ahead with positivity and ideas of how it can be changed for the better.

Creating a positive mindset also comes with a measure of preparation. Make sure you and the team are equipped with the right resources and knowledge of the situation, or else your positive energy can turn negative very quickly.

Adopting a First Strike Mindset

For SEALs, a first strike mindset means that at every moment, in every situation, you act first decisively and assertively to make the most of your time. You approach life and every task in a creative, energetic, positive way.

The fundamental advantage of the first strike mindset is that it puts you in control of every moment in your life. It means that you see every moment of your life — and every leadership moment — as an *opportunity*.

Power by Example

An *ethos* is the distinguishing character, sentiment, moral nature or guiding beliefs of a person, group or institution. The word ethos means "character" in Greek.

In fundamental ways, the SEAL Ethos and way of life are very similar to those of ancient warriors. True warriors

have always held similar fundamental beliefs in the virtues of life. They all believe in serving something greater than themselves, which gives them a clear purpose and meaning in life. They believe in protecting those who cannot protect themselves and in living a life of virtue, purpose and brotherhood.

The SEAL Ethos is a highly evolved statement of a shared set of core values, values that guide the thoughts, behaviors, morals, beliefs and sentiments of SEALs and SEAL Teams. Their ethos is the basis for all of their conduct on and off the battlefield. It's a philosophy on how to live life as SEALs, citizens and leaders. Their ethos is a guiding framework for life and a guiding framework for leadership. SEALs continuously grade and evaluate themselves — and are graded by others — within the framework of the values stated and implied in their ethos. It defines who they are.

Your ethos won't be exactly like the SEALs'. But the important part is to have one, think one, use one and allow it to not only guide your daily activities but also to inspire you to First, Fast and Fearless victories in your enterprise.

Always On

As members of a relatively small community, everyone in the SEAL Teams knows or has heard of everyone else. Your reputation is very valuable, but it can be detrimental as well. In the SEAL Teams, you can tell who the great leaders are by how many people request orders into their command.

Leadership is not one thing you do. It's *everything* you do. Leaders should understand that they are on stage all the time and that their people are watching and judging every aspect of their actions, in and out of the office. As a leader, you must not leave your reputation or their perceptions of you up to chance. Take the offensive mindset, and strike first. In short, you must market yourself. This is not advocating that leaders need to be schmoozers, social butterflies or ass-kissers. It means if you build a solid reputation, people will come running because great leaders develop fans and a following.

General George Patton was famous for his leadership style. He believed that general officers must be careful not to appear to be dressed more warmly than the troops. People loved and hated him at the same time, but General Patton knew, among other things, that perception mattered, especially the higher up you go.

When you are highly ranked, every contact, even for a moment, means something and adds to the perception of your leadership. Don't show off your power and prestige. Be one with your team. That said, it's also disingenuous to pretend you *are* them. It may be perceived as not genuine or even condescending. They know you are not one of them. Yet they can and will respect you if they feel their well-being is your concern and you have their backs.

Leadership Moments: When the Bugle Sounds

Leadership moments are shining opportunities to make the most of your leadership responsibility. The expression "when the bugle sounds" refers to the call to war in the days of the cavalry. It's used here to signify a moment when leadership truly matters. Your reputation will be defined by these precious moments. For your people, these moments are those of conflict, stress, fear and VUCA. Will you stand up and face that challenge?

Be in the moment during times of stress.

If this sounds like an impossible feat, it's not. It merely means that you must recognize these moments in time, understand your emotions, control them and your actions, and stand up. Great leaders understand the importance of not losing their composure during difficult times. They understand that it is at these times when their people rely on them the most. In stressful conditions, people are hypersensitive to leadership.

Getting it right during these leadership moments is not about being the most courageous, the toughest or even the most qualified. It's about choosing to accept the privilege and responsibility of leadership and to stand up to address problems head on, with a first strike mindset — with a First, Fast, Fearless mentality.

Look, Listen and Feel

The more you know about tactics and the environment you're in, the better chance you have for mission success. SEALs understand that they don't know everything about warfare or tactics, but they are learners willing to learn anything to become a better operator to succeed at the mission.

Leadership is subtle. Once you see leadership, you'll always see it. Once you're a leader and consistently exhibit leadership traits, you're always a leader. Your people will undergo the same transformation: Once they see you as a leader, they will always see you as a leader.

Communication is the thread that holds us all together in life and at work. The expression "look, listen and feel" comes from the idea that when you make an insertion into enemy territory, you need all of your senses to be working in a heightened state. You need to pay attention to everything.

From the moment the helicopter or boat inserts your team into the field, you take cover and concealment, forming a 360-degree perimeter. You completely stop moving and stay silent. You look for any signs of enemies; you listen not only to the sounds of people but also to the sounds of nature. When nature is disturbed, it leaves signs. At the moment of insertion, the wildlife and insects become quiet because the noise scares them. SEALS sit there motionless until the chorus of nature restarts, so they know they are not in an ambush. They use all of their senses to feel what is going on around them.

Good leaders evaluate what's going on with all six senses before they step in. Their sixth sense is their personal experience.

Great leaders are great listeners and can hear — or sense — people's fears. Anger, resentment and frustration are all symptoms of fear.

To effectively communicate and understand what people say and what they mean, we must pay attention and focus on their intent; that is, we must be aware. It's not just the words that are said. It's how they're said and what they really mean. Be aware; know what's going on; know what's going on behind what's going on.

When people see that you are paying attention to them, it improves the interaction because they know you are listening. Always look to find their intent, and then strike first to 1) make sure you know what they mean and 2) let your intent be known.

Give Honest Feedback

One of the most important — and most sensitive — tasks that leaders have, whether in the SEAL world or in the business world, is to give feedback to their troops and their teams. The leader who can't make the time or effort to do this, well, isn't a leader.

Feedback, of course, gets everyone better aligned on whatever is being discussed — the values, the mission or specific tasks undertaken by the team. People want to know how they're doing; they seek security in what they do and how they approach their responsibility.

Without that feedback or with feedback that is delivered in the wrong way, people struggle with self-doubt about their performance or their role in the team. Giving feedback the *right way* means being clear and being honest, telling people what they did right as well as what they did wrong.

Highly insecure leaders think their job is to "find the fault," and they spend most of their time doing that. When they find fault with their subordinates publicly, that is, in front of everyone else, look out below. Never disrespect people personally or publicly. If you do, apologize quickly.

When complimenting someone or approving something, don't use the words *but* or *however*. You're probably looking for perfection in things that don't matter.

Remember, be honest, balance the positive and the negative, be clear and take your own ego out of it. The people receiving the feedback will get more out of the process in the short term, and everyone will benefit in the long term.

'Ya Got What Ya Got'

In the military and any productive organization, accountability as a leader is critical and is enforced at all levels. When you accept command, when you are in charge, everything rests on you. SEAL leaders know and accept this when they join.

Dealing with limited resources — and getting things done anyway — is a sign of accountability. Some people confuse the terms responsibility and accountability. You can be responsible and also accountable, but the two are not one and the same. Responsibility is "pointing the finger," that is, finding the cause when something goes wrong; it's what most organizations do. It's identifying who made the mistake and blaming that person or people. Accountability is not about who is responsible and who is not. It's more than that. It's about "where the buck stops."

In the SEAL Teams, when you are in charge, you are accountable for everyone in your care, no matter who did what. You will stand on the carpet and "answer to the man." Accountability is a way of stopping the blame game when things go wrong. Making excuses is not tolerated at any level because it slows down the organization.

To hold people accountable, we must give people authority to act. We cannot separate the two; we cannot hold people accountable if they do not have authority to make decisions that guide their team's results. When authority is given, so is the trust in leaders to do the right thing as guided by their ethos. Accountability and authority must travel together.

Leaders should confront their bosses with the shortfalls they have prior to taking command of a situation, to give them a clear understanding of the risks associated with the lack of resources, manning, training or other deficiency.

When you know you're accountable, you accept your job in a holistic manner. You don't waste time or energy thinking about how you have been dealt a bad hand. First, Fast, Fearless leaders take the offensive mindset, bend the rules prudently and make it happen with what they have.

Ya got what ya got. Now do something with it!

PART II: RUNNING TO THE SOUND OF GUNFIRE THE ESSENCE OF BROTHERHOOD

Teamwork and brotherhood are similar but not the same. Brotherhood is much deeper and stronger than teamwork. Brotherhood is a full commitment and promise from each team member to look after each other and to put the well-being of others before themselves.

When navigating in the fog of war and in the world of VUCA, the SEALs' ethos is their compass. Their values, not the rules, define who they are. Of course they need *some* rules, but too many take discretion away from leaders. They also destroy the ability to change the situation in real time for the success of the mission.

Managing Versus Leading

What is the true difference between managing and leading? You manage things; you lead people. Managing people instead of leading them often results in the "nickel-and-dime effect."

The managers start to see — and look for — trivial faults and mistakes. They focus on things that don't matter to the successful outcome of the mission. Their people are worn out by the sense that these trivial negatives are now the main topic or currency of their relationship with their manager. People resent being managed, but they appreciate and respect being led.

Provide the motivation — and the means — to do something important. Don't micromanage.

If you guide and measure people according to values, the specific goals and metrics of the organization tend to take care of themselves. That is, if people on your team are acting according to their values and are guided by the big-picture elements of the mission, the specific measures and goals tend to fall in line naturally.

If you and your team members take care of your customers, treat others with respect, "own it and act passionately on it" and do what's right for the profitability of the business, you will likely come out ahead. Sales, costs, profits, customer retention rates — they will all take care of themselves. The values and mission guide the right behaviors. Being guided by your values is the essence of First, Fast, Fearless leadership.

Powering Teams Forward with TRUST

Without trust, there is no team, just a bunch of individuals looking out for themselves. A lack of trust leads to micromanagement, bureaucracy, paranoia, rules-based management, resentment, dishonesty and a host of other organizational ills.

How does an organization build the sort of trust upon which we would risk our lives? Great teams build trust in a variety of environments, from the battlefield to the boardroom. They share common themes and principles:

Time and attention: The ability to manage time is a critical part of leadership and of building team trust. Be timely, and respect the time of others.

Respect: Respect needs to be genuine and continuous; it is a perpetual state of mind and being. Gain respect the old-fashioned way. Earn it. Never resort to fear.

Unbreakable values: Every day our values are being tested, and often they are in competition with one another. That makes it more important than ever to live by an ethos instead of a set of rules. Without an ethos, the outcome of moral decisions can vary greatly. As a leader, you should expect mistakes with expertise, knowledge and experience, but values-based mistakes should be dealt with swiftly and not allowed.

Sacrifice. The willingness to sacrifice is one of the "secret sauces" of building trust. Sacrifice provokes a strong emotion, and people respond. Sacrifice as much as or more than you expect of your teams.

Technical proficiency. There are few honors higher to a SEAL than being referred to as a "great operator." It means that he has mastered the trade skills and leadership skills for his level. Be an operator and people will trust your performance.

The internal trust within your team, department or organization develops into a trustworthy brand. Consistent internal trust over time leads to trust with an organization's customers.

Two Is One, One Is None

Two people with complementary skills and abilities working together toward a common goal can be more than twice as effective as one man alone. They leverage each other's skills and presence; they cover each other; and they help each other deal more effectively with VUCA. In the SEAL world, they always approach difficult tasks with a *swim buddy*. Without a swim buddy, the individual not only has no help, but he is also more vulnerable.

"Two is one, one is none" is a mantra for every SEAL. The swim buddy concept accomplishes the larger goal of getting everybody across the finish line faster. But there is much more than combined strength to the swim buddy principle. Most of it is psychological, and every bit of it is

tested in the heat of combat during times of VUCA. You make better decisions when someone else is with you. You are braver and stronger, and when held accountable for each other, both of you tend to perform at a higher level.

In the civilian world, successful people recognize the swim buddy concept and use it, often without realizing what it is. They may call their swim buddy a "partner," an "associate" or a "teammate." They have a swim buddy to bounce ideas off of, mesh their strengths and weaknesses with and support them throughout.

If you have swim buddies on your team, hold them jointly accountable for their performance. Their accountability to each other will follow naturally and will strengthen their performance. It's a positive cycle.

Developing a Perimeter

It has been observed that conventional forces can listen to a firefight happening at a distance and quickly identify the force as being Navy SEALs. When a well-trained and coordinated force gets into a firefight, they can sound several times larger than they actually are. Why? Because they are all firing and fighting in unison, not as individuals.

Similar effects might be observed with teams in the business or enterprise world. A team that works in unison seems stronger and more effective — maybe even more so than it actually is. If you define a perimeter, strengthen what's inside and make sure it acts, communicates and moves forward as a team, it will have greater credibility and impact than a loosely guided and coordinated band of individuals. A good leader defines the perimeter and leads all that's inside of it. What's inside the perimeter and how it works together become part of the team brand.

Danger: The Enemy Within Is Worse

Particularly in combat, the enemy inside the perimeter is worse than the one outside. Infighting and conflict within the team can inflict more damage on a team than the enemy outside the perimeter. It is a leader's responsibility to resolve the pressures team members face and to maintain the resilience of the team during periods of high stress. Teams can endure great amounts of outside stress if they keep the enemy outside and their teammates close, and if they are led by competent leaders.

The inside of the perimeter represents the team and what you want to accomplish through, by and with them. The enemy and danger should remain outside. The core of the perimeter is composed of our actions to accomplish our mission, our ethos and the elements of TRUST. Within the perimeter lie mutual respect, fairness, recognition, meaningful work, loyalty, caring, friendship, flexibility, honesty, humility, working together and all the other positive actions and virtues of a brotherhood.

Some things you can't control — volatile markets, competitors and world events. But a strong team with a strong perimeter can deal with those dangers.

Leading From All Parts of the Line

Good leaders know how to follow others when the situation calls for it. It's called *followership*. It is an element of leadership just as important as leading from the top.

SEAL leaders and SEAL Chiefs don't see their followership role as submissive or passive; they pursue it aggressively when the time is right. Being able to humble yourself as a follower and commit to someone else's decision is critical for any mission success.

Being the right kind of leader is critical to getting committed and engaged followers. When possible, leaders should always listen to their people's ideas and reserve giving direct orders for when they have to. When leaders let their people decide, it gives their people a greater sense of control over their jobs and ultimately a better sense of ownership.

People won't question the orders if they trust the leader; they will know that he is protecting the perimeter and doing the best he can for the mission and the team, not himself. What's important is that when a decision is made, people accept and execute it.

The strength of any team comes from the ability of its followers to execute plans from decisions made. As a leader, you must remember that you are looking for results, and those results lie in the hands of your followers. If you stay married to your own ideas long enough, the team will stop being creative. They won't come to you with solutions. Instead, they will wait to be told, knowing that their ideas won't matter.

Following is just leading from a different direction.

PART III: BATTLE RHYTHM TURNING BRAND AND BROTHERHOOD INTO MUSIC

Every culture has its own music. The SEALs refer to theirs as their "Battle Rhythm." Battle Rhythm is an organizational condition, or context, that helps individuals confront the change and VUCA of high-stress organizations — and enables the highest levels of success.

Certain patterns and elements create a rhythm to lead SEAL Teams through VUCA and situations of dramatic change and adversity. These patterns operate almost subconsciously and tend to lead to better decision making, problem solving, innovation and results by pushing authority down the organization through a high degree of trust.

Leading at the Speed of War

Leading at the speed of war means making the *right* decisions at the *right time*. This doesn't mean the *fastest* decisions but ones made at the right time — *timely* decisions that consider what's important but don't impair progress. Leading at the speed of war means making decisions without perfect information.

Leading at the speed of war requires you to trust your teams, to reap the fruits of the seeds of teamwork and brotherhood that have been sown up to this point. It means joining your troops in war, to know more, learn the truth, gain trust and react faster. It means allowing yourself to move outside your comfort zone. Otherwise, you'll get bogged down, won't react or can't decide. It means focusing on what's right, not what's wrong — too much focus on what's wrong will slow you down.

Leading at the speed of war is a system based on well-orchestrated values, teamwork and timing. When it works, it creates music.

Thriving on the Rhythm

If the leaders set up the right conditions for the team to thrive, sometimes the harder the job, the better the rhythm. But don't make it so hard as to break their spirit or make it so easy as to be dull.

To lead at the speed of war, one must share information both up and down the chain of command. Furthermore, the intentions behind leaders' orders must be clear. In the world of VUCA, unanticipated situations and opportunities arise, requiring your subordinates to exercise their own initiative. If they are clear on what winning looks like, they can use their discretion and make decisions that support the mission.

An effective expression of the leader's intent usually has three parts: purpose, key tasks and end state; appropriate guidance; and priorities. It's a clear and concise statement of what subordinates must do to succeed and achieve the desired end state in the environment they're in. It gives subordinates enough context to exercise initiative when unanticipated opportunities or constraints arise or when the plan they are executing is no longer relevant.

The leader's intent is not a restatement of the mission. It provides a broader purpose, one that helps put things in a clearer context. It is written in your own words, not as it comes down from command. Present the big picture, so people get a better sense of why they are doing what they are doing.

Ultimately, the better the team understands the mission and intent, the better equipped and empowered it will be to execute. But it only works in an ethos-based organization where individuals can be trusted to do the right thing.

The Man in the Arena

"Front sight focus" is a SEAL expression that means focusing on the front sight of your weapon when you want to hit the target. The farther away the target, the more critical is front sight focus. The target itself is blurred because your eye can focus on only one distance at a time, much like a camera.

It's the same in business. If you focus too much on the bottom line — and lead accordingly — you may miss your target. Leaders should keep people focused on the front sight post to ultimately hit the target. The trick is to see and know the target but to focus on the key steps — the sight posts — to get there. Focusing on the front sight means focusing on the smaller, doable parts of the job, which ultimately reduces fear. Hitting the target is the result of great leadership.

When you accept the responsibility of — and the accountability that comes with — leadership, there will be hard times. But remember, it's not the critic who counts. It's the man who is actually in the arena. If you cultivate the brand of a true leader, build and love your brotherhood and set the conditions for your people to thrive, there will be great rewards.

RECOMMENDED READING LIST

If you liked *First, Fast, Fearless*, you'll also like:

1. ***No Substitute for Victory* by Donna Kinni, Theodore Kinni.** The authors reveal what General Douglas MacArthur knew about setting goals; building sleek, fast-response organizations; and inspiring subordinates.

2. ***It's Your Ship* by D. Michael Abrashoff.** Captain D. Michael Abrashoff shares his experiences commanding a guided missile destroyer.

3. ***Turn the Ship Around!* by L. David Marquet.** The author shares insights as the crew gains unprecedented decision-making authority, the risks of doing so and the reward of an exponentially more effective organization.

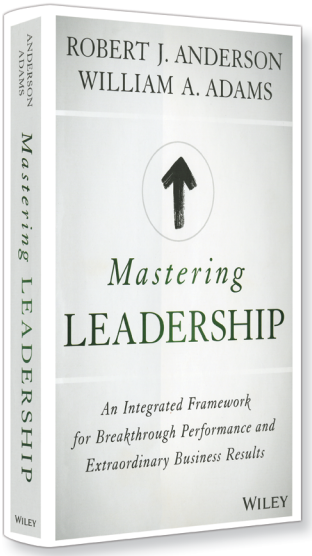
Mastering Leadership

An Integrated Framework for Breakthrough Performance and Extraordinary Business Results



by Robert J. Anderson and William A. Adams

THE SUMMARY IN BRIEF

For most leaders today, complexity is outpacing their personal and collective development. Most leaders are in over their heads, whether they know it or not. The most successful organizations over time are the best led. While this has always been true, today escalating global complexity puts leadership effectiveness at a premium. Mastering Leadership involves developing the effectiveness of leaders — individually and collectively — and turning that leadership into a competitive advantage.

This comprehensive roadmap for optimal leadership features the first fully integrated Universal Model of Leadership — one that integrates the best theory and research in the fields of Leadership and Organizational Development over the last half century, the five stages in the evolution of leadership — Egocentric, Reactive, Creative, Integral and Unitive — along with the organizational structures and cultures that develop at each of these stages, six leadership practices for evolving your leadership capability at a faster pace and more.

Mastering Leadership provides a systemic approach for developing your senior leaders and the leadership system of your organization. By more meaningfully deploying all of who you are every day, individually and collectively, you will achieve a leadership legacy consistent with your highest aspirations.

IN THIS SUMMARY, YOU WILL LEARN:

- The four universal promises of leadership.
- Why mastery in leadership requires nurturing both your "inner" and "outer" games.
- The five levels of leadership and how they meet the challenges of today.
- Six key practices for developing your leadership.

The Promise of Leadership

When we step into positions of leadership, we make a whole set of promises we may not know we are making. These promises are profound and come in the form of high, often unspoken expectations. Understanding, managing and living up to these promises defines our leadership. We all expect great things from our leaders, and these expectations constitute the Promise of Leadership. Leadership expectations come in two forms:

Explicit: Expressed expectations for certain outcomes that come with the role and that show up in the leader's job description (things like fiscal responsibility, accountability, strategy and execution).

Implicit: Unspoken expectations that stakeholders have of their leaders (things like competence, fair treatment, commitment, engagement, listening, acting on suggestions and providing inspiration, meaning and direction). Leaders rarely understand the impact these implicit expectations have on their perceived effectiveness.

Great leaders can be cultivated to meet and exceed our high expectations of them. In order to fulfill the Promise of Leadership, leaders must know what people expect of them, manage those expectations and develop into the person who can perform against them.

Based on research and field experience, there are *four universal promises of leadership*:

- Set the right direction, and create meaningful work.
- Engage all stakeholders, and hold them accountable for performance.
- Ensure that processes and systems facilitate focus and execution.
- Lead effectively — maintain relationships of trust to achieve and sustain desired results.

These four promises and the level of effectiveness (if not mastery) that they require — individually and collectively — constitute the Leadership Agenda for the organization. This agenda, mastering the art and practice of leadership, needs to be held by the Top Team and led as a key strategic priority and business imperative. The performance of the business — as well as the meaning and value creation of everyone associated with the business — depends on it.

Leadership Effectiveness and Business Performance

We will only seek a better model of leadership and make the Leadership Development Agenda a strategic priority if we believe that more effective leaders achieve higher performance and that we can develop effective leaders at a faster pace.

Leadership effectiveness is a primary contributor to business performance. In fact, data strongly suggests that if you can improve leadership effectiveness, you have a 38 percent probability of seeing that improvement translate into higher business performance. In other words, leadership effectiveness is a 38 percent lever, contributing heavily to the organization's overall performance. Since 38 percent is well beyond most companies' profit margin, developing effective leaders clearly deserves investment.

Collective Effectiveness

In business, *collective leadership effectiveness* is underutilized and rarely capitalized upon. Most development focuses on *individual* leaders, ignoring collective effectiveness and the leadership system — all leaders and managers in formal leadership positions.

The Extended Leadership Team (ELT) makes up the organization's Leadership System. Primarily the focus is on the top four levels of leadership — the CEO, their direct reports (C-Team and EVPs/SVPs, that level's direct reports (primarily VPs) and in some cases the next level down (primarily Senior Directors). The number of leaders on the ELT varies depending on a company's size. In large organizations, there are several hundred people within these ranks. In smaller enterprises, this group might be fewer than 20. Regardless of its size, the ELT is responsible for providing leadership to the entire organization. This group has more impact on how the organization performs than any other group.

Since the ELT determines the organization's direction and execution, collective leadership effectiveness is impacted by how well the ELT sets direction; aligns around vision and mission; agrees on key strategies and initiatives; develops a clear shared understanding of strategy; translates strategy into execution; understands each other's roles; collaborates together; makes decisions; creates an accountable, engaged, performance-based culture; focuses on achieving results; mobilizes and engages all stakeholders to achieve those results; and develops leadership that can do all the above.

The level and consistency of collective effectiveness of the leadership system makes the difference between organizations that perform optimally and those that do not. Individual effectiveness is necessary, but insufficient, for extraordinary business performance. Individual leadership effectiveness catalyzes collective effectiveness. The organization cannot perform at a level higher than the collective effectiveness of its leadership. Collective effectiveness is vital to fulfilling the Promise of Leadership.

The Leadership Development Agenda

We often confer the title of Master onto people who are highly effective at what they do. Mastery in anything — from sports, to the arts, to leadership — requires well-practiced capability mediated by a highly mature interiority: a well-honed "Outer Game" arising from a highly-evolved "Inner Game." Both are essential. Masterful leadership is Conscious Competence. The inner game runs the outer game. The maturity of the inner game is mediating and managing the outer game. Since this truth is largely ignored, most efforts to develop mastery in leadership focus on the outer game of competence with little focus on the inner game of consciousness.

The outer game of leadership consists of using all of our knowledge and experience, as well as our technical, managerial and leadership competence, to accomplish results. In high-pressure leadership roles, we might assume that the outer game is the only game; however, it is just the tip of the iceberg. What is happening beneath the surface is mediating and organizing the effectiveness of the outer game.

The inner game consists of our meaning-making system — what we use to make sense of the world; our decision-making system — how we analyze, decide and act; our values and spiritual beliefs; our level of self-awareness and emotional intelligence; the mental models that we use to understand reality, think, act and create; the internal beliefs and assumptions making up our personal identity — the system that we use to know who we are, and to define and deploy ourselves into circumstances. The more well-honed the outer game, the more effective we are. The more mature the inner game, the more effective we are. Mastery is a well-honed outer game arising from a very mature inner game.

Four Foundational Premises

There are four premises that underpin the Unified Model of Leadership.

Premise 1: Structure determines performance. This is a systems and design principle: the design of any system is the primary determinant of the performance of that system. Likewise, you are designed, individually and organizationally, for the performance you are getting.

Premise 2: You are a structure. You have an inner game and an outer game. The inner game is a complex system that includes your conscious and unconscious meaning and decision-making system, values, mental models, beliefs, assumptions, self-awareness, emotional intelligence and identity. This is our Internal Operating System (IOS). It functions like a computer's operating system, operating mostly below the surface, mediating and managing everything going on at the surface in the outer game. Each evolution in the operating system enables us to accomplish more with less — higher mastery amid greater complexity.

Premise 3: Consciousness is the operating system of performance. Consciousness (the inner game) is the deep structure of performance. The structure of our operating system focuses our attention, influences our choices, drives our behavior and determines the effectiveness of our actions (both short- and long-term). Performance, individually and collectively, is always consistent with our level of consciousness. We cannot perform at a higher

level of performance than is built into our operating system. Likewise, an organization cannot perform at a higher level of performance than the collective consciousness of its leadership.

Premise 4: To achieve higher performance, you must be restructured. Since structure determines performance and since you are a structure, if you want to break through to higher levels of performance, you must allow yourself to be restructured.

Escalating complexity requires that the creative, adaptive capacity of the leadership of the organization evolve at or beyond the rate at which complexity is increasing. The maturity of the outer game and the inner game of leadership, individually and collectively, must mature at a pace to stay relevant and competitive. The mastery or effectiveness of leadership depends on evolving the complexity of mind or consciousness of leadership to be more than a match for the complexity of market and business challenges.

Five Levels of Leadership: Structures of Mind and Performance

The Universal Model of Leadership is the first fully integrated model of leadership development. The premise at the heart of the Universal Model of Leadership is that consciousness can evolve into higher-order capacity to meet complexity — development proceeds from lower to higher-order Structures of Mind through a series of well-mapped stages. Personal transformation is the movement from one stage to the next.

The Universal Model of Leadership includes five stages: Egocentric, Reactive, Creative, Integral and Unitive.

Egocentric Leadership. This Stage begins at about 8 years of age and ends as the adolescent matures into early adulthood. Identity at the Egocentric level is "I am my needs." This identity does not notice others' (often competing) needs. The strength of egocentricity is the capacity to get our needs met and gain independence. Growth at this phase is taking others' needs and expectations into account. The Egocentric Mind in adolescence is normal. In adulthood, it is pathology. In leadership, it is oppressive and destructive.

Reactive Leadership. The developmental challenge of the Reactive Mind is to merge with society. As adolescents, we reluctantly give up our over-independence and learn that to get along we must go along. As we transition into the Reactive Mind, we learn societal rules and play by them in order to meet expectations. We construct a life that best fits and works within these expectations. Loyalty is not so much to the leader but to the organization and its objectives. Its political climate requires loyalty and obedience. Most change efforts seek to create structures and cultures that are flatter, leaner, more agile, more engaged, and require more ownership and creative involvement at lower levels than the Reactive Structure of Mind can tolerate. The Reactive Mind is outmatched by the complexities of organizational life today.

Creative Leadership. The transition to the Creative Structure of Mind is marked by two changes in the IOS: first, we shed some old assumptions that have been running us all our lives; and second, we initiate a more authentic version of ourselves as we shift from Reactive to Creative. The central questions of the independent, self-authoring, Creative Mind are, "Who am I? What do I care most about? What do I stand for? How can I make my life and my leadership a creative expression of what matters most?"

As the consciousness of leaders moves to Creative levels, they tend to design and create organizational structures and cultures that facilitate industry-leading business performance. Leaders begin to share power. It is no longer perceived as "letting go" of control but of gaining power by sharing it. The development of self and others is prized. People at every level (and there are fewer levels and broader spans of control) are deeply involved in decisions that affect them. There is a successful, quality culture that sometimes evolves into a self-managing organization.

Integral Leadership. The Integral Mind ushers in a level of leadership that is capable of leading amid complexity. We can now hold the whole complexity of our personality, good and bad, light and dark, hard and soft. We can see this inner complexity without flinching or needing to engage in some strenuous self-improvement regime. We see others this way — as complex multi-dimensional beings. We also see the world as a dynamic interplay of conflicting forces. Self-compassion for our incompleteness allows us to engage others and the larger system with the same acceptance. Integral leadership is best suited to lead the transformation of complex systems.

Leaders at this level become systemically and community oriented. The workplace becomes a self-renewing organization where members are true, engaged and participating partners. The organization is seen as a network of stakeholders nested within a larger system of networks. Vision often becomes global and oriented toward service to human welfare. Sustainability and long-term common good become salient values. This is servant leadership.

Unitive Leadership. At the Unitive stage, another major shift takes place. Up to this point, the self has seen itself as a separate self, as located within the body-mind. Now the self realizes that "I am not the body, nor the mind." In the early phases of the Unitive stage we identify with the "soul"—an essential self in communion with the Divine Reality. The Integral self is not discarded. That richly nuanced self is used to act in the world. It is highly functional and effective. It becomes a useful tool of the spirit.

Further into the Unitive Stage, the astonishing oneness underlying and just behind diversity becomes obvious. Leaders at this level function as global visionaries and enact world service for the universal good. From the perspective of Unity, we are all each other: one family.

Task and Relationship

If leaders effectively organize and execute to accomplish tasks and establish great relationships, they will be effective. If leaders are ineffective on either task execution or relationship capability, their leadership effectiveness diminishes.

A leader can manage people Creatively — in a way that engages, empowers and brings out the best in them. Or that leader can engage people Reactively — in a way that is people-oriented and heart-centered but gives up too much power in service of being liked and accepted. A leader can manage tasks Creatively — purpose-driven and vision-focused that translates into effective execution on results and systemic improvement. Or, a leader can manage tasks Reactively — over-controlling and driving the organization and people beyond sustainable limits.

Mastering leadership is long-term life work. As Warren Bennis said, the process of developing extraordinary leadership is the same process as becoming an extraordinary person. To fulfill the Leadership Imperative, we need to rethink how we develop leaders. Our efforts need to be long-term and systemic (not piecemeal and episodic), individual and collective, and integrative of the inner and outer game of leadership. Anything less is not likely to succeed.

The Leadership System: The Central Organizing System

Businesses are facing a Leadership Imperative that requires them to focus on and accelerate the development of effective leadership. This requires a transformative approach to the development of leaders, individually and collectively.

Six systems within organizations must be carefully developed and maintained for businesses to thrive and organizations to be changeable.

System 1: Leadership. First and foremost, the Leadership System ensures that organization identity is defined; this happens by providing direction and strategy and ensuring alignment. Overall, the leadership system is responsible for creating meaning, setting context and maintaining the conditions by which the organization can thrive.

System 2: Communication. Everything happens in or because of a conversation, and every exchange is a potential moment of truth — a point of failure or critical link in the chain of success. Effective communication creates organizational meaning. Organizational meaning produces the context in which the entire organization operates. What you say, the way you say it and where, when and under what circumstances it is said shape the performance culture.

System 3: Accountability. Leaders translate vision and strategic direction into goals and objectives, actions and accountabilities. Performance accountability systems clarify what is important and what is expected of people. They align consequences for efforts with actual performance. Leaders need to build discipline into their leadership process and management cycle to achieve accountability, predictability, learning, renewal and sustainability.

System 4: Delivery. The best organizations develop simple processes that are internally efficient, locally responsive and globally adaptable. Complexity is removed from the customer experience to enable them to engage you in ways that are both elegant and satisfying. Establishing and optimizing operational performance is an ongoing journey. Operations need to be focused on the priority work, using the most effective techniques: aligning initiatives and operations with strategy, continuously improving operations, pursuing performance breakthroughs in key areas, using advance change techniques in support of major initiatives, establishing a pattern of executive sponsorship for all initiatives, and building future capability and capacity.

System 5: Performance. The Human Performance System is designed to attract, develop and retain the most talented people. The idea is to hire the best people and help them develop their skills, talents and knowledge over time. Of course, it becomes critical, as they add abilities and know-how, that they are properly rewarded such that they feel good about their work and remain loyal, dedicated employees.

System 6: Measurement. A system of metrics, reviews and course corrections keeps the business on track. Organizations need concrete measures that facilitate quality control, consistent behaviors and predictable productivity and results. Within these parameters, *control* is instrumental to viability and profitability. Leaders establish and maintain the measurement system to ensure disciplined processes. They track progress against strategy and planning, review status on operational results through clear key metrics, update the strategy regularly, and ensure action is driven by insight based on relevant, current information focused on achieving the vision.

This Six Systems model helps us understand how everything within an organization is a system that, when fully integrated, optimizes overall performance.

Next, we'll dive into the progressively developing Structures of Mind (Reactive, Creative, Integral and Unitive).

Reactive Leadership

The evolution of the Egocentric Mind into the Reactive Mind is a triumph of development. The Reactive Mind is well suited for growing into adult life, but as life gets more complex — with competing demands of expanding leadership roles, growing families and mounting financial commitments — Reactive Structure likely meets its limits.

Reactive Structure is inadequate to lead effectively today because volatility and complexity put a premium on the ability to adapt and recreate the organization in new and innovative ways. Reactive Structure is designed to return to normal for six reasons.

First, the Reactive Mind forms in the transition out of adolescence when the challenge is to join with, to merge with, the prevailing cultural reality. Development succeeds to the extent that we take on the mental models, values, rules and ways of operating that are structured into the world of which we are members. We build our lives, roles, careers and identities such that we succeed within the current culture. The Reactive Mind is designed to fit into and to replicate what is, not change it.

Second, the Reactive Mind is problem focused — organized to remove the problem. At best, when we try to fix our way forward, we eliminate the problem, which returns us to homeostasis, not to a new future.

Third, the Reactive Structure of Mind is designed to reduce the inner conflict (fear, anxiety and self-doubt) created by the problem. As such, it orients on safety in a play-not-to-lose game. Since we get what we avoid, the Reactive Structure tends to re-establish what we do not want.

Fourth, if our Reactive strategy is successful, it attenuates the inner conflict that is motivating the very behavior we are using to make change. This sets up the likelihood that we will stop reacting as the inner conflict recedes, and thus, the problem returns.

Fifth, the inner conflict we feel is generated by beliefs and assumptions that run on autopilot. These beliefs are externally structured and were formed by taking on the dominant assumptions of the current cultural reality. Worth and safety are maintained through external validation. We live, therefore, reactively. We are motivated to live up to the expectations of others, which we mistake as our own. This dependency on external validation creates fear, keeps us habitually in a play-not-to-lose game, has us seeking safety over purpose, and thus sets up the oscillating/balancing loop structure that maintains current reality in a way that is consistent with our belief structures and consistent with current reality as it is.

Sixth, Reactive Structure orients toward safety. The choice to pursue a larger purpose and vision gets compromised. There is no risk-free path to creating the future we want. The safe paths all lead back from whence we came. To lead transformation is a risky business. It requires the biggest risk of all: that we change fundamentally. Reactive Structure, in its unconscious, play-not-to-lose, fear-attenuating, externally dependent structure, is simply not designed to lead into a more purposeful vision of the future.

Creative Leadership

The transition from the Reactive to the Creative Mind is arduous. Only about 20 percent of adults fully make it. It is the major transition in most adults' lives.

The core of the Creative IOS is a constant focus on a desired future vision, and amid the current reality (with all its mixed messages and hurdles) taking authentic, collaborative action to bring that vision into being over time. Creative Leadership is about creating an organization that we believe in, creating outcomes that matter most and enhancing our collective capacity to create a desired future. It is designed for change, to bring into being what is envisioned.

The energy that fuels the Creative Mind is passion. While fear is naturally present when creating what we want, fear is not running the show. The focus on purpose and vision generates a passion, love and commitment that is bigger than the fear. It is more powerful, and, thus,

Creative Structure supersedes the Reactive play-not-to-lose game. The focus on vision, fueled by passion, results in action, not reaction. In the Creative Mind, we act to bring into being what we most care about. It is called Creative because it is designed to create what matters most.

Creative Structure of Identity

In the transition to the Creative Self, we experience a shift from an externally based identity that is dependent on outside validation to an internally based identity. In this identity, we do not base our self-esteem, worth and security on how others see us. Our self-esteem, worth and security are in our own hands. We establish them not by living up to others' standards but by living up to our own. In this transition, people often refer to "finding themselves," discovering their "authentic self" and enjoying a new level of inner freedom and creative capacity.

As this perspective-taking and challenging process unfolds, we develop new assumptions that are structured from the inside out, not dependent on outside validation. The belief that "my future is in your hands" is replaced with "I am responsible for and capable of creating my own future."

Six Leadership Practices

Leadership is a set of practices. The notion of practice is simple: To master anything, you need to practice; to become more effective in your leadership, you must continually practice and improve both your outer game and your inner game.

Here are six essential leadership practices that, if approached as ongoing disciplines, reliably mature the inner game and develop outer-game capabilities. These practices, taken together, are a spiritual boot camp for leaders. They are spiritual because they call forth the highest and best in us. They are a boot camp because they change and restructure us, making us more fit to lead. They reliably transform the Reactive Mind into the Creative Mind and beyond.

Practice One: Discerning Purpose. A primary task of a life creatively led is to discern the purpose of our life. The Creative Mind orients itself on the purpose that seeks to come through us. Discerning purpose is a practice of attention, much like tracking a deer through woods. The deer leaves signs if we know how to read, track and stalk them. Discerning purpose requires attention to the trail, to the minute, subtle and detailed clues our life is leaving as we live it (or as it lives us). Life has been speaking to us for a long time about what matters most. It has been leaving a trail. It remains for us to have the courage and the discipline to pay attention. This practice is about learning to trust those moments of clarity when purpose is speaking.

Practice Two: Distilling Vision. The Creative Mind is focused on creating vision; thus, the discipline that most evolves the Creative Mind is the challenge of self-authoring a vision of greatness for ourselves and for the organization. There are five elements of vision: Vision is personal, specific, lofty, strategic and collective.

Practice Three: Knowing Your Doubts and Fears. We stalk our longing until it distills into vision. The vision then challenges us to transform ourselves into an effective and powerful vessel for realizing the vision. The new vision will challenge the status quo of who we are, how we live and lead, and how our organization is performing. Vision challenges and evolves the current state of things. We are never "done" with purpose or vision. If we are tracking it and stalking it, it keeps pulling us toward becoming the ever-larger person/leader that wants to emerge. It stretches us. When we are stretched by vision, when we choose to "step up," we meet our doubts and fears at the door.

Practice Four: Engage in Authentic, Courageous Dialogue. Courage is the willingness to be authentic, to speak and act in ways that express and embody our vision of greatness. The whole culture is going on in every meeting: the level of honesty or withholding, caution or courage, vision or compromise, integrity or manipulation, clarity or lack of clarity. To change the culture is to change the moment. The vision lives or dies in moments of courage. We either opt for purpose and take the risk of saying what we really think and feel, or we opt for safety. In this choice we either advance the vision or hold it back. The power to create the culture we want lies in authenticity.

Practice Five: Develop Intuition, Open to Inspiration. Finding leverage points within systems that are so complex they defy rationality requires that leaders trust a way of knowing that is beyond rationality and deductive logic. Leaders must learn to use data and rational analysis as far as it can go and then listen to their gut, their intuitive knowing about the best or right thing to do. Intuition is the gateway to the higher, more spiritual dimensions of ourselves. Creative Leadership is courageous, authentic, purpose-driven, visionary, strategic, emotionally intelligent and inspirational. All of this is informed by intuition.

Practice Six: Think Systemically. In the presence of a new and compelling vision, structures and systems must evolve. Structural forces are more powerful than individual commitment. Only when leaders courageously meet the challenge of structural change head-on can they make

their vision a reality. Systems have a powerful immune system that seeks homeostasis or equilibrium, and they push back hard when change is introduced. This tendency to resist change helps to ensure the survival of the system; it also makes systems difficult to change. Significant changes in individual and collective performance must first take place at the level of structural design.

If practiced regularly, these six practices do two things: 1) they transform consciousness from Reactive to Creative and from Creative to Integral, and 2) they create high performance individually, collectively, organizationally.

Integral Leadership

The Integral Mind is built for complexity, designed for leading change within complex systems amid volatile, ambiguous and rapidly changing environments. By the time leaders evolve to the Integral Stage, their leadership is likely to be extraordinarily effective, if not masterful.

The visionary leader becomes the Servant Leader. The focus is both on the success of the organization that we are leading (the hallmark of Creative Leadership) and on the interdependent welfare of that organization and its larger system. The visionary leader becomes the servant of the whole system and all of the interdependencies that, together, co-construct the welfare of all stakeholders. With this transition, both time horizons and organizational perspective expand. The strategist becomes the system architect.

Leading systemic change requires leaders to hold a high level of conflict, tension, ambiguity and unresolvedness. Integral Mind can hold huge opposites in tension over a sustained period of time, thus allowing the dialogue of key stakeholders to arrive at breakthrough, high-leverage solutions to complex problems. These leaders can do this with effectiveness, mastery and wisdom because the self has gone through yet another metamorphosis, another profound internal transformation in identity. Its inner game has gone from inside out to an ecology of opposites.

Fierce Compassion

The inner work of the Integral transformation is shadow work — work that integrates shadow elements into a larger, more inclusive construction of the self. This can only happen with searing honesty, self-compassion and forgiveness. It is just this honest compassion for the inner conflict and unresolvedness within oneself that enables the leader to hold the conflicted visions and redundant polarities in the outer world with equanimity, tolerance and compassionate forgiveness.

This fiercely embodied compassionate leadership is now mature enough to call forth conflicting stakeholders and hold them in a dialogue with the level of tolerance, urgency, acceptance, resolve, forgiveness, humility and courage that allows for higher-order systemic resolution to emerge.

When leaders reach this stage, they are capable of orchestrating a high level of collective effectiveness and intelligence. As a result, new, sustainable future visions, as well as the systemic design innovations required to realize them, naturally emerge. The Integral Mind is capable of navigating through the complex and interdependent issues we face in our global business environment as well as geopolitically.

Unity: Journey's End

Each progressive Structure of Mind is a more mature ego-identity structure. The movement into Unity is different. The ego is not matured into Unity — it is surrendered. You must forget yourself. Unity Consciousness is not a higher-order Structure of Mind, of ego or identity. Unity Consciousness is identity-less.

This creates a dilemma: developing the self that is no self. Development is still necessary, however. Most of us will not realize Unity Consciousness in this lifetime. So, we need something to do that helps. Why not develop? Why not become more effective? Furthermore, living as Unity will not necessarily make you a more effective leader. You still have to live, work and lead in the complexities of the current business environment. You still need a complex Structure of Mind through which to translate insight into action and results.

When the consciousness that animates us and our leadership is that of Unity, justice is our natural state: non-violence toward, acceptance of and tolerance of difference is effortless. We become servants of humanity. We see that all creatures are one in that Unity, and we become stewards of the planet. This is the Leadership Imperative.

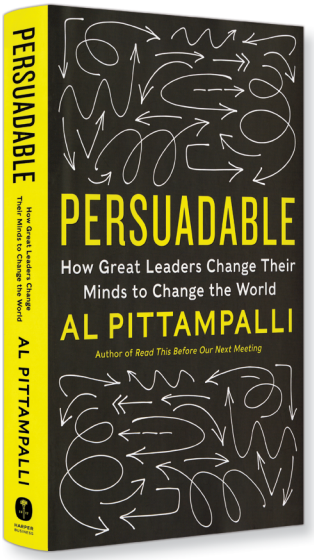
Leadership

Persuadable

How Great Leaders Change Their Minds to Change the World



by Al Pittampalli

THE SUMMARY IN BRIEF

As a leader, changing your mind has always been perceived as a weakness. Not anymore. In a world that's changing fast, successful leaders realize that a genuine willingness to change their minds is the ultimate competitive advantage.

Drawing on evidence from social science, history, politics and more, business consultant Al Pittampalli reveals why confidence, consistency and conviction are increasingly becoming liabilities — while humility, inconsistency and radical open-mindedness are powerful leadership assets.

In *Persuadable*, you'll learn why being persuadable yields accuracy, agility and growth. But Pittampalli doesn't just explain why you should be persuadable. Distilling cutting edge research from cognitive and social psychology, he shows you precisely how by outlining seven key practices: consider the opposite, update your beliefs incrementally, kill your darlings, take the perspective of others, avoid being too persuadable, convert early and take on your own tribe.Through clear and compelling descriptions and stories, you'll learn exactly how to practice the art of persuadability.

Rife with actionable advice, *Persuadable* is an invaluable guide for today's data-driven, results-oriented leader.

IN THIS SUMMARY, YOU WILL LEARN:

- Why persuadability is especially suited for today's business environment.
- The seven practices of persuadability and strategies for using them.
- Why it's often better to persuade your own tribe before you try to convert others.

The Changing Face of Leadership

In every imaginable field, a stunning number of successful leaders are breaking away from the traditional leadership archetype. One after another, they're progressively moving toward a new, flexible way of thinking: persuadability.

Persuadability is the genuine willingness and ability to change your mind in the face of new evidence. Being persuadable requires rejecting absolute certainty, treating your beliefs as temporary, and acknowledging the possibility that no matter how confident you are about any particular opinion — you could be wrong. It involves actively seeking out criticism and counterarguments against even your most long-standing favored beliefs. Most important, persuadability entails evaluating those arguments as objectively as possible and updating your beliefs accordingly.

Globalization, hyperconnectedness and the rapid advancement of technology have all made the world more complex, dynamic and unpredictable. At the same time, we have access to more knowledge, data and analytics than ever before to help us make sense of this world. Smart leaders exploit this shift, viewing it as an opportunity to succeed. In a world that is unpredictable, ultracompetitive and fast-changing, being persuadable is the ultimate competitive advantage.

Actively open-minded leaders are in a hurry to find out the truth no matter what it is, good or bad. They understand that the quicker they know the truth, the faster they can deal with it. Highly successful leaders go out of their way to challenge and even kill off their most cherished beliefs. If they're successful, good riddance. The belief deserved to be discarded. If it survives, they, as well as the belief, will emerge stronger. It's this gutsy mindset that allows leaders to reap the most benefits of the Persuadable advantage.

PART I: THE PERSUADABLE ADVANTAGE

Get Smart: Accuracy, Agility and Growth

Being persuadable gives leaders three key advantages. The first is accuracy. Being persuadable enables a better, more precise understanding of the world. This improved understanding allows you to make smarter decisions and more accurate judgments.

Improved accuracy begets the two other advantages: agility and growth. Being persuadable improves your ability to recognize and swiftly respond to incoming threats and opportunities. And finally, being persuadable allows you to honestly evaluate your performance so that you can identify your own weaknesses as well as solicit feedback in order to improve.

You've probably seen a refractor before. Stationed in any optometrist's office, this mechanical device looks like something out of a science fiction film, a forbidding black-and-silver contraption studded with lenses of differing strengths. Eye doctors use a refractor to determine your eyeglass prescription.

The doctor begins by having you sit down at the refractor and look at an eye chart through a pair of lenses. In the beginning your vision is bound to be fuzzy. The doctor then adjusts the refractor so a new lens replaces the old one and asks you for feedback, specifically, "Which one is better: #1 or #2?" If you answer #2, the new lens replaces the old. Then the process repeats, with

the doctor adding another lens and comparing them: "Which one is better: #1 or #2?" Each time, your vision improves slightly as the doctor continues to refine the lens. After many rounds of this, you end up with vision that is dramatically enhanced.

This is the power available to leaders who are willing to be persuadable. By progressively, incrementally evaluating and assessing the clarity of their vision to see if it could be improved on, persuadable leaders engage in an invaluable process that optimizes their ability to make decisions. As a result, they end up being more accurate.

Agility

Now more than ever, leaders are desperate for agility. A survey by McKinsey & Company found that "nine out of ten executives ranked organizational agility as both critical to business success and growing in importance over time." Yet despite being a stated priority for years, countless companies fail to adapt.

Unfortunately, humans are plagued by what psychologists call a status quo bias, meaning that we often have a strong preference for the current state of affairs over some alternative. In general, our status quo bias causes us to seek out information that supports the status quo with greater intensity than information that threatens the status quo.

In order to overcome the status quo bias, leaders need to pay close attention to information that threatens their current plans. In fact, leaders need to aggressively seek out the unpleasant facts. This mindset is the essence of agile leadership.

Growth

The tendency to overestimate our own skills, abilities and performance is called illusory superiority (or, in lay terms, the better-than-average effect) and plagues virtually all of us across a wide range of traits and behaviors. A litany of studies have shown that people think they're better than they actually are at everything, from personality traits, such as intelligence and honesty, to skills such as driving and academic performance, to how charitable they are.

But while illusory superiority can make us feel good about ourselves, it has severe disadvantages to anyone who is interested in growth. In order to improve, we need to know precisely what the gap is between where we are now and where we'd like to be. We must understand our weaknesses.

If we want to know how we're doing, we can seek out insights from others. Despite the proven value of feedback, however, most people don't seek it out nearly as often as they should. It forces you to confront the unpleasant reality that you're not as good as you want to believe, which can be damaging to your self-concept.

Persuadable leaders gain more accuracy, agility and growth than their peers because they have an intense willingness and desire to constantly update their understanding of the world in the face of new evidence. But one common theme among them is their realization that they can't do it alone. Persuadable leaders understand they are limited by their own biases and therefore frequently seek out the opinions of others.

The Truest Path to Self-Determination

The willingness to change your mind in response to evidence is a powerful character strength. Unfortunately, our culture doesn't always see it that way. While we may praise open-mindedness and humility in the abstract, in reality, when acted on by our leaders, these traits are often perceived as signs of weakness. People who change their opinions — even for intelligent reasons — risk being labeled flip-floppers or pushovers.

Sometimes resisting persuasion is the least self-determined thing a leader can do, and being persuaded is often the most self-determined thing a leader can do.

The truest path to self-determination is not knee-jerk defiance but autonomy. Autonomy may sound like resisting the influence of others, but it's a much more comprehensive and measured pursuit than that. Autonomy involves a conscious deliberation of all available evidence, along with reflecting on your own values and goals, and *then* making the decision. Sometimes this process results in resisting external pressures; other times it results in aligning with them. What determines if it's free will is whether you've made the choice that you truly think is the best *regardless of the external pressures.* Not just understanding but embracing this concept is essential for leaders to be persuadable.

A theory was developed in 1966 by a social psychologist named Jack Brehm who realized that all human beings consider freedom a critical need. So much so that when they perceive their behavioral freedoms are being threatened or eliminated, they enter a state of emotional arousal called reactance. It's essentially an inflamed attempt to reassert the very freedom that is being taken away. Reactance is often accompanied by overt displays of aggressiveness or anger.

Leaders are especially susceptible to reactance. As a general rule, the more power one has, the more one has the incentive to maintain an appearance of authority and command and therefore resist influence.

Any young child can resist persuasion, but no one would argue that children are the quintessential examples of self-determination. What happens with age and maturity is that we learn to control our reactance. We develop the ability to determine our own fate by making a truly free choice. Sometimes making a free choice results in our accepting persuasion. Sometimes accepting persuasion is the most self-determined action we can take. The lesson is this: making the choice that matches your interests and values at the highest level of reflection, regardless of external influence and norms, is the true mark of self-determination. This is what's known as autonomy.

TOMS

In 2006, while vacationing in Argentina, a college dropout named Blake Mycoskie met an American woman in a café collecting shoes for the poor. Blake was heartbroken to learn that so many children in the third world were in need of shoes. Soon inspiration struck: What if he created a shoe store where every time someone bought a pair of shoes, another pair — the same exact pair — would be donated to a child in need? Everyone around him said his one-for-one idea was impossible.

But Blake Mycoskie thought otherwise. And so TOMS shoes was born, and the rest is history. In less than a decade, TOMS has given away more than 35 million pairs of shoes to kids in need in over 60 different countries, one of the darlings of the social-good world.

But as TOMS grew, it began to draw criticism. Some people argued that TOMS was disrupting local markets by manufacturing shoes in Argentina, China and Ethiopia and then importing these shoes into poor countries, thereby undercutting local producers. Others insisted that donating shoes is vastly less efficient than just donating money to programs whose sole mission is to alleviate poverty.

At first Blake admittedly took it all personally. But then, he paused to carefully reflect on the critiques. After doing so, he came to realize that his critics had a point. There was much more that he could do to help. And so at the 2013 Clinton Global Initiative event, Blake made a big announcement. In early 2014, TOMS would build its first major plant in the country of Haiti, where it would hire at least 40 local employees to operate the plant. He went on to make a pledge, to be realized by the end of 2015, that one-third of TOMS shoes would be manufactured in the countries where the shoes are donated.

The Blake Mycoskie who defied the critics to begin his company is as self-determined as the Blake Mycoskie who followed his critics' advice to change the way he does business. The critical attribute here is autonomy, the willingness to reflect on different opinions, rather than to just reflexively dismiss them.

PART II: THE SEVEN PRACTICES OF PERSUADABLE LEADERS

Consider the Opposite

If being persuadable means changing our minds in the face of evidence, the first thing we have to be able to do is to spot evidence when it crosses our desk. Noticing evidence that supports our current beliefs is easy, but when it comes to counterevidence — information that cuts against our current hypothesis, theory or opinion — it can be devilishly difficult. When we look at counterevidence, it often appears to us as an anomaly (a one-off that should be dismissed completely) or else as information that, despite contradicting our current way of thinking, somehow strangely confirms it.

The force responsible for this distorted thinking is what's known as the confirmation bias. The confirmation bias is one of the most powerful and insidious forces in human behavior, and if we want to be persuadable, we're going to have to learn how to manage it.

There are two forms of confirmation bias, which we can refer to as "motivated" and "unmotivated." You're likely already familiar with the motivated form of the confirmation bias (MCB). This is where people seek out information that supports their preferred conclusion and ignore information that contradicts it. It's the other unmotivated kind of the confirmation bias (UCB) that's far more subtle and difficult to recognize. Confirmation bias doesn't only apply to people who have a horse in the race. Even without a stake in the matter, we are susceptible to this bias.

In order to understand why that is, we need to acknowledge one of the most fundamental priorities of the human brain: conservation of energy. When making sense of the world, we tend to follow a simple rule: use only as much energy as we can get away with. This is why, when called on to deliberate about something, we first tend toward a kind of thinking we can refer to as "intuitive reasoning," which requires little cognitive power. Intuitive reasoning is a slow and often careful form of thinking, but it's narrow in that it follows only one train of thought without

considering alternatives. Like motivated reasoning, intuitive reasoning begins with a conclusion and reasons backward.

The Key to Identifying Counterevidence

In order to recognize counterevidence, we need to tap into a cognitively expensive kind of reasoning called reflective thinking. Keith Stanovich, emeritus professor of applied psychology and human development at the University of Toronto, explains in his meticulous book *Rationality and the Reflective Mind* that reflective thinking consciously and deliberately considers competing scenarios that aren't immediately obvious. While this might sound intimidating, it's actually very straightforward and simple to do. The most direct and helpful way to access this kind of reasoning is just to "consider the opposite."

Considering the opposite really is a simple technique. Ask yourself questions like, "What are some reasons I may be wrong?" Or "What's an alternative explanation for this information?" All you need are a few direct questions that force you to consider alternative scenarios.

The hardest part of considering the opposite is knowing *when* to do it. That's because when we have a model of the world (and we all do), we don't relate to it as our model of the world; we relate to it as reality. It's like wearing a pair of contact lenses that change the way we see everything. At some point you forget you're even wearing contact lenses, and the world just *is*.

That's why we need to be on the lookout for clues. The first clue, which is a signal that you're being guided by the confirmation bias and might need to consider the opposite, is when, in response to some information, you experience intense emotions like anger or anxiety. That is the time to intentionally consider the opposite.

The second clue you should be on the lookout for is confusion. Imagine you find yourself in an argument with a friend with whom you had just canceled coffee plans. He is excoriating you for what he sees as a pattern of not following through on commitments with him. As you pride yourself on generally keeping commitments and honoring your word, you are deeply offended. What he is saying doesn't feel true at all.

As you are debating, he mentions two other times that you had failed to follow through on commitments. Your first reaction is to continue defending yourself, but at that moment, noticing your own confusion, you catch yourself instead. You stop reaching for an explanation and consider the opposite. In that moment, you recognize that the feedback your friend is offering is legitimate counterevidence. He is right. You had failed to follow through on those two other commitments. You apologize and tell him you will do better next time.

If you want to recognize counterevidence, you have to be actively engaged and willing to remain puzzled, and to consider alternative scenarios more often than most. It takes mental effort, but the payoff can be extraordinary.

Update Your Beliefs Incrementally

What good is counterevidence if it doesn't change anything? How do we actually change our minds? It's surprisingly not that simple.

In the face of common, nonoverwhelming evidence, we tend not to change our minds. A large part of the reason is that human beings are prone to dichotomous thinking. We like things to be true or false, black or white. When it comes to facts, this isn't necessarily problematic, but alas it also applies to our opinions. In order to be persuadable, we need to move from thinking in black and white to thinking in shades of gray.

Thomas Bayes

Thomas Bayes was a theologian who, sometime in the 1740s, took a keen interest in theories of probability. Bayes was interested in inverse probability — because unlike a deck of cards, the world is often highly uncertain. We don't always know exactly what the cause is. Instead, what often shows up in our observations about the world is the effect. For example, upon getting handed four aces, what's the probability the dealer is using a loaded deck?

Any Bayesian analysis begins with an initial belief. Then we encounter objective information. When you combine the two, it gives you an improved belief. By continually updating our belief with new evidence, we can continually improve the accuracy of a belief. If we continue over and over again, the process ultimately will get us progressively more accurate beliefs. If we learn to treat all our beliefs as initial guesses with particular probabilities associated with them, then we can welcome new evidence as an opportunity to get closer to seeing the world the way it actually is.

A practical way to think about Bayes is the "three strikes" rule. It's a simplifying assumption that means to change your mind and get rid of any particular belief that you have confidence in, it'll take three strikes. When you first face counterevidence that isn't overwhelming enough to change your mind, think of it as strike one. This allows you to learn from the information, without needlessly overreacting and getting rid of the belief altogether. If you then find another piece of counterevidence, this is strike

two. At this point you should have some serious doubts about your belief, but still it's okay to remain unconvinced. But once you're hit with a third piece of counterevidence, now you know it's time to change your mind.

Kill Your Darlings

In 2014, Jeff Bezos brought Steve Kessel, one of his most trusted executives, into his office. Kessel ran Amazon's book division, the company's bread-and-butter business category. Bezos wanted Kessel to focus on e-books. At the time, Bezos could see that digital books were poised to threaten physical books, just as digital music had threatened CDs. He was still reeling from Apple's takeover of online music with its iTunes store. His reluctance to enter the market had caused Amazon to miss out on a tremendous opportunity, and Bezos wasn't about to let it happen again. So Bezos told Kessel that his first priority was to build an electronic reading device — a piece of technology that would become the dominant hardware platform for e-books, something innovative and impressive enough to be at the forefront of the movement toward digital books.

It was an ambitious call to action, but Kessel was confused. A foray into digital would undermine Amazon's traditional business, cannibalizing his current division's physical book sales. Bezos was well aware of this conflict of interests. He had been highly influenced by Clayton Christensen's eye-opening book *The Innovator's Dilemma,* which attributes the downfall of great companies to their unwillingness — in the face of disruptive change — to actively go after new opportunities which, in the short term, undermine their core businesses.

Bezos assigned Kessel as the head of Amazon's new digital division and told him he wanted Amazon to own the e-book business.

Killing your darlings entails accelerating your journey to the truth by actively seeking out counterevidence — in an attempt to try to destroy your most favored beliefs.

What are favored beliefs? Put simply, they're ideas about the world that we want to be true. Some of our most favored beliefs take the form of "all is well." We want to believe that all is well with our health, that all is well with our business, that all is well with our marriage, our reputation, our prospects for getting a promotion.

For this reason, when faced with threatening information about our favored beliefs, remaining open-minded is a challenge. Even though the open-minded are open to the possibility that they might be wrong, they're in no hurry. Ordinary open-mindedness leads to ordinary growth and agility, but as Bezos proved, active open-mindedness leads to extraordinary growth and agility. In 2014 Amazon sold 65 percent of all digital titles in the U.S.

If you're committed to extraordinary growth, then you should be killing your darlings. Go out of your way and try to disprove your own favored belief. If you succeed, then you know that you can discard the belief. If you fail, then you can be more confident that your belief is the right one. If the exercise proves inconclusive, and it often will, you can wait for more evidence, knowing that you've done your duty for now.

Even when we're focused on the higher mission, the thought of killing your darlings will bring up tremendous anxiety — so much so that it can feel outright impossible. Why? It's because you're imagining the worst. Your unconscious mind is whirring with disastrous future scenarios, regardless of the likelihood of these ruinous details coming true. Ironically, imagining the worst can actually be one of the best strategies to dealing with anxiety. In many cases, visualizing the worst-case scenario in detail can lead you to come up with creative, winning solutions that never would have occurred to you otherwise.

Taking the Perspectives of Others

In order to lead effectively, we need to be understood. But in order to be understood, we need first to understand. People are complex creatures, and we can't communicate with and influence them effectively if we don't know their interests and positions. Often the way we think they see the world isn't the way they see the world.

In order for us to communicate effectively, especially when we're in leadership positions, we have to take into account the receiver's worldview. We need to take that person's perspective. Perspective taking is an exercise in reflective thinking. Reflective thinking is inherently difficult.

But for leaders there's an additional challenge. While being a follower increases your ability to take perspectives, leadership diminishes your ability. Adam Galinsky, professor of management and organizations at Columbia University, conducted experiments to understand how power affects people's ability to see someone else's point of view.

Galinsky's findings, that power diminishes perspective taking, shouldn't be surprising for two reasons: One, powerful people are the ones with the resources. Because they're less dependent on others, they simply are less incentivized to take other people's perspectives. This stands

in contrast to someone with low power, who often is very dependent on other people and therefore needs to understand what is going on inside their heads in order to fulfill their needs and get access to resources. Two, powerful people are busy. Because they have so many demands on their time and attention, they don't often stop to take others' perspectives.

Powerful people tend to anchor heavily to their own opinions, expecting that other people share their views. In order to be seen as fair, leaders need to communicate and explain policies in a way that takes into account others' interests and positions. But powerful people don't often take into account what others' needs and interests are.

Yet, even though powerful people are less likely to take perspectives, Galinsky found that when you combine the two, you get synergistic effects. Power galvanizes perspective taking. Powerful people become better at understanding the positions and interests of others, even when compared with low-power people.

All leaders, and people in power, have the ability to excel at understanding what the people around them are thinking, accurately identifying their positions and interests, if they're willing to make it a priority.

Avoid Being Too Persuadable

We have to realize that there is a tradeoff involved with being persuadable. Being persuadable enables accuracy, agility and growth — but it would be foolish to pretend that there are no costs to acquiring these benefits. We need to understand those costs so that we can recognize when being persuadable just isn't worth it and when we should, instead, be more decisive.

Being persuadable comes with both explicit and implicit costs. Explicit costs are visible and obvious. For example, let's say you run into some legal trouble. If you decide to pay a lawyer $300 an hour in order to hear her advice, that costs you real money ($300, to be exact). But that isn't the only cost. There are also implicit costs — for example, your time and attention. What if instead of paying for a lawyer you decided to research the topic online for free. Even though it doesn't cost you any money, it still costs you one hour of time and attention, scarce resources that also have value. Research shows that people who are persuadable, who care a lot about making the best decision, often forget to take into account these implicit costs.

The Danger of Diminishing Marginal Returns

When it comes to the quality of any decision, the incremental value of more information declines over time. In economics this is referred to as "diminishing marginal returns." When gathering advice for an upcoming decision you need to make, perhaps you begin by reaching out to a few people. They offer you valuable opinions and insights that you hadn't considered before. As a result, the quality of your decision is likely to go up. But at some point, for every new person you ask, the information is likely to be similar to a previous opinion. You're no longer receiving a lot of new insights. And so the quality of your decision probably won't go up by nearly as much. As you continue to solicit more opinions, the marginal returns for each new opinion begin to get smaller and smaller.

The failure to consider the costs of more analysis in relation to the diminishing marginal benefits is one of the traps that perfectionists tend to fall into.

How to Be Decisive Without Being Close-Minded

Remember two things when you want to be decisive: First, you are forgoing optimal accuracy. The benefits of decisiveness are speed, efficiency and action, but they're at the cost of accuracy. There's nothing necessarily wrong with that. The problem occurs when we believe that our decision is still, somehow, the most accurate one possible. Then we fall into overconfidence, dismissing a review of the decision later, in case we need to amend or correct something.

The second thing to remember is that we shouldn't maximize decisiveness any more than we should maximize persuadability. When we become too decisive, we also become close-minded and blind to new information. The world is just too fluctuating and unpredictable for this. Even something that you thought was settled may abruptly change or be overturned.

Convert Early

As a leader, if you want to change the world, the quickest and most powerful way is often not to persuade others — it's to be persuaded yourself.

The diffusion of innovations model is most often applied to products, but it works just as well with ideas and behaviors. The model predicts that any innovation progresses through predictable stages. Each stage marks the penetration of the idea into a different group: innovators, early adopters, early majority, late majority and laggards.

Although from the way the curve is normally drawn, it looks as though there should be a seamless transition between the groups, there isn't. In fact, the transition between the early adopters and the early majority is

notoriously the most problematic. According to the business expert Geoffrey Moore, between these two groups lies a chasm. The reason for this is that early adopters have very different needs than the early majority. Early adopters are visionaries who like taking risks, while early majority members are practical and dislike taking risks. And, perhaps most critically, the early majority make their decisions based on what their peer group is doing.

For any idea to be adopted by the majority of society, it must cross the chasm — meaning it needs to be embraced by the early majority. But in order for the early majority to adopt an idea, a few brave souls have to go first. They need to courageously change their minds, defying the current social norms. This punctures unanimity and allows for nonconformity within that critical early majority group. These early majority champions prove indispensable by serving as a legitimizing reference to their peers. In addition, now we know — thanks to researchers Nicholas Christakis and James Fowler — that this influence affects not only the people closest to them but others in their social network distant degrees away. Ultimately, this creates the possibility of accelerating social movements.

Leaders, of course, have an even greater ability to accelerate social movements by changing their minds. Because of their status, they are more likely than others to transmit social norms in an impactful way.

Take On Your Own Tribe

Since our earliest history, human beings have belonged to tribes. It's how we survived, through cooperation and solidarity. This tendency to be a part of tribes remains with us today.

You didn't consciously choose many of your beliefs and positions. You adopted the belief, not through analysis, but mainly because it was normal and acceptable within your tribe. Conformity toward shared beliefs leads to feelings of attachment and solidarity with fellow tribe members. It's like the glue that holds groups together.

Conformity is an undeniably strong and problematic force because it causes people to believe things without evaluating the reasons. But conformity isn't the only problem inside tribes; there's also polarization. When everyone in the tribe shares the same beliefs, discussions and debates tend to be one-sided, and an echo chamber is created. This type of self-reinforcing dialogue leads people to ever greater certainty about the tribe's ideas. As a result, people in tribes, when left unchecked, often develop extreme views and become wildly overconfident that these views are true.

We're more likely to listen to people whom we find very similar, preferably fellow members of our own tribes. This presents an opportunity. Instead of futilely badgering people outside of our tribes and telling them "you're wrong," what if we brought change to our *own* tribes by employing a much more persuasive statement, "*we're* wrong."

If ever there was a time to take on your own tribe, it's now. According to journalist Bill Bishop's landmark book, *The Big Sort*, over the past several decades a monumental shift has occurred in the American cultural landscape. We have been sorting ourselves into communities of closely like-minded people to a staggering degree. While in 1976, less than 25 percent of Americans lived in places where the presidential election was a landslide, Bishop points out "by 2004, nearly half of all voters lived in landslide counties."

With ever greater frequency, we're clustering into tightly knit groups of increasingly homogenous beliefs: churches, volunteer groups, civic organizations, clubs and businesses. The result is a vast buzzing echo chamber that has taken over so much of the national discourse.

In this epidemic of homophily, the most powerful thing you can do is to listen to those with whom you disagree, change your mind in the face of good reasons and then help change the minds of others similar to you. Right now, there is no shortage of unreasonable activists committed to pushing their own tribe's cause. What we're sorely in need of are reasonable individuals courageously willing to change their own minds and champion the cause of others. What we need now are persuadables.

Take pride in being persuadable. It's the highest human ideal to try to map our beliefs as closely as possible onto the actual structure of the world.

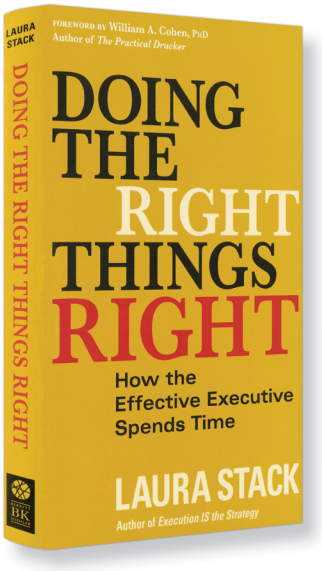
Doing the Right Things Right

How the Effective Executive Spends Time



by Laura Stack

THE SUMMARY IN BRIEF

Inspired by Peter Drucker's groundbreaking book *The Effective Executive*, Laura Stack details precisely how 21st-century leaders and managers can obtain profitable, productive results by managing the intersection of two critical values: effectiveness and efficiency.

Effectiveness, Stack says in *Doing the Right Things Right*, is identifying and achieving the best objectives for your organization — doing the right things. Efficiency is accomplishing them with the least amount of time, effort and cost — doing things right. If you're not clear on both, you're wasting your time. As Drucker put it, "There is nothing so useless as doing efficiently that which should not be done at all."

Stack's 3T Leadership offers 12 practices that will enable executives to be effective and efficient, grouped into three areas where leaders spend their time: Strategic Thinking, Teamwork and Tactics. With her expert advice, *Doing the Right Things Right* will give you scores of new ideas on how you, your team and your organization can boost productivity.

IN THIS SUMMARY, YOU WILL LEARN:

- The 12 practices to be both effective and efficient.
- The three activities that help you make sense of the 12 practices.
- Why executives have evolved from being bosses to team members in recent decades.
- Strategies to communicate better and motivate your team.
- How to use technology to make you more efficient, rather than letting it overwhelm you.

Introduction

In *The Effective Executive*, Peter Drucker provides what he promises in the subtitle: a definitive guide to getting the right things done, complete with all the things an effective executive must do to help keep his or her organization afloat. He explains the "why" and the "what to do" in a superlative manner — as always. If the book has a flaw, however, it's in not examining the "how."

How does the modern executive — a somewhat different animal from the executive Drucker defined in 1967 — do the job both effectively and efficiently? How does the executive at any level mine that intersection of effectiveness and efficiency to get the right things done right?

In business, effectiveness is summed up by "doing the right things." Efficiency is summed up by "doing things right." When effectiveness lacks efficiency, it's often unproductive. A task that should take four months to complete can end up taking fourteen. Additionally, efficiency without effectiveness can go devastatingly wrong. It doesn't matter how well your team climbs Mount Everest if your intention was to climb the Matterhorn.

To be both effective and efficient, today's leaders should follow 12 practices: goals, change, communication, decision-making, environment, performance, motivation, growth, value, technology, agility and balance. These 12 practices, which supplement Drucker's work, describe how to do the right things the right way. They are up to speed for our modern times, where flexibility, agility and on-the-spot, in-the-moment execution rule.

In addition, what leaders actually "do" during the day and where they spend their time can be grouped into three leadership activities called the "3T Leadership" roles. These three activities (Strategic Thinking, Team Focus and Tactical Work) also describe the three parts below. As shorthand, these 3Ts are referred to as THINK, TEAM and TACTICS. The 3Ts are the chief time management roles for leaders:

- **Strategic Thinking:** Acting as the organizational strategist who focuses on business goals.
- **Team Focus:** Serving as the conscientious leader who focuses on employee productivity.
- **Tactical Work:** Being the productive performer who focuses on task completion.

Each of the 12 practices for doing the right things belongs to one of the 3T categories. In general, as an executive moves up the leadership ladder, the percentage of time spent in each category tends to shift, becoming less tactical and more strategic.

PART I: STRATEGIC THINKING

Strategic thinking boils down to one simple question: *What is the desired outcome?* The answer to that question helps an executive drive organizational strategy through various ways to maximize results in minimal time, maintain a bird's-eye view of the big picture and ensure the team aligns its goals with those of the organization.

Your goals tie together all the disparate members of a team as well as the strategies that apply both individually and collectively. By its very nature, strategic thinking requires you to learn to make the best decisions you can as quickly as possible, boosting innovation and flexibility, helping your team adapt to circumstances as they change. Just as importantly, you have to be able to communicate those adaptations to all involved. Like the captain of a ship, you should always consult with your officers before

making a decision, taking their viewpoints and suggestions into account. But the decisions are ultimately yours, and you must make them. Once you've made a decision, you and your team have to execute immediately — on the spot if necessary.

Goals

Align Strategy and Objectives

Strategy tends to fall into place more easily when it's built on mission, vision and values — which, in turn, makes it easier to determine corresponding goals and tactics. Effective leaders hitch themselves to the organization's star and align team and personal goals with the organization's. Then they determine the most efficient ways to advance together.

Some of your team members will have a better understanding of goal-setting than others, so it's up to you to make sure they all stay on the same wavelength. Here's how:

1. **Start with individual team members.** You'll find it easier to establish team goals if individual members also have personal goals to reach for. As you learn your team members' personal and professional development goals, help them find ways to weave those goals into the general goal-fabric of both team and organization.
2. **Set reasonable goals.** Whether it involves finishing a particular project or improving overall performance, provide your team with reasonable goals that include time-based milestones and objectives.
3. **Ensure a supportive, productive working environment.** Invite open discussion and sharing of resources. Continually ask people how they think productivity can be improved.
4. **Clear the way to the target — and give your team something to shoot for.** As the leader, you're also a facilitator. You not only have to clarify what the goals are and how to get there, but you'll also need to help blaze a trail.
5. **Track your team's productivity, and provide meaningful feedback.** You can't manage what you can't measure. Keep an eye on your team deliverables and overall production using Key Performance Indicators (KPIs), timesheet software or scoreboard programs such as Kaptasystems.com or i-nexus.com.

Change

Embrace Innovation and Adaptability

Modern leadership involves more than just telling people what to do. Because you're responsible for helping the company stay profitable, you have no choice but to embrace change. Change has become essential to the continued growth and development of global business. It stirs things up, cross-fertilizing ideas and aerating the waters of creativity. You can't afford complacency, because some hungry young company will always be pushing the envelope and trying to steal part of your market share.

Innovation provokes changes that must occur for us to move forward. It can be tricky, but there are ways to handle innovation so you can advance your agenda without having the situation blow up in your face. For example, don't try to act on all your ideas at once. Don't let history hold you back, either. Just because something didn't work before doesn't mean it won't work now. Also, don't assume the experts are right. Even experts sometimes get it wrong.

Today's leaders should adopt these six change management methods:

1. **Employ enhanced flexibility.** Instead of trying to meet requirements that no longer match reality, be open to modifying the scope and direction of projects as you move forward.
2. **Aim for controlled growth.** As we move into a business landscape that has been decimated by recent economic troubles, we must take care not to expand too far, too fast. Take time when you need it so you can consolidate your gains.
3. **Consider calculated abandonment.** In the spirit of controlled growth, you may need to help your people adjust to changes that result when company leaders decide to cut losses by selling off or abandoning underperforming projects, markets or locations.
4. **Constantly upgrade your technology.** Given how fast technology advances, the stuff you were using last year might be given away in cereal boxes next year.
5. **Retune your team's activities regularly.** While you rarely want to micromanage, check in with your people regularly to make sure they're in tune — not only with the team but with the organization.
6. **Evolve with society.** No matter how much you love the product you make or service you provide,

it can become obsolete overnight as society changes. You may have to change just to stay relevant, so be willing to reconsider your branding and reinvent yourself occasionally.

Communication

Share Mission, Vision and Ideas

Effective communication sets profitable, productive organizations apart from the duds. It can take many forms, but the factors that work best are plain talk, honesty and cooperation. Your communication must be simple and straightforward, especially when conveying the organization's mission to employees.

To ensure your team members do their work correctly the first time, communicate your expectations clearly and concisely. Follow these three rules:

1. Repeatedly communicate your expectations.
2. Triple check for understanding.
3. Communicate in multiple ways.

Promoting Your Vision

Clear communication is important in all directions, upward and laterally as well as downward. People who rise to a management level are often competent and strong willed, so you might find yourself at odds with another peer leader or with your own superior. When you're at loggerheads with someone for any reason, you'll want to find the most efficient way to resolve the issue quickly. Here's how you can argue your point productively, so everyone can move quickly through the dispute phase and get back to work.

Get all your ducks in a row. Prepare your arguments, and have your facts straight. Probe them for weaknesses, so you can strengthen your position. Run your thoughts by neutral people, and ask them to shoot holes in your argument.

Disagree early, clearly and politely. Remain open to others' points, but make your position clear. Be simple, to the point and specific about your concerns. Don't dispute an argument in general terms; always use specific examples to refute it. Don't use sarcasm or name-calling.

Consider the opposing argument. Others in a dispute may have several good points, in which case you can integrate those points into your decision-making process and hammer out a compromise.

Keep the lines of communication open. You can't work something out if you won't talk to one another. Jump on the phone or meet face-to-face instead of sending a volley of email.

Decision-Making

Resolve and Execute Decisions Promptly

Too often, indecision rules in the workplace, because decision-makers fear making mistakes. Yet the occasional mistake is the price of effective decision-making. It's better to take a wrong turn than no turn at all. You can always change direction to correct an error or to meet a new threat or opportunity head-on.

Test your choices against these imperatives:

Core values, mission and vision. If you're in alignment with your organization's core values, some decisions will come surprisingly easily. Ditto for mission and vision.

Outcome. Follow the decision to its logical conclusion. Can you see danger lurking somewhere down that path? Does one possible outcome satisfy you more than the others? What contingency plans can you put into place?

Return on investment (ROI). This is crucial for most businesses. Will your decision make your company more money than it spends? Include all the factors you can think of, and remember, it's what happens in the long run that counts.

Opportunity cost. Every choice you make closes other doors. If you decide to do something, what will it keep you from doing in the future? Is what you skip worth missing out on? What other trade-offs will you face?

Efficient use of time and resources. Will this decision slow workflow and efficiency in your organization? If so, you'd better choose "tails," unless some other benefit offsets the wasted resources.

Execute Decisions and Move Forward

Once you've made the decision, execute! When it comes to productivity and success, execution trumps all. The ability to make ideas happen means the difference between success and failure, so sometimes you have to set a hard line and be the boss. That means, among other things, stop accepting excuses, set strict deadlines, don't overcomplicate things, hone the team's skills and help them structure their time.

PART II: TEAM FOCUS

Effective, efficient executives take responsibility for the return on investment (ROI) their teams generate,

because doing so benefits the entire organization. Getting discretionary effort from team members begins with genuine concern for them and their lives — an approach that previous generations of executives might have found a little too touchy-feely for their liking. Some still do. But during the past generation or so, something unusual has happened: executives have evolved from being bosses to being team members. Oh, they're still in charge, but smart leaders realize they get further by forming partnerships with their employees. Business has always been a collaborative endeavor, and today it must become even more so to facilitate efficient execution and greater productivity.

Environment

Build an Open Team Culture

Most of how your team culture develops boils down to what you do as a leader. The easier you make it for your team to excel, the more likely it will. Remove the obstacles to your team's success. Encourage teamwork, empower everyone and emphasize accountability. Root out any internal limitations.

Business is becoming more complicated, competitive and unpredictable by the day. Those in leadership positions must be constantly aware of this reality, because the decisions made affect the lives and careers of everyone on the team and sometimes influence the fate of the entire organization.

Organizations often grow top-heavy because leaders won't let go of old responsibilities when they take on new ones — even when the old ones are money pits. Aside from an unwillingness to abandon unworkable initiatives, leaders create unnecessary complexity when they

- Overthink business situations.
- Overengineer products and services.
- Lose focus on what truly matters.
- Avoid handling important issues.
- Repeatedly reinvent the process "wheel."
- Aimlessly chase unclear goals.
- Fear that simplifying means eliminating jobs.

Here are four tools to use to simplify your life.

1. **Streamline workflow processes.** Constantly tweak your workflow by trying new things, clearing your team's path, slashing bureaucracy, replacing broken and underperforming "parts" and occasionally overhauling the whole work engine if necessary.
2. **Apply simple rules to business situations.** Cleaning up your processes accelerates business wonderfully, resulting in greater simplicity and greater profits.
3. **Cut unnecessary positions.** Simplifying may mean you no longer need as many people to do the job as you once did. Decrease head count through transfers, attrition, retirement and lateral promotions.
4. **Include a sunset clause for all projects and initiatives.** Make the end of an endeavor part of its natural life cycle. Plan for that ending, and when it comes time to shut down, do so — unless there's an overriding reason to continue.

As you build and refine team culture, you'll consistently have trouble challenging your best and brightest enough to keep them engaged with their work.

What they really need is purpose: a chance to excel at something that matters. Give them the opportunity to prove they can excel. Here's how:

- Touch base regularly with your top employees, allowing them open access to you.
- Offer them tasks with a real chance of failure.
- Keep them busy. Pile your employee's plates full of a variety of tasks, so when one gets boring, they can jump to another.
- Help them fall in love with the process of marketing, coding, writing, speaking or whatever their job entails, and they'll never be bored.

Performance

Forge a Results-Oriented Team

In today's sped-up business environment, style is less likely than ever to triumph over substance. Results — not just staying busy — define productivity, while acting as a benchmark for new efforts. And producing results is at the heart of what it means to be efficient and effective. Move forward with positive energy, developing the talents of your team members so you'll inevitably enhance performance.

No matter how well you run your own team, you'll have weaknesses that can undermine your strengths if you're not careful. Maximize strengths rather than focusing on weaknesses, but at the same time, you should know your weaknesses so you can work around them — and root them out whenever possible. Follow this process:

Conduct a classic SWOT analysis. List your team's Strengths, Weaknesses, Opportunities and Threats. Dig deeper than the obvious, and consider your options thoroughly.

Consult your team. As a leader, you may have different ideas of what constitutes a weakness than your team does, so ask your people to contribute their ideas.

Audit the big picture. Don't ignore the big picture in favor of minor issues or get caught up in the daily minutiae, even briefly. Look around often. Make sure an unexpected change or threat doesn't run you down.

Respond well to feedback. Don't blow off criticisms, constructive or otherwise, especially when they come from within. Rather, invite them.

Look at *everything*. Weaknesses are not necessarily obvious; they might not even look like weaknesses at first.

Once you've conducted your SWOT exercise and examined team performance, you may find you have little or nothing to worry about. But that doesn't mean you can rest on your laurels. Note not only where you are and where you've been but where you want to be in the near future.

Motivation

Harness Creativity and Loyalty

What can you do to motivate your employees? Helping them help themselves by devoting themselves more fully to their careers is a win/win situation. There's no altruism here: fully engaged employees, who are passionate about their work, keep team and organizational performance trending steadily upward.

Truth is, you can't really motivate people to do anything; they have to motivate themselves. But you can provide incentives and an environment people find motivating, so they're inspired to contribute their discretionary efforts. It's as easy as ABC and DEF:

A = Analyze. Everyone's different, so determine what each person wants in return for extra discretionary effort. Give them all the opportunity to profit when the company does. For example, offer flexible scheduling, raises, bonuses, conference attendance, part-time telecommuting, certificates or pats on the back — whatever it takes.

B = Balance. Your team members need a good work/life balance to remain productive. Make sure everyone gets the rest and the breaks they need — from daily coffee to their annual vacations — and they'll take care of you.

C = Communicate. Explain what you need everyone to do and why — clearly, plainly and honestly. Keep the lines open for whenever a team member needs assistance.

D = Direction. You'll see better results when you strategically align individual and team goals with their organizational counterparts.

E = Expect. Let your people know what you expect from them as unambiguously as possible. But if someone discovers a better way of getting from here to there, let them take it — as long as it's ethical and legal.

F = Facilitate. When your team sees you out there fighting for them by providing the assistance they need to improve, they can't help but want to do their best for you.

Allowing your team to unleash their creativity on your collective business problems is also an excellent way to motivate them to donate their discretionary effort to the organization. To combine creativity with your work processes, set aside time for creativity, study other disciplines, listen to your team's ideas and advice, and don't punish failure.

Growth

Emphasize Continuous Improvement

Once you've built and shaped your team members into a vehicle for true productivity, focus on finding ways to optimize their performance through further growth. Effective, efficient execution is not a fixed destination; it is a moving target that can only be hit consistently if you and your team are seeking ways to constantly improve.

Growing together as a team and growing to become a team creates cohesion — with individual team members interlocking smoothly into one efficient entity. A mature team develops features that naturally boost productivity. You can facilitate this process and avoid problems by understanding not only how *you* think but also how your team members think.

Among other things, a quality leader accepts both credit and blame when it's due. Leaders act on constructive criticism without overreacting to the pain that accompanies it, because they know it can offer insight into where growth is needed.

Growth occurs on all levels in an organization — or at least it should. While you have to center growth on your team to best benefit the organization, individual growth at the leadership level and cross-team development also affect team growth.

No matter where you stand in an organization, you can always improve your game. Practice these tips for accepting and acting on constructive criticism: listen more and talk less, ask for specifics (an example or suggestions for what to do about it), take corrective action and follow up.

PART III: TACTICAL WORK

Truly successful executives are those who can thoroughly mine the intersection of efficiency and effectiveness to maximize their value and that of their team's whether that team is a small group or an entire division, department or organization. Recall that effectiveness is doing the right things; efficiency is doing things right. Doing the right things right are the tactics by which you get things done and achieve strategic execution at the right time in the right place.

Value

Focus on High-Impact Activities

We know that time management determines how well we manage not only our own operational, day-to-day responsibilities but that of our teams as well — and most of us do try to make sure we handle it in a manner that's both efficient and effective. Your best formula for both personal and team success is to make a serious effort to consistently value your time.

To do the best job possible, value your time both realistically and highly. Depending on your leadership position, your value to the organization may be thousands of dollars per hour. Once you've pinned down the value of your time, use these tips as you move forward:

Delegate your authority and tasks as widely as possible, to capable people who can do certain things better than you can. Retain the few high-priority, high-value tasks only you can do most profitably.

Avoid false economy. If what you're doing costs more in terms of the value of your time than it's worth, stop doing it.

Cracking the Whip on Time-Wasters

You've no doubt learned how to apply self-discipline, or you wouldn't have made it as far as you have in your career. Now apply that discipline to your team to ensure they aren't wasting valuable time either. Clarify goals and review them at regular intervals. Also clarify the organizational environment your team works in, explaining to team members precisely what you'll accept, what you won't and what's explicitly against the rules. Make it clear that, while you don't intend to be punitive (unless something goes badly wrong), you expect people to accept responsibility for everything they do, regardless of the outcome — yourself included. Act as a role model and follow company policy. Don't expect the team to do what you say rather than what you do; the real world doesn't work that way.

Technology

Master Data Handling and Workflow

How executives organize their personal work matters more now than it ever has. Things as simple as efficient time management, organization and email processing help you save time and sharpen the knife of effectiveness.

Technology has been a blessing in this regard, but it's a two-edged sword. On the one hand, it's helped make modern workers more productive. Conversely, technology can be tyrannical. Not only do you risk Schlimmbesserung (the effort to make something better that actually makes it worse), it sometimes makes it easier for others to steal proprietary information. You may also become trapped by your technology, unable to survive without it.

Reducing Your Information Intake

The only way to overcome "infobesity" is to triage mercilessly, then reduce the amount you take in forever. Keep these tips in mind as you work toward stemming the info-tide.

- Limit your exposure to external information at work.
- Check your email as little as possible.
- Employ the right means of communication. Carefully select the most efficient means of communication for each issue.
- Maximize reading time. Adopt a speed-reading system, or carry around material for downtime reading in your briefcase.

Pioneer New Technology

New technology can have its dangers. Improperly implemented, it can slow or stop productivity. Additionally, inexperienced or malicious users can leave backdoors open for hackers and identity thieves to waltz right in and steal or corrupt data. So before you dive in, dip a toe in the waters first. Before you take the plunge with new technology, study its impact. Will the new technology really upgrade productivity? Calculate the costs, and include an exit strategy. Test the new technology to make sure it does all it promises — and don't hesitate to roll back to your old tech if it doesn't.

Agility

Maximize Speed and Flexibility

Effective, efficient execution demands agility. Agility means responding to change of any kind with speed and flexibility, whether it's a new client demand or a paradigm shift. Handling new challenges on the fly, swerving onto a new course, stopping suddenly and reversing direction — it's all in a day's work for the modern business professional.

Given today's go-go-go approach to modern business, agility is applicable to most fields. A flexible model breaks a project into manageable pieces, all with independent milestones, due dates and testing phases that team members can handle independently if necessary. That way, when a delay occurs in one area, it doesn't stop the entire project dead in its tracks. Take these actions the next time you assign your team a new project:

Examine it carefully from all angles. Focus on the needs and requirements first. Think about where and how you can split the project into discrete pieces that particular team members or subteams can handle.

Cut the diamond. You can easily "part out" some projects, but you will have to deal with others more carefully, much like cutting a diamond. Once you've determined you can split the project into pieces, do so. Hand the pieces out to the people best suited for them, complete with their own specific milestones and deadlines.

Build in flexibility. A project built from many independent parts is naturally more flexible than a sequential project. It more easily absorbs the need for changes, additional testing and new features as they arise. You can also implement feedback more quickly.

Put it back together. As sections of the project come in, slide them in place, leaving space for the later bits to allow greater flexibility in terms of responding to customer and market needs. This requires careful planning and preparation, perhaps more so than traditional project management.

Also, if you want your team, division, department or company to truly improve, you have to hire for versatility, not indispensability. If someone is indispensable, then you can't replace them. If you can't replace them, the team can't advance without them. So if that person dies, leaves or even takes a vacation and forgets to leave the keys to the filing cabinet (metaphorically speaking), the team is unable to move forward. Instead, make sure your teammates are somewhat interchangeable, so you can maintain your productivity no matter what.

Balance

Sustain Your Physical and Mental Health

In order to be an effective, efficient leader, you have to take care of yourself at least as well as you take care of your team, by maintaining balance in your life. We certainly know we do better, more productive work when we feel well. And yet many of us get stuck in a vicious cycle. When we work long hours and run short on time, we cut into our precious free time — the time when we would do the things that keep us healthy: exercise, sleep, eat and drink properly and have fun.

Good health doesn't automatically produce productivity, but it prepares you for it. You can't control all the factors contributing to good health, but you can control most of them.

The Big Five (sleep, eating well, hydration, exercise and mental health) are inextricably interrelated: sleep impacts weight as well as mental health, as do exercise and good diet; too much weight from poor diet and lack of exercise can contribute to self-esteem issues; happiness can convince you to take better care of yourself … you get the picture. Strive to get each of these factors under control, and your productivity will scale upward.

Working hard and doing your job well are important. That said, you shouldn't live to work. Instead, you need to regain control of your productivity so you can get out of the office on time — not only to recharge and recapture your mental edge but also to devote time to the people you care about and who care about you.

These days, it's not enough for an executive to do the right things; he or she has to be superbly efficient, too. As executives, we must manage this intersection of efficiency and effectiveness carefully to ensure we do the right things right, wasting as little time as possible in the process.

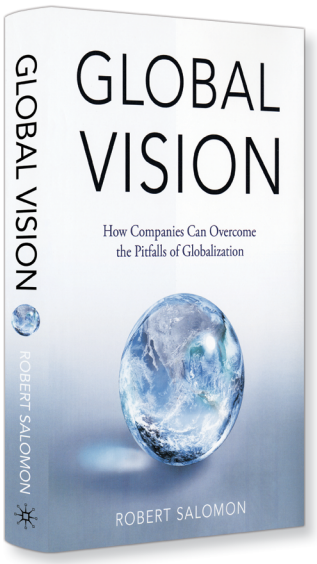
Global Vision

How Companies Can Overcome the Pitfalls of Globalization



by Robert Salomon

THE SUMMARY IN BRIEF

In an increasingly interconnected world, managers frequently turn to global markets as a means of achieving profitability and growth targets despite accumulating evidence that globalizing is fraught with risk. In the last 20 years alone, high-profile companies like Tesco, IKEA, AES and Walmart (among others) have been hobbled by globalization.

Global Vision offers a lens through which to view globalization in a new and compelling way, helping managers understand the risks associated with globalization while equipping them with the necessary tools to overcome those risks.

Author Robert Salomon defines country institutions across political, economic and cultural dimensions and demonstrates how to measure them so that managers can estimate the risks that institutional differences pose to global companies. *Global Vision* will help unlock the mysteries of globalization using a framework and a tool — Global Acumen — that managers can immediately apply to successfully navigate globalization's institutional hazards.

IN THIS SUMMARY, YOU WILL LEARN:

- How to assess institutional distance.
- How to make better-informed, smarter globalization decisions.
- How to select the appropriate mode of entry into foreign markets.
- How to optimally structure your global operations.

Globalization: A Cautionary Tale

When it comes to globalization, managers are not just optimists; all too often, they are *unbridled* optimists. They habitually overestimate the benefits of globalization and underestimate its costs. In evaluating globalization opportunities, managers often forget the other side of the opportunity equation: risk. Risk goes hand in hand with opportunity, and managers fail to accurately account for the risks they face in global markets.

Managers often make dangerous assumptions about what it takes to succeed in global markets. They tend to assume that their current business model, one they successfully and profitably exploit in their home country, will translate simply and effectively to other countries, yielding similar levels of profitability. These same managers fail to account for real and alien differences between nations and to consider how those differences generate operational risks that may negatively impact their business. Unfortunately, they end up learning the hard way that the risk borne out of cross-country differences can overwhelm even the best-laid globalization plans.

Failure to Globalize Effectively

Globalizing companies habitually underperform in foreign markets, and more often than not, they fail to achieve desired performance targets in global markets. Globalizing companies take about three months longer and spend anywhere from 5 to 25 percent more than domestic companies just to get their businesses off the ground. Foreign companies pay higher wages, on average, than their domestic competitors. They are also more likely to get sued than domestic companies and more likely to lose local lawsuits. All of this translates into a higher general cost structure for foreign firms and significantly higher rates of failure for global business expansions compared to domestic business expansions.

Even those companies that are lucky enough to achieve profitability in global markets tend to earn lower returns in their foreign-market operations than in their domestic ones.

Starbucks, for example, which has been relatively successful in global markets, has operating margins in Japan — its second-largest market in terms of revenue — that are half those of its U.S. business. Similarly, Lincoln Electric, one of the world's largest and most profitable welding equipment manufacturers, has been making profits in Asia that are only one-third of those in the United States. Its profitability in South America is about half that in the United States.

Institutional Distance: A Key Factor

As you might expect, it is easier to conduct business in countries that share commonalities in institutional profile. Successful global expansion is more likely in a country that is institutionally similar to your own — where you not only speak the language but also understand the culture as well as the political and economic environments.

For example, institutional distance is relatively small between Canada and the United States, between Spain and Mexico, and between the United Kingdom and Australia. (There are obvious cultural, political and economic similarities that make this seem like common sense.) When institutions differ substantially between countries, institutional distance is great. For example, institutional distance is relatively great between China and the United States, between India and Brazil, and between Indonesia and Spain.

Institutional proximity by no means guarantees success in global expansion. Globalizing to an institutionally similar country still requires overcoming numerous institutional obstacles.

The Globalization Process

The process of globalization generally starts with managers identifying an opportunity to increase profits. At some point, managers recognize that operating globally has the potential to generate additional revenues or lower costs.

Companies of all types can increase revenues and/or reduce costs via globalization. Logoplaste, for example, a relatively small Portuguese packaging company, has been able to lower its operating costs by manufacturing in Eastern Europe. Similarly, the Selkirk Group, a small, family-owned Australian building-materials company, has been able to effectively tap into the Japanese export market to increase its overall revenues by 10 percent.

The kinds of expansion where local customers pull a company into a foreign market are known as "follow-the-customer globalization strategies." They are fairly typical in the service sector, where retailers, banks, accounting firms, consulting companies and law firms follow clients from the home country into global markets to serve them there.

There are also cases in which opportunity arises on the cost side of business operations. Managers might not be looking specifically to globalize their supply chain to reduce costs, but sometimes foreign suppliers will approach a company with offers in hand.

Globalization strategies typically are devised by managers who are continually scanning the environment, looking for an opportunity to pounce. They often carry out or commission studies of foreign markets in advance, looking for opportunities to grow the business and streamline operations.

Regardless of how globalization opportunities arise — by chance or by design — global expansion requires careful analysis. Managers can build a business plan to justify their globalization efforts, comprehensively projecting revenues and costs to assess whether they can profitably globalize. They can express their business plan in financial terms reflecting

- the duration of the opportunity;
- the projected revenues and operating costs;
- the investment costs;
- the residual value of the business (should the company decide to sell the business);
- the exchange-rate considerations (should the company do business in a foreign currency);
- the tax implications (associated with tax policies in both the home country and the host country);
- the overall profitability associated with the opportunity.

The Impact of National Institutions on Globalization

The most egregious mistakes managers make in global markets are not a result of misreading opportunities to increase revenues or decrease costs, but of applying domestic financial models without repurposing them to account for globalization's institutional risks. Managers must examine the role of institutions, institutional differences and the institutional risks they generate to determine how all these are likely to influence financial projections.

National institutions can be formal or informal. Formal institutions are those that govern behavior in a society. Structural entities that make up the formal institutional environment include governments, political parties, legal bodies, law enforcement and military organizations, and regulatory agencies.

Informal institutions, in contrast, sanction activity through a series of unwritten, tacit rules that evolve in a society. Informal institutions impose order through social conventions — by condoning and even rewarding certain behaviors and discouraging or ostracizing those who engage in others. Academics typically refer to informal institutions of this sort as culture.

Whether members of a society create its institutions by design or they evolve historically without intention, they differ from country to country and sometimes markedly so. The United States and India, for example, have political institutions that resemble one another. Why? Because they share a common colonizer — England — that played a critical role in developing the institutions of both countries. And yet, although their political institutions are similar, their cultures are very different in religious makeup, philosophical leanings, familial structure and demographic composition.

Japan and China, by contrast, share cultural similarities that date back centuries because Japan imported a system of philosophical and cultural ideals from China.

However, culture is largely where the similarity ends; the two countries differ significantly in their political and economic institutions.

Foreign companies are generally unfamiliar with the local institutional environment; they don't know the laws, the rules or the customs; they cannot fully appreciate how the local economy works; they lack ties to powerful and well-connected local individuals and organizations that can act on their behalf; and they cannot rely on an established set of suppliers with which they have been working for years. Even the customers are new to foreign companies.

Typically, it takes foreign companies longer to set up their operations, and they often have a higher cost structure; they also generally experience more run-ins with the law. Ultimately, the profitability of global companies suffers. They perform worse and exhibit a higher rate of failure than similar domestic competitors. This disadvantage born out of institutional differences is known as the "liability of foreignness."

It Takes an Intangible (or Two or Three)

If foreign companies are generally at a disadvantage compared to domestic companies, then there must be specific factors that enable certain multinational companies to succeed where others fail. Research demonstrates that, indeed, successful global companies tend to have competitive advantages in the form of intangible assets: technological, marketing and managerial capabilities that domestic competitors cannot match or easily imitate. These capabilities allow companies to overcome the liability of foreignness and earn profits in global markets.

Coca-Cola, for example, relies on its marketing prowess to succeed in global markets, and companies such as Apple and Google rely on "killer" technologies that are far superior to those of their rivals.

The most successful global companies typically do not rely on only one valuable intangible asset — whether technology, marketing or management — but exhibit strength in several of these areas. For example, powerful brand names and strong marketing have helped to complement and reinforce the management intangibles of IKEA and Goldman Sachs. In addition, IKEA boasts technological capabilities in furniture design, and Goldman develops and exploits proprietary technologies that its rivals struggle to match.

Yet, even for companies that have painstakingly developed valuable technological, marketing and management intangibles to overcome disadvantages in global markets, there are limits. Strong technological, marketing and management intangibles neither guarantee a company's success in global markets nor imply that it will succeed in all countries. Success is not as simple as determining *if* a company possesses valuable intangibles; it is important to know *whether* those intangibles are appropriate to the host country.

As you might expect, the greater the institutional distance between countries, the more inhospitable the host country is likely to be, and the more difficult it will be for companies to extend their intangibles there.

Political Institutions and Globalization

The natural place to start to understand a country's political institutions — its structure, system, activities and entities — is with its constitution. Next, it is essential to dig deeper into the country's political and governmental bodies: the executive, legislative and judicial branches; the roles and responsibilities of each branch; the scope of power each one holds. Managers should consider the structure of each entity and the individuals who are empowered to lead them:

- how these leaders come to power (are they elected, appointed or chosen in another way?);
- the roles and responsibilities of those who hold political positions of authority;
- the frequency of elections — if any — that determine who holds those positions of authority; and
- how long individuals in positions of authority can serve in those positions.

It is also important to examine more practical considerations, such as

- the type and number of political parties;
- the extent to which the political system has built-in checks and balances (such as veto power);
- whether the judicial branch is independent of the executive and/or legislative branches;
- the relative balance of power within a country — whether the power lies with the central government or with the individual regions, provinces or states.

Beyond the political institutions themselves, understanding their stability is essential to understanding their viability. It is crucial to know the extent to which the populace views the government as legitimate and the

likelihood that the government is under threat from some sort of internal or external shock.

A common internal shock could be a protest intended to effect change or challenge the existing government. External shocks, by contrast, are extraterritorial; they involve other countries.

Managers need to have a basic familiarity with political institutions and understand the challenges that differences in political institutions can cause when conducting business overseas. Practically speaking, however, managers have neither time for, nor do they need deep, detailed insight into how a country's political, legal and regulatory institutions were designed, created and structured, or how they function on a day-to-day basis. It is wise to turn to specialists — scholars, consultants, lawyers and accountants — who have developed an expertise in dealing with political institutions.

Economic Institutions and Globalization

Managers intuitively recognize the importance of economic institutions to their bottom line, and yet they continue to make countless mistakes when they expand into global markets. Among these mistakes may be the following:

- overestimating a particular market's potential;
- misjudging the quality of local employees or local inputs;
- underestimating the likelihood that the market is vulnerable to a recession or other adverse developments;
- overlooking the impact of currency fluctuations;
- failing to realize how a country's physical and economic infrastructure will impact the company's business operations.

Economic institutions are the basic units of an economy — comprised of economic actors, systems and structures — and the essential building blocks to economic activity.

Think of economic actors as parties engaged in business activity. They can be individuals or organizations that own, allocate, use and direct factors of production and engage in transactions involving said factors in exchange for some consideration, either monetary or otherwise.

Economic systems and structures refer to a country's market orientation — the well-established sets of arrangements that govern economic activity as well as the behavior of economic actors. These include

- the allocation of resources among the various economic actors in society;
- the means of exchange of goods and services;
- the rules that govern ownership — who owns (or can legally own) the factors of production;
- the roles of economic actors that exchange economic inputs (i.e., the factors of production) or economic outputs (i.e., goods and services developed using the factors of production);
- the rules that govern interactions among economic actors.

There are two primary economic systems/structures that currently dominate the global landscape: capitalist and command.

Capitalist Economic Systems. These systems typically permit private economic actors to own factors of production, and they afford those actors wide latitude in deciding how to allocate those factors to productive ends. In a capitalist system, the market plays a central role in coordinating economic activity, and market-based considerations influence the allocation of resources and the decisions of economic actors. The United States, for example, is a country that likely comes to mind when one thinks of a capitalist economy.

Command Economic Systems. In command economic systems, the state (rather than private economic actors) typically owns the factors of production. The state generally acts as the economic coordinating mechanism, allocating and directing factors of production — determining how factors of production are put to use, by whom, and which goods and services are produced and in what quantities. As a result, the market plays a relatively small role. For example, to some extent China exhibits characteristics of a command economy.

Less common economic systems and structures include the feudal systems of medieval times, gift economies and barter economies. Most countries are a hybrid of capitalist and command economies.

Indirect Measures of Institutions

Although economic development indicators might not directly measure economic institutions, they are correlates of those institutions and are useful for gauging differences in economic institutions in different countries. Measures of economic development include the following:

- indicators of educational attainment (literacy rates and rates of tertiary education);

- indicators of infrastructure development for transportation, energy and for information and communications.
- indicators of knowledge development (e.g., research and development in science and technology, patents and intellectual property).

Understanding the economic institutions in those countries where managers plan to do business empowers them to better appraise and account for the risks they will face in those markets.

Cultural Institutions and Globalization

Culture is an important social institution in its own right, and research demonstrates quite convincingly that it has a great influence on business — especially global business.

Culture takes on heightened importance in global business settings, and business owners, managers, employees, customers and suppliers expect — and require — greater cultural sensitivity. Interpersonal interactions matter a great deal when managing employees with different cultural backgrounds and negotiating transactions with foreign businesspersons.

Culture affects not only the decisions a manager makes but, by extension, how the local market views a company. A seemingly minor cultural faux pas that a manager commits can hamstring a company and torpedo even the best-laid global business plans.

Offensive advertising campaigns that culturally misjudge local consumers, serious religious transgressions and failing to account for culture in negotiations with business partners: These can all negatively impact profitability and, in the extreme, destroy businesses.

When it comes to globalization and cross-border business dealings, national culture matters a great deal. Because culture is familiar and habitual to those from a particular country, it can be hard for members of a collective from one country to understand how others from another country could possibly not share their world view.

An appreciation for differing cultures enables us not only to understand the motivations behind certain behaviors but also — even more useful — to predict future behavior. Managers who understand the significance of culture are therefore well-positioned to devise strategies for effectively dealing with and managing the cultural complexities inherent in global business.

How Culture Relates to Other Institutions

We cannot consider any one institution — politics, economics or culture — in a vacuum, given that they are all interrelated. Researchers have discovered that certain cultural leanings tend to correlate with specific political and economic structures and vice versa.

However, they are not perfectly related. Research suggests that cultural institutions typically change at a much slower rate than political and economic institutions — over generations rather than in years. For example, in a coup d'état, political institutions change radically overnight, and yet a culture — with its shared systems of meanings, ideas, thought, values and socially acceptable behaviors — tends to endure, regardless of sudden political institutional changes.

Because cultural, political and economic institutions can and do change separately from one another, failing to measure one of them can lead to significant gaps in our understanding of all of them and to a flawed understanding of globalization.

Using Global Acumen to Account for Risk

Researchers have made great strides in identifying countries' key institutions, developing and validating measures of those institutions and using those measures to calculate institutional distances between countries. Studies show a positive correlation between institutional distance and the level of risk in doing business across countries: the larger the institutional distance between one country and another, the higher the risk.

Research links institutional distance not only to globalization and global performance but also to market-entry strategies in foreign markets (that is, the governance structures companies select in global markets) and global subsidiary management (how companies manage far-flung global operations). The greater the institutional distance, the more likely a company is to opt for shared forms of ownership and control, such as alliances and joint ventures. In addition, the greater the institutional distance, the more likely a company's product offerings are to vary from one country to another, and the less likely a company is to centralize decision making at its domestic headquarters.

In practice, this suggests that a U.S. company is (on average) more likely to own its own operations in the United Kingdom than in China and more likely to use a joint venture in China than in the United Kingdom.

Likewise, the company's product mix is likely to be more similar in the U.S. and the U.K. markets than in the U.S. and Chinese markets. Finally, U.S. companies are likely to allow managers in the Chinese market greater latitude in making decisions for the Chinese market than they allow managers in the U.K. market.

Most seasoned managers already recognize that global business is fraught with risk, but they have failed to develop the systematic tools — such as a detailed measure of institutional distance — to meaningfully express or account for that risk.

Managers from some of the largest and most sophisticated companies in the world recognize the importance of political, economic and cultural institutions to globalization. They are also highly aware of the incredible challenges inherent in managing the many differences in institutions across borders. However, despite this awareness, many managers openly admit that in their global operations they do not explicitly account for these differences.

For example, when reflecting on his business in India, a chief financial officer (CFO) at a Fortune 100 said, "We know India is different [from the United States]; we just don't know how to measure it." When a chief strategy officer (CSO) of a Fortune 500 company was asked, he acknowledged, "We do not approach global acquisitions any differently than domestic acquisitions... not because we do not want to but because we are unsure how to."

Global Acumen is a great place to start when it comes to assessing global risk, especially for the far too many companies that have no system in place to evaluate these risks. The beauty of this approach is that the raw materials needed to compute the Global Acumen algorithm are the same ones that would be used to calculate institutional distance between two countries.

Global Acumen generates globalization risk values between pairs of countries

- over a range that extends from 0 to 30;
- using mathematical distances to account for differences in cultural and political institutions across countries;
- using mathematical differences to account for differences in economic institutions across countries.

However, knowing the institutional risk spread between two countries is only half the battle; the real value is in knowing how to use risk spreads to improve decision making. Meaningful risk spreads can complement existing strategic and financial decision-making models — if they are applied effectively.

Global Acumen in Practice

Global Acumen generates risk spreads that indicate the additional political, economic and cultural risks that a company faces when it does business in another country. The Global Acumen tool reports risk spreads in a way that reflects the additional compensation — expressed in interest-rate terms — that a company ought to expect in exchange for bearing the political, economic and cultural risks of doing business in that country.

Generically, the process works as follows:

1. Add the Global Acumen risk spread to the domestic discount rate.
2. Generate a country-specific, risk-adjusted discount rate.
3. Replace the domestic discount rate with this new, country-specific, risk-adjusted discount rate.

Step 1 retains the domestic discount rate because risks in global markets are risks added to a company's existing operations — risks that a company takes on over and above those it already faces in the domestic market. The opportunity cost of capital reflected in a company's domestic discount rate serves as an important signal about a company's health and well-being: its underlying "quality" and risk characteristics. Typically a strong company that is managerially sound and operates in a less risky market has a lower discount rate and a lower opportunity cost of capital because it presents fewer risks to potential investors; there is a greater likelihood that the company will deliver results for investors.

Apple, Inc., for example, has an opportunity cost of capital around 6 percent, whereas Cisco Systems Inc. has an opportunity cost of capital of around 7 percent. Market participants currently view Apple as having lower levels of risk, better future prospects, better products and a better overall management team.

When companies such as Apple or Cisco expand abroad, their idiosyncratic features — management, product and industry characteristics — do not change. Investors still expect rates of return that are at least commensurate with the risk factors specific to the company. However, in addition, investors also expect compensation for the country-specific institutional risk companies will take on by operating abroad. And the greater the levels of risk that companies face in foreign markets, the greater those country-specific returns should be. This is why Global Acumen risk spreads were designed to be conjunctive with (rather than disjunctive to) the discount rate.

Using Global Acumen in Other Contexts

One advantage of the Global Acumen tool is that it is designed to be flexible. Managers can tailor the baseline risk spreads to an expansive set of global strategy problems and a wide variety of company-specific situations. With only slight adjustments, Global Acumen can help managers to do the following:

- assess different foreign market entry modes and ownership structures;
- accommodate for different industry characteristics;
- account for a company's prior international experience;
- benchmark the performance of existing foreign operations;
- monitor institutional developments in a particular country.

Irrespective of how a company decides to globalize, there is one constant: The level of institutional risk a company bears in a particular country varies with how it expands into that market. Export and import modes of globalization entail much less risk, for example, than subsidiary investments in which a company ties up capital in a long-term investment.

A company can export products from its home market with little change, whereby foreign customers purchase the product on an "as is" basis. Similarly, a company can import products from a foreign supplier without having to spend much time in the foreign market. Recent advances in information technology have made it possible to purchase foreign-made inputs or sell domestically made outputs directly over the Internet. So compared to foreign market entry modes that require a physical presence, export and import strategies can minimize the institutional disruption globalization can cause to a company's operations.

The End of the Beginning for Global Acumen

We should, of course, exercise caution in applying (or relying too much on) algorithmic procedures to solve complex globalization problems that, at their root, are a product of social interaction. Algorithmic approaches can certainly help us simplify and make sense of complex globalization problems, but we should always view them as a complement to managerial intuition and as a decision-making aid. With respect to Global Acumen, that means that there is no substitute for a deep qualitative and intuitive understanding of globalization's risks to help guide, inform and improve Global Acumen's quantitative, algorithmic nature.

A manager should temper any application of Global Acumen with a healthy dose of realism. Sometimes understanding *why* institutions change and anticipating *how* they are likely to change in the future is more important than knowing a specific number attached to that change.

Rather than merely taking output from Global Acumen and blindly plugging it into a financial model, a manager would be wise to carefully consider whether the output

- suits the intended application;
- makes sense given any recent or sudden changes to the institutional environment — either in the firm's home country or in the intended host country.

These considerations will only enhance the tool's value and utility.

Finally Bringing It All Together

Managers see unbridled opportunity the world over, making globalization an exciting proposition for businesses everywhere. And they are right; there are tremendous opportunities in global markets. Tapping into global markets, especially fast-growing and developing ones, not only promises riches beyond our wildest imagination but also empowers people the world over to work toward creating a better economic future.

But as we have seen, there can be trouble when two opposing forces collide: the optimistic nature of managers and the fact that global markets, especially developing ones, can be precarious. To play the complicated and high-stakes game of global strategy and reap the potentially high rewards, a manager needs to understand the risks and be empowered to accurately take them into account and outmaneuver them.

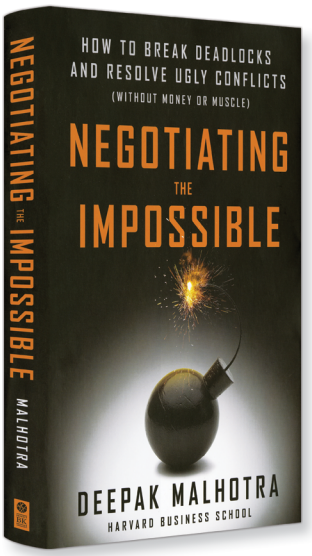
Negotiating the Impossible

How to Break Deadlocks and Resolve Ugly Conflicts (Without Money or Muscle)



by Deepak Malhotra

THE SUMMARY IN BRIEF

Some negotiations are easy. Others are more difficult. And then there are situations that seem completely hopeless. Conflict is escalating, people are getting aggressive and no one is willing to back down. And to top it off, you have little power or other resources to work with. Harvard professor and negotiation adviser Deepak Malhotra shows how to defuse even the most potentially explosive situations and to find success when things seem impossible.

Malhotra identifies three broad approaches for breaking deadlocks and resolving conflicts, and draws out scores of actionable lessons. He shows how his principles and tactics can be applied in everyday life, whether you are making corporate deals, negotiating job offers or resolving business disputes.

As Malhotra reminds us, regardless of the context or which issues are on the table, negotiation is always, fundamentally, about human interaction. No matter how high the stakes or how protracted the dispute, the object of negotiation is to engage with other human beings in a way that leads to better understandings and agreements. The principles and strategies in this book will help you do this more effectively in every situation.

IN THIS SUMMARY, YOU WILL LEARN:

- Three crucial levers for successful negotiation.
- Why and how to frame, or make sense of, negotiations early.
- Why the process of negotiations is just as important as the substance.
- How learning to empathize will increase your chances of success.

THE COMPLETE SUMMARY: **NEGOTIATING THE IMPOSSIBLE**

by Deepak Malhotra

The author: Deepak Malhotra is the Eli Goldston Professor of Business Administration at the Harvard Business School, where he teaches negotiation courses in a wide variety of programs. His first book (with Max Bazerman), *Negotiation Genius*, was awarded the 2008 Outstanding Book Award by the International Institute for Conflict Prevention and Resolution. His second book, *I Moved Your Cheese*, was a *Wall Street Journal* best-seller.

Introduction

Even seemingly impossible deadlocks and conflicts can be resolved if we shed the assumption that our only sources of leverage are money and muscle. This is especially important to keep in mind when you are dealing with a situation that seems hopeless. When even your most generous offers are being rejected, when your well-intentioned attempts at addressing the issues are being thwarted, and when you have little power with which to impose a solution, you need a different approach and other sources of leverage.

Too often, when people hear the word "negotiation," they equate it with haggling or debating, or imagine people in suits hammering out a deal. They think of negotiation as something we do once in a while — or worse, as a daunting or unpleasant task that should be avoided if possible. We would benefit from thinking differently.

Negotiation, regardless of the context or the issues involved, is fundamentally about human interaction. However simple or complex the issues, however well-intentioned or malicious the parties, however familiar or unprecedented the challenges, the question we are always trying to answer in negotiation is this: How might we engage with other human beings in a way that leads to better understandings and agreements?

Negotiation, then, is the process by which two or more parties who perceive a difference in interests or perspective attempt to reach agreement.

There are three crucial levers that negotiators often ignore, underestimate or mismanage, especially when they are accustomed to thinking of power in terms of money and muscle:

- **The Power of Framing.** Effective negotiators know that *how* you articulate or structure your proposals can be as important as *what* you are proposing.
- **The Power of Process.** Negotiating the process astutely can be more important than bargaining hard on the substance of the deal.
- **The Power of Empathy.** A dispassionate and methodical approach to understanding the real interests and perspective of all relevant players can help to resolve even the ugliest of conflicts.

Which one of these levers will be the key to solving your problem — or, whether you will need to use multiple levers — will depend on the situation. Alone, each of these is extremely effective. Together, they provide a comprehensive approach to negotiating the impossible.

PART I: THE POWER OF FRAMING

The "frame" of the negotiation is a psychological lens. It is a sense-making apparatus that influences how people perceive each other, the issues at hand and the options that exist. There is almost no limit to the number and types of frames that can emerge in a negotiation. For example, negotiators may look at a deal through a financial or a strategic lens, see it from a short-term or a long-term perspective, or regard it as a friendly or hostile engagement.

There are no "right" or "wrong" frames, but which frame takes hold has important implications for how the parties behave and what they will ultimately be willing to accept. Sometimes a low-stakes issue that neither side

really cares much about becomes infused with so much political or symbolic significance that neither side is willing or able to back down.

Importantly, negotiators almost always have the power to influence the frame, and reframing can be a powerful tool for overcoming barriers to deal making. Regardless of the objective stakes, much of what determines how people approach a problem depends on how they (or their constituents) *subjectively* make sense of it. Deal makers are unwilling to make concessions to perceived adversaries but are more amenable to doing so when they perceive the task as a collaborative problem-solving effort. Negotiators who frame a conflict as "winner takes all" will have a harder time than negotiators who believe it is possible for everyone to "win." Negotiators will be more or less willing to accept certain proposals when they adopt a short-term versus a long-term lens, or when the offer appears better versus worse than what they initially expected.

Objectively identical proposals and options can be reframed to make them more attractive to the other side. Paying attention not just to the substance of what is being negotiated, but also the lens through which parties are evaluating their options, can sometimes help break seemingly impossible deadlocks.

Control the frame of the negotiation. The frame that takes hold will shape how negotiators make decisions, evaluate options and decide what is acceptable.

Leveraging the Power of Framing

Too often, negotiators incorrectly assume that if you get the substance of the deal right — that is, your proposal is sufficiently valuable to the other side — then you do not have to worry about "how it looks," also called *the optics of the deal.*

The role of optics is especially pronounced when there is an audience. The audience can be voters, the media, competitors, future negotiation partners, a boss, colleagues or even friends and family. We are usually aware of our own audience, but we pay insufficient attention to theirs. In fact, their audience is just as important to consider as ours, especially if we are asking them to back down or make hefty concessions. To think of their audience as "their problem" ignores a central tenet of most difficult negotiations: there is no such thing as their problem; what seems to be their problem, if left unsolved, eventually becomes your problem. You may have already given them an offer that is superior to their alternatives, one that they "should" accept, but if you have not paid sufficient attention to the other factors that influence their decisions, you may find that even your generous offers are being rejected.

In the 1991 book *Getting Past No,* William Ury tells us to "write their victory speech" for them. Carefully consider not just how much value you are providing to the other side, but also how they and their audience will view an offer. Think about how they can possibly say yes to what you are proposing and still declare victory.

It is not always obvious whether the other side truly needs a substantive concession or merely has a problem with how your offer will look to their audiences. As you might also suspect, the other side is often unwilling to clarify which of these is the case. Make it safe for the other side to ask for help on optics. Build a reputation for rewarding transparency and not exploiting their moments of weakness.

Avoid One-Issue Negotiations

A common problem in negotiations is getting stuck on one divisive issue. Counterintuitive as it may seem, negotiations are often easier when you have more than one thing to fight about. When there is only one issue on the table, and it is not easy to see how both sides can get what they want — or as much as they have promised to their audiences — you have a zero-sum problem in which at least one of you is going to feel or look like you lost. In these situations, it is useful to consider whether you can bring other issues to the table so that each side can walk away with something. If there is only one issue, try to split it into two or more separate issues.

The Logic of Appropriateness

How do people make decisions? We are all familiar with one way people choose: cost-benefit analysis. The basic idea is that people weigh the costs and benefits of all options and pick the one that seems to be best overall, perhaps with some adjustment based on risk preferences.

Social scientists James March and Johan Olsen have an alternative model for decision making, which they refer to as the logic of appropriateness. They suggest that, rather than engaging in a potentially complex or time-consuming cost-benefit analysis, people often make decisions by asking themselves a simple question: "What does a person like me do in a situation like this?"

If we take the logic of appropriateness seriously, it means that we should be mindful of whether people will perceive our offer or preferred option as "appropriate," and also of how we might boost the appropriateness of the proposals we make.

These principles are among the most powerful and broadly applicable means of boosting the appropriateness — and hence the attractiveness — of an idea or proposal.

Leverage social proof. The principle of "social proof," as articulated by social psychologist Robert Cialdini, says that when people are unsure about which way to go or what to choose, they look to the behavior of others, actual or implied. According to the logic of appropriateness, if we think most others are actually doing something, it must be appropriate. This is because when people look at the world, they think the world is supposed to make sense. And so when they see other people choosing a certain course of action, they say to themselves, "There must be a reason," and take it as a signal that it is the correct or normal or acceptable behavior. Not surprisingly, then, the most direct way to boost the appropriateness of an option is to demonstrate or signal that others are also choosing it.

Set the default option. When something is the presumptive or preset choice in a setting, it leads people to conclude "It must be the default for a reason"— that is, it must be what most others do, or it is normal or acceptable. You can boost an option's appropriateness by making it the default.

Shift the reference point. Is $10,000 a lot of money? It depends on what you are comparing it to or contemplating. If you are thinking about buying a watch, it is a lot of money and the amount will be very salient; if you're buying a house or discussing the national debt, then it is not particularly attention-worthy. The point is that people do not react to or evaluate data and options in a vacuum. Someone who is evaluating an offer, the suitability of a timetable or the level of success achieved on a performance metric always has some reference point in mind. If it is the "wrong" reference point, even the best data or the most meritorious argument will be evaluated as weak. Before presenting your information, then, it is wise to set an appropriate reference point.

Don't apologize for your offer. The moment you seem apologetic, you give the other side the license to start haggling. This does not mean you should be unwilling to negotiate price. Nor does it mean you shouldn't explain your price. But when you apologize for your offer, you are creating a frame that says your proposal is inappropriate and that even you do not think it is a reasonable starting point. If you are bringing more to the table than competing offers, you want to shift the frame to a discussion of value. For example, if the customer complains about the price being too high, the salesperson might say, "I think what you're wondering is, how is it that despite having this price we have so many people lining up to buy our product? What kind of value are we delivering that allows us to win so many deals over our competitors? I'm happy to have that conversation..."

First-Mover Advantage

In 1786, Thomas Jefferson and John Adams signed the "Moroccan–American Treaty of Friendship" that had been negotiated between the American representative, Thomas Barclay, and Mohammed III, Sultan of Morocco. The treaty, written in Arabic and then translated into English, had 25 articles, mostly pertaining to naval and commercial matters. The final article set the length of the treaty obligations: "This Treaty shall continue in full Force, with the help of God for Fifty Years." Almost 230 years later, it is still in effect.

But the signing of the Treaty of Friendship merely formalized a relationship that had already existed between the two countries for almost a decade. The first, and most consequential, step towards friendship was planted in 1777, when Morocco became the first sovereign country to recognize the independence of the fledgling United States of America. In December of that year, seeing the value of enhanced commercial relationships with America, the sultan announced that the ports of his country would be open to the United States. While it took a few years for the U.S. government to respond to this offer — they had more pressing concerns during the war with England — it planted the seed that would grow into a friendship and a commercial relationship for centuries.

There is a powerful first-mover advantage when it comes to framing. The sooner a frame takes hold, the more likely it is to stick and to shape subsequent negotiations. We saw this when discussing default options: It pays to start with your initial template for the negotiations, or with your draft of the agreement. In the case of the longstanding relationship between the United States and Morocco, the friendship frame was set early on, when there was no prior, dominant frame to contest it.

In business contexts, multiple frames are usually established very early in the deal-making process. These include, for example, who is perceived as strong or weak, whether it makes sense to be transparent or to be guarded, and which reference points or precedents are appropriate when evaluating offers, valuations and so on. Effective negotiators are mindful of the influence such frames will have as the negotiation unfolds, and seek to establish the preferred frame as early as possible.

PART II: THE POWER OF PROCESS

The substance of a negotiation is about what the parties are trying to achieve. Process is about how they will get from where they are today to where they want to be. Even the most brilliant strategy for the substance of negotiations can be undermined if there is insufficient attention to process. Here are just a few elements of process to consider and try to shape:

How long will negotiations last? Who will be involved and in what capacity? What will be on the agenda, and in what order will issues be discussed? Who will draft the initial proposal? Will negotiations be public or private? When and how will progress be reported outside of negotiations? Given multiple parties or issues, will there be one negotiation track or many? Will all the parties be in the same room at the same time? How will major deadlocks or other problems be managed? Will deadlines, if any, be binding or not? What milestones might help build momentum and keep the process on track? If the negotiations end in no deal, when and how might parties re-engage?

In most negotiations, some or many of these factors will be predetermined, or there may be a default process in place due to precedent or the actions of other parties. But defaults need not be blindly accepted — they can be reset to great advantage.

Have a process strategy: How will you get from where you are today to where you want to be? Consider the factors that influence whether, when and how substantive negotiations will occur.

Also, a process strategy for deal making is not enough — you also have to strategize the implementation process. What will be required for successful implementation? How will you garner sufficient support for the deal? How will you ensure ratification? While getting the substance right is essential, getting the process wrong can still be fatal. Moreover, it is not enough to give process elements due consideration: Process should be given precedent. Focusing on process early can sometimes help avoid deadlocks and ugly conflicts altogether.

Leveraging the Power of Process

Consider the following: You have been negotiating with your counterpart for weeks. After considerable effort, you seem close to reaching a deal. You decide to offer one final concession that you have so far resisted and agree to one of their more onerous demands — a move you hope will seal the deal. You make the concession, and the other party responds, "Thank you. This is extremely helpful. I appreciate your flexibility. Now, I'd just like to go over things with my boss to see what she thinks about it." And you are sitting there, stunned, thinking to yourself, "What? You have a boss? I thought this was going to be the end. I have nothing more to give." The mistake, in this somewhat stylized example, is one that is all too common. It is a failure to negotiate process before diving into substance.

Negotiating the process involves evaluating the default (or proposed) process and reshaping it if necessary and possible. It also entails asking questions, sharing assumptions and expectations, and reaching as close to a common understanding as possible on the path from where you are to the finish line. How will we get from here to there, and what are the factors that can influence the trajectory and speed?

A failure to negotiate process effectively can lead to mistakes on substance later on, including poorly timed concessions; ill-conceived proposals or demands; coordination failures across different tracks or channels in the negotiation; and the failure to anticipate barriers, such as deadlines, political or bureaucratic hurdles and the behavior of spoilers.

Even when there is clear agreement on process at the outset, parties can sometimes get misaligned regarding their views on where they are in the process. One party may feel that they are close to a deal and should forgo other options, while the other thinks it is still legitimate to be shopping around. Ensure — early and often — that there is agreement about what has been accomplished and what the path ahead looks like.

Even when you have no ability to shape the process, there is much to be gained by seeking clarity and commitment on the process. Greater clarity (an understanding of the process) and commitment (assurances that the process will be followed) can help negotiators navigate towards better outcomes and avoid strategic and tactical mistakes even when they do not have the leverage to change the process.

Of course, there is no guarantee that the other side will respond to your request for clarity or discuss potential problems that may arise, but even a refusal by the other side to answer certain questions can be informative. In the case of process, if the other party in the deal or dispute will not answer reasonable questions about process, it allows you to further explore whether this reflects bad intentions or a lack of preparation on their part, or that they are merely keeping their options open. At the very least, you can be more vigilant as you navigate the deal.

Preserve Forward Momentum

In protracted conflicts where finding a solution will take a long time — and in relationships where the parties will have to negotiate with each other again in the future — it is necessary to preserve forward momentum. Forward momentum is the deliberate, gradual progress towards eliminating obstacles and creating the conditions that might eventually lead to a successful outcome. Unfortunately, short-term temptations abound that create the risk of sacrificing forward momentum. The desire to "win" today can make it difficult to make even modest progress tomorrow.

There is nothing, per se, inappropriate about trying hard to get the best deal for one's constituents. The problem surfaces when this pursuit induces negotiators to break long-standing norms of behavior, to disrupt implied or explicit agreements, or to legitimize the use of "whatever it takes" tactics in an environment where cooperation and moderation might have otherwise taken root. Instead of doing whatever possible to make progress easier, negotiators who engage in such behaviors will motivate a desire for revenge and displace collaborative rules of engagement.

Before using tactics to gain advantage, consider: How will this affect our ability to negotiate productively in the future?

The Dark Side of Consensus

Consensus certainly has its merits. But the more people who have veto power, the fewer the degrees of freedom you have to structure a satisfactory deal, because there are too many demands on the limited resources available. The need to bring everyone on board creates a situation in which anything that isn't bolted down is subject to compromise, and the emergent agreement is likely to be strategically shortsighted — that is, designed to solve current problems at the cost of ignoring or exacerbating future problems.

Deal makers and diplomats will often try to adopt the principle of sufficient consensus. Instead of requiring that everyone at the table vote in favor of each proposal, the parties agree that negotiations can proceed as long as there is a "high enough" level of acceptance among and within the parties (e.g., 80 percent of all parties must agree in favor of the provision, and 60 percent of all individuals must agree).

Stay at the Table

Most negotiations, even successful ones, leave residual conflict in their wake. For example, some salespeople will disengage with customers after a deal is signed (or when it fails) and re-engage only when it is time to pitch the next deal.

A wiser strategy is to stay at the table, at least figuratively if not physically, even when there is no visible prospect for a deal or money to be made. Especially in the aftermath of "failed" negotiations, the natural tendency is for the relationship to further deteriorate, for trust to diminish and for perspectives to diverge further. Continued engagement is crucial to keep relationships intact, audit the potentially changing interests and constraints of all parties and explore the possibility of renewed negotiations.

Also, it is often easier to obtain information and build trust when substantive negotiations are not under way, because there is less anxiety that sharing information will give the other side an advantage in a deal. Stay engaged regardless of the outcome; there may come a time when the deal you reached can be improved, or the no deal you reached can be reversed.

Wise negotiators do what they can to get a seat at the table. If that is not possible, there are other ways to influence what happens in a negotiation. If you don't have a seat at the table, you might influence deal makers by creating value outside of the deal or by offering to help sell or implement the current deal.

PART III: THE POWER OF EMPATHY

The mistake people make is to think that empathy is what you use when you want to be nice, or that it is an instrument of the weak. This reflects a dangerous flaw in understanding. For negotiators, the reason to empathize with the enemy is not because it is somehow the "nice" or "liberal" or "enlightened" approach to dealing with nasty people. We need to empathize because it makes it more likely that we can achieve our own goals.

In negotiations of all kinds, the greater your capacity for empathy — the more carefully you try to understand all of the other party's motivations, interests and constraints — the more options you tend to have for potentially resolving the dispute or deadlock. Empathy does not guarantee success, but a lack of empathy usually guarantees failure.

Most of us see ourselves as being relatively understanding and empathetic, but we fail to act this way when we are dealing with people who have done things that we find abhorrent or inexplicable. Yet, these are precisely the situations where empathy is most needed. You already

understand your friends; the key to resolving conflicts lies in understanding your enemies.

It is important not to confuse empathy with sympathy. The goal is to understand what is causing someone to behave a certain way; it does not mean you have to approve of their goals or actions. There is a difference between explaining the other side's behavior and justifying it. When you are dealing with difficult negotiations and ugly conflicts, it is not necessary to agree with the other side, but it is crucial to understand them.

Leveraging the Power of Empathy

When the other side has a lot of power and seems willing to engage in unscrupulous behavior, your options seem limited. But a number of options might not be immediately apparent because inaccurate assumptions are being made about the underlying problem. It is crucial for deal makers to investigate what factors other than sheer incompetence or evil intentions might motivate the other party to behave in a manner that seems aggressive, unfair, unethical or irrational. Of course, you might conclude after an exhaustive examination that they really *are* out to get you, but it is best not to start with that assumption.

Not every negotiation should end with a deal. If the best you have to offer the other side is worse than their alternatives, not reaching a deal is the right outcome. Not reaching a deal is tragic only when you are the right partners for each other and value could be created for everyone, but something is standing in the way of getting it done.

Broadly speaking, there are three classes of barriers that negotiators ought to consider:

Psychological Barriers: These are barriers that exist in the minds of people, such as mistrust, ego, disliking the other party, emotions, biased perceptions of fairness and overconfidence.

Structural Barriers: These are barriers that are associated with the "rules of the game" as currently established — e.g., time pressure, having the wrong parties at the table, the use of agents whose incentives are misaligned with yours, too much media attention, insufficient availability of information, other deals or agreements that are constraining your options, etc.

Tactical Barriers: These barriers arise from behaviors and choices on either side, such as publicly committing to a position that is untenable, aggressive tactics that provoke retaliation, focusing too narrowly on one issue and failing to consider all of the interests of each party, choosing not to exchange information and so on.

The more carefully you evaluate all the challenges that you may face, and the more comprehensively you consider the various tools and tactics at your disposal for addressing them, the more likely that your deal-making efforts will succeed.

Ignore Ultimatums

Every so often, in big negotiations and small, ultimatums are given: statements such as "We will never… ," "Under no conditions can we… ," "You must…" or "That's impossible." But many of the ultimatums that get thrown about in negotiations do not reflect absolute "red lines" or deal breakers. Sometimes people are just angry or upset, and the words come out more aggressively than necessary. Sometimes the other side feels that they have been pushed around for too long and are now simply trying to assert some control.

Ignore ultimatums. The more attention you give to them, the harder it will be for the other side to back down if the situation changes. Remember: What is not negotiable today may be negotiable tomorrow. How the other side approaches a negotiation is not only likely to change over the weeks, months and years ahead; it can also be shaped by the actions you take.

Yielding

Sometimes neither controlling the frame nor reframing is an option. Sometimes there is already a dominant frame, a well-established lens through which one or more of the parties are viewing the situation. You may be walking into a protracted negotiation or conflict where the parties have a deeply rooted perspective on the issues and their options.

When all else fails, you can sometimes overcome resistance to your ideas and proposals by *yielding* — that is, understanding and co-opting the other side's frame or perspective to make it work for you. Yielding means "going with" and not "giving in." Doing so effectively requires a clear and unbiased understanding of how the other side views the situation and of the metrics they will use to evaluate ideas and options.

Sometimes there is not one dominant perspective but two equally strong philosophies competing for dominance. This can be the case when each side has strong views on the correct way to discuss or evaluate issues, and they have seemingly incompatible ways of looking at the problem. In such a case, one potential solution is *bridging:* finding a

way for one side to adopt the other's frame without losing leverage, or proposing a new frame that they can both safely adopt.

Competing perspectives can be bridged if one side can adopt the other's frame without sacrificing their ability to articulate key demands, or both sides can agree to a new frame that gives neither an advantage.

Map Out the Negotiation Space

A common mistake in negotiation is to think about relationships *bilaterally* — that is, to focus only on your relationship with the party across the table from you. The negotiation analysis changes when parties think *trilaterally:* evaluating not only the relationship that the parties have with each other but the relationships each has with other parties. The negotiation space consists of all parties that are relevant to the negotiation. "Relevant" means one of two things: (a) any party that can influence this deal and (b) any party that is influenced by the deal.

The more you "zoom out" to see the negotiation in the broader context, the more accurate will be your understanding of the other side's likely behavior, and the more likely you are to wisely revise your strategy when relevant events take place elsewhere in the negotiation space.

When it comes to understanding the other parties in the deal, what precisely are we to understand about them? Here is a framework (ICAP) to help organize your thinking around four critical factors: each party's interests, constraints, alternatives and perspective. Here are the kinds of questions that each of these raises:

Interests. What do the other parties value? What do they want and why? Why are they doing this deal? Why now rather than last month or next year?

Constraints. What are the things they can and cannot do? On which issues do they have more or less flexibility? What is causing them to be constrained? How might their constraints change over time?

Alternatives. What happens to them if there is no deal? Are their outside options strong or weak? Are their alternatives likely to improve or deteriorate over time?

Perspective. How are they seeing this deal? What is their mindset? Where does this negotiation fit into the portfolio of deals they are doing? Is this a high or low priority for them?

An ICAP analysis at the outset of negotiations, and updating the analysis as the deal progresses, can be crucial.

Partners, Not Opponents

It is always best to remember that the people you are dealing with are not competitors, allies, enemies or friends — they are just people who, like you, have interests, constraints, alternatives and perspectives. As a negotiator, your job is to understand these factors and to address the situation accordingly. It is useful to retain the label "partner" for everyone (whether they are acting like a "friend" or "foe"), because it reminds you to have empathy, to be open to the possibility of collaboration in even the most difficult relationships, and to shed assumptions about what is or is not possible.

In the world of business, negotiators often talk about "creating value." Negotiators should be in the business of creating value whether they are bargaining over deal terms, facing deadlock or addressing an ugly conflict.

In difficult situations, an effective way to clarify objectives and choose between options is to ask, What would be the value-maximizing solution? For example, creating a business relationship with the person who is suing you is not intuitive, unless you are dispassionately looking to create value in every situation. Here again, we see the value of regarding all other parties as partners, not opponents, in the process. When you see them as your partner, you are more likely to identify and implement value-creating solutions to the problem.

Every problem wants to be solved. This is especially true in negotiation. You may not solve it today — it may not even be solvable today — but you will solve it sooner when you remember that all problems of negotiation are, fundamentally, problems of human interaction. Therefore, humans have the capacity to solve them.

Our ability to find unique solutions to our problems is greatly enhanced when we are skilled in using all of our sources of leverage — not just money and muscle but also the powers of framing, process and empathy.

RECOMMENDED READING LIST

If you liked *Negotiating the Impossible*, you'll also like:

1. ***Persuasion Equation*** **by Mark Rodgers**. Rodgers reveals what drives decisions and introduces the persuasion equation — a powerful combination of factors proven to speed agreement.

2. ***Just Listen*** **by Mark Goulston**. A veteran psychiatrist and business coach, Goulston reveals the secret of how to get through to anyone, even when productive communication seems impossible.

3. ***Real Influence*** **by John Ullmen, Mark Goulston.** The authors provide a four-step method to examine your priorities, learn about the key players and what they need, earn their attention and motivate them to hear more, and add value with your questions and action.

by Peter Sheahan and Julie Williamson, Ph.D.

THE SUMMARY IN BRIEF

Companies and people that matter have successfully become the obvious choice in the hearts and minds of their customers, their employees and their communities. They elevate themselves by consistently finding ways to solve the most pressing needs their markets face. The result? They create more value year after year and build a sustainable, differentiated organization.

In *Matter*, Peter Sheahan and Julie Williamson show you how to identify the place where you can create the most value — your edge of disruption — at the intersection of old and new, where your existing profits, reach and reputation enable you to create the markets of the future. This is the place where the most important problems are solved and where the fewest people can solve them. Your edge of disruption is where your opportunity to matter is found.

Matter uses extensive case studies of real companies that have successfully become the obvious choice in their markets. Through their journeys, you will find the inspiration and courage to lean in to complexity and solve the higher value problems that matter most. Don't just read this book — use it to identify and act on opportunities to create the most value and accelerate your own journey to becoming a person and a company that matters.

IN THIS SUMMARY, YOU WILL LEARN:

- What it means to be a company that matters.
- The three-step process for becoming a company that matters.
- How to do the hard work of reinventing yourself, rather than working hard at what you've always done.
- How to make thought leadership a way of life.

Introduction

People want to buy from companies that matter. People want to work for companies that matter. People want our communities to be filled with organizations and people that matter.

To become the obvious choice, to be a company that matters, you need to consistently create outcomes that are valued more than those of your competitors and that are not easily replicated. As the definition of value evolves in the marketplace over time, you also must sustain your ability to perpetually create new and valued outcomes that are beyond what your competition is capable of doing. Period.

How are some companies able to be the obvious choice in their markets year after year? The "what," "where" and "how" questions about providing value are riddles worth solving: *What* does it take to create more value? *Where* do you find the opportunities to create more value? *How* do you build the capability to deliver more value, year after year?

Here is a map for your journey to become the obvious choice.

- Establish your *elevated perspective* by defining your edge of disruption and learning and sharing as much as you can about it.
- Use your elevated perspective to build credibility and gain the access you need to develop *elevated relationships.*
- Go deep with your customers and connect the dots between disruption and opportunity, and you will have the understanding and influence required to have an *elevated impact*.
- Lean into the complexity required to solve higher-value problems, and answer the call to act in a way worthy of your leadership position.

Do these things and you will be able to create more value for your customers, move beyond your competition and, as a result, become the obvious choice in your market, year after year. You will matter more.

PART I: ELEVATED PERSPECTIVE

There are things that matter to buyers, and there are things that matter more. An elevated perspective that comes from the edge of disruption matters more. Your ability to have insight at that edge and to share it in a compelling and applicable way will matter in the most influential rooms of your most important clients. Clients can leverage that perspective to help differentiate their organization and solve their most complex problems.

DEFINE: Discover Your Edge of Disruption

Defining your edge of disruption should be driven by the question, "What are the problems we are uniquely positioned to solve with a scalable solution?"

Defining your edge of disruption is about looking toward the future, determining where your capabilities and credibility uniquely position you to take advantage of the wide array of changes you see there, and developing a unique perspective about the disruption these changes

will bring. Then use that perspective to drive meaningful insight for the people you need to influence the most.

Wherever you go to find your edge of disruption, it should ultimately generate *market-facing* value. It must have an impact on your customers and, if appropriate, your customers' customers.

Companies that have succeeded on the edge of disruption, that are delivering the highest value possible to customers, bring three things to the journey. You need to find them for yourself if you wish to become the obvious choice in your market.

1. Have the courage to challenge assumptions. When you set out to define your edge of disruption, you absolutely, unequivocally must have the courage to challenge your assumptions and deeply held beliefs about your industry, including how you make money and provide value. You must step out of the container of your immediate environment and be willing to stretch your imagination and your understanding of possibilities.

Write down the five most irrevocable truths that you believe about how you do business. Truths that, when you are honest with yourself, may in fact be blinding you to opportunities that are right in front of you. Opportunities that the insular world of your industry and your organization are hiding in plain sight. Embedded in the results will be pointers to your edge of disruption — the ideas that are too precious to challenge are the very ones you must examine.

2. Take an optimistic stance. Finding your edge of disruption, and then thriving from what you learn there, is about asking more optimistic questions. Optimistic questions are growth questions for the future. Questions like "How can we use this to our advantage?" "What opportunities are hidden in this disruption?" and "How could we get ahead of this change and profit from an early-mover advantage?" If you are optimistic about the possibility that the future can be even better than today, you will keep pushing out of the box you are in, even if it is a box that is currently serving you reasonably well.

3. Explore the unanswered questions. Have an insatiable desire to explore the unanswered questions that face your industry, company, team and your customers, wherever you find them. This is fueled by a desire to know about what's going on around you, wondering what others are doing and what might be possible. That keeps you watching for the next opportunity, pushing to understand what's happening broadly and how you can create more value for your clients, and doing the work that matters most by solving complex problems with innovative solutions. Unanswered questions worth exploring are the "what if," the "where else," the "how might we" questions.

LEARN: Establish Your Point of View

Take intelligent risks in the real world. Think about your team, your region, your function or your company — wherever you have line of sight. What controlled risks could you take to learn how you could matter more to your internal or external customers?

Co-create with your customers and your market. Engaging your customers and your market in co-creating — both in defining *and* solving for your edge of disruption — creates tremendous respect for your ability to bring people together around interesting challenges. And you often fast-track the sales process later on, because people are primed to buy solutions they helped to build. Working together to solve systemic problems creates more value for everyone — you, your customers, their customers, your competitors and the industry as a whole.

As you work to learn about your edge of disruption, you may find you have more questions than answers. You may not even have the problem fully defined. You can co-create a problem definition and solutions with your customers and market; consider this approach as you work to learn about your edge.

Know what you know. Another approach is to make sure you "know what you know." You can often learn a tremendous amount about your edge of disruption when you look right in front of you: at your people, your suppliers, your contractors and your customers. They all have experiences that help you to better understand your edge of disruption. It takes courage and humility to ask about those experiences, learn from them and synthesize them to find and stay at your own edge. You can't learn from your expertise if you don't know what it is or where it exists inside your organization.

Muster up the courage, the optimism and the curiosity to ask the tough questions and fully understand the answers; then make a decision to take action. It takes hard work, but if you are committed, you can start to elevate your own perspective and that of those around you.

Move from ideas to insights. Ideas pop into your head in the middle of the night, or get doodled on whiteboards during meetings, and they are great to have. The work is in moving from ideas to insights. Insights are formed when an idea is tested in a real-world situation, and key distinctions are generated that test the underlying

assumptions of the idea itself. Companies that contribute from the edge of disruption are committed to generating insights. By testing their ideas, they flex them inside the market, using diverse viewpoints and taking intelligent risks. The companies that matter are able to develop an informed point of view about their edge of disruption and take it out into the world in effective ways. It is critical that this ability to define and learn about your edge of disruption be developed throughout the organization, not just in the marketing, R&D or product departments. It must be ingrained in your company's DNA.

Once you demonstrate to your clients that you don't just know yesterday's news but are discovering, defining and sharing tomorrow's news, they will want to engage and partner with you as they push toward their own edge of disruption. In the process, this will break you free from the commoditized positioning that plagues most industry players. To leverage an elevated perspective into elevated relationships, you need to develop a platform from which you share what you have learned. You must be known for what you know.

SHARE: Be Known for What You Know

Companies that matter go beyond the superficial to become true thought leaders in their industry. When it comes to their approach to thought leadership, content marketing, applying their perspective to the sales process, and the way they share and proliferate what they know, companies that matter believe in four things that set them apart from their competition:

Share abundantly. Elevated perspective isn't just about what you know and what you see. It is about how your perspective is put to work by your customers, your sales teams, your industry and even your competitors. It's about being known for what you know. To those who share much, more will be given.

If you don't find a way to be heard, your elevated perspective will not add the value that it should. Instead of opening new doors and building your credibility, it will hibernate inside your organization until it reaches its expiration date, without elevating you at all. That creates two risks. First, you can become so enamored with your ideas, you don't realize they've expired; and second, you can fail to contribute in a way that ultimately associates you with the maximum possible value. Creating more value happens at the edge of disruption. And if you share, the perspective you gain there can be leveraged to elevate your relationships and your impact.

Quality: Focus on value, not volume. Companies that matter have come to know that views and volume of consumption do not equal value. Value equals value. It's more important for the right people to access your perspective than for a lot of people to access it.

Companies that are the obvious choice in their markets put what they learn to work for them by developing and curating content platforms that make their insight, data and points of view available to their most important customers. Sometimes that is in the form of awesome content that gets a broad audience activated, and other times that is more surgical and precise, focused on buyers in particular verticals.

Now might be a good time for you to start to think about how you can position your point of view about your edge of disruption, and with whom. Then consider how you would build a platform that will position your elevated perspective in a way that reflexively drives value for you and your customers.

Be provocative. New ideas and new approaches, including those from the edge of disruption, are always met with criticism — they wouldn't be disruptive if they weren't. When the future threatens the status quo, people become defensive and start to think, talk and act out of fear. It is easier to reject a new elevated perspective than it is to consider it and embrace it. It's about having the courage to stand by your point of view and to shine a light on the edge of disruption itself.

Make thought leadership a way of life. Companies that matter don't just treat their thought leadership as a marketing strategy; they also grow their content out of a much broader mindset and way of operating. Thought leadership infuses everything these companies do, from product development to learning. Everyone on staff has an obligation to think about the future. As a result, the value of these companies' insights goes way beyond typical content marketing. Specifically, they differentiate their thought leadership in three key ways:

- They find and focus on the edge of disruption that is most impactful for them and for their customers, and that's where they spend time developing their most valuable insights.
- Their ideas are grounded in experience, data and collaboration.
- It is authentic. Companies that matter want to break free of the world as it currently exists, and move confidently toward the world as it is going to exist. As a result, they are bold and provocative, and they leave people questioning their most fundamental industry

assumptions. Thought leadership is not content marketing. It is a way of life.

PART II: ELEVATED RELATIONSHIPS

Elevated relationships happen in three different but interrelated dimensions. First, you have access to the key influencers in your marketplace — the people who can say yes and can make things happen inside their own organizations. They are typically your buyers. Having access to these key influencers is called *playing high*.

Second, you build partnerships with the people who ultimately use or interact with your products and services, relationships that continually keep you fresh in understanding their needs and focused on the most complex problems they face. This is called *engaging like you mean it*.

Third, you must make meaningful connections across *the whole board* — all the various internal and external influences that create disruptions in your world. These connections go beyond the direct buy/sell relationships, or internally beyond your immediate circles, and into the broader ecosystem.

INFLUENCE: Play High

There are five key challenges you will encounter when you decide to play high.

1. Invest your energy in the right people. Elevating your perspective is critical, but alone it does not create enough value to make you the obvious choice. Innovative thinking and deep insights might raise your reputation, but to truly create the most valued outcomes, you have to leverage your elevated perspective to elevate your customer relationships.

Companies often bemoan their inability to reach the "right" people to influence at the highest possible level. Consider whether you are doing all you can to go to where your ideal buyers are, rather than either expecting to meet them in their offices or expecting them to find you. Take a hard look at where you are spending your time. Are there opportunities to claim different space and to create different conversations? We are willing to bet there are, and your elevated perspective creates the opportunity to do so.

2. Align your go-to-market approach. Transforming sales and often marketing in any organization is not for the timid, that's for sure. But, it is completely necessary if you want to elevate relationships with your buyers and to put your elevated perspective to work for you. Time and again companies invest in building an elevated perspective only to have the sales organization reject it because "that's not how we sell," or because it can feel like a slower burn. Solving more complex problems is often a slower sales cycle than commodity-based categories. Companies that are working on the edges of disruption, that want to change how they matter to their customers, will push through that resistance, hold their nerve, and in the process often bring sales and marketing closer together.

3. Learn to say no. Imagine if you took all the energy you put toward pleasing customers who aren't profitable to you and likely never will be — clients who keep pushing you into commodity conversations and ruthless negotiations — and instead directed that energy toward clients who are your partners and who most need the work you do best? You'd become so valuable to those clients, you'd get the margins you need to do less (but more enjoyable) work and still thrive as a business. It takes clarity and courage to say no to work, but it is absolutely imperative if your goal is to become the obvious choice. Management guru Jim Collins suggests three questions a company should ask: Is this something we can do better than any other company? Are we passionate about it? Will it fuel our economic engine?

4. Set clear standards. The most successful companies don't just apply strict standards to say no when choosing customers and work. They apply equally tough standards once they've taken a job as well, both to their own conduct and to that of their customers. They don't chase jobs; they partner. A given job matters, but the relationship with the partner matters more. It takes real courage to demand something greater from your customers and to adhere to these standards long after they are first defined. But the results are worth it. They include not just lasting, loyal relationships but also more meaningful work.

5. Be true to your future self. You have to know who you want to be in business, and with whom you want to be in business, and stay completely focused on that goal, while remaining open to changes in your industry and continuing to synthesize and maintain perspective on the edges of disruption happening all around you. Influence isn't fundamentally about what a company has. It's about what a company does, and even more profoundly, what a company is — what it's made of, its character. Companies accelerate their journey to becoming the obvious choice by positioning themselves to conduct business with the right customers and doing the right work. They go head-on to meet the challenges

of gaining access, saying no to work, screening customers, revamping their go-to-market teams and processes, and being true to their future selves.

PARTNER: Engage Like You Mean It

The best companies invest in their relationships in such an authentic way that the returns they create are more than sufficient to justify further investments. They don't see relationships as a cost to be managed but, instead, view them as critical to their ability to create value. They know that to not only see the opportunities at the edge of disruption but also have the understanding required to execute solutions that make the most of such opportunities, they need to create a partnership with a consumer or client beyond the typical cordial and sometimes adversarial nature of professional relationships. The best companies create these kinds of partnerships in three ways.

Create intimacy and understanding. First, companies that matter establish programs or models for engaging in partnerships with the clients and prospects that create intimacy and understanding. They do not rely on any one transaction or the health and vitality of a relationship from the past. Being "in the traffic" means standing shoulder to shoulder with your clients, essentially meeting them on their ground — being in the room, in the hallway conversations, in the planning meetings, adding value long before there is an economic opportunity for you.

What are some ways you might engage more deeply with some of your customers, whether they are internal or external, big or small? Are there opportunities for you or your team to get to know more about the people you serve internally and the way your products are used?

Convert insights into application. If you really want to matter, you have to be able to add value in application, not just in theory. Doing that means having the ability to convert ideas into insights and insights into action for your customers. Companies that transform into the obvious choice take the insight that comes from their elevated perspectives to make better decisions, shining a light on challenges and opportunities and creating products and services customers didn't even know they wanted.

Turning insight into action means having both the perspective and the relationships needed to understand data in a different way. You need to know who your customers really are. How they live. What they hope to accomplish. What they fear. You have to study your customers, marrying sophisticated data analysis with an equally sophisticated interpretive, ethnographic perspective that leaves you with a rich and nuanced understanding that can't be found in the numbers.

Vest your interests and remove barriers. It is no longer enough to have really smart people; if you don't, why are you in consulting? What clients really want is something more. They look for high-value reciprocal relationships; they want a professional services firm's success to be their success; they want a deeper relationship, mutually vested. They want to discover and exploit new value-creation opportunities together. Vesting is all about finding ways to do business where everyone benefits. The goal is to do away with litigious, acrimonious organizational positioning and to unlock the value of the relationships while driving higher-value outcomes for all.

CONNECT: See the Whole Board

Sometimes called "board vision" in the world of chess, seeing the whole board is about not just seeing each piece in isolation, or a move in isolation. It is about seeing the spaces between the pieces — the relationships, if you will — and the impact of individual moves on the entire board. Players with board vision see their impact in the moment and the potential future impact of subsequent moves as they begin to build to the crescendo that is the tension of the game. The companies capable of solving the most complex and valued problems for their customers are able to do so in part because they can see the whole board.

Connecting is about creating relationships that go beyond the buy/sell relationship, outside your organizational and market boundaries. It is building a level of knowledge and insight capable of identifying the interconnectedness of the moving parts in your world. It is being able to not just understand but also exert influence on how those parts work together and relate to each other. It starts with you seeing the whole board and builds through connecting the dots between the variables that exist on the board.

Connect the dots. Many companies that make it past startup last about 40 to 50 years and then crumble from the inside out, or are taken out in a massive technology or social revolution. Companies on the S&P 500 have seen their average life span decrease from more than 50 years to 15. The rare companies that are able to survive over a century and remain relevant and growing are the ones with the ability to truly see the whole board — what's going on in the world — and constantly adjust by connecting the dots and making bold moves.

Connect broadly. LoyaltyOne is the obvious choice in Canada's loyalty-awards program industry. Its Air Miles Reward Program has achieved one of the highest per capita penetration levels of any national loyalty-awards program on earth. It did so because LoyaltyOne not only saw the whole board but also built the wide-ranging relationships required to capitalize on what it saw via this strategic view: massive opportunities in the white space between brands and retailers, between retailers and consumers and between retailers and other retailers. It suddenly became clear that there was an opportunity to connect the retailer programs with the consumer's decision to shop somewhere, to choose a specific brand or to use a specific credit card with something more meaningful than mere discounts. The power of Air Miles lay in the whole constellation of consumers, retailers and brands, and its success came from LoyaltyOne's ability to build relationships with all of them. Thanks to that breadth, the program knew more about what people bought and aspired to than any single discounting platform ever could have, and its results for brands and retailers were so remarkable that Air Miles created a bigger pie for everyone to share.

Influence the system. Having an elevated relationship is about having a more sophisticated and comprehensive view of your entire market. The best companies, the ones that really matter in their markets, understand that creating the most value requires that you know how to execute in real life. And execution is about politics. It's about influence. It's about behavior change. It's about relationships.

Specifically, it's about the dynamics of relationships. It's about knowing how the actions of Player A impact the results for Players B, C and D. You must understand so much more than the narrow transaction; you must grasp an entire interconnected system of different players bearing on the product's purchase and use. You need to see the whole board and connect the dots between these players. You need to build relationships with them so you can exert influence over the entire market in a way that is good for you, good for the industry and good for the customers downstream.

PART III: ELEVATED IMPACT

Elevated impact happens when companies are delivering the most valued solutions in diverse areas to a variety of stakeholders — and when higher-value outcomes are being created.

LEAP: Be the Disruptor

Just working hard at what you've always done tends to yield diminishing returns, but doing the hard work of reinventing yourself and finding ways to move beyond the competition is what it means to elevate your impact — that's why it is the hardest step, the biggest commitment on your journey to becoming the obvious choice.

There are three distinct patterns of hard work in companies that took the leap, became the disruptor and elevated their impact.

1. Orient around outcomes. Many leaders become blinded to opportunities by a less value-creating focus on building products or services instead of creating the right outcome for clients. What business are you really in? What outcomes do your customers ultimately seek? Knowing the answers to these questions, and then aligning your focus and investments behind them, will help you to avoid holding on to existing business models for longer than is healthy, and will allow you to leap and become the disruptor in such a way that you have the future-focused solutions to the higher-value outcomes you are ultimately seeking to create for your customers.

2. Lean into the complexity. Upon becoming Burberry's CEO in 2006, Angela Ahrendts was asked by an industry analyst to name Burberry's most threatening competitor. Was it Louis Vuitton? Gucci? "No," Ahrendts responded, "Burberry online." Ahrendts went on to observe that customers could now buy the same Burberry clothes or accessories online from e-tailers like Gilt Groupe and Net-a-Porter for up to 25 percent less than in a Burberry store; sometimes they could buy them on Burberry.com for less as well. Under Ahrendts' leadership, Burberry somehow had to figure out how to bring more paying customers into its brick-and-mortar stores.

Burberry's edge of disruption was to take the very best of online and integrate it into the in-store experience, completely shifting industry beliefs and assumptions in doing so. It started with reimagining the store. According to Christopher Bailey, Burberry's then–chief creative officer, now CEO, the store aimed to bring its "physical and digital worlds together to create amazing experiences that encompass everything from fashion, to heritage, to music." It did so by integrating an extreme focus on customer insight with advanced technology, a retrained sales staff, a commitment to new forms of engagement and a massive investment of time and money to recapture a once iconic brand. In 2012, after 300,000 person-hours were invested in its development, the new store was opened and a new age of digital experience was created. Ahrendts summed

it up by observing that "walking through the doors is just like walking into our website."

3. Create organizational alignment. Major transformations will fail every time if alignment doesn't exist among a broad group of stakeholders who can also ensure that processes and systems are organized in a way to deliver. Look at your own world and think about how you can do things differently. What elevated impact could you have on your part of the world? We're willing to bet there is a transformative opportunity in every group in every company, if you take the opportunity to think about how you might deliver more value and how you might matter more in whatever form that takes for you. Elevating your impact means confronting your edge of disruption head on and leaning into the complexity you find there. It requires an orientation around the high-value outcomes your customers most seek from you and a shift away from the inputs that have underpinned your offer and value proposition to date. And it means bringing others along with you — your employees, your customers and others in your ecosystem.

LIVE: Answer the Call

Your customers, your suppliers and your employees are all, at the end of the day, just people. People who crave purpose, people who want to leave a legacy and people who want to see meaning in what they do beyond just economic gain. This is referred to as answering the call, and it is really about making a decision not just to have an impact but to have a positive impact on your organization, your customers and your entire community.

The best companies take their elevated perspective, relationships and impact and they create a new world order that truly matters to them, their customers and the broader community within which they exist. They do work that matters, and they have an impact that makes them matter, too.

Take a stand. There may be no better example of a company that confronted disruption coming from social and cultural changes in recent years, and answered the call required to elevate its impact, than CVS Health. Its approach to tobacco sales in its stores cost the company money in the short term, but the longer-term benefit is paying off well. The leadership team made an incredibly bold decision, one that immediately lit up the news wires and the Twitterverse with speculation about "What were they thinking?"

The announcement was that as of September 2014, CVS stores across America would be free of all tobacco products. The store replaced the "real estate" with signage that read, "We quit tobacco. Ask a trained pharmacist or nurse practitioner to help you quit, too."

At the same time, CVS rolled out a series of products and services aimed to help people quit smoking. *USA Today* noted that "CVS was deluged with personal stories from customers who had quit smoking." Many called it "the hardest thing they had ever done," as CVS/pharmacy president Helena Foulkes said, but "the company is determined to make it easier for them."

Elevating your impact is not just about doing the hard work; it is also about doing the right work. Companies that truly matter view their industry and community issues as their responsibility. If not us, who? And if not now, when? These companies are willing to take ownership of the unique role they can play, and they are willing to put their time, money and energy into playing that role. They see themselves as social actors after all, but there is more to it for companies that matter.

They do not just throw money at social problems or give lip service to the issues. They confront the disruption caused by open social issues and develop programs worthy of their leadership positions. Such companies invest very intentionally in measurably impactful, strategically aligned and organizationally integrated programs.

Once you push through and elevate your impact, you will find you want to do it again and again. You will want to find your next edge of disruption, and you will have built the organizational fortitude to support taking the journey even further. It will become part of your culture to step out to that edge and leap over and over again as you learn, share and increase your impact. Your ability to elevate your perspective, relationships and impact will coalesce into a strength that will enable you to sustain your position as the obvious choice in your market. Being a company that matters will become your modus operandi, the most comfortable way for you to work, and you will join other companies that have enjoyed being the obvious choice year after year.

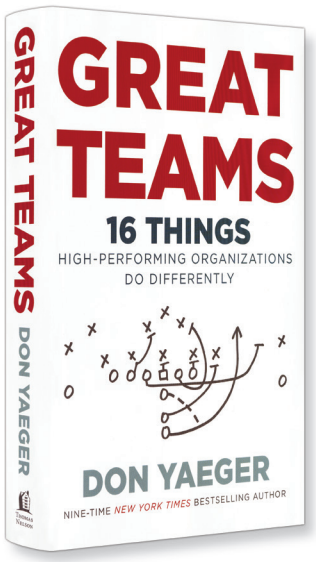
Great Teams

16 Things High Performing Organizations Do Differently



by Don Yaeger

THE SUMMARY IN BRIEF

What makes a team great? Not just good. Not just functional. But great?

Over the last six years, long-time *Sports Illustrated* associate editor Don Yaeger has been invited by some of the greatest companies in the world to speak about the habits of high-performing individuals. Yaeger was approached by his most consistent client, Microsoft, to develop a talk on what allowed some teams to play at a championship level year after year. What do some organizations do seemingly better than most all of their opponents?

Yaeger took the challenge. He has conducted more than 100 interviews with some of the most successful teams and organizations in the country. From those interviews, he has identified 16 habits that drive these high-performing teams.

Building on the stories, examples and first-hand accounts, each chapter in *Great Teams* comes with applicable examples on how to apply these characteristics in any organization. *Great Teams* is a powerful companion for thought leaders, teams, managers and organizations that seek to perform similarly.

The insight shared in this book is sure to enhance any team in its pursuit of excellence.

IN THIS SUMMARY, YOU WILL LEARN:

- The four essential pillars and 16 characteristics that set a Great Team apart.
- The synergistic leadership style of Great Teams.
- The importance of culture in Great Teams and organizations.
- How Great Teams embrace change and manage conflict.

THE COMPLETE SUMMARY: **GREAT TEAMS**

by Don Yaeger

The author: As the author of more than two dozen books, nine of which have become *New York Times* best-sellers, Don Yaeger has developed a reputation as one of America's most provocative journalists. His award-winning writing career, including more than 10 years as associate editor of *Sports Illustrated*, has led to guest appearances on every major talk show in America — from Oprah to Nightline, from Fox News to Good Morning America.

Great Teams: 16 Things High Performing Organizations Do Differently by Don Yaeger. Copyright © 2016 by Don Yaeger. Summarized with permission of the publisher, Thomas Nelson. 272 pages, $24.99, ISBN: 978-0-718-07762-4.

Introduction

There is something special about watching a Great Team at work. Whether it is on the gridiron, on the diamond, on the hardwood or in a corporate setting, when a group of people "click," the environment feels electric and the outcome is often extraordinary.

Great Teams are driven to create a culture of greatness. Trendy offenses, tricky defenses or "hot products" often get the credit for success, but the truly amazing organizations don't stay at the top of their marketplaces without building a team-first culture.

The effort to achieve that culture can be broken down to four essential pillars that set a truly Great Team apart from one that simply performs well:

- **T**argeting Purpose: The team is connected to a greater purpose. Members understand whom they are serving and why that matters.
- **E**ffective Management: The team is able to think creatively and act dynamically in order to stay fresh, effective and relevant.
- **A**ctivating Efficiency: Each member of the team brings a unique set of talents, experiences, perspectives, work ethic, personality traits and know-how that melds with and complements those of the other team members.
- **M**utual Direction: There is a strong sense of understanding, appreciation, shared responsibility and trust that unites and motivates the team to work together.

Moreover, there are 16 defining characteristics that special teams all share. These traits can be worked on independently by individual team members, but the truly outstanding teams use them to build on one another. Organizations that exhibit real greatness combine talent, relationships and innovation in a variety of ways for the sake of achieving a shared goal.

Pillar One: Targeting Purpose

1. Great Teams Understand Their "Why"

Every day, whether it's at practice or a game, an important meeting or an ordinary day at the office, the highest-performing teams show up with a sense of purpose; they understand the "why" of what they do and can clearly see how it matters. The better an organization understands whom it serves, the more effective it will be in weathering challenges along the way.

For this reason, a Great Team will constantly remind its players and employees that they are involved in something larger than themselves and their individual goals. Some team members will instinctively grasp this essential concept and will appreciate and respect the tradition of what they do or whom they work for. Others will need reminding, and leadership must intentionally create emotional moments that connect them to their greater purpose. But whatever the case, understanding the deeper motivation behind the effort is one of the most important elements of a truly Great Team.

Author and inspirational speaker Simon Sinek explained, "When an organization lays out its cause, how it does so matters. It's not an argument to be made, but a context to be provided. An organization's 'why' literally has to come first — before anything else." Companies that understand the purpose and philosophy behind the "why" are usually astute, high-performing organizations that tap directly into the pulse of those they benefit the most. When utilized correctly, this understanding can

create a powerful sense of duty and purpose for business teams because the employees know exactly whom they are working for and to what end.

Pillar Two: Effective Management

2. Great Teams Have and Develop Great Leaders

There is no question that the key to any organization is leadership. From the CEO to frontline staff, strong leaders are critical to performance. Great Teams that sustain success place a high value on developing leadership. Promoting such a culture leads to consistent behaviors and better habits and ultimately increases that team's chances of winning.

Brad Black, CEO of HUMANeX Ventures, considers professional assessments a "foundation of development" and essential for any leader desiring to be great.

"Context matters," Black said. "If you were told that you were the Olympian of your chosen profession, then you'd have a context [on which] to base your strengths. And all leaders should have a strong sense of who they are before they attempt any developmental venture."

All leaders should know where they — and their teams — stand on skills, strengths, weaknesses and latent talents. Black said that understanding who you are as a leader is a "gift to yourself" and can create the road map for your own growth.

Here are the five most common leadership styles, along with the principles for developing an effective system of leadership that fits your team:

Command and control: Bobby Knight, George Patton, Martha Stewart and Al Dunlap are leaders who have employed Command and Control governance. This approach is autocratic in nature and does not involve their subordinates or followers in the decision-making process. They prefer to tell versus lead, and they are highly concerned with the details of what their teams do. Typically, these individuals micromanage aspects of their teams' strategies. Such individuals ensure that an organization's long-term vision remains intact.

Relational: For Relational leaders, people come first. These managers strive to keep their teams happy and in harmony. They are approachable and employ a "come with me" style of leadership. A Relational leader can be very good at building trust, respect and employee buy-in as a result of letting people have a say in the decisions of the company. In the business world, CEOs Sara Blakely of Spanx and Tony Hsieh of Zappos head wildly successful companies, but both are known for their even-keeled leadership and for engaging others in decision making.

Expert: Great Teams are often led by visionary leaders who are sponges for information and knowledge and who depend on their high levels of knowledge or specialized sets of skills to guide their teams. These are the Expert leaders. In the corporate world, Bill Gates was an absolute Expert as the chairman, CEO and chief software architect of Microsoft Corporation. Likewise, no one questioned the authority of Phil Jackson when he was head coach of the Chicago Bulls and Los Angeles Lakers. His knowledge of the game — from recruiting to the Xs and Os of play calling — was second to none.

Charismatic: Imagine a leader with a personality so engaging and inspiring that you hang on his or her every word. These are people who don't tell you what to do but create a vision of what you can do and light the fire to make you want to rush out and accomplish it all. Charismatic leaders tend to be incredibly skilled at reading an environment, scanning and processing the moods and concerns of both individuals and larger audiences, and honing their actions and words to suit any situation. And while the skills are often innate to the personalities of the leaders, they can also be practiced and honed to improve any organization. President John F. Kennedy possessed this kind of charisma. His charisma and authentic passion could be felt in every single word, which was why he was so good at connecting with the hearts of his audiences. Pete Carroll, head coach for the Seattle Seahawks and former head coach for the University of Southern California Trojans, is known across the sports world for his cool-headed temperament and engaging personality.

Synergistic: Synergistic leaders balance the best characteristics of the other four styles, so they have the best chance of establishing a Great Teams culture. These leaders have visions for their teams but also the ability to empower others to be innovative; they advance the needle of progress through all aspects of their teams, easily adapt to change and develop others in their ranks. John Wooden, the legendary head coach of the men's basketball team at the University of California, Los Angeles, was the epitome of a Synergistic leader. For Coach Wooden, building team culture involved a process, and he used elements from the other leadership styles to establish a culture based on integrity and accountability.

Every leader is capable of learning and adapting in order to build a Great Team. In particular, great leaders must

consider not just their own leadership styles but the styles their teams need in order to be very successful.

3. Great Teams Allow Culture to Shape Recruiting

Great Teams recruit players who fit — who will thrive within the established team culture and add value to it. The talent of the employee or teammate is important, but fit trumps all. These organizations understand that Great Team culture establishes an environment conducive to success, but that success ultimately depends on the right kind of personnel. A Great Team understands that fit is more important than credentials.

How do you distinguish A-caliber players from the rest of the talented field of recruits? The answer: Look for unique qualifiers that correspond to your team culture. CEO Tony Hsieh of Zappos uses "weirdness" as a unique differentiator to determine his A-caliber recruits. For Hsieh, his A-caliber players are people who see themselves as regularly moving outside of their comfort zones and being able to contribute strange, new ideas to the organization.

4. Great Teams Create and Maintain Depth

Once the leaders of a Great Team recruit A-caliber players who fit the culture, they continue the process by building depth in the organization. Depth provides suitable replacements for key players and a sense of calm in moments that can be perceived as tumultuous by members of the team.

The top-performing sports and business organizations all operate on the principles that 1) no team player is irreplaceable and 2) talent must be shaped in order to build a deep bench at all levels of the organization. One of the best ways for leaders to do this is to create healthy internal competition. The right kind of competition within an organization can bring out the best performance and growth of A-caliber recruits and high-potential employees.

Additionally, Great Team cultures develop strategies for improving the quality of depth at various positions within the organization. Implementing intense practices or creating a learning environment can enhance both the skill level of individual players or employees and the depth of the team positions.

The concept that one person's presence or absence can make or break a team is antithetical to how a team should operate. An organization that lacks depth places immense responsibility on the shoulders of a few.

This can be a crucial mistake, as the Indianapolis Colts learned during their 2011-2012 season. When their superstar quarterback, Peyton Manning sustained a neck injury and missed the entire season, the team suffered. They won only two games that season because they did not have a backup plan in the even of Manning's absence. By contrast, when St. Louis Rams quarterback Trent Green was injured in 1999, backup quarterback Kurt Warner took over. This deep-bench substitution led to the Rams' first Super Bowl win and sparked a three-season run that is famously known as the "Greatest Show on Turf."

Just as a good coach has a plan to replace a starting player, a business leader must have a plan to replace a key employee. This is one of the most helpful and necessary parts of creating depth in a company. Even when it's not feasible to hire from outside to fill a vacancy, it makes sense to plan for a replacement from within the organization and prepare that person for the new responsibilities.

5. Great Teams Have a Road Map

Every Great Team lays out its plan for finding success in a clear and concise road map. To help navigate that vision, a successful organization has an active, well-designed training program with end goals in mind. This plan is the fabric of an organization's culture, and all involved in it understand the importance of following the road map to reach their desired success — even if the journey is a long one.

A road map guides a team in its pursuit of greatness and forms a culture in which individuals can identify their long-term roles. No team can achieve long-term success without one. Whether in the world of sports or business, a road map is vital to reaching a team's full potential.

Bill Snyder, head coach of the Kansas State University Wildcats football team, installed a road map for his organization that transformed the struggling football program into a national powerhouse. One of the first things he did to turn the team around was to post his "16 Goals for Success" as a motivator to inspire program change. These goals — gathered succinctly on a single page — were leadership terms with clearly spelled out definitions — and expectations — for his players to follow daily. The Wildcats used Snyder's clear vision as a driver, winning 193 victories in his 24 years of coaching.

A Great Team outlines expectations for all members of an organization and for the organization as a whole. This clear-cut set of objectives — a road map — enables the organization to set benchmarks and goals and ultimately to lay the foundation for its own success.

Take, for example, Nestlé Global and its 4x4x4 Roadmap. In this one-page document, Nestlé describes its vision for the brand across all departments and subsidiary products. This road map outlines Nestlé's four

"competitive advantages," four "growth drivers" and four "operational pillars." Combined, these 12 principles form a clear outline of the company's plan for the future.

The Nestlé Strategic Roadmap differs from a typical business mission statement in the same way the plan of a successful sports organization differs from that of a mediocre one. Nestlé clearly states its goal to be "the leader in Nutrition, Health and Wellness, and the industry reference for financial performance, trusted by stakeholders." Its road map spells out how it will achieve this goal as a company.

6. Great Teams Promote Camaraderie and a Sense of Collective Direction

Team building requires camaraderie — fellowship among members of the team.

Camaraderie doesn't happen by accident; developing a strong sense of trust, accountability and togetherness around team goals requires intentional effort. When an organization comes to a collective understanding of its objective, the individuals develop a sense of responsibility to each other. They know the direction the team is heading and trust that their teammates are willing to work hard to accomplish their respective goals.

Sylvia Hatchell, head coach of the women's basketball team at the University of North Carolina at Chapel Hill, is the third-winningest head coach in NCAA women's basketball history. She has built a strong team culture by creating a family system and promoting a mentality of respect and winning — especially in regards to developing camaraderie. Hatchell said. "Out there by yourself, you can be broken. With your team, you can't. That's how you win championships."

Building mental and emotional bridges among team members can increase employee engagement, productivity and innovation. Camaraderie is often overlooked, but it can be the greatest asset in unifying a team.

Pillar Three: Activating Efficiency

7. Great Teams Manage Dysfunction, Friction and Strong Personalities

While 100 percent camaraderie is the dream scenario for team culture, some degree of dysfunction is likely in even the best situations. When a team has strong personalities and talented people, there will inevitably be friction. The roles of persecutor, victim and rescuer are played out in disagreements in sports and business each and every day. Such a clash of personalities can heavily disrupt the productivity of a team — or can even destroy it. But if the situation is handled wisely, the fireworks can be defused and a productive working relationship can move forward on a positive note.

The common perception is that conflict should be avoided at all costs. But not all conflict is negative or deconstructive. It can be a source of tremendous energy and innovation when managed well.

According to the Thomas-Kilmann Conflict Mode Instrument, leaders commonly manage — or mismanage — conflict in one of five ways:

Some rely on their rank and title, debating fiercely if necessary, to force their way through workplace friction. That's **competing.** Others try to "play nice," giving in to even unreasonable demands to keep the peace. Their strategy is **accommodating.** Some fail at addressing conflict because they'd rather pretend it isn't happening and hope it will settle itself. They are masters at **avoiding** the issues. Still others prefer **compromising** and try for a middle ground.

Each of these four strategies for dealing with conflict can have some success. But Great Teams set a standard above the rest by choosing the fifth option — **collaborating.** This means they do their best to listen actively, consider all points of view, and stress the common purpose and shared values of the organization.

Great Teams don't falter in the face of friction but grow stronger when addressing it directly.

8. Great Teams Build a Mentoring Culture

The most successful and high-performing teams strategically embed professional guidance within their cultures to inspire teaching and learning at every opportunity. Great Teams understand how powerful the synergy can be between veterans and recruits, especially when both mentors and mentees have clearly defined responsibilities to make the relationship successful.

Like the most successful teams in sports, many of the high-performing organizations in business make mentoring a priority. Technology manufacturer Intel, for example, has created a process that connects individuals on the basis of high-demand skills. The mentees — whom Intel calls "partners" — choose topics that interest them, and an Intel questionnaire and extensive employee database match the recruits with mentors who are subject-matter experts in those areas. Intel has three rules for its mentoring relationships: 1) partners govern the relationship, create meeting dates and ultimately decide what they would like to work on; 2) mentors and partners draw up a contract

that contains the details of the mentoring relationship; and 3) terms and limitations are left to be discussed and decided upon by the mentor and partner, *not* Intel. The fact that employees can access Intel's innovative mentoring system through email and company intranet expands the mentoring reach across the company's international employee pool. The result is a diverse, open stream of information sharing that ultimately fuels growth by shaping the company culture. As Intel has shown, when a corporate culture includes mentorship, the end result is a dynamic learning environment with leaders constantly shaping leaders.

9. Great Teams Adjust Quickly to Leadership Transitions

In sports and business, transition is inevitable. Any organization will be uniquely challenged when responding to employee retirement, resignation or termination — but Great Teams adjust more quickly than their opponents and do not allow leadership change to derail their missions. Instead of losing momentum and letting change become an excuse for failure, the leaders of these organizations allow moments of change to accelerate their teams' success.

In 2005, Symantec acquired Veritas Software in order to gain a competitive edge; however, the move more than doubled Symantec's staff — to 14,000 — and created engagement problems with far-flung employees. Communication suffered, cooperation dwindled and disengagement grew. Silicon Valley watchdogs, keenly observing the merger, even recruited and hired away Symantec employees.

Former vice president Jennifer Reimert and her team sought to correct these failures with a more effective way to reward outstanding members of their huge employee base for good service. Later that year, the company introduced Applause, an employee recognition program that rewarded high performers. Applause not only recognized the top 15 percent of the company's employees, but also served as a driver for refreshing Symantec's corporate culture and reinforcing the company's values of innovation, trust and customer-driven action.

Employees were empowered to congratulate and celebrate the accomplishments of colleagues who did outstanding work or provided innovative ideas. Job satisfaction and cooperation soared as people rewarded one another enthusiastically. Production rose as employees strove for recognition themselves. And by centralizing the process, Symantec reached more employees than ever and strengthened its corporate culture.

10. Great Teams Adapt and Embrace Change

Being resistant — or even oblivious — to change is a common mistake. Great Teams keep their eyes open to what is going on and tweak their methods to ensure an ability to thrive in changing circumstances. At the same time, their leaders remain mentally tough and understand the importance of focusing on the task at hand in the midst of changing circumstances.

Bill McDermott of SAP said, "Always be who you said you would be to your customer and do things for them that others perhaps wouldn't do." The ability to adapt style of play to current conditions is crucial in business, particularly in a digital world where consumer demands change quickly.

The first step in embracing change is recognizing the internal and environmental factors that made you successful in the first place. Understanding how these components have changed over time will help identify what the company needs to do to stay ahead of the competition.

Achieving success is an evolving process that becomes more challenging with each passing year. But if an organization can acknowledge the reality that past success does not necessarily predict future success, then change becomes an unlikely ally rather than an adversary.

Any team desiring to be great must develop the mental edge required to master change. Ultimately, that's what makes the most innovative and undeniably successful teams great.

11. Great Teams Run Successful Huddles

A common frustration among organizations is company meetings, which can trigger negative emotions throughout the levels of any team. Lateness, inattention, overdrawn objectives and unclear directives are enough to give even the most seasoned professionals a dislike for meetings. But Great Teams use these gatherings to inspire confidence, encourage productivity and create a competitive advantage. They understand the value of getting together in person or via technology to share opinions, coordinate plans and solidify team culture.

A Great Team will be intentional about how meetings are conducted. Here are 10 ways Great Teams can ensure equally great meetings:

- Begin and end meetings on time. Consider instituting consequences for team members who are chronically late.
- Schedule meetings wisely. Great meetings and huddles are planned when all participants can attend.

- Begin with a shared or pre-read agenda — and stick to it.
- Engage employees with strong, emotion-driving content.
- Make the meeting's objective clear from the beginning.
- Don't waste time with off-topic discussion.
- Allot enough time for necessary discussion points.
- Calculate the cost of all in the meeting, and make the appointment count.
- Tailor the meetings for all participants.
- End the meeting by reviewing objectives met or decisions made.

Pillar Four: Mutual Direction

12. Great Teams Improve Through Scouting

Great Teams scout their competition in order to gain competitive advantage. Having a clear understanding of how competitors do things can set up a company to do the same things better. This is key for immediate and long-term success.

In sports an appropriate strategy or game plan cannot be formulated without a detailed scouting report. Scouts provide both firsthand and video evaluation of the opponents' tendencies or styles of play. Additionally, the staff completes a computer analysis of the opposing team — both current and long-term — for the coaches to study and break down.

When leaders of a professional team perform a scan, they examine the trends dominating their customer demographics, education, government policy and especially their competition. Great Teams analyze every perspective and option and position themselves to take full advantage of any knowledge gained about an opponent.

In the corporate world, the SWOT analysis is a user-friendly, widely accepted tool that helps an organization evaluate itself internally. Leaders who utilize the SWOT understand that they can directly manage their internal strengths and weaknesses and capitalize on favorable conditions in the marketplace, but must anticipate — and react appropriately to — outside threats.

Benchmarking, like the SWOT analysis, is one of a leader's strongest resources in identifying how the company's products, practices and services measure up against competitors. The goal of benchmarking is to evaluate whether internal processes are above or below external industry standards. This works by examining company-to-company comparisons of day-to-day functions and overall performance.

Scouting — both internal and external — is a consistent learning tool that all teams should adopt and reinforce. Good scouting keeps a team continually aware of its potential, the capabilities of its opponents and the need to develop aggressive championship strategies.

13. Great Teams See Value Others Miss

Great teams never answer the "why" question with, "Because we've always done it this way." Instead, they regularly evaluate each situation and seek unique opportunities for improvement. In today's fast-paced world, many of those opportunities can be found in the world of analytics — defined as "the method of logical analysis."

Big data is a hot topic in the worlds of sports and business because the collection of metrics, analytics and information can reveal a potential advantage or disadvantage. The Great Teams collect that data and analyze it to recognize trends others might miss.

Sometimes a team needs a fresh look at what everyone has decided the "rules" for success look like. At the Pulaski Academy, the Bruins varsity football team is led by Coach Kevin Kelley. In 2003, Coach Kelly watched a taped lecture by a Harvard professor on the value of the fourth-down punt. The professor analyzed 2,000 football games and came to the conclusion that teams should *never* punt.

Armed with new perspective and valuable stats, Kelley broke down the numbers behind his own team's fourth-down decisions. The data he found backed up the concept that going for it on fourth down was the correct call, even though most football coaches adamantly insisted on punting the ball to the other team. And for that reason, the Pulaski Academy Bruins made an unorthodox decision they would never punt the football again. Coach Kelley's unconventional football philosophy has been effective for his team, which has five state championships under his leadership.

With metrics now considered a best practice in today's marketplace, several key lessons have emerged from the leading voices in statistical analysis: Big data drives accurate decision making. Statisticians understand the importance of informed business decisions, and data analysis can help encourage an organization toward — or dissuade it from — taking a course of action.

14. Great Teams Win in Critical Situations

Every player or employee wants to be a part of a team that can achieve victory in the most critical of situations. A Great Team wins in those moments because it has figured out effective ways to finish strong. And with the game

on the line, a team accustomed to pressure can execute its strategy without hesitation and not fall apart in the process. The culture of a fourth-quarter team requires countless hours of team preparation so that its members learn to trust in themselves and each other when the stakes are high. This type of approach can help a team get through a season, series or game even when the scoreboard tilts the wrong way.

A high-performing team does not remove its foot from the accelerator even in critical moments but instead focuses on ongoing strategy and goal completion. In critical times, a team should always do what it does best. Intense moments should never be the stage for trying something rarely practiced.

15. Great Teams Speak a Different Language

Through success or failure, great leaders always know what to say to bring out the best in their organizations. Many teams undervalue the art of properly framing communication, especially in times of struggle. Successful leaders do not berate or chide team members but seek ways to positively articulate objectives and expectations. They have better coaching conversations, ask better questions and drive results. Positive communication is not only a habit for high-performance teams but also a tool used to reinforce and enhance the values of organizations.

Great Teams create cultures with solid foundations in positive reinforcement. Walt Disney World and Disneyland acknowledges superstar employees — which the company refers to as "Cast Members" — on the spot with its Guest Service Fanatic cards. Whenever Disney management (or any fellow employee) notices a Cast Member truly living and expressing the company's service values of safety, courtesy, show and efficiency, the actions of the employee are recognized on the spot by handing out the cards. Card recipients are eligible for drawings, and copies of the cards are kept in the recipients' personnel files.

The cards have been beneficial to Disney because 1) leaders are expected to be on alert for employees who are living the values and 2) Cast Members are recognized for doing their jobs well and reinforcing culture. Additionally, the cards serve as fantastic leadership indicators when the company is seeking dedicated employees for promotions. It's always easier for team leaders to criticize performance, but Great Teams create cultures that have solid foundations in positive reinforcement.

16. Great Teams Avoid the Pitfalls of Success

As difficult as winning is, winning repeatedly is more challenging by a factor of ten. Even after defeating all competitors, some organizations are truly unprepared for victory. A team that does not know how to navigate success will ultimately be thrown off track in its attempts to succeed further. The Great Teams maintain success by not falling victim to the pitfalls of human nature; they overcome common temptations, resist complacency and nurture a culture that wins consistently. Winners capitalize on new opportunities, adjust game plans and do not settle for what worked last season or year.

The Great Teams are led by culturally intelligent leaders. These individuals understand the impact that a strong workplace culture can have on goal completion and focus-driven work. And a culturally perceptive team can be especially valuable during challenging times.

The most successful brands of our time — such as Nike, McDonald's, Google and Apple — tend to transcend the marketplace, ultimately becoming something much greater than a brand: a *meaning*. A brand becomes symbolic by keeping cultural promises in an ever-changing society; its relevance is embedded in its desire to remain significant. Likewise, risk-taking organizations outperform companies that play it safe during periods of change. These teams seek and create new possibilities with an innovative spirit.

It's never too early for a team to discuss the temptations of victory and new goals worth fighting for. Successful teams should ask themselves, "How do we respond after a record year? In what ways can we defy the natural human tendency to coast?"

For a Great Team, repeat success is often a byproduct of a high-performing culture. Maintaining championship or industry-leading momentum requires experienced leadership, cultural drivers and clear communication of the end goal and how to get there. People want to feel excited about the future and the potential of progress.

Progressive leaders understand these truths and connect their teams to a culture that motivates, challenges and empowers them to start and to keep winning. Always strive to remember the pitfalls of success — and don't let them derail your Great Team!

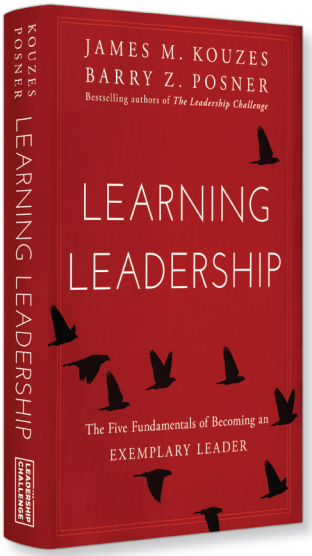
Learning Leadership

The Five Fundamentals of Becoming an Exemplary Leader



by James M. Kouzes and Barry Z. Posner

THE SUMMARY IN BRIEF

Leadership is a set of abilities, and like any other skill set it can be learned and improved. Becoming an exemplary leader isn't easy. It takes self-belief, aspiration, grit, support and deliberate practice. *Learning Leadership* delivers the concrete framework and practical steps for building exemplary leaders for today's and tomorrow's challenges.

Whether you're an experienced leader or someone new to the role, this comprehensive guide offers evidenced-based strategies for taking charge of your own leadership development and unleashing the leader within. Based on more than 30 years of research, with data from more than 70 countries, this insightful treatment on learning explores the fundamentals of becoming an exemplary leader and presents a solid foundation on which to strengthen and expand leadership skills.

For those in roles of mentoring and coaching people, the practical and proven framework in this resource enables you to develop leadership potential in the emerging leaders with whom you work.

An exemplary leader must master many skills, but one of the most important is the ability to learn. *Learning Leadership* challenges you to do the meaningful and disciplined work necessary to becoming the best you can be.

IN THIS SUMMARY, YOU WILL LEARN:

- Authoritative explanations on what's inhibiting leadership development.
- To take initiative for your own leadership development.
- The most critical leadership skill is the ability to learn.
- The first thing you need to learn in leadership is who you are.

Learning Leadership Fundamentals

A universal set of leadership practices is associated with exemplary leadership, and these practices are within the capacity of everyone to follow. The challenge is to increase the frequency with which you engage in these leadership practices and become more comfortable and confident in their use.

Leaders Are Born and So Are You

Every one of us has the necessary material to become a leader. The question you should be asking yourself is not "Will I make a difference?" In becoming a better leader, the most demanding and significant question you should be asking is "How will I make the difference I want?"

Five myths inhibit learning to lead and contribute most to the misunderstandings about what leadership is and isn't.

The Talent Myth. The belief that leadership is available only to a talented few is a far more powerful deterrent to development than anything else. It prevents too many people from even trying, let alone excelling. To become a better leader than you are right now, the first fundamental thing you have to do is *believe you can* be a better leader and that you can learn to improve your leadership skills and abilities.

The Position Myth. This myth assumes that leadership is a title and that if you don't have a title of authority, you aren't a leader. Leadership is not a rank, a title or a place. Leadership is about going places and guiding others. Leading is about the actions you take. It's about the values that guide your decisions and actions. It's about the visions you have for yourself and others. To become an exemplary leader, the second fundamental is that you have to *aspire to excel*. You have to aim for something greater, dream of something better and strive for something nobler than what exists right now.

The Strengths Myth. The strengths approach has been misapplied to mean that you should take on *only* tasks in which you are strong, not waste your time attending to your weaknesses, and in areas where you aren't strong and don't have natural talent, you or the organization should assign those tasks to other people. The emphasis on strengths has fundamentally discouraged people from challenging themselves to become better leaders. The third fundamental of becoming an exemplary leader is *challenge yourself.* If people built only on strengths, they would likely not challenge themselves or their organizations. You simply can't do your best without searching for new experiences, doing things you've never done, making mistakes and learning from them. Challenge is an important stimulus for leadership and for learning.

The Self-Reliance Myth. Leaders cannot possibly design breakthrough innovations, produce high-quality products, provide awesome service, attract raving fans and build great places to work without the trust, teamwork, strength and capabilities of everyone in the organization. Although there is certainly great benefit to being confident in your abilities to handle challenging situations, the best leaders know they can't do it alone. They know they need the support, engagement and commitment of others. Just as leaders can't make extraordinary things happen all by themselves, they can't become exemplary leaders by

themselves either. That's why the fourth fundamental is to *engage support* in your learning and growth.

The It-Comes-Naturally Myth. A corollary to the myths of talent and strengths is that leadership comes naturally to those who are the best at leading. People admire those who make it seem so easy and attribute that ease to natural ability. The truth is that the best leaders become the best because they work hard at it and put in the hours of practice. Therefore, the fifth fundamental of becoming an exemplary leader is to *practice deliberately.* You have to put considerable effort into learning to lead to make leadership look effortless. No surprise that the more you practice, the easier it gets.

You Are Already Leading — Just Not Frequently Enough

From an analysis of thousands of personal-best leadership case studies and interviews, it was discovered that ordinary people who guide others along pioneering journeys follow rather similar paths. Though each experience was unique in expression, every case followed remarkably parallel patterns of action.

These common practices create a leadership framework called The Five Practices of Exemplary Leadership. Leadership is not about personality; it's about behavior. Hundreds of scholars have used this framework in their own studies of leadership, investigating the central role leadership plays in personal well-being and organizational productivity and effectiveness.

Here are The Five Practices along with the two key essential leadership commitments connected with each one:

Model the Way

- Clarify values by finding your voice and affirming shared values.
- Set the example by aligning actions with shared values.

Inspire a Shared Vision

- Envision the future by imagining exciting and ennobling possibilities.
- Enlist others in a common vision by appealing to shared aspirations.

Challenge the Process

- Search for opportunities by seizing the initiative and by looking outward for innovative ways to improve.
- Experiment and take risks by constantly generating small wins and learning from experience.

Enable Others to Act

- Foster collaboration by building trust and facilitating relationships.
- Strengthen others by increasing self-determination and developing competence.

Encourage the Heart

- Recognize contributions by showing appreciation for individual excellence.
- Celebrate the values and victories by creating a spirit of community.

Hundreds of studies by independent researchers have found that the extent to which people engage in these five leadership practices is consistently associated with important aspects of managerial and organizational effectiveness, such as work-group performance, team cohesiveness, commitment, satisfaction, motivation and productivity.

How frequently people report that their leaders engage in The Five Practices of Exemplary Leadership relates directly to their level of engagement. Demographic factors about direct reports do not illuminate why they are or are not engaged in the workplace, but knowing how they see their leaders behaving provides a substantial explanation for their levels of engagement.

Fundamental One: Believe You Can

Believing that you can lead is essential to developing your leadership skills and abilities. No one can put leadership into you. You have to bring it out of yourself. Authentic leadership flows from the inside out. You have to liberate that capacity you already have, and that begins by taking an inner journey to discover who you are. You already have it in you to lead.

You Have to Believe in Yourself

Learning to lead all starts with what you think of yourself and the assumptions you feed. Learning to lead is about discovering what *you* value, what inspires *you*, what challenges *you*, what gives *you* energy and what encourages *you*. When you discover these things about yourself, you'll also know more about what it takes to lead those qualities out of others.

Sure, every leader has to learn the fundamentals and the discipline, and there are periods during which you're trying out many things you know nothing about and you have no idea what will work and what won't. There are times when you copy others and absorb a lot of information from the outside. These are necessary stages in your development as a leader. The point is that you can't begin to do any of these things until you *truly decide that inside of you is a person who can make a difference and provide leadership.*

Learning Is the Master Skill

Although there are many different ways to learn — for example, by taking action (e.g., preferring to learn by trial and error); by thinking (e.g. reading articles or books or going online to gain knowledge and background); by feeling (e.g., confronting themselves on what areas they are worrying about); and by accessing others (e.g., bouncing hopes and fears off someone they trust) — people can be differentiated by the range and depth of learning tactics they use when facing a new or unfamiliar experience.

Learning to lead is not dependent on any particular learning style. It doesn't matter how you learn. What matters is that you do more of whatever learning tactic works best for you. Clearly linked to becoming a better leader is becoming a better learner. The best leaders are the best learners.

Leadership Emerges From Within

You can't expect to accomplish anything grand until you are aware of who you are and comfortable with being able to share yourself with others. If you're going to lead, then you have to wrestle with questions about what shaped you into the person you are now and what gives meaning to your leadership, your life and your work. Through the process of self-examination, you find the awareness needed to lead yourself and others.

In terms of how leaders learn and grow, there are three developmental stages.

Looking Out. When first learning to lead, you want to learn everything you can from others and you often try to copy their style. You do this to learn the fundamentals and to acquire the tools and techniques others have learned from their experience.

Looking In. Somewhere along the way, you'll notice that your talks sound mechanical and rote, that your meetings are boring, and that your interactions feel terribly routine and empty. You'll awaken to the frightening thought that the words aren't yours, that the vocabulary is someone else's, and that the technique is right out of the textbook but not straight from the heart. For aspiring leaders, this awakening initiates a period of intense exploration, a period of testing and a period of invention. You go beyond technique, training, imitating the masters and taking the advice of others. You go through a period of exhausting experimentation, second-guessing, and anxious and even painful moments, to emerge from all those abstract strokes on the canvas to an expression of self that is truly your own.

Finding Your True Voice. The turning point in your development as a leader comes when you're able to merge the lessons from your outer and inner journeys. You awaken to the fact that you don't have to copy someone else, and you don't have to wear someone else's clothes. Because unless it's your words and your style, then it's not really you; it's just an act: you pretending to be you. You cannot lead out of someone else's experience. You can only lead out of your own.

Fundamental Two: Aspire to Excel

To become the very best leader you can be, you need to be clear about the core values and beliefs that guide your decisions and actions. You have to determine what you care most about and why it's important. Your motivation needs to be intrinsic and not instrumental. Top-performing leaders want to lead because they care deeply about the mission and people they are serving. Your success as a leader is inextricably linked to how successful you can make others.

You Have to Know What's Important to You

Your fundamental values and beliefs represent the core of who you are. They influence every aspect of your life: your moral judgments, the people you trust, the appeals you respond to, and the way you invest your time and your money. Values help you determine what to do and not to do. The leaders people admire the most, whether public figures or personal acquaintances, are those who have strong beliefs about matters of principle, an unwavering commitment to a clear set of values and passion about their causes.

You have to know in your gut that when you are making a decision, you are being true to who you are and what you stand for.

Who You Are Isn't Who You Will Be

Becoming an exemplary leader fundamentally changes who you are. It changes your relationship with yourself. You're no longer just an individual contributor. You're now someone who takes people on journeys to places they've never been.

It changes how you see the future. You are expected to be able to imagine exciting future possibilities and communicate them to others. It changes how you respond to challenges. You are expected to be comfortable with uncertainty, champion experimentation and learn from experiences.

People expect their leaders to be forward-looking. To look toward the future, you start by being mindful of the present. Stop, look and listen to what is happening around you. That way you'll be better attuned to your own and

others' aspirations. The ability to draw people forward requires you to be able to imagine what the future will look, sound and feel like. One place to start is envisioning the kind of leader you'd like to be in five, 10 or 20 years. This ideal image of self greatness generates the necessary emotional energy to pull you forward.

It's Not Just About You

If you are marching forward toward a future destination and you turn around and notice that no one is there, then you're just out for a stroll. Leadership is fundamentally a relationship between those who aspire to lead and those who would choose to follow, and if no one is following you, then there's no relationship there. There's nothing that connects what you see to what they want.

Although you need to be clear about your vision and values, you must also be attentive to those around you. If you can't find alignment between what you care about and what others care about, then you won't find a common purpose or achieve much success.

This means that to become the best leader you can be, you have to know deep down what *others* want and need. You have to understand their hopes, their dreams, their needs and their interests. You have to know your constituents, and you have to relate to them in ways they will find engaging.

Finding common ground is what enables you to have something upon which to build. It creates the platform for constructing a better future.

Connecting deeply with others enables leaders to appreciate what drives the people around them and what unites them. Leadership becomes a dialogue and not a monologue. It becomes a conversation and not a recitation.

People want to follow a meaningful purpose, not simply do some work in exchange for cash. If you want to lead others, you have to put principles and purpose ahead of everything else. The larger mission is what calls everyone, leader and constituent alike, forward. It's what gives significance to the hard work required to do anything extraordinary.

Fundamental Three: Challenge Yourself

To develop as a leader and do your best, you have to step outside your comfort zone. It takes courage to learn. When you challenge yourself, it's likely that you'll be doing things that scare you. There will be fear and uncertainty, so you need to see yourself making a choice about how to move forward, finding meaning and purpose in setting off in a new direction.

Challenge Is Your Leadership Training Ground

Challenging yourself doesn't mean you need to go out and start something entirely new, launch a new company, begin a social movement or change history to be considered a leader. But you do have to be involved in exploring, investigating and experimenting with how things could be better than they are now.

Research shows that

- Opportunities to challenge the status quo and introduce change open the door to doing one's best. Challenge is the motivating environment for excellence.
- Challenging opportunities often bring forth skills and abilities that people don't know they have. Given opportunity and support, time and again ordinary people can get extraordinary things done in organizations.
- People who become leaders don't always seek the challenges they face. Challenges also seek leaders.

It's clear that if you want to develop your leadership capabilities, you need to take the initiative and volunteer for assignments that stretch you beyond your current comfort zone. You need to make them part of your personal leadership development curriculum.

Remember that a learning curve is not a straight line. When you engage in learning, instead of getting better, your performance at the beginning typically declines. That's why it's called a learning *curve.* When learning something new, performance always goes down before it goes up — and if it doesn't go down, then you are only doing something you already know how to do.

You're not growing until you feel you're pushing the edges.

Get Curious and Go Kick the Ball Around

Questions send people on journeys in their minds. Knowing what to ask and how to ask it are critical skills for leaders and learners. Preparing to ask questions forces you to think about what you'd like to learn.

When you are curious about things that are outside of your regular affairs, and when you start asking questions, what you learn often becomes the catalyst for change and opens up new possibilities. This is all part of having a growth mindset. Because they believe that they are capable of always learning and developing and that their abilities aren't fixed, individuals with a growth mindset

seek opportunities to learn. Gathering information about how they are doing and what they could do better is part of that process.

With a learning mindset, you can act like a scientist. Make your life a laboratory, and use it to conduct as many experiments as possible. Try something new, fail, learn and repeat. This should be one of your leadership mantras. Realize, as well, that you will learn that every so often you should try something entirely different, pursue another approach or change pathways.

Get Gritty and Stay Hardy

Knowing what you want and wanting it intensely are two essential elements in the formula for success in learning, in leadership and in life. There's yet another vital component, and that's persistence. Together these ingredients make up what University of Pennsylvania psychology professor Angela Duckworth calls *grit*.

"Grit," Angela says, "is passion and perseverance for very long-term goals ... Grit is living life like it's a marathon, not a sprint."

Hardiness is a pattern of attitudes and skills that enables people to respond adaptively under high-stress conditions. There are three fundamental beliefs to being hardy: commitment, control and challenge. To turn adversity into advantage, first you need to commit yourself to what's happening. You have to get involved, engaged and curious. You also have to take control of your life. You need to make an effort to influence what is going on. Finally, if you are going to be psychologically hardy, you need to view challenge as an opportunity to learn from both negative and positive experiences.

Together, grit and hardiness make you resilient. They enable you to recover quickly from difficult circumstances. From a learning perspective, instead of just returning to the state you were in before the setback occurred, you move ahead and are in better shape than you were previously.

Courage Gives You the Strength to Grow

Courage is not about being fearless so much as it is about being able to control your fear. When you remind yourself why you are doing something challenging — when you can find the meaning in the hard work and energy to make a change — your brain will see the situation more as a motivator than as a source of stress.

As theologian Mary Daly puts it, "Courage is a habit, a virtue. You get it by courageous acts. It's like learning to swim by swimming. You learn courage by couraging." The reward for doing so is, at a minimum, learning — learning about yourself and learning about what might be possible.

Courage gives you the energy to move forward. Courage makes it possible for you to raise your hand and offer an alternative, speak out and express an opinion, stand up and be counted, and step forward and move in a new direction. Courage makes it possible for you to learn to be your best.

Fundamental Four: Engage Support

In learning to become an exemplary leader, you need to get connected. You need those connections to be strong and close. You need them to be personal, not just transactional. Often you're going to have to take the initiative to create and sustain these relationships.

You will also have to rely on the people around you to let you know the impact your actions and behaviors have on them. Getting open and honest feedback happens only when there is a foundation of mutual trust. You have to go first in creating a climate in which people trust one another enough to provide valid and useful information that will help you grow.

I Couldn't Have Done It Without You

The best performers in all fields know that they can't make extraordinary things happen alone. You can't lead alone, and you can't learn alone. You need to involve others to become the best leader you can be.

Learning to lead requires getting help from others. Social support is a necessary condition for growth and development, particularly when that learning is challenging. "The single most important thing you can do to help ensure your future success," according to a Gallup study of more than 27 million employees worldwide, is to find someone who has an interest in your development.

Research across a broad range of disciplines consistently demonstrates that social support enhances learning, productivity, psychological well-being and even physical health. In fact, George Vaillant, Harvard professor of psychiatry, who directed the world's longest continuous study of physical and mental health, said, "The only thing that really matters in life are your relationships to other people."

Of course, you have to find a balance between trying to learn something on your own and sucking it up, swallowing your pride, and admitting that you are stuck and need help.

When seeking help from others, the point is not to get someone else to do your work. The point is to get help to learn. Be prepared to describe what you've already tried and what you've learned. Come armed with a few action possibilities of your own so that it doesn't appear that you're asking for a handout. But when you're stuck, don't delay asking for help for too long. Often, the longer you wait, the worse problems can become and the more limited the options are.

Don't assume you know what others know, and don't discount their willingness to help. Until you ask, you can't be sure of either.

Finally, don't worry about other people thinking less of you if you seek advice. In fact, just the opposite is true. Reaching out to others for advice on tough challenges on which you need help not only builds your competence but also increases the sense in others that they can have confidence in your leadership.

Get Connected

To become an exemplary leader, you have to connect to others. You have to invite people into your life. You have to be willing to get close to people and open up with them. You need to plug into the resources others have, find opportunities to observe leaders in action, and learn the social skills that will facilitate social interaction. You don't have to be a fiery extrovert to do all this; you can be a quiet introvert and still make lots of connections.

Research shows very clearly that when social connections are numerous and strong, there's more trust, reciprocity, information flow, collective action, happiness and wealth.

Recent longitudinal research has found that when people are in their twenties, the number of social interactions predicts greater well-being. As people move into their thirties and beyond, however, the quality of relationships becomes more important. Your ability to cultivate intimacy with others increasingly become a significant factor in your personal and professional development.

Without Feedback You Cannot Grow

Valid and useful feedback is essential to learning. Learning cannot happen without knowing how you are doing and without identifying what you need to change to improve. Research shows that the best leaders are active learners, never believing that they know it all.

When it comes to leadership, feedback has to come from the people you are attempting to influence. They're the only ones who can reliably tell you the impact your actions have on them. Asking for feedback is a habit you need to develop.

How do you get more comfortable giving and receiving feedback? The first thing you have to do is view feedback through the frame of a growth mindset instead of a fixed mindset. With a growth mindset, you assume that you can learn from criticism, that your capabilities are always evolving, that you can overcome obstacles and deficiencies if you put in the effort, and that even the most painful information can motivate you to improve. This may initially be difficult to do, but if you practice reframing feedback as an opportunity to get better at what you do, then it'll get easier over time.

Getting open and honest feedback can happen only when there is a foundation of mutual trust. As a leader, you have to go first in creating a climate in which people trust one another enough to provide valid and useful information that will help you grow.

Fundamental Five: Practice Deliberately

You can't get any better at leading without practice. Moreover, the time spent practicing won't amount to much unless you adhere to some discipline.

Leadership Takes Practice and Practice Takes Time

Raw talent is not sufficient to achieve greatness. You need a particular kind of practice — *deliberate practice* — to develop expertise. Deep learning just doesn't happen without intentionality and intensity. The time required needs to fit with the skill you're practicing. Moreover, during repetition you need to pay as much attention to the methodology as to the goal.

CrossFit training in the gym, working out with weights, with specified repetitions and varied fitness stations, is a whole lot different from running around your neighborhood while talking with a friend on your mobile. Sloppy execution is not acceptable to top performers.

What keeps the top performers going during the often-grueling practice sessions is not the enjoyment that they are having but the knowledge that they are improving and getting closer to their dream of superior performance.

Mastery is about how you use your time to maximize your potential and learn your craft. If you want to be the best leader you can be, you will have to attend to your weaknesses. You can't delegate or assign to others those

leadership behaviors you aren't comfortable doing. If you do, you'll get to be only as good as your weakest skill.

Although you may never get as good as someone else at everything you do, by continuously practicing, practicing and practicing, you can improve. You will also gain an appreciation for why persistence is another one of those attributes that differentiate the best from the wannabees.

The mantra for the 21st century learner is this: "No matter how good I am, I can always get better."

Context Matters

Context matters. When applied to the workplace, context is often talked about as the organizational culture.

According to Edgar Schein, emeritus professor at MIT's Sloan School of Management, organizational culture can be best understood as having three levels.

First are artifacts, and these are the things you can see: structures, processes and observed behavior. You see them in dress, interior design, furniture, formal management systems, organization charts, employee perks, company publications and the like.

The second level is espoused beliefs and values. These are the ideals, aspirations, visions and ideologies the organization and its leaders champion. You hear and see these beliefs in speeches, employee orientations, training programs and posters on the wall.

The third level of organizational culture is "underlying, taken-for-granted beliefs and values" that are not expressed overtly in speech or text. They're implicit rather than explicit, but they are often the most influential factors in how people think, feel and act.

In growth-mindset organizations there is a "culture of development." If you want to become the best leader you can be, you will benefit immensely from working in an organization with a culture of leadership — a culture in which the artifacts, espoused beliefs and values, and underlying assumptions are supportive of leadership development.

What are the attributes of a culture in which leaders are most likely to thrive and be productive? Four major clusters of cultural attributes are trust, opportunities for learning, support for risk and failure, and models of exemplary leadership.

Commit to Becoming the Best

Leadership is not just in making the decisions to act; it's about acting on the decisions you make. The best way to take those actions is to do little things every day that make meaningful progress on your work as a leader. Small acts accumulate and provide momentum. You have to freely choose the actions you take, go public with your choices and then make sure it's hard to reverse course.

It's Not How You Start; It's How You Finish

Becoming an exemplary leader requires your behavioral commitment. It's not something you do now and then when you feel like it. The people around you expect you to be the best leader you can be every day. They expect, and so should you, that when you commit to lead you are also committing yourself to doing it well.

Leadership is hard work. It's challenging work. There will be conflicts and struggles. There will be resistance to the changes you want to make. There will be times when you want to give up. As rewarding as it is, leadership can be exhausting. That's just the reality of leading. That's why you have to keep your hope alive.

People expect their leaders to be inspiring, upbeat and energetic. No one wants to follow a negative, downbeat and lethargic person. You have to sustain hope. Hope has three essential ingredients. First you have to have a goal — something you want to attain or obtain. Then you have to have the willpower, the "reservoir of determination," and third, the waypower, the "mental plans or road maps that guide hopeful thought" to get you to your goals whatever the obstacles that you might face.

People with high hope are not Pollyannas. They are not blind to the realities of the present. If something isn't working or if the current methods aren't effective, they don't ignore it, cross their fingers or just redouble their efforts. They assess the situation and find new ways to reach the goals. And if the goals begin to recede rather than appear closer, people with hope reset their goals.

You can learn to be full of hope, just as you can learn to lead.

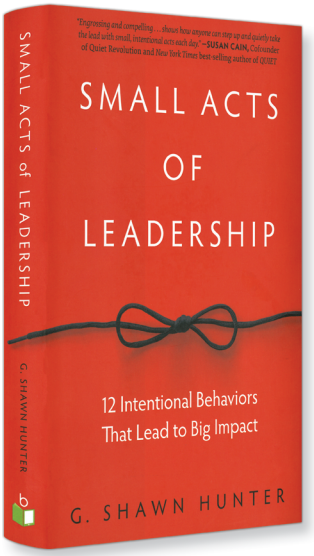
Small Acts of Leadership

12 Intentional Behaviors That Lead to Big Impact



by G. Shawn Hunter

THE SUMMARY IN BRIEF

In business today, there is no offline and there is no downtime. Professionals are both exhausted and depleted. Being constantly tethered to our work through technology makes us overwhelmed and shortsighted, and deprives us of time for meaningful reflection or thoughtful connection to our professional communities, and often even to our own families.

For us to thrive — not simply survive — in this accelerating economy, we need to adopt small, intentional behaviors and practice them each day. From simply taking care of our rest and exercise to building our self-confidence and embracing challenges, author Shawn Hunter's latest book, *Small Acts of Leadership,* will guide you through a series of incremental steps you can take to build a stronger version of yourself and make a broader impact in the world.

Combining research and meaningful interviews with business leaders around the world, Hunter presents the reader with 12 critical competencies that are consistently present in the daily behaviors of today's most successful leaders.

IN THIS SUMMARY, YOU WILL LEARN:

- Strategies to build confidence and believe in yourself.
- The key link between meaningful work and gratitude.
- The importance of autonomy and authenticity in organizations.
- The essential qualities of inspiring leaders.
- How "positive deviance" can distinguish the best organizations.

Introduction

Small Acts of Leadership is about doing little things that can lead to big impact. Small, consistent efforts, practiced over time, can yield big results for you and the people around you.

The reason New Year's resolutions fail is not because the goal is too great or the intention is misguided. It's because the discrepancy between where we are today and the envisioned future often appears so great that we cannot bridge the gap. If we resolve to spend five days a week at the gym and we currently spend zero, then the gap is so great that we cannot immediately and easily cross it.

Small Acts of Leadership is about small steps and tiny tweaks in how we treat ourselves, how we carry ourselves and how we think about other people and the world, that can change the way we think and behave.

1. Believe in Yourself

The respect and regard we have for ourselves is our self-esteem. The strength of our belief in our abilities to accomplish our goals and achieve our potential is our self-efficacy. These are two different things, and without self-efficacy, we are likely to fail in leading others. When we have a strong sense of self-efficacy, we take deeper interest in and make a greater commitment to our activities, we view challenges to be mastered, and we recover quickly from setbacks and pitfalls.

And while we often think we're lucky or unlucky, we can choose to make our own luck by facing challenges head on, trusting our own intuition and expecting the best outcomes. And when we believe in ourselves, we find it easier to be true to our values and live authentically instead of trying to be who we think others want us to be.

Believing We Are Imposters

Have you ever thought someone else could do your job better, or thought you got that bonus or promotion by luck? Have you ever been in a hurry to leave before someone finds out you don't know what the hell you're talking about?

The feeling that we are frauds when we succeed is known as "impostor syndrome." It can be defined, according to the Caltech Counseling Center, as "a collection of feelings of inadequacy that persist even in the face of information that indicates that the opposite is true. It is experienced internally as chronic self-doubt, and feelings of intellectual fraudulence."

The interesting thing about impostor syndrome is that the more successful we become, the greater the likelihood we will encounter more bouts of self-doubt. The reason is that, as we enjoy greater and greater success, we encounter increasingly successful people with whom to compare ourselves. Here's the secret: they don't know what they are doing, either; they're just winging it, too.

We should try to remember these truths: You do deserve to be here. It wasn't luck. It was your tenacity and hard work. Ambition is a good thing. Strive for more. It's okay to ask. And stop comparing — it's self-defeating. Instead, start by trying to be the person you would like to work for. It's kind of like trying to live up to, and become, the person your dog already thinks you are.

Living True to Ourselves

In her book *The Top Five Regrets of the Dying,* Bronnie Ware describes her years of experience working with

patients in their final days. The number-one regret her patients expressed was not being authentic and true to themselves — not daring to take on their dreams and challenges — and instead trying to live the life others expected of them.

It's not laziness and indolence that holds us back. It's an inability to overcome the fear of trying. Courage is not blindly facing the unknown and stampeding ahead anyway. Courage is instead carefully considering and recognizing the risks, obstacles and opportunities before us, and proceeding in measured steps despite these risks. By carefully considering, and preparing for, each forward move, we mitigate risk and become stronger and mentally sharper with each step. But the stepping is critical. The starting means everything. When initiating an endeavor we have never attempted before, it's important to overcome fear and paralysis by making forward progress, however small. *Action creates clarity.*

Consider the acrobats in a Cirque du Soleil show. Their tremendous feats of flying high above the arena are the result of hours and hours of careful and methodical training. But there was still a first time they leapt without a net. And there was still a first time that an Olympic skiing long jumper launched off a 90-meter jump. And there was also a first time you gave a presentation in front of 50 people, or gave a formal report to your executive team.

Courage can be learned, and courage can be practiced. The more we practice risk, the more we are able to take risks.

2. Build Confidence

Confidence. Like art, we know it when we see it, and we know it when we feel it. The thing is, confidence isn't summoned on demand from the heavens. Confidence isn't brought on by clenching our fists. So how do we achieve and sustain it?

Building and maintaining confidence often requires individual acts of courage. And while assuming the best in others is important to the process, obstacles — including stress-inducing bosses — can present challenges. But, if we are persistent, we can overcome many of these.

Sources of True Confidence

True and profound confidence comes from a lot of factors. Here are a few.

Preparation. Being prepared ranks as one of the strongest confidence measures among professional athletes and can give any of us confidence, whether on the sports field, on the stage or at a workplace meeting. Preparation leads to competence, which in turn begets confidence.

Visualization. Recollecting positive performances in the past can give us a confidence advantage. When we take a moment to recall a time in which we were previously successful, we fuel a sense of confidence that we can repeat that success.

Great Coaching. Good coaches can instill confidence in many ways, but the greatest coaches are honest, specific and positive, all at the same time. They don't ignore the behavioral or performance weaknesses of the people they coach but instead address those weaknesses head on and provide correctional advice that is both specific and positive.

Social Support. No matter what we think, none of us is unique, and we can bet someone else is going through the same issue. Asking for help is the first sign of strength.

Self-Control. Studies have shown that practicing small, consistent acts of self-control can bolster confidence and self-esteem. Through small acts of self-control in any activity, we can gain self-control in all we do. It's a self-reinforcing, positive feedback loop.

Building confidence sometimes comes down to personal acts of courage.

"Seek small improvement one day at a time," UCLA Bruins Coach John Wooden famously said. "That's the only way it happens. And when it happens, it lasts."

There is a simple truth about people who become great leaders: They step up. It doesn't start at the top. We have to make it happen. It starts with each of us and our own personal attitudes and behaviors.

Bolstering confidence takes constant, incremental and intentional effort. Creating confidence is the result of applied effort and work.

3. Introduce Challenge

Our next small act is to introduce ourselves, and others, to challenging circumstances and projects to build and maintain high-performing teams. By having the confidence to overcome small challenges in our daily lives, we are more ready to meet the larger challenges we face at work and in the rest of our lives. And if we can do that, we can influence those around us to also accept challenges that will lead to learning and growth.

Often, the difference between teams that are successful and those that are not is in the way we measure success. Focusing on performance, rather than learning, is common, but that emphasis is misplaced. What is important is not how many sales we make or how many innovations

we come up with but what we learn and how we embrace that process that keeps us on the path to innovation and success.
