If you are a "booth sitter" at an industry trade show, you are the greeter and gracious host. Welcome all visitors to your booth and product demonstrations with a smile and an offer to be of assistance. Your friendly personality will put a face and a name on your product line and company in customers' or potential customers' minds.

Facilitate media coverage for your company by knowing who the designated hitters are and offering to introduce them and provide their contact information through business cards.

Talking to the media without being ready for it is playing with fire. Don't spoil years of hard work getting ahead in your company and career by letting your name be attached to an inappropriate sound bite heard round the world, industry and company. In this Age of the Sound Bite, what you say is every bit as important as how you say it — probably more so because the words will be quoted out of context, usually in print and by others without the inflection or meaning that you perhaps intended.

# What to Say and How to Say It

The *Harvard Business Review* reports: "The number one criteria for advancement and promotion for professionals is an ability to communicate effectively."

The most important moments of any presentation are the first and last ones. Everything else may be forgotten if it starts or ends badly.

Usually the best attention-getting beginnings come out of real-life experiences that are funny or insightful. Speakers who can be humorous and roll with the punches because they are relaxed enough to be spontaneous are the ones who triumph over adversity and win the appreciation and approval of their audiences. Short, true-life stories with humor, paradox or pathos are usually safer than jokes, even for professional comedians.

Revisit the beginning at the end. If you began with a story, tell the audience how it came out at the end. The end of a speech requires three things:

1. **A payoff or something dramatic (but not necessarily forceful).**
2. **A sense of humility.**
3. **A reiteration of expectations or call to action.**

Effectively presenting yourself, whether to your peers, your boss, the customer, the general public or even the media, plays a major role in career advancement. Good grammar is a key to being educated, which is the key to getting ahead. Poor grammar, vulgarity, crudeness and insensitivity have the opposite effect on your image. If your standard usage causes other people to consider you uneducated, you may want to consider changing it.

Use nonstandard English only when you intend to rather than do it mistakenly because you don't know any better.

## How to Face Ending Questions

One of the most terrifying moments of any speech is when you ask if there are any questions, and there are none. You've probably left a third to a half of your time for questions and no one speaks up. You may have just answered all of the questions in a really complete speech or the audience members may be shy or intimidated by their peers. But it gives the impression that no one is, or was, really interested.

Solution: Bring three or four really good questions (ones you have answers for) with you along with extra information that hasn't been covered in the prepared remarks. Next, pose them to the audience with, "You might be asking yourself ..." or "You may be wondering ...," then answer them. This may serve to get them started asking their own questions or may simply finish your presentation smoothly.

Constant reinforcement of good grammar will help you, and so will writing it down, correctly, over and over. Gradually, you will teach your ear to hear and your mouth to speak correctly. Here are some grammatical do's and don'ts to keep in mind:

- **Number and Quantity.** Things that can be counted should be referred to as fewer (in number), such as birthday candles and cars. Less refers only to quantity, such as orange juice, pollution and shoe polish.
- **Tense.** A commonly made mistake is using the past tense instead of the past participle with "have" and "had." This is understandable because often the past tense of a verb is the same one you use with the past participle. For example, I walk, I walked, I have walked.
- **Subjects and Objects.** To say, "Susan and me went for Chinese" is *incorrect* because you and Susan are the subject of the action or verb. But, "The deliveryman brought Chinese to Susan and me" is correct when you are the object of the action or verb.
- **Agreement.** If the subject is plural, the verb should be, too. The rest of the sentence should also agree.
- **Modifiers.** Adverbs are often words ending in "ly" and always describe verbs or the action. They answer the questions Where? When? and How? For example, "She played fairly" explains *how* she played. *Not*, "She played fair." Adjectives describe nouns or subjects by answering which, what kind of, and how many. For example, "It was fair play" (what kind of play).
- **Articulation.** If anyone has ever asked you to mumble that again, or is constantly asking you to repeat yourself, you may have a problem with articulation. Slow down and emphasize every syllable and sound, particularly the letters at the ends of the words.

### *Lights, Camera, Action!*

Not only will you make more money if your grammar is up to snuff, but you may lose your job if you can't speak correctly. Recently, a brilliant turnaround president was hired, and then fired, by a high-profile company because he spoke in "dems" and "dose" instead of "them" and "those." He was a street warrior and let loose with expletives, too, that were very inappropriate for the executive suite. Swear words in the executive world are seen as uncouth and uneducated.

Because people hear in three different languages, but only one per person, it's best to include video, audio and kinesthetic words and approaches in your communication. For the audios, use audio words such as "hear this" and "let me tell you." For the videos, use visual words such as "see it this way" or "my view is." Kinesthetics learn most from experience. The important relationships of your life should be typecast so you can reach them with the words they can best hear. ■

## Don't Talk to Strangers

The audience is the other half of your conversation. It's best to involve audience members through acknowledgement, laughter and poignancy; by name or participation. Learning how to use an audience is the single biggest key to success in a workshop or presentation. Here are some do's and don'ts:

- **Be your audience's champion.** Help them win.
- **Ensure that the audience recognizes the value you are offering by applying your expertise directly to current circumstances.**
- **Do whatever you have to do to engage an audience, on an individual basis.**
- **Enable a successful response.**
- **Don't single out an audience member for critique or ridicule.** The group will close ranks against you.
- **Don't embarrass anyone, if at all possible.**
- **Don't take on or criticize the audience as a whole.** The audience may close ranks on you and you'll be a dead man walking.
- **Don't try to enlist a member of the audience in doing your dirty work.** Don't say, "Nudge your neighbor and wake her up for me."

Find out what the audience wants or needs to know. You will be most successful if you know your audience. The secret to being interesting to audiences is being interested in them. ■

## Question and Answer

The question-and-answer portion of a presentation is often the part both reporters and audiences look forward to the most. In press conferences, members of the press often wait until remarks are over before they turn on the cameras and begin taking notes. According to former San Francisco news anchor Fred LaCosse, journalists fall into a number of types depending on their styles.

The **Machine Gunner** is the type of interviewer who likes to fire off several questions all at once to bewilder and frustrate you. Take control of the interview, and choose one question to answer. Then shut up.

The **Intruder** never allows you to finish a thought. You are midway through your message when another question is thrown your way. Take control and finish a thought and then wait for the next question.

When the **Paraphraser** repeats your message, it comes out antagonistic and wrong. Make sure you always correct the reporter right then and there.

The **Softsoaper** is super friendly. Stay alert and remember that nothing is ever off the record.

The **Bully** is hostile, and has a few extra nasty habits. Take control, stay calm, and say politely that you are happy to answer the questions if given the opportunity.

The **Sneak** always has tricks up his or her sleeve. Stay on your toes and refer back to your message.

The **Rookie** is an unprepared reporter who requires you to give a lot of background information. Don't let it get in the way of the messages you want to convey.

The **Old Horse** is a reporter who is tired of doing the same old stories. Be careful not to mimic him or her and bore everyone. Establish your own level of energy.

Don't let your guard down when dealing with the **Pro**. Appreciate the reality that he or she will give you the opportunity to use your good material.

Think of journalists as your boss or your mother-in-law: Never forget where their loyalties lie.

### *The 'Teflon President'*

President Ronald Reagan is a good role model for speakers who are often put on the spot. He pioneered the practice of listening intently to a difficult question, and then began his answer in the direction of the interrogator, but would finish his answer looking at a more sympathetic member of the press. In essence, he took the floor from the interrogator and avoided getting locked into one-on-one verbal combat.

**Bridging** begins with an acknowledgment of the question, then bridges to one of the messages you came to give. These are called SOCOS (Single Overriding Communication Objective Sound bites). They are the three to five bottom-line message points that you want the audience to take home with them. Just choose the one most appropriate to the question and bridge to it.

**Flagging** is a technique that alerts your audience that something important is coming. It is a phrase that sets them up to listen, such as, "My most embarrassing moment was ..." or, "I'll never forget the time that ..."

Another way to maintain control of the situation is by **addressing** the question *rather than* answering it. Any question can be responded to with a quotable statement that addresses the question clearly and concisely. ■

## What Should I Wear?

When you are a guest of the media, and, perhaps most especially, if you are a brilliant college dropout with a mega-million-dollar software company in Silicon Valley, Calif., wear a coat and tie. Shirts should be bought to go with the suit and the belt and socks should match the shoes.

The difference between bosses and their heir apparents should only be in the expense of the fabrics, which reflects higher salaries. Never is it more apparent that you don't get a second chance to make a first impression than with your choice of wardrobe.

# Working a Room

Whether they are called mixers, parties, or meet and greets. The bottom line is, it's you in a room full of people you don't yet know, perhaps with name tags, and the expectation that you will emerge with votes, business cards or phone numbers.

Stephen Clouse, an on-camera communications coach based in Washington, D.C., recommends observing and then emulating the image of coaches at the end of a sporting contest. The losing coach almost always slouches, head bent over, and eyes looking downward. However, the winning coach stands straight with shoulders back and chin up. He visually communicates the role of a winner and it carries over into gestures and even the smile on his face. "Always be the winning coach on camera and in person," Clouse tells his congressional clients. "That's the type of individual people like to vote for."

### *Likability*

In connecting with an audience, the issue is almost never your knowledge but your likability. In her book, *How to Work a Room* (HarperResource, 2000), Susan RoAne lists what she calls the Top 10 minglers when meeting new people. Here are her Top 10:

1. **Make others feel comfortable.**
2. **Appear self-confident and at ease.**
3. **Laugh at yourself.**
4. **Show interest by maintaining eye contact, asking questions and listening.**
5. **Lean into greetings with a firm handshake and a smile.**
6. **Convey a sense of energy and enthusiasm.**
7. **Be well rounded, well intentioned, well informed and well mannered.**
8. **Prepare interesting conversational vignettes.**
9. **Make introductions of others with enthusiasm and compliments.**
10. **Convey respect and genuinely like people.**

Always remember that you get one point for sharing your own topics of conversation and twice as many for your genuine interest in someone else's. ■

# Awards and Acceptance Speeches

When Yogi Berra was receiving the key to New York City on a miserably hot and humid day, Mayor Lindsay's wife, Mary, commented on how cool he looked. He replied, "You don't look so hot yourself." Later, he reflected, "I guess I was a little nervous about the speech I had to make."

There are two sides to an acceptance speech: Giving the award and making the acceptance.

A good technique for giving an award is to save the recipient's name as the last thing you say. Even though everyone may know whom you are talking about, it creates some suspense and a payoff.

Whichever role you play, do your research for some little known but charming and relevant facts about the recipient and/or the award. If something interests you, it is likely to interest the audience, too.

The biggest mistake to make in accepting an award is making your acceptance speech too long or too political. Your audience may not share your politics. Stick to the subject and event at hand.

When you are competing for an award, take your lead from sports where players and teams genuinely compliment their opponents. Don't give a speech but rather a thank you. You can be pleased, but not proud. Make yourself the example of a lesson learned, but never the hero or heroine. That is too much like bragging, which turns everyone off. ■

# Arguments and Apologies

In arguments, as in sports and life, whether you win or lose depends a lot on how you play the game. One of the best ways to make your points is to avoid blaming the other and take responsibility for your own feelings.

Instead of, "YOU did such and so," try saying, "What happened made ME feel disappointed, hurt, sad, lost or

***(continued on page 7)***

## After-Dinner Speeches

Follow these tips when making an after-dinner speech:

✓ Make your speech a metaphor or personal anecdote. Give it a middle, a surprise and a laugh.

✓ Start with a personal, real-life story that taught a lesson or personified some truth. Make yourself the butt of the joke, *never* the hero or heroine.

✓ If you choose to write your speech out as a security blanket, write for the ear, not the eye.

✓ Spell out acronyms after using them.

✓ Never start a speech with, "Tonight, I'm going to talk to you about ..." Instead, build rapport from the introduction or circumstance, followed by an attention-getting story with a provocative but appropriate moral, statement or question as the main point.

✓ Do not jingle the change in your pocket.

✓ Avoid hanging on to the podium.

✓ Say what you believe and believe what you say.

✓ Twenty minutes is probably long enough.

✓ Be succinct.

## Arguments and Apologies

*(continued from page 6)*

betrayed because ..." "I" statements keep the responsibility for your feelings with you. Your worthy opponent, instead of feeling blamed and becoming defensive, can usually at least sympathize with your feelings. He or she then has the option of mirroring back what he or she has heard; expressing understanding, sadness or regret, and offering to do something to help you feel better if he or she cares to. If not, you still have a clear understanding of how you feel and perhaps how he or she feels about you.

If you are in an argument where blame is being leveled at you, justifiably or not, try this in reverse by stating the feelings that would seem appropriate to the situation: "That must have made you feel disappointed, hurt, sad, lost or betrayed." If you identify the correct feeling, it's like throwing a life raft to a drowning soul. Even if you guess wrong, you've taken the argument to a feeling level and your contrarian will almost always come back with the correct feeling.

Sometimes, the best question to ask is, "What can I do to help you?" By involving your opponent in the solution, you guarantee that you've gone to the heart of the matter and will find out what to do next if you care and can. This technique of active listening deepens the surface conversation, too. By identifying the feelings that come up in any situation, people seem to feel not only heard but understood as well.

Fighting fair means limiting the argument to the issue at hand and not condemning the other person's character or being. Arguments, and avoiding them, take planning.

### *Apology*

The best antidote for regret was shared by well-known journalist Jim G. Bellows. He follows the guiding principle of "begin at once and do the best you can."

Once you've acknowledged your wrongdoing, correct the wrong and make amends. Be genuinely sincere about winning back trust.

Make apologies brief and sincere. Recap what you did and how it hurt the other person or situation. Acknowledge how you feel about it.

Accept apologies graciously by briefly mentioning the impact of the other's actions and how you felt, and then offer to move on. If you can't, then at least acknowledge your appreciation for the courage it takes to apologize.

In the media, one of the most important aspects of apology is timing. It's not only what did you know and when did you know it, but what did you say and when did you say it.

Lead from a position that responsibility has not yet been determined, unless it has, then move directly to ways in which your company is reacting in a respectable manner. Don't meet the media and deny it was you if it was.

The minute you know you are wrong, begin at once to do what's right. If your company was in part responsible, show as well as tell that specific actions have now been taken to ensure that the situation will not — cannot — be repeated. ■

## Five Rules for Conversation

**Do's**

✓ Do be well-read.

✓ Do be willing to expose your ignorance.

✓ Do avoid wasting time in conversations where there is no contribution you can or want to make.

**Don'ts**

✓ Don't pretend agreement or interest.

✓ Don't be a spectator to the conversation. Get involved.

# Job Interviews

Whether you are a guest on a talk show or in a job interview, sit up straight with your head up, shoulders back for relaxed but full breathing, comfortably perched on the front half of your chair.

One seasoned job applicant thought well and quickly in an interview by answering the question, "Did you ever make a mistake?" with "Sure, I'm certainly human. But I never made a mistake that I didn't fix before it became a disaster." This was a perfect example of candor, creativity and confidence. Instead of going into dangerous and damning detail about the errors of his ways, he answered the interviewer's "unasked" question of whether they could count on him to help the company survive and succeed, particularly in a crisis.

### *Do Your Homework*

Don't wait until you are in the lobby to read the annual report. All of your homework should have been done online from home. If there is an interesting reprint or article about the company in the lobby, it might be a good conversation starter once the interview begins.

Learn as much as you can to ask intelligent questions of genuine interest to you. Prepare yourself with more education, skills, industry-specific information, and knowledge of trends.

If your resume contains a topic that might be considered a "pink elephant," address it to open the subject for discussion, if necessary. More often than not, a simple comment bridged to a related benefit will be more than enough to dispel the issue.

*(continued on page 8)*

## Job Interviews

*(continued from page 7)*

If an industry executive offers to spend time with you, even if there is no position currently available, take the opportunity. Every industry is a small town and you never know who knows whom.

Avoid cattiness at all costs, but be ready to hear insider gossip. Let it roll off your back without being judgmental or condescending. And never, never, never repeat it. You never know where alliances lie. ■

For Additional Information on tips for job interviews, go to: http://my.summary.com

# Panels, Seminars and Workshops

If you are chosen to be a panelist in a panel discussion, take the time to research the bios and backgrounds of the other panelists and be generous in spirit, even if they are your biggest competitors. A panel is a great opportunity for potential customers to compare and contrast the competition, and you want to appear gracious and good-natured.

Take a dynamic point of view, but not one that contradicts your business philosophy. Address the topic both from experience and research. Be subtle in your advertising or self-promotion. Use your experience, client list or case histories as logical examples of points that need to be made. Avoid being too commercial.

Look intently at each speaker and listen very carefully to what each one says, noting places where you can refer back for agreement. Very often the audience will be watching you to see how interested you are in what the others have to say. Nothing will hurt the others' credibility or yours more than a yawn from you or a roll of your eyes or even staring into space.

### *Seminars*

Every audience has smilers and stoics. Both can be misleading. Smilers will smile and nod at anything: That's their social mode. Involve the stoics and those who are looking at their shoes. Interrupt your flow and engage the stoics with questions. ■

# Media Interviews

The media has been a thorn in the side of many presidents and presidential hopefuls since the early days of television. In the first televised presidential debates, Richard Nixon's nerves, pallor and 5 o'clock shadow contrasted sharply with the tan, relaxed Jack Kennedy.

Politically incorrect, culturally insensitive, last-minute remarks made in anger or jest can get anyone fired, or worse. Distinguished careers are forgotten in an instant, replaced by a sound bite that lives on forever.

Don't try to find sound bites or lines. Sound bites will come naturally when, like Winston Churchill, you speak a simple truth, "The maxim of the British people is 'Business as usual.'" Or offer a powerful word picture, "An iron curtain has descended across the continent."

### *The Biggest Media Mistake*

Not mentioning the name of the sponsor, company, product or book by name early and often is the biggest branding mistake made in the media. A close second is not including the advertising slogan or subtitle, once you know what you're selling.

Crisis happens even to the best companies. There is a proven formula for responding to it: Give an acknowledgement of compassion, a bottom-line sound bite message, appropriate history, repeat of the sound bite, and then the next step. Rightly or wrongly, companies and their products have gotten reputations exclusively for how they have handled crisis. Johnson & Johnson acted quickly to address the Tylenol poisonings and used its media moment to introduce Tylenol's tamper-proof packaging on the front page of every newspaper. ■

# Rallying the Troops

UCLA's winningest basketball coach, John Wooden, motivated his championship teams with, "Be quick but don't hurry." And football great Vince Lombardi said in a 1962 interview that "winning isn't everything but wanting to win is." This was homogenized into the reported battle cry for rallying the troops, "Winning isn't everything, it's the only thing."

When speaking to audiences of your peers and reports, what you have to say should be second nature when you get up to bat. It's what you know and what you do all the time.

### *Transfer Passion*

Picasso said, "To draw is to close your eyes and dance." What music are you dancing to? Your job, as a communicator, is merely to transfer the passion and music of your life into the expression of your work or project or subject. It is, after all, your life's work, your contribution to society. Your job, since you've chosen to accept it, probably holds within it your leadership potential and possibility.

By finding passion for the work you do and expressing it, your briefings and speeches will become much more exciting and inspirational. Bottom line, don't seek to inform, seek to motivate and inspire. ■

## Free Yourself from Conflict at Work, at Home, and in Life

*by* **Jennifer Goldman-Wetzler, Ph.D.**

## Contents

Part I: Understanding the Conflict Loop
*Page 2*

Practice 1: Notice Your Conflict Habits and Patterns
*Page 2*

Part II: Breaking the Conflict Pattern
*Page 3*

Practice 3: Put Your Emotions to Work for You
*Page 4*

Part III: Freeing Yourself from the Loop
*Page 5*

Practice 6: Design a Pattern-Breaking Path
*Page 6*

## THE SUMMARY IN BRIEF

Where can you turn when your attempts to resolve conflict fail? Most approaches emphasize collaboration. You are supposed to sit down, calmly talk through your differences, and find a solution. But what if nothing seems to work, no matter what you do?

***Optimal Outcomes*** reveals eight groundbreaking practices proven to help people everywhere free themselves from conflict. When situations resist resolution, the Optimal Outcomes Method teaches us conflict *freedom.* Dr. Goldman-Wetzler's innovative method blends mindfulness, Jungian psychology, and practical, step-by-step advice to free anyone from seemingly impossible conflict.

You'll learn to observe complex situations with clarity, access your shadow values, and take bold, simple, surprising action. Applying the practices, you'll reach your Optimal Outcome—which may be vastly different from what you originally imagined but more satisfying than you ever dreamed possible.

## IN THIS SUMMARY, YOU WILL LEARN:

- The four habits that keep us stuck in the conflict loop and the eight practices that help us get out of it.
- To map out conflict and put your emotions to work for you.
- To imagine your Ideal Future and design a pattern-breaking path.
- To overcome hesitation and identify your Optimal Outcome.

## PART I: UNDERSTANDING THE CONFLICT LOOP

## Introduction

Conflict is a natural, normal, healthy part of everyday life. Conflict can also be productive and lead to innovative solutions.

For instance, diverse teams, in which team members engage in conflict as a result of naturally arising differing perspectives, have been found to be more creative, innovative, and productive than teams in which everyone looks, sounds, and thinks alike.

Interesting plot lines in books, plays, and movies—and to some degree life itself—depend on the protagonist facing an inner or outer conflict and learning how to overcome it. Think of the main characters in the world's best-known pieces of literature, from Gilgamesh to Moses, from Mohammed to the Buddha, all of whom face and overcome gargantuan conflicts—both inside themselves and with others.

Some conflict—a healthy amount of it—is and should remain part of a well-functioning life, team, organization, or society. However, conflict that returns no matter how many times you try to resolve it tends not to contribute to your health and growth. Instead, it makes it hard to enjoy life or achieve your goals.

### The Conflict Loop and the Optimal Outcomes Method

When we experience conflict with someone else, we tend to think, feel, and act in ways that cause more conflict, which leads to thoughts, feelings, and actions that cause more conflict, and so on. Conflict recurrence is the nature of the beast. This is called the conflict loop.

When you're stuck in a conflict loop, you develop conflict habits, including blaming or avoiding others, blaming yourself, and relentlessly seeking "win-win" solutions even when other people refuse to cooperate. And your conflict habits interact with other people's conflict habits to form a pattern of interaction that keeps you stuck in the conflict loop.

The Optimal Outcomes Method is a set of eight practices you can use to free yourself from the habits and patterns that reinforce the conflict loop. Breaking free from a conflict loop can be challenging. The habits and patterns that reinforce it have a strong inward pull. In order to break free, you'll need a force from outside the loop to pull you out.

The Optimal Outcome is that force. The following eight practices will help you to create it to pull you away from the conflict loop and toward freedom.

## Practice 1: Notice Your Conflict Habits and Patterns

Our conflict habits arise based on how we have been conditioned or taught to approach the world. What we learn from parents and other family members, teachers, sports coaches, religious clergy, and other influential people in our lives has a strong influence on our conflict habits.

If you want to free yourself from conflict, the first practice is to notice how your conflict habits might be contributing to it.

There are four conflict habits that, despite our best intentions, keep us stuck in patterns that perpetuate the conflict loop. The good news is that once you understand how your own habit may be getting in your way, you can then choose to stop and do something different.

**Blame others**. People with this pattern may lean on their competitive spirit too heavily, to the point where it gets warped into blaming and attacking others. Many wonderfully competitive spirits, from all kinds of backgrounds, develop the Blame Others habit. If that's you, perhaps you've experienced the results of your behavior: Other people with strong personalities are liable to react by counterattacking you, while people who are conflict avoidant shut down completely.

**Shut down**. Maybe you shut down in the face of conflict. Your good intentions, to avoid confrontation, can be useful in situations where you're too upset to have a productive conversation. However, when you avoid conflict at any cost, your behavior goes beyond simply avoiding things when you're too upset; you become incommunicative, which allows situations to fester, making them worse, not better. The typical outcome is that the conflict is prolonged in "simmer mode." It remains unaddressed until it eventually breaks out again, sometimes more intensely than before.

**Shame yourself**. You may blame yourself when you're in conflict. When you take the blame, your well-intentioned goal is to learn and do better next time. The upside is that you're taking responsibility for your own actions and you're focused on how you can improve. But when you're compelled to do this regardless of the extent to which you played a part in any particular situation, and when you feel that not only did you do something wrong but you are bad or wrong, your

Conflicts are typically caused by multiple factors, but our tendency is to view the situation in much simpler terms.

original intention to learn becomes distorted. Though you may extract some helpful lessons, your learning is overshadowed by shame. The conflict is prolonged while you put yourself through the wringer unnecessarily.

**Relentlessly collaborate**. When you're relentlessly collaborative, your well-intentioned openness to others becomes warped. You're on a mission to collaborate at any cost. You end up wasting valuable time and energy devising potential solutions that will never satisfy the others involved. Either you reach a "Band-Aid" solution that unravels later, or things escalate into a more heated dispute, all while time continues to tick by.

Self-knowledge is power, and understanding your conflict habits will loosen their grip on you. Review the four descriptions. Which one might be your primary habit? Although you may use different habits depending on whether you are at work, at home, or in the community, it is still useful to ask yourself which habit you use most often.

## PART II: BREAKING THE CONFLICT PATTERN

## Practice 2: Increase Clarity and Complexity: Map Out the Conflict

Conflicts are typically caused by multiple factors, but our tendency is to view the situation in much simpler terms. This inclination to simplify into narrow "us-versus-them" affairs stems from the fight-or-flight instinct, which restricts our focus in the face of danger. When a tiger is charging you, the tiger is all you can afford to pay attention to. Even if you understand that a situation is complicated, your mind seeks rapid clarity so you can take quick action.

When you take a step back and use a wide-angle lens, you gain a more complex and nuanced understanding of a situation that previously seemed black and white. This allows you to identify levers for change that were impossible to see before and develop approaches to the conflict that are different from when you were looking at the situation in a simpler way. One of the best ways to widen your perspective is to map out the conflict.

Sometimes the primary benefit of mapping the conflict is that it broadens your perspective. Other times, the benefit is the exact opposite: Mapping clarifies, even crystallizes, your perspective.

### Map Your Situation

The following mapping process is informed by Dr. Peter T. Coleman, director of the Morton Deutsch International Center for Cooperation and Conflict Resolution at Columbia and founder of the Advanced Consortium on Cooperation, Conflict, and Complexity at Columbia University's Earth Institute.

In the middle of a large blank page, write down the names of the people or groups involved in a conflict. This conflict should be something that directly impacts you, that you or someone else has tried to resolve and failed, and for which you can do something to help.

Now add as many people, places, events, ideas, and other factors to the map as you can. Pay particular attention to include people, places, events, ideas, and other factors that might not have been obvious to you before. They can be factors from the past, that are occurring today, or that you anticipate may influence the situation in the future.

Then draw circles and lines to show how all the factors are connected. Be sure to put at least one new person or aspect of the situation on your map that you didn't consider relevant before. Draw or write anything on your map that will help you understand the situation better.

For example, thick arrows can denote exertion of pressure or influence or simply strong relationships. You can use different colors to represent the feelings you get from different people or groups of people. Or you can add shapes, colors, pictures, or words inside each circle to represent the meaning a person, place, event, idea, or factor holds for you.

Now take a look at your map. What story does it tell? Mapping your situation can give you some new insight, at least enough to create even a small break in the conflict loop.

## Practice 3: Put Your Emotions to Work for You

In order to understand someone else's emotional experience, you must first identify and understand your own. If you don't, you risk projecting your own emotions onto other people or, equally as problematic, taking on their emotions as if they were your own. Doing either of these things can make it difficult to respond to others in a truly helpful way.

Depending on how we experience and express our emotions in any given situation, all of us, at one time or another, become vulnerable to each of three emotion traps.

When you fall into the **Knee-Jerk Reaction Trap**, you express a quick reaction based on your emotional experience.

When you fall into the **Inaccessible Emotions Trap**, your emotions exist inside of you, but they remain inaccessible to others and often even to yourself.

In the **Lurking Emotions Trap**, emotions tend to be hidden but lurking, lying in wait to emerge. It is the nature of emotions to be expressed. When we do not consciously express them, they often materialize anyway, in ways we don't intend.

**Practice pausing.** When you have the presence of mind to notice as you're falling into one of the traps, you have the opportunity to take a reactive pause. Instead of reacting to other people, you simply stop and take a short break. You can do this in your head or out loud. You can use proactive pause time to acknowledge and name your emotions.

**Let your emotions settle**. Once you acknowledge your emotions, what should you do? The well-known Vietnamese Buddhist monk Thich Nhat Hanh offers the metaphor of a muddy glass of water when you're in the desert: You want to drink the water, but it's clouded with mud. What to do?

You let the dirt settle to the bottom, so you can drink the clear water. It's the same with emotions, Hanh says. Don't try to throw away, change, or examine the muddy emotions—just let them settle, and see what happens. Usually something else more constructive appears in their place.

**Ask what your emotions are trying to tell you**. Get to know your emotions as if they're old friends who have come to visit you. What do your emotions look, sound, feel, and even smell like? Try talking to them.

If you feel silly doing this in public, do it inside your head or find a quiet place to be alone and say something like "Hello, fear. What are you trying to tell me?" Then listen for an answer.

**Take constructive, pattern-breaking action**. Once you acknowledge your emotions and listen to what they're trying to tell you, then it's time to take constructive action. When you feel angry, consider how an American civil rights icon handled anger.

Reverend Dr. Martin Luther King, Jr., acknowledged his anger and used it as a catalyst for social change. That broke the patterns of interaction in the United States at the time, when people were expressing their anger about lack of civil rights either violently or not at all.

Instead, King took constructive, pattern-breaking action. He articulated the impact of injustice on his people: "Our civil rights have been violated." He committed himself to the cause of justice. And he made a clear request of every American: to treat all people equally.

Anger—or any other emotion—is not inherently bad. It's what you do with it that can cause it to become a catalyst for either constructive change or destruction. It's up to you.

## Practice 4: Honor Ideal and Shadow Values—Yours and Theirs

Over the course of a lifetime, each of us develops a unique values fingerprint. Unlike our actual fingerprints, our values fingerprint is not fixed. It evolves based on our life experiences and our responses to the values we learn from the people around us.

We learn some values explicitly. If you grew up in a religious home, your parents may have taught you the value of caring for others by quoting the biblical phrase "Love your neighbor as yourself."

Other values are instilled implicitly, without any discussion. With implicitly learned values, we may not always be aware of how important they are to us and why. We may also lack clarity about our values because we've pushed some of them out of our consciousness. With a nod to Carl Jung's notion of the shadow self, these can be called shadow values.

Unlike ideal values, which we're proud to hold openly, shadow values are hard for us to admit, even to ourselves. Because we're in denial about them, we're often unaware that they are leading us to speak and act in ways that exacerbate conflicts. We are typically reluctant to admit to our

shadow values because we are ashamed of them.

The ironic thing is that shadow values differ widely from person to person, and a value that might seem obviously "good" or ideal to one person can be a shadow value for someone else.

### Identify Your Ideal Values

To help you break the conflict pattern of the past in whatever situation you're struggling with, you first need to identify your values. Ideal values are simply the things you are proud to say you care about, such as autonomy or collaboration.

Now search for your shadow values. Think of what you value but are not comfortable *saying* you value. If you're stumped, take a moment to think about a time when you may have felt wrongly accused. If you haven't been owning a shadow value, it is still there; it's just stuffed deep down inside.

Noticing the tensions between our own values is key to freeing ourselves from conflict with other people. Those inner tensions often prevent us from being clear about what we want in any given situation, which makes it impossible to be clear with others.

> We are typically reluctant to admit to our shadow values because we are ashamed of them.

### Honor Your Shadow Values

Honoring a shadow value means to think, speak, or take action in a way that acknowledges its presence. Doing this helps bring the value into conscious awareness, where it can be properly addressed.

Once you've noticed the tensions between your own ideal and shadow values, choose to honor one shadow value of yours that seems most relevant to your situation. First, seek to understand why it became a shadow value for you. Was it implicitly impressed upon you, so you haven't been fully aware of it? What messages did you receive at some point in life that might have led you to suppress it?

Honoring other people's values means to think, speak, or take action in a way that acknowledges their values and their right to hold them (even though you may not like or agree with those values). One practical reason to do this is that doing the opposite—trying to convince others that their values are wrong—tends not to work.

Take a moment to try to identify others' values now. This exercise offers a powerful way to develop empathy for others by suggesting possibilities about their perspectives and behavior that you haven't yet considered.

## PART III: FREEING YOURSELF FROM THE LOOP

## Practice 5: Imagine Your Ideal Future

It's finally time to learn how to exit the conflict loop. There are two forces that will help you do this. You can be pushed out of the loop from the inside, or you can be pulled out of the loop from the outside. In the case of a well-worn conflict loop, you'll need to do both.

The force from the outside that you'll need to pull you out of the conflict loop is your Optimal Outcome. But since we haven't yet determined exactly what your Optimal Outcome is, we'll need to start with something simpler: a prototype of it.

This prototype of your Optimal Outcome can be called your Ideal Future; it is the "beta version" of what will become your Optimal Outcome.

One of the reasons that some conflict situations resist resolution is that we are so focused on what happened in the past and on who is to blame that we don't consider what we would like to happen in the future. We're stuck for reasons that go beyond rational thinking and problem solving. In fact, complex problems involving challenging emotions and deeply held values are typically resistant to rationally derived solutions.

For this reason, do not put on your brainstorming or problem-solving hat. Use your imagination instead. For now, your job is to imagine in as much detail as possible the future you desire for yourself.

### Use All of Your Senses

To gain clarity about your Ideal Future, using all five of your senses and generating the emotions you would like to

experience in the future, imagine what it would look, sound, taste, smell, and feel like (tactilely and emotionally) to be in that future state. Your job is to do this until it seems as if you are experiencing the future before it arrives.

At the March on Washington for Jobs and Freedom on August 28, 1963, to demand civil rights for African Americans, Dr. Martin Luther King, Jr. drew upon the five senses and emotions to help us imagine the Ideal Future he wanted to create.

This is a powerful practice because the imagined future registers at a different level of our awareness from the intellectual one. We see, hear, feel, touch, and taste the Ideal Future because King not only paints a picture of it but also creates a song, a feel, a touch, and even a taste to it. He uses words to help us imagine the future he would like to create.

For example, he says, "Now is the time to lift our nation from the quicksands of racial injustice to the solid rock of brotherhood." By describing how the ground will feel beneath our feet, moving from "quicksands" to "solid rock," he distinguishes between where we are now and where he wants us to be.

When he says, "I have a dream that one day on the red hills of Georgia the sons of former slaves and the sons of former slave owners will be able to sit down together at the table of brotherhood," he whets our appetite to taste the food at the feast of fellowship in his Ideal Future.

Now, there is a fine line between a successful "I Have a Dream" speech about a future that inspires you and a pipe dream. The line can sometimes be tough to distinguish. But the only way to distinguish one from the other is to gain clarity about what you're shooting for in the first place.

For now, your work is simply to imagine an Ideal Future without worrying about how feasible it is. We'll come to that work soon enough.

## Practice 6: Design a Pattern-Breaking Path

In Practice 5, you imagined what you'd like to happen in the future; now it's time to plan how you will get there—what you will actually do to turn your imagined future into reality.

A Pattern-Breaking Path (PBP) is a linked yet simple set of action steps to help you exit the conflict loop and move toward your imagined Ideal Future. Successful paths have three characteristics: they involve doing something surprisingly different from what has been done before; they're simple; and each action step builds on the one that comes before it.

Let's think about how you will design the steps in your Pattern-Breaking Path.

**Step one: Start with yourself**. The best way to free yourself is to begin by directing your attention within. Your actions in step one may be so subtle that only you are aware of them. For example, you might incorporate a three-minute pause practice into your daily routine. You may spend your pause time imagining your Ideal Future in detail until you are ready to talk about it with others.

**Step two: Connect with one person**. In step two, consider how to involve one person from your conflict map. This may not always be the most obvious other person on your map. It might be someone on your map with whom you already have a trusting relationship or someone you suspect could be helpful to you.

You might ask them out for coffee (or a beer!) to hear more about their perspective and to share your Ideal Future with them. Or you might make a phone call to apologize to someone or simply to say hello. Remember to keep your actions simple and pattern-breaking.

**Step three: Involve a small group**. In step three, think about whether or how you might involve more people from your conflict map. If appropriate to your situation, maybe you could host a meeting, video chat, or phone call in which you seek to engage with, and gather new ideas and support from, other people on your map.

**Step four: Involve larger groups of people**. In step four, if appropriate, you may now be ready to bring together a larger group of people who have not been seeing eye to eye. For example, one client held a meeting between the people on his research team and the people on the sales team who have not been getting along to discuss ways to collaborate more effectively.

**Steps five and beyond: Extend the work**. Steps five and beyond may be made up of a series of one-on-one conversations or group experiences meant to support and extend the work you did in the previous steps.

Your imagined future plus your Pattern-Breaking Path provide the pull and the push you'll need to exit the conflict loop.

## Practice 7: Test Your Path

No matter how positive our intent, when designing a PBP,

Like theater directors, we script out scenes to bring about our Ideal Future—and then we're caught off guard when the actors go off book.

we often miscalculate the effect of our overtures. Like theater directors, we script out scenes to bring about our Ideal Future—and then we're caught off guard when the actors go off book. The trouble is that our own (starring) role is the only one we've properly fleshed out.

To prevent this, think about how your Pattern-Breaking Path might play out in the future. Consider not only how your own actions (or inactions) will affect yourself today, but also how your actions (or inactions) may impact the other people you identified on your conflict map in Practice 2, now and in the future.

Once you've anticipated any possible unintended consequences of your actions, find ways to mitigate them. You can do this in two ways: You can work to *prevent* unintended consequences from happening in the first place, and you can *prepare* for how to respond if, despite your efforts, unintended consequences do occur.

### Conduct Mini-Experiments

It is often best to test our hypotheses in the lab before testing them in the real world. Your lab can be any place in which you'd feel safe making a mistake.

The defining feature of your "lab" is the people you choose to be in it: ideally, people who care about you and who will forgive you if your experiments don't turn out the way you intend. Your lab is for conducting small experiments in a safe environment, not grand ones.

For example, if your PBP involves voicing an unpopular opinion to your boss, first practice by voicing an unpopular opinion to a friend—someone who will forgive you if your words don't come out exactly the way you intend.

Notice the results of your experiment: How does your friend respond? Are your words helpful or not? How can you improve for next time?

When you conduct mini-experiments, you will gain two things: practice and immediate feedback. If you've got the luxury of having enough time to practice, you can flex your "muscles" by trying new behaviors and even develop the "muscle memory" needed to change ingrained habits.

You'll also learn about the impact of your behavior—how others receive it. You can use that feedback to refine your approach in the situation where it matters most.

## Practice 8: Choose an Optimal Outcome

You may be excited to pursue your Ideal Future and Pattern-Breaking Path, but if you're like many people, you may still feel hesitant. Making a change in your behavior, which your PBP will naturally require you to do, can seem daunting, even scary.

There are four common sources of hesitation. Though each of them is slightly different, they all serve one purpose: to keep you safely within your comfort zone. Unfortunately, staying in your comfort zone keeps you stuck in the conflict loop, which prevents you from achieving an Optimal Outcome.

- Your Ideal Future is not possible, but you fantasize about it anyway.
- Your Walk-Away Alternative is unfeasible, but you fantasize about it anyway. A Walk-Away Alternative is any scenario you can imagine to free yourself from conflict that involves walking away from, or ending a relationship with, people in your situation.
- Your Walk-Away Alternative seems unfeasible, but it's better than your Ideal Future.
- By far the most common reason we hesitate is that the prospect of changing our behavior to pursue an Ideal Future is intimidating or, in many cases, downright terrifying.

### Identify Your Optimal Outcome

To identify your Optimal Outcome, assess the feasibility of your Ideal Future, Staying in Conflict, and any Walk-Away Alternatives. Compare the costs and benefits of all the feasible options with one another. The feasible option with the lowest costs and greatest benefits is your Optimal Outcome.

It is important to note that choosing to pursue an Optimal Outcome does not necessarily preclude you from exploring other options later. But if you want to free yourself from conflict, you do need to choose one option to begin with.

If your Ideal Future emerges as the lowest-cost, highest-benefit option, choose it and refer to it by its proper name: your Optimal Outcome.

If an unfeasible Walk-Away Alternative has been distracting you from your Ideal Future, let the unfeasible fantasy go. Clinging to a fantasy about an unfeasible Walk-Away Alternative is, in effect, the same as choosing to stay stuck in conflict, even if you don't consciously realize that's what you're doing.

So face the hard truths of reality, and let go of your unfeasible Walk-Away Alternative so you can become free by taking a different, more viable path.

If a Walk-Away Alternative is less costly than your Ideal Future, recognize it as your Optimal Outcome. By doing so, you can free yourself from conflict in a way that may happily surprise you.

If you can find ways to lower the costs of any of your options, revise them. Redesign your Pattern-Breaking Path to reflect a revised Optimal Outcome. If you revise any of your options, you will need to update your Pattern-Breaking Path to reflect the changes.

### Be Courageous

If you have found your Optimal Outcome and you're still hesitating, remember that your discomfort is totally normal. In fact, if you didn't experience some discomfort at the thought of taking pattern-breaking action, that would be strange. We human beings naturally experience discomfort when we so much as think about breaking the patterns of the past.

It is not only the discomfort of making change that can be difficult; it is the fear of change itself. But because fear is a natural part of being human, it is not realistic to try to get rid of it. Instead, the best way to deal with fear of change is to muster your courage. As Nelson Mandela put it, "I learned that courage was not the absence of fear but the triumph over it. The brave man is not he who does not feel afraid but he who conquers that fear."

He also said, "For to be free is not merely to cast off one's chains but to live in a way that respects and enhances the freedom of others." Your actions are a contagious form of leadership; when you free yourself from conflict, you help free others as well.

# Persuasion Equation

## The Subtle Science of Getting Your Way

by Mark Rodgers

### THE SUMMARY IN BRIEF

How do you get people to see things your way? Whether you're trying to secure a promotion, make a sale or rally support for a new idea, the ability to persuade those around you is absolutely essential to success.

Merging research and real-world application, *Persuasion Equation* is an insightful guide that reveals what really drives decisions, and introduces readers to the persuasion equation — a powerful combination of factors proven to speed agreement.

Readers will discover the surprising reasons that people say "yes" and learn how to radiate an aura of expertise; win trust and leverage credibility; build a business case that appeals to both heart and mind; adapt for personality differences; understand technology challenges and persuasion tactics; use language strategically; perfect the five-step persuasion process; generate group buy-in; and be sensitive to the crucial psychology of self-persuasion.

From crafting compelling emails, to convincing a colleague, to nailing the big presentation, *Persuasion Equation* is your personal recipe for success.

### IN THIS SUMMARY, YOU WILL LEARN:

- The three persuasion precepts and how to set your persuasion priorities.
- Key heuristics and biases that influence your decision making.
- To build a convincing business case via quantitative and qualitative reasoning.
- To build credibility and use verbal and nonverbal "power language."
- Why positive self-talk is key to your persuasive efforts.

## Persuasion Fundamentals

To the uninitiated, the term *persuasion* has negative connotations. But persuasion is not coercive, conniving or devious. No one can be persuaded to do something he or she doesn't want to do.

Persuasion is "ethically winning the heart and mind of your target." Let's take a moment to examine this definition word by word. *Ethically* means simply doing something honestly and without trickery or deceit. *Winning* means gaining agreement with your suggestion, idea or position. *Heart* refers to gaining emotional buy-in, *mind* refers to logical buy-in and *target* represents the specific person you are attempting to persuade. Whether you're attempting to persuade or dissuade, you have to be doing it for the right reasons and in the right manner.

There are two fundamental roles of persuasion. The first involves getting someone to say yes to your offer or request — to buy your product, agree to your idea or take you up on your suggestion. Persuasion helps you get someone to willingly *do* something.

The second role of persuasion — and one that many people overlook — is getting someone *not* to do something, to *dissuade* him or her from taking action you feel might be harmful. If you're going to thrive in the eat-or-be-eaten contemporary workplace, you must be able to effectively use both roles.

### Setting Your Persuasion Priority

If, in your professional endeavors, you could flick a switch and convince one person to do just one thing, what would that be? Do you want to get the assignment? Bring a new product to market? Overhaul the Customer Service Department? Win the promotion? Land a big-name client? Each of these is a "persuasion priority." To get to the heart of the matter, ask yourself this: Who is the one person you want to say yes, and to what?

Before you answer the above persuasion priority question, consider the four persuasion priority criteria. Your persuasion priority must be

- **Meaningful:** Important to you and your organization
- **Significant:** Large enough to make a difference in your life and workplace
- **Realistic:** But not so large a request that it's unattainable
- **Others-Oriented:** Because you get ahead by improving the condition of others

In professional settings, wildly persuasive people balance the following attributes: assertive, empathetic, communicative, tenacious and resilient.

### Persuasion Precepts

There are three key foundational ideas on which your persuasive efforts will be built. These ideas are reciprocity (the linchpin of persuasion), a concept referred to as "enlightened self-interest" and the ultimate persuasion principle: congruency.

**Reciprocity:** Reciprocity is a fundamental human condition that means a "cooperative interchange," or the repaying of others in kind, often for a mutually beneficial result. Reciprocity is about surviving — and thriving — within your own organization. Likewise, understanding reciprocity is vital to maximizing your yes success. The first step to doing so involves establishing a healthy give-and-take mindset. There are two planes to consider:

your willingness to actively do things for others and your willingness to accept assistance from others.

**Enlightened Self-Interest:** If it's positive for you (your increased income, your heightened professional status, your strengthened organization), positive for other parties involved (your target and your target's organization) and positive for the larger whole in which you operate (your industry or your community), then why not do it? Appeal to the enlightened self-interest of others, and prepare to hear yes again and again.

**Congruency:** Your external actions and internal thoughts must be aligned. If you are promoting a product, an idea or an initiative, you need to believe in it from an ethical standpoint. If you want to be convincing, you have to be convinced.

## Decision Making

Heuristics are supportive cognitive shortcuts that help us make good decisions in times of complexity. Biases, on the other hand, impede decision making. Sometimes, biases also are referred to as cognitive illusions because, much like an optical illusion, they twist our thinking about reality. What follows are the heuristics and biases most prevalent in persuasion.

### Cialdini's Six Principles of Persuasion

Robert Cialdini created something akin to a "Unified Field Theory of Persuasion" by categorizing almost every persuasion approach into one of six primary principles: reciprocity, scarcity, consistency, liking, authority and social proof. Cialdini's principles are great examples of heuristics, meaning that when we humans follow them, we typically have a good result. People often use Cialdini's six principles, individually or in combinations, to make decisions.

**Reciprocity**. Reciprocity involves the give-and-take of human exchange. The best way to leverage reciprocity is to enter every situation by asking yourself, "Who here can I genuinely help?"

**Scarcity.** To truly leverage the principle of scarcity, the scarcity must truly be real. There really needs to be "only three days left!" or "limited inventory!"

**Consistency.** We like, trust and want to interact with people who follow through on what they say.

**Liking.** We like those who like us as well as those who are like us.

**Authority.** We defer to experts. If you have a level of expertise and your target is aware of it, you automatically become more persuasive.

**Social Proof.** The best way to leverage social proof in a business setting is through the use of testimonials and referrals, which demonstrate that others have benefited from knowing and working with you.

Next, let's set our sights on understanding the most prominent biases.

**Availability Bias:** We have a tendency to give the most credence to what we can most easily recall. It's imperative to keep the value of your "ask" in front of your target. Sending a reminder email, revisiting a key point casually in conversation, or mailing a communiqué that augments or amplifies your position all work beautifully.

**The Halo Effect:** The Halo Effect occurs when we judge others positively in one aspect of their lives (appearance, wit, charm, industriousness) and then apply positive feelings to them for other, often unrelated, areas (problem solving, leadership, sales prowess). Make a favorable impression early, and you'll dramatically improve the likelihood of hearing yes later.

**Confirmation Bias:** We seek facts, stats and opinions that prove our hypothesis or our preconceptions. If you're attempting to ethically win the heart and mind of your target, you must do your due diligence. Look at all relevant data sets to make sure that what you're proposing is the right thing to do. Once you're convinced that your proposal is the right thing for your target, for you and for the surrounding situation, acknowledge the bias.

## Targets, Technology and Tactics

The people you'll be attempting to persuade — your targets — possess personality, gender and generational differences as well as individual preferences. Understanding and tapping into these differences will be pivotal to your successful persuasion efforts. They will impact how you behave, what sort of case you make, the language you use and the references you choose.

### Personality Differences

In their book *Personal Styles and Effective Performance*, David Merrill and Roger Reid developed four personality styles based on assertiveness and responsiveness: Driving, Expressive, Amiable and Analytical.

*Driving* personalities seek power and autonomy via facts and information. Communicative and competitive best describe people with *Expressive* behavior. Relationships and cooperation are important to *Amiables*.
*Analyticals* want to know not only if something works but how and why and who says. They avoid risk because their desire to be right is almost all-consuming.

Don't treat others the way you would like to be treated; treat them the way they want to be treated.

- Don't small talk a Driver. Also, share facts, not feelings, and use concision to get the decision.
- Make an Expressive the star. Also, resonate fun and high energy, and allow for digressions and stories.
- Form a bond with an Amiable. Also, take a personal interest in him, and ask for his opinion.
- Bring out your research arsenal for an Analytic. Also, use unqualified expert opinions, and leave no question unanswered.

### Technology and Persuasion

It is crucial to understand the role technology plays in making your persuasion priority a success. Take, for example, Computer-Mediated Communication (CMC), specifically how we use text messaging, email and video-conferencing to be more effective and more persuasive communicators. Keep in mind that your target's attention is fragmented; remember that concision is king; get it right; make it easy; make it fast; opt for synchronous communication; keep up appearances; know text-speak and use emoticons wisely.

### Persuasion Tactics

Persuasion tactics are those approaches deemed to cross the fine line between ethical persuasion and manipulation. That line of demarcation is fine precisely because it's dependent on the target's perspective. What Boomers call "selling out," Gen Xers see as corporate sponsorship and Millennials view as the ultimate objective.

Sometimes people are so afraid of acting unethically in their persuasion efforts that they fail to take any action and, no surprise, manage to not persuade at all. If the means are ethical and the ends are ethical, then you're obviously operating in an ethical manner. The dilemma occurs when the ends are ethical but the means are questionable. Author Daniel Pink offers a powerful rule of thumb for operating ethically: Treat everyone as you would your grandmother.

## Building Your Business Case

Your Persuasion Equation is the combination of factors that will result in a rocket-fueled approach to you getting agreement. Your Persuasion Equation is (A Great Business Case + Your Outstanding Credibility + Compelling Language) × Intelligent Process = Yes Success.

A solid business case requires two primary building blocks: logic and emotion. In business, if you want to appeal to logic, you do so with quantifiable measurements.

### Quantitative Reasoning

You'll never reach your persuasive potential if you are terrified of your calculator. You need to know how to read and understand the basics of an income statement, a cash flow statement and a balance sheet.

**Return on investment** (ROI) by definition is always a ratio. A ratio demonstrates the quantitative relationship between two numbers; ROI establishes the relationship between the return and the initiative's investment. So if a project has a $400,000 return and a $100,000 investment, it can be expressed as a ratio of 4:1.

The **payback period** is the length of time it takes an organization to recoup its costs on an initiative.

**Net present value (NPV)** reflects what your multiyear project is worth in today's dollars. It answers the question, What is this cash stream really worth to the organization?

**Internal rate of return (IRR)** is a measure related to NPV and answers this question: What rate of return will the organization receive on this project? The resulting number can be used internally to compare projects and make informed decisions, such as whether your case is strong enough to convince the organization to say yes.

The **breakeven calculation** answers the question, "How many units do we need to sell to recoup our investment?"

### Qualitative Reasoning

Numbers are important — absolutely. But for many, the real power of persuasion lies on the emotional side of your appeal. Qualitative reasoning becomes just as important as quantitative reasoning.

Here are seven emotional objectives to consider when building your case to persuade or dissuade:

**Provoke**, by causing a reaction, especially an angry one.

**Inspire**, by giving people hope or a reason to agree with you.

**Invoke**, by enabling someone to see a particular image in his or her mind.

**Awaken**, by making someone experience a new feeling or emotion.

**Arouse**, by exciting someone with ideas or possibilities.

**Touch**, by generating a sad or sympathetic emotion.

**Ignite**, by invoking a feeling of success or accomplishment.

Building one or more of these emotional strategies into your business case will materially improve your chances of yes success.

## The Credibility Crucible

Easy to lose and tough to build, credibility ranks as one of the primary characteristics of a successful and professional persuader. A basic determination of credibility can be found in the following descriptors: You do what you say you're going to do; your information is accurate and unbiased; you're not prone to exaggeration or hyperbole; you admit when you're wrong and accept blame; you share the credit when successful; your word is your bond.

The key question is this: What do people say about you when you're not in the room?

### Three Components of Credibility

Credibility cannot be achieved if you don't possess the following three attributes: expertise, track record and respect.

**Expertise:** Expertise means that you actually comport yourself as an expert. Experts' opinions are believed and sought; they are not generally subject to quibbles or arguments. You gain expertise through experiences, education, observations and boldly moving on from both your victories and your defeats.

**Track record:** Nothing succeeds in promoting credibility like results that others can see, touch, feel, hear and smell. In other words, don't just talk the talk; walk the walk. Track records don't require uniform and unblemished successes. In fact, showing variation is preferable. The idea is to constantly improve.

**Respect:** No one respects people who can win only if someone else loses, or who see life as a zero-sum game. You don't have to like everyone, but you do have to remain civil. When you share, you gain respect; you also gain respect when you accept responsibility, when you volunteer, and when you effectively negotiate and honestly resolve conflict.

### Four Ways to Build Credibility

Gaining credibility is easier than you might think. If you currently do any of the following, you're well on your way to creating credibility confidence.

**Publicize your successes.** Demonstrate your triumphs, relate your victories, recount your progresses — but don't boast about them.

**Create a "rational future."** In other words, help people see a future that begins pragmatically in the present and develops logically and persuasively forward along a reasonable path.

**Become clearly accessible and accountable** or, to use contemporary jargon, "transparent." People are less likely to argue with an individual who is clearly available and responsible.

**Hang out with other credibility all-stars.** Find people with impressive credibility credentials within your organization or community and align yourself with them.

## Power Language

The connotations of *rhetoric* have changed in recent years to suggest that it is a pejorative form of discourse, as in "empty political rhetoric." But the original definition is "the art of persuasive speaking and writing, especially using figures of speech." Effective rhetoric involves verbal and nonverbal communication skills, which in turn dictate how persuasive you are by informing others of your intent — overtly and covertly, explicitly and implicitly.

### Savvy Word Choices

Some words are more compelling than others because of their emotional heft. They create powerful mental images to which listeners can readily relate. Consider the following: Our *savviest* customers, the company's *diverse* suite of products, your *compelling* presentation. A *sensitive* situation, an *urgent* response, a *feel-good* solution.

Unpack your trunk of adjectives, and punch up the power quotient. Instead of just saying the team has to make a decision, try describing it as a *crucial* decision or perhaps a *far-reaching* decision or a *key* decision. Judiciously used, well-chosen adjectives can work tremendously; overuse, on the other hand, leads to hyperbole.

When in the process of persuading, remember six powerful words that will force you to link a meaningful target benefit to your ask: "What this means to you is . . ." You can't say it without saying something after it, of course. So when you start to focus on your justification points for why someone should take you up on your offer, liberally use this phrase as part of your rhetoric.

### Nonverbal Communication

What your body language communicates to your target and what your target's body language tells you is the essence of nonverbal power. A message that your target sends to you is a "nonverbal tell" (like in poker when someone has a tendency to, say, look at his watch before he bluffs). Likewise, a "nonverbal sell" is a message you send to your target. Recognizing nonverbal tells (NVT) and nonverbal sells (NVS) can be crucial to your persuasion success.

Following are some of the most common tells to watch for and what you might do in response.

**Solid eye contact.** Response: Don't miss your opportunity to engage.

**Averted eyes.** Response: Proceed carefully — not boisterously, not aggressively. Don't engage in prolonged eye contact. A brief smile is enough.

**Engaged smile.** Response: Smile, acknowledge interest, move your gaze to others and then come back to your smiling target.

**Dissenting squint.** Response: You'll want to bring your target into the conversation.

**Space-saving stance.** Response: Tread lightly. This is a clear signal that now is not the right time to talk.

**Watch glance.** Response: Make your point and get to the ask — quickly.

## Persuasive Processes

Now it's time to master the persuasive process. Here is a formula that governs persuasion success: Yes = E2F3, defined as follows: You get to yes by Engaging your target, Exploring the issue, Forming (and framing) possible options, Finessing any white water and Finalizing (and formalizing) the decision.

**Step 1: Engage Your Target.** Find the time when your target will be most approachable and receptive. And just as important as when is how you approach your target. Persuasion relies on relationships, so a face-to-face encounter is always better than a phone call, while an email shouldn't even be considered when it comes to persuasion. The first aspect of engagement involves building (or confirming) rapport. The engagement aspect is intended to begin a dialogue. Don't take a stance at this point; rather, simply explore the other person's attitudes.

Another key engagement element is understanding your target's level of knowledge. Has he or she been approached by others regarding the persuasion topic?

**Step 2: Explore the Issue.** This means delving into its content, as opposed to navigating the approach. The issue is a multifaceted situation, and each facet needs to be considered in turn. First, you need to determine what the issue means to your target, personally and professionally. Next, explore what the persuasion topic means to the organization. Examine budget parameters. Explore risk, too. With these factors firmly in your mind, explore your target's appetite for the change.

**Step 3: Form and Frame Possible Options.** Having options raises the odds of acceptance exponentially. Instead of providing a binary choice — a take-it-or-leave-it option, which is a 50/50 proposition at face value — offering three options raises your chances of acceptance to about 75 percent. In other words, you now have three shots at hearing yes. Discuss the pros and cons of each option objectively, understanding that they all lead to Rome — that is, your desired outcome.

**Step 4: Finesse any White Water.** Like rafting through grade-five white water, the way in which you navigate resistance to your persuasion attempts will determine your success. Not every target will agree with new ideas (or even old ones). But remember that an objection is a sign of interest; apathy is your real enemy. If your target takes the time to express counterarguments, skepticism or doubt, she is engaged enough to invest her time.

**Step 5: Finalize and Formalize the Decision.** Ask for your target's opinion — not for a commitment. Opinions are nonthreatening: Everyone has them, and most want to share them. Simply say, "What do you think?" If you receive a positive response (" I really like the "best" option you've created"), move boldly forward. If you receive a neutral response (" I'm still not sure"), don't try right away to secure your yes. You have more work to do. If you receive a flat-out no, employ your options.

Finally, never accept a simple yes. Instead, work toward a profound agreement. Then you want to formalize the decision; you want your target to somehow go on record with his decision.

## Persuasion 360

To persuade groups and specific members of groups, the first thing you need to acknowledge is that group decisions don't get made in group settings. Groups hear and discuss, sometimes debate and argue, but they seldom decide as a unit. Rarely will you find a single decision maker. Rather, multiple decision makers — often including but not limited to the budget manager, a hierarchical leader and an informal leader — are involved in the final decision.

Thus, you need to appeal to fiscal prudence, leadership responsibility, charisma or all of the above. You don't need unanimity or an overwhelming mandate to generate group agreement; you need critical mass. Consensus is something everyone can live with, not something everyone would die for. With that in mind, focus on the pragmatism of the numbers.

**Seven Ways to "Influence Up."** Speak the language; deal with evidence, not opinions; find workable approaches; be concise; manage the clock; stand your ground and relish being the contrarian. These best practices to "influ-

ence up" are based on boldness and brevity, which strong senior people tend to appreciate and respond to positively.

**Seven Ways to "Influence Down."** Use your "home field advantage"; avoid condescension at all costs; be brief but not abrupt; leverage honest ingratiation; request input; provide opportunities for contributions and don't micromanage.

**Five Ways to Influence Sideways.** Cultivate favors by doing favors, link agendas, leverage loss aversion, covet your credibility and be fair.

## Persuasion 911

Persuasion turbulence occurs when new information appears, people are influenced by other opinions or X factors are in play. Be it a promotion, a firing or a merger, things happen that change a person's perspective on your request. But just because things get a bit bumpy doesn't mean your flight won't ultimately arrive at your intended destination. You simply need strategies for navigating "assent turbulence."

### Troubleshooting the Seven Most Common Weaknesses in a Pitch

**Lack of trust:** You'll know that trust is missing if your target fails to be forthcoming with information, asks for delays, acts guarded, and is curt and abrupt in responses — or worse, doesn't ask any follow-up questions. Response: Be 100 percent candid with your target, and address the elephant in the room.

**Lack of value:** This is indicated by no clear economic return on investment, no personal benefit for the target and no attempt to link qualitative returns to actual evidence. Value, as they say, is in the eye of the beholder. And the other person's eye is the one that needs to behold the benefits of your pitch. Response: Have your target stipulate what an effective return would be, at least theoretically.

**Lack of clarity:** You'll know your pitch isn't working when you're hit with a slew of questions, insistence on qualifiers, digressions and a lack of focus on what you believe the issue to be. Response: Eschew jargon, and focus on specifics.

**Poor timing:** Sometimes, it's not you; it's the timing. Priorities may be elsewhere. Perhaps it's your firm's busy season, or IT problems in the office are leaving employees distracted and ornery. Response: Try to avoid asking for something that directly conflicts with ongoing demands in the first place.

**Opposing self-interest:** This happens when the company, the department or the individual has a huge economic advantage to do exactly the opposite of what you are pursuing (or to do nothing at all). Response: This is a tough one, but there are ways to combat it, by appealing to corporate values or long-term benefits. Suggest that your pitch will not create a reversal of goals, and attempt to show your targets how a yes would support their private benefits in the longer term.

**X factors:** Suddenly, an unexpected "expert," such as an outside consultant, weighs in on your pitch. Or an unanticipated development, such as an acquisition or company reorganization, occurs. Response: Keep your persuasion priority moving forward, irrespective of the new information. If that's too bold of a move for you, make sure you have a Plan B.

**Machiavellian impulses:** This is when the people who tell you one thing (to keep you happy) then do another (to make them happy). Then they explain their behavior as a misunderstanding (to try to make you happy again). Response: Machiavellian types also hate the bright light because it exposes their dark corners, so keep issues in the light. Contain them, because it's pointless to fight them, and don't attempt head-on (or head-first) assaults.

## Yes Success

We plan for objections and we plan for resistance; but we often don't plan for success. This is a big mistake. Learning to handle this moment with panache will differentiate the Hall of Famers from the also-rans. This is because it is in the moment of yes that you can reassure your target that he or she has made a wise decision. And from there, you can begin to position yourself for even higher levels of persuasion success.

### Five Moment-of-Yes Don'ts

When you hear yes, you've accomplished your objective. So don't blow it by falling into one of the following five traps:

- Don't immediately reply with an incredulous "Really?" You don't want to appear gob-smacked that someone actually believes in your pitch.
- Don't keep trying to make your case. Just stop.
- Don't review your target's concerns.
- Don't be unprepared. If, for example, a purchase order needs to be signed, have it with you and ready to go. If you need to call someone to issue a verbal autho-

rization, have the contact's name and number programmed into your phone.
- Don't bask in the glow of your success. After your target says yes, hit the bases.

### Five Moment-of-Yes Dos

- Immediately shake hands.
- Offer a reinforcing comment. "This is going to be an exciting project." "We will do great work together." "Here's to accomplishing important work."
- Give a "next steps" overview. Here you want to be absolutely clear on what will happen next.
- Make sure your target takes action. Your target should be committed to the decision, not merely compliant. The only way that will happen is if she has something to do.
- Go public. This can take the form of letting just a few people around the lunch table know about the agreement, to distributing a company-wide memo, to alerting the local and national media. Going public makes that yes official by naming those accountable and broadcasting the commitment.

## The Psychology of Self-Persuasion

Whether it's chasing a new job, requesting a plum assignment or making a budget pitch to the board of directors, we all talk to ourselves before we take action. Many psychologists have labeled this ongoing mental dialogue "self-talk." These internal comments impact thoughts, emotions, actions, and ultimately careers and life itself.

If left unchecked, those thoughts often skew negative. Negative self-talk can be disastrous for your persuasion attempts. Here are some examples of what self-doubt looks like in the workplace: You don't apply for the open position; you don't make the pitch; you don't ask for help when you need it; you don't request a customer testimonial; you don't solicit your manager's recommendation or you don't request the sales referral.

All of these manifestations of self-doubt can become problematic for your persuasion efforts. Why? Because persuasion is about taking risks. Because it requires you to put yourself "out there" by taking a stance and asking for agreement. Because persuasion is mostly about taking action, not sitting back hoping the action will occur on account of someone else's effort. And because self-doubt can paralyze you.

### The Ultimate Guide to Self-Persuasion Success

To make the most of your newfound ability to persuade in any professional situation, be sure to practice persuasion by participating in the following activities at least once a day (if not more often):

1. Be cognitively aware of your internal dialogue.
2. Reframe negative thoughts. Don't scold. Fix.
3. Create an honest self-assessment. Make a list of your strengths and weaknesses. Then add either a piece of positive evidence or a solution after each one.
4. Use success ranges. Create ranges of success: Your threshold success might be that you make a positive impression and set another meeting, while your ultimate success might be that you secure a deal.
5. Understand the physical side of self-persuasion. Without enough rest, you won't be able to form your arguments, look your best and articulate your positions to the best of your abilities.
6. Boost your natural dopamine levels. Exercise can fuel dopamine production in your brain, making you feel good, look good and present your ideas with confidence.
7. Be present.
8. Undergo digital detox. Making digital detox a daily regimen will calm your thoughts and allow you to focus on the present.
9. Be convinced of your own value.
10. Use positive affirmations.
11. Create high-quality options. Never allow yourself to have just one option for your persuasion project. Always have a Plan A, a Plan B and a Plan C.
12. Keep a success journal.

If you want to be convincing, you have to be convinced. The first person who needs to say yes is you.

## How to Say It Right the First Time, Every Time

by Bill McGowan and Alisa Bowman

### THE SUMMARY IN BRIEF

During the pivotal moments of our lives, results are often determined not only by our actions but by our words as well. Saying the right thing the right way can make the difference between sealing the deal or losing the account, advancing your career or suffering a demotion. During these moments, it's important to be pitch perfect — to use precisely the right tone to convey the right message to the right person at the right time. Such pitch-perfect moments are crucial in our personal and professional journeys.

In *Pitch Perfect*, the renowned media coach Bill McGowan shows you how to craft just the right message and deliver it using the right language — both verbal and nonverbal. *Pitch Perfect* teaches you how to overcome common communication pitfalls by using McGowan's simple Principles of Persuasion, which are highly effective and easy to learn, implement and master.

The right language can make you more confident, persuasive and certain. With *Pitch Perfect* you can harness the power of persuasion and have people not only listening closely to your every word but also remembering you long after you've left the room.

### IN THIS SUMMARY, YOU WILL LEARN:

- Why Pitch-Perfect moments happen in business every day.
- The Seven Principles of Persuasion.
- How to stand out by displaying genuine interest.
- How to create compelling stories, anticipate questions and speak with conviction.

## The Language of Success

If eloquence were a commodity listed on the New York Stock Exchange, every analyst on Wall Street would issue a buy order. That's because its value constantly rises, and investment in it pays increasingly huge dividends. Great communication skills are your secret to holding someone's attention, making a persuasive point, being remembered, and appearing smart and confident. Every time you speak, it's an opportunity to inform, influence and inspire.

Saying the right thing the right way can make the difference between sealing the deal or losing the account, advancing in your career or stagnating, earning a powerful ally or burning an important career bridge. Get it right, and your reputation will shine from that halo effect awarded to those who are seen as confident, smart, likable and sincere. Get it wrong, and you run the risk of being labeled annoying, tedious, ineffectual or irrelevant.

Pitch-Perfect moments serve as crucial junctures in our personal and professional lives. In business they take place every day, sometimes several times a day. They come up during meetings, presentations, events, parties, in hallways, over coffee, on smartphones and in front of cameras.

We can all remember a few Pitch-Perfect moments. Maybe we muddled through the experience and managed to somehow get it right. Or maybe things didn't go so well. Rather than wow someone, we underwhelmed. We were Pitch Poor, and whenever we think about that experience we cringe, because there's no take two.

The thing is, it's not over. Sure, that one Pitch-Perfect opportunity has passed, but many, many more opportunities lie ahead. It has been estimated that we spend 70 to 80 percent of our waking hours in some form of communication. During many of those hours, we absolutely need to say it right.

### Secrets of Pitch-Perfect Communicators

Great communicators are not genetically predetermined. They are made. Nearly all great communicators have been coached. They also do the following:

**Practice:** Most professionals who make their living in front of audiences and cameras would never dream of ad-libbing. They all decide what they want to say long before they say it.

**Develop Distinctiveness:** Spoken communication today, especially in the workplace, has a numbing sameness to it. Many of us have adopted a monotonous lexicon of meaningless phrases that get delivered the same way. It's nothing more than a conformity zone that denies us the opportunity to develop a personal style that's distinctive.

**Show Crisp Conviction:** Good communicators don't equivocate. They don't start sentences with "I think that ... " They also avoid wishy-washy language, such as *sort of* and *kind of.* They have the courage to say what they mean and confidently state their point.

**Keep It Short:** More is not more. Researchers at Saint Louis University have found that 10 to 18 minutes is the length of time past which you begin a game of diminishing returns on your listener's attention.

**Display Sheer Delight:** Even if you need to fake it, you want to exude a palpable enthusiasm for the chance to get up and speak. If your audience is getting the sense that you're loving every minute of the opportunity, they will see your performance through a more favorable lens. Conversely, if you look uptight and nervous, that anxiety will spread to your audience.

## The Principles of Persuasion

Holding your audience's attention is like winning a tennis match at Wimbledon. You better have a clearly defined strategy, execute it brilliantly and muzzle any inner voice of self-doubt, or you'll get crushed. And thanks to a number of complicating factors brought on by the times in which we live, winning is getting harder.

For starters, we have a tortoise-and-hare-style speed disparity that exists between our brains and our mouths. Your listener is capable of absorbing 400 words per minute, yet you are capable of voicing only 125.

So what does the human brain do when it is not challenged to its full information-processing potential? It wanders far off the trail you're verbally trying to blaze, which is why your audience is hardwired to contemplate in the middle of your presentation such weighty issues as *I wonder if my son finished his science project. Is this guy kidding with his shirt-and-tie combination?* Perhaps not surprisingly, only about 20 percent of what we say makes a lasting impact.

And the quest for listener engagement is only getting tougher. Research commissioned by Lloyds TSB Insurance shows that 10 years ago, the average person could easily pay close attention for roughly 12 minutes. Now five minutes is more realistic. Why? Pinging, poking, tweeting and Snapchatting have recalibrated our definition of sustained focus, with the average person being exposed to 5,000 messages a day. As a result, our collective attention spans seem to be shrinking faster than the ozone layer.

As attention deficits grow, the techniques we use to keep people's attention need to be more and more effective.

### The Seven Principles

No matter how toned or flabby your verbal communication muscle, the Seven Principles of Persuasion can help you get into game shape.

**The Headline Principle:** Get attention by starting with your best material, especially a grabbing, thought-provoking line that makes listeners think, *I want to know more.*

**The Scorsese Principle:** Hold attention with visual images that illustrate a story.

**The Pasta-Sauce Principle:** Cure boredom by boiling down your message, making it as rich and brief as possible.

**The No-Tailgating Principle:** The speed with which you talk should be directly proportional to how certain you are about the next sentence coming out of your mouth.

**The Conviction Principle:** Convey certainty with words, eye contact, posture and tone of voice.

**The Curiosity Principle:** The best broadcast interviewers earn trust by displaying genuine interest, as if there is nowhere else they'd rather be.

**The Draper Principle:** The best way to stay on point is to make sure the flow and focus of the discussion plays to your strengths. If it strays elsewhere, away from an area in which you can shine, transition it back.

When you use the Principles of Persuasion to your advantage, you'll feel confident and at peace as you win the client, nail the job interview or deliver the best speech of your life.

## The Headline Principle

The first 30 seconds of any conversation or presentation are like the last two minutes of a football game. This is when victory or defeat is determined, the period of time when your audience is deciding whether you are interesting enough for them to continue paying attention. Say just the right thing, and the communication game is yours. Your audience gets hooked, and they're enticed to hear what you will say next. Get it wrong, and your listeners start daydreaming, checking their smartphones or plotting their conversational exit strategy. Unfortunately, more speakers get it wrong than right.

### Talk Like a Journalist

Think of how a journalist writes a news story. Good journalists put their most compelling material in the first paragraph, known as *the lead.* This is the sentence or paragraph that grabs the readers or viewers, enticing them to want more. An effective lead is often surprising — even counterintuitive. It makes the reader think, *What's this about? I want to know more.*

In television, "teases" are short snippets of copy that come just before a commercial break. Teases are meant to discourage viewers from surfing other channels or getting up and leaving the room. The elements of a good tease are the same as a good opening for a conversation or presentation. Good teases generally have three characteristics:

**Short:** Convey it quickly, in just a line or two.

**Suspenseful:** Include an element of intrigue. Beginning your remarks with a story or some declarative, provocative statement works nicely. It gets your audience mentally chewing on something right away, which is what you want to accomplish.

**Surprising:** Make your tease the opposite of a cliche, something that makes your listeners think, *This is new. I've*

*never heard this before.* Do the unexpected, and employ a different style.

Not every opener includes all three traits, but great openers include many of them. Steve Jobs once opened a speech back in 1984 with the line, "Hi, I'm Steve Jobs." It was short, and it was also surprising. You wouldn't expect Jobs to introduce himself, considering that everyone in the auditorium knew him and had come specifically to hear him speak. After laughter and applause faded, he hooked his audience by immediately launching into a story: "It is 1958. IBM passes up the chance to buy a young, fledgling company that has invented a new technology called xerography."

Notice that he did not start by saying, "I want to spend a little time this morning walking you through some of the historical context of the early days of personal computers and illustrate how it relates to Apple's current mission from an innovation perspective."

Don't spend hours trying to force your openers into a three-S box. Just use the three S's as a guide and a source of inspiration that helps you find your best material.

### Where Great Headlines Lurk

Simply put, your headline is your best material. It's the lines that come after "You'll never believe this!" and "Did you know that...?" When coming up with headlines, consider the stories you tell friends and coworkers as an aside. Also look for strong statements, ones that you might be tempted to bury later in a conversation or speech. Many people make the mistake of building up to a provocative statement rather than leading with it. Often they'll be five minutes into their prepared material when I'll stop them and say, "The line that you just said? That's your opener."

They often reply, "Really? You want me to start there?"

Absolutely.

## The Scorsese Principle

Visual storytelling is the sweet spot of good communication. In this way, good communicators are a lot like film directors. They tell stories that paint visual pictures in the minds of their listeners. They provide rich detail but also manage to keep it tight.

According to a recent study, facts are 22 times more likely to be recalled when they are told in stories, and images are 60 thousand times more memorable than words. That's because humans are visual creatures. A movie reel is constantly spinning inside our brains. As a speaker, you want to be the director of that reel. If you illustrate your point with colorful stories your listeners can imagine, you will keep your listeners satiated — and satiated listeners are engaged listeners.

### The Formula for Great Stories

So maybe you don't think you're a good storyteller. Perhaps you feel anecdotes don't come naturally to you. If you've told jokes in the past, only to have the punch lines land with a thud, the traumatic memory now probably puts a crimp in your storytelling style.

The good news is that telling a good joke or story is a product of both nature and nurture. If storytelling is not an innate talent, then for the time being, let's think of it as having a certain formula:

**The Setup:** Resist the urge to forecast or signpost. Many presentations are ruined by the speaker saying, "To illustrate this point, I'd like to share with you an anecdote." Does a Broadway actor stop in the middle of a scene to announce that a dramatic section of dialogue is coming up? Weave stories into your presentations, but don't make them feel like an afterthought that got shoehorned in to an otherwise bland presentation.

**The Build:** Your build sets the scene, introduces key characters, and hints at some tension or conflict to be resolved. It also takes your listeners out of their heads and puts them inside yours, helping them to see exactly what you are visually describing.

**The Reveal:** This is the anecdotal equivalent of a joke's punch line. It's the payoff or the reward to your listener for staying attentive through the buildup. It's even more potent when it's counterintuitive, something your listener is not expecting.

**The Exit:** Once you deliver the reveal, let it sit there for a beat or two. Many people worry that they'll lose the audience when they stop talking. Yet, pausing creates the opposite effect. It allows your story to sink in and ensures that your audience can fully take in the meaning of what you've just told them.

### How to Add Some Scorsese

You might be tempted to think, *Some stories just aren't visual.* Not long ago, an economist was in my office for media training. He wanted to make the point that countries like Brazil had improved their economies immensely in just 30 years. His inclination was to deliver the point as if he were in a Harvard Business School lecture hall: "When you look at a country like Brazil from a short-term historical perspective, the macro view you have is of a country that has transformed itself from one of enormous currency

volatility and hyperinflation to one of stable growth."

That's the kind of point that is begging for visual detail. It's also precisely the kind of point that many people assume can't be made visual.

Except it can. I asked this client to describe what was going on in Brazil back in the 1980s. "If you remember in Brazil 30 years ago, people were loading bags of suddenly worthless cash into wheelbarrows and carting them off to their local bank to trade them in for a mere walletful of the new currency the government had introduced that week ... that's how bad inflation was. It was like showing up at a boutique with a dozen tattered and soiled evening dresses and hoping to exchange them for one new blouse," he said.

Now that's better. Visual anecdote + analogy ≠ boredom.

## The Pasta-Sauce Principle

There are several incredible parallels between cooking and communicating. Two in particular stand out: less is more, and simpler is better. In fact, good communication is a lot like pasta sauce. The more you boil down and reduce a sauce, the more dynamic the flavor. Speaking redundantly and using filler words in your communication is like adding water to the sauce. The result is something bland and forgettable.

Why do people go on too long? Usually they do it for one or more of the following reasons: to drive home a point, to seem smart, to take up the full time that was allotted, poor planning and to exploit a captive audience.

### How to Boil Down a Message

If you struggle with the whole notion of brevity, it might be useful to think of words like calories. Every day you have a set number to play with, let's say two thousand. Exceeding that amount never leads to anything good. If we were all put on a verbal diet, we'd make what we say really matter and become more effective communicators.

Your communication should leave people feeling satisfied, not stuffed and bloated. But being concise is hard to do. It takes practice. If you struggle to boil things down, try this:

**Develop Decisive Starts and Finishes:** Know your opening — the first 60 to 90 seconds of content that will come out of your mouth — and have it down cold. That's when you're going to be the most nervous, so leave nothing to chance. Once you're out of the starting blocks cleanly and smoothly, your confidence will build. The same holds true for your close. It should be a definitive destination you're driving to with a sense of purpose. Make it firm, and give it a little punch.

**Sever Your Emotional Ties to the Content:** Rarely do I come across a client's presentation that isn't improved by cutting it by 25 percent. Don't fall so deeply in love with your own content that you can't see that some of it is excess. Your audience will not miss all the elements that were in the original version.

**Use the Headline Principle:** Get to your point immediately. Don't slowly build up to it.

**Practice, Practice, Practice:** Time yourself each time, continually shrinking your delivery until you've got your message boiled down to its most flavorful essence.

**Don't Commit to a Number:** Do you remember the moment Rick Perry lost his bid for the 2012 Republican nomination for president? It was when he said he would eliminate three departments from the U.S. government, but he could remember only two of them. Forecasting exactly how many points you are going to make is riskier than leaving it more general with "several" or "a few."

**Always Leave Them Wanting More:** Nothing makes people sink down into their chairs more than the line, "So let me just quickly recap what we just went over." Instead, at the end of your presentation, suggest they try something new or adopt a new strategy or way of thinking, and then project the future benefits they'll reap if they heed your advice.

The best way to master the Pasta-Sauce Principle is to pay attention to your words as well as the words of others. Do that, and you'll find that much of what you and others say just isn't necessary and that every point could be made better and clearer with fewer words rather than more.

## The No-Tailgating Principle

Think of your brain and your mouth as two cars traveling down a road. The brain is the lead car, and the mouth is drafting a millisecond right behind, conversationally steering in the direction the brain tells it to go. At any given moment, the brain is choosing which verbal road to travel and the exact words needed to articulate each thought.

The more slowly you drive the rear car (your mouth), the more time you give your brain to carefully decide where the mouth is going next. Likewise, your mouth has more time to smoothly turn in any given conversational direction the brain tells it to go. It's like following a friend who is driving in a separate car in front of you. The more time you give each other to prepare to turn or stop, the smoother and less dangerous the maneuver will be.

The object is to keep your mouth a safe car length from your brain. The more quickly you talk, however, the closer the mouth travels to the brain. I call this verbal tailgating. When this happens, the brain doesn't have enough time to make careful and thoughtful decisions. End result: the brain is forced into choosing the first direction (or thought) rather than the best one. This is why we often find ourselves in a conversational dead end, saying something irrelevant or, worse, inappropriate.

### How to Maintain a Safe Talking Distance

You probably think you talk more slowly and pause more often than you really do. A recording will give you an accurate measure of your vocal pace. It will also help you to hear your fillers, verbal backspacing and other foibles. Modern technology makes recording yourself quite easy. You can use a webcam, a tablet or a smartphone. When you play back the recording, take notice of filler words, verbal fender benders, verbal backspacing, tangents, repetitions and lost trains of thought.

As you work on improving your delivery, use these pointers:

**Mix Up Your Pace:** Feel the freedom to briskly deliver thoughts that are quite familiar to you (ones you've said repeatedly to others), and then slow down to drive home your most important points or content that is less familiar to you.

**Talk Cleanly:** The idea is to eliminate all the obscure jargon, the filler, the showoff vocabulary and the complex, flowery, verbose sentence structure. Keeping it simple, straightforward and clean gives your brain enough time to sort out the next thought, allowing you to progress from one idea to the next in an orderly, focused and persuasive manner.

**When in Doubt, Stop Talking:** The more uncertain you are about your next words, the more slowly you should speak, even coming to a dead stop if needed.

**Focus on What You Want to Say, Not on What You Think the Audience is Thinking:** There is not enough bandwidth in your brain for you to concentrate simultaneously on your point, your delivery, and what you think your listener might be thinking based on his or her facial expressions.

**Listen More, Talk Less:** Listening is one of the most effective compliments we have to offer. It validates others and makes them feel supported, and it also gives us a chance to thoughtfully prepare what we want to say. Attentive listening is becoming an increasingly rare commodity, which is why it is so easy to stand out and make a great impression by demonstrating that the art is not lost on you.

## The Conviction Principle

When you speak, you want to sound filled with relentless conviction, exuding enthusiasm for the value of the information you're sharing. Your words, eye movement, posture, pitch and tone of voice must convey certainty. But demonstrating unshakable self-confidence is a process, especially if deep down you're feeling anything but. I often tell clients there are three stages of public speaking:

**Stage 1: Dread**
**Stage 2: Tolerance**
**Stage 3: Enjoyment**

Just because you may be starting in stage one doesn't mean your audience has to know that. The trick is to simulate your sense of enjoyment until you can actually experience it for real.

### Don't Copy Your Colleagues

One of the worst ways to practice the Conviction Principle? Watch what many of your colleagues do and then try to emulate them. Three bad speaking habits pervade much of the business world:

**Cliches:** In a recent poll, Britons chose the insipid expression "at the end of the day" as the number one cliche infecting the king's English. Another cliche that has infected every corporation in America is referring to a problem as a "challenge" or, worse yet, declaring that "we don't see this so much as a challenge but rather as an opportunity."

**Industryspeak:** Every industry has its jargon — words and phrases that everyone uses but hardly anyone truly understands. Using meaningless corporatespeak is a crutch that obstructs the true depth of your knowledge. To kick the jargon habit, practice your next presentation out loud using the recording device on your smartphone. Then take the audio content and have it transcribed. You see all those red lines under words like *efforting, choiceful* and *incentivization*? That's a gentle reminder from your computer that you are using a made-up word. If it's not real, you shouldn't be using it.

**Oversimplification:** The opposite of industryspeak is what many people call "dumbing it down." I'm all in favor of keeping communications simple and straightforward, but I've seen too many videos of people who think they're great communicators talking to people as though they're four-year-olds. Such verbal pabulum is downright offensive.

### Staying Confident in Rough Conversations

Nowhere is the Conviction Principle more important than during uncomfortable and tense conversations, the kind we all try hard to avoid. When you find yourself amid conversational tension, try these tactics:

**Validate; Don't Bully:** Validating others' opinions, even if they're contrary to our own, is mistakenly thought of as a sign of weakness in this era of cable-news bombast.

**Find a Way to Agree:** Highlighting even the tiniest sliver of common ground is such an outdated notion that it actually is fresh and new again.

**Point Out a Strength:** Acknowledging people's strengths while telling them they've got some issue to resolve is a good way to bring balance to the conversation and avoid making them feel ashamed or embarrassed. Think of adopting the "critique sandwich" model. In it, the critical meat of what you have to say is sandwiched between two acknowledgments of their strengths or something they do well.

## The Curiosity Principle

Have you ever come home from a party and felt exhausted, as if every conversation sucked the life from you like one of those Dementor creatures in Harry Potter? With any luck, those occasions are more than balanced by the social events that leave you feeling invigorated and happy. The key ingredient that makes a conversation truly great is curiosity. Too bad it's an ingredient that's becoming harder and harder to find.

The majority of us have no idea what kind of vibe we give off when we're listening. We may very well be captivated, yet we inadvertently come off as if we're really thinking about something else. The Curiosity Principle will help you to overcome this mismatch between how you feel inside and how you appear on the outside. It will also help you to fuel important conversations, score personal points and take someone's pulse. The more often you listen with curiosity, the more skilled you will be at reading people, an enormously valuable asset to develop and fine-tune.

### The Elements of Curiosity

The art of conversation seems to be going the way of the pay phone. Hardly anybody uses it, so you don't find much of it around. That's because many people mistakenly believe that the most important skill a conversationalist needs is the ability to talk endlessly. So they talk *at* people rather than *with* them.

In reality, the best conversationalists are extremely good listeners, and they display three rare characteristics:

**Interest:** Being a good conversationalist requires attentiveness and enthusiasm. It doesn't mean that you have to create a new BFF. The trick is to listen for some nugget of information that inspires you to want to know more about a particular topic.

**Generosity:** Your likability is central to your success; people will seek you out if you are a generous conversationalist. If you're a selfish hog who talks only about yourself, you'll quickly become known as the crashing bore everyone wants to avoid. But if you include people, ask for their input, seek out their stories, thoughtfully consider their dissenting opinions without bombastic ridicule, you will exude an aura others gravitate to.

**Modesty:** It's easy to trick ourselves into thinking that modesty and humility have no place in today's ubercompetitive business world, where we're all told to advertise ourselves as diligently as Disney markets the magic of its theme parks. But in the art of self-promotion, there's no need to be shameless. It just requires a little finesse. If someone is blathering on about clients who don't pay their bills on time, say, "I also see a lot of that in my work," or "Fortunately, I don't have to contend with that too much in our business." Only somebody thick as a brick would not be lured into asking, "Oh yeah, what do you do?" Self-promotion and modesty are not mutually exclusive.

## The Draper Principle

Don Draper, the main character of the hit show *Mad Men,* spouts advertising advice that's nearly identical to what I tell my clients for public speaking, job interviews, media interviews and just about all high-stakes conversational situations. One Draper mantra has risen above all others: "If you don't like what's being said, change the conversation."

Many people go into job and media interviews disregarding Draper's advice. Rather than steering the conversation away from areas that are not their strength, they obediently answer just the questions the interviewer asks. This is like sitting in the back of a car being taken for a joyride. Will the car end up where you want it to go?

Probably not. Passively allowing others to dictate the content and flow of a discussion takes the steering wheel out of your hands, something you want to avoid.

### How to Talk Like Don

Here are some techniques that might help you to steer any conversation in any direction you choose — without leaving the other participants feeling as though you've hijacked the discussion.

**Get Inside Your Interviewer's Head:** Before heading into any Pitch-Perfect situation, think about the types of questions and topics you might encounter. What will others likely ask you? What material might your listeners want to know about? What is most likely to come up?

**Anticipate the Question:** Curious listening allows you to better plan your response. To get a jump on where a question will go, pay close attention to the very beginning of what someone says. Before someone ever asks you a question, she or he gives you plenty of contextual clues that set up that question. You'll hear opinion or observations that relate to the question someone is going to ask many sentences later.

**Line Up the Pitch-Perfect Triumvirate:** When you develop the new skill of listening to the question with heightened attention to the first sentence or so, you will find that you can identify the topic of the question much earlier. This will allow you valuable time to answer three key questions:

1) What's my point?
2) How will I illustrate it (an example, story or data)?
3) What are the first five words out of my mouth?

This three-step process will keep you from rambling and meandering your way through some long-winded and redundant speech.

## The Seven Principles at Work

Many of my former colleagues wanted help navigating delicate situations: delivering bad news, admitting a mistake and rectifying it, managing a contentious relationship with a rival colleague. It seemed that no matter the specifics of my advice, the basic equation was the same: Fairness + Honesty + Empathy = Good Outcome.

The empathy piece is huge. The value of getting outside our own heads and understanding how a problem looks to the other person cannot be overestimated. In addition, actually validating another person's position, even if counter to your own, is often a powerful part of the mix.

### How Do I Reprimand Employees While Keeping Them Motivated?

Communicating a delicate, sensitive or unwelcome message to someone is the ultimate high-wire act. Too much diplomacy and subtlety might result in your message not coming through. Position it too bluntly and aggressively, and the recipient winds up wounded, defensive and incapable of seeing the merit in your point. How do you find the rare middle ground between these two extremes?

First, don't initiate the conversation with "We need to talk" or mention anything about "paying dues." To turn this problem employee around, blend empathy with concern for his or her well-being. To do so, start off with an empathetic question. Wait for the answer. Then offer the reason for your concern. You want to make it absolutely clear that you are an ally and not an adversary. Put yourself in the role of mentor rather than boss. If your employee is convinced of that, then he or she will be more open and receptive to what you have to say.

### How Do I Apologize for a Mistake?

If you're going to say "I'm sorry," don't make it half-hearted. Don't try to qualify or justify. Don't point fingers or shift the blame. Don't drift into TMI territory, providing endless detailed explanation nobody wants to hear. The more details you offer, the worse you look, and the more you call the authenticity of your apology into question. Think of an apology as a three-part process: own the mistake; couch it as the rare exception — not the norm; and forecast a positive result still ahead. No matter what the situation, no matter what the mishap, people essentially want to be reassured by a calming, confident voice that everything's going to be okay.

You face Pitch-Perfect situations every day. Use them to your advantage. Put the principles into practice everywhere you go.

### The Art of Selling Your Story

# PRESENTING TO WIN

## THE SUMMARY IN BRIEF

*Thirty million presentations will be given today. Millions will fail. Millions more will be received with yawns. A rare few will establish the most profound connection, in which presenter and audience will understand each other perfectly, discover common ground, and together, decide to act. If you want your presentation to succeed, you must present to win. Transform your presentations from dry recitals of facts into compelling stories with a laser-sharp focus on what matters most: what's in it for your audience.*

*In* Presenting to Win, *corporate presentations coach Jerry Weissman shows how to create power presentations that will inform and persuade even the most hostile of audiences.*

## What You'll Learn In This Summary

✓ How you can convince even the toughest audience with techniques that have been proven in hundreds of IPO road shows.

✓ What you must do to tell your story and how you can identify your real goals and message.

✓ How you can use the power of WIIFY — What's In It For You — to stay focused on what your audience really cares about.

✓ How to go about brainstorming what will be included in your presentation, ensuring that no important ideas are left out and no irrelevant ones make their way in.

✓ How to use Opening Gambits and compelling linkages to capture your audience's attention in the first 90 seconds and keeping their attention through the end.

✓ How to create a winning and effective presentation, including making the most of bullets, graphics, charts and special effects.

✓ How to practice your presentation using your prepares slides as your guide.

# PRESENTING TO WIN

**by Jerry Weissman**

## — THE *COMPLETE* SUMMARY

## You and Your Audience

Few human activities are done as often as presentations, and as poorly. How many are truly memorable, effective and persuasive? Probably only a handful. The vast majority of presentations fall prey to the Five Cardinal Sins:

- **No clear point.** The audience leaves the presentation wondering what it was all about.
- **No audience benefit.** The presentation fails to show how the audience can benefit from the information.
- **No clear flow.** The sequence of ideas is so confusing that the audience is unable to follow.
- **Too detailed.** The main point is obscured by irrelevant information.
- **Too long.** The audience loses focus and gets bored.

Every time you make a presentation, you are trying to get the audience to do your bidding. The key to getting them to act is to build a Power Presentation — one that avoids the five cardinal sins.

### *The Power Presentation*

Most people in business are too busy living their stories to focus on telling them. They live, eat, breathe and dream their businesses. They see every single tree, but not the forest. They rarely have the opportunity to step back and see the whole. The remedy is painfully apparent: Focus. Give the audience only what it needs to know.

Whether it is a formal presentation, speech, sales pitch, seminar or jury summation, every communication has as its goal to take the audience from where it is at the start of your presentation (Point A) to your objective (Point B). This dynamic shift is persuasion.

- **Point A** is the inert place where your audience starts. They are *uninformed*, knowing little about you or your business, *dubious*, skeptical and ready to question your claims. They may even be *resistant* and mentally committed to a position contrary to what you're asking them to do.
- **Point B** is what you want them to do. To reach Point B, you must move the *uninformed* audience to *understand*, the *dubious* audience to *believe* and the *resistant* audience to *act*. Point B is the endgame of every presentation.

The only way to create a successful presentation is to begin with the goal in mind.

### *Audience Advocacy*

To get your audience to Point B, you must learn to view yourself, your company, your story and your presentation through the eyes of your audience. This is called *Audience Advocacy.* Everything you say and do in your presentation must serve the needs of your audience. If Audience Advocacy guides every decision in preparing your presentation, you'll be effective and persuasive.

Start by shifting the focus from features to benefits. A feature is a fact or quality about you or your company, the products you sell or the idea you're advocating. By contrast, a benefit is how that fact or quality will help your audience. When you seek to persuade, it's never enough to present the features of what you're selling — every feature must always be translated into a benefit. For people to act on anything, they must have a reason to act, and it must be *their* reason, not yours.

### *The Power of WIIFY*

The key building block for Audience Advocacy is *WIIFY* — What's In It For You. The WIIFY is the audience benefit. In any presentation, before you make any statement about yourself or your company, or the products and services you offer, ask yourself, "What's the WIIFY? What benefit does this offer my listener?"

Some examples of What's In It For You include:

## You and Your Audience

*(continued from page 2)*

- When an entrepreneurial CEO and his or her management team launch an IPO road show for potential investors, the WIIFY is, "If you invest in our company, you'll enjoy an excellent return for your money."
- When a corporate headhunter makes a job offer to a sought-after young recruit, the WIIFY is, "If you join our firm, you'll be starting an incredible career with great pay, fascinating challenges and the prospect of someday becoming company president!"
- When a partner in a marketing consulting firm makes a new-business proposal to the chief operating officer of a Fortune 500 company, the WIIFY is, "If you hire us, the expertise we'll provide will improve your promotional plans, increase your market share, boost your profits, and your personal stock options will double in value!" ■

For Additional Information on another example of WIIFY, go to: http://my.summary.com

# Avoid the Data Dump: Too Much Information, Not Enough Focus

Too many businesspeople labor under the mistaken assumption that for their audience to understand anything, they have to be told everything. The result is long, extensive presentations that amount to nothing more than Data Dumps.

It goes something like this: "Let's show them the statistics about the growth of the market. Then we've got the results of the last two customer satisfaction surveys. Throw in some excerpts from the press coverage we got after out product launch. Give them the highlights of our executive team's resumes. And don't forget the financial figures, the more the better."

This is a formula for a failed presentation. Your audience will either be overwhelmed by the information or will simply give up and declare, "So what?"

The Data Dump must be part of your preparation, not the presentation. You need a proven system to incorporate it into the development of the story you will tell.

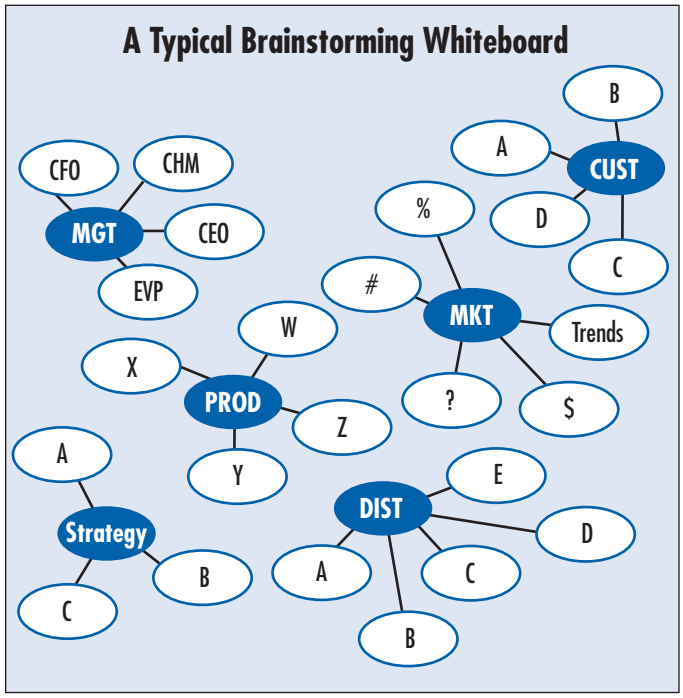
Brainstorming is the ticket. It's a process that encourages free association, creativity, randomness and openness while helping you consider all the information that may or may not belong in your presentation. Later on in the process, you can sort, select, eliminate, add and organize these raw materials into a form that flows logically and compellingly from Point A to Point B.

### *Setting Parameters*

Think of your presentation as a blank canvas within a frame. This is where you will do your brainstorming. To tighten the focus, you will need to set the parameters of your presentation. These parameters include:

- **Point B.** Start with the objective in sight and work toward it. Remember the first of the Cardinal Sins? *Presentations that lack a clear point.* Identify Point B and you won't commit the first sin.
- **The Audience.** Analyze what your intended audience knows and what it needs to know to understand, believe or act on what you are asking. First ask yourself who will be in the audience. Then define the level of their knowledge of your topic. And don't forget the WIIFY. This is the most important factor in your audience analysis. Ask yourself: What does your audience want? How does the subject of your presentation offer it to them? How can you make the benefits to your audience crystal clear?
- **External Factors.** External factors can impact your message. Some will be positive while others will be negative. For example, when making an investment pitch, the fact that there is a rapidly expanding market for your product is a positive external factor while the emergence of new competition in that market is a negative external factor.
- **The Setting.** Keep in mind the physical setting of your presentation. Who will be presenting? When will the presentation take place and how much time is allotted? Where will it take place? Will there be time for discussion or is it a large group presentation where only you will have the microphone and will likely be uninterrupted? And finally, what kind of audiovisual aids will you be using and will there be a demonstration?

### *The Brainstorming Session*



Once you have set the context and the focus, you're ready to begin developing potential concepts.

You can launch a brainstorming session by having someone call out an idea about something that might go into the presentation. Jot down the word on a white board and draw a circle around it. That concept is now a self-contained nugget.

As each new concept comes up, the entire group should help "explode" the concept. Pop up whatever ideas come to mind that are related to the nugget. (Use different colored markers to separate different levels of ideas.)

- Continue the process with new concept nuggets and related ideas. Your whiteboard will have a series of circles connected to other circles.

*(continued on page 4)*

## Avoid the Data Dump: Too Much Information, Not Enough Focus

*(continued from page 3)*

### *Clustering*

Brainstorming generates ideas of varying importance, loosely related to one another. Getting from relative chaos to an organized, clearly focused presentation requires a technique known as Clustering. When you look at your whiteboard filled with ideas, you will find key clusters emerging from the chaos. Examine the whiteboard and use a new colored marker to highlight the most significant ideas — making them stand out visually from the mass of data.

You may be tempted to avoid the messy stage of Brainstorming and simply identify your main ideas. Don't do it. Always start with unloading a "splat" of ideas in whatever order they come in. Do your polish later. You're so close to your business that it's easy to take key ideas for granted. That's why it's so important to get it all out during your presentation. ■

**For Additional Information on how the Ancient Romans used clustering in presentations, go to: http://my.summary.com**

# Finding Your Flow

It's time to decide the order in which your ideas will flow. Remember, your audience has only linear access to your content, one slide at a time. Make it easy for them to follow your presentation. Don't make them think!

There are proven techniques for organizing ideas into a logical sequence to create lucid and persuasive presentations. They are called the 16 *flow structures*:

**Modular.** This method presents a sequence of similar parts, units or components in which the order of the units is interchangeable. This option is difficult to follow and should be used sparingly, as in financial presentations.

**Chronological.** This option organizes clusters of ideas along a time line. This format is ideal when your presentation consists of a story that deals with change. Take, for example, the fictitious acquisition by Goliath Software of David Software. To help David software developers feel at home, you might use a presentation that shows Goliath's growth, where it is today, how and why the acquisition occurred, and how the two companies will move ahead in the future. David employees will begin building strong connections with their new employer when they understand the change process.

**Physical.** This flow structure organizes clusters of ideas according to their physical or geographic location. For example, if you are selling the advantages of using your global distribution network, you might organize your presentation around each location, demonstrating how each connects into a global network that can serve customers better than any other distribution company.

**Spatial.** This method organizes ideas conceptually. In this case, ideas are arranged according to a physical metaphor or analogy, such as in a pyramid or inverted pyramid or concentric circles.

**Problem/Solution.** This technique organizes the presentation around a problem and a solution offered by you or your company. Many companies in the life sciences use this format when doing a road show to raise private or public capital. To attract investors, they describe a medical problem and how they can solve it with their unique product or service. Just be sure to spend as little time as necessary on the problem and as much time as possible on your solution.

**Issues/Actions.** This structure organizes the presentation around one or more issues and the actions you propose to address them. Outside the life sciences, the issues/actions variation of the problem/solution presentation may be more effective. Focus on actions. This is often used by companies in turnaround mode. They identify the issues they are facing and the actions they are planning to take to overcome them.

**Opportunity/Leverage.** This format organizes the presentation around business opportunities and the leverage you or your company will implement to take advantage of them. This is most often the format of IPO road shows because it appeals to the investor audience's

*(continued on page 5)*

## Finding Your Flow

*(continued from page 4)*

essential interest in growth. It identifies an opportunity and immediately shows how your company can take advantage of it.

**Form/Function.** This structure organizes the presentation around a single central business concept, method or technology with multiple applications or functions emanating from that central core.

**Features/Benefits.** This method organizes your presentation around your product or service features and the concrete benefits provided by those features.

**Case Study.** This technique presents a narrative recounting of how you or your company solved a particular problem or met the needs of a particular customer. In the telling, you cover all aspects of your business and its environment. A pharmaceutical company might tell the story of John Smith, for example, who suffered from a particular disease and was helped by your company. As you tell his story, you also tell your company's story and help the audience see the human side to your business.

**Argument/Fallacy.** This method raises arguments against your own case and then rebuts them by pointing out the fallacies that underlie them. This is a good approach to use with a skeptical or even hostile audience. Raise arguments against your own case and then knock them out of the water by showing they're false. The idea is to pre-empt audience objections.

**Compare/Contrast.** This option organizes the presentation around a series of comparisons that illustrate the differences between your company and others. Focus on what makes your company special.

**Matrix.** This structure uses a two-by-two or larger diagram to organize a complex series of concepts into an easy-to-digest, easy-to-follow and easy-to-remember form.

**Parallel Tracks.** This format drills down into a series of related ideas with an identical set of subsets for each idea. For example, a biotech company might explain one disease, such as an allergic reaction, and call it the *disease mechanism*. This is followed by a description of the company's *drug product*, an explanation of how the company's patented drug treats the disease — the *mechanism of action* — and a description of who is affected by the disease, the *market*. Each drug in the company's stable is described the same way: first the disease mechanism, then the drug product, the mechanism of actions and, finally, the market for the drug.

**Rhetorical Questions.** This technique asks, then answers, questions that are likely to be foremost in the minds of your audience.

### The Four Critical Questions

You have seen how you can begin creating a presentation, starting with the Framework Form, doing Brainstorming and Clustering, and sequencing them into a logical path with a specific Flow Structure. All these steps can be further distilled into Four Critical Questions. They are:

1. **What is your Point B?**
2. **Who is your audience and what is its What's In It For You?**
3. **What are your clusters?**
4. **Which Flow Structure have you chosen?**

**Numerical.** This method enumerates a series of loosely connected ideas, facts or arguments. Think of this presentation style as a David Letterman top 10 list.

Is one flow structure better than another? Not really. But do pick one or two. If you fail to choose, your presentation will drift, your audience will become confused, and you'll never get them to Point B. It's less important which Flow Structure you choose than that you choose one. ■

**For Additional Information on a powerful example of the use of Flow Structure in a presidential speech, go to: http://my.summary.com**

# Capturing Your Audience Immediately

Picture your audience at the start of your presentation. What are they focused on? Chances are it isn't you. If you were to launch into your presentation at full speed, chances are you would vault ahead of your audience and they would never catch up. Remember, *don't make them think!*

The Opening Gambit can overcome this problem. The Opening Gambit is a short statement you can use to seize the attention of your audience. There are seven Opening Gambits from which to choose. They are:

**1. Question.** Direct a question at your audience. A well-chosen, relevant question evokes an immediate response, breaks down barriers, and gets audience members thinking about how your message applies to them.

**2. Factoid — a striking statistic or little-known fact.** The factoid must be closely related to the main theme of your presentation. It can be a market growth figure, a detail about a demographic, or a social trend.

**3. Retrospective/Prospective — a look backward or forward; a "that was then, this is now" approach.** If

*(continued on page 6)*

## Capturing Your Audience Immediately

*(continued from page 5)*

you're selling computer chips, for example, start with a look at speeds five years ago, today, and then project them into the future.

**4. Anecdote — a short human interest story, related to your Point B.**

**5. Quotation — an endorsement about your business from a respected source.** Be sure it is relevant.

**6. Aphorism — a familiar saying.** Examples include: "The whole is greater than the sum of its parts," "Seeing is believing," and "Easier said than done."

**7. Analogy — a comparison between two seemingly unrelated items that helps illuminate a complex, arcane or obscure topic.** The simpler and clearer, the better.

To make the opening of your presentation most effective, link your Opening Gambit to Point B. You'll need two additional stepping stones to get there — the *Unique Selling Proposition* (USP) and the *Proof of Concept.*

The USP is a very succinct summary of your business, the basic premise that describes what your company does, makes or offers. Think of the USP as the "elevator" pitch of your presentation — the way you'd pitch yourself if you stepped into an elevator and suddenly saw a hot prospect. It should be one or two sentences long. The USP, simply put, is what your company does.

The Proof of Concept is a single telling point that validates your USP. It gives instant credibility to your business. For example, if your USP is that you make the best consumer accounting software, your proof of concept might be that the software won a prestigious consumer award.

Think of your Opening Gambit, your USP, your Proof of Concept, and your Point B as dynamic inflection points. Once you've segued smoothly through each of them at the start of your presentation, your audience will be primed for the heart of your argument. You will have grabbed your audience's attention, and they will be very clear about where you want them to go. Now it's time for you to tell them how you intend to navigate them there.

### *Tell 'em What You're Gonna Tell 'em*

Now that you've caught the audience's attention, are you going to dive directly into the body of your presentation? Not quite yet. Take a moment to give your audience a preview of your major ideas. The technique for helping your audience become oriented is the classic *Tell 'em what you're gonna tell 'em.* Do this by giving the audience a link forward to your Point B and by telling them how long your presentation will be. ■

## Winning Over the Toughest Crowd

When Jim Flautt, a vice president of marketing at DigitalThink, had to do a presentation to a group of first graders at his son's school, he used all the techniques he had learned would work on executives. He was scheduled to talk to the squirmy youngsters about submarines.

He began with the call-for-a-show-of-hands Opening Gambit. Flautt had three questions: "How many of you know what a submarine is?" All the first graders raised their hands. Then he asked, "How many of you have seen a submarine?" Half the students in the class raised their hands. "And how many of you have ever seen a submarine fly?" Now all the first graders giggled and smiled. He had their attention.

He continued on to Point B: "I'm here today to tell you all about submarines." Then, linking forward from Point B, Flautt told 'em what he was gonna tell 'em — what goes on in a submarine, how to drive a submarine, how to repair a submarine. And then he added, "When I'm done with all that, about 15 minutes from now, I'm gonna show you a submarine that flies!"

He then kept their attention for the whole slide show and finished with a video clip of a submarine surfacing exercise, in which it leaps up out of the roiling ocean looking, for all the world, like a dolphin performing a stunt.

## The Proper Role of Graphics

Think about the last time you were part of an audience and the graphics didn't work. The reason was probably that they were cluttered, there was too much on the slides or they were data dumps. Many presentations suffer this problem because too many businesspeople fail to distinguish between a document and a presentation.

All too often, presenters take the flood of data contained in typical documents — dense text and highly detailed tables and graphs — and reproduce them as presentation graphics.

The better way to use presentation software, such as Microsoft PowerPoint, is as speaker support. The slides and graphics are there to support you, the presenter, not the other way around. To make it work, the guiding principle is *Less is More.*

Effective graphics work to minimize the eye sweeps the audience has to make. For every graphic, keep the number of times their eyes must move back and forth

*(continued on page 7)*

## The Proper Role of Graphics

*(continued from page 6)*

across the screen to an absolute minimum. All the bells and all the whistles and all the graphics programs available for business presentations boil down to just four basic design elements:

- **Pictorial.** Pictures, sketches, maps, icons, logos, screen shots, or clip art.
- **Relational.** Tables, matrices, hierarchies and organizational charts.
- **Text.** Bullets and sentences.
- **Numerical.** Numbers expressed in bar charts, pie charts, area charts, line charts, and histograms.

When you choose either pictorial or relational graphics, you achieve Less is More by default. A picture is worth a thousand words and a table makes less out of more. But not all business information can be captured in a picture or table, so most presentations bulk up with text and numerical graphics. This is where the trouble begins.

### *Making the Text Talk*

Text slides come in two options: bullets and sentences. A bullet is used to express a core idea, taking the form of a headline. When you create a text slide containing bullets, you are in effect presenting only the headlines. Where does the body text appear? It doesn't. It's your job as the presenter to put flesh on the bones of the headline bullets. You deliver the value in your discussion.

- The Less is More bullet slide contains one concept, expressed in a one-line title.
- Subtitles, more often than not, confuse matters.
- The actual bullets contain key words only. Don't use articles, conjunctions and prepositions.
- Use a 4 by 4 formula: four lines down, four words on a line — maximum.
- Space the bullets in your slide proportionally.
- Bullets in a list should be grammatically parallel.
- Avoid sub-bullets.

In order to keep the audience with you and help them concentrate on your message, not your slides, you may want to use presentation software features that let you reveal each bullet in the slide one by one. Bring the bullets in from left to right.

Be careful with your choice of fonts. Just because your presentation program comes with hundreds isn't a license to use them all in the same presentation. Stay with one or two to lend a unified look. You may also want to add some interest to your slides by using design features built into your software. You can, for example, use gradient shading or text boxes to add interest. But again, don't go overboard. Stay with the same one or two graphic effects throughout your entire slide presentation.

### *Making the Numbers Sing*

Numbers play a key role in any business presentation. Revenues, units shipped, profits, and market share are the hits, runs and errors of the business scorecard and everyone in business understands their importance. But not everyone feels equally at ease when it comes to interpreting those numbers. When you are in a persuasive situation, you want to win the agreement and understanding of both the number-savvy and the number-shy people in your audience. Well-designed numerical graphics that translate digits and decimals into visual images make abstract relationships concrete and easier to interpret.

Numerical slides also need to live by the Less is More motto. Most can be dramatically improved by ruthlessly eliminating unnecessary words, numbers, scales and legends. Make labels horizontal rather than vertical. This minimizes eye sweeps.

Simplify your pie or circle charts. The most important information is conveyed by the relative size of each wedge. To emphasize the right information, put the percentages inside the wedges and the labels outside. ■

# Making Graphics Help Your Story Flow

Once you've created a set of slides, step back and take a look at the overview. If using Microsoft PowerPoint, choose the Slide Sorter view. This lets you see all the slides at once. When viewed this way, if some slides don't fit your flow, you can reorder them.

The ultimate technique for checking your flow is to read only the slide titles. If you can trace the logic of your entire presentation by reading only those words, you can be sure you have created clarity.

Once your verbal logic is clear, you can turn to graphics to help communicate your flow. Well-designed graphics convey information clearly and establish connections among ideas. Use the following techniques:

- **Bumper Slides.** Bumper slides serve as dividers between sections of your presentation. Their purpose is closure of the outbound section and a lead — in to the inbound section. Bumper slides should contain a single line of text, centered. The line previews the contents of the next section with phrases like "Market Opportunities" or "Business Results." You can also repeat your agenda as a bumper slide, highlighting the bullet that you will discuss next, provided the presentation is at least 30 minutes long.
- **Indexing/Color Coding.** Indexing uses a recurring

*(continued on page 8)*

## Leave Out WIIFY and Point B

Never put "Point B" or "What's In It For You" directly into your slides. These should be stated by you. Remember, the slides are there as presenter support — they are not the presentation. It is you, the presenter, who must grab your audience at Point A, navigate them through all the parts, and deposit them at Point B.

### Making Graphics Help Your Story Flow

*(continued from page 7)*

object that is highlighted with different colors or shades coded to map the sections of your presentation. For example, a company's four-part business strategy may be represented by a pie icon divided into four different-colored wedges. Show the slide near the beginning of your presentation to describe and discuss your overall strategy. When you move to slides discussing each strategy, move a smaller version of the pie to the upper left corner and highlight only the wedge that represents the strategy you are discussing.

- **Icons.** Icons are symbols that express relationships among ideas of your presentation. Some classic icons include yin and yang, representing two-part harmony. It could be used when discussing mergers or other integration concepts. Another is the pyramid, representing building on a foundation.
- **Anchor Objects.** Use a recurring image in a succession of slides to express continuity. Start with one, add a second in the next slide, and so on.
- **Anticipation Space.** Leave the right half of the slide empty and fill it in the next slide. Fulfill expectations. ■

# Bringing Your Story to Life

Now it's time to think about your presentation as a whole. Use the process of **verbalization** to prepare and practice. Verbalization means turning your outline into a full-fledged presentation by practicing it beforehand. Speak the actual words you will use in your presentation aloud, accompanied by your slides. Do it exactly as you will in front of your audience.

You crystallize the ideas in your mind by talking your way through your entire presentation in advance. As you verbalize, articulate your key points and make logical connections.

Every time you verbalize your presentation and every time you deliver it before a live audience, you should expect the words to vary slightly. The logic of your well-honed outline and your improved comfort level will guarantee that every time you deliver your presentation it will be clear and persuasive.

As you make your presentation, link your ideas. There are 12 internal linkages you can use. These are:

- **Reference the Flow Structure.** Make repeated references to your primary Flow Structure as you track through your presentation.
- **Logical Transition.** Close your outbound subject; lead to your inbound subject.
- **Cross-Reference.** Make forward and backward references to other subjects in your presentation.
- **Rhetorical Question.** Pose a relevant question and then answer it.
- **Recurring Theme.** Establish an example or data point early in your presentation and then make several references to it throughout.
- **Symmetry.** Establish an example or data point early in your presentation and then never mention it again until the end.
- **Mantra.** Use a catch phrase or slogan repeatedly.
- **Internal Summary.** Pause at major transitions and review.
- **Enumeration.** Present related concepts as a suite and count down through each of them.
- **Do the Math.** Put numerical information into perspective.
- **Point B Reinforcement.** Restate your call to action at several points throughout your presentation.
- **Say Your Company Name.** State your company, product or service name often. ■

# Customizing Your Presentation

For your presentation to be fresh, you must create the illusion of the first time, every time. Make a deliberate effort to focus your energy every time you present. The most effective way to accomplish this is through customizing:

- Mention specifically, by name, one or more members of the audience.
- Make reference to a person, company or organization related to both you and your audience.
- Address a question directly to one or more members of the audience.
- Make reference to what is happening on the day of your presentation.
- Make reference to current information that links to and supports your message.
- Start your presentation with a slide that includes your audience, location and the date. ■

# QBQ! The Question Behind the Question®

## What to Really Ask Yourself to Eliminate Blame, Complaining and Procrastination

by John G. Miller

### THE SUMMARY IN BRIEF

The lack of personal accountability is a problem that has resulted in an epidemic of blame, complaining and procrastination. No organization — or individual — can achieve goals, compete in the marketplace, fulfill a vision, or develop people and teams without personal accountability.

The troubles that plague organizations cannot be solved by pointing fingers and blaming others. Rather, the real solutions are found when each of us recognizes the power of personal accountability. In *QBQ!*, author and consultant John G. Miller explains how negative, inappropriate questions like "Why do we have to go through all this change?" and "Who dropped the ball?" represent a lack of personal accountability. Conversely, when we ask better questions — QBQs — such as "What can I do to contribute?" or "How can I help solve the problem?" our lives and our organizations are transformed.

*QBQ!* provides a practical method for putting personal accountability into daily action with astonishing results: problems are solved, internal barriers come down, service improves, teamwork thrives and people adapt to change more quickly. *QBQ!* is an invaluable resource for anyone seeking to learn, grow and change.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to add tremendous worth to your organization and life.
- How to make personal accountability a core value in your organization.
- How to practice personal accountability at work and in life.
- How to eliminate blame, complaining and procrastination from your life.
- How asking the question behind the question can make a real difference.

## INTRODUCTION

Have you ever heard questions like these?

"When is that department going to do its job?"

"Why don't they communicate better?"

"Who dropped the ball?"

"Why do we have to go through all this change?"

"When is someone going to train me?"

These questions may seem innocent enough, but they indicate a lack of personal responsibility — or "personal accountability" — and go right to the heart of many of the problems we face today.

Conversely, turning our thinking around and asking more personally accountable questions is one of the most powerful and effective things we can do to improve our organizations and our lives.

The Question Behind the Question® (QBQ®) is a tool that's been developed and refined over the years that helps individuals practice personal accountability by asking better questions.

The benefit people enjoy the most about the QBQ is a personal one: Once they start practicing QBQ thinking, things just seem to go better. People have more fun. Life is simply more satisfying and enjoyable for those who choose the way of personal accountability. ●

## A Picture of Personal Accountability

Many people have had thoughts like these:

"Why do I have to do everything around here?"

"When is management going to provide us with more products?"

"Why are we always so short-staffed?"

It's understandable that someone would feel and think that way, especially when frustrated, but the truth is that these are lousy questions. They're negative and they don't solve any problems. Questions like these are Incorrect Questions, or IQs, since nothing positive or productive comes from asking them. They're also the complete opposite of personal accountability, because in each one, the implication is that someone or something else is responsible for the problem or situation.

Unfortunately, though, they're often the first thoughts that come to mind. It's a sad fact that when most of us are faced with a frustration or challenge of some kind, our first reaction tends to be negative and defensive, and the first questions that occur to us are IQs.

The good news is this: That moment of frustration also presents us with a tremendous opportunity to contribute, and the QBQ can help us take advantage of it. The moment the IQs pop into our heads, we have a choice. We can either accept them — "Yeah, when *are* we going to get more help around here?" — or reject them, choosing instead to ask better, more accountable questions, such as "What can *I* do to make a difference?" and "How can *I* support our team?"

This, in a nutshell, is the essence of the QBQ:

**Making better choices in the moment by asking better questions.** Practicing personal accountability makes a difference. Everyone wins: customers, co-workers, the organization, everyone.

### Making Better Choices

Each day, as we journey into the unexplored wilds of our personal and professional lives, we have countless

choices to make. And what are we choosing? Not our next action but our next thought. Choose the wrong thought and we're blaming, complaining and procrastinating. But the right thoughts lead us to a richer, more fulfilling life and the feelings of pride and accomplishment that come from making productive decisions.

The idea that we are accountable for our own choices and are free to make better ones is fundamental to the QBQ. Sometimes people think they have no choice. They'll say things like "I have to" or "I can't." But we always have a choice. Always. Even deciding *not* to choose is making a choice. Realizing this and taking responsibility for our choices is a big step toward making great things happen in our lives.

Want to make great things happen? Make better choices. ●

## QBQ! The Question Behind the Question

The Question Behind the Question is built on the observation that our first reactions are often negative, bringing to mind Incorrect Questions (IQs). But if in each moment of decision we can instead discipline our thoughts to look behind those initial questions and ask better ones (QBQs), the questions themselves will lead us to better results.

One of the guiding principles of the QBQ is "The answers are in the questions," which speaks to the same truth: If we ask a better question, we get a better answer. So the QBQ is about asking better questions. But how can we tell a good question from a bad one? What does a "better" question sound like?

For starters, here are the three simple guidelines for creating a QBQ:

1. Begin with "What" or "How" (not "Why," "When" or "Who").
2. Contain an "I" (not "they," "them," "we" or "you").
3. Focus on action.

For example,"What can I do?" follows the guidelines perfectly. It begins with "What," contains an "I" and focuses on action: "What can I do?" Simple. But don't let its simplicity fool you. Like a jewel, the QBQ is made up of many facets. Let's explore these facets and see the powerful effect asking QBQs can have on our lives. ●

## Don't Ask 'Why?'

Ever heard these questions?

"Why don't others work harder?"

"Why is this happening to me?"

Say them aloud. How do they make you feel? When they are said aloud, they can make you feel powerless, like a victim. Questions with a "Why me?" tone to them say, "I'm a victim of the environment and the people around me." Not a very productive thought, is it? But we ask them all the time.

The first QBQ guideline says all QBQs begin with "What" or "How," not "Why," "When" or "Who." Take another look at those "Why" questions and consider what would happen if we asked these instead:

"How can I do my job better today?"

"What can I do to improve the situation?"

### 'Why Do We Have to Go Through All This Change?'

When Stacey was 12 years old, she and her father, a pilot, took off on a Sunday afternoon joyride in their single-engine Cessna. Not long into the flight, and about a mile up over Lake Michigan, the joy of their father-daughter adventure came to an abrupt halt. The engine quit.

Stacey's father turned to her and in a calm, reassuring tone said, "Honey, the engine has quit. I'm going to need to fly the plane differently." Interesting phrase: "Fly the plane differently."

Her father understood that new challenges and changing conditions often require different strategies. Conditions change, markets change, people change. What works one day in a given situation does not necessarily work the next. We need to develop a repertoire of responses so we're prepared when our engine unexpectedly quits.

### Dad's Plan

In order to restart the engine, they needed more air speed. Stacey's father told her he would be hitting switches in the cockpit while he steered the plane downward. Stacey understood, and sensing the gravity of the situation, quickly nodded her approval of the plan.

Her father put the plane into a dive and fiddled with the switches, but nothing happened. He leveled off closer to the water. "Stacey, we're going to try that again," he said. "Hang on!" They dove a second time. He hit the switches again as the plane gained speed, and this

time the engine fired, first with just a few hopeful sputters, but finally with a secure, familiar hum.

About 20 minutes later, they landed safely. At that point, this fearless father turned to his young daughter, lovingly patted her shoulder and said, "Now honey, whatever you do, *don't tell Mom!"*

### Handling Change

When faced with a new situation, Stacey's dad took action and solved the problem. But if he had resisted the change and instead spent his time whining and complaining, having thoughts like "Well, I've never done it that way before!" or asking IQs such as "Why do we have to go through all this change?" things might have turned out much differently.

Are you facing change? Any engines quit in your life lately? If so, ask a better question. Here's one that really works: "How can I *adapt* to the changing world?" ●

## Don't Ask 'When?'

"When will they take care of the problem?"

"When will the customer call me back?"

When we ask "When?" we're really saying we have no choice but to wait and put off action until another time. Questions that begin with "When" lead to procrastination.

Most people don't intend to procrastinate. No one ever gets out of bed and says, "Today, I'm going to procrastinate!" But procrastination is a sneaky problem. We put something off until a little later, and then a little later and a little later again until, before we know it, the action has been postponed so long that it has become a serious problem.

Is any procrastination going on in your life? Most people don't hesitate to admit that procrastination is a problem for them. And if it's a problem for most people, it's also a problem for most organizations. What are the consequences? Putting things off means precious time is lost. Productivity suffers. The team may not progress toward its goal. Deadlines are missed.

### Procrastination Increases Stress

Procrastination also increases stress. As things pile up, we begin to feel overwhelmed, which takes the joy out of our work. Bottom line: Procrastination is costly to all involved.

One solution is to stop asking externally focused questions that begin with "When?" Instead, we need to ask QBQs such as:

"What solution can I provide?"

"How can I more creatively reach the customer?"

"What can I do to find the information to make a decision?"

Remember: The answers are in the questions.

### 'When Will We Get More Tools and Better Systems?'

Most of us have heard the saying "Creativity is thinking outside the box." There's a lot of truth in that, but true creativity is this: Succeeding *within* the box.

Hitting targets, reaching goals, doing the job well and making a difference with what we already have is the QBQ way. Every organization has imperfect systems and finite resources. We may wish we had newer tools, better systems, more people and bigger budgets. But thinking too much about what we'd like to have is another cause of procrastination. Managers, for example, won't take their group through teambuilding until "All the right people are in place." Individuals won't make a decision until they have all the information, or take action until all the questions are answered.

Ironically, succeeding with what we have makes us more likely to get the things we wanted in the first place. Listen to the wisdom of Deb Weber of State Farm Insurance: "I find that every time I do the job with the tools I have, I tend to receive more tools." It's the truth: We sow, then we reap.

Focusing on what we don't have is a waste of time and energy. To really make a difference, let's focus our energy on succeeding within the box. Let's ask the QBQ "How can I achieve with the resources I already have?" ●

## Don't Ask 'Who?'

"Who made the mistake?"

"Who missed the deadline?"

"Who dropped the ball?"

When we ask "Who" questions like these, what we're really doing is looking for scapegoats, someone else to blame. And blame may well be the most pervasive and counterproductive of all the ideas mentioned so far.

### The Circle of Blame

From the smallest group to the largest corporation, from the lowest rung on the ladder to the highest office in the land, there's an epidemic of blame going on — and no one seems immune. The CEO blames the vice president, who blames the manager, who blames the employee, who blames the customer, who blames the

government, who blames the people, who blame the politicians, who blame the schools, who blame the parents, who blame the teen, who blames the dad, who blames the mom, who blames her manager, who blames the vice president, who blames the CEO, and on and on it goes. This is the "Circle of Blame," and it would be kind of funny if it weren't so true.

Blame and "whodunit" questions solve nothing. They create fear, destroy creativity and build walls. Instead of brainstorming and working together to get things done, we *blame*-storm and accomplish nothing. There's not a chance we'll reach our full potential until we stop blaming each other and start practicing personal accountability.

Try these questions instead of the "Who?" questions and see how fast you can break the Circle of Blame in your organization:

"What can I do today to solve the problem?"

"How can I help move the project forward?"

"What action can I take to 'own' the situation?"

### A Gift from Bonita

It was a humid day in Houston. As John boarded the plane, he could feel the heat in the steamy, crowded cabin. The flight was obviously overbooked and every passenger seemed to have three pieces of large carry-on luggage. On top of that, several people had apparently been assigned the same seats and weren't taking it too well. Tension in the cabin was high.

The doors finally closed and they taxied to the runway only to sit for another hour with no explanation from the crew. John couldn't help but think this gave a whole new meaning to the term "pressurized cabin." Mercifully, they did finally take off, and that's when John met one of his QBQ heroes.

Bonita was a flight attendant. When John first saw her, she was prancing down the aisle with an armload of headphones, smiling broadly and having great fun. It was the week before Christmas, and she was wearing one of those red-and-white Santa Claus caps, which draped down her shoulder and off to one side.

As she handed out the headphones, she wasn't saying, "We held you up for an hour, but give me five bucks anyway!" She was offering them at no charge. She turned to a young man and said, "I'm sure you'll enjoy our sports programming, sir."

### 'What Can I Do Right Now to Make a Difference?'

When she got to John, he stopped her and said, "You know, Bonita, I really appreciate your attitude!" As she sashayed away with that big smile on her face and the Santa Claus cap on her head, she said, "Well, whatever you do, don't drug test me!"

John didn't need to test her. He already knew she was high — on life. And that's one of the great things that happens when we make better choices: We get high on life.

It's not about "us" versus "them" or "Why did they overbook the plane?" or "Who dropped the ball?" The better question is "What can I do right now to make a difference?"

With one simple choice, making the best of a bad situation, Bonita made a difference for John and every other person on that flight. That's how personal accountability changes the world: one choice at a time. ●

## Making Accountability Personal: All QBQs Contain an 'I'

Personal accountability does NOT begin with you. It begins with me. That's why it's called *personal* accountability. It is not about you or me holding each other accountable, as a manager does in setting standards, defining consequences, helping set goals and then holding people accountable for their performance. Nor is it a group thing, where people get together, make public professions of commitment then come back a week or a month later to discuss what did or did not happen.

Personal accountability is about each of us holding *ourselves* accountable for our own thinking and behaviors, and the results they produce.

This is why the second QBQ guideline is: All QBQs contain an "I," *not* "they," "them," "we" or "you." Questions that contain an "I" turn our focus away from other people and circumstances and put it back on ourselves, where it can do the most good. We can't change other people. We often can't control circumstances and events. The only things we have any real control over are our own thoughts and actions. Asking questions that focus our efforts and energy on what we can do makes us significantly more effective, not to mention happier and less frustrated.

Accountability groups are great tools. Managers and executives *do* need to define and communicate standards, but the power of personal accountability comes from questions that begin with "What" or "How" and contain an "I."

### I Can Only Change Me

"What's the *one* thing you would change to improve

the effectiveness of your organization?"

People's minds fill with all kinds of ideas when asked what they would change to improve things. But guess what? Nobody ever says, "I would change *me* to make our organization run more effectively." It's not a trick question. Read it again. Our minds simply don't go there. Our thoughts almost always focus elsewhere first. Asking questions that begin with "What" or "How" and contain an "I" bring our focus back to ourselves.

How much better things would be if we all tried to mold and shape our own thoughts and actions rather than those of others. The bottom line is that the QBQ works because it's based on the truth *"I can only change me."* ●

## 'When Will Others Walk Their Talk?'

Up to the mountaintop go the executives for a senior management retreat. For three days they debate the critical issues, filling flip charts with brightly colored ink. Finally, "mission, vision and values" in hand, they return to the valley below where the people wait to receive the stone tablets, which have been magically transformed into little laminated pocket cards for men to sit on and women to stuff in their briefcases.

Not long after, people huddle near a water cooler, pull out their cards and whisper, "Well, I'll practice these values when they do!"

Careful. The easiest thing to spot is gaps of integrity in others:

- The manager who says, "I'm here to help you reach your personal goals," and then dresses people down in front of others.
- The executive who says, "You are all empowered. It's our new program!" and then adds, "But before you do anything substantial, check with me first."
- The teammate who says, "I appreciate my colleagues just the way they are … but if only they'd be a bit more like me."
- The organization that proudly declares on the lobby wall its guiding value, "People are our greatest asset!" yet the training dollar is the last one budgeted and the first one cut.

### Integrity

The definition of integrity is: "Being what I say I am by acting in accordance with my words."

QBQ thinking leads to integrity because integrity begins with me — not others — asking the question "How can I practice the principles I espouse?" instead of asking "When will others walk their talk?" let's walk our own talk first. ●

## An Integrity Test

Here's an integrity test for anyone who's part of an organization: Does what we say about our organization while we're at work *match* what we say at home? If it's positive at work and negative a few hours later at home, we have a choice to make. Here's an idea we should all consider: *Believe or leave.*

Sound harsh? Maybe. But if the organization is no longer a vehicle to help us reach our life goals, why would we stay?

Answering that question honestly is part of practicing personal accountability.

## Practicing Personal Accountability

Our third guideline is: All QBQs focus on action. To make a QBQ action-focused, we add verbs, such as "do," "make," "achieve" and "build," to questions that start with "What" or "How" and contain an "I."

We end up with excellent-sounding questions like "What can I do right now?" and "How will I make a difference today?"

If we don't ask what we can do or make or achieve or build, then we won't do or make or achieve or build. It's that simple. Only through action is anything accomplished.

The practice of personal accountability: We discipline our thoughts. We ask better questions. We take action.

### The Risk of Doing Nothing

Even though there are risks involved in taking action, the alternative, inaction, is almost never the better choice. Here's why:

- Action, even when it leads to mistakes, brings learning and growth. Inaction brings stagnation and atrophy.
- Action leads us toward solutions. Inaction, at best, does nothing and holds us in the past.
- Action requires courage. Inaction often indicates fear.
- Action builds confidence; inaction, doubt.

Decide what to do. Then take action.

### 'Thanks for Shopping at the Home Depot!'

One morning a few weeks into Judy's new job as a

cashier at Home Depot, a young man came through her line, obviously in a hurry. He quickly plunked down a few items and a $100 bill, but the total came to only $2.89. "Do you have anything smaller?" Judy asked. "No, I'm sorry, I don't," he said. At that moment, Judy had a choice to make.

So here's what she did: She handed the young man back his bill, reached for her purse, took out the $2.89, put it in the register and tore off the receipt. She turned to her customer with a smile and said, "Thanks for shopping at the Home Depot!"

### Stunned

The man stood there a few moments before he figured out what she'd done. Finally, somewhat stunned, he thanked her several times and took off. As far as Judy was concerned, that was the end of it.

Two days later, her supervisor, looking both confused and amused, approached her holding an envelope. "Judy, I need to get this straight," he said. "Did you actually buy the merchandise for one of our customers the other day?"

She had to think. "Yes, I guess I did."

"Well, he's sent you a tip," he said, "and as a Home Depot employee, I'm sure you know that you can't accept tips."

"I don't want a tip," she said, then abruptly added, "How much?"

"He wrote you a check for $50."

"Wow! How about if I endorse it and put it in the pizza fund so we can all share it?" she asked.

"OK," he said. "We can do that." So the money went into the pizza fund, and no one thought any more of it.

### Worth the Risk

The next day, though, the young man showed up in her line again. This time, he had his father, Bob Johnson Sr., owner of Johnson Construction Co. with him. Question: What do contractors need? Answer: Stuff! And the better answer from Judy's perspective: stuff from the Home Depot.

The elder Mr. Johnson said to Judy, "I want you to know that because of what you did to serve my son the other day, we've decided to start getting everything we need from you folks."

Never let it be said one person can't have an impact, especially if he or she is willing to take risks. Remember, Judy was in kind of a tight spot. The young man was in a hurry, people were lined up behind him and standard procedure said she'd have to make them all wait while she got change. But she didn't get stressed out, thinking, "Why is this happening to me?" or just say, "Sorry, it's our policy," and make them wait. She kept her cool and decided to take action and serve her customer. That's QBQ service, and it's worth the risk.

### Leaders at All Levels

Are you a leader? Many people wrestle with this question. "Am I a leader or is my manager the leader? Is the company president the leader? The vice president of my division?" Or they think, "Maybe the leader is my peer who was granted the title of 'Team Leader.'"

Too often, we think leadership is about title, position, tenure, or the number of people or dollars we manage. But the number of years one has been around does not automatically equate with being a good leader, any more than does merely having the title of manager or vice president. And, certainly, the things we acquire — fine cars, nice homes — are not measures of our leadership ability.

Leadership, more than anything else, is about the way we think. It's a moment-to-moment disciplining of our thoughts. It's about practicing personal accountability and choosing to make a positive contribution, no matter what our role or "level." A receptionist, an engineer, a salesperson, a temp worker, a cashier: They can all be leaders. Judy certainly was. If we think like leaders, we are leaders. ●

## A Great List of Lousy Questions

Each of us plays many different roles in our lives, and each of those roles has its own particular challenges and frustrations. As you read the following list of roles with IQs and QBQs, think about what IQs *you* might be asking, and more important, what QBQs you could use instead.

**Customer service:**

"Why does the customer expect so much?"

"When will the field do it right the first time?"

"Why don't customers follow the instructions?"

**QBQ:**

**"How can I serve them?"**

**Sales:**

"Why are our prices so high?"

"Why won't the customer call me back?"

"When will marketing give us better brochures?"

**QBQs:**

**"What can I do today to be more effective?"**

**"How can I add value for my customers?"**

**Management:**

"When am I going to find good people?"

"Why aren't they motivated?"

"Who made the mistake?"

**QBQs:**

**"How can I be a more effective coach?"**
**"What can I do to better understand each person on the team?"**

**Executive:**

"Who dropped the ball?"

"When are they going to catch the vision?"

"Who will care as much as I do?"

"When will the market turn around?"

**QBQs:**

**"How can I be a better leader?"**
**"What can I do to show I care?"**
**"How can I communicate better?"** ●

## The Spirit of the QBQ

There's a well-established legal principle that says there's a difference between the "letter" and the "spirit" of the law. The letter of the law refers to the specific words used in the law itself. The spirit refers to the underlying concepts and intentions behind the law. The general idea is that compliance with the letter of the law should be in alignment with the spirit of the law.

Using the same concept in our case, the letter of the QBQ would be the guidelines:

1. Begin with "What" or "How" (**not** "Why," "When" or "Who").
2. Contain an "I" (**not** "they," "them," "we" or "you").
3. Focus on action.

The *spiri*t of the QBQ is personal accountability:

- No more victim thinking, procrastinating or blaming.
- I can only change me.
- Take action!

It's possible to construct a question that follows the letter of the QBQ but conflicts with the spirit. Consider these:

"What can I do to *make you change*?"

"How can I *avoid responsibility* in this matter?"

"What action can I take right now to *do the wrong thing*?"

These questions are clearly not QBQs. The principle is this: If a question conflicts with the spirit of the QBQ, it isn't a QBQ.

When the time comes to construct a meaningful question, remember that the only questions that will help us practice personal accountability are those that follow both the letter *and* the spirit of the QBQ. ●

## The Cornerstone of Leadership

"Servant leadership" is the QBQ way, and it requires a humble spirit combined with a servant's heart. Humility is the cornerstone of leadership.

## A Final Picture

Personal accountability is not blaming, complaining and putting things off, but instead asking questions like "What can I do?" and taking action.

Asking QBQs is the way to start disciplining our thoughts and making better choices.

As we go out now and apply the QBQ in our own lives, let's always remember the real reason we're doing it. We're doing it so we can be more like Stacey's father, the pilot; Bonita, the flight attendant; and Judy, the cashier at the Home Depot.

None of these people knew about the QBQ, but each embodied its spirit. The rest of us, though, need the QBQ. We may not need it every minute of every day, but we need it often enough for it to make a real difference in our lives.

### Make Great Things Happen

We need the QBQ so our organizations can be places where, instead of finger-pointing, procrastinating and we-they-ing ourselves into the ground, we bring out the best in each other, work together the way teams are supposed to and make great things happen.

It's an exciting vision because if more people practiced personal accountability, the world would be a far better place. ●

# Broaden Your Horizons and Embrace the Future

From our earliest educational and athletic days, we are pushed to find an art, sport, or skill in which we show potential and to hyper focus in that area until we reach peak performance. We are told that the best way to achieve at the highest level and to be our very best is to spend all of our energies on that one thing, clocking countless hours of practice and conditioning in constant pursuit of near perfection. But what if we have been taking the exact wrong approach?

In ***Range: Why Generalists Triumph in a Specialized World,*** two-time New York Times bestselling author David Epstein challenges readers to reconsider everything they think they know about how to become great. He lays out a nearly irrefutable case for going against the specialization grain and instead, becoming skilled and adept at any and every thing that is of interest. Achievement through specialization, he argues, is the exception, not the rule. Anchored by the latest research on highly complex and competitive fields such as sports, music, science, and art and bolstered by writing that is nothing short of exceptional, Epstein urges managers, parents, and individuals themselves to broaden their horizons and make themselves happier, more successful, and ready for whatever the future brings.

## Specialization vs. Sampling

There exists a rule of thumb regarding the development of expertise in any skilled pursuit. It spawned from a study of thirty violinists and it states that expertise can be achieved through "deliberate practice" to the tune of ten thousand total hours. Deliberate practice, according to this now-ubiquitous rule, happens when learners are "given explicit instruction about the best method" by an instructor that provides "immediate informative feedback and knowledge of the results of their performance" and they "repeatedly perform the same or similar tasks."

Tiger Woods is a quintessential example of this theory and an accompanying edict that one must start deliberately practicing as early, or young, as possible. As our ability to obtain information and connectivity increased, humans have responded with an "increasingly narrow focus" and "unwavering specialization" that begins at a very young age. This trend extends far beyond

the world of sports, where it's ubiquity is near complete. We see it in music, art, science, and beyond. However, when the available data on athletes is examined more closely, we see a different story.

"Eventual elites typically devote less time early on to deliberate practice in the activity in which they will eventually become experts. Instead, they undergo what researchers call a "sampling period." They play a variety of sports, usually in an unstructured or lightly structured environment; they gain a range of physical proficiencies from which they can draw; they learn about their own abilities and proclivities; and only later do they focus in and ramp up technical practice in one area."

As it turns out, research showed that a sampling period leads to greater achievement in the tech sector as well as for artistic creators. And further still, Epstein's anecdotal evidence showed the same benefits from "late specializers and career changers" in the "wider world of work." The more Epstein dove into the research, the more evidence he uncovered that it is far more common for someone to develop a personal and professional range over a longer time frame, than for someone equally elite to have started specializing early. It is less efficient and takes longer to get to elite performance this way but the research shows that "it is worth it."

The deeper Epstein looked into this revelation, the more surprised he became. He discovered that people who are highly specialized "become so narrow minded that they actually get worse with experience, even while becoming more confident–a dangerous combination." Most shocking of all was the idea he was led to by cognitive psychologists about how learning itself is optimized. The experts Epstein consulted opened his eyes to a vast body of research that shows that "learning itself is best done slowly to accumulate lasting knowledge, even when that means performing poorly on tests of immediate progress." In other words, learning at its best looks inefficient. A person may appear to be falling behind, but they are actually learning optimally.

Everything we fervently believe about becoming the best just might be wrong. Epstein implores us to embrace "breadth, diverse experience, interdisciplinary thinking, and delayed concentration in a world that increasingly incentivizes, even demands, hyperspecialization." What the world needs now are generalists with a wide array of experiences and perspectives. The world needs "people with range."

## Thinking Outside Experience

The saying "think outside of the box" became so overused in modern work culture that it was rendered trite. Despite the phrase falling out of favor, the spirit behind it remains ever relevant. Epstein recounts the work of a 25-year-old astronomer named Johannes Kepler, who exemplified the then-revolutionary mode of thinking beyond your personal experience.

The year was 1596 and many thinkers of the time had come to accept the theory Copernicus put forth that the planets orbit the sun. Kepler found himself consumed with curiosity over why planets further away from the sun moved more slowly than those close to it. Asking the question itself was "so far outside the bounds of previous thought that there was no evidence in existence for him to work from." Having no experience to draw from, he started making analogies. And he made many, many of them before forming his theory that correctly identified the laws of planetary motion.

Analogical thinking requires us to analyze ideas or objects or scenarios that seem to have nothing in common but that have "ceonceptual similarities" that can be recognized. This way of thinking is a powerful tool that humans can apply to the "wicked problems" of modern life. Relational thinking is, in no small part, responsible for the dominant position humans hold on our planet. "Analogical thinking takes the new and makes it familiar, or takes the familiar and puts it in a new light, and allows humans to reason through problems they have never seen in unfamiliar contexts." It also enables us to comprehend that which we cannot see at all.

For example, students learning about how molecular motion, which cannot be seen with the eye, can begin to understand it through an analogy of how billiard balls collide and bounce off of each other. The basic elements of electricity can be taught with an analogy of how water runs through a plumbing system. These types of surface level analogies are made with some background experience or knowledge. Kepler relied on analogies that did not draw on previous experience and that level of creativity is the kind we need to solve new world problems.

## Being Late to Start is Actually Right on Time

Epstein shares several examples of phenomenally successful people in creative pursuits who got their start in the artistic endeavor of their choosing quite late in life. The likes of Vincent Van Gogh and J.K. Rowling are among them. He acknowledges that one could cherry pick such stories from the annals of history, but he didn't. That is because stories like these, in which the best of the best in any particular profession came to their path with a late start, are the rule, not the exception. Epstein says, "they aren't exceptions by virtue of their late starts, and those late starts did not stack the odds against them. Their late starts were integral to their eventual success."

In a highly relatable analogy of his own creation, Epstein likens professional and educational sampling to dating. Students in higher education who are forced to choose a specialization early on, oftentimes find themselves "divorced" from that career path early on, too. It would be like asking a high school senior to decide before graduation whether or not she would marry her high school sweetheart. She may think that's the best choice at the time, but later on she may realize that they are not the best suited for long term success. In love, like in life, trying out a variety of partners and potential mates with an eventual choice later in life is far more likely to succeed and provide fulfillment than hitching your wagon to the first horse that comes along. "If we treated careers more like dating, nobody would settle down so quickly."

Ideally, people just beginning their careers will pursue a wide variety of interests, including jobs that may seem risky or too

> . . . experts become incredibly worse at making long-term predictions in their own area of specialization."

bold for those more advanced in their profession lives. Newcomers, with less experience to draw on, should go big. They should seek out those big risk, big reward opportunities like we find in arts, entertainment, and entrepreneurship. That is because these experiences have "high informational value."

"Thanks to constant feedback and an unforgiving weed-out process, those who try will learn quickly if they might be a match, at least compared to jobs with less constant feedback. If they aren't, they go test something else, and continue to gain information about their options and themselves." In the long run, people who leap frog around will eventually land on something that is the perfect fit, in which they can leverage that breadth of experience, skill, and knowledge they gained in the process. And that leads to a more fulfilling life as well.

## Fooled by Expertise

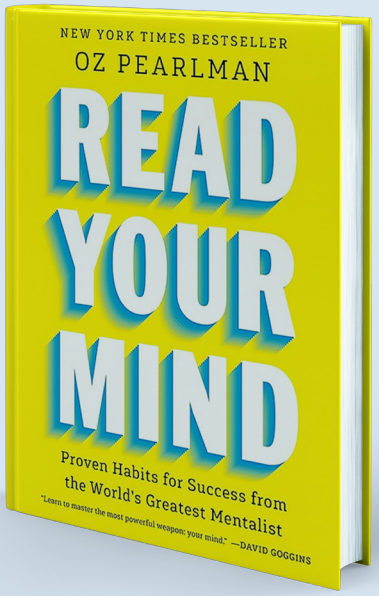
One of the biggest problems with our tendency to specialize is that it breeds a very particular kind of thinking. Those who become highly specialized in their field eventually run the risk of missing critical pieces of information outside of the scope of specialization. They become entirely entrenched in their own microworld of focus and when presented with ideas that are contrary to their understanding, which are discovered or invented or progressed towards, they draw worse and worse conclusions and make mistakes. Different specialists in the same field can present "facts" that are "perfetly contradictory to one another and impervious to counterarguments." It is as if they are blinded by "their mental representation of the world" and cannot see the larger forest for their own highly-specialized trees.

This remarkable penchant for poor prediction making peaked the curiosity of psychologist and political scientist Philip Tetlock during the Cold War. He gathered and studied "short- and long-term forecasts from 284 highly educated experts who averaged more then twelve years of experience in their specialities." Over the course of twenty years, he posed predictive questions to this group about international politics and economics, ammassing a collection of "82,361 probability estimates about the future." And the results showed that the average expert was not just slightly off the mark from time to time. They were horrifically bad at forecasting.

Results were equally off regardless of the predictor's area of specialty, years of experience, or even access to classified information. And even more striking, when faced with the failure of their prediction, many would "never admit systemic flaws in their judgment." When their prediction failed to materialize, it was because of one small detail they got wrong, resulting in a "near miss." On the flip side, when they were right, it was entirely because of "their own merits." "Victories were total victories, and defeats were always just a touch of bad luck away from having been victories too." In the mind of the experts, they remained undefeated even though they were, in reality, constantly losing.

Perhaps most quizzical of all, experts become incredibly worse at making long-term predictions in their own area of specialization. Instead of taking in a whole view with all relevant information, old and new, they hold firm to their worldview. The more credentialed, quoted, or interviewed an expert becomes, the more they find any way possible to cram their prediction through "their preferred keyhole." In terms of creating notoriety, this does have a distinct advantage. "Viewing every world event" through their finely-tuned lens makes it quite "easy to fashion compelling stories about anything that occurs" and to tell those stories "with adamant authority." In other words, they make for great television.

Epstein's work in the area of specialization versus generalization began in the sports world. When he would speak to a group of parents about the fallacy of childhood sports specialization, pointing out that the world's elite athletes are more often late starters with wide experience in a variety of athletic pursuits than early-start specialists, he was usually met with disbelief. We are so conditioned to the idea of specialization that we ourselves cannot accept the truth of the facts when presented with hard data that is not in line with our firmly-held beliefs. Time and again parents, reluctantly coming to at least consider Epstein's supposition, would ask Epstein to sum up his advice for the best path forward in one single sentence. "What began as a search for one sentence of advice ended in this book."



The central question Epstein set out to answer was "how to capture and cultivate the power of breadth, diverse experience, and interdisciplinary exploration, within systems that increasingly demand hyperspecialization, and would have you decide what you should be before first figuring out who you are." In composing that single sentence, Epstein succeeds in perfectly capturing the essence of his book and inspires us to reach wide, rather than deep. But readers can be grateful that he didn't stop there as the entirety of Range is thought provoking, entertaining, insightful, and ridiculously well written. And it can change your life.

# Read Your Mind

Oz Pearlman

Book Snaps™
In-depth reviews of best-selling business books

## Read Your Mind

**Proven Habits for Success from the World's Greatest Mentalist**

*By Oz Pearlman*

Oz Pearlman, known as "The Mentalist," is a world-renowned performer celebrated for his extraordinary mind-reading abilities and audience-specific experiences. He rose to national prominence as a finalist on *America's Got Talent* and earned an Emmy Award for his NBC special *Oz Knows*. With three decades of experience studying how people think and decide, Pearlman applies mentalism to performance and personal transformation. He has appeared on hundreds of television programs and been featured in *The New York Times*, *The Wall Street Journal*, and *Forbes*. His elite clients include Fortune 500 companies, professional sports teams, and A-list celebrities around the world.

*A Book Review by Soundview*

# Channeling Your Inner Mentalist

In ***Read Your Mind***, Oz Pearlman explores how the skills behind mentalism—careful observation, attention, and awareness—can be applied far beyond performance. While he is not capable of reading minds, Pearlman has learned how to read and understand other people, a skill he argues can be developed just as it is possible to better read and understand ourselves. As social creatures, he suggests, humans are already equipped with the foundations of these abilities.

Pearlman began his career as a restaurant magician, a role that did more than simply provide money for magic supplies. It gave him an education in reading people and learning the best ways to garner and hold their attention—skills that would prove useful to him in both his career and his life. He learned the importance of choosing the right time to approach people just as he learned the importance of paying attention to every clue people give off as to their mental and emotional state. He writes that he learned to "anticipate the thoughts of others before they even think them."

He also learned the importance of responding to failure constructively rather than dwelling on it. Not every table welcomed a teenage magician during dinner service, and those rejections became part of his education in resilience and adaptability.

## What Goes on in Our Minds

Pearlman writes that, "Theory of Mind refers to our ability to attribute mental states to ourselves and others, and to understand that the mental states of others may be different from our own." Despite the popular adage against such judgments, people do, indeed, judge books by their cover.

Pearlman points out, however, that with mentalism, a person can design their own cover because the skills of a mentalist help people manage the impressions other people develop of

them. Much of this is done within the first ten seconds of meeting a person.

Part of being a mentalist is learning to both "predict" and "plan" for what will happen next. A crucial step in this is stress testing or trying to assess every eventuality before a high-stakes performance. Equally important is visualization and they must be as detailed as possible because our brains react the same way to them much as it does to real-life events. According to Pearlman, effective visualization builds confidence, helps manage pressure, sharpens focus, reduces anxiety, and creates muscle memory.

Furthermore, it is crucial to account for what could go wrong. This includes recognizing when you may be inclined to give in to temptation or fatigue and preparing a backup plan. While some variables and situations can be controlled, others simply cannot. When uncontrollable situations arise, as they inevitably will, maintaining composure and avoiding panic becomes essential. After all, "your mental controls your physical."

## Managing Fear of Rejection and Failure

One reason people fail to pursue their goals is because they fear rejection. The problem is that when we avoid the possibility of failure, we also avoid the possibility of real success. This fear is deeply rooted: rejection is not merely unpleasant but neurologically painful. Research shows that social rejection activates the same neural pathways as physical pain, a response shaped by evolution, when survival depended on belonging to a group.

Through his work, Pearlman has identified strategies to reduce the emotional sting of rejection. One of his most effective techniques is to silo his emotions by separating his personal identity from his professional role.

He distinguishes between two versions of himself: Oz the Person and Oz the Mentalist. When rejection occurs, it is directed at the character he performs, not at him personally. This form of compartmentalization provides psychological distance, allowing him to manage negative thoughts and emotions without becoming overwhelmed. It allows him to protect his sense of self while still learning objectively from professional setbacks.

Another method Pearlman uses to cope with failure is reminding himself that the intensity of negative emotions tends to fade, particularly within the first forty-eight hours after an event. With this perspective, he focuses on getting through the next minute, hour, or day rather than being consumed by the setback.

While failure is painful, Pearlman emphasizes its role in building resilience, encouraging innovation, and strengthening mental endurance.

## Outward Focus

Pearlman writes that, "The only thing you have to do to be the most interesting person in the room is to be the most interested person in the room. If you want to be fascinating, be fascinated by others."

It is important to pay close attention to others during interactions. Too often, people place themselves on a pedestal, which prevents genuine connection because individuals tend not to feel connected to those they perceive as above them. Conversely, placing others on a pedestal can also hinder connection by making it harder to relate to them as equals. For this reason, Pearlman stresses the value of creating a level playing field in interactions.

One way to make another person feel important is to remember what *they* consider important. This does not require a remarkable memory. Pearlman himself has made it a habit to take notes after meeting with people so he can refer to them the next time he encounters the person. By doing so, he is able to make people feel valued by recalling what matters to them.

It is also important to build empathy, which requires sharing in the feelings of others. This binds people together and can be strengthened by focusing on similarities rather than differences.

## Avoiding Procrastination

Achieving goals requires work. People are so prone to procrastination because our brains are "locked in a battle." This inner battle occurs because the limbic system rewards hedonistic behavior, while the prefrontal cortex drives responsible action.

Often, the limbic system wins out, which is why we procrastinate. This tendency is not inevitable, however. It can be overcome by breaking down large goals into smaller ones. The key is to begin with one small task to spark motivation for the rest of the work. The dopamine produced can help counteract inertia.

When you have a goal in mind, it is most effective to reverse engineer the process by identifying the three areas you want to change and then figuring out the adjustments needed to achieve those outcomes. These changes are then broken down into smaller, actionable steps. This approach requires goals that are quantifiable and well-defined—the more specific the goal, the better. Pearlman advocates for SMART goals, which are specific, memorable, achievable, relevant, and time-bound.

Our brains will try to stop us as we struggle to create new habits to meet our goals. Pearlman maintains, however, that if we remain as consistent as possible, while avoiding beating

> Betting on yourself isn't a gamble; it's the smartest move you can make."

ourselves up after failure, we can create a habit within two weeks. It is helpful to have a backup plan for when progress becomes difficult, especially during this time period. He emphasizes the role of accountability and discipline in creating and maintaining goals. Discipline, he suggests, comes from remembering that long-term goals are ultimately beneficial, while accountability can be reinforced by sharing those goals with others.

## Set Yourself Up for Success

Pearlman writes that, "Betting on yourself isn't a gamble; it's the smartest move you can make." There are steps you can take to make the likelihood of success greater. One of these is to learn to quiet your mind and achieve a state of flow, something athletes have known for a long time. This requires allowing muscle memory to take over as distracting thoughts quiet. Achieving flow depends on two conditions. First, sufficient practice is needed to enable a specialized brain network to perform the task. Second, overthinking must be relinquished so the subconscious can take over.

Another way to stack the deck in your favor is to be proactive and avoid waiting for other people to create opportunities for you. When an opportunity does arise, it must be taken. According to Pearlman, "If you wait for the perfect moment to do something, odds are you're going to wait a long time."

At times people can find themselves getting overwhelmed by the prospect of success. The brain cannot always differentiate between different types of anxiety, so people can feel an increase in tension when they achieve a goal. Pearlman believes it is important to acknowledge this anxiety and walk through any worst-case scenarios you can come up with to be able to put those worries behind you.

If worry persists, it can be used more productively through planning rather than rumination. Pearlman suggests striking a balance between enjoying the present and planning for your future. He also mentioned the value of cultivating a growth mindset—one grounded in self-belief and a willingness to confront challenges.

## Self-Talk and Self-Perception

As Pearlman observes, "No online troll could poke our raw nerves and tender spots like we do when we are trolling ourselves." This tendency towards negative thinking is evolutionarily advantageous as our ancestors needed to anticipate danger in order to survive. The trick these days, however, is to avoid letting negative self-talk convince us that we are not as worthy as we are. If we do, we run the risk of developing anxiety, depression, and a host of other feelings.

Negative self-talk, while sometimes feeling indulgent, is ultimately harmful because it signals a perceived threat to the brain. Negative thoughts and emotions also affect others through emotional contagion. To address this pattern, Pearlman introduces the *Catch It, Check It, Change It* system. This cognitive behavioral technique requires people to first identify their negative thoughts, evaluate their accuracy, and finally replace inaccurate beliefs with more balanced and constructive ones.

It is normal to struggle when you are attempting to learn a new skill or working toward personal growth. Rather than allowing failure to become defining, Pearlman has learned to use other people's successes as motivation, pushing himself to work harder rather than becoming discouraged.

Another way that people undermine their own success is by devaluing their work. This is especially common when individuals enjoy what they do and would continue doing it even without compensation, which can make pricing their services difficult. To help with this, Pearlman recommends considering opportunity cost—what are you giving up in order to perform this service?

Assigning value to one's work takes confidence, particularly since others will often seek to pay as little as possible. Pearlman's silo technique can help manage the negative emotions that may arise in these situations by separating personal worth from personal negotiation.

## Asking For Help and Confronting Weaknesses

At times, everyone needs help, and reaching out is an important part of growth. Many people resist doing so because asking for help requires vulnerability. Pearlman points out that vulnerability is not a weakness, even though it can trigger feelings of shame. This discomfort stems from a basic human need for belonging: people crave connection, and vulnerability is one of the primary ways it is formed. Those willing to be vulnerable are better positioned to build strong

relationships. As Pearlman notes, vulnerability also helps regulate emotions, build resilience, and improve self-esteem by fostering a more positive self-image.

Pearlman moves on to discuss building a team. After all, success requires other people. Pearlman is an ultramarathoner, and as such, he needs a crew to help him through these races. A crew, however, does more than just help individuals endure grueling physical challenges. Pearlman notes that belonging to a group is directly linked to the production of oxytocin, which he describes as "almost like taking a performance-enhancing drug." He encourages readers to identify the people in their own lives who consistently offer support. These relationships, he argues, also contribute to physical health by influencing blood pressure, immune function, and stress regulation.

Pearlman also advocates for finding a mentor. He makes a point of mentoring others himself, having benefited from mentors while learning his craft. Not everyone is willing to take on that role, however, as some believe their own success may be diminished by helping others succeed. Pearlman challenges this assumption, suggesting that one effective way to secure mentorship is by offering value in return. When people feel supported, he argues, they are more inclined to offer support themselves.

Pearlman argues that weaknesses can become strengths if individuals allow themselves room to change and grow. He suggests that confronting weaknesses—rather than avoiding them—and sitting with the discomfort they produce is essential to that process. This is often difficult, as acknowledging weaknesses can trigger fears of rejection.

To move past this resistance, he encourages readers to examine broader patterns of discomfort—situations that may limit personal growth. While these changes can be unsettling, that discomfort is a critical part of learning and development, leading to greater motivation, emotional resilience, and long-term growth.

## Employing Memory and Charm

Pearlman insists that most people do not struggle with memory problems; rather, they struggle with listening. People do not usually forget names; they fail to ever encode them in the first place, often because they are too distracted. To combat this, Pearlman advocates for his *listen, repeat, reply* approach.

When listening, Pearlman underscores the importance of tuning out distractions and giving the speaker full attention. He suggests repeating a person's name after it is introduced and using it naturally during the conversation. Spelling the name or commenting on its spelling can also aid recall. Other memory techniques he discusses include the mansion technique, which involves associating information with objects in a familiar location, and chunking, a method of breaking information into smaller units to improve retention.

Charm is a central theme in Pearlman's work. He defines charm as "getting people on your team," or finding a way to persuade others to root for you. While some individuals are naturally charismatic, he argues that charm is a learnable skill and considers it "the linchpin to success."

He associates charm with honesty, noting that people are drawn to authenticity and that it cannot be faked. Effective listening also plays a key role and involves full engagement, expressing genuine interest, avoiding interruptions that can trigger a fight-or-flight response, asking thoughtful questions, and concluding conversations by summarizing what was discussed.

## From Mentalism to Mindset

In his book, Oz Pearlman demonstrates some of the tactics and lessons he has learned that have allowed him to become a world-class mentalist, earning the attention of corporate heads and billionaires alike. His book is filled with stories of his own journey because he believes that people best learn lessons when they are conveyed through story.

While Pearlman does not give away the secrets to his tricks, he does give away the secrets to his success. He leaves his reader understanding what it takes to be successful in any field. His discussions on self-talk and charm help readers turn difficult situations into more pleasant ones. His job requires solid memory skills and shares useful tactics to not only better encode and remember people's names but also to remember larger pieces of information.

While Pearlman may not literally read minds, his insights offer readers practical ways to become more attentive, perceptive, and intentional in how they engage with others—skills that carry clear value in both personal and professional contexts.

## THE SUMMARY IN BRIEF

Failure is inevitable. But failure is also valuable. Sure, coping with failure isn't exactly fun. But what if you find a way to transform your failures into successes? What impact would that bring to your personal and professional life?

By recounting the success story of Bennett Gates, the book ***Read the Tape: Using Situational Awareness to Predict Personal and Business Probabilities*** unveils a super powerful yet fun guide to overcoming difficult challenges on your way to greatness. Here, you'll taste seven compelling episodes that will help you deep dive into who you are, what you're truly capable of, how you can overcome your limitations, and how you can overcome your limitations to achieve your most ambitious dreams.

By crafting a novelized version of his own journey to excellence, Author Mike S. Shapiro enables us to extract opportunities, deploy situational awareness, and overcome adversity (in both life and business) in a super creative and engaging way.

## IN THIS SUMMARY, YOU WILL LEARN:

- How to truly know yourself.
- How to transform failures into success.
- How not to limit yourself.
- How to find joy in whatever you do.

## Introduction: You Already Can

As Bennett Gates rolled up to the sleek recording studio of his noon session, he caught a glimpse of himself – or rather, a glimpse of his BMW iX reflected in the building's glossy black glass. For a split second, the image startled him. A year ago, he was driving a beat-up truck in the mountains of Virginia, feeling about as lost as he ever had.

For most of his life, a question had haunted him. He had no doubt the Bennett Gates of a year ago would have this question in mind when confronted with a shiny new BMW and the familiar face at the wheel: Who does that guy think he is?

Back then, that question would have made him stick his head in the sand and hide from the world. Because at least when you were hiding, you couldn't fail. Everything is different now. I know exactly who that guy is, Bennett thought, a smile spreading across his face because he's me. He was learning to be comfortable in his own skin. Over the last twelve months, he had failed – spectacularly – but instead of being crushed by that failure, he had laughed and learned from it. The irony, of course, was that only once he embraced failure had Bennett experienced such phenomenal success.

Bennett was a coder and a decent one at that. A coder could always find work. But he had a bad feeling he wouldn't be able to work in video games again, not again after multiple failures he had to face. What in the world happened to my life? He wondered. How is it possible that I have continued to be my own worst enemy, failing time and time again?

But one day, he stumbled across a podcast called Read the Tape by Mike Shapiro. And that was where his wildly successful journey began. The following episodes of Read the Tape reveal the secrets behind Bennett's success!

## Episode 1: What's Your Chutzma?

Welcome to Read the Tape. I'm your host Mike Shapiro, an author, entrepreneur, and venture capitalist. I've developed and created multiple businesses and done lots of things in my life. Honestly, a lot of my success has come from failures I've had before. Today we're going to talk about chutzma. It's one of my favorite Mikeisms. Mikeisms are the things I've learned from a lifetime of experience that I try to quantify in my life and business so you can put them to use in yours.

Chutzma is essentially a combination of two things: chutzpah (or self-confidence) and charisma. When you bring these elements together, chutzma becomes the practice of developing a deep belief in yourself and your capabilities, strengthening that belief, making yourself stronger through that belief, and getting others excited and engaged in you and your cause.

Everyone has an inner genius, something that makes you special, and it's vital to find out what yours is. Ask yourself, "What's easy? In your entire existence, what was just really easy and fun for you? What do you love to do? What brings you joy?"

Now let's talk about self-confidence. It's hard to stop being fearful of putting yourself in the spotlight, but the only way we're going to learn who we are and how to be comfortable with ourselves is by facing those irrational fears head-on. After all, what's the worst that could happen? Chutzpah and charisma are both driven by communication. That communication is effective only when you're yourself around others and not trying to be someone you're not.

## Episode 2: Know Yourself

Welcome to the next episode of Read the Tape. I'm your host Mike Shapiro, and here's one thing I know about myself: I'm confident. In all honesty, confidence is built through success. Every time you have a success, you get more confident. Yes, you're going to fail along the way. But it depends on what you do with those failures. Turn it into something that's successful so that each time you're successful, more confidence comes. Then you're always confident.

Part of knowing yourself is enjoying who you are, what brings you joy and makes you happy. Now, write down five things you're not. If those five things made you feel like a failure, guess what: you're going to fail along the way. There will be failures and your success will depend on what you do with those failures.

Succeeding isn't just about money or notoriety. It's about doing something that gives you purpose. It's about truly enjoying yourself – about being yourself and embracing your inner genius – and finding that, in the process, you're becoming really good at what you do.

No one has the power to change your life circumstances as much as you do. But there are several things you can control that can make all the difference between success and failure. One of them is what we talked about earlier: chutzma (self-confidence + charisma).

For self-confidence to really settle in, you need to build up two more all-too-important traits: resilience and a sense of

humor. While resilience can get you far, having the fearlessness to laugh at the worst that could happen will keep you going. It's easy to know what we're good at. But when we look at what we're not good at, we get a much better sense of who we are because we have to stop and really think about the answer. So, be open to facing your fears, and you may be surprised where it takes you!

## Episode 3: Read the Tape

What does the name of the podcast – Read the Tape – really mean? To "read the tape" refers back to the old practice of using a telegraph to transmit stock price updates. But in the modern world, reading the tape goes beyond staying aware of stock market fluctuation. It's about reading the room, reading the environment, and reading the momentum of what's going on around you. It's also being able to take in visual cues, from the layout of a room to the rise of an eyebrow. It's about paying attention – accurately assessing people, situations, and trends – and using that information to do the right things at the right times to move forward.

Step one is just to be open and real, and let the other person lead. Truly connecting with someone means letting go of that false-perfect narrative and, instead of feeling like you have to prove yourself, being excited about getting to know them. See the people you want to connect with as incredibly and imperfectly human as you. Ask yourself, by focusing on them and not yourself, what can you learn about them that will help you ask the right questions.

Step two is relating. As you take all these observations, what can you ask that could help you relate to someone? What sort of nonverbal communication could help you ask about their day? Do they seem down or excited? Eventually, there will be something they say or something you notice that will lead to that deeper connection. All you have to do is stay open, listen, and ask.

Step three is asking the right questions. Once you've explored the first two steps, you'll already have a sense of how people like to communicate. Regardless of the way they talk, make note of whatever their style is, and adjust your response to complement it. And don't forget to be a good listener.

## Episode 4: Above All, Try Something

I want to start today's episode with a brand-new Mikeism: Everything comes back, but it comes back differently.

When you get good at reading the tape, you start to ask the right questions about how things will come back differently. It's those questions that help you move forward, whether it's by making suggestions for improvement, coming up with new ahead-of-the-curve products in your day job, or launching a new business concept.

Always trying something is also linked to being willing to take a leap when others won't because unlike them, you're reading the tape, watching those trends lines to see what will come back and how different it will be when it does.

But how do you know what to look for? Where to find it? How to know if you're looking for the right thing? The truth is, reading the tape is not like following a clear trail of breadcrumbs. It's about training yourself to take in as much of the data around you as possible – from the nuances of the environment to the flow of human interactions.

At the same time, it's not a step-by-step process. I can't give you instructions on how to read the tape because everyone observes things differently and absorbs data differently. All I can tell you is to be open to it. Always trying something is also about reading your own tape. What's your edge? What makes you tick? What is different in you from the rest of the world? What is your inner genius? It is common sense to take a method and try it. If it fails, admit it frankly and try another. But above all, try something.

## Episode 5: Don't Limit Yourself

In this episode, we're going to talk about the importance of not limiting yourself. Usually without realizing it, we let our experiences hold us back instead of propelling us forward. We box ourselves in, defining ourselves as what we have done – those lines of "skills" and "previous roles" on our resumes – instead of what we could do.

In doing this, we risk burying ourselves in the tedium and mediocrity of settling for work that we already know, which numbs our minds and souls even if the paycheck is decent. We don't push ourselves, and instead of growing and pursuing new avenues that could spark excitement and reignite our happiness, we instead become complacent, bored, and lost.

But what if, instead of thinking about what our experiences say we can do, we look at what we're capable of doing? While experiences say "I'm able to do X, Y, Z skills, capabilities open up the door for anything we believe we can do. Believing we're capable of something simply means that although we may

have never had the experience or developed the skills to make it happen, we believe we can still try it and learn how to do it – and we may even find that we can do it pretty well.

## Episode 6: Know Your Nut

We'll start this episode with three little words for you: Know your nut. We're going to talk about managing your cash flow and paying attention to financials. You might think, I'll worry about that later, Mike. But if you keep pushing it off to some date in the future, then you won't have a strong foundation to build on, which means your inner genius may never get a chance to spark.

Capital is the fuel for every entrepreneur. It fuels the fire for whatever it is you do, which is why talking about capital is a necessary matter. If you want to be successful, then you've got to ask these questions: What is it that you're trying to pursue? What are you spending? What is your burn rate?

Be it life or business – surround yourself with people who have skill sets you don't. Always have a clear calculation of what your financial statements look like.

## Episode 7: You Are Always Selling

How about a Mikeism that's evergreen? You are always selling. Whether business or personal, that's the truth. That's why you have to look the part to the people you're trying to sell to. It's part of your credibility.

When I was selling real estate in Arizona, it was important to look the part with nice clothes and shoes. In Seattle, it's the exact opposite: I've met with billionaires who have holes in their T-shirts. Compare that to Southern California, where there's so much focus on how you look that it can start to get conflated with who you are.

Everyone has an inner genius. The problem is that, for many of us as we get older, the genius gets clouded over, and we forget. Knowing your limits is not supposed to be a barrier to success. It's about knowing what you're good at, what you're capable of, what you're comfortable with, whether you want to be in front of a screen, and what you can do. It is about self-discovery, personality, and capability, and figuring out how to make your inner genius shine.

## Conclusion: Finding Joy in the Success of Others

"And that's when I realized," Bennett said, bringing his long story to a close, "that maybe I could be successful in more than just business. Maybe it was time to pay as much attention to my personal life as I'd been paying to my professional success."

He was in Mike's recording studio, podcast headphones clamped over both ears, speaking into the microphone. Bennett reflects on the many failures that had led him to where he now sat, in Newport Beach, recording a podcast with his coach, mentor, and hero. Too many to count. And every one of those failures was worthy of being celebrated.

"I can't thank you enough," Bennett said sincerely. "You don't have to, Ben. I love helping young people like you. I don't expect I'll ever stop finding joy in the success of others. Sometimes all you have to do is put your hand under someone and say, 'Here's the net.' That usually allows creativity to happen and for success to blossom very rapidly. I mean, look at you!"

**Mike S. Shapiro** is an entrepreneur, investor, personal development coach, mentor, speaker, author, and podcast host. Mike is also a co-founder and CEO of EQTY | Forbes Global Properties and a co-founder of Plunk, a Seattle-based proptech startup. Mike's system is based on skills he developed as a market maker and trader with the Chicago Board of Options Exchange. There, he learned the value of "reading the tape," cultivating situational awareness to predict behaviors, leverage opportunities, and achieve game-changing results.

## Contents

Chapter 1: Our Batteries Are Depleted
*Page 2*

Chapter 3: Mental Health and the Workplace
*Page 4*

Chapter 4: Technology and Mental Health
*Page 5*

Chapter 5: Our Biggest Mental Health Challenges
*Page 6*

## THE SUMMARY IN BRIEF

We pay more attention to our phone battery than to the inner battery that powers our mind and body. And this is one of the biggest causes of the most widespread disease of our century: stress.

In his book, ***Recharge: Boosting Your Mental Battery, One Conversation at a Time***, David Ko argues that if we paid as much attention to our inner energy levels as we do to our phones, we would be much better, both mentally and physically. Working for Calm, the company behind the well-known mindfulness app, Ko had the opportunity to understand how technology can be both friend and foe when it comes to our mental health.

In this book, Ko argues that we need to give up the stigma of talking about mental health issues at the workplace, and use technology to help us monitor our mental wellbeing, instead of letting it add up to our stress levels.

## IN THIS EXECUTIVE BOOK SUMMARY:

- Learn to use the battery model to evaluate your level of stress.
- Discover helpful ways to recharge your battery, both at work and at home.
- Understand the dangers of being hooked on social media all the time.
- Learn how to discuss mental health with your family, friends and coworkers.

## Introduction

I had my first panic attack when I was fourteen. I remember taking a shower to see if the water would help the tightness in my chest go away. I couldn't breathe, and all I could think about was trying to "power through."

But now I work for the most mindful company in the world: Calm. Our mission is to help everyone on every step of their mental health journey. I decided to write a book to share my journey to guide and encourage all of us to take care of the batteries that run our lives: our brains.

The mind is the ultimate battery. Traditionally, we think of the brain as a supercomputer, able to handle decisions, calculations, and movements in a fraction of a second. But every supercomputer needs an energy source, and the mind's battery frequently gets overlooked. We take it for granted most of the time.

Until now.

## Chapter 1: Our Batteries Are Depleted

Our world today operates at a hyperkinetic, twenty-four-seven pace. We struggle with anxiety, high rates of depression, addiction, and burnout. But oftentimes, we plaster on a smile and "power through". We don't have the conversations we should be having. When someone asks, "How are you?" our usual response is "Fine."

We need to change that.

It's helpful to think of this in the universally understood context of our phones. We all have these computers in our pocket and—let's be honest—are obsessed with their battery levels. If everyone can check in on their mental health whenever they check their phone or laptop battery, we'd all be better off.

When you see your phone battery hovering around 20 percent, you start to feel a little bit anxious. Yet how often do you check your mental health battery, that battery within that is your power source, if we continue the analogy? We don't check in with ourselves nearly enough, if at all. Especially for busy people, mental health and wellness are often afterthoughts until that battery within is hovering near 5 percent.

The stigma around discussing our mental health adds to the constant cacophony of our twenty-four-seven world. I'm sure we've all heard someone say, "I don't have time for myself; I'm just too busy."

What we don't discuss enough is that mental health challenges are just as "normal" as any other medical concern. They can, and do, happen to anyone—everyone. But talking about it is easier said than done. Sometimes we don't have the vocabulary.

Sometimes it's that sense of stigma or embarrassment. However, when we have these conversations with each other, with our friends, with our families, when we simply are honest and assure ourselves and others, "It's OK to not be OK right now," we are all helping to ease that stigma.

These conversations don't have to be heavy or deep; they can start with a simple question. It's about being open and then listening in response.

Helping someone with their mental health is as easy as asking, "How can I help?" and it comes naturally to many of us. We're happy to ask peers and our families how we can lighten their load.

Keeping our own minds' batteries charged will not just help us with our mental health—it will help with our physical health.

## Chapter 2: The Mind and Body

I am willing to bet that every single person reading this knows the physical manifestations that arise when their mental health is suffering. We'll discuss some of those in more detail, but physical symptoms could include:

- stomachaches and indigestion;
- headaches;
- fatigue;
- muscle tension, muscle aches, and pains;
- clenched jaw and teeth grinding;
- insomnia;
- rapid heartbeat, clammy hands, and chest tightness;
- dry mouth and inability to speak;
- frequent illnesses—colds, swollen glands, sore throat;
- cold or icy hands;
- forgetfulness.

The mind and body are intrinsically linked. If your thinking brain is stressing you out, chances are it's also stressing out your breathing, or other aspects of your involuntary nervous system.

If your thinking brain is stressing you out, chances are it's also stressing out your breathing, or other aspects of your involuntary nervous system.

We all need to learn to listen to our batteries, to listen to our "guts" and our bodies as well. Those signs, like chronic headaches or those dreaded panic attacks, are like the canary in the coal mine, letting you know the signals that all is not well.

### Check Your Battery: Your Mind-Body Connection

How does your body react to your mind's stress? It can look different for everyone. Do you lose sleep? Feel tension in your neck or lower back? Does your stomach tie up in knots? Think about how you personally hold onto stress in your body.

The following sections will offer plenty of suggestions, but as you read, consider how you recharge to keep your mind-body connection healthy and in balance.

### Sleep

Smart sleep hygiene habits include the following:

- Keeping a consistent sleep schedule
- Creating a relaxing bedtime routine
- Creating a relaxing and soothing bedroom environment
- Exercising
- Getting sunlight during the day, if possible.

### Mindfulness

Mindfulness begins with being aware. Being in the now. Being in what we ubiquitously hear people call "the present." Mindfulness can also begin with being aware of the pace you are keeping. It begins with slowing down and just being present.

### Meditation

Meditation can take many forms—from an athlete listening to music to prepare for a game to someone who does yoga first thing in the morning. Meditation does not have to look a specific way or be done perfectly or according to a set of rules in order for you to experience the health benefits of mindfulness, which can include:

- stress reduction, reducing the production of stress hormones;
- improved focus/concentration;
- better sleep;
- reduced anxiety;
- lower blood pressure
- pain management;
- enhanced feelings of well-being.

### Exercise

Exercising—even walking a few days a week—helps to release feel-good hormones for our brains. But it also has positive effects on cardiovascular health, can help prevent osteoporosis, and even lowers the risk of certain cancers.

But in a chapter on the mind-body connection, I wanted to be sure to bring up yoga, tai chi, qigong, and other mind-body forms of exercise and tradition.

While yoga is the most famous practice to Westerners, tai chi is a gentle form of exercise sometimes called meditation in motion. Qigong also coordinates movement and breathing.

### What About the Power of Prayer?

For many people, prayer is a spiritual practice that is especially important to them for taking a moment of gratitude and calming their mind—and hence their body. When it comes to prayer and its battery-charging power, especially in terms of the mind-body connection, I think what works for you is as unique as our own backgrounds.

While I was writing this book, I had an opportunity to sit down with Surgeon General Dr. Vivek H. Murthy. He shared a story about speaking to an audience of high school students. He wanted them all to pause a moment and think of someone in their lives they wanted to thank—and compose a text.

Those gratitude texts may have made a roomful of students feel great, but the science is there—gratitude helps our mental health. It is a way to move through the world that helps us recharge our batteries and face adversity.

### The Care and Feeding of Your Body and Brain

Healthy nutrition is essential for our mind-body connection. We have all heard the phrase "You are what you eat."

Studies have compared "traditional" diets, like the Mediterranean and the traditional Japanese diet, to a typical "Western" diet and have found that the risk of depression is 25 percent to 35 percent lower in those who eat a traditional diet.

## Chapter 3: Mental Health and the Workplace

We are not OK. What our hustle culture created is toxic resilience. True resilience honors your boundaries, understands your human limitations, and celebrates your ability to say no when needed. Toxic resilience, on the other hand, is productivity at all costs.

Even in the busiest workday, there are ways to give your mental battery a boost. Try these quick recharge techniques:

- Walking meetings: Suggest a "walk and talk" for your next one-on-one meeting.
- Tech-free lunch: Step away from your desk and enjoy your meal without screens.
- Desk yoga: Try simple stretches like neck rolls, shoulder shrugs, or seated twists to release tension and increase energy.
- Positive affirmations: Keep a list of encouraging phrases nearby. You can go back and read one whenever you need a quick mental boost.

As a leader, I have spent years—from my time in university—thinking about what kind of leader I wanted to be. Never has it been more important to be an intentional leader.

In my opinion, leadership begins with listening. Listening is about empowering your employees, building trust, gaining insights about what's happening on the ground of your organization. And in this era of an increased focus on mental health in the workplace, active listening is also a building block for empathy.

So what are the traits of active listening?

- Focus. Pay attention to the speaker. Try to be present. Eliminate as many distractions as possible. Put down your phone.
- Make sure your nonverbal clues reflect listening. Don't cross your arms over your chest or appear "closed." Nod. Make eye contact.
- Reflect or mirror. "What I hear you saying is xyz …" Repeating back or mirroring what the other person says (or what you think they said) affords the opportunity to clear up any mis- communications right away.
- Empathize. Try to acknowledge the feelings and perspective of the other person.
- Do not interrupt. Very often leaders are "bottom-line" people. Avoid the temptation to interrupt or finish the other person's sentences.
- Ask appropriate questions. Asking follow-up questions that demonstrate a thoughtful approach to the discussion builds trust.
- Recap. In the workplace especially, it's essential to finish with a recap of what was discussed and next steps.

Over the last few years (and even before that), I started thinking about that question of work-life balance, of mental health, and I started to make some intentional changes as both a leader and a person.

However, outside the pandemic bubble, I've been finding myself wondering if work-life balance is actually achievable. The world has resumed operations, and I can feel the extra travel days creeping back into my calendar. One thing that has helped me bring balance to my postpandemic life is having the vocabulary to talk about where I am and what I need.

What's so interesting to me is once I started talking to people about recharging and the battery, somehow it seemed easier to understand. I am hoping, then, that helps with our next workplace issue—what happens in business when leaders don't address mental health.

In certain professions (medical school residents, Wall Street, hospitality), the long hours and stress are almost the point. They're almost like professional hazing.

However, we are increasingly seeing executives embrace the fact that caring for their employees' mental health and well-being is not only just the good thing to do, but is actually also good for the bottom line. According to Population Health Management, mental health costs US companies $200 billion a year in healthcare utilization and lost productivity.

By ignoring mental health in the workplace, we're essentially trying to run high-performance machines on low power. It's not sustainable, and ultimately, it's not good for anyone— employees or employers.

As diversity, equity, and inclusion (DEI) programs gain trac-

> By ignoring mental health in the workplace, we're essentially trying to run high-performance machines on low power.

tion, employers are seeking not only a diverse workforce, including people who literally think differently. There is probably not a person reading this book who does not know someone who is neurodivergent.

The challenge is to make sure that management and employees have empathy and realize that two people will never share the exact same thought process. It's our job as leaders to create empathy throughout the entire organization for one another, rather than trying to choose rigid qualifications and fit square pegs into round holes.

## Chapter 4: Technology and Mental Health

Today, everything from watches to rings to fitness and mental health apps can provide real-time data that measure how we're doing. I see unprecedented potential in what technology can tell us about our health and in what ways it can support us in our mental health journeys.

When I was young, I used to travel to South Korea to visit family, including my grandmother. On one of my visits, I was struck by my grandmother's dining room table. My grandmother's table had become a sea of paper and Post-it notes. They were reminders—what time to take what medication, notes of things to remember to tell the doctor, blood pressure readings.

The sight of the table and the problem it represented rolled around in my head for a while—there had to be a better way. Technology could help; I was certain of it. Why couldn't an app make our healthcare portable and trackable?

When we use tech to gamify healthier habits, then we're making tech work for our lives, and not the other way around.

One of the things technology does is make a service that was hard to come by easier to access. We take for granted if we have a heart problem, we will be able to access a cardiologist relatively quickly. Yet somehow, when it comes to mental health, we see a very broken system.

Overall, financial barriers pose a considerable obstacle to accessing mental healthcare. This often forces individuals to forgo or delay seeking treatment, worsening their mental health conditions over time.

Our latest venture at Calm, a product called Calm Health, takes aim at systemic barriers within the healthcare system. Tools like Calm Health are a first line of defense. More than just making you feel better because it helps you check in on yourself and monitor how you are doing. Calm Health will also let you know if you may need to get professional help.

I always tell my kids to aspire being comfortable enough with yourself that you do not need social validation of who you are and your choices. When we do not do that, technology veers toward toxicity.

Every year, people around the world participate in a "Screen-Free Week." A few benefits of a digital detox include the following:

- Reduced FOMO. For many of us, we've gotten so used to being on top of the news, work, social media, that we have the fear of missing out. A digital detox can slow this down and offer a respite or cure for FOMO.
- Better sleep. Most of us know the blue lights from our cell phones are not conducive to restful slumber. This is why it's wise, even if you think you cannot do a digital detox for a day or week, to certainly do a digital detox for the hour or two before bed.
- Increased productivity. A digital detox can give you back uninterrupted time for better focus and productivity.
- Improved mental health. Relentless scrolling can increase anxiety and depression. A digital detox gives mental health a break from the impacts of blue light, doomscrolling, and the like.

## Chapter 5: Our Biggest Mental Health Challenges

I want to examine some of the big mental health challenges

of our times, common to many of us. To the we.

Some of us thrive on stress. I do know there are different kinds of stress—and not all stress is bad.

There is the stress that wreaks havoc with our bodies. But there is also eustress. It is the "good stress." Think of a new job you are excited to start—you feel a little anxious, elated, stressed, but it's a motivating kind of stress that pushes you forward. Eustress keeps us motivated and working toward goals.

It's when stress becomes chronic that it becomes unhealthy and can have an impact on your mental and physical health. It is the real drain on our mental health battery—like having way too many apps open all at once for a long time.

Burnout is that next level of stress. It is a state of emotional, physical, and mental exhaustion caused by prolonged and excessive stress.

Just like some stress can be good, sadness is a healthy emotion. It's OK to feel sad. Depression is different. It feels constant. You feel hopeless and worthless.

Recharging from depression requires a multipronged approach that may include medication, talk therapy, or even hospitalization. However, starting the conversation is the first step—remember the "we," not the "they." You do not need to be alone.

Anxiety is a natural response to stress, characterized by feelings of worry, nervousness, or fear about an imminent event or something with an uncertain outcome. While occasional anxiety is a part of life, persistent and excessive anxiety can interfere with daily activities and might indicate an anxiety disorder.

The symptoms of anxiety can be both psychological and physical. In terms of recharging, when you suffer from anxiety, you want a go-to technique that can help those feelings to subside.

When we're stressed, we cope. Or at least, we try to. There are good ways of coping, and you already know there are some pretty bad ways too. Consider your coping skills. Some that work against us include the following:

- Substance use or abuse
- Denial (pretending the problem will go away is never helpful)
- Overeating or undereating
- Self-harm
- Isolating and withdrawing from friends and support
- Workaholism
- One of the problems with unhealthy coping skills is they can actually make problems worse. Ways to recharge that can improve your mental health include these:
- Exercise (and it can be as simple as a thirty-minute walk three or four times a week)
- Mindfulness
- Meditation
- Good sleep
- Healthy eating (yes, I will advocate for eating a pint of ice cream to nurse a broken heart—but not every night for a month)
- Connections—friends, family, group therapy, support or twelve-step groups, places of worship, etc.
- Pursuing hobbies and other positive outlets for stress
- Therapy
- Talking with trusted friends

## Chapter 6: The Difficult Conversations

Why are the conversations about our mental health so difficult?

We fear offending others. We fear not having the right words. We fear we are unequipped to say the right things.

We've all been on both sides of this equation: not wanting to speak up, for fear of others' reactions, and avoiding the conversation for fear of saying the "wrong" thing.

Another reason we may avoid the conversation is that we may not have the words in terms of our own feelings. For people raised to be stoic, for example, they may not even realize when they are sad because they have been taught not to recognize or acknowledge those feelings. This can be especially common in people who have experienced trauma.

We say to each other, "You good?" We expect the answer to be, "Yeah, I'm good." And then we move on.

What if we offered that space to the person we asked, "How are you?" What if their answer was "good"—and we followed up with "Great, how's your battery level?" Now we may get a different answer. Now we have an obligation. We

might have to engage. We might have to problem-solve. We might simply have to offer compassion. But the conversation now requires something of us.

## Conclusion: The Journey

It is my hope that this book has encouraged you to check your internal battery whenever you check your phone battery.

I hope you have conversations with those you love and care about, or those you lead at work, on how they are doing. Not the "You good?" variety, but with space and grace to truly listen.

And then it is my hope that you encourage those you have conversations with to continue their conversation with others.

**David Ko** is the CEO of Calm, a leading company in mental health and mindfulness. His extensive background in healthcare and technology has equipped him with a unique perspective on mental wellness. David's personal experiences with panic attacks and his professional journey from Wall Street to Silicon Valley have shaped his understanding of mental health challenges. At Calm, he leads a team dedicated to helping individuals improve their mental well-being.

## THE SUMMARY IN BRIEF

This book is about amplifying your life, regaining your focus, and transforming your world. You versus the entire world, doesn't offer the best odds. This doesn't mean giving up trying to make improvements to where you work or how you live. But it does mean thinking in terms of better rather than perfect, and working in stages toward making the improvements you want to manifest. This mindset is the "think global," "act local" of personal and organizational development. To reclaim the moment is to regain your focus from a place of feeling stuck, overwhelmed, or underdeveloped, all of which are too common today. These ideas are about getting back on track. The ideas and perspective shifts in these pages are a push in the right direction to regain a sense of clarity amidst a world filled with distractions. That clarity puts us in position to advance with a clear and powerful voice.

In ***Reclaim the Moment: Seven Strategies to Build a Better Now***, Greg Bennick helps people understand what is needed to become a better version of themselves in order to help others on a bigger scale. Through personal stories and proven evidence, Bennick is able to give readers the tools needed to not only understand why changes need to be made, but how to successfully achieve this as well.

## IN THIS EXECUTIVE BOOK SUMMARY:

- Discover new approaches to leadership and how to step into a listening role.
- Strengthen communication and how to reach one another more effectively.
- Juggle priorities and balance these with work demands.
- Manage conflicts and develop better interactions with one another.

## There's a Method to the Madness

This book is about amplifying your life, regaining your focus, and transforming your world. It all starts with being grounded. From there, you can refine what you want, how you want to communicate it, and move forward feeling like that new kind of human. Then you can build a team who will reverberate and transform.

## A World Changer's Guide to Life

You're a creature. Deal with It. This news is good because it's a launching pad, and one people have in common. The bad news gets much worse from there if people let themselves slip in terms of what humans, as insecure and frightened creatures, have the potential to do.

You've got a vast mind, and a powerful voice. Use them to create some good in the world. You, your team,your business, your life, your relationships, depend on you building a better now for yourself and approaching the world with new perspectives.

People need to be telling themselves, rather than listening to themselves, about the changes they want to create. You can learn to disregard the small stuff and focus on the main tasks at hand. You can strengthen your perspectives on relationships, creativity, what it means to be a leader, and how to best listen to and amplify others' ideas.

Imagine the words you tell yourself as an ignition point, sparking potential again and again. People are individual pieces of consciousness, each with a face and a name, all wondering what purpose that face and name is supposed to have. This, while feeling and knowing that you can do better, create more effectively, and expand powerfully.

Power resides in everybody. Authority exists above everybody. Use your voice for empowerment. Power is the sense of strength that emanates from within, and also the ability to inspire that in others. Authority is often different from power. Authority is centered on control.

What you want, you must create. What you risk will be regained. It is deeply troubling to be a creature who can imagine the infinite but be bound by physical imitations from within our outside of ourselves. But being a creature gives us a level playing field from which we can all develop and grow.

We are caught between want or want not, with no easy way out. If you can imagine the infinite, what do you do with your limitations? The answers are found in the act of constant creation and in sharing that with other people.

Not when. Not then. But now. You can use strategies to give yourself the best fighting chance for the future that you want.

## Mickey Mouse, a Thunderstorm, and Anarchy

There is always a way through. What matters most is if you are willing to see it, recognize it, and pursue it.No one is going to give you your voice. You have to find it yourself.

Why not your vision for the world, and why not now? What if you had to speak out to change something for the better and instead chose to be silent?

Silence inhibits progress. When it matters most, it might be up to you to break it. If people want something more, they have to take action. They need to be willing to use their voice when it is needed, and not after the fact. They need to give form to their ideas and motivations and make their words matter.

You can't let life unlived simply pass you by.

- Believe in the possibility of kindness.
- Keep your eyes on the knife.
- Cultivate a revolutionary mindset.
- Leap into the dark.
- Engage with laughter.
- Build relationships that matter.
- Start a reverberation effect.

Don't be the leader who wants to drive but forgot the keys to the car. Be the person and make the choices you will be excited to remember years from now.

When you strive to fill the gap between what you hope for and what you have, or what you aspire to and what you achieve, you can do that work without throwing someone else into the gap along the way.

## Believe in the Possibility of Kindness to Escape the Trap of Pessimism

Hope yields possibility. If you choose to believe in the possibility of kindness, you can start to see others, their

Pessimism destroys everything in its path. Believing in the possibiity of kindness opens up possibilities for connection, teamwork, and growth.

actions, and their potential to do better in newly positive and proactive ways.

Pessimism destroys everything in its path and things that aren't even yet in its path. Believing in the possibility of kindness opens up possibilities for connection, teamwork, and growth.

As is true when you build a better now, a reverberation effect starts with you that impacts and inspires others and leads to additional good things happening.

Be driven by kindness and consider people to be action partners and allies instead of adversaries. When you believe in the possibility of kindness, it gives you hope. It lets you reclaim the moment in a way that embraces and reflects how you want to be treated yourselves.

It bears repeating: Believe in the possibility of kindness to escape the trap of pessimism.

When you believe in the possibility of kindness, you:

- Discover that people around you are also inspired, empowered, and essential.
- Remember that without domination, collaboration becomes possible.
- Expand your ability to serve customers, collaborators, and community members effectively.

What can you do to believe in others more than you suspect or deny them? If human potential is about manifesting and maximizing change,development, and expansion, you have to lead first with that which creates the potential for you to experience growth.

## Keep Your Eyes on the Knife to Resist the Allure of Distraction

Roadblocks can yield possibilities. Be open to them. And ask yourself, "On what do you need to be focused most?" Increasing focus helps you reclaim the moment by being directed, intentional, and grounded.

If you want to build a better now, keep your eyes on the knife. Keeping your eyes on the knife is about keeping your highest priorities clear. When you focus specifically and completely on the task, idea, and the intention of what you have to offer, you can keep the offering directed.

Juggling isn't a distraction from the goal. Juggling is a powerful lesson on the way to the goal. Juggling lets you discover little victories in the midst of a challenge. You will learn how you react to making mistakes and you'll also find a new relationship with control.

Are you even willing to throw a first ball aloft? Mistakes, if we approach them with the right frame of mind, are a roadmap to success.

What is your single juggling ball – the one thing that would impact you most if it dropped to the ground? A drop is a learning point on your way to achieving success. A drop is also an opportunity to increase your focus the next time you try. Do not consider any drop a failure.

Don't be afraid to drop the ball! Get comfortable with making mistakes. Try something beyond the limits of what you think you can do. Don't listen to an internal voice that says you can't do this. Tell yourself that you can.

Would you rather try and fail or never try at all? Keeping your eyes on the knife means that you're paying attention to what matters most even in the midst of chaos. Keep your eyes on the knife to resist the allure of distraction.

When you could use this strategy:

- When you're distracted
- When too much is coming at you too quickly
- When navigating a decision that involves risk and reward
- When you or your team must get back on track together
- When decision-making is a challenge due to having too many choices

We are living in a time where allure is everywhere. It's no

wonder that we are confused and distracted. The life we are living is often a life in response to the spectacle, not a life in pursuit of our own desires and ambitions.

We are overwhelmed by truth, opinions, ideas, and images, and all of them seem to matter. We are creating distractions faster than we can adapt to them. People want there to be an overabundance of truth that they cannot consume. They want to be consumed and they want to try to consume all of this material so that they don't have to challenge themselves to push further.

Liking can make you miserable. If you want to reclaim the moment and build a better now, then you have to rein yourself in from the Allure of Distraction.

What's your excuse for being immersed in distractions? What is your most important task? What's your one blue juggling ball? What are you most focused on? If everything feels like a priority, we still have to make a choice, and to do this requires accepting some degree of sacrifice.

## Cultivate a Revolutionary Mindset to Break Free from the Deception of Defeat

"If they give you ruled paper, write the other way."

During times when you have felt bound by the deception that things were over, constantly be reminded to believe in yourself first and foremost. Believing in yourself is a revolutionary act.

Defeat is a deceptive and challenging adversary because people quickly convince themselves that no forward movement is possible and that they've done everything they can do. When we build a better now, we set ourselves up to be able to do that for others as well.

If you take a step back and do some intellectual work, you might literally change how you see an experience.

You must cultivate a revolutionary mindset to counteract the deception of defeat. You can think beyond the scope of what's in front of you, beyond the scope of your reality.

We need to rethink defeat so that it doesn't immobilize us. People walk a fine line between being afraid to succeed and at the same time afraid to fail.

The perception of defeat is often nothing more than a deception. Beyond the parameters that you've created in your daily work and life so that you feel safe, there is another world waiting. It is a world in which you make different choices when presented with the deception that defeat is absolute.

## Leap into the Dark to Embrace the Possibility of Success

In terms of creative development, moving in any direction is far better than having no movement at all. Direction matters less than action. Sometimes it takes just getting started, failing a little, then setting back on course to show you that you will eventually get to where you need to be.

When we step into the unknown, it can have powerful and even positive consequences. Our brains can be minefields of worry, impacting our ability to get anything accomplished. We can change that reality.

When we leap, we don't know where it could lead, but we definitely know where it will lead if we don't. While defeat or fear of failure is a barrier to creative development, it's essential for people also to not be intimidated by the possibility of success.

Leap into the dark to embrace the possibility of success. People see others having success and they want that, but sometimes they don't believe that it's possible, or if they do, they can think of half a dozen reasons why they can't have that same success.

Embracing courage is the key to overcoming intimidation by The Possibility of Success

Step into the tunnel, even if you don't see light at the end. Humans are the only creatures who can imagine something that doesn't yet exist and then through will and creativity, imagine it, develop it, create it, and infuse it with meaning.

## Engage with Laughter to Connect Amidst the Weight of the World

We can initiate powerful change if we choose, both in ourselves and in the world around us. People have the power to positively shift their mental and group dynamic from one in which individuals bear burdens toward one where shared experience elevates all.

Be willing to laugh, connect, and take joyous risks. Laughter and connection are brilliant engagement tools, and you

When you build and strengthen a team through relationship, the new collective dynamic experienced amidst those involved has never existed before.

don't have to be a comic genius to think in these terms. You just need to be willing to step out from the weight of the world and interact with a different mindset.

Laughter is a powerful thread that binds us together. Engage with laughter to connect amidst the weight of the world. When there are problems, people want solutions, not more process. The way to get there is through positive influence.

Try to not be Michael Scott from The Office. Making everyone feel uncomfortable is not the best way to success, even if that show truly is a riot. If you just hit people over the head with a vision, it will never land the same way as if you get them onboard with the reason for the vision first. Laughter doesn't have to poke fun. It can honor, engage, elevate, and inspire.

Perspective shifts aren't just helpful, they are life-enhancing, problem-solving, and team-developing. You can create the something more you are looking for.

The attempt, the mindset of trying to engage with laughter, humor, or light-heartedness amidst a world weighed down, has value in and of itself. You have to dream impossibly and at the same time act from a mindset of possibility. Taking joyous risks while engaging with laughter will inspire you to embrace vulnerability and courageously try something new.

## Build Relationships to Outsmart the Dread of Isolation

How will you be a driver of relationship culture instead of simply being a passenger? To build a better now, you are going to have to explore connectivity and relationships and how you can strengthen your connections to one another and how you can enhance as an individual.

People need a new kind of listening. Taking the time to really listen changes relationships and helps to build a better now. Listen as if other people's stories are more important than yours. Listen as if who you are is dependent on who they are.

Building relationships is an art form, a solid approach to how you work and live, and is an essential life skill. There's a direct connection between valuing what people have to offer and whatever profit might flow from those relationships.

Making people feel like they matter, matters. When you identify someone and make them feel seen and heard, you give them a sense of belonging.

Let's continually work to make relationships clearer, stronger, and more significant. When you build and strengthen a team through relationship, the new collective dynamic experienced amidst those involved has never existed before. To build a better now, you need to strengthen relationships with those around you, and prioritize their position.

Isolation might be real, and you may indeed dread it, but you outsmart it when you come together with others and pursue a meaningful goal. Strengthening connection to others is at the core of development. While in a relationship, people are continually redefined by the interactions they have, so make them count. When you build connections, you are building a better now for yourself, but you are also building a better now for the people with whom you are connecting.

Build relationships to outsmart the Dread of Isolation. Wanting something more and figuring out how to share and develop it as an idea can be a lonely reality. Relationship is the way through.

We come into being not individually but relationally. When people share power from within, and each person is on a journey that is appreciated and supported and understood as meaningful, then they can truly grow into their potential. We would be very wise to open our minds to new approaches that value people as a priority.

Authority disrupts. Relationships define.

## Start a Reverberation Effect to Build a Better Now

What is a Reverberation Effect? If you want to build a better now, and if you indeed want something more, then you

are reaching beyond yourself to include others in order to maximize potential all around.

Start with you. The clearer your mind, the better you will show up for others and be able to amplify their ideas. Taking the first step sets others up to be reverberation multipliers.

Taking action is very different from simply celebrating that you have a good idea. Keeping your mind clear and your sense of self intact are reverberation multipliers.

Keeping your mind clear will heighten your ability to share reverberations. Improving communication is a reverberation multiplier. If you want to be a better relay, work to be a better communicator.

Try to keep your mind open to alternative points of view. With reactions and intensity in mind, a helpful tool for boosting reverberation is to check your communication style and make sure it is effective, not affective.

No one else's strength should diminish yours. Nor should yours diminish anyone else's. Work to ensure the way you communicate is in line with how, what, and why you communicate. Building teamwork is a reverberation multiplier.

Cultivate engagement skills with the people around you. Engage, listen, respond, and then reverberate and amplify. When people reverberate and amplify ideas, they put themselves on track to build a better now.

Welcome to the beginning. This is where you start. To see yourself as a world changer is one thing, but when you can see yourself as a relay and part of a reverberating team, it is far more generous and inspiring.

So, where do you go from here? The goal of all of this is to create, elevate, and enhance potential. What you want, you must create.

## In Conclusion

Ultimately, when we build a better now, we find what we have been seeking. We create potential. That is the more we have been wanting all along. The potential for more experiences and connection, for more life, and for more space where new ideas can be shared and heard with more confidence. The space we create when we bring ourselves back to center and reclaim the moment is rich with possibility.

Greg Bennick is a world-class speaker, organizational consultant, and global event host whose ideas have inspired tens of thousands of people to take new approaches to productivity, focus, inspiration and personal development. He engages with audiences in conversations that span borders, appearing on stages in 27 countries (and counting). He is the founder and executive director of an international nonprofit in Haiti (onehundredforhaiti.org), which since 2010 has listened to Haitian people to help transform an entire region's relationship with water, education, food, and housing.

## THE SUMMARY IN BRIEF

"In our families, our businesses, our communities, our world – we need one another. We are not islands unto ourselves."

The book ***Relationship Equity: Your Cornerstone Investment to Great Gains in Business and Life*** takes us on a meaningful journey of realizing why the relationships we build with people are deeply important. It shows us the path toward building meaningful relationships steadily and faithfully.

Through his very own fable of progressing from a small-town bricklayer to the CEO of a successful tech company, author Richard Walker credits the kindness of people as the reason for his success. He says, "If you are a friend who is genuine, you will have genuine friends – and lo and behold – they will want to help you just as you have helped them."

## IN THIS SUMMARY, YOU WILL LEARN:

- The philosophy of relationship equity.
- How to cultivate a relationship equity mindset.
- How to build enduring relationships in life and business.
- How to make the most out of your opportunities.

## Introduction: We're All Just People

"Do you think other people are better than you?" my father asked me. "Of course, they are, Dad!" I said after my team lost the football match. "We lost, didn't we? I mean, you saw the score for yourself, right?" He cut me short, "No, they're not better. And if you start thinking others are better than you, that means you're thinking you're better than others, and you're not. We're all just people, Richard. Sure, there's always going to be some who have better skills, but that doesn't make them better people. Never forget that."

And I never have. Half a century later, I realized those were some of the most profound words that I have ever heard. As I advanced into adulthood, I witnessed the power of Relationship Equity firsthand. At so many turns, I met people who graciously gave me attention, advice, and encouragement. They believed in me and I have done my best to return their investment in our relationship – and with interest.

What fascinates me the most is discovering ways to positively influence the lives of others, as others have done for me. This is not so much of a business book as it is a philosophy book. What I offer here is a game plan not only for good business but also for good living. To be best at both, we must develop reliable and authentic connections with others. That's what engenders growth. That's what promotes prosperity. Only by reaching outward and upward can we move onward. We rise, or we fall, on the quality and strength of our relationships.

## Chapter 1: Investing in Humanity

When asked why he scored more goals than everybody each season, Wayne Gretzky, the great ice hockey legend answered, "I don't go to where the puck is. I go to where it's going to be."

I had met a chap who would come to influence me through the years as few others have done. His emphasis consistently was on helping others succeed, and that required more than a set of skills. When we met, I was well on my way, sure, but Bill must have recognized my relative inexperience. Nonetheless, he also recognized something else in me that soon would make him want me as a business partner. He didn't go to where the puck was. He went to where it was going to be. As a result, together we have been successful in building a strong and profitable business.

The bottom line here is the power of relationships. In the business world, as in virtually all human affairs, relationships are of paramount importance. When you show others that you genuinely care and want to help, they often want to reciprocate. Fostering strong, sacrificial, and respectful relationships mutually benefits everyone; this truth is the foundation of Relationship Equity.

Think of Relationship Equity as an investment. It isn't one that, necessarily, will build your bank account, though it quite often does. Rather, the equity you are building is in people. Whether or not it results in dollars, it always makes good sense to get to know people on an equal footing, not expecting a payback but exploring how you can help one another. And when you're open to that, marvelous things tend to happen.

## Chapter 2: The Relationship Equity Mindset

Relationships are not static. They thrive when nurtured, and they shrivel when neglected. Like a master gardener, you must know what needs the most attention, how much, and when.

Relationships require effort. But when Relationship Equity becomes your mindset, when you practice those skills daily until they become reflexes, you can be sure that you will find yourself moving in new circles with opportunities possible at every step.

The Relationship Equity mindset isn't some fancy formula that requires calculations and ruminations. It's about as simple as it gets. It comes down to thinking first about helping others get what they hope to achieve and then letting them help you with what you hope to achieve.

A successful relationship always requires a little give and take. A business relationship can develop into a personal one, and vice versa, and that is all well and good. There should be no barriers between the two, despite the conventional wisdom that suggests otherwise. I have had business relationships develop into lifelong friendships, and I have fostered friendships that led to mutually rewarding business deals.

You must be intentional about creating Relationship Equity and adopting this mindset will be the foundation of your success.

## Chapter 3: Foundations of A Philosophy

Opportunities have a way of multiplying once you get in the habit of accepting them. From working as a bricklayer

Caring about people is central
to both good business and good living.

to graduating at 27 to landing my first job in the IT field – I could journey from opportunity to opportunity with an incredible set of people guiding me along the path. In fact, the people part is why I still am in the IT field today.

I never tire of the dynamics and complexities of human interactions. After all, our business doesn't have a physical product to sell. What we "sell" is a cadre of smart people with an abundance of tech talent who we have taught to excel and to serve.

A business needs to make money to survive. That is about as fundamental as it gets. Business is foremost about service, whether you are offering a better widget or a wiser way. In one way or another, it is about improving lives. Caring about people is central to both good business and good living. That is the foundation of all success – and Relationship Equity is the cornerstone.

## Chapter 4: Links on the Links

Networking is an essential part of building Relationship Equity. A cynic might consider networking to be a calculative use of people for personal gain, but relationships like that would be shallow and devoid of equity with no history of sharing and mutual growth. I'm talking about deeper, lasting relationships that are more than transient and transactional, ones that can enrich your life in ways that are more profound than a big bank account. When you open yourself up to relationships that expand your world, wealth tends to grow organically.

We all have heard the trope that it's who you know, not what you know. Sure, both the who and the what matter immensely, but what makes it all work is how you know. How do you relate to others? How well do you get to know people? Do you regard those you meet as potential friends? And as for what you know, how are you putting it to good use? What you know won't matter if nobody knows you know it. Whose radar are you on? What have you done to put yourself there? Think about that for a moment, and it will make perfect sense.

## Chapter 5: Awakening to Oneself

One thing leads to the next might seem like a silly old saying that states the obvious, but it sums up the connectedness of different points in our lives. There is a catch, though. Nothing leads anywhere unless you act on it. If you shrug, your world shrinks. I chose not to shrug.

As young people mature, they presumably become better able to reconcile their values with their behaviors. They go on to pursue productive and authentic lives. Quite often, though, something disrupts that natural growth. It might be cultural or economic demands, family pressures, or simply the voices in their head saying, I can't do that or I'm not smart enough or it's just too late for me. Limiting themselves before they start, they end up toiling for years in jobs and careers that others might believe are appropriate for them and that bring them little satisfaction. They get stuck and can't see a way out.

Aside from your own self-doubt, there are now societal pressures influenced by social media that can have a profound negative impact on the psyche of today's youth. But, like anything else, it is how you respond that is what matters most. We are all in control of how we respond to any source of information. And I have seen firsthand what you can achieve once you recognize your own value and gain the confidence to move forward.

## Chapter 6: Breaking Down the Barriers

I have a confession to make: I'm about as technical as a pint of Guinness. I do not fit the stereotype of an "IT guy." It can be a struggle for me to even turn on the computer in the morning. Developing relationships, though, is what comes naturally to me.

The IT world as a whole is weighted more toward the introverted end of the continuum. Our industry needs both types – we need those smart analytical minds, and we also need people who are adept at making connections and zeroing in on the needs and wants of individuals and the marketplace. One part is not possible without the other, and

together they can come up with the best IT solutions.

The IT landscape has changed drastically in recent years. Today, the imbalance between supply and demand is the worst I've ever seen, and it appears that it will not be getting better any time soon unless something major changes. Industry leaders must grow a talent pool large enough to meet that demand. The winners will be the companies that use innovative ways to attract and retain top talent.

Strong relationship skills enhance the chance of success in the world of business. A prime example of this in my own career was during the Great Recession. During this time, I organized golf outings, intending to help laid-off executives connect with new opportunities.

A relationship deficit, however, is far from the only reason that some people with the skillset to succeed do not get into the field and build a strong career. Often, the reason is simply education. Let me explain this to you using what I call the socioeconomic pyramid. The peak of this pyramid represents wealthy families whose children have a high probability of attending a four-year college. At the base of the pyramid are families for whom that expense is out of reach or nearly so. The distribution of ability, however, is arguably the same from the top to the bottom of that pyramid. Wealth produces opportunities, but it does not increase brain power or problem-solving skills.

The implication is clear: our society has a broad base of untapped talent. At York Solutions, we are mining for the diamonds in the rough at the base of the pyramid. The Barriers to Entry (or B2E) program that York has developed provides the training needed to begin lifelong careers in IT. The greatest impact we achieved via this program was found in the discussions we had on imposter syndrome.

In any case, the act of reaching out, of seeking a deeper connection, put them a step ahead of their peers. This is how Relationship Equity works. An act of service, an expression of gratitude, a desire to reciprocate – it often starts that way, small and slow, and then it grows. It works on every level.

## Chapter 7: "We're Doing Good Today, Thanks."

When I ask people how they're doing today, most of them tell me they're "doing good, thanks." To which I feel like saying, "Well, that's great! What did you do for somebody today?"

At York Solutions, I preach the philosophy of "doing good while doing well," by which I mean that companies that are doing well should use some of their resources to do good for people so that they, too, have a better chance of doing well. And I also believe in "doing well by doing good," meaning that doing good for others will help us to prosper, too. When we reach out to be helpful to others, they likely will want to return the favor in some way, some time, somehow.

## Chapter 8: For Better and For Worse

When I told my wife, Lisa that one of the chapters in this book on Relationship Equity would include some thoughts on how it works in marriage, she smirked: "Oh yeah? Let me write that chapter!" Today, after three decades of marriage, I have learned two indisputable facts: My wife is always right, and I am always wrong. Those are the two rules, so far as I can see, for how to build a strong and enduring marriage.

All kidding aside, though, the principles of Relationship Equity are of supreme importance in a healthy marriage and family life. As in business, I have learned not to jump right in with my solution to every problem. I have found that the best way to help people get to the truth is to just ask questions. That's how it is in a marriage relationship, too.

As I wake up each day, the first thing I think is, "What can I do to make this day better for my wife?" Even if it's just making the bed or emptying the dishwasher. And when I do those things, I find that she is all the more eager to find ways to make my day better, too. That's the spirit that makes any relationship grow.

## Conclusion: A Wealth of Possibility

In this book, we have examined the elements of Relationship Equity. In my time, I have observed common denominators among people who turn the corner to success:

They approach life not fretfully but expectantly and when possibilities present themselves, they look for how they can say yes to them, not for excuses to say no. They are willing to work hard to make the most of what comes their way. They think in terms of us, not me, and are eager to build enduring relationships, expecting nothing in return.

Those skilled in Relationship Equity know how to launch a relationship and nurture it properly. They have the confidence to fit in wherever they wish, without feeling like an imposter. Finally, they choose kindness and helpfulness as their modus operandi.

**Richard Walker's** transformative career path led him to embrace an opportunity as an IT recruiter in St. Louis, MO, which he initially considered temporary. However, he turned it into a thriving career, making impactful contributions to the IT industry for four years. In collaboration with his business partner, Bill Carr, Richard co-founded York Solutions, a leading IT consulting firm that has been revolutionizing businesses since its inception. The company's headquarters in Westchester, IL, serves as an epicenter for innovative IT solutions.

# Reset

Dan Heath

Book Snaps™
In-depth reviews of best-selling business books.

## Reset

### How to Change What's Not Working

*By Dan Heath*

**Dan Heath** is the #1 New York Times bestselling coauthor/author of six books, including *Made to Stick, Switch,* and *The Power of Moments*. His books have sold over four million copies worldwide and been translated into thirty-five languages. Dan also hosts the award-winning podcast What It's Like to Be…, which explores what it's like to walk in the shoes of people from different professions (a mystery novelist, a cattle rancher, a forensic accountant, and more). A graduate of the University of Texas at Austin and Harvard Business School, he lives in Durham, North Carolina.

*A Book Review by Soundview*

# Unlock Forward Movement

In his book, ***Reset: How to Change What's Not Working,*** Dan Heath quotes Paul Batalden as saying, "Every system is perfectly designed to get the results it gets." If progress is to be made, then, systems need to be improved. Heath says that the changes needed in any given circumstance are not always self-evident because after a while people start to think that how something is always done is how it should be done. In order to reset a system as quickly as possible, then, people need to recognize what these stumbling blocks are, the leverage points, and then they must use their resources to change those systems.

Heath devotes his book not just to problems that occur within business. His strategies can work also in families, church communities, and any other group of people. They can also work as well within a person's own internal life and the habits that that internal life facilitates. Before Heath gets into the heart of his book, finding leverage points and stacking resources, Heath talks about the importance of noticeable progress. Research has shown how noticeable progress is the most important way to influence people's motivation as well as their perceptions of their work day. "No other work dynamics had as dramatic an effect on employees' inner life." People simply need to believe they are making progress in order to be satisfied in a situation.

## Finding Leverage Points: Observation, Goals, and Questions

The first step to change is to find leverage points, and in order to do this, a person must "go and see the work." Doing this is much more beneficial than merely sitting in a conference room discussing a situation because seeing the work allows people to work within the realm of reality rather than in the realm of guesses. Heath finds that most people do not understand how parts relate to a whole in a system. To illustrate this, Heath discusses how difficult of a time people have drawing parts on a bicycle. Most people have a functional understanding of a bike but could not explain how the system works, even those with in-depth knowledge about cycling. This is true in many situations, and it is not until the time is taken to go and watch a system up close that people can really see where problems occur.

It is usually best to go visit the people on the front lines when seeing the work because they are the ones who really understand how things work. Without seeing the work, people can find that sometimes interventions make things worse. For example, one school had students who struggle take a double class period for math. When shadowing a student to understand the system, an assistant principal noticed just how awful the double class periods were, especially because students who had to take the double class periods were cut short on electives. To improve the situation, the school decided to ensure that all students had an option to take at least one elective. This was a problem quickly mitigated because of the assistant principal's decision to "go and see the work."

Heath then encourages his reading to "consider the goal of the goal." This is important because achieving some goals results in no lasting change or benefit, making them relatively useless. Readers, therefore, need to consider whether the goals they set will achieve the outcomes they desire. One way to do this is with what Heath calls, "the Miracle Question." This question is, "A miracle happened overnight that fixed your critical problem. What are the first things you notice, after you wake up, that reveal the miracle has happened?" This question helps people zero in on quality changes that actually can make a difference. To illustrate this, he discusses a man and a woman in marriage counseling. The two discuss what they want with their therapist, and when the therapist asked the miracle question. The husband said that one thing that would change would be his wife would look at him while he was speaking to her. His wife never knew how important this was. This answer provided a tangible goal his wife could pursue that would make a meaningful difference.

## Finding Leverage: Bright Spots, Constraints, and Mapping

Another way to find leverage points is to look for what is currently working, the bright spots. After all, it does nobody any good to focus on areas where change cannot be made. If change cannot be made, the point is not a leverage point after all. It is not helpful, usually, to look at averages when trying to find leverage points because they are by nature a composite and do not necessarily represent one person or situation. Bright spots, on the other hand, are tasks, behaviors, or outcomes that you know are possible because somebody is already achieving them.

To illustrate this concept, Heath discusses a subscription service. Crucial to the success of a subscription service is for clients to renew their service. Some client partners at this particular enterprise had success with retaining their customers while others had much less success. When the company looked at the top performers versus the lowest performers, they realized that there were areas where individual's tactics were quite different. For example, top performers were over 50% more likely to have a "defined daily process" than the lowest performers were. Because there was such a gap between success and failure, this was a solid leverage point. If the company could get their lowest performers to have their own "defined daily process," it is likely they would start to improve dramatically. On the other hand, the company realized that there was not a huge difference between the follow up processes of the lowest and highest employees, and as such, this would not serve as a solid leverage point. This demonstrates how looking specifically at the brightest spots in any organization or process can help a person determine where the best leverage points are.

On the flip side, it is also possible to find leverage points by targeting the constraint. A constraint is "the limiting factor" or what it is that is holding you back from greater success. Heath states that "what's counterintuitive about constraints is that even smart-seeming investments can be worthless at improving the operations of a system if they don't address the constraint." The constraint will depend on what the actual goal is.

To explain identifying constraints, Heath discusses a hypothetical donut stand where cooking the donuts takes 60 seconds and taking the orders takes 90 seconds. It would not make any sense to purchase a new machine that could cook the donuts in 30 seconds because the cooks would not be in use a large part of the time because they would be waiting on orders which still take 90 seconds. If the owner of this same stand instead hired an extra person to take orders, quickening the order process, they could move the line more quickly. At this point it may make sense to purchase the new machine that could keep up with the faster order taking. It is important to find the constraints.

Finally, it can be helpful to "map the system" when finding new leverage points. People within organizations can get stuck in silos where they do not understand the overall system as a whole, making it difficult to find leverage points. It is the person who stands above the system and determines how it all works together who can find leverage points most easily. It is also important to find inherent assumptions and see if they are, in fact, true.

## Resetting Resources

When resetting resources, it can be incredibly helpful to start with a burst to get everybody off on the right track. Heath is careful to note that a burst is not a time to expect people to do exponentially more work. Rather it is a set time dedicated to the task at hand, limiting distractions. For example, having everyone work on pushing on a specific leverage point for forty hours over the course of one week is an example of a burst. One reason this works is because switching between tasks takes time. When people are able to focus intently on one task over the course of a week, that down time is eliminated or is at least reduced.

It also helps when people are working together. Miscommunication and misunderstandings can occur when people are not working in the same space at the same time. This is eliminated or reduced when everyone is together. Even if people are separated by distance, however, the idea of joint work can become possible when everyone makes themselves available for synchronous communication at the same time over whatever remote systems the group is working with.

Heath discusses the importance of effectiveness over efficiency in bursts by discussing an issue a man had at home with his wife. His wife wanted him to install a hose system that would allow her

## *Motivation is "the very heart of change"*

to more easily water her garden beds. The husband went to the home improvement store and bought everything he needed, but when he got home, he realized that one component was broken. It would have been more efficient for him to put the project on hold and get a new part the next time he went to the store, likely within a couple of days. This way he would not waste time or gas. He knew that this would not be okay with his wife, however, because she was less concerned with efficiency than she was with effectiveness at that moment. She wanted the hose system. He, therefore, went and got the part that day to finish the project. This task served as a burst. He put all of his resources into finishing the task before moving on to something new. It is important to accomplish meaningful work during a burst by focusing directly on the task that needs to be completed.

## Downtime

Another way to focus on resetting resources is to seek out and then to eliminate waste. Heath uses the acronym DOWNTIME to explain waste. With this acronym, he refers to "eight possible categories of waste: defects, overproduction, waiting, non utilized talent, transportation, inventory, motion, and extra processing." This principle is usually used to describe waste in factories, so it can be used in people's personal lives, but it may need to be tweaked a little bit. An example Heath gives of a company using DOWNTIME to eliminate waste involves Sweetgreen, a salad restaurant. At this restaurant, staff would mix salads in large metal bowls, but the bowls constantly had to be washed and were pricey. Adding to the price was the labor and water needed to wash these bowls. If they had customers mix their own salads, they believe people would enjoy the experience less. Therefore, they decided to purchase larger take home bowls in which staff could mix the salad directly in the bowl. Sweetgreen was able to reduce waste without compromising quality by using DOWNTIME, and this was only possible because they first mapped the system to find out where the waste was.

Another way that DOWNTIME can be used is with the concept of shifting right. There are certain tasks that all people can do, and there are other tasks that only one person or only particularly qualified people can do. An example of this is in the world of medicine. Only a doctor can diagnose patients. Therefore, medical systems sought to hire out other steps of the process, such as checking in patients and checking vitals, to other cheaper labor. This made the endeavor cheaper for the organization. Heath uses this example, however, to explain that prudence is also needed when trimming waste as patients consider whether or not the quality of the experience is the same when they see the doctor for such a short period of time. To determine whether such a right shift is beneficial, Heath thinks people need only to ask those affected whether or not the change is worth the cost.

Heath moves on to discuss the necessity of both adding and subtracting to what it is that you do. This often requires people to make tough decisions. He writes about a story that he read about in which a woman sought therapy because she had an exceedingly difficult time getting her children out of the door in the morning. One of her daughters has ADHD and it was particularly difficult for this child. The woman spoke with a therapist who suggested she look at what went well and add on to that. The woman realized that her daughter shines when they have one on one time. She realized that she, herself, works better when she is well-rested. She made some changes, and the situation changed very quickly. At least one of these changes inflicted a cost, however. She had to give up some time with her husband in the evenings in order to wake up early enough in the mornings to have some time to calmly start her day by herself. People should look at what they should add or increase in a situation as well as what they should stop doing or should start doing less of. Heath finds that both individuals and organizations will often spend too much time on some low pay off projects or customers and way too little time on what matters the most. When people look to see what to cut or to minimize, they ought to be looking for those activities that give the least amount of payoff, so they are not wasting resources on less productive tasks or customers.

## Restacking Resources

It is also important to consider people's motivation when it comes to restacking resources. Motivation is "the very heart of change," according to Heath. To illustrate how important motivation is, Heath discusses a man named Ezra Fox who was struggling to get his children to put away their toys. Fox realized that his children simply had no desire to follow his direction, and so he made it a game for them. While the motivation from this game only lasted a short amount of time, he was able to come up with other games that gave the children motivation to promptly clean up their belongings. By tapping into their motivation, he was able to help his children achieve his goals for them.

Obviously motivation extends beyond just children and cleanliness. Tapping into employees' motivation can help everyone become more effective. One method for doing this is to establish swaps where everyone lists out aspects of their jobs that they love and hate. Then if one employee loves working on something another hates, they can switch tasks. It will not always be possible to have people only working on tasks they enjoy, but when possible, it does help increase employee motivation. In this way, you are restacking human resources to work on what it

is each person can most effectively accomplish.

Heath moves on to the importance of giving people some power over their own work in his second to last chapter on resetting resources. He claims that offering people autonomy "instills more accountability… taps higher-order skills, and… reduces waste from micromanagement." Heath describes how dialysis nurses at one center started to train patients to do their own dialysis. Many feared what could happen because successful dialysis is crucial to keeping people alive. They worried about all that could go wrong. In the end, they found out that giving patients control over their dialysis was highly successful and that there were actually fewer patient emergencies. A tactic like this helps redistribute resources as the patients themselves do some of the work, making them feel in control. It also opens up other resources. This all must be done within reason, however. The most successful situations where people are given autonomy happens when the level of autonomy is also aligned to the goals of the organization. In these cases, it is the leaders who decide on the problems but the team members who decide how to solve those problems.

Finally, Heath turns to accelerated learning. In order to work effectively and manage leverage points, ample information is needed, and the quicker people get information, the quicker they can change. In order to facilitate this change, it is important to quickly identify failure and also figure out who is most likely to give effective feedback. Finally, it is also important to locate successes. One organization that effectively captured quick feedback was the 49ers. They desired to know, in real time, what changes they could make to improve the fan experience. They ended up installing terminals throughout the park where people could rate their experience. People interpreting that data in real time could go to sources of problems and solve them immediately. This fast learning allowed them to make quick changes in the areas where small changes could make big differences. This is a key example of leveraging resources.

Heath's book sets out to teach readers how to effectively manage their resources in order to make noticeable improvements in key areas of life. While many of the examples in the book pertain to the world of business, not all of them do. This is because Heath's tactics can be used in families, too, as well as with people's personal goals. This is because the book is all about finding areas where problems exist that can be quickly changed. The concepts are all easy to follow because Heath gives numerous examples for each of his steps, illustrating how the concepts are used in different areas of life. Additionally, he ends each chapter with a summary of key points from the chapter, allowing readers to quickly go back and review information they may have forgotten. All of this comes together to form a coherent and easy to implement plan of action for people looking to use their resources to the best of their abilities and to use leverage points to make improvements.

Career & Self-Development: Communication

# Resonate

## Present Visual Stories That Transform Audiences

by Nancy Duarte

### THE SUMMARY IN BRIEF

If great presentations were easy to build and deliver, they wouldn't be such an extraordinary form of communication.

Great presentations are like magic. They amaze their audiences. And great presenters are like magicians. In addition to practicing regularly, both are reluctant to reveal the methods behind their performances. In this summary, presentation expert Nancy Duarte cracks the code on how to orchestrate the invisible attributes that shape transformative audience experiences.

By leveraging techniques normally reserved for cinema and literature, Duarte reveals how you can transform any kind of presentation into an engaging journey. You will discover how to understand your audience, create persuasive content and elicit a groundswell of response.

*Resonate* describes what it takes to be a world-class communicator. It shows you how to evolve information into a story that connects with your audience and rallies them to action.

At the heart of leadership and learning is great storytelling. In *Resonate*, Duarte gives you the tools to teach, motivate and encourage audiences not just to listen, but to change and to act.

Applied with passion and purpose, the concepts in this summary can accelerate your career trajectory or propel your social cause.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to leverage the hidden story structure inherent in great communication.
- How to connect with your audience empathetically.
- How to create captivating content.
- How to craft ideas that get repeated.
- How to inspire enthusiasm and support for your vision.
- How to change the world.

# THE COMPLETE SUMMARY: **RESONATE**

**by Nancy Duarte**

**The author:** Since 1988, Nancy Duarte's award-winning design firm has created more than a quarter of a million presentations. Duarte Design is one of the largest design firms and woman-owned businesses in Silicon Valley, and its clients include Adobe, Chick-fil-A, Cisco, GE, HP, Twitter and Google. Duarte is the author of *Slide:ology*.

## Introduction

Language and power are inextricably linked. The spoken word pushes ideas out of someone's head and into the open so humankind can contend with adopting or rejecting its validity. Moving an idea from its inception to adoption is hard, but it's a battle that can be won simply by wielding a great presentation.

Presentations are powerfully persuasive tools, and when packed in a story framework, your ideas become downright unstoppable. Story structures have been employed for hundreds of generations to persuade and delight every known culture.

It's still the dawn of the information age, and we are all overwhelmed with too many messages bombarding us and trying to lure us to acquire and consume information (then repeat the process over and over). We are in a more selfish and cynical age, which makes it tempting to be detached.

Technology has given us many ways to communicate, but only one is truly human: in-person presentations. Genuine connections create change.

Whether you're an engineer, teacher, scientist, executive, manager, politician or student, presentations will play a role in shaping your future. The future isn't just a place you'll go; it's a place you will invent. Your ability to shape your future depends on how well you communicate where you want to be when you get there.

## Why Resonate?

Presentations are mostly delivered to persuade an audience to change their minds or behavior. Presenting ideas can either evoke puzzled states or frenzied enthusiasm, which is determined by how well the message is delivered and how well it resonates with the audience. After a successful presentation, you might hear people say, "Wow, what she said really resonated with me."

But what does it mean to truly resonate with someone?

Let's look at a simple phenomenon in physics. If you know an object's natural rate of vibrations, you can make it vibrate without touching it. **Resonance occurs when an object's natural vibration frequency responds to an external stimulus of the same frequency.**

How many times have you wished that students, employees, investors or customers would snap, crackle and pop to exactly where they need to be to create a new future?

**If you adjust to the frequency of your audience so that the message resonates deeply, they will display self-organizing behavior.** Your listeners will see the place where they are to move to create something collectively beautiful. A groundswell.

The audience does not need to tune themselves to you — you need to tune your message to them. Skilled presenting requires you to understand their hearts and minds and create a message that is tuned to their needs and desires.

### Change Is Healthy

Presentations are about change. Businesses, and indeed all professions, have to change and adapt in order to stay alive.

It takes gutsy intuitive skills to move toward an

unknown future that involves unfamiliar risks and rewards, yet businesses must make these moves to survive. Companies that learn to thrive in the chronic flux and tension between *what is* and *what could be* are healthier than those that don't. Many times the future cannot be quantified with statistics, facts or proofs. Sometimes leaders have to let their gut lead them to uncharted territories where statistics haven't yet been generated.

**An organization should make continual shifts and improvements to stay healthy.** That makes even simple presentations at staff meetings a platform for persuasion. You need to persuade your team to self-organize at a distinct place in the future or it could bring the demise of the organization.

Rallying stakeholders to move together in a common course of action is all part of the innovation and survival process. Leaders at every level in an organization need to be skillful at creating resonance if that organization is to control its own destiny.

Rule #1: *Resonance causes change.*

## Lessons from Myths and Movies

Presentations have the potential to hold an audience's interest just like a good movie. You might be thinking that it takes years to write a successful screenplay, and you have a real job to do. But isn't part of your "real job" to communicate ideas well, help people understand objectives and persuade them to change? Building your presentations with some of the attributes from myths and movies will help your ideas resonate with others.

Great stories introduce you to a hero to whom you can relate. The hero is usually a likeable sort who has an acute desire or goal that is threatened in some way. As the story unfolds and trials are met with triumph, you cheer for the hero until the story is resolved and the hero is transformed. As storytelling expert Robert McKee explains, "Something must be at stake that convinces the audience that a great deal will be lost if the hero doesn't obtain his goal." If nothing is at risk, then it's not interesting.

**Your communications follow a similar pattern. You have a goal that needs to be reached, but there will be trials and resistance. However, when your desire is realized, the outcome will yield remarkable results.**

The most simplistic way to describe the structure of a story is situation, complication and resolution. From mythic adventures to recollections shared around the dinner table, all stories follow this pattern.

### Crossing the Threshold

There is one indisputable attribute of a good story: **There must be some kind of conflict or imbalance perceived by the audience that your presentation resolves.** This sense of discord is what persuades the audience to care enough to jump in. In a presentation, you create imbalance by consciously juxtaposing *what is* with *what could be*.

**Clearly contrast who the audience is when they walk into the room (in their ordinary world) with whom they could be when they leave the room (crossing the threshold into a special world).** Drawing attention to that gap forces the audience to contend with the imbalance until a new balance is achieved.

### The Presentation Form

Drawing insights from mythological, literary and cinematic structures, *a presentation form* emerged. Most great presentations unknowingly follow this form.

Presentations should have a clear beginning, middle and end. Two clear turning points in a presentation's structure guide the audience through the content and distinctively separate the beginning from the middle and the middle from the end. The first is the *call to adventure* — this should show the audience a gap between *what is* and *what could be* — jolting the audience from complacency. When effectively constructed — an imbalance is created — the audience will want your presentation to resolve this imbalance. The second turning point is the call to action, which identifies what the audience needs to do or how they need to change. This second turning point signifies that you're coming to the presentation's conclusion.

The middle of the presentation form moves up and down as if something new is happening continually. This back and forth structural motion pushes and pulls the audience to feel as if events are constantly unfolding. An audience will stay engaged as you unwrap ideas and perspectives frequently.

Each presentation concludes with a vivid description of the *new bliss* that's created when your audience adopts your proposed idea.

Presentations are meant to persuade, so there is also a subsequent action (or crossing the threshold) the audience is to do once they leave the presentation.

Rule #2: *Incorporating story into presentations has an exponential effect on outcomes.*

## Get to Know the Hero

The instructions your high school speech teacher gave you about picturing the audience in their underwear is now officially obsolete. Instead, you need to picture them all in colorful stockings and tunics with superhero emblems — because these are the heroes charged with carrying your big idea to fruition.

It's important to know what makes your audience tick in order to connect with them. So how do you get to know them and really understand what their lives are like? What makes them laugh? What makes them cry? What unites them? What incites them? What is it that makes them deserve to win in life? It's important to figure this out.

Though your heroes might be lumped together in a room, you shouldn't view them as a homogeneous blob. **Instead of thinking about the audience as a unified clump when preparing your presentation, imagine them as a line of individuals waiting to have face-to-face conversations with you.** You want to make each person feel like you're having a personal exchange with him or her; it will help you speak in a conversational tone, which will keep the audience interested.

An audience is a temporary assembly of individuals who, for an hour or so, share one thing in common: your presentation. They are all listening to the same message at the same moment; yet all of them are filtering it differently and gleaning their own unique insights, points of emphasis and meaning. If you find common ground from which to communicate, their filter will more readily accept your perspective.

As an option, you might want to create a narrowly targeted message for specific people in the audience so that your presentation comes across as a personal conversation with the highest-priority individuals. Even if only one person gets it — as long as it's the right person — it's worth it!

You need to get to know these folks. You are their mentor. Each one has unique skills, vulnerabilities and even a nemesis or two. The audience must be your focus while you create the content of your presentation. Stop thinking about yourself and start thinking about connecting with them.

When an audience gathers, they have given you their time, which is a precious slice of their lives. It's your job to have them feel that the time they spent with you brought value to their lives.

Rule #3: *If a presenter knows the audience's resonant frequency and tunes to that, the audience will move.*

## Define the Journey

Presentations should have a destination. If you don't map out where you want the audience to be when they leave your presentation, the audience won't get there. You have to set a course, and that means developing the right content. The destination you define can serve as a guide. **Every bit of content you share should propel the audience toward that destination.**

Keep in mind that a presentation is designed to transport the audience from one location to another. They feel a sense of loss as they move away from their familiar world and closer to your perspective. **You are persuading the audience to let go of old beliefs or habits and adopt new ones.** When people deeply understand things from a new perspective to the point where they feel inclined to change, that change begins on the inside (heart and mind) and ends on the outside (actions and behavior). However, this typically doesn't happen without a struggle.

That struggle usually manifests a resistance — something that can be harnessed if you plan for it. When a sailboat is sailing against the wind, the sails are positioned to harness the wind. If done well, the boat sails faster than the wind itself — even though the gusts are opposing it. While you might not be able to control the severity of audience resistance, you can "adjust your sails" (message) and use it to gain momentum. When harnessed properly, the seemingly counterproductive force creates forward progress. However, just like sailing, it needs to move back and forth to get there (just like the presentation form).

**The journey should be mapped out, and all related messages should propel the audience closer to the destination.**

### The Big Idea

A *big idea* is that one key message you want to communicate. It contains the impetus that compels the audience to set a new course with a new compass heading. Screenwriters call this the "controlling idea." It has also been called the gist, the take-away, the thesis statement or the single unifying message.

**There are three components of a big idea:**

**1. A big idea must articulate your unique point of view.** People came to hear you speak; since they want to know *your* perspective on the subject, you should give it to them.

**2. A big idea must convey what's at stake.** A big idea should articulate the reason why the audience should care enough to adopt your perspective.

**3. A big idea must be a complete sentence.** Stating the big idea in sentence form forces it to have a noun and a verb.

Rule #4: *Every audience will persist in a state of rest unless compelled to change.*

## Create Meaningful Content

It's rare that the first, most obvious idea generated is the best one. Tenaciously generate ideas along a theme until you've exhausted all possibilities. Usually, the truly clever ideas appear in the third or fourth round of idea generation.

You will use divergent thinking — the mental process that allows idea creation to move in any direction you imagine. Divergent thinking enables new, original content to emerge. This is a messy phase, so suspend neatness and allow yourself to stay unstructured — you'll be scouting for new ideas and mining existing ones. Broadening the amount of possibilities creates unexpected outcomes, so explore every solution and suspend judgment.

### Generate as Many Ideas as Possible

• **Idea collection:** While you can avoid starting from scratch by collecting presentations from peers, that's not the only type of information out there; and regurgitating someone else's slides is not the best way to connect with your audience. Collect readily available ideas — but more importantly, purposefully mine for inspiration from all other relevant resources. Go both wide and deep. Gather as much as possible about the competitor's messages so you can position yourself differently than they do. Find out everything about the subject, and roam into tangential topics for insights.

• **Idea creation:** Inventing new ideas is a different process from mining existing ones. This is where you need to think instinctively — from your gut. Be curious, take risks, be persistent and let your intuition guide you. Draw from your creative side to generate ideas that have never existed or been associated with your big idea before.

Grab a sheet of paper or a stack of sticky notes and jot down everything you can imagine that supports your idea. The goal is to create a vast amount of ideas. You'll filter, synthesize and categorize all of them and craft a meaningful whole later on.

### More Than Just Facts

Now that you have begun to collect and create content, this first batch you brainstormed might be primarily comprised of facts. Facts are one type of content to collect — but they're not the only type needed to create a successful presentation. You must strike a balance between analytical and emotional content. Yes, emotional. This might not be a step with which you're comfortable, but it's an important one nonetheless.

Stating fact after fact in an hour-long presentation doesn't signal to the audience why these facts are important. Use emotions as a tool to bring emphasis to the facts so they stand out. If you don't, you're making the audience work too hard to identify the decision they are to make. Staying flat and factual might work in a scientific report but simply won't work for the oral delivery of persuasive content.

Rule #5: *Use the big idea to filter out all frequencies other than the resonant frequency.*

## Structure Reveals Insights

A solid structure is the foundation of a coherent presentation and shows the relationship between the parts and whole. It's similar to the couplings on a train or the string of a pearl necklace; it keeps everything connected in an orderly fashion, as if the content were destined to fit together neatly within a given framework. Without structure, ideas are easily forgotten.

Most presentation applications are linear and encourage users to create slides in a sequential order. One slide follows the other, which naturally compels the user to focus on the individual details instead of the overarching structure. To help your audience "see" the structure, move out of the linear format of the presentation application and create an environment where you can look at the content spatially.

There are several ways to do this. You can use sticky notes, tape slides on a wall or lay them on the floor. Any method that pulls your content out of a linear presentation application will work. Moving out of a slide-creation environment helps identify holes and keeps you focused on the bigger picture. This will help move your presentation from being about a bunch of small parts to being about a single big idea.

Clustering your content helps you visually assess how much weight you've given to various portions and how many supporting points you need to get your message across. Use this technique to confirm that you're emphasizing the correct content and allocating appropriate time for each message.

Keep in mind that the structure should accommodate the audience's comprehension needs and should be

assembled in a way that's palatable to them. It's natural for subject matter experts to prepare material linking ideas that are closely connected in their own minds, but remember that the audience might not see these relationships as readily. Connect your messages in a way that your audience can follow. The structure should feel natural and make common sense to them!

Most presentations that fail do so because of structural deficiencies. When the structure works, the presentation works. A good structure helps you work out the kinks and eliminate the extemporaneous.

Everything has inherent structure. A leaf, a building and even ice cream each has a (molecular) structure. Structure drives the shape and expression of everything. The same is true for presentations. How they are structured determines how they are perceived. Changes to the structure, whether grand or small, alter the receptivity of the content.

Structure allows your audience to follow your thought process. If you don't have clear structure then you end up jumping around and making random connections to ideas that are unclear to the audience. Solid structure causes ideas to flow logically and helps the audience see how the points connect to each other.

Rule #6: *Structure is greater than the sum of its parts.*

## Deliver Something They'll Always Remember

Create a moment where you dramatically drive the big idea home by intentionally placing *Something They'll Always Remember — a S.T.A.R. moment* — in each presentation. This moment should be so profound or so dramatic that it becomes what the audience chats about at the water cooler or appears as the headline of a news article. Planting a S.T.A.R. moment in a presentation keeps the conversation going even after it's over and helps the message go viral.

Since you might be presenting to an audience that sees lots of presentations — like a venture capitalist or a customer who is reviewing several vendors — you want to stand out two weeks after you presented, when they're making their final decision. You want them to remember you instead of all the other presenters they encountered.

### Create a S.T.A.R. Moment

The S.T.A.R. moment should be a significant, sincere and enlightening moment during the presentation that helps *magnify* your big idea — not distract from it.

There are five types of S.T.A.R. moments:

- **Memorable Dramatization:** Small dramatizations convey insight. They can be as simple as a prop or demo, or something more dramatic, like a re-enactment or skit.
- **Repeatable Sound Bites:** Small, repeatable sound bites help feed the press with headlines, populate and energize social media channels with insights, and give employees a rally cry.
- **Evocative Visuals:** A picture really is worth a thousand words — and a thousand emotions. A compelling image can become an unforgettable emotional link to your information.
- **Emotive Storytelling:** Stories package information in a way that people remember. Attaching a great story to the big idea makes it easily repeatable beyond the presentation.
- **Shocking Statistics:** If statistics are shocking, don't gloss over them; draw attention to them.

Rule #7: *Memorable moments are repeated and retransmitted so they cover longer distances.*

## There's Always Room to Improve

A presentation broadcasts information to an audience in much the same way that a radio broadcasts programming to listeners. Thus, the signal's strength and clarity determine how well the information is conveyed to its intended recipients. Communication is a complex process with many points at which the signal can break down. Once a message has left its sender, it is susceptible to interference and noise, which can cloud its intention and compromise the recipient's ability to discern the meaning.

Communication has the following parts: sender, transmission, reception, receiver and noise. The message can become distorted at any step of this process. Your top priority is to ensure that the message-carrying signal is free from as much noise or interference as possible.

Presentation development works the same way. Every step of the process either enhances the signal or creates noise that causes the audience to tune out.

### Amplify the Signal, Minimize the Noise

The signal-to-noise ratio is an important factor in how well your message is received, and it's your job to minimize the noise. If the audience receives a message that includes any interference, they receive distorted information.

You must expend energy minimizing the noise in each step of the communication process to ensure that a

crystal-clear message gets through to your audience.

There are four main types of noise that can interfere with your signal:

**1. Credibility noise.** Speaker's believability or likeability creates interference.

**2. Semantic noise.** Language and interpretation create interference.

**3. Experiential noise.** Speaker's delivery or venue creates interference.

**4. Bias noise.** Speaker or receiver filters ideas through bias or dogmatism.

Noise can be reduced or eliminated through careful planning and rehearsing.

### Rehearse and Re-rehearse

There is always room to improve. So be tenacious in preparing yourself ahead of time. Rehearse and re-rehearse. Then, solicit feedback. If the presentation was taped, review the recording and then start the refinement process all over again.

Successful people plan and prepare. To be successful in any profession requires discipline and mastery of skills. Applying that same discipline to the skill of communication will attach the audience to your idea and improve your professional trajectory.

Rule #8: *Audience interest is directly proportionate to the presenter's preparation.*

## Change Your World

If you say, "I have an idea for something," what you really mean is, "I want to change the world in some way." What is "the world" anyway? It is simply all of the ideas of all our ancestors. Look around you. Your clothes, language, furniture, house, city and nation all began as a vision in someone else's mind. Your food, drink, vehicles, books, schools, entertainment, tools and appliances all came from someone's dissatisfaction with the world as they found it. Humans love to create. And creating starts with an idea that can change the world.

Staying passionate and tenacious about your idea requires that some part of you be uncomfortable with the status quo. At times, you must have enough resolve to put your reputation on the line for the sake of advancing your idea.

### Changing the World Is Hard

Ideas are not really alive if they are confined to only one person's mind. Your idea becomes alive when it is adopted by another person, then another and another, until it reaches a tipping point and eventually obtains a groundswell of support.

President John F. Kennedy gave a speech declaring that by the end of the decade, the United States should land a man on the moon and bring him home safely. He wanted support from every American. He said in the speech, "In a very real sense, it will not be one man going to the moon — it will be an entire nation. For all of us must work to put him there." He wanted the entire country to feel responsible for supporting his vision. Later in the 1960s, Kennedy was touring NASA headquarters and stopped to talk to a man with a mop. The president asked him, "What do you do?" The janitor replied, "I'm putting the first man on the moon, sir." This janitor could have said, "I clean floors and empty trash." Instead, he saw his role as part of the bigger mission that was to fulfill the vision of the president. As far as he was concerned, he was making history.

### Use Presentations to Help Change the World

Presentations really can change the world. Who would have thought that a movie about a presentation would win an Academy Award, create global awareness and incite change? Long before *An Inconvenient Truth* was on anyone's radar, former Vice President Al Gore had delivered his presentation hundreds of times to influential audiences around the world.

You might not need to change the *entire* world, but you can definitely change your world using a presentation. To see a systemic adoption of your idea, you may have to deliver multiple presentations. On your way to change the world, there will be key communication milestones that become catalysts for your success. Each milestone is an opportunity to adjust the strategy, collaborate and realign the team. Milestones include product pitches, product launches, board-member updates and keynote addresses.

An understanding of the strategic value of a presentation is important to your career. Make sure your world-changing ideas are in your organization's presentations. If not, you'll inherit someone else's thinking and implement their ideas instead of influencing innovation with yours.

After the ideas are presented and agreed to, work activities are generated from the presentations. Most presentations persuade people to take action, so presentations spawn a lot of activity. Also, after the brilliant thinking in the presentation is solidified, it ripples through and informs other related materials needed to support and spread the idea, like websites, social media, brochures and so forth.

Remember, just because you communicated your idea once doesn't mean you're done. It takes several presentations delivered over and over to make an idea become reality. Well-prepared presentations will speed up the adoption and change your world!

### Gain Competitive Advantage

There's a constant push and pull related to what's perceived as right or wrong, based solely on how it's communicated.

Most communicators are visionaries who can see where to go and how to get there. An executive "sees" where the company needs to go; a manager "sees" how to build a strategy; an engineer "sees" how to construct a product; and a marketer "sees" how to promote it. Your job as a communicator is to get others to "see" what you are saying so your ideas gain traction.

Getting stakeholders to understand your ideas — while the competitor's concepts remain obscure — ensures a victory. If presented well, a smart idea acts as the igniting spark for an explosion of human and material resources. A great presentation gives smart ideas an advantage.

If your presentation is great, it can become a broadly reaching social media phenomenon. Now, more than any other time in history, great presentations transcend the moment in which they're given, because they can be seen by millions of people who weren't there in person. When a presentation is great and is recorded, people will watch it again and again. If your message is clear and worth repeating, it will be repeated. If your message is repeated, you win!

### Be Transparent So People See Your Idea

You must be willing to be you, to be real and to humbly expose your own heart if you want the people in the audience to open theirs. You must be transparent, and this is difficult.

**Being transparent moves your natural tendency of personal promotion out of the way so there's more room for your idea to be noticed. The audience can see past you and see the idea.**

There are three keys to being transparent:

• **Be honest.** Be honest with the audience and give them the authentic you. If you are honest with yourself and your audience, your presentations will have more moments of vulnerability and sincerity. Openly sharing moments of pain or pleasure endears you to the audience through transparency.

• **Be unique.** No two people have experienced the exact same trials and triumphs in life. Though we often tend to conceal our differences in an effort to fit in and be accepted, our unique perspective is what brings new insights to a topic.

• **Don't compromise.** If you really believe in what you're communicating, speak confidently about it and don't back down. It won't be easy to try something no one has done before or speak loudly about a topic that no one has the guts to confront. Call it like it is.

## Give a Positive First Impression

Successful first impressions introduce you and your message in a way with which the audience can identify. It's the nature of all audiences to compare themselves to you and look for similarities and differences. Make these similarities and differences clear as they size you up, so they get over that phase quickly. Create a common identity between you and them.

### You Can Transform Your World

Your ideas may be simple or they could contain keys that unlock unknown mysteries. However, if you don't communicate them well, they will lose their value and add nothing to humanity.

The amount of value you place on your idea should be reflected in the amount of care you take in communicating it. **Passion for your idea should drive you to invest in its communication.**

Your ideas are potent. A single idea from the human mind can change the world. You have the opportunity to shape the future through your imagination. Imagining a future where your idea has been implemented will keep you inspired to communicate your idea passionately. So be flexible, be visionary and go rewrite all the rules.

Rule #9: "*Your imagination can create a reality.*"
- *James Cameron*

## THE SUMMARY IN BRIEF

We used to think of failure as the opposite of success. Now, we're often torn between two "failing cultures": one that says to avoid failure at all costs, the other that says fail fast, fail often. The trouble is that both approaches lack the crucial distinctions to help us separate good failure from bad. As a result, we miss the opportunity to fail well.

After decades of award-winning research, Amy Edmondson is here to upend our understanding of failure and make it work for us. In ***Right Kind of Wrong: The Science of Failing Well***, Edmondson provides the framework to think, discuss, and practice failure wisely. Outlining three archetypes of failure–basic, complex, and intelligent–she showcases how to minimize unproductive failure while maximizing what we gain from flubs of all stripes. She illustrates how we and our organizations can embrace our human fallibility, learn exactly when failure is our friend, and prevent most of it when it is not. Edmondson gives us specifically tailored practices, skills, and mindsets to help us replace shame and blame with curiosity, vulnerability, and personal growth. You'll never look at failure the same way again.

## IN THIS SUMMARY, YOU WILL LEARN:

- The three reasons failing well is hard.
- Why you need awareness of context to fail well.
- How system awareness impacts unwanted failures.
- The keys to thriving as a fallible human being.

## Part One: The Failure Landscape

### Chasing the Right Kind of Wrong

In order to fail well, we have to learn how to chase the right kind of wrong. Failing well is hard for three reasons: aversion, confusion, and fear. Aversion refers to an instinctive emotional response to failure. Confusion arises when we lack access to a simple, practical framework for distinguishing failure types. Fear comes from the social stigma of failure.

**Aversion: a spontaneous emotional response to failure**

Failure is never fun, and nowhere is that more starkly true than in hospitals, where life and death are at stake. But even ordinary failures–our mistakes, the unimportant things we do wrong, the small defeats when we hoped for victory–can be surprisingly painful and difficult to come to terms with.

You trip on the sidewalk; a comment in a meeting falls flat; you're the last kid selected for an impromptu soccer game. Small failures, to be sure, but for many of us, the sting is sharp.

Aversion to failure is real. Rationally, we know that everyone makes mistakes; we know we live in a complex world where things will go wrong even when we do our best; we know we should forgive ourselves and others when we fall short. But failure and fault are inextricably linked in most households, organizations, and cultures.

Ironically, our aversion to failures makes experiencing them more likely. When we don't admit or point out small failures, we allow them to turn into larger ones. Our aversion to our failures also leaves us vulnerable to feelings of relief when someone else fails. We're instantly glad it's not us. Worse, we can be quick to judge others' failures.

It's human to feel anger and blame, but it's not a strategy for helping us avoid and learn from failure. One of the most important strategies for avoiding complex failures is emphasizing a preference for speaking up openly and quickly in your family, team, or organization. In other words, make it psychologically safe to be honest about a small thing before it snowballs into a larger failure.

Another strategy is how we frame our failures. Reframing a failure can give us joy instead of regret. How we frame or reframe failure has a great deal to do with our capacity to fail well. Reframing failure is the life-enhancing skill that helps us overcome our spontaneous aversion to failure.

Each of us is a fallible human being, living and working with other fallible human beings. Even if we work to overcome our aversion to failure, failing effectively isn't automatic. We also need help to reduce the confusion created by the glib talk about failure that is especially rampant in conversations about entrepreneurship.

**Confusion: not all failure is alike!**

Although "fail fast, fail often" has become a Silicon Valley mantra meant to celebrate failure, much of the discussion in books, articles, and podcasts is simple and superficial–more rhetoric than reality. For instance, it's clear that no company should celebrate a plant manager whose assembly line fails fast and often. Ditto for today's heart surgeons. No wonder we are confused!

Fortunately, this confusion can be reduced by understanding the three types of failure–basic, complex, and intelligent–and how differences in context matter. In some situations, well-developed knowledge about how to achieve desired results makes routines and plans generally unfold as expected; for example, following a recipe to bake a cake. These are called consistent contexts.

Other times, you're in brand new territory–forced to try things to see what works. These are novel contexts and include things like designing a new product.

Failures are more likely in novel than consistent contexts, so we don't get upset about them, right? Wrong. The small part of your brain responsible for activating a fight-or-flight response detects a threat no matter the context and our negative emotional reaction to failures, regardless of the level of real danger, can be surprisingly similar. But, a simple typology for distinguishing failures can help us make healthy attributions about them, counteracting this emotional hijacking.

In addition to novel and consistent contexts, all of us frequently find ourselves in variable contexts–those moments in life when knowledge exists to handle that particular type of situation, but life throws you a curveball. In our daily lives, we face situations where we have extensive prior knowledge but still face meaningful uncertainty.

The correlation between context type and failure type is substantial but they are not 100 percent aligned. A basic failure can happen in a laboratory when a scientist mistakenly uses the wrong chemical. Similarly, an intelligent failure can occur on an assembly line when a thoughtful process improvement

For some, to begin learning from failure takes one large enough to be undeniable.

suggestion turns out not to work as hoped. Nonetheless, an appreciation for the role of the context helps you anticipate the kinds of failures likely to happen.

Our confusion about failure gives rise to illogical policies and practices. The instinct to exhort people to do their best work in challenging times is understandable. It's tempting to believe that if we just hunker down, we can avoid failure all together. It's also wrong.

The relationship between effort and success is imperfect. The world around us changes constantly and keeps presenting us with new situations. Even when people work hard and are committed to doing the right thing, failure is always possible in a new situation.

Now consider what happens when executives, or parents, for that matter, state that failure is off-limits, that only good results are acceptable. Failures don't stop. They simply go underground. It's human nature to hide the truth when it's clear sharing it will bring punishment, or even just disapproval. Our fear of rejection presents the third barrier to practicing the science of failing well.

**Interpersonal fear: stigma and social rejection**

Adding to our emotional aversion and cognitive confusion is a deep-rooted fear of looking bad in the eyes of others. This is more than just a preference. The fear induced by the risk of social rejection can be traced back to our evolutionary heritage when rejection could literally mean the difference between staying alive or dying of starvation or exposure.

This survival mechanism in our brains that helped us survive in prehistoric times, today often leads us to overreact to harmless stimuli and to shy away from constructive risk-taking.

The fear response, designed to be protective, can be counterproductive in the modern world when it keeps us from taking the small interpersonal risks that are essential to speaking up or trying new things.

Psychological safety–an environment where you don't fear rejection for being wrong–is the antidote to the interpersonal fear that prevents us from failing well. Psychological safety helps us to do and say the things that allow us to learn and make progress in our changing, uncertain world. It reduces the interpersonal barriers to failing well, so people can take on new challenges with less fear, such that we can try to succeed and walk away wiser when we don't. That is the right kind of wrong.

Failures may never be fun, but with practice using new tools and insights they can become less painful and easier to learn from. Failures are an unavoidable part of progress. This is true for our personal lives and for the vital institutions that shape society. This is why it's so important, and rewarding, to master the science of failure.

## Part Two: Practicing the Science of Failing Well

### We Have Met the Enemy

We go about our work and lives hampered by, and partly oblivious of, some well-documented human tendencies that make it difficult to learn the valuable lessons failures offer.

Part of the problem is that we are reluctant to share our failures with others–an old truth, today exacerbated by social media–and this reduces everyone's ability to learn from them. Important information is lost and we become doomed to repeat failures that could have been prevented.

For some, to begin learning from failure takes one large enough to be undeniable. We need to be hit over the head with our wrongness to make us stop in our tracks and start to wonder where we went wrong.

We don't all need a giant fiasco to change how we think to help us better navigate the inconvenience and embarrassment of ordinary, not-so-large failures in our day-to-day lives. We just have to learn a new way of thinking–one that favors learning over knowing.

Learning from failure is difficult for a host of reasons.

Sometimes we miss our failures, sometimes they threaten our self-esteem or don't seem to contain valuable information or we don't speak up about them. These largely cognitive barriers are exacerbated by the unpleasant emotions failure evokes, especially in how we measure up to others.

When we see failures as shameful, we try to hide them. We don't study them closely to learn from them. We can help ourselves learn from failure if we simply reframe a situation from "I was not promoted because I am a failure" to "I failed to get the promotion."

Our relationship to failure improves when we unlearn the belief that "I am a terrible person because I made that mistake" to understand instead that "I made a mistake" and to ask, "What can I take away from it that will help me avoid making the same one in the future?"

We need to choose learning over knowing. At the core of the reframing task lie the words we use to express our thoughts, privately and aloud. Am I failing, or am I discovering something new? Do I believe I should have done better–and I'm bad for not having done so–or do I accept what happened and learn as much as I can from it? Am I okay with the discomfort that comes with new experiences? Will I give myself permission to be human? Permission to learn?

We have met the enemy and he is us. Our distorted, unrealistic expectations for avoiding failures are indeed the culprit. Mastering the science of failing well must therefore start with looking at ourselves. Self-awareness is the first, and most vital, of the three competencies we need to develop.

## Contexts and Consequences

An exercise called the Electric Maze designed more than three decades ago by inventor Boyd Watkins asks teams to successfully cross a rug that is rigged with beeping or non beeping squares without making any beeps.

The only way to find the right path is to step on squares, one at a time, through trial and error, to see if they beep. No one on the team has answers for this task so it can't be solved without experiencing failures (beeps) along the way.

Team performance is time based. Hesitating is costly. Yet, here's what happens. Each teammate seems to freeze because if they step on a beeping square, their team members groan. Or they step on a quiet square and everyone cheers. The team's reactions exacerbate the hesitation: the next person in the maze becomes even more hesitant, and eventually the team runs out of time.

When asked why they hesitated so much and ultimately failed the game, the answer is always the same. They didn't want to make a mistake and feel embarrassed. But stepping on a new beeping square is not a mistake. It's simply information about the path. It's the right kind of wrong.

When something goes wrong in unknown territory, it's a failure but not a mistake. Recall that something is only a mistake if you already have knowledge for how to avoid it. What people don't easily put into practice is that the way to perform well in the maze is to collect as quickly as possible information about which squares beep.

Logically, teams should applaud for discovering both quiet and beeping squares. Both provide vital new information about the path. Instead, people experience the tiny intelligent failure of a new beep as a mistake and feel embarrassed by it–an embarrassment amplified by others' reactions.

It shows lack of appreciation of context. When we face novel contexts in our lives, we must be prepared for failures as we navigate the new terrain. Most of us don't find ourselves standing in front of a literal maze trying to find the right path. But the exercise provides an apt metaphor for our lives.

All of us face uncertainty, which brings both risks and opportunities for discovery. All of us can benefit from pausing to consider the context at crucial and not-so-crucial moments in our day-to-day lives.

Too many failures in life, and in companies, occur because we don't pay attention to context. Practicing the science of failing well requires awareness of two dimensions of context: (1) how much is known and (2) what's at stake.

The first dimension concerns the degree of novelty and uncertainty. The second is about risk–physical, financial, reputational. Roughly speaking, are the stakes high or low? Reflecting on both the uncertainty and the stakes in a situation is a crucial competency for elite failure practitioners.

Situation awareness helps us feel better about experimenting when it's safe to do so and helps us be cautious when warranted to prevent unwanted failures.

## Appreciating Systems

All of us operate in systems in our everyday lives–family systems, ecosystems, and school systems to name a few. This makes system awareness–especially how systems can

Because failure is a fact of life, failing is not a matter of if but when and how.

produce unwanted failures–a crucial skill in the science of failing well.

A system's results are less shaped by its individual parts than by how the parts relate to one another. This simple but powerful idea can help you analyze and design various systems in your life to get better results.

The word system refers to a set of elements or parts that come together to form a meaningful whole–that is, a recognizable entity, whether a family, a company, a car, or a baseball team. Systems exhibit synergy: the whole is more than the sum of its parts.

Put slightly differently, the behavior of the whole can't be predicted by the behavior of the parts examined separately. Only by considering the relationships between parts can you explain a system's behavior.

Most people's education doesn't prepare them to see systems. We learn to break down problems into parts, which enables focus and progress in many fields of knowledge but blinds us to larger patterns and relationships. Traditional management systems similarly break work down into parts, inhibiting collaboration and innovation in favor of reliability and efficiency.

Systems with interactive complexity and tight coupling are vulnerable to breakdowns. By taking time to consider how a system works, many complex failures can be avoided. Getting into the habit of looking for relationships between elements in a system allows us to anticipate and prevent all kinds of failures and breakdowns and, just as important, allows us to learn more from the failures that do occur.

Think about activities your children want to join. A simple yes today brings multiple consequences for others and for the future. A decision in one part of a family system at one moment often affects other parts and later times. The point is not to say no indiscriminately to any alteration in your family's activities.

Rather, it's to diagnose the most important interrelationships so as to say yes, or no, thoughtfully. What you want is to benefit from the simple act of asking, (1) "Who and what else is affected by this?" and (2) "What might happen later, as a consequence of doing this now?"

Once you start seeing systems you can begin to see ways to alter the most important systems in your life or organization to reduce unwanted failures and to promote greater innovation, efficiency, safety, or other valued outcomes.

System awareness also helps you feel less bad about some of the things that go wrong in your work or personal life. When you start to see systems more clearly, you understand better that you are not wholly responsible for most of the failures that occur. You can feel responsible for your contributions to them–and determine to do better next time–but suffer less from the delusion that you're entirely to blame.

When you undertake systemic thinking it helps you make decisions more mindfully. This can seem distressing because there is no "right" answer. But it is also empowering because you get to choose! The choices you make can expand your opportunities for experimenting and learning.

### Thriving as a Fallible Human Being

A certain freedom comes from learning to live comfortably with who you are. Fallibility is a part of who we are. Self-acceptance can be seen as brave. It takes courage to be honest with oneself, and it's a first step in being honest with others. Because failure is a fact of life, failing is not a matter of if but when and how.

But thriving as a fallible human being also means learning how to fail well: preventing basic failures as often as possible, anticipating complex ones so as to prevent or mitigate them, and cultivating the appetite for more frequent intelligent failures. Learning to recognize and learn from each of the three failure types and strengthen each of the three awareness zones is a lifelong process.

The most important reason to embrace our fallibility is that it frees us up to take more risks. When you take more risks, you will experience more, not less, failure. This is how you get more comfortable with it. But two good things happen.

One, you realize that you don't die of embarrassment. Two, you build muscle so that each next failure stings less. The more you experience failure, the more you realize you can still be okay. More than okay: you can thrive.

The science of failing well is not always fun. It brings good days and bad. It's practiced by fallible human beings working alone and together.

But one thing is certain. It will bring discovery.

Discoveries about what works and what doesn't work in achieving goals that matter to you, along with discoveries about yourself. Practice failing and you will develop the science of failing well.

Amy C. Edmondson is the Novartis Professor of Leadership and Management at the Harvard Business School, renowned for her research on psychological safety over twenty years. Named by Thinkers50 in 2021 as the #1 Management Thinker in the world, Edmondson's Ted Talk "How to Turn a Group of Strangers into a Team" has been viewed over three million times. She received her PhD, AM, and AB from Harvard University. She lives in Cambridge, Massachusetts, and is the author of Right Kind of Wrong, The Fearless Organization, and Teaming.

# Right Thing, Right Now

Ryan Holiday

Book Snaps™
In-depth reviews of best-selling business books.

## Right Thing, Right Now

**Good Values. Good character. Good Deeds.**

*By Ryan Holiday*

**Ryan Holiday** is one of the world's bestselling living philosophers. His books, including *The Obstacle Is the Way, Ego Is the Enemy, The Daily Stoic*, and the #1 New York Times bestseller *Stillness Is the Key,* appear in more than forty languages and have sold over 10 million copies. He lives outside Austin with his wife and two boys ... and a small herd of cows and donkeys and goats. His bookstore, The Painted Porch, sits on historic Main Street in Bastrop, Texas.

*A Book Review by Soundview*

# Doing What's Right—Even When It's Not Easy

Ryan Holiday ends his book, ***Right Thing, Right Now: Good Values. Good character. Good Deeds***, part of The Stoic Virtues Series, with an explanation of the ways in which stoicism asks of its adherents to consider other people. He writes, "Any philosophy that hardens you to the plight of other people, any philosophy that punches down… instead of up…, any philosophy that rages instead of loves? These ideas are the plagues of our time." Holiday believes that what truly matters in life is how a person treats other people, and his book is an exploration of numerous principles that can help a person live a life of virtue. Stoicism, he explains, teaches people that challenges present opportunities. And these ideas form the basis of his book which is broken into three categories: The Me, The We, and The All.

Before Holiday gets into his three main sections, he explores the idea of virtue. He explains how the ancients believed that virtue could be divided into four components: courage, temperance, justice, and wisdom. He believes that these principles are "the stuff that the door to the good life hangs on." It was not just the ancients who believed in these principles as they have spread throughout Christianity, Western philosophy, Buddhism, Hinduism, and "just about every other philosophy you can imagine." Holiday's book is built around these principles as he writes that "doing the right thing almost always takes courage, just as moderation is impossible without the wisdom to know what is worth choosing. What good is courage if not applied to justice? What good is wisdom if it doesn't make us more modest?" As such, these virtues provide a compass by which people can follow.

While all four components are important, Holiday believes that justice is the most important of the virtues because, in part, there is no other virtue that can counterbalance it. There is never a situation in which justice is disposable. To note, he does not just refer to justice as just that which is administered by the courts. By justice, Holiday refers to fairness, "honesty, give and take, truthfulness, keeping promises." He believes that a solid moral code that takes the virtues into account gives a person something to build their life around. Despite his discussion of virtues, Holiday's book is about action, not merely debating principles but living them. Justice, he claims, is "not a noun but a verb."

## The Me (Personal)

Holiday starts the main section of his book by telling his reader that justice begins in the home, with the individual. It is about making a decision about the type of person you want to be. While some from the outside may consider this to be a restrictive idea, Holiday explains that following one's own high moral code actually gives life meaning and allows a person to make a difference. "We preach the Gospel," he writes, "not with words but with actions."

Holiday refers time and again to Harry Truman's political career. In his section on standing before kings, Holiday explains how Truman was a seemingly ordinary person who was thrust into the spotlight suddenly upon the death of Franklin Roosevelt. While some despaired, worrying that Truman did not have the credentials or experience to lead the nation, one man who knew him well was confident that Truman's character would help him lead the country well. Truman studied the Meditations of Marcus Aurelius as a younger man, and in doing so, learned the four virtues discussed above. He believed that they provided a roadmap to a well lived life, and he used those principles to lead the country in the aftermath of Roosevelt's death. Earlier in his life, Truman proved his dedication to these principles when he decided to serve in World War I. Truman had numerous reasons why he could have secured an exemption from fighting, but he believed it was his duty to fight to try to make the world a safe place for democracy to flourish. He believed that "justice is an awful tyrant" as he led his men in discipline balanced with compassion. In his personal life after the war, he continued to be guided by honor, refusing to succumb to corruption even when his family was poor and those around him were acting without scruples. Holiday commends Truman's behavior further with his statement that "The fact that corruption seems obviously wrong and shameful makes it easy to miss just how remarkable and solitary Truman's honest political life was – it is one thing to try to keep your hands clean, it's another to manage to do it in a den of thieves." For Holiday, you either follow ethical guidelines or you do not. To note, Truman's actions did not bring him widespread support. Holiday states that he left office a very unpopular president, but he believes that with the luxury of time, the world can now see just how great of a leader he was.

Holiday moves on to discuss taking responsibility. He writes, "we evade responsibility because it's hard. Because it comes with risks. Because we have a tough enough time taking care of ourselves. Because we'd rather someone else be responsible. But what kind of world would it be if everyone did this?" He explains that a person cannot take responsibility for another person's life until they have taken responsibility for their own. Character and self-respect stem from this responsibility taken, and Holiday finds this responsibility to be empowering. He believes that most or all people were, due to immaturity, or are in a place where they fear responsibility or avoid taking it. Holiday discusses F. Scott Fitzgerald's story, "The Adjustor." In the play, a woman has an easy life and is indifferent towards her marriage and children because they ask something of her. A doctor comes in and tells her that she now has "to give others what was given to you for so long. You've got to give security to young people and peace to your husband, and a sort of charity to the old. You've got to let the people who work for you depend on you. You've got to cover up a few more troubles than you show." He tells her that she will now be the warmth by which other people will warm themselves. Holiday believes that it is in this responsibility that people can find both "meaning and purpose."

Later in his first section, Holiday discusses integrity and its importance. He demonstrates this through Martha Graham, a woman who was asked to participate in preparing the Olympics in Berlin. Graham turned down the opportunity because the majority of the people in her group were Jewish, and she did not like the message it would send for her to work with the Nazi party. She needed this job at this point in her life, but her needs and desires did not overshadow her own sense of integrity, and she acted in accordance with her principles. Holiday then goes on to discuss Ulysses S. Grant. Poor at this time, Grant was gifted an enslaved person by his wife's family. This made slavery a personal issue, not just a political one for Grant that he could view from a distance. Having legal ownership over this person forced him to make a decision about whether he would bypass with integrity by denying his principles and utilizing the work of the slave that could bring much needed gains to himself and his family. He decided to give the enslaved man his freedom. Holiday explains that "Integrity is living by what you think is right. Not what you can get away with, not what everyone else is doing." Integrity can guide a person when decisions are difficult. It can keep a person afloat. "Integrity ceases to be an abstraction when life presents you the opportunity to act on it. Integrity then becomes real. It is proven." All of this responsibility is rooted in a person's own self-respect. Living with integrity will not be easy, but "somehow we all know that to live without it is the worst fate of all."

Holiday then moves on to discuss the importance of a person realizing their potential. He discusses Buckminster Fuller, a man who decided to take his life one night after experiencing incredibly traumatic life events. As he was prepared to take his life, he suddenly realized that by doing so, he would be evading responsibility for those who rely on him. He heard a voice saying, "You do not have the right to eliminate yourself…. You do not belong to you. You belong to the universe…. You may assume that you are fulfilling your significance if you apply yourself to converting all your experience to the highest advantage of others. You and all men are here for the sake of other men." This principle is part of what progress is based upon. If people refuse to live up to their potential and use the gifts they have been given, progress cannot be made. Stagnation will ensue. It is not just oneself who suffers when a person fails to fulfill this potential. Rather, it is also all the people who would benefit from what that individual has to offer. Because of this, people have a responsibility to do what they do best. He explains how Angela Merkel was talented in science, but she learned that there are many talented scientists around. There were not as many talented politicians, and since she excelled in this area, it was best for the world for her to pursue this path. This illustrates the economic law of comparative advantage which states that everybody does best if each works at what they are best at. He does not want it to be said about anybody that he or she could have done more.

*"It's not about you. It never has been. Discipline is a me virtue. Justice, one might say, is a we virtue."*

## The We (Sociopolitical)

Holiday opens the second part of his book by stating that "It's not about you. It never has been. Discipline is a me virtue. Justice, one might say, is a we virtue." Holiday discusses Thomas Clarkson. He was a college student tasked, in 1785, with writing an essay about the ethics of owning enslaved people. At that time, his arguments against slavery were novel, but he was less concerned with ethics than he was with winning the essay contest at Cambridge. He won the contest, and he found himself now plagued by the notion of slavery. While society at the time believed the institution of slavery was just, he could not easily dismiss the arguments he formulated in his essay. Clarkson became convinced that if slavery was wrong, someone needed to stop it. He took it a step further and started to consider whether that person should be him. Holiday thinks that even without Clarkson's convictions and work to end slavery, society would have eventually ended the evil practice, but Holiday prefers to think that this idea is actually disempowering. What he finds more inspiring and empowering is the idea that one person can make a difference and can change the tides of history even if he or she must join with many others and even if the work continues well past his or her lifetime.

One principle involved in helping the sociopolitical situation is seeing how other people live. Holiday discusses the well-to-do British woman, Beatrice Webb. Because of her social position, she had the best that was offered to women at the time. In her twenties, she became involved in a charity project whereby she pretended to be the daughter of a farmer and went to work with relatives of much lower status. Prior to this experience, Webb had no knowledge of the other classes because society was specifically designed to keep the wealthy sheltered from those living in poverty. Because of this experience, Webb's belief that those in poverty were there because they were immoral and deserved that life was shattered. This experience changed the course of Webb's life as she then dedicated herself to developing safety nets for people in British society. She worked to make conditions better for the working people. Holiday believes that "most social change is a result of a similar kind of rude awakening. Someone sees something and decides to do something." He quotes activist Jacob Riis as saying "what are you going to do about it… is the main question of the day." It is much easier for people to avoid the problems that plague other people, to stay firmly ensconced in one's own bubble. It is also difficult for people to take on the task of helping others when they face problems in their own lives. Holiday does not believe we should hide from reality, however. He believes it is our responsibility to open our eyes to both history and to the unpleasant facts of today. He writes, "we must wake up. We must seek out the experiences that will change us, we must seek out an understanding of how the world works and lives."

When discussing growing a coaching tree, Holiday writes that "In sports, a coaching tree is defined by the coaches and players and executives that a coach has discovered, hired, and mentored and what they go on to do in their careers." Holiday asks his reader to consider their career and the people they have helped. He thinks that people can learn even more about the extent to which they helped other people by looking at how many of those they have helped are different from them. He thinks that people too often pay more attention to how to get other people to help them than they are in helping other people get a chance at their dreams and opportunities. Holiday writes, "Not all of us have the power to change or improve the world within our own lifetimes. By supporting, encouraging, and influencing others – including our own children – our efforts can live on."

## The All (Is One)

In his final section, Holiday opens with a discussion of greatness. This greatness goes beyond mere caring or compassion. He believes that all cultures have their own saints, and these are people who go above just helping others; "they embrace an expansive, radical connection to everyone and everything to ever live, expanding 'we' to conclude everyone, to include all of us, even generations yet unborn." These people do the right thing even if they stand to lose everything. They have a commitment to righteousness that enables them to achieve the greatness they do, and this level of righteousness is possible in each one of us. For Holiday, Gandhi's work to help the untouchables is a prime example of this righteousness and greatness. Of Gandhi, a British scholar said, "Be careful in dealing with a man who cares nothing for sensual pleasures, nothing for comfort or praise or promotion, but is simply determined to do what he believed to be right." In the end, Gandhi's work to help those less fortunate took his own life when he was assassinated.

Holiday then discussed climbing "your second mountain." Here he opens by discussing Lou Gehrig, the professional baseball player whose name has become synonymous with Amyotrophic lateral sclerosis, or ALS. Gehrig could have comfortably retired with the money he had saved up, and he was offered lucrative contracts. He turned these down, however, to work for a parole board. Gehrig is quoted as saying that when you are young, it is good to be seen as a sports hero, but it is sad if that is what a person is most known for at forty years old. Writer David Brooks says that people get to the top of a mountain by conquering worlds like business or the arts, and this is good. But these people often also realize eventually that there is more than this to life. At

that point the question becomes "Will we just go back to how we've always done things? Or will we find another mountain, one that is much higher, much less a monument to our ego? One that challenges us to reach our potential in a fuller sense, a less self-interested way, a more generous and community-minded way." This is the second mountain. This second mountain is more spiritual, and we help others when we begin to climb it.

Author Ryan Holiday's last principle in his book is to pay it forward. He opens this section discussing Ralph Ellison's realization, in Harvard's Memorial Hall, that the names of the men carved into the wall are of men who gave their lives to help free Ellison's ancestors from slavery. Ellison's life was not one of ease. He still suffered under Jim Crow and racism of all stripes. Yet still, in this moment, he experienced a moment of indebtedness when he realized all of the people who gave their lives so that the future could be better. "They crossed oceans. They rotted in prisons. They stepped willingly, shaking with fear, onto great battlefields. They waited. They accepted. They hoped. They endured." It is not just in the giving of one's very life that these sacrifices are made for the benefit of others. People only need to look to their own caregivers in childhood to find people who gave of themselves so that their children could be cared for and be provided for. All around us there is evidence of people who worked for the betterment of others. This is a free gift in Holiday's estimation, and each person must decide what they will do with that gift This work we do with our lives will also be what gives meaning to our lives. Holiday's entire book, *Right Thing, Right Now: Good Values. Good character. Good Deeds,* catalogs the different Stoic principles upon which he believes a good life is lived. His book asks something of its reader. It asks the reader to live for something greater than himself or herself. He ends with the simple words, "The future depends on" what we do with our lives.

## THE SUMMARY IN BRIEF

We're all born with a certain "imprint" for work that makes us come alive. This is your Sparketype®, your DNA-level driver of work that lets you know, deep down, you're doing what you're here to do. Work that motivates you, fills you with purpose and, fully expressed in a healthy way, becomes a mainline to meaning, flow, performance, and joy. Put another way, it's work that sparks you.

Drawing upon years of research, experimentation, more than 25 million data-points generated by over half a million people, hundreds of deep-dive conversations with luminaries from science to art to industry and well-being, author Jonathan Fields and his team at Spark Endeavors developed the Sparketype imprints and methodology that are the basis of ***Sparked***.

***Sparked*** takes you deep into the world of the Sparketypes, revealing an entirely new depth of insights about what makes you come alive in work life, along with what empties you out and trips you up, so you can avoid those life-drains. It's a comprehensive guide to help you discover what you are meant to do and how to get started.

## IN THIS SUMMARY, YOU WILL LEARN:

- What it means to be Sparked and the 10 Sparketypes.
- The difference between your primary, shadow, and anti-Sparketypes.
- To recognize and avoid what trips up the Sparketypes.
- How the Sparketypes can translate to career success.

## What Should I Do With My Life?

When most of us ask, "What am I here to do," we're thinking about work. "What is my unique contribution? To my life. To the lives of those around me. To society. Whether it's the thing I get paid to do, or the thing, once discovered, I can't not do, simply because it's the air that breathes me."

This is a state called "being Sparked." Being sparked exists at the sweet spot between five domains:

- **Purpose**. Knowing you're moving toward something you believe in.
- **Engagement**. Excitement, energy, and enthusiasm for the pursuit of that something.
- **Meaningfulness**. The feeling that what you do and who you are matters.
- **Expressed potential**. The sensation of being fully you and not having to hide, bringing all of your potential to the experience, and leaving nothing untapped.
- **Flow**. The blissful experience of getting lost in an activity, losing time, and becoming absorbed in the task.

### Sparketypes

Early in life, we begin to exhibit a certain unique imprint or affinity—an intrinsic impulse—for work that makes us come alive. This work gives us the feeling of being Sparked. These imprints not only determine what type of work or effort we're drawn to (and repelled from), they also tend to come with a host of common behaviors, quirks, and attachments. These imprints are Sparketypes®, which is an easy shorthand for the source code-level driver of work that makes you come alive.

Finding your Sparketype equips you with insight that immediately rings true, a sense of direction, and the freedom to finally lead from a place of truth and potential. How many Sparketypes are there? The quick answer is 10: maven, maker, scientist, essentialist, performer, sage, warrior, advisor, advocate, and nurturer.

We're all a blend of a number of different Sparketypes, but every person has a distinct Sparketype Profile that is made up of three key components:

- **Your Primary Sparketype**. Think of your Primary Sparketype as the thing that generates the strongest impulse to exert effort for no other reason than the fact that it makes you feel alive.
- **Your Shadow Sparketype**. Your Shadow Sparketype is also a big part of you, sometimes even a close second behind your Primary. It is not, however, your strongest impulse. Think of it as your Primary Sparketype amplifier.
- **Your Anti-Sparketype**. Your Anti-Sparketype is the type of work that is the heaviest lift for you. It takes the most out of you and requires the greatest amount of recovery even if, objectively, it's not that hard.

When you know your full profile, all three elements, it helps you decide not only what to run toward but also what to run from. The online Sparketype Assessment (Sparketype.com) allows anyone, anywhere to rapidly discover their Sparketype.

Let's now look at six of the 10 Sparketypes. You'll learn how each Sparketype is nourished and stifled, what you need to feel fulfilled, where you tend to get tripped up and why, how each type tends to find an outlet, and how that outlet can lead to a career and generate an income.

## The Maven

### Slogan: "I live to learn."

Mavens are all about learning. Often on a level that goes beyond curiosity and lands as fascination, even obsession. As a Maven, you're fueled by a near-primal drive to know more, even if there is no end beyond simply scratching your often misunderstood and sometimes maligned "that is insanely cool, I must know more" itch. The thing that gets you out of bed in the morning is the opportunity to go to sleep knowing more than you did the day before. You view learning as an almost sacred pursuit, one you easily get lost in.

In fact, because the opportunities to learn are often so abundant, internal, and unimpeded, Mavens drop more readily into that blissed-out, time-fugued state of flow than other Sparketypes. They sink into an 800-page biography, follow a Google search about the mating patterns of dinosaurs, or tear through a bingeworthy lineup of documentaries on a Sunday morning only to look up and wonder if it's time for breakfast . . . at 11:00 p.m.

When working in a way that allows them the resources and control to spend the greatest amount of time immersed in the process of learning, deepening into a broad or narrow fascination, focused on a topic they feel innately drawn to, Mavens feel most alive. They become fully expressed. Sparked.

Own the fact that learning is your work oxygen. Often, this simple acknowledgment creates a shift that leads you to start seeing and creating opportunities.

### What Trips You Up

In the early head-spinning days of any pursuit, for Mavens, there is generally a lot to learn, from discrete knowledge about a topic, field, or area of expertise to the culture, mission, and social dynamic of an organization. But here's the strange thing. While those fueled by other Sparketypes may be happiest once the "new information overload dust" settles, Mavens tend not to be. Why? Because Mavens gotta learn.

These experiences often hit a crisis point when, months or years in, Mavens find themselves in a position where there's little left to learn. Or so they think. For Mavens, this is death. They feel trapped.

How do you get Sparked again? Understand you are a Maven. Own the fact that learning is your work oxygen. Often, this simple acknowledgment creates a shift that leads you to start seeing and creating opportunities. Reimagine your current work. What might you do, even if it lies outside the confines of your job, that would unlock the learning gates for you?

### Show Me the Money

Mavens often turn to their Shadow Sparketypes as conduits to cash, or as a "funding mechanism" for their Maven impulse. Neil Pasricha is an international best-selling author of books like ***The Book of Awesome***, ***The Happiness Equation***, ***You Are Awesome***, and many others. His books and talks are meticulously crafted, deeply vulnerable, and generous expressions of his Maker Shadow, and also highly effective mechanisms to fund his life and his continued ability to spend inordinate amounts of time learning.

Mavens often function well on teams, where they play the role of domain expert, contributing to the collective efforts of others who then apply that expertise to the creation of a product, service, idea, or outcome that becomes the source of compensation.

## The Maker

**Slogan: "I make ideas manifest."**

Makers gotta make. Creation is your call; it's the thing that gets you out of bed in the morning. You are most alive and engaged when you start with an idea, then turn it into something that exists in the world. Something that reflects the taste, sensibility, and notion of possibility you have in your head, the vision of what could be. And, now . . . it is. Because of you. Even if it's brutally hard, you know you're doing the thing you're here to do.

Makers are very heavily driven and also satisfied by process. When you are working in a way that allows you to spend the greatest amount of time immersed in the process of creation, you feel most alive. When the thing you are making is a true reflection of your vision, your unique ideas, lens, values, and sense of taste, you become Sparked.

When you have control over the resources, steps, decisions, and ultimate vision and are in charge of all of the elements that allow you to work toward that idea you see in your mind's eye and know is possible, you come alive.

### What Trips You Up

While certain circumstances allow you to come fully alive, others shut you down. For example, decision by committee, followed by creation by committee, can be the bane of your existence, especially when those involved have different values, visions, and sensibilities. For Makers, with a strong sense of identity tied to a specific idea or ideal of what the process and outcome should look like, being constrained, hindered, or having your vision diluted by the input of others can be incredibly frustrating.

Healthy, well-aligned, and harmonized collaboration is great, but it often works better when each person has their own "creation domain" within a larger context or project. Or when there is a clear and agreed-upon "lead Maker" who largely sets the vision and approach, then brings in others to make it real.

It's important to choose carefully, negotiate wisely, and be clear about where your line in the creation sand is. Get a clear understanding of what the decision-making process will be for any endeavor before you say yes to it.

### Show Me the Money

Makers have a sometimes-complicated relationship with making, service, and money. On the one hand, it's a beautiful thing when you can sell what you make, be compensated on a level that sustains you, and not have to do anything else. On the other, you sometimes feel the pressure of making what you know will sell (or earn an income), rather than what you're called to create. It's always a bit of a dance. There is no universally right answer beyond the balance that makes you feel fully expressed while also comfortably sustained.

Makers may earn their living not by selling what they create but by guiding others in the process of creation. This can be incredibly rewarding, especially when your Shadow is the Sage or Advisor or one of the more service-driven, outwardly satisfied Sparketypes. Your Maker impulse satisfies the desire to turn ideas into things, but the process of doing what you do has value to others, so you share it in the form of anything from a course or class to workshops, mentoring, and more.

## The Scientist

### Slogan: "I figure things out."

Scientists are all about the pursuit of burning questions, wicked problems, puzzles, riddles, and quandaries. The more involved and complex, the better. You also tend to be very process-driven. Sure, solving the puzzle, finding the solution, or figuring out the answer feels great, especially if it ends up helping others in a way that matters to you.

But it's the hunt, the process of discovery—or what Richard Feynman, Nobel Prize-winning physicist, described as "the pleasure of finding the thing out, the kick in the discovery"—that is equally, if not more, enlivening. You feel a sense of excitement, energy, and purpose not only when you arrive at an answer but through the simple experience of searching for it.

When the question, problem, or puzzle you are pursuing is tied to an area, topic, person, or community you feel some personal connection to, or innate pull toward, even if you have no idea why it feels so compelling, you become even more drawn to the work, and the feeling may well rise to the level of not just a devotion but a calling. In the Scientist's mind, even well-answered questions are ripe for better solutions and answers that are just waiting to be discovered by them.

### What Trips You Up

Just like every other Sparketype, Scientists are prone to certain circumstances that hold the potential to trigger them and take them to a dark place. Interestingly enough, the triggers for Scientists are the exact opposite of what triggers so many other Sparketypes.

For example, the air that Scientists breathe is the unknown. It's that place where something's not quite right and there's a better way out there, but what exactly that is, well, it's anyone's guess. Uncertainty is the soil in which they plant their seeds and grow their solutions. It represents possibility.

As they work their Scientist magic, over time, answers start to come, solutions take form, and what was once the great unknown starts to come into focus. A specific, certain answer emerges. While this is the end-state we're taught to spend our lives working toward, Scientists love the process of getting there, and they love the fact that they figured the thing out. But they don't love being there.

If they dwell in it for too long, they get intensely uninterested, frustrated, and maybe even a tad cranky. They lose the ability to come alive and, instead, find themselves trapped in the process and slowly flatlining.

### Show Me the Money

In the world of business or work, there are really only two ways to get paid. Deliver a delight or solve a problem. The latter approach is what the vast majority of businesses and jobs center around. Because of this, Scientists tend to find themselves in demand and well paid, especially in domains where the stakes are high and the impact is vast.

That said, when Scientists find themselves innately drawn to a problem, question, or puzzle that is of deep interest to them and maybe even to society, but offers no clear, predefined path to income or economic value to others, they may find themselves torn.

In order to resolve this tension, Scientists may find themselves pursuing more of a blended path. They'll earn a living through work that both taps and financially rewards their impulse to solve, albeit in an area that is not of great interest, then unleash that same impulse "on the side" in relation to problems or questions that may not provide meaningful financial compensation but do strongly interest them.

## The Performer

### Slogan: "I turn moments into magic."

Performers come alive when animating, enlivening, and energizing—breathing life, emotion, and sensation into an experience, interaction, engagement, moment, role, or pursuit in a way that makes it come alive with energy, emotion, and understanding.

Performers are among the rarest and most misunderstood Sparketypes. Many bounce between feelings of shame when they go full-on Performer and repression when they stifle this impulse that family, friends, colleagues, and society in certain domains exalt and revere, yet in others, disdain and even punish. It is also one of the most misdirected Sparketypes, in no small part because it is so often artificially constrained by the notion that it can only be expressed in the world of the performing arts.

Like all other Sparketypes, Performers tend to most fully access the feeling of being Sparked when the thing they are breathing life into is also a true reflection of a strong interest, vision, values, and a sense of taste.

### What Trips You Up

On occasion, when people discover their Sparketype is the Performer, they'll share how they dislike the term "Performer." Performer, they've come to feel, is about being "a fake." Even worse, it's about playing up the drama to bring unwarranted attention to yourself. It's about wanting undue attention and praise.

But the most effective Performers are not actually the ones who dial up the drama for the sole purpose of ego gratification, attention, and reaction or those who put on a facade. Rather, they're the ones who dial up the authenticity, integrity, trust, and craft in order to enliven an experience, moment, or interaction in a way that opens others to emotion, trust, connection, transference—and, at times, understanding, transcendence, even revelation. The intention is for the experience to land more as a gift that invites, connects, and elevates than a demand for adulation or adoration.

### Show Me the Money

The work of the Performer, like the work of so many of the Sparketypes, tends to have what most would consider a conventional outlet and then a universe of nonconventional ones. The interesting thing here is that, while most of the other Sparketypes find the easiest path to a comfortable living when pursued along those more conventional paths, for the vast majority of Performers, it's the opposite.

The vast majority of Performers who pursue their impulse in the most conventional way, often performing arts, struggle to earn a comfortable, full-time living.

That said, all is not lost, because the impulse and skills of the Performer are incredibly valuable, in demand, and often very well compensated when they find an outlet in the exponentially larger array of nonconventional opportunities. Performers in business-development or sales roles can create and enliven an interaction or presentation in a way that leads to exceptional outcomes and substantial compensation.

Speakers, facilitators, leaders in hospitality, recreation, and beyond find countless opportunities to bring the impulse to their work in a way that makes them come alive and translates into revenue. This impulse and skill, in fact, is both rare and incredibly differentiating in the world of business.

> Performers are among the rarest and most misunderstood Sparketypes.

## The Sage

### Slogan: "I awaken insight."

For Sages, illumination is your call. You live to share insights, ideas, knowledge, and experiences with others in a way that leaves them in some way better, wiser, and more equipped to experience life differently—and maybe sparks something in them that makes them want to learn more.

While there is definitely a process-fulfilled side to the work that makes you come alive, you tend more often to find your fullest expression and get your greatest reward when focused on the impact you have on those you seek to help illuminate and elevate. It's rarely enough to just know your topic well or have command over your craft. You can't just stand in front of a room, or write a book,

give a talk, or produce a podcast and feel like you've done what you came to do. Sages want to know what you share actually lands in a way that is understood, integrated, and embodied.

When the body of knowledge you are teaching and the people you seek to impact are a reflection of topics and communities, visions, interests, ideas, values, and process that you feel intrinsically called to, you become Sparked.

### What Trips You Up

Because Sages tend to be more externally service-focused, they can find themselves "over-giving" and becoming physically, psychologically, and emotionally depleted. The risk rises when the system you work within is demanding or all-consuming. It also requires you to devote great amounts of time to both the process of teaching and managing many outside factors, which tend to compound the experience of depletion.

If you are a Sage, be aware of this potential drain on your ability to give. Commit to filling your tank along the way, if not in the name of taking care of yourself, then in the name of being as effective as possible in your ability to illuminate. If you've done all you can to optimize your well-being and the circumstances under which you teach and still are left empty, you may want to explore a different approach to expressing your Sage call.

### Show Me the Money

The skills and abilities of the Sage—the desire and capacity to illuminate, to turn the lights of awareness, understanding, and insight on—are forever in need in a vast array of industries, organizations, and fields. Salespeople who are great at illuminating features, benefits, points of differentiation, and reasons why the thing they're offering is exactly what is needed tend to generate high levels of sales, be well compensated, and are also appreciated by customers and clients who get their problems solved and often leave with deeper insights.

Sages in positions of leadership and management often tap their impulse not just to inspire and motivate but also transfer insight, information, and turn the light of understanding on, cultivating knowledge, autonomy, and competence, along with a greater capacity to deliver outcomes more independently. This often leads to a bump in performance, engagement, and retention that is reflected in opportunity, demand, and compensation.

## The Warrior

### Slogan: "I gather and lead people."

There is, and has always been, something inside Warriors that yearns to gather people, organize them, harness their collective energy, assume responsibility, make decisions, and lead them on some form of meaningful, fun, or challenging (sometimes all three) quest, experience, mission, or adventure. For you, it's not just a skill, position, or title as a leader or community organizer; it is a DNA-deep impulse. It is the work you're here to do, even when it's personal, social, and fun.

You might express this through a deeper connection to a specific industry, field, group, or community. It might find an outlet at home, with friends or family. Some Warriors become attached to a particular area of focus, mission, or pursuit for long windows of time. Maybe you lead a faculty of teachers to raise graduation rates, or a team to invent and launch a new product, service, or company.

A certain fierce devotion to people and path must be present in order to do the deeply rewarding, yet sometimes difficult, work of gathering and leading. That ferocity is, in fact, where the moniker Warrior comes from. It's not about dominance, force, or pecking order but, rather, a willingness to stand in a place of enduring conviction and support, even when things get hard—which, when the stakes rise, they often do.

### What Trips You Up

Confidence is generally a good thing, but for Warriors, it can be a double-edged sword. Warriors tend to believe they're right. A lot. This can show up constructively as strength and conviction in the face of challenge.

When you are right and are willing to hold the vision long enough for the efforts of those you lead to prove its potential, the impact can be transformative. Problem is, that same instinct can easily tip from good intentions to ego preservation, from possibility into delusion. It can show up destructively as an arrogant and dogged attachment to a wrong point of view or belief in potential, even long after the assumptions and vision that launched the endeavor have been disproven.

The difference between these two expressions of decisiveness often comes down to those two Warriorship touchstones, openness and vulnerability. Stay perpetually open to and in search of the truth, allow yourself the grace to be wrong, and accept the invitation to change course. Own decisions and all that comes with them. You and those you sought to lead may not arrive at the place you

Viewed as trusted guides and catalysts who accelerate outcomes and add value, often in measurable ways, capable Advisors tend to be highly sought after.

hoped, but at least you'll land in the place you are with your dignity and their trust intact.

### Show Me the Money

Warriors in conventional roles and industries are often highly sought after and exceptionally well paid. They are viewed as the ones who make things happen and often sustain their efforts even in the face of hardship. They are in demand because of their skills and clarity of purpose but also because they gather and lead, not just because it's their job but because it's a pure expression of who they are and what they do. The very existence of that primal impulse often sustains them where others who are fueled more by obligation and skill fall down or step away.

In business, this can lead to roles in management and leadership. They are easily able to rise up the rungs of the leadership-centric, aspirational ladder so many want to climb, finding new opportunities and higher value and compensation along the way. While this impulse and skill set is deeply valued in nearly every domain, industry, and pursuit, it may not be as well compensated in non-business areas.

## The Advisor

### Slogan: "I guide to grow."

For the Advisor, the work of coaching, mentoring, and advising fills you like nothing else. You're the person who swoops in, develops sustained, personal relationships, most often with individuals or small groups, cultivates trust and confidence, and creates the safety needed to guide people in a hands-on, engaging way toward a desired end.

It's all about wisdom, trust, confidence, curiosity, presence, and guidance. Whoever you work with, their win is your win.

While you see yourself as someone who is wise and skilled, for you, it's less about illumination or teaching a particular body of knowledge the way a Sage might be drawn to do, and more about the interactive experience of walking people through a process of problem-solving, application, achievement, and, ultimately, growth.

It's also not just about the outcome. The aspiration is not just to get them to the place they yearn to be. More important is the depth of connection, the nature of the relationship between you and your advisees, the joy of the trust that you cultivate, and knowledge that you're making a genuine difference. For many advisors, it is also about helping others develop their own inner trust, competence, confidence, and self-reliance so that, when the time is right, you can step away and watch them soar.

### What Trips You Up

Advisors often become deeply attached to those they advise. To the extent this helps provide the insight necessary to be more effective advisors, that's not a bad thing. But without proper boundaries, it can lead to a level of clouded vision, emotional empathy, or transference that diminishes the objectivity needed to do the work you're there to do.

There will always come a time in the Advisor/advisee relationship where the Advisor needs to have a tough conversation in order to effectively do the work they've been tasked to do. The closer you are, the harder the hard conversations become and the greater the risk of ineffective or even harmful guidance that, inevitably, leads to the demise of the relationship.

Whenever possible in a professional setting, establish clear boundaries, be explicit, and even write them out and have all parties agree to abide by them. Expectation setting is critical and gives you both the authority and permission to identify and address boundary crossings if and when they happen.

### Show Me the Money

Viewed as trusted guides and catalysts who accelerate outcomes and add value, often in measurable ways, capable Advisors tend to be highly sought after. Everyone wants them by their side or in their organizations. That does not, however, always translate into high-level compensation.

In domains like business, competitive sport, and entertainment, the monetary rewards can be extraordinary, whether in a leadership role in an organization, consulting, coaching, or serving as an outside advisor. The same mix of

insight and advisory ability is equally necessary everywhere from the nonprofit world to middle schools, to clergy, social work, or other domains where the rewards tend toward some blend of "livable" wage, along with the satisfaction of knowing you're doing the thing you're here to do and making a difference in the lives of people you truly care about.

## Spark Your Work: Putting Your Sparketype to Work

What does the Sparketype actually look like in the real world? How do you Spark your current work to make it feel a lot better? How do you find something different that is more likely to make you come alive?

Let's explore briefly the three Activation Keys. One is about getting expressive, one is about getting imaginative, and one is about getting expansive. Together, they're the Activation Trifecta.

**Express**. This involves creating a living inventory of the specific ways you've expressed your Sparketype in the past. This will give you strong hints at what you might want to look for, do more of, and shy away from in the future. For example, if you think about the categories of paid work, leisure/fun/craft, roles you've played, and classes or courses of study, you can ask this question:

"What three experiences/roles/jobs, under each category, made me feel most alive, most myself, like I was at my best most often, where I felt a genuine sense of purpose, like it mattered and I mattered, where I lost time because I was so engaged, when I felt most energized and excited, fully expressed, like I was accessing my true potential?"

**Reimagine**. Turns out, once you discover your Sparketype, then understand how to express it in work and life, it's not unusual to realize you're not doing many of the things that make you come alive. But do not make big, likely painful, changes out of the gate. Do not blow up your career, business, or life in the name of getting all the "emptying" stuff out of your life and chasing all the "good, Sparky stuff."

Consider a different first step. Instead of blowing up what lies outside, break open what lies within you. Before burning down your so-called malignant work experiences, first hit pause and take the time to look inside.

**Expand**. Your final exploration focuses on how you define work. It's about the possibility of expanding your understanding of what actually counts as work, bigger picture, in the name of broadening your options for becoming Sparked through a vastly larger set of life experiences. This can be especially helpful when the thing you call your "job," even reimagined, redefined, and optimized, doesn't quite get you there.

This can be a great time to explore expanding your definition of work beyond simply what you get paid to do, and looking at a blend of paid full-time or part-time and nonpaid experiences that, together, may well hold the potential to let you come alive.

Whether you do it as your living, on the side, or as an ingredient in some blend, your Sparketype is not just about coming alive; it's about coming home.

This is bigger than us. It's time for a reclamation of work as a source of meaning, energy, purpose, joy, and potential. Together we can spark the world! One lit-up human at a time.

Jonathan Fields is a dad, husband, award-winning author, executive producer, and host of one of the top-ranked podcasts in the world, Good Life Project®, which has been featured everywhere from the *Wall Street Journal* to *Oprah Magazine* and even Apple's iconic annual product event. He is also the founder of a number of wellness companies. His current focus is on being founder and CEO of Spark Endeavors and lead architect behind the Sparketypes®.

## THE SUMMARY IN BRIEF

Sometimes, that promising lead turns out to be a bust. The sales pitch fails to land the client. But what if you knew the steps to "set up" each conversation to increase the likelihood that you connect, engage and win? Lou Diamond, a storyteller, podcaster, and professional speaker, wrote his book, ***Speak Easy: Connect With Every Conversation***, to address the questions above and more. He has analyzed, edited, and broken-down thousands of interviews and great conversations.

Through him, you now have exclusive access to proven strategies, tactics, and lessons to make more of your conversations lead to great connections.

## IN THIS SUMMARY, YOU WILL LEARN:

- Some of the best-kept secrets of some of the world's elite interviewers and conversationalists.
- The mindset you should strive to be in before, during and after you have a conversation.
- How to prepare, maximize, and continue a great conversation.
- How to utilize a conversation to connect with prospects, engage with partners, clients, and colleagues.
- How to win the sales, deals, and relationships you need to get your business to thrive

## Introduction

In Speak Easy, you will learn the skills and develop the tools you need to increase the likelihood that more of your conversations lead to great connections. Speak Easy will address the mindset you should strive to be in before, during, and after you have a conversation, as well as how to prepare, maximize and continue a great conversation. Speak Easy will show you how to utilize a conversation to connect with prospects, engage with partners, clients and colleagues, and win in business and in life.

At the end of each chapter is a section titled "Connect, Engage & Win," in which you will find tips, techniques, and best practices utilized by some of the world's greatest communicators and leaders. The suggestions in these sections are specifically geared toward connecting with business prospects and targets. You will receive tips for engaging your audience to win the sales, deals, and relationships you need to get your business to thrive. Think of Speak Easy as your playbook to tap into the unlimited potential that lies in every conversation.

## Conversations Matter

Too often, sales professionals, team leaders, and CEOs approach their sales and client meetings as business presentations.

By approaching a meeting with the mindset that you need to present who you are and tell them what you do, you're more focused on delivering a performance than establishing a connection and engaging with them. Rather than approaching a business meeting as a dog and pony show, try to engage in a conversation. Asking questions, viewing reactions, and listening to what your prospects have to say will create a more stimulating environment for your meeting. It also will create a more engaging, vibrant environment that is way more enjoyable than having to watch the uninviting and uneventful "PowerPoint march of death."

Remember that we all love and need more conversations in our lives. Ditch the slides and the scripts. Take the initiative and have a conversation in all your business meetings.

## What Makes A Conversation Engaging?

As you think about an engaging conversation, whether personal or for business, review your approach ahead of time to see if the Seven Cs resonate with the audience you are about to connect to.

Are you going to speak about familiar content within a relatable context? Even though you are familiar with what you're going to talk about, are you going to communicate your thoughts and message in a clear, easy-to-understand manner? Will you share content through an authentic lens that demonstrates the creativity within you that is unique to your specific circumstances? Can you speak with a continuous flow and a familiar cadence that will keep your audience engaged? Will you find a way to connect your thoughts and ideas, which in turn will establish a connection with whom you are speaking?

The more of the Seven Cs you're able to incorporate as you converse, the more likely you'll achieve an engaging conversation.

## Sound Check

Utilize prep time by running through a thorough sound check. Before group presentations, have a member of your team role-play a prospect or client. That individual should ask the really tough questions, and the team should work on the most common Mock Tales that are applicable to the situation.

Examples of these might be why your company was founded, what problem your product solves, what your team specializes in, and what you can expect if you choose to hire us. In addition, this is the opportunity to work on engaging in a conversation versus sticking to the presentation deck.

After the sound check, talk amongst the team and discuss if the session felt more like a presentation or an organic conversation. The more your responses come across as natural, the more prepared you are to engage in a business conversation.

## Show Prep

Let's demonstrate how you can connect your V.O.I.C.E. by walking through a popular business activity: an initial sales meeting.

V. Visualize how you will go about connecting with your target or prospect. This might entail asking questions to learn about the individual, what they do, what their needs are, and where they need help. In turn, you might be asked exactly the same questions. You then could visualize sharing some of the ways you could potentially help this target. You could also envision that this will be the first of many subsequent conversations.

O. Be appreciative that you'll get an opportunity to learn about this individual's role within their business. Another great thing that will happen is that you will get a chance to better understand this person themself. Regardless of making a sale, this opportunity to connect is what you should be most interested in.

I. In most initial sales meetings, the role of "question asker" is the identity you'll take on. You are trying to gather as much information within this conversation as is needed to be helpful to your target

C. "You do you." Don't be afraid to show charisma by adding in some of your personality, humor, interests, and the things that make you unique. Be prepared to be open when sharing, including in your physical stance.

E. People love to connect to others with high energy. Gauge the individual you're with and try to raise the energy level a little above where they are at. Try to rev your engine when asking your questions and learning about your target prospect. It's sometimes tempting to show more excitement when you are talking about your own work or your offering. Keep in mind that in trying not to overpower the prospect, you might come across as not excited about them. Balance your energy and embrace this opportunity to learn about another person. That is where your connection will be strongest and where the conversation will appear to flow the smoothest.

## Set The Stage

Be excited and enthusiastic about the opportunity to have a conversation. Make everyone involved in the conversation feel comfortable and at ease. Provide a clear path toward what you plan to talk about. Give a heads-up as to how you'd like to conclude the conversation.

If you are providing a literal agenda, make it concise. Use one-word descriptors representing the topics that need to be covered (sales, marketing, operations, and so on). Next to each agenda item, list the names of the individuals that will address that specific topic within the meeting. The simpler the agenda is, the more likely the meeting will head down a path toward being a connecting conversation.

## Show Up

The major message for top sales professionals around the globe when it comes to showing up is to aim to be the "host" versus being the "guest" in prospective business conversations. Every talk show host or podcast interviewer is tasked with asking great questions that the guest answers, which creates an engaging conversation. Your goal should be to do the same—ask great questions as if you were the host—in a business meeting, conversation, or presentation.

While both parties in a business conversation are learning about one another in an initial meeting, the one asking the questions is the one driving the conversation. The more questions you ask, the more you can cater your answers to your target.

When you show up in a business conversation, you need to authentically demonstrate that you are appreciative of the time you've been given to converse. When you show up, you need to demonstrate that the way you are in this conversation is how you always will aim to be.

## Fun Street

The Thrive LOUD podcast has a dedicated segment toward the end of each episode that's called "Fun Street." Within this segment, the guest is presented with a set of rapid-fire questions where the answers are all about things that make them feel good about themselves and things they love and truly enjoy. You can use these suggestions as icebreakers to start conversations or as a way to close meetings on a high note.

"Share something fun." Whether in introductory meetings, weekly team huddles, or board meetings, kick-start your conversation by having at least one person share something fun they have planned. Whatever it is, hearing what others like to do establishes a happy, upbeat tone.

"What are your favorite things to eat?" A large sales team of a Fortune 500 company concludes every weekly sales call with one person sharing a recipe for something they love to prepare. This feature became so popular that the company created a special blog section on its corporate website with a new recipe each week.

"Tell us about an activity you wish you did more of." Too often, work gets in the way of our getting to do the things we really love. Asking and sharing what activities you love to do helps you to connect. It's fun to learn what people like and even more fun when there's an overlap of interests.

"Talk about an activity you wish you did less of." On the flip side, learning what people don't like doing can also be enjoyable because you can commiserate with each other.

Find some shared joy when you learn someone else dislikes doing what you dislike. That's called making "unfun" fun.

"If you could go anywhere in the world . . ." While we may not all love to travel, we all have a favorite place. Learning where that spot on this planet is for each of us is always intriguing. In addition, you'll be amazed at how many people have been to some of your favorite places. It is always fun to share common experiences.

## Last Call

There is nothing more gratifying in the sales process than to see a conversation within a meeting begin to establish a genuine connection. However, many times the conversations within the meeting can run longer than the allocated time, and the meeting must come to an abrupt halt with no clear next steps or action items. To be clear, in a business setting, the meeting cannot end until you've had "last call."

To make certain everyone's needs are served within a meeting, every meeting should have a designated timekeeper. This individual's primary job is not only to make sure the meeting stays on track but also to allocate time for your last call with a few minutes to spare to summarize key action items and immediate next steps.

The importance of summarizing the meeting and what needs to happen next cannot be overstated. A well-defined last call session with clear "calls to action" can transform an initial conversation into an ongoing business relationship. In prospective sales conversations, ideally, these next steps could entail flushing out the specifics for a proposal to share how you can work together and help one another.

## Outro (Conclusion)

We live in very busy times, and we have a lot of things to do every day. Time is one of the most valued resources we have. We don't ever really want to waste it. Understanding the importance of brevity in this fast-paced world is about appreciating the time we have with others. Recognize that it is truly a privilege to make the time to sit down and have a great conversation with another busy human being. Make the most of the time you have and be respectful of it by optimizing and being "straight and to the point" within your conversations.

The connection made through a great conversation is a "win" for everyone involved in the conversation and everyone connected as well. Because when we move onward and upward, we thrive.

**Lou Diamond** is a highly sough-after speaker, sales and marketing consultant, leadership and performance mentor and podcaster. Author of Master the Art of Connecting and CEO of Thrive, Lou has made it his life's work to help businesses, leaders and brands thrive through the power of connecting. His innovative connecting tactics have helped hundreds of companies across the globe explode their sales, retain their clients and build a thriving culture.

## Develop the Resilience You Need to Succeed

by George S. Everly, Jr., Ph.D., Douglas A. Strouse, Ph.D. and Dennis K. McCormack, Ph.D.

### THE SUMMARY IN BRIEF

Professional athletes, surgeons, first responders — all perform remarkable feats in the face of intense stress. Why do they thrive under pressure, while others succumb? What separates the two is attitude. Resilient people meet adversity head-on and bounce back from setbacks. They seem to naturally exude an inner strength — but studies show that resilience is something that anyone can build.

Analyzing the heroic exploits of U.S. Navy Seals and others who succeed against all odds, *Stronger* identifies five factors that combine to unlock deep reserves of personal power: active optimism — believe that you can change things for the better; decisive action — you can't succeed if you don't take the leap; moral compass — face any challenge with clear guiding principles; relentless tenacity — try, try again; interpersonal support — gain strength from those around you.

Drawing on the unique perspective of a standout team of authors (a stress-management expert, a skilled entrepreneur and a Navy SEAL), *Stronger* explores the science behind resilience and explains how you can develop this vital trait for yourself. Whatever your profession, today's demanding world calls for a special kind of strength. *Stronger* holds the key.

### IN THIS SUMMARY, YOU WILL LEARN:

- The five sequential factors of personal resilience.
- The difference between active and passive optimism.
- The elements of a strong moral compass.
- How to be tenacious and gain support for your efforts.
- Frameworks and prescriptions for practicing the factors of personal resilience.

## Active Optimism and the Self-Fulfilling Prophesy

Everyone has faced adversity, and each has failed at least once in life. The issue is neither adversity nor failure per se but what happens in the wake of adversity when you find yourself in the dark abyss of despair. Successful people fail. Happy people fail. The key doesn't lie in the nature of the adversity. What really matters is the degree of personal resilience you possess in the wake of the adversity.

Personal resilience is your ability to bounce back, to pick yourself up and try again, and again and again, until you either succeed or decide on a more productive direction. Resilience is your ability to see yourself in the dark abyss of failure, humiliation or depression — and bounce back, not only to where you were before but to even greater heights of success, happiness and inner strength. Resilience helps you withstand adversity. Think of it as a form of immunity that helps you make good decisions under pressure, motivates you for the achievement of peak performance and allows you to bounce back quickly and effectively.

### Five Factors of Personal Resilience

Successful people share a set of five core factors that equip them with personal resilience. Just as a suit of physical body armor protects the wearer from physical injury, a suit of psychological body armor can protect you against psychological distress and emotional injury. In psychologically toxic environments, they enable us to grow stronger.

The five factors of personal resilience are

1. **Active Optimism.** Optimism is more than a belief; it's a mandate for change. It's the inclination to move forward when others are retreating. This mandate can be so strong that it can become a self-fulfilling prophecy. But to do so it must lead to . . .
2. **Decisive Action.** Optimism is not enough. You must be decisive and act in order to rebound. You must acquire the courage to make difficult decisions. Making hard decisions is easier when it is based upon a . . .
3. **Moral Compass.** Use honor, integrity, fidelity and ethical behavior to guide your decisions under challenging circumstances. Once your decisions have been implemented, employ . . .
4. **Relentless Tenacity, Determination.** Persistence can be omnipotent. Be persistent, while at the same time knowing when to quit. To find hidden opportunities and aid in physical and psychological energy, rely upon . . .
5. **Interpersonal Support.** Who has your back?

### Active Optimism

Optimism is the tendency to take the most positive or hopeful view of matters. It's the tendency to expect the best outcome, the belief that good will prevail over evil. But the value of optimism is much greater than just the good mood that can accompany a rosy outlook. The optimist always has the capacity to look forward to another day. Not surprising then that optimistic people are more likely to persevere. They are not only more resilient than pessimists but better able to tolerate adversity, more task oriented and committed to success.

Passive optimists *hope* things will turn out well and *believe* that they will. But those who merely hope and

believe are surrendering control of their circumstances to someone or something else. Active optimists, on the other hand, *act* in a way that increases the likelihood that things will indeed turn out well.

Navy SEALs seem to share the characteristic of a strong positive mental attitude — an expectation of personal success. For SEALs, the difference between success and failure is often the difference between life and death. From the SEAL perspective, success doesn't just happen by chance; it happens because you make it happen. The optimistic expectation of success occurs because of relentless preparation, understanding only too well the meaning of sacrifice, coupled with dogged determination. The SEALs' success begins with active optimism — a positive attitude and a mandate to change the world.

Of course, not all active optimists think in such emphatic terms; but all active optimists do believe they can make a difference.

### The Self-Fulfilling Prophesy

The most powerful source of active optimism appears to be the experience of success itself. Success begets success. The more successes you have, the better you'll understand what it takes to be successful — which will generate more successes — and the more you will tend to expect success. This also sets the stage for the emergence of self-fulfilling prophecy, which promotes active optimism even further.

Victory always starts with a state of mind. It then spreads with such radiance that destiny can do nothing but obey. The self-fulfilling prophecy can be a tremendous competitive advantage. It is the embodiment of the notion that any prediction about a human behavior actually affects the behavior itself. Your state of mind really matters!

If you think you will succeed at something, you are likely to attempt the task with greater effort, enthusiasm and tenacity. You are less willing to accept initial rejection or failure. You are more likely to see those occurrences as exceptions to the rule and simply precursors of your inevitable success. You are more likely to be physically healthier. And your positive beliefs affect your performance.

### Prescriptions for Building Active Optimism

Here are some specific methods, or prescriptions, for achieving active optimism.

**1. Harness the Power of Optimism and the Self-Fulfilling Prophecy.** Your optimism increases with each success you have. You must program yourself to be successful. The mistake that most people make is to choose a challenge that is initially too difficult to manage. There are four ways you can leverage the success-building model in this first prescription:

- Break down large tasks into smaller and more manageable parts.
- When a task is too big for you to manage, ask for assistance.
- Rehearse your responses.
- Visualize success.

**2. Build Active Optimism Vicariously.** The best way to build active optimism is by first having success and then applying a self-fulfilling prophecy based on that success. But there's another road to achieving active optimism in the absence of your own success: Watch others be successful at what you want to achieve. The key is that you must perceive those you observe as either being somehow similar to you or possessing a key to success that you are realistically capable of acquiring.

**3. Build Active Optimism Through the Encouragement and Support of Others.** Evidence suggests that interpersonal connectedness and support are powerful determinants of resilience. In the military, unit cohesion is critical. In the social and business worlds, sometimes it really is whom you know that counts, and the strength of the bonds of affinity.

**4. Build Active Optimism Through Self-Control.** The ability to control oneself becomes a powerful determinant of subsequent behavior. When you can control your actions, thoughts and even bodily reactions, it conveys self-confidence and active optimism. Your ability to delay impulsive actions will prevent overreacting. Learning how to control both self-defeating thoughts and overarousal can be powerful sources of active optimism.

## The Courage to Be Decisive and Take Personal Responsibility

Having the courage to be decisive in the context of resilience really means the ability to effectively narrow a myriad of options and make the difficult decision to take action in the wake of adversity or in the face of extraordinary challenges.

For many, taking decisive action and then accepting personal responsibility for decisions are self-evident virtues. What might not be self-evident is why. Decisive action appears to be capable of (1) mitigating adversity, (2) helping you rebound from adversity and (3) promoting growth in the wake of adversity.

**Decisiveness Mitigates Adversity.** Think about your own life. Have you ever wasted valuable time, money or energy because you were unsure what to do? Have you ever waited so long trying to make a decision that the opportunity itself was lost? So how does decisiveness help you? Those who are first to act most often reap the rewards that life has to offer. The saying "The early bird catches the worm" refers not only to early risers but also to those who are first to act. Opportunities in life seem to benefit those who act upon them more than those who merely recognize them.

In business, being decisive often leads to creating trends rather than following them. A visionary trendsetter, Steve Jobs was once referred to as the "Father of the Digital Revolution." Jobs, who co-founded Apple Computer Inc. with Steve Wozniak in 1976, shaped the fields of computing, personal-communications devices, music and modern movie-making. But his greatest strength was his ability to make a decision and follow it through to fruition.

His ability to understand future markets, think beyond current limitations, create nontraditional business models, assemble a team of technical experts and guide (some would say push) the company to creative excellence is what really made Apple (and almost everything else that Jobs touched) successful, according to Jobs' biographer Walter Isaacson.

At a Macworld conference, Jobs once said, "There's an old Wayne Gretzky quote that I love: 'I skate to where the puck is going to be, not where it has been.' And we've always tried to do that at Apple. Since the very, very beginning. And we always will."

**Decisiveness Helps You Rebound from Adversity.** Depression and feelings of hopelessness often follow in the wake of hardship. Psychologists have long known that if these feelings are allowed to persist, they can become paralyzing forces that dramatically reduce the likelihood of resilience.

Conversely, acting quickly and decisively has been shown to be of benefit in reducing stress and empowering people to rebound from adversity. The most powerful way of helping yourself in the wake of adversity appears to be resisting the pressures of psychological avoidance and paralysis by doing something to help yourself or others. Take action. Gain strength by identifying and actively pursuing a goal. Taking that first step is empowering and tends to result in other successes. To borrow from the principles of physics, an object in motion tends to remain in motion, and an object at rest tends to remain at rest.

**Decisiveness Promotes Growth in the Wake of Adversity.** In the process of bouncing back from adversity, you can not only completely recover, but you can become stronger and happier than you were before the adversity ever occurred. Steve Jobs' success didn't come easily, despite the great immunity to pressure he demonstrated early in his career. In 1985, Jobs was forced to resign from the company he and Wozniak had founded.

In a Stanford University commencement address in 2005, Jobs recalled that getting "fired" was one of the best things that ever happened to him. "The heaviness of being successful was replaced by the lightness of being a beginner again, less sure about everything," he said. "It freed me to enter one of the most creative periods of my life." Jobs went on to say he was "pretty sure none of this would have happened if I hadn't been fired from Apple. It was awful-tasting medicine, but I guess the patient needed it." After leaving Apple, Jobs went on to pioneer in arenas previously untouched by Apple, including digital movies.

## Taking Personal Responsibility for Your Actions Empowers You

At this point you can see there is a resiliency advantage that accrues from decisive action. The next step is to take responsibility for your actions.

Taking personal responsibility requires courage, perhaps more courage than being decisive. After all, most of us believe that mistakes are who we are rather than what we did. We're quick to seek other people or things to blame should the outcome of a decision not be as desirable as hoped. In doing so, we abdicate responsibility for failure and forfeit the potential benefit to be gained from rebirth. Only by taking responsibility for our actions can we then learn to take credit for our successes.

Taking responsibility for your actions aids in gaining empowerment. Your resiliency advantage accrues not only from the fruits of opportunities pursued and the empowerment of success in the wake of adversity, but from the fact that many people will view your decisiveness before, during or after adversity as evidence of courage, strength and desirability that extends to your entire persona.

Taking responsibility for your actions will be interpreted as evidence of honesty and trustworthiness. Consequently, you'll often be given opportunities that others will be denied. And since your failures will be seen as uncharacteristic exceptions to the rule, you'll likely be given greater leniency in the wake of failure and more chances to succeed.

## The Moral Compass: Honesty, Integrity, Fidelity and Ethical Behavior

To resiliently bounce back when life has knocked you down, you must be decisive and act. Nevertheless, decisive action is often very difficult in the wake of adversity. Your ascent from the darkness of the abyss is made easier when you use the guiding light of the moral compass.

When you find yourself in the darkness of the abyss of despair, when the temptation is to bend the rules, use deception, take advantage of others and even cheat, the compass will help you choose the right direction, make decisions you will not have to apologize for later and ultimately find your way from the darkness of the abyss to the light of success. The term *moral compass* may be thought to denote any tool that serves to guide or direct your system of virtues.

The moral compass for resilience consists of four points — honesty, integrity, fidelity and ethical behavior — which collectively can help you navigate in the direction of virtue no matter how turbulent your journey in life may be. Although these terms are often used interchangeably, we believe there are important differences and that one builds upon the other.

Honesty, integrity, fidelity and ethical behavior tend to remove the risk from business and personal relationships. They offer interpersonal predictability; predictability engenders safety; and safety fosters trustworthiness. When you deal in business or personal relationships, others will never have to worry who "has their back" because their back will never be in danger. An amazing thing happens when you are perceived as trustworthy: You will be given greater responsibility that will lead to more opportunities.

### Honesty

Honesty may be thought of as being truthful. Honesty may be thought of as being genuine. It is the absence of deception, fraud or deliberate misrepresentation.

Dishonesty, on the other hand, is the presence of disingenuousness. If your intention is to deceive so as to harm another or to achieve personal gain or advantage, then that is dishonesty. Cheating (taking unfair advantage) is dishonest. Any advantage that is gained through dishonesty seems brittle and short-lived. Dishonesty is often born of urgency, impulsivity and greed. For most people, dishonesty seems most associated with situational stress and a lack of personal resiliency. For this reason, so-called honesty tests are generally poor predictors of dishonesty.

### Integrity

While integrity is sometimes defined as honesty, it is actually a virtuous reliability and consistency that is built on a foundation of honesty. Integrity may be thought of as reliable incorruptibility and uncompromising sincerity.

Warren Buffet is one of the world's richest men, having built, from relatively meager beginnings, an international investment empire. He is, for many, a paragon of business success. On the issue of integrity, he offers a personal imperative as well as an organizational admonition: "It takes 20 years to build a reputation and five minutes to ruin it. If you think about that, you'll do things differently." From the organizational perspective, he notes, "In looking for people to hire, you look for three qualities: integrity, intelligence and energy. And if they don't have the first, the other two will kill you."

### Fidelity

The third point on the moral compass is fidelity, which means faithfulness and dedication. The Latin phrase *semper fidelis* — adopted by the U.S. Marine Corps as its motto in 1883 — means always faithful. The concept of fidelity as a core attribute dates back at least 200 years earlier in England, where it was a motto for aristocratic families and even entire cities. Fidelity is a precious commodity.

### Ethical Behavior

The most complicated aspect of the moral compass is ethical behavior. Ethics often refers to a code of conduct that is pro-social. Simply said, ethical behavior supports and enhances a society and serves the greater good. Ethics is often linked to morality. Ethical behavior may be thought of as acting harmoniously within prescribed values of fairness as well as simply doing what is "right" and "just." Ethical behavior, acting pro-socially, may be the most complex but important element; it serves as an action-oriented collective term for the other three points on the compass. Honesty, integrity and fidelity must culminate in ethical behavior if they are to serve as psychological body armor.

Why is the moral compass an important aspect of psychological body armor? When you see honesty, integrity, fidelity and ethical behavior in others, it creates a compelling atmosphere. They serve to create a role model for others. They immediately create a sense of predictability. Predictability creates a sense of safety. Safety inspires trust. For leaders of groups, organizations, societies and even

nations, trust creates compliance. Conversely, deception, duplicity and dishonesty erode trust. They erode organizational, social and even national effectiveness. People will be inclined to act to protect themselves and defend their actions, rather than thinking outside the norm and taking risks that could rapidly and significantly advance the group toward its goal.

## Relentless Tenacity: Try, Try Again

What is tenacity? Think of it as perseverance, as steady persistence in a purposeful course of action, especially in spite of difficulties, adversity or discouragement.

Despite temptations to the contrary, the course you choose to rebound from adversity should be one that is plotted using a moral compass. It makes addressing difficult decisions easier. Once the decision to act has been made, armed with an optimist vision and a moral compass to guide you, you must be persistent.

### The Best Plan for Successful Resilience: Tenacious Defiance

Failure is simply not an option, resilient people will say. So when we speak of tenacious defiance of failure, no name in world history resonates more than Winston Churchill, prime minister of Great Britain from 1940 to 1945 and again from 1951 to 1955.

On September 1, 1939, the army of Nazi Germany invaded Poland, initiating World War II. Great Britain declared war on Germany on September 3, 1939. Following the resignation of Neville Chamberlain on May 10, 1940, Churchill became prime minister. At that time, the war was not going well. According to Jon Meacham's 2003 best-seller, *Franklin and Winston: An Intimate Portrait of an Epic Friendship*, U.S. President Franklin Roosevelt was concerned about the resolve of the British as they faced an impending German invasion. Churchill was aware of his concern and in spring 1940 sent Roosevelt a telegram in which he stated, "Our intention is, whatever happens, to fight on to the end in this Island . . . but in no conceivable circumstances will we consent to surrender."

Shortly thereafter, the British future dramatically darkened. More than 300,000 troops were evacuated from Dunkirk, France, to avoid annihilation at the hands of advancing German forces.

By October 29, 1941, the military forces of Nazi Germany had control of Europe but not Great Britain. Churchill visited his alma mater, the Harrow School, to give an address. In one of his most memorable speeches, he underscored the theme of tenacious defiance once again. "Never give in," he said. "Never give in. Never, never, never, never — in nothing, great or small, large or petty — never give in, except to convictions of honour and good sense. Never yield to force. Never yield to the apparently overwhelming might of the enemy."

Indeed, because of Great Britain's stubborn resistance in the face of unrelenting bombing campaigns, the German commanders soon abandoned the planned invasion of Great Britain. At that point, the tide of war changed.

When some people are told they cannot succeed, they give up. When others are told they cannot succeed, they become tenaciously defiant.

When is tenacity no longer useful? The answer appears to be, when the tenacious effort toward any goal becomes more of a liability than an asset, when resources dedicated in one direction are better reallocated in another.

When does tenacity become self-defeating? The answer is, when continued tenacious effort creates more problems than can be resolved once a successful outcome is achieved.

### Prescriptions for Building Personal Tenacity

**Choose a Goal and Practice Tenacity.** Tenacity becomes self-sustaining when perseverant actions are rewarded. Success in the wake of tenacity is rewarding. It says all of the tenacious hard work can pay off. Choose a goal for which the best predictor of success is simply tenacious adherence to a plan of action. Mobilize the one thing over which you have complete control: how hard you will work to achieve your desired goal. Then go for it.

**Observe Tenacious Role Models.** Tenacity is increased when we see or read about others who overcame great barriers to be successful using tenacious defiance. Find tenacious role models. Study history; it's full of examples of tenacious defiance of failure.

**Find People to Support Your Tenacity.** Churchill needed the support of the United States if Britain was going to survive the war with Nazi Germany. In his book *Franklin and Winston*, Jon Meacham quotes Churchill's son Randolph's recollection of a conversation with his father in which Randolph asked how Britain could possibly defeat Germany. The elder Churchill replied, "I shall drag the United States in."

## Gain Strength From the Support of Others

Interpersonal cohesion refers to the tendency of the members of a group to identify with other members,

share values and provide support in times of distress. Interpersonal support is believed to be the single best predictor of human resilience. It really is whom you know that counts when you are making your comeback from, or even avoiding a descent into, the abyss, psychologically or physically.

### Why Do People Help Other People?

If you are to generate a network of social support, it will be useful to understand why people might be willing to provide assistance. This will help you construct your interpersonal support system. Mathematical biologist Martin Nowak has identified five foundations of interpersonal reciprocity. According to Nowak, people will provide you assistance for one or more of these reasons:

- **Direct Reciprocity.** It's the principle of quid pro quo. I will help you now if you will help me at some later date.
- **Spatial Selection.** I will be more likely to help you if I know you via some mechanism of proximity. For example, we are neighbors, co-workers, attend the same gym or participate in the same recreational activities.
- **Genetic Selection.** I am likely to help you if we are related.
- **Indirect Reciprocity** (the most powerful). I am likely to help you if you are seen as a desirable person to me, for example, you have a positive reputation, celebrity or outstanding achievement.
- **Group Selection.** I am likely to help you if I'm altruistically inclined or if I believe that helping you will be acting on behalf of the "greater good."

### Prescriptions for Building Interpersonal Support

Here are some suggestions on how to build supportive relationships.

**Homophily × Proximity.** Begin to seek out and develop sources of social and professional support. The formula for doing so is quite simple: homophily × proximity. First identify individuals whom you believe are likely to share attitudes and values of compassion and mutual support (homophily). Then frequent places where you are likely to encounter such people. Go there on a regular basis (proximity). Proximity is the best predictor of relationship formation.

**Show Appreciation.** If you want to be appreciated, show appreciation. As philosopher and psychologist William James said, "The deepest craving of human nature is the desire to be appreciated." Here are some guidelines for how to best show appreciation:

- Regarding children, provide safety and compassionate guidance.
- To the elderly, show respect and gratitude.
- Regarding your employer, earn your income.
- To those who rely on you, provide presence and unwavering support.
- To a friend, show loyalty.
- To your spouse, show honor and fidelity.

**Be Patient.** Control impulsive urges. Be patient with yourself and others.

**Hanlon's Razor.** Never attribute to malice that which can be adequately explained by stupidity. In other words, don't take things personally. People really are inconsiderate at times, and it has nothing to do with you.

**Listen to Others, Especially Before You Speak.** People who possess extraordinary interpersonal skills are good listeners. In even the briefest of encounters, they can make you feel important. When you listen to people, truly listen. Look at the other person with interest. Do not multitask. Any time you have to say, "Go ahead, I'm listening," you're really not.

**Practice the WAIT Principle.** WAIT is an acronym for Why Am I Talking? Pause before you speak. Most important, ask yourself two questions: (1) Where are my words likely to direct the conversation? and (2) How would I feel if someone said that to me?

**The Power of the Paraphrase.** When someone has finished making a point, use that person's name, and then paraphrase in your words the essence of what you understood that person to say. Then ask a follow-up question.

## Lessons Learned About Human Resilience

What are the most significant lessons learned about human resilience as taught through history, personal reflection, scientific inquiry and case-study empiricism? The answer is to learn to be resilient in the wake of adversity, rejection, unfairness and failure. Develop your own variation of psychological body armor derived from the five factors of human resilience discussed. But as you consider how these five factors are applicable to your own life, here are a few things to keep in mind.

**Simplicity Matters.** The science of human resilience can be paralyzingly granular and abstruse. The quest is not intended to be definitive but to offer a user-friendly, heuristic and prescriptive formula.

**The Five Factors Are Sequential.** Ideally, the five factors of personal resilience are a sequential prescription.

**Resilience Can Be Learned at Any Age.** Of course, some things are best learned at a young age. This is because of the enhanced neural plasticity, or malleability, of the young brain. Ironically, according to new research, extreme adversity, stress and traumatic events can cause the release of a cascade of neurological and neuroendocrine events that mimic, if not temporarily replicate, the neural plasticity of youth and, in doing so, actually facilitate learning. A key phenomenological characteristic of many life-changing events is the fact that the memories of those events are easily recalled, often in vivid detail. They reside for a lifetime just beneath consciousness, ready to surface at a moment's notice.

**Self-Efficacy Is a Useful Framework by Which to Learn Each of the Five Factors of Human Resilience.** Albert Bandura's brilliant model for acquiring self-efficacy and personal agency (the optimistic belief that you can be an effective agent of change) is a useful tool for learning each of the five factors of human resilience. Bandura offers four learning prescriptions for the acquisition and maintenance of self-efficacy that are generically applicable to *each* of the five factors of personal resilience:

- Seek to successfully demonstrate and repeatedly practice each of our five factors of personal resilience.
- Observe resilient people. Use them as role models. Human beings learn largely by observation.
- Vigorously pursue the encouragement and support of others.
- Practice self-control. In highly stressful times, myriad physiological and behavioral reactions occur.

**Study the Past: Resilience in Their Own Words.** Extraordinarily resilient people can teach us a great deal.

- **On Active Optimism:** Abbey-Robin Tillery, Ph.D., psychologist, says, "Finding a way to imagine a better life for oneself is the first step in making it happen; telling people to never give up does not last if people can't even imagine a better life. Believe in yourself. Believe you are destined for something better. There is a strong intuitive sense in us all that screams out against all odds, 'I will make it!'"
- **On Decisiveness:** Ben Carson, MD, Johns Hopkins University neurosurgeon, says, "What happens with your life is up to you. Growing up, when I read books about successful people, I found out that many didn't start out that way. I began to understand it's not the environment. It's you and your attitude ... I ignored the pessimists from the time I was a teenager throughout my entire career. My adviser wanted me to drop out of medical school. When I started performing surgical procedures that others had failed to perform or that had never been tried before, people said, 'You can't do that.' Because of our successes, those procedures are now being done routinely all over the world." When asked to summarize his concept of resilience, Carson said, "When adversity strikes, simply refuse to be a victim."
- **On Using a Moral Compass:** Dutch Ruppersberger, U.S. congressman, says, "Just do the right thing, and everything else will take care of itself. Make your legacy tenacity and integrity. When you get knocked down, get up . . . You want to be respected for who you are and what you've done. In the final analysis, your legacy will be your deeds, not your words."
- **On Tenacity:** Patrick Rummerfield was given 72 hours to live after a terrible car crash. Having beaten those odds, but as a quadriplegic, he was sent to a nursing home to slowly die over the course of four or five years. As living testament to the fact that success begets success, he noticed his big toe move in response to thinking about driving a race car. Against his physician's advice, he entered intensive rehabilitation. Over the course of 17 years, he recovered the use of his arms and legs and has run a marathon. Rummerfield said, "No one can predict the future. Where there is life, there is hope. Where there is hope, there can be tenacity. Where there is tenacity, all things are possible."
- **On Interpersonal Support:** Erika Brannock, survivor of the Boston Marathon bombing, refuses to be a victim. "Yes, I lost my legs, but I am still here. I can still do all that I did before. I just have to get used to doing them a different way. You have to choose to focus on the positive, not the negative." Erika credits her mother, her students and the supportive health professionals who cared for her as the key to her recovery.

Never forget the words of the Brazilian writer and journalist Fernando Sabino: "In the end everything will be OK. If it's not OK, then it is not yet the end."

## RECOMMENDED READING LIST

If you liked *Stronger*, you'll also like:

### Creating a Life That Matters

# SUCCESS BUILT TO LAST

## THE SUMMARY IN BRIEF

*Imagine discovering what successful people have in common, distilling it into a set of simple practices and using them to transform your company, your career and your life.*

*Authored by three nationally acclaimed thought leaders in organizational development and self-improvement — including* Built to Last *co-author Jerry Porras —* Success Built to Last *challenges conventional wisdom at every step.*

*It draws on face-to-face, unscripted conversations with hundreds of remarkable people from around the world, including billionaires, CEOs, presidents of nations, Nobel laureates and celebrities. Meet unsung heroes who've achieved lasting impact without obvious power or charisma. Famous or not, almost all started out ordinary.*

*The authors' use of interviews helps set this book apart from others in the field. So does their reliance on original independent survey data rather than third-party sources. The authors' survey shows that whether respondents perceived themselves as successful or not, "The traditional dictionary definition of success no longer describes what success means to them." Their book is an engaging effort to demonstrate both the varied ways of interpreting success and the varied paths that lead to it, unburdened, they write, "by the need to believe or disbelieve."*

*Above all, this book describes how successful people stay successful and how you can too.*

*In addition, this summary will show you:*

- ✓ ***Why leadership is pointless without an understanding of what success means.***
- ✓ ***Why it's so hard to do what matters, and what you can do about it.***
- ✓ ***Why it's dangerous not to do what you love.***
- ✓ ***Why you don't have to be charismatic to be successful.***
- ✓ ***How to overcome adversity and tackle what are known as "Big Hairy Audacious Goals."***
- ✓ ***How to apply positive thinking to mistakes.***

# SUCCESS BUILT TO LAST

**By Jerry Porras, Stewart Emery and Mark Thompson**

## — THE *COMPLETE* SUMMARY

## From Great to Lasting — Redefining Success

When you feel pressure to pursue the elusive outcomes of traditional success, it's often driven by the burden of making a living, pleasing others or achieving status. Ironically, it appears that success often will fade, vanish or become the dungeon of your soul unless it is not your primary objective.

*Builders* — enduringly successful people — tell us that when success just means wealth, fame and power, it doesn't last and it isn't satisfying. Builders insist that success may never come without a compelling personal commitment to something you care about and would be willing to do without counting on wealth, fame, power or public acceptance as an outcome.

Builders mostly toil with every ounce of their energy and persistence, with heart and soul, for their whole lives. They become lovers of an idea they are passionate about, creating something that continually seduces them into obsessing over every detail and losing track of the passage of time. In a real sense, it's something that they'd be willing to do for free, for its own sake. They do it because it matters to them.

For Builders, the real definition of success is a life and work that brings personal fulfillment and lasting relationships and makes a difference in the world in which we live. ■

## PART ONE: MEANING – HOW SUCCESSFUL PEOPLE STAY SUCCESSFUL

## Love It or Lose

It's dangerous not to do what you love. The harsh truth is that if you don't love what you're doing, you'll lose to someone who does.

### *All You Have Is Personal Capital*

You may have noticed that we now live in a global economy where job security is a contradiction in terms. All you have is your personal capital, and that's not your money. It's your talents, skills, relationships and enthusiasm. Making success last takes a level of tenacity and passion only love can sustain. Making a life is as important as making a living. Builders do both.

"The job of leadership today is not just to make money, it's to make meaning," said John Seely Brown, who presided over research for two decades at Xerox Park. "Talented people are looking for organizations that offer not only money, but … spiritual goals that energize … [and] resonate with the personal values of the people who work there, the kind of mission that offers people a chance to do work that makes a difference."

Be warned: The relentless irritation of not loving what you do makes you a pain to be around and has been clinically proven to chip away at your health. "We spend our health building our wealth," said author and financial adviser Robert T. Kiyosaki, paraphrasing the old proverb. "Then we desperately spend our wealth to hang onto our remaining health."

### *Rational Optimism or Irrational Exuberance*

No one can tell you what risks you should take. Instead, you must choose a path that you love, for better

*(continued on page 3)*

**The authors:** Jerry Porras co-authored *Built to Last: Successful Habits of Visionary Companies*, which has been translated into 25 languages and sold more than 1 million copies. He is also known for a number of lectures he has presented to senior management audiences.

Stewart Emery is considered one of the fathers of the Human Potential Movement and co-founded Actualizations. Emery has led seminars in dozens of countries and has coached more than 12,000 people in the last three decades.

Mark Thompson captured the insightful stories that formed the foundation for *Success Built to Last* from hundreds of personal interviews with enduringly successful people around the world.

or for worse, because only then will you have the good-hearted stubbornness to stretch for your full potential and survive the inevitable slings and arrows that await you on your journey.

You've got to love what you're doing or you can be sure there will be someone else who will. Falling in love with all the rational and irrational exuberance that is involved is the only way you have a prayer of creating success that lasts. ■

# Portfolio of Passions

Although one passion usually dominates Builders' lives and defines their successes in the eyes of the world, it's a mistake to believe there is just one passion that must be pursued at the expense of all others.

Builders may look like race horses sprinting with blinders on, but most live large and complicated lives filled with many different personal and professional passions. The myth that there is only one thing to do with your life is not an idea that many would endorse.

### *It's Not About Balance*

Ironically, at the same time society insists that you do one thing with your life, those same cultural norms pressure you to have a "balanced" life split into neat little slices. The problem here is thinking there's a right answer — the notion that balance can be defined by a time-allocation pie chart representing work, family, community and, if you're lucky, you're included in there somewhere, too.

If you define balance in the sense that it requires equal proportions of life partitioned into four or five politically correct parts, then CEOs and presidents don't have balance, nor do most Nobel laureates. The Dalai Lama doesn't either, nor does Nelson Mandela or Bono. Martin Luther King Jr. and Mother Teresa did not have balance.

Enduringly successful people, many of whom live a life that's a gift to the world, don't raise balance as a major issue — not because they had it masterfully handled, but because they were all busy doing what mattered to them.

It's a struggle for everyone at some point. If you're feeling a twinge of guilt about balance, there is a probability that you don't want more balance, but need more of something that you can't admit you want. The balance you're seeking is a meaningful portfolio, not a balanced one.

The reason that balance is so painful and elusive is because that's not what you really want. What you hunger for is a place for all of your passions — not balance as culturally defined. ■

## Maya Angelou's Portfolio of Passions

Maya Angelou has become the first best-selling African-American author (*I Know Why the Caged Bird Sings*), one of the most popular living poets of our time, an Emmy Award-winning actress and producer, a university professor, a mentor to Oprah Winfrey, a civil-rights activist and Martin Luther King Jr.'s protégé and the first African-American woman admitted to the Directors Guild of America. If there is a secret to her success, it was that she found many ways to feed her soul. "You can't simply sit on the sidelines and bemoan one's outcast state; it's not enough," she told Mark Thompson. "This experience, this life, is our one time to be ourselves."

# Integrity to Meaning

Endeavors are not things from which these remarkable people can ever fully retreat or retire. That's why they stay successful for so long. To ask them why they're still "working" is to dismiss their passions as trivial pursuits.

That mistake is often made in interviews; it seems like an innocent question, but only tends to indicate that the interviewer doesn't get it. Their passions create meaning in their lives that is nothing short of a lifelong obsession from which they seek no escape.

People become fascinated by the lifestyles of the rich and famous, perhaps longing for the adulation, glamour and imagined self-satisfaction in those lives. It may be tempting to believe you can find success by studying their stories and assuming that whatever she or he did is a road map you can follow. But that's a dead end. That's not what billionaires or the best CEOs do. That's not what heroes like Mother Teresa or Mahatma Gandhi did. That's not what the world's enduringly successful people do.

If there is one thing they all do consistently — one value they all share in common — it is integrity to what matters to them, and that makes a difference in their lives and work. It is integrity to what they believe will make a difference overall.

Whenever they are faced with a decision, they look to find meaning in that opportunity that is very personal to them. They do not waste their time if it doesn't matter.

*(continued on page 4)*

### Integrity to Meaning

*(continued from page 3)*

#### *One Value That Builders Have in Common*

Although Builders keep their lives and careers on track by placing high value on personal meaning, individual interpretation and expression of "what matters" vary enormously.

As it turns out, all of the stories of enduringly successful people have some improbable quality to them. What helps successful people stay successful is their stubbornness about sticking with their own journey based on their own values, not a magic path followed precisely by everyone else.

The lesson here is that you can't — or shouldn't — hijack someone else's value system. To do so would be a violation of integrity to what matters in your life. There is no more personal decision than to discover what is meaningful to you. ■

## Overcoming Failure

Jimmy Carter grew up in relative isolation outside Plains, Ga., a community of only 500 people. No one in his family had ever finished high school before and this fellow goes to college to study nuclear physics, jumps in politics and ends up the 39th president of the United States. He would have to reinvent his definition of success, however, after his first term.

"When I left the White House, I was in despair," Carter said. "I think everybody has to be prepared in life for failures or disappointments or frustrated dreams or even embarrassments," he said. "You have to accommodate changing times but cling to unchanging principles. If you do have an extreme change in your life that is unpleasant, what are the principles that don't change, on which you can build a new life, an expanded life, a better life, a more adventurous life?"

## PART TWO: THOUGHTSTYLES – EXTREME MAKEOVERS START IN YOUR HEAD

# The Silent Scream

Happy endings come from listening to that little voice inside your head — some call it a whisper — about what matters to you. It is a voice that echoes through every cell in your body, straining to be heard like a silent scream. It's a nagging, often irritating "need" craving a response.

The tragedy for most people is that there is a gaggle of other voices trying to drown out the whisper. Whether it's the ranting of your own self-doubt or the concerns of loved ones and business partners, there are many forces vested in seeing you not change. These forces would be more comfortable if risky notions — like following your passion — were locked silent in the basement of your soul.

Builders plow ahead despite self-doubt, delusional bosses, desperate spouses and outlaw in-laws who have high control needs. And builders ignore or overcome those incoming hostiles — media messages proclaiming that without consuming the right stuff, you cannot be successful or happy. ■

# You Don't Have to Be Charismatic to Be Successful

Due to hardship, genes or both, many of the Builders that are often interviewed lack the kind of confidence you might expect in a leader. Many can be tentative, even nervous, introverts. But when they talk about what really matters to them, it's like watching shy, mild-mannered Clark Kent step into a phone booth and, a moment later, leaps out a super hero. Despite the way social worker Norma Hotaling feels about herself at any given moment, her cause gives her the charisma she needs to keep her going through hard times, helps her magnetize and motivate a strong support community and unlock barriers such as low self-esteem and limited knowledge.

"It came down to this," Hotaling insisted. "I will do this and make a difference or I'll commit suicide. It's just that simple and just that hard." What could the rest of us accomplish with a fraction of that clarity?

#### *The Cause Has Charisma*

Many Builders will tell you that breaking away from the boundaries set in their own minds — despite the realities of their tortured past — was one of their most difficult, necessary and rewarding achievements.

"You must release yourself from the repression of your mind," noted Roberta Jamieson, who became chief of the Six Nations of the Grand River and CEO of the National Aboriginal Achievement Foundation in Toronto. "You are no longer a prisoner. You are not that person. You are a part of a long and great history. You are entitled to make decisions. You have gifts to share that belong to your people. It is your responsibility to share your talents with others. Throw off the shackles that keep you down — stop tearing at yourself and others because you don't feel good about yourself."

Your personality is not what determines enduring success. It's what you do with your personality that counts. The personalities of Builders come in all sizes. Some

*(continued on page 5)*

## You Don't Have to Be Charismatic to Be Successful

*(continued from page 4)*

are painfully shy and others seem in-your-face and aggressive. The essential difference with Builders is that they've found something to do that matters to them and are so passionately engaged that they rise above the personality baggage that would otherwise hold them down. Whatever they are doing has so much meaning to them that the cause itself provides charisma and they plug into it as if it were an electrical current.

Enduringly successful people — whether they're shrinking violets or swashbuckling entrepreneurs — serve the cause and it also serves them. It recruits them and they are lifted up by its power.

Builders cling to a personal commitment that's so compelling to them — something so important to them that they would actually do it for free — that they must do it despite popularity, not because of it.

### *Trust Your Passion*

Life takes "passion, determination and skill," said Condoleezza Rice, the current U.S. Secretary of State. You can't skip any of those three and expect to enjoy success built to last.

One of the best ways to unleash the charisma that Builders feel for a cause, calling, career or other major objective is to see whether or not they're really willing to immerse themselves in it. Opportunity comes from expertise, not just luck, talent and passion. If you find it impossibly tedious to become an expert about what you think matters to you, then you're not chasing a dream, you're just daydreaming. You can't claim the buried treasure if you aren't willing to dig for it.

That is not to say that it's easy or that you won't suffer frequently. But if you find you can't or won't persist in learning more about it, then it's going to be very tough to hang on when inevitable obstacles get thrown in your way. This isn't earth-shattering news. Being the best at what you do is essential. ■

**For additional information about finding your passion, go to: http://my.summary.com**

# The Tripping Point — Always Make New Mistakes

There is rarely a person who doesn't have a pile of embarrassments or stunning defeats in his or her portfolio. Most highly accomplished people described themselves as so proficient at making mistakes that, if you didn't know better, you might think they were losers. If there were just one thing that every enduringly successful person had in common, it is that they are all really great at failure.

Life is short, but some days are really long. Many Builders face lifelong adversity, phobias or flaws that they never overcome. But builders always find a way to manage and refuse to let their goals and dreams be held ransom by their feelings in that awful moment when everything has gone wrong.

### *When Positive Thinking Doesn't Work*

It's not that enduringly successful people keep a "positive attitude" regardless of the situation. Most Builders have a hard time choosing an attitude when they first hit a setback. It hurts. What makes Builders different has to do with having a *ThoughtStyle* that moves them from negative emotion to constructive action quickly. Builders go to work dealing with a problem directly instead of struggling to put a smile on their face. They don't pretend to be happy when things go wrong and they refuse to completely surrender to the current disappointment. It's not that they feel good; they just harvest what they can from the setback and keep taking action.

"It's natural to feel like hell when things turn out badly," laughed Desmond Tutu, the Nobel Peace Prize-winning archbishop. "But don't let that stop you. Emotions are a storm that sweeps through your life." The defeat you've had matters less than what you ultimately want to create.

Builders don't try to "fix" that they feel badly; they believe that learning from the experience and getting on with their goal is the fix. They feel the pain but cherish what they're building more than the misery of the moment. They believe their dreams deserve to be created and that they have an essential role in it, no matter how awful they feel today.

Builders always shift their focus back to what they want to ultimately achieve — that thing they are committed to building. Instead of struggling to choose their attitude, they focus on what works, and when they do that, their attitude improves. In a culture that seems bent on perfection, entitlement and instant gratification, it is often forgotten that most overnight successes require decades of failure to achieve their dreams.

### *Persistence and Perfectionism — The Dark Side*

Two of the tripping points that make the adventure particularly difficult for people is what Builders describe as an overly self-critical tendency toward perfectionism and persistence for its own sake. Of course, both attributes are necessary and noble aspirations for which high achievers strive.

It's true that you can't get much of anything done without perseverance. Stories of persistence making the vital difference are legendary and the pursuit of perfection is something to which many high performers aspire.

*(continued on page 6)*

### The Tripping Point — Always Make New Mistakes

*(continued from page 5)*

While an obsession for perfection is typically listed in leadership and success literature as your worst enemy and persistence as your greatest asset, both can be addiction. People persist at all sorts of bad habits — like believing they must be perfect. The answer is neither perfection nor persistence, but what to persist at.

#### *You've Paid the Tuition, Collect Your Paycheck*

Every Builder said that it is crucial to search setbacks for lessons. At a minimum, the lesson may be not to do the same thing again, or at least do it differently. Perhaps what becomes clear is how committed you are to doing what you're doing, allowing you to see different options that you wouldn't have recognized otherwise.

Builders don't use a weakness or a setback as a reason to distrust themselves. They don't marginalize themselves or the problem. If you fail to dissect the problem to see what is working and what doesn't — if you keep throwing away the experience — you may be doomed to repeat it. Builders put the content to work for them.

The question is not whether they won or lost this round, but what they will do with the feedback. Innovation is failure sped up. ■

## Wounds to Wisdom

Builders don't deny their flaws, nor do they allow them to paralyze action. They might feel embarrassed or overwhelmed by them at times, but they still don't marginalize themselves or the problem. They don't even "overcome" their "disability." They manage it, include it, cope with it and don't let it stop them. In many cases, so called "disabilities" become embraced as the building blocks of greatness.

It's a difficult and nonintuitive step to think of the adversity that you are facing as an opportunity to actually find a way to make the challenge or flaw itself somehow useful. There is a much bigger prize awaiting you. The perceived disadvantage may hold the seeds of your genius.

By embracing their pain, Builders gain something more powerful than just the ability to learn from mistakes or harness the value of persistence. The special knowledge and skill you can gain from painful personal experience seem to transcend even empathy.

Some builders who were once thought to have lost the genetic lottery and suffered learning disabilities have instead found that they won a prize: discovery of a special talent and a novel way to break out of the pack.

#### *Letting Go of What Doesn't Work*

At its highest and best level, perhaps that horrible thing in your life — that failure or disability or source of outrage — is the genius. Gandhi could not have found his voice without pain. CEOs Charles Schwab and Richard Branson could not have built their companies without their dyslexia. By their nature, Builders are obsessed with creating or building something and are on a never-ending quest for something of value they can use. When it comes to their flaws, nothing goes to waste.

One of the things that Builders do discard quickly is blame. When you talk with them, what is clearly missing is the natural human tendency to dwell on blaming other people and things for their problems. Builders may explode, grieve and privately blame everything and everyone, but most appear to drop it quickly. Instead, they look at what they can change and deal with that directly without prolonged whining. Wallowing in blame of yourself or others doesn't actually deal with the problem or allow progress toward the goal.

They don't try to rewrite history or to wipe the slate clean. They don't pretend it didn't happen. They simply decide to dismiss the case and move on. Obsessing on a grudge only fuels the conflict and pain; letting it go allows you to get back to business.

"Dismiss is a very strong word," said Rev. Deborah Johnson. "When something is dismissed, it's over. When it's dismissed, you don't keep going back to it." That's what successful people do. They don't necessarily call it forgiveness. But they do abandon blame. ■

## PART THREE: ACTIONSTYLES – TURNING PASSION INTO ACTION

## Earning Your Luck

The overwhelming majority of Builders claim that their success has been a serendipitous journey and the luck they enjoyed was usually earned, often at great cost. They have done that by focusing on doing work that is meaningful to them and going deep to discover relevant clues along the way. They set big goals and engaged completely in the work at hand.

As a consequence, Builders are better prepared to turn things that may seem bad or useless into opportunities. What may appear to be brilliance, heroism or passive good luck is actually a saga of passion, depth and skill. Because they love what they do, Builders invest the time to acquire detailed knowledge about things that matter.

It is focus and knowledge, more than brains and brawn, that allow them to observe the subtleties of their path and then take advantage of serendipitous events.

*(continued on page 7)*

## Earning Your Luck

*(continued from page 6)*

Builders describe their path as adventures filled with bad breaks and unplanned good fortune. Only a prepared mind and open heart prevail.

### *Big Hairy Audacious Goals*

Are Builders saying goals and plans are pointless? No, they are often essential. In fact, Builders use planning and goals — often big goals — to put themselves into a serendipitous position. Big Hairy Audacious Goals (BHAGs) don't just exist in parallel to your ideology; they are a manifestation of it. They are an extension of who you are and what matters to you.

A BHAG engages people, reaching out and grabbing them in the gut. It is tangible, energizing and highly focused. It takes little or no explanation, and people get it right away. It has a clear finish line, so the organization can know when it has achieved the goal; people like to shoot for finish lines. These BHAGs involve a consistent pattern of making bold risky investments in audacious projects in order to stimulate forward progress while still preserving core values and ideology.

BHAGs give you something tangible to be authentic about. Much has been said about the need for leaders to be authentic, but Builders will tell you to be careful about what that means. Your BHAG must be real, but the world doesn't want to know everything you're thinking. Your behavior has to match your words. And your words should take the form of personal stories rather than clever quotes from heroes you've never met.

For Builders who stay true to what they know and what matters to them, things actually have a knack of turning out better than they imagined. This is one of the more subtle, but critical, powers of BHAGs. They instantly capture your heart and head. They deliver clear direction.

Don't confuse direction with a road map, however. Builders have the former, but not the latter. Take the race to the moon, for example. What is often forgotten is that when the BHAG of "a man on the moon and back before the end of the decade" was conceived, America had no clue how to actually accomplish this.

### *Bold Risks Measured in Small Steps*

Most people don't do well with ambiguity. Builders do. Ambiguity is the enemy of audacity and innovation. It strikes fear in our heart and doubt in our heads. When was the last time you were able to sell an idea to your boss, your partner or your team without an exact battle plan for getting it done? Did they not want a detailed process for getting there and certainty about the outcome?

It's human nature to crave certainty and repudiate ideas that don't have guarantees. And yet, very few things do. Great ideas and great careers don't have perfect plans before launch dates.

### *Responsible Chutzpah*

Builders exercise an odd mixture of accountability and audacity. It's tough to find the right word for this leadership quality. The Yiddish dictionary gets close: We're talking about a responsible form of chutzpah — the nonconformist gutsy audacity to create something despite all odds, for better or for worse.

The difference here is that long-term Builders are accountable — they are people who deliver for themselves and the outside world at the same time. Accountability means "to stand and be counted, as a part, a cause, an agent, or a source of an event or set of circumstances." Audacious accountability means you consider your life from the point of view that how it goes and what happens is up to you.

You may or may not be to blame for what happens to you, but either way, you are responsible for doing something about it. Builders don't claim to feel in total control, but they do have the audacity to embrace the idea that they alone are building this life for a reason, rather than life being something that happens to them while they're making other plans.

Very few Builders give their work an intimidating label like a mission, calling, cause or higher purpose. Such a pedestal can develop as an unnecessary torment. Indeed, Builders describe their objectives as essential — that they must be done and that they deserve to happen.

### *Measuring What Matters and Keeping Score*

Without feedback, you cannot adapt or improve. Measurement provides that feedback. And every time you get more information about how to do better, you are making a deposit in your personal capital account.

Measuring things helps you take account of progress on your long hike toward your goal, but it won't tell you if you're headed in the right direction. It's important to start with the end in mind, but it could be a dead end if you hurry to set a goal without first finding a meaningful passion in life.

The goal-setting process is both powerful and dangerous because it can make you effective at achieving objectives without any assurance that it's the right mountain for you to climb. Goals, by their nature, don't necessarily require focusing on inspiration as much as they do on perspiration and the sheer pragmatic effort of getting things done.

It's important to curb the rational impulse to set goals too soon on your journey. Goals become a barrier to success and satisfaction when they're not really yours.

*(continued on page 8)*

## Earning Your Luck

*(continued from page 7)*

This is what we call the *Secret Life of Goals* — when the milestones themselves take on a life of their own. Goals can dictate success for its own sake or by someone else's definition, not necessarily success that matters to you and the stakeholders you care about. ■

# Naked Conversations — Harvesting Contention

It might not sound intuitive, but the best thing you can do about contention is throw fuel on the flames. One of the oddly inspiring *ActionStyles* of enduringly successful people is that contention is something they actually seek out. This is gloves-off, brutally frank dialogue. It's what some pundits call naked conversations.

Many entrepreneurs light up when you raise the topic. It's something they look forward to and many claim their team saw contentious meetings as a "perk" for working with them. These naked conversations are not intended to be personally abusive. The focus is on issues, not people. What Builders ignite is actually a sort of controlled burn. The purpose is to encourage contention in a very precise way to draw out the best, most passionate and creative ideas from their team.

### *Struggle With the Issue and Not Each Other*

Builders don't fend off contention; they manage it as a source of inspiration. If you foster a safe place to air issues, you constructively unleash power that will otherwise become toxic — infecting things later. In addition, creative contention can help your team avoid its own delusions of grandeur and dangerous self-agreement.

Many companies hold "workout" sessions where it's required to get all the issues out on the table. When people really commit themselves to frank discussion, these meetings can be an effective way to create an appropriate politically correct environment to do what's usually politically incorrect at work.

These meetings can be used to shift the focus from personality conflicts to the actual problems that need to be solved by providing a safer, more honest dialogue without as much whining and name-calling. It provides a place to share the facts behind your worst fears and greatest hopes, rather than allowing them to continue to collide by accident.

The sooner you can do this, the better. Encouraging contention in the early stages of an initiative helps you discover where the problems are and fix them while they are small. Without a forum or time and place to attack and resolve the issues, relatively small problems can become counterproductive obsessions. ■

# Creating Alignment — The Environment Always Wins

Builders have this odd notion that many of the people they meet are potential members of their community or team — as recruits, customers, vendors, volunteers, friends, you name it.

If you want success that lasts, then you're better off if you think about your relationships as being built to last with people whose roles change — sometimes they work for you, sometimes you work for them, sometimes they leave your organization and become customers or vendors or regulators or competitors. But if you consider them on your virtual "team," the only thing that changes is their role. You still have the relationship.

The thing that matters is meaning. It drives everything. Builders align their attention to the things that matter to them and they know a lot about that stuff. They are experts on what matters to them — their portfolio of passions. They talk responsibly in the domains of their expertise; otherwise they say, "I don't know." Seconds later, they tell you what they do know about their passion or goal.

Builders are fanatical about framing what they say in terms of their goals and values. Their answers to most questions end with a segue back to the goal or mission with which they are passionately engaged.

Intuitively, they are always pushing and shoving the three circles — Meaning, Thought and Action — into alignment. Everything that has meaning gets organized in a ThoughtStyle, which then is turned into words and deeds, ActionStyles, that support what matters to them. They use every possible opportunity to reaffirm goals and meaning.

The only thing that provides lasting success is the day-by-day practice and struggle to move the three circles toward alignment in your life and work. It's an adventure that you are better off embracing with all of your heart and soul because it is a challenge that never ends. ■

### SOUNDVIEW RECOMMENDED READING LIST

**If you liked *Success Built to Last,* you'll also like:**

1. ***Crucial Conversations*** **by Kerry Patterson, et al.** The authors provide readers with tools for talking when the stakes are high.
2. ***Overcoming the Five Dysfunctions of a Team*** **by Patrick M. Lencioni.** Specific, practical guidance is supplied to leaders, managers and facilitators in this breakthrough guide.
3. ***Vital Friends*** **by Tom Rath.** Employees who have a best friend in the office are more productive, more likely to engage positively with customers, share new ideas and stay longer in a job.
4. ***The Emotional Intelligence Quick Book*** **by Travis Bradberry and Jean Greaves.** Emotional intelligence is now widely accepted, not only within the psychological arena, but within the business world.
5. ***The Power of an Hour*** **by Dave Lakhani.** What if by devoting just one hour a week, you could make big improvements in your professional life?

# Success Intelligence

## Essential Lessons and Practices from the World's Leading Coaching Program on Authentic Success

by Robert Holden, Ph.D.

### THE SUMMARY IN BRIEF

There are many so-called successful people who have not learned how to enjoy their success. True success should not have to cost you your joy, your health or your relationships. On the contrary, true success is about enjoying these things.

*Success Intelligence* examines how to enjoy real, soulful success while living in a manic, busy and hyped-up world. Author Dr. Robert Holden describes his unique coaching program — called Success Intelligence — which is used worldwide by artists, writers, entrepreneurs, business leaders, and global companies and brands.

Holden shares some the experiences and techniques he uses to coach success with talented people from all walks of life. He also presents the key principles and exercises he teaches in his Success Intelligence presentations.

The name "Success Intelligence" emphasizes the need to think wisely about success. Practicing Success Intelligence helps turn any true personal success into a valuable gift for others.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to create a vision for your life, work and relationships that doesn't get lost in the rush.
- How to identify what the real you really wants and discover the real purpose of your life.
- How to free your mind, liberate your talent and attract more effortless success.
- How to conduct a Busyness Audit, give up Destination Addiction, release dysfunctional independence and overcome your fear of success.
- Why happiness is the key to greater inspiration, creativity and meaningful success.

## Prologue

What is Success Intelligence? Simply put, it is about applying wisdom to success.

We live in a "Success Culture." Many people pursue success as a primary goal in life and are often obsessed with it. They judge their entire lives on whether or not they are a success. They secretly attack themselves for not being successful enough. But how much success is enough? People crave success because they hope it will deliver salvation from the ego's self-attack.

Success Intelligence challenges you to apply your best thinking to success.

## Vision

The pace of life for many of us has accelerated past fast to manic. In the Manic Society, we speed ahead, on fast-forward, and the danger is that we leave behind the truth. Winston Churchill said, "Men stumble over the truth from time to time, but most pick themselves up and hurry off as if nothing happened."

In the Manic Society, we propel ourselves so fast that we often exceed the speed limit of intelligence and common sense.

Of particular concern is how our relationships suffer in the Manic Society. Our frantic schedules cause us to skim across the surface of each other's lives without ever really connecting. The pressure to work harder is relentless, and we often end up emotionally unavailable and socially isolated.

In the Manic Society, our nonstop speed ethic can easily blur our vision. We are living faster, but for what? What is the vision? Without vision, we may simply be attempting to win prizes that aren't worth winning. We may be "getting there" faster, but we may also be missing what is "here, now," within us and before us. As Mahatma Gandhi said, "There is more to life than increasing its speed."

In the Manic Society, we are changing faster, succeeding faster and failing faster. The challenge is to make sure we do not blur the vision, blur the goals, blur what's important.

Cultivating a strong vision, in which you learn to "see" not only with your eyes but also with your mind and your heart, is essential for success. Make time for vision.

### The Busy Generation

Permanent busyness is not intelligent. In fact, permanent busyness is often a major block to success in work, relationships and life.

The Busy Generation has to learn that *it is not enough to be busy*. A busy life is not necessarily a life well lived. A busy work schedule is not evidence of any great accomplishment. Being busy neither guarantees success nor equates to success.

Permanent busyness is mainly compensation for a lack of clarity about true success.

The value of regular coaching is that it creates a space that helps you to punctuate your business. Space is a restorative that helps people breathe deeper, clear their minds, connect to their wisdom, remember what is important and be open to new possibilities.

White space refers to thinking time for vision and re-evaluation. White space is the 20 minutes you take each

day to make sure you are living and working wisely. Without these moments, life is just more busyness as usual.

### The Hyperactive Workplace

The Hyperactive Workplace is a modern tragedy where people work without vision and joy.

An increasing number of people report that they are generally unhappy with their jobs. One recent work survey interviewed 5,000 households and found that job satisfaction has decreased by 10 percent overall in the last few years. In another survey, three out of four people said they did not trust the CEOs of large companies. Relationships rarely prosper in a hyperactive climate.

In the hyperactive world of work, more computers, more printers and more photocopies will not save us. Prayer can. Vision can. And so can courage.

### The Joyless Economy

Economist Tibor Scitovsky wrote a landmark book in the 1970s titled *The Joyless Economy*. It is considered by many thinkers to be one of the most important books written in the late 20th century. Scitovsky argued that the reason why so many people are successful and unhappy is not because there is not enough to accumulate; it is because we have not figured out what we really want.

In our consumer society, which has so much to offer, it is essential to know what you value and what you really want. Otherwise the distractions and disappointments can be endless.

The key to feeling successful is not only more stuff, money, credit or more shops, but also *more vision*. Before you ask yourself "How much more can I get?" you first have to ask "What do I really want?" This simple question is the key to feeling truly successful. ●

## Potential

Success Intelligence begins with an awareness of and respect for the vast potential inside us all.

William James, author of *The Principles of Psychology*, wrote: "Most people live, whether physically, intellectually or morally, in a very restricted circle of their potential being. They make very small use of their possible consciousness and of their soul's resources in general, much like a man who, out of his whole bodily organism, should get into a habit of using and moving only his little finger."

Realizing our potential, and using it in intelligent ways, is our purpose and our salvation.

### Authentic Success

Self-knowledge is a primary key to Success Intelligence. The better you know yourself — what you value, what inspires you, what you are made of — the more effectively you will live, work and relate to others. Self-knowledge is the jewel in the crown of success. It enables you to be inner-directed, self-referring and true to yourself.

Without self-knowledge there can be no authentic success, no authentic happiness and no authentic living. The failure to be true to oneself, to be faithful to core values and to listen to innate wisdom leaves even the most accomplished person feeling unsuccessful and as if something is missing.

### The Self Principle

The "Self Principle" has an enormous influence on how every person experiences his or her life. It is an essential key to potential and talent, transformation and growth, success and happiness. The Self Principle states unequivocally: The quality of your relationship with yourself determines the quality of your relationship with success, happiness, love, God, money, time, health, luck and everything.

The better you know yourself, the better you can live and work with authenticity and authority. Your self-knowledge is what helps you discern between true purpose and pointless goals. Self-knowledge also teaches you about your inner strengths and true values. The better you know yourself, the better you can trust your wisdom, follow your joy and liberate your talent.

When you change the way you see yourself, you change your experience in the world.

### The Success Contract

By learning how to "read" and "rewrite" their Success Contracts, people can experience more happiness in their relationships and more success in their life.

The Success Contract is a metaphor, but its effects are very real. The Success Contract is a personal agreement drawn up by you and your ego (your self-image) that states — in categorical terms — how much success is possible and how much is impossible. The Success Contract is your guide to potential success. It is full of conditions and rules that are, essentially, your beliefs about success. These beliefs are very influential and may fully determine your relationship with success if you let them.

When you become aware of your Success Contract and re-author it, it can unlock your potential for success, often in immediate and dramatic fashion.

### Inner Dialogue

People talk to themselves constantly. Psychologists call this behavior inner dialogue or sub-vocal speech. They estimate that you speak to yourself at a conservative average of 50 words per minute, 3,000 words per hour. If you listen to your inner dialogue, you will notice an assortment of observations, judgments, commentary, beliefs, doubts, hopes, fears, anxieties, chatter and general nonsense. Fortunately, it takes only one great thought — one inspired piece of inner dialogue — to create some success.

The most important conversations you hold in life are the ones you hold with yourself. Your own inner dialogue is an important key to success.

Set aside some time to listen to your inner dialogue. See if you can discern between "learned thoughts," "everyday chatter" and "inner wisdom." What are your wisest thoughts about success? What is your wisdom trying to teach you?

Let yourself be inspired.

## Wisdom

Wisdom is a lifesaver in a Manic Society, where so many people complain that they have no time to stop and think. Wisdom is what will save the Busy Generation from a life of meaningless busyness. Wisdom is the key both to authentic success in the Hyperactive Workplace and to genuine happiness in the Joyless Economy. There is never any shortage of wisdom, only the confidence to use it.

Success Intelligence is about recognizing inner wisdom and using it to good effect in your relationships, your work and everything you give yourself to.

### Wisdom Is Not an MBA

"Character Goals" (i.e., *being* a good leader and *being* confident) are different from "Achievement Goals" (i.e., *doing* an MBA). Too often, the language of goal-setting is about "doing," "having" and "getting" and not about "being." Without some focus on "being," there is no true way to test if a goal is right for you or not.

Set aside time to review your goals. Identify your criteria for setting your goals. How do you decide if a goal is important or not?

Reflect on how you evaluate your success. Review your Spiritual Goals, your Character Goals, your Achievement Goals, etc. Think wisely about your true goals in work, relationships and life.

### Success Is Not Always Up

Too often people throw success ahead of them, into the future, and hope to bump into it someday. In the meantime, their lives are full of Destination Goals and no Present-Time Goals.

Success Intelligence is about allowing your inner wisdom to teach you what success is *today*. It is the ability to live life well *now*. Too often, our up-goals are nothing more than a self-serving, desperate cry for significance, attention and approval. These up-goals will get us nowhere if we do not learn how to be happy and successful along the way. A successful life can only ever be the one you are living now.

### Happiness Is Not an It

The language of happiness is important because how we talk about happiness influences how we encounter happiness. For example, when we talk about happiness as something "to have," the danger is that we reduce happiness to an "it" and a possession. Thereby, we externalize happiness, and we end up *pursuing* happiness instead of *being* happy. It is the same with success. In the Manic Society, we are busy trying "to achieve" success instead of cultivating a deeper sense of inner success.

Success Intelligence recognizes the value of happiness. It knows happiness is an important goal because happiness is a great teacher. True happiness is an inner guide that teaches a person how to live well. In particular, happiness can teach a person a lot about success.

### Money Is Not Your Purpose

The "Money Trap" is about waiting to have enough money before you commit to what is true, to what you love, to your real purpose. Money, by itself, cannot make you secure. Money, by itself, cannot heal fear. Money, by itself, cannot give you faith. And money does not make someone more intelligent.

What is money anyway? Money does not define you. Money has no vision. Money does not have your talent, nor your wisdom. Money cannot guarantee you success. Money cannot buy happiness. Money can't even prevent unhappiness.

Never put money first. The key to success is to commit first to your purpose, and let the money follow after you.

### Love Is Not Just an Emotion

Love is not just an emotion. Love is an intention. Love is a purpose. Love is our true power. It is what inspires us and what evolves us. "We are all born for love. It is the principle of existence, and its only end," said British Prime Minister Benjamin Disraeli.

Love is the heart of success. Any life goal that is not somehow about love is not really a goal; it is just compensation or a distraction. Love is the ultimate goal and the only real goal.

If your definition of success has little or no measure of love in it, get another definition.

Success Intelligence is the wisdom to keep putting love first in your life. ●

## Relationships

German physicist Werner Heisenberg took a small subatomic building block of life, called a photon, and showed that it has a dual nature, which is both a "particle" and "wave."

If a scientist observes a photon with a particle detector, he or she finds that a photon looks like a particle — a small, fixed, singular object that has hard boundaries and is separate from all else.

However, Heisenberg's Uncertainty Principle found that if a scientist observes a photon using another device, called a wave detector, the photon no longer looks like a separate particle floating through space on its own. Now the photon appears as a wave that has momentum and is in connection, flow and dialogue with everything else. Heisenberg said, "The world thus appears as a complicated tissue of events, into which connections of different kinds alternate or overlap or combine and thereby determine the texture of the whole."

Thus, the photon may look like a separate, independent entity, but it is never really separate. The Uncertainty Principle is one of many breakthroughs in quantum physics to establish that *relationship* is the basic building block of life — on every level.

Relationship is the heart of physics, the heart of life and the heart of success. Our personal challenge is to be both particle-like and wave-like; in other words, we have to embrace our apparent uniqueness and also realize our deep connection and oneness with all. We have to learn how to live for ourselves *and* for everyone else.

### The Broken Community

Excessive individualism and the lack of deep intimate attachments is not a formula for success. It breaks up communities and people's lives.

The spiritual imperative of every human is to overcome his or her perceived aloneness. Separation — the optical delusion — is the mental virus that causes so much fear, pain and disease. Intimate relationships are the basic building blocks of true success and well-being. Positive relationships promote strength, resilience and happiness. The heart of success is about living for ourselves and for others.

### The Independence Myth

A dogged insistence on independence — "my way or the highway" — is a very common block to success in work, life and relationships. Total independence makes everything more difficult than need be. Excessive individualism cuts us off from our team. Absolute self-sufficiency is unnecessary and egotistical.

Albert Einstein extolled the virtues of independence, but he balanced this beautifully with his praise for community and his experience of connectivity and oneness with life. In *The World As I See It*, he writes: "A hundred times every day I remind myself that my inner and outer life depend on the labors of other men, living and dead, and that I must exert myself in order to give in the same measure as I have received myself and am still receiving." Independence is part of a greater picture that leads to interdependence and wholeness.

### The Competition Block

One of the biggest obstacles to success is "the competition block." A common characteristic of dysfunctionally independent people is that they make everything into a competition.

When people's only strategy for success is to compete, they often block all sorts of opportunities for mutual support, potential for shared learning and possibilities for creative collaboration.

The Tao of competition is about knowing when to compete (which is *yang*) and when to cooperate (which is *yin*). It is also about knowing how to compete. A true champion will work with his or her competitive instinct to achieve a personal best. He or she will also keep his or her primary focus on his or her own personal vision and values so as not to let the competition urge distract or derail him or her. Ice-skating champion Katarina Witt said, "When I go out on the ice, I just think about my skating. I forget it is a competition." Herein lies the Tao of success.

### Thin Conversations

The faster we go, the more we specialize in thin conversations. When we are busy, we communicate mostly on the run, using cell phones, BlackBerrys and e-mail. Occasionally we stop, and we wish our lives could be better than this.

Social literacy is an important key to success in work, happiness in relationships and well-being in life. The

positive news is that communications surveys agree no one is too old to learn how to be a better communicator. Also, most of us already know how to communicate well; where we fail is that we don't make time to put our wisdom into practice.

### A Better Balance

The story goes that word-champion boxer Muhammad Ali was invited to give a talk to the Harvard Business School shortly after his famous victory over George Foreman in the "rumble in the jungle" fight in Zaire. An eager audience member asked Ali to recite a poem. Ali stood up, pointed to himself and said, "Me," and then threw his arms wide open to the audience and said, "We." Ali said that "Me We" represents his whole philosophy of success.

"Me-we" thinking offers a crucial way forward for the individualistic cultures that fail to teach us that we can access higher levels of success when we live for ourselves and each other.

Healthy relationships are vital for "me-we" balance and work-life quality. To enjoy sustainable success you cannot keep putting your relationships on the back burner. ●

## Courage

The word *courage* is derived from a French word meaning "from the heart." There are many men and women of great courage. These people have often experienced the worst in life, such as personal heartbreak, major illnesses and financial disaster. They distinguish themselves because they have faced their personal hell, survived their dark nights and chosen to live. Often, these people seem extra alive; they live from their heart and inspire everyone they meet.

### Shift Happens

Change can often be a deeply unsettling process that tests our faith and our resolve. Yet, if we learn to handle change well, we can open ourselves up to new levels of creativity and success.

Shift happens when we are willing to make the inner shifts that create more success. The world does not change because business changes, society changes or our relationships change; it changes because we do. When we show up differently, the world responds differently to us. When we give the world another chance, our chances for success and happiness improve. Furthermore, until we put our whole hearts into our lives, we will not know what is truly possible, nor will we reach the hearts of others.

### A Failure Policy

To be successful, a person must have a "Failure Policy" that is honest and effective. A Failure Policy is a similar idea to the "Success Contract." Both your Success Contract and your Failure Policy sit in the back of your mind beneath a pile of thoughts. Both are metaphors, of course. The Success Contract represents your philosophy and beliefs about success, and your Failure Policy represents your attitude and approach to failure.

A Failure Policy usually has three main parts to it:

- **Definition of Failure:** Often by asking "What is failure?" a person is better able to answer the question "What is success?"
- **Meaning of Failure:** An effective Failure Policy can help a person adopt the best possible attitude of failure. Attitude creates meaning, and meaning points the way forward.
- **Uses of Failure:** An intelligent Failure Policy can help a person decide how best to use failure.

### Further Education

Success requires an intelligent balance between making the fewest possible mistakes *and* the best use of mistakes. A person who is good at relationships is probably very mindful and is also willing "to go to school" on any mistakes he or she makes. A person who has a great talent for something often has what is commonly called "a natural ability" (translation: courage) to risk learning by trial and error. A person who is a great leader has often made "every mistake in the book" *and* has learned how to capitalize on them.

Success Intelligence includes the wisdom to avoid making unnecessary mistakes and the courage to accept the necessary education when mistakes are made.

### Higher Learning

A true definition of success must embrace a profound truth about life: There is suffering. Literally every moment of the day, somebody, somewhere, is coming to terms with pain and loss.

The power of inner alchemy describes a person's innate ability to transform setbacks into lessons, problems into opportunities and pain into wisdom. Alchemy happens when we are prepared to look with new eyes, think new thoughts, make better choices and act differently than before. Every problem has a message for us. Each adversity hides some gift. Every conflict points to a better way.

True success is about growing your awareness of who *you* are and what your *strengths* are. It is also about placing your faith and your power in what will help you to grow beyond the mistakes, failures and setbacks you encounter by seeing them as opportunities, not blocks. It fashions everything into a gift. ●

## Grace

Grace has something to do with the universal dialogue between all things. People who believe in grace believe that life is a collaborative adventure and a joint effort. Grace is the meeting point between an open-minded individual and the whole of Creation. It is the experience of being moved or inspired by something bigger than your ego.

### Destination Addiction

In the Manic Society, people exhibit a frantic, neurotic behavior called "Destination Addiction." This addiction is a major block to success. People who suffer from Destination Addiction believe that success is a destination. They are addicted to the idea that the future is where success is, happiness is and heaven is. Each passing moment is merely a ticket to get to the future.

If only we could stop a while and let wisdom and grace show us a better way. "One's destination is never a place but rather a new way of looking at things," wrote novelist Henry Miller.

Success Intelligence is knowing when to go fast and when to take things slowly. The ability to go fast becomes counterproductive when you try to do *everything* fast. The joy of slow teaches you to discern between busyness and wisdom, effort and grace, progress and truth. Slowing down can help you to stay true to your vision during the fast times. In fact, going slow can help you go fast better.

### Insane Busyness

Most of us are either very busy or insanely busy. Our busyness eats up our space. There is no space in our schedule. Our schedule is a never-ending to-do list.

Excessive efforting hides compensations that block success. For example, maybe people over-effort because they are dysfunctionally independent and never ask for help. Or maybe they over-effort because they are trying too hard to control a situation. Sometimes effort is just fear.

Success requires commitment, particularly the commitment to balance effort with grace.

Great dancers, like Rudolph Nureyev, and great singers, like Maria Callas, found a way to balance effort with grace. So too did great artists, like Leonardo da Vinci, who believed in the need for work and rest. They know how to give their best and also make space for grace and inspiration.

Greater simplicity helps to avoid excess busyness and unnecessary effort. It increases effectiveness and it welcomes grace and inspiration. It also preserves your sanity. Take time to reflect on how you could simplify your life and work to enjoy greater success.

### The Failure of More

Social psychologists have amassed a large body of research on the "failure of more" to make us happy and fulfilled. One study, "Happiness of the Very Wealthy," found that millionaires in the *Forbes* 100 (with a net worth of $125 million plus) reported only a slightly higher average of happiness than people on average incomes. In fact, 37 percent of the millionaires were *less happy* than the national average. One very wealthy millionaire reported that he could never remember being happy. It seems that even the "winners" feel like "losers" in the culture of more.

Success Intelligence encourages you to think wisely about what it is you really want. It teaches you to distinguish between an "illusory more" that has no permanent value and a "real more" that is in alignment with your values and success.

### The Energy Crisis

Many people suffer from a personal energy crisis. They are either exhausted or at the edge of exhaustion. Their permanent tiredness inhibits success and intelligence. Chronic exhaustion often traps us in an ineffective "effort economy" in which we keep on trying harder and doing worse.

Success Intelligence encourages a wise balance between adrenaline and grace.

Success Intelligence interprets exhaustion as a vital lesson in how to care for ourselves better. Exhaustion is a call to be wiser. ●

## Renaissance

Success Intelligence is a journey that can be mapped over three distinct stages of consciousness: Determinism, Adaptation and Renaissance.

**Determinism** is the Dark Ages of the human consciousness. A formula for this stage is: the world = my life = me. In Determinism, we believe we have no choice in our lives.

**Adaptation** is the New Dawn of the human consciousness. It opens us up to a world of choice. A formula for this stage is: the world + me = my life.

**Renaissance** is the Creation Song of the human consciousness. It opens us up to our true being and identity. A formula for this stage is: me + the world = my life.

Success Intelligence teaches that we create the world on three levels: our actions, our thoughts and our *being*.

First, if we act differently, we create new outcomes. One new action can rearrange the world around us.

Second, if we think differently, we create new possibilities. We learn that by choosing our thoughts, we can choose our lives.

Third, on a level of being, we change the world by choosing *to be what we want*. For example, our lives change when we stop searching for happiness and we decide to be happy.

## Be the Goal

The real challenge of leadership is to "be the goal." This means that leadership is about *bringing into being* what you most value. Thus, if you want honesty, you have to be honest. And if you want trust, you have to be trusting. Ultimately, if you want any change to happen, you have to think about how you can "be the change" you want.

Success Intelligence is about finding the authenticity of each moment. The value of authenticity is that it encourages true authority, i.e., wisdom and inspiration. In every situation, ask yourself, "What is my true goal here?" and listen. And in every conflict you are in, ask yourself, "How can I be more honest?" and listen. And in every relationship, ask yourself, "How can I be a true friend?" and listen. More authenticity enables greater effectiveness.

## The Big Fear

People often hold themselves back in life because they will not face their fears. They will do anything to avoid fear, including keeping busy, working harder, playing small and generally increasing the noise of their lives. Their fear of fear prevents them from following their passion, realizing their talent and finding their voice.

Success Intelligence recognizes that if you want to be your best self and contribute fully to life, you have to reach beyond your fears. These fears sometimes include the fears of success.

When you next review your major goals, uncover any unresolved fears of success. Think deeply about each goal and ask yourself, "What are my fears of success here?" Check thoroughly.

Hidden fears (i.e., the fears you hide from) will interfere with your best efforts to succeed.

## Service

Albert Schweitzer said, "I don't know what your destiny will be, but one thing I do know: The only ones among you who will be really happy are those who have sought and found how to serve."

Service helps to transcend your ego, evolve your gifts and realize your potential. When you dedicate your success to the good of others, it activates all manner of inspiration and help.

## Happiness

Scientists have traditionally overlooked happiness because, in terms of evolution, it was judged to have only "entertainment value" compared with the survival value of emotions like fear or anger. Recently, however, thanks to psychologists like Barbara Frederickson, there is growing evidence that happiness plays a big part in our growth and development.

Happiness is not now dismissed as just a pleasurable emotion; it is valued more as a creative power that can help you evolve and thrive. Today leaders are learning that happiness, talent and success work together.

## Saying Yes

Success Intelligence has to take into account that our adventure on Earth is both transient and temporary. Therefore, an intelligent question to ask is, "Knowing I will die, how shall I live?"

Success is not about driving yourself harder; it is about letting go of what blocks your heart. Think deeply about what you most want to say "Yes" to. Be willing to let go of old heartbreaks and wounds to which you still cling. You didn't come into this world to shrink and play small. Nor are you here to play dead. You have gifts to share and a contribution to make. ●

## THE SUMMARY IN BRIEF

Everybody wants to be successful, but a few put in the conscious effort to get there. Success looks glamorous on the outside. But nobody wants to acknowledge the amount of struggle that goes on behind the curtains. Success takes work. It takes thoughtful action. But most importantly, it takes cultivating a robust "success psyche."

***Success Psyche*** spins a real-world web of tried and tested methods that offer a realistic approach toward success. It helps the readers uncover the right actions and habits they need to achieve their goals.

Through his life story and several insightful personal experiences, author Jay Adkins takes us through a realistic journey of success, uncovering several "success myths' along the way. The author urges the readers to first find out the "why" and then craft a robust gameplan to eventually find their very own version of success.

## IN THIS SUMMARY, YOU WILL LEARN:

- To define your very own version of success.
- To design your path toward success.
- To create and implement a Goal Planning System (GPS).
- How to break free of every myth associated with success.
- To be successful.

## Introduction

What exactly is Success Psyche? It is a mindset, a philosophy, and a way of living that attracts your unique definition of success and allows you to be happy as long as you continue taking massive actions towards your goals. Your Success Psyche is the lightbulb that won't dim. It's the part of your brain that is trained to view failure as progress. When you focus on every massive action you design for yourself, you develop your very own Success Psyche. This book lays out twelve massive actions you can translate into long-term habits, to succeed both in business and life as a whole.

## Part One: Unlocking The Path To Success

### Learn That Success Is A Snowflake

My story of struggle and success started at a very young age. My parents made barely enough to pay the bills. But I quickly learned that the only way to respond to difficulties was by working through them rather than running away from them or playing the victim card. The mentality of "do just enough" doesn't get anyone anywhere. If you're not happy in your life, it's no one's fault but yours.

Remember, Usain Bolt didn't magically wake up one day and become the fastest man in the world. Jeff Bezos wasn't born with the business plan for Amazon taped to his baby crib. The result—the big success stories—all involve countless steps we never saw.

Success is like a snowflake. Yours and someone else's will never look exactly the same. We'll learn more about it, one element at a time, and as you progress through the book, your every step would be a success all on its own.

### Outline Your Terms Of Success

The entire foundation of your success lies on this golden rule: Unless you define your success, you will not be able to shape your life in a way that leads you there. The five steps to outlining your terms of success include:

Step 1: Envision the kind of life you'd like to have. This could include the type of career you want to have, the type of people you want to allow into your life, the destinations you want to travel to, and anything you would be happy to include in your life.

Step 2: Perform some reverse engineering to detect what it will take to help you reach your goals. What sacrifices and actions are required? What will make you uncomfortable? What do you NEED to do for success? What is it that you DON'T NEED to do for success? This is the hardest part of it all but once you cross this, you eventually get closer to your goals.

Step 3: Ask the big question, "Am I willing to do whatever is necessary to reach my goal?" Your willingness to do something can be the greatest deciding factor for your success.

Step 4: Deploy deadlines. As cliché as it may sound, a goal without a deadline is a dream that will never live outside your head.

Step 5: Let it loose outside your head. This is when you take accountability for your action and bring your dreams to reality.

Remember, you can't look at someone's success but behind it. That's how you'll understand that every success story had to travel a jagged journey of tough lessons and bad choices.

### Realize You Are Programmed To Fail

The truth is, failure is inevitable. The world expects you to admit defeat and trek on down that mountain with your tail tucked between your legs and fall back in line with the rest of the dissatisfied masses. Unfortunately, many of us believe the world is right. We give up and wonder why we ever tried at all. The goal here is to undo the programming that "failure is our inevitable conclusion,"

Failure might be inevitable but the story doesn't end here. You must fail and keep going several times until your goals begin to appear on the horizon. Remember, it is failure that brings out the light-bulb moments in our life. They can be your biggest teachers. Inventions like airplanes, the internet, and even computers were a result of multiple failures.

### Define Your Why As Your Legacy

There are only two ways to approach goal setting and journeying towards success – analyzing everything that seems wrong with your personal and professional life and hunting down the "why" behind it. When you focus on the "why", it allows you to reframe failure as progress.

It also allows you to observe others' mistakes and translate them into your learning opportunities. When you determine your why, the "there's not enough time" excuse vanishes. For example, if the answer to your "why can't I finish my work on time" is "because of social media" – you grasp a clear solution to be more productive, that is, "to not waste

time on social media." Use your why-led focus to craft a "Whatever it takes" attitude and you'll begin to untangle how the sky is the only limit for your success.

### Schedule Success Or Live In Regret

Human bodies are designed to avoid tasks that are not immediately rewarding. Nobody likes to wake up early or exercise. At that moment, it's difficult to realize the amount of positive impact good habits can make in your life. But the creation of good habits demands thorough systems and processes within in your daily routine. To make sure your entire day remains productive, start your day right. Wake up early in the morning with any positive self-talk like meditation or prayer. Remember, you're only as tired as you think you are. Once you get the start of the day right, design a detailed schedule for the rest of the day and stick to it.

### Use A GPS For Vision And Values

Making your mornings valuable is great. But how to get the rest of the day in order? Create a clear, visually clean collage and set it as a screensaver on your devices, and in places like your bathroom mirror and refrigerator door. I like to call it the GPS or Goal Planning System. Just like how we use a GPS to find directions in real life, your life's GPS will guide you toward the precise goals (or destinations) you want to reach. Once you create your GPS, set a time frame that will help you get real results. For example, "By the end of the year, I want to accomplish this goal." Make sure you cover both personal and family goals. Finally, review your vision board throughout your weekly routine. To help you create your detailed GPS system, I've included a GPS template in my book.

### Respect The Power Of Ego In Accountability

Sometimes, the ego can act as a powerful tool to accomplish things. When Freud used the term "das Ich," he was referring to the conscious, decision-making part that humans regard as "I." Ego is the person you think of when you take ownership of anything. (i.e., I want to quit my job, or I love my kids).

In other words, ego is "I" – no negative terms attached. This is exactly why you can use "ego" to cultivate accountability. You can do this by giving other people permission to keep you on track. For example, if your goal is to get fit, discuss your workout plan with your friend and make them your accountability partner. When you're held accountable for things, you tend to take them more seriously.

### Find Mentors Or Settle For Good

Mentors and coaches are the best catalysts for your success. They provide you with a unique vision, offer you impartial and objective advice to work on your mistakes, provide you with the right perspective so you don't end up making expensive mistakes, and are the best source of encouragement. When looking for a mentor, make sure they have qualities like mastery of the niche you want to become an expert in and absolute honesty, and find out if they can give you the freedom to set your own expectations, and if they fit your style.

### Discover The Dangers Of Goal Myths

There are nine goal myths that block success. As the chapter title indicates, these myths can be dangerous when they are not dispelled through conscious effort.

Myth 1: Setting goals is the key.

Myth 2: I failed because the goal was too hard.

Myth 3: Dreams are goals.

Myth 4: Comparison is motivating.

Myth 5: Praise is motivating.

Myth 6: There are shortcuts.

Myth 8: Motivation comes from outside inspiration.

Myth 9: Some failures are outside my control.

### Practice The Nine Be's Of Networking

Successful networking requires outside-the-box thinking. Networking needs to be a process. It also needs to be extremely intentional. Perhaps the most valuable thing that you will get from your network is a constant stream of referrals.

- Be curious, care about people, and ask questions that go beyond "how are you."
- Be relatable by finding conversation points that people will engage in or find interesting.
- Be creative when networking with someone on social media. For example, instead of simply "liking" someone's picture, contribute something useful to their posts.
- Be systematic by creating a digital journal of people you need to reach out to regularly.
- Be authentic, be yourself.
- Be open-minded and embrace others' true feelings or passions even when they seem different from yours.

- Be genuinely caring to build lasting trust or relationships over the years.
- Be valuable by contributing your knowledge to your growing network.
- Be patient and remember your efforts will pay off.

### Embrace Uncertainty Or Accept Complacency

It's easy to get complacent once you think you've arrived. If you forget the struggle, it means you're destined to repeat them. Make it a point to recognize both struggles and triumphs. There is a chance you'll fail several times, and your self-doubt might come in the way of your persistence and determination. When things seem uncertain, the only thing you can do is to keep moving with your goals in mind.

### Gain The Happiness Advantage

Don't fall into the trap of, "If I work hard, I will be successful, and once I am successful, I will be happy." Remember, we become more successful when we are happier and more positive, not the other way around. It doesn't depend on a dollar amount or how the economy is doing. Happiness is directly linked to how positive your attitude is.

## Part Two: Take Charge Of Your Success

### 90-Day Massive Action Plan (Compress Everything)

Sometimes, the most challenging part of a journey is the first few steps. So, let's talk about those critical steps for a moment. Ask yourself, "what does my success snowflake look like?" Once you know the answer, ninety days is all takes to craft the mindset and routine that fosters a Success Psyche.

- Make the daily decision that you will do everything to cultivate a success psyche
- Implement a morning routine
- Become comfortable being uncomfortable
- Lose the victim mentality
- Don't set unrealistic expectations for others
- Define your success snowflake
- Recruit some accountability partners
- Lean into failure
- Define your core values
- Define your why

## Conclusion

Success doesn't simply come knocking at your door because you call it. Success takes conscious effort. It takes patience and unbreakable faith in yourself. No two people would experience a similar success story. But know that every human already has what it takes to succeed, the only questions that matter are: Have you found your success snowflake yet? If yes, are you ready to become your very own version of success?

**Jay Adkins** is a mentor, speaker, author, and the proud owner and Founder of ProVest Insurance Group. He has six exclusive Allstate agencies in three regions of the United States - FL, NC, and TX. As Co-founder and President of one of the largest sales training platforms, Agency Sales Academy, Jay has led a bright and continuously evolving career, winning him many awards. He performs a variety of consulting services for diverse industry clients including mergers, acquisition of insurance agencies, and structuring and negotiation. Jay also consults individual agency owners on effective agency operations.

## The Summary In Brief

In ***Success with People,*** author Cavett Robert demonstrates that personal success as well as financial success in life depends on your ability to get along with other people.

Regardless of the business, industry or profession we're in, we are all involved to some extent in human engineering. Human engineering, in its simplest form can be defined as the science of dealing with people–understanding their responses, their vulnerable spots, and their "hot-button"issues.

***Success with People*** outlines steps for how to manage and influence people in ways that align with your life goals.

No one is completely divorced from dealing in some fashion with other people. Follow the six principles identified by Cavett Robert and you will find the way to more personal power and income.

## In This Summary, You Will Learn:

- The What, the Why, and the How dimensons of human engineering.
- The Six Principles that must become a part of you.
- Why people love to buy and what you need to know.
- Why it's critical to make people feel important.

## Introduction

Your success in life will be determined by your ability to get along with other people. One of the important lessons in life is discovering how to sell yourself to others and get them to help you in anything you many want to attempt.

Human Engineering is the science of knowing how to deal with people. This is not discounting the importance of knowing and understanding the nature of our business, industry or profession, which is a necessity. Human engineering is the PLUS factor.

The human engineer must go to the heart of an individual's existence and understand their ambitions, aspirations and goals in life — even their yardstick of values. These are the qualities which cause the attitudes, tendencies and idiosyncrasies which eventually result in the behavior pattern of an individual.

There are three dimensions of human engineering. The human engineer's concern is in WHAT people do and WHY they do it. These are important because they lead to the third dimension — the HOW.

For example, in sales, a person may know WHAT a prospect's buying habits are. They may even know WHY the prospect follows these buying habits. But the salesperson will never be anything but an order taker until they enter the magic world of creative selling by learning HOW to cause the prospect to change their attitudes and buying habits. The salesperson can only do this when they have learned the art of motivation.

There are six principles of Human Engineering that will not only help you discover a whole new way of influencing others, but you will also come to a better understanding of yourself.

## (Principle #1) People Love To Buy But They Hate To Be Sold

The great desire to acquire, the compulsion to possess, is one of the deepest human impulses known to man. Since we acquire things by paying for them, we know that people love to buy. But we also need to move to the second dimension and know WHY people love to buy.

Psychologists have told us for years that this great compulsion springs from the fact that it makes us feel important to acquire and own things, whether we need them or not.

No one is exempt from the necessity of being able to influence others. When a person begins to feel important and optimistic, they want to buy and acquire. They immediately enter their maximum buying mood.

To sell something, the first step is to create this buying mood. This is where we enter the creative world of Motivation. This is how we get action.

We all, at all times, wear a big sign, "Make Me Feel Important — Don't Rain on My Parade — Please Don't Blow Out my Candle." If you could imagine seeing this sign on a person you are addressing and make full use of it by making them feel important before attempting to persuade them, you would be far more successful in moving them to action.

When we have mastered this first great principle of human engineering, that people who have been made to feel important and optimistic enjoy accepting our ideas and buying our products, life itself will take on a new meaning.

## (Principle #2) We First Must Sell Ourselves

Before selling a person an idea or product, we first must sell ourselves. Until a person first accepts us, they will not accept anything we offer. This is why that first impression is so important.

There are several basic qualities which a person must recognize in us if they are to accept us.

**First, be yourself.** Remember that if you can't make a good impression being yourself, you certainly will "louse it up" trying to be something you are not. Above all else, in our dealings with others, we must be natural.

**Second, have a happy approach.** Never forget that everybody loves to be around an optimist. Don't tell people your troubles. Take time to enjoy people. No one enjoys the company of someone who seems too busy to converse in a relaxed manner.

**Third, be truly interested in the other person.** Anyone who talks only in the field of their own particular interest will find that only a few doors of conversation are open to them. Convince the other person that you are genuinely interested in all that concerns them.

Never forget that before any person will accept your ideas, products, or service, they must first accept you. While you must know your product or service, you must still think people.

## (Principle #3) People Are Persuaded Not By What We Say But By What They Understand

Much of this world's trouble is due to the fact that in our communications with others, we do not take the time to be sure that we are making ourselves clear.

When we first approach a person on any idea, at the beginning they will give us only about 10 or 15 percent of their attention. Our explanation must be so elementary and direct that it will challenge even this small percent of attention. Finally, as the person begins to understand us, and even begins to like us, they will become interested and consequently will give us a larger percentage of their attention.

Not only must we be simple and explicit in our dealings with others, but we must relate our explanations and stories to the understanding of the person to whom we are presenting our ideas. Different words have different meanings to different people. For example, the word "strike" expresses the ultimate aim of a bowler. To a baseball player, it's a nightmare. To the head of a labor union it signifies one thing; to the manager of a large factory it undoubtedly stimulates a different emotion.

Finally, in order to be sure that we are understood, we must also be dramatic. Throughout all history, the story has been the best vehicle to transport our ideas in an understandable and convincing way. Anytime we relate an example or a "for instance" we are, in reality, presenting a drama. Generously use stories in illustrating your points.

## (Principle #4) How Does It Benefit Me –– Not You, But Me?

Our ideas, products or services are acceptable to an individual only to the extent that they feel they will benefit. This is why the human engineer never mentions features unless they follow up their remarks by translating the features into benefits.

Benefits are determined primarily by time, place and circumstances. If your timing is off, value is immediately lost. You might hear, "How I wish you had spoken to me sooner about this."

Place and circumstances, also, are just as important when considering benefits and values.

Something might be extremely valuable to us at one time and under certain circumstances, and yet absolutely worthless to us on some other occasions. It is important for us to consider first the individual and all elements of their situation before even thinking of the ideas, products and services we might intend to offer. This is the very basis of human engineering.

Until you and the person you approach have first agreed completely upon what their problem is, you are not talking to anyone except yourself. You may be able to make a brilliant presentation on the unsurpassed qualities of a certain service or product, but until you first have fixed a need in someone's mind, your brilliance falls upon deaf ears.

Nothing that is offered has any value within itself if divorced from someone's needs. Only to the extent that it solves someone's problem has it any value at all. As a human engineer, first concentrate on the individual — his needs — his problems, then the door is open to present your ideas, your product or your service.

## (Principle #5) Wants, Not Needs, Cause People To Act

Needs move a person only when they are in a state of desperation. Wants are a magic ingredient. They are emotional, sentimental; they have no ceiling, no limitation. Wants alone bring out the best within us.

Making a person want what he Needs, more than what he Wants to gratify a temporary desire is often not easy. Maybe I need more insurance for my family's protection, but can you make me want it more than I want a trip to Honolulu?

It is a great challenge to the human engineer. It's a real character sale. Everyone will respond to at least one of the five motivating factors: pride, profit, need, love, or fear. Our responsibility is to find, by testing, just which one of these factors motivates an individual most strongly.

When you have found the one responsive note, you should concentrate on this one alone. Most people are moved to action by one persuasive point.

Assume, for example, that you are attempting to interest an individual in purchasing a home. As you present an advantage directed to each of the motivating factors, you are

holding the prospect's mental pulse, watching them carefully to detect any response. As soon as you get the response, you ignore the remaining motivating factors and concentrate on the one responsive note.

A bargain is measured, not in terms of dollars and cents, but rather by how nearly something comes to solving a problem. Show me something which is tailor-made to my needs, and I begin wanting it. We pay more for a tailor-made suit, a custom-made house, because we WANT it enough to be willing to pay more.

Before people will buy, they must be encouraged to WANT what they NEED — and WANT it more than something else — even more than they want the money it takes to buy it.

## (Principle #6) Emotion Opens The Door But Logic Locks It Tightly

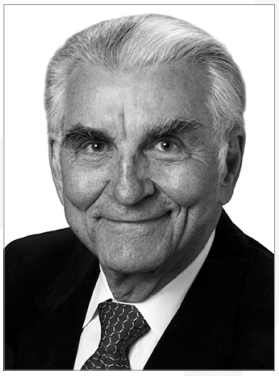
Approximately 85 percent of the decisions in life are made by a person while they are in an emotional frame of mind and only about 15 percent are made based purely on logic. But emotion is not enough alone to ensure that a decision will be permanent. Emotion is a transitory thing — it comes and goes. As the emotion subsides, there is nothing to support the decision and hold it up. It comes "unglued."

In the field of human engineering, every day we weigh logical reasons against emotional reasons in making decisions. You want to feel justified in buying something, for example. You begin looking for a logical excuse to do the thing you emotionally desire to do.

It is important that we are able to appraise this balance between emotion and logic, whether we are attempting to sell an idea, product or service or we are considering the acceptance of such.

## Remember This...

Persuasion is converting people — no, not to our way of thinking, but to our way of feeling and believing. The most persuasive person in the world is the person who has a fanatical belief in an idea, a product or a service.



The person who completely buys into the idea they are presenting, can be practically hypnotic in their persuasive powers. That person projects enthusiasm for the idea and radiates belief in it.

The one common denominator of all great people in history is that they believed in what they were doing. The only chains and shackles that prevent any of us from realizing our life's dream are those we ourselves forge in doubt and lack of belief in what we say or do.

In 1935, Will Rogers spoke at a luncheon and offered a model blueprint for success:

"If you want to be successful, it's just this simple — Know what you are doing. Love what you are doing. And believe in what you are doing."

The greatest principle of human persuasion is that people are persuaded more by the depth of your conviction than by the height of your logic — more by your own enthusiasm than any proof you can offer.

Cavett Robert (1907-1997) is considered by many to be the founder of the modern professional speaking industry. He graduated from Ole Miss in 1929 and obtained his law degree from Washington and Lee University. After practicing law in New York, he moved to Arizona in 1937 and established himself as a successful lawyer and insurance and real estate salesman. He began his career as a platform speaker in his early sixties and in 1972 he won the coveted Golden Gavel Award from Toastmasters International. In 1973 he founded the National Speakers Association.

Career Development: Business Skills

# Be a Shortcut

## The Secret Fast Track to Business Success

by Scott G. Halford

### THE SUMMARY IN BRIEF

Emotional intelligence expert Scott Halford makes it easy for all professionals to think, act and work in a way that makes them indispensable to their employers. During tough economic times, you must distinguish yourself or your product to secure your job or your organization's future; you must be remarkable. More than just another guide to career success, *Be a Shortcut* demonstrates how you can gain influence, earn respect from co-workers, accrue value, develop particular professional strengths and fulfill professional goals.

Shortcuts are individuals and companies that function like lifelines to the people and organizations that most depend on them. They are available when needed; they humbly perform tasks without complaint; they are masters of their own specific skill; and they always present a positive attitude. Halford demonstrates how shortcuts can command immeasurable influence by consistently and happily performing above and beyond the standards in their chosen fields or tasks.

You might be hanging out in the middle of the career pack or trying for a more senior job, but somehow the next rung remains elusive. You want to know what to do to get yourself the attention and influence that will allow you to take better control of your future. By utilizing Halford's case studies, personal anecdotes, exercises and lessons, you can excel in your field and be the go-to person for your colleagues.

On the road to professional success, there are no shortcuts to excellence. But when you become a shortcut in the workplace, you carve out the straightest path between you and your ultimate goal.

### IN THIS SUMMARY, YOU WILL LEARN:

- How the winners in financial, personal and spiritual endeavors use shortcuts.
- The shortcut goal: Make it easier, make it better, make more money.
- The shortcut role: Delight the customers while getting them what they need.
- How to become a superstar shortcut with the 21-day training model.
- What areas your organization can focus on to create a Shortcut Culture.

## Preface: What a Shortcut Looks Like

### The Rescuer on the River of Life

Early one summer while white-water rafting down the Arkansas River in the Royal Gorge Canyon of Colorado, at the midpoint of the journey the guides had to decide whether to close the river because the rapids were swelling above the level that even advanced rafters could navigate. They chose not to close the river, instead selecting only two of eight boats to continue into the most difficult water.

One of the rafts flipped within three seconds of entering the Sunshine Falls, a narrow rapid that fell under the 5.5 classification — the most advanced class of rapid before the river is closed to rafting. Close to dry land and battling the white water, a rescuer yelled for the author to clutch the rope strung overhead. That rescuer was a lifeline, a buddy, a savior.

Here are some things that a shortcut — like the rescuer — embodies. Shortcuts:

- Are there when you need them.
- Humbly do their jobs so that others can "survive" and thrive in their jobs.
- Don't complain about having to sometimes carry the weight of others.
- Are happy to make you successful.
- Don't waste time trying to convince you how good they would be doing something else.
- Are experts in their own little corner of the world.
- Command respect, admiration, even affection from those who use them as a shortcut.

## Part One: The Know-Why

### The Shortcut Way

A *shortcut* (according to the trusty dictionary) is:

- A shorter way to get to the same place.
- Any way of saving time, effort, expense and so on.

Shortcuts take the time to be experts so that we don't have to. As a result, we're willing to pay for their artistry, their mastery and know-how. The relationship between the user of a shortcut and the shortcut is magical — and you can create that magic in your life by both being a shortcut and availing yourself of the shortcuts you select to go on your journey with you.

### Back-Road Basics

As with most shortcuts, it doesn't make any sense to take the long road unless the shortcut is unethical, is illegal or leads to shoddy work. Look around you and you will see that the winners in financial, personal and spiritual endeavors — to name a few — all use excellent shortcuts:

- We can now do more things more rapidly, but because more is now expected of us all the time, those technological wonders that make life easier actually make it more complex as well.
- We now need to use shortcuts because they are valuable to our well-being and success.
- Using products and services as shortcuts is not a cop-out.
- Great shortcuts don't require you to give up quality, but they might require you to give up some money.
- The same value and payment equation applies to you when you become a shortcut.

If you're not a shortcut, you're taking up too much space. When layoffs loom, business leaders must figure

out who goes and who stays. Managers will then look around and ask themselves some simple questions:

1. Who is "high maintenance"?
2. Who gets things done without having to be told, or at the very least, not told twice?
3. Who pre-empts my very thoughts and needs?
4. If I did away with a certain position, would it negatively affect the organization?
5. Do I have shortcuts in my organization who are so good that they can pick up the relatively minor shortcuts a person in question is providing?

### Are You a Shortcut or a Bottleneck?

When the Denver International Airport (DIA) first opened in October 1995, it was the most modern airport in the world. Its avionics were hailed as state of the art; it was one of few airports in the world that could simultaneously land three jumbo jets side by side; its concourse boasted a layout excellent for travelers; and it was visually stunning, if not at least an architectural oddity. All this was lost on the flying public because of a major bottleneck that plagued the airport's opening: the baggage system.

The lessons from this botched-up shortcut-turned-bottleneck are many:

- First, be careful if you brag about your shortcut abilities. Make sure it works before you trumpet the shortcut to others.
- Second, the DIA story is an excellent example of how easily you can tarnish the image you worked so hard to earn and, conversely, how difficult it is to restore a good reputation.
- Once you've promised or unleashed your service or product as a shortcut, people will hold you to the high standard you espouse and punish you if you don't deliver.

### Anatomy of a Bottleneck

Tom is a traffic engineer, which is basically an expert on flow. There was a particularly troublesome segment of I-25 in Denver that was being re-engineered because of its nightmarish traffic jams. The area is referred to as "the Narrows of I-25."

Tom was asked why it slowed to a crawl every rush hour. He explained, "A few small things can slow down and impede traffic flow, even when there are no accidents on the highway. The Narrows were built with a reduced shoulder space of about a foot on each side of the highway, in order to fit between the neighborhoods through which it cuts. It also had several badly spaced exit and entrance ramps, one after the next. The last thing is that the highway was not straight. It curved through the Narrows. All these things added up to one of the worst man-made traffic problems anywhere in the country."

When a multibillion-dollar reconstruction of I-25 was carried out in the years between 2000 and 2007, the Narrows was one of the first items on the drawing board. The highway has become what it was intended to be in the first place: a rapid way to get from one point to another through the city. It's now a marvel to travel.

Like the highway, human beings are seemingly wired to look for and respond well to shortcuts. It's part of an evolutionary process to save us time so that we don't have to think of every step and every detail in a more chaotic environment. One thing is certain, however: A good shortcut gives you the greatest gift of all — time.

There is an easy formula to think about to become a shortcut. It's useful to think about it in terms of giving a persuasive presentation. No matter what field of work you toil in, chances are you have had to do some sort of presentation — some persuading, convincing or informing, in order to get your business done. Regardless of the situation, when it comes to making your proposal, your goal as a shortcut should be to answer "yes" to the following three questions:

1. Will what you're proposing make your listener's life or job *easier*?
2. Will what you're proposing make your listener's life or job *better*?
3. Will what you're proposing make your listener *more money*?

Another piece of the formula is to think in terms of your services or product in regard to need and cost. The lower the cost and the higher the need to others, the more frequently a shortcut will be used. That demand

## Take the Shortcut Quiz

The Shortcut Quotient Inventory (SQI) will help you learn about being and becoming a shortcut. It is designed to provide you a place to start improving and to heighten your awareness about ways to change your behavior. It is only by being honest with yourself that you'll get a true idea of your areas of strength, as well as those of growth opportunity. The 27 SQI questions are listed in the introduction of the book; the answers are in the appendix with explanations and a scoring evaluation. You can also take the quiz online at www.BeAShortcut.com.

leads to a good deal of influence in pricing and negotiations. Cost is measured in both time and money. If it costs me a lot of time to work with you because of your attitude or lack of skill, your value goes down, and so does your influence.

## Part Two: The Know-What

### How to Be a Shortcut

Six Sigma (the process perfection system), Total Quality Management (TQM) and many other efficiency processes are being employed by countless companies in order to find shortcuts. The black belts of Six Sigma are the icons of this process improvement movement; but wise people don't wait for one of these programs to be adopted by their companies to be or find the shortcuts. They keep the process going on a daily basis in their own jobs. They ask themselves how they can make every step of their job easier, faster and more efficient.

We need people who are willing to become the shortcut because of the information explosion. It's said that scientific and technological information is doubling every six to eight years. After that, much of the current affairs and technological information you learned becomes obsolete. Figure out a better way to pull data together more usefully; discover how to communicate it to a broad audience; and make it easily accessible. The result will be a profitable venture.

The other thing all this information leads to is overload and paralysis. We all need people who can become our shortcuts in different areas of our lives.

Here's a valuable exercise to examine the shortcuts you use:

1. Make your own personal and professional lists and insert the names of people who do these things for you.
2. If you do them for yourself, ask if it is time for you to find someone else to do them for you.
3. Start out small if your budget doesn't allow another big expenditure.

Shortcuts can be found in all walks of life and at every level of an organization. You don't have to have an important title or a glamorous job.

Consider *DoodyCalls*. It is a Virginia-based pet waste removal company started in 2000 by Jacob and Susan D'Aniello. It's now a franchisor bringing in a startup fee of around $25,000 per franchise and growing at a rate that would make any small-business owner bay at the moon.

The more you are willing to become an expert at something no one else wants to do — and do it with a great attitude — the more influential and valuable you become.

Shortcuts are confident about what they do. Think about what you know hands-down, which jobs you are confident you can do as well as or better than others. If someone is going to be selected to do the job; it might as well be you. So raise your hand and assert yourself. Remember, as a self-aware shortcut, you create your own future.

### The Washed-Up Shortcut

We have all heard stories of people who came up with a brilliant, cost-saving product or marketing idea and made their companies a lot of dough. Subsequently, they ride on the reputation of that innovation for a long time, until wham! The top executive asks what this person has done for the company lately.

Even at the very top, you have to be a shortcut, for the street, to investors, to the board of directors, to everyone. People often look at CEOs and wonder why they are so driven. It is because they know the road to long-lasting success lies in being or finding the next shortcut. They live for it. They look for it. And when they find it, they are on to the next one, because this latest, greatest shortcut they just found is already yesterday's news.

### Get Some Screen Time

In TV, screen time is the most important asset it owns. To get some screen time as a shortcut, let's go back to basics: it's a relatively simple acid-test that many individuals and organizations forget as they begin to add frills to their offerings. Shortcuts get back to basics by asking on a regular basis, "What are we really doing here? Does the extra frill add to my value or distract me from being a shortcut?" Ask the questions and the answers may surprise you. Ask yourself: Is your frill ending up "on the screen" of your customers or your boss? Put your money where the shortcuts can be seen and felt by your customer "on the screen."

So, shortcuts ask a lot of questions, and they have a particular approach to rules as well. First, take time to think about the rules of your organization. Here are three rules for this shortcut about policies:

1. Shortcuts don't get bogged down in rules and procedures that impede forward progress.
2. Shortcuts understand the spirit and intent of a policy and its rules.
3. Shortcuts understand that their role is not to teach customers how to behave properly according to the

rules, but to delight the customers while getting them what they need.

### Find the Flow

An influential psychological researcher in the area of human performance is Mihaly (pronounced ME-high) Csikszentmihalyi (pronounced CHEEK-set-me-HIGH), who introduced a revolutionary concept while at the University of Chicago. His theory on flow — the study of optimal performance — is key to understanding how to become a master shortcut.

Csikszentmihalyi studied people in demanding pastimes that provided no direct obvious reward. He initially chose those who spent a good deal of time in physically and mentally challenging activities, such as amateur athletes and artists, rock climbers, composers and chess players. These things were universal in his subjects' experiences:

- They described a sense of timelessness — a feeling that time had become distorted and had caused them to lose track of it altogether.
- The skill felt simple.
- Self-consciousness faded away and the individual concentrated only on the moment at hand.
- There was a general sense of euphoria and joy in the person completing the task.

Csikszentmihalyi labeled this experience "flow" and wrote a book about it, appropriately titled *Flow: The Psychology of Optimal Experience*.

Typically, the more mastery you achieve, the rarer you and your talents become; and with that, the more valuable you become. Do not ignore your strengths. It's where you'll find mastery. If you find yourself in the situation where you're overworked, and it is indeed true that you are *the* resource, it's time to negotiate.

Mastery has its privileges, but sometimes you have to ask for them. Expertise accounts for only a portion of what makes a shortcut a shortcut. If you're lacking in know-how, your negotiations might not go as well as you would like.

### Incite Your Insights

The insightful person is a much-praised and coveted shortcut because he or she offers that quick assessment, uncanny observation or revolutionary thought that brings corporations billions of dollars in revenue or cost containment.

The competitive edge you have is neither the result of the data you have nor your experience alone, but both combined and seasoned with reflection. They give you something no other living person on the planet has: your distinctive insight. Trust yourself. Practice insight. Practice verbalizing it to others. Practice allowing others to improve upon it. Practice pushing the elevator to the top floor. That's where your seat is awaiting you, at the table with those who are providing priceless insight.

By properly using your insights, you can stand out with just a little bit of creativity. Shortcuts are so good at what they do that they have the time to be more creative and add spice to their skill, whatever it is. And they look forward to it. They know they don't necessarily have to have the next big idea; but thanks to their mastery, they can visualize and utilize the little things that make a big difference in even the simplest thing.

### Use the White Space

Shortcuts are also good at seeing what might be missing, and then filling it in. They notice something in the white space around the image, not just the image itself. In other words, they look beyond the obvious to find answers. Shortcuts ask enough questions to help them see the white space, and they are rewarded for it accordingly. When they deliver, they give not only what is requested but anything else that might be needed as well. When you're an expert, you're more able to see the white space because you have broader experiences.

Framing, or reframing, is one of the single most important things we can do to be a shortcut in expressing important thoughts. Not only is it essential to communicating our ideas, it's a shortcut's greatest tool for getting to the heart of a matter quickly and effectively. It demonstrates the shortcut principle of "I'm good enough at what I do that I can frame my work in myriad different ways so that people can understand it, no matter what their experience with my area."

In addition to framing, influence plays a key role. Influence is not about getting something you want in any particular instance, simply because you were able to, for example, use the right combination of words at the right time. Instead, influence can be defined with one five-letter word: "trust." The most successful shortcuts are influential. ●

## Part Three: The Know-How

### The Quickest Personal Shortcut

There are few things that will help you in your life and your job as much as likeability.

What constitutes likeability? Probably it's different for each of us, but most people, including social scientists, would agree on a number of common attributes:

- Physical attractiveness.
- Similarity.
- Recognition and complimenting.
- Cooperation.

You become likeable when people like being around you; and they like being around you because they feel good about themselves when they are with you.

### Image: Your Status Is Not Quo

Your status changes when your audience changes. The more mastery you achieve in a particular area, the less significant the change in perception will be about you from situation to situation; but there will still be a shift.

None of us is exempt from what is called "status shift." It happens to the president of the United States when he goes from a press conference in the Rose Garden to a meeting with heads of state or to ask Congress to approve his budget. It happens to the carwash guy, who behaves differently in front of his customers than when he's addressing his crew.

The point is that the image we have of ourselves is, in part, shaped by our audience; and shortcuts are expert when it comes to this status shift, and when it comes to reading their audience.

Once you've gotten your network together and have the image you want within it, it's important to nurture your network. LinkedIn.com is like Facebook.com or MySpace.com, but for professionals who want to nurture their shortcuts. You go online, sign up and begin linking to college friends you haven't spoken to in a long time. You link to former co-workers, no matter how long ago you lost track of them and no matter where they are.

When you're in a pinch and need something right away, if you have a nice list of shortcuts that you have been nurturing, you'll be able to rely on them to get you what you need.

Successful shortcuts want to increase their value by becoming the resource that people think of every time. It does matter how people feel about you. Think of two questions: How do you leave people feeling after you've "served" them and do they feel as if it was your honor to be able to serve them?

### Emotional Intelligence: The Must-Have Trait

Dr. Reuven Bar-On is one of the world's seminal researchers on emotional intelligence. His layperson definition of emotional intelligence is that it is the measurement of street smarts, of experiential wisdom.

Shortcuts pay attention to the subtleties of emotion to make experiences successful. They're not just enamored with their own knowledge; they recognize intuitively emotional factors as well — that everyone wants to be around people who make us feel good, smart, validated — and like we're not going crazy for having asked a question.

Shortcuts have a good attitude. They make it easy to be around them. They make others *want* to be around them. They don't require the extra time to deal with them that bottlenecks do. Having and keeping a good attitude is a lot more difficult than you might think, however. But when people are relying on you every day, unless something is catastrophic, they're too busy with their own "stuff"to have to deal with yours too.

### Focus: Finding What Motivates You

Frederick Herzberg and David McClelland were research psychologists whose theories and studies have been incorporated into nearly all of the most successful leadership and personal growth approaches over the last 50 years.

The shortcut is a "motivation seeker." Herzberg says workers who fall into this category are driven primarily by internal motivators, such as:

1. Achievements/accomplishments at work.
2. Earned recognition (the feeling of pride is internal).
3. The work itself.
4. Personal growth.
5. Advancement in the organization (paired with achievement).
6. Responsibility.

These motivational factors should lead you to ask yourself if what you do currently is little more than a way for you to earn a paycheck. If it offers little or no long-lasting fulfillment, then you have an opportunity to start taking inventory of your life, to discover whether you can find work that will also bring meaning to your life.

### Why 'Yes' Is Usually the Right Answer

There are many ways to say yes in your own work.

- The shortcut isn't always responsible for making the decision, but he or she is always there to serve as a resource to help the person making the decision.
- The best shortcuts have a yes-attitude and proceed to pull together enough resources and information to help someone else arrive at a decision.
- Shortcuts do not only look for information to corroborate their idea.
- Shortcuts do not scold requestors into agreement, if they happen to disagree with the request.

### Choices: The Rewards of Offering Them

Shortcuts practice behaviors that put control where most people want it: in their own hands. Shortcuts use their considerable expertise and resources to advise rather than make decisions for others, demand or pass judgment.

Most of us want to have choices, and most of us also seek advice and maybe a little hand-holding from a shortcut to help us decide; but, ultimately, *we* want to be the ones who choose. The degree to which you, as a shortcut, can present well-informed choices is the amount by which your stock as a shortcut goes up.

### Create Stickiness

David Smith, an American sculptor, once noted, "Anytime you can expand your network and users in this market, it's significant. The goal is to make it 'sticky,' make users come back to it."

Successful shortcuts *are* sticky. They make their companies piles of money and keep the customers coming back. They create stickiness by doing many small things very well. They also find ways to make every part of every transaction seamless and easy for their clients. They pay attention and think a step ahead; the result is a fully satisfied, greatly impressed and permanently sticky customer.

### Responsibility: If You Take It, You'll Make It

Responsibility is an issue that has plagued both business and society for generations. The German playwright, poet and novelist Johann Wolfgang von Goethe wrote, "Let everyone sweep in front of their own door. Then the whole world will be clean." Unfortunately, not everyone is willing to sweep around their own door. Shortcuts can, and should, be the first to pick up their brooms and show others the way.

Surprisingly, many employees of large corporations — from the top down — refuse to take responsibility for the mood and morale of their workplaces; for the way things are going for their companies in general; even for their own careers.

In the author's conversations with these employees, they say, it was always somebody else's fault — management made a stupid decision; *they* did the wrong thing; *they* didn't treat people fairly; *they* didn't care about anyone. The implication being: The woes of the organization are always the fault of others, and if others are at fault, why should the employee do the right thing, treat people fairly or care about others?

Shortcuts take responsibility for all their efforts, even the crummy ones. They are prepared to learn from their first drafts and not cast blame on the "theys" of the world.

## Train Your Brain for 21 Days

The first step toward achieving excellence in any field is having the desire or motivation. Select a focused goal that you can practice or address every single day for 21 days. The more often you repeat the behavior, the more your brain will reward you by thickening the neural pathway that leads to your performance of the behavior more easily and comfortably. The basic model is:

- See, hear about, witness and/or visualize the accomplishment of a skill.
- Try (practice) the skill.
- Think about how the skill worked for you.
- Adjust to improve the skill.
- Reward your improvement and repeat.
- Do it every day for 21 days.

### Feelings: The Halo Effect

All feelings — good or bad — produce a "halo effect." It has long been known that humans are conditioned to assign positive thoughts and feelings to products associated with people we like or admire, who endorse the products.

As a shortcut, the halo effect likewise applies to you and/or your product; that is, the feeling part comes into play. People have a tendency to forget what you say, and they might even forget what you did for them. But they will always remember how they felt when you or your product or service reappears on their radar screen.

Shortcuts are a true win/win. Everyone likes to be a winner, and when the shortcut makes you feel like you win — even when they take your money — that sensation continues long after the shortcut service is complete. We return over and over again to our shortcut, even if the rest of what they do is not really out of the ordinary. Now who's the big winner? The shortcut, once again.

### Context: Make Things Right

Skilled professionals manage the context of each interaction to increase its appeal; and their sales quotas and general success prove the wisdom of doing so. You must:

1. Determine what the mood is. This requires empathy and an ability to see things through the eyes of anyone else involved.
2. If the mood is negative, ask questions and listen carefully to what you're being told. Take care not to interrogate a person in a negative state. He or she will close down even further. Focus your questioning

on finding out whether you should even be there.

3. Ask, sincerely, if it would be better to reschedule the appointment. If now is the only time the client can and wants to talk, tread lightly, be brief and speak in high-level bullet points. Remember, the client will be doing little actual listening if he or she is in a bad space.
4. Look for any sign of light in the dark mood and build on it. If a client says he or she likes something, for example, take time to give more information about it. This is your opportunity to get a little chattier and to bring the context into a more positive place.
5. Once you've maneuvered the context into a more positive position, you can negotiate and sell — but not a moment before. ●

## Part Four: The Shortcut as a Company

### The Shortcut Organization

Creating an organizational Shortcut Culture is, to be sure, a major undertaking. But it can be done. The organizations that have already accomplished this shift are notable, and their customers are generous with both praise and loyalty — which translates into revenue. Those that have not, have a tendency to overlook many of the small things that result in a first-rate customer service reputation.

There are four distinct areas your organization can focus on to create a Shortcut Culture:

- Executive buy-in (from the "C-level" execs) of the need for the Shortcut Culture.
- Education of the top 10 percent of senior leaders in the organization and their subsequent practice of what they've learned.
- Education of all employees at all organizational levels.
- The hiring process.

### Shortcuts Transform

With regard to creating shortcuts, all the same rules apply to corporations that pertain to individuals. If your company is not providing a shortcut to someone or something, it won't be viable for long.

Shortcuts are creative. Looking for more revenue streams in your company? What are your customers doing to adapt and customize your products to their specific needs? Do it for them, only better. Shortcuts are excellent at spotting the trends because they are experts in their area. They are trendsetters, not trend-getters.

It's useful to complete this exercise to see what you offer as a shortcut.

1. Ask your friends and colleagues about your service or product. Do they need it and, if so, how much would they be willing to pay for it?
2. If someone were thumbing through a shortcut catalog and came across you and what you have to offer, would they say, "You've got to be kidding me! Is this a joke?" or, "Cool! I need one of those"? ●

## Part Five: The Long and Shortcut of It

### The Lessons Have Always Been There

Being a shortcut is about the positive or negative energy you choose to bring to every situation. Those with emotional intelligence *choose* the positive. Emotionally intelligent living requires a mindful effort; and it's the more difficult part of being a shortcut. If you don't want to read all the studies of emotional intelligence, simply ask yourself this shortcut question: Do people feel good or bad when they are with you? Whichever reaction you evoke in others is due to the energy — good and bad — that you emit. Shortcuts are aware of their energy.

The shortcut proposition is simple:

- Get shortcuts. It's the single easiest thing you can do to make your life more enjoyable and your success more attainable. Find experts and use them.
- As a shortcut yourself, you write your own ticket when you focus on mastering a service or product and then offering it with positive energy and a good dose of emotional intelligence.
- Enjoy the process.
- Life is sweet because of the journey we choose to take, not because we get to the end of it. ●

### RECOMMENDED READING LIST

If you liked *Be A Shortcut*, you'll also like:

Career & Self-Development: Business Skills

# Brain Rules

## 12 Principles for Surviving and Thriving at Work, Home, and School

by John Medina

### THE SUMMARY IN BRIEF

Most of us have no idea what's really going on inside our heads. Yet brain scientists have uncovered details every business leader, parent and teacher should know — such as the brain needs physical activity to work at its best.

How do we learn? What exactly do sleep and stress do to our brains? Why is multitasking a myth? Why is it so easy to forget — and so important to repeat new knowledge? Is it true that men and women have different brains?

In *Brain Rules*, molecular biologist John Medina shares his lifelong interest in how the brain sciences might influence the way we teach our children and the way we work. He introduces 12 "Brain Rules" — which cover what scientists know for sure about how our brains work — and then offers ideas for investigating how each rule might apply to our daily lives, especially at work and school.

Medina identifies "the brain's performance envelope" and looks at subjects that relate to this envelope, including exercise, survival, wiring, attention, memory, sleep, stress, vision, gender and exploration.

In the end, you'll better understand how your brain really works — and how to get the most out of it.

### IN THIS SUMMARY, YOU WILL LEARN:

- Why our brains need physical activity as much or more than our bodies.
- Why you've got seconds to grab someone's attention and only 10 minutes to keep it.
- How taking a nap might make you more productive and mentally agile.
- Why those in neuroscience, education and business need to work together to develop improvements in both teaching and management methods.
- Why the differences between men's and women's brains start with how they got that way in the first place.

# THE COMPLETE SUMMARY: **BRAIN RULES**

**by John Medina**

**The author:** John Medina is a developmental molecular biologist and research consultant. He is an affiliate Professor of Bioengineering at the University of Washington School of Medicine. He is also the director of the Brain Center for Applied Learning Research at Seattle Pacific University. Medina's books include: *The Genetic Inferno; The Clock of Ages; Depression: How it Happens, How it Heals; What You Need to Know About Alzheimer's; The Outer Limits of Life; Uncovering the Mystery of AIDS;* and *Of Serotonin, Dopamine and Antipsychotic Medications.*

*Brain Rules* by John Medina. Copyright © 2008 by John J. Medina. Summarized with permission of the publisher, Pear Press. 301 pages. $15.00. ISBN: 978-0-9797777-4-5. To purchase this book, go to www.amazon.com or www.bn.com.

## Introduction

Go ahead and multiply the number 8,388,628 x 2 in your head. Can you do it in a few seconds? There is a young man who can double that number 24 times in the space of a few seconds. He gets it right every time.

There is a boy who can tell you the precise time of day at any moment, even in his sleep. There is a girl who can correctly determine the exact dimensions of an object 20 feet away. There is a child who at age 6 drew such lifelike and powerful pictures that she got her own gallery on Madison Avenue. Yet none of these children could be taught to tie their shoes. Indeed, none of them have an IQ greater than 50.

The brain is an amazing thing.

To accomplish the miracle of reading, for example, your brain sends jolts of electricity crackling through hundreds of miles of wires composed of brain cells so small that thousands of them could fit into the period at the end of a sentence.

What's equally incredible, given our intimate association with our brains, is that most of us have no idea how our brains work.

### Strange Consequences

This has strange consequences. We try to talk on our cell phones and drive at the same time, even though it is literally impossible for our brains to multitask when it comes to paying attention. We have created high-stress office environments, even though a stressed brain is significantly less productive. Our schools are designed so that most real learning has to occur at home.

Blame it on the fact that brain scientists rarely have a conversation with teachers and business professionals, education majors and accountants, superintendents and CEOs. ●

## EXERCISE — Rule #1: Exercise Boosts Brain Power

From an evolutionary perspective, our brains developed while working out, walking as many as 12 miles a day. The brain still craves that experience, especially in sedentary populations like our own. That's why exercise boosts brain power.

Exercisers outperform couch potatoes in long-term memory, reasoning, attention, and problem-solving tasks. Integrating exercise into our eight hours at work or school would only be normal.

There are two compelling business reasons for such radical ideas. Business leaders already know that if employees exercised regularly, it would reduce health care costs. And there's no question that cutting in half someone's lifetime risk of a debilitating stroke or Alzheimer's disease is a wonderfully humanitarian thing to do.

But exercise also could boost the collective brain power of an organization. Fit employees are capable of mobilizing their God-given IQs better than sedentary employees.

For companies whose competitiveness rests on creative intellectual horsepower, such mobilization could mean a strategic advantage. ●

## SURVIVAL — Rule #2: The Human Brain Evolved, Too

The brain appears to be designed to solve problems related to surviving in an unstable outdoor environment and to do so in nearly constant motion. The brain adapted this way as a survival strategy to help us live long enough to pass our genes to the next generation.

Ecosystems are harsh, crushing life as easily as supporting it. Scientists estimate 99.99 percent of all species that have ever lived are extinct today. Our bodies, brains included, latched on to any genetic adaptation that helped us survive.

There are two ways to beat the cruelty of the environment: You can become stronger or you can become smarter. Humans chose the latter. It seems most improbable that such a physically weak species could take over the planet not by adding muscles to our skeletons but by adding neurons to our brains.

But we did, and scientists have spent a great deal of effort trying to figure out how.

Judy DeLoache, a researcher at the University of Virginia, has studied this question extensively. She is especially interested in how human cognition can be distinguished from the way other animals think about their respective worlds.

### Symbolic Reasoning

One of DeLoache's major contributions was to identify the human trait that really does separate us from the gorillas: the ability to use symbolic reasoning. When we see a five-sided geometric shape, we're not stuck perceiving it as a pentagon. We can just as easily perceive the U.S. military headquarters or a Chrysler minivan. Our brain can behold a symbolic object as real all by itself and yet, simultaneously, also representing something else.

DeLoache calls it Dual Representational Theory. Stated formally, it describes our ability to attribute characteristics and meanings to things that don't actually possess them. Stated informally, we can make things up that aren't there. We are human because we can fantasize.

Symbolic reasoning is a uniquely human talent. It may have arisen from our need to understand one another's intentions and motivations, allowing us to coordinate within a group.

### Meet Your Brain

The prefrontal cortex is only the newest addition to the brain. Three brains are tucked inside your head, and parts of their structure took millions of years to design. (This "triune theory of the brain" is one of several models scientists use to describe the brain's overarching structural organization.)

Your most ancient neural structure is the brain stem, or ***lizard brain***. This rather insulting label reflects the fact that the brain stem functions the same in you as in a gila monster. The brain stem controls most of your body's housekeeping chores. Its neurons regulate breathing, heart rate, sleeping and waking.

Sitting atop your brain stem is what looks like a sculpture of a scorpion carrying a slightly puckered egg on its back. The ***Paleomammalian brain*** appears in you the same way it does in many mammals, such as house cats, which is how it got its name. It has more to do with your animal survival than with your human potential.

Several parts of this "second brain" play a large role in

## Jack LaLanne: Godfather of the American Fitness Movement

A man was handcuffed, shackled and thrown into California's Long Beach Harbor, where he was quickly fastened to a floating cable. The cable had been attached at the other end to 70 boats, bobbing up and down in the harbor, each carrying a single person. Battling strong winds and currents, the man then swam, towing all 70 boats (and passengers) behind him, traveling 1.5 miles to Queen's Way Bridge. The man, Jack LaLanne, was celebrating his birthday. He had just turned 70 years old.

LaLanne, born in 1914, has been called the godfather of the American fitness movement. He starred in one of the longest running exercise programs produced for commercial television. A prolific inventor, LaLanne designed the first leg-extension machines, the first cable-fastened pulleys, and the first weight selectors, all now standard issue in the modern gym.

To hear him in an interview, your biggest impression would be not the strength of his muscles but the strength of his mind. LaLanne is mentally alert, almost beyond reason. His sense of humor is both lightening fast and improvisatory. He is hyper-energized, opinionated and possessed with the intellectual vigor of an athlete in his 20s. So it's hard not to ask: "Is there a relationship between exercise and mental alertness?" The answer, it turns out, is yes.

the Brain Rules. The claw of the scorpion, called the amygdale, allows you to feel rage, fear or pleasure, or experience memories of rage, fear or pleasure. The amygdale is responsible for both the creation of emotions and the memories they generate.

The leg attaching the claw to the body of the scorpion is called the hippocampus. The hippocampus converts your short-term memories into longer-term forms. The scorpion's tail curls over an egg-shaped structure like the letter "C" — as if protecting it.

This "egg" is the thalamus, one of the most active, well-connected parts of the brain — a control tower for the senses. Sitting squarely in the center of your brain, it processes signals sent from nearly every corner of your sensory universe, then routes them to specific areas throughout your brain.

Arching above like a cathedral is your ***human brain***, the cortex. Latin for "bark," the cortex is the surface of your brain. It is in deep electrical communication with the interior.

This "skin" ranges in thickness from that of blotting paper to that of heavy-duty cardboard. It appears to have been crammed into a space too small for its surface area. Indeed, if your cortex were unfolded, it would be about the size of a baby blanket.

## WIRING — Rule #3: Every Brain Is Wired Differently

The human brain, only partially constructed at birth, will not be fully assembled for years. The biggest construction programs aren't finished until you are in your early 20s, with fine-tuning well into your mid-40s.

When babies are born, their brains have about the same number of connections as adults have. That doesn't last long. By the time children are 3 years old, the connections in specific regions of their brains have doubled or even tripled. This doubling and tripling doesn't last long, either. The brain soon takes thousands of tiny pruning shears and trims back a lot of this hard work.

By the time children are 8 or so, they're back to their adult numbers. And if kids never went through puberty, that would be the end of the story. In fact, it is only the middle of the story.

At puberty, the whole thing starts over again. Quite different regions in the brain begin developing. Once again, you see frenetic neural outgrowth and furious pruning back. It isn't until parents begin thinking about college financial aid for their high schoolers that the children's brains begin to settle down to their adult forms (sort of). It's like a double-humped camel. From a connectivity point of view there is a great deal of activity in the terrible twos and then, during the terrible teens, a great deal more.

Whether examining toddlers or teenagers, different regions in different children develop at different rates.

### Ideas

Given these data, does it make any sense to have school systems that expect every brain to learn like every other? Does it make sense to treat everybody the same in business, especially in a global economy replete with various cultural experiences? The data offer powerful implications for how we should teach kids — and, when they grow up and get a job, how we should treat them as employees.

**Smaller Class Size** — All else being equal, it has been known for many years that smaller, more intimate schools create better learning environments than megaplex houses of learning. Given that every brain is wired differently, being able to read a student's mind is a powerful tool in the hands of a teacher.

Theory of Mind, defined as the ability to understand the interior motivations of someone else and the ability to construct a predictable theory of how their mind works based on that knowledge, gives teachers critical access to their students' interior educational life.

**Customized Instruction** — To create more individualized instruction within a grade level, a three-pronged research effort between brain and education scientists is suggested:

1. Evaluate teachers for advanced Theory of Mind skills, using one of the four main tests that measure empathy. Determine whether this affects student performance in a statistically valid fashion.
2. Develop adaptive software for a variety of subjects and grade levels.
3. Test both ideas in various combinations. Add to the mix environments where the student-teacher ratio is both typical and optimized, and then compare the results.

The reason to do this is straightforward: You cannot change the fact that the human brain is individually wired. Every student's brain, every employee's brain, every customer's brain is wired differently.

What you do and learn in life physically changes what your brain looks like — it literally rewires it.

## ATTENTION — Rule #4: We Don't Pay Attention to Boring Things

The more attention the brain pays to a given stimulus, the more elaborately the information will be encoded and retained. This has implications for your employees, your students and your kids.

But peer-reviewed studies confirm that before the first quarter-hour is over in a typical presentation, people have usually checked out. The brain seems to be making choices according to some stubborn timing pattern, undoubtedly influenced by both culture and gene. This fact suggests a teaching and business imperative: Find a way to arouse and then hold somebody's attention for a specific period of time.

The messages that do grab our attention are connected to memory, interest and awareness.

In everyday life, we use previous experience to predict where we should pay attention. Different environments create different expectations. The brain continuously scans the sensory horizon, with events constantly assessed for their potential interest or importance. The more important events are then given extra attention.

Emotionally arousing events tend to be better remembered than neutral events. Studies show that emotional arousal focuses attention on the "gist" of an experience at the expense of peripheral details.

Of course, at work and at school, detailed knowledge is often critical for success. Interestingly, our reliance on gist may actually be fundamental to finding a strategy for remembering details.

Whether you are a waiter or brain scientist, if you want to get the particulars correct, don't start with details. Start with the key ideas and, in a hierarchical fashion, form the details around these larger notions.

### The Brain Cannot Multitask

Multitasking, when it comes to paying attention, is a myth. We are biologically incapable of processing attention-rich inputs simultaneously. We must jump from one thing to another. It is time-consuming and it is sequential. That's why people find themselves losing track of previous progress and needing to "start over," perhaps muttering things like "Now where was I?" each time they switch tasks.

The best you can say is that people who appear to be good at multitasking actually have good working memories, capable of paying attention to several inputs *one at a time.*

## SHORT-TERM MEMORY — Rule #5: Repeat to Remember

Hermann Ebbinghaus was born in 1850 and is famous for uncovering one of the most depressing facts in all of education: People usually forget 90 percent of what they learn in a class within 30 days. He further showed that the majority of this forgetting occurs within the first few hours after class. This has been robustly confirmed in modern times.

Ebbinghaus's work was foundational. It was also incomplete. It did not, for example, separate the notion of memory from retrieval — the difference between learning something and recalling it later.

There are two types of memories: memories that involve conscious awareness and memories that don't. This awareness distinction gradually morphed into the idea that there were memories you could declare and there were memories you could not declare.

Declarative memories are those that can be experienced in our conscious awareness, such as "this shirt is green," "Jupiter is a planet," or even a list of words. Nondeclarative memories are those that cannot be experienced in our conscious awareness, such as the motor skills necessary to ride a bike.

This does not explain everything about human memory. It does not even explain everything about declarative memory. But the rigor of Ebbinghaus gave future scientists their first real shot at mapping behavior onto a living brain. Research shows that the life cycle of declarative memory can be divided into four sequential steps: encoding, storing, retrieving and forgetting.

### Cracking the Code

Despite their wide reach, scientists have found that all encoding processes have common characteristics. Three of these hold true promise for real-world applications in both business and education:

- The more elaborately we encode information at the moment of learning, the stronger the memory.
- A memory trace appears to be stored in the same parts of the brain that perceived and processed the initial input.
- Retrieval may best be improved by replicating the conditions surrounding the initial encoding.

What does it mean to make encoding and retrieving environments equivalent in the real world of business and education? The most robust findings occur when the environments exist in dramatically different contexts from the norm. But how different from normal life does

the setup need to be to obtain the effect?

It could be as simple as making sure that an oral examination is studied for orally, rather than by reviewing written material. Or perhaps future airplane mechanics should be taught about engine repair in the actual shop where the repairs will occur.

## LONG-TERM MEMORY — Rule #6: Remember to Repeat

We now suspect that short-term memory is actually a collection of temporary memory capacities. Each capacity specializes in processing a specific type of information. Each operates in a parallel fashion with the others. To reflect this multifaceted talent, short-term memory is now called working memory.

Working memory is known to be a busy, temporary workspace, a desktop the brain uses to process newly acquired information.

The process of converting short-term memory traces to longer, sturdier forms is called consolidation. At first, a memory trace is flexible, labile, subject to amendment and at great risk for extinction. Most of the inputs we encounter in a given day fall into this category. But some memories stick with us. Initially fragile, these memories strengthen with time and become remarkably persistent.

Memory may not be fixed at the moment of learning, but repetition, doled out in specifically timed intervals, is the fixative.

The relationship between repetition and memory is clear. Deliberately re-expose yourself to the information more elaborately, and in fixed, spaced intervals, if you want the retrieval to be the most vivid it can be. Learning occurs best when new information is incorporated gradually into the memory store rather than when it is jammed in all at once.

Long-term memories are formed in a two-way conversation between the hippocampus and the cortex, until the hippocampus breaks the connection and the memory is fixed in the cortex — which can take years.

Perhaps learning in the long view should be thought of the same way one thinks of immune booster shots, with critical pieces of information being repeated on a yearly or semi-yearly basis.

## SLEEP — Rule #7: Sleep Well, Think Well

In 1965, 17-year-old Randy Gardner decided that his science-fair project would involve not sleeping for 11 straight days and observing what happened. To the astonishment of just about everyone, he accomplished the feat, setting a world record that year for sleep loss. The project attracted the attention of scientist William Dement, who was given permission to study what happened to the teenager's mind during the week and a half he was awake. What happened to Randy's mind was extraordinary.

To put it charitably, it started to malfunction.

In short order, he became irritable, forgetful, nauseous and, to no one's surprise, unbelievably tired. Five days into his experiment, Randy began to suffer from what could pass for Alzheimer's disease. He was actively hallucinating, severely disoriented and paranoid. He thought a local radio host was out to get him because of his changes in memory.

In the last four days of his experiment, he lost motor function, his fingers trembling and his speech slurred. Curiously, on the final day, he still was able to beat Dement at pinball, doing so 100 consecutive times.

So we know bad things happen when we don't get any sleep. But we still don't know why we need to sleep.

### Sleep Loss = Brain Drain

When you look at all of the data combined, a consistency emerges: Sleep is rather intimately involved in learning. It is observable with large amounts of sleep; it is observable with small amounts of sleep; it is observable all the time.

Some kind of offline processing is occurring at night. Is it possible that the reason we need to sleep is simply to shut off the exterior world for a while, allowing us to divert more attentional resources to our cognitive interiors? Is it possible that the reason we need to sleep is so that we can learn?

Here's what we do know:

- The brain is in a constant state of tension between cells and chemicals that try to put you to sleep and cells and chemicals that try to keep you awake.
- The neurons of your brain show vigorous rhythmical activity when you're asleep — perhaps replaying what you learned that day.
- People vary in how much sleep they need and when they prefer to get it, but the biological drive for an afternoon nap is universal.
- Loss of sleep hurts attention, executive function, working memory, mood, quantitative skills, logical reasoning and even motor dexterity.

## STRESS — Rule #8: Stressed Brains Don't Learn the Same Way

You can feel your body responding to stress: Your pulse races, your blood pressure rises and you feel a massive release of energy. That's the famous hormone adrenaline at work. The overall effect is called the fight or flight response. But there's a less famous hormone at work, too — also released by the adrenals, and just as powerful. It's called cortisol. It's the second wave of our defensive reaction to stressors and, in small doses, it wipes out most unpleasant aspects of stress, returning us to normalcy.

Stress hormones can do some truly nasty things to your brain if boatloads of the stuff are given free access to your central nervous system. That's what's going on when you experience chronic stress.

Under chronic stress, adrenaline creates scars in your blood vessels that can cause a heart attack or stroke, and cortisol damages the cells of the hippocampus, crippling your ability to learn and remember.

Three things matter in determining whether a workplace is stressful: the type of stress, a balance between occupational stimulation and boredom, and the condition of the employee's home life. The perfect storm of occupational stress appears to be a combination of two malignant facts: a) a great deal is expected of you and b) you have no control over whether you will perform well.

To detect stress-related problems, one might simply examine the situations where an employee feels the most helpless. The next step would be to change the situation. This might change the absentee rate of employees, cut down on the number of trips to the doctor and reduce insurance overhead.

As well as money saved, a great deal of creativity may be engendered simply by routinely giving employees a way out — not from their jobs, but from the stress they experience in them.

## SENSORY INTEGRATION — Rule #9: Stimulate More of the Senses

External physical inputs and internal emotional inputs all are presented to your brain in a never-ending fire hose of sensations. As in a normal morning in Manhattan for example, your brain perceives the screech of the taxis, the pretzels for sale, the crosswalk signal and the people brushing past. Snapshots like these illustrate the incredible amount of sensory information your brain must process simultaneously.

We absorb information about an event through our senses, translate it into electrical signals (some from sight, others from sound, etc.), disperse those signals to separate parts of the brain, then reconstruct what happened, eventually perceiving the event as a whole.

There is no question that multiple cues, dished up via different senses, enhance learning. They speed up responses, increase accuracy, improve stimulation detection and enrich encoding at the moment of learning.

Our senses evolved to work together — vision influencing hearing, for example — which means we learn best if we stimulate several senses at once.

## VISION — Rule #10: Vision Trumps All Other Senses

We do not see with our eyes. We see with our brains. What we see is only what our brain tells us we see, and it's not 100 percent accurate. We actually experience our visual environment as a fully analyzed *opinion* about what the brain thinks is out there.

The visual analysis we do has many steps. The retina assembles photons into little movie-like streams of information. The visual cortex processes these streams, some areas registering motion, others registering color, etc. Finally, we combine that information back together so we can see.

If you think the brain has to devote a lot of its precious thinking resources to vision, you are right on the money. It takes up about half of everything you do, in fact. Vision is probably the best single tool we have for learning anything.

### Pictures — Worth a Thousand Words

When it comes to memory, researchers have known for more than 100 years that pictures and text follow very different rules. Put simply, the more visual the input becomes, the more likely it is to be recognized and recalled. The phenomenon is so pervasive, it has been given its own name: the pictorial superiority effect, or PSE.

Text and oral presentations are not just less efficient than pictures for retaining certain types of information; they are *way* less efficient. If information is presented orally, people remember about 10 percent, tested 72 hours after exposure. That figure goes up to 65 percent if you add a picture.

One of the reasons text is less capable than pictures is that the brain sees words as lots of tiny pictures. Even when we read, most of us try to visualize what the text

is telling us. Pictorial information may be initially more attractive to consumers, in part because it takes less effort to comprehend. Because it is also a more efficient way to glue information to a neuron, there may be strong reasons for entire marketing departments to think seriously about making pictorial presentations their primary way of transferring information.

We learn and remember best through pictures, not through written or spoken words. ●

## GENDER — Rule #11: Male and Female Brains are Different

There is a great deal of confusion regarding the way men and women relate to each other, and even more about why. The differences between men's and women's brains start with how they got that way in the first place.

### The X Factor

If you have two X chromosomes, you go into the ladies' locker room all your life; an X and Y puts you forever in the men's. The Y can be donated only by sperm (the egg never carries one), so the male determines the sex.

Labs have found differences in the front and prefrontal cortex areas of the brain that control much of our decision-making ability. This cortex is fatter, in certain parts, in women than in men.

Women are genetically more complex, because the active X chromosomes in their cells are a mix of Mom's and Dad's. Men's X chromosomes all come from Mom, and their Y chromosome carries less than 100 genes, compared with about 1,500 for the X chromosome.

Men's and women's brains are different structurally and biochemically — men have a bigger amygdale and produce serotonin faster, for example — but we don't know if those differences have significance.

Men and women respond differently to acute stress: Women activate the left hemisphere's amygdale and remember the emotional details. Men use the right amygdale and get the gist.

Dealing with the emotional lives of men and women is a big part of the job for teachers and business professionals. They need to know:

1. Emotions are useful. They make the brain pay attention.
2. Men and women process certain emotions differently.
3. The differences are a product of complex interactions between nature and nurture. ●

## EXPLORATION — Rule #12: We Are Powerful and Natural Explorers

Babies are the model of how we learn — not by passive reaction to the environment but by active testing through observation, hypothesis, experiment and conclusion. Specific parts of the brain allow this scientific approach. The right prefrontal cortex looks for errors in our hypothesis ("The saber-toothed tiger is not harmless"), and an adjoining region tells us to change behavior ("Run!").

We can recognize and imitate behavior because of "mirror neurons" scattered across the brain. Mirror neurons are cells whose activity reflect their surroundings. Cues that can elicit mirror neural responses are remarkably subtle. Classic imitative behavior is when you stick your tongue out at a baby and the baby imitates you. Other neurons mirror a variety of motor behaviors.

Researchers have shown that some regions of the adult brain stay as malleable as a baby's brain, so we can grow new connections, strengthen existing connections and even create new neurons, allowing all of us to be lifelong learners.

For little ones, discovery brings joy. It is a straight-up reward system that, if allowed to flourish, will continue into the school years. As children get older, they find that learning not only brings them joy, but it also brings them mastery. Expertise in specific subjects breeds the confidence to take intellectual risks.

### The Sense of Wonder

The greatest Brain Rule of all is the importance of curiosity. Classrooms and businesses should be designed with the brain in mind. If we started over, curiosity would be the most vital part of both demolition crew and reconstruction crew. ●

### RECOMMENDED READING LIST

If you liked *Brain Rules*, you'll also like:

1. ***Sway* by Ori Brafman and Rom Brafman.** We are all prone to irrational behavior, but understanding why it occurs can help us to become more aware of it. This book helps you resist the pull of irrational behavior.
2. ***Buyology* by Martin Lindstrom.** Lindstrom presents the astonishing findings from his groundbreaking neuromarketing study that peered inside the brains of two thousand volunteers.
3. ***A Whole New Mind* by Daniel H. Pink.** Right-brain thinking controls the more artistic, creative side of the mind and is becoming more important to business. Learn the six essential aptitudes you'll need in order to excel.

Career & Self-Development: Communication

# Fierce Conversations

## Achieving Success at Work & in Life, One Conversation at a Time

Bonus Summary

by Susan Scott

### THE SUMMARY IN BRIEF

Business is fundamentally an extended conversation — with colleagues, customers, partners and the unknown future emerging around us. Unfortunately, many conversations fail.

Conversations are the work of a leader and the workhorses of an organization. While no single conversation is guaranteed to change the trajectory of a career, a company, a relationship or a life — any single conversation can.

Practicing and championing fierce conversations company-wide enhances employees' capacity to serve as effective agents for strategic success, structuring the basis for high levels of alignment, collaboration and partnership at all levels within the organization.

Whether it's coming up with a big idea, transforming a company into a great place to work, improving customer-renewal rates, enhancing cross-boundary collaboration or providing leadership development and the healthier financial performance that goes with it — success occurs one conversation at a time.

We effect change by engaging in robust conversations with ourselves and others.

Each conversation we have with co-workers, customers, significant others and children either enhances those relationships, flattens them or takes them down.

In *Fierce Conversations*, executive development expert Susan Scott explores principles and practices that will help you engage in conversations that interrogate reality, provoke learning, tackle tough challenges and enrich relationships, no matter how sensitive the topic.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to overcome the barriers to meaningful communication.
- How to expand and enrich conversations with colleagues, customers, friends and family members.
- How to increase clarity and improve understanding.
- How to handle strong emotions — on both sides of the table.

# THE COMPLETE SUMMARY: **FIERCE CONVERSATIONS**

**by Susan Scott**

**The author:** Susan Scott teaches positive change through powerful communication. Her firm, Fierce Inc., is an internationally recognized leader in cultural transformation and executive education. For 13 years, Scott ran think tanks for executives through Vistage International, a CEO development organization. Previously, Scott served as vice president of the Pace Network, a search firm in Seattle, and also as a regional manager for Context Associated, a training organization headquartered in San Francisco.

## Introduction: The Idea of Fierce

In *Roget's Thesaurus*, the word *fierce* has the following synonyms: robust, intense, strong, powerful, passionate, eager, unbridled, uncurbed, untamed. In its simplest form, *a fierce conversation is one in which we come out from behind ourselves, into the conversation, and make it real.* While many people are uncomfortable with "real," it is the unreal conversations that should scare us because they are incredibly expensive for organizations and for individuals. Every organization wants to feel it's having a real conversation with its employees, its customers, its marketplace and with the unknown future that is emerging around it. Each individual wants to have conversations that are somehow building his or her world of meaning.

If you are a leader, your job is to accomplish the goals of the organization. How will you do that in today's workplace? In large part, by making every conversation you have as real as possible.

### Getting Started

Begin by listening to yourself as you've never listened before.

Begin to overhear yourself avoiding the topic, changing the subject, holding back, telling little lies (and big ones), being imprecise in your language, being uninteresting even to yourself. And at least once today, when something inside you says, "This is an opportunity to be fierce," stop for a moment, take a deep breath, then come out from behind yourself, into the conversation, and make it real. Say something that is true for you.

When you do, whatever happens from there will happen. It could go well or it could be a little bumpy, but at least you will have taken the plunge. You will have said at least one real thing today, one thing that was real for you. Something will have been set in motion, and you will have grown from that moment. Once you master the courage and the skills and begin to enjoy the benefits of fierce conversations, they will become a way of life. ●

## Principle 1: Master the Courage to Interrogate Reality

No plan survives its collision with reality, therefore, whether you are running an organization or participating in a committed relationship, you will find yourself continually thwarted in your best efforts to accomplish the goals of the "team" unless reality is regularly and thoroughly examined. Describing reality, however, can get complicated because there are multiple realities existing simultaneously on almost any and every topic.

Most leaders have learned from experience that until the multiple — sometimes conflicting — realities of key individuals and constituents have been explored, implementing a plan can be a decidedly tentative endeavor. To the degree that you resist or disallow the exploration of differing realities in your workplace and at home, you will spend time, money, energy and emotion cleaning up the aftermath of plans quietly but efficiently torpedoed by individuals who resent the fact that their experience, opinions and strongly held beliefs are apparently of little interest to the organization.

### Three Stages

There are three stages of interrogating reality. The first step is to identify the issue on the table and, if you have a

**Rebecca S. Clement**, Publisher; **Sarah T. Dayton**, Editor in Chief; **Andrew B. Clancy**, Senior Editor; **Edward O'Neill**, Graphic Designer; **Chris Lauer**, Contributing Editor

solution in mind, make a proposal. Be clear and concise. "This is the issue. This is what I propose, for these reasons."

An alternative approach is to withhold your ideas until others have shared theirs; however, conversations are best launched when there is a well-defined idea offered as a jumping-off place for everyone's thinking and discussion. If you don't have a proposal, simply identify the issue and proceed.

When you are in the presence of knowledgeable but cautious individuals, once you've made your proposal or described the issue, don't just ask, "What do you think?" Invite questions. Check for understanding. Say, "Before we go any further, please ask any clarifying questions you may have." If you notice someone who is silent but looks puzzled or concerned, ask, "Alison, what questions do you have?"

### Check for Agreement

Once you are certain that everyone understands what you are proposing, check for agreement. For example: "I believe this is the right way to go, the right course of action. But I suspect some of you may see it differently. If you do, I'd like to hear it. I know that my enthusiasm may make it hard to challenge me, but my job is to make the best possible decisions for the organization, not to persuade you of my viewpoint. So please speak up." Then proceed to call on every individual at the table. "Mike, what's your perspective on this? I invite you to push back on what I've said."

This kind of invitation will get people to open up because you publicly, openly and actively encouraged them to share opposing views. You've shown that you are open to rational influence.

Do the same thing following the sharing of others' ideas. "Jim, what is your perspective on Mike's idea?"

### The Right Sequence

Thus, the sequence in interrogating reality is:

1. Make a proposal.
2. Check for understanding.
3. Check for agreement.

What's the payoff for interrogating multiple realities? Original thinking and innovation becomes possible. Most importantly, the best decisions will be made and implemented.

### Mineral Rights

The "Mineral Rights" conversation model is based on the idea that, "If you're drilling for water, it's better to drill one 100-foot well than 100 one-foot wells." This conversation interrogates reality by mining for increased clarity, improved understanding and impetus for change.

Mineral rights will help you drill down deep on a topic by asking your colleague, customer, boss, direct report, spouse, child or friend a series of questions. This is a natural exploration that accomplishes all four purposes of a fierce conversation:

1. **Interrogate reality.**
2. **Provoke learning.**
3. **Tackle tough challenges.**
4. **Enrich relationships.**

The questions asked during a Mineral Rights conversation help individuals and teams interrogate reality in such a way that they are mobilized to take potent action on tough challenges.

The questions are:

1. What is the most important thing we should be talking about today?
2. What is the core, underlying issue?
3. What current results is this creating?
4. If nothing changes, what's likely to occur?
5. Where are your fingerprints on this issue?
6. What is the ideal outcome you envision?
7. What is the next most potent step you need to take?

And throughout this conversation, probe for emotion. "When you consider those results, what do you feel?" "When you consider that possible outcome or scenario, what do you feel?" Emotion gives the lit match something to ignite. ●

## Principle 2: Come Out From Behind Yourself, Into the Conversation, and Make It Real

You are an original, utterly unique human being. You cannot have the life you want, make the decisions you want or be the leader you are capable of being until your actions represent an authentic expression of who you really are or who you wish to become.

In the context of fierce conversations, authenticity requires that you pay attention to Woody Allen's first rule of enlightenment: "SHOW UP!"

You must deliberately, purposely come out from behind yourself, into the conversation, and make it real — at least *your* part of it.

How real are any of us if we do not share our doubts and dark days with those closest to us, if we do not claim our failures as well as our successes? Authenticity is not something you have; it is something you *choose*.

### Healthy Selfishness

Even individuals who wield significant power at times withhold their real thoughts and feelings from those central to their success and happiness. It has much to do with the underlying impulse to survive by gaining the approval and support of others (boss, customer, co-worker, family member, significant other) who we imagine hold the keys to the warehouse wherein is kept everything we want and need. To ensure that such power brokers are on our team, we aim to please. While the desire to please is not a flaw, at crucial crossroads we sometimes go too far. *Way* too far. When faced with a so-called moment of truth, we find ourselves chucking the truth over the fence or tucking it behind the drapes in exchange for a trinket of approval.

Some fear that becoming authentic is a form of selfishness, and unknowingly limit the possibilities within their relationships, feeling it's inappropriate to put their own interests first. After all, what would people think?

Consider this: Successful relationships require that all parties view getting their core needs understood and if possible, met as being legitimate. You won't articulate your needs to yourself, much less to your work team or life partner, until and unless you see getting your needs met as a reasonable expectation. So pry the permission door open just far enough to consider that you have a right to clarify your position, state your view of reality and ask for what you want.

### Individuation

Coming out from behind yourself is part of the search, whether born of panic or courage, for that highly personalized rapture of feeling completely yourself, happy in your own skin. It is a reach for authenticity — a process of individuation — when you cease to compare yourself with others and choose, instead, to live *your* life. It is an opportunity to raise the bar on the experience of your life. It is a deepening of integrity — when who you are and what you live are brought into alignment. No more damping down your soul's deepest longings in order to get approval from others. As André Gide wrote, "It is better to fail at your own life than succeed at someone else's."

The principal job at hand is to intertwine addressing your current business and personal issues with self-exploration and personal development, building a bridge between yourself as a person and yourself as a professional.

Our companies, our relationships and our lives are mirrors accurately reflecting us back to ourselves. The results with which we are pleased reflect parts of ourselves that are working well. The results that disappoint and displease us reflect aspects of ourselves — beliefs, behaviors — that simply aren't working.

We can see an organization, department or relationship with clarity only when we look ourselves full in the face.

### Rewards

What are the rewards for coming out from behind yourself, into your conversations, and making them real? You will find yourself abandoning the safety of confusion for the juice and motivation of clarity. You will nurture your own deepening authenticity and the emergence of healthier, more effective qualities and behaviors. Your desire to control others will be balanced with the willingness to surrender. As a result, you will move toward what you desire — a happier marriage, personal freedom, professional accomplishment, a life that simply fits you better. A lot better. The experience of being awake, alive and free. ●

### The Seven Principles of Fierce Conversations

1. Master the courage to interrogate reality.
2. Come out from behind yourself, into the conversation, and make it real.
3. Be here, prepared to be nowhere else.
4. Tackle your toughest challenge today.
5. Obey your instincts.
6. Take responsibility for your emotional wake.
7. Let silence do the heavy lifting.

## Principle 3: Be Here, Prepared to Be Nowhere Else

Being truly present in a conversation is, sadly, a rare experience often because we are multi-tasking, eyeing our emails or thinking about something other than the conversation that is right in front of us, the one that wants and needs to take place. But it is only when we genuinely "see" the people who are important to us, that we can hope to succeed as agents for positive change.

Having ignored, misheard and misread many individuals throughout our lifetime, however, we often find that

discovering someone else's authentic self can be complicated by our increasing cynicism.

Yet we must learn to rebuild the links that connect people and that provide an effective antidote to cynicism and disaffection. We must transform the way we speak, the way we ask, the way we listen. How do we get to know another person? How do we get past "How are you? I'm fine."?

By really asking and really listening. By being with someone, even if only for a brief moment, prepared to be nowhere else.

### The One-on-One

For both personal and professional relationships to move forward or upward, you must have fierce affection for the other person. You must have genuine curiosity about what is going on with that person at any given time. You must have an insatiable appetite for learning more every day about who he or she is. Occasionally set aside all of the topics ping-ponging inside your own head and simply be with this other person, here and now.

All this *being present* stuff does not involve listening endlessly to someone telling you more than you ever wanted to know about a series of boring topics.

The conversation is the relationship. One conversation at a time, you are building, destroying or flatlining your relationships. It is possible, however, to create high-intimacy, low-maintenance relationships — one relatively *brief* conversation at a time.

### Soft Eyes and Ears

One of the basics of being present is eye contact. Being here, prepared to be nowhere else, does not require maniacal eye contact during your conversations. Many people want to back away from an avid individual whose eyes seem to drill through us and out the other side. Better to have "soft eyes."

Instead of trying to focus on any one thing, if we soften our eyes and allow the world to come to us, we will see a great deal more. We will catch subtle motion. Our peripheral vision will become acute.

The same thing happens with our listening. We may succeed in hearing every word yet miss the message altogether. There is so much more to listen to than words. Listen to the whole person.

When we listen beyond words for intent, for the scaffolding on which a story hangs, clarity and character emerge. We need to listen this way to ourselves, not just to others. ●

## Principle 4: Tackle Your Toughest Challenge Today

Hand in hand with the courage to interrogate reality comes the courage to bring to the surface and confront your toughest, most often recurring personal and professional issues.

Remember, enriching relationships is one of the purposes of a fierce conversation.

Below is a model that can be used when you need to confront someone's behavior or coach someone else to do so. If you wish to craft conversations that moderate our worst conversational tendencies, you should:

- Advocate your position clearly and succinctly.
- Illustrate your position by sharing the thinking behind it.
- Publicly test your views, and invite and encourage others to do so as well.
- Inquire into the views of others and actively explore their thinking.

Challenging conversations can be broken down into three distinct parts: opening statement, interaction and resolution.

### The Opening Statement

Preparation of your opening statement is essential. Do your homework. Write down your opening statement and practice saying it out loud. There are seven components to an opening statement:

1. **Name the issue.**
2. **Select a specific example that illustrates the behavior or situation you want to change and the negative results it is currently creating.**
3. **Describe your emotions about this issue.**
4. **Clarify what is at stake if nothing changes.**
5. **Identify your contribution to this problem.**
6. **Indicate your wish to resolve the issue.**
7. **Invite your partner to respond.**

You have 60 seconds to do it all.

### The Interaction Phase

The next part of the confrontation model is the interaction phase:

**Inquire into your partner's views.** If your partner says something with which you violently disagree, resist the temptation to build a stronger case. Simply listen so that your own learning may be provoked. Ask questions. Dig for understanding. Use paraphrasing and perception checks; don't be satisfied with what's on the surface. For example: "May I tell you what I'm hearing? I want to

make sure I've understood you."

Rather than jump back in and start talking as soon as your partner says something you feel is off base, focus on examining your partner's reality and his or her filters.

Finally, when your partner knows that you fully understand and acknowledge his or her view of reality, move toward resolution, which includes an agreement about what is to happen next. This is the longest part of the conversation.

### The Resolution

Throughout the interaction phase of confrontation, reality is interrogated, learning is provoked and relationships are enriched. Now it's time to come to an agreement about what happens next. After all, you said your intent was to resolve the issue, and the following questions will help you accomplish this:

**What have we learned? Where are we now? Has anything been left unsaid that needs saying? What is needed for resolution? How can we move forward from here, given our new understanding?**

How do you end the conversation?

**Make an agreement and determine how you will hold each other responsible for keeping it.**

When we confront behavior with courage and skill, we are offering a gift. And it goes both ways. While it may be difficult to hear others' truths about ourselves, there is likely to be a vein of gold worth mining.

## Principle 5: Obey Your Instincts

How does an intelligent human being make poor decisions? When President Kennedy got the idea to invade Cuba, only one person, Arthur M. Schlesinger Jr., questioned this decision; however, other advisers talked Schlesinger out of bringing up his concerns. The invasion was a disaster.

### Listen to Your Internal Voice

Obeying your instincts requires that you listen to your own internal voice, acknowledge your internal reference point, rather than rush to embrace the myriad references and voices of others. Most of us allow ourselves to be influenced or persuaded that the voice within us is mistaken, flawed, at best a distraction. And if we are intent on gaining others' approval, we are quick to discard our insights, commanding the voice inside us, "Shut up and go to your room."

In fierce conversations there is neither a struggle for approval nor an attempt to persuade. There is, instead, an interchange of ideas and sentiments, during which you pay attention to and disclose your inner thoughts while actively inviting others to do the same.

Listen to both sides of your brain as if you were hearing two conversations at the same time. One conversation is the literal conversation that is visible, audible. The other conversation is the one going on inside your head — what you are thinking and feeling.

### Perception Testing

Bring some of your private thoughts and feelings into the neutral zone between your private thoughts and your public thoughts by noticing them without attachment. They aren't right or wrong. They just exist. Become interested in them as phenomena in the world, as if they were interesting shells you found on the beach. When you are ready you can bring these thoughts into the public conversation. If you like, you can use these words: "While you were speaking, I had a thought that I would like to check out with you …"

This is called "perception checking." It lets your partner in on what you have been thinking and feeling, but it doesn't invite defensiveness because you didn't interject your thoughts as the capital-T Truth.

Another approach is to ask a question to open up a willingness on another person's part. For example, you might ask, "Would you like to hear something I'm feeling [or thinking or wondering] right now?" Then, assuming your partner is willing and interested, share your thought.

### What Is Appropriate?

And what if your instincts occasionally miss the target?

Consider this possibility: *Your confusion is an asset; in fact, your search for clarity may blaze a path for others.* In working to express what you do not understand — but long to understand — you invite the kind of conversations for which others are searching. If you begin to wonder what others will think of you, you won't be able to pursue original avenues. Look for the deepest issue that engages or troubles you. Familiarity with the unknown and with the fluidity of the world is essential. Speak your way toward it.

## Principle 6: Take Responsibility for Your Emotional Wake

For a leader, there is no trivial comment. Something you might not even remember saying may have had a devastating impact on someone looking to you for guidance and approval. By the same token, something you said years ago may have encouraged and inspired some-

one who is grateful to you to this day. Everything each of us says leaves an emotional wake. Positive or negative. Our individual wakes are larger than we know.

An emotional wake is what you remember after I'm gone. What you feel. The aftermath, aftertaste or the afterglow.

### Your Stump Speech

A leader's long-term performance is profoundly affected by the long-term spin the organization puts on him or her. Our emotional wake determines the story that is told about each of us in the organization. It's the story that's told when we're not in the room. It's the story that will be told about us after we're gone. It can be a wonderful story that makes us smile or a painful story with a bad ending.

If you are a leader, taking responsibility for your emotional wake requires that you have a stump speech that you are prepared to give anytime, anywhere to anyone who asks or who looks the least bit confused. Your stump speech must be powerful, clear and brief.

*This is where we're going.*

*This is why we're going there.*

*This is who is going with us.*

*This is how we're going to get there.*

Great leaders share their stump speeches with their teams and with their customers repeatedly, not only to convey a clear and compelling story but also to leave a positive emotional wake by providing such clarity that it is difficult to put a negative spin on their words.

### Your Legacy

What is *your* story? How would you like to be interpreted? What is the legacy you want to leave? If the people in your organization could tell one story about you, what would you want it to be? What is the message you wish to deliver to *your* customers? What wake do you wish to leave following each conversation? The conversation is the relationship. In the workplace, this translates to your ongoing dialogue with all those essential to your success and that of your organization.

Many great leaders sustain a love affair with their work and their lives. They place their attention at the service of deep, long-term concepts and convictions in the workplace and the home. They possess a groundedness that comes from having wrestled core problems to the ground and lived to tell about it. They have become sensitized to the effect they have on others. They have become increasingly aware of the wake caused by their words and actions. Their perspective and goals have shifted as they recognized that leadership must be for the world, for the greater good, rather than for narrow personal interests. ●

## Principle 7: Let Silence Do the Heavy Lifting

Many people attempt to forge relationships exclusively through words. Lots of words. However, the best leaders talk *with* people, not *at* them.

Talking at people is a common affliction. Did you know that eight out of 10 sales proposals fail? And 50 percent of those eight fail because we spend too much time talking about ourselves or the features and benefits of our product, and not enough time listening to the customer before we explained how wonderful doing business with us would be.

### So Many Words, So Little Substance

Fierce conversations *require* silence. In fact, the more emotionally loaded the subject, the more silence is required. And, of course, this carries over into our homes, into our personal relationships. Often we are simply trying to intuit something about ourselves, our companions or the topics themselves. Sometimes we need silence in which to make a decision about the closeness we feel for our companions or the distance we feel from them.

Once in a precious while, silence is merely abstinence from self-assertion. For many work teams and couples, however, it is easy to fall into a conversational pattern that contains so many words, so much white noise, that it leaves all parties deaf to any comments of substance that could have been interjected into the conversation. Our habitual ways of talking with (or *at*) each other prevent us from allowing silence to help us get in touch with what we really want to say.

### Slow Down

Sometimes a dramatic intervention is required to stop the words in order to start a conversation. There are issues that our colleagues and customers will ignore every time they come up. If we are not alert, we will walk with others right past the issue. We may sense that something is there, but the conversation is moving too fast. Or, because we are so invested in playing the role of "expert," we fill the air with words, missing the real issue entirely.

Silence is the greatest tool to slow down a conversation. As we talk with people, as we sit with them in silence, what is in the way — anger, numbness,

impatience, manipulation, rigidity, blame, ego, cruelty, ambition, insensitivity, intimidation, pride — may fall away. It is in silence that such attributes, emotions and behaviors reveal themselves as unnecessary.

### The Space Between Thoughts

Deepak Chopra refers to the space between thoughts as the place where insight can occur. The trouble is, for most of us, there is no space between thoughts.

While the occasional stream of consciousness can be illustrative, important conversations require moments of silence during which we may reflect on what someone has said and consider our responses, before opening our mouths. Otherwise, our knee-jerk responses may not reflect our highest and best thoughts. How could they? We haven't had a moment to consider what they might be.

How do we let silence do the heavy lifting? Provide it. Allow silence to fill in the greater meaning that needs to be there. Perhaps if I close my mouth, you'll open yours.

During company meetings, the best responses, the most brilliant solutions, often come from the person who has sat silently listening for a very long time while the rest of us filled the air with debate. Even when called upon, such an individual often appears reluctant to speak, sitting in reflective silence for agonizing moments while others click ballpoint pens and glance at their watches. Then he or she speaks, and everyone else in the room is compelled to shift to a broader, wiser perspective, with the result that elegant, complete answers begin to emerge. ●

## Embracing the Principles

Fierce conversations are not a form of showing off or parading a rich vocabulary. Fierce conversations are an effort to understand — first of all, for yourself — something that is worthy of your pondering. They are deeply probing explorations. Speak about the things you want to understand. Most people want to share journeys of this kind. Forget about being clever or impressive. What is called for now is quiet integrity.

The secret is for you to show up — fully. You may be among people who don't support you. You may be among people who, loving or unloving, are simply not equipped to support the ambition of engaging in fierce conversations. This is not an unusual experience. The courage to show up is both simple and daunting. Once you show up, people can see you. They can judge and criticize and gossip. Some safety and comfort are lost when an ambition or strongly felt emotion is expressed. Perhaps, if you have become impatient with the false identity you have created for yourself, life is inviting you into much larger worlds than you have imagined.

Intimacy is required in conversation now — at home and in the workplace. We must answer the big questions in our organizations: What is real? What is honest? What is quality? What has value?

### How to Effect Change

We effect change by engaging in robust conversations with ourselves, our colleagues, our customers, our family, the world. Your ability to effect change will increase as you become more responsive to your world and to the individuals who are central to your happiness and success.

*Change the world — one conversation at a time.* The world will be well served if each of us makes a strong personal choice to pay fierce attention to every conversation that we have.

It is not enough to be willing to speak. The time has come for you *to speak*. Be willing to face mutiny everywhere but in yourself. Your time of holding back, of guarding your private thoughts, is over. Your function in life is to make a declarative statement. Sit beside someone you care for and begin. ●

### Never Mistake Talking for Conversation

- Talk *with* people, not *at* them.
- The more emotionally loaded the subject, the more silence is required.
- Use silence to slow down a conversation.
- Allow silence to fill in the greater meaning that needs to be there.
- Allow silence to teach you how to feel.

## Discover the Secret to Getting Through to Absolutely Anyone

by Mark Goulston

### THE SUMMARY IN BRIEF

Right now, there's someone in your life you need to reach. But you can't and it's driving you crazy. You've tried everything — logic, persuasion, forcefulness, pleading, anger — but you've hit a wall every time. You're mad, scared or frustrated. And you're thinking, "What now?" In *Just Listen*, veteran psychiatrist and business coach Mark Goulston reveals a simple, quick set of techniques he has discovered on his own or learned from mentors or colleagues that can be used to get through to anyone, even when productive communication seems impossible.

As Goulston describes it, "People have their own needs, desires and agendas. They have secrets they're hiding from you. And they're stressed, busy and often feeling like they're in over their heads. To cope, they throw up barricades that make it difficult to reach them even when your goals are in sync with their own."

Goulston discloses that there are simple ways to break down the walls that keep you from getting through to the people you need to buy into your ideas and goals. *Just Listen* presents effective tools and strategies you can use whenever a job, a sale or a relationship hangs in the balance.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to reach people and get them to do what you want them to do.
- How to get the attention of a total stranger who you need to know.
- When to use the "Magic Paradox" to turn a negative person into an asset.
- How to master the art of breaking through barricades that separate people.
- How to move from transactional relationships into meaningful relationships.

# THE COMPLETE SUMMARY: **JUST LISTEN**

**by Mark Goulston**

**The author:** Mark Goulston, M.D. is a business advisor, consultant, trainer and coach trained as a clinical psychiatrist who honed his skills as an FBI/police hostage negotiation trainer who increases people's ability to get through to anyone. He was named one of America's Top Psychiatrists for 2004-2005 and again in 2009 by Washington, D.C. based Consumers' Research Council of America.

## The Secret to Reaching Anyone

You probably don't find yourself in the types of situation that hostage negotiators handle. But on any given day, who are you trying to persuade to do something? The answer is: nearly everybody. Almost all communication is an effort to get through to people and cause them to do something different than they were doing before. Maybe you're trying to sell them something. Maybe you're trying to talk sense into them. Or maybe you need to impress them that you're the right person for a job, a promotion or a relationship.

People have their own needs, desires and agendas. They have secrets they're hiding from you. And they're stressed, busy, and often feeling like they're in over their heads. To cope with their stress and insecurity, they throw up mental barricades that make it difficult to reach them even if they share your goals, and nearly impossible if they're hostile.

Approach these people armed solely with reason and facts, or resort to arguing, encouraging or pleading, and you'll expect to get through — but often you won't. Instead, you'll get smacked down and you'll never have a clue why.

The good news is that you can get through simply by changing your approach. All persuasion moves through the steps of the Persuasion Cycle. To take people from the beginning to the end of this cycle, you need to speak with them in a manner that moves them:

- From *resisting* to *listening*
- From *listening* to *considering*
- From *considering* to *willing to do*
- From *willing to do* to *doing*
- From *doing* to *glad they did* and *continuing to do*.

The secret of getting through to absolutely anyone is that you get through to people by having them "buy in." Buy-in occurs when people move from resisting to listening to considering what you're saying. The key to gaining buy-in and then moving people through the rest of the cycle is not what *you* tell *them*, but what you get *them* to tell *you* — and what happens in their minds in the process. ●

## A Little Science: How the Brain Goes from 'No' to 'Yes'

When you understand something about how the brain moves from resistance to buy-in, you'll have a huge edge — because no matter what your message is, you need to talk to the brain.

Your brain has three layers that evolved over millions of years: a primitive reptile layer, a more evolved mammal layer and a final primate layer. They all interconnect, but in effect they often act like three different brains — and they're often at war with each other.

Here's how each of your three brains behaves:

- The lower reptilian brain is the "fight-or-flight" part of your brain. This region of your brain is all about acting and reacting, without a lot of thinking going on. It can also leave you frozen in a perceived crisis — the "deer-in-the-headlights" response.
- The middle mammal brain is the seat of your emotions. It's where powerful feelings — love, joy, sadness, anger, grief, jealousy, pleasure — arise.
- The upper or primate brain is the part that weighs a situation logically and rationally and generates a con-

scious plan of action. This brain collects data from the reptile and mammal brains, fits it, analyzes it and makes practical, smart and ethical decisions.

What does all of this have to do with getting through to people? To reach someone, you need to talk to the human upper brain — not the snake brain or the rat brain. You're in trouble if you're trying to gain buy-in from someone who's feeling angry, defiant, upset or threatened because, in these situations, the person's higher brain isn't calling the shots. If you're talking to a boss, a customer, a spouse or a child whose lower brain or midbrain is in control, you're talking to a cornered snake or, at best, a hysterical rabbit. In this situation, your success hinges entirely on talking the person up from reptile to mammal to human brain.

## Move Youself from 'Oh F#@&' to 'OK'

Getting your emotions under control is the most important key to reaching other people in stressful situations, especially in times of stress or uncertainty. It's why a cool and controlled hostage negotiator can get through to someone who seems unreachable — and, conversely, why a person who's crying, whining or yelling will turn off even a calm and empathetic listener.

One of the most powerful things you'll learn is how to be in control of your own thoughts and emotions — because most of the time, that's where successful communicating starts. Mastering the art of controlling yourself will change your life because it'll keep you from being your own worst enemy when it comes to reaching other people in stressful situations.

It doesn't matter what the crisis is, you go through these steps in more or less the same order each time you're upset:

- *"Oh F#@&" (The Reaction Phase):* This is a disaster. I'm screwed. What the hell just happened? I can't fix this. It's all over.
- *"Oh God" (The Release Phase):* Oh my God, this is a huge mess and I'm going to get stuck with cleaning it up. This stuff always happens to me.
- *"Oh Jeez" (The Recenter Phase):* Alright, I can fix this. But it's not going to be fun.
- *"Oh Well" (The Refocus Stage):* I'm not going to let this ruin my life/my career/my day/this relationship, and here is what I need to do right now to make it better.
- *"OK" (The Reengage Phase):* I'm ready to fix this.

### Mirror Neurons

Years ago, scientists studying specific nerve cells in macaque monkeys' prefrontal cortices found that the cells fired when the monkeys threw a ball or ate a banana. But here's the surprise: these same cells fired when the monkeys watched another monkey performing these acts. Humans, just like macaques, have neurons that act as mirrors. In fact, studies suggest that these remarkable cells may form the basis for human empathy. That's because, in effect, they transport us into another person's mind, briefly making us feel what the person is feeling.

These cells may prove to be one way nature causes us to care about other people. We constantly mirror the world, conforming to its needs, trying to win its love and approval. And each time we mirror the world, it creates a little reciprocal hunger to be mirrored back. If that hunger isn't filled, we develop "mirror neuron receptor deficit."

In today's world, many people feel that they give their best, only to be met day after day with apathy, hostility or no response at all. This deficit explains why we feel so overwhelmed when someone acknowledges either our pain or our triumphs. Understanding a person's hunger and responding to it is one of the most potent tools you'll ever discover for getting through to anyone you meet in business or your personal life.

## Rewire Yourself to Listen

The instant judgments we make about people build on the past. That doesn't mean they're entirely wrong. (In fact, an initial "gut instinct" is often spot-on). But it means they're not entirely right, either.

The problem is that while we think our first impressions of people are grounded solely in logic, they're not. In reality, they're a jumbled mix of conscious and unconscious truth, fiction and prejudice. Thus, from the very start, we're dealing with a fictitious creation — not a real person. Yet that first impression will color our feelings about another person for months or years to come. It'll also affect how we listen to that person, because we'll distort everything he or she says to fit our preconceived notions.

The solution? Think about what you're thinking. When you consciously analyze the ideas you've formed about a person and weigh these perceptions against reality, you can rewire your brain and build new, more accurate perceptions. Then you'll be communicating

with the person who's really in front of you — not the fictitious character conjured up by false perceptions. ●

## Make the Other Person Feel 'Felt'

Making someone "feel felt" simply means putting yourself in the other person's shoes. When you succeed, you can change the dynamics of a relationship in a heartbeat. At that instant, instead of trying to get the better of each other, you "get" each other and that breakthrough can lead to cooperation, collaboration and effective communication.

One explanation for the effectiveness of making a person "feel felt" lies in the mirror neurons. When you mirror what another person feels, the person is wired to mirror you in return. Say "I understand what you're feeling," and the other person will feel grateful and spontaneously express that gratitude with a desire to understand you in return. It's an irresistible biological urge and one that pulls the person toward you.

When people feel felt, they feel less alone, and when they feel less alone, they feel less anxious and afraid — and that opens them up to the message you're trying to send. They shift from defensiveness to reason, and they're capable of hearing your message and weighing it reasonably. ●

## Be More Interested Than Interesting

You're not just held hostage by the people who resist, bully, annoy or get upset with you. You're also held hostage to your own mistakes when you fail to break through to people who either don't know you at all or don't act like they care to know you well.

Do you ever think in frustration, "I could get somewhere if only I could get this person interested in me?" Embodied in your statement is the reason you're not getting through. Why? Because you're focusing all your attention on what you can say to make that person think you're cool or smart or witty. And that's your mistake, because you've got it backward.

The only way to truly win friends and influence the best people is to be more interested in listening to them than you are in impressing them. ●

## Make People Feel Valuable

When you make people feel important, you give them a gift that's beyond price. In return, they'll often be willing to go the ends of the world for you. That's why, if your emotional IQ is high, you'll find ways to show the people you value — parents, children, a partner, a boss, a key co-worker — how much they matter. You'll find ways to tell them that they make your world happier, funnier, more secure, less stressed, more entertaining, less scary or just all-around better.

But this was the easy part. Something you might have trouble believing is that it's smart to go out of your way to make the annoying people in your life — the complainers, kvetchers, and obstructers — feel important too. You're probably thinking, "Are you nuts? Why would I want to make the people who screw up my life feel valuable, when they aren't?"

The answer is simple. One thing most of these high-maintenance, easy-to-upset, difficult-to-please people have in common is that they feel as if the world isn't treating them well enough. In essence, they don't feel important or special enough in the world, usually because their awful personality has gotten in the way of success. These people are driving you crazy for a simple reason: They need to matter. Want them to stop driving you crazy? Then you'll need to satisfy that need. ●

## Help People to Exhale Emotionally and Mentally

Stress isn't bad. It causes us to focus, become determined and tests our mettle. It's when stress crosses over into distress that we lose sight of our important long-term goals and instead look for what will relieve us now. At that point, we're too busy looking for an emergency exit from our pain to be either rational or reachable.

In these situations, the first step is to move people out of this state and into a state where their brains are capable of listening to you. Only *exhaling* enables people to experience and express their feelings — like draining a wound — in a way that doesn't attack others or themselves. It's the only response that relaxes stressed-out individuals and opens their minds to solutions from other people. That, in turn, offers an opportunity to resolve the source of the stress and prevent it from recurring.

When you give a distressed person breathing room — a place and a space to exhale — you don't just get the situation back to normal, you actually improve on it. That's because, in addition to getting a person to calm down, you build a mental bridge between the person and yourself. And when you build that bridge, you can communicate across it. ●

## Check Dissonance at the Door

Dissonance occurs when you think you're coming across in one way but people see you in a totally different way. For instance, when you think you're coming off as wise, but people see you as being sly. Or when you think you're coming off as passionate, but other people think you're "over the top." When that happens, the result is buy-out.

Dissonance works the other way around, too. It occurs when you think you perceive someone else accurately, but the other person doesn't agree. There's hardly anything more annoying to another person than hearing you say, "I know where you're coming from," when you don't really have a clue. Often this happens when you aren't listening deeply enough to know what the other person is trying to communicate.

Dissonance keeps you and another person from connecting — or, from a neurological point of view, achieving mirror neuron empathy — because you're not sending the message you think you're sending. People can't reflect your confidence if it looks like arrogance. They can't mirror your concern if it sounds like hysteria. They can't mirror your calmness if they interpret it as apathy. And if you're misperceiving them — for instance, if you mistake their legitimate grievances for hysteria — the results can be fatal to a relationship.

How can you know how other people perceive you? Ask the experts — your friends or relatives. This isn't fun, and you'll need to have thick skin. But the quickest way to pinpoint your issues with dissonance is to identify two or three honest people who know you well and whose judgment you trust, and ask them to describe your worst traits. ●

## When All Seems Lost — Bare Your Neck

Many people believe that earning respect means never showing weakness. Instead, it's better to reach out for help before you mess up. When you wait until you mess up and then ask for help, others may see it as a way to get out of being punished. Even so, it's better to reach out after a screw-up than to avoid reaching out at all.

When you're scared or hurting or humiliated, but you're still in cover-up mode because you're afraid of losing another person's respect, your own mirror neuron receptor deficit widens. You don't feel understood because you can't be understood. That's because nobody has a clue what's going on with you. It's a self-inflicted wound and you're on your own.

The person whose respect you're worried about losing can't mirror your distress and understand it. Instead, the person will mirror the attitude you're using to mask your distress. If you're using a "screw you" attitude to hide your feelings of helplessness, you'll get back "fine — screw you too." ●

## Steer Clear of Toxic People

Some people don't want to make your life better. Instead, they want to destroy it. Some of these people want to suck you dry, while others want to con you, thwart you, bully you or make you the scapegoat for their mistakes. To save yourself, you need to strip these people of the power to hurt you.

There are three ways to do this. The first is to confront these people directly. The second is to neutralize them. The third is to walk away and make sure they don't follow you.

Sometimes you're so entangled financially or emotionally that it's tough to do a "jerkectomy." But painful or not, handling these people (or getting them out of your life entirely) is critical to your success and your sanity. Here's how to spot them — and how to defend yourself against them:

• **Needy people.** Pathologically needy people can gut you emotionally or financially, or both. These are the people who send the messages: "I need you to solve all of my problems." "I can't function without you." "My happiness depends totally on you." "If you leave me, I'll die." Unlike needful people — who ask for help only when they need it and appreciate it when they get it — needy people demand constant help and attention, use emotional blackmail to get it, and offer gratitude only if it keeps you on the hook.

• **Bullies**. When a bully tries to intimidate you by verbally attacking you, do this: Make eye contact. Act perfectly polite but ever-so-slightly bored, as if your mind is elsewhere. Let your body language transmit the same message: stand up straight, be relaxed and cock your head as if you're listening but not very hard. Let your arms hang causally, instead of folding them defensively across your chest. Often, this response makes bullies feel uncomfortable or even foolish and causes them to back down.

• **Takers.** You know these people. They're the ones who hit you up every day for a favor. Strangely, however, they never seem to have time or energy to help you in return. These people usually won't ruin your life, but they can ruin your day. Avoid takers if you can, but if that's not possible, neutralize them. How? It's the easiest

trick in the book. The next time a taker asks you for a favor, follow this scenario:

*Taker:* Hey, could you do the graphs for my PowerPoint presentation? I know I should do them, but I'm swamped.

*You:* Sure. No problem! And you can help me out by taking over the intern orientation on Thursday?

*Taker:* Uhhh …

*You:* I assume you don't mind doing a favor for me in return, right?

*Taker:* Uhhh …

Do this once or twice — and insist each time on a *quid pro quo* — and the taker will move on to an easier touch.

• **Narcissists:** These people aren't out to hurt you, but they don't give a damn about you either — except as an audience for their own wonderfulness. If you can't change a narcissist, should you reach out or back away? It depends, because narcissists can be exciting partners in a personal or business relationship. Nearly all politicians are narcissists. (Who else would put their families through all that?) So are most actors, and many hard-driving lawyers and CEOs. Narcissists often are huge successes in life, but don't expect a 50/50 relationship.

## The Impossibility Question

Now that you know the core rules for reaching people, you're ready to arm yourself with some powerful tools for moving people through the Persuasion Cycle.

The Impossibility Question works with a person who's somewhere between resisting and listening, but not ready to move to considering. If you're lucky, there might be a flicker of interest in there somewhere. But without a shove, your idea is going nowhere. That powerful shove is the Impossibility Question. Here's how it works:

*You:* What is something that would be impossible to do, but if you could do it, would dramatically increase your success?

*Other Person:* If I could just do _____. But that's impossible.

*You:* OK. What would make it possible?

What's so powerful about those two questions? They move a person from a defensive, closed position or a selfish, excuse-making stance into an open, thinking attitude. And they make the person picture your vision as a reality and cooperate in thinking strategically about reaching that reality.

## The Magic Paradox

This technique lets you break through to people in the most difficult part of the communications cycle: at the very beginning, when you need to shift them from resisting to listening and then to considering. It's a classic first step in hostage negotiation, and it's equally powerful in a business crisis.

Consider a co-worker with personal issues who is late on an important project. Here's what you *don't* do if you're smart. You don't go to him or her and say something like, "Look, I know things are tough but you need to get your act together. You know how to do this job and I know you can pull it off. Just set some targets and I'm sure you can get caught up in time. All of us are under pressure and we're counting on you."

If you do this, odds are he or she will get defensive, lash out angrily or even quit. That's not what you need. And it's not what the co-worker needs. So instead, do what he or she least expects. Empathize with his or her negative thoughts. For example, say, "I'll bet you feel that nobody knows what it's like to be scared that you can't pull this project off. And I'll bet that you're upset because you think we're all feeling let down by you. What's more, I'll bet you feel that nobody can possibly understand how hard it is to deal with all the stuff that's happening in your life."

Now watch the magic. Because you're empathizing with the co-worker's emotions, you will eliminate his or her mirror neuron receptor deficit and cause the co-worker to feel understood by and connected to you. By saying explicitly that you know he or she feels that nobody understands, you'll make him or her realize that you do understand.

## 'Do You Really Believe That?'

When a person launches into an out-of-control rant about how awful the problem is and how it's the end of the world, simply ask, calmly, "Do you really believe that?"

This is a highly effective question because when you ask it in a calm way, it causes most people who use hyperbole or exaggeration to recant and restate their position. Typically, they backpedal, saying something like, "Well, not really, but I am very frustrated about things." Then you can respond, "I understand that, but I need to know what the truth is, because if what you say is totally true, then we have a serious problem and need to address it." By this time, they're in retreat and the power has shifted to you.

The trick to this approach is to ask the question not in a hostile or degrading manner, but very calmly and in a straightforward way. Your intent is not to antagonize the other person, but rather to make the person stop and realize, "I really am making a mountain out of a molehill. I must sound like a jackass." ●

## The Power of 'Hmmm …'

"Hmmm …" is a tool to use when you're facing a person who's angry, defensive and sure you're the bad guy. It works in a wide range of settings — everything from a hostage crisis to an angry customer scenario — because it rapidly turns a potential brawl into cooperative dialogue. Here's why:

Most people do exactly the wrong thing when confronted by an angry or upset person. They say well-intentioned things, such as "OK, just calm down," or they lose it and get angry themselves. Both of these approaches generally have disastrous results. Make the other person angry and you'll get into a shouting match. Ask the person politely to calm down, and you'll send the condescending and infuriating message, "I'm sane and you're a flaming nutball." The response, in either case, will be a dramatic shift to resistance on the other person's part.

"Hmmm …" conversely, is a potent de-escalator. When you use this approach, you're not trying to shut someone up; instead, you're telling the other person, "You're important to me and so is your problem."

The goal isn't to solve the specific problem you're facing (though it sometimes happens). Instead, it's to avoid talking *at* each other, move beyond talking *to* each other, and with luck, end up talking *with* each other. ●

## Side by Side

Sitting people down and lecturing them rarely works, because it makes them defensive and when they're defensive, they hide things from you. Work side by side with them in a cooperative activity, however, and you'll lower their guard and get them to open up.

One advantage of the side-by-side technique is that it doesn't focus on things a person did wrong in the past. Instead, you can use it to explore ways to make things go right in the future. So instead of delving into a person's past screw-ups, you give him or her a chance to avoid future ones.

The side-by-side technique is easy to use, but it comes with three cautions. The biggest one is when you get people to lower their guard, don't violate their trust. Do not use this technique to troll for negative information or people will feel like you're trying to spy on them or trap them rather than trying to learn from them. Also, don't argue with the person you're talking with. If he or she says something you disagree with, resist the urge to explain why you're right. Instead, deepen the conversation by asking another question. ●

## Fill in the Blanks

When you and a prospective customer or client first meet, the playing field is level. As soon as you sell or try to convince the other person of anything, the power shifts to the client. The key is to keep clients pursuing you right out of the gate.

The secret to this is to invite these people into a conversation rather than asking questions that put them on the defensive — and that's where the fill-in-the-blanks approach comes in.

When you ask direct questions, you're hoping to communicate a sincere interest. The people on the receiving end of your questions, however, can feel challenged, like a schoolchild being put on the spot by a teacher or coach. Sensitive questions posted at the right times can powerfully transform a relationship. But hitting a new client with a transactional question like "What do you want?" or "Can I show you why our product is better?" can create immediate resistance.

The fill-in-the-blanks approach has the opposite effect: it draws a person toward you. You don't come off as a demanding teacher or coach; instead, you sound like a trusted uncle, aunt, grandfather or grandmother who's saying, "C'mon. Let's talk this out and find a solution."

Try this yourself and see if you sense the difference between the two techniques. First, picture Mark Goulston sitting across from you and saying, "So, what do you expect to get from this book?" A little intimidating, isn't it? Now picture him saying in an encouraging way, "You are reading this book because you want to learn how to _____. And the reason it's important for you to learn how to do that now is _____." If you're like most people, you'll feel willing and, in fact, a little eager to open up and share your thoughts with him. ●

## Take It All the Way to 'No'

Ask managers or salespeople, "What's the biggest mistake you can make?" and often they'll say, "Asking for too much." But they're wrong, because in reality, the biggest mistake you can make is to ask for too little.

A better approach is to keep pushing for what you

want until you receive a "no." This will tell you that you're in range of getting the most that's possible from the other person. More importantly, it will be one of your best opportunities to demonstrate poise and close a sale or a deal. To get from no to yes, however, you need to make the right moves.

Let's say you're trying to get a client, "Ned," to buy a product, hire you as a consultant or retain your firm for a project. But after you lay out the deal you're hoping for, Ned says no.

When Ned does this, he's feeling a little edgy and defensive because he expects you to be frustrated or angry or upset — or to start in with a hard sell. If you do any of these things, you're not going to win Ned over. Instead, take a breath and then, as earnestly as possible, say something like this: "I either pushed too hard or failed to address something that was important to you, didn't I?"

After Ned recovers from his momentary shock at your self-awareness and humility, he'll nod in agreement or even say, "You sure did." At that moment, the advantage shifts to you. Why? Because Ned is mentally agreeing and aligning himself psycologically with you. Without knowing it, he's actually beginning to say yes.

Once you score this agreement, it's time to use the fill-in-the-blanks approach to build on the moment saying, "And the point where I went too far and the deal points I failed to address were _____." If Ned is like most people, he'll respond honestly to these questions. As he elaborates on his points, he'll do two things: he'll get his frustration at you off his chest, and he'll tell you what he needs from you. Both of these will give you the power to go from "no" to "yes." ●

## The Power Thank You & Apology

Clearly, there's nothing wrong with simply saying "thanks" when someone helps you out. In fact, that's usually the right thing to do. But if you stop there, your communication is merely transactional (you did something nice for me, so I'll say something polite to you). It doesn't touch the other person or strengthen the relationship between you.

That's why, if you're deeply grateful to someone who's done an exceptional favor for you, you need to express that emotion by going beyond the plain words "thank you" and instead offer a Power Thank You. When you do this, your words will generate strong feelings of gratitude, respect and affinity in the other person. It consists of:

- Thanking the person for something specific that he or she did for you.
- Acknowledging the effort it took for the person to help you by saying something like: "I know you didn't have to do _____" or "I know you went out of your way to do _____."
- Telling the person the difference that his or her act personally made to you.

The Power Thank You doesn't just make the other person look good. It also makes you look good to everyone involved by showing that you have empathy and humility and that you care. It also shows that you can be trusted to give credit where it's due.

### The Power Apology

Somewhere along the line, you'll screw up. When this happens, understand that merely saying "sorry" will patch over the wound, but it won't heal it, because your screw-up wasn't just a blunder. It was also a suggestion that the other person doesn't matter (creating a huge mirror neuron receptor deficit), and you're responsible for proving otherwise. If the situation warrants it, offer a Power Apology. That consists of the "4 Rs":

- ***Remorse:*** Demonstrate to the other person that you know you caused harm and you are truly sorry. When you're doing this, allow the other person to vent and don't become defensive even if the person is over the top. When you encourage people who are furious to get their anger off their chests, it speeds the healing process.
- ***Restitution:*** Find some way to make amends, at least partially.
- ***Rehabilitation:*** Demonstrate through your actions that you've learned your lesson.
- ***Requesting forgiveness:*** To truly earn forgiveness, you need to sustain your corrective actions until they become part of who you are.

If someone doesn't forgive you even after you've done all you can to make amends, don't assume that you're unforgiveable; instead, realize that you may be dealing with someone who's unforgiving. Just let it go. If your Power Apology works, on the other hand, make good use of your second chance — and recognize that this approach only works once. ●

# Real Influence

## Persuade Without Pushing and Gain Without Giving In

by Mark Goulston and John Ullmen

### THE SUMMARY IN BRIEF

In this post-pushing, post-selling world, influence can no longer be viewed as something you do to someone to get what you want. In fact, real influence isn't even about what you want. It's about forging strong connections by focusing on *other* people's viewpoints and, quite simply, giving before asking for anything and always striving for win-win outcomes.

Now master communicator and best-selling author Mark Goulston teams up with esteemed executive coach John Ullmen to show why this kind of "connected" influence is the secret to achieving not only short-term gains but also long-term success. Goulston's popular book *Just Listen* offered insights into getting through to hard-to-reach people, and it laid the groundwork for the more far-reaching scope of *Real Influence*. Here the authors provide a blueprint for getting buy-in, agreement and enduring loyalty from anyone by using authentic communication, empathy and engagement.

Packed with enlightening stories from the authors' extensive interviews with high-level influencers — people in business, government, nonprofits, sports, the arts and more — *Real Influence* shows the remarkable power of real influence and offers insights for tapping into it. Its message has the power to transform your outlook, your relationships, your career and ultimately your life.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to get past the "blind spot" in our brains that makes connecting and influencing impossible.
- The simple four-step model that will help you connect with people you thought were unreachable.
- How listening with a real motive to learn and understand will change a relationship instantly.

# THE COMPLETE SUMMARY: **REAL INFLUENCE**

**by Mark Goulston and John Ullmen**

**The authors:** Mark Goulston, M.D., is a business psychiatrist, consultant, chairman and cofounder of Heartfelt Leadership, and the author of the bestseller *Just Listen* and *Get Out of Your Own Way*. He also writes a *Tribune* syndicated career column; blogs for *Fast Company*, *Business Insider*, *Huffington Post* and *Psychology Today*, and is featured frequently in major media, including *The Wall Street Journal*, *Harvard Business Review*, *Fortune*, *Newsweek*, CNN, NPR and Fox News.

John Ullmen, Ph.D., is an acclaimed executive coach whose clients include dozens of leading international firms. He oversees MotivationRules.com, conducts popular feedback-based seminars on influence in organizations and teaches at the UCLA Anderson School of Management.

## Introduction

Are you frustrated because you fail to get people to buy into your great ideas, can't close the deal on tough sales or constantly hit the wall when you try to influence people?

If so, you're not alone. As executive coaches, we know that it's harder than ever to influence people, because the old rules of persuasion no longer work.

Today we live in a post-selling and post-pushing world. As people grow more aware of manipulative tactics, their guard goes up. The Internet, television advertising, and wall-to-wall marketing have made us cynical about deceptive tricks and hard-sell approaches.

We call this outdated strategy *disconnected* influence. It's a shortsighted strategy that sometimes creates momentary "buy-in" but often at the expense of your relationships and reputation. When you make the transition to connected influence, you'll set the stage for strong, sustained influence by becoming the kind of person other people are eager to follow.

Connected influence pays off — and it pays forward. ●

## The Problem: Why Are You Struggling to Influence People?

Disconnected influence doesn't earn you the commitment you need to achieve great things. Why? Because when you're stuck in *your here*, you can't get to *their there* — and that's where you need to be in order to persuade people effectively.

### The Dangers of 'Disconnect'

You tried your best, but they didn't budge. What's far worse is when it happens over and over again. And for millions of smart, caring and creative people just like you, it does. Even when these people are right — when they have brilliant ideas, inspiring goals or the best of intentions — they can't get through.

Most people most of the time aren't motivated to do what you want them to do. They don't feel your urgency, they're busy with their own priorities and crises, or they have hidden reasons for rejecting your ideas. To break down these walls, you need to create powerful connections that make people *want* to do what you're recommending.

On the surface, disconnected influence makes perfect sense. You've got to get things done. Important priorities are at stake. You size up a situation and see gaps that need to be filled and mistakes that need to be fixed. Maybe your project team is making a foolish decision. Or your boss needs to allocate more money to your project. Or your daughter is dating someone who isn't good for her. But when you view influence as "getting people to do what I want," you actually reduce your influence. That's because you're viewing the person you're trying to influence as a target, an object, something to be pushed or pulled. You're not hearing the other person's message. And the other person either recognizes this immediately or — even if you get temporary compliance — resents it later. You're dangerous

when you're blinded by your own point of view.

When you practice disconnected influence, you're stuck in what we call *your here*. You can see *your* position, *your* facts and *your* intentions clearly. But to connect with the people you're trying to influence, you need to communicate from a perspective we call *their there*. You need to see *their* position, *their* facts and *their* intentions clearly.

To reach people and win their long-term support, you need to stop pushing. Instead, you need to influence them in ways that spark a genuine connection.

### Four Traps That "Disconnect" You

As you master the elements of the connected influence model, you're going to start freeing yourself from four "bad influence" habits that keep you disconnected. We call them *human nature traps*, and they're hardwired into your brain — but you can avoid them more successfully when you can spot yourself falling into them. Here's a look at all four and why they're so dangerous:

• **The Fight or Flight Response:** Your reptile brain focuses on *fight or flight*, your mammalian brain on *emotion* and your human brain on *reason*. The problem is that sometimes your three brains can get in the way of each other — especially when you're under stress. At times like this, an emotional sensor in your brain called the amygdala can become overly activated and it's as if your three brains have disconnected and are all functioning independently of each other. When you're focused on your own fears, your own stress, and your own anger, you're continually reagitating your amygdala.

• **The Habit Handicap:** We do what we're used to doing. We do what usually works. Whatever pattern we fall into, we go there because that's where we're on familiar ground. Ingrained habit combined with the stress response of our system put us at the mercy of our own dysfunctional default settings. We're stuck in a pattern of ineffective behavior. We're stuck at our here.

• **Error Blindness: It Feels So Right to Be Wrong:** While we're being wrong, we're like the cartoon coyote in midair before he looks down. We think we're OK, even though what we're doing isn't working, because we don't know it yet. We're tempted to make a sequence of assumptions about our counterparts: they don't know and it needs to be explained to them, they're not smart enough, and it needs to be explained again; and the evil assumption — they're working against us. Each keeps you locked into *your here*.

• **The Double Curse of Knowledge:** Being right also has its own dangers and shortcomings. When we're failing to persuade and finding it difficult to get things done with people — what we "know" can change from asset to obstacle. Why? Because it's very difficult to "unknow" what you know. And this can create enormous gaps between *your here* and *their there*.

When you discover how to go beyond the limitations of your brain's hardware by writing new software that lets you move from *your here* to *their there* in every important relationship, you can create new habits that set the stage for you to have more genuine, lasting influence with other people.

### The Four Steps to Connecting and Influencing

The connected influence model isn't a collection of strategies for manipulating people. Instead, it's a new way of acting every day. And it won't just change your business relationships; it will change all of your relationships by allowing you to overcome your blind spots and human nature traps so you can connect with the people who matter to you. The four core steps to moving from *your here* to *their there* and becoming the powerful influencer you want to be are:

**1. Go for great outcomes.** This isn't just a once-a-year exercise in setting ambitious goals. It's about standing for something noble and worthwhile, and it's about going beyond where people want to be and showing them where they could be.

**2. Listen past your blind spot.** To exert real influence, you need to have a willingness to learn, an open mind and sometimes the insight to discover that you're wrong.

**3. Engage them in their there.** Engaging strengthens the connection that comes from listening. It's about "getting" your audience — not using "gotcha" techniques to manipulate them into compliance.

**4. When you've done enough … do more.** Doing more isn't just about the transactions you have with other people right now. It's about committing to making their great outcomes happen. ●

## STEP #1 Go for Great Outcomes

To become a master at connected influence, you need to inspire people by going for what's possible — and then looking beyond that for what still might be possible. It's a determination to focus on the three "R's" of a great outcome: results, reputation and relationships.

### The First "R": Go for a Great Result

If you're going to influence others, go for something

grand. Go for a great outcome. It's ambitious. It's nearly impossible. It's energizing. It often triggers a response of "Do you think that's possible?" or "Could we really do that?"

*Reverse cognitive bias* means that most people wait for things to happen and then react to them. Fewer people have a *forward cognitive bias* — a willingness to engage the challenges and uncertainties that lie ahead. These people ask, "Why settle for an opportunity when you can create and realize a possibility?"

When you take the bold step of going for a great outcome, you'll get people to think into their futures. You're not just trying to "trick" them into doing something that's good for you. Instead, you're showing them a path to a better *their there*. That leads to creative solutions, great results and stronger connections with the people you want to influence.

A great outcome doesn't need to be large in scope, but it needs to be rich in meaning. And it needs to be great for everyone involved.

### The Second "R": Go for a Great Reputation

Connected influence requires you to prove that you're worthy of people's long-term commitment. To get people to support their great outcomes, you need to support them even when it's not in your best short-term interest.

They need to know that you're committed to *their* success as well as yours and that if they're in trouble, you'll stand up for them, even if the cost is high. In short, you need to be a hero. The actions you take to help others — or the actions you decline to take — can make or break connections forever.

Over and over, people tell us that the men and women who influenced them the most weren't the ones who persuaded them to do things. Instead, they were the ones who deeply cared about them and showed it. As one man put it, "This person was committed to not letting me fail." Commit to standing up for everyone who helps make your dreams a reality.

No matter how you build your own good reputation — through public gestures or behind-the-scenes support — it will empower you to wield positive influence both with the people you help and with the people they influence.

A strong reputation will make people want to work with you, deal with you, listen to you and help you. Because of what they've heard and learned about you, even before they meet you they will anticipate that good things will happen.

### The Third "R": Go for Great Relationships

Disconnected influence steers us into thinking solely about getting results. But when that keeps us from thinking about building relationships, we often get worse results.

Relationships aren't always evident, but they always have an effect. If you damage your relationships, people will be less willing to support your great outcomes and might even work to undermine them.

Most influential people think about long-term implications even in their short-term actions. They drive for results, but they care about how they get those results. They don't make trade-offs between getting things done and earning trust and confidence with every interaction. The people around them know that they're not merely the means to the influencer's ends but are crucially important ends in their own right.

It's extremely easy to fall into focusing on results at the expense of the other two "R's". In fact, this is the core mistake that disconnected influencers make. And it takes mindful effort to break this bad habit.

## STEP #2 Listen Past Your Blind Spot

To practice connected influence, you need to break down the barriers that keep you from knowing what other people really think, want and need. You do that by "hearing the music" of other people's words, mastering the fourth level of listening and being influenceable.

### To Discover Their There, Listen to the Music

In the sort of listening we're talking about — we call it *listening to learn* — there is an energetic, determined humility. Listening to learn implies we don't know already. It implies there is work to do in order to connect with people on their own terms, with as little distortion as possible from our own biases. It involves not surrendering our judgment but suspending it.

When we master this type of listening, we draw others in and invite genuine buy-in. Listening with a strong personal motive to learn and understand more leads to real alignment and commitment rather than creating resistance or the mere appearance of going along.

Listening this way is a fully involved experience. It's an immersion in understanding. It's looking, hearing and feeling *into* another person's perspective and learning from it. Effective listening is an empathic exploration. It's an expedition into others' thoughts, feelings, mindsets and attitudes.

Listen to them as if you're listening to music. Experience the tone, tempo, rhythm, harmony and emotion. Listen not just for the words being said but also for how the words are said and (very important) for what's *not* being said.

### Master Level-Four Listening

To practice the kind of connective listening that increases influence rather than destroying it, you need to train yourself to listen at a higher level. And to do that you need to understand what happens at each level of listening. Here are the four levels of listening from the worst to best:

- **Level One: Avoidance Listening = Listening Over:** This is more the avoidance of listening than listening. Listeners who listen over others say, "Uh huh," while clearly showing no interest in what the other person is saying. The person who's talking usually feels ignored.
- **Level Two: Defensive Listening = Listening At:** This is listening with your defenses up. It's being quick to react and slow to consider. Listeners who listen at others take issue with everything they're saying. Rather than taking things seriously, they take everything personally.
- **Level Three: Problem-Solving Listening = Listening To:** This is listening to accomplish things. It's problem-solving listening. Problem-solving listeners listen for the facts in order to move forward. In the correct circumstances, this is the right approach. But people will feel frustrated if they're hoping for something more than a solution to a problem.
- **Level Four: Connective Listening = Listening Into:** Connective listeners strive to understand in the fullest sense. It's important for them to feel where people are coming from so they can establish genuine rapport. You're listening with the intention to understand the other person and forge a stronger connection. Connective listening is listening into other people to discover what's going on inside them. It's listening from *their there* instead of *your here*.

### To Influence, Be Influenceable

When you're influenceable, it's possible to get buy-in for your ideas even if you think or feel very differently than another person does. That's because you'll lean into each other rather than resisting each other. When that happens, you'll nearly always be able to find common ground.

To demonstrate to other people that you're influenceable, you'll need to practice the following two types of openness:

- *Intellectual openness:* Being open to other people's logic, data, analysis and ideas. It means genuinely taking an interest in how others think and acknowledging how their ideas are influencing you. Intellectually open influencers say things like "You've really changed my thinking on this" and "I haven't thought about it that way before."
- *Emotional openness:* Being open to other people's feelings, passions, values, drives, motives, beliefs and convictions. You'll actively work to understand what other people are experiencing and why they feel the way they do. Emotionally open influencers say things like: "How are you feeling about the situation?" and "What's at stake for you here?"

You need to master one additional essential skill: the art of "shutting up." The next time someone's speaking with you and you feel yourself becoming angry or defensive, do not say the next thing you want to say — no matter how much you want to say it. Instead, stop and ask yourself "Why am I pushing back at what this person is saying?"

## STEP #3 Engage Them in *Their There*

Once you understand where other people are coming from, it's time to connect with them in a way that makes them want to support you.

### Use the Three Gets of Engage

The secret to reaching people in *their there* is to use what we call the "three gets of engage." By keeping these in focus, you'll be able to shift quickly and effectively from your own to another person's perspective.

- **Situational Awareness — You Get "It":** You show that you understand the opportunities and challenges a person is facing. You grasp that person's reality and you offer ideas that work in the person's there. When you do this, you'll hear comments like "You really get it!" or "You really understand what I'm dealing with here."
- **Personal Awareness — You Get "Them":** You show that you understand other people's strengths, weaknesses, goals, hopes, priorities, needs, limitations, fears and concerns. You demonstrate that you're willing to connect on a personal level. You'll hear people say things like "You get me!" or "You really understand where I'm coming from on this."
- **Solution Awareness — You Get Their Path to Progress:** You show people a positive path that enables

them to make progress on their own terms. You give them options and alternatives that empower them. You show them possibilities for making things better. You'll hear comments like "I see how that would help me."

Consistently, the three gets will take you to *their there* and then help you get them to where they want to be and could be.

### Push Their Buttons — Positively

Engaging people in *their there* takes you outside your comfort zone. Now we're going to suggest something that will take you way, way outside your comfort zone. Think of it as "extreme engagement." This isn't something you need to do all the time. In fact, choose your moments very, very carefully. You can turn an encounter that's going nowhere into a memorable moment that leads directly to a great outcome.

In this approach, you won't just engage the other person. You'll provoke the person. It's a risky approach, but sometimes it's the only way to get through to a person who's completely disengaged.

Real engagement is hard work, and we sometimes need to make other people work at it by shaking them out of their inertia. The goal in this case isn't to force people to move to *our here* but rather to open their eyes to *their there* so they can see how they can make their own situation better.

Provoking people is a powerful approach that can quickly turn negative situations around. Use it carefully and sparingly. The key is not just to provoke but to provoke in specific ways that evoke the three gets of engage. So prepare before you provoke, by focusing clearly on the people you want to engage, what their situation is and what solutions they need. Go to *their there* and identify the real reasons for their disconnect. And then confront them with the intent of helping them move forward.

### Engage Across Cultures

Brian Adams, the director of the Griffith University Multi-Faith Center in Brisbane, Australia, is an authority on how to engage with others and collaborate across cultures. Adams says that if you can master just seven words or phrases in a language, you can create an immediate connection:

- Say the person's name properly in his or her native language.
- Say hello.
- Offer a proper greeting.
- Say thank you.
- Say, "I appreciate your time with me."
- Offer a proper farewell when your interaction comes to a close.

Follow Adams' four guidelines for engaging across cultures: First, have courage. Many are hesitant to reach out to someone from another culture because they don't want to look foolish or cause offense. Second, show respect. You don't need to agree with everything the other person says, but assume you have as much to learn from the person's culture as that person has to learn from yours. Third, be curious. Show that you're interested in the other person's history, job, relationships and life. Fourth — and perhaps most important of all — exhibit humility and a good sense of humor. Apologize in advance for any inadvertent cultural slips you might make, and then join in the laughter if you screw up. In the process, you'll strengthen bonds with people who may still be trying to learn a new language or adapt to a new culture themselves. While they may chuckle, they'll admire you for reaching out to them in *their there*.

The cultural challenges aren't the only ones you'll encounter when you want to exert positive influence. While 70-year-olds, 40-year-olds and 20-year-olds may work together and share the same recent events, they have very different pasts, and in effect they come from very different cultures. As a result, they often wind up misunderstanding or resenting each other.

Connecting across cultures and ages isn't difficult if you're willing to take the first step. At work and in your personal life, make it a point to seek out relationships with people from other countries and backgrounds and with people who are older or younger than you. When you connect with people from different backgrounds and ages, they'll offer you new perspectives and new ideas. You'll learn from their successes and sometimes avoid their mistakes. Many times they'll show you an entirely different way of solving problems or approaching life. They may forever change the way in which you view your own world. ●

## STEP #4 When You've Done Enough … Do More

Real influence doesn't just mean meeting people's expectations. It means going so far beyond them that you make yourself unforgettable.

### Do More Before, During and After

To connect in a way that makes you unforgettable, you need to do more, a lot more. You automatically do

more for the people you care about deeply, but you can go beyond what's expected in *any* relationship. When you do, you make a statement about who you are as a person and as a professional. "Overdelivering" makes you stand out in the moment and makes people remember you later. The response will be gratitude, respect or even awe.

Doing more isn't just a one-time thing but an ongoing practice. For maximum effect, you'll want to focus on three distinct times when you can do more: before, during and after an interaction.

• **Doing More Before:** When you do more before you even begin a relationship, you're immediately telling people that you're not just in it for yourself. When you begin interactions by doing more, sometimes even taking a risk in the process, you form instant bonds with people who are tired of being ripped off, manipulated or given the bare minimum of service. It's about
a mindset that starts not with results but with relationships. You may not have any clue where those relationships will lead ... but that's part of the excitement of real influence.

• **Doing More During:** It's crucial to succeed at the task you're undertaking. But there's doing the task and 's turning that task into something greater. When you do the latter, people remember you and want to give back to you. Think about every project you are involved in right now, and ask yourself, what can I do to bring a little more value? What can I do that's a little more than what people usually do in this situation? To help the people around me, is there something else I can do, say, bring, offer or commit to? Then offer your help fully and generously without thinking about what you might get in return. You can make a lifelong impression by doing more in an interaction.

• **Doing More After:** Doing more doesn't end when an interaction does. In fact, you can often add tremendous value long afterward. And one of the most powerful ways to do that is simply by expressing your gratitude. Even when people know we're grateful, telling them is a gift of great value. Thank the person for something specific, acknowledge the effort it took and tell the person how his or her action made a difference in your life.

When you find ways to help other people learn, grow, gain, avoid problems, make progress and achieve their goals, you form the basis for ongoing results, enriched relationships and an integrity-based reputation. And that will lead to real, lifelong influence.

### Do More in All Three Value Channels

The most powerful ways to do more in a business relationship usually don't involve writing a check or donating to charity. And in personal relationships, they don't involve giving your children bigger allowances or buying an expensive gift.

The best way to create real influence is to do more in ways that touch people's hearts and minds. Here are three ways to do this:

• **Expand their thinking ("the insight channel").** Find ways to help them see new insights, reframe their situation, gather new information and find new meaning in their lives.

• **Make them feel better ("the emotional channel").** Find ways to help them feel energized, capable, supported, empowered, successful, happier or valued.

• **Take effective action ("the practical channel").** Find ways to help them take action for themselves or for people they care about. Help them resolve issues, solve problems, build relationships, get projects done or accomplish tasks.

Your goal is to make things better for them in ways that will make you memorable.

### Ask Other People to Do More

But don't do too much. To exert real influence, don't insist on doing more all on your own. Instead, open your arms to other people who want to help. Just as you've invited them to join in your great outcome, allow them to make it even greater by adding value.

When you do this, these people will contribute ideas you'd never think of on your own. By bringing them into the picture, you increase the chances that a great outcome will succeed, and in turn you increase your own positive influence.

When you look for other people to add value, be careful not to limit yourself to "experts" or people with the same experience and background as yours. Instead, look for people from different backgrounds who've done and experienced things you never have. These are the people who can often *do more* in unexpected and compelling ways. ●

## Taking Real Influence to the Next Level

When you practice connected influence, you can transform vulnerability into triumph, create a lasting legacy and repair even the most damaged relationships.

## Let Adversity Lead You to Great Outcomes

Millions of people fail to achieve great influence because they're stuck in "I can't." They have a host of highly persuasive reasons why they can't create great outcomes and get others to buy into them.

But the truth is that our own setbacks or tragedies often lead us to missions that change our lives or even the world. An injured soldier and his friends and family started the Wounded Warrior Project. The Susan G. Komen Foundation raises millions in honor of a young woman who died of breast cancer. A First Lady who triumphed over substance abuse founded the Betty Ford Center.

One common thread in the stories of positive influencers who have been able to turn adversity into great outcomes is their determination to bring something positive from their experiences. A second common thread is that they were able to get out of *their there* and move to the there of other people in need. And the third is that many of them took a powerful first step: They shared their vulnerability openly. When you're in a vulnerable position, realize that you're not alone.

If you have endurance, tenacity and resilience — along with a big dose of courage — you have the tools you need to survive. You also have the power to wield positive influence and to turn setbacks into successes.

## Influence by Getting out of the Way

The time may come to let someone else continue your legacy. This can be wrenching, because — like leaving home when you reach adulthood — it means letting go of a part of yourself.

But if you're strong enough to get out of the way so others can take over, you can ensure that your great outcome lasts forever. That's why letting go is a challenge that power influencers are willing to face head-on.

By stepping aside gracefully at the right time, you actually expand your influence.

Here's something else to think about if you reach a point when it's time to hand off a great outcome. John Glenn, the first American astronaut to orbit the Earth, later became a U.S. senator. John Grisham had a successful career as a lawyer before he became a best-selling fiction writer. So when it's time to say farewell to one great outcome, consider this: Maybe you're just opening the door to the next one.

## Influence Positively After You've Made Big Mistakes

In an ideal world, we'd all be ideal people. We'd never act stupidly, say hurtful things, lash out blindly or behave unethically. Of course, that world doesn't exist. All of us screw up occasionally. To repair the damage, we need to learn how to make things right after we've made them wrong.

The first step is the toughest one: facing your mistakes head-on. Often we shy away from doing this because we're too defensive or too ashamed to look honestly at the stupid things we've done. But mistakes don't make us weak or bad — they simply make us human.

Be brave enough — and humble enough — to make amends to the people you've hurt. Spell out what you did or failed to do, and say, "I'm sorry, and I was wrong." Describe how your mistake harmed the other person. State your commitment to avoiding this mistake in the future. Ask the person what you can do to make up for your mistake, and then do it.

Take a hard look at why you made each mistake in the first place. Real influence isn't about dwelling on the negative. Instead, it's about learning from mistakes.

## Let Gratitude Magnify Your Influence

Gratitude is one of the themes we heard most often from our group of power influencers. Dozens of influencers eagerly shared their stories about people who'd helped them advance in their careers and become better people. These stories made us feel grateful to the people who shared them with us.

Interestingly, there's even a scientific reason for this. It's called "mirroring." The human brain contains "mirror neurons" — specialized cells that cause us to respond to other people's actions and emotions as if we're experiencing them ourselves. Thus, when you perform an act of gratitude, the person who's listening to you feels a strong sense of gratitude as well. And that immediately creates a stronger bond between the two of you.

So if you want to magnify your influence, share your appreciation whenever you can. And if you find yourself trapped in a cycle of negativity, actively break out of it and start a brand-new cycle of appreciation instead. ●

## The Irresistible Pull of Irrational Behavior

by Ori Brafman and Rom Brafman

### THE SUMMARY IN BRIEF

Although most of us think of ourselves as rational, we're much more prone to irrational behavior than we realize.

What psychological forces underlie our own irrational behaviors? How do these forces creep up on us? When are we most vulnerable to them? How do they affect our careers? How do they shape our business and personal relationships? When do they put our finances, or even our lives, at risk? And why don't we realize when we're getting swayed?

In *Sway: The Irresistible Pull of Irrational Behavior*, brothers and authors Ori and Rom Brafman explore several of the psychological forces that derail rational thinking. Wherever they looked — across different sectors, countries and cultures—the authors saw different people being swayed in very similar ways. We're all susceptible to the sway of irrational behaviors. But by better understanding the seductive pull of these forces, we'll be less likely to fall victim to them in the future.

### IN THIS SUMMARY, YOU WILL LEARN:

- How the natural aversion to loss leads many people to ignore the facts, put on blinders and chase a loss in the hopes of recovering something often unrecoverable.
- What happens when you can't navigate the swamp of commitment.
- How looks can be deceiving, especially when they assign an inaccurate value to something or someone based on an initial impression.
- Why interviews are often like first dates, and how hiring managers need more structure in their interviews in order to truly find the right-fit candidate.
- Why every individual is a psychological chameleon.

## Dealing With Loss

A growing body of research reveals that our behavior and decision making are influenced by an array of psychological undercurrents that are much more powerful and pervasive than most of us realize. The interesting thing about these forces is that, like streams, they converge to become even more powerful. Charting these psychological undercurrents and their unexpected effects, we can see where the currents are strongest and how their dynamics help us understand some of the most perplexing human mysteries.

### Oversensitive Egg Shoppers

Professor Daniel Putler, a former researcher at the U.S. Department of Agriculture, has spent more time thinking about eggs in a year than the rest of us spend in a lifetime. He carefully tracked and studied every aspect of egg sales in southern California. Looking at the data, he found some interesting patterns. Egg sales were typically higher during the first week of each month. Not surprisingly, they were abnormally high in the weeks leading up to Easter, only to experience a sharp decline the week after. Poring over cash-register data that reflected egg-price fluctuations, Putler identified what is referred to in economics as an "asymmetry."

Traditional economic theory holds that people should react to price fluctuations with equal intensity whether the price moves up or down. If the price goes down, we buy more. If the price goes up, we buy less. Economists wouldn't expect people to be more sensitive to price increases than to price decreases. But Putler found that shoppers completely overreacted when prices rose.

It turns out that, when it comes to price increases, egg buyers are a sensitive bunch. If you reduce the price of eggs, consumers buy a little more. But when the price of eggs rises, they cut back their consumption by *two and a half times*. The feeling of dread over a price increase is disproportionate — or asymmetric — to the satisfaction felt when a good deal arises.

We experience the pain associated with a loss much more vividly than we do the joy of experiencing a gain. Putler's research illuminates a mystery that economists have been grappling with for years. For no apparent logical reason, we overreact to perceived losses.

### So Long, Martha's Vineyard

According to Columbia Business School professor Eric Johnson, the more meaningful a potential loss is, the more loss averse we become. In other words, the more there is on the line, the easier it is to get swept into an irrational decision.

If anyone knows about having a lot on the line, it's Jordan Walters of the Silicon Valley branch of investment house Smith Barney. He remembers one client in particular, whose biotech startup purchased by a public company. The client had it made and was planning to retire on Martha's Vineyard.

But Walters pointed out to his client that investing the vast majority of his wealth in his former biotech company's stock would be putting all his eggs in one basket. It would have made more sense to diversify, and Walters came up with a plan to sell a predetermined percentage of his client's holdings every quarter in order to "take the emotion out of the decision."

But the client wanted to ride the stock even higher. He had just sold his company and made it big. Why stop

now? "What happened," Walters recalled, "when he came in and the stock was at $47, we sold maybe 10 percent of his total position." Shortly after that, the stock began to drop and hit $42. The client said that if the stock went back to $47, he would sell.

Sensing that money was starting to slip through his fingers, the client developed an aversion to loss. Walters realized that his client was so eager to make up for a loss that he was becoming oblivious to the risks he was taking. From Walters' rational perspective, there was nothing magical about the $47 stock price, and there was no guarantee that it would get back up there. On the flip side, the stock was liable to slip even further. But for the client, selling at anything less than $47 represented a loss.

The stock dropped to $38, and the client decided he would sell if it went back up to $44. Stock traders call this kind of behavior "chasing a loss" — when investors ignore the current data, put on blinders and proceed with the singular purpose of recovering as much of their loss as possible.

Walters explained to his client that holding on to the position in hopes that the stock price would recover was risky. But the client ignored Walters' advice and kept his stake. The stock ended up at 12 cents, and the only value the client got out of it was the initial 10 percent he sold up front. Painful as it may have been, the client could have sold at $42, perhaps giving up the dream of a fancy yacht but keeping the majority of his assets and realizing his plan to retire to Martha's Vineyard. ●

## The Swamp of Commitment

We've all experienced the pervasive pull of commitment in some form or another; whether we've invested our time and money in a particular project or poured our energy into a doomed relationship, it's difficult to let go even when things clearly aren't working. As difficult as it can be to admit defeat, however, staying the course simply because of a past commitment hurts us in the long run.

Independently, each of these two forces — commitment and aversion to loss — has a powerful effect on us. But when the two forces combine, it becomes much harder to break free and do something different.

### The $20 Auction

It's precisely because of the compounding effect of commitment and aversion to loss that students in Max Bazerman's negotiations class at Harvard Business School would do well to hold on to their wallets when he introduces his "$20 auction."

On the first day of class, Bazerman announces a game in which he offers up a $20 bill for auction. Everybody is free to bid; there are only two rules. The first rule is that bids are to be made in $1 increments. The second rule is a little trickier: The winner of the auction wins the bill, but the runner-up must still honor his or her bid while receiving nothing in return.

At the beginning of the auction, the hands shoot up quickly, with a flurry of bids following. As Bazerman described it, "The pattern is always the same. The bidding starts out fast and furious until it reaches the $12-to-$16 range."

At this point, it becomes clear to each of the participants that he or she isn't the only one with the idea of winning the $20 for cheap. Everyone but the two highest bidders drops out of the auction, and without realizing it, those two students are locked in. Up to this point, the students were looking to make a quick dollar; now neither one wants to be the sucker who paid good money for nothing. This is when the students become committed to the strategy of playing not to lose.

Like a runaway train, the auction continues, with the bidding going up to $18, $19 and $20. From a rational perspective, the obvious decision would be for the bidders to accept their losses and stop the auction before it spins even further out of control. But the students are pulled by both the momentum of the auction and the looming loss if they back down — a loss that is growing greater by the bid. The two forces, in turn, feed off each other: Commitment to a chosen path inspires additional

### Kahneman on Loss Aversion

Nobel Prize-winning economist Daniel Kahneman, who, together with Amos Tversky, first discovered and chronicled the phenomenon of loss aversion, offers a telling reflection of our psychology during such situations. "To withdraw now is to accept a sure loss," he writes about digging oneself into a deeper hole, "and that option is deeply unattractive." When you combine this with the force of commitment, "the option of hanging on will therefore be relatively attractive, even if the chances of success are small and the cost of delaying failure is high."

Aversion to loss, on its own, is strong. But when it converges with commitment, the force becomes an even more powerful influence in shaping our thinking and decision making.

bids, driving the price up, making the potential loss loom even larger.

And so students continue bidding: $21, $22, $23, $50, $100, up to a record $204. Over the years Bazerman has conducted this experiment, he has never lost a penny (he donates all proceeds to charity). Regardless of who the bidders are — college students or business executives attending a seminar — they are always swayed. ●

## The Value of the Stradivarius on the Subway

To understand how value attribution works, we must journey beneath the streets of Washington, D.C. On a January morning in 2007, L'Enfant Plaza subway station was about to be filled with music. At exactly 7:51 a.m., during rush hour, an ordinary-looking man dressed in jeans and a baseball cap nonchalantly took out his $3.5 million Stradivarius violin and got ready to play. The man was Joshua Bell, one of the finest violinists alive, who regularly performs to sold-out crowds in the best concert halls. Unbeknownst to any of the commuters, Bell was taking part in an undercover field study conducted by *The Washington Post*.

Over the next 43 minutes the concert continued, but on that morning there was no thunderous applause. Here was one of the best musicians in the world playing in the subway station for free, but no one seemed to care. Of the 1,097 people who walked by, hardly anyone stopped. One man listened for a few minutes, a couple of kids stared, and one woman, who happened to recognize the violinist, gaped in disbelief.

Now, the commuters might have been in too much of a hurry to pay attention to Bell. But think about how Joshua Bell appeared to the subway riders. He wasn't dressed in formal attire; he stood on no stage. For all intents and purposes, Bell looked like your average street performer. Even though he didn't *sound* like a mediocre violinist, he looked the part. Without realizing it, the commuters attributed the value they perceived — the baseball cap, jeans, subway venue — to the quality of the performance. As they passed Bell, most subway riders didn't even glance in his direction. Instead of hearing an outstanding concert, they heard street music.

### Value Attribution

It's easy to understand why the subway riders reacted the way they did. Value attribution acts as a mental shortcut to determine what's worthy of our attention. When we encounter a new object, person or situation, the value we assign to it shapes our further perception of it, whether it's our dismissal of a curiously inexpensive antique at a flea market or our admiration of a high-priced designer bag in a boutique. Imagine stumbling upon a discarded armoire on the street. Do you see it for the rare treasure it might be? Or is it your knee-jerk reaction that *something* must be wrong with it? In the same way, value attribution affects our perceptions of people. We may turn down a pitch or idea that is presented by the "wrong" person or blindly follow the advice of someone who is highly regarded.

That is not to say that a person's title doesn't count for anything or that a product's price usually fails to give you a good idea of its true value. But when we apply that price tag (be it real or metaphorical) too broadly, we compromise our rationality. ●

## The First-Date Interview

Here's where value attribution meets up with a sway called the *diagnosis bias* — our propensity to label people, ideas or things based on our initial opinions of them — and our inability to reconsider those judgments once we've made them.

When you think about it, the standard job interview is a lot like a first date. As Professor Allen Huffcutt explained, "You don't have a clear format to follow and you just let the interview go as it will." It's easy to understand why companies would be so drawn to the "first-date" interview format. After all, managers will spend a lot of time with the person they hire; they want to make sure the person is a good fit.

### Standard Interview Questions That Don't Cut It

The standard job interview questions are familiar to all of us, but they make Huffcutt cringe. He shared a list of the top 10 most commonly asked questions during an interview. You'd think that, given the frequency with which they're asked, at least *some* of them would be useful. But from the whole list, Huffcutt gave a passing mark to only one question.

1. Why should I hire you?
2. What do you see yourself doing five years from now?
3. What do you consider some of your greatest strengths and weaknesses?
4. How would you describe yourself?
5. What college subjects did you like the best

and the least?

6. What do you know about our company?
7. Why did you decide to seek a job with our company?
8. Why did you leave your last job?
9. What do you want to earn five years from now?
10. What do you really want to do in life?

When we look at these questions more closely, we see that they cluster around specific themes. The first group (questions 1, 3 and 4) is taken from the Barbara Walters school of interviewing. The second group (questions 2, 9 and 10) requires the candidates to gaze into the future. But unless they're applying for a job at a psychic hotline, their predictions carry little weight. The final cluster (questions 5, 7 and 8) takes the opposite approach and turns the interviewer into a historian. The thing is, when people revisit the past, they often reconstruct it. That leaves question No. 6, "What do you know about our company?" as the winner. "That can actually be a decent question," explained Huffcutt. "That gets into whether they took the time to research your company, which can be a good sign — at least better than the previous questions."

### Does a Good Interview = Good Job Performance?

When researchers conducted a meta-analysis — a broad study incorporating data from every scientific work ever conducted in the field — they found there's only a small correlation between first-date (unstructured) job interviews and job performance. The marks managers give job candidates have very little to do with how well those candidates actually perform on the job.

It all comes back to the dating analogy. "How many people go on a first date," Huffcutt reflected, "get a certain impression; keep dating the person; and then, over time, see the reality of the person? That first impression can be totally wrong. You later wonder, 'What in the world was I thinking? How did I not see these things?' The same thing happens in the interview. You've got a very limited time exposure, applicants put on their best show and — not surprisingly — you don't see the realities of the person in 20 minutes."

When it comes to interviews, managers need to restrain themselves from delving into first-date questions (i.e., What do you see yourself doing five years from now?) and focus instead on specific past experience and "job-related hypothetical scenarios," said Huffcutt. The idea is to focus on relevant data and squelch any questions that invite the candidate to predict the future, reconstruct the past or ponder life's big questions. It's all about the important information. What kind of accounting software are you familiar with? What experience do you have running PR campaigns?

But even then, interviews aren't that great as a predictive tool, because some people simply know how to sell themselves better than others. As counterintuitive as it sounds, you don't need interviews at all. Research shows that an aptitude test predicts performance just as well as a structured interview.

The point is, when we're in the position to make a diagnosis, we all become overly confident in our predictive abilities and overly optimistic about the future. ●

## The Chameleon Effect

To look at another trap of diagnosis, let's head to Israel, where 105 soldiers were about to participate in a grueling 15-week commander training program. It was a rigorous and intense process, requiring harsh physical training, mental concentration and 16-hour workdays.

The would-be commanders didn't know it, but this particular course was going to be different from any previous to that date. Before this session's classes started, psychologist Dov Eden informed the training officers leading the program that the army had accumulated comprehensive data on each of the trainees.

Based on this information, Eden told the officers that each soldier had been classified into one of three "command potential" (CP) categories: high, regular and unknown (due to insufficient information). Trainees from each classification were divided equally into four trainee classes. "You will copy each trainee's CP," Eden told the

### The Chameleon Effect in the Workplace

This kind of phenomenon is by no means limited to the military. A meta-analysis conducted by psychologists at SUNY Albany suggested that these same diagnostic effects operate in the workplace. If you've ever been fortunate enough to work for a boss who values you, you'll know that you tend to rise to meet the high expectations set for you. On the other hand, there's nothing that will make you feel more incompetent and demoralized than a supervisor who is convinced you don't have what it takes.

officers, "into his personal record. You are requested to learn your trainees' names and their predicted CP by the beginning of the course."

The trainees had no idea that any of this was going on. And the officers didn't know that the so-called command potential, along with the supporting data, was bogus. Scores were randomly assigned to the trainees and had nothing to do with their intelligence, past performance or ability.

When Eden returned 15 weeks later, he discovered something remarkable. At the end of the course, the soldiers took a paper-and-pencil test that measured their new knowledge of "combat tactics, topography, standard operating procedures, and such practical skills as navigation and accuracy of weapon firing." This test wasn't rigged; it was part of the normal procedure. But this is where the effects of assigning soldiers to the different command potential categories became apparent.

### The Results

The soldiers who the training officers *thought* had a high CP score performed better on the test (scoring an average of 79.98) than their "unknown" and "regular" counterparts (who scored 72.43 and 65.18, respectively). Simply being labeled, however arbitrarily, as having high leadership potential translated directly into actual improved ability — improved by a staggering 22.7 percent. Remember, neither the trainers nor the trainees had any idea what was going on. Without realizing it, the trainees had taken on the characteristics of the diagnoses ascribed to them.

This molding process becomes self-perpetuating: When we take on the characteristics assigned to us, the diagnosis is reinforced and reaffirmed. Take a look at what happened with the Israeli soldiers and officers. When Eden informed the trainers that the command potential scores had actually been fabricated and assigned randomly, they staunchly disagreed. In an attempt to prove their point, they offered up evidence that the high-potential soldiers indeed performed better on their exit exams. This, of course, is circular logic. The exit tests confirmed the initial diagnosis; the trainees had merely molded their abilities to the diagnoses ascribed to them.

When we brand or label people, they take on the characteristics of the diagnosis, displaying the chameleon effect. We're constantly sending and receiving cues and subtle messages to and from one another — swaying and being swayed, even if our rational brain hasn't been let in on the secret. As this study illustrates, we can't help but take on the characteristics others ascribe to us. There's a hidden dance at work within even the most seemingly straightforward interactions — and in this way, we're all psychological chameleons. ●

## What's Fair Is Fair

Researcher Joseph Henrich decided to test the cultural universality of fairness. To begin with, Henrich replicated a money-splitting experiment among UCLA graduate students. He decided to use a dollar amount that he knew would be significant to students and came up with $160, which translated to 2.3 days' worth of work at the grad students' standard university wage of $9 an hour. Participants were randomly paired with strangers in separate rooms. Each participant was told that he or she had been paired with a partner whose identity would not be revealed. The pair would be given the combined sum of $160 — but it was up to them to decide how to split it. The catch, though, was that the students couldn't talk to each other, flip a coin or enter into negotiations. Instead, one person was randomly chosen to decide how to split the money. The splitting participant could divvy up the money any way he or she wanted. The receiving partner was then presented with the offer and had to decide whether to accept it or not. If the receiving partner accepted, both participants would collect their shares. If he or she rejected the offer, *both* parties would leave empty-handed.

### Playing the Game

The most common split offered in the UCLA study was 50/50, which the receiving partner always accepted. After the game was over, Henrich interviewed the participants to see what they had been thinking as they considered their offers. The same word came up again and again: fairness. Most thought that if they offered less than half, their partners wouldn't accept the offer. It turns out they were right. Asked whether they would have accepted an 80/20 split — an offer of $32 — virtually all the partners scoffed. "That would be unfair," they protested. They'd rather go home empty-handed. Some even went so far as to say that they would have rejected *any* offer less than 50 percent.

We don't typically think of fairness as an irrational force, but it dramatically affects our perceptions and sways our thinking. We've all been in situations where we had to negotiate a position. From an objective, logical perspective, it would make sense to focus strictly on the issue at hand: the offer we're presenting or the price we're asking for. As it turns out, because of these fairness sways, it's not always true that what's fair is fair. ●

## Motivation Through Compensation

Managers are always looking for ways to better motivate people; they have long operated under the assumption that monetary incentives increase motivation. But psychologists are beginning to discover that the connection between the two is trickier than it first appears.

Economists can debate the reasons that financial rewards backfire. But researchers at the National Institutes of Health (NIH) have been able to pinpoint the neurophysiology behind this paradox. In an experiment, the NIH researchers placed participants in a specially modified MRI machine fitted with a computer monitor and a simple joystick. Lying inside the machine, the subjects played a video game reminiscent of the Atari era.

At the start of each round of the game, a circle, square or triangle would appear on the screen. Each shape held a unique meaning: A circle meant that if you succeeded in completing a task — zapping a figure as it appeared on the screen — you'd earn a monetary reward. However, when subjects saw a square instead of a circle, they braced themselves for bad news. The object of the game would be the same — zap the figure — except that failing to do so would result in a monetary penalty. If the participants saw a triangle, it meant that no money was on the line; whether they hit the target or not, they would neither lose nor gain any money that round.

While the participants were playing the game, they were shown a running tab of their earnings and losses. Meanwhile, the scientists monitored their brain activity and noticed that every time a circle or square appeared — that is, every time there was money to be gained or lost — a certain part of the brain lit up. This region, which remained dormant when the triangle appeared and no money was at stake, is called the *nucleus accumbens*. Evolutionarily speaking, the nucleus accumbens is one of the most primitive parts of the brain — one traditionally associated with our "wild side." Scientists call this region the pleasure center because it's associated with the high that results from drugs and gambling.

At its most extreme, the pleasure center drives addiction. The MRI study surprised the researchers because it revealed that the pleasure center is also where we react to financial compensation. And the more money there is on the line, the more the pleasure center lights up. A monetary reward is — biologically speaking — like a tiny dose of a drug.

### Pleasure Versus Altruism

Now compare this reaction with our neurological reaction to altruistic behavior. In 2006, after the NIH study, Duke scientists asked subjects to play a similar game, but instead of earning money for themselves, the participants were told that the better their score, the more money would be donated to charity. In the MRI images, the pleasure center remained quiet throughout the game, but a different region of the brain, the *posterior superior temporal sulcus*, kept lighting up — the altruism center. This is the same part of the brain responsible for social interactions — how we perceive others, how we relate and how we form bonds.

Considering the two studies, scientists discovered that unlike the parts of our brain that control movement and speech, the pleasure center and the altruism center cannot both function at the same time. It's as if we have two "engines" running in our brain that can't operate simultaneously. We can approach a task either altruistically or from a self-interested perspective. The two different engines run on different fuels and also need different amounts of those fuels to fire up. It doesn't take much to fuel the altruism center: All you need is the sense that you're helping someone or making a positive impact. But the pleasure center seems to need a lot more.

Everywhere we look, we see efforts to provide concrete financial incentives: from compensating star teachers whose students do well on standardized tests to giving tax credits to people who house Hurricane Katrina refugees. Of course these individuals deserve recognition for their efforts. The problem with offering incentives, though, is that they carry a lot of baggage with them. For many, throwing money into the mix diminishes altruistic motivation and introduces unexpected behavior. ●

## Dissenting Justice

In a study conducted by Solomon Asch to observe group dynamics, each participant was placed in a room with several other people. The participants were told they would be tested for visual acuity. It was pretty straightforward; the lengths of the lines they were shown were so glaringly different that you didn't need a magnifying glass or a ruler to tell the difference.

But what the participant didn't know was that the

other "subjects" in the room were actors, and they had all been instructed to give the same wrong answer. As the actors called out their wrong answers one by one, the real participant was bewildered. But something strange happened: Rather than stick to their guns, most participants began to doubt themselves and their lone dissenting opinion. Time and again, they figured that it was best to go along with the group — 75 percent of the subjects joined the actors in giving the wrong answer in at least one round.

### Ferris Bueller and Group Dynamics

Within every group dynamic, there are four distinct roles. The first role is that of the *initiator*: the person who always has the ideas, likes to start projects and advocates new ways of moving forward. Think of someone like Matthew Broderick's character, Ferris Bueller, in *Ferris Bueller's Day Off*. The entire movie is about Ferris' creative ideas for something fun to do: ditch school, take a vintage car for a joyride, sneak into a restaurant, attend a baseball game and star in a parade. When you're in the same room with an initiator, it's hard not to get excited about whatever new project — or idea he or she has in mind.

If initiators are represented by Ferris, their opposites — *blockers* — are like Ferris' friend Cameron. Ferris wants to take a joyride; Cameron is afraid of getting caught. Whatever new idea the initiator comes up with, the blocker finds fault with it. If hanging out with Ferris makes us want to go out and do something fun, spending a minute with Cameron makes us reluctant to do anything. Of course, it's easy to think of blockers as pure curmudgeons. But they play a vital role in maintaining a balance within a group.

Initiators and blockers are bound to lock horns, which is when the *supporter* steps in, taking one side or the other. If there's a decision to be made, the supporter will side with either the initiator or the blocker. The fourth role, that of the *observer*, stays fairly neutral and tends to merely comment on what's going on.

Most of the tension in the group lies between the initiator and the blocker. Initiators are all about making new things happen. They have a wealth of fresh ideas. In contrast, blockers question the merit or wisdom of new decisions. It's easy to see why people and organizations are naturally attracted to initiators.

Whatever the situation, a dissenting voice can seem, well, annoying. And yet, as frustrating as it can be to encounter blockers, their opinions are absolutely essential to keeping groups balanced. It's natural to want to dismiss a blocker's nay-saying, but a dissenting voice can often act as the dam that holds back a flood of irrational behavior. ●

## Epilogue

Jordan Walters, the financial adviser from Smith Barney mentioned earlier, offers an example that illuminates his perspective on overcoming the psychological force of our irrational aversion to loss: "Let's say you're traveling on a long trip and you have a flat tire," Walters begins. After fixing the tire, you have two choices: You can look for shortcuts to make up the lost time and completely rearrange your trip, or you can continue on your way and accept that you're running behind schedule. Walters advocates the latter, "long-view" method: You might be a little late, but "you're on your way again and you still know where you're going." Rearranging your trip on the fly, on the other hand, can get you lost.

When things go wrong, we can either apply a short-term Band-Aid solution or remember that in the grand scheme of things, it's only a minor misstep. Having a long-term plan — and not casting it aside — is the key to dealing with our fear of loss.

Living in a time when we can predict hurricanes, treat diseases with complex medical interventions, map the universe and reap the benefits of systemized business approaches, it's easy to forget that under the surface we humans are still influenced by irrational psychological forces that can undermine a logical perspective on the world around us. The fact is, all of us are swayed at times by factors that have nothing to do with logic or reason. From managers looking to hire a job applicant to trained psychiatrists studying why we act the way we do, each of us brings a variety of different experiences, emotions and perceptions to our thinking. It is only by recognizing and understanding the hidden world of sways that we can hope to weaken their influence and curb their power over our thinking and our lives. ●

## What *Really* Separates World-Class Performers from Everybody Else

by Geoff Colvin

### THE SUMMARY IN BRIEF

Few people are truly great at what they do. But why aren't they? Why don't they manage businesses like Jack Welch or play golf like Tiger Woods?

Asked to explain why a few people truly excel, most of us offer one of two answers. The first is hard work. Yet hard workers aren't always great. The other possibility is that the elite possess an innate talent for excelling in their field. The trouble is, scientific evidence doesn't support the notion that specific natural talents make great performers.

So what's the real solution to the mystery of high performance? According to author Geoff Colvin, both the hard work and natural talent camps are wrong. What really makes all the difference is a highly specific kind of effort called "deliberate practice."

Based on extensive research, *Talent Is Overrated* shares the secrets of extraordinary performance and how to apply these principles to our lives and work. Colvin explains cutting-edge research and eye-opening facts that debunk the myth of innate talent. Most profoundly, Colvin shows that great performance isn't reserved for a preordained few. The price may be high — but it is available to us all.

### IN THIS SUMMARY, YOU WILL LEARN:

- The real source of great performance.
- Why innate abilities are not necessarily indicative of great performance.
- The true role of intelligence and memory in high achievement.
- Why "deliberate practice" is the real method for achieving great performance.
- How to apply the principles of great performance in your life.
- How to apply the principles of great performance in your organization.

## The Mystery

The odds are that few if any of the people around you are truly great at what they do — awesomely, amazingly, world-class excellent.

Why — exactly why — aren't they? Why don't they manage businesses like Jack Welch, or play golf like Tiger Woods, or play the violin like Itzhak Perlman? The hard truth is that virtually none of them has achieved greatness or come even close, and only a tiny few ever will.

This is a mystery so commonplace that we scarcely notice it, yet it's critically important to the success or failure of our organizations, the causes we believe in, and our own lives.

Extensive research in a wide range of fields shows that many people not only fail to become outstandingly good at what they do, they frequently don't even get any better than they were when they started.

Hundreds of research studies have converged on some major conclusions that directly contradict most of what we all think we know about great performance. Specifically:

- The gifts possessed by the best performers are not at all what we think they are.
- Even the general abilities that we typically believe characterize the greats are not what we think.
- The factor that seems to explain the most about great performance is something the researchers call "deliberate practice." Exactly what that is and isn't turns out to be extremely important.

Understanding where extraordinary performance comes from is crucial. The 19th-century humorist Josh Billings famously said, "It ain't so much the things we don't know that get us into trouble. It's the things we know that just ain't so." The first step in understanding the new findings on great performance is using them to help us identify what we know for sure that just ain't so. ●

## Talent Is Overrated

If it turns out that we're all wrong about talent, that's a big problem. Our views about talent, which are extremely deeply held, are extraordinarily important for the future of our lives, our children's lives, our companies and the people in them. Understanding the reality of talent is worth a great deal.

A number of researchers now argue that giftedness or talent means nothing like what we think it means, if indeed it means anything at all.

When researchers have looked at large numbers of high achievers, at least in certain fields, most of the people who became extremely good in their field did not show early evidence of gifts.

No specific genes identifying particular talents have been found. The most one could say is that if genes exert any influence, it would seem to be much less than the whole explanation for achieving the highest levels of performance.

### What About Tiger?

Researchers on great performance sometimes call Tiger Woods the Mozart of golf, and the parallels do seem striking. Woods' father, Earl, was a teacher, specifically a teacher of young men, and he had a lifelong passion for sports.

Here's the situation: Tiger is born into the home of an expert golfer and confessed "golf addict" who loves to teach and is eager to begin teaching his new son as soon as possible. Earl gives Tiger his first metal club, a putter,

at the age of seven months. Before Tiger is 2, they are at the golf course playing and practicing regularly.

Neither Tiger nor his father suggested that Tiger came into this world with a gift for golf. Tiger has repeatedly credited his father for his success. Asked to explain Tiger's phenomenal success, father and son always gave the same reason: hard work.

### In Search of Business Talent

The overwhelming impression that comes from examining the early lives of business greats is that they didn't seem to hold any identifiable gift or give any early indication of what they would become.

Jack Welch showed no particular inclination toward business, even into his mid-20s. He majored not in business or economics but in chemical engineering and earned a master's and a Ph.D. in that field. At 25, he decided to accept an offer to work in a chemical development operation at General Electric.

If anything in Welch's history to that point suggests that he would become the most influential business manager of his time, it's tough — in fact, impossible — to spot it.

Bill Gates is a more promising prospect for those who want to explain success through talent. He became fascinated by computers as a kid and says he wrote his first piece of software at age 13: It was a program that played tic-tac-toe.

It's clear that Gates' early interests led directly to Microsoft. The problem is that nothing in his story suggests extraordinary abilities.

In surveying the world's business titans we find Welch-like stories more often than Gates-like stories, lacking even a hint of inclination toward the fields or traits that would one day lead to fame and riches.

For most of us, the critical point is that, at the very least, these talents are much less important than we usually think. They seem not to play the crucial role that we generally assign to them, and it's far from clear what role they do play.

## How Smart Do You Have to Be?

Everywhere we see hypersuccessful companies seemingly filled with people who got perfect scores on their SATs.

So it's definitely surprising, at least at first, to find that research doesn't support the view that extraordinary natural general abilities are necessary for high achievement. In fact, in a wide range of fields, including business, the connection between general intelligence and specific abilities is weak and, in some cases, apparently nonexistent. As for memory, the whole concept of a powerful memory is problematic, because it turns out that memory ability is very clearly created rather than innate.

A wide range of research shows that the correlations between IQ and achievement aren't nearly as strong as the data on broad averages would suggest, and in many cases there's no correlation at all.

Many of the most successful people do seem to be highly intelligent. But what the research suggests very strongly is that the link between intelligence and high achievement isn't nearly as powerful as we commonly suppose. Most important, the research tells us that intelligence as we usually think of it — a high IQ — is not a prerequisite to extraordinary achievement.

### How's Your Memory?

The evidence is similar when it comes to that other general ability we often associate with hypersuccessful people, an amazing memory. A large mass of recent evidence shows that memory ability is acquired, and it can be acquired by pretty much anyone.

The widespread view that highly accomplished people have tremendous memories is in one sense justified — they often astound us with what they can remember. But the view that their amazing ability is a rare natural gift is not justified. Remarkable memory ability is apparently available to anyone.

It may seem surprising that off-the-charts general abilities, especially intelligence and memory, are not necessary for extraordinary achievement, but it becomes less surprising when we consider the qualities that highly successful companies and business leaders look for in employees, or rather what they don't look for. It's striking to notice the companies that don't put extreme cognitive abilities at the top of the list, or sometimes even on the list.

The message from these companies raises an important question: Even if superior intelligence and memory aren't the critical factors for success, are the traits the companies seek — team orientation, humor, confidence and so on — reliably related to success across companies, and if so, are they innate traits that you either have or you don't? Research suggests that some personality dimensions do match up with success at certain types of work.

At this point you can't help but wonder if there's anything at all (a) that makes a significant difference to whether you achieve extraordinary performance, and (b) that you can't do anything about it. The answer is yes, of course there is.

What's surprising is that when it comes to innate, unalterable limits on what healthy adults can achieve, anything beyond basic physical constraints is in dispute.

That fact is profoundly opposed to what most of us believe. We tend to think that we are forever barred from all manner of successes because of what we were or were not born with.

But what we'd really like to know is not what does or doesn't stop us, but what makes some people go so much further than others. And what we have discovered so far is not what makes some people excel but rather what doesn't. Specifically:

- It isn't experience.
- It isn't specific inborn abilities.
- It isn't general abilities such as intelligence and memory.

In short, we've nailed down what doesn't drive great performance. So what does?

## A Better Idea

Consider a critically important and highly rigorous scientific study conducted in the early 1990s in Berlin that examined music. The objective of the study was to figure out why some violinists are better than others.

There were three groups of test subjects — we'll call them best, above-average and good. All three groups were spending the same total amount of time on music-related activities.

The violinists were quite certain which activity was most important for making them better: It was practicing by themselves. They all knew it, but they didn't all do it. Though the violinists understood the importance of practice alone, the amount of time the various groups actually spent practicing alone differed dramatically.

The advantage of practice was cumulative. All the research subjects were asked to estimate their weekly practice hours for each year of their violin-playing lives. The results were extraordinarily clear. By age 18, the violinists in the first group had accumulated 7,410 hours of lifetime practice on average, versus 5,301 hours for violinists in the second group and 3,420 hours for those in the third group.

What the authors of the research study called "deliberate practice" makes all the difference. Or, as they stated it with stark clarity in their scholarly paper, "The differences between expert performers and normal adults reflect a lifelong period of deliberate effort to improve performance in a specific domain."

This position was highly significant for two reasons. First, it explicitly rejected the you've-got-it-or-you-don't view. Second, it resolved the huge contradiction in the body of scholarly research on performance and high achievement as well as in our everyday experience. On the one hand, we see everywhere that years of hard work do not make most people great at what they do. On the other hand, we see repeatedly that the people who have achieved the most are the ones who have worked the hardest. How can both sets of observations be true?

The problem, observed the researchers, is that "the current definition of practice is vague." Their framework is not based on a simplistic "practice makes perfect" observation. Rather, it is based on their highly specific concept of "deliberate practice."

Precisely what this means turns out to be critically important. An understanding of it illuminates the path to high achievement in any field, not just by individuals, but also by teams and organizations.

## What Deliberate Practice Is and Isn't

The concept of deliberate practice is quite specific. It isn't work and isn't play, but is something entirely unto itself. What we think of as practice frequently isn't what the researchers mean by deliberate practice.

Deliberate practice is characterized by several elements, each worth examining. It is activity designed specifically to improve performance, often with a teacher's help; it can be repeated a lot; feedback on results is continuously available; it's highly demanding mentally, whether the activity is purely intellectual or heavily physical; and it isn't much fun.

What we generally do at work is directly opposed to the first principle: It isn't designed by anyone to make us better at anything. Usually it isn't designed at all; we're just given an objective that's necessary to meeting the employer's goals and are expected to get on with it.

As for the second principle, the activities that would make us better are usually not highly repeatable. Even in jobs where we do the same few things, we face few (if any) incentives to get better at them by exceeding our limits and discovering what we can't do well.

Feedback? At most companies this is a travesty, consisting of an annual performance review dreaded by the person delivering it and the one receiving it.

Work is often not fun, because getting anything accomplished in the real world is a grind.

If that's life in most companies, then the opportunities for achieving advantage by adopting the principles of great performance, individually and organizationally,

would seem to be huge. In fact they are. Indeed, what's especially surprising about the cluelessness of most organizations with regard to deliberate practice is that the principles are not counterintuitive or hard to grasp.

### What We Need to Know Next

Deliberate practice does not fully explain high achievement — real life is too complicated for that. We're all affected by luck. But more significantly, a person's circumstances, especially in childhood, can powerfully affect his or her opportunities to engage in deliberate practice.

It turns out that deliberate practice can extend one's ability to perform at higher levels far longer than most people believe. In addition, even though performance seems to improve with increased deliberate practice in a wide range of research studies, it must also be true that the relationship cannot be simple and direct in every case.

Regardless of how well practice is designed, another important variable is how much effort a person puts into it.

Frequently when we see great performers doing what they do, it strikes us that they've practiced for so long, and done it so many times, they can just do it automatically. But in fact, what they have achieved is the ability to avoid doing it automatically.

Great performers never allow themselves to reach the automatic, arrested development stage in their chosen field. The essence of practice, which is constantly trying to do the things one cannot do comfortably, makes automatic behavior impossible. Ultimately the performance is always conscious and controlled, not automatic.

## How Deliberate Practice Works

What makes deliberate practice work? It turns out the answer is the same whether we look at business or sports or any other field, and it isn't what you might expect.

Indeed, the most important effect of practice in great performers is that it takes them beyond — or, more precisely, around — the limitations that most of us think of as critical. It enables them to perceive more, to know more and to remember more than most people.

### Perceiving More

Top performers can figure out what's going to happen sooner than average performers by *seeing more.* Sometimes excellent performers see more by developing a better and faster understanding of what they see.

The superior perception of top performers extends beyond the sense of sight. They hear more when they listen and feel more when they touch.

When excellent performers look further ahead than average performers do, they are literally looking into their own future. Knowing what lies ahead for them, they prepare for it and thus perform better. They may be looking only one second ahead, but for them that extra moment makes all the difference.

Much of the power of looking further ahead comes from the simple act of raising one's gaze and getting a new perspective, and doing it not once or occasionally, but using practice principles to do it often and get better at it.

### Knowing More

Top performers in a wide range of fields have better organized and consolidated their knowledge, enabling them to approach problems in fundamentally different and more useful ways.

Many of the best-performing companies explicitly recognized the importance of deep knowledge in their specific field, as opposed to general managerial ability.

Building and developing knowledge is one of the things that deliberate practice accomplishes. Constantly trying to extend one's abilities in a field requires amassing additional knowledge, and staying at it for years develops the critical connections that organize all that knowledge and make it useful.

### Remembering More

How can great performers in every realm recall more than would seem possible? Researchers find that excellent performers in most fields exhibit superior memory of information in their fields. What's the explanation?

All these people have developed what we might call a memory skill, a special ability to get at long-term memory in a fast, reliable way.

Top performers understand their field at a higher level than average performers do, and thus have a superior structure for remembering information about it.

Practice exerts an additional, overarching influence that in a way is even more impressive: It can actually alter the physical nature of a person's brain and body.

Endurance runners have larger-than-average hearts, an attribute that most of us see as one of the natural advantages with which they were blessed. But no, research has shown that their hearts grow after years of intensive training.

We've all had the powerful feeling, when watching or contemplating an extraordinary performer, that in some deep way this person is simply not like us. Great performers really are fundamentally different. Their bodies and brains are actually different from ours in a profound way. But we're wrong in thinking, as

many do, that the exceptional nature of great performers is some kind of eternal mystery or preordained outcome. It is, rather, the result of a process, the general elements of which are clear.

## Applying the Principles in Our Lives

Step one to applying the principles in our lives is knowing what you want to do. Because the demands of achieving exceptional performance are so great over so many years, no one has a prayer of meeting them without utter commitment. The first challenge in designing a system of deliberate practice is identifying the immediate next steps. In a few fields those steps are clear. But in the great majority of careers, and in the advanced stages of all of them, there is no published curriculum, no syllabus of materials that must be studied and mastered.

From this perspective we can see mentors in a new way — not just as wise people to whom we turn for guidance, but as experienced masters in our field who can advise us on the skills and abilities we need to acquire next and can give us feedback on how we're doing.

The skills and abilities one can choose to develop are infinite, but the opportunities to practice them fall into two general categories: opportunities to practice directly and opportunities to practice as part of the work itself.

### Practicing Directly

What separates the great musicians from the rest is how well they perform music. In business we find many analogous situations. The most obvious involve presentations and speeches, and these form the one element of corporate life that is commonly practiced. Yet for most people, practice consists of perhaps a few run-throughs.

Many other important elements of business life can be practiced. One of the most dreaded tasks for many managers is giving job evaluations to their direct reports. The message can be broken down into pieces and each piece analyzed for intent, then practiced repeatedly with immediate feedback from a coach or by video.

The chess model has been used widely in business education for 80 years, but under a different name: the case method. You're presented with a problem, and your job is to figure out a solution. The process of focusing on the problem and evaluating proposed solutions is powerfully instructive.

The practice of top athletes falls into two large categories. One is conditioning. The other category is working on specific critical skills.

Conditioning in business means getting stronger with the underlying cognitive skills that you probably already have. It can mean reviewing the fundamental skills that underlie your work.

Specific skill development is based on focused simulation, and that concept can be applied widely in business. Try to improve a specific aspect of your performance, achieve high repetition and get immediate feedback.

### Practicing the Work

We all face a different way to practice business skills, and that is by finding practice in the work itself. These activities, called self-regulation, are done before, during or after the work activity itself.

## Applying the Principles of Great Performance in Our Organizations

Organizations that apply the principles of great performance follow several major rules:

- Understand that each person in the organization is not just doing a job, but is also being stretched and grown.
- Find ways to develop leaders within their jobs.
- Encourage their leaders to be active in their communities.
- Understand the critical role of teachers and of feedback.
- Identify promising performers early.
- Understand that people development works best through inspiration, not authority.
- Invest significant time, money and energy in developing people.
- Make leadership development part of the culture.

### Applying the Principles to Teams

Turning groups of great individuals into great teams is a discipline in itself, which also operates on the principles of great performance. That's why the best organizations follow one additional rule:

- *Develop teams, not just individuals.* Organizations that are the most successful at building team performance are especially skilled at avoiding or addressing potential problems that are particularly toxic to the elements of deliberate practice, such as the following:
  - Picking the wrong team members.
  - Low trust.
  - Competing agendas.
  - Unresolved conflicts.
  - Unwillingness to face the real issues.

Self-regulation begins with setting goals. The best performers set goals that are not about the outcome but about the process of reaching the outcome. The next prework step is planning how to reach the goal. The best performers make the most specific, technique-oriented plans. The best performers also go into their work with a powerful belief in their ability to perform.

During the work, the most important self-regulatory skill that top performers use is self-observation. They are in effect able to step outside themselves, monitor what is happening in their own minds, and ask how it's going. Researchers call this metacognition — knowledge about your own knowledge, thinking about your own thinking.

The practice opportunities that we find in work won't do any good if we don't evaluate them afterward. Excellent performers judge themselves differently from the way other people do. They're more specific, just as they are when they set goals and strategies.

As you add to your knowledge of your domain, your objective is not just to amass information. You are building a mental model — a picture of how your domain functions as a system. This is one of the defining traits of great performers: They all possess large, highly developed, intricate mental models of their domains.

For anyone, a rich mental model contributes to great performance in three major ways:

- A mental model forms the framework on which you hang your growing knowledge of your domain.
- A mental model helps you distinguish relevant information from irrelevant information.
- Most important, a mental model enables you to project what will happen next.

## Performing Great at Innovation

The greatest innovators in a wide range of fields all have at least one characteristic in common: They spent many years in intensive preparation before making any kind of creative breakthrough.

The most eminent creators are consistently those who have immersed themselves utterly in their chosen field, have devoted their lives to it, amassed tremendous knowledge of it, and continually pushed themselves to the front of it.

### Making Organizations Innovative

Since organizations are not innovative — only people are innovative — it follows that the most effective steps an organization can take to build innovation will include helping people expand and deepen their knowledge of their field. Creating innovation networks within the organization is one step.

Organizations can take two other steps that are especially effective in light of how innovation really happens: telling people what's needed and giving them freedom to innovate.

## Great Performance in Youth and Age

Becoming world-class great at anything seems to require thousands of hours of focused, deliberate practice. For an adult facing the responsibilities of a family and a career, devoting that kind of time to purely developmental activities would be exceedingly tough. Only in childhood and adolescence will the time typically be available.

That reality creates another advantage to starting early. In any field where people can start early, starting late may put one in an eternal and possibly hopeless quest to catch up.

### Should We Create Business Prodigies?

Early training can produce high achievers who are surprisingly young. Traditionally, however, training in business skills doesn't start early. There isn't intensive, focused development of business skills in young people that's anything like what happens with swimmers, artists and mathematicians, for example. The question then arises whether it's even possible.

The answer is clearly yes. Beyond general domain knowledge, it would be possible to train quite young people in more specific business skills.

Our society has very little problem with children being directed toward fields other than business at early ages. If similar techniques were applied to early training in business, and similar results were produced, would the same effect follow?

Continued deliberate practice enables top performers to maintain skills that would otherwise decline with age and to develop other skills and strategies to compensate for declines that can no longer be avoided. We've seen business people performing at the highest levels at advanced ages. Warren Buffett continues to run Berkshire Hathaway brilliantly in his late 70s.

The perspective of both youth and age raises a profound question about great performance. If it's all about the punishing demands of deliberate practice, the continual, painful pushing beyond what's comfortable, then why does anyone do it?

## Where Does the Passion Come From?

The central question about motivation to achieve great performance is whether it's intrinsic or extrinsic.

Most of us believe the drive must be ultimately intrinsic. Much of the research supports this view.

The consistent finding reported by many researchers examining many domains is that high creative achievement and intrinsic motivation go together.

The great majority of the research in business motivation has focused on what motivates employees generally, not on what drives the top performers. The drivers are almost never extrinsic. Long after executives and entrepreneurs accumulated more money than they could ever use and more fame than anyone could hope for, they keep working and trying to get better.

Yet that can't be the whole story. Intrinsic motivation may dominate the big picture, but everyone, even the greatest achievers, has responded to extrinsic forces at critical moments.

### The Multiplier Effect

In our search for the source of the motivation that sustains people through the trials of getting better, the evidence is pushing in a clear direction. The passion doesn't accompany us into this world, but rather, like high-level skills themselves, it develops. World-class achievers are driven to improve, but most of them didn't start out that way.

If the drive to excel develops, rather than appearing fully formed, then how does it develop? Several researchers have separately proposed "the multiplier effect." The concept is simple. A very small advantage in some field can spark a series of events that produce far larger advantages. This multiplier effect accounts not just for improvement of skills over time but also for the motivation that drives the improvement.

The concept of the multiplier effect is embedded in the fundamental theory of deliberate practice. A beginner's skills are so modest that he or she can manage only a little bit of deliberate practice, since it's highly demanding. But that little bit of practice increases the person's skills, making it possible to do more practice, which increases the person's skill level more.

### What Do You Believe?

We've seen that the passion develops, rather than emerges suddenly and fully formed. We've also seen hints that childhood may be especially important in how the drive's development gets started.

What would cause you to do the enormous work necessary to be a top performer? It depends on your answers to two basic questions: What do you really want? And what do you really believe?

## How Organizations Blow It

Most organizations seem to be managed brilliantly to prevent people from performing at high levels.

How often is feedback at most companies constructive, nonthreatening and work-focused rather than person-focused? Evaluations at most companies are exactly the opposite. As for rewards, at most companies they almost always entail more responsibilities and less freedom. Extrinsic motivators may be, by definition, the only type that a company can offer employees, but most companies do it about as poorly as they can.

What you want — really, deeply want — is fundamental because deliberate practice is a heavy investment. What would you want so much that you'd commit yourself to the necessary hard, endless work, giving up relationships and other interests, so that you might eventually get it? Whatever it is that the greatest performers want, that's how much they must want it.

The second question is more profound. What do you really believe? Belief is tragically constraining. Everyone who has achieved exceptional performance has encountered terrible difficulties along the way.

What you really believe about the source of great performance becomes the foundation of all you will ever achieve. Regardless of where our beliefs in this matter originated, we all have the opportunity to base them on the evidence of reality.

The evidence offers no easy assurances. It shows that the price of top-level achievement is extraordinarily high. Perhaps it's inevitable that not many people will choose to pay it. But the evidence shows also that by understanding how a few become great, anyone can become better. Above all, what the evidence shouts most loudly is striking, liberating news: that great performance is not reserved for a preordained few. It is available to you and to everyone. ●

# The 29% Solution

## 52 Weekly Networking Success Strategies

by Ivan R. Misner, Ph.D., and Michelle R. Donovan

### THE SUMMARY IN BRIEF

Most people understand that networking is important to their success — they just lack a step-by-step process to get the results they want. Very few individuals implement a comprehensive methodology that will build a business through networking.

In many ways, success at networking is the uncommon application of common knowledge. The 29% Solution is that "uncommon application" — the development of the methodology required for becoming a master networker. Best-selling author Ivan R. Misner, founder of the world's largest business networking organization, and co-author Michelle R. Donovan, known to her colleagues as "The Referability Expert," provide 52 weekly networking strategies to ensure success.

Misner and Donovan believe that, with reading, training and coaching, people can develop their networking skills, increase their connections and become part of the roughly 29 percent of people who are, in fact, separated from the rest of the world by just six degrees.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to create your own future by setting networking goals and profiling your preferred client.
- Why "Givers Gain" should be your networking mantra.
- How to master the top 10 traits of a master networker.
- How to break out of the "cave dweller" mentality.
- How to get the maximum value for the time you invest in networking.
- How to gain success from doing what others don't.

## Introduction

You've heard that there are "six degrees of separation" between you and anybody else on Earth whom you would like to meet. Right? Ain't true.

But with reading, training, and coaching, people can develop their networking skills, increase their connections, and become part of the roughly 29 percent of people who are, in fact, separated from the rest of the world by just six degrees. ●

## Section One: Create Your Future

### Week 1: Set Networking Goals

One way to systematize and organize your approach to networking is to set measurable networking goals. Each goal you create should be SMART: Specific, Measurable, Attainable, Relevant and Timed with a deadline. You have to set your goals before you can design a plan for meeting them.

### Week 2: Block Out Time to Network

Make a written commitment to yourself and your business by blocking out time on your calendar for networking activities.

If sales are only part of your job responsibility, then eight hours a week seems appropriate. On the other hand, if sales represent most of your job responsibility, you need to be spending much more than eight hours a week on networking activities.

### Week 3: Profile Your Preferred Client

Profiling your preferred client means taking a hard look at what makes that organization or individual a perfect fit for you.

You can be much more effective at networking your business when you're able to profile your preferred client to the people who are listening to your message. This gives the listener more information and opens the mind's eye to his personal Rolodex, visually matching the people he knows against your specific profile. When a listener identifies a match, there's a good chance you'll get a referral.

### Week 4: Recruit Your Word-of-Mouth Marketing Team

Once you understand and can describe for others your preferred client, you can begin to pursue that prized catch with the help of your own personal word-of-mouth (WOM) marketing team.

Who constitutes your strongest WOM team? They are influential people whose recommendations and testimonials carry great weight with your preferred clients and, of utmost importance, they are willing to establish a reciprocal referral relationship with you.

Most important, the members of your word-of-mouth marketing team are in touch with your preferred client on a regular basis — but for a different reason than yours.

### Week 5: Give to Others First

*Givers Gain.* We believe that no other two words in the English language capture so vividly, accurately and simply the power and potential of networking at its best.

By giving to others first, you take the initial step in building two-way, win-win networking relationships. You're leading by example, modeling the behavior you hope others will adopt.

### Week 6: Create a Network Relationship Database

You need a way to maintain contact information on your clients, prospects, vendors, word-of-mouth marketing team members and anyone else whose path you hope to cross again — especially those people who are most likely to be able to refer you business.

You need to keep more than just contact information. Record every word-of-mouth referral that you receive from your network ... who gave you the referral, how it developed and whether it led to any further business.

### Week 7: Master the Top 10 Traits

1. Timely follow-up on referrals
2. Positive attitude
3. Enthusiasm/motivation
4. Trustworthiness
5. Good listening skills
6. Commitment to networking 24/7
7. Gratitude
8. Helpfulness
9. Sincerity
10. Dedication to working one's network

These traits impact your ability to get into the 29 percent of the population and your overall networking success. They all tie in to proactive, long-term relationship building.

## Section Two: Expand Your Network

### Week 8: Diversify Your Contacts

A major key to success in building a powerful business network is diversity. Think about the untapped world beyond the security of your circle of close contacts.

When it comes to business networking, you never know who people know. In networking, someone you don't have a lot in common with could be a connector between you and a whole world of people you might not otherwise be able to meet.

### Week 9: Meet the RIGHT People

It's not what you know, or even who you know — it's how well you know them and how well they know you that really counts in building a powerful network.

At networking events, who are the right people to meet? Consider two types of individuals: those serving your preferred clients and those who have the potential to help you meet your business goals.

## Worksheet for Profiling Your Preferred Client

This is an abbreviated list that will help in creating your specific profile. This list can be expanded, depending on the preferred client profile that you design.

| Business-to-Consumer Clients | Business-to-Business Clients |
|---|---|
| Gender | Location |
| Family Structure | Number of Employees |
| Marital Status | Years in Business |
| Household Income | Specialty or Type of Business |
| Location | Size of Company (Revenue) |
| Education | Number of Departments |
| Children/No Children | Industry |
| Homeowner or Renter | Public or Private |
| Other | Other |

### Week 10: Reconnect With People From the Past

Are there people from the past that you haven't contacted in a while? These people obviously mean something to you, because otherwise you wouldn't stay in touch with them, or they with you. It's time they knew more about what's going on in your business, because you never know who they might know and how they might be able to help you. But here's a key point: Always offer them something in return for their help.

### Week 11: Talk to Your Family

Suppose you have two brothers and two sisters. Of those four siblings, three are huge fans of yours. They know you; they love you; they trust you. So why wouldn't they refer their friends and colleagues to you? Often it's because they don't know how.

It's time to tell your family what you do. Schedule lunch (or a telephone call, if distance provides a challenge) with a family member. During your lunch (or call), shift your assumptions and begin to consider the person in front of you as a potential business resource with a broad network of people you don't know.

### Week 12: Stop Being a Cave Dweller

Cave dwellers will always remain in the 71 percent of the population who are unsuccessful networkers because they become prisoners of their routine.

Breaking out of your cave-bound routine will take commitment on your part. It's going to require you to venture outside your comfort zone and — take a deep breath — network!

With your renewed commitment to networking your business, it's in your best interest to practice smart networking. Smart networking is focused and strategic. Smart networking reaps a high return on its investment of time, money and energy. Smart networking is no longer an option for the success of your business — it's a prerequisite.

### Week 13: Join a Web-Based Networking Group

If you harness the power of the Internet wisely, the result can be something like putting your business networking efforts on steroids. Today, online social networking forums are being used more and more for business purposes.

It's not enough just to join and get your name on the membership list. You must focus on building relationships (turning contacts into connections) with other members of the community. Networking is all about building good relationships — even online.

### Week 14: Become Magnetic

Becoming a center of influence makes you a living magnet for your business. A magnet's strength is related to the composition of the magnet — not necessarily the size.

When you arrive at a meeting, be "ready to engage," with conversation topics, questions and stories in the back of your mind. Focus on "CPI," Common Point of Interest, an essential element in every conversation and interaction. ●

## Section Three: Go the Extra Mile

### Week 15: Be a Value-Added Friend

When you help someone meet a goal, you instantly become a "value-added" friend — an asset to this individual's life and business.

Start by giving. Let your mantra be not "What's in it for me?" but "What can I do for you?" This is perhaps the most powerful technique for deepening and widening your networks, as well as for adding value.

### Week 16: Become a Catalyst

In networking, there are three kinds of people: those who wait and watch for things to happen, those who make things happen, and those who wonder what the heck happened.

A catalyst is one who makes things happen *(see sidebar)*. Without a catalyst, there is no spark and nothing much gets done.

### Characteristics Shared by Catalytic People

- **Initiative.** Catalytic people don't sit still — they make things happen in all aspects of their lives. As networkers, catalytic people learn the goals of others in order to help people get where they wish to be.
- **Confidence.** Catalytic people have confidence in themselves and in the players on their team. Their confidence is contagious, and they tend to bring out the best in others.
- **Motivation.** Catalytic people are not only motivated themselves, but they can also motivate others to perform at their highest potential.

### Week 17: Find an Accountability Partner

Why not find an accountability partner for networking your business? That way, every time you commit to a strategy, your accountability partner can keep you to the task.

Accountability in the context of a strong referral network can create excellence within the network. Fostering friendships while insisting on accountability requires a balancing act that rests on the fulcrum of a Givers Gain philosophy. We must both develop friendships and expect accountability.

### Week 18: Volunteer and Become Visible

Volunteering can position you to meet key people in your community. It instantly expands the depth and breadth of your network. People who are getting to know you will not be experiencing you in the "customer" mindset.

Volunteering is not a recreational activity; it's a serious commitment to help fulfill a need. To find an organization or cause that aligns with your interests, you need to approach volunteerism with a healthy level of thought and strategy.

### Week 19: Send a Thank-You Card

The old-fashioned, personalized, handwritten thank-you card has been largely replaced by e-mail. A handwritten card of thanks now carries even more cordiality than when it was the norm.

Most people enjoy receiving the handwritten card, but few actually do it themselves for other people. When someone goes the extra mile for you, send him a card.

### Week 20: Follow Up TODAY

We believe that follow-up is the lifeblood of effective networking. Your ability to follow up on what you say you are going to do — when you say you're going to

do it — is critical for building credibility and ultimately networking your business.

The key to good follow-up is a system for keeping track of your networking partners, your meetings and appointments with them, and their professional needs and personal interests. It's also important to follow up in a timely manner.

## Section Four: Get Value for Your Time

### Week 21: Be "ON" 24/7

To be a master networker, you have to be like a broadband connection: always on.

Building your "social capital" hinges on the development of relationships with other people. Rather than constantly direct selling, the best way to build meaningful relationships is to help someone whenever possible. Ultimately, the key is to be "on" 24/7 while honoring the place and the occasion for networking at all times.

### Week 22: Learn to Play Golf or Something

Golf outings can be good for forging relationships, but not everyone likes to play golf. Other activities can be used to engage with people beyond the boardroom.

Whatever activity you prefer, you can use it as a "catalyst event." Catalyst events bring people together in situations that are conducive to forming symbiotic relationships.

How do you capitalize on the potential of your catalyst events to generate referrals for you? By inviting the right people to these events. Catalyst events must have an element of exclusivity in order to work. The people attending are investing in their social capital too.

### Week 23: Have Purposeful Meal Meetings

A purposeful meal meeting is nothing more than a meeting that includes a meal and a specific, meaningful purpose. And our purpose happens to be networking.

These meetings are strategic and results-oriented. They provide high value for your invested time.

Realize the potential that exists for a substantial amount of networking over meals. Learning about each other, helping one another with problems and giving of ourselves — that's what defines a purposeful meal meeting.

### Week 24: Make First Impressions Count

You get exactly one chance to make that all-important first impression. In seven short seconds, you are being predefined, prejudged and precategorized as deserving more time — or not.

Every time you connect with someone new while networking, the seven-second clock begins its countdown. You must create a powerful, positive first impression with your appearance and your body language.

Before leaving the house, ask yourself, "What message am I sending to those who are meeting me for the first time?"

### Week 25: Seek Out a Referral Networking Group

How much would it benefit you to have several dozen salespeople working on your behalf to bring you new business? That's what referral networks can do.

This book's co-author, Dr. Ivan Misner, founded BNI. It has become the world's largest business networking and referral organization. BNI's purpose is to enable professionals to develop lasting relationships that lead to future business.

### Week 26: Join a Chamber of Commerce

Diversifying where you spend your time is a sound business networking strategy. There is a professional association for just about every field you can imagine. Trade associations, like professional associations, offer plenty of networking opportunities.

Another venue to consider: your local chamber of commerce. Membership in this chamber of commerce would give you an opportunity to meet more than one prospect for your word-of-mouth marketing team.

You'll get the most value out of your networking by belonging to one chamber, one referral group and one professional association.

### Week 27: Sponsor Select Events

How many times have you been asked to be a sponsor? How many times have you offered to sponsor a select event in order to help out someone in your network? Both situations have the potential to give you huge exposure if done well.

Choose carefully when you're thinking about sponsoring an event. Is it a good investment of your time and money?

### Week 28: Host a Purposeful Event

Purposeful events don't need to be elaborate. For example, you might choose to organize a weekly happy hour each Friday to give colleagues an occasion to build relationships. You could make it more strategic by focusing on your word-of-mouth marketing team.

## Section Five: Control Your Communication

### Week 29: Ask Your Own Questions

In business, you can usually count on reciprocity and be assured that the time and effort you give someone will come back to you. The law of reciprocity even has an impact on our conversations when we're networking. If you want someone to ask you a specific question, ask her the same question first. After she answers, she'll probably ask you the same question in return.

### Week 30: Talk About Benefits, Not Features

The features are simply the bare-bones facts — the elements or significant parts — of the product or service. The benefits are its value to customers — how it will solve their problems, eliminate their pain and make life glorious.

Most businesspeople, without thinking about it, talk in terms of features. In formulating the message you want your networking partners to convey, your challenge is to put yourself in the customer's place.

### Week 31: Become a Profiler for Your Business

Your success in marketing your business by word of mouth rests mostly on your skills as a communicator. Here are three common ways people miscommunicate:

1. They talk too much.
2. They use jargon.
3. They speak in generalities.

A surefire way to avoid talking too much is to practice delivering your message. Then identify jargon words that you've been using in your networking. Finally, write out a specific referral request before presenting it to the people in your network.

Becoming an effective profiler for your business not only helps you clarify your messages, but also helps ensure the success of your word-of-mouth marketing efforts.

### Week 32: Become a Motivational Speaker for Your Business

The message begins with you. It's your choice: Will the message come from your head or from your heart? When the message comes from your head, it's intellectual and unemotional. But a message from the heart is filled with emotion and passion.

Your personal challenge in networking is to have an extraordinary message that not only captures but also highlights your unique selling proposition (USP). Your USP is what sets you apart from your competition. Your message needs to be filled with passion. If you are not excited about what you do, no one else will be either.

### Week 33: Leverage Your Smallest Billboard

An effective business card is an integral part of a good marketing plan. For its size and cost, it's probably the most powerful marketing tool you own.

The best way to use your business card is not to give it out if people don't ask for it. If you practice this rule while networking, you'll be amazed at the impact you'll have on others. You are now assured that people who ask for your card actually want your card.

So, you may be asking yourself, what happens if I want to give someone my card, but she doesn't ask me? It's simple. First, ask her for her card. As she hands you her card, she will probably ask you for yours as well. ●

## Section Six: Become the Expert

### Week 34: Give a High-Value Presentation

Getting speaking engagements is a great short-term approach to building your business. And it fits well with your long-term process of word-of-mouth marketing, because educating your referral sources takes time.

But a glorified sales pitch won't cut it. Instead, we've got two words for you: high value. If your presentation gives your audience something they can use, that's a high-value presentation.

### Week 35: Create an Informative Newsletter

If you wish to be seen as an expert, consider writing an informative newsletter. Whether printed on paper or contained in an e-mail, your newsletter needs to reflect your brand and image.

Publishing a newsletter week after week or month after month is time-consuming and requires a strong commitment, but it can be a powerful networking and marketing tool.

### Week 36: Write a Press Release

Next to word of mouth, publicity is the most cost-effective strategy you can use to market your business. The main objective of publicity is to announce or inform.

Publicity is usually free; in most cases, you don't have to pay to get your press release into the paper. Your ability to write a compelling, newsworthy press release helps to determine whether your announcement gets noticed and ultimately considered for publication.

Professionals recommend that your business generate a press release once per quarter to remain visible in your industry and community.

### Week 37: Write Your Own Identity

You can derive identity-building, brand-boosting benefit from writing articles. Editors and reporters need good story ideas and will use them wherever they can find them.

Either by phone or by letter, tell an editor why readers will be interested in the feature idea you have or why it is newsworthy. What are you doing in your business that strikes a chord in the community? Editors need hooks, angles, ways to relate to a distracted, overworked, frenzied readership.

## Section Seven: Capture Your Success Stories

### Week 38: Ask for Written Testimonials

Before people come to your firm for a particular product or service, they often want the comfort of knowing what others have said about you. Testimonials carry a level of credibility because they come from someone who has direct experience with your product or service.

Have you ever asked a satisfied client for a written testimonial? We recommend making this standard practice for your business. Review your testimonial file or binder at least every two to three years to identify testimonials that are no longer valid or credible.

### Week 39: Write Down Two Success Stories

You can empower your network with success stories about your business — as long as those success stories are truthful, substantive and compelling. First, however, you need to write them down so they can be told to other people. The key is to capture a truly compelling story. The best story is one that profiles your preferred client so that more people like him will find their way to you.

By writing these stories down, you can swap them with your referral partners. Top off your success story with a written testimonial by the perfect customer!

### Week 40: Write a Personal Introduction

When you're getting ready to make a presentation and someone is introducing you, you've got a captive audience — even before you begin speaking. Your personal introduction is something you can — and should — control.

A typical personal introduction lasts a minute or two. It should tell the audience who you are, what your business is and how you help people. You can liven it up and pique the audience's interest by including a brief success story or anecdote.

### Week 41: Toot Your Own Horn

Don't confuse horn tooting with bragging. Bragging is being arrogantly or pompously boastful. Horn tooting is simply making positive, factual statements about your business in a way that highlights your successes while leaving the door open for new clients.

When someone asks about your business, respond in a way that (1) informs the person of your accomplishments in a positive manner; (2) provides information that can be repeated by someone on your behalf; and (3) lets people know how they can help you with your business.

## Section Eight: Do What Others Don't

### Week 42: Ask for Feedback

Asking for feedback is a simple way to gather information for improving our business, but many of us never take the time to ask. Whether positive or negative, feedback should be considered constructive.

As difficult as it can be to receive, negative feedback is actually a gift. It's a reality check; it reminds us that no matter how good we are, we can always improve.

### Week 43: Adopt a Host Mentality

Wouldn't it be great to stand out positively at a networking function? There's a way you can achieve this: Behave like a host. If you adopt a host mindset, people will naturally seek you out.

You arrive early so that you can learn the schedule for the event. You scan the list of attendees to find out who you can expect to see. You study the layout of the room so you can direct people to the coat closet, bathrooms and food. You introduce people to each other and help them feel at ease. In other words, you take the initiative.

When you act this way, people are drawn to you. You seem to know everything about the event. You demonstrate one of the most important traits of a master networker: helpfulness.

### Week 44: Follow the Money Trail

For some businesses, you not only may have been a customer — you may also have recommended them to other people. When was the last time those businesses returned the favor and helped your business succeed? This strategy — following the money trail — shows you how to leverage the law of reciprocity with the businesses you have financially supported.

Are you willing to approach your favorite businesses and ask them to support your business in some way?

Most people, once it is pointed out to them, understand that the law of reciprocity goes both ways. As a client, you're giving a lot to someone else's business. It's not unreasonable to ask for something that supports your business in return.

### Week 45: Write a Letter of Support

One of the strategies that you can use to further develop a relationship is to write a letter of support that will help someone on your word-of-mouth marketing team in some way. This is not a testimonial letter, but a letter that provides influence and support on someone's behalf.

When you hear about an issue that affects your clients, show your support by getting involved on their side. Make sure others in the industry know it too — especially those you would like to have on your networking team or roster of clients.

### Week 46: Ask for Referrals

The more specific you are in your request for a referral, the more likely it is that a specific person will come to mind.

By listing specific examples of your target market, you help your referral prospect do a mental sort that is far easier than the general question "Do you know anyone who needs my service?" The easier you make it for people to understand what you do, sort through their contacts and think of a referral for you, the more referrals you will get.

### Week 47: Read the Paper, With Referral Intent

Read the paper differently — to look for opportunities for referral. The paper is a tremendous source of leads — information and resources that could be beneficial to you or to someone in your network. A lead should never be confused with a referral; however, with the right approach, a lead can be turned into a referral.

### Week 48: Conquer Fear of Public Speaking

Networking your business is going to involve public speaking. We have a few tips from our experiences that might help reduce your stress:

1. Prepare, prepare, prepare! Prepare an outline of what you want to say, and practice it.
2. Be specific, and talk about the things you know best.
3. Use handouts, visuals or PowerPoint slides to support your presentation.
4. Remember, you're the expert. If you focus on what you know best, you will feel more confident and be more credible.
5. Be creative. Find a way to communicate that makes you comfortable.

### Week 49: Become the Hub Firm of a Power Team

To capture the image of a hub firm, imagine the spokes of a wheel, with one business positioned in the center — the hub — surrounded by other businesses with which it has very strong collaborative relationships. These businesses are your power team.

To become a successful hub firm, you must base the selection of your power team on the quality of your relationship. The key is finding the right businesses to surround you. You need not activate all the businesses in your team for each project; instead, bring in selected businesses based on what you, as the hub firm, identify as the needs of the client.

### Week 50: Become a Networking Mentor

It's common knowledge that if you want to improve your skill, then you should teach someone else. Sometimes mentoring and coaching others gets us to focus on the basics and apply them better ourselves.

Reach back to someone stuck in the 71 percent of the population who are disconnected and begin to connect them to your network. This will definitely improve your networking skills by acting as a refresher.

### Week 51: Recruit an Advisory Board for Your Business

Many successful businesspeople recruit an advisory board to keep them up to speed on fixing problems and running the business smoothly. When you consult with an advisory board, you are truly exhibiting one of the key traits of a master networker: You are working your network.

When you set up an advisory board, you are creating a web of contacts who know and understand what you must do to achieve success in your profession or business and who have the experience to help you achieve your goals.

### Week 52: Commit to Lifelong Learning

Networking is something you can train for on the job — in fact, that's the best way. By putting it into practice, you not only learn how to apply and fine-tune your approach, but you also build your business at the same time.

Becoming a master networker is a journey, not a destination. In your never-ending journey toward perfection, how do you improve on the basic networking plan?

First, keep reading. Second, Practice! Third, seek out reputable training programs on networking. Lifelong learning continually sharpens and hones your skills. Would you trust the growth of your enterprise to someone who's not skilled in one of the most effective ways to grow your business? ●

Career & Self-Development: Change & Advancement

# The Adversity Paradox

## An Unconventional Guide to Achieving Uncommon Business Success

by J. Barry Griswell and Bob Jennings

### THE SUMMARY IN BRIEF

Obstacles and setbacks are inevitable parts of life, especially in today's harsh and volatile economy. How can you use these to build success? The answer lies in firsthand knowledge of the "adversity paradox." Working to overcome humble beginnings, lack of knowledge, unexpected setbacks or any manner of misfortune can be the foundational step in a path to incredible achievement.

Those who have benefited from the adversity paradox all relate similar experiences. The knowledge they gained from overcoming obstacles played such a crucial role in their success trajectories that they now consider adversity to be an invaluable friend.

While you may not experience the extreme forms of adversity described in *The Adversity Paradox*, it's inevitable that each and every one of us will encounter adversity at some point in our careers. The lessons here are practical and inspirational, and they can be applied at any stage of your career.

J. Barry Griswell and Bob Jennings offer concrete steps that can be taken to increase your own business savvy. Their intent is to embolden you to take action or refocus your determination in your career path. The paths to success are diverse, but *The Adversity Paradox* identifies patterns that anyone can study and learn from.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to take your own business-savvy inventory.
- How to use the skill of introspection to find your level of moral development.
- How to ignite your thirst for knowledge.
- How to have the confidence to do what others see as impossible.
- How to build endurance of character the same way we build physical strength.

## What Is Business Savvy, Anyway?

**business savvy:** ***n.*** **1.** *proficiency in the realm of business; the unique ability to consistently meet and surpass one's business goals.* ***adj.*** **1.** *those who are proficient in business and consistently achieve outstanding success.*

**the adversity paradox:** ***n.*** **1.** *the phenomenon of building outstanding success upon the lessons learned in overcoming serious difficulty or misfortune.*

You always have a choice. No matter how terrible the setback, you can make the choice to lie back and let adversity consume you, or you can face the situation head-on and work to make adversity your friend. Befriending adversity means not shying from it, but learning from it.

The business leaders who've benefited from the adversity paradox are the ones who use the diagnostic skill of introspection to conduct honest self-assessments so as to make trajectory adjustments whenever necessary. These folks have found a purpose they're passionate about and have found a way to take the work out of work. They're the employees who nurture a thirst for knowledge that keeps them constantly abreast of the ever-changing world of business.

Given such commendable core competencies and practices, it isn't surprising that those who've learned their lessons the hard way often go on to achieve enormous wealth as a result of their prodigious business savvy.

## The Individual Human Capital of the Business Savvy

Individual human capital (HC) is an individual's portfolio of assets in which he or she has invested that can produce future positive outputs. Garry S. Becker, the foremost expert on human capital, states, "Economists regard expenditures on education, training, medical care and so on as investments in human capital. They are called human capital because people cannot be separated from their knowledge, skills, health or values in the way they can be separated from their financial and physical assets."

Business leaders who have benefited from the adversity paradox have tended to build their success upon the same five components: introspection, values behavior, work character, purpose and passion, and thirst for knowledge. This is "the business-savvy framework."

### The Individual Human Capital Profile

J. Barry Griswell has successfully put all the components of the business-savvy framework together and built a rags-to-riches kind of success. His industry, associates, competitors, company board, employees and friends see him as a very business-savvy person. To get to this point in his life he has defied all the odds. As a youth his family was poor, his home broken and learning was difficult. As an adult he fought medical issues and the occasional career setback. But he learned early on to persevere despite all the odds, and that ability has facilitated both personal and career success. His comments about each of the individual human capital components are incorporated in the following descriptions.

***Introspection: HC Component No. 1.*** Introspection is the practice of observing one's self — one's personality, strengths and weaknesses, overall performance, motivations, goals, ideas and capabilities — and conducting honest self-assessments.

"Introspection allows us to look deep within and

**Rebecca S. Clement**, Publisher; **Sarah T. Dayton**, Editor in Chief; **Andrew Clancy**, Senior Editor; **Edward O'Neill**, Graphic Designer

analyze our motives and priorities, and to measure our progress toward goals. Most important, introspection allows us to get an accurate measure of purpose, passion, and commitment to dreams and goals. To truly know oneself can be daunting, but it's essential in order to experience one's personal success."

Our self-understanding needs to be 100 percent accurate. We need an accurate read on our weak areas so we can direct our efforts to focused self-improvement and maintaining an upward success trajectory.

***Values Behavior: HC Component 2.*** Values do not have to be compromised to get ahead. Good values, and behavior that matches those values, are paramount to maintaining a positive trajectory over long periods of time. Compromising values may get someone ahead in the short run but will always bring him or her down in the long run.

"I do not believe for a second that you can be a bad person — a dishonest or cruel person — and have true success … I firmly believe that honesty and integrity are the foundation for any type of success — honesty with others and, more important, honesty with oneself."

***Work Character: HC Component 3***. In being business savvy there is no substitute for hard work. "If you buy into the theory that success is about reaching your personal potential, about achieving stretch goals and doing it 'right,' there must be hard work."

***Purpose and Passion: HC Component 4***. If hard work is critical, then we need to find a way to really enjoy our work so that it's no longer work, but rather something we're passionate about. The trick is to view work as a means to far greater benefits or enjoyment.

"I never forgot how badly we needed insurance after my father died suddenly, and how burdensome it was to be left with so much unexpected debt. What a noble cause it was, I thought, to help families protect themselves if the breadwinner were to die prematurely, to have an income should a disability occur, or to help someone plan for a secure retirement. Was selling life insurance boring? No way. I had a strong and exciting purpose."

Purpose can keep you going in the face of any challenge.

***Thirst for Knowledge: HC Component 5***. The power of knowledge and lifetime learning is transformative.

"While it took me almost 20 years to catch up, my grades in college eventually became good enough to get an academic scholarship to supplement my athletic scholarship. I even managed to get into graduate school and earn an MBA while loading trucks at night. But, I learned the power of knowledge and how to acquire it. … Lifetime learning and an ongoing curiosity have been absolutely essential to my success."

## The Power of "And Then Some"

Those who choose to make adversity their friend don't enjoy hardships any more than the next person. But there is a world of difference between those who befriend adversity by overcoming it and learning from the experience, and those who give up at the first sign of an obstacle.

Adversity is going to happen, and usually in ways you never could have foreseen. Knowing this, make a choice right now to look at adversity in a new light. Realize that adversity is an ally and that it's here to teach you something of crucial importance.

### The Key to Befriending Adversity

You are the agent of change. In other words, the power to act, to positively change your own circumstances, lies with you. No matter how difficult the circumstances, relying on and harnessing the power of "and then some" ensures that you're never helpless in the face of adversity. Because "and then some" is a universal principle, you can apply it to any manner of adversity you encounter.

Have you been laid off? Start with a goal of targeting five companies a day and then find five more, and don't rest until you follow through by contacting the person in charge of hiring or by sending your resume. Are you weak in a particular area, such as public speaking, making cold calls, team leadership or even a software program? Do whatever it takes to gain not only competency, but proficiency in whatever area is holding you back from reaching your potential.

If you're truly meeting your goals and then surpassing them, the amazing results you'll achieve will be an extremely powerful motivational force. Success breeds success. If you habitually use the power of "and then some" to build your human capital, you'll find that the positive results will surpass all your expectations.

And if you're lucky enough not to have experienced full-scale adversity, you can start by applying the power of "and then some" to all the setbacks, obstacles and even daily nuisances that will always arise in business.

To apply the basic principle of "and then some" to everything you do, put in the extra effort above and beyond others at work, and then expand the principle into a full cycle of self-improvement.

Positive thinking is integral to befriending adversity

and harnessing the power of "and then some." Face adversity with a relentlessly positive frame of mind, even if at first it feels artificial or unnatural. Allow no other thought to enter your mind than "I will face this adversity head-on and I will learn from it." You can either wallow in self-pity and pessimism or you can treat adversity as the clarion call to institute needed change.

## Just Add Introspection

Most businesses absolutely stink at assisting employee development through formal appraisal processes. It's a major missed opportunity.

Business leaders or managers do have good intentions when implementing appraisal processes. They aim to facilitate honest self-assessment so as to maximize employee potential but, more often than not, their execution destroys the intent of growing the human capital within their organizations.

Many appraisals are based upon subjective one-to-five rating systems for performance issues like quality of work, cooperation and relationships, and problem analysis. They call for one person's subjective opinion, and if your performance issue doesn't show up on the form, tough luck.

Then there are the not-so-unusual cases where a change in supervisors produces a large change in a person's appraisal score — no change in performance, just a change in who's doing the appraising.

There is no substitute for real introspection, for an honest and critical examination of one's own thoughts, feelings and motivations, and by extension, one's strengths and weaknesses. Introspection provides an accurate personal appraisal process that enables one to analyze motives and priorities, and to measure progress and commitments toward goals. The process of introspection allows one to make constant — and accurate — trajectory adjustments.

Critical to successful introspection is that it is conducted with *frequency* and with *accuracy*. Frequent but inaccurate introspection gets one nowhere and can even be self-destructive. Accurate but infrequent introspection just places a person on a low trajectory, as trajectory corrections don't occur often enough.

### Satellites and Mirrors

When we were young we were surrounded by mirrors that told us what we were doing right, what we were doing wrong and what we could do differently. Parents, teachers, test scores, coaches, counselors, sports successes and failures all gave us rapid feedback. We could get a pretty accurate read on who we were and in what areas we might be able to excel.

As we age, many of our mirrors disappear; some are replaced, but the average person is left with far fewer means to obtain accurate and frequent reflections. Just as the key to the Global Positioning System (GPS) is having multiple satellites and accurate signals at all times, the key to good introspection is having multiple mirrors and accurate reflections at all times. In both cases, one needs to be able to triangulate.

Harvey Mackay, a successful business owner, may demonstrate the value of multiple mirrors best. To this day he relies on what he calls 18 coaches — (for various disciplines) from marathon, writing, and language and speech coaches to a humor coach. He learned the value

## The Power Resides in All of Us

Out of high school, Gene Postma gave community college a shot before being lured away by the attractive hourly wages of a construction job. The job became a career and, after 10 years, Gene found himself running a crew and remodeling a building in New York City. The remodel included removing several layers of shingles on a steeply pitched roof. Gene was exasperated with his crew's slow progress and uneasiness on the roof, so he decided to demonstrate that there was nothing to worry about.

Starting at the roof's peak, Gene started ripping and tearing when, all of a sudden, one of his toeholds broke loose, sending him sliding down the steep slope and off the edge into a 25-foot fall. On the way down he shattered his arm on a balcony, and when he landed he incurred compression fractures in his back. The doctors told him he would never be able to swing a hammer or run a trowel again. He was married with a two-year-old son and was unable to continue with his career.

Gene accepted the unexpected turn in his life and went back to school, put in extra effort with the books, and he and his wife both worked throughout his education. He graduated second in his class in less than four years with an engineering degree. He is now president of Western States Fire Protection Company, which has 1,500 employees and more than $200 million in annual sales. Like so many, Gene had the power of "and then some" before his fall, but adversity put it to work to grow his human capital well beyond that which he'd originally thought himself capable.

of multiple mirrors early when he bought his struggling company when he was 26. Back then he called each of his mirrors "old grizzly" as his lawyer was 60, his accountant 58, and his banker over 70. His was a professional team, but mirrors need not cost money.

"There are a lot of qualified advisors out there," Mackay said, "who are just waiting for us to ask them. Try it sometime." His success has little to do with luck and everything to do with the science of setting up mirrors (satellites) and conducting accurate and frequent introspection (triangulation).

The Mackay approach stands in stark contrast to many in business today. Take the competent businessperson who relies solely on his or her boss as his or her performance and trajectory gauge. As a GPS receiver cannot provide an accurate fix on location with a single satellite, neither can the businessperson conduct accurate introspection with only one mirror.

Mentors of all types are extremely important for increasing both the accuracy and frequency of your introspection. The term "mentor" can apply to any person who is offering you feedback for forward thinking and positive adjustments. The more mentors, the better the triangulation and, more often than not, mentoring is free for the asking.

## What Does Behavior Have to Do with Values? Everything!

Possessing business savvy isn't just about superior business skills or proficiency in a particular area of business. It's also about having the right values and bringing those values to bear on the way one does business.

Creating and fostering a culture of integrity and ethical behavior is not only the right thing to do, it's critical to business success. The culture of integrity and ethical behavior must start at the top. Leaders need to set and live out the example for their organizations, and it's all too obvious how one corrupt manager can bring an entire company down.

At the end of the day, the most effective tool anyone has is his or her own behavior, and behavior is always ultimately predicated upon an individual choice.

### Kohlbergian Theory

Lawrence Kohlberg was a psychologist and professor at the University of Chicago and Harvard University. His research holds that moral reasoning, which is the basis for ethical behavior, has six identifiable stages.

**Stage 1** is simply the rules and punishment trade-off. Thinkers using Stage 1 moral reasoning believe that there is an external and fixed set of rules, and that there is only one right or wrong answer to every moral dilemma.

In **Stage 2**, individuals lock into a "What's in it for me?" perspective. All behavior comes from serving one's own needs.

Those in **Stage 3** base moral choices on the expectations of others in their proximity, such as family, friends, peers and the community. Likewise in business, an employee bases his or her behavior upon the expectations of superiors, co-workers and subordinates.

**Stage 4**, however, brings us into all-new territory. Individuals at this stage have expanded their circle of thinking enough to see the society or the business they are in as a whole. The emphasis is on obeying laws or rules, respecting authority and handling one's duties so that the social order, or business rules and processes are maintained.

**Stage 5** thinkers want to do what is best for society or for all parties that touch the business. It is crucial for those in a leadership role to reach this level. At Stage 5 one must not only be driven by principle but also understand and balance the interests of everyone.

Few people reach the level of **Stage 6** moral reasoning, but those with prodigious business savvy always strive for it. This is the stage of universal human ethics. Behavior is predicated upon actions and decisions that demonstrate an equal respect for all.

For the long-term growth and health of any business it is crucial to hire ethically sound people and to foster an environment in which employees can develop morally and only the ethically sound are rewarded.

So how does one climb the hierarchy of moral development, advancing from one stage to the next? One advances in moral reasoning by actually encountering a moral dilemma, finding that one's current level of moral reasoning is inadequate and then grappling with that dilemma to the point that one comes to a more comprehensive viewpoint. The more comprehensive our viewpoint, the more robust our moral development and the farther we advance up the hierarchy of moral development.

### The Gray Zone

The truth is that the business world is full of moral dilemmas and, even with sound moral reasoning, matters will arise that fall into the so-called Gray Zone, a space rife with adversity. The Gray Zone encompasses not only those dilemmas that do not have a definitive right answer, but also those in which almost all decisions come at the detriment of someone or something else.

There's no end to the number of Gray Zone issues the businessperson will face, especially those in leadership positions. Gray Zone dilemmas are rarely published, as they're often troubling or embarrassing, but companies routinely face them.

## Sorry, But There's No Substitute for Hard Work

People with a fully developed work character are qualitatively different from their peers: Their excellent work habits and the success they earn distinguish them from the pack. The idea of work character as used here is rooted in this distinguishing quality and encompasses a person's attitude and ability. People with an outstanding work character habitually work hard, think hard and lead well — and because they're pursuing what they love, they enjoy their work.

### Physical Work Ethic

People with a well-developed physical work ethic have the ability and the willingness to put in the requisite hours and effort to do a job to their fullest potential.

The fact is, any of you who are trying to move up the corporate ladder will be required to put in whatever extra hours and effort are necessary in order to distinguish yourself from the pack. If you're not physically up to the task, or if you're operating at half speed, you're going to be at a significant disadvantage from the beginning.

Those in leadership roles may have even more of a responsibility to develop a strong physical work ethic. Good leaders know that their team members will emulate them; it's their job to set the standard for productivity.

### Cognitive Work Ethic

A cognitive work ethic is engagement of the mind to learn, solve problems, find opportunities, develop solutions or successfully execute the tasks a job requires.

The need for a fully developed cognitive work ethic for any type of success is growing more pronounced every day.

Over time, unemployment in America has remained relatively unchanged, but much of the work force has been required to move from employing their physical work ethic to their cognitive work ethic to earn a living.

In today's business work, a robust cognitive work ethic is required simply to stay in the game, much less excel.

## What Would You Do in the Gray Zone?

In one case a leading sales representative got caught falsifying hotel receipts. Your recourse is simple, right? You just fire him. Problem is, he is a top producer, and firing him will hurt the bottom line and the stockholders. He is also well liked, so if he goes, you run the risk of losing some key customers. What's more, he's a friend, a company veteran who's been through thick and thin with you. If you fire him, what are you saying to other employees? That you had an unwritten "one strike and you're out" policy? That you don't value years of loyal and trusted service? But if you don't fire him, are you tacitly telling employees that it's okay to cheat? Now take it a step further: It turns out the employee was falsifying the receipts not for the money but to hide an affair he was having in another city. His behavior, while clearly unethical, hasn't cost the company a dime. So is business now to be concerned with and penalize a person for his conduct outside of work? What would you do in the face of this kind of adversity? How do you find your way through the Gray Zone and arrive at the right decision? In this case, the employee was fired, and the outcome was quite costly; some sales were lost, as were some customers. But in the long run making the extremely difficult decision to fire the employee preserved the company's ethical standards, and it showed employees that management would abide by its principles. The long-term gain exceeded the short-term pain, and again we see the adversity paradox in action.

### Skills to Lead

Even with the most highly developed physical and cognitive work ethics, one person can only do so much on his or her own. "Skills to lead," the third part of work character, brings us into more specialized territory. It can uniquely combine any number of skills. It can involve things like effective public speaking, communication, team selection, team building, an ability to motivate others, delegation and having good vision.

"Skills to lead" is an adaptable concept. That is, one's skills to lead will depend on the people one is leading, the business one is in and the corporate culture.

### Working Not Just Harder but Better

We can have the best of intentions, but if we have no idea how to start or follow through on them, we're stuck at square one. So here are three proven processes

that have worked to promote positive change:

**1. Motivation/Visualization.** If you ask most people what gets them out of bed and to the office every morning, they'll have a quick answer: the paycheck. More dollars might bring you a bit more spending power, a few new things, but those are temporary highs. More money isn't likely to be a permanent motivating factor.

A recent Gallup study found that recognition of one's efforts has the largest impact on worker engagement and performance. Other huge motivating factors include a sense of self-worth, a feeling of accomplishment, the satisfaction of taking part in meaningful work, the sense of being a part of a vibrant and accomplished team, or pursuing a more challenging role with greater responsibility. Maybe your biggest motivating factor is getting out of one job and into another that provides the kind of long-lasting intangible rewards that have been listed.

What you need is something powerful enough, something meaningful enough, that it gets you working and thinking at such a level that you won't rest until you attain your goal.

The most powerful motivating factor of all arrives when you've found a purpose you can pursue with passion and bring to fruition through your career.

**2. Adding "And Then Some" to Everything You Do.** Apply the power of "and then some" to literally everything you do and you're guaranteed to get positive results. Set your goals higher than what is expected of you and find ways to achieve them.

If you're completing your tasks *and then some*, if you're putting in the extra effort required to distinguish yourself from your peers, there's no way you can't advance. The trick is to make "and then some" a lifelong habit.

The difference between employing *enough to get by* and *and then some* may be hardly visible within a given task or in a day's work, but over a lifetime it can be the largest separator between a life of mediocrity and a life of success.

**3. Successful Habits.** The third way you can make positive change is about making hard work not just a short-term means to reach a short-term goal, but a lifetime modus operandi.

Whereas forming habits that make you successful may seem like drudgery, once they become habits they are no longer a grind, especially when you start enjoying the rewards of the success you have created with them. ●

## Purpose and Passion: You Really Can Take the Work out of Work

Recognizing the importance of the connection between purpose and passion, businesses try to foster corporate statements that help develop and engage employee passion. The business leaders who get their mission statements right are the ones who know how to align purpose and passion.

Wal-Mart's mission is "To give ordinary folk the chance to buy the same thing as rich people." Did this mission statement work? Did they foster and cultivate employee passion? The answer is in the results. So many "ordinary folk" purchased Wal-Mart goods that it's become one of the most profitable businesses in America.

The true measure of a stated business purpose is its ability to get its employees excited and engaged. True purpose, no matter where it is found or how modest it may seem from the outside, is immeasurably powerful. Having the right purpose, the purpose that specifically works for you and your business, is central to creating passion that impacts results.

Passion is the enthusiasm you feel as a result of your purpose. Your purpose generates your passion. Finding passion in your work doesn't mean everything is perfect, but it means you have the ability and vision to see beyond the imperfections.

### Clay Jones: Take Serendipity and Run With It

Clay Jones is the president and CEO of Rockwell Collins, a company engaged in the design, production and support of communications and aviation electronics worldwide. When asked how he got from zero interest in flying to a career in aviation and becoming a leader of one of the most recognized aerospace companies in the world, he said "serendipity."

He didn't mean simple luck. Rather, the Jones application of serendipity is about encountering the numerous forks in the road of life — most of which are entirely unforeseen and many of which come about through no conscious choice of our own — and then making a conscious choice to pursue a direction with vigor and perseverance.

"You find yourself in certain positions in life where you have to make a decision," Jones said, "and the fact is, each of these decisions has a profound effect on your future direction in life, which is something most of us underappreciate at the time … each of those decisions builds upon a new direction … And that," concludes Jones, "is how I eventually found my purpose." ●

## The Transformative Power of a Lifelong Thirst for Knowledge

What is the value of knowledge and education for the business-savvy professional? Business-savvy professionals absolutely thrive on the thirst for knowledge.

Knowledge enables you to:

- Formulate a vision and execute it successfully.
- Think on your feet, and act quickly and judiciously when problems or opportunities arise.
- Switch back and forth from systems to linear thinking, from seeing the big picture to scrutinizing the details.
- Synthesize mountains of data into salient, useful information.
- Inspire your team's confidence in your leadership.
- Select, train and inspire business-savvy teams.
- See your lack of knowledge.

This fifth and final component of human capital alone has worked wonders in people's success trajectories; but added to the full business-savvy framework, it's guaranteed to transform not only your career but your life.

### Formal and Informal Learning

We're all familiar with formal learning: It's the learning that takes place within a structured teacher-student relationship. Informal learning then, encompasses the balance of our learning. Much of informal learning results from what we do and experience in daily life.

What is surprising, and terribly sad, is the statistics (about formal learning) for the country at large. The U.S. Census Bureau reveals that one in three Americans drops out of college and, according to the latest government figures, more than 50 percent of college freshmen do not receive a degree within six years.

Over a lifetime, most people spend far more time on and gain far more knowledge from informal learning. But while informal learning is clearly critical to success, without the skills the formal learning environment provides, the informal learner has little chance of accumulating the quantity and quality of knowledge needed to gain business savvy and be successful.

So let's review the benefits of a formal education. We've got job qualifications, increased confidence, a way out of humble beginnings, a way out of a stalled career or life situation, and a statistically better chance of greater earning power. The most important advantage — no matter what discipline the business-savvy professional studies — is learning how to learn. If your formal education has taught you how to learn, your path to success will be all the smoother.

Your success is significantly impacted by the foundation of knowledge you have or will possess. If you haven't already found a thirst for knowledge, it's not too late. Enroll in a class, subscribe to a new journal, read as much as possible, and keenly observe successful people and emulate them. You never know when something will ignite your thirst for knowledge. ●

## Using the Adversity Paradox to Triumph Over Unexpected Trajectory Changes

Even though the business savvy are recognized for their ability to see around corners, no one can predict the future with 100 percent certainty. The good news is that most adversities or career catastrophes leave a person's human capital substantially intact. Trajectories may be shaken by the unpredictable, but they can be re-established — sometimes with far superior results.

### Practicing the Paradox

So often, the most powerful catalyst for change lies in the place we'd least expect or want to find it, in adverse circumstances. Failure has a way of making us take stock of our careers and our lives — our progress toward dreams and goals, our strengths and weaknesses, our motivation and our daily work habits — in a way that success does not. It can also force us to take quick, decisive action without benefit of the usual safety nets, which can often reveal inner resources and abilities we wouldn't have otherwise known we possessed. At the very least, overcoming difficult circumstances always causes growth and the development of your human capital. ●

# The Art of Explanation

## Making Your Ideas, Products, and Services Easier to Understand

by Lee LeFever

### THE SUMMARY IN BRIEF

You've done the hard work. Your product or service works beautifully — but something is missing. People just don't see the big idea, and it's keeping you from being successful. Your idea has an explanation problem.

*The Art of Explanation* is built on Lee LeFever's years of experience in creating explanations for organizations and educators. His company, Common Craft, is known around the world for making complex ideas easy to understand in the form of short videos. No brand is better known for explanations.

*The Art of Explanation* is for businesspeople, educators and influencers who want to improve their explanation skills and start solving explanation problems. Tools, tactics and techniques are presented that will help you consistently inspire audiences to fall in love with your ideas, products or services through better explanations in any medium.

*The Art of Explanation* is your invitation to become an explanation specialist and see why explanation is now a fundamental skill for professionals.

### IN THIS SUMMARY, YOU WILL LEARN:

- Explanation basics, what causes them to fail and how to diagnose explanation problems.
- To create an explanation strategy using simple elements that builds confidence and motivates your audience.
- To produce remarkable explanations with visuals and media.

## Preface

Chances are that you explained something recently — why dinner tastes the way it does, why you were late for a meeting, what an article means to your company. We explain so many different things so frequently that we take the art of explanation for granted. This is a tragedy because a great explanation can make our ideas come to life, invite people to care and be motivated to learn more. However, we lose the opportunity to do this unless we recognize that explanation is an essential skill we can learn and master.

## PART 1: PLAN

## Learning to Run

Six months ago Trevor picked up running again after his doctor said he needed to get more exercise. He set a goal of completing a half marathon within a year. But it didn't seem like this was going to happen — not the way things were looking. He joked with his friends that he felt like an old man at 45.

Trevor had recently been enjoying a drink with a friend and mentioned that he was having a difficult time preparing for the race. His friend asked, "Have you tried changing how you run?" Perplexed, Trevor replied, "I'm not sure what you mean. I run how I run." His friend asked again, "Seriously, have you ever thought about how you run — and what you could do to run better?"

Trevor had always taken his running style for granted. "Nah, the way I run is fine. And anyway, aren't we born with the ability to run?"

His friend replied, "Of course we can all run. But like anything, there is an art and skill to running, and part of getting what you want out of it is knowing how to run correctly."

"What could possibly make my running better?"

"Look it up." And that is just what he did.

The more he researched, the more he saw running as a skill that he could improve. He learned about proper posture, stride and how a foot strikes the surface, and he discovered tactics that professional runners use to stay healthy. As he trained for the race, he began paying attention to his form and movements. His knee and back pain began to fade, and his endurance seemed to jump, which gave him the energy to run longer.

We all take *explanation* for granted. Because it is a natural part of how we communicate, the thought may never occur to us that explanation is a skill we can improve and put to work in achieving our goals. In this way, running and explanation have much in common:

- We have the ability to do it.
- We may do it so frequently that we never think about it.
- We think the way in which we do it is normal.
- We never consider that we could improve the way we do it.
- Improvement *is* possible and creates positive results.

Explanation is a skill that we can apply to nearly every part of our lives. ●

## What Is an Explanation?

Most of us take explanation for granted. For many people, it's just something that happens. Someone asks a question, we answer it in the form of an explanation. We do not often step back and think about what makes an explanation an explanation or how we could approach it differently.

An explanation is an act or process that makes something known, plain or understandable. Explanations make facts more understandable. Creating a great explanation involves stepping out of your own shoes and into the audience's. It is a process built on empathy, on being able to understand and share the feelings of another.

Great explanations often do not come from rigorous research and testing; they come from someone's unique approach to communication. Two people could have profoundly different ways of explaining a single idea and still achieve equal levels of understanding. Explanation thrives on being unique and novel; it succeeds when it helps people see ideas from a new perspective. Explanation is a creative act that turns facts into useful, informative and memorable ideas.

Science has helped us make sense of the world by showing that there is a reason things are the way they are. There is a reason that water freezes at 32°F and airplanes can fly. The laws of our universe have been tested and are proven: They explain *why*. Unfortunately, many of the facts and ideas we see on a day-to-day basis cannot be defined by the laws of the universe. We cannot explain Twitter's popularity in terms of gravity or inertia. We need explanations to tell us why Twitter is so popular. Explanation is the art of not just packaging facts but also presenting them in a way that answers the question "why?" — as in why does it make sense to do this?

Explanation is the art of showing why the facts, laws and specifics make sense. Explanations present an idea in a way that makes people *care*. Explanations help people feel confident in choosing to learn more because they care about the idea. People who care about an idea are often motivated to learn more. ●

## Why Explanations Fail

Every day, many companies, homes and schools are filled with blank stares and discouraged explainers. We all struggle to find the best way to communicate our ideas, and we sometimes fail.

Blank stares often appear when someone has lost confidence that they can grasp — or should even care about — the idea you are communicating. It can be easy to discern when an explanation is failing with a one-person audience. However, it can be more difficult to determine in a group meeting or classroom setting where you have no way of knowing each person's level of confidence in the material. When you're faced with this, you must make assumptions about the confidence of the overall group, and inevitably your assumptions will not match reality.

We can look at our decisions through the lens of *the curse of knowledge*, described in *Made to Stick,* written by Chip and Dan Heath. When we know a subject very well, we have a difficult time imagining what it is like *not* to know it. Our level of knowledge interferes with our ability to see the world from another person's perspective and to gauge their confidence level accurately. The curse of knowledge is an underlying cause of numerous problems in explanations.

But what about the other side of the coin? Knowing too little is an obvious problem when it comes to explanation. Approaching an explanation without sufficient understanding is a quick way to dig yourself into a hole. If you understand a subject and are prepared to answer questions, you are set up for success. But if you lack the understanding needed to converse about the subject and frame your ideas as an explanation, your lack of knowledge can easily be discovered and cause your explanation to fail. ●

## Planning Your Explanations

How often do we sit down and focus on how we will explain an idea? An explanation problem is related to how we choose to communicate ideas. A great idea poorly explained ceases to appear great, and the cost is tremendous. Without a way to explain something effectively, we limit its ability to spread.

We can use the "explanation scale" to develop a plan for solving explanation problems. This model provides a way to visualize the audience, account for their needs and move them from misunderstanding to understanding via a carefully crafted explanation. The simple A-to-Z continuum will be our guide to planning explanations. "A" represents less understanding, and "Z" represents more understanding. Our goal is to move from left to right on the scale.

This scale serves as a way to think about almost any explanation problem that people encounter. Think about your own situation. Ask yourself the following:

- Where are you on the scale regarding a specific idea?
- Where is your audience?

- What assumptions are you making about their level of understanding?
- Are your current explanations accounting for everyone on the scale?
- Should they?

These questions are important because they frame perhaps the biggest problem in communication: We make poor assumptions about what people already know, and these assumptions limit the potential of our explanations. By using the explanation scale, we have a simple way to think about, talk through and plan our explanations. ●

## PART 2: PACKAGE

# Packaging Ideas

Packages have limits. Only so many things can fit into a package, and this is true of explanations as well. By packaging ideas into explanations, we define the package's contents by what we include or exclude. This gives our explanation form, shape and limits. The idea is to identify an explanation problem and build a package that will solve it through explanation.

Packaging ideas is a simple process that requires the person presenting ideas to account for the audience's needs. And because every audience and idea is different, there are innumerable ways to package ideas. However, they all focus on a few important elements:

- **Agreement:** Agreement builds confidence from the very first sentence. It is accomplished through big-picture statements that most people will recognize, such as "We can all agree that gas prices are rising."
- **Context:** Context moves the points we have agreed upon into a specific place. It gives the audience a foundation for the explanation and lets them know why it should matter to them. You could say, "More of your hard earned income is going to pay for transportation."
- **Story:** Story applies the big ideas to a narrative that shows a person who experiences a change in perspective and the emotions that accompany that change. "Meet Sally; she's tired of paying so much for gas and needs alternatives. Here's what she found."
- **Connections:** Connections often accompany a story and are analogies and metaphors that connect new ideas to something people already understand. "Sally could see that taking the bus was like multitasking because she could work and commute at the same time."
- **Descriptions:** Descriptions are direct communications that are more focused on how versus why. "Sally found that she could save more than $20 a week by taking the bus three times weekly."
- **Conclusion:** Conclusion wraps up the package with a summary of what was learned and provides a next step with a focus on the audience. "The next time gas prices get you down, remember …"

Think about these elements as stepping stones in an explanation, with each step moving the audience from "A" to "Z" with confidence. ●

# Context

Context is a foundational element of communication — it provides a place for people and ideas to come together. Context allows ideas to come alive and to be applied in new ways. Unfortunately, context is often forgotten or limited. This makes our ideas appear to be inside jokes in which the punch line requires previous knowledge.

You have probably heard the saying "You are missing the forest for the trees." Taking the time to build context means talking first about the forest and then about the trees.

In most cases, developing context can be a simple matter of making a few declarative statements. We want the audience to feel that they agree with the statements and are confident that the explanation is heading in a direction that they can grasp. As my friend Boris Mann said recently regarding product pitches, "You want to keep everyone's head nodding."

An explanation that builds context can be very compelling. The context then becomes the person's feelings, which can be very powerful.

Done well, context makes it possible to invite experts and beginners alike to see ideas from a new, helpful perspective. ●

# Story

Storytelling, especially a specific kind of storytelling, represents an untapped resource when we are trying to make ideas easier to understand.

Stories, in the context of explanations, need facts. And facts can be explained much more effectively in the form of a story. Facts give stories *substance*. Stories give facts *meaning*. Substance and meaning are two of the most powerful factors in any explanation. However, we rely on fact telling more than ever and forget the power of storytelling. We focus so tightly on facts that story

falls by the wayside — and with it, our ability to give those facts the context and meaning that make them attractive to our audiences.

Award-winning journalist Al Tompkins wrote: "The difference between fact telling and storytelling is the difference between watching a stock ticker and hearing a story about an elderly woman who lost every dime she needs for shelter and medicine because the market just tanked."

By adding a person to a narrative, we make the facts more meaningful and interesting. Tompkins also wrote that "Viewers remember what they feel." That is the goal — to create an explanation people remember because it made them feel something.

Many of the stories we tell in Common Craft videos follow a very simple format that goes something like this:

- Meet Bob; he's like you.
- Bob has a problem that makes him feel bad.
- Now Bob found a solution, and he feels good!
- Don't you want to feel like Bob?

The simple inclusion of a human can make a huge difference and invite people to see your ideas from a new, more natural perspective. ●

## Connections

Dan O'Bannon and Ron Shusett pitched their movie using three simple words: "*Jaws* in Space." Their idea became the Oscar-winning movie *Alien*. O'Bannon and Shusett were able to connect their idea to something the audience already understood.

If we can connect an old, easily understood idea to something new, we can help the audience feel confident that they can understand the new idea.

Let's say you find yourself trying to explain cloud formation to a 10-year-old named Jasmine:

- Option 1 — Explain Clouds by Establishing New Ideas: With this approach, you might assume Jasmine needs to understand the basics of evaporation, condensation, and weather to understand clouds. You would need to introduce some new ideas, such as: clouds form when the water in oceans, lakes and rivers evaporates; clouds are made of tiny droplets of water; clouds are part of the atmosphere that surrounds Earth.
- Option 2 — Explain Clouds by Connecting Ideas: With this approach, you would look for ideas Jasmine already understands and use them as a foundation. The question then becomes, what does Jasmine currently understand that could connect her to cloud formation? The answer hits you — boiling water. With this in mind, you start at a level that allows her to feel confident. You ask, "You've seen boiling water, right? Have you ever noticed the steam that comes from the pot? When water gets hot it changes, and some of it turns into drops that are so tiny they float in the air. The steam that rises is like a little cloud. Earth has oceans, lakes and rivers. All that water slowly turns into tiny drops that are lighter than air, and when it does, clouds form in the sky."

By connecting clouds to something she already knows, we can help her see the big idea and give her confidence from the start that she can understand it.

Analogy compares two ideas for the purpose of outlining a connection between them. When two ideas connect, they are analogous. In explanation, the use of analogy is a key to making ideas easy to understand. Analogy represents an explanation strategy and an approach to connecting ideas. ●

## Description

The elements of context, storytelling and connections are most important and appropriate when the audience is near the "A" end of the scale, where they are trying to establish why an idea makes sense. But some explanations must account for people near the other end of the scale, which means approaching explanations from a different perspective.

For example, a team of mechanics who are learning to use a new tool are unlikely to benefit from a discussion of the importance of repairing cars or from stories about someone using the tool to solve problems. Their level of understanding is near the end of the scale — maybe at "U." Because they already understand the big idea, they need an explanation that focuses more on the details of *how* than on *why*.

We published a video in early 2012 called "Web Browsers Explained by Common Craft." Because the concept of the browser was likely clear, we started to account for the actions one must take to use a browser. We spent a few sentences on context by establishing that we were referring to software on a computer. We used a quick connection to explain the idea of a browser extension by transforming the concept of tabs into a short story about movie times. Then we wrapped it up with a reminder about the browser being a window to the online world. We were still using the principles of explanation, but the elements were more compressed and focused.

When people already feel comfortable with a concept and need an explanation that focuses on *how* more than on *why*, we may be prone to falling back on a recipe approach and focusing solely on the specific tasks that will produce the desired outcome. In some situations this may be appropriate. By thinking about these steps in terms of explanation, however, we may see opportunities to present the ideas in a form that interests the audience and motivates them to learn more. This may mean building context, making quick connections and using short stories to show not just how to complete a task but also why the task makes sense. ●

## Simplification

One of the most profound products of the curse of knowledge is the inability to simplify. The knowledge we bring to the table inhibits our ability to predict what will appear simple for others, which then makes our explanations overly complex.

When an idea seems unattainable, it has an impact on how experts explain the idea. The curse causes explanations to be accurate yet incomprehensible, detailed to the point of being ineffective, filled with unfamiliar words and presented without context or application.

However, when we consider simplification, we focus on transforming that complex bundle of details into big, understandable ideas that serve as stepping-stones to future understanding. Here are some guidelines:

- Do not make assumptions about what people already know.
- Use the most basic language possible.
- Zoom out and try to see the subject from the broadest perspective possible.
- Forget the details and exceptions and focus on big ideas.
- Trade accuracy for understanding.
- Connect the basic ideas to ideas the audience already understands.

Inside that big bundle of details and ideas is a single notion that will make the overall concept easier to understand. To get to that core, you can use the guidelines like a machete to hack away at all the extraneous knowledge that causes complexity. Soon enough, you will find any complex idea can be made simple. It just takes a new approach. ●

## Constraints

As much as we think we *want* a large number of choices, too many can become a problem and prevent us from feeling happy with any choice. We encounter this same decision making process when we're thinking through explanations. Our myriad choices can seem overwhelming and prevent us from feeling confident that we choose the correct analogy or story, for instance.

Since creating the first Common Craft video, we've worked under a very specific set of constraints that give our videos a specific shape, form and intent. By agreeing on a set of constraints, we can start to evaluate ideas from the context of what is possible within them. Although these constraints limit, they also liberate. We intentionally create a container that allows us to evaluate quickly what's in or out, which frees up our attention to focus on other things. Constraints help us focus on connecting what will fit.

Perhaps you're not sure where to begin, and you need to give your explanation a shape to move forward. One way to do this is to think about the explanation in terms of constraints and eliminate all the ideas and data blocking your view. Start by using the constraints that we encounter in making a video:

- **Timeline:** When do you need to have the explanation ready?
- **Duration:** How long should it take to explain?
- **Location:** Where will the explanation be presented?
- **Format:** How will the information be presented?
- **Idea volume:** How many ideas can you explain in the defined duration?
- **Language:** How technical is the language that the target audience speaks?

A common process for brainstorming and organizing ideas is to use sticky notes, each of which contains one idea. You can think about all the themes and ideas that could be part of your explanation and then put them all up on a wall. Next organize them into groups and start filtering them by removing the ones that don't fit with the big idea groups that emerge.

Only by considering a specific situation's limitations can we identify the right combination of factors that work to achieve the outcomes we want. ●

## Preparing for and Writing an Explanation

The best path to solving explanation problems and making ideas easier to understand is to have explanations in writing, where they can evolve before being presented. Written explanations become living documents that

provide a means for sharing and developing ideas and concepts. Although explanations may be effectively presented in text form, it is the *process* of writing that clarifies an explanation and gives it a form that can be presented in many ways.

Our focus before any presentation is writing. All Common Craft videos follow the same basic process prior to the storyboard phase:

**1. Big idea:** "We are going to make a video about X." If you intend to solve explanation problems, it is essential that you identify the right problem or big idea. Scan the environment of your work or home and look for explanation problems. Look for gaps in understanding that, if filled, would give people a way to see a big idea from a new perspective.

**2. Research and discovery:** "What main points do we need to make?" Our research and discovery are not only focused on the facts themselves but also on how they have been communicated or explained in the past. Approaching the research in this broad way will increase your chances of identifying major points and finding ways to make your explanations more useful and remarkable.

**3. Script writing:** "How will we make it easy to understand?" The script is the foundation of any explanation. The secret to crafting a great explanation is learning to recognize when people can't grasp an idea and developing a script that solves the problem.

## PART 3: PRESENT

## Common Craft's Lessons Learned

People often ask us what makes Common Craft video explanations work. We've identified lessons we learned that go beyond writing and focus on presenting explanations in a manner that befits our audience:

• **State your intentions early:** Perhaps the first chance we have to build context is the title we give our work. This prepares the audience for the presentation and sets expectations. The title shows that the video's intention is to accomplish a specific goal.

• **Solve a problem:** People in any situation — a classroom, business or social setting — are anxious about falling behind on information. If you can create an explanation that solves a problem and helps them feel confident about an idea, it will make an impression and create demand for more.

• **Keep it short:** People are busy. This is why we always keep our videos under four minutes long and why they are designed to relate only a handful of ideas. This is one of the constraints that matters most. We embrace the fact that we cannot include every detail.

• **Reduce noise:** People are surrounded by noise all the time. That's why experiences designed to reduce noise stand out and attract our attention. We make a concerted effort to reduce visual noise. Nothing appears on the whiteboard that isn't there for a purpose.

• **Use visuals:** Many people are visual learners. The combination of text and visuals can be greater than the sum of the parts. Visuals have the potential to captivate the audience in a way that words alone cannot.

• **Embrace imperfection:** Common Craft videos are inherently imperfect. They feature hand-drawn characters on hand-cut paper. Our videos show that we are more concerned about substance and understanding than about polished design and perfection.

• **Slow down:** The first few Common Craft videos were presented with minimal practice, and looking back, it's obvious they were too fast. We now approach our current work with an emphasis on a consistent, low-intensity pace that appeals to a very wide audience and accounts for a variety of viewers, such as older people and those for whom English is a second language.

• **Be timeless:** We want our explanations to be valuable today and years into the future. If we use an example that changes six months later, the video becomes outdated and less relevant. Some refer to this as shelf life. Our explanations can have longer shelf lives if we focus on big ideas and themes.

• **Be accessible:** In whatever medium you choose, consider the implications for those who might face challenges in experiencing your medium, then try to find a way to make it accessible to them as well.

• **Have fun:** Gentle humor and informality are among the true hallmarks of a Common Craft video. We make it a priority to not be too stuffy. Informality helps us be remarkable, and we hope it causes people to smile.

## Right Medium for the Message

Have you ever wondered about the lack of cooking shows on the radio? Radio is an auditory medium, and cooking is best when it's visual or, even better, live. Medium matters. One of the keys to getting the most out of an explanation is being deliberate about the media in which you choose to present it.

Your audience and access to tools are unique to you

and the explanation you're crafting. To be truly effective, you'll need to consider how to transform your explanation into forms that fit with your audience and their needs. There is a range of options for doing this:

- **Media options:** The various forms of communication: text, image/graphic, audio and video.
- **Presentation modes:** The platform that presents the forms: documents, presentation/slideshow, website, webinar, video and web-based presentation apps.
- **Recording and distribution options:** How we make the resulting explanation shareable.

Instead of defining the perfect tool for every situation, it's more powerful to think at a higher level about the basic options we have and to learn to use constraints to help us decide what will work best. Two types of constraints are media constraints (these focus on the explainer's access to media) and audience constraints (these focus on the audience's need and situations).

We can't use a simple formula to find the right combination of media for every situation; however, we can use constraints to help give our explanation a form. By thinking in terms of audience and media constraints, we can narrow the choices to a manageable few that fit our needs. ●

## Visuals

Only after we introduce a visual do some ideas easily make sense to the average person. The visual becomes the embodiment of the idea, something memorable and reproducible. And that is the goal of visuals in the context of explanation: They make ideas memorable and reproducible.

Visual thinking focuses not only on representing ideas but also on solving problems. According to Dan Roam, author of *Back of the Napkin*, you can classify any problem into six problem clusters:

- **Who and what problems:** Challenges that relate to things, people and roles.
- **How much problems:** Challenges that relate to measuring and counting.
- **When problems:** Challenges that relate to scheduling and timing.
- **Where problems:** Challenges that relate to direction and how things fit together.
- **How problems:** Challenges that relate to how things influence one another.
- **Why problems:** Challenges that relate to seeing the big picture.

Much of *Back of the Napkin* is related to solving these problems with pictures. The six problem clusters are associated with specific kinds of hand-drawn pictures that best relate that information and solve problems.

Visuals are an incredibly important part of the Common Craft experience; however, our videos are more focused on the script than on the visuals. The visuals support the script, not the other way around. Common Craft videos are designed to be a noise-free experience. The figures don't have faces because faces would represent unneeded noise — something for your brain to perceive and understand. And this is our goal: to have people see themselves in the characters we use in the videos. By eliminating faces, we can invite people to do just that.

Keep viewers' attention on the ideas that are the focus of the explanation. Ask whether the words, faces, buttons, features or ideas support the big idea or make it more difficult to see. Work to remove noise from your message, giving people a way to experience your ideas without distractions. ●

## Explanation Culture and Your Life as an Explainer

By thinking about your own life and work in terms of explanation, you can start to develop and evolve stories and connections that are more powerful than any answers you've given before.

You don't have to wait around for the perfect explanation problem — your first explicit explanation may be right in front of you. If you seize the opportunity, you may find that it takes on a life of its own.

Once explanation becomes a part of your communication toolbox, you'll start to see all the ways you can use it. Explanation represents an amazing opportunity to make your ideas more understandable. If you choose to pursue it, it could change your life for the better. ●

# THE ART OF WOO

## Using Strategic Persuasion to Sell Your Ideas

by G. Richard Shell and Mario Moussa

### THE SUMMARY IN BRIEF

When Napoleon was a young officer at the Siege of Toulon, he established an artillery battery in an extremely exposed, dangerous location. His superiors thought he would never get troops to man it. But instead of ordering or threatening his soldiers, Napoleon created a large placard and placed it next to the cannons: "The Battery of Men Without Fear." The position was manned night and day.

That's Woo: the ability to win people over to your ideas without coercion, using relationship-based, emotionally intelligent persuasion. It's the secret of success with colleagues, clients and customers.

Authors G. Richard Shell and Mario Moussa know what it takes to deal with difficult bosses and drive new initiatives through complex organizations. They have advised thousands of executives and have studied the greatest persuaders in history — from John D. Rockefeller Jr. to Andy Grove, to name only a few. Their four-step process, called Woo, is a systematic, repeatable strategy for putting your ideas across.

Emphasis falls on building relationships and communications techniques. The authors draw on their experiences while teaching seminars on negotiations to business and nonprofit executives and the problems they faced when needing to persuade people in their work and personal lives.

*The Art of Woo* does not suggest high-level strategies to defeat opponents in a competitive world. It delivers a process to win people over rather than defeat them.

### IN THIS SUMMARY, YOU WILL LEARN:

- What makes up the four steps of Woo.
- What the six channels of persuasion are and the appropriate times to use them.
- How to determine your personal persuasion style.
- How the eight best practices for managing organizational politics can help ensure that your idea gains the commitment needed.
- How to use the PCAN model to make a case for selling your idea.

## Selling Ideas: How Woo Works

Companies sell their products and services. People in organizations sell their ideas. Your success depends on how well you sell. The president and chairman of the board of a large bank in the Northeast was once asked how he thought about his job. "I am a salesman," he replied. "I have to sell policy changes and new ideas. I sell to the board of directors, the stockholders, the branch managers, the tellers, the cleaning crew and the customers all at the same time."

But selling ideas — especially the kind that make organizations work — is a skill shrouded in mystery. Classical geniuses from Aristotle to Cicero considered the idea of selling (they called it "rhetoric") to be one of the most critical subjects an educated person could learn. Yet two thousand years later, most schools have stopped teaching it. Rhetoric is seen as something practiced by those in the realm of political spin, while selling is viewed as something people can learn once they start work.

### The Four-Step Woo Process

You will discover that relationship-based persuasion follows a distinct, repeatable four-step process of Woo that you can master to achieve your goals:

**Step 1: Survey Your Situation** by developing your idea into a polished concept; mapping the decision process by understanding the social networks within the organization; assessing your persuasion styles; and confirming your own level of passion for the idea.

**Step 2: Confront the Five Barriers** including negative relationships, poor credibility, communication mismatches, contrary beliefs and conflicting interests. Then transform these five barriers into assets.

**Step 3: Make Your Pitch** by presenting solid evidence and arguments for your idea and giving it a personal touch.

**Step 4: Secure Your Commitments** by dealing with politics both at the individual level and within the organization.

To start using this process, you must master the main influence channels people use at work — and gain a sense of your own biases in communicating in these channels. Are you a soft-spoken relationship manager or a hard-driving taskmaster? Woo starts with a look in the mirror.

## Start With You

In persuasion, you are trying to win people over, not defeat them. Where do you start on this journey toward others' perspectives? With self-awareness. Unless you are aware of your own needs, emotions and communication impulses, you have little chance of seeing other people clearly — much less anticipating their feelings and crafting a message that will appeal to them. Thus, Woo starts with you.

### The Six Channels of Persuasion

Extensive research on how people influence one another in work settings has revealed that they return over and over to a relatively limited number of persuasion moves. Although communication scholars have labeled as many as 16 separate and identifiable strategies, there are six main persuasion channels that dominate when people are selling ideas.

**1. Interest-based persuasion** takes place every time someone frames a sales pitch in terms of the other party's self-interest. The essence of this persuasion channel is inducement, not trading.

**2. Authority** is usually used in a "top-down" situation, but even a secretary can use this channel if he or she has jurisdiction over expense accounts or other procedures. Effective appeals using authority are almost always accompanied by independent justifications to help persuade the audience that the authority is legitimate.

**3. Politics**, the use of coalitions, pressure tactics and

other power moves, is not limited to government. You are using the political persuasion channel whenever you acknowledge that appearances may be as important as substance, work through coalitions or lobby.

**4. Rationality-based persuasion** tries to influence someone's attitudes, beliefs or actions by offering reasons and/or evidence to justify a proposal on its merits.

**5. Inspiration and emotion** includes any appeal to an audience's overriding sense of purpose, values or beliefs as the foundation for selling your ideas.

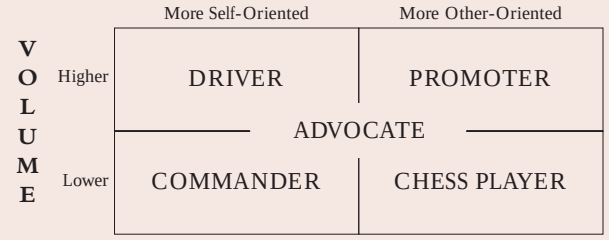
**6. Relationships** that are positive predispose an audience toward your message. Negative relationships, however, distort almost everything an idea seller says. You are accessing the relationship channel whenever you use similarity, liking, rapport and reciprocity, or rely on your existing network of contacts to open doors.

## Personal Persuasion Styles

Some acts of persuasion are specially tailored to appeal to specific audiences, while others are more akin to blunt announcements of the speaker's point of view. The former are called *other-oriented persuasion* and the latter are called *self-oriented persuasion*.

When you are working from the audience's point of view, you are focused more on social considerations — existing relationships, political environment, other people's interests. You then harness these insights to make your message especially appealing to that target audience.

By contrast, when you are working from your own frame of reference, you focus on your internal perspective — the authority you want to assert, the need you want to express or the evidence you want to demonstrate. Then you put your message out there with less attention to "spinning" it for a particular audience.



Of course, persuasion events often consist of a seamless combination of moves that are both internally and externally focused. But if your preferences run strongly toward one of these orientations, that can define your overall communication style.

## Volume Control

A second important variable that goes into the persuasion styles people display is the "volume" they give to their message. At work, you may also have noticed people who speak up right away and those who prefer to listen and quietly give their views when asked.

One of the more important variables in how you come across to others in persuasion moments is the rapidity and ease with which you can escalate from a normal conversational tone to a tough or enthusiastic insistence on your point of view. Some people find this quite a natural transition. Others prefer to maintain a more even tone and are not as prone to wide swings in emphasis. Such people are no less passionate about their ideas, but they are quieter by disposition. If you have a strong inclination toward communicating one way or the other, this will affect your choice of persuasion roles.

## Five Persuasive Styles

## What's Your Personal Style?

Five persuasive styles factor into the self-oriented versus other-oriented dimensions. The more other-oriented roles are the **Promoter** and the **Chess Player**. The more self-oriented roles are the **Driver** and the **Commander**. The **Advocate** role is a balance of both and a moderate tone or "volume." The chart above gives you a sense of how the five roles relate to one another.

## The Driver: Andy Grove

Drivers are fond of saying things like "Do this my way or hit the highway." In an ineffective persuader, this comes across as overbearing. But by conveying a sense of self-awareness and showing true dedication to the organization's mission, this strong style can be effectively persuasive.

As head of Intel, Andy Grove was notorious for his blunt style of communication. But he knew this about himself and compensated by making his style the cultural norm within Intel. An example of how this culture worked comes from an incident between Grove and his secretary, Sue McFarland. During McFarland's first performance review, Grove told her she lacked ambition and deserved no raise. She went home that night and put together an airtight case refuting each of Grove's charges. The next day she confronted Grove, and walked out of his office with not only a raise but permission to hire an assistant.

## The Commander: J.P. Morgan

You don't have to be aggressive like the Driver when you want people to know exactly what you think. A quiet, understated demeanor can often be much more effective. People listen when you speak your mind from a position of quiet confidence and credibility.

In 1895, a financial panic set off a run on the gold reserves that served as the basis of the U.S. currency. President Grover Cleveland called a meeting of advisers, including the nation's most powerful financier, J.P. Morgan, to address the crisis. Morgan sat silently as leaders from Congress and Cleveland's cabinet offered plans that Morgan knew would fail. When asked for his suggestion, Morgan laid out a plan to save the Treasury. He offered to repatriate 3.5 million ounces of gold he controlled in Europe and agreed to take, in return, $65 million worth of 30-year government bonds. Morgan then produced a legal memorandum showing that the government had authority to act as he proposed based on a little-known emergency law passed just after the Civil War.

Morgan's proposal was adopted. His message gained power from the quiet way he communicated both his authority and expertise. Playing the Commander with finesse, he saved both the American and his own financial empire from a fiscal catastrophe.

### The Promoter: Andrew Carnegie

When played ineffectively, the Promoter is all glad-handing and no substance. But when played well, this role features an outfront style and a gift for gaining and maintaining a wide circle of relationships.

In 1883, steel mogul Andrew Carnegie faced one of his first labor crises. He adopted a politically sophisticated negotiation strategy designed for delivery on the Rationality, Interest and Relationship channels. He and his management team prepared a document that displayed the trade-offs between forcing layoffs and reducing wages. This analysis demonstrated that if wages were reduced 13 percent, the plant could remain in operation without layoffs — a key interest of the unions. He offered to open his books so union leaders could see the financial constraints the steel market was forcing on the business. He mobilized them as his allies. The union leaders accepted the deal and sold it to their members.

### The Chess Player: John D. Rockefeller

In 1865, John D. Rockefeller found himself trapped in a partnership with four other men: Maurice, James and Richard Clark (all brothers) and Samuel Andrews. Rockefeller favored leveraging the partnership's assets to invest in the oil business, but the Clarks repeatedly vetoed his ideas. Rockefeller wanted to end the partnership, but the firm could be dissolved only if all partners consented. Therefore, Rockefeller went to work behind the scenes, lining up support from some banks, and then he provoked another quarrel over an oil industry investment. Maurice Clark barked, "If that's the way you want to do business, we'd better dissolve." Catching his partners in their bluff, Rockefeller placed a formal notice in the morning paper stating that he and his partners had unanimously agreed to part ways.

By communicating in a moderate tone and appearing to play to his partners' interests, Rockefeller arranged the situation so that his partners gave him exactly what he wanted.

### The Advocate: Sam Walton

As Wal-Mart's founder, Sam Walton could have ordered people to do what he wanted. But part of his genius was that he rarely forced an idea. By protecting the self-esteem and autonomy of his executives, he was able to win their cooperation.

Take the idea of using "greeters." Walton got this idea when visiting a Wal-Mart in Louisiana. He was met by an elderly man who said, "Hi! How are ya? Glad you're here." He discovered the store had experienced a shoplifting problem. Rather than offend the 99 percent of customers who were honest by posting a guard to check bags, the manager placed a friendly-looking older man out front to put shoplifters on notice that someone was watching.

Walton went back to Bentonville and told everyone about placing greeters in every store. A lot of people thought he'd lost his mind. Walton immediately gave credit for the greeters program to the people in the field who conceived it. Through his skilled advocacy, the greeters program has become an enduring, signature part of the Wal-Mart shopping experience.

### The Problem of Authenticity

The need in persuasion to adapt to audiences raises an important ethical issue: authenticity. Your personal credibility provides the foundation for influence. The authenticity paradox diminishes when you see that you cannot help being a somewhat "different person" depending on who you are interacting with. And your awareness of these various roles gives you a range of "authentic selves" to display in persuasion. ●

## Connect Your Ideas to People

As you plan your idea-selling strategy, you will need to set persuasion goals for each stage of the process. In some encounters, your goal will be to obtain introductions to key influencers; in other meetings, you will be looking for endorsements; eventually you will be asking for decisions.

### It All Begins With Ideas

Inside or outside an organization, you need to bring lots of energy to the process of developing and promoting new concepts. The Netflix concept got its start one day when Reed Hastings had a huge late fee for a copy of *Apollo 13* he had rented. As he was driving to the

gym, he began to think about the video store's business model. The store charged customers for each rental and penalized those who were late returning movies. The gym charged a flat fee and did not keep score on his usage. Would it be possible to run a movie rental business the way the gym worked? He worked on the idea until he developed a full-fledged profit model.

### From Ideas to Action: Deciding Who to Woo

Once you have a well-polished idea, you are ready to map the influence you will use to sell it. Even the most unlikely ideas can be pushed through the most difficult environments if you act methodically — one idea, one ally, one e-mail, one conversation, one meeting and one presentation at a time. And sometimes you can get to the decision maker and make a sale in one move — even with a very big initiative.

One-move idea sales can work even better with lower-level decision makers, provided you have taken the trouble to form good relationships with them. As Peter Drucker once noted, it is a "dangerous mistake" to think that only those at higher levels make important decisions.

### Setting Specific Persuasion Goals for Each Encounter

The stepping-stone process for selling ideas requires you to persuade different people to do different things at different stages. Thus, you will need somewhat different goals as you move from one encounter to the next.

Early on, you may simply be trying to introduce your idea and get key people thinking about it by floating "trial balloons." Later, you may be seeking input to help shape your idea into a final product. Finally, you may be asking for specific forms of cooperation as you work through your social network toward the ultimate decision makers.

**For additional information on persuasion goals, go to http://my.summary.com**

## Build Relationships and Credibility

Managing relationships plays a crucial role in selling ideas. Relationships give people a level of trust and confidence in each other, facilitating communications and making it easier to cooperate. Three social psychological foundations form the basis for relationships: similarity, liking and reciprocity. Add these ingredients to a history of positive interactions and you get a crucial idea-selling asset: trust.

### Similarity and Liking

Selling ideas to colleagues is seldom the same as conventional salesmanship. But in the area of relationships, there are common features. First, "face time" matters. The more you work with people, the more familiar they become with you, laying the groundwork for functioning relationships. The second trigger for the liking response is a perception of similarity between two people.

Even something as elusive as personal style can be enough to strike a chord of similarity. Early in his battle to get a casino license in Atlantic City, Donald Trump needed to hire a local lawyer to help him drive through his application. A young man named Nick Ribis was recommended to him. Ribis won Trump over in their opening conversation by showing he could match Trump, ego for ego.

"I'm not sure a lawyer as young as you are can handle a big project like this," said Trump after being introduced.

Ribis did not miss a beat. "To tell you the truth, Mr. Trump, I've never had a client as young as you who could afford my bill." The two men hit it off and worked closely on a successful legal strategy to get the casino license.

### Reciprocity

Reciprocity means that we tend to do things for people who do things for us. It can be observed at the bargaining table when people take turns making concessions. Reciprocity can also take the form of mutual exchanges of resources, services, emotional support, status and information.

You can benefit from the reciprocity system even when nobody owes you any personal favors. All you need are allies and champions who are willing to use their networks and associated reciprocity systems to advance your cause.

### Relationship Builders

In the world of electronic communications, there are a dizzying number of choices for building relationships. When practicing the Art of Woo, there is no substitute for meeting face to face. However, this is bad news because in today's multitasking world, convenience usually trumps judgment when it comes to developing relationships.

When you want to build a relationship with an important person on an idea-selling campaign, take the time to meet face to face. If conflicting schedules or distances make this impossible, spend some time composing a careful message. Research shows that e-mail messages are more likely to be successful if you personalize your note and build some rapport, forecast the agenda, and then get to the heart of your communications. Don't send until you reread your message and edit it with an eye to how it will be seen when received.

### Credibility

Credibility comes down to audience perceptions of three key things: competence, expertise and trustworthi-

ness. Thus, your credibility resides *in your audience's mind*. This means you can lose it in a single moment of poor judgment, miscalculation or misconduct.

Whereas people give you competence-based credibility when they think you have accomplished something worthy, they give you expertise-based credibility when they think you have specialized knowledge. If you are respected enough, expertise can overcome even the most socially awkward presentation. But no matter how slick your presentation, you will lose your audience if you show a lack of expertise.

When it comes to data, your credibility will depend on the reliability of your sources as well as your expertise. You should try to find out what sources *your audience* considers reliable. By showing reliability and integrity in everything you do — not just when everyone is watching — you build the foundation for people to trust you.

## Respect Their Beliefs

The people you are selling your idea to will have their own individual, sometimes quirky way of processing information and concepts. It will help you to gather as much information as you can on the thought processes, values and preferences of each person in your stepping-stone strategy.

Sometimes you can gain insights into people's preferred language by finding out how they speak when they are selling ideas. Search for the special words that your audience will find familiar and that can convey your idea in the most user-friendly way. Be ready to shift strategies based on your audience's real-time feedback.

### Using a Common Language

Bono is more than a well-known singer and front man for the band U2. He is also an authentic social activist with a bold agenda for helping the world's poorest people. And he has a gift for turning would-be enemies into fervent allies by selecting the right language and saluting the right values.

On September 20, 2000, Bono walked into the office of arch-conservative U.S. Senator Jesse Helms to recruit allies for Jubilee 2000 — a program to get governments to forgive the debts of African countries so more local resources could be directed at the AIDS epidemic.

As Bono launched into his litany of statistics he saw that he was losing his audience. So he switched to a different "language." Bono, himself a student of the Bible, knew that Helms was a religious man. So he started speaking of Jesus' concern for the poor and afflicted. By the end of the conversation, Senator Helms was visibly moved and expressed a desire to help Bono with his cause. With Helms' support, Congress appropriated $435 million.

### Beliefs as Barriers to Persuasion

The very power of your audience's beliefs creates hidden barriers to persuasion. Ideas that violate basic beliefs will simply be rejected. If you can communicate on the right persuasion channel and show how your idea furthers your audience's core purposes, you are well on the way to successfully wooing any group.

## Give Them Incentives to Say Yes

When you approach people in your stepping-stone strategy, you must not only use their language and honor their beliefs — you must frame your idea in terms of their needs and problems. People tend to favor ideas that benefit them and oppose those that will force them to shoulder significant costs. Here are important questions to help you think about your audience's interests.

**1. Why might it already be in the other party's interests to support my idea?** What problems, hopes, needs, fears, desires, and goals do they face that your idea might help them with?

When Donald Trump was starting off as a New York City real estate developer, one of his projects was to take an old, boarded-up hotel and turn it into the Grand Hyatt. Many people thought that lenders would charge extra-high interest rates for loans on such a risky property. But Trump did not target lenders. He targeted public officials whom he could address in terms of their interest in rejuvenating the city and their cravings for positive publicity. When he got approval, he made sure that all involved were seen as the people who had "saved" New York City.

**2. What do other parties want that I can give them to gain their support?** A key point to remember is that people's self-esteem and pride can be rich sources of low-cost trade-offs.

When Andrew Carnegie was a boy, his mother let him keep pet rabbits. He persuaded children in his neighborhood to gather food by promising he would name baby rabbits after them. In today's world, fundraisers follow the example, selling ideas by promising to place donors' names on them.

**3. Why might they say no?** When there is a strict conflict of interest that cannot be overcome, you will have to accept that no sale is possible. When you hear unanticipated objections, probe for any way you can work around them. If the people who will win with your new idea outnumber or outrank the people who will lose, you might still succeed.

## State Your Case

In the end, the two most reliable ways to persuade people are the most traditional: offer them solid reasons to say "yes," and back up those reasons with evidence. The soundness of reasons required and the depth of evidence, however, vary with circumstances. When people don't care much about the issue, are unqualified to evaluate it or are already inclined to agree based on their own beliefs and interests, arguments need not be rigorous. Often, the simplest statements, such as "I think this is a good idea because ... " may be enough to make a sale if you say it with conviction and credibility.

### The PCAN Model

One template for making a tight idea-selling case to an involved audience is the PCAN model (Problem, Cause, Answer and Net Benefits). This model concentrates people's attention, producing sharp, practical recommendations.

• **Define the problem.** By providing a crisp answer to the question "What is the problem?" you establish the context in which your idea will be evaluated.

• **Explain the cause of the problem.** An investigation into causes usually points toward solutions. You may sometimes need to do this in a way that avoids assigning blame, especially if your audience helped to create the situation.

• **What is my answer to the problem?** Here you outline your proposal, show how it will solve the problem and demonstrate that it could work in the real world.

• **Does my answer provide net benefits compared with alternatives?** You must prove that your idea is better than the current situation and alternative solutions. Solid evidence may be hard to come by. Proposals for pilot projects and market tests are popular methods for concluding a good policy-based idea pitch.

### Using the PCAN Model With Maximum Credibility

You must balance two important credibility factors: (1) your need to come across as a committed advocate and (2) your objectivity as an expert who has considered all sides. If you come to an argument with an obvious conflict of interest, address this conflict up front.

You gain credibility by acknowledging the possible weaknesses in your own arguments before presenting them, whereas you lose credibility if you present a weak argument and your audience punches holes in it. If you are assuming that the audience shares your belief about the nature of a problem, say so. If they do, you get credit as someone who advances his case only with his audience's permission. ●

**For additional information on PCAN's evidence, go to http://my.summary.com**

## Make It Memorable

In every persuasion event, there are two parts to the audience: its *rational calculator* and its *intuitive decision maker*. You must present arguments and evidence to the former, but unless you also make your ideas easily accessible to and actionable by the latter, you will lose the sale.

There are eight specific pathways that lead to the intuitive decision maker — techniques for grabbing your audience's attention and keeping it firmly focused on your idea.

**Pathway No. 1: Make it vivid.** Vividness can trigger belief even when no proof is available. Before grabbing just any visual image, make sure it is an image your audience will respond to in the way you intend.

**Pathway No. 2: Use demonstrations and symbolic actions.** Nothing is more vivid than an object your audience can see and touch, or an experience they can feel.

**Pathway No. 3: Put your heart into it.** People will be more inclined to believe your arguments if you show that you believe in them yourself. What convinces is conviction, especially if that conviction is backed by genuine feeling.

**Pathway No. 4: Tell a story.** When you tell a good story, the audience starts wondering what plot twists lie ahead. If you have integrated your idea pitch into the story in a compelling way, the intuitive decision maker will be listening.

**Pathway No. 5: Personalize it.** Talk about specific things a customer or employee shared with you about the problem your idea addresses. Give people names, and place the story in a specific location.

**Pathway No. 6: Make it a puzzle.** Look for puzzles embedded within the problems you are trying to help solve. The puzzle device works best when the solution is exactly what you want the audience to remember about the idea you are selling.

**Pathway No. 7: Build bridges with analogies and metaphors.** When you are talking about something the audience does not know much about, you need to start with something it does know. The simpler and more widely understood the image, the greater its hold on the imagination.

**Pathway No. 8: Force your audience to think.** You can get people thinking about old issues in new ways when you question the obvious. Ask your audience to consider what an upside-down world might look like. Make a radical assumption and get the audience to explore what the world might look like if it were true. Ask the audience to rethink the purpose or mission as part of your idea sale. ●

## Close the Sale

Your first job in closing a sale is often the hardest: overcoming the natural inertia that keeps people locked into the tried and true. Scientists have a name for this phenomenon: the "status quo" bias. Change requires effort, so people maintain the status quo, provided it works "well enough" to satisfy their interests.

### Gaining Individual Commitment

Unless you can take an individual's word to the bank, you need to close your sale by asking for performance-based rather than promise-based commitments.

Psychologists claim that to engage the commitment process, you need the other party to take concrete action that requires effort, is freely chosen, and is observed by or known to people other than you. The action the other party takes can be as simple as sending an e-mail to a group list endorsing your idea or as complex as allocating millions of dollars and hundreds of staff to your initiative. Either way, you can count that person as an ally.

### Organizational Commitment: Managing Politics

Organizational momentum can carry your idea a fair distance once you get decision makers to take concrete action. Unfortunately, there are also many countervailing forces that can slow or stop this momentum. If you want your idea to succeed, you must remain an active and energetic advocate.

Selling ideas sometimes sparks large-scale disputes between organizational units. When this happens, serious issues of corporate strategy, resources, careers and turf can stop an initiative. Of course, you can expect people who disagree in good faith over the merits of a proposal to do battle over it. The solution to such disputes lies in your making the best possible case to the most influential people: essentially using the four steps of Woo.

But often battles are less about the merits of an idea and more about the effects your idea will have on the existing distribution of power, resources and status. When this happens, political strategies become paramount.

### Best Practices for Managing Politics

Winning political battles within organizations is not all that different from winning traditional political fights. Here are some time-tested tactics that can help you win.

**1. Find a simple theme that captures your idea.** The bigger the group you need to communicate with, the larger the payoff from having a theme that captures the essence of what you want to get done. To succeed in politics, you need a slogan.

**2. Get your idea on the agenda — create a sense of urgency.** Deadlines, external threats and mandates from higher authority can be useful ways to make your idea a priority.

**3. Score small wins early and broadcast them widely.** When people see positive results from their actions, their commitment deepens.

**4. Form key alliances to broaden your base.** Form alliances with the people who have three key powers: to decide, to fund and to implement.

**5. Create a snowball effect.** As the number of people who back the idea increases, the pressures build on opponents to get out of the way.

**6. Be flexible — respond and adjust.** Your ideas will take on a life of their own as more people become involved. When this happens, you need to show flexibility if you and your idea are to survive politically.

**7. Lock it in.** Once you have generated momentum, you need to lock the idea into the organizational matrix through budget lines, job descriptions, incentives and other procedures.

**8. Secure appropriate credit.** The secret of gaining appropriate kudos centers on relationships. If you cannot blow your own horn, you will need others to blow it for you. And the people who will sing your praises are generally the ones who know you, like you, owe you or trust you.

## Woo With Integrity

Like any powerful force, persuasion skills can serve many purposes — some good and some not so good. With these tools now in your hands, you confront the ethical problem of how you will use them. If you could not defend your actions on the front page of *The Wall Street Journal*, then you should rethink your strategy.

You need persuasion skills no matter what kind of organization you work for. And the higher you go, the more these skills matter. The typical organization may have many traffic lights and stop signs. Learning the Art of Woo will provide a road map for working your way through these dangerous intersections to safety and success.

### RECOMMENDED READING LIST

If you liked *The Art of Woo*, you'll also like:

1. ***Influencer*** by Kerry Patterson, Joseph Grenny, David Maxfield, Ron McMillan and Al Switzler. This book shows readers how seemingly "insignificant" people are making incredibly significant improvements in solving problems others would think impossible.
2. ***Words That Work*** **by Frank D. Luntz, Ph.D.** To effectively obtain the power of communication, you must learn that it's not always what you say, but how you say it.
3. ***Success Built to Last*** **by Jerry Porras, Stewart Emery and Mark Thompson.** Through interviews with 300 successful individuals, the authors uncover the secrets of their accomplishments.

# The ONE Thing

## The Surprisingly Simple Truth Behind Extraordinary Results

by Gary Keller
with Jay Papasan

### THE SUMMARY IN BRIEF

You want less. You want fewer distractions and less on your plate. The daily barrage of emails, texts, tweets, messages and meetings distract you and stress you out. The simultaneous demands of work and family are taking a toll. And what's the cost? Second-rate work, missed deadlines, smaller paychecks, fewer promotions — and lots of stress.

And you want more. You want more productivity from your work. More income for a better lifestyle. You want more satisfaction from life and more time for yourself, your family and your friends.

With *The ONE Thing* by Gary Keller and Jay Papasan, now you can have both — less and more. *The ONE Thing* delivers extraordinary results in every area of your life — work, personal, family and spiritual.

The ONE Thing shows up time and again in the lives of the successful because it's a fundamental truth. Applying the ONE Thing to your work — and in life — is the simplest and smartest thing you can do to propel yourself toward the success you want.

### IN THIS SUMMARY, YOU WILL LEARN:

- About the six lies standing between you and success and how to beat them.
- That willpower is not always on will-call and how to use it as effectively as possible.
- How to construct a Focusing Question.
- How to navigate the path to great answers by using the Great Question matrix.
- How to time block.

## Introduction

Considered one of the funniest movies of all time, *City Slickers* sprinkles in unexpected doses of wisdom and insight. In one memorable scene, Curly, the gritty cowboy, and city slicker Mitch leave the group to search for stray cattle. Curly reins his horse to a stop and turns to face Mitch.

Curly: Do you know what the secret to life is?

Mitch: No. What?

Curly: This. [Holds up one finger.]

Mitch: Your finger?

Curly: One thing. Just one thing. You stick to that and everything else don't mean sh★t.

Mitch: That's great, but what's the "one thing"?

Curly: That's what you have to figure out.

Out of the mouth of a fictional character comes the secret of success. Whether the writers knew it or unwittingly stumbled on it, what they wrote was the absolute truth. The ONE Thing is the best approach to getting what you want.

### Going Small

If everyone has the same number of hours in a day, why do some people seem to get so much more done than others? The answer is they make getting to the heart of things the heart of their approach. They go small.

"Going small" is ignoring all the things you could do and doing what you should do. It's recognizing that not all things matter equally and finding the things that matter most. It's realizing that extraordinary results are directly determined by how narrow you can make the focus. When you go as small as possible, you'll be staring at ONE Thing.

### Getting Extraordinary Results

Toppling dominoes is pretty straightforward. You line them up and tip over the first one. In the real world, though, it's more complicated. The challenge is that life doesn't line everything up for us and say, "Here's where you should start." So instead, every day you should line up your priorities anew, find the lead domino and whack away at it until it falls.

This approach works because extraordinary success is sequential, not simultaneous. The domino effect applies to the big picture, like your work or business, and it applies to the smallest moment in each day when you're deciding what to do next. Success builds on success. The key is over time. Success is built sequentially. It's one thing at a time. ●

## PART I: THE LIES: THEY MISLEAD AND DERAIL US

Over time, myths and mistruths get thrown around so often that they eventually feel familiar and start to sound like the truth. Then we start basing important decisions on them.

The challenge we all face when forming our success strategies is that success has its own lies, too. If we're going to maximize our potential, we're going to have to make sure we put these lies to bed.

## Lie No. 1: Everything Matters Equally

Equality is a worthy ideal pursued in the name of justice and rights. In the real world of results, however, things are never equal. No matter how talented people are — no two are ever equal. Equality is a lie.

Not everything matters equally, and success isn't a game won by whoever does the most. Yet that is exactly how most play it on a daily basis.

Although to-do lists serve as a useful collection of our best intentions, they also tyrannize us with trivial, unimportant stuff that we feel obligated to get done — because it's on our list. Achievers operate differently. Achievers always work from a clear sense of priority. Instead of a to-do list, you need a success list — a list that is purposefully created around extraordinary results. If your to-do list contains everything, then it's probably taking you everywhere except where you want to go.

### Applying Pareto's Principle

Pareto's Principle, also known as the 80/20 Principle, states that the minority of your effort (20 percent) leads to the majority of your results (80 percent). It points us in a clear direction: the majority of what you want will come from the minority of what you do. Extraordinary results are disproportionately created by fewer actions than most people realize.

Depending on the circumstances, it can play out as 90/20, where 90 percent of your success comes from 20 percent of your effort. Or 70/10 or 65/5. Just understand these are all working off the same principle. The insight is that not everything matters equally; some things matter more than others — a lot more. A to-do list becomes a success list when you apply Pareto's Principle.

To go further to an extreme, start with as large a list as you want, but develop the mindset that you will whittle your way from there to the critical few and not stop until you end with the essential ONE Thing. ●

## Lie No. 2: Multitasking

Multitasking is a lie because nearly everyone accepts it as an effective thing to do, but when you try to do two things at once, you either can't or won't do either well. Multitasking is an effective way to get less done.

The term "multitasking" emerged in the 1960s to describe a computer's ability to quickly perform many tasks. However, the term is inherently deceptive. Multitasking is about multiple tasks alternately sharing one resource (the CPU), but over time, the context was flipped, and it became interpreted to mean multiple tasks being done simultaneously by one resource (a person).

People can do two or more things at once, such as walk and talk, but we can't focus on two things at once. Our attention bounces back and forth. This is fine for computers, but it has serious repercussions in humans.

When you switch from one task to another, two things happen. The first is nearly instantaneous: you decide to switch. The second is less predictable: you have to activate the "rules" for whatever you're about to do. It always takes some time to start a new task and restart the one you quit, and there's no guarantee you'll pick up where you left off.

So why would we ever tolerate multitasking when we're doing our most important work? Just because our day job doesn't involve bypass surgery doesn't make focus any less critical to our success. Your work deserves no less respect. ●

## Lie No. 3: A Disciplined Life

Contrary to what most people believe, success is not a marathon of disciplined action. Achievement doesn't require you to be a full-time disciplined person where your every action is trained and where control is the solution to every situation. Success is actually a short race — a sprint fueled by discipline just long enough for habit to kick in and take over.

You can become successful with less discipline than you think, for one simple reason: success is about doing the right thing, not about doing everything right.

The trick to success is to choose the right habit and bring just enough discipline to establish it. That's it. As this habit becomes part of your life, you'll start looking like a disciplined person, but you won't be one. You'll be a person who used selective discipline to build a powerful habit.

### Sixty-Six Days to the Sweet Spot

The right discipline goes a long way, and habits are hard only in the beginning. Over time, the habit you're after becomes easier to sustain. Habits require much less energy and effort to maintain than to begin.

In 2009, researchers at the University College of London asked the question, "How long does it take to establish a new habit?" The results suggest that it takes an average of 66 days; the full range was 18 to 254 days, but 66 represented a sweet spot — with easier behaviors taking fewer days and tough ones taking longer.

Super-successful people aren't superhuman; they've just used selective discipline to develop a few significant habits — one at a time, over time.

## Lie No. 4: Willpower Is Always on Will-Call

Most people assume willpower matters, but many might not fully appreciate how critical it is to success. Willpower is so important that using it effectively should be a high priority. Unfortunately, because it's not always on will-call, putting it to its best use requires you to manage it. Willpower is a timing issue; when you have your will, you get your way.

Willpower has a limited battery life but can be recharged with some downtime. You must monitor your willpower fuel gauge. Full-strength willpower requires a full tank. Never let what matters most be compromised due to underfueling. Eat right and regularly and get plenty of rest.

How do you put your willpower to work? You think about it. Pay attention to it. Respect it. You do what matters most first each day when your willpower is strongest. Maximum strength means maximum success.

## Lie No. 5: A Balanced Life

The idea of balance is exactly that — a grand yet not very practical idea. In your effort to attend to all things, everything gets shortchanged, and nothing gets its due.

When we say we're out of balance, we're usually referring to a sense that some priorities — things that matter to us — are being underserved or unmet. The problem is that when you focus on what is truly important, something will always be underserved. There will always be things left undone. Leaving some things undone is a necessary tradeoff for results. But you can't leave everything undone, and that's where counterbalancing comes in. You must counterbalance your work and personal life buckets.

**1. Counterbalance your work bucket.** View work as involving a skill or knowledge that must be mastered. This will cause you to give disproportionate time to your ONE Thing and will throw the rest of your workday, week, month and year out of balance. Your work life is divided into two areas: what matters most and everything else. You will have to take what matters to the extremes and be OK with what happens to the rest. Professional success requires it.

**2. Counterbalance your personal life bucket.** Acknowledge that your life has multiple areas and that each requires a minimum of attention for you to feel that you "have a life." Drop any one, and you'll feel the effects. This requires constant awareness. You must never go too long or too far without counterbalancing them so that they are all active areas of your life. Your personal life requires it.

The question of balance is really a question of priority. When you change your language from balancing to prioritizing, you see your choices more clearly.

When you're supposed to be working, work, and when you're supposed to be playing, play. It's a weird tightrope you're walking, but it's only when you get your priorities mixed up that things fall apart.

## Lie No. 6: Big Is Bad

This is possibly the worst lie of all, for if you fear big success, you'll either avoid it or sabotage your efforts to achieve it. No one knows their ultimate ceiling for achievement, so worrying about it is a waste of time. When you allow yourself to accept that big is about who you can become, you look at it differently.

Thinking big is essential to extraordinary results. Success requires action, and action requires thought. But here's the catch — the only actions that become springboards to succeeding big are those informed by big thinking to begin with. Make this connection, and the importance of how big you think begins to sink in.

Everyone has the same amount of time, and hard work is simply hard work. As a result, what you do in the time you work determines what you achieve. And because what you do is determined by what you think, how big you think becomes the launching pad for how high you achieve.

Don't fear big. Fear mediocrity. Only living big will let you experience your true life and work potential.

# PART 2: THE TRUTH: THE SIMPLE PATH TO PRODUCTIVITY

Success comes down to this: being appropriate in each moment of your life. If you can honestly say, "This is where I'm meant to be right now, doing exactly what I'm doing," then all the amazing possibilities for your life become possible.

## The Focusing Question

How we phrase the questions we ask ourselves determines the answers that eventually become our life. The

challenge is that the right question isn't always so obvious. Most things we want don't come with a road map or a set of instructions, so it can be difficult to frame the right question. Clarity must come from us.

To get the answers we seek, we have to invent the right questions — and we're left to devise our own. So how do you come up with uncommon questions that take you to uncommon answers?

You ask one question: the Focusing Question. Anyone who dreams of an uncommon life must find an uncommon approach to live it. The Focusing Question is that uncommon approach.

### Anatomy of the Question

The Focusing Question collapses all possible questions into one: "What's the ONE Thing I can do / such that by doing it / everything else will be easier or unnecessary?

- **Part 1: "What's the ONE Thing I can do …":** This sparks focused action. It forces you towards something specific. The last phrase, "can do," is an embedded command directing you to take action that is possible. Not should do, could do or would do. Action you "can do" beats intention every time.
- **Part 2: "… such that by doing it …":** This tells you there's a criterion your answer must meet. It's the bridge between just doing something and doing something for a specific purpose.
- **Part 3: "… everything else will be easier or unnecessary?":** This is the ultimate leverage test. It says that when you do this ONE Thing, everything else you could do to accomplish your goal will either be doable with less effort or no longer even necessary. This elevates the answer's potential to change your life by doing the leveraged thing and avoiding distractions.

The Focusing Question asks you to find the first domino and focus on it until you knock it over. Once you've done that, you'll discover a line of dominoes behind it either ready to fall or already down.

## The Success Habit

Habits can be hard to break and hard to create. But we are unknowingly acquiring new ones all the time. When we start and continue a way of thinking or a way of acting over a long enough period, we've created a new habit. The choice we face is whether or not we want to form habits that get us what we want from life. If we do, then the Focusing Question is the most powerful success habit we can have.

Obviously, you can drive yourself nuts analyzing every little aspect of everything you might do. Instead, start with the big stuff and see where it takes you. The Focusing Question can direct you to your ONE Thing in different areas of your life. Simply reframe the Focusing Question by inserting your area of focus. You can also include a time frame — such as "right now" or "this year" — to give your answer the appropriate level of immediacy, or "in five years" or "someday" to find a big-picture answer that points you toward outcomes to aim for.

Here are some Focusing Questions to ask yourself:

- For My Spiritual Life: "What's the ONE Thing I can do to help others?"
- For My Physical Health: "What's the ONE Thing I can do to achieve my diet goals?"
- For My Personal Life: "What's the ONE Thing I can do to improve my skill at _____?"
- For My Key Relationships: "What's the ONE Thing I can do to improve my relationship with my spouse/partner?"
- For My Job: "What's the ONE Thing I can do to ensure that I hit my goals?"
- For My Business: "What's the ONE Thing I can do to make us more competitive?"
- For My Finances: "What's the ONE Thing I can do to increase my net worth?"

To make your ONE Thing part of your daily routine, you must first understand and believe it. If you don't, you won't take action. Then you need to ask yourself the Focusing Question each day. When you do this, your direction will become clear. Once you make the Focusing Question a habit, you fully engage the power to get the results you want. To help yourself out, leverage reminders, such as putting up a sign that says, "Until my ONE Thing is done — everything else is a distraction." And be sure to recruit support — research shows that those around you can influence you tremendously.

This one habit can become the foundation for many more, so keep your success habit of using the Focusing Question working as powerfully as possible.

## The Path to Great Answers

The Focusing Question helps you identify your ONE Thing in any situation. It clarifies what you want in big areas of your life and then drills down to what you must do to get it. It's a simple process: Ask a great question, then seek out a great answer.

### Ask a Great Question

Great questions, like great goals, are big and specific. Consider the Great Question matrix:

Quadrant 1: Big and Specific

Quadrant 2: Big and Broad

Quadrant 3: Small and Broad

Quadrant 4: Small and Specific

When applying the Great Question matrix to an issue such as increasing sales, you get the following breakdown:

**Quadrant 4 (Small and Specific): What can I do to increase sales by 5 percent this year?** This aims you in a specific direction, but there's nothing truly challenging about this question. For most salespeople, a 5 percent bump in sales could just as easily happen because the market shifted in your favor. Low goals don't require extraordinary actions, so they rarely lead to extraordinary results.

**Quadrant 3 (Small and Broad): What can I do to increase sales?** This is not really an achievement question at all. It's more of a brainstorming question. It's great for listing your options but requires more to narrow your options and go small. Unfortunately, this is the kind of average question most people ask and then wonder why their answers don't deliver extraordinary results.

**Quadrant 2 (Big and Broad): What can I do to double sales?** Here you have a big question, but nothing specific. It's a good start, but the lack of specifics leaves more questions than answers. There are still too many options, and without specifics, you won't know where to start.

**Quadrant 1 (Big and Specific): What can I do to double sales in six months?** Now you have all the elements of a great question. It's a big goal, and it's specific. You're doubling sales, which isn't easy, and you have a timeframe of six months, which is a challenge. You'll need a big answer. You'll have to stretch what you believe is possible and look outside the standard toolbox of solutions.

So if "What can I do to double sales in six months?" is a Great Question, how do you make it more powerful? Convert it to the Focusing Question: "What's the ONE Thing I can do to double sales in six months such that by doing it, everything else will be easier or unnecessary?"

### Find a Great Answer

Answers come in three categories: double, stretch and possibility. High achievers understand these first two routes but reject them. Unwilling to settle for ordinary when extraordinary is possible, they've asked a Great Question and want the very best answer.

The research and experience of others is the best place to start when looking for your answer. Armed with this knowledge, you can establish a benchmark. With a stretch approach, this was your maximum, but now it's your minimum. It's not all you'll do, but it becomes the hilltop where you'll stand to see if you can spot what might come next. This is called *trending*, and it's the second step. You're looking for the next thing you can do to head in the same direction as the best performers, or, if necessary, an entirely new direction.

Because your answer will be original, you'll probably have to reinvent yourself in some way to implement it. A new answer usually requires a new behavior; so don't be surprised if along the way to a sizable success you change in the process. ●

## PART 3: EXTRAORDINARY RESULTS: UNLOCKING THE POSSIBILITIES WITHIN YOU

There is a natural rhythm to our lives that becomes a simple formula for implementing the ONE Thing and achieving extraordinary results: purpose, priority and productivity. The most productive people start with purpose and use it like a compass.

## Live With Purpose and by Priority

Who we are and where we want to go determine what we do and what we accomplish. A life lived on purpose is the most powerful of all — and the happiest.

Happiness happens on the way to fulfillment. We all want to be happy, but seeking it isn't the best way to find it. The surest path to achieving lasting happiness appears when you make your life about something bigger, when you bring meaning and purpose to your everyday actions.

### The Power of Purpose

Purpose is the straightest path to power and the ultimate source of personal strength — strength of conviction and strength to persevere. The prescription for extraordinary results is knowing what matters to you and taking daily doses of actions in alignment with it. Knowing why you're doing something provides the inspiration and motivation to give the extra perspiration needed to persevere when things go south.

Discover your purpose by asking what drives you. Purpose is why you're excited about your life. Pick a direction, start down that path, and see how you like it. Time brings clarity, and if you find you don't like it, you can always change your mind.

### Goal Setting to the Now

We need a simple way of thinking to save us from ourselves, set the right priority and move closer toward accomplishing our purpose. Goal Setting to the Now will get you there. By thinking through the filter of Goal Setting to the Now, you set a future goal and then methodically drill down to what you should be doing right now. It can be a little like a Russian matryoshka doll in that your ONE Thing "right now" is nested inside your ONE Thing today, which is nested inside your ONE Thing this week, etc. Essentially, you're lining up your dominoes.

Understanding and completing Goal Setting to the Now trains your mind how to think, how to connect one goal with the next over time until you know the most important thing you must do right now. You're learning how to think big — but go small.

## Live for Productivity

The most successful people are the most productive people. Productive people get things done, achieve better results and do so because they devote maximum time to being productive on their top priority, their ONE Thing. They time block their ONE Thing and then protect the time blocks with a vengeance.

### Time Blocking

Most people think there's never enough time to be successful, but there is if you block it. Time blocking is a very results-oriented way of viewing and using time. It's a way to make sure what has to be done *gets* done.

So go to your calendar and block off all the time you need to accomplish your ONE Thing. If it's a one-time ONE Thing, block off the appropriate hours and days. If it's a regular thing, block off the appropriate time every day so that it becomes a habit. Everything else — papers, email, calls, — must wait. When you time block, you're creating the most productive day possible in a way that's repeatable every day for the rest of your life.

If disproportionate results come from one activity, then you must give that one activity disproportionate time. Each and every day, ask this Focusing Question for your blocked time: "Today, what's the ONE Thing I can do for my ONE Thing such that by doing it, everything else will be easier or unnecessary?" When you find the answer, you'll be doing the most leveraged activity for your most leveraged work. This is how results become extraordinary.

Once you've done your ONE Thing for the day, you can devote the rest of it to everything else. Just use the Focusing Question to identify your next priority, and give that task the time it deserves. Repeat this approach until your workday is done. Getting "everything else" done may help you sleep better at night, but it's unlikely to earn you a promotion.

To achieve results, time block these three things in the following order:

**1. Time block your time off.** Successful people launch their year by taking time out to plan their time off because they know they'll need it and that they'll be able to afford it. By planning your time off in advance, you're managing your work time around your downtime instead of the other way around. Resting is as important as working.

**2. Time block your ONE Thing.** Yes, your ONE Thing comes second. Why? Because you can't happily sustain success in your professional life if you neglect your personal "re-creation" time. The key to making this work is to block time as early as possible in your day. Aim to block four hours a day, minimum. If you can do more, then do it.

**3. Time block your planning time**. This is when you reflect on where you are and where you want to be. Block an hour each week to review your annual and monthly goals. Ask, "Based on where I am right now, what's the ONE Thing I need to do this week to stay on track for my monthly goal and for my monthly goal to be on track for my annual goal?" You're lining up the dominoes. There is magic in knocking down your most important domino day after day.

### Protect Your Time Block

For time blocks to actually block time, they must be protected. The best way to do this is to adopt the mindset that time blocks can't be moved. So when someone tries to double-book you, just say, "I'm sorry, I already have an appointment at that time," and offer options.

## The Three Commitments

Achieving extraordinary results through time blocking requires three commitments. First, you must adopt the mindset of someone seeking mastery. Mastery is a commitment to becoming your best. Second, you must continually seek the very best ways of doing things. And

last, you must be willing to be held accountable to doing everything you can to achieve your ONE Thing.

### 1. Follow the Path of Mastery

When you see mastery as a path you take rather than a destination, it starts to feel accessible and attainable. A healthy view of mastery means giving the best you have to become the best you can be at your most important work. The path is one of an apprentice learning and relearning the basics on a never-ending journey of greater experience and expertise.

### 2. Move from "E" to "P"

The path of mastering something is a combination of not only doing the best you can, but also doing the best that can be done. It's called moving from "E"— the Entrepreneurial Approach — to "P" — the Purposeful Approach. Our natural approach is entrepreneurial; it's seeing something we want to do or that needs to be done and racing off to do it with enthusiasm, energy and our natural abilities. However, our natural abilities have a ceiling of achievement, a level of productivity and success that eventually tops out.

Highly productive people don't accept the limitations of their natural approach as the final word on their success. When you bring the "P" to the same ceiling of limitation, things look different. The Purposeful Approach says, "I'm still committed to growing, so what are my options?" You then use the Focusing Question to narrow those choices down to the next thing you should do. It could be to follow a new model, get a new system or both.

### 3. Live the Accountability Cycle

Taking complete ownership of your outcomes by holding no one but yourself responsible for them is the most powerful thing you can do to drive your success. Therefore, accountability is most likely the most important of the three commitments. Without it, your journey down the path to mastery will be cut short as soon as you encounter a challenge, and you won't figure out how to break through the ceilings of achievement you'll hit along the way. Accountable people absorb setbacks and keep going; they're results oriented and never defend actions, skill levels, models, systems or relationships that aren't getting the job done.

When life happens, you can either be accountable or unaccountable. When life happens, the accountable person seeks and acknowledges reality, owns it, finds a solution and gets on with it. The unaccountable person avoids and fights reality, blames, makes personal excuses, and waits and hopes. ●

## The Four Thieves

Our best intentions can be undone. Just as there are Six Lies that will deceive and mislead you, there are Four Thieves that can hold you up and rob you of your productivity.

**1. Inability to say "No":** It's one thing to be distracted when you're trying to focus; it's another to be hijacked before you can even get to. The way to protect what you've said yes to and stay productive is to say no to anyone that could derail you. So here's a simple rule: A request must be connected to your ONE Thing for you to consider it.

**2. Fear of chaos:** Messes are inevitable when you focus on just one thing. While you whittle away on your most important work, the world doesn't sit and wait. It's important for you to accept this instead of fighting it.

**3. Poor health habits:** Personal energy mismanagement is a silent thief of productivity. It's key to exercise, make some time for meditation, and be sure to get eight hours of sleep. Don't sacrifice your health by trying to take on too much.

**4. Environment doesn't support your goals:** Your environment is simply who you see and what you experience every day. The right people in your life and the right physical environment on your daily path will support your efforts to get to your ONE Thing. ●

## The Journey

As satisfying as succeeding is, as fulfilling as journeying feels, there is actually an even better reason to get up every day and take action on your ONE Thing: No regrets. Life is too short to pile up woulda, coulda, shouldas.

Success is an inside job. When you put yourself together, the world falls into place. You know what to do. You know how to do it. Your next step is simple. You are the first domino. ●

# The Power Presenter

## Technique, Style, and Strategy from America's Top Speaking Coach

by Jerry Weissman

### THE SUMMARY IN BRIEF

Presentation coach Jerry Weissman has spent 20 years teaching CEOs and other executives how to deliver successful, profitable IPO road shows. Weissman's strategies have worked for dozens of top business leaders, including Yahoo! founder and CEO Tim Koogle, Intuit founder Scott Cook and Netflix founder and CEO Reed Hastings.

*The Power Presenter* introduces the same effective technique, style, and strategy that executive teams from more than 1,000 companies have used to raise financing, sell products, propose partnerships or seek approval for projects. Supported by examples of famous presentations, this summary describes how to deliver a winning speech or presentation that will engage your audience from beginning to end.

Weissman offers a seven-step plan for crafting your content into a compelling story as well as advice on how to conquer your fear of public speaking and to present naturally with force and conviction. You'll also learn how to speak with your body language, create empathy with your audience, and integrate your graphics design and animation with your delivery.

For anyone who has to stand up and deliver, *The Power Presenter* is a master resource filled with proven techniques, practical tools, insightful wisdom and inspiring examples.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to handle the Moment of Truth: when the presentation begins.
- How to strengthen your presentation with the correct way to organize, develop, and think through your content.
- How to take charge of your content with The Seven Steps of Story Development.
- What every speaker can learn from Barack Obama.
- How to integrate presentation skills, tools and slides with a unique new skill called Graphics Synchronization.
- The five essential elements of every presentation.

# THE COMPLETE SUMMARY: **THE POWER PRESENTER**

**by Jerry Weissman**

**The author:** Jerry Weissman is America's leading corporate presentations coach with a client list that includes top executives at Yahoo!, Cisco Systems, Microsoft, Intel, Netflix and many others. He is the founder of Power Presentations, Ltd., and has helped over 1000 firms develop and deliver their mission-critical business presentations.

## Introduction

*Cisco originally expected to get $13.50 to $15.50 per share for its stock. But during the road show the company was so well-received that it managed to sell 2.8 million shares at $18.00 apiece, Don Valentine, chairman of the Board of Cisco Systems, said. He attributed at least $2 to $3 of the increase to Weissman's coaching.*

*— San Francisco Chronicle, July 9, 1990*

When a business offers shares of its stock to the public for the first time, the company's senior management team develops a presentation that they take to the road to potential investors. It's the most demanding and high-stakes presentation any executive will ever make.

Because only a few hundred companies go public in any given year, you are more likely to win a national lottery than to launch an IPO. But you'll almost certainly have to give a presentation or to make an important speech at some point during your lifetime. And whether you are a businessman or businesswoman or an ordinary citizen, your challenge is to be as "well-received" as the Cisco Systems IPO road show.

## Your Actions Speak Louder Than Your Words

Audience Advocacy is a viewpoint that asks you, the presenter, to become an advocate for your audience. Put yourself into your audience's place and think about their hopes, fears and passions. Consider what your audience knows about you and your message or cause, and what they need to know in order to respond favorably to you.

Think of the presenter and the audience as the beginning and ending points of all interpersonal communications; then think of the presenter as a transmitter and the audience as a receiver. The presenter transmits a set of dynamics — human dynamics — that can be summed up in three Vs:

**Verbal.** The story you tell.

**Vocal.** Your voice, or how you tell your story.

**Visual.** Your body language, and what you do when you tell your story.

Your audiences are affected by these dynamics to varying degrees. Interestingly, body language has the greatest impact, the voice next, while the story has the least impact.

Surprised? You're not alone. Given the amount of time and effort that most presenters and speakers expend scribbling on yellow legal pads, pounding away at their computers, or shuffling their slides in preparation for their mission critical presentations, they assume that content is paramount; but at the moment of truth, the story takes third place behind the body language and the voice.

## The Crucial Task: Creating Audience Empathy

In addition to the Visual, Vocal, and Verbal forces that influence your audience, they are also impacted by another dynamic: empathy. Evolved from the Greek word for emotion or affection, empathy refers to shared or vicarious feelings. In the presentation environment, the empathy is the shared feelings between the audience and the presenter, but the sharing on the audience's part is involuntary.

To illustrate, let's consider the example of the presenter who stands up and freezes like a deer in the headlights.

Although you may not know this stressed presenter, when you are in the audience and see that person's nervousness, you are most likely to feel similar, vicarious feelings. That is the power of empathy.

Empathy also works positively. For a case in point, let's go back to July 27, 2004, at the Democratic National Convention. Barack Obama, a then-unknown, 42-year-old state legislator from Illinois, stood and delivered a stirring keynote speech. Obama spoke of the energy, urgency, and passion that he felt for America, and he expressed it with great energy, urgency, and passion in his voice and body. What was the result?

- The delivery system lifted the payload into orbit and the convention delegates at the packed Fleet Center in Boston rose in unison to give Obama an enthusiastic ovation.
- Three months later, he swept into office as a first-term U.S. senator by 70 percent, the widest margin ever in an Illinois Senate race.
- Four years later, his momentum unabated, Barack Obama became, the 44th President of the United States — all launched by just one 16-minute, 25-second speech. ●

## The Butterflies in Your Stomach

Every living being on the planet, from one-celled organisms to four-legged animals to two-legged humans, responds to imminent danger by standing its ground and fighting or fleeing for its life. To enable either of these reactions, the body releases a sudden spurt of adrenaline and activates the sympathetic nervous system. This vast internal emergency network then sets many parts of the body into accelerated motion:

- **Eyes:** Pupils dilate to increase the field of vision.
- **Heart:** Pumps faster to send blood to the extremities to flail in defense or to run to safety.
- **Blood pressure:** Elevates due to increased blood flow.
- **Blood sugar levels:** Elevate to generate more energy.
- **Lungs:** Increase respiration rate to put more oxygen into the blood.
- **Sweat glands:** Activate to avoid overheating.
- **Salivary glands:** Shut down to suspend digestion.
- **Limbs:** Primed to Fight-or-Flight.

When a two-legged presenting animal is faced with the daunting task of standing exposed before an audience, the solitary focus of attention for dozens, if not hundreds or thousands of watchful eyes, it responds with the flight reaction: pacing the platform like a caged tiger.

1. The eyes sweep the room frantically in search of escape routes.

2. The heart pumps faster to rush blood to the extremities.

3. The hydraulic system screeches into reverse: The palms, usually dry, get clammy from perspiration, cooling the rush of warm blood, and the mouth, usually moistened by the salivary glands, goes bone dry.

4. The nerve synapses fire off more rapidly to heighten alertness.

### Audience Perception

All of the preceding involuntary presenter behavior gathers momentum in a rolling chain action that impacts audience perception.

Rapid eye movement makes you as the presenter appear shifty-eyed or furtive. Sweeping your head back and forth makes you appear harried. Wrapping your body with your hands and arms appears defensive.

The defensiveness immobilizes your features, which makes you look fearful and also makes your posture rigid. Moreover, by pressing your arms against your rib cage, the air supply in your lungs is constricted, which in turn impacts your voice creating low volume, which sounds weak, and narrow inflection, which sounds monotonous.

Your vital organs, also impacted by adrenaline-driven behavior, can affect audience perception. The heart, lungs, and synapses accelerate into time warp, which impacts your cadence so that the tempo of your presentation sounds rushed. Words are crammed into a steady flat line pattern, which results in a data dump that makes it difficult for the audience to separate the ideas you are presenting. And the steady pattern also causes the repetition of unwords, such as "um" or "ah," which makes you sound uncertain.

### The Moment of Truth

All these powerful forces surging around inside your body and your mind — and reverberating throughout your audience — occur at the critical juncture of the Moment of Truth. But that moment is preceded by many other moments that stretch all the way back to another important moment: when the date and time for your mission-critical presentation is set.

As the clock starts ticking down to D-day, you think, "How will I ever find the time to get it done?" Suddenly, you ignite a state of high anticipation that builds in intensity until the Moment of Truth; and then the sight of your live audience kicks your adrena-

line flow even higher.

Diminish your anxiety by taking charge of your content in its preparation. ●

## How to Prepare Your Content

Many presenters and speakers, pressured by the demands of business and daily life, often beg, borrow, or steal a colleague's material or put off their own preparation until the eleventh hour. Your presentation will be much stronger if you spend enough time to organize, develop, and think through your content. During the preparation, clear your mind by eliminating all the superfluous material and identifying the essential.

### The Seven Steps of Story Development

**1. Establish the framework of your presentation.** Define your objective. What is your call to action? What does your audience need to know in order to respond to your call to action?

**2. Brainstorming:** Consider all the possibilities. Distill all your ideas into a few main themes.

**3. Roman Columns:** Find a mnemonic device for your main themes. If you visit Rome today and tour the ruins of the great Forum, you are likely to hear your guide talk about the classic Roman orators who spoke in the Forum for hours on end without any notes. To help them remember what to say, the orators used the stately marble columns of the Forum as prompts. The object of your brainstorming is to develop the Roman columns of your own story; about five or six in all is optimal.

**4. Flow Structure:** Provide a road map for your audience and for you. Give the individual components of your story a meaningful, orderly flow. Two of the simplest and most common flow structures are *chronological* (track your story along a timeline) and *numerical* (Combine all your Roman columns and assign them a number, then count down for your audience as you discuss each column). Think of David Letterman's Top Ten.

**5. Graphics:** Use visual aids, but give your graphics their proper role as support for your narrative.

**6. Ownership:** Take charge of your own presentation. Become a hands-on presenter and supervise your presentation's development at pivotal points.

**7. Verbalization:** Practice the right way. In your rehearsals, speak the actual words of your presentation or speech aloud, just the way you will do it when you are in front of your intended audience. Verbalization crystallizes ideas. ●

## Charisma Not Required

"Good speakers are born, not made," and its extended variation, "That person has natural charisma" are often said about a presenter's delivery skills. The corollary implication of this view is "Change is impossible." You either have it or you do not. For some unearthly reason, many people cling to this preconception, and recite it, almost as a pledge of allegiance. Change is possible for anyone.

### A Case in Point — President Bill Clinton

Bill Clinton, with his usual rhetorical flair and an established reputation as a superstar of the keynote circuit, seemingly did not need any makeovers. But Clinton was not born with this capability. He admits as much in his autobiography, calling his first speech effort while in high school "unremarkable." He was still far less than remarkable in 1988 when, as the governor of Arkansas, he gave a nominating speech for Michael Dukakis at the Democratic National Convention in Atlanta. Clinton rambled on for so long that the delegates began to chant, "We want Mike!" And when he finally said, "In closing …" the crowd roared their approval. In his autobiography, Clinton confessed, "It was 32 minutes of total disaster." ●

## The Mental Method of Presenting

Control of the mind, or concentration, is essential in every activity in the human experience. Even relaxation requires you to clear your mind of extraneous thoughts and focus on one tranquil image. Think about your sport of choice, be it skiing, tennis, golf, swimming, basketball, or soccer; in each of them, concentration is fundamental. Well, it happens to be the very same mind and the very same body that you use when you stand in front of an audience to present or to make a speech. Use concentration to conquer your adrenaline rush — and your audience.

### What Was Going Through Your Mind?

During coaching sessions at Power Presentations, each participant is asked to stand and deliver a brief presentation to the other participants in the room — their colleagues — while the presentations are recorded on a digital video camera, an intentionally adrenaline-inducing scenario. As each person concludes they are asked, "What were you thinking? What was going through your mind as you were speaking?" All of their responses have a least-common denominator: "How am I doing?" They were thinking, "Uh-oh! They're all looking at

me!" "I'd better do well!" This mind-set serves only to heighten their — and your — fear of public speaking.

Do a sharp U-turn. Change the mind-set. Think instead, "How are you doing?" How is your audience doing? Shift the focus from yourself to your audience. This shift will not only reduce your anxiety, it will also heighten the effectiveness of your presentation or speech. That is the essence of the Mental Method of Presenting.

### Concentration & Conversation

The pivotal factor in this shift is concentration. In sports, concentration ranks higher in importance than conditioning, muscle mass, nutrition, hydration, or stamina. Universally in sports, the mind is used to control the body. It is the very same mind and the very same body that you use in presentations and speeches, so use your mind to control your body when you stand in front of an audience.

The foundation of the Mental Method of Presenting is person-to-person conversation. The challenge when you are in front of an audience is to recreate the conversational mode, the very mode in which most human beings are comfortable. To do this, let's first analyze the key dynamics of conversation.

In any person-to-person exchange, the two parties:

1. Make eye contact.
2. Use their hands and arms to express themselves.
3. Use their voices to punctuate their words.
4. Interact by asking questions and exchanging ideas.

In presentations and speeches, the adrenaline rush causes drastic changes in each of those core elements. But does the interaction really stop? If you see a person in your audience smiling at you in knowing appreciation, that's an interaction. So there is indeed interaction with your audience, but at the Moment of Truth, the interaction suddenly switches from verbal to nonverbal. The challenge then is to focus on that pivotal instant, and make the nonverbal interaction work for you, rather than against you. And the way to do this is to shift from presentation mode to person-to-person conversation.

### Person-to-Person

Whenever you step up to the front of a room to present or speak, regardless of the size of the audience — four, 40, 400, or 4,000 — pick one person. For an instant in time, set a new default: Presume that you and that individual are the only people present and, for that instant, disregard everyone else in the room. Make that person the object of your concentration. Then, as if the two of you were across a table or a desk, strike up a conversation. After a moment in time, move to another person and strike up another conversation; after another moment, another person and another conversation. Continue around the room in a series of person-to-person conversations. ●

## The Four Stages of Learning

If you've ever taken up the study of a physical activity, such as a sport, you've gone through a process known as the Four Stages of Learning. The stages also hold true for the physical aspect of presenting or speaking before a group.

- Stage One: Unaware of what to do, you perform poorly and are unconscious about your incompetence.
- Stage Two: The instructor tells you what you did wrong and you become conscious about your incompetence.
- Stage Three: The instructor tells you what to do and you become conscious about your competence. But the first time you try to follow the instructor's advice it feels unnatural. Your Stage Three, then, is actually self-consciousness about your competence.
- Stage Four: You perform your skill without thinking about it; you are unconscious about your competence.

## Learn to Speak with Your Body Language

Negative behavior, driven by the fear of public speaking and its attendant instinctive reaction, the Fight-or-Flight syndrome, creates negative perceptions in the audience.

How do we change the behavior to create a positive perception? The key is to approach our challenge from the 35,000-foot view. Accept that there is a difference between the way it feels to you as a presenter and the way it looks to your audience.

In the Power Presentations program, participants are asked to stand up in front of the room and gesture with their arms open wide. Because the new behavior feels uncomfortable to them, they inevitably resist. As soon as they are told that their discomfort will diminish over time, they accept and are able to make significant improvements.

Eventually, opening your arms will feel comfortable to you and continue to look comfortable to your audience. You will look poised, confident, and ready to take on the world. Whatever behavior you have been practicing

until this point in your life is behavior you have been reinforcing. To develop new habits you need repetition. Repetition over time will move you from self-conscious to unconscious competence.

### Qualitative vs. Quantitative

Each of the following instructions describes the quality of your engagement with the one person with whom you are having a conversation:

- Your eyes hold until they connect.
- Your features reflect your enthusiasm.
- Your head nods to create involuntary agreement.
- Your balanced posture appears poised.
- Your hand and arm reaching out replicates a handshake.
- Your voice conveys your message with conviction and punctuation.

All of the preceding is summed up by the acronym E.R.A: Eye Connect, Reach out and Animate. This single instruction brings all the elements of your delivery system into play. ERA also happens to be what you do when you have a conversation. So, whenever you step up to the front of the room to present or speak, have a conversation with each person in the audience. As you do, use the Mental Method of Presenting. Read the reaction of each person you address and be prepared to adjust your content. ●

## Control Your Cadence

Cadence in speech is the equivalent of rhythm in music. For our speech metric, we turn to our three presentation dynamics and focus now on the Verbal, or the content. In text, the written form of the Verbal, that metric is a sentence. Spoken language, however, is different. When we speak, we don't form full sentences; we speak in partial sentences or phrases. Therefore, use the phrase as the metric for your cadence. This will give your speech a clear rhythm. When you speak in a clear and coherent cadence, you will make it easy for your audience to follow you. Here's how it all works together in a presentation or speech: When you step up to the front of the room, pick one person in your audience, the one with whom you're going to have a conversation. Then:

- Deliver one phrase to that person.
- Pause.
- Move to another person and deliver one phrase to that person.
- Pause.
- Move to another person and deliver one phrase to that person.
- Pause.
- Continue around the room, delivering one phrase to one person at a time.
- Pause between each phrase and each person.

### Complete the Arc

Stay with one person for the entire logic of the phrase — regardless of its length — and then drop your voice. Stay with that one person for the full trajectory of meaning. The length of each unit is measured logically rather than numerically. Dropping your voice at the end of every phrase is called Complete the Arc.

1. Stay in Eye Connect all the way through the full phrase, "The key to winning presentations is the Mental Method," and then drop your voice at the end.

2. If you do not drop your voice at the end of your phrase, if you let it hang in midair, you convert your statement into a question.

### The First 10 Seconds

The moment you stand up in front of that room the adrenaline will start coursing through your body. It will cause your eyes to sweep the room in search of escape routes. You will not be able to hold back that sweep. You will barely be able to think of what to say. Your eyes will go into motion, searching for the exits.

- Go with it. Let the sweep happen. Let your eyes take in the entire room; but make the sweep work for you rather than against you.
- Accompany your continuous eye movement by speaking to the entire group, and be gracious about it: "Good morning. Welcome. I appreciate the opportunity to speak with all of you." These simple amenities will make your rapid eye movement appear sincere rather than frantic.
- Once you have swept the room with your welcoming remarks, stop. Turn to one new person, set on both of that person's eyes, and get ready to speak the first phrase of your presentation. ●

## Masters of the Game

### The Great Communicator

Ronald Reagan was known as the Great Communicator, and deservedly so. To see what makes him so effective, let's look at his delivery of his final State of the Union message.

On January 25, 1988, in the House Chamber of the U.S. Capitol Building, Ronald Reagan stood poised on the historic dais, looking out at the sea of faces in a joint session of Congress. He spoke *with* — not *at* — the men and women of the Senate and House of Representatives and he did so as if he was having individual conversations. The warm tone of his voice reflected the intimate human-interest words of the text. The vast, packed chamber watched and listened in hushed awe, drawn in by the hypnotic long, looping rhythms of his cadence.

As the speech reached its climax, Reagan displayed all the dynamics once described by a Pulitzer Prize-winning television critic "… his physical presence begins to eclipse his words… when you begin watching more and hearing less… feeling more and thinking less. Look and mood completely take over. That presence on TV: just the sight of him cocking his head with his sincere grin and lopsided hair, is still worth a thousand words and millions of votes."

### Conversation and Empathy

Contrast Ronald Reagan's conversational style to that of Winston Churchill, John F. Kennedy, Martin Luther King and Billy Graham. These orators used their hands and arms with dramatic gestures that approached choreography. They had rich, resonant, nearly operatic voices. Moreover, Churchill and Kennedy were national leaders who spoke from on high, down to their audiences, and asked them to come up to their lofty level. The latter two, King and Graham, were religious leaders who also spoke from on high, and asked their audiences to go up to a higher authority.

Ronald Reagan, on the other hand, spoke to his audiences at their level. The essence of Reagan's style was his uncanny ability to be completely at one with his audience in every setting, across every dimension. He projected his gentle persona into the living rooms of America. ●

## What Every Speaker Can Learn from Barack Obama

On October 2, 2002, at the very same time that President George W. Bush and Congress were announcing their joint resolution to authorize the invasion of Iraq, Obama, then an Illinois State senator, spoke at an antiwar rally in Federal Plaza in Chicago. *The New Republic* reported an eyewitness account:

> *Jesse Jackson was to be the day's marquee speaker. But it was Obama, wearing a war-is-not-an-option lapel pin, who stole the show. Obama's 926-word speech denounced a "dumb war. A rash war. A war based not on reason but on passion, not on principle but on politics." The electrified crowd knew that a political star was born.*

Barack Obama is, by any standard, a very good, if not a great speaker. But his talent did not spring from birth or from mystical magical powers. Obama uses a set of accessible techniques that you, too, can use.

**1. Verbalization:** Obama practices verbalization. In a *Washington Post* story he was quoted as saying, "My general attitude is practice, practice, practice … Besides campaigning, I have always said that one of the best places for me to learn public speaking was actually teaching — standing in a room full of 30 or 40 kids and keeping them engaged, interested and challenged."

**2. Person-to-person, head nods, read the reaction/adjust your content.** A *New Yorker* magazine profile of Obama gave an example of his campaign for his Illinois Senate seat. When speaking to a group of AFL-CIO building tradesmen who had supported his opponent in the state primary, Obama adjusted his content to include a pro-labor message. The result: "Heads began nodding slowly, jaws set, as he drove home his points."

**3. Think "You."** Obama used that persuasive word strategically throughout his campaign for the Democratic nomination: on his Web site and in his speeches.

**4. Speak with your body language.** *Eye Contact:* Obama's strong eye contact is apparent in every type of speaking situation. *Reach Out*: *Time* magazine reported,"Physically, he is uncommonly restrained: He keeps his hands close to his head, and his shoulders are always tight and squared." *Animation:* In all settings, large and small, Obama is always animated, his face expressive, breaking into a ready smile or expressing the meaning of his words with passionate emphasis.

**5. Control your cadence and complete the arc.** Emulating Reagan, Obama rolls out his words in long arcs, like a ship riding the waves on the high seas, completing each arc by dropping his voice, and punctuating each point forcefully. The pauses between the arcs allow his listeners to absorb the meaning of his words, if not to become captivated by his compelling rhythm. ●

## Graphics Synchronization

Graphics Synchronization is a close cousin of graphics design. Design is what you *show*, or what your audience sees displayed by your PowerPoint slideshow; synchronization is what you *do* (your eyes and body language) and *say* (your voice) when you show what you show. Graphics Synchronization is the integration of your slides with your Visual and Vocal components. All these factors exist in a teeterboard relationship. The classic skill set to adapt is: Tell 'em What You're Gonna *Show* 'em; *Show* 'em; and Tell 'em What You've *Shown* 'em.

There are many tools of the presentation trade: screens, microphones, lecterns, projectors, computers, and remote control devices. All six (tools) must be carefully integrated with each presenter's or speaker's Graphics Synchronization skills.

**Presenter and Screen**

- Present with the screen at your left.
- Present in the screen plane.
- Present at the edge of the screen.
- Avoid the projection beam.

**Presenter and Audience**

- Face front.
- Illuminate for Eye Connect.
- Present at the eye level of the audience.
- Check sightlines. ●

## Graphics and Narrative

Start your discussion of every slide with a Title Plus. (When you look at a new slide, look at it in its entirety. This overview is called Title Plus. The title serves as the headline for the whole slide.) It will make the rest of your narrative flow more smoothly and enable your audience to stay with you. After the Title Plus, however, different types of slides have different narrative follow-throughs.

- Simple slides start with a Title Plus.
- Complex slides also start with a Title Plus, but then you must help your audience understand your slide by guiding them through the image.
- Very complex slides also start with a Title Plus, but then they become the exception to the rule. Certain slides require a level of detail that is irreducible: for example, financial charts, architectural diagrams, or flowcharts. You can build the slide in stages.

Alternatively, you can display all the information on the screen at once and then, rather than try to make Eye Connect, turn to the screen and become a Voice Over narrator.

All the concepts must work together inseparably. Any one element can impact the others, as well as the fate of your entire presentation.

For example, you can develop a persuasive story, illustrate it with dazzling graphics, present it with poise and confidence in a presentation environment with all the trappings of a first-class, modern theater and have your audience listen to you in hushed awe for the full length of your presentation. But if, when you open the floor to questions, you react to the first tough question defensively, evasively, or contentiously, everything that went before will be negated. ●

## The Power Presentations Pyramid

The five essential elements of every presentation can be viewed as tiers of a pyramid beginning with the base of the pyramid — story, graphics, delivery, tools, and Q&A. The foundation of the pyramid, as it is for every presentation, is a solid story that is illustrated by the graphics of the slide show. In turn, these elements are delivered by the presenter's body language and voice, all supported by the tools of the presentation trade. The entire presentation is then subject to the scrutiny of the audience's questions, which the presenter must handle with complete assurance and credibility.

The ultimate conclusion is that a presentation does not exist on the screen alone, in the presenter alone, or in the audience alone. A Power Presentation combines all these dynamic elements into a living entity that changes every time you present.

As Cindy Burgdorf, former CFO of SanDisk Corporation, commented after concluding the last of four intensive days of the Power Presentations program, "This isn't just about presentations is it? This is about communicating in any situation. It all applies everywhere." ●

# You Can't Lie to Me

## The Revolutionary Program to Supercharge Your Inner Lie Detector and Get to the Truth

by Janine Driver

### THE SUMMARY IN BRIEF

No machine built to date has proven more effective than a well-trained human lie detector, says world-renowned body language expert Janine Driver, a former federal law enforcement investigator who has trained agents at the ATF, CIA and FBI. In *You Can't Lie to Me*, she teaches people like you to supercharge your internal BS Barometer quickly and accurately so you can protect yourself from liars and manipulators.

*You Can't Lie to Me* will change the way you look at job applicants, coworkers, dates, salespeople, money managers — anyone from whom you want and deserve the truth — while simultaneously strengthening and deepening your relationships with your siblings, children, friends and lovers. Driver distills nearly two decades of behind-the-scenes knowledge, cutting-edge science and relatable case studies into a simple five-step program.

Whether you are communicating face-to-face or through phone calls, emails, texts, Facebook posts or handwritten notes, you will have the tools and confidence you need to spot deception. More important, you will recognize the truth as you build the caring, authentic connections that make life worth living.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to outsmart disloyal coworkers — and beat them to plum promotions.
- How to protect your children from predators and guard aging loved ones — and their nest eggs — from unscrupulous con artists.
- How to hire honest employees whose résumés and experience you can trust.
- How to say yes to honest partners and avoid lying cheaters.
- How to get your boss's attention with these little tips.

## PART I: POWERING UP YOUR BS BAROMETER

## The Truth About Lying

Sometimes we lie to protect other people's feelings. (Delicious fruitcake, Aunt Suzie!) But sometimes we lie solely to benefit ourselves. And because you're an honest human being, you probably feel guilty about this kind of lying — which is what makes you so bad at it.

But chronic liars don't have that problem. Nor do sociopaths. Nor, it turns out, does your boss.

You've heard the expression "Power corrupts," right? Well, you might be surprised to learn how easy it is for people in powerful positions to lie straight to our faces. Not just those folks who sit in the corner office: Anyone who holds power over you — whether his or her grip is on your paycheck, your mortgage rate or your heart — can lie to you as easily as tell you the truth.

Here's how it works: When people in power lie, they focus on rewards more than on costs — they spend much more energy thinking about what they stand to gain than what they stand to lose. This laser focus on rewards protects them from anxiety and makes it easier for them to lie through their teeth. All the physical and mental benefits that come with power can make unscrupulous people in power almost immune to guilt, allowing them to lie all the time without ever getting caught.

Researchers are finding more and more evidence that power appears to give its owners a physical and cognitive high that completely blunts and disguises any negative effects of lying.

Now on the flip side — for those without power — what motivates them to lie?

Simple. What they have to lose.

Lying, cheating, stealing and manipulating are definitely not the sole purview of the powerful. Desperate times call for desperate measures, and, for many, these are quite desperate times. When your job or your relationship is on the line, lying can sometimes feel like a necessary act of survival.

### Common Myths About Lying

People tell lies for a million personal reasons, but most boil down to one of three essential needs:

1. To protect ourselves.
2. To avoid tension and conflict.
3. To minimize hurt feelings.

Now, if everyone lies, and we all know we all lie, why is it still not easy to detect these lies? Again, there are many individual reasons, but they, too, boil down to three realities:

1. Many of us don't want to know the truth.
2. Many people are really good at covering up lies.
3. Most are looking for the wrong deception signals.

We are able to investigate and identify probable lies with a fairly high degree of accuracy if we know the correct process to follow. But before we learn how to use the BS Barometer, we have to understand what may have kept us from seeing the lies all these years. Here are some of the common myths standing between us and the truth:

- **The Myth: Liars have shifty eyes**.

**The Reality: Not so fast.** Twenty-three out of 24 peer-reviewed studies found that eye behavior is not a

positive indicator of deception. The biggest thing we must look for in a person's eye movement is a deviation from normal behavior.

• **The Myth: Liars never make eye contact.** (Alternate: Liars make constant eye contact.)

**The Reality: They're both correct!** And of course, they're both wrong. Again, what's important is that we watch patiently for a change in a person's normal behavior.

• **The Myth: Liars scratch their noses.**

**The Reality: Rather than a foolproof sign of deception, this nose itch reaction can reflect a basic human response to acute stress, the fight-or-flight reaction.**

• **The Myth: Liars tend to squirm and jiggle.**

**The Reality: Most likely, nothing's up.** These "pacifier" actions do just that: They pacify and soothe unconscious nervous energy.

• **The Myth: Liars skip words.**

You: "How was your guys' night, Bobby?"

Bobby: "Eh. Just went to dinner. Burger was good. Then to the club. Then back home."

**The Reality: This absence of details — and even pronouns — is nothing alarming if Bobby is typically pretty tight-lipped.** However, if Bobby usually shares enthusiastic stories of his escapades, with no detail left undivulged, then you may have an issue here as he departs from his norm. ●

## How the BS Barometer Process Works

Everyone lies. Everyone. We cannot escape lying, nor would we ever want to, really. Society would cease to function. Marriages would fall apart. Fights would break out in grocery store checkout lines. You get the picture. There are good reasons to lie to people. What we need instead is a way to quickly sort the healthy lies from the toxic ones. Let's start by looking at where lying begins — for all of us.

Lying is always about helping us get what we want. Sometimes what we want is selfish; sometimes it's kind.

Lying is a totally normal part of human development. Learning to lie goes hand in hand with the moment when babies realize they are individuals. We don't grow out of the desire to "get what we want, when we want it" as we get older. Yet despite how useful lying is in this regard, brain imaging has proven that the baseline default for humans is to tell the truth. When we kick this default to the curb, we demand that our brains suppress our natural truth response, which is not comfortable for most people, especially the novice fibber. And the more we tell the truth, the harder it is for us to lie.

When you look closely at it, becoming a good liar is a learned skill — one that, when mastered, has a nearly unlimited potential to be positively reinforced. The more often you attempt to lie and are successful at it, the more easily your brain and your body can adapt to the stress that comes with doing it and the more convincing you are to the outside world. You continue to get what you want, when you want it. And your lying becomes more automatic.

### A Liar Is Caught

A recent meta-analysis report by the FBI found that the most effective approach to lie detection is a combination of tools. These tools are meant to capture "leakage" (unintentional communication) across multiple channels: facial expressions, gestures and body language, voice, verbal style, and verbal statements. Further, the researchers found that it's not simply this combination of signals but also their deviation from the baseline and how they are combined with each other that make them an accurate reflection of deception.

The most critical part of detecting deception is that both parties — both the liar and you — must have something at stake. Begin the process first by asking yourself, "Why do I care if this person is lying? What is at stake?" Imagine the worst-case scenario for getting this encounter wrong. Emotional investment is essential for accurate deception detection; it's the biggest predictor of your success. You must have as much skin in the game as the liar does. *Why* you want to know is just as important as *what* you want to know. ●

## When to Use the BS Barometer

While there are, of course, no surefire signals that someone is lying to you, we can point to a few indicators that might prompt you to dig a bit deeper. Some of these signals are logical — but some may shock you.

**1. You hear answers that seem a bit "off."**

• Your teen tells you that she's sleeping over at Becky's house, and you don't know why, but you feel she's not being straight.

• Your boss shrugs, looks over your head and changes the subject when you ask him about rumored layoffs.

• Your new employee brushes off your questions about the petty cash reconciliation, saying, "I'll get to it — I have the receipts around here somewhere."

Please remember, as a generally trusting person, you are a great gauge of honesty. You just have to give yourself permission to pursue those whiffs of suspicion and to investigate further.

**2. You feel off-balance after talking with the person.** Practiced liars are uniquely able to distort reality and make us feel like the floor is shifting underneath us, that something odd is afoot, but we just can't put our finger on it. This particular type of manipulation is called "gaslighting." A gaslighter spouts false information as if it is fact with such conviction that it makes the victim start to question his or her own recollections of the same incidents. Standard gaslighter lines include, "I never said that — stop making things up," "How come you are always accusing me of horrible things?" and "Wow, what is wrong with you? You are so paranoid." Gaslighters make you question yourself and reality as they slowly drive you crazy.

**3. Your gut tells you there's something to fear.** When you're walking by an alley and you have a bad gut feeling, it may not be because you're a Nervous Nellie — it may be because your subconscious picked up on something odd. Whatever causes that prickle on the back of your neck, trust it — your brain has likely registered something potentially dangerous that your conscious mind just can't "see" yet. Researchers talk about this phenomenon as "thin slices" — our brain's ability to notice details much more quickly than our conscious awareness is capable of doing.

**4. You really, really like someone.** Have you ever felt an instant magical connection with someone who you couldn't wait to hang out with? But when you have the "This person just gets me" feeling right away, be warned. The most effective liars are charismatic and downright charming — but at their root, they are manipulators. Take a cold, hard look at potential motives. Instead of saying, "Wow, that person is so charming!" make it your first instinct to ask, "*Why* is this person trying to charm me?" ●

## PART 2: MASTERING THE BS BAROMETER PROCESS

# Step 1: Gathering Intel

Everyone has a "norm" — a basic pattern of behavior under normal amounts of stress: everything from how often they blink to which way they cross their legs or don't to what words they tend to use with their friends.

For now, getting to know the person's baseline will help you determine three key elements:

1. How does this person normally speak and act?
2. What words does this person use and how does he or she act under stress?
3. When do I see the most dramatic differences between those two instances?

### First Things First: Establish Rapport

When my mentor and dear friend J.J. Newberry, a retired ATF agent and president of the Institute of Analytic Interviewing, once interviewed a possible suspect in a bombing case, even he was surprised at how smoothly he was able to get a confession. When J.J. asked the man, "Joe, what would you say if I told you your fingerprints were on the bomb?" Joe responded, "J.J., you wouldn't, because I wore gloves."

In less than an hour J.J. was able to build up enough comfort, and ultimately trust, with this suspect to get to the truth. How? Rapport. Rapport helps you establish a person's comfortable, relaxed baseline so that you can spot lies later on. Here are a few ways to establish the rapport that's essential for gathering an accurate baseline:

- **Set your intention and your body language will follow suit.** More than anything, you want your body language to be open and welcoming. Aim for steady (but not oppressive) eye contact.
- **Lead with empathy.** To detect deception, you must learn to think like the other person. You need to see how that person views you from his or her perspective — what are the things you want to hear?
- **Listen to their stories.** Hostage negotiators know that the first thing you do in a high-stress situation is to let the person tell his or her story. The shooter, liar or other bad person needs to regain his or her equilibrium for you to get to the truth.
- **Mirror their movements — but very subtly.** You can mirror someone's posture, but be extremely cautious — obvious mirroring can turn the other person off, and the other person might believe that you are not an honest person and clam up right away.
- **Allow transparency to create an atmosphere of trust.** "Confess" to something that might be slightly embarrassing and see what happens. By appearing more human, you're simultaneously less threatening, which immediately lowers others' guard around you. The first impression you give determines how much another person will trust you.
- **Always err on the side of their relaxation.** Your mantra for obtaining a baseline is "How do I lower the stress in this situation?" Because how you confront any situation can change the outcome.

### Ask Open-Ended Questions

The real secret behind detecting deception is asking questions. But you're not out to win the Pulitzer in this interview — you just want to get an accurate read on the person. For right now, your primary objective is to get him or her talking.

Believe it or not, you can baseline people with just one or two very simple open-ended questions. The trick is to keep it light. Bring yourself into the conversation in a way that disarms the subject and takes the focus off of him or her.

For example, "I'm so excited to get home this afternoon — I'm buying my 5-year-old his first bike. Man, that brings back memories, huh? Tell me about the first bike you had as a kid."

The key to crafting these sentences is to share a bit about yourself, so that you can then pose an open-ended question about personal information the other person has no reason to fabricate.

### Follow the Baseline Checklist

Body language is where I typically start with my baseline. This checklist works equally well whether encountering strangers for the first time — car salesmen, other parents on the playground, new doctors — or people you've known forever but whom you've just started to suspect of lying. As you go through this list, keep in mind two baseline rules to live by: Keep your communication simple, and sometimes what's *not* there is the most important clue.

• **Is he a space invader?** First you'll determine how "big" the person is. How much space does this person take up, both while he is stationary and while he is moving? Is he becoming as large or as small as he possibly can be? We are looking for the baseline, so we'll notice when we see a change. He might still be making a hand gesture, but now all of a sudden instead of being up at shoulder height his gestures are really low. Why? What's going on here?

• **What is his face factor?** What's his chin positioning? Does he tend to have his chin pulled in, level headed, or is his chin up? Is her head generally straight or is it tilted? Tilted right or left? **Facial touches.** Does he typically touch his face? How often is he touching his face? **What is his voice saying?** Where does your target's baseline fit into this spectrum? Tonal differences: soft, medium or loud talker. Pitch differences: low, medium or high pitch. Speed differences: slow, medium or fast. **What are his words saying?** Statement analysis is an incredibly useful tool — once you start to notice the little language idiosyncrasies, you'll be amazed at how much information you'll get from them. Is she using pronouns? Dropping pronouns has definitely been tied to deception. Some people never use pronouns; some use them without fault. You have to know which is normal for her. Is she using verbal fillers? Once the lies start flowing, the ums, ahs, ers are likely to follow. Is she using absolutes? "I always do that," "I never do that." Sounds like overselling but only if it's not her baseline. For now, absorb what you can about the person's norm. ●

## Step 2: The Wiretap

No matter whether you are turning on your BS Barometer at a distance or in person, you'll be able to hear the verbal indicators of deception in the words people choose and in the changes in their speech rates, volume and pitch that naturally occur in most deceptive statements.

Vocal tone is a powerful indicator of emotion. Research has shown that a person's vocal tone will waiver from baseline in up to 95 percent of all deceptive statements — it's one of the most reliable indicators of deception. Whether it goes up or down depends on the emotions involved.

Vocal tone rises when we're angry or excited. If your friend denies that she has the hots for your husband, listen for her tone of voice when she talks with him. An article in the *Journal of Evolutionary Psychology* found that the pitch of women's voices will shoot up when they are speaking to a man they find attractive.

Vocal tone lowers with sadness and shame. We saw this with Britney Spears when she was being interviewed about divorce rumors, insisting everything was great in her marriage to Kevin Federline — you couldn't even hear the words coming out of her mouth.

### Taking Care of Business: Teeter-Tottering, Convincing-Not-Conveying and Backsliding

Get this mental picture in your mind: Liars are all tightrope walkers. They want to get from where they are now, talking to you, all the way across the canyon of your skepticism and doubt, to the other side — freedom, the moment at which you've been convinced of their lie. Their task is to remain upright and make steady progress through the lie and not fall off the rope before they get to their destination. And their brains are carrying an awful lot of weight on this journey:

• The truth: the facts about what really happened.

- The "facts" in their own lie: the whole story they're trying to convince you of.
- What they've already told you in every conversation up until now.
- The new information they may not yet know — but once they learn, they will have to instantly assimilate without slipping up.
- Your reaction to their tale — positive or negative.
- Their own visible and audible reactions to the stress of telling the lie.

**Teeter-Tottering.** A teeter-totterer will leak inconsistencies in many of her statements or will try to make everything seem like "sunshine and roses." Her language is garbled and she may even blurt out clues midsentence — all signs of an off-balance, klutzy liar. As long as it's a deviation from her baseline, it's cause for a closer listen. Remember, our default is to always tell the truth. Our brain doesn't want us to lie, so we teeter-totter and say things in a weird way.

**Convincing-Not-Conveying.** Honest people convey information. Liars, on the other hand, try to convince us that their story is the truth. While a truthful person expects that you believe him or her, a liar will fight to be believed. Some phrases that liars love are:

- What kind of a person do you think I am?
- I'd have to be stupid to do something like that.
- I knew this was going to happen to me.
- You think I'm lying to you?

**Backsliding.** Backsliders' primary mission is to get away from being found out. The backslider is a master of obscurity and camouflage, usually using ways to distract you or distance himself or herself from the lie. Whether with sneaky statements or overwhelming politeness and self-deprecation, the backslider would love nothing more than for you to forget the entire incident ever happened. ●

## Step 3: The Stakeout

Now it's time to focus on the stakeout and learn how to decode the facial signs that are likely indicators of deceptive hot spots. Although facial findings won't give you all the information you're looking for — for example, whether or not the person is actually lying — spotting them gives you potential areas to later probe.

Before you get started looking for nonverbal hot spots, ask yourself if the person you're about to do the stakeout on is in one of the following wildcard categories. A few factors that might make suspects' nonverbal behavior an untrustworthy source of information are:

- **Their intelligence.** The smarter the suspect, the more likely his or her body language "makes sense" and mirrors his or her thinking. But when people are not the sharpest tools in the shed, their body language might reflect confusion or misinterpretation of the questions instead of anxiety about lying.
- **Their emotions.** When people are unstable, so are their body language signals. You can never know where the emotions are coming from or what they relate to.
- **Their age.** Kids and teens may not have matured enough to appreciate the consequences of their actions — so they may not feel fear even when they should!
- **Their culture.** Some cultures consider the direct eye contact favored by Americans to be rude — so a person's averted eyes would be a sign of respect rather than disrespect or guilt.
- **Their partying status.** Drinking and taking drugs dramatically alter behavior. Don't look at a drunk person and think you can gauge his real baseline — he's far from it.

Above all, with this process you have to trust your eyes. Your BS Barometer is helping your brain absorb and process more than you can ever consciously know.

### The Teeter-Tottering Face

We spend our entire lives gathering information from other people's faces, so we don't have to work that hard to get the basics down. The special motor neurons in our brains, called "mirror neurons," react immediately to subtle signs of true emotion on others' faces — a flash of a genuine smile or a tiny hint of sorrow can trigger that same emotion within us.

All humans share seven universal emotions: happiness, sadness, disgust, fear, surprise, anger and contempt. These can be seen in microexpressions that are universally hardwired into us. These automatic expressions are the same whether you are male or female, black or white, young or old. Everyone who is surprised makes the same expressions.

These microexpressions may leak out for only one-fifteenth of a second. While these micromovements can be a challenge to spot, learning to see these fleeting emotions is incredibly useful because each of these emotions registers with very distinct patterns that are almost impossible to fake. Consciously faking emotional response patterns (which can involve moving any of the more than 40 intricate muscles in our face) is hard to do,

hard to manipulate, hard to disguise — for everyone. We still can't know for sure what sparks the wobbly leakage on the tightrope of those emotions (she says she's sad, but we spot happiness; he tells us he's happy, but we decode disgust and surprise). But if we see the microexpression, the person is *definitely* feeling that emotion, which, for a liar, makes these moments of emotional leakage the face's version of teeter-tottering.

The big gun for convincers is consciously faking emotions. They try very hard to convince you just how honest they are. But often they miss very key, subtle differences in the movement of the forehead, eyes, cheeks and eyebrows. So a great way to bust a liar is to really focus on some key differences between genuine and fake emotions.

Also, like changing the channel on the TV, the speed of a switch in emotions is, in itself, a telling sign. If someone can go from sad to happy or from fear to anger to happiness in the time it takes to switch the station, that's the big red flag of the convincer.

## Step 4: The Full Body Surveillance

As a channel of communication, some experts say that full body surveillance contains more than 50 percent of the true message behind our words.

Bearing in mind that people tend to mirror one another, it's in your best interest to present honest, open body language. Remember, we're not looking for the lie; we're looking for the truth. Anything you can do to help other people be honest will help you too. Honest people tend to:

- Point their toes and body toward you.
- Lean forward with casual interest.
- Be somewhat casual and at ease but not artificially, so they shift their body posture fluently, without any nervous tics.
- Keep their throat, neck dimple, belly button and "naughty bits" all open and pointed toward you.
- Use a wide, solid, powerful stand ("short fat candle") versus a tight, wobbly stance ("tall skinny candle").
- Uncross their arms and keep their hands down at their sides or on their chairs.

The biggest teeter-tottering red flag you might see during your full body surveillance will be obvious discomfort or unconscious incongruence of a liar's gestures with what's coming out of his or her mouth.

Shoulder shrugs indicate uncertainty, so when a shrug shows up with a definitive statement, it could indicate deception. The often less noticeable hand shrug is very similar to the shoulder shrug. The palms typically stay facing down on the lap or table, and all of a sudden, they face up. The meaning is the same as a shoulder shrug: ambiguity and uncertainty.

## Step 5: The Interrogation

The real secret of detecting deception is to know that you have to ask lots of questions and to continue doing so until you get what you need. Start with an easy one. Ask an innocent question that you already know the answer to or one that you know won't arouse any suspicion: "What are you doing this weekend?" And move slowly up to the more heavy-duty ones: "Why is there a tan line on your ring finger — did you recently get divorced?"

Ask open-ended questions. An interrogation is not a true/false test — it's more like an essay. Yes-or-no questions are typically dead ends. For now, get the basics down: who, what, when, where, why, how. Then, keep going just for sheer quantity:

- What is it about …?
- You said … Tell me more.
- What do you mean?
- Tell me what happened …

The more questions you ask — 20, 30, 40 — the more information you gather, the wiser you become. And as you ask, keep your eyes open.

This is where the baseline comes in. You're looking for those deviations that come when people seem slightly uncomfortable. Anytime anyone deviates from that nonverbal baseline, say to them something like, "Maybe I'm wrong here, but it seems like there's more to the story" or "Maybe I'm wrong here, but you seem a little anxious about your meeting later." And then you WAIT. Silence is interrogation gold. People don't like awkward silences, so they will do almost anything to fill them up. A truthful person believes you will believe him or her, but a liar will immediately think the worst.

# PART 3: YOUR BS BAROMETER IN THE BIG PICTURE

## Putting It All Together

In general, people with power experience fewer restrictions while simultaneously having greater access to money, information and connections. People with less power have the opposite — more rules to govern their behavior, fewer resources to draw from.

Breaking the rules can signal to others that you have power. Research has shown that powerful people are more likely to:

- Take more cookies from a common plate.
- Eat with their mouth open and spread crumbs.
- Interrupt conversations.
- Be "close talkers."
- Stereotype.
- Exhibit more aggression toward other people (and have it tolerated).

You don't have to be a boor just to prove that you have power. The trick with interrogation is to display supportive, appropriate power. Your task is to walk the fine line between cheerful supplicant and angry overlord — you want your employee (or any person from whom you want the truth) to feel that you have the upper hand but not so much power that he or she is unwilling to work with you.

### Getting Back to Trust

Sometimes we may have distrusted someone and called him or her out in a lie — and found out we were dead wrong. In those situations, it will take a while to repair the relationship — but the good news is, it can be done. Research shows a simple apology can restore trust — so that's always worth a try. But one study found that just a short series of cooperative acts can restore mutually cooperative behavior.

The important thing to remember is, when you are doing this to intentionally repair your relationship, you must let the other person take top billing. Allow your husband to pick the seats at the game, what to plant in the garden, or even where to place the bike rack in the garage — and then agree with him. If it's your colleague, go out of your way to praise his or her ideas both when you work as a pair and when you present the project to others. ●

## The Self-Exam

Do you find that you frequently encounter deception by almost everyone in your life? Whether there is one liar or many in your life right now, it might be time to take a peek in the mirror. What mistakes are you making in your life that are stopping you from spotting that friendly phony? Why are cheating partners, lying bosses and "frenemies" even in your world?

Let's turn the BS Barometer around and take a good long look at your degree of honesty with yourself. Do you always give people second and third chances and expect a different result — and then blame *them* when they betray you again? Have you been turning a blind eye to suspicious behavior of your longtime trusted advisor and friend? Or are you so busy that you have given someone too much power over the most important areas of your life — and you just assume that he or she has your back?

Many people who are looking to tune up their ability to detect deception and improve their communication skills skip the most important step: setting a positive and authentic intent, such as success, love or truth. Instead they often set a negative one, such as "The next guy better not be a cheater!" or "I hope I don't appear nervous" or "I hope people don't think I'm a liar!" When people focus on what they *don't* want to happen, it's as if their ability to honestly communicate and genuinely connect with other people just deflates.

As we do the self-exam, we need to take a good hard look at all the deceptive lenses we use to view the world and how they can block us from creating genuine, authentic relationships with ourselves and others.

Every aspect of communication begins with intention. You can choose whether that intention is positive or negative. Negative intentions break down relationships, opportunities and self-esteem. Positive intentions create possibilities, growth, confidence and love.

### Epilogue

I hope that by tuning up your BS Barometer you're creating the courage and the confidence to do what's right and get to the truth of the matter faster, and more directly. Because, ultimately, I want you to fight not only for yourself — but also for the other people who might need you even more: your student, who needs you to confront him about drugs; your mother, who needs you to watch out for a dishonest caregiver; your young son or daughter, who needs you to stay vigilant about the predators in your midst.

I want you to have open, trusting relationships; to enjoy genuine connections with people who deserve your respect and your love; and approach the world with confidence and without fear. ●

#### RECOMMENDED READING LIST

If you liked *You Can't Lie to Me*, you'll also like:

1. ***Speaking as a Leader* by Judith Humphrey.** Casual elevator conversations, phone calls or one of many brief interactions in work life — Humphrey shows you how to make the most of your daily communications.
2. ***Win* by Dr. Frank I. Luntz.** Luntz examines how top performers win in all areas of human endeavor by utilizing superb communication skills.
3. ***Well Said!* by Darlene Price.** Price presents field-tested techniques, guidelines and checklists to help you present yourself and your message with clarity, credibility and confidence.

## THE SUMMARY IN BRIEF

Now is the perfect time to get prepared for what's next. If you're going through a rough transition in life right now, this could be the perfect packaged discomfort to prod you to make a shift in your life to make things better. If you're feeling pretty on top of your game and cruising through life right now, maybe now is the time to go to the next places you only imagined. No matter how comfortable or uncomfortable you are, or what the circumstances of your life might be, no matter where you are in the world or what you have done or not done, now is the perfect time to get prepared.

You're right where you need to be right now, even though it may not make sense. The truth is, everyone can prepare to win in any endeavor, but not everyone does. Eric Wood, accomplished podcaster and former NFL player, wrote ***Tackle What's Next: Own Your Story, Stack Wins, and Achieve Your Goals in Business and Life*** to give you some proven tools that will help you prepare for the next, best chapter of your life. Your day is today, and by following the principles of this book, your what's next will be your best yet.

## IN THIS SUMMARY, YOU WILL LEARN:

- Four questions to examine your gifts.
- How to create a vision for your future.
- How to set a routine for maximum success.
- The importance of preparation.

## Examine Your Gifts

You're here on earth with a full slate of natural gifts that you've used all your life, gifts that will continue to serve you as you get to the next step. If you're having a hard time imagining what those gifts are, it might be because you use them instinctively without thinking about them.

When you find yourself down, you may have trouble seeing your attributes and resources. You have more tools in your utility belt than you give yourself credit for. To find out what you're going to do next, you need to begin by examining your gifts. You can do this by answering four questions.

**Question 1: What Are You Good at Naturally?**

Don't overthink this. These are things you seem born to do or were born with by luck.

**Question 2: What Have You Learned to Do Well?**

Sometimes we learn to be very good at something that started as a natural knack or talent and then we honed it into something special.

**Question 3: What Do People Who Love You Say Your Gifts Are?**

Sometimes your gifts are obvious to everyone but yourself. The people who love you and know you the best are keenly aware of your qualities and attributes.

**Question 4: What Are You Resisting?**

When we resist certain things, it can be a clue where our head is, and that can tell us where we need to go. Sometimes what we resist is a gift we have to offer the world.

Using your gifts to serve others and affect their lives will lift you up and make you more successful as well. One of the biggest challenges in life is to see beyond the adversity that life throws at us from nearly the moment we start breathing. Adversity is a gift in and of itself that can reveal more of your other gifts.

Having a greater sense of perspective and learning how to interpret and use adversity in a positive way will fundamentally improve your quality of life. Success is nearly impossible without this skill.

## Create a Vision for Your Future

As part of professional NFL training, the Bills brought in a performance coach who introduced specific visualization exercises that demonstrated the power of visualization. If you can create a vision and break it down into smaller steps, really seeing it in the mind's eye, there is a better chance of actualizing it on the field or in life. Many celebrities who rise to the top of their fields in sports, entertainment, and the arts all say essentially the same thing: visualization works.

Visualization is an incredible thing. If you practice visualizing an action, you get almost the same benefits as if you are actually doing it. It's important to adopt a greater perspective before you start to visualize. If your thoughts are too negative, they will tax your mind and body as if they had physically happened. Are you practicing failing and fear over and over again in your mind? Or are you practicing the best outcomes?

Your thoughts become your actions, and your actions become your habits, and your habits create your future. So, you have to be incredibly careful with your thoughts. You can shift your whole reality just based on the thoughts that you're intentionally creating. Our brains are incredible gifts with power that we are only beginning to understand.

There are so many benefits to visualization. It is incredible how much more calm and in control you feel when you find yourself in situations you have already visualized in advance. You can make better and more effective decisions about what to do and not get caught like a deer in the headlights. Your future is bigger than your past! If you're not actively creating a future, you may not like where your future takes you.

## Examine Your Core Values

Ever had that uneasy feeling that you are totally off course? You know you're headed in the wrong direction, and maybe you're not even sure how you know that. But you feel it deep in your gut, and that uncomfortable feeling tells you something needs to change.

Compare that to the opposite feeling, when everything seems right. You feel like you have the wind at your back and you're sailing in the right direction. You may have challenges that come up. However, you feel you are entirely equipped to handle them. The difference between these two vastly different feelings goes to the very essence of your own *core values* and whether you live your life aligned with them.

Having a strong, unshakeable sense of your core values dramatically affects how you deal with life's pivot points, at

The things you do at the beginning of the day can help you seize control of your life and get intentional about the future.

which you must change direction completely. You will find yourself more resilient and able to withstand the impact of an unexpected emergency or disaster. If you do get knocked off course, it won't be for long because you have such a fundamental sense of yourself.

You also develop higher confidence in yourself. People who know their core values know precisely how to optimize their life to live within them. When they live aligned with their core values, they tend to be more successful, too. It's almost impossible not to be.

When you don't have a firm grasp on your core values, you're in for a tough time. You may find yourself hanging out with people you don't like, doing things you don't really want to do, and feeling a ton of anxiety about it. You may feel stuck, or in a downturn, or angry or disgusted with yourself. You probably won't be performing anywhere near your best at any given task or vocation. The price of not being true to who you really are is outright misery.

The good news in this situation is that you can always shift course. You can adopt a new set of core values that more accurately reflect who you want to be, or you can finally start following the excellent set of core values that may have been there all along. It's never too late to turn around.

When we find ourselves in a spot where we don't feel right, one of the first places to look is whether or not we are aligned with our core values. When you already have a reinforced and clear sense of your core values, it makes being resilient and strong at difficult points so much easier. It doesn't stop the storms in life from coming; you're just better prepared to weather the storm.

## Get into a Routine that Sets You Up for Success

You are creating your future by the things you do every day. Your morning routine is where the rubber hits the road. If you have a particular vision about what you want from life, how are you putting that into practice today and every day? The truth is you already have a morning routine. Most of the time, you do the same things every morning and then later into the day. So the question then becomes–is your routine intentional? Is it supporting your future? Or is your routine just something that you do every day without really thinking about it?

The things you do at the beginning of the day can help you seize control of your life and get intentional about the future. Even the seemingly most minor things can make the most significant difference over time. Little things, like making your bed, are all the actions and micro-actions that add up to the totality of your day. Those days turn into weeks and those weeks into months and years.

The little things have a cumulative effect over time, adding up to an enormous benefit. If every little thing you do matters…what are you doing? That may be one of the most critical questions of your life.

Most people are not intentional about their routine. Although that is not a recipe for disaster, not being intentional won't move you forward. Chances are if you stick with a typical, unintentional routine, whatever you are experiencing now, you're just going to get more of the same.

Some people are happy staying where they are and not advancing. But if you want to break out of that, and help fulfill the future you've set for yourself, then you've got to switch it up and get intentional. It all starts with what you do in the morning, which leads you into the rest of the day.

Many people were thrust into an unfamiliar routine during the pandemic–they had either too little or too much time on their hands. Neither is good for you. And I think that's a struggle for many people, especially when the situation forces them to be home when they have been used to going to the office or a job where everything is structured. You supposedly have all this free time, but when are you able to be productive?

In studying highly effective people's morning routines, a set of common features came to the surface.

- Gratitude practice: Some people write down the things

they are grateful for, speak them aloud, or record them on a device. The point is to actively recognize the things you are grateful for in your life.

- Morning reading: This could be a biblical verse, self-development material, or some kind of nonfiction where you are learning something new. It's a way of feeding the mind with positive content to give a significant boost.
- Extended moment of silence of some kind: Meditation is a common choice in this area but it could also be breathing exercises or simple silent reflection. It could be silent prayer or simply time away from all screens and devices. It is incredibly healthy to quiet the mind and free yourself from toxic distractions.
- Some kind of exercise: Some people start with a swim or run, and others might prefer lifting, yoga, or tai-chi. Anything that gets your blood pumping and helps you get in touch with your body is excellent and has tremendous positive long-term impact.

The combination of gratitude, morning reading, working out, and silent reflection helps people take control of their morning and start the day on their terms. They don't start in a frantic state, reacting to all stimuli thrown at them as soon as they open their eyes. They don't let their phones or other devices bully them around and force them into a place of fear or anxiety. Instead, they feed their minds and souls calmly and intentionally, helping to prepare themselves for the day ahead.

## Starting Your Day with Wins and Building Momentum

Ever had one of those days when you feel unstoppable–a day you seem to rack up win after win after win, and nothing is slowing you down? Each success seems to fuel the next one, and before you know it, you have an unrestrainable momentum that takes on a life all its own.

In football, we strive for that kind of momentum, and we recognize that feeling on the field when it happens. It's not any single moment–it's when one team is successful in several events in a row, which leads the crowd and team to believe that more winning events are about to occur.

Just like in football, our life momentum comes from a series of events stacked up on top of each other over time. When you start racking up wins through your consistent morning routine, you inevitably build positive momentum in your life. That routine you devised set you up for success and is a promise you keep to yourself.

The momentum from all those actions will build in your life. Practiced long enough, you'll hit the "hockey stick effect"–a term often used in finance to record results over a long period. They call it a hockey stick because, on a graph, it looks flat for a long time, and then results rise dramatically in a very short time, creating the shape of a hockey stick. Little micro-actions build up cumulatively over time until you break out with incredible results. Some success stories reflect the hockey stick effect in a short time, and others are years in the making.

However, there is a vital ingredient to maximize the potential of each win, no matter how big or small. You must record and recognize the win so that you can add it into your collective energy and the greater momentum of your life. To do that, you have to start recognizing wins in your day-to-day life.

A win is an accomplishment that makes you feel better about yourself or makes you progress toward a stated goal, even if just a little bit. You are producing wins every day, and you might not even know it if you don't notice what's happening. For example, did you pay the bills? Go to work? Get some exercise? All wins!

You are losing out on enormous potential if you don't stop and measure your wins as progress in the overall goals of your life. Moreover, you're robbing yourself of momentum and joy that can get you there faster and be exciting and fun along the way.

## Fill Your Mind with What You Want to Show Up in Your Life

"What are you putting into your mind?" That question may be the most significant thing you ever ask yourself. People who deliberately choose what they think about and fill their minds with positive thoughts that spark growth will be successful in all the buckets of life. Conversely, someone who lives their life on autopilot and fills their mind with whatever captures their attention is bound to have mediocre results. Just as you are what you eat, you also become what you think.

How? It all sources from the mind. Your thoughts become your behavior, your behavior becomes your actions, and your actions become your future. It's as simple as that. Of course, there's always a catch. To harness the power of

Filling your mind with negative self-talk will cause negative things to show up in your life.

your mind, you have to become disciplined and know how to steer it. And the entire world is full of obstacles that can easily knock you off course.

One of the biggest obstacles is your own mind's incredible processing power and capacity for information. You are capable of thousands of thoughts every day. There is an incredible amount of noise created by our own minds that could be dangerous to our long-term future. If left undirected and open to any influence that comes along, distraction becomes inevitable.

What would it look like if most of those thoughts were constructive, conscious, and sending you in a positive direction? To do that, we have to consciously place a focused thought that we control and purposely curtail thoughts that send us astray. It is the idea of letting your intentions guide you throughout the day.

One of the challenges all of us face are negative thoughts sourced from inside our minds. Some of the most common ones are: I'm not good enough, I'm a failure, I can't do anything right, I'm weak, dumb, or inept. There's another word for all this negative self-talk–self-limiting beliefs. Because that is all they are: beliefs, not facts, even though they may seem like facts.

They only seem real and they don't serve you–you can just as easily replace them with more productive beliefs. And just like your self-limiting beliefs, positive beliefs about yourself increase potency with repetition. If you tell yourself "I'm a success" often enough, you will find a way to construct that future instead.

Filling your mind with negative self-talk will cause negative things to show up in your life. The good news is the reverse is also true. Practicing positive self-talk can turn things around.

## Examine the People You are Spending the Most Time With

Just as you have to be intentional with what you are thinking, you also must be mindful of the people you are spending the most time with. All the time you spend with them makes an impact. Over time, you become more and more like the people you spend the most time with. It's inevitable.

So then the questions become, "How are you being guided and influenced by the people with whom you spend the most time?" Are they making you better? The same? Or worse?" Most people would rather keep things the same than risk uncomfortable change. However, when we take that risk and consciously curate the people who can add the most value to our lives, we enter into a community that uplifts each other and supports us to succeed in ways we may not have thought possible.

There is indisputable value in having close friends in our lives or having regular social interaction. It's part of what it means to be human. However, with that engagement comes influence. You are influencing your circle of friends, and they are influencing you. Some researchers call this a network and others compare it to an ecosystem. The gist is that you are all influencing each other inside the circle for better or worse. And that influence can have surprising impacts on your psychology.

Strong-willed friends might rub off on you and help you conquer habits that you wish to replace. This is part of the idea of having an accountability partner, someone to help you stick to your goals and manage your self control.

Seeking out people with strengths in areas where you have weaknesses is a great way to enrich your team of friends. In short, they help round you out. Together, a circle of friends with different strengths and backgrounds can be an ideal group to help each other earn and maintain success in all the buckets of their life.

Everyone has access to genuine and helpful groups of people who can fill in the gaps and give you much needed perspective. You can create groups or join existing groups of people to enhance your learning at a high level. No matter what your goals, you can find a group correlated to those goals, whether it's through social media or any other community resource. You don't have to limit yourself by your recent experience–connecting

with others, asking advice, and getting involved with something greater than yourself can help you learn and upgrade yourself at an exponential level.

## Control What You Can Control

The best of the best prepare their mind and body, and they do it every day. Preparation processes can be seemingly mundane process goals that make up a more significant overall product goal. For example, preparing your clothes the night before, planning meals and prepping supplements for the week, and preparing for the day with your morning routine are all ways to make you as prepared as possible. Control the elements that you can control every day.

The hardest part about preparing is that it takes intentionality and willingness to change. And let's admit it, change is hard for a lot of people. You win success on a daily basis by what you do every day. Once you can create the proper habits that prepare you every day for success, you can evolve to where it doesn't take the same kind of willpower each day to prepare. It becomes second nature.

The work-life balance isn't easy in football, with massive amounts of preparation leading to only a few moments of high-stakes game play per game. Those moments are hard-won. There are only minutes of game play, but those minutes take hundreds of hours of practice. And the preparation is what makes those minutes the best they can be. It's no different from how you prepare for other things in your life–hundreds of hours of preparation for high-performance moments that make a difference.

Here's the hard truth, too. We all have every morning and every day to prepare, either intentionally or unintentionally. If you're unintentional and undisciplined about how you prepare, or if you're not preparing at all, then you're going to have an unintended and unprepared future. Trust me–you don't want that. Successful people get intentional about what they're preparing, get disciplined about it, and put in the hard work. There is simply no substitute for solid preparation.

When you are the most prepared, the most practiced at whatever you are doing, you don't have to think about techniques so much. Instead, your mind and body simply know what to do. It's muscle memory. As a result, you develop a level of consistency that is only possible with diligent experience, drilling, and discipline. When that happens, you can focus on the tasks at hand without consciously worrying about your technique and skill. Essentially, you can perform at an optimal level.

When you're backed in a corner in life, quit thinking and take action. Think about making a slight improvement first. Then, think about your next step and how you can better prepare for the one after that. And so on. Leave no stone unturned as far as preparation goes. When God puts those opportunities in your life, you want to be completely prepared to run with them.

Eric Wood was a first-round NFL draft pick by the Buffalo Bills in 2009. He played nine seasons with the Bills, which included a Pro Bowl and two Walter Payton Man of the Year nominations. In 2018, he suffered a career-ending neck injury that has led him on a journey to find out what's next for him. Eric is currently the radio analyst for the Buffalo Bills and the host of the podcast "What's Next with Eric Wood," where he interviews high achievers in a variety of fields. Eric is a keynote speaker, author, and performance coach who is driven by a passion to help others achieve the best version of themselves.

## THE SUMMARY IN BRIEF

Everyone wants to find success in their life and career. The question is how to get there. Many coaches won't tell you that you can actually *coach yourself* to success. The importance of good coaching has been studied and written about for some time now. It can help people see themselves and their experiences more clearly, respond to situations more effectively, expand their knowledge and capabilities, and help them define what they need to do and stay on track. Good coaching can help them reach more of their potential and become the best they can be. Yet, despite all the known benefits, good coaching doesn't seem to be practiced all that much.

The need is clear. There are a lot of people out there that don't like their jobs, are launching their own businesses, opting for freelance and gig work more often, and working remotely. All of this means many are without a manager or mentor on hand to act as their coach. In ***Take Charge of You: How Self-Coaching Can Transform Your Life and Career***, David Novak and Jason Goldsmith show you how to take the responsibility for coaching into your own hands and give yourself what you need to succeed, grow, and lead a more fulfilling life. It's time to *take charge of you* and learn how to self-coach.

## IN THIS SUMMARY, YOU WILL LEARN:

- 4 key questions to ask yourself to start a self-coaching conversation.
- How to develop a self-coaching mindset.
- Transformational insights for your self-coaching plan.
- 3 strategies to keep you committed to your Single Biggest Thing.

## The Self-Coaching Conversation

### Ask Yourself Some Key Questions

If you are interested in this topic, it probably means that you are searching for something. Perhaps you are not fully satisfied with how things are going in your career or your life. Maybe there's a goal you'd like to reach or an issue you'd like to resolve, but you're not quite sure how to get there. Or maybe you're pretty happy but want to continually up your game.

It's situations like these where a good coach can really come in handy–to help you gain perspective, develop a plan, work through the inevitable hurdles, and provide inspiration and motivation to see things through. So that the growth and change you're looking for can become more than just a hope or desire. So that it can take shape and become reality.

If you're going to coach yourself through all that, where do you start? Coaching starts with a conversation. You have to get to know the person you're coaching–about who they are, what they want, what they believe is getting in their way.

With that in mind, you will be guided through a kind of conversation with yourself so we can begin to do two important things that will be key to your self-coaching journey:

1. Gain a better understanding of how best to coach the unique individual that is you.
2. Figure out what we will be coaching toward.

### Key Question #1: What's Getting in the Way of Your Joy?

Many of us are in the habit of ignoring or pushing past our feelings, especially when they are unhappy ones like misery, or even feeling stuck or uninspired. But we can also look at feelings as simply a source of information about ourselves.

They can help us gain insight into what's going wrong or what's going right in our lives, whether we're on the right track or headed in the wrong direction. With that in mind, we will start with the particular feeling of *joy*.

Why start with joy?

It may sound like an impractical or unsubstantial word, but think about the difference between doing something *because you have to* and doing something *because you want to*.

Those *have-tos* are the things we often complain about, rush through, get to only after a lot of procrastination, or avoid altogether when possible. The *want tos* are the things we willingly make time for, can't wait to do, and put our best effort towards because we enjoy them so much.

In terms of an organizing principle for continual growth and development, pursuing joy will lead you to be more successful.

You need to find your Joy Blockers.

### Key Question #2: What Would Grow Your Joy Personally and Professionally?

You probably have a natural sense of what joy means to you. Researchers who study joy generally define it as an intense positive feeling. It's high energy and exuberant. People who love what they do feel energized by it. People who don't feel the opposite.

Joy has an energy to it, one that can snowball, leading to more and more things you find yourself driven to do. So as you explore this second question, keep the definition of joy in mind. It's not just about what makes you happy, but what makes you feel energized and alive. You need to find your Joy Builders.

### Key Question #3: What's the Single Biggest Thing You Can Imagine That Would Grow Your Joy Personally or Professionally?

This question is about choosing a destination that we will be coaching you toward. To answer it, you are going to use the work you have done examining your Joy Blockers and Joy Builders.

And then, when considering all those joy related things, this question becomes about focus and selection: Which one thing will bring you the most joy–that's your **Single Biggest Thing** (**SBT**). That's the destination we will coach you toward.

Your SBT should feel big, important, impactful, even aspirational. There is a difference between setting a goal and choosing a destination.

A goal might be to lose five pounds or get into the habit of exercising five times a week. The destination might be to improve your overall health to the point where you feel like you're living your best life.

So allow yourself to think big, think boldly, and see where it takes you.

### Key Question #4: What Would It Mean if You Accomplished Your Single Biggest Thing?

It is so important to love what you do and to show that each

People think of a coach as the person with all the answers, but a good coach is really more of a seeker.

and every day. How much better would life be if you did? Create a picture of your own that describes what it would be like to achieve what you want most in life.

## The Self-Coaching Mindset

### Open Yourself Up to Growth

Self-coaching requires adopting a new way of thinking that we call the *coaching mindset*. A *coaching mindset* is when your mind is open to whatever is going to drive your growth or performance. That means avoiding the trap of preconceived notions of prejudging what's going to happen.

Instead, you want to be continually searching for the next insight that's going to move you forward and closer to your destination.

People think of a coach as the person with all the answers, but a good coach is really more of a seeker. Seeking knowledge to better understand the people you coach (even when it's you) and the things that impact them is how coaches come up with new ideas, insights, and innovations that can help.

In many ways what you're trying to do as a coach is keep your mind open enough to continue that conversation you started with yourself earlier. You want to be flexible in your thinking and ready to explore, rather than believing you already have the answers to how you're going to accomplish your Single Biggest Thing–or even if it's possible.

When we set out to achieve something, especially something big, there are a lot of things that can get in the way or send us off course. Our own minds may be the biggest culprit. That's why adopting a coaching mindset early in this process is crucial to your success going forward.

There are four key aspects of a coaching mindset. To be a good coach, you have to know how to draw on your capacity for:

1. **Belief:** knowing you can do it, even if you've never done it before
2. **Neutrality:** belief paired with an ability to suspend judgment long enough to search for the insights you need to make good decisions
3. **Awareness:** an ability to become conscious of what your mind is focused on at any given moment and an ability to shift that focus where you want it to go
4. **Self-knowledge:** knowing yourself is crucial to your growth and development

## The Self-Coaching Plan

### Uncover Transformational Insights

Having a destination is not the same as knowing how to get there. What do you do first? What do you do next? What could stand in your way? These are the kinds of insights you need in order to figure out how to get from where you are now to where you want to go.

### Make Sure Your Destination is Purposeful

First things first, take another look at your SBT and see how it holds up against the values and purpose you defined for yourself. If it doesn't hold up, that should provide some insight into where you have work to do.

The key thing here is to make sure–to the best of your abilities with what you know right now–that the destination you will be working toward is worth your time and effort.

Sometimes we set our sights on something because it's what we think we should be doing or because someone else thinks it's what we should accomplish. That kind of destination is going to be a lot harder to reach than one that feels purposeful and brings your joy along the way.

### Learn to Ask for Insights

One of the best tactics you can use to start gaining insights into how to reach your destination is to ask for them from people who have done something similar or simply from people you admire and respect. Collecting outside opinions is a great place to start when you're not sure what to do next.

### What to Do with Unwanted Insights

Just because you ask someone for their insights doesn't mean you have to take their advice or adopt their opinions. No one except you can decide whether the advice is good or worth following.

If you find yourself having doubts or even getting upset about an insight someone has shared, remember your coaching mindset and take some time to become more aware.

Be curious about your reaction rather than just rejecting the insight outright. Are you feeling that way because it wasn't the right advice for you? Or is there something else getting in the way of accepting sound advice?

### Become an Avid Learner

You can still gain insights from others even when you can't ask them directly for advice. Avid learners who are constantly on the lookout for new ideas and insights and consult a wide range of sources to find them.

### Understand How Your Mind Might Not Be Helping You Succeed

To reach your destination, you also need insight into how to tackle any roadblocks that stand in your way. The roadblocks are going to be different for everyone, but no matter what you encounter, the signal that something could be getting in your way will often begin as a feeling. Or it may come to you as a kind of voice in your head. These are roadblocks and know that they are coming.

### Learn to Listen to Yourself

The clue that something in your head is getting in your way will sometimes be obvious and other times be quite subtle.

The first thing to do when you pick up one of these clues is simply to pause and accept it. This can be challenging, but it's also essential to building the kind of self-knowledge needed to discover how and when your own mind might be getting in the way.

When we are aware and intentional about our thoughts and actions, it is possible to change our perspective about what's getting in our way.

## The Self-Coaching Journey

### Take Insightful Action

The path to achieving something new will always be a question mark until we walk it. So what do we do with that question mark?

We can start by admitting we won't have all the answers up front and we don't need to. It's not a reason to get stuck or hold ourselves back. Instead we can take action to move ourselves forward, step by step, in spite of not having all the answers.

But that doesn't mean taking action for action's sake. It's an important distinction. We want to take *insightful actions*; that is, actions that are both informed and inspired. As you take action toward achieving your Single Biggest Thing, strive for a balance between the two: information and inspiration.

That balance is about having your feet on the ground and your head in the clouds at the same time. You can't achieve anything new unless you have some of both.

### Define Your Current Reality

Before you start plotting your journey, make sure you have a clear view of where you're starting from–your current reality. Some steps on your path will be more joyful than others, but doing big things takes hard work and sometimes requires trade-offs.

When you know where you are and you know where you want to go (that's your SBT), then the task becomes about plotting the route from here to there.

### Bring Your Focus Down to What to Do Next

Setting an SBT can be overwhelming. Your list of goals and the roadmap you have begun to create may feel long, incomplete, and even messy at this point.

If you try to think about all the things you have to do all at once, it can lead to confusion, distress, or even cause a shutdown because there's too much to consider.

A more effective approach is to simplify focus on the process. Focus on the next step you need to take to move closer to your destination.

### Track Your Progress

As a self-coach, you're going to have to track progress for yourself. The process is going to be different depending on the kind of destination you're aiming for, but it's crucial for two very important reasons:

1. Tracking progress shows you what's working and what isn't so you can course correct or take more

It's not difficult to do some real damage to our belief in ourselves if we don't learn to manage those negative voices in our heads.

effective actions in the future.

2. Tracking progress provides inspiration and motivation because when you can see yourself making progress, it makes your far-away destination feel more real and attainable.

### Learn How to Talk to Yourself

Inspiration is essential to helping sustain yourself on what could be a long and challenging journey. That's why it's important to be conscious of how we talk to ourselves about what we do and our efforts to be successful.

We can send ourselves off course more easily than many of us realize. It's not difficult to do some real damage to our belief in ourselves if we don't learn to manage those negative voices in our heads.

## The Self-Coaching Habit

### Commit to Constant Improvement

No process is worth very much if it isn't sustainable. You need to keep yourself motivated, on track, and moving forward as you continue to coach yourself to your Single Biggest Thing, and then on to greater and greater heights.

Making a consistent effort so often makes the difference in our success. Even the best-conceived ideas, dreams, goals, plans, and strategies mean very little if you don't follow through with them.

### Build in Positive Motivation

Too many people leave their motivation up to chance. They wake up in the morning, think about how they're feeling, and act accordingly. But guess what? If you do that, there are going to be days when you just don't feel like it–whatever it is to you in that moment. Leaving your motivation up to chance guarantees there will be times when you don't follow through.

That's because motivation doesn't just happen. Contrary to popular belief, it isn't something you just wake up and will yourself to have. If you have trouble staying motivated from time to time, that doesn't make you weak–it makes you human.

If you want to stay motivated, it works best if you build that motivation into your process. That way you can't help but feel motivated to keep pursuing your SBT, even when things get tough or when your energy or belief wanes.

There are three strategies you should put in place before you need them to help sustain your motivation. Don't wait until you have a bad day or a setback to do these. Do them now so that when rough patches come–and they will come–you have strategies in place to turn to.

### Strategy 1: Remind Yourself What Matters

It can be really easy to get caught up in the day-to-day minutia of what we need to do and where we need to go, thereby losing track of big-picture things like our SBT, our purpose, and the values that really matter to us. That's why, wherever and whenever possible, we believe it's important to surround ourselves with reminders of these things.

Take charge by building a motivational space. Pick a spot that you look at often and place there a card with your SBT written on it, as well as ones with your purpose and values. That will keep these things top of mind. Pictures, awards, notes, and anything that holds value to you works, too. Visit this place often, not just on difficult days when motivation needs a boost.

### Strategy 2: Connect with Your Future Vision

Paint a picture for yourself of what it would mean to accomplish your SBT. Visualize what your future would look like if your SBT happened and imagine how it would make you feel. Pay particular attention to what you think it will feel like to succeed. Then ask yourself how you can bring a bit of that feeling into your life on a daily basis.

Despite the fact that our culture tends to prioritize our logical side over our emotional one, it is our feelings that tend to motivate us more often than facts. So pay attention to your feelings, and make an effort to be more intentional

about cultivating the positive ones that will keep you motivated over the long term.

Take charge by choosing how you want to feel today. First thing in the morning, ask yourself, "How do I want to feel today?" Maybe the answer is similar to feelings such as joyful, playful, connected, or grateful. You get to decide with whatever comes to mind.

Set an intention to bring that feeling into your day as much as possible. To get started, ask yourself: What's one thing I can do today to feel this way? Make an effort to do that one thing. And then do another and another after that.

Keep coming back to your intention throughout the day, and look for ways to cultivate that feeling. Make this a daily practice, every morning, and see what happens.

### Strategy 3: Go Public

Going public is a tactic that makes your goals, large and small, feel more urgent and keep them top of mind. You can go public by telling people what you want to do and asking them to hold you accountable for doing it.

It changes our thinking when we know someone is watching our progress. And when our belief or energy wanes, drawing on others can help us get it back.

It does matter, however, who you share with.

While it's not always possible to anticipate people's reactions, it's best not to share with someone who is going to undermine your intentions or someone who researchers describe as "lower status"– meaning their opinion isn't that important to you.

This is a good place to draw on that self-knowledge you've been developing throughout this process and consider what you need most to get and stay motivated. We are not all the same and we do not have the same motivational needs, so remember that as you consider who to confide in. What would resonate most for you? Ask yourself what you really need to sustain your motivation.

Take charge by sharing your intention. Identify at least one person you can confide in about your SBT. Consider what you now know about the subject, as well as your self-knowledge, and make sure you choose someone who is likely to be motivating to you personally. Reach out today and ask the person to check in with you regularly about your progress as you work toward your SBT.

### A Word About Procrastination

We all have a tendency to procrastinate at some point or another. Procrastination is often thought of as a time-management issue, but research suggests it's more often an emotional-management issue.

Some of the most common reason people procrastinate are:

- **Confusion:** You are not clear about what you need to do or how to do it.
- **Discomfort:** What you need to do feels scary, boring, difficult, or unpleasant in some way that makes you want to avoid it.
- **Distraction:** Perhaps because you are feeling confused or uncomfortable, or simply because of the overstimulated way in which most of us live our lives today, what you need to do gets lost or buried under a mountain of other things.

The more you can avoid the feeling of procrastination, the better off you will be. Of course, that's not always possible, so the following tip will help you when you find yourself already in a procrastinating state of mind.

It's called the Five-Second Rule, and it's adapted from a bestselling book of the same name by Mel Robbins. It's pretty simple: If you notice yourself procrastinating, then you must act on what you're procrastinating about within five seconds. Count 5-4-3-2-1-GO! And then start doing whatever you have the instinct to do first.

Choose the first thing in mind and then start doing it. Not only does this help move you from procrastination, but it also helps build momentum–because action tends to lead to more action!

As a final word, here is something that can take your success to a new level: *Coach others the way you have learned to coach yourself.* You can get even more out of the coaching skills you practice by applying them to more than just yourself.

Knowing how to coach yourself is invaluable for your own growth, but it is also the first step in being able to provide wisdom and inspiration for others to succeed. As you take charge of you, use what you have learned in service of others.

## THE SUMMARY IN BRIEF

Mention the word ***target***, and several visuals may come to mind. In business, a target may be number on spreadsheet or a highly desired customer. For others, sports goals come to mind—touchdown, hole-in-one. When presented with a target, people have an irrepressible desire to take aim and hit it!

Author Jérôme Chouchan, a successful French businessman in Japan, aims for success. As a master of Kyudo, he utilizes a bow and arrow. In ***Target***, he applies lessons learned from Kyudo to modern business. Kyudo, a traditional martial art governed by strict rules, has as its core purpose self-development and a pursuit of the perfection of the human being. Business may focus on the brutal chase for profits. Chouchan, through Kyudo, moves us deeper.

***Target*** shows that business can be successful from a conventional standard of metrics, as well as spiritually meaningful when it is practiced with a mindset that has a deeper aim than solely sales and profit. In this modern age, where there is a pressing need for meaning and fulfilment in the work place, let ***Target*** challenge you to a different path.

## IN THIS SUMMARY, YOU WILL LEARN:

- How to discover and aim for the heart of the customer.
- The Kyudo lesson: Right shooting always results in a hit.
- How decision-making affects every part of business.
- Habits to improve your business AND your life.

At first glance, archery and business seem to be worlds apart. Surprisingly, learning the spirit and wisdom of traditional Japanese archery helps the modern businessperson navigate through today's challenges.

## Principles for Hitting Your Target

People are born with an irrepressible desire to aim for and hit the target. In archery, this means hitting your target with your arrow. Kyudo literally means 'the Way of the Bow." Let's explore this Way.

### You Don't Reach a Target; A Target Reaches You

This saying teaches the importance of "right shooting," which results in a natural hit, instead of constantly striving to hit the target. In business, the "target" is the customer. The secret of business success is not reaching the target, but the target reaching you. For this to happen, the feelings of the customer and the actions of the company have to become one. When you become one with the feelings of the customer, the distance between the business, the product, and the customer disappears, and success is achieved.

### A Pure Heart

The secret to producing a hit is for managers and employees to forget about themselves and face the customers with "a pure heart." It is beneficial to train oneself to listen to what customers have to say without thinking of personal gain and to tackle work with a selfless heart. Everyone takes pride in the way they do their work and the way they think; it is a natural urge. Don't let those ideas become an obstacle to the vital task of listening to the feelings of the customers or understanding the opinions of others. Chouchan relates this story of leading the luxury brand, Godiva, to make its brand more accessible to the Japanese customer. "When we decided to sell Godiva chocolates at 7-Eleven, some people were opposed to the idea because they felt that it would damage the brand's image. But, without this step, customers who lived in an area without access to Godiva shops could only buy the products through the internet. We wanted those customers to have easier access to the brand and enjoy a sense of luxury. Godiva made an arrangement so that the customers at convenience stores could receive the product in the same Godiva shopping bags provided in the Godiva shops. This made it a more luxurious experience for the customers. For convenience stores, this arrangement was unheard of, but they accommodated the request, resulting in sales growth of the Godiva brand.

### Right Shooting Always Results in a Hit

Chouchan once asked a sales director at Godiva, "What do you look at first when you visit a shop?" She replied, "I check if the shop is nice and clean." Most sales people look at sales, profit, traffic, and conversion rate." This director not only looked at the numbers, but also paid attention to how the products were being sold and the process of it all. She saw the shops that were clean – and therefore appealing – also had good sales performance.

The philosophy underpinning the art of Kyudo is all about placing value on the process, the correct spirit and form, not just the outcome. During a Kyudo exam, archers are observed by the judges from the moment they enter the Kyudo practice hall until they leave. This includes their posture and movement as they wait and walk, and how this is performed in a harmonious rhythm with other archers.

The principle of "right shooting always results in a hit" encourages the employees to be creative, cheerful, and positive because they don't have to worry about their sales results, which can be very unstable. They are free of stress and can take more initiative at work. Instead of worrying about results, they are able to put their best effort into performing, resulting in better engagement of employees.

### Right Shooting Results in a True Hit

In the Kyudo examination, you can fail even if the arrow hits the target. For example, at the moment of releasing the arrow, by looking at the movement of the hands and the body, the judges can see if the archer is in the proper state of mind and energy or if he has been overcome by the desire to hit the target. The world of business can follow the same process. As Kyudo instructs us in the art of correct shooting, we must think about "correct" management in business.

What constitutes the right posture in business? This seemingly elusive goal can be achieved by thinking about the customer, the employee, and by performing business tasks with a high morale.

Are your products of good quality? Are they priced appropriately? Are they being sold in the right places? Is proper service being given? These are questions to ask yourself and your employees.

## Lessons from Kyudo and Japan

In the world of Kyudo in Japan, the correct approach entails a fight against yourself. It has nothing to do with your

> . . . if the company has a meaningful mission, and you are in agreement with their values and purpose, then you can feel joy in your work.

competitors or the circumstances you are in. The focus is upon you and

the target. You are fully responsible for the outcome. In this thought lies the wisdom to establish and develop oneself and the key to improving your relationship with others.

### There is No Such Thing as a Perfect Shot

A Kyudo archer aims for a perfect shot but knows there is no such thing. This is the difference with modern Western archery, where a bull's-eye shot is perfect in itself. In Kyudo, the aim is for better form and a purer spirit in shooting. This endless quest is the soul and spirit of Kyudo.

The key to success for any new project is to move it forward, in small, incremental steps. In Kyudo, through one shot at a time the archer gradually builds form. Shooting is an iterative process, learning from each shot, and shooting each new shot with a higher aspiration than the previous one. This learning and growing process is as relevant in business as it is in archery.

### The Moment the Arrow Leaves the Bow

Kyudo teaches about the importance and the quality of the moment. The entire outcome of the shooting is dependent on the instant of the release of the arrow. The proper timing cannot be planned, and archers may fall into the trap of two types of weakness: ***hayake***—releasing too soon or ***motare***—releasing too late.

These weaknesses can also be experienced in business and in making decisions. For example, hayake is when you rush to a decision without taking the time to get the required information and input from your team, and motare is when you look for certainty and consensus and procrastinate, missing the right timing for making a decision. Motare is frequent in large organizations, and the delay of the moment of decisions is a strong barrier to innovation.

In Kyudo, the release of the arrow is followed immediately by a hit or a miss, so it is a natural process to understand the importance of good and accurate timing. However, in the office, there is no such single moment of seeing the immediate effect of the decision. The effect—the fruit of the decision—happens in the marketplace a long time after the decision has been. As a result of this cycle (decision and effect), managers put much more priority on the content of the decision rather than on its timing, whereas in principle, when making a decision, the timing is as critical as the decision itself.

## How to Make Your Work Meaningful and Enjoyable

In work, in hobbies, and in life, knowing why we are doing what we are doing is very important. The answer to this "why" is what we call our mission. In Kyudo it's said, "The bow builds the man." The great mission of Kyudo is not to hit the target or to get better at shooting, but to perfect the human nature in learning to shoot an arrow. And this mission is what provides deep meaning and joy to the art of Kyudo. It is the same with work: if the company has a meaningful mission, and you are in agreement with their values and purpose, then you can feel joy in your work.

### The Right Inner Intention

Right intention means that to shoot and hit the target, the inner and outer man should be in harmony. You must first of all have your inner intention right, straighten out your outward appearance, and treat the bow and arrow with care. Applying this to a company means that in order to make those outside the company—the customers—happy, you should try to make sure that the workplace is a happy environment and that the workers are happy too. There is a saying in Kyudo, "The bow builds the man." The great mission of Kyudo is to cultivate people through training and practice. The mission of all businesses should also be to cultivate people.

### The Important Things are Sensed

In Kyudo there is another saying, "The bow is understood through personal experience." The first level of experi-

ence is with the mind; this is where you understand what has to be done. The second level is with your body when it reaches some understanding and can perform the shape that the mind had asked of it. The third level, which is called "Chi" (knowledge), is when the mind and the body work regularly in harmony, and because of the stability of the shooting, the desired form is yours. This level can be achieved only through intensive practice and repetition of the same movements.

Training for the corporate environment is the same as in practice for martial arts: the critical factors are repetition and content to bring forth the form in the body of the organization. When training activation reaches a certain level, we can see the staff naturally exhibit the desired behaviors in their daily actions. The leadership team of the company is the spirit of the organization. Its influence permeates the whole body of the organization, in the same way that the archer directs his mind and vital energy to his whole body to perform a proper shooting. The Japanese proverb, "fish start to perish by the head," is often quoted to describe the responsibility of the top management for sustaining a healthy organization.

## How to Live a Fulfilling Second Life

In Kyudo, it is fundamental that the left and right arm work in balance to draw the bow and then release the arrow with the hands moving equally in a straight line to the left and the right. Applying the metaphor of this balance to the workplace, it can be said that these two forces between work and life should complement each other harmoniously, just as the left and right arm do in Japanese archery. In so doing, we can expect the individual to lead a fulfilling life, grow into their full potential and perform better at work. Today, work-life balance is still an issue for many companies. Chouchan relates, "At Godiva Japan, we support our employees in having a good work-life balance, and they are very grateful for this. For example, Fridays are called 'Happy Fridays.' After two o'clock, the employees go out and visit our shops or do something fulfilling for their personal life. Through this practice, we encourage them to feel and experience the importance of activities outside the office. As we are in the business of providing happiness, this is a beneficial practice for both the individual and the company. It is often by walking around in town that new ideas and services for the consumer can pop up."

For those who are on a path of self-development, as we have seen with Kyudo, every obstacle should be seen as an opportunity to perfect the character and grow. In a fast-moving, globalized world, inspiration from ancient wisdoms and arts has relevance to business now more than ever. This is a journey that each of us can embark upon with sincerity and determination. Progress along the Way will improve the man, the company, and society as a whole.

Jérôme Chouchan is the President of Godiva Chocolatier for Japan, South Korea, Southeast Asia, India, Australia and New Zealand. He has extensive management experience in Japan and Asia, having worked for premium global brands such as Lacoste, Hennessy and Lladro. He has a master's degree in management from the Grand Ecole HEC Paris. Chouchan has practiced Kyudo in Japan for more than 25 years and holds a Kyudo Renshi (instructor license) and a 5th dan degree. He is also a Board Director of the Kyudo International Federation, the body governing the development of Kyudo globally. He published Target in Japanese in 2016.

**Contents**

Introduction
*Page 2*

Part One: When Empathy Eludes Us
*Page 2*

Part Two: Following The 5 Steps To Empathy
*Page 2*

Part Three: Embracing Empathy In Everyday Life
*Page 4*

Conclusion
*Page 4*

## THE SUMMARY IN BRIEF

Everyone is born empathetic, but it is the combination of genetics, parenting, and lived experiences that help one develop a strong ability for cognitive empathy. This strong gift of cognitive empathy allows Rob Volpe the ability to see from another person's perspective, walk a mile in their shoes, and provided the perfect foundation for his book, ***Tell Me More About That: Solving the Empathy Crisis One Conversation at a Time***.

With empathy becoming a new catchphrase in leadership, this book provides the fundamental outline on the five steps to empathy that every person in leadership needs to conquer – dismantling judgment, asking good questions, actively listening, integration of understanding, and using solution imagination.

## IN THIS SUMMARY, YOU WILL LEARN:

- How to identify empathy, even when it eludes you as a leader.
- Why it is important to identify empathetic scenarios and change perspective.
- How to utilize the five steps to that every leader needs to conquer.
- Why empathy as a leader is more important than the product or service you provide.
- The solutions necessary to move forward in an empathy-empowered environment.

## Introduction

With a focus on empathy today, this book empowers leaders to gain the first-hand insight necessary to overcome the digital technology dominated society and create success that is not determined by the product but by the leader's ability to be efficient in operations. To truly succeed and stand out in the crowd, leaders need to be able to respond to the needs, wants, and desires of their customers, employees, and fellow leaders.

No matter what our role is, we encounter millions of people in our lives. As a leader, you may encounter some more than others. Having an empathetic character can go hand-in-hand with expanding your operations and creating an environment that flourishes. Using empathy and storytelling, you are able to connect with people and understand where they are coming from.

Everyone has a unique worldview that is made up of individual factors creating their perspective – empathizing allows you to tap into this and connect on a level that doesn't exist otherwise.

Right now, the US is suffering from a shortage of empathy skills as a whole, determined by a University of Michigan Institute for Social Research study. When there is a lack of empathy, it generates tensions and the breakdown results in an empathy crisis. Leaders, to be effective in their roles, must learn the proper ways to overcome the crisis and instill the right empathetic practices within their organization.

## Part One: When Empathy Eludes Us

### It's Like Christmas Morning

Meeting people and learning from their stories is one way to help build the "empathy muscle," which has spent years atrophying due to lack of use. Thinking about it and approaching it from the Christmas morning perspective can change the way we think about empathy as a whole. Everyone loves Christmas morning – mainly the presents. When you approach the day as an opportunity to receive a new gift, it changes the perspective. Each story, each recollection of how others have been treated poorly by their peers is an opportunity to build upon the empathetic character you want to create.

Getting to know and listen to others is a gift, one that you can use toward good or one you can just store away in a vault. Think about your own story – have you felt misunderstood by others? How did that make you feel? Reflecting on your own personal encounters can help you determine where to focus your empathy training.

### The Hazards Of The Job

The biggest mistake most people make is confusing sympathy for empathy. Empathy is a powerful tool that requires you to connect with someone and their experience, whereas sympathy results your having feelings for someone and their situation – two completely different sides of the spectrum. We often don't realize that this happens until we are in the middle of it. Judgment pushes us into bring more sympathetic than empathizing (truly connecting) with the situation. Being sympathetic instead of empathetic in the workplace can be a leadership landmine.

When confronted with situations that are uncomfortable – how did you approach it? Taking a look at how you approach various situations in your role (whether sympathetic or empathetic) can help you nurture the right environment and create real connections based on a more general understanding.

### Turning Perspective Around

Although many of us have the same viewpoint, the points of view we have are different. There are two perspectives to every conversation and experience. Think of it as listening with your eyes, although the view is the same, we are processing it differently.

Our brain is processing the view based on our past experiences and often our own bias. We have to create the connections that help us see things from the other perspective. Effective leadership requires the ability to take the current perspective you might have and view it from the perspective of someone else.

## Part Two: Following The 5 Steps To Empathy

### Defining The 5 Steps To Empathy

Mastering the five steps of empathy does not require taking the first step, mastering it, and building upon it with the subsequent step. Instead, it is situational. You may need to use one step more than another in any given situation – the goal is to determine which step is necessary at any given time.

The steps to consider include dismantling judgment, asking good questions, actively listening, integrating what you hear into real understanding, and using that to create a solution based on imagination.

### Step 1: Dismantle Judgement

Dismantling judgment is the hardest step of empathy. Judgment is second nature within society, and we use it as a measure of protecting ourselves, which only sabotages making a true connection. Think of judgment as a "frenemy." We need to use judgment to make decisions in our lives (friend), but when we find ourselves being judgmental, that perverts us from getting to the empathy we need to connect. To properly combat this, we have to stop and evaluate how we come across. Are we using judgment to make a decision or to build a wall between ourselves and others? Understanding what prompts the wrong kind of judgment can create pathways for empathy, which are expressed in the scenarios throughout the next four chapters and how to rethink perspective – The Moldy Pancake, Crawling Away, Mother Would Never Do That, and Fear.

### Step 2: Ask Good Questions

Context is everything in building up empathy. A good question is one that is open-ended and exploratory. There is no judgment in it and good questions produce good answers that you can build a connection over. How much context do you get from "yes" and "no"? Think back to all the recent conversations you have had – were questions asked? Were they good questions? Implementing the word "why" can change the direction of the answer you receive from your question.

Instead of relying solely on the word "why," implementing who, what, when, where, and how, can uncover more emphasis on the situation and create a better understanding of the answer. Using the next two chapters provide context and understanding as to why asking good questions bring about results.

### Step 3: Active Listening

It is not enough to ask the questions, if you aren't going to listen to the answers. Without listening, it is impossible to achieve any level of empathy. Listening is more than just the sounds – it is everything we hear, see, touch, smell, taste, and sense. The intuit we gather become data points and stimuli that are then processed and synthesized into meaning for that very moment. When we are present and pay attention, we pick up on transmitted signals – the true definition of active listening.

Using active listening skills make us present in the moment – when present we pick up on the verbal and non-verbal cues being given to us. Look back at the situations you have been in – what did you miss when you weren't paying attention to what wasn't being said. Over the next few chapters, the scenarios presented create a better understanding of how being active and present in the conversation can change the entire outcome – an empathetic one.

### Step 4: Integrate Into Understanding

Step four is where things really start to come together. Pushing aside your own perspective to welcome someone else's doesn't mean you abandon yours – only that you are accommodating someone else. For example, you can prefer chocolate ice cream, but at the same time acknowledge that vanilla might be preferable to others. It doesn't mean that you abandon your bowl of chocolate, you just make room at the table for someone enjoying a bowl of vanilla. You are entitled to your opinion, others are entitled to theirs – but when you remove the judgment that only your opinion matters, you can begin seeing the true reflection of the other person's point of view.

Have you tried sharing your feelings but holding your preference to accommodate the ones of others? The next couple of chapters will explore how altering your perspective and changing your language can help you integrate more of an understanding.

### Step 5: Use Solution Imagination

Step five is the moment you have been working toward with steps one through four. Your training has brought you to the moment where you step into someone else's shoes – the entire meaning of empathy. To do this, you have to take off your own shoes and say, "I can see your point of view; tell me more about that?" At this time you have to push back the clouds of judgment that may come rolling in, obscuring your ability to truly see.

Using the right solution imagination, you can begin creating change and promoting empathy by literally putting yourself in their shoes. The scenarios of life experiences in the next three chapters will show you just how important it is to truly get into someone else's perspective.

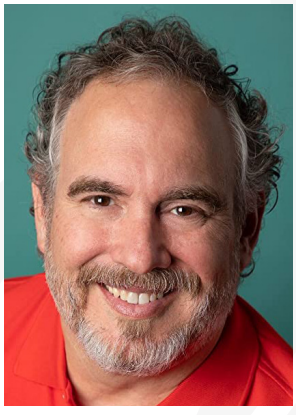
## Part Three: Embracing Empathy In Everyday Life

### A Work In Progress

An empathetic approach is also useful when trying to achieve forgiveness. Taking past traumas or childhood experiences that shaped us and looking at it from the other

perspective can change how we approach specific situations. Maybe the one doing the bullying in your life was bullied in their own home – which you might not see if you weren't looking at it from their perspective. It does not condone the experience you went through, but it can help you create your own type of closure by putting yourself in their shoes.

The best part? The five steps of empathy can be used in your everyday life and in any situation where you must interact with another person. Empathy is important and it increases the quality of the relationships in your life – whether work, leadership, or everyday encounters.



## Conclusion

Empathy is a touchy subject for most, but it is a crucial skill to master when working in a leadership role. Misunderstood employees leave – understood and empathized ones join your mission to excel your business.

Through the viewpoints expressed within this book, you can begin to put yourself in the shoes of someone else within your organization – or even your daily life. Empathy is not something we are all experts at, but with the right amount of work, we can pursue expert status.

With the five steps of empathy, mastery is within reach. Making sure to keep judgmental opinions and thoughts at bay can help you begin asking questions and step inside of someone's shoes. Just because an opinion is different than yours, doesn't mean that it isn't valid to someone else. Being able to acknowledge and ask questions about a viewpoint different from your own can allow you to truly see where the other person is coming from.

As a leader, this perspective can change how efficient you are in that role. Using empathy, in a world where empathy has declined, can change how others perceive you and how you perceive others – a chance at true success in life and in the organization.

**Rob Volpe** is an astute observer of life and a master storyteller who brings empathy and compassion to the human experience. As CEO of Ignite 360, he leads a team of insights, strategy, and creative professionals serving the world's leading brands across a range of industries. As a thought leader in the role of empathy in marketing and the workplace, Rob frequently speaks on the topic at conferences, corporations, and college classes. He is a graduate of Syracuse University's S.I. Newhouse School of Public Communications and lives in San Francisco with his husband and three cats.

## THE SUMMARY IN BRIEF

You can have it all. Happiness, health, wealth, and wisdom-you do not have to compromise any one of these for the other. You can build a life of abundance. In ***Tenacious Abundance: Simple Habits & Hacks for Being Happy, Healthy, Wealthy & Wise***, Anthony Trupiano breaks down all the key beliefs, habits, and hacks necessary for you to thrive in all areas of your life. Between his financial journey from being broke to being a millionaire, his happy marriage of thirty-one-plus years, and his own robust physical health, Anthony shares what has helped him build his life of abundance.

For over three decades, Anthony's tested guidance from countless seminars, books, and life coaches to discover the best methods for success. Through their teachings, Anthony identified two vital traits: tenacious habits and a mindset of abundance. Consider this your handbook for growing these two traits within yourself. If you can be tenacious and pursue abundance, your quality of life will grow past comfort and contentment. Anthony's tactics and techniques will help you seize the life you want without any compromise.

## IN THIS SUMMARY, YOU WILL LEARN:

- Key beliefs, habits, and hacks necessary to thrive in all areas of life.
- How to grow the two vital traits for success within yourself.
- Tactics and techniques to help you seize the life you want.
- Simple, actionable, and proven ways to experience a richer, more abundant life in all key areas.
- The 3-Anchor Method to create your perfect day.

## Introduction

Most of us want to change something about ourselves. We have things in our lives we want to improve, but we struggle to find clear and effective solutions. This book was written to give readers simple, actionable, and proven ways to experience a richer, more abundant life in all key areas.

The goal is clear: to become abundant in all the key aspects of your life. Happiness. Health. Wealth. Wisdom. And then put it all together and live a blessed life. But just because the goal is clear, that does not mean we know the path to it. Without a conscious commitment to intentionally working on your happiness, health, wealth, and wisdom, you'll always default to just chasing daily problems, whether it be in your family, your business, your career, or any other key areas.

This book is about real, practical things you can do to invite the overflowing gift of abundance into your life. It is for everyone because anyone who wants more in their life can receive it. I'm here to tell you that abundance really is possible in all key areas of your life. And even though you can't create it instantly in every area all at once, you can begin to turn things around right away by implementing a few simple habits, hacks, or beliefs in each area.

The habits and hacks I recommend need to be done consistently for at least a few months before you can call them your own (which doesn't mean you won't start feeling benefits right away—you will). Realistically, habits take a minimum of ninety days (and often more) to get wired into your system, much longer than the twenty-one to thirty days that the self-help industry touts as long enough to establish a new habit.

This book is purposely designed for easy reading. I wrote it for busy people who do not have time for a lot of fluff or padding. This book also does not have to be read all the way through from beginning to end to get tremendous benefit from it. It is structured so you can start with any chapter and get something out of it immediately. This book is to help you discover and implement your key habits and hacks for tenacious abundance in all areas of your life, using the same twenty-four hours that everyone has.

## Chapter 1: I Am Happy

### Three Key Habits/Hacks

Use a superhero pose in the mirror every morning and tell yourself any/or all of the following: "I am enough, have enough, and do enough." "I love my life and have no strife." "I am a great husband/wife, I am a great father/mother, I am a great son/daughter, I am a great brother/sister, I am a great friend, I am great at [whatever your occupation is]," and then finish with "I am a great person and I unconditionally love myself."

Start your day with a sincere compliment or a way to help someone else have a great day. Helping others helps you. Surround yourself with people who give you energy and add value to your life. It is very important that you are reciprocating.

### Three Key Questions

Whom do I love, who loves me? What in my life is going great right now? Who could I sincerely compliment today via a text, email, or phone call?

## Chapter 2: I Am Healthy

### Three Key Habits/Hacks

Drink plenty of water each day, especially upon rising (see chart in this chapter). I recommend using a twenty-six-ounce Yeti with a straw to increase water consumption throughout the day. Also, scrape your tongue with a spoon upon rising and before bed at night. Use the Lose It app to understand daily caloric intake; it will give insights on how many calories you should be eating each day. The most important thing is to choose quality whole foods, especially foods that are high in fiber. Stop eating after 8:00 p.m. until 8:00 a.m. (a twelve-hour fast is great for your digestive system). Try to move every day, either exercise, walking, breathing, and/or my two-minute exercise or ten-minute isometrics. Get outside when possible to get sun on your skin and sweat out toxins.

### Three Key Questions

What would be a healthier choice to eat today? How could I make exercise more fun? Who could I model that is leading a fit and healthy lifestyle?

## Chapter 3: I Am Wealthy

### Three Key Habits/Hacks

Find a true fiduciary advisor that, by law, must place your interest ahead of their own. If you don't do that, at least use a role model who has created the kind of results you want and then replicate what they do. Build a team of professionals around you. Take a percentage of what you earn and place it

in an investment with limited access so it can compound and grow over time (3 percent, 5 percent, or 10 percent, whatever you can do—just start). This habit will serve you well. When starting and running a business or a new job, your deepest level must come before the how (strategy) of your business. Always start with why it is important to you.

### Three Key Questions

Who could I model now that is getting the results I would like to achieve? How could I create multiple sources of income in my life? What one action could I take today to create more wealth or success in my life?

## Chapter 4: I Am Wise

### Three Key Habits/Hacks

Do your most important or hardest task of the day first. I promise you, this will change your life. Keep your vision board in sight, too. Keep a book on your nightstand and read at least a page or two each night, which creates the habit of becoming a reader. Or listen to a podcast every night to become a learner. Join a program like MindValley where you can have access to some of the most successful people at a very reasonable cost. Most of their programs are broken out into small time frames each day, so they are very simple to fit into your daily life. There are other amazing resources you can benefit from like Ed Mylett podcasts, James Clear's weekly newsletter or blinklist for a synapsis of over 5,000 books.

### Three Key Questions

How can I make learning something new both simple and fun? Who could I model knowing the shortest path to success is finding a role model? In what ways would my life improve by learning something new each day?

## Chapter 5: Create the Perfect Day, Then Live Your Perfect Life

The most abundant people create their own days, and they do not spend them in reactive mode putting out fires. They carefully and intentionally think through the day's top priorities and then get them completed first.

People who create their own days are tenacious about it and, at a minimum, always use the three anchors to have a good and productive day.

You will always struggle to maintain consistent abundance in all areas of your life unless you learn to master your own daily schedule. Remember, you are the boss of your life!

## Chapter 6: Tenacious Thought Leaders

What follows is my curated list of content that delivers value that is off the charts. For each video, I give you a very brief synopsis of why it is worth your time and provide the runtime so you'll know how much time to set aside to watch any particular video. None of the videos are longer than twenty minutes and many are much shorter. I encourage you to do a short reflection after viewing and give yourself at least one actionable item to implement from what you learned. The stars of each video are the following:

Sean Stephenson was one of the most respected members of the Genius Network and was always a shining light.

Marisa Peer is the British equivalent of Tony Robbins and certainly no beginner in living an abundant life.

Joel Osteen talks about the power of "I am" and how important it is for us to make sure whatever follows "I am" is self-empowering and not negative.

Coach Lou Holtz gives some priceless advice on leadership and life.

Coach John Wooden is the definition of leadership and a life teacher.

Bo Eason has a unique style of captivating the listener and delivering the message in a way that you will not forget it.

Admiral William McRaven is the real deal. To become a Navy SEAL is ridiculously tough, and his delivery and content in this video reflects that.

Tony Robbins is clearly the king of motivation and, in my eyes, the most effective human being on the planet for helping others change.

Tucker Max, founder of Scribe Media, is just a straightforward person who tells you like it is. His story and advice are spot-on—and his humor is great.

Evan Carmichael is simply a wonderful person who wakes up every day truly passionate to help others.

Ed Mylett has become a podcast star because of his great interviewing skills, and it has attracted some of the most sought-after high performers on the planet.

Mike Rowe, in his witty and well-spoken manner, shares his

thoughts on the next generation and gives an extraordinarily candid interview about life and work.

James Clear is the modern-day master of habits, and trust me – habits maketh the man!

Dave Asprey is known as the founder of Bulletproof Coffee, but he is also the creator of biohacking.

Ken Honda, Japan's best-known secret, has written over fifty books on money.

Bob Proctor is known as the grandfather of motivational speaking, and that moniker is well-earned.

Dr. Wayne Dyer's last video message, and he clearly saved the best for last.

## Chapter 7: Music – The Healthy Wonder Drug

This is the shortest chapter in the book, but do not let that mislead you about its importance. Music is one of the most powerful tools in our toolkit when we consciously use it. To put it another way: Music is one of the most undervalued resources for motivating us, for making us happy, and for serving as anchors for moods and moments of our lives.

What I want to do in this chapter is convince you that music is a powerful aid in bringing more abundance in our lives, and if we use it tenaciously and intentionally, we will get more value out of it. I think we should all create a playlist for our own lives and break it up into major categories.

## Chapter 8: I Am Blessed

### Three Habits/Hacks

Write down at least three to ten things you are grateful for each morning and then think of at least one to two great things that happened during the day before you go to sleep so it is last on your mind. Realize there is always someone in the world worse off than you. Stop being a victim, think big picture, and choose to be grateful when challenged. Watch Joel Osteen Sunday morning for a positive and uplifting message to start your week. Pray for others each night before going to bed; there's no better way to feel blessed than praying and thinking of others. When you focus on adding value and helping others, it is impossible to feel bad about yourself.

### Three Key Questions

Who can I help today that is not able to repay me? In what ways am I a blessing to others? What in my life, family, friends, or career is a blessing to me today?

## Conclusion

One of this book's guiding stars has been to make it a practical and easy guide to implementing change a little at a time. So, stand up, take a deep breath, and smile big. Start your amazing journey toward living a life of tenacious abundance.

**Anthony Trupiano** has been happily married, successfully self-employed, and physically healthy for over three decades. He has found success in the finance and insurance industry for over twenty-one years now, though he also worked in health and fitness, as well as food and catering. Anthony has completed dozens of life-improvement programs and has also been a speaker at events for organizations such as MassMutual, New York Life, Deutsche Bank, Prudential, Million Dollar Round Table, and an NFL financial workshop for the Jacksonville Jaguars.

Career & Self-Development

# Thanks for the Feedback

## The Science and Art of Receiving Feedback Well (even when it is off base, unfair, poorly delivered, and frankly, you're not in the mood)

by Douglas Stone and Sheila Heen

### THE SUMMARY IN BRIEF

We get feedback every day of our lives from friends and family, bosses, colleagues and customers. We know that feedback is essential for healthy relationships and professional development — but we dread it and often dismiss it. That's because receiving feedback sits at the junction of two conflicting human desires: we want to learn and grow, but we also want to be accepted just as we are right now.

*Thanks for the Feedback* is the first book to address this tension head on. It explains why getting feedback is so crucial yet so challenging and offers a powerful framework to help us take on life's blizzard of off-hand comments, annual evaluations and unsolicited advice with curiosity and grace.

The business world spends billions of dollars and millions of hours each year teaching people how to give feedback more effectively. Authors Douglas Stone and Sheila Heen argue that we've got it backward and show us why the smart money is on educating *receivers* — in the workplace and in personal relationships as well. It's the receivers, after all, who interpret what they're hearing and decide whether and how to change.

With humor and clarity, the authors blend the latest insights from neuroscience and psychology with practical, hard-headed advice.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to identify truth, relationship and identity triggers that block learning.
- How to separate appreciation, coaching and evaluation.
- How to dismantle distortions and draw boundaries in the face of unrelenting criticism.
- How to uncover blind spots to see hidden impacts of our behaviors.

## Introduction

We swim in an ocean of feedback. Feedback includes any information you get about yourself. In the broadest sense, it's how we learn about ourselves from our experiences and from other people — how we learn from life.

In today's workplace, feedback plays a crucial role in developing talent, improving morale, aligning teams, solving problems, and boosting the bottom line. And yet, 55 percent of respondents in one recent study said their performance review was unfair or inaccurate, and one in four employees dreads their performance review more than anything else in their working lives.

Something isn't working. So organizations are spending billions of dollars each year to train supervisors, managers and leaders on how to *give* feedback more effectively. When feedback meets resistance or is rejected outright, feedback givers are encouraged to be persistent. They are taught how to *push* harder.

We think we have it backwards. If the receiver isn't willing or able to absorb the feedback, then there's only so far persistence or even skillful delivery can go. *The real leverage is creating pull.*

Creating pull is about mastering the skills required to receive feedback well and drive our own learning. It's about how to recognize and manage our resistance, how to engage in feedback conversations with confidence and curiosity, and even when the feedback seems wrong, how to find insight that might help us grow. It's also about how to stand up for who we are and how we see the world, and ask for what we need. It's about how to learn from feedback.

Receiving feedback sits at the intersection of our drive to learn and our longing for acceptance. These needs run deep, and the tension between them is not going away. But there's a lot each of us can do to manage the tension — to reduce anxiety in the face of feedback and to learn in spite of the fear. We believe that the ability to receive feedback well is not an inborn trait but a *skill* that can be cultivated. It may be fraught, but it can be taught. The rewards are great, and the stakes have never been higher.

## THE FEEDBACK CHALLENGE

## Three Triggers

Not all feedback is difficult. Most of us do just fine with positive feedback. Then there's the tougher stuff — the feedback that leaves us confused or enraged, flustered or flattened. This kind of feedback triggers us: Our heart pounds, our stomach clenches, our thoughts race and scatter. We usually think of that surge of emotion as being "in the way"— a distraction to be brushed aside, an obstacle to overcome.

But pushing our triggered reactions aside or pretending they don't exist is not the answer. Triggers are obstacles, but they are also information that can help us locate the source of the trouble. Understanding our triggers and sorting out what set them off are the keys to managing our reactions and engaging in feedback conversations with skill.

Because feedback givers are abundant and our shortcomings seemingly boundless, we imagine that feedback can trigger us in a googolplex of ways. Actually, there are only three: Truth, relationship and identity triggers.

**1. Truth Triggers** are set off by the substance of the feedback itself — it's somehow off, unhelpful or simply

untrue. In response, we feel indignant, wronged and exasperated.

**2. Relationship Triggers** are tripped by the particular person who is giving us this feedback. All feedback is colored by the relationship between giver and receiver, and we can have reactions based on what we believe *about* the giver or how we feel *treated* by the giver. Our focus shifts from the feedback itself to the audacity of the person delivering it.

**3. Identity Triggers** are all about *us*. Whether the feedback is right or wrong, something about it has caused our identity to come undone. We feel overwhelmed, threatened, ashamed or off balance.

Our triggered actions are not obstacles because they are unreasonable but because they keep us from engaging skillfully in the conversation. Receiving feedback well is a process of sorting and filtering — of learning how the other person sees things; of trying on ideas that at first seem a poor fit; of experimenting. And of shelving or discarding the parts of the feedback that in the end seem off or not what you need right now.

And it's not just the receiver who learns. During an effective conversation, the feedback *giver* may come to see why their advice is unhelpful, and both parties may understand their relationship in a clarifying light. But it's nearly impossible to do this from inside our triggers. And so we make mistakes that cause us to put potentially valuable feedback into the discard pile, or just as damaging, we take to heart feedback that is better left at the curb.

## TRUTH TRIGGERS

# Separate Appreciation, Coaching and Evaluation

Sometimes, when receiving feedback, we feel grateful and energized. At other times we feel hurt and defensive. Our responses don't always hinge on the skill of the giver or even what is being said. Rather, they're based on how we are hearing what's said and which kind of feedback we think we are getting.

### Three Kinds of Feedback

When we use the word "feedback," we may be referring to any of three kinds of information: appreciation, coaching and evaluation.

**Appreciation:** Appreciation is fundamentally about relationship and human connection. At a literal level, it says "thanks," but it also conveys "I see you," "I know how hard you've been working," and "You matter to me." Appreciation motivates us — it gives us a bounce in our step and the energy to redouble our efforts.

**Coaching:** When you ask your boss for more direction, you're asking for coaching. Coaching is aimed at trying to help someone learn, grow or change. Coaching can be sparked by two different kinds of needs. One is the need to improve your knowledge or skills in order to build capability and meet challenges. In the second kind of coaching feedback, the giver is identifying a problem in your relationship: Something is missing; something is wrong. The giver wants the situation to change, and often that means they want *you* to change. The "problem" the coaching is aimed at fixing is how the giver is feeling or a perceived imbalance in the relationship.

**Evaluation:** Evaluation tells you where you stand. It's an assessment, ranking or rating. Evaluations are always in some respect comparisons, implicitly or explicitly, against others or against a particular set of standards. They align expectations, clarify consequences and inform decision making.

### Beware Cross-Transactions

One of the key challenges of feedback conversations is that wires often get crossed. There are two ways this happens:

1. A receiver may want a different type of feedback from the type given.
2. A giver may have intended one kind of feedback, but the receiver interprets it incorrectly.

Once crossed, these wires are tough to untangle. Then add this complication: There is always evaluation in coaching. On the receiving end, we constantly funnel the advice we're given into either evaluation or coaching slots. How you hear your girlfriend's suggestion to "call your mother" depends on your relationship (was she reminding or chiding?).

Often, feedback offered as coaching is heard as evaluation. ("You're telling me how to improve, but really, you're saying you're not sure I'm cut out for this.") So what helps? Two things keep us on track:

**Get aligned: Know the purpose and discuss it:** Cross-transactions happen when the giver and receiver are misaligned. The fix? Discuss the purpose of the feedback explicitly. Be explicit about what you think the conversation is about, and be explicit about what would be most helpful to you. Then discuss, and if you each need something different, negotiate. Remember: Explicit disagreement is better than implicit misunderstanding.

**Separate evaluation from coaching and appreciation:** The bugle blast of evaluation can drown out the quieter melodies of coaching and appreciation. The evaluation conversation needs to take place first. We can't focus on how to improve until we know where we stand.

## First Understand

We don't want to take feedback that's invalid or unhelpful, and so, quite reasonably, we screen for that. We listen to the feedback with this question in mind: "What's wrong with this feedback?" And as it turns out, we almost always find something.

Why is wrong spotting so easy? Because there's almost always *something* wrong — something the feedback giver is overlooking, shortchanging or misunderstanding. And givers compound the problem by delivering vague feedback, making it easy for us to overlook, shortchange and misunderstand what they are saying. But in the end, wrong spotting not only defeats wrong feedback; it defeats learning.

### Understanding Is Job One

Before we determine whether feedback is right or wrong, we have to first *understand* it and move beyond vague feedback labels (e.g., "Don't be so selfish"; "Act your age."). In part, this is because the giver and receiver interpret the label differently. For example, the coaching feedback "Be more confident" can be heard as "Give the impression that you know things even if you don't," but what was meant was "Have the confidence to say you don't know when you don't know."

To clarify the feedback under the label, we need to be specific about two things: 1) where the feedback is coming from and 2) where the feedback is going. Feedback givers arrive at their labels in two steps: they oberve data, and they interpret that data — they tell a story about what it means. Feedback givers rarely share the raw observations behind their labels because they simply aren't aware of them. It's up to you to help them sort it out. Your goal is to not ignore or dismiss the interpretation. Data is crucial, but so is interpretation.

Once you know where the feedback is coming from, you need to figure out where it is going. Is it advice from coaching feedback? Or is it consequences and expectations from evaluative feedback? It's up to the receiver to ask the necessary questions in order to move the conversation forward.

## See Your Blind Spots

There is always a gap between the self we think we present and the way others see us. We may not recognize ourselves in others' feedback, even when everyone else would agree that it's the conventional wisdom about who we are and how we are.

### Three Blind-Spot Amplifiers

Others observe things about us that we literally can't observe about ourselves. Our blind spots are their hot spots. But differing observations are only part of the blind-spot disconnect. There are three dynamics that amplify the gap between how we see ourselves and how others see us.

**Emotional Math:** We subtract certain emotions from the equation: "That emotion is not really who I am." But others count it double: "That emotion is *exactly* who you are."

**Situation Versus Character:** When something goes wrong and I am part of it, I will tend to attribute my actions to the situation; you will tend to attribute my actions to my character.

**Impact Versus Intent**: We judge ourselves by our intentions, while others judge us by our impacts.

### What Helps Us See Our Blind Spots?

Instead of dismissing the feedback or the person giving it to you, use these thoughts as a blind-spot alert. When you notice yourself wondering, "What's wrong with them?" make sure your next thought is "I wonder if this feedback is sitting in my blind spot?"

Ask the feedback giver, "What do you see me doing or failing to do that is getting in my own way?" If you respond with genuine curiosity and appreciation, they'll be able to paint you a picture that is clear, detailed and useful.

Other important skills are looking for patterns ("Where have I heard this before?") and getting a second opinion from another person by asking, "Here's feedback I just got. It seems wrong, but I wonder if this is feedback in a blind spot? Do you see me doing this?" When you invite others to be an honest mirror, you're able to see yourself in the moment and see the blind spots.

## RELATIONSHIP TRIGGERS

## Don't Switchtrack

We are often more triggered by the person giving us feedback than by the feedback itself. In fact, relationship

triggers may be the most common derailers of feedback conversations.

When a person offers feedback that trips off a relationship trigger for the other person, that person then breezes past the feedback and instead talks about how he feels. This creates a situation where two people are giving feedback, and no one is receiving it. The conversation gets smoothly shifted, as if by railroad switch, from one topic to two. Soon we are each heading in our own direction, moving farther and farther apart. A key part of the dynamic here is that the person receiving the original feedback is unaware that they are changing the subject.

Switchtracking has two potential impacts. The potentially positive impact is that the second topic being put on the table may be important — sometimes more important than the feedback that triggered it. The negative impact is that because we now have two topics, the conversation gets tangled. With switchtrack conversations, we don't *realize* there are two separate topics, and so both get lost as we each hear the other person through the filter of our own topic.

To get better at managing our impulse to switchtrack, we have to get better at understanding the relationship triggers that create these impulses: Two key kinds of relationship triggers include what we think about the giver (Are they credible? Do we trust them? Did they deliver our feedback with good judgment and skill?) and how we feel treated by the giver (Do we feel accepted? Appreciated? Like our autonomy is respected?).

### Relationship Triggers: What Helps?

There are three moves that can help us manage relationship triggers and avoid switchtracking. First, we need to spot the two topics on the table. Next, we need to give each topic its own conversation track (and get both people on the same track at the same time). Third, we need to help givers be clearer about their original feedback, especially when the feedback itself relates to the relationship.

## Identify the Relationship System

A system is a set of interacting or interdependent components that forms a complex whole. A relationship is a system, a team is a system, and an organization is a system. When something goes wrong in a system, we each see part of the system (and some things the other doesn't), and these observations are not randomly distributed between us.

Systems insight number one is that each of us is part of the problem. Systems insight number two is that each of us sees only part of the problem (the part the other person is contributing).

If we're going to have better conversations about feedback, we need a better handle on the ways that the giver and receiver (and often others) are contributing to the problem under discussion. This helps us move beyond blame and defensiveness and toward understanding, and it also produces more durable solutions.

### Take Three Steps Back

Let's look at systems from three different vantage points — from close in, medium range and wide angle. Each view enables us to see different patterns and dynamics in our relationship systems.

- **One Step Back: You + Me Intersections.** From here, we see the interaction of you and me as a pair. What is the particular you + me combination that is creating a problem, and what is each of us contributing to that?
- **Two Steps Back: Role Clashes.** This view expands our perspective to look at the roles each of us plays. Roles are often a crucial but largely invisible reason we bump into each other.
- **Three Steps Back: The Big Picture.** From this frame of reference we can view the entire landscape, including other players, structures and processes that guide and constrain the choices we each make and the outcomes we get.

### The Benefits of a Systems Lens

There are a number of advantages to understanding feedback through a systems lens.

- **It's More Accurate:** Systems thinking corrects for the skew of any single perspective.
- **It Moves Us Away from Needless Judgment:** Systems thinking eases the temptation to treat other people's contributions to the problem as *automatically* "bad" or "wrong" or "blameworthy."
- **It Enhances Accountability:** A systems approach helps you clarify your choices and actions and how they created the outcomes you got. Then when you say you're accountable, it actually means something.
- **It Helps Correct Our Tendency to Shift or Absorb:** A systems perspective helps us fight the tendencies of the blame absorber (it's all my fault) and blame shifter (it's not my fault) in ourselves, and understand them in others as we talk about feedback.

**It Helps Us Avoid "Fixes that Fail":** When we don't understand the system that produces the feedback, we often make the mistake of trying to adjust just one component of the system and expect that to solve the

whole problem. We're often tempted to solve a short-term problem without taking account of the long-term cost.

## IDENTITY TRIGGERS

## Learn How Wiring and Temperament Affect Your Story

People respond differently to feedback due to their wiring — their built-in neural structures and connections. Our wiring affects who we are and how intensely feedback affects us. A lot goes on in both your brain and body when you experience mood-altering feedback. Your "reaction" to feedback can be thought of as containing three key variables:

- **Baseline** refers to the default state of well-being or contentment toward which you gravitate in the wake of good or bad events in your life.
- **Swing** refers to how far up or down you move from your baseline when you receive feedback. Some of us have extreme reactions to feedback; we swing wide. Others remain on an even keel even in the face of disquieting news.
- **Sustain and Recovery** refer to duration, how long your ups and downs last. Ideally, we want to sustain a boost from positive feedback and recover quickly from a negative emotional dip.

### Wiring Is Only Part of the Story

The danger when talking about brain wiring and temperament is that we take our wiring as fixed and assume it is destiny. While aspects of our temperament are inherited, there is ample evidence that they are not fixed. Wiring changes over time in response to our environment and experiences.

And perhaps more important, our wiring — whether fixed or not — tells only part of the story. About 50 percent of our happiness is wired in. Another 40 percent can be attributed to how we *interpret* and respond to what happens to us, and about 10 percent is driven by our circumstances. If we're going to get better at handling tough feedback, we have to understand how emotions interact with and distort the stories we tell about what the feedback means. How you *feel* in a particular moment has a big impact on the story you tell yourself. If you're already in a dark mood, you'll tell a darker story. Similarly, our thoughts impact our feelings — a dark story leads to a dark mood. What this means is that we can change our stories by working to change either our feelings *or* our thoughts.

## Dismantle Distortions

One of the biggest blocks to receiving feedback well is that we exaggerate it. To understand and assess feedback, we need to dismantle distortions. This means finding ways to turn down the volume on the ominous soundtrack playing in our minds so that we can hear the dialogue more clearly.

To learn from upsetting feedback, we need strategies to counter the distortions that we bring to it, whether during the feedback conversation itself, beforehand (in preparation) or afterward (in reflection). Here are five strategies:

**Be prepared, be mindful:** Recognize your feedback footprint — your reactive behavior in response to criticism. Your footprint will show up strongest when the feedback is toughest. Think through in advance the worst that could happen, try it on emotionally, and reason through the possible consequences. This activity reminds you that whatever the outcome, you'll be able to manage.

**Separate the strands: feeling/story/feedback:** Pull apart the different threads of the conversation so you can see each element clearly, and observe how each is affecting the other. Ask the following questions: "What do I feel? What's the story I'm telling (and inside that story, what's the threat)? What's the actual feedback?" The goal of untangling everything is to see what you've woven in that does and doesn't belong. The more clearly you see that, the better you can keep the feedback in perspective.

**Contain the story:** When we think about the consequences of feedback, the goal is not to dismiss them or pretend they don't matter. The goal is to right-size them, to develop a realistic and healthy sense of what might happen and respond in line with these reasonable possibilities.

**Change your vantage point:** Anything that helps you see a dark situation from a different point of view is beneficial. Try to imagine you're an observer to the situation, or try looking back on your life from the vantage point of 10 or 20 years from now.

**Accept you can't control how others see you:** We care how others see us, but we have to accept that how others see us is something we can't control. Don't dismiss others' views of you, but don't accept them wholesale either. Their views are *input*, not *imprint*.

## Cultivate a Growth Identity

Feedback can contradict or undermine the story we tell about who we are, or it can confirm our worst fears about ourselves. Learning profitably from feedback is not only

about how we interpret the feedback; it's also about how we hold our identity.

Identity is the story we tell ourselves about ourselves — what we're like, what we stand for, what we're good at, what we're capable of. Our ability to metabolize challenging feedback is driven by the particular way we tell our identity story. Some people tell their identity story in ways that cause their identity to be brittle, while others tell their identity story in ways that allow it to be robust. Those in the latter group are predisposed to treat feedback not as a threat to who they are but as a core aspect of who they are.

We can all *learn* to hold our identity in ways that make us more resilient. We can't control the feedback that life throws at us, but we can make some specific shifts in assumptions that can improve our ability to take it in, stay balanced and learn from it. Two shifts are crucial:

**Give up simple identity labels, and cultivate complexity:** While our identities are built from the endless complexity of our life experiences, we tend to hold these identities as simple labels, such as "I'm competent, I'm good, I'm worthy of love." Simple labels are simple because they are all or nothing. All-or-nothing identities present us with this choice: Either we can exaggerate the feedback, or we can deny it. To accept being realistically complex, keep in mind that you will make mistakes, you have complex intentions, and you have contributed to the problem.

**Move from a fixed mindset to a growth mindset:** Do you consider your traits and abilities fixed and finished? Or are they always evolving and capable of growth? Researchers argue over the precise degree to which various traits are fixed or elastic. But the bottom line is this: People do get better when they apply themselves, and people apply themselves when they believe they can get better.

### Move Toward a Growth Identity

Here are three practices to cultivate a growth identity:

- **Sort toward coaching:** As feedback receivers, we are always sorting feedback into coaching and evaluation bins. While identity is easily triggered by evaluation, it is far less threatened by coaching. Hear coaching as coaching and not as evaluation. You'll notice your identity reaction is diminished or gone.
- **Unpack judgment from the evaluation suitcase:** As we figure out how to take in evaluation, it's helpful to break evaluation itself down into three constituent parts: assessment, consequences and judgment. Accurate assessment is valuable, and the consequences are important to understand. Others' judgments? You may find certain judgments illuminating; other judgments you'll rightly dismiss. It's one person's interpretation, and you've got other interpretations, including your own, to weigh it against.
- **Give yourself a "second score":** Let's imagine you get a negative evaluation. Imagine that there is an invisible second evaluation. After every low score you receive, give yourself a "second score" based on how you handle the first score. Even when you get an F for the situation itself, you can still earn an A+ for how you deal with it. In the long term, the second score is often more important than the first. A strong second-score identity can help you deal with even the most challenging life events.

## FEEDBACK IN CONVERSATION

# How Good Do I Have to Be?

Is it okay to not only turn down feedback but to say, "I don't even want to *hear* it"? It is. In fact, being able to establish limits on the feedback you get is crucial to your well-being and the health of your relationships.

Being able to say no is not a skill that runs parallel to the skill of receiving feedback well: it's right at the heart of it. If you can't say no, then your yeses are not freely chosen. You need to make your own mistakes and find your own learning curve. Sometimes that means you need to shut out the critics for a while so you can discover who you are and how you are going to grow.

### Three Boundaries

Rejecting feedback can be as easy as saying no thanks or walking away or simply saying nothing. But sometimes it's more complicated. You say no, but the unwanted feedback keeps coming. It's not just bothersome, but destructive. This is when it helps to be explicit about boundaries. Here are three kinds of boundaries to consider:

**I May Not Take Your Advice:** I'm willing to listen. I'll consider your input. But I may not end up taking it.

**I Don't Want Feedback About That Subject, Not Right Now:** You are not only establishing your right to decide whether to take the feedback, you're establishing your right to be free of the topic altogether.

**Stop, or I Will Leave the Relationship:** If you can't keep your judgments to yourself, then I will leave the relationship or change its terms.

### Turning Away Feedback with Grace and Honesty

The biggest mistake we make when creating boundaries is that we assume other people understand what's going on with us. In setting up boundaries, you want to reject feedback clearly and firmly while at the same time affirming the relationship and showing that you appreciate the intention. Be specific about three things:

**The Request:** What, exactly, are you asking of them?

**The Time Frame:** How long is the boundary likely to be in place?

**Their Assent:** Don't assume that they understand you or agree. Instead, ask.

Finally, it's only fair to let them know what's at stake. You need to let them know what happens if they can't or won't observe the boundaries.

## Pull Together: Feedback in Organizations

Just as there are no perfect learning people, there are no perfect organizational feedback systems. Anyone choosing and implementing a particular system must grapple with the inevitable tensions and tradeoffs associated with it.

Leadership and HR are typically the ones expected to "do something" about the problem of performance management. They're the most visible and likely to have their hands in the design. Here are three things they can do that help:

**Don't just trumpet benefits; explain tradeoffs:** When selecting or implementing an organizational system, provide the following to employees at all levels: clarification of the various goals of the system; explanation of why this system was chosen over others; transparency about potential costs as well as benefits; description of the costs of half-hearted participation; and an invitation for ongoing discussion, suggestions and feedback.

**Separate appreciation, coaching and evaluation:** A single performance management system can't effectively communicate all three kinds of feedback. Each requires different qualities and settings to be effective.

**Promote a culture of learners:** If you want learning to be valued, it has to be embedded in what is talked about with admiration, what is highlighted as important in the war stories that are told, what matters when it comes to visible projects and key promotions.

### What Team Leaders and Feedback Givers Can Do

What can one manager or team leader do to improve an organizational culture?

**Model learning; request coaching:** In many ways, the manager *is* the culture: If they're good learners, they set the tone for a learning culture. Hold people accountable by showing them how you hold yourself accountable. Ask for coaching and help, not only from those above you but from peers and subordinates.

**As givers, manage mindset and identity:** As you think about whether and how to give feedback, factor in the long-term consequences for the receiver as well as your own short-term identity discomfort.

**Be aware of how individual differences collide in organizations:** Part of the challenge of feedback in organizations is due to differences in temperament and wiring. Our sensitivity to feedback can affect not only how we receive feedback but also how we give it.

### What Receivers Can Do

Regardless of context or the company you keep, you are the most important person in your own learning. Your organization, team or boss might support or stifle feedback. Either way, they can't stop you from learning. You don't have to depend on your annual review or your boss's willingness to mentor. You can watch, ask questions and solicit suggestions from coworkers, customers, partners and friends.

Like the tension between learning and acceptance for each of us as individuals, the tensions at the heart of organizational feedback are a permanent condition. The ideas presented can help manage these tensions and get us talking to one another. But while learning is a shared responsibility, in the end, it comes down to you.

# The 12 Week Year

Brian P. Moran and Michael Lennington

BOOK SNAPS™
Zooming In On Your Next Read

## The 12 Week Year

By Brian P. Moran and Michael Lennington

Brian P. Moran, President and Founder of The 12 Week Year, has 30 years of expertise as a corporate executive, entrepreneur, consultant and coach. His background as a corporate executive combined with his experience as an entrepreneur positions him with a unique skill set to help individuals and organizations grow and prosper.

Michael Lennington has been a consultant for most of his adult life and has worked in the Americas, Asia, Europe, and The Middle East. Currently, he spends his professional time coaching his entrepreneurial clients, writing about leadership and business execution, and building simple tools for people seeking to accomplish more.

# The Secret to Help You Perform at Your Best

Brian P. Moran and Michael Lennington open their book by laying out a core concept that has been the focus of their thinking, work, and coaching for more than a decade. The "vast majority" of people never live up to their full potential. Most of us fail to set goals at all and among those of us that do, many of us fail to achieve them. What if that could change? What would happen in your life in particular if every single day you woke up and "performed up to your full potential?" The coauthors of ***The 12 Week Year: Get More Done in 12 Weeks Than Others Do in 12 Months*** are on a mission to "work with individuals, teams and corporations" in "unlocking the secret to helping individuals and organizations perform at their best and live the life they are truly capable" of living.

In a way, each of us has two separate and distinct lives. There is the life that we actually live day in and day out and then there is the life that we have the potential to live. Deep within us, we all know that there is a better life available to us, but we are not sure how to actualize it. In order to have that life, we have to show up as our very best selves each day. We have to avoid procrastination, conquer our doubts and fears, and "make things happen." The aim of this book is to teach you "how to increase your current results by four times or more, in a very short amount of time. You will learn exactly what it takes to perform at your best every day" in order to "produce staggering results."

The authors promise that this journey is not overly complicated. In fact, it is "quite uncomplicated." However, that does not mean it is easy. It will take effort and focus and, most importantly, execution. Moran and Lennington say that "effective execution is the path to accomplish the things you desire." ***The 12 Week Year*** provides the guidance to make that happen.

## Redefining the Year

Corporations and individuals are programmed to organize their goals on an annual basis. The authors assert that annual planning and goal setting is often a barrier to high performance. They are not saying that annual plans can't impact our lives and corporations in a positive way. Annual plans are better than

***Book Snaps***™ is a publication of Soundview Inc. • 2 Christy Drive, Suite 302, Chadds Ford, PA 19317 • © 2021 Soundview, Inc. All rights reserved. no plans at all. However, their research and experience shows that performance is limited by this annual process.

As the authors worked with an increasing number of clients, they noticed a pattern. People believed that "their success or failure" was a reflection of what they had or had not achieved over the course of the year. "They set annual goals, created annual plans, and in many cases broke the goals down into quarterly, monthly, and sometimes even weekly plans." Despite the careful consideration and planning that went into it and the weekly, monthly, and quarterly benchmarks, people judged and "evaluated their success annually." The authors say that this is a trap and they call it "annualized thinking."

There are several flawed premises that make this annualized thinking problematic. The first is the false sense of security that an entire year brings. When the year begins, we think that we have "plenty of time in the year to make things happen." January comes and goes and although we may be behind where we planned to be, we think we've got tons of time to catch up. This continues into March and then May and so on. Before we know it, the end of the year is approaching. We continually believe that there is plenty of time left and thus, we "lack a sense of urgency."

The next flawed premise, which goes hand in hand with the first, is that many of us believe that our results will improve as the year goes on. If we fall short in the first quarter, we believe with all of our hearts that next quarter will be better. The authors write, "It's as if something magical will happen in late September or October that will result in a substantial increase." We are kidding ourselves. If the effort we have put in has not yielded the results we hoped to achieve early in the year, why would the results suddenly and dramatically improve? We want to believe they will and with the gift of time on our side, we kick the ball down the field hoping that our hail mary will result in a score at the end of the annual game.

The truth is that "every week counts! Every day counts! Every moment counts!" The key to working and performing at your absolute best is to rid yourself of this annualized thinking and "instead focus on shorter time frames." Annualized thinking "blinds people to the reality that life is lived in the moment and that ultimately success is created in the moment." Annualized thinking makes us complacent and we believe that things can be put off for later, even though putting things off is exactly what will stop us from reaching our goals.

You only need to look at year-end pushes in corporations to see this point clearly illustrated. As the end of the year draws ever closer, the entire organization rallies to generate the business needed to hit the annual target. Any tasks or activities that are not directly linked to the accomplishment of those goals are put aside to deal with once the goal is met. For the last months or weeks of the year, there is a "frantic rush to end the year strong and kick off the new one with gusto." What would happen if people could harness this energy and focus and determination every month, every week, and every single day of the year? That is the power of periodization and the essence of the 12 week year.

Moran and Lennington recognized that they could apply the principle of periodization to organizations and personal lives to increase success and achievement. They developed a "12 week approach to periodization" that allows people to "focus on the critical factors that drive income and life balance." Long-term goals actually get achieved when daily actions and thinking are chosen based on what is important with a sense of urgency. Actions are "manifestations of your underlying thinking" and actions are what lead to results.

The authors propose redefining the year as 12 weeks instead of 12 months. Forget the old way of thinking in terms of quarters. There are only 12 week periods followed by the next 12 week period on and on, "ad infinitum." Here are the implications of such thinking. All the buzz and energy and focus and excitement usually reserved for December is now happening all the time. This new 12 week year sets a deadline far sooner and you will act accordingly. The end game is just 12 weeks away, period after period, so in order to celebrate your success, you will get into gear and take daily action towards hitting that quickly-arriving target.

## Three Principles, Five Disciplines

Now that you understand the shift from 12 month to 12 week periods, it's time to integrate the set of "fundamental elements" that are essential to high performance and the 12 week year. The authors believe there are eight elements that they organize into three principles and five disciplines. "Those eight elements are: Vision, Planning, Process Control, Measurement, Time Use, Accountability, Commitment, and Greatness in the Moment." The principles are organized in this manner as doing so allows "you to better understand how they operate as a holistic system," which leads to more consistent and simple application.

The three principles that determine how effective and successful you can be with the 12 week year are:

1. Accountability: At its core, accountability is ownership. It is the ability to take responsibility for an outcome, even when that outcome is unfavorable. It relies on an internal understanding that each of us has "freedom of choice" in how we spend our time, in the actions we take towards achieving our goals, and in how we react when circumstances beyond our control impact our lives. Those who are accountable will always be asking themselves, "What more can I do to get the result?" Accountable people own the result, regardless of circumstance.

2. Commitment: Commitment exists as a future effect of accountability. While accountability refers to owning an action or result in the present, commitment refers to making a promise to perform an action in the future. They go together. The principle of commitment allows you to build strong relationships, keep promises to yourself and others, grow your character, improve your esteem, and drive your personal success.

3. Greatness in the Moment: Most people think of greatness as the result of some set of actions or achievements. In relation to living in a 12 week year, greatness should be viewed as that moment "when an individual makes the choice to

**You have to make choices in each moment to be great and the results will be confirmation of your greatness, not attainment of it.**

do what is necessary to become great." You have to make choices in each moment to be great and the results will be confirmation of your greatness, not attainment of it.

If you are able to fully embrace these three principles, you will have a solid foundation from which to grow your "personal and professional success."

The above principles are a means to tackle your way of thinking in relation to the 12 week year. The five disciplines provide a framework for the actions you take. They are focused on execution, which is a key component to top performance. The five disciplines are:

1. Vision: You need a clear and compelling vision that encompasses what you want to achieve on the business side that is also aligned with your personal aspirations. This vision paints a picture of what the future will look and feel like. It provides "a powerful emotional connection that promotes a sustained commitment and continual action."

2. Planning: Despite the near-magical effectiveness attributed to vision boards, it is not enough to create the vision, tack a reminder on the wall, and hope for the best. You have to put a solid plan in place that will move you ever closer to your target. An effective plan must include "top-priority initiatives and actions needed to achieve the vision" that is "constructed in a manner that facilitates effective implementation."

3. Process Control: Once a plan is in place, you have to further break things down to daily events and actions. Process Control refers to the "set of tools and events that align your daily actions with the critical actions in your plan." The point of putting these controls in place is to ensure that your time is spent strategically on activities that make money.

4. Measurement: Your process has to be regularly measured for effectiveness. You have to be able to determine if the process is working or if you need to make some tweaks. Measurement allows you to gain insight and feedback on the effectiveness of your daily actions and events. To be effective, your measurement should show "both lead and lag indicators" so you can accurately determine what needs to be done to correct the process.

5. Time Use: Everything comes down to how you use your time. You can have the most clear vision, thoroughly developed plan, airtight processes, and on-point metrics to analyze your results and still not reach your goals. It all means nothing if you do not spend your time intentionally. We live in a world that is ripe with distractions. Focused and productive use of your time is critically important to achieving your goals.

The five disciplines are interconnected. The authors point out that each affects the other. For example, a vision allows you to "live a life by design" while a life that is lacking that vision is being lived by chance. If you create a vision but fail to construct a plan, "then you have a pipe dream." A vision and plan without process control leads to frustration. Your days will be inconsistent with equally inconsistent results. If you are too afraid to measure your success then you will never make necessary changes to improve your results. Finally, "if all of those are in place but you are not intentional about what you say yes to and what you say no to, then "the day is controlling you" instead of you controlling the day. Every discipline impacts the other, for better or worse.

*The 12 Week Year* presents readers with a life-changing way to think about time and organize life for better performance and results. As with any endeavor that seeks to shake up the way you live and work, you are certain to encounter barriers and challenges along the way. The authors acknowledge that openly and present readers with common pitfalls they can expect to encounter, such as the need for immediate gratification. Through gentle but persistent reminders, they show readers that all they need to do is follow the vision, plans, and processes they've put in place to overcome those obstacles and reach goals.

The big carrot that motivates people to switch to a 12 week year is the promise that doing so will bring results that outperform a typical 12 month year by four times. That is a bold statement, to be sure. The authors back it up with the experiences of clients and corporations who have implemented this ideology and made that happen. For those who are pushed to perform with the promise of a reward of a more personal nature, such as a mini-vacation or a weekend getaway with friends, the authors note that hitting milestones four times per year instead of annually is the perfect set up for such a situation. With shorter intervals, you will push harder, stay the path more consistently, and have that much more to celebrate at the close of each period. An excellent resource for anyone looking to create quantifiable change in short order, *The 12 Week Year* shows readers how to get way more from the time you're given.

# The 5 Choices

## The Path to Extraordinary Productivity

by Kory Kogon, Adam Merrill, and Leena Rinne

### THE SUMMARY IN BRIEF

Every day brings us a crushing wave of demands: a barrage of texts, emails, interruptions, meetings, phone calls, tweets, blogs—not to mention the high-pressure challenges of our jobs—that can be overwhelming and exhausting. The sheer number of distractions can threaten our ability to think clearly, make good decisions, and accomplish what matters most, leaving us worn out and unfulfilled.

Now, FranklinCovey offers powerful insights drawn from the latest neuroscience and decades of experience and research in the time-management field, to help you master your attention and energy management through five fundamental choices that will increase your ability to achieve what matters most to you. *The 5 Choices* is time management redefined for the 21st century: it increases the productivity of individuals, teams, and organizations and empowers you to make more selective, high-impact choices about where to invest your valuable time, attention, and energy.

*The 5 Choices* will not only increase your productivity, it will also provide a renewed sense of engagement and accomplishment. You will quickly find yourself moving beyond thinking, "I was so busy today; what did I achieve?" to feeling confident, energized, and extraordinarily productive.

### IN THIS SUMMARY, YOU WILL LEARN:

- New ideas on how to be more productive.
- How to get clear and focused on the things that matter to you.
- How to increase your capability in decision management.
- To recognize that you have the ability to do extraordinary work.

## Introduction: Feeling Buried?

It has never been easier in human history to accomplish great things. A big part of that is the dramatic increase in the power of technology to make us more productive.

With advances in interconnectivity, processing power, and wearable technologies that measure everything from the temperature of our skin to the flow of our blood, the interaction between how we live and think and the technologies we use becomes more inseparable each day.

Yet, paradoxically, these same technologies can make it harder than ever to accomplish the things that are important to us.

People feel overwhelmed like never before. They feel buried in things to do and simultaneously drained of their capacity to do them. They feel agitated and anxious, stressed when they are working and stressed when they are not. It is a semipermanent state of worried restlessness that pervades our culture and drains us of confidence and joy. This is the widespread human cost of the *productivity paradox*, and it will only become more challenging for people who do not know how to tame the paradox and turn it to their advantage.

The productivity paradox revolves around three critical challenges: we are making more decisions than ever, our attention is under unprecedented attack, and we are suffering from a personal energy crisis.

Everyone has the capability to do extraordinary work. Everyone has the potential to go to bed at the end of each day feeling satisfied and accomplished. However, in order to do this, you will need to directly address the three challenges. You will need to increase your capability in three areas: decision management, attention management, and energy management.

The good news is there are 5 Choices that, when consistently made, will help you do this. They are proven and they work.

## DECISION MANAGEMENT

## Choice 1: Act on the Important, Don't React to the Urgent

In a knowledge-work world where we are paid to think, create, and innovate, a primary tool for creating value is our brain. Before we go further, let's gain a little understanding about how our brain works. We will simply talk about two basic parts of the brain: the Reactive Brain and the Thinking Brain.

The Reactive Brain is the lower part of your brain. It is the source of the fight-or-flight response and is also where we process our feelings and emotions. Most of these processes happen automatically, before we have time to think about what's going on. Scientists say the Reactive Brain was built to ensure our survival as far back as prehistoric times.

In contrast, the upper part of our brain, the Thinking Brain, is the place where we make conscious and very intentional decisions. It is often called the *executive function*, because it is where we can consciously direct and override other impulses from the Reactive Brain. It is where we act rather than react. It is where we choose to pay attention to something in a deliberate, thoughtful way.

The good news from neuroscience is that, with practice, we can actually rewire our brains to be more thoughtful and discerning about our choices. It is in those discerning choices that we determine the quality, joy, and happiness of our lives.

### On Being Intentional

In order to be truly productive, we need to gain the habit of being conscious and intentional about everything we do. In today's world, we can't just go on "I have a busy life" autopilot and expect to end up where we want to be.

To be truly productive and make those high-value decisions, it helps to have both a framework and a process. FranklinCovey's Time Matrix provides the framework, and Pause-Clarify-Decide (PCD) provides the process.

The Time Matrix model illustrates that people spend their time, attention, and energy in one of four quadrants, depending on how urgent and important their activities are.

### The Time Matrix™

Visualizing it as the top left quadrant, Quadrant 1 (Q1) is the *quadrant of necessity* and contains things that are both urgent and important. It is filled with crises (like a hospital visit), emergency meetings, last-minute deadlines, pressing problems, and unforeseen events. If you spent a lot of time in Q1, you may feel productive and energized, but if you spent too much time there, you may also burn out. Although it is often necessary to be in Q1, it is rarely where we do our best, most creative, and highest-value work, even though it may feel like it at the time.

In investment terms, you usually get out what you put in. It's essentially a break-even quadrant for the attention and energy you spend there. In the overall scheme of things, it's not a solid foundation for enduring success.

Visualizing it as the lower left quadrant, Quadrant 3 (Q3) activities are urgent but not important. This is the *quadrant of distraction*. Because things here are urgent, they feel like they need to be done now, but really, there are no serious consequences if you don't do them. Here you find needless interruptions, unnecessary reports, irrelevant meetings, other people's minor issues, unimportant emails, tasks, phone calls, status posts, and so on.

In terms of the time and energy you invest here, you get less than you put in. It's a negative return on your attention and energy.

Visualizing it as the lower right quadrant, the things in Quadrant 4 (Q4) are neither urgent nor important. We call this the *quadrant of waste*. We really shouldn't be here at all, but we often get so burned out fighting the battles in Q1 and Q3 that we go here to escape. This is where we let our brains go completely unconscious and fill our time with excessive relaxation, television, gaming, Internet surfing, gossip, and other time-wasters.

Visualizing it as the upper right quadrant, Quadrant 2 (Q2) is the quadrant of extraordinary productivity. Activities are important but not urgent. This is the *quadrant of extraordinary productivity* because here is where you take charge of your own life and do things that will make a real difference in terms of accomplishments and results.

Unlike the other quadrants, where things come at you, you have to consciously choose to be in Q2. You have to use the thinking part of your brain to discern the things of highest value and act on them.

Time spent in Q2 reduces the crises and problems in Q1 because you will intentionally spend time planning, preparing, and preventing. You will lower your level of stress because you'll intentionally decrease the amount of time you spend in Quadrants 1, 3, and 4. Most important, you will know that you are making progress on the things that really contribute and add value to your work and life every day.

Bottom line: The time and energy you invest in Q2 generates returns that are much higher, even exponentially higher, than that which you put in. That's why it's the quadrant of extraordinary productivity.

### The Essential Skill for Getting Into Q2: Pause-Clarify-Decide

The key to getting into Q2 is to pause your Reactive Brain long enough to clarify what is coming at you, then decide whether it is worth your time and energy. We refer to this vital process as Pause-Clarify-Decide (PCD).

Our ability to do this comes into play in the moment of choice when we consciously decide whether or not we will do something. Using PCD basically means that we take a brief instant to ask the question, *Is it important?* This simple process helps us get the return on the moment we desire.

Again, this is not how our brain is naturally wired to react. With an understanding of the Time Matrix, you have a framework to help you clarify whether or not something is important. When something comes up, you can ask yourself, *Which quadrant is this in?* Then you can make a better decision about what to do with it.

To sum up, we should remove any self-imposed activities in Q1, Q3, and Q4, reclaiming that time to invest in Q2. We can create a Q2 culture by speaking the language of importance and improve our ability to focus on Q2 together.

## Choice 2: Go for Extraordinary, Don't Settle for Ordinary

With all the challenges of life and all we have on our plates, it's a legitimate question to ask why we should set the standard at extraordinary. Extraordinary means going to bed at the end of each day feeling satisfied and accomplished. It's about accomplishing those things that add the most value to your work and life.

### What Are the Most Important Roles in Your Life Today?

Roles are where life happens. Roles are so fundamental to human identity that when we ask people to tell us about themselves, they always answer in terms of roles: "I am an engineer." "I am Jane's spouse." The trick is to keep them all in balance. The way each of your roles plays out in life affects all your other roles.

Our brains naturally organize information in categories like roles, so organizing your life in terms of roles makes a lot of sense. One of the most effective Q2 things you can do is to narrow your focus. Take the time to identify the few most important roles in your life today; evaluate how you think you are doing in each of them; then define what success looks like in each role. This will give your brain the targets it needs to greatly enhance the decisions you make every day.

### Making Your Roles Extraordinary

Now that you have identified and evaluated your most important roles, how do you transform them into something that will guide you and help you make better decisions about where you invest your attention and energy every day? The key is to determine your vision of success in each role. You can accomplish this by doing two things:

- **Anchor your purpose and passion in a Q2 Role Title.** Take a few minutes, and think broadly and deeply about one of your roles. Really go to town on what a vision of success could look and feel like. Capture it in the title of that role. For example, change the title of "Housemate" to "Supporter," or "Photographer" to "Visual Artist." If you like it, then keep going with your other roles.
- **Craft a Q2 Role Statement for each role.** For each role, craft a brief statement that articulates the outcomes you are after and the essential activities or methods that will help you achieve them. You are not looking for a goal; you are looking for a combination of outcomes and activities that will guide your goals, plans, and decisions. A formula that can be helpful is, "As (role title) I will (extraordinary outcomes) by (activities.)"

In addition to connecting to the motivational centers of our brains, clarifying our roles and goals taps into the deepest purposes we have in our lives. Our roles embrace our most significant relationships, our most profound joys, and our highest contributions and aspirations.

The Q2 time you take to think deeply about your Q2 Roles and Goals will help you tap into these deeper wells of motivation and high performance.

## ATTENTION MANAGEMENT

## Choice 3: Schedule the Big Rocks, Don't Sort Gravel

There is a big difference between thinking about what is important and actually accomplishing it. If we don't have robust planning disciplines and processes in place to execute what is important, then our Q2 Role Statements and Q2 Goals are merely wishful thinking.

### The Big Rocks and the Gravel

In this comparison, the Big Rocks represent the important Q2 priorities in our lives. These are the activities that come from our Q2 Role Statements and Goals. These activities are in contrast to gravel, which represents all the little things that fill up our lives—email, phone calls, laundry, less important priorities, and so on. These things take time and attention away from the Big Rocks.

You can never get ahead by just sorting through the gravel faster. Decide what is most important, and get those activities "in the bucket" before the week begins.

### A Critical Pre-Planning Tool: The Master Task List

In the 21st century, the Master Task List is probably one of the most vital tools we can use to keep our attention focused on Q2. The purpose of a Master Task List is to keep things in a single trustworthy tracking system so that you can get them out of your brain and stop worrying about them.

The basic rule for using a Master Task List is this: When something comes up that you might need to do, it goes either on the floor or on the list, but not in your head. This means you use your discernment skills right away and decide what to do with it, but don't leave it floating in your consciousness, taking up valuable working memory.

Without a Master Task List, you are more prone to have sleepless nights, tossing and turning as all the things you

need to do and haven't written down run through your mind like a broken record. You also feel the pressure of knowing that tomorrow a whole new slew of decisions and demands are coming your way and that you have nowhere to put them.

### Q2 Planning and the 30/10 Promise

If you spend 30 minutes each week and 10 minutes each day in Q2 Planning, you will dramatically increase your ability to be and feel accomplished at the end of every day.

Q2 Planning is a process where you take some time to quiet your mind and work from the Thinking Brain to consciously and intentionally load the Big Rocks into your weeks and days *first*, to make sure they get accomplished.

When you take some time to reduce the noise, get centered, and plan from a more thoughtful state, you will have an entirely different experience when you ask yourself, *What is most important?* The answers you get will be clearer and more accurate.

The 30/10 Promise will transform the time you spend everywhere else and dramatically increase your ability to feel accomplished at the end of every day.

### Weekly Q2 Planning

Find a quiet place, and take at least 30 minutes *before* your week starts to

**1. Review Your Roles and Goals.** Take some time to consciously connect with the vision for your life that you captured in your Q2 Role Statements and Q2 Goals. Don't skimp on this step. It will rekindle your deepest passion and highest motivations.

**2. Schedule the Big Rocks.** Ask the Big Rocks Question, *What are the one or two most important things I can do in this role this week?* When it comes to Big Rocks, you should only pick the top one or two most important things for each role. There is only so much you can do, so set the bar high, and pick the ones that will really make a difference.

**3. Organize the Rest.** With the Big Rocks securely in place, you can calendar other important things that need to be done—things that aren't critical, but need to be taken care of, like the laundry!

These three steps to Weekly Q2 Planning will ensure that your week is productive.

### Daily Q2 Planning

To plan your coming day, find a quiet place, and take at least 10 minutes to review the day you just completed, and

**1. Close Out the Day.** Look back at your tasks you scheduled. Is everything done? If not, then reschedule the unfinished items at some other time on your calendar, delete them if they are no longer important, or leave them on your Master Task List. The idea is to be accountable to yourself each day.

**2. Identify the Few "Must-Dos."** A must-do is something so important that you probably wouldn't end your day without getting it done.

**3. Organize the Rest.** Organize everything else around your must-dos.

## Choice 4: Rule Your Technology, Don't Let It Rule You

Our current technologies—from sticky notes to personal computers, from email to video conferencing, the Internet, the cell phone, text messaging, wireless networking, wearable devices, eBooks—can provide such immediate responsiveness to our actions that we can be caught up in responding to texts and tweets, thinking we are being productive, when in fact we are only being distracted.

Of greater concern, we may be missing the really important things like building strong relationships, collaborating on important problems, or doing some thoughtful and focused work. In the end, these things are far more important.

### Swordlessness and the First Principle

Sometimes we get caught up in the idea that if we just have the right tool—the right software, the latest gadget, and so on—then all our problems will be solved. No external device can replace our own minds.

When we embrace the idea that no tool will automatically save us, we act from what 16th-century Japanese sword master Yagyu Munenori called the "first principle," which is to be independent in every possible way and to keep your presence of mind in all circumstances. The notion is that when we get stuck on a particular tool, we create an attachment in our mind that keeps us from moving fluidly and responding appropriately to different circumstances as they arise. This is important, because the tools and technologies change all the time, but the first principle of conscious choice does not.

The first thing we need to do is get all our information organized. Basically, there are four kinds of information you need to manage—two of them you can act on; the other two are information that you file away for future reference.

- **Appointments.** Things you need to do at specific times.
- **Tasks.** Things you need to do that are not yet scheduled.
- **Contacts.** Information about people you interact with.
- **Notes/Documents.** Other information you want to keep track of that does not fall into one of the other three categories.

We call these categories the *Core 4*. The first task to bring order to the chaos is to learn to see incoming information so you know exactly where and how to access it anywhere, anytime. How you do that will depend on the system you use, but as a guideline, use the *Rule of One*.

This means having one Master Task List, one calendar, one contacts list, and one system for your notes or documents. This can be personalized, as long as you stay true to the principles managing the Core 4. You can design your system to be all paper, all digital, or a combination of both.

## The 3 Master Moves

These are 3 Master Moves that can help you leverage the features of your technology systems to dramatically increase their effectiveness as you deal with the incoming and organize your Core 4.

**Master Move 1: Win Without Fighting.** Win Without Fighting is based on the principle of automation. The goal is to confidently automate as many of these decisions as possible so that our brains do not have to use up energy on the mundane, useless, or unnecessary.

One of the most powerful ways to automate your incoming email is to master the rules or filter functions of your email program. Rules or filters can automatically put many of your emails where you want them to go before they ever hit your inbox!

Of course, you should be aware of any corporate guidelines that govern how you handle and delete email. But by taking some Q2 time to set up these rules, you can save thousands of hours later on.

Once you set up your rules or filter system, continue to be intentional about keeping it current. Continue to discern your new messages through the eyes of the quadrants. Look for patterns to automate and opportunities to prioritize. When you see one, take just an additional second or two to make a rule for those messages; then they will be handled smartly from that time forward.

**Master Move 2: Turn It Into What It Is.** The goal of this move is to eliminate any additional Q3s and Q4s from your inbox that rules and filters did not handle, then effectively manage the Q1s and Q2s.

To understand Master Move 2, realize that every email is really only made up of one or more of the Core 4. When you look at each email with this new pair of glasses, you realize that the information in the email already has a place set up in your Core 4 system where such information should go. Once you've identified each of the Core 4, then *immediately* Turn It Into What It Is, and get it out of your inbox. The basic rule here is to touch it once.

Having an uncluttered inbox gives you an uncluttered mind. There is nothing more peaceful than seeing your number of messages reduced to just a few and knowing that everything is where it belongs.

**Master Move 3: Link to Locate.** Have you ever been late for a meeting because you were scrambling to find all the resources you needed? When you are busy looking for stuff, which quadrant are you in? Generally, it's a self-imposed Q1. We have higher-value uses for our time, and that is what Master Move 3: Link to Locate helps you solve.

The paradigm shift for this move is to see the relatedness of information and to proactively connect resources among the Core 4 as much as you can ahead of time so you don't have to search for them later.

Even though many search functions have become quite effective for digital information, the more key information you have organized and linked, the lower your risk of not finding what you need, the greater your confidence, and the sooner your attention can be focused on the important work at hand.

Linking can be done by

- Inserting the actual file.
- Inserting an active hyperlink.
- Creating a text-based link.

The number of links you add is entirely up to you. The point is not to get obsessed with links, turning this into a Q4 activity, but to proactively create some well-chosen cross-references that will help you connect different items ahead of time.

In the end, the most important asset in any conflict is a calm and undisturbed state of mind. This allows you to act fluidly and with discernment in the moment of choice. While the skills are important, even more vital is your own ability to transcend your natural impulse to respond to every beep and buzz, and to consciously act from a centered, clear-thinking Q2 perspective.

## ENERGY MANAGEMENT

# Choice 5: Fuel Your Fire, Don't Burn Out

We have targeted the brain as the number-one asset and tool that must be optimized. To be extraordinarily productive, we need to create a way of life that is intentional, consciously making the highest-value decisions virtually every waking minute of the day.

Our mode of life today—constant stress, poor diet, lack of exercise and sleep—leads to what scientists call *exhaustion syndrome.* The rest of us call it burnout. We continually push through each day, postponing the renewal time our brains and bodies need. By contrast, extraordinarily productive people consistently recharge.

### Five Drivers of Mental and Physical Energy

To maintain your ability to carry out your great purposes and make the day-to-day decisions that get you there, you need the sustainable physical energy that comes from a well-cared-for and well-functioning body to fuel the brain with lots of oxygen and a constant flow of glucose.

The 5 Energy Drivers are

- **Move.** It's not just about exercise. Your body was meant to move. Take brain breaks periodically throughout the day. Get up from your chair at least every 90 minutes to walk around, even if it's just to the beverage area.
- **Eat.** Just as you don't put dirt in your car's gas tank, you shouldn't put poor-quality food in your body. The idea is that when you fuel your brain with the right amount of whole, natural foods in regular intervals throughout the day, you provide your brain and body with a steady supply of glucose and other nutrients that help you function at your best.
- **Sleep.** Getting a good night's sleep is not just enjoyable, it is vital to extraordinary productivity. One study indicated that individuals who had gone 17–19 hours without sleep performed like someone with a .05 percent blood-alcohol level. Showing up at work sleep-deprived is like showing up drunk.
- **Relax.** Learning to turn off the stress responses in our brain and act from a more centered, relaxed state can have a tremendous impact on our performance. Recovery strategies are as unique as the individual, and sometimes the right strategy is to reduce the load of work or even take some significant time off. Recovery and relaxation might be as simple as a 15-minute break to change your surroundings.
- **Connect.** Spending time building and maintaining meaningful relationships is actually nourishing to our brain. We may not think of relationships as a way to increase mental energy, but they are. Not only is the brain wired for movement, but it is also an inherently social organ.

Each of these 5 Energy Drivers is powerful in its own right. If you invest time in even one of them, you will get a quick and clear benefit. However, the real power comes when you have a regular pattern of life that honors all 5 Energy Drivers. When you have a healthy pattern of movement, eating, sleeping, relaxing, and connecting, you are strengthening yourself as a complete human being.

# Conclusion: Your Extraordinary Life

More than anything, extraordinary productivity is a question of being conscious in the moment. And it doesn't take much to change the equation. It's taking small steps each day to cultivate this habit in our own lives. It's being aware of our surroundings, the people we work with, and the opportunities for high-value decisions about where we spend our time, attention, and energy.

When we live our days this way, we find they are much more rewarding and fulfilling. We know that we have been involved in things that matter and have done them well. We can feel accomplished at the end of every day. And in the end, we may be surprised to find out that a series of extraordinary days has given us an extraordinary life!

## SPECIAL SECTION: BEING A Q2 LEADER

# What Leaders Can Do

A culture is particularly sensitive to the actions of its leaders. Almost by definition, they have a disproportionate impact on how a culture feels and what people do. But leadership is not just a position; in fact, some of the most powerful leaders in the world held no real formal position of power (think Mother Teresa or Gandhi). By this definition, leadership is a choice, not a position.

The suggestions here are ideas about how you can exercise leadership in each of the 5 Choices to create a Q2 culture among those you work with.

### Choice 1: Act on the Important; Don't React to the Urgent

- Share your commitment to a Q2 culture with those around you. Be explicit about what you are trying

to achieve and how it can help everyone feel more accomplished at the end of every day.

- Allow for strategic pauses. Create an environment where it is safe for people to press the pause button and make good decisions about where they are spending their time, attention, and energy.
- Reward Q2. Rewarding heroics is part of the corporate DNA. Nurture the higher-return Q2 culture by seeking out those accomplishments that get at root causes and prevent Q1s or projects that are completed on time and on budget without a rush.

### Choice 2: Go for Extraordinary; Don't Settle for Ordinary

- Share your own leadership Q2 Role Statements and Q2 Goals with others. By articulating your priorities to your team, it helps them calibrate their own efforts to make these things happen. As a leader, you cannot (and should not) try to do everything.
- Ask others to define Q2 Role Statements and Q2 Goals. If you are a formal leader and can do this, ask people on your team to come up with the contribution they want to make in their role and share it with you. The conversations you have can be both illuminating and motivating.
- Use the *From X to Y by When* formula when setting up organizational goals. Build on the current brain science when formulating your goals. The specificity of this formula will help you and everyone else make better decisions around where to spend your time, attention, and energy.

### Choice 3: Schedule the Big Rocks; Don't Sort Gravel

- Create organizational Q2 Time Zones. As a leader, you should be involving others and looking months, quarters, and even years into the future. If you are not, then you are not doing your job.
- Do Q2 daily huddles. The principles of Q2 Planning can apply in a variety of settings once you have the Q2 mindset and language.
- Get good at what you do a lot of. Spending Q2 time with your team to set up a good process around your most vital and repeatable work can help everyone in your organization stay focused in Q2.

### Choice 4: Rule Your Technology; Don't Let It Rule You

- Create an organizational Q2 manifesto. As a leader, take the initiative to set clear guidelines and protocols about how to handle email, texts, and so forth. Help your team know how to prioritize communications from you and those they sent to others.
- Get your technology right. Pick technologies that help people organize the Core 4. Give them the necessary tools and policies to make critical information available when and where they need it.

### Choice 5: Fuel Your Fire; Don't Burn Out

- Take care of yourself. Being an effective organizational leader takes all kinds of mental and emotional energy. Take time to take care of yourself. You will be a better leader if you do.
- Provide healthy food options. This one is sure to be a hit at the office. Start providing healthy options for people at work. When you see people alert and working rather than in sugar comas during afternoon meetings, you will see that it is money well spent.
- Create brain breaks. When you can see that a meeting has gone on too long, recommend that everyone take a brain break. Get up and walk around. Take a moment for humor and fun. These things provide a bit of renewal in your work and enliven the culture.
- Encourage and foster an ethos of health and energy in your culture, versus the tough-guy, work-all-hours-hero, make-it-happen culture that we often cultivate to get things done. Sure, there are times we choose to work long hours. That's reality. But if the culture celebrates strung-out, bleary-eyed, I-worked-all-night-again patterns of behavior, you are setting yourself up for crises, and what's worse, you are draining your culture of the creative energy you need to discover the next innovative idea that takes you to the next level or lifts you above the competition.

  Instead, celebrate people who choose to bring their very best energy to the workplace—they are the best employees you have.

## The 5 Types of Wealth

**A Transformative Guide to Design Your Dream Life**

*By Sahil Bloom*

Sahil Bloom is an inspirational writer and content creator, captivating millions of people every week through his insights and biweekly newsletter, The Curiosity Chronicle. Bloom is a successful entrepreneur, owner of SRB Holdings, and the managing partner of SRB Ventures, an early-stage investment fund. Bloom graduated from Stanford University with an MA in public policy and a BA in economics and sociology. He was a four-year member of the Stanford baseball team.

*A Book Review by Soundview*

# Achieving Lasting Happiness

History is replete with characters, real and imaginary, who have reached the pinnacles of financial success but have found their lives lacking and broken in ways that render that financial wealth all but tertiary. Financial wealth can aid in the building of a life of security and abundance, but in and of itself, it will not make a life joyful or fulfilling. Financial wealth can be incredibly beneficial, but it is not sufficient. In the end, Sahil Bloom builds his book, ***The 5 Types of Wealth: A Transformative Guide to Design Your Dream Life***, around the five types of wealth that build a fulfilling and full life. The fifth pillar, financial wealth, is helpful insomuch that it facilitates the other four: time wealth, social wealth, mental wealth, and physical wealth. Bloom dedicates ample time in his book to explore all five of these pillars.

## Time Wealth

The first type of wealth Bloom explores is time wealth, and one of the key principles he discusses in regards to this type of wealth is that we simply do not know how much of it we have left, and we often grossly underestimate the time we do have left with those we love. This became apparent to Bloom when a friend pointed out that, based upon the age of Bloom's parents and the fact that he goes to visit them about once a year, he will likely only see his parents fifteen more times in his life. Once Bloom internalized this truth and discussed it with his wife, he and his wife decided to upend their lives and move to be closer to their family. Once Bloom was able to conceptualize and think about the time he realistically had left with those he loves, he was able to make decisions that would help him maximize this time. It changed the course of his life, and this realization of his is used as the basis for many of the decisions he made later in his life, and it also appears numerous times throughout his book. In regards to time, Bloom believes, "It's later than you think." And it is not just parents with whom people need to be cognizant of time with. The only person that people spend more time with as they age is their spouse. Most of the time a person spends with their children is when the children are under the age of eighteen; time with friends drops considerably in young adulthood, and while time with co-workers stays fairly consistent during the working years, it drops off obviously and dramatically at the age of retirement.

Bloom states, "Once you embrace this harsh reality [that time left with people is often less than we think] investing in your Time Wealth means using the awareness of time's impermanence to spark action. It is building the power to direct your attention to the things that truly matter (and ignoring the rest). It is achieving control over your time - how you spend it, where you spend it, and whom you spend it with." One problem with time that Bloom observes is the Red Queen Effect. This refers to a character in Lewis Carroll's Through the Looking Glass and refers to the general human maxim that the more a person has, the more they want. He then notes examples of people who got what they always wanted in life only to realize that what they wanted is less rewarding and satisfactory than they envisioned it would be.

Bloom then turns to the first of his three pillars of time wealth: awareness. To describe people's inherent understanding of time wealth, he considers how it would be very hard to find a young person willing to trade places with Warren Buffett despite the overwhelming financial wealth that Buffett has. This is because Buffett was 94 years old at the time Bloom wrote his book. There is only so much more time a 94 year old would have left to enjoy his wealth. On the other hand, Bloom believes that Buffett might be willing to trade places with someone many decades younger with far less wealth. This shows how most people consider financial wealth far less important than time wealth when presented with such choices. Bloom describes this as a paradox: "You are subconsciously aware of the immense value of your time, but you regularly and consciously take actions that disregard that value." Bloom's second pillar of time wealth is attention, described as "the state or act of applying the mind to something," and it is essential to progress. Bloom believes that "concentrated attention leads to focused, extraordinary outcomes," and he believes it is important for people to focus their concentrated attention on what is most important to them, saying no to things that are not dedicated to these most important projects. Bloom's third pillar is control which he describes as "the ultimate goal." He believes that there is a goldilocks component to free time, with both too little and too much of it proving problematic, and he believes the ultimate goal is "the freedom to allocate time according to your preferences – to choose how you spend it, where you spend it, and whom you spend it with."

## Social Wealth

"Her one regret was that she hadn't spent more time deepening relationships with the people she cared about." These words were spoken by a man named Erik who lost his wife to cancer. Describing his relationship with his wife, Eric said that they fell in love quickly at the start of their relationship, but that it reached its highest peak when his wife, Aubrie, was actively dying of cancer. Having gotten rid of everything extraneous, they could focus exclusively on their relationship. Bloom takes Aubrie's wish for more time with those closest to her as an insight for those still living. For Erik, life was difficult before Aubrie's diagnosis. He often felt a tension between his job and his role as a father. While everybody has obligations, Eric became convinced that "we must remember what's behind our desire to do those things in the first place; we must remember our center. And it's not the money."

Bloom encourages his reader to consider who the most important people are in their lives and what they are doing to show those people their importance. This brings Bloom to his three pillars of social wealth: depth, breadth, and earned status.

Depth refers to a "connection to a small circle of people with deep, meaningful bonds." Bloom refers to this group as the people who will be sitting in the front row at your funeral. He believes that honesty, support, and shared experience support these relationships. While oftentimes family members are part of this circle, this is not necessarily the case. He writes, "where you find it in your life is not important; what is important is that you find it." Breadth refers to the larger circle of relationships in your life that provide "support and belonging." The closest fifteen or so relationships a person has forms their depth relationships, and all the other relationships belong to this category of breadth and "they can provide varied support such as networks for career opportunities, enjoyment, warm connections to new romantic partners, and more." People can find these relationships through shared activities, spiritual activities, and through networking. The final pillar of social wealth is earned status. Bloom explains that people seek out status. This is not a bad thing even though the phrase often has negative connotations. What matters is not a desire for status but rather how one goes about achieving it. All too often, people try to purchase this type of status or join groups where other esteemed people belong. He writes, "The allure of these symbols is not that you respect and admire the people who have them; it is that you imagine the respect and admiration that you will receive once you have them." He goes on to write, "to avoid falling into this trap, you have to identify the people you truly respect and admire and then determine what specific assets or traits elicit that respect and admiration." Too often people focus on bought status rather than on earned status, the latter of which he describes as "the real respect, admiration, and trust received through hard-won treasures."

## Mental Wealth

The next facet of wealth Bloom moves on to is mental wealth. The question he asks regarding mental wealth is "what would your ten-year-old self say to you today?" And to open this section of his book, he discusses a man named Hank Behar who was a seemingly ordinary man, "but the sum of his ordinary starts to look rather extraordinary." Hank was a screenwriter and director in Hollywood who had a successful marriage to an actress named Phyllis and numerous children and grandchildren. For his ninetieth birthday, Hank asked to be able to sit in on an astronomy class at Harvard. Bloom writes that "Hank's day at Harvard is much more than just a heartwarming story. It carries a deeper set of insights and lessons with science-backed implications for how you can live a healthier, more fulfilling life well into your sunset years."

Bloom considers curiosity to be "the foundation of a life of Mental Wealth," and he states that all people are born with a sense of curiosity and can find proof of it in their everyday lives. He believes that many people would find that the ten year old version of themselves would not be pleased to see where

> *Bloom asks, "Will you be dancing at your eightieth birthday party?" The answer to this question, he maintains, depends upon the actions you take today and in the coming years."*

their adult self ends up in life. Bloom says, the seeds of this discontent are sown in a person's twenties and thirties when they begin to focus almost exclusively on their job and then in a person's forties and fifties when people stop questioning the world and then in a person's sixties and seventies when they stop trying to learn new things because new skills and abilities do not seem necessary. He maintains that "it's not too late to reconnect" with your inner ten year old. He encourages his readers to consider what it is that would impress and excite the ten year old version of themselves and to consider pursuing that.

The three pillars Bloom establishes for mental wealth are purpose, growth, and space. By purpose, he refers to "the clarity of defining your unique vision and focus that creates meaning and aligns short- and long-term decision making." In short, it is "the unwillingness to live someone else's life." Purpose, he maintains, is what gives life meaning. It is what makes people distinct from one another. This requires people to connect "to something bigger than" themselves. People need not find a grand purpose; instead, when it comes to life purpose, the most important thing is that "it is personal" and belongs to you. When it comes to growth, Bloom goes back to Hank and Phyllis. Phyllis, at 88 years old, was still taking painting classes, "finding joy in the pursuit of new skills that have no utility beyond the sheer enjoyment she gets from the experience and personal growth." Growth depends upon a person's mindset, not innate aptitude. Anyone can develop a growth mentality. The final pillar of mental wealth is space. Bloom describes space through a paraphrase of Victor Frankl by saying, "your power is in the space that exists between stimulus and response." Most people are so busy that they consider finding space to be incredibly difficult. Bloom refers to John D. Rockefeller as someone who was good at finding space. He did this by walking around his gardens multiple times a day in order to allow himself time to breathe. Finding space does not require a person to stop the pursuit of worldly goods if that is what they want, but it does require intentionality.

## Physical Wealth

Bloom asks his readers to consider their eightieth birthdays when it comes to physical wealth as he asks them, "Will you be dancing at your eightieth birthday party?" The answer to this question, he maintains, depends in no small measure upon the actions you take today and in the coming years. Bloom considers three pillars for physical wealth. These are movement, nutrition, and recovery. These do not require superhuman abilities or resources, but rather they require a person to take consistent and mindful steps towards cultivating a strong body. When writing about physical health, he uses a videogame mindset where there are three levels, and people should not try to move to level three until they are first able to get comfortably from level one to level two.

In regards to movement, Bloom focuses on both "cardiovascular exercise and resistance training" as well as "activities that promote stability and flexibility." Cardiovascular training refers to both aerobic and anaerobic activity. Aerobic exercise helps the heart and lungs work well while in anaerobic activity, "the body breaks down stored sugars for energy" and generally refers to bursts of high intensity training followed by recovery. Strength training helps "to build overall muscle, power and strength" while "stability and flexibility" training helps make sure the body can "efficiently and effectively" move. At level one, a person should focus on movement for a minimum of thirty minutes a day while at level three additional and varied types of training are added.

Bloom then focuses on nutrition, urging readers to focus on some key principles. First is a person's caloric intake throughout the day which helps keep weight in a healthy range. Bloom then focuses on macronutrients urging people to focus on protein and clean food for the majority of foods eaten. At level one, a person should focus on eating "whole, unprocessed foods 80 percent of the time" while by level three, people focus on eating those foods all but five percent of the time while also focusing on protein and supplements.

Finally, in regards to recovery, Bloom focuses primarily on sleep. Sleep is crucial for memory, brain cleaning, the parasympathetic nervous system, and "emotional restoration and mood rebalancing." He maintains that people simply function better if they sleep better. It is not just the quantity of sleep that counts, however. The sleep environment and routine are also important for high quality sleep. At the most basic level, a person should focus on getting "seven to eight hours of sleep" while by level three, they should focus on improving their circadian rhythm while also focusing on "additional recovery methods."

## Financial Wealth

A key to understanding Bloom's position on financial wealth is a person's individual definition of what enough actually is. Without a clear idea of what a person is working for, they are at risk of falling prey to the Red Queen Syndrome mentioned earlier, always working for ever greater quantities of wealth with no clear end point in sight. He quotes an open letter Mark Twain wrote to a business tycoon of his time. In this letter, Twain refers to what he calls "the poverty of more" as he writes about how the tycoon gives up sleep and peace because he is always in a search for more money. "It isn't what a man has that consti-

tutes wealth," Bloom quotes Twain as saying. "No – it is to be satisfied with what one has; that is wealth."

As with his other four types of wealth, Bloom establishes four pillars of financial wealth: "income generation, expense management, and long-term investment." Income generations refers to "stable, growing income through primary employment, secondary employment, and passive streams." This needs to be combined with expense management in order to create a gap that can then be put into long-term investments "that compound effectively." To build or increase income, people can focus on building marketable skills. Then, a person can work to turn those skills into income. On the side of expense management, readers can focus on first creating and then sticking to a budget. They also can work on managing expectations by being aware of both the inevitability of inflation as well as of lifestyle creep where a person's "expectations… grow faster than [their] income." When turning to investing, Bloom reminds his reader of Warren Buffett's advice that "time, not average annual returns, is the most important factor." Bloom believes that "the most common and most attractive way to harness the full power of compound interest is to invest in and hold liquid market assets, such as stocks or low-cost diversified funds." Bloom breaks wealth into five levels. At the first level, a person is able to meet their most basic needs. By level three, basic needs are not much of a concern, and a person can focus on investing while still engaging in significant pleasures because of their money. By level five, a person has all pleasures available to them. They achieve financial independence as they no longer need an active income in order to maintain their current lifestyle.

Wealth is important to Sahil Bloom. Financial wealth, however, is not his primary focus because Bloom does not believe that financial wealth alone can bring a person peace or contentment. People need purpose and growth in their lives in order to feel direction, and it is social connection that makes life meaningful for almost all people. Bloom does not expect readers to go from an inert baseline in any of these areas of wealth directly to the upper echelons. Rather, he walks his reader through concrete steps that can be taken to get the reader to where they want to be. After describing his pillars of wealth, Bloom then explains concrete steps readers can take to level up in any of the areas of wealth they find themselves lacking in. This makes his book not only a philosophical discussion but a practical manual for developing a life of purpose and peace. Each tactic for growth is formulated to address a particular pillar that a person is lacking in, in order to help curb any overwhelm a person might have about approaching improvement in all areas at once.

Habit 5: Seek First to Understand, Then to Be Understood
*Page 7*

Habit 6: Synergize
*Page 8*

Part IV: Renewal
*Page 9*

## THE SUMMARY IN BRIEF

For three decades, ***The 7 Habits of Highly Effective People*** has transformed the lives of presidents, heads of state, CEOs, educators, students, parents, and families—millions of people of all ages and occupations. Presenting a principle-centered approach for solving both personal and professional problems, Stephen R. Covey reveals a step-by-step pathway for living with fairness, integrity, honesty, and human dignity. These principles give us the security to adapt to change and the wisdom and power to take advantage of the opportunities that change creates.

Now, this 30th anniversary edition commemorates the wisdom of the 7 Habits®, with personal insights from Covey's son, Sean Covey. In the current fast-paced world of nonstop information, 24/7 connectivity, and constant change, Sean Covey reflects on how the habits have been used over the past 30 years and offers valuable new insights on how we can apply the habits in our lives today. With these exciting additions, this edition refreshes the wisdom of the 7 Habits for a new generation of leaders.

## IN THIS SUMMARY, YOU WILL LEARN:

- Why the 7 Habits are more relevant now than ever.
- The power of the inside-out approach.
- How the 7 Habits develop maturity by taking you from dependence to independence to interdependence.
- Exciting new data and stories illustrating how the 7 Habits change lives.

PART I: PARADIGMS AND PRINCIPLES

## Inside-Out

Almost all literature written about success in the first 150 years of this country focused on the Character Ethic—integrity, humility, fidelity, temperance, courage, justice, patience, industry, simplicity, modesty, and the Golden Rule.

Shortly after World War I, the basic view of success shifted to the Personality Ethic. Success became more a function of personality, of public image, attitudes and behaviors, skills and techniques that lubricate the process of human interaction. Elements of the Personality Ethic are beneficial and sometimes essential for success. But they are secondary, not primary traits. Many people with secondary greatness—i.e., social recognition for their talents—lack primary greatness or goodness in their character.

### The Power of Paradigm

A paradigm is the way we "see" the world—not in terms of sight but in perceiving, understanding, interpreting. Our paradigms, correct or incorrect, are the sources of our attitudes and behaviors, and ultimately our relationships with others. Both the Character Ethic and the Personality Ethic are examples of social paradigms. To try to change outward attitudes and behaviors does very little good if we fail to examine the basic paradigms from which they flow.

As we look at the problems we create as we live and interact with the Personality Ethic, we realize they are deep, fundamental problems. We need a deeper level of thinking—a paradigm based on the principles that accurately describe the territory of effective human being and interacting—to solve these deep concerns.

This new level of thinking is what ***The 7 Habits of Highly Effective People*** is about. It's a principle-centered, character-based, "inside-out" approach to personal and interpersonal effectiveness.

The inside-out approach says that private victories precede public victories, that making and keeping promises to ourselves precedes making and keeping promises to others. It says it is futile to put personality ahead of character, to try to improve relationships with others before improving ourselves.

Take outside challenges—a difficult boss, a personal addiction, a big opportunity—and start inside with yourself. All change starts with you.

### The 7 Habits in the Digital Age

Now is the greatest time to be alive. You can navigate with your phone's GPS instead of stopping at a gas station to ask for directions. You can fly to any city in the world. You can influence and reach millions around the globe instantly through books, blogs, videos, or a dozen other communication channels.

On the other hand, challenges have increased. Trust in our institutions is declining. Depression and anxiety have become a global epidemic. The family unit is hurting. Much of the world lives in terror, psychologically or literally.

For individuals, the pace of life is at light speed. We are connected 24/7. We are saturated in social media. Screens have taken over. There is too much information, too many choices. Something has to give.

This is why the 7 Habits are needed more than ever. They provide a sure foundation upon which you can build a better life. They offer stability in the midst of an increasingly crazy world. The 7 Habits give people their lives back. They remind us that, despite our psychic baggage or past, we have the power to choose. They encourage us to envision and pursue exciting purposes. They communicate that we have it within us to build quality relationships and find third alternatives that bring people together.

## The 7 Habits: An Overview

Our character is a composite of our habits, which form a powerful factor in our lives. Because habits are consistent, unconscious patterns, they constantly express our character and produce our effectiveness or ineffectiveness.

Habits also have a tremendous gravity pull. Breaking deeply imbedded, habitual tendencies such as procrastination, impatience, criticalness, or selfishness that violate basic human principles of human effectiveness involves more than a little willpower and a few minor changes in our lives.

### 'Habits' Defined

A habit is the intersection of knowledge, skill, and desire:

- **Knowledge** is the theoretical paradigm, the ***what to do*** and the ***why***.
- **Skill** is the ***how to do***.
- **Desire** is the motivation, the ***want to do***.

Knowing you need to listen and knowing how to listen are

Being proactive means more than taking initiative. It means we are responsible for our own lives.

not enough. Unless you want to listen, it won't be a habit. Creating a habit requires work in all three dimensions. By working on knowledge, skills, and desire, we can break through to new levels of personal and interpersonal effectiveness as we break from old paradigms.

### The Maturity Continuum®

The 7 Habits move us progressively on a maturity continuum from **dependence** to **independence** to **interdependence**. On the maturity continuum, **dependence** is the paradigm of ***you***—***you*** take care of me; ***you*** come through for me, ***you*** didn't come through; I blame ***you*** for the results.

**Independence** is the paradigm of ***I***—***I*** can do it; ***I*** am responsible; ***I*** am self-reliant; ***I*** can choose.

**Interdependence** is the paradigm of ***we***—***we*** can do it; ***we*** can cooperate; ***we*** can combine our talents and abilities and create something greater together.

True independence of character allows us to act rather than be acted upon. It frees us from our dependence on circumstances and other people and is a worthy, liberating goal. But it is not the ultimate goal in effective living.

Interdependence is a more mature, advanced concept. As an interdependent person, you have the opportunity to share yourself with others and have access to the vast resources and potential of other human beings. Interdependence is a choice only independent people can make. Dependent people cannot choose to become interdependent. They don't own enough of themselves.

That's why Habits 1, 2, and 3 deal with self-mastery. They move a person from dependence to independence. They are the private victories, the essence of character growth. Private victories precede public victories. You can't invert that process any more than you can harvest a crop before you plant it. It's inside-out.

As you become truly independent, you have the foundation for effective interdependence. You have the character base from which you can effectively work on the more personality-oriented public victories of teamwork, cooperation, and communication in Habits 4, 5, and 6.

## PART II: PRIVATE VICTORY

## Habit 1: Be Proactive®

Being proactive means more than taking initiative. It means we are responsible for our own lives. Our behavior is a function of our decisions, not our conditions. "Response-ability" is the ability to choose your response. Highly proactive people do not blame circumstances, conditions, or conditioning for their behavior. Their behavior is a product of their own conscious choice, based on values, rather than a product of those conditions, based on feeling.

Reactive people are often affected by their physical environment. If the weather is good, they feel good. If it isn't, it affects their attitude and performance. Proactive people carry their own weather with them. They are still influenced by external stimuli, but their response, conscious or unconscious, is a value-based response or choice.

Our basic nature is to act and not be acted upon. As well as enabling us to choose our response to particular circumstances, this empowers us to create circumstances. Taking initiative does not mean being pushy, obnoxious, or aggressive but recognizing your responsibility to make things happen.

### What the Data Says

We now have a great deal of empirical data that backs up these ideas about proactivity. Stanford professor Carol Dweck found that most people have one of two mindsets, or paradigms, about their ability to learn: a "fixed" mindset or a "growth" mindset. People with a fixed mindset believe their intelligence and talent are fixed and that there's not much they can do about it. This is a reactive view of the world. "I'm not good at math" or "I've never been good with people, so why try?"

On the other hand, people with a growth mindset believe their basic abilities can be developed and enhanced through dedication and hard work, a belief that they are in the

driver's seat and can, therefore, improve and change. This proactive view of the world results in proactive thinking and language. "I need to get better with numbers," or "I can be more considerate of my partner."

### Circle of Concern® and Circle of Influence®

Another excellent way to become more self-aware regarding our own degree of proactivity is to look at where we focus our time and energy. We each have a wide range of concerns—health, children, problems at work, the national debt, and nuclear war. We could separate those from things in which we have no mental or emotional involvement by creating a "Circle of Concern."

Within our Circle of Concern are some things over which we have no control and some we can do something about. We could identify those in the latter group as within our Circle of Influence.

Proactive people focus their efforts in the Circle of Influence. The nature of their energy is positive, enlarging, and magnifying, causing their Circle of Influence to increase. Reactive people focus their efforts on the Circle of Concern, which results in blaming, accusing attitudes, and increasing feelings of victimization, causing their Circle of Influence to shrink.

### Direct, Indirect, and No Control

The problems we face fall in one of three areas:

1. Direct-control problems are solved by working on our habits, which are within our Circle of Influence. These are the private victories of Habits 1, 2, and 3.
2. Indirect-control problems are solved by changing our methods of influence. These are the public victories of Habits 4, 5, 6, and 7.
3. No-control problems involve taking responsibility to smile, to genuinely and peacefully accept and learn to live with these problems, even when we don't like them.

Dr. Martin Seligman, the distinguished director of the Positive Psychology Center at the University of Pennsylvania, explores the benefits of focusing on your Circle of Influence. In his book ***Authentic Happiness***, he concludes that your happiness depends on (1) genetics, (2) circumstances, and (3) things you can control.

However, his research found that genetics and circumstances have less to do with happiness than the third category—the things you can control. To be happy, Seligman suggests, focus on things you can control.

For 30 days, work only in your Circle of Influence. Make small commitments and keep them. Be part of the solution, not part of the problem. When you make a mistake, admit it, correct it, and learn from it—immediately. Don't get into a blaming, accusing mode. Work on things you have control over.

## Habit 2: Begin With the End in Mind®

To begin with the end in mind means to start with a clear understanding of your destination. You need to know where you are going in order to better understand where you are now so that the steps you take are always in the right direction.

It's easy to get caught up in an activity trap, in the busyness of life, to work harder and harder at climbing the ladder of success only to discover it's leaning against the wrong wall.

### The Ladder of Success

At a Harvard Business School reunion, renowned management thinker Clayton Christensen told a story about his first job out of school at a prestigious consulting firm. As a young consultant, he worked hard, long hours Monday through Friday and was devoted to his colleagues and his clients. But juggling work and life demands became challenging.

One day one of his managers told him to clear his Sunday so that the team could prepare for an important client meeting on Monday. Clayton paused and told his manager he couldn't come in for the meeting. "I'm sorry," he explained, "I don't work on Sundays. That is the day that I reserve for my faith."

The manager walked away grumbling but came back a short while later. "Okay, fine. I've been able to move everything to Saturday. We'll have the preparation meeting then."

Clayton paused before responding. "I'm so sorry," he explained again. "I don't work on Saturdays. My wife and I made the decision long ago to prioritize our family on Saturdays. I spend Saturdays with my family."

His colleague stormed away for a third time before coming back with, "Do you happen to work on Fridays?"

Clayton explained how he got through that decision, which was the first of many that shaped his life for the better, propelled his career, and kept him near to his

family and faith. He sensed that if he were to compromise staying late or working weekends "just this once," it would become a slippery slope.

He learned over the years that it's easier to stick to your principles 100 percent of the time than 98 percent of the time.

### A Personal Mission Statement

The most effective way to begin with the end in mind is to develop a personal mission statement. It focuses on what you want to be (character) and to do (contributions and achievements) and on the values or principles upon which being and doing are based.

To write a personal mission statement, you must begin at the very center of your Circle of Influence. Whatever is at the center of your life will be the source of these four factors, which are interdependent:

**Security:** Your sense of worth, identity, emotional anchor, self-esteem, basic personal strength, or lack of it.

**Guidance:** Your source of direction in life, an internal frame of reference that includes standards or principles or implicit criteria that govern moment-by-moment decision-making and doing.

**Wisdom:** Your perspective on life, sense of balance, judgment, discernment, comprehension.

**Power:** The faculty or capacity to act, the strength and potency to accomplish something.

A mission statement takes deep introspection, careful analysis, thoughtful expression, and often many rewrites. Writing or reviewing a mission statement changes you because it forces you to think through your priorities deeply and carefully and to align your behavior with your beliefs.

By centering your life on correct principles, you create a solid foundation for development of the four life-support factors: Security comes from knowing that, unlike other centers based on people or things subject to change, correct principles do not change.

Wisdom and guidance come from correct maps, from the way things really are, have been, and will be.

The personal power that comes from principle-centered living is that of a self-aware, knowledgeable, proactive individual, unrestricted by attitudes, behaviors, and actions of others.

## Habit 3: Put First Things First®

Effective management is putting first things first. While leadership decides what first things are, it is management that puts them first, day by day, moment by moment. Learning to put first things first is hard. In fact, this is the habit, in general, that people struggle with most. Why is Habit 3 so hard? It's urgency, plain and simple. And the reality is most of us are addicted to urgency.

### The Time Management Matrix

We spend time in one of four ways, depending on the two factors that define an activity: urgent and important. Urgent means it requires immediate attention. Urgent things act on us and are usually visible. A ringing phone is urgent.

Importance, on the other hand, has to do with results. It contributes to our mission, values, and high-priority goals. We react to urgent matters. Important matters that are not urgent require more initiative, more proactivity.

Consider the Time Management Matrix:

The solution to overcoming your urgency addiction is to shift your paradigm from one of urgency to one of importance. Thanks to smartphones, social media, and the like, it is increasingly difficult to stay out of Quadrants I and III. In fact, data shows that 51.2 percent of our time is spent responding to things that are urgent.

People who live in Quadrant I can be called the Procrastinator. The results of spending too much time here include stress and anxiety, feeling burned out, and mediocre performance.

The Yes-Man is those who live in Quadrant III. They have a hard time saying no to anything that is urgent or popular, resulting in staying incredibly busy while getting nothing of importance done.

Quadrant IV is where a lot of people live. Meet the Slacker. Anything done to excess falls into Quadrant IV. Yes, chilling out and streaming a good movie is part of a healthy lifestyle. It's only when that single movie leads to two or three in a row that it becomes a waste of time, leading to feelings of guilt and apathy.

### Moving into Quadrant II

Quadrant II is where the Prioritizer lives. It's too bad, on average, that we only spend 30.8 percent of our time here. Time in Quadrant II results in improved relationships, high performance, and balance. This is where we make time to fix the screen instead of continually swatting the flies.

The return on the time and energy you spend in Quadrant II is exponential, while the return on Quadrant I is only equivalent to the input, and the return on Quadrants III and IV is virtually nonexistent.

The key to spending more time in Quadrant II is to reduce the amount of time you spend in Quadrant III, the quadrant of deception. QIII seems important because it is urgent, and thus, it tricks us. When time is scarce, we go through what psychologists call "tunneling," meaning we can only concentrate on the most immediate, often low-value tasks. This urgency mode causes us to lose about 13 IQ points.

The remedy to Quadrant III is to start saying no. Say no to responding immediately to every email or text that comes your way. Say no to serving on that community board when you might be neglecting your family or your health. Say no to filling out that report no one reads. The key to saying no is to have a deeper yes burning inside of you. Clarify the few things you do well, and then start saying no to everything else.

Of all that FranklinCovey has learned about time management after working with millions around the globe, one main idea stands out: Set aside 30 minutes each week to plan your week, and watch it change your life.

## PART III: PUBLIC VICTORY

## Habit 4: Think Win/Win®

Think Win-Win is an attitude toward life that says "I can win and so can you." It's not me or you, it's both of us. Think Win-Win is the foundation for getting along with other people. It begins with the belief that we are all equal, that no one is inferior or superior to anyone else, and no one needs to be.

Win/Win is not a technique; it's a total philosophy and one of the six paradigms of human interaction. This is a frame of mind and heart that constantly seeks mutual benefit in all human interactions. It's not your way or my way; it's a better way, a higher way. The other five paradigms are as follows:

- **Win/Lose**. In leadership style, it is the authoritarian approach: "I get my way; you don't get yours."
- **Lose/Win**. This is worse than Win/Lose because it has no standards, no demands, no vision. In leadership, it's permissiveness or indulgence, being a nice guy, even if "nice guys finish last."
- **Lose/Lose**. When two Win/Lose people get together, the result is Lose/Lose. Both will become vindictive and want to get back at each other.
- **Win**. People with this mentality don't necessarily want someone else to lose. What matters most is that they get what they want.
- **Win/Win or No Deal**. If we can't find a solution that benefits us both, we agree to disagree agreeably.

Most situations are part of an interdependent reality, and then Win/Win is the only viable alternative of the five. Think of Win/Win as the bait of interpersonal leadership. Character is the foundation of Win/Win. There are three character traits essential to the Win/Win paradigm:

- **Integrity**—the value you place on yourself.
- **Maturity**—the balance between courage and consideration.
- **Abundance mentality**—there is plenty out there for everyone.

### Win-Win Is the Only Alternative

A few years ago, FranklinCovey was working with a telecommunications company that was laying cable in cities across the United States. In most cases, cities were eager to have the cable laid, in spite of the temporary disruptions it caused. One ma-

Habit 5 is powerful because it is right in the middle of your Circle of Influence. You can always seek first to understand.

jor city, however, was not keen on the idea. They knew that if they allowed one cable company to tear up the city, they would have to allow the same for every cable company that followed them. They did not want their city repeatedly torn up.

Negotiations ultimately came to a standstill. The city was not willing to proceed unless the company paid them a fee. The result would have been no cable access for the citizens (a loss for the city) and no access to thousands of customers (a loss for the company). They were headed for lose-lose.

One of the negotiators for the telecommunications company had recently been through the 7 Habits training. Under his leadership, the company went back to the city and said, "What if when we lay our cable, we also laid cable for two or three future providers? We'd turn over the cable access to them for less cost than what they would typically incur. Then the city would be torn up only once."

### The Better Choice

The city loved this idea. The cable was laid. When the competitors arrived, they were delighted to learn that the cable was already in the ground and at a much-reduced cost. So the city and its citizens won because their streets were not constantly torn up and they got their cable, and the competition won because they got their cable laid at lower rates.

But the biggest win was for the initial company: The two competitors paid them more than the installation had cost! They had laid their cable for free and picked up some spending money on the side.

## Habit 5: Seek First to Understand, Then to Be Understood®

Seek first to understand involves a deep shift in paradigm. We typically seek first to be understood. Most people do not listen with the intent to understand; they listen with the intent to reply. They're either speaking or preparing to speak.

Empathic listening is listening with the intent to understand. Empathic listening gets inside another person's frame of reference. You look out through it, you see the world the way they see the world, you understand their paradigm, you understand how they feel.

Empathic listening is powerful because it gives you accurate data to work with. It takes time but nowhere near the time that it takes to back up and correct misunderstandings when you're already miles down the road.

As you learn to listen deeply to other people, you will discover tremendous differences in perception. You will also begin to appreciate the impact these differences can have as people try to work together in interdependent situations.

### Then Seek to Be Understood

Seek first to understand. . .then to be understood. Knowing how to be understood is the second half of Habit 5 and equally critical to reaching Win/Win solutions. Seeking to understand requires consideration; seeking to be understood takes courage. Win/Win requires a high degree of both. So it becomes important in interdependent situations for us to be understood.

Habit 5 is powerful because it is right in the middle of your Circle of Influence. You can always seek first to understand. That's something within your control. And as you do it, your Circle of Influence begins to expand. Habit 5 is also something you can practice right now.

Select a relationship in which you sense the emotional bank account (a metaphor for trust) is in the red. Try to understand and write down the situation from the other person's point of view. In your next interaction, listen for understanding, comparing what you are hearing with what you wrote down. How valid were your assumptions? Did you really understand that individual's perspective?

### Listening Empathically: For Leaders

Listening empathically gets even harder when you're in a leadership position, because people tend to defer to authority. That is why so many senior leaders are poor listeners and do most of the talking anytime they're in the room.

If you are in a leadership role, do a gut check. The next time you're in a team meeting, ask yourself, "What percent-

age of the words spoken in this meeting today came from my own mouth?" If there were six people in the room and 80 percent of the words came from you, that is a problem.

There is a time and place for empathic listening. Use empathic listening when the topic is important, sensitive, or really personal, like when a colleague needs career advice, or if you're having a communication problem with a loved one. These conversations take time and can't be rushed. A good rule of thumb is to use empathy any time emotions are high. You don't need to do it in casual conversation or everyday small talk.

We increasingly communicate via text and email. Does that change anything about this habit? Yes. The use of technology strips out the tone of voice and facial expressions that help us empathize. So anytime you're dealing with an important, emotional issue, do not email or text. At some point, meet face-to-face, or at least talk it out over the phone. An emoji just isn't going to cut it.

Note that Habits 4, 5, and 6 are different but work together. Over the years, Franklin Covey has taught students the mnemonic root, route, and fruit. Habit 4: Think Win-Win is the foundation, or root, of effective relationships. The route for getting there is to practice Habit 5: Seek first to understand, then to be understood. And the fruit you produce by practicing Habits 4 and 5 is synergy, Habit 6.

## Habit 6: Synergize®

Exercising all the other habits prepares us for the habit of synergy. Synergy is the essence of principle-centered leadership. It catalyzes, unifies, and unleashes the greatest powers within people.

Simply defined, synergy means the whole is greater than the sum of its parts. It means that the relationship the parts have to one another is a part in and of itself. And it is not only a part but the most catalytic, the most empowering, the most unifying, and the most exciting part.

Life is a team sport, and with the right attitude and skills, you can find synergistic answers to complex problems—not all of the time but most of the time. You have to believe in the idea that by working together, we can find a solution that is better than what either of us had in mind.

A key building block to finding third alternatives (a solution that is mutually beneficial and is better than what either person originally proposed) is to set aside your ego and acknowledge that you need the collective intelligence of everyone involved to find the best solution.

Another building block is conversation. We must learn to communicate with one another. We need to brainstorm, talk through issues, bounce ideas off each other, and go back to the drawing board again and again and again.

### Synergy and Communication

It's phenomenal what openness and communication can produce. The possibilities of significant gain and improvement are so real that it's worth the risk such openness entails. Consider three different levels of communication and how closely they relate to trust:

**Defensive**. The lowest level of communication coming out of low-trust situations would be characterized by defensiveness, protectiveness, and often legalistic language, which covers all the bases and spells out qualifiers and the escape clause. Such communication only produces Win/Lose or Lose/Lose. It isn't effective, creating further reasons to defend and protect.

**Respectful**. The middle position is respectful communication, a level where fairly mature people interact. They communicate politely but not empathically. They may understand each other intellectually, but they really don't deeply look at the paradigms and assumptions underlying their own positions and become open to new possibilities. Respectful communication works in independent situations, but the creative possibilities are not opened up. Compromise is the position usually taken, meaning that 1+1=1½. Both give and take. It produces a low form of Win/Win.

**Synergistic**. Synergy means that 1+1 may equal 8, 16, or even 1,600. The synergistic position of high trust produces solutions better than any originally proposed, and all parties know it. They also genuinely enjoy the creative enterprise.

### A Tale of Tech Synergy

Sergey had been studying computer science at Stanford University for two years when he was assigned to help new students at spring orientation. That morning, he was slated to show a guy named Larry around the campus. They didn't hit it off right away and found each other quite obnoxious. They disagreed on nearly everything—but eventually they had so much fun contradicting each other on every topic that they became friends.

While both Sergey and Larry liked computers, they were total opposites. Sergey was a party guy; Larry was private

Essentially Habit 7 is preserving and enhancing the greatest asset you have—you.

and reserved. Sergey couldn't sit still; Larry had once painstakingly built a printer out of LEGO bricks.

When they later worked together as part of Larry's dissertation, they experimented with a new way to search the internet. At that time, you would type a word into the computer, and the internet would spit back how many times the word showed up and where.

Larry thought it would be interesting to search for links, not for words. He figured the more often a website was linked to other websites, the more important it was. Using his approach, search results would come up on your screen in order of importance.

### The Birth of BackRub

Sergey and Larry called their new program "BackRub" because it counted the number of links back to an original website. To run the program, they filled Larry's room with so many cheap computers that the university's network nearly shut down. So they moved their project into a friend's garage.

Years later, more than a billion people use BackRub—now called Google, the company Larry Page and Sergey Brin started in a dorm. The two college guys who founded Google rarely agreed on anything. What would have happened if they had always seen eye to eye?

Clearly, they needed each other's strengths to build one of the world's greatest companies. Neither could have done it alone.

Think about a person who typically sees things differently than you do. Consider ways in which those differences might be used as stepping stones to third alternative solutions. Perhaps you could seek out his or her views on a current project or problem, valuing the different views you are likely to hear.

**PART IV: RENEWAL**

## Habit 7: Sharpen the Saw®

Suppose you were to come upon someone in the woods working feverishly to saw down a tree.

"What are you doing?" you ask.

"Can't you see?" comes the impatient reply. "I'm sawing down this tree."

"You look exhausted!" you exclaim. "How long have you been at it?"

"Over five hours," he returns, "and I'm beat! This is hard work."

"Well, why don't you take a break for a few minutes and sharpen that saw?" you inquire. "I'm sure it would go a lot faster."

"I don't have time to sharpen the saw," the man says emphatically. "I'm too busy sawing!"

Habit 7 is about taking time to sharpen the saw. It surrounds the other habits on the Seven Habits paradigm because it is the habit that makes all the others possible.

### Four Dimensions of Renewal

Essentially Habit 7 is preserving and enhancing the greatest asset you have—you. It's renewing the four dimensions of your nature:

**Physical**—exercise, nutrition, stress management. The essence of renewing the physical dimension is to sharpen the saw, to exercise our bodies on a regular basis in a way that will preserve and enhance our capacity to work and adapt and enjoy.

**Spiritual**—value clarification and commitment, study, and meditation. Renewing the spiritual dimension provides leadership to your life. It's highly related to Habit 2. This dimension is your core, your center, and your commitment to your value system. It's a very private area of life and a supremely important one. Spiritual renewal takes an investment of time.

**Mental**—reading, visualizing, planning, writing. Most of our mental development and study discipline come through formal education. But as soon as we leave the external discipline of school, many of us let our minds atrophy. There is no better way to inform and expand your mind on a regular basis than to get into the habit of reading good literature.

Writing is another powerful way to sharpen the mental saw. Keeping a journal of our thoughts, experiences, insights, and learning promotes mental clarity, exactness, and context.

**Social/emotional**—service, empathy, synergy, intrinsic security. The social and the emotional dimensions of our lives are tied together because our emotional life is primarily, but not exclusively, developed out of and manifested in our relationships with others.

This dimension centers on Habits 4, 5, and 6—principles of interpersonal leadership, empathic communication, and creative cooperation. If our personal security comes from sources within ourselves, then we have the strength to practice the habits of public victory.

### A Masterpiece from Sharpening the Saw

In 2008, Lin-Manuel Miranda had been working nonstop for seven years to bring his first musical, *In the Heights*, to the Broadway stage. After winning four Tony Awards for his debut, he finally made time for a vacation to Mexico. He packed "a little light reading" for the beach: *Alexander Hamilton*, by Ron Chernow—the exhaustive biography of a mostly forgotten founding father.

"The moment my brain got a moment's rest, *Hamilton* walked into it," Miranda said in an interview with Arianna Huffington. "It's no accident that the best idea I've ever had in my life—maybe the best one I'll ever have in my life—came to me on vacation." From that seed of an idea, *Hamilton* went on to shatter records, become a cultural phenomenon, and win Miranda a Pulitzer Prize, an Emmy, a Grammy, and 11 Tony Awards!

So many jobs in today's knowledge worker age depend on wise decisions and good judgment. So much of our happiness depends on the quality of our relationships. You may think you don't have time to exercise, go to lunch with a friend, read a book, write in your journal, attend that conference, take a break, or go on a family vacation. In reality, you don't have time not to.

Change—real change—comes from the inside out. It doesn't come from hacking at the leaves of attitude and behavior with quick-fix Personality Ethic techniques. It comes from striking at the root—the fabric of our thought, the fundamental, essential paradigms, which give definition to our character and create the lens through which we see the world.

By centering our lives on correct principles and creating a balanced focus between doing and increasing our ability to do, we become empowered in the task of creating effective, useful and peaceful lives for ourselves and for our posterity.

Stephen R. Covey was an internationally respected leadership authority, family expert, teacher, organizational consultant, business leader, and author who dedicated his life to teaching principle-centered living and leadership to build both families and organizations. ***The 7 Habits of Highly Effective People*** was named the #1 most influential business book of the 20th century and has sold more than 40 million copies in over 40 languages. Sean Covey is a business executive, author, speaker, and innovator. He is the president of FranklinCovey Education and is devoted to transforming education throughout the world through a principle-centered leadership approach. He directs FranklinCovey's whole school transformation process, called Leader in Me®, which is now in more than 5,000 schools and 50 countries throughout the world.

## THE SUMMARY IN BRIEF

When someone at work takes the time to listen to you, they make you feel important and that what you said matters. When someone shares something that is happening to them at home, they feel gratitude for being given the time and for being heard. When a customer vents about what a business could be doing better to serve them, they will thank the listener profusely for hearing them out. The more we get this listening thing right, the more all employees will feel a sense of belonging and want to stay, and the more customers will feel appreciated and supported by us.

Conversely, when people fail to listen, those who have something to say are left feeling confused, disconnected, or even helpless. Heather B. Younger wrote ***The Art of Active Listening: How People at Work Feel Heard, Valued, and Understood*** to address these missed opportunities. In it she explains the idea of being a supportive, caring leader who actually listens to people and works to protect them from harm. No one at work is excluded from the need to actively listen and can learn how to do so effectively with the process outlined in this book.

## IN THIS SUMMARY, YOU WILL LEARN:

- How to recognize the unsaid.
- The importance of seeking to understand.
- Three action steps for sustainable change.
- How to close the loop.

## The Cycle of Active Listening

When we listen to someone, they receive our attention like a gift. When we hold space for them, asking questions and leading with curiosity, we send them the message that their voice holds weight and a place of importance in our heart.

Being a good listener has the potential to heal so many of the divisions between us. When we think about it that way, we realize listening is our most important responsibility.

The premise of ***The Art of Active Listening*** is that listening at work is flawed because people don't feel safe telling the truth, and listening is usually one-sided so it rarely produces any results or the outcomes that we are looking for.

You might understand the importance of making a conscious effort to hear and restate what others are saying, which is certainly a big part of how we need to think about listening. But that's not all that is needed.

Active listening is more of a doubling down, with the purpose of not only understanding another person, but also addressing any issues they raise in a way that makes them realize their opinions matter. Active listening is the doorway to increased belonging, loyalty, profitability, innovation, and so much more. It is the difference between *thinking* we understand what people want and *knowing* what they want.

Of course, one reason we might not want to listen in the first place is because we worry that we'll hear something we'd prefer not to address. This internal resistance can often be the biggest obstacle to listening at work and it is why leaning in to understand isn't enough on its own.

Follow through is vital and can be accomplished with a model called the Cycle of Active Listening, which is a continuous, dynamic, and never-ending process.

The Cycle of Active Listening can move organizational culture forward, but it requires a strong commitment to change–not just changing how we currently think about active listening, but also how we *demonstrate* our understanding through actions.

The following sections lay out each of the five steps of the Cycle of Active Listening that we need to take if we want to learn how to listen well at work.

## Recognize the Unsaid

Over thirty thousand engagement survey responses and years of working with organizations to transform employee engagement have shown clearly that when you know how to listen, people will tell you *exactly* what they need to bring their full selves to work. This starts with the first step in the Active Listening Cycle: recognizing the unsaid.

Recognizing the unsaid means paying attention, so that you can pick up on important signals–like someone's facial expressions, body language, or tone of voice. You take time to sense what someone might be thinking but hasn't revealed out loud yet. When you make an effort to notice when someone is holding back their feelings, opinions, or ideas, you recognize the unsaid.

Here are some examples of things people might be thinking, but not saying out loud, at work:

- "I wish management would show me that I'm valued here because I feel like I'm just a number to them."
- "The rapid pace of change seems disorganized, and it's stressing me out."
- "I feel like my team doesn't like me and excludes me from important conversations."
- "I'm your customer, but instead of providing what we need, you keep trying to sell us what we don't want."
- "The way you miss deadlines, or reschedule calls all the time, makes me think that I'm not an important client to you."

We have the power to *recognize the unsaid* when those around us are struggling or trying to send us a message. The customer who hasn't been calling in new orders, the prospect who stops returning our calls, the coworker who has stopped contributing in meetings…all are examples of opportunities to recognize the unsaid.

If we don't do our part, these are the same folks who will leave, seemingly out of the blue–although if we'd recognized the unsaid, we'd have noticed the signs all along.

If you're interested in transforming your ability to recognize the unsaid, you must start by cultivating a listening mindset that puts you in the best position to uncover what's true–and that can require patience. This advice holds true no matter your position at work.

Leadership teams need to work to build people's trust every day–for example, meeting more regularly with employees one-on-one instead of in large groups, demonstrating a consistent willingness to confront hard truths, and using

Recognizing the unsaid can be an uncomfortable experience, but there is necessary growth in that discomfort.

tough feedback to make changes.

If you can show that you value all opinions, all the time–and not just the ones people *think* you want to hear–people will feel safer speaking up in the long term.

We also need to recognize what we're personally leaving unsaid. If you work for a company with a culture that supports you to express yourself, and yet you don't speak up when something feels amiss, take the time to listen to what your gut is telling you before speaking to someone you trust.

By taking the time to go inward, you'll become more aware of what you personally need to thrive to work. You just have to be willing to listen closely, so that you can understand your needs and act accordingly.

Recognizing the unsaid often starts with facing the unknown and being prepared for whatever the truth may reveal–including when we need to take action in response to what we've learned.

The temptation can be to bury our heads in the sand because we don't feel prepared to deal with what could be an inconvenient reality. Recognizing the unsaid can be an uncomfortable experience, but there is necessary growth in that discomfort.

## Seek to Understand

By recognizing what's not being said and then seeking to better understand the truth you uncover, you'll be in a position to move on to the next step in the Cycle of Active Listening.

To become a better listener at work, you must seek to understand. That means stepping outside those experiences that shaped how *you* see the world, so you can gain an understanding of what drives other people.

Several elements must be present if you want to be successful in seeking out understanding: curiosity, open-mindedness, empathy, presence of mind, and a courageous spirit.

### Lead with Curiosity

When you're seeking to better understand others in similar ways, let down your guard enough to allow a sense of curiosity to shine through. Set your ego aside and see if you can maintain a sense of childlike wonder when listening to others.

Put aside what you think might be true, and listen not for what you want to hear, but for what you want to learn. Not only can you gain a greater understanding of a situation by cultivating curiosity, but also you can put your listening skills to good use by ensuring that the other person feels *valued*.

### Be Open-Minded and Minimize Assumptions

When seeking to understand, throw out your assumptions. That means entering into a conversation as if you were a blank slate, ready to receive what might be revealed. If you're to truly give the gift of active listening, and not hijack it for your own purposes, you *have* to stop predicting what's next based on the knowledge you already have.

Stay open and learn something new. Minimizing assumptions means not relying on what you infer to be true when it's time to listen in, dive deeper, and clarify your understanding.

### Flex Your Empathy Muscle

When someone seeks to understand where we're coming from, it completely shifts the energy running through any subsequent interaction. It makes you feel like they understand how you feel. Empathy is sensing the feelings and pain of another. We do this to try to understand what they are experiencing.

When we insert empathy into the active listening process, it helps make the conversation more about the person we're speaking with. Leaning in with empathy has more to do with quality than quantity. It's much more important to be fully present and make sure that the empathy we display is genuine.

### Be Fully Present

When seeking to understand, we should aim to make the people on the other end of our interactions feel that we are being present. One of the most important things you can

do for those you lead is set aside uninterrupted time to sit with them, one-on-one, and hear their thoughts.

Help them appreciate how much you value them with your presence. There's no better way to get to know someone other than to spend quality time with them. If you want to be known as an active listener, carve out time to be present with the people who look to you for guidance and support, so that you can seek to understand them better.

### Build Your Professional Courage

When something is wrong, it requires summoning courage to run toward the discomfort to address it, rather than running away from it. Sit down and ask a few leading questions. Continue to dig deeper, reflecting back on what you hear the other person say.

When you leave the tough interaction, the other person will know you've taken their concerns seriously and understood them. It can be easy to overcomplicate active listening, but we don't need to. We just need to invite more courage into our interactions with people whose opinions, ideas, and insights we want to harness.

## Decode

Whether you consider yourself a leader or not, you need to manage expectations and communicate when you can't solve every problem at once. Discerning which action items you will act on first, if any, is something you need to think carefully about if you want to avoid overpromising or getting people's hopes up. This process of discernment is called *decoding*.

To ensure that you're actively listening, you must slow down and take the time to decipher what someone tells you. That means interpreting what you've heard. Decoding is your opportunity to connect the dots between what someone said and what you should do about it.

When you decode, you have the opportunity to identify those changes that are likely to have the greatest impact. In other words, decoding allows you to see the complete picture.

As you think about how to master the art of active listening, remember the importance of decoding before you take action, so that you know what to do next. You might be tempted to jump to conclusions, but instead give yourself space to interpret what someone shares with you.

Reflect on what you hear before choosing whether and how to act. This reflection period lets the people in your presence see how important they are to you and helps you make informed decisions that will benefit more people in the long run.

The benefits of decoding are numerous. Here are two of them that demonstrate the critical role that decoding plays.

### Uncover Flawed Thinking

How many times have you left a meeting after a heated debate and realized you were on the wrong end of the argument? This happens to the best of us. When you discover that your assumptions were wrong, the first step is to release your initial desire to prove you were right, own your mistake, and reenter the conversation with more humility.

The second step is to admit your error to anyone who felt wronged by your assumptions, so that they see you're taking responsibility for your inaccurate thinking and behaviors. Approaching this type of situation from a place of vulnerability will help you build trust.

### Increase Collaboration

We can only get so far alone. When we embrace collaboration we are empowered to do more than we ever could by ourselves. Learning to relinquish control over different things on your plate helps you to learn to trust the gifts of others and enjoy more time for family and self-care.

The best part is, collaboration is a way to enlist the help of experts who help you stay on the leading edge. When you include more people in the process of decoding the information you receive, you have the chance to uncover connected problems and gain additional insights. Certain problems may never surface if you choose to act alone instead of collaborating.

It can be hard to find the patience to decode effectively but doing so is worthwhile. When you fail to interpret what you hear from people at work as a leader, you send them the message that they are inconsequential cogs in a big machine and not important to you or your organization.

## Act

There is a time to decode, and then there is a time to act–in that order. Taking action after you've followed the first three steps is the difference maker when it comes to active listening. That means signaling to others your commitment to help them. One act alone can send someone the message that they are valued, important, and more than just a means to an end.

When you're responsible for leading change in your organization, you'll see other people go through their own versions of resistance.

We need to remember that for every action we take, there is an equal and opposite reaction. When someone at work voices their concerns, and you act by hearing them out, you're likely to receive a positive reaction–such as a strengthened relationship and maybe even increased productivity or engagement.

On the other hand, if you choose not to address that person's concerns, the consequences of your inaction will likely entail a negative reaction–such as weakened relationships, low morale, a lost customer contract, or even someone's resignation.

It's not the size of the action that counts but the intent behind it–and the alignment of those actions to the person's original request. This is what determines an action's impact. That means your impact could be the same whether the action you take is big or small. The question to ask is, "Do my actions align with the person's expectations and meet their needs?"

No matter how committed you are to taking action, you have to be sure you can sustain it. Here are three proactive steps you can take to ensure that the changes you implement are sustainable.

### 1. Recognize the Need for Change

Whichever problem you're experiencing, even if you're aware of the issue but unsure of its origins, be assured that *someone* knows the root cause. Other people can be your greatest asset when it comes to diagnosing a problem and its source.

That's why it's imperative to ask the right questions and listen to what people tell you. Accept that people may not be saying out loud what could make the workplace culture better. Lean into the Cycle of Active Listening to meet that need to change head-on.

### 2. Cultivate a Desire for Change

We're hardwired to resist change. In fact, our bodies want to protect us from it–hence the release of stress-induced hormones that make us fight, flee, or freeze. When you're responsible for leading change in your organization, you'll see other people go through their own versions of resistance.

The best thing you can do in these situations is communicate. People are often more receptive than we think they are and more likely to embrace change if they feel their opinion is valued. If you lead a team, think about how the members might respond if you present the change to them in detail and ask for their opinion.

### 3. Build the Stamina Needed to Persist

One of the reasons people are so resistant to change is that the process can be drawn out, like a long and tedious race. Real change at work takes time, in the same way a new habit takes months to establish. You must show up to work prepared to take the actions necessary for change to take root.

Gathering as much input from employees as possible before changing anything is great, but that won't necessarily correlate to lasting impact. Once you've taken action, involve others by asking questions like, "What would be helpful to you in terms of next steps?" That will enable you to act based upon what they need as a priority to keep going.

You must believe in your organization's ability to achieve sustainable change. You must have faith in your ability to not only take action but also overcome any obstacles in your path.

## Close the Loop

The fifth step in the five-step process we follow if we want to listen effectively and positively engage those around us is to close the loop. Closing the loop is the connecting piece and it's easy for us to forget because it requires intentional effort. Closing the loop says the following:

- "I acted. Thank you for your feedback, and here's what I did about it."
- "I can't do anything about what you brought to my attention now, but I might be able to do something later."

- "I can't do anything about X, but I can do Y."

The same goes for customers. You can say, "We heard what you had to say, and here's what we're going to do about it," or "We heard what you had to say, and here's the end result."

You go back to the person who gave you the feedback–whether in a survey or in a one-on-one interaction or small group meeting–and let them know, "Thank you for your feedback. By the way, we heard you and here's what's next."

Closing the loop means you're communicating that you are planning to act on the input you received, are in the process of acting on that input, or already have acted. A little gratitude here goes a long way. When you genuinely thank someone for their input, they feel your appreciation and are likely to feel more connected to you as a result.

This step completes the Cycle of Active Listening, but then the cycle starts over again. Yes, you read that correctly. To be known as a great active listener, you have to be committed to doing it well, with everyone you encounter, and demonstrate your listening skills often.

This is not a one-and-done proposition but something that should be an ongoing part of all your interactions. You simply keep working the steps.

When exploring how they might apply the Cycle of Active Listening, people often find that closing the loop is one of the hardest for many at work.

This is because people don't realize that listening to someone requires any action at all and that following up with those who have given feedback is like the period at the end of a sentence. It completes the active listening process.

Many of us tend to be check-the-box people. We think the effort toward something, without full commitment, should be good enough. Our check-the-box-thinking causes us to mistakenly assume there is one quick-and-simple solution to solve a particular workplace challenge. But the answer is rarely quick and simple.

When organizations get listening to employees and customers right, it positively impacts customer loyalty, employee morale, and a company's bottom line. Embrace the entire process of active listening, and don't consider it done until you've closed the loop on all feedback.

The very act of closing the loop makes others feel a part of the change they seek, a part of something bigger.

## Are You Ready to Become a Better Active Listener?

We're at a difficult time in our history. We've become oblivious to the needs of others because we fail to listen. People everywhere feel helpless, ignored, and unimportant to the people they work with.

This, in some ways, was heightened by the move to more remote work, but it has been its own epidemic for some time. Listening at work is the single most important thing we can do to create more hope, a deeper sense of importance and belonging, and a desire to stay invested for the long haul.

Listening is not only a way to connect with people. We give others at work their power back when we commit to listening to them in the way outlined in ***The Art of Active Listening***.

This is true in all areas of our lives.

Those in our presence no longer feel like numbers on a spreadsheet or a means to an end–they finally feel heard, valued, and understood for who they are as people.

People often don't want us to fix or solve a problem for them. Most times, people come to us simply because they need an ear. They long to form relationships with people interested enough to give them their undivided attention.

In a world focused on action, there are many cases that can't be fixed. There are many times when people don't need a solution from us. Sometimes, just hearing someone out is all we need to do.

This is true as leaders of teams, as leaders of households, and as leaders in our communities. You can be the spark. Go out and change your little corner of the world by demonstrating the art of active listening.

Active listening is the doorway to increased belonging, loyalty, profitability, innovation, and so much more. It is the difference between thinking we understand what people want and knowing what they want.

Heather R. Younger is the CEO of Employee Fanatix, a leading workplace culture and employee engagement consulting and training firm. She is a highly sought-after keynote speaker, bringing the best insights from over 25,000 employee stories to the stage. A diversity, equity, and inclusion strategist, Heather is an expert in creating safe spaces for these vital conversations. She is also a trusted expert for stories on culture, workplace engagement, and employee retention, contributing to leading news outlets.

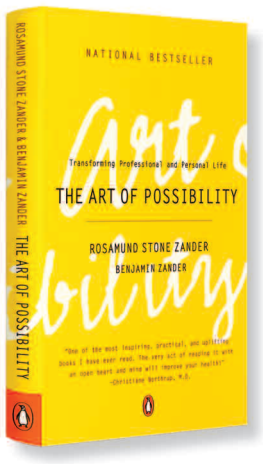
# Re-Envision Your Organization and Your Life



by Chris Lauer

## THE ART OF POSSIBILITY

**by Rosamund Stone Zander and Benjamin Zander**

*© 2002, Penguin Books, 210 pages, $15.00, ISBN 978-0-14-200110-3*

Every individual's unique perspective of the world influences everything he or she sees, says and does. While that might seem simple enough, much can be gained by recognizing that a single perspective might also be a limiting factor. It can shut out the possibilities available if that perspective were to be transformed. Shifting perspectives to new angles is what Rosamund Stone Zander and Benjamin Zander intended when they wrote *The Art of Possibility* in 2000. Since then, their work has continued to elevate the perspectives of thousands of readers and organizational leaders by providing them with a multitude of guided insights. The ideas are culled from visionaries who have worked with talented people and organizations for decades, creating limitless possibilities for better work and life.

While many business books are self-help books disguised as organization-help books, *The Art of Possibility* makes no bones about its intended reader: When you change your own perspective, your organization stands a better chance. When you rethink your basic assumptions and perceptions with a better view of the possibilities, the decisions you make for yourself and your organization improve.

Innovation and creativity — two fundamental tools of organizational growth — rely on a deep capacity for taking risks and thinking outside the box. Offering business leaders a series of principles for developing the ability to see the powerful possibilities that lurk all around us, the authors of *The Art of Possibility* describe how different views of the events, people and things around us can be illuminated so anyone can draw them out.

### A Different Approach

The authors are a husband-and-wife team of intelligent professionals with many impressive credentials to back up the lessons and perspectives they advocate.

Rosamund Stone Zander is an executive coach and family systems therapist who has spent many years developing models for leadership, relationships and effective action. Her theory of human development that permeates *The Art of Possibility* promotes creativity as an essential adult capacity. She has conducted workshops for the British Civil Service, the Aspen Institute, National Public Radio, the World Economic Forum and many others, introducing leaders around the world to her ideas and programs.

### The Corporate Conductor

The concepts found throughout *The Art of Possibility* also spring from the experiences of Benjamin Zander, who has been the conductor of the Boston Philharmonic since it was formed in 1979. For more than three decades, Zander has shared his ideas and musical philosophies as a guest conductor with many of the world's top orchestras. He also gives regular performances with the Philharmonia Orchestra of

London, with whom he recently recorded the complete cycles of Beethoven and Mahler symphonies.

Benjamin has also been speaking to major organizations about leadership and creativity for the past 10 years. In 1999, he was honored with the Crystal Award at the World Economic Forum in Davos, Switzerland, for his outstanding contribution to cross-cultural understanding. Part of that understanding is his deep belief in the art of possibility.

## A Different Lens

In *The Art of Possibility*, the Zanders describe how they are continually striving to see the world through a wider lens that focuses beyond scarcity and survival to a world of abundance and passion. Constantly polishing that lens to remove the things that block a clearer perspective of possibility can help anyone see what others miss. It can also help people at all levels get more from their lives than they would if they remained blind to the many options hiding beneath the surface of everyday life.

**The Zanders describe how they are continually striving to see the world through a wider lens ... Constantly polishing that lens to remove the things that block a clearer perspective of possibility can help anyone to see what others miss.**

The Zanders aim to help others see what Michelangelo saw when he looked at a block of marble or stone. A rock in the master artist's eyes was not merely a rock. It was a beautiful statue just waiting to be revealed once the excess material had been removed. That's the type of perspective on life that comes from practicing the art of possibility that the Zanders describe. Life and everything in it can be simply viewed as products of nature and nurture, or they can be seen for all of the greatness that is possible when better, often hidden, ideas and observations are focused into more creative actions and behaviors.

The authors write that we can all change how we think, but we usually need a little help tapping into the possibilities of the moment when faced with difficult demands. To help readers recall the lessons within *The Art of Possibility*, the Zanders have created a series of catchphrases that can guide readers back to the ideas and perspectives that have been presented. A dozen of these catchphrases and the cleverly prepared life lessons to which they are attached fill *The Art of Possibility*. The phrases capture not only a dozen principles behind the art of possibility, but 12 simple ways to recall them when they are needed most.

## 'It's All Invented'

For example, the Zanders' launch into their journey through the universe of possibility with the insight, "It's all invented." What they mean is that everything that we take for granted is often merely an assumption. When we discard these assumptions and get past an obsolete survival mentality or scarcity mentality, we can find a better and more flexible life. We can also create better organizations where people take smarter risks, roll with the punches and emerge stronger and better able to maximize their potential. The lesson the Zanders present can best be described as thinking outside the box while knowing that the box was just an imaginary construction that we invented in our own minds. When we get outside of that box, and we imagine the possibilities beyond artificial constraints and find ways to ask better questions when faced with uncertainty, we make better decisions that are not bogged down by obstacles that might have once helped us stay safe but are no longer needed.

Insightful stories from the realms of physical science, anthropology, biology, art and the authors' personal experiences decorate the ideas that are presented throughout the Zanders' book. Vignettes from the lives of many legendary men and women illustrate how great minds from the past and present have been able to make valuable breakthroughs. These innovations have changed how we think by cultivating better ways of seeing what was once taken for granted.

## Seeing Beyond Assumptions

It is easy to believe that everything that can be seen is visible with our human eyes. The proof is right in front of us, much like the many other assumptions we make about our lives and organizations every day. But what about the things that other creatures can see? Bees see patterns in the ultraviolet light reflected by flowers. Owls can see in the dark. Frogs are able to see and catch insects better than humans. Likewise, many other types of things flit past our senses and perceptions. That's why it is important to always remember that there are other ways to view what we think is so obvious. If we are missing so much information that is out there but beyond our view, perhaps it

makes perfect sense that we might also be missing other facts and possibilities because of our assumptions in other areas.

By remembering and practicing the mantra "It's all invented," the Zanders' write, we can better invent the spaces in our lives where we can build even better organizations and personal relationships.

That lesson is just one of the 12 practices that is offered in *The Art of Possibility*. The other principles go even deeper into the world of possibility. One way to see the difference between our usual way of thinking and the other way described by the authors is to see the difference between what they call "the world of measurement," which is based on competition, grades and comparisons, and another realm where more and better possibilities are available because it is open to the unlimited resources of our imagination.

## The Power of a Fallible Maestro

One of the highlights of *The Art of Possibility* is the inside look it offers into the lives of its co-authors, especially Benjamin Zander's life as a world-class conductor. Since the genre was first developed, business books have compared the relationship between a conductor and his or her orchestra to the relationship between a business leader and his or her organization. This is because both rely on the leader's ability to motivate all of his or her people to move in the right direction to create harmonious accomplishments. This is only possible when everyone is doing his or her individual job correctly. This is how the different parts of a huge orchestra combine to create a single, beautiful accomplishment. Zander recognizes this fact, but he also takes the metaphor of conductor-as-business-leader in a different direction by pointing out that few jobs are as totalitarian as the conductor's role in an orchestra.

Many conductors throughout history have seen themselves as flawless maestros who will only accept fawning questions rather than true critical assessments from their musicians. Zander writes that it was not until 20 years into his career that he had a revelation. He realized that his power as a conductor was less derived from his ability to make himself better as a conductor and interpreter of a composer's music than it was about how well he could engage and invigorate his musicians. Once he started seeing his leadership role in this new light, he recalls, his attention shifted to enabling his musicians rather than pleasing his audience and critics.

When he began to recognize his new role as a mentor to the musicians he conducted, he began to connect with the members of his orchestra better than ever before, which helped him improve his skills as their leader. To the surprise of the musicians he was conducting in the Philharmonia Orchestra of London, he broke with the tradition that painted conductors as infallible. Instead, he began to readily admit his mistakes to those he was leading. Leaders in any type of organization can learn from the personal experiences at the podium that he relates. Breaking free from the traditionally hierarchical confines of a conductor is what the Zanders mean when they propose their principle "Lead from any chair." In other words, the leader/follower dynamic can often waste much of the talent that is available if it leads to only one-way, top-down communication. The old hierarchy creates intimidated employees who are too afraid to confront a leader with apparent mistakes.

## How to Improve Give-and-Take

To facilitate a better give-and-take between an organization's people and the person who stands at the top, Benjamin Zander explains that he has initiated a practice within his orchestra that helps to create valuable coaching that moves up and down all levels of the group. Zander puts a blank sheet of paper on the stand of every member of his orchestra and invites the musicians to give him whatever feedback each one feels can help him "empower them to play the music more beautifully."

Although he was prepared to face vast criticism from his players, instead he generated a level of trust that he had never seen before. Comments on these "white sheets" moved from basic practical issues about the connection between the musicians' parts and the music they were performing to deeper insights that helped him better understand his role and methods.

Zander writes that some of the comments he receives on these white sheets are so insightful about his interpretation of the music that he takes them to the podium when he is conducting. By spreading this unique practice to all of the orchestras that he conducts, he is better able to tap into the brilliance of the exceptional artists in these organizations. To connect what he has learned with the person who initiated a change in tempo or the restructuring of a song, for example, Zander writes that he makes eye contact with that person at the moment the change occurs during the performance. This simple action, he explains, provides a sense of pride and delight among his musicians that would have been impossible if old-fashioned conducting styles and relationships were still in place.

Another way that the conductor empowers his people while also learning from them is to ask one of his orchestra's musicians to conduct a passage or a piece while he listens from the back of the room. The result is more than just another perspective from which he can hear the music, but a sometimes life-changing experience for the musician who might have never had a similar chance to see, hear and feel the piece from the perspective of the conductor.

## Lighting a Spark

Another principle that highlights the Zanders' collection of provocations toward the joy and importance of looking at the world through the lens of possibility is the concept of "lighting a spark." Everyone can benefit by looking past the usual choices and igniting the future with the "spark of possibility," the co-authors write. The active ingredient in the formula for creating better possibilities is the fire of passion and the best way to extinguish that flame is with fear.

One way to bypass that fear and ignite the passion and possibilities in others, the authors explain, is through the practice of enrollment. Rather than pressuring people into seeing things your way, or fighting with them to do what you want them to do, enrolling them "is the art and practice of generating a spark of possibility for others to share," the Zanders write. To demonstrate the power of enrollment, Benjamin tells the story of how he was able to get the world's greatest cellist to play a solo during a performance by the New England Conservatory orchestra. By enrolling him through their mutual love of the piece's composer and the close connection Zander made with the cellist when he flew from Boston to Washington to meet him in person, the possibility of a great performance was turned into reality.

Spreading the spark of possibility to others through your own passion is what enrollment is all about. The steps, according to the authors, can help anyone do this by imagining that other people are already prepared to get enrolled.

**When persuasion and instigation are not working for you, the co-authors explain, simply remember to 'light a spark.'**

Your next step is to present yourself as a willing participant who is available for whatever inspiration emerges. Making a passionate offer comes next, followed by the belief that other people are just as excited about the possibility as you are. When persuasion and instigation are not working for you, the co-authors explain, simply remember to "light a spark." By aligning your interests with those of others and enrolling other people into your passion, you can capture the power of possibility and create stronger relationships along the way.

## Groundbreaking Ideas

Filled with simple yet profound ideas such as these, along with a passionate look at the wonderful power of possibilities, *The Art of Possibility* captures the potential of people and their organizations like few other books can. It is no wonder that it is a *New York Times* bestseller that has sold more than 500,000 copies worldwide since it was first published in 2000 by Harvard Business School Press. Filled with the wonder and excitement found during the professional and personal lives of both a world-class conductor and an innovative psychotherapist, *The Art of Possibility* captures some of the most important yet overlooked concepts that leaders can use to improve themselves and their organizations. The practices the Zanders describe are not simply rules for fixing specific things, they are valuable tools for transforming anything through the power of infinite possibility. ●

**The authors:** Rosamund Stone Zander is a pioneer in the field of leadership and relationships. As a family therapist and an executive coach, she develops models for leadership and effective action. She has designed programs and workshops for global corporations as well as government agencies, including Hampton/Hilton Inns, IBM, Whirlpool, The Bureau of Public Debt, Harvard Medical School and Carnegie Mellon University.

Benjamin Zander has been on the faculty of the New England Conservatory in Boston for 35 years. He is also the artistic director of the music program at the Walnut Hill School, a boarding high school for highly accomplished young performing artists. He teaches master classes all over the world, including a class for conductors as part of the London Master Classes at the Royal Academy in London.

## THE SUMMARY IN BRIEF

In ***The Art of War***, Sun Tzu describes his experiences and things he has learned in war as a Chinese general. Not only can these tactics be used in war, but also in business and everyday life. The book focuses on many themes, such as adaptability and leadership while incorporating the importance of strategy and precise planning. Furthermore, Sun Tzu emphasizes the importance of knowing yourself and how one should analyze and use their strengths and weaknesses.

***The Art of War*** is broken into thirteen chapters, each focusing on an important part of war and victory. Sun Tzu uses his own experiences on these topics to guide people and show them how to succeed. While the book was written many years ago, the work remains timeless as it translates across time and location.

## IN THIS EXECUTIVE BOOK SUMMARY:

- Learn why strategy is just as important as force.
- Discover your strengths and weaknesses and learn how to use them.
- Adapt techniques on how to be flexible when plans fall through.
- Understand your fears and motivations.

## Laying Plans

**Sun Tzu said: The art of war is of vital importance to the State.**

The art of war, then, is governed by five constant factors, to be taken into account in one's deliberations, when seeking to determine the conditions obtaining in the field:

1. The Moral Law: causes the people to be in complete accord with their ruler, so that they will follow him regardless of their lives, undismayed by any danger.
2. Heaven: night and day, cold and heat, times and seasons
3. Earth: comprises distances, great and small; danger and security; open ground and narrow passes; the chances of life and death.
4. The Commander: stands for the virtues of wisdom, sincerely, benevolence, courage and strictness.
5. Method and discipline: the marshaling of the army in its proper subdivisions, the graduations of rank among the officers, the maintenance of roads by which supplies may reach the army, and the control of military expenditure.

Therefore, in your deliberations, when seeking to determine the military conditions, let them be made the basis of a comparison, in this wise:

1. Which of the two sovereigns is imbued with the Moral law?
2. Which of the two generals has most ability?
3. With whom lie the advantages derived from Heaven and Earth?
4. On which side is discipline most rigorously enforced?
5. Which army is stronger?
6. On which side are officers and men more highly trained?
7. In which army is there the greater constancy both in reward and punishment?

## Waging War

**Sun Tzu said: In the operations of war, there are in the field a thousand swift chariots, as many heavy chariots, and a hundred thousand mail-clad soldiers.**

When you engage in actual fighting, if victory is long in coming, then men's weapons will grow dull and their ardor will be damped. If you lay siege to a town, you will exhaust your strength.

There is no instance of a country having benefited from prolonged warfare.

Bring war material with you from home, but forage on the enemy.

Contributing to maintain an army at a distance causes the people to be impoverished.

The proximity of an army causes prices to go up; and high prices cause the people's substance to be drained away. Hence a wise general makes a point of foraging on the enemy.

Now in order to kill the enemy, our men must be roused to anger; that there may be advantages from defeating the enemy, they must have their rewards.

In war, then, let your great object be victory, not lengthy campaigns.

## Attack by Strategem

**Sun Tzu said: In the practical art of war, the best thing of all is to take the enemy's country whole and intact; to shatter and destroy it is not so good.**

The highest form of generalship is to balk the enemy's plans; the next best is to prevent the junction of the enemy's forces; the next in order is to attack the enemy's army in the field; and the worst policy of all is to besiege walled cities.

It is the rule in war, if our forces are ten to the enemy's one, to surround him; if five to one, to attack him; if twice as numerous, to divide our army into two.

If equally matched, we can offer battle; if slightly inferior in numbers, we can avoid the enemy; if quite unequal in every way, we can flee from him.

There are three ways in which a ruler can bring misfortune upon his army:

1. By commanding the army to advance or to retreat, being ignorant of the fact that it cannot obey.

Learn to brag. You are not bragging, you are informing. You must inform your boss of the work you complete and the effort it takes when they are not present.

2. By attempting to govern an army in the same way as he administers a kingdom, being ignorant of the conditions which obtain in an army.
3. By employing the officers of his army without discrimination, through ignorance of the military principle of adaptation to circumstances.

There are five essentials for victory:

1. He will win who knows when to fight and when not to fight.
2. He will win who knows how to handle both superior and inferior forces.
3. He will win whose army is animated by the same spirit throughout all its ranks.
4. He will win who, prepared himself, waits to take the enemy unprepared.
5. He will win who has military capacity and is not interfered with by the sovereign.

If you know the enemy and know yourself, you need not fear the result of a hundred battles. If you know yourself but not the enemy, for every victory gained you will also suffer a defeat. If you know neither the enemy nor yourself, you will succumb in every battle.

## Tactical Dispositions

**Sun Tzu said: The good fighters of old first put themselves beyond the possibility of defeat, and then waited for an opportunity of defeating the enemy.**

The good fighter is able to secure himself against defeat, but cannot make certain of defeating the enemy.

He wins his battles by making no mistakes. Military method to control success:

1. Measurement owes its existence to Earth;
2. Estimation of quantity to Measurement;
3. Calculation to Estimation of quantity;
4. Balancing of chances to Calculation; and
5. Victory to Balancing of chances.

## Energy

**Sun Tzu said: The control of a large force is the same principle as the control of a few men: it is merely a question of dividing up their numbers.**

Fighting with a large army under your command is no different from fighting with a small one: it is merely a question of instituting signs and signals.

In battle, there are not more than two methods of attack—the direct and the indirect; Simulated disorder postulates perfect discipline, simulated fear postulates courage; simulated weakness postulates strength.

Hiding order beneath the cloak of disorder is simply a question of subdivision; One who is skillful at keeping the enemy on the move maintains deceitful appearances, according to which the enemy will act.

## Weak Points and Strong

**Sun Tzu said: Whoever is first in the field and awaits the coming of the enemy, will be fresh for the fight; whoever is second in the field and has to hasten to battle will arrive exhausted.**

Therefore the clever combatant imposes his will on the enemy, but does not allow the enemy's will to be imposed on him. You can be sure of succeeding in your attacks if you only attack places which are undefended.

Hence that general is skillful in attack whose opponent does not know what to defend; and he is skillful in defense whose opponent does not know what to attack.

If we do not wish to fight, we can prevent the enemy from

engaging us even though the lines of our encampment be merely traced out on the ground.

We can form a single united body, while the enemy must split up into fractions. The spot where we intend to fight must not be made known. If the enemy sends reinforcements everywhere, he will everywhere be weak.

Knowing the place and the time of the coming battle, we may concentrate from the greatest distances in order to fight. Carefully compare the opposing army with your own, so that you may know where strength is superabundant and where it is deficient.

Do not repeat the tactics which have gained you one victory, but let your methods be regulated by the infinite variety of circumstances.

## Maneuvering

**Sun Tzu said: In war, the general receives his commands from the sovereign.**

Having collected an army and concentrated his forces, he must blend and harmonize the different elements thereof before pitching his camp. After that, comes tactical maneuvering, than which there is nothing more difficult. Maneuvering with an army is advantageous; with an undisciplined multitude, most dangerous.

We are not fit to lead an army on the march unless we are familiar with the face of the country—its mountains and forests, its pitfalls and precipices, its marshes and swamps. In war, practice dissimulation, and you will succeed.

When you plunder a countryside, let the spoil be divided amongst your men; when you capture new territory, cut it up into allotments for the benefit of the soldiery.

Now a soldier's spirit is keenest in the morning; by noonday it has begun to flag; and in the evening, his mind is bent only on returning to camp. This is the art of studying moods.

Disciplined and calm, to await the appearance of disorder and hubbub amongst the enemy:—this is the art of retaining self-possession.

To be near the goal while the enemy is still far from it, to wait at ease while the enemy is toiling and struggling, to be well-fed while the enemy is famished:—this is the art of husbanding one's strength.

To refrain from intercepting an enemy whose banners are in perfect order, to refrain from attacking an army drawn up in calm and confident array:—this is the art of studying circumstances.

It is a military axiom not to advance uphill against the enemy, nor to oppose him when he comes downhill. Do not pursue an enemy who simulates flight; do not attack soldiers whose temper is keen.

Do not swallow bait offered by the enemy. Do not interfere with an army that is returning home. When you surround an army, leave an outlet free. Do not press a desperate foe too hard.

## Variation in Tactics

**Sun Tzu said: In war, the general receives his commands from the sovereign, collects his army and concentrates his forces.**

When in difficult country, do not encamp. In country where high roads intersect, join hands with your allies. Do not linger in dangerously isolated positions.

Hence in the wise leader's plans, considerations of advantage and of disadvantage will be blended together.

Reduce the hostile chiefs by inflicting damage on them; and make trouble for them, and keep them constantly engaged. There are five dangerous faults which may affect a general:

1. Recklessness, which leads to destruction;
2. cowardice, which leads to capture;
3. a hasty temper, which can be provoked by insults;
4. a delicacy of honor which is sensitive to shame;
5. over-solicitude for his men, which exposes him to worry and trouble.

## The Army on the March

**Sun Tzu said: We come now to the question of encamping the army, and observing signs of the enemy. Pass quickly over mountains, and keep in the neighborhood of valleys.**

Camp in high places. When an invading force crosses a river in its onward march, do not advance to meet it in mid-stream.

All armies prefer high ground to low. When the enemy is

Manage the patterns, not the person. As a manager, you need to be able to identify patterns in behavior rather than merely symptoms.

close at hand and remains quiet, he is relying on the natural strength of his position. When he keeps aloof and tries to provoke a battle, he is anxious for the other side to advance.

If his place of encampment is easy of access, he is tendering a bait. Movement amongst the trees of a forest shows that the enemy is advancing.

Humble words and increased preparations are signs that the enemy is about to advance. When the light chariots come out first and take up a position on the wings, it is a sign that the enemy is forming for battle. Peace proposals unaccompanied by a sworn covenant indicate a plot.

When some are seen advancing and some retreating, it is a lure. When the soldiers stand leaning on their spears, they are faint from want of food.

If those who are sent to draw water begin by drinking themselves, the army is suffering from thirst. If the enemy sees an advantage to be gained and makes no effort to secure it, the soldiers are exhausted.

When an army feeds its horses with grain and kills its cattle for food, and when the men do not hang their cooking-pots over the camp-fires, showing that they will not return to their tents, you may know that they are determined to fight to the death.

## Terrain

**Sun Tzu said: We may distinguish six kinds of terrain, to wit:**

1. Accessible ground: Ground which can be freely traversed by both sides
2. Entangling ground: Ground which can be abandoned but is hard to re-occupy
3. Temporizing ground: When the position is such that neither side will gain by making the first move
4. Narrow Passes: if you can occupy them first, let them be strongly garrisoned and await the advent of the enemy.
5. Precipitous heights: if you are beforehand with your adversary, you should occupy the raised and sunny spots
6. Far from the enemy: If you are situated at a great distance from the enemy, and the strength of the two armies is equal, it is not easy to provoke a battle.

Now an army is exposed to six several calamities, not arising from natural causes, but from faults for which the general is responsible. These are:

1. Flight: Other conditions being equal, if one force is hurled against another ten times its size, the result will be the flight of the former.
2. Insubordination: When the common soldiers are too strong and their officers too weak,
3. Collapse: When the officers are too strong and the common soldiers too weak,
4. Ruin: When the higher officers are angry and insubordinate,
5. Disorganization: When the general is weak and without authority,
6. Rout: When a general allows an inferior force to engage a larger one, or hurls a weak detachment against a powerful one.

If fighting is sure to result in victory, then you must fight, even though the ruler forbid it; if fighting will not result in victory, then you must not fight even at the ruler's bidding.

Regard your soldiers as your children, and they will follow you into the deepest valleys.

## The Nine Situations

**Sun Tzu said: The art of war recognizes nine varieties of ground:**

1. Dispersive ground: When a chieftain is fighting in his own territory. Fight not.

2. Facile ground: when he penetrated into hostile territory but to no great distance. Halt not.
3. Contentious ground: Ground the possession of which imports great advantage to either side. Attack not.
4. Open ground: Ground on which each side has liberty of movement. Do not try to block the enemy's way.
5. Ground of intersecting highways: Ground which forms the key to three contiguous states, so that he who occupies it first has most of the Empire at his command. Join hands with your allies.
6. Serious ground: When an army has penetrated into the heart of a hostile country, leaving a number of fortified cities in its rear. Gather in plunder.
7. Difficult ground: all country that is hard to traverse. Keep steadily on the march.
8. Hemmed-in ground: Ground which is reached through narrow gorges, and from which you can only retire by tortuous paths. Resort to stratagem.
9. Desperate ground: Ground on which you can only be saved from destruction by fighting without delay. Fight.

Rapidity is the essence of war. Make forays in fertile country in order to supply your army with food. Carefully study the well-being of your men.

Throw your soldiers into positions whence there is no escape, and they will prefer death to flight. If they will face death, there is nothing they may not achieve.

Confront your soldiers with the deed itself; never let them know your design.

Place your army in deadly peril, and it will survive; plunge it into desperate straits, and it will come off in safety.

## The Attack by Fire

**Sun Tzu said: There are five ways of attacking with fire:**

1. Burn the soldiers in their camps
2. Burn stores
3. Burn baggage
4. Burn arsenals and magazines
5. Drop fire on the enemy

In order to carry out an attack, we must have means available. The proper season is when the weather is very dry. In attacking with fire, one should be prepared to meet five possible developments:

1. When fire breaks out inside to enemy's camp, respond at once with an attack from without.
2. If there is an outbreak of fire, but the enemy's soldiers remain quiet, bide your time and do not attack.
3. When the force of the flames has reached its height, follow it up with an attack, if that is practicable; if not, stay where you are.
4. If it is possible to make an assault with fire from without, do not wait for it to break out within, but deliver your attack at a favorable moment.
5. When you start a fire, be to windward of it. Do not attack from the leeward.

No ruler should put troops into the field merely to gratify his own spleen; no general should fight a battle simply out of pique.

If it is to your advantage, make a forward move; if not, stay where you are.

## The Use of Spies

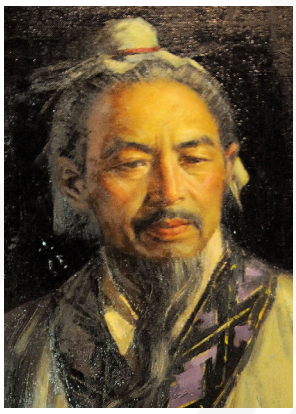
**Sun Tzu said: Raising a host of a hundred thousand men and marching them great distances entails heavy loss on the people and a drain on the resources of the State.**

Knowledge of the enemy's dispositions can only be obtained from other men. Hence the use of spies, of whom there are five classes:

1. Local spies: inhabitants of a district
2. Inward spies: officials of the enemy
3. Converted spies: getting hold of the enemy's spies and using them for our own purposes.
4. Doomed spies: doing certain things openly for purposes of deception, and allowing our spies to know of them and report them to the enemy.
5. Surviving spies: those who bring back news from the enemy's camp.

Hence it is that which none in the whole army are more intimate relations to be maintained than with spies.

If a secret piece of news is divulged by a spy before the time is ripe, he must be put to death together with the man to whom the secret was told.



The enemy's spies who have come to spy on us must be sought out, tempted with bribes, led away and comfortably housed.

The end and aim of spying in all its five varieties is knowledge of the enemy; and this knowledge can only be derived, in the first instance, from the converted spy. Hence it is essential that the converted spy be treated with the utmost liberality.

Spies are a most important element in war, because on them depends an army's ability to move.

## Conclusion

***The Art of War*** remains a classic that can assist people in various parts of their lives. Sun Tzu is able to offer a guide to show others how to be strong leaders and how to consider different strategies. This results in learning the skills for conflict resolution and knowing when and how to confront one's enemies. These tools can be used in everyday life and challenges people to think through various tactics to win without fighting.

Sun Tzu, a military general and strategist who lived in ancient China, is one of East Asia' s most important historical figures. Traditional historians believe that he lived between 544– 496 B.C. Sun Tzu' s birth name was Sun Wu; the name he is well known with is an honorific that means " Master Sun." He is most famous for writing ***The Art of War***, a timeless classic and one of the most important works of Eastern literature.

## THE SUMMARY IN BRIEF

We are always presenting ourselves, whether through formal pitches, informal communications, or interviews for a promotion or an entirely new job. This book addresses some important cutting-edge questions such as: what if instead of thinking authenticity is all about you, you thought of it as being about you and others? What if you could turn your greatest wound into your greatest authentic gift to give? What if instead of thinking of authenticity as a trait like integrity, we reimagined it as a skill that we can learn to become more authentic?

Dr. Sharon Lamm-Hartman wrote ***The Authenticity Code™***, because, in the case of communications, those who fake it will never make it. Success in any endeavor demands authenticity, and breaking the code requires this formula: Your Presence + Your Audience + Your Presentation = Your Success. Authenticity is your most powerful way of adding value by expressing your unique gifts and talents for your chosen audience.

## IN THIS SUMMARY, YOU WILL LEARN:

- To focus on your audience for maximum effectiveness.
- To hook your listeners with a strong beginning.
- The elements that make up a cohesive presentation.
- To assess your progress as you prepare for impact.

## Know Your Audience and Yourself

To deliver the most effective presentation you possibly can, it's vital that you know as much about your audience as you can possibly ascertain. The more you know about your audience—especially the key decision maker(s)—the better your presentation will likely go.

### Appearance Matters

Let's say that someone gets hired to play the part of a character at Disneyland. They want to appear as Moana or even Aladdin or Mickey Mouse. If you want to work in a Disney Park, you are deliberately choosing your audience. Kids. Families. Disney management used to prohibit visible tattoos while employees were working.

Recently they changed their policy to allow cast members to show 'appropriate' visible tattoos, yet they still ask that employees choose hair colors that look natural. They ask their employees to think Disney with every move. Would Aladdin chew gum while flying on his magic carpet? Authenticity means dressing, speaking, and acting in ways that are consistent with a company and its culture. If you did not authentically fit with the culture and internal and external audiences, you would have chosen a different company with different audiences.

### Personalities

The people to whom you present all make decisions in different ways. Understanding what is important to them is a critical component for effective communication. If your decision maker is a point person and you are a people person—and you don't present according to their 'get to the point' preferences—you will completely lose your decision maker and, worse yet, frustrate them. The opposite also applies.

### Authentic Brand Statement

There is no point in beginning a journey without having some destination as a goal. The destination may ultimately change over time, but the initial destination is a vital place to begin. Your Authentic Brand Statement is your most powerful way of adding value by expressing your gifts and talents. It is a statement that describes what you came here to do and who you came here to be.

A brand statement may read like this one: I am the CEO of World Wide Synergistics who seeks out and hires the most competent, skilled, innovative individuals I can identify for every position that needs to be filled, and I inspire and empower them to succeed beyond their greatest expectations. I foster positive attitudes toward our company, and model healthy workplace relationships. I give this by encouraging, supporting, and motivating people to exceed what they thought was possible.

### More than a Presentation

It is difficult to separate the three parts of The Authenticity Code™ because your presence + your audience + your presentation are all critically important for success, and they mix together. The best example of how this works is a smoothie. Smoothies are made of whatever healthy stuff is found in the fridge: bananas, blueberries, strawberries, kiwi, celery, and leafy greens, such as kale. Kale may remind you of sandpaper, but when it's thoroughly blended with the other ingredients, it's not only delicious; it's also energizing! It offers significant health benefits. It's much the same when it comes to the 'ingredients' of The Authenticity Code™. They must be blended to achieve maximum effectiveness.

## Key To a Compelling Presentation

Once you have completed your audience-understanding matrix and know some basics about your audience, you need to plan and rehearse an attention-getting opening that will hook them to listen to you.

### Strong Beginning

When you begin a speech, a sales pitch, a job interview, or any other type of presentation, you only have 90 to 120 seconds to 'grab' your audience. There are time-tested ways to accomplish this daunting feat. The first way to grab attention is through a story. The second way to command attention is through humor. That being said, never begin with a joke, even if you think it won't offend anyone in your audience. Third is to use an analogy or metaphor. A solid fourth way to capture your audience's attention is by asking a question. And the fifth and final attention-getting technique is to begin with a quotation. Your first words would ideally be like a tasty appetizer that whets their appetite and interests them in the full-course meal. Make it short, fast, punchy, interesting, and creative.

### Clear Executive Summary

There are three key parts of an effective Executive Summary:

First, you state your purpose. In many cases, it is to educate or inform. You might be giving a project or program

update, sharing information on a new project or program proposal, describing the value of a product or service, or even sharing why you are the best candidate for a position you are interviewing for.

Second, state your value proposition: What's in it for your audience? Why should they listen to you? What is the bottom-line impact of your presentation? It could be cost savings, market share increase, time and efficiency savings, or some other benefit that the audience will receive from listening to you.

Third, what is the desired outcome? You could be seeking a decision, approval to go to the next step, additional resources, input or feedback, help solving a problem, or help in the process of moving forward to the next step.

### Concise Body Message

The letters in HORSE represent the first letters of words or phrases intended to remind you to have clarity in each of your agenda items so you can tell your audience what you are there to tell them in a clear and concise way.

The H in HORSE represents 'Highlight the main point.' In other words, start with the hottest topic. You also always start with your hottest topic in case your presentation is cut short.

The O in HORSE stands for 'Okay, so what?' 'Okay, so what' simply means that you tell us exactly why your main point—your hottest topic—is important to your listeners.

The R represents 'Relevant information or data.' This is where you present the essential information that supports your 'so what.' That information could include things such as research findings and test results. It also might include what human and technological resources could be required to achieve the desired end.

The S in HORSE tells you to 'Summarize the key point or points.' Sometimes in shorter presentations or with shorter agenda items, this can be optional.

The E represents 'Ease into your next H.' That means to highlight the point of your next agenda item or ease to your close. Create a Transition Statement or use your agenda as a transition slide.

Once you start to use the HORSE to create a clear body message in any presentation or communication, it will become second nature—just like riding a horse!

## Finish Strong

Have you ever gone to a fireworks display, and nothing special happens at the end of the show? No big finish? No finale? You get in your car or board the train to go home, and the big thought on your mind is Well, that sure was a disappointment. I expected more. Just as you, your family members, and other viewers expected a big finish, so the people in the audience for your presentation expect to leave with a thought in their minds: "I get it!" or "That's fantastic!" or "Thank you!"

Finishing strong or ending with a 'Fireworks Close' to your presentation ideally should include a call to action. This is where you come back to the desired outcome you expressed in your Executive Summary and ask your audience to give you what you asked for, such as a decision, approval to go to a next step, and so on. The closing is your final opportunity to make your magic. There is nothing more important than your attention-getting opening to capture your audience's attention during your presentation. However, it is your close that drives their action after your presentation has been completed. With this being what they remember, your closing should include a recap of your main points.

## Practice and Preparation

As I'm sure you already know, preparation is key. But preparation is more than the content of your presentation. You can have all the facts, details, and supporting data available, but if you don't deliver it properly, your message won't achieve the results you desire.

### Practice Makes Better

There are three ways to practice. The first way is to deliver your presentation in front of a mirror, ideally a full-length mirror. The second way is to find a captive audience, usually family, friends, or peers. The third way is to use video to record your presentation rehearsal. It's not that practice makes perfect. Rather practice makes permanent or better. Every time we do something, we improve . . . little by little.

### Using Non-verbal Communication

Your visuals, charts, and slides are part of your nonverbal communication. In other words, your visuals are a reflection of who you are. Clear visuals equal a clear you. The basic truth is a chart or slide needs to be readable if it is to be useful. There are a number of factors that contribute to readability: The first is the font that you choose to use.

Avoid script fonts or handwritten fonts or anything frilly. The second big point is the background color you choose. Naturally, there must be sufficient contrast between the font color and the background color. And, remember, many people—mostly men—are color-blind. Cluttered visuals communicate a cluttered you.

The fact is, 75 percent of everything we know today, we learned visually. Studies show that 90 percent of all information that comes into our brains is visual. Our brains absorb images 60,000 times faster than words. Your slides are not your presentation. Your slides simply support you as the presenter.

## Minding Your APQs (Authentic Presence Qualities)

Can you spot a fake bill? Fake money sends you a lot of clues that the bills are not authentic. And the US treasury—as well as the treasuries of Canada, Mexico, and other countries—develops new and improved anticounterfeiting measures on an ongoing basis. When you examine a fake bill closely, it asks you questions that you can't answer. In that case, you know that it's a fake. But what about the inauthentic presenter, executive, teacher, or salesperson? Well, you can be very certain that your audience will spot all of the clues. And this is why you can't fake it to make it! Your audience can spot a phony a mile away.

These are the traits that separate average people from extraordinary people. Dr. Sharon Lamm-Hartman, the CEO of Inside-Out Learning, researched key qualities that, if demonstrated, contribute to the expression of authentic presence. The basic qualities are warmth, thoughtfulness, openness, sincerity, integrity, clarity, passion, confidence, polish and presentation, inspiration, trustworthiness, and respect. If you've been counting, there are 12 of them. And they are all important. To improve your presentation skills, after rating yourself, ask three or more people to rate you to help you determine your Authentic Presence Qualities strengths and blind spots. Unless we know how others view us, we can't authentically choose whether we want to work on our growth and development.

A survey of 268 senior executives revealed "Executive Presence counts for at least 26 percent of what it takes to get promoted." The highest estimates are closer to 80–90 percent, with the remainder made up of your specific skill set. No matter which number you believe, authentic presence is still an important factor in how successful you will be as a leader and in your professional career. Think about it if you are competing for a job with someone who has similar accomplishments and skills; the only thing that will differentiate you is your leadership presence. In the end, the job will go to the most authentic person.

**Dr. Sharon Lamm-Hartman** has 20+ years of award-winning experience as CEO and founder of Inside-Out Learning, Inc. (IOL), a WBENC-certified global leadership, team and organization development consulting firm. IOL works with Fortune 500, mid- and small-size businesses to level up their professional and leadership development skills. With a doctorate in leadership and organization development from Columbia University and a masters from Cornell, she is a CEO, leadership development consultant, certified executive coach, speaker, writer, educator, wife, and mother.

# The Behavior Breakthrough

## Leading Your Organization to a New Competitive Advantage

by Steve Jacobs and Colleagues

### THE SUMMARY IN BRIEF

A powerful new competitive advantage is within your reach. To perform well over the long term, to make everyone's valiant efforts work and "stick," you need another ingredient, something basic and seemingly ordinary: behavior. New results require new behavior. It's that simple — and that difficult.

*The Behavior Breakthrough* reveals the quiet revolution that is underway in pioneering and successful organizations. Their people routinely focus on "move the needle" priorities, skillfully identify the new actions that are required to win and consistently perform them.

In *The Behavior Breakthrough*, organizational behavior expert Steve Jacobs and his colleagues explain how these companies do it, presenting the game-changer for new business results. They offer lessons on identifying high-impact behavior, fostering it, and building new and lasting competitive advantage. Moreover, they share the important implications of behavioral leadership for breakthroughs in executing business plans, coaching for elite performance, guiding large-scale change, building culture and accelerating talent strategies.

Distilling decades of research and experience, the authors deliver a career-changing and life-changing book that will give you "new eyes," simple models for everyday use, and inspiring and instructive stories of Fortune 500 leaders who have won big results.

### IN THIS SUMMARY, YOU WILL LEARN:

- To use the scientific field of Applied Behavioral Science to your advantage in implementing change in your organization.
- The seven essential steps to putting behavioral change into practice.
- Why culture eats strategy for breakfast — and how to use behavioral leadership to shape your culture to align with your organizational goals.

# THE COMPLETE SUMMARY: **THE BEHAVIOR BREAKTHROUGH**

**by Steve Jacobs and Colleagues**

**The author:** Steve Jacobs is Chairman and Senior Partner of The Continuous Learning Group (CLG) consultancy. For decades, he has advised senior executives on achieving new performance, culture change and lasting competitive advantage. His counsel is sought by Fortune 100 corporate leaders and he speaks frequently at corporate and conference events.

## The Quiet Revolution

This book introduces you to a neglected game-changer in the world of business: *Behavioral Leadership*®. Behavioral leadership focuses on crafting desirable shifts in everyday habits, behaviors and routines. Based on *Applied Behavioral Science*, a discipline that has been researched and taught in major universities for decades, behavioral leadership puts to work the principle that *new results require new behavior.*

Unfortunately, almost all organizations overlook the essential role that *targeted behavior change over time* plays in achieving superior results. As a result, promising new initiatives never get off the ground or stall in midair, resulting in wasted resources and subpar performance.

Most executives disregard behavior and related subjects like leadership skills and culture because they view them as "soft stuff." Executives seeking to improve field sales performance, for instance, might hire new sales people or design a new field sales compensation system, but they generally don't emphasize what the field sales managers can *do* differently or what top performers are *doing* that others are not.

We can attest to the pronounced tendency of leaders to overrate themselves. Even when leaders recognize their weaknesses in shaping new behavior, they don't improve unless they apply conscious effort; none of us do. In the workplace and throughout our lives, instances in which people know what behavior is desirable in a situation but choose to do something else are commonplace.

The widespread neglect of behavior in organizations creates a tremendous opportunity for transformative business leaders — those elite few who are willing to invest the time, focus and energy to do something new to achieve something great. Competitive advantage in any industry or geography flows as much from behavioral leadership as from new strategies, processes or technologies. The decades-old science of behavior has the potential to trigger a *quiet revolution* in companies that apply it.

Information today is everywhere and instantaneous, but practices as simple as meaningful feedback between leaders and employees or consistent task performance are still as scarce as ever. Bringing new everyday behaviors into your organization can prove more useful and more conducive to an energized, engaging work environment than any strategy or process you might embrace.

## Your Return on Revolution

Golfers seeking to improve their putting may experiment with new equipment, but sooner or later they succeed by adopting different behavior, such as changing their grip or adjusting their backswing. Likewise, behavioral leaders understand the very real return that behavior yields — what we call the *Behavior → Results connection.*

Many companies perceive leadership and behavior as intangible, difficult to measure and less essential to financial performance than other drivers. Managers regard efforts to improve behavior as costs that must be contained rather than as investments that can be commercially leveraged. As behavioral leaders become more sophisticated, they begin to adopt new approaches for estimating potential ROI and deciding when, where and how long to invest in behavioral capability. We touch on four of these methods here:

- **Cost of Leadership Neglect:** This captures the opportunity cost of *not* systematically developing behavioral leadership skillfulness throughout a business unit or enterprise. It is one thing for a leadership

team to weigh a budget expenditure of X dollars for developing leadership capability in the coming year and quite another for them to knowingly reject the opportunity to save (or generate) five to 15 times that amount per annum.

- **Cost of Partial Adoption:** Often, companies roll out strategic initiatives without clear metrics for establishing how extensively people are adopting a desired behavior. Since adoption is new behavior and we can measure both new behavior and its *value*, we can decide when it makes sense to invest further in incremental adoption and when the likely yield reaches the point of diminishing financial return.
- **Value of Sustainability:** Most companies and many leaders tend to assume that any change their organization makes will stick, and so they shift their time and attention to other things. Behavioral leaders understand that shaping new behavior is essential, but *sustaining* behavior change yields the greatest prize.
- **Value of Capability Extensions:** The greatest return on investments in behavioral leadership comes from new applications of this capability beyond the initial execution. Suppose you could improve your sales performance by motivating consistently superior selling behavior across your sales force, or suppose you could execute quickly and consistently any new strategic change in your company. What would that be worth to you?

Additional benefits follow when leaders focus on motivating employees' *discretionary performance* of new behavior (discretionary performance is their highly engaged, "what to do" performance). These benefits are at least as important strategically and emotionally:

- **The Culture Benefit:** Improved work culture that engages employees and retains top talent.
- **The Change Execution Benefit:** Accelerated deployment of strategic changes (via superior execution capability).
- **The Shared Capability Benefit:** Measurable proficiency in behavioral leadership skills common across leaders and managers.
- **The Personal Benefit:** Emotional reward from achieving new results and making a positive difference in people's work lives.

## Drivers of Sustainable High Performance

Leaders must first understand the foundations upon which lasting behavior change rests. The science behind behavioral leadership is logical and practical, and the principles are easy to grasp.

We begin by presenting the powerful DCOM® Model for sustainable high performance in organizations:

- **Cornerstone 1: Direction:** Does everyone in the organization clearly understand what is most important? To effect behavior change, leaders must articulate three things especially well: vision, values and value-oriented metrics.
- **Cornerstone 2: Competence:** Are the organization and its people capable of achieving its vision and purpose? Competence includes several kinds of capabilities and competencies, such as technical capability, collaboration skills, work-management skills and economic literacy.
- **Cornerstone 3: Opportunity:** Are all needed resources available, and is the organization removing barriers to performance? Creating an environment where employees have the opportunity to excel involves sufficient authority to perform their jobs well, clear and consistent boundaries, proper work processes to facilitate performance, and all resources needed to get the job done well.
- **Cornerstone 4: Motivation:** Do people want to perform, or do they just have to? Do the consequences that employees experience for their daily actions clearly align with the Direction to inspire desired behaviors?

Most leaders steer companies by falling back on a small set of organizational levers like new policies, structures or compensation designs. Behavioral leaders understand their range of levers for leading new performance. Among other things, they

- Link their decisions to the specific results targets and high-impact behavior that they want to encourage.
- Use a complete and shared set of organizational levers in weighing alternatives.
- Place equal emphasis on leadership levers and organizational levers, knowing that changing day-to-day leadership practices may at times be more effective and/or less expensive than changing organizational processes.

By applying an understanding of how and why people behave, behavioral leaders can greatly increase the power and sustainability of their decisions.

It is possible to derive additional advantage by probing deeper into some of the cornerstones. Applied Behavioral Science (ABS) takes the understanding of one cornerstone, Motivation, to a much higher level.

Using a fundamental model called ABC (Antecedents, Behavior, Consequences), behavioral leaders can trigger and sustain new behavior to obtain desired results. Validated by countless scientific studies, the ABC model captures

the process by which all behaviors take place. We define a *behavior* as what we do or say (actions and speech). *Antecedents* are conditions or events that occur before a behavior, serving to prompt or enable it. *Consequences* follow after a behavior takes place and either encourage or discourage the behavior from taking place again.

Most organizations place 80 percent of their time, attention and budget on the things that are intended to get new behavior started, that is, on "antecedents." Consequences, however, follow behavior and typically have 80 percent of the influence on whether or not people will continue that behavior.

The E-TIP tool assesses which of the many possible consequences will most influence behavior and helps leaders to better understand how to establish the right balance of consequences to motivate desired behavior. The **E** in E-TIP stands for **E**ffect: Will a consequence encourage or discourage future behavior? The **TIP** stands for **T**iming, **I**mportance, and **P**robability. Consequences that happen sooner rather than later, that the performer regards as important, and that are highly likely influence behaviors most powerfully over time.

## Putting Behavioral Leadership into Practice — Seven Essential Steps

Now you know the core concepts underpinning behavioral leadership. But how can behavioral leaders *apply* this knowledge to achieve revolutionary results? We believe you will find these seven essential steps exciting and applicable to your own initiatives. Whether it's retooling an organization's culture, rethinking the annual plan or undertaking a change initiative, *how* leaders undertake these seven steps determines the form, function and scale of the outcome, and *how well* they undertake them determines the extent of the advantage:

- **Step 1: Target the Business Opportunity and Desired Results:** Behavioral leaders focus their behavioral capability on strategic business opportunities ranging from sales growth to innovation, cost management, capital stewardship and culture change. Then they set worthy, precise and challenging results targets. Consider how your organization translates priorities into results targets.
- **Step 2: Pinpoint the High-Impact Behavior:** High-impact behaviors drive targeted results, are few in number, do not likely happen without focused, purposeful effort, and can pull along other desired behaviors. Pinpointing behavior well takes time, rigor and experience. Behavioral leaders ask, "Whose behavior? Precisely what behavior? What supporting behavior is needed?"
- **Step 3: Understand the Drivers:** Behavioral leaders draw upon ABS to identify the triggers (antecedents) and impact on the performers (consequences) of behavior. What conditions, events and actions precede and prompt behavior? What happens to the performer as a result of the behavior?
- **Step 4: Implement the Behavior Change Plan:** Behavioral leaders apply logical, practical, systematic techniques to develop a *behavior change plan*. They apply effective antecedents to prompt high-impact behaviors. They seek to rebalance consequences by encouraging desired behavior and discouraging undesired behavior. And they accelerate the behavior change process by observing and reinforcing new, successive steps in the right direction.
- **Step 5: Continuously Improve Your Own Leadership Practices:** Leaders typically don't see themselves as part of the problem. Behavioral leaders not only accept that they may in fact be part of the problem, but they also see themselves as *part of the* solution in shaping new, high-impact behavior. They adjust their personal leadership practices continually to enhance their positive impact.
- **Step 6: Measure Behavior Change Progress and Impact:** Behavioral leaders establish ways of measuring progress both in behavior change and results impact. Measurement of behavior (how often a behavior occurs) is a *leading indicator* of results. If the right behavior increases, results will too — so by monitoring behavior, you can predict results.
- **Step 7: Sustain It, Improve It, Apply It to New Priorities:** Behavioral leaders think of success as *sustained behavior change and business impact*. They aim to make new habits "business as usual." They improve over time upon the initial gains, and they extend the new behaviors in new ways.

## Game-Changing Plan Deployment

Each year, companies develop a business plan that establishes priorities and deployment approaches. Yet annual plans usually fail to deliver. The first underlying cause for failing to achieve a plan comes from the numerous, often conflicting demands on middle managers. The second underlying cause comes from that neglected game changer — behavioral leadership. Few leaders identify or use the

critical behaviors that keep the workforce focused in the right direction and create the behavior changes needed to execute. Senior leaders also neglect to identify which of the critical priorities are the organization's BRAVO goals, that is, the top priorities that will require significant behavioral change. BRAVO is an acronym for Behaviorally Reinforced Acceleration for Vital Outcomes.

To set the right annual plan in motion, we have created and deployed the MAKE-IT process for organizational execution. It conceptualizes strategic initiatives as rolling out in four distinct phases or milestones:

- **MAKE-IT Clear:** Senior leaders set the stage for successful execution by communicating the change clearly to everyone. Leaders link the change to new competitive advantage and results targets, frame the desired patterns of future behavior, assess drivers of current and desired behavior, and establish a deployment road map that addresses each DCOM cornerstone — Direction, Competence, Opportunity, Motivation.
- **MAKE-IT Real:** Leaders ensure that managers and supervisors are ready to lead broad-based behavior change. Leaders deploy a map of high-impact behaviors for all roles and levels, training managers and assigning specific behavior change plans for each manager to implement. Leaders also develop leading and lagging metrics to track progress.
- **MAKE-IT Happen:** It's execution time as managers deploy their behavior change plans. They seek feedback and coaching to sharpen their skillfulness and address obstacles to behavior change. They discuss progress metrics and key learnings in team meetings at all levels and reward forward momentum. They continue to model desired behavior and celebrate progress.
- **MAKE-IT Last:** Sustain the change — make it stick. This phase focuses not only on sustaining the desired behavioral changes but also on broadening and deepening the advantage that has been realized. Leaders monitor cultural and behavioral indicators for slippage and augment organizational processes even further to support continuous improvement.

Companies that have behavioralized their approach to plan deployment have greatly improved their business results and softer measures like employee satisfaction and retention. Here are six tips for executing better than the competition:

1. **Start Early and Use an Annual Planning Calendar:** Behavioral leaders schedule annual planning events to allow sufficient time for considering behavioral change implications at every step. They use a well-documented, annual planning cycle.
2. **Start at the Top:** Ensure complete alignment among the executive team members and then among the next two levels of leaders on the annual priorities, especially the BRAVO goals.
3. **Use High-Impact Behavior at the Planning Table Too:** Leadership team decision making at the planning table itself constitutes a type of performance-related behavior, and some companies have carefully identified high-impact behaviors for such settings.
4. **Set Reasonable Stretch Goals:** Behavioral leaders set goals that reflect the organization's capability at a given annual deployment cycle. When facing triage conditions, they establish stretch goals that focus on establishing safe and reliable operations. If the organization is underperforming but under control, then more aggressive performance goals become appropriate.
5. **Ensure True Cross-Boundary Collaboration:** As important as it is to achieve complete vertical alignment on key priorities and high-impact behaviors, horizontal alignment across group boundaries remains at least as important (and perhaps tougher).
6. **Build Behavioral Execution Capability in Successive Cycles over Time:** Behavioral leaders seek improvement in steps or stages over a three- to four-year period, building a level of simple, practical behavioral adherence so that the types of practices described previously become business as usual. Among other things, the company strategically nurtures new behavioral leaders for the future.

## Coaching for Elite Performance

Behavioral leaders regard performance coaching as job one and work hard to master specific coaching skills grounded in behavioral science. They understand the advantage that emerges when leaders and managers throughout a business unit prioritize skillful performance coaching.

Performance coaching is a *structured dialogue that recognizes excellence and achieves business goals by specifying areas for improvement and learning*. Managers coach others to help them develop new skills, initiate a desired competency or goal, stretch performance to the next level or redirect behavior to solve existing problems. Performance coaching must occur regularly and consistently, not just once or twice per year.

Although conversations include feedback, they go beyond mere feedback talks in the following ways:

- Feedback focuses on *past* behavior, but performance coaching focuses on *future* behavior.
- Feedback talks about "what, so what, now what." Performance coaching is about solving problems and removing barriers to performance.
- Feedback is mostly about telling, but performance coaching is more about asking and discussing.

Performance coaching focuses explicitly on business results. Performance coaches spend most of their time discussing high-impact behaviors and linking them to results. They aim not just at addressing performance problems but more often at achieving *high* performance and reaching a person's full potential.

Don't simply aim for strong performance; take the highest possible performance as your standard and help even high achievers excel further.

Here are some practices that behavioral leaders use to implement performance coaching successfully in an organization. The IMPACT coaching model has contributed to a number of the companies' successes described in this book. IMPACT is an acronym for key coaching practices:

- **I**dentify and **M**easure desired business results.
- **P**inpoint high-impact behaviors most essential to achieving targeted business results.
- **A**ctivate and **C**onsequate discretionary performance of desired behavior.
- **T**ransfer successful approaches to achieve new progress.

Companies that effectively scale and leverage coaching capability typically

- Focus coaching on new organizational performance and new strategic advantage.
- Establish clear roles and accountabilities for coaching at each level of the management spine.
- Map strategic imperatives to high-impact behaviors to establish the primary focus of managers' feedback and performance coaching.
- Align high-impact behaviors upward from performer groups through each level of leadership.

Companies also define the performance coaching process and skill sets, describing specific, proven practices underpinned by the science of behavior change.

## Changing the Way Organizations Change

Behavior-based execution means changing organizations, but what's the best way to achieve this change? Consultants and other experts have traditionally advised leaders to delegate the hands-on work of change to others. But in today's fluid environment, when the challenges of aligning thousands of employees around the globe are so daunting, leaders play a more active role, particularly when the company requires significant behavior change.

Not all leaders are experienced or sophisticated in managing change. Some just "do" change in the way that feels right to them, unaware of the science of behavior. Their strategies all share something in common: They rely on people to change behavior when asked.

The traditional project-management approach focuses on the basic task of rolling out the solution. The change management approach emphasizes the fostering of understanding and buy-in. In both approaches, leaders usually create the case for change, set expectations, make decisions, and monitor leading and lagging metrics.

Executives who excel at leading change know not to measure success by how fast a solution gets developed and deployed but rather by how quickly people begin to work differently and improve results. These executives set the expectation that the project team and leaders bear joint responsibility for ensuring that people implement change and achieve expected results. They don't declare success when the project is deployed, but when performance changes. Shared accountability forces project teams and leaders to recognize that new results require new behaviors.

In implementing a behavioral approach, leaders perform behavior-change planning with both the project team and leaders, asking, "What new behaviors will the company require of leaders and employees? Which one to three behaviors are most critical? How will those behaviors generate promised results? Which behaviors will the company still have trouble generating after go-live?" How will we know at an early stage if these behaviors are happening?

We can augment the behavioral tools presented in previous chapters with the following tips:

1. Senior leadership should assume more responsibility for communicating the case for change in terms that help the entire organization understand what the change means to them, not just why the change is good for the business.
2. Project teams, when they exist, should use behavioral tools such as the ABC and E-TIP Analysis to influence the balance of consequences in the design stage.
3. Governance structure leaders and members should learn and utilize behavioral tools at each MAKE-IT phase.
4. The organization should integrate specific behavioral methods within its existing approaches for devel-

oping stakeholder engagement, effective communications, and change-resiliency practices.

5. Deployment planning should transcend the traditional large-scale change solutions and include deliverables like new role definitions, communications tool kits, training and self-help tools.

## Winning on Culture

Most of us know the phrase, "Culture eats strategy for breakfast." But have we really internalized the idea? Business thinkers have written about culture's relationship with competitive advantage, but most leaders still don't commit to reshaping their cultures — and of those that do, few succeed.

We can trace the struggle organizations have with reshaping culture to one simple fact: Leaders remain confused about how to define culture. Behavioral leaders begin by rejecting vague definitions of culture and refusing to undertake initiatives that are merely symbolic. They define culture in a way that enables them to change it in tangible, focused, performance-enhancing and enduring ways. Specifically, they define culture as

*A pattern of behavior that is encouraged or discouraged by people and by systems over time.*

Culture for behavioral leaders is behavior that is explicitly *encouraged* or *discouraged*. Behavioral leaders determine what factors encourage the undesirable behavior in the current culture. They assess the extent to which meaningful antecedents and consequences encourage culturally desirable behaviors and use this analysis to establish their road map for progress.

Behavioral leaders often clarify culture change objectives by framing them as From → To themes (e.g., From a Culture of Blame to a Culture of Accountability, From a Culture of Silos to a Culture of Collaboration, etc.). They then translate the desired culture into specific high-impact behaviors throughout the organization at every level and role. Doing so enables individuals to see the important role they play in creating the desired culture and, by extension, in helping the company to succeed.

The following tips can help smooth the way and ensure the success of your organization's cultural change initiative:

1. **Make the Commitment:** Senior leaders, you are the architects of your company's culture. You may have inherited unfavorable conditions from your predecessors, but you bear responsibility both for envisioning a new culture and for implementing processes and practices to MAKE-IT Happen. You have to put culture change front and center — or risk failure.
2. **Don't Start All at Once:** Begin with a few well-chosen pilots to fine-tune culture change methods and demonstrate meaningful business impact. Three to five proof-of-concept projects will usually work.
3. **Balance Enterprise Standards with Local Flexibility:** Offer clear guidelines for when you expect simple replication and when you will allow innovation on the local level.
4. **Start at the Top and Work Down:** It's important for each level of leadership, starting at the top, to ensure sufficient clarity and skillfulness before asking the next-level managers to do their part.
5. **Practice Consistency:** Not only must a manager's practices align with those of line workers across time; practices must remain consistent *across managers*.
6. **Use Metrics That Motivate:** CN (Canadian National Railway Company) implemented Employee Performance Scorecards to align the individual's performance metrics with the company's Culture of Precision Railroading objectives. Scorecards became a source of pride for a number of employees. Some employees took the scorecard home to share with their families.
7. **Signal with Informal Processes Too:** Conventional approaches to culture change use symbols (titles, trophies, mascots, logos) to reflect what's important to an organization. We encourage this as well. Be creative and have fun. Just remember to purposefully use symbols to prompt and encourage desired behavior.
8. **Get the Right People on the Bus:** Senior leaders often wish they had addressed more quickly those individuals who had worked to derail progress. If someone persists in impeding the desired culture, leaders must ask him or her to leave the organization, regardless of role or level.
9. **Stay in It for the Long Haul:** Building culture for competitive advantage merits regular attention over time. Most competitive environments are constantly evolving. A high-performance culture by definition strives for continuous improvement.

## Developing Behavioral Leaders

To achieve competitive advantage through Applied Behavioral Science, companies not only need an enhanced annual plan, culture and change processes — they also need strong behavioral leaders. We define such leadership

as *the ability to foster and sustain discretionary performance of high-impact behavior change*. All behavioral leaders must motivate their people and colleagues to *want to* perform at consistently high levels. Moreover, senior leaders must have the capability to scale behavioral leadership across business units and, ultimately, across the enterprise.

What distinguishes behavioral leaders is not general intelligence, sophistication or competence, but possession of a set of skills and abilities relating to application of the behavioral approach. Companies that seek to foster these skills and abilities must go well beyond the conventional leadership training most companies favor.

In particular, they must take leaders outside of the classroom setting and develop them in the field, where they learn by doing, every day. Leaders themselves must commit to the process of personal growth and to mastering the behavioral techniques so critical for superior performance.

Behavioral leaders apply the DCOM performance model better than most. When it comes to *Direction*, behavioral leaders articulate strategic goals and expectations to direct reports, teams and organizations. They then ensure that the organization demonstrates the *Competence* and capability to follow the strategic direction. They also work to sweep away bureaucratic obstacles so that individuals have the *Opportunity* to fulfill the company's stretch goals. Finally, behavioral leaders provide *Motivation* to their people. They align rewards and recognitions with organizational goals.

Behavioral leadership training typically integrates three ingredients:

1. Programs employ stretch assignments that task leaders with both achieving new organizational performance and sharpening their leadership effectiveness.
2. They provide enough *feedback* so that executives remain keenly aware of their development targets at all times.
3. They incorporate the clear expectation that leaders develop *others in turn*.

How can individual leaders best approach their own development? We offer the following tips:

- **Set Continuous Improvement Targets for Your Personal Development Goals:** Some executives see leadership as too subjective and intangible to allow for meaningful annual improvement goals. Behavioral leaders *always* work toward leadership improvement goals.
- **Practice, Practice, Deliberate Practice:** Behavioral leaders accept that ongoing practice is part of success. But not all practice is created equal. Practice that focuses on relatively undeveloped skills works best, even if this means venturing out of your comfort zone.

## Building Enterprise Advantage

The science underpinning behavioral leadership has as much to say about *sustaining* behavior change as it does about encouraging new behavior in the first place. The same principles that bring about change can sustain it when continuously applied.

First, *keep moving forward*. Take aim at new results targets. Embrace new high-impact behaviors. Second, *set the stage for sustainability from the very beginning*. Behavioral leaders build in certain activities as they complete MAKE-IT Clear, MAKE-IT Real and MAKE-IT Happen phases so that the foundation for sustainability is already established as they move on to MAKE-IT Last.

Companies that have led the way in sustainability practices anticipate leadership transitions, plan for them, and leverage them to the fullest. Once selected, new leaders receive briefings on behavior-based applications, results, and learning from past implementation cycles as well as on implications for their own leadership practices.

The best behavioral leaders view initial accomplishments as the reason to stay the course, broaden and deepen their behavioral leadership acumen, and drive to a more formidable position. Ultimately, they seek the kind of enterprise advantage that can only be achieved through continuity, ingenuity and persistence. And they build this enterprise advantage by extending to new areas and audiences, targeting new types of performance results (and therefore new types of behavior), integrating new implications for formal organizational processes, developing more advanced "201-level" sophistication in applying the science and incorporating new deployment tactics.

Pioneers in behavioral leadership have recognized perhaps the greatest advantage that the approach affords: *Competitors cannot purchase it off the shelf. They cannot reverse engineer it. They cannot imitate it overnight. There are no shortcuts*. Companies can only possess competitive advantage by earning it through repeated experience. Those who have a head start will more likely maintain that advantage for many years to come.

Here's to getting started.

## THE SUMMARY IN BRIEF

Many of us enter negotiations with skepticism and without understanding how to truly negotiate well. Because we lack knowledge and confidence, we may abandon the negotiating process prematurely or agree to deals that leave value on the table. ***The Book of Real-World Negotiations*** will change that once and for all by immersing you in real-world scenarios.

Through hard-to-find examples, you will learn exactly how to effectively and productively negotiate. As a result, you'll be better able to grasp the true power of negotiation to deal with some of the most difficult problems you face or to put together the best deals possible.

Once you come to understand through these cases that negotiation is the art of the possible, you'll stop saying "a solution is impossible." With the knowledge and self-assurance you gain from ***The Book of Real-World Negotiations***, you'll roll up your sleeves and keep negotiating until you reach a mutually satisfactory outcome!

## IN THIS SUMMARY, YOU WILL LEARN:

- Common negotiation mistakes and the five key principles of great negotiators.
- To meet short-term needs while building long-term relationships.
- To recognize hidden dimensions in negotiations.
- To understand and respect cultural differences.

## Introduction: The Power of Stories to Teach About Negotiation

Actual negotiations that happen in business, government, and the world around us stay lodged in our memories better than theories, concepts, or facts. Why are these negotiation stories so powerful? An important part of the reason is because they often challenge our assumptions and preconceptions about what is achievable when people sit down together.

The best stories have a memorable arc from beginning to end, overcoming obstacles, conflicts, and controversies, while ultimately conveying a lesson in an easy-to-understand manner. Negotiation stories, generally speaking, follow a similar pattern. They begin with an introduction, reach some kind of apex in terms of a quandary, and culminate with either a constructive way forward, the parties walking away to something else, or a stalemate.

The connection between stories and negotiation is deeper, however. In difficult moments in negotiations, we are much more likely to summon up a story with a happy or dramatic ending, a lesson or anecdote, than we are a concept or theory. Negotiation stories, simply put, stay with us and are easy to recall in critical moments.

The negotiations that follow hold invaluable teachings that will help to broaden people's perceptions on negotiation and how to overcome difficult obstacles and challenges. First, however, let's review some key principles.

## Mistakes Negotiators Make, and What Do Great Negotiators Do Anyway?

Learning to be an effective negotiator is a journey, not a destination. Along that journey you will encounter many notions about what effective negotiation looks like. There are some commonly held fictions related to negotiation that often lead people astray and away from creating the best deals or solutions possible. Below are the most common.

**A winner and a loser—and nobody wants to lose**. This win-lose way of thinking leads people to conceive of negotiation from this vantage point—thereby limiting the negotiator's thoughts on what might be possible.

**The false promise of compromise**. While compromises might be needed from time to time, they certainly are not what effective negotiation is all about. So what do you do if you don't compromise? You resist the urge and dig into the issue in a deeper fashion. What that means is taking a creative approach where you explore all the underlying interests and sources of value that exist.

**Misnomers about manipulation and deception**. The thinking goes that when a negotiator finds something that creates discomfort in the other negotiator, they seek to exploit it. Successful negotiation does not involve these deceptive tactics. In fact, it is really the opposite—building relationships and finding creative solutions are what make effective negotiation possible.

**The strong don't negotiate**. The fourth fallacious customary perception of negotiation is that it is for the weak. Strong people coerce others to do things, not persuade them. The reality is very different. Negotiation is one of the key tools that we have at our disposal to solve our conflicts. There is nothing weak about this process.

**Negotiators are born, not made**. Everyone can learn how to negotiate more effectively. Each person has their own negotiation ceiling that they can achieve, which requires time and effort.

**You have to sacrifice the long-term relationship for short-term gain**. This is a false dichotomy. Those that negotiate regularly, particularly with people with whom they have a long-term relationship, are always watching that fine line. They will never do something in the short term that damages the long-term relationship because they know it will come back to haunt them down the road.

### What Great Negotiators Do: Five Key Principles

As you read through the different cases, you will notice at least five principles emerging continuously. It is fair to say that these five tenets are a necessary condition for success in virtually all negotiations. If you use all of the principles below, you are much more likely to reach creative solutions that maximize the value in all your negotiations.

**Principle 1: Invest in preparation (instead of having a plan)**. Even though it is very tempting for people to want to develop a specific plan of action, that approach rarely works effectively. There are two reasons why plans are ineffective. The first reason is that what happens in a negotiation is partly contingent on the actions of the other.

Second, negotiations are rarely linear and full of unexpected twists and turns. Given that truism, even the best-laid plans of negotiators are likely to go awry. Being clear on your end goal but flexible on how to get there is a critical

The challenge for any negotiation in a business context is how to meet your short-term needs while also building the long-term relationship.

component of successful negotiation.

**Principle 2: Mindset and the importance of cultivating the relationship**. Mindset underpins everything a negotiator does in a negotiation. For example, if a negotiator brings a mutual gains thought process to the table, that puts them in the right frame of mind to envision potential solutions and to freely explore possibilities that meet both their and the other negotiator's needs. One must seek to meet their short-term interests while preserving the long-term relationship.

**Principle 3: Creative problem solving**. When a negotiator engages in creative problem solving, they free their mind from its traditional constraints and are more able to engage in innovative explorations. These roads less traveled are often the avenues to success. In order to problem-solve effectively, one has to see and make connections where others do not.

**Principle 4: Managing the emotional side of negotiation**. Whether we like it or not, emotions always play a role in negotiation. The question should not be whether to keep emotions out or let them in but, rather, how does one let them in with some control? The way in which most negotiators do that today is through emotional intelligence.

**Principle 5: Uncovering the hidden dimensions of negotiation**. Many of the covert dimensions of negotiation are far from obvious and require a lot of exploration and investigation. Astute negotiators look for these dimensions and assume there is more going on than meets the eye.

In other cases there are key psychological dimensions involved, such as face saving, that underpin the entire process. Finally, in still other examples, there are critical interests or needs that are driving the process but are lurking under the surface like the hidden elements of an iceberg.

## PART I: DOMESTIC BUSINESS CASES

The challenge for any negotiation in a business context is how to meet your short-term needs while also building the long-term relationship. See if you can spot the places where some of the above-mentioned principles apply.

## Saving a Merger With Creative Thinking

Two companies, called Amity and Branco, had recently agreed to merge. As they were working through some of the issues post the merger, Amity abruptly changed one of their policies and decided to "tax" each division in a new way that would cost Branco a whopping $25 million. The tax was supposed to cover the costs of harmonizing the two firms' computer systems and other technologies. Amity felt it could do this because it was the much larger of the two companies and the one doing the acquiring.

The tax on Branco was so onerous that it would turn the economics of the merger upside down, making it a financial loser for Branco. Needless to say, frustration levels from employees at Branco rose quickly. Two of the people at Branco who were deeply involved were Danny and his boss, Amy, both of whom were stunned at the turn of events and worried about their jobs and the jobs of their colleagues.

Danny immediately began doing intense factual research. Together, Amy and Danny, with two other colleagues, used the research and developed a number of possible options on how to move forward.

Danny recalled, "We realized something obvious that everyone had missed when the two sides were bickering during the negotiation. If we didn't integrate the technologies, the costs to the firm would actually go up! We had the right to block the integration. Why? Because my company would be forced to maintain a myriad of duplicate systems, which would create serious inefficiencies. I realized we had a common interest I could highlight." That common interest was cost savings.

### The Negotiation

The solution Amity and Branco ultimately found was a result of questioning assumptions and digging deep for a solution no one had thought of based on a special ac-

counting method. Amy and Danny's division would pay its portion of the costs to change the system, but it wouldn't pay the current operating costs.

The method would also cut costs to other divisions by ending duplicate accounting systems and wouldn't create any further financial issues for either side. Danny concluded that he would wind up saving $14 million for both sides using this approach, salvaging the merger, reviving his and his boss's careers, and winning the respect of his new colleagues. "I was hero for a day," he added.

There are a number of key lessons here. The first lesson is the value of preparation and learning from a clear framework in order to do so.

The second lesson was the key shift from a positional, back-and-forth negotiation, to a more interest-based way of viewing the situation. Instead of getting pulled into the game of one-upmanship, Danny stepped back and searched for a creative solution.

The final lesson is that even in the face of a power asymmetry, you have options if you think creatively enough.

## How a Bad BATNA, but a Strong Relationship, Sidestepped a Lawsuit and Created a Mutual Gain Solution

In 1995, Jim, Bill, and Tim started a company in a rented room with a fax machine. Their company, Contrexo, an Architecture, Engineer, and Construction management firm (AEC), grew from those very modest beginnings into a moderate-size business by 2001 with a value of approximately $20 million.

At that time, Contrexo was approached by a large publicly traded AEC firm called Mantosar, which wanted to acquire them. After some rather straightforward negotiations, Contrexo became a wholly owned subsidiary of Mantosar. The three principals who created Contrexo began working at Mantosar. As part of their contract with Mantosar, the three had a noncompete clause for a period of five years.

As the three men worked in conjunction with Mantosar, they became increasingly frustrated with the overall business model and experienced a strong feeling of disenfranchisement. Furthermore, they could not see a way to grow Contrexo. The former owners and senior managers wanted to make a change but were forced to wait until their noncompete agreements had expired. At that juncture, they decided to leave as individuals—one by one. The idea was to leave slowly and start a new company similar to Contrexo.

Jim was the first to leave the firm. The remaining senior leaders would come over one at a time and get restarted that way. Jim began reaching out to major clients to let them know that they were on their own again, and the new company began to get new contracts. Shortly after Jim left, Bill followed.

Approximately one week later, Jim got a phone call from Mantosar's president, Peter, and CEO, Ramon. Peter and Ramon explained that they needed to speak with Jim immediately because they were considering bringing litigation against their new company. Jim, of course, agreed to meet.

Ramon added that when both Jim and Bill left Mantosar, they forced a significant material change of leadership that required public reporting because Mantosar was a publicly traded company. Immediately Mantosar would have to take the goodwill off their books as a write-off, which amounted to approximately $11 million in value. This would impact their stock price, and they simply could not allow that to happen.

Peter and Ramon then explained that the only option they would have would be to sue Jim and Bill personally. They candidly admitted that they might not win the lawsuit, but it would tie up Jim, Bill, and the new company professionally for seven years. As a result, Jim and Bill's new business would likely fall apart. Jim and Bill had worked well with Peter and Ramon for a number of years, and they all liked each other personally. Peter and Ramon did offer Jim and Bill their jobs back at Mantosar with significant pay increases. Neither Jim nor Bill were interested in that opportunity.

### The Negotiation

One thing was clear to Jim. Even though he did not think it all through strategically, he knew his BATNA was not a good one. He understood that a potential lawsuit could stop his new business in its tracks, with no real hope for success.

Yet, Jim did not react negatively. In fact, he let his emotions run through, acknowledged them, and then quickly got into brainstorming mode. One of the keys to doing that was the strong relationship he had with Peter in particular.

After some brainstorming around the issue, Jim eventually hit on a new idea. He asked Peter and Ramon if he and Bill could buy back Contrexo. It was a novel idea and one that had not come up before. In the end, it was the solution they

needed, but it would be far from simple. Per usual, the devil was in the details.

One problem was that Jim and Bill did not have the $11 million in cash or capital to do the deal. On a piece of paper they mapped out a sale price and how Mantosar would have to take back a loan of significant value. Peter and Ramon would have to deal with a write down they could take and what Jim and Bill could manage in loans.

Jim and Bill negotiated a loan of $6 million, along with reasonable interest rates they felt they could manage. They also mapped out a continued relationship between the two companies into the foreseeable future. That took future competition off the table and ensured a profitable arrangement for both going forward. This plan also enabled Jim and Bill to keep the agreements they had in place with other vendors.

This broke new ground for Mantosar. They had never let a wholly owned subsidiary be bought back. Curiously, from Mantosar's perspective, a lawsuit might have actually made more sense to pursue. With this deal they took a loss and had to take back loans, among other things. The only explanation Jim could surmise as to why they went down the road of a negotiated deal was the pre-existing relationship he had with Peter and the impact of a lawsuit on Mantosar's stock price.

### Lessons Learned

There are innumerable lessons within this case. First, the value of the relationship between Jim and Peter saved this situation from escalating out of control.

Second, how you react to different moves in negotiation matters considerably. Third, sometimes a power differential in negotiation does not always unfold in the way the parties expect. In this case, Mantosar had a lot of power and ability to control the process, and yet they showed a lot more flexibility than a pure power analysis might suggest.

## PART II: INTERNATIONAL BUSINESS CASES

With the interconnected nature of the world, more and more companies are working internationally. As a result, an increasing number of negotiations are taking place across borders and between businesses stretching from Afghanistan to Zimbabwe. Business deals are happening everywhere, in some of the most unlikely places and between some of the most unlikely partners.

Negotiation in this context has a number of added dimensions. First, laws differ from country to country, and it is often unclear which laws will be applicable in a given situation. Second, unique cultural norms undergird each negotiator's overall orientation. Unless those cultural differences are understood deeply, they can easily disrupt a process that otherwise would flow smoothly.

> Unique cultural norms undergird each negotiator's overall orientation.

### Going a Long Way to Make a Deal

Ecru is a small clothing company based in New York City. Ecru's CEO, Howard Sheer, led the negotiations with a potentially new supplier based in India, called Indegopro. Sheer began looking to India as more and more unfavorable changes were taking place in China, where his previous supplier base existed.

Indegopro was a large factory group based primarily in India with facilities in other countries. Sheer very much wanted to work with Indegopro for a multitude of reasons, but he feared that they held all the cards in the negotiation and it would be a difficult process to meet his goals and make the deal profitable for the much smaller Ecru.

Sheer did his due diligence and investigated Indegopro thoroughly. As he did, he found that they served small entities similar to Ecru but also big department stores like Gap and Banana Republic. He also found that Indegopro had a great track record of working with all of these different stores. Their quality, value, and public relations all checked out.

Sheer's challenge was that Ecru was tiny in comparison. How would he persuade them that doing business with Ecru was worthwhile to them?

Ecru had engaged Indegopro on one order, and Sheer was very happy with how they performed. The terms under which that first deal was done, however, were not at all ideal for Ecru. They were working under a Letter of Credit (LC),

which they could manage, but LCs tend to be expensive, and Ecru didn't have the ability to engage this way into the future.

Put differently, Ecru needed the ability to finance the business, and the bank would only open a limited number of LCs. Thus, Sheer knew the core of the negotiation was about a future partnership and the terms under which that arrangement would unfold.

Sheer also knew that in Indian culture, having a strong relationship mattered a great deal when it came to doing business. Unfortunately, that was lacking.

Then it hit him. He would make a trip all the way to India to demonstrate his level of commitment.

### The Negotiation

In going to India, Sheer was doing his best to bridge the cultural gap. He wanted to send a clear and unequivocal signal that he was very serious about working with Indegopro now and into the distant future. His goal was to get them to understand that he deeply valued their business, and he was prepared to invest in the relationship to prove it.

After spending the day together and discussing things generally, Sheer turned to the specifics and the heart of the negotiation from his point of view. The primary issue was the financing terms. Sheer's opening offer was for 90-day terms based on receipt of goods, which in actuality was 120 days in payment terms, because to ship the merchandise by boat would be 30 days in transit.

To Sheer's surprise, the representatives at Indegopro had no issue with the 90 days. They countered with a proposed 1.75 percent flat finance charge, which for Sheer was considerably cheaper than opening an LC or tying up his credit line at the bank that he could use for other purposes.

Upon reflection, this was not an exceptionally challenging negotiation, but it was the unknowns of the negotiation parameters and the lack of a relationship that defined this situation. The representatives at Indegopro explained to Sheer, after the agreement had been signed, that they were very moved by the effort it took for him to come all the way to India and the professionalism of the presentation of his business plan for the future.

## Crossing Cultures and Crossing Wires

When negotiators consider culture, they often contemplate behaviors and customs, but the more challenging aspects of culture from a negotiation point of view lie beneath the surface and are profoundly embedded in ways of acting, thinking, and believing.

This negotiation took place in Pankyo, South Korea, regarding a merger and acquisition negotiation between a Korean biotechnology company and a German biotechnology company. Pankyo is an emerging digital city comparable to Silicon Valley in the United States.

This particular negotiation occurred in a face-to-face capacity at the CEO's office of the Korean company, named Kyammi. The German company involved in the negotiation is called Bundascorp. Bundascorp's CEO visited South Korea for the series of negotiations in which Kyammi's CEO was seeking capital investment from Bundascorp. In return, Bundascorp's CEO was seeking to control the management of Kyammi through a merger and eventual acquisition.

Kyammi wanted to be an authorized subsidiary of Bundascorp and maintain its business relationship through their capital investment. They wanted this relationship because they would benefit from Bundascorp's excellent global reputation in the biotechnology field. Bundascorp wanted to control the management of Kyammi because they owned one of the leading biotechnologies in the world along with affluent human resources and regional networks that dominated the Asian market.

The underlying interest of Kyammi was not to lose its majority stake in the company so they could still make their own decisions, while also maximizing the amount of investment from Bundascorp. On the other hand, Bundascorp wanted to take control of the Korean subsidiary company's shares in order to exploit the regional domination of Kyammi in Asia. By exercising its power over management, this task would be made much easier.

### The Negotiation

While the negotiations had many dynamics, none were more critical to a solution than getting to the bottom of the cultural issue that underpinned each company's orientation and position.

Korean parties seeking foreign investment perceive themselves as the lower-power parties, given that their counterparts have financial capability and resources. As a result, Koreans engage in negotiation processes without communicating their needs and wants with the high-power parties.

Despite Kyammi's CEO experiencing significant dis-

Culture not only controls the ways in which people raise . . . issues but also their ability to openly resolve any disputes or conflicts that might arise during the process.

comfort with the way the Bundascorp's CEO negotiated, he did not express these emotions openly since such a demonstration would have been deeply frowned upon from a cultural point of view.

The negotiation process progressed simply because Kyammi's CEO made begrudging concession after concession. As a result, Kyammi's CEO lost most of his company shares through these voluntary concessions, allowing Bundascorp to take over 65 percent of the company.

This was not, however, where the negotiation ended. When South Koreans engage in this kind of behavior, they frequently do not comply with the agreement they signed. In order to comply and implement an agreement, they need to be satisfied with the negotiation process itself as well as the personal relationship with their counterpart(s).

The outcome of this negotiation was far from optimal—particularly for Kyammi but also for Bundascorp. By making their concessions as their culture dictated, Kyammi attempted to put itself into a new and different relationship with Bundascorp. Bundascorp unfortunately did not understand what was happening and, as a result, took advantage of the situation and the relationship.

Interestingly however, due to the very strong emphasis on the relationship by the CEO of Kyammi, the business relationship has persisted and, while not balanced, it continues to this day. One can only imagine how much more fruitful the relationship would be if the situation had properly met Kyammi's cultural expectations.

## PART III: GOVERNMENT AND DAILY LIFE CASES

There are a number of lessons that are key for people to understand who are negotiating in an international cultural context such as this. Culture not only controls the ways in which people raise (or do not raise) issues, but also their ability to openly resolve any disputes or conflicts that might arise during the process. The key to dealing with all of this is understanding the culture one will be interacting with and their ways of living, working, and negotiating.

A tremendous number of negotiations happen all around us every day—whether it is between civil society entities, hostage situations, or at the governmental level between warring factions. Akin to the business cases that have been previously presented, these cases cover a vast array of areas. What is interesting is the similarities involved despite the disparate nature of the examples.

### What's In a Name—and How Do You Negotiate It?

This negotiation scenario was shared by someone who worked at a law firm and who was serving their client in a pro bono capacity. The client, Life Care International (LC), was involved in humanitarian work and the delivery of aid after natural disasters. LC engaged in work all around the world and deployed in rapid fashion to help those in need.

At a certain point LC ended up in a major city in a Slavic country, delivering much-needed aid after a natural disaster. While they were working in this city, they encountered another nonprofit organization called Life Care International for the Benefit of Children (LCIBC). This nonprofit organization was much smaller and did a different type of work—primarily helping children in need of medical care. Both entities were known in their respective spheres as simply Life Care.

As they both worked in this city, confusion began to take hold. At first the problem was trivial. The occasional phone call to the wrong office. However, it got worse and more frequent over time, with people who were seeking to connect with one nonprofit contacting the other nonprofit seeking their help, donations intended for one entity ended up with the other organization, and so on. What began to emerge was a classic trademark dispute.

It turns out that LCIBC had been around longer and held the trademark. Due to the confusion both were experiencing, LCIBC eventually asked LC to change their name. This is where the negotiation ensued, as neither wanted to change their name given the sunk costs and investment they both had in their name and, more importantly, their identity.

As the parties prepared to negotiate, they sought different ways to solve the problem but simply could not find a viable answer.

### The Negotiation

At that point, one party suggested a mediator be brought in to help. During the course of the mediation, the mediator eventually asked LCIBC a slightly counterintuitive question given they held the trademark: "How important is your name to you?"

It was a very interesting question that stopped the lawyers for LCIBC in their tracks and seemed to shift the conversation to a different and unexpected place.

After giving it some thought, LCIBC responded by saying that their name was actually really long, and even though they held the trademark, they would consider changing it. They explained further that their name really did not effectively describe the core of their work, and they would be amenable to something else. The question was, what?

The mediator then suggested the following to LCIBC: "What if LC paid you to change your name?" There was silence in the room as the parties considered the out-of-the-box suggestion. After a few moments they both realized that the proposed solution might actually break the deadlock. It turned out that solution would be much cheaper and easier for LCIBC to do than the other way around.

Interestingly, and what made this solution that much more effective, was the fact that LC had insurance that would not have been enough to pay for their own name change but would be enough to pay for LCIBC's. Thus, in the end, a creative solution was found out of what seemed like a no-win situation for LC and an uncomfortable one for LCIBC.

This example beautifully highlights the distinction between positions and interests. The mediator clearly grasped the positions but also probed the underlying interests.

Second, the mediator brought in some very innovative and creative thinking by flipping the problem on its head. Instead of seeing the problem as something the defendant (LC) had to fix on their own, the mediator reframed the problem as a joint one. This perspective freed the mediator to ask some thought-provoking questions, leading to the creative idea of LCIBC changing their name due to their size and having LC pay for it.

These case studies demonstrate that effective negotiation happens in a multitude of different ways. Often the most improbable negotiation solutions occur in the face of tremendous odds through creativity and persistence. These breakthroughs occur when a negotiator is thinking that a solution is simply not possible, or they have run into what seems like an insurmountable obstacle.

But they don't quit. Their desire to find a solution, and belief that one can be found, is essential to their success.

As you go forward, be endlessly creative, and never give up.

## THE SUMMARY IN BRIEF

Everyone has something they want to change. Marketers want to change their customers' minds, and leaders want to change organizations. Startups want to change industries, and nonprofits want to change the world. But change is hard. Often, we persuade and pressure and push, but nothing moves. Could there be a better way?

Successful change agents know it's not about pushing harder or providing more information; it's about being a catalyst. Catalysts remove roadblocks and reduce the barriers to change. In ***The Catalyst,*** Jonah Berger identifies the key barriers to change and how to mitigate them. You'll learn how catalysts change minds in tough situations, such as how marketers get new products to catch on and how leaders transform organizational culture.

***The Catalyst*** is for anyone who wants to catalyze change. Whether you're trying to change one person, transform an organization, or shift the way an entire industry does business, you can learn how to become a catalyst.

## IN THIS SUMMARY, YOU WILL LEARN:

- Why persuasion is not the best way to change minds.
- The five horsemen of inertia, i.e., the key barriers to change.
- To reduce people's uncertainty and resistance.
- To effect change by building agency, finding common ground, and marshalling strength in numbers.

## Introduction

Change is hard. We persuade and cajole and pressure and push, but even after all that work, often nothing moves. Things change at a glacial pace if they change at all. In the tale of the tortoise and the hare, change is a three-toed sloth on his lunch break.

Isaac Newton famously noted that an object in motion tends to stay in motion, while an object at rest tends to stay at rest. Just like moons and comets, people and organizations are guided by conservation of momentum. Inertia. They tend to do what they've always done.

When trying to change minds and overcome such inertia, the tendency is to push. Client not buying the pitch? Send them a deck of facts and reasons. Boss not listening to the idea? Give them more examples or a deeper explanation.

The assumption is that pushing harder will do the trick. That if we just provide more information, more facts, more reasons, more arguments, or just add a little more force, people will change. Unfortunately, that approach often backfires. Unlike marbles, people don't just roll with it when you try to push them. They push back.

So if pushing people doesn't work, what does?

### A Better Way to Change Minds

To facilitate change, chemists often use a special set of substances. These unsung heroes clean the exhaust in your car and the grime on your contact lenses. They turn air into fertilizer and petroleum into bike helmets. They speed change, enabling molecules that might take years to interact to do so in seconds.

Rather than pushing, they lower the barriers to change. And these substances are called catalysts.

Generating change is not about being more convincing or a better persuader. Instead, it's about being a catalyst—changing minds by removing roadblocks and lowering the barriers that keep people from taking action.

Rather than asking what might convince someone to change, catalysts start with a more basic question: Why hasn't that person changed already? What is blocking them? This is about how to overcome inertia, incite action, and change minds—not by being more persuasive or pushing harder but by being a catalyst.

Reactance, Endowment, Distance, Uncertainty, and Corroborating Evidence can be called the five horsemen of inertia. Five key roadblocks that hinder or inhibit change. These five ways to be a catalyst can be organized into an acronym. Catalysts reduce Reactance, ease Endowment, shrink Distance, alleviate Uncertainty, and find Corroborating Evidence.

Taken together, that forms an acronym, REDUCE. Which is exactly what great catalysts do. They REDUCE roadblocks. They change minds and incite action by reducing barriers to change.

Let's now discuss each of these five elements.

## 1. Reactance

Instructing jurors to disregard inadmissible testimony can encourage them to weigh it more heavily. Alcohol prevention messages can lead college students to drink more. And trying to persuade people that smoking is bad for their health can actually make them more interested in smoking in the future.

In these and similar examples, warnings became recommendations. Just as telling a teenager not to date someone somehow makes that person more alluring, telling people not to do something has the opposite effect: It makes them more likely to do it.

People have a need for freedom and autonomy. To feel that their lives and actions are within their personal control. That, rather than driven by randomness, or subject to the whims of others, they get to choose. Consequently, people are loath to give up agency.

Restriction generates a psychological phenomenon called reactance. An unpleasant state that occurs when people feel their freedom is lost or threatened. Whether made to encourage people to buy a hybrid car or save money for retirement, any effort is often unintentionally seen as impinging on people's freedom. It interferes with their ability to see their behavior as driven by themselves.

To reestablish a sense of autonomy, people often react against persuasion. They do the opposite of whatever is being requested.

### Allow for Agency

To reduce reactance, catalysts allow for agency— not by telling people what to do or by being completely hands-off but by finding the middle ground. By guiding their path. Four key ways to do that are (1) provide a menu, (2) ask, don't tell,

One way to allow for agency is to let people pick the path. Let them choose how they get where you are hoping they'll go.

(3) highlight a gap, and (4) start with understanding.

**Provide a menu**. One way to allow for agency is to let people pick the path. Let them choose how they get where you are hoping they'll go. For example, potential hires know they are supposed to negotiate, so—almost regardless of what they're offered—they usually ask for more. One way to deal with this is to give candidates the tradeoffs. An extra week of vacation is equivalent to $5,000 less salary. Ten thousand more in salary is equivalent to this much less in equity.

Letting potential hires choose which dimension is more important makes them feel like they have more of an active role in the process—and hopefully satisfies their need to negotiate. It's providing a menu: a limited set of options from which people can choose.

**Ask, don't tell**. Another way to allow for agency is to ask questions rather than make statements. Questions shift the listener's role. Rather than counterarguing or thinking about all the reasons they disagree with a statement, listeners are occupied with a different task: figuring out an answer to the question. How they feel about it or their opinion. Something most people are more than happy to do.

More importantly, questions increase buy-in. Because while people may not want to follow someone else's lead, they're much more likely to follow their own. The answer to the question isn't just any answer; it's *their* answer. And because it's their own personal answer, reflecting their own personal thoughts, beliefs, and preferences, that answer is much more likely to drive them to action.

**Highlight a gap**. Another route to self-persuasion is to highlight a gap—a disconnect between someone's thoughts and actions or a disparity between what they might recommend for others versus do themselves.

"Can I get a light?" Talk to any smoker, even someone who smokes casually, and they've probably heard this question at least once if not hundreds of times. Most people are happy to oblige.But when smokers in Thailand were stopped on the street and asked this question, their responses were nowhere near as positive. "I'm not giving it to you," said one smoker. "Cigarettes contain poison," responded another. "They drill a hole in your throat for cancer. Aren't you afraid of surgery?" lectured a third.And they did so because the person who made the request was a child.

A small boy wearing a monkey T-shirt or a girl in pigtails. Each no more than four feet tall and barely over ten years old. The kids pulled cigarettes from their pockets and politely asked smokers for a light. After being rejected and often chastised for their request, the kids turned to walk away. But before they did, they handed the smoker a piece of paper. A small note, folded into fourths, almost like a secret passed under the table at school. "You worry about me," it said, "but why not about yourself?" And at the bottom was a toll-free number smokers could call to kick the habit.With a meager budget of only $5,000 and no media spending at all, the campaign had an enormous impact. Calls to the helpline jumped more than 60 percent. Many called it the most effective anti-smoking ad ever.

The Smoking Kid campaign worked because it highlighted a gap, a disconnect between what smokers were suggesting to others (kids) and what they were doing themselves. People strive for internal consistency. They want their attitudes, beliefs, and behaviors to align.

Consequently, when attitudes and behaviors conflict, people get uncomfortable. And to reduce this discomfort, or what scientists call cognitive dissonance, people take steps to bring things back in line.

**Start with understanding.** Over the last few decades, negotiators have relied on a simple stairway model. A basic set of steps consistently works. The first step isn't influence or persuasion. Before people will change, they have to be willing to listen. They have to trust the person they're communicating with. And until that happens, no amount of persuasion is going to work.

Think about why word of mouth is more persuasive than advertising. If an advertisement says a new restaurant is good, people don't usually believe it. Because they don't think they can trust what the ad is saying. But if their friend says they'll love the homemade tagliatelle, they're much

more likely to give it a shot. Why? Because that friend has earned permission. They've known the friend long enough to assume she has their best interests at heart.

Rather than trying to persuade, start by understanding. Why is the supplier's price higher than desired? Perhaps their costs have gone up. When people feel understood and cared about, trust develops. The supplier realizes the goal is a long-term partnership and not just a money grab.

## 2. Endowment

People tend to eat the same foods they've always eaten, buy the same brands they've always bought, and donate to the same causes they've always supported. Take someone who's just had heart bypass surgery or had an angioplasty to widen obstructed arteries. Afterward they're told, often multiple times by multiple doctors, to change their diets and lifestyles. But only around 10 percent actually do.

Change is hard because people tend to overvalue what they have: what they already own or are already doing. Once we have something, once we're endowed with it, we start to become attached to it. And consequently we value it more.

Also, losses loom larger than gains. When deciding whether to take a bet, buy a new phone, or make any change at all, potential disadvantages are weighed more heavily than potential advantages. Losing $100 feels worse than winning $100.

To get people to change, the advantages have to be at least twice as good as the disadvantages. New software can't be just a little better; it has to be *a lot* better. A new approach can't just be slightly more effective; it has to be *significantly* more effective. So how do we ease endowment? Two key ways are to (1) surface the cost of inaction and (2) burn the ships.

### Surface the Cost of Inaction

To overcome endowment, we need to help people realize the cost of doing nothing—that rather than being safe or costless, sticking with the status quo actually has a downside. Business author Jim Collins once said that "good is the enemy of great… We don't have great schools, principally because we have good schools. We don't have great government, principally because we have good government. Few people attain great lives, in large part because it is just so easy to settle for a good life."

The same holds for change. When things are good, it's easy to stick to the status quo. Change is costly and requires effort, so as long as things are good enough, the impetus to switch is muted.

So, to change minds and ease endowment, catalysts surface the cost of inaction. They make it easier for people to see the difference between what they are doing now and what they could be doing. And rather than focusing on how much better the new thing is than the old, or the potential gain of action, catalysts do the opposite. They highlight how much people are losing by doing nothing.

Seeing how much time or money is being lost is more motivating than seeing how much could have been gained.

### Burn the Ships

When endowment is really strong, sometimes change requires going one step further. And those situations may warrant burning the ships. The expression "burning one's bridges" comes from the idea of burning a bridge after crossing it during a military campaign, leaving the troops no choice but to continue the march. Compared to the situations most people face on a daily basis, this tactic is clearly extreme. And selfish.

But similar, less drastic versions can be applied to a broad set of situations in which people are stuck on the status quo. Not completely taking the old option off the table but making people realize and bear more of its true costs.

Car manufacturers don't refuse to make replacement parts for older vehicles, but once a reasonable time has passed, they stop making as many. Prices go up, and consumers are encouraged to transition to something new. Manufacturers don't force consumers to change, but they also don't subsidize the prices on the old parts, leaving them artificially low. They pass the cost on to the consumer, making it less likely those consumers will stick with the status quo.

So sometimes inaction needs to be taken off the table. Or at least no longer subsidized. Because while inaction might beat newcomers in a royal rumble, once inaction becomes more costly, suddenly the contest is a lot more even. Now everyone is on equal footing. Rather than thinking about whether a given new thing is better than the old one, by helping to take inaction off the table, burning the ships encourages people to set aside the old and instead think about which new thing is worth pursuing.

## 3. Distance

When trying to change minds, we hope that evidence will work. That giving people facts, figures, and other information will encourage them to move in our direction. Unfortunately, that doesn't always happen.

Numerous studies, whether examining medicine, politics, or other areas, have found that evidence that was supposed to change minds didn't always work. Sometimes it made people more likely to believe the truth, but other times it just reaffirmed falsehoods. Rather than changing false beliefs, exposure to the truth often increased misperceptions. Giving people correct information made them more likely to believe the exact opposite.

> Rather than going after anyone, catalysts start by finding the people who see their offering as a painkiller.

### The Region of Rejection

People have a range, or zone, around their beliefs that they are willing to consider. Staunch conservatives oppose government spending and regulation. Tell them about a bill to eliminate deficit spending or protect free markets, and they'll probably support it.

But go beyond that zone, to things like raising the debt ceiling or providing universal health care, and it backfires. The further afield the message, the less likely they'll listen. And the more likely it will push them in the opposite direction. Because the region of rejection not only impacts change, it shapes how people perceive and react to information. People search for, interpret, and favor information in a way that confirms or supports their existing beliefs.

How do catalysts avoid the region of rejection and encourage people to actually consider what they have to say? Three ways to mitigate distance are to (1) find the movable middle, (2) ask for less, and (3) switch the field to find an unsticking point.

**Find the movable middle**. When dealing with issues that people feel strongly about, start by finding the movable middle. Individuals who, by virtue of their existing positions, are more likely to shift because they're not so far away to begin with. One way is to look for behavioral residue. Clues that indicate conflicting opinions or a willingness to change. In a business context, consumers who've complained about a competitor on social media, for example.

Trying to get a new product to take off? Rather than trying to convince everyone how great it is, find the subgroup that already needs it. Venture capitalists often refer to products and services as vitamins or painkillers. Nice-to-haves (e.g., vitamins) that can be put off until later, or need-to-haves (e.g., painkillers) that people can't live without.

Rather than going after anyone, catalysts start by finding the people who see their offering as a painkiller. Locating potential users who need the offering and can't wait to sign up.

**Ask for less**. Sometimes we want to change minds of people who are further away. So how do we do that? Try asking for less rather than pushing for more. Dial down the size of the initial request so that it falls within the zone of acceptance. Not only will that make that initial request more successful, it also makes big change more likely overall.

This is really about chunking the change. Breaking big asks into smaller, more manageable chunks. Starting with one and building from there. Moving 10 or 15 yards at a time, rather than tossing a Hail Mary and hoping for the best.

**Switch the field; find an unsticking point**. When someone is really dug in, you can find a dimension where there's already agreement and use that as a pivot point. Have a boss who doesn't support an initiative because they think it will cost too much? Dealing with a colleague who doesn't believe in company culture because they think it's too "squishy"?

Catalysts switch the field and find an unsticking point. Rather than pushing harder down the same blocked path, explore related directions where people aren't so dug in. Even though someone might seem like an adversary on one dimension, there's probably more to them than just that. Points of agreement like making sure the company continues to grow or employee retention stays high. Start with that. Start with the areas of agreement and build from there.

## 4. Uncertainty

People are risk averse. They like knowing what they are getting, and as long as what they are getting is positive, they prefer sure things to risky ones. Even if the risky choice is better, on average.

This devaluing of things uncertain is called the "uncertainty tax." When choosing between a sure thing and a risky one, the risky option has to be that much better to get chosen.

Change almost always involves some degree of uncertainty. Consequently, the more change involves uncertainty, the less interested people are in changing. The more ambiguity there is around a product, service, or idea, the less valuable that thing becomes. So how can we get people to un-pause?

Trialability is how easy it is to try something. The ease with which something can be tested or experimented with on a limited basis. The easier it is to try something, the more people will use it, and the faster it catches on. Trialability works because making things easier to try lowers uncertainty.

The question, then, is how to reduce uncertainty by lowering the barrier to trial. Four key ways to do that are to (1) harness freemium, (2) reduce up-front costs, (3) drive discovery, and (4) make it reversible.

**Harness freemium**. Like Uber and Airbnb, Dropbox often appears on lists of "unicorns," or privately held start-ups with valuations of more than $1 billion. In less than a decade, the file hosting company has amassed more than 500 million registered users. More than 200,000 businesses and organizations have signed up, and the company is valued at more than $10 billion.

But it wasn't always that way. At the outset, Dropbox struggled to get customers to sign up. The technology was innovative, but they were trying to solve a problem most people didn't realize they had. Dropbox's CEO thought about hiring a marketing person or buying some search ads, but the firm didn't have a lot of money to spend, and the return on investment seemed low.

So, rather than trying to convince people how great their service was, Dropbox did something else. They gave it away for free. On the surface, this might seem backward. Give your product away for free? This seems to violate the basic laws of successful business. But it worked. In just two months, the number of users more than doubled. In less than a year, the number had increased tenfold. And soon Dropbox was making billions of dollars in revenue.

Dropbox grew by harnessing a business model called freemium. "Freemium" is a portmanteau, a linguistic blend of two words: "free" and "premium." The initial or basic version is free of charge, but the experience is designed so that satisfied users will eventually pay to upgrade to an enhanced or premium version.

**Reducing up-front costs**. When it launched free shipping, Zappos got a lot of pushback. No one thought it would succeed, and it was an expensive gambit. But it worked because it removed the main barrier to purchase. It reduced uncertainty.

Free shipping was the catalyst that made e-commerce into the behemoth it is today: Just think about Amazon Prime. Success came not from dropping prices or devising a clever slogan but by removing the roadblock that was hindering change. By allowing consumers to experience things like they would in a physical store, without having to pay for the opportunity, free shipping overcame the uncertainty tax and changed how people shop forever.

These and similar examples work by reducing the up-front cost. They shrink the amount of time, money, or effort required at the outset to experience something.

**Drive discovery**. What if people don't even know you exist? Or they know you exist but don't think they'd like what you have to offer? If people don't know something exists or don't think they'll like it, they're unlikely to go looking to try it.

Supermarkets hand out free samples of smoked sausage on toothpicks. That not only lowers the barrier to trial for sausage lovers; it also grows the set of people who think about buying sausage in the first place.

Trial-size toothpastes in first-class airline amenity kits or shaving cream samples in hotel bathrooms serve the same function. Even if someone isn't looking to switch toothpastes, anyone who forgets theirs at home will try the sample, increasing the chance that they will change brands in the future.

**Make it reversible**. Returns are a big issue for retailers. Consumers return more than a quarter of a trillion dollars in merchandise annually, and less than half of those goods can be resold at full price.

Not surprisingly, then, many retailers are tightening up their policies. REI and L.L.Bean have replaced their famous lifetime guarantees with stricter limits. Most companies give consumers 30 days to return their purchases,

When it comes to changing minds, translation comes into play. Not everyone likes or believes the same thing.

with the expectation that shorter policies will reduce costs and increase profit.

But some research suggests this might be shortsighted. Two marketing researchers ran an experiment in which different groups of consumers randomly received different return policies. For the strict policy group, only defective products or incorrect shipments could be returned. For the lenient policy group, any product could be returned at any time for any reason.

Contrary to intuition, the less restrictive policy actually increased profits. Not by just a little but by 20 percent. Because the lenient policy didn't just increase returns; it also increased sales and word of mouth. And these increases were more than enough to offset the cost of the extra returned merchandise. Applied to the company's full base of customers, the lenient policy would have increased profits by more than $10 million a year.

Money-back guarantees or pay-for-performance contracts work similarly. "Don't like it? We'll fix it." Some lawyers advertise that they don't get paid if the client doesn't win. Even airline tickets are covered by a 24-hour return policy. All of which lower uncertainty and reduce inertia, encouraging customers to change their minds from "no" to "yes."

## 5. Corroborating Evidence

Imagine someone comes into the office Monday morning and tells you that they watched an amazing show over the weekend. The dialogue is sharp, the plot is gripping, and the acting is superb. They just loved it and they think you'll like it, too.

When your co-worker says a show is great, that could mean the show is really, truly great. But it might also just reflect the fact that they like lots of shows. Or that they like all sitcoms or anything with a strong female lead.

When someone hears a recommendation, they try to make sense of it. To sort out what that recommendation means. Does it say something about the thing being recommended, or does it just say something about the recommender themselves?

So whenever people get a recommendation or see someone else doing or liking something, they try to figure out—to translate—what it means for them. How informative is that person's opinion? What does it say about their own likely reaction?

When it comes to changing minds, translation comes into play. Not everyone likes or believes the same thing. And what works for one person or organization doesn't necessarily work for another. Things are subjective rather than objective. So how do we solve the translation problem?

### Strength in Numbers

There's strength in numbers. Corporate boards wait to adopt new practices until they've been adopted by several peer institutions. Doctors wait to adopt new drugs until they see multiple colleagues using them. And companies wait to adopt supply chain technologies and management strategies until they've been piloted by a number of other firms.

Multiple sources saying or doing the same thing solves the translation problem. If just one source suggests or does something, it's hard to translate. Hard to know if their opinion is diagnostic. Hard to know what their reaction means for your own.

But if multiple sources say or do something, it's harder not to listen. Because now there's corroborating evidence. Reinforcement. Multiple sources concur. They have the same view, response, or preference. And this consistency means it's much more likely that you'll feel the same way.

If multiple people are doing the same thing, it's harder to argue that they're wrong. Harder to argue that the thing they're suggesting or recommending isn't any good. Multiple sources also add credibility and legitimacy. Increasing the expectation that others will approve and lowering the risk of embarrassment or sanction.

More sources doing or saying the same thing can provide more proof. But who those sources are and when they share their perspectives plays an important role. In particular, when finding corroborating evidence, it's important to consider who, when, and how.

**Which sources are most impactful?** A great deal of research finds that similarity matters. Looking at hotels on TripAdvisor? You don't just want to know whether a hotel is highly rated; you want to know if that hotel is highly rated among people like you. If you're a family traveling with two kids, you probably want a place that other families recommend. The fact that hip 22-year-olds like the hotel isn't as useful.

In other words, the translation problem is less of a problem when there's less need for translation. In the absence of Another You, similar sources are the next closest thing. Sources that are dealing with the same issues or challenges. Other people with the same needs. Other companies in the same vertical. The more similar they are, the more proof or corroborating evidence they provide, and the greater their impact.

**The science of when**. Let's go back to the co-worker recommending a show. If they tell you how much they love it, and another co-worker says something similar the next day, it's hard not to at least consider checking out the show. It's a hot topic, lots of people are talking about it, so you infer that the show must be pretty good.

Spread those conversations out a bit more, though, and their effect is muted. If one co-worker says something today, and another mentions the show three weeks from now, it's less likely to drive action. It's been a while since you heard about the show, so you're less likely to infer it's widely popular. You've probably heard about a lot of other shows in the meantime. And if enough time passes, you may not even remember hearing about the show in the first place.

When trying to change minds, then, not all proof is equal. Concentrating proof boosts its effectiveness. Trying to increase attention for a new service or important social cause? Make sure that different media hits happen soon after one another so potential supporters hear about it multiple times in a short period.

Trying to change the boss's mind? After stopping by her office, catalysts encourage colleagues to make a similar suggestion right away. Concentration increases impact.

Whether it's about shifting minds, changing behavior, or inciting action, catalysts REDUCE roadblocks.

And anyone can be a catalyst. You don't have to be a slick talker or have the best PowerPoint deck. You don't have to have a huge advertising budget or work for a big organization. And you don't have to have 20 years of domain expertise, know how to speak with your hands, or be the most charismatic person in the room.

By being a catalyst, and working to REDUCE roadblocks, you, too, can change anyone's mind.

## THE SUMMARY IN BRIEF

On a hill above Los Angeles is a building that stands apart. George Wyman, the designer, was a simple draftsman working for five dollars a week for the original architect when millionaire Lewis Bradbury asked if he wanted to design the building. After initial doubts, Wyman agreed. Although he had no training as an architect, nor past projects for reference, he created a structure that has shaped the cityscape for over a century and is admired by professionals around the world. Wyman had a changemaker mindset. He took his "one shot," his unique opportunity to make a difference. We all have "one shot." It's our task in life to figure out how we use it.

In his ninth book, ***The Changemaker Mindset***, Ilja Grzeskowitz, states, "The most important success factor of the future will be a radical human changemaker mindset." In this time of increasingly intense digitization of all areas of life, the return to personal relationships, team spirit, and the individual—with all their strengths and weaknesses—will be the most crucial success factor for the future.

## IN THIS SUMMARY, YOU WILL LEARN:

- To envision your purpose to formulate your plan for success.
- People matter—don't go on the journey alone.
- Persistence is more than a daily grind.
- A mindset for change makes the difference.

## Introduction

When it comes to getting from point A to point B—mentally or physically, a changemaker mindset is essential. Grzeskowitz notes that the three Ps of Personal Development are: Purpose. People. Persistence.

### The Change Loop

The better you understand what drives you and your fellow human beings, the easier it is to reach your goals. Six core needs drive each person. Four of them are based on lack (Freedom, Security, Individuality, and Community, one of which is always dominant). These motivate behavior. Once we have permanently secured these four needs, the two growth needs—Vision and Mission—come into play.

### Change or Die

The more we understand what drives us and what our dominant basic need is, the easier it is to lead a life free from the expectations of others and design our future. The motto is: change or die. And, at a time when conditions are becoming increasingly complex, technical developments are more rapid, and the pace of change is soaring, your individual personality is the only factor you can really rely on. The best part? You can influence this factor, beginning to end.

## Stay Yourself To Change Yourself

Trust yourself. Listen to your inner voice and find out what drives you. The more your work is based on the true core of your personality, the easier it will be for you to make necessary changes.

### What's Important

Who owns the story of your life? Are you the producer, scriptwriter, and lead actor, or are you primarily guided by the expectations and standards of others?

### The Personal Freedom Plan

The combination of your dream life and work life ultimately leads to personal freedom for true fulfillment. Determine what's important; build everything else around that vision. Start by asking yourself about what matters to you: What do I wish for myself most of all? Follow with questions probing your financial and professional vision. Finally, ask lifestyle questions such as: What is the everyday life that I dream of? Create a clear vision.

### Positive Obsession

Use the power of positive obsession. Four Love Factors determine your career success: what you do, how you do it, who you do it for, and why you do it. Whenever we love our job, our products, and especially our customers, we inevitably deliver above-average results.

Picture people who love what they do: Accountants juggling numbers as if there were nothing better in the world. Or teachers who treat their students as if each one of them was an extraordinary gift to the world. So, whatever kind of job you have, do the work with infectious passion. If you love how you do something, then even the smallest task acquires great significance.

## External Change Through Internal Transformation

You can let yourself be guided by the expectations of others, make yourself cozy in your comfort zone, and react passively to external circumstances. Or you can assume responsibility and actively shape the desired or necessary change. If you don't take care of your own luck, your success, and your satisfaction, nobody will!

### Of Dodos and Wolves

Are you a dodo or a wolf? The dodo, extinct since 1681, lived a happy and carefree life on the island of Mauritius. Its wings were so stunted that the dodo was unable to fly. But that didn't matter, because dodos didn't have a single natural enemy. They were cozy and comfortable living in paradise until the humans arrived. The humans left the dodos alone, but the rats, pigs, cats, and monkeys that traveled with the humans loved the taste of the dodos' eggs. The dodos were victims of never having faced a challenge.

The counterpart to the dodo is the wolf—it has numerous characteristics that are relevant to change. The wolf is a prime example of future-oriented adaptability—awareness, flexibility, and persistence. The future will belong to the wolves, while the dodos will perish due to their comfortable passivity. And yet, in our society, our companies, and organizations, there are far too many dodos who prefer to wait, hesitate, and blame external circumstances instead of taking life by the horns.

### Nobody Wins Alone

In a future characterized by digitization, disruption, and

technical progress, the human being will be the most critical success factor.

### The Team Is Sacred

Only a team allows ordinary people to achieve extraordinary results—the team is sacred. Even supposed superstars are lost without their team. The British Formula One racing driver Lewis Hamilton needs his mechanic team like he needs air to breathe. Professional soccer player Cristiano Ronaldo can shine only because Sergio Ramos and his defensive colleagues have his back. The great Richard Branson, with more than 260 companies, is so successful only because he places his employees at the center of his endeavors. And they pay him back with dedication, performance, and passion. Nobody wins alone.

## Put Your Employees First

In the markets of tomorrow, a focus on employees will be more important than a focus on customers. Marriott, the hotel chain, understands employee care. Company leader, J. Willard Marriott, clearly and articulately formulated his aspirations, values, and management philosophy, right on his homepage. Also, the entire HR strategy of the chain is geared toward employing people who can identify with it 100 percent. The results speak for themselves because Marriott is known primarily for its service-minded and friendly employees. When the entrepreneur was asked one day which training methods the company uses to ensure this high standard, he gave a simple but revolutionary response, saying, "We just hire nice people." Why? J. Willard Marriott realized that his team is sacred; Marriot selects and treats his staff accordingly.

### The Days Of "Harder, Faster, Stronger" Are Over!

The philosophy of "Harder—Faster—Stronger" is about the pursuit of more and more. And of course, more recognition from other people. Without a break. Without a deep breath. And without gratitude for what you have already achieved and accomplished. Life deserves mindfulness, appreciation, and a high degree of gratitude.

### The World Needs More Battery Changers

Imagine the weekly meeting of department heads. The manager had carefully prepared a PowerPoint presentation, but when she clicked to the first slide, nothing happened. Frantically, she clicked on the remote control and stared hopefully at the projection screen. Multiple clicks—no luck. It wasn't long before a murmur started in the room and grew louder by the second. "Somebody needs to do something," one person said. Another complained, "With the ancient equipment we have to work with around here, it's no wonder it doesn't work." The criticism was hurled at everything. The mood was boiling. All because the projector didn't work. It probably would have continued for some time longer, had the young head of one department not done something that interrupted the endless spiral of negativity and criticism. She rummaged in her purse, rose from her seat, and wordlessly stepped forward. Then she took the remote control, opened the flap, and changed the batteries. "So," she told her colleagues, "it's working again. Can we continue now?" The world doesn't need any more people who think they know exactly what everyone else is doing wrong. The world needs more battery changers!

## The Motivation Revolution

### An Uncomfortable Truth

The better we can motivate ourselves, the better prepared we will be for the challenges of the future. The concept of motivation can be traced back to the Latin word, *movere*. The "carrot and stick" method is a type of "motivation" in theory only. In practice, external motivation—where people only act based on money, praise, or avoidance of punishment—is no more than a myth. If we want to motivate other people to move mentally or physically from point A to point B, then we need to know their inner motives and create the framework conditions in which they are triggered as often as possible—provoked or nudged, that is. The better you know the values, needs, and motivations of your employees, colleagues, and customers, the more you can align your communication and motivate them to change.

### Every Fool Is Different

One slogan seen on the wall art at Cologne Bonn Airport is "Every Fool is Different." Every person is different. Every person is individual. Every person is a unique personality with strengths, weaknesses, and of course, lovable quirks. Yet, we continue to apply the standard formula for communication: what applies to me must also apply to all others. We must meet others according to their needs, values, and motives. Knowing these and combining them with personal goals creates a magical cocktail of deep drive, genuine commitment, and a contagious passion.

## Change. Just. Do. It.

The biggest brake on personality development is the ten-

dency toward passivity. Start finally. You have everything you need. You just have to get on with the doing.

### Imperfect, But Sexy

Berlin's famous party mayor was asked if there was a connection between wealth and erotic charisma. He replied, "No. You can see that in Berlin. We are poor, but sexy." The economic conditions of that time were not perfect, and the citizens had to accept many cutbacks. However, the slogan "Poor, but sexy!" ensured that the people of Berlin were suddenly proud. The perfect moment will never come. Don't wait for it. Prepare yourself as much as necessary, but as little as possible. Just start the change.

### The Seven-Second Rule

Use the Seven-Second Rule to train your changemaker mentality. Behavioral scientists have determined that our daily decisions have already been made on an unconscious level before we register them with our full awareness. If you have not acted within seven seconds, then nothing will happen. You shift to your automatic behavior. And your brain will talk you out of the harder path. Whenever you feel an impulse to do, say, or implement something, you have seven seconds to physically take action. This doesn't have to be a big thing; it's also about starting with the little things. Pick up the phone, write something down, make eye contact, or open your laptop to write an important email.

### The Success Formula

If you don't achieve what you'd hoped to, there's only one person responsible, and that is you. Let's rethink success. Can success only be tied to material things, external achievements, and the attainment of socially-decreed goals? Is it not also success if a single mother raises her three children while, at the same time, working two jobs and still being happy and satisfied? Is it not success if a family decides to live far away from the big city in an old farmhouse and be completely self-sufficient? And is it not also success for a flourishing lawyer to give up his career, live on ten dollars a day as a diving instructor in Thailand, but to have finally found peace of mind through this activity? Figure out what you want and makes you happy and what's important to you. Then you'll make the right decisions.

### It Is Never Too Late to Make a Big Difference

The author was surprised to see a 75-year old woman waiting for him at reception when he was speaking at an event. He was even more impressed when he met her 96-year old father. That elegant man in the wheelchair, in a perfectly fitted suit, holding a briefcase, was there to attend the conference devoted to personal growth and change. Don't you know people who, at the age of twenty, think that by the end of school they will have learned and already know everything that life has to offer? Yet this man said that although his time may be limited, one thing he knew for sure is—it's never too late to make a big difference!

Life is not a straight line, but a fast roller-coaster ride with ups and downs, successes and defeats. As soon as you find the answer, life changes the question. However, what you want to achieve in life—with every goal, vision, and dream—the growth staircase is waiting to be climbed by you.

Ilja Grzeskowitz is a global conference speaker on change, innovation and transformation. He was an executive manager for Germany´s largest retail corporation Karstadt as well as for IKEA, before he started his own consulting company in 2009. As an author, he has published ten books (among them three bestsellers), which have been translated into ten different languages and hundreds of thousand copies worldwide.

## THE SUMMARY IN BRIEF

Creating valuable connections and relationships can be challenging and awkward, especially if you want to use those connections for personal and professional success. In ***The Connector's Advantage***, author Michelle Tillis Lederman shows you what it means to be a Connector and how to become one. By looking at common mindsets and techniques of great Connectors, Lederman lays out the exact steps for growing your connections. From these relationships, you can impact the world and become a Connector in your own life. As you become a Connector, you will have a more significant impact on yourself, as well as those around you.

Through stories, feedback, and real-life applications of connection-making, anyone can learn how to become a Connector. Lederman specifically examines the mindsets of Connectors and offers helpful tips for cultivating the same attitudes within yourself. The techniques provided in this book center around authenticity and generosity, allowing you to create relationships that actually mean something. By incorporating these mindsets and techniques in your own life, learn how to become a Connector that forms reliable relationships to help you out in your personal and professional life.

## IN THIS SUMMARY, YOU WILL LEARN:

- Why connections matter.
- What distinguishes Connectors from other networkers.
- The 7 mindsets of Connectors.
- How to become a Connector.

## Connection or Luck?

Some people naturally seem to have good fortune. You probably know one or two people whose life always seems to go right, even without them trying. From winning the lottery to landing a big job promotion, luck seems to have a massive impact on a person's quality of life. From the outside looking in, it can feel unfair how some people always seem to be in the right place at the right time.

If you're like most people, you probably don't think you're lucky. Luck is something that almost always befalls someone else, not yourself. Why is that? The answer is simple - because luck is a rare thing, and many "lucky" events are actually due to connections, not luck.

## Why Connections Matter

Connection is the key to success in both your professional and personal lives. Having a variety of relationships helps you overcome obstacles, move on to the next phase in your life, and be more content overall. Without connections, it is impossible to succeed, even if you are highly motivated, intelligent, and qualified. To put it bluntly, you will not go far without valuable connections.

By having valuable connections, you can improve most aspects of your life. People often associate networking with work and business. It can help you get ahead in marketing ventures, land your dream job, or receive a hefty bonus. Those who start a new business will find connections vital to the company's success.

Aside from business, though, connections improve personal lives and wellbeing too. Having supportive and stable relationships are required for a healthy life. The more links you add to your list, the more people you can depend on when times are tough.

## Becoming a Connector

Even when you have connections, it can be difficult to translate those connections into success. It takes a Connector to know exactly how to start, grow, and use connections in a valuable way to both their lives and the other party's lives.

In other words, a Connector is someone who cultivates and creates meaningful connections with those around them. Many people mistake Connectors for Users, but Connectors are wildly different. They focus on connections in the long haul, allowing them to create meaningful and fulfilling relationships built on trust and mutual respect.

Whether you are new to networking or have been in the game for a long time, translating your networking venture into observable success can be tricky. It requires specific skillsets and mental exercises to become a Connector who truly utilizes connections for success.

### Mindset #1 of a Connector: Open and Accepting

You don't want to be friends with someone mean, judgmental, and close-minded. Nobody else wants to be either. Don't close yourself off to new relationships by being closed and judgmental. Instead, be open and accepting of a variety of people and situations.

Similarly, only real relationships flourish. Create real relationships by being completely open, accepting, and authentic about yourself, your goals, and your desires. People can see through fakeness, and they don't want connections with it. Be yourself by being open, honest, and accepting of yourself. If you don't accept you, nobody else will either.

People who are open and accepting almost always have stronger connections. Their open mindset allows them to connect with many people, even those completely different from themselves. This then allows them to have more perspectives, help, and support when the time comes. Connectors know this to be true. They make it a priority to be open and accepting of themselves and others.

### Mindset #2 of a Connector: Have a Clear Vision

Sometimes, it can be challenging to know what you want. Hamburger or chicken nuggets? Left or right? Stay or go? Though a little bit of uncertainty is okay, you should not be uncertain about your vision. Knowing exactly what you want is how you create your ideal life. Just as you won't get where you want to go without directions or an address, you won't live the life you want without a clear vision of it.

For this reason, Connectors almost always have clear visions of their goals and desires. Their visions are so clear that they can create action steps to get to the point they want. This allows them to set goals, ask for help when they need it, and communicate their goals, feelings, and wishes with their connections along the way.

Start creating clearer visions by setting SMARTER goals, meaning goals that are:

- Specific
- Measurable
- Actionable
- Realistic
- Timed
- Engaging
- Revisited

By setting SMARTER goals, you have a clear idea of what you want and how to get there. Use these goals to create the life you want. Then, keep talking to your connections to get there faster and ensure you are going the right way.

As you set your goals, don't forget about your connections. They are there to help you become the person you want to be. Communicate with them, ask for help, and offer support in return so your connections can flourish alongside you.

### Mindset #3 of a Connector: Believe in Abundance

How often have you heard the phrase "less is more?" Though this cliché is true in many cases, it is not right for connections. In fact, the opposite is true when it comes to relationships. Abundance is the best. The more you believe in abundance, the more opportunities you will have, people you will meet, etc.

To believe in abundance is to believe in opportunities. Whether they be work opportunities, relationship opportunities, or personal opportunities, abundance lets you see the potential for all sorts of options in your life. Invest your time, energy, and motivation into these opportunities, and you will see them come to fruition.

To fully believe in abundance, don't compare yourself to others, and don't take away anyone's shine. Just as you have an abundance of opportunities, so do the people around you. Trust yourself and your journey so you can experience abundant opportunities within your own life.

### Mindset #4 of a Connector: Trust

It's common knowledge that a romantic relationship will not last without trust. The same is true with all relationships, even the one with yourself. Trust is what allows relationships to flourish, grow, and be useful when times are tough. When a relationship lacks trust, one or both parties get defensive, vindictive, or toxic.

With this in mind, Connectors make trust a priority. They know that trust is what will allow their relationships to grow and go smoothly. They tackle every one of their relationships with authenticity, vulnerability, transparency, and consistency. These four attributes are the ingredients to both giving trust and receiving it in return.

To trust your connections, though, you first have to trust yourself. Many people forget this fact. If you don't trust your decisions and abilities, there is no way that you can learn to trust another person. Put your best foot forward by trusting yourself when it comes to your actions, decisions, and abilities.

### Mindset #5 of a Connector: Social and Curious

Although your exact social preference may differ, humans are naturally social creatures. Even those who are introverts need socialization now and then. We cannot thrive without meaningful social interaction. This is why those without friends or close family members are often sad and depressed. We absolutely need social interactions to live happy, healthy lives.

Connectors know that social interaction is what makes and breaks us. They make a point to be social in various ways, whether in group settings, one-on-one time, or virtual relationships. No matter the way they communicate, they make it a point to be social.

Curiosity is a prominent feature of becoming more social. The more curious you are, the more likely you will go out, meet new people, and try new things. Let your curiosity lead you to become more brave, outgoing, and social every day. You may be interested in throwing a party, joining a club, or attending a unique event. Follow that curiosity and boost your socialization. Don't be afraid to get creative with it, either!

### Mindset #6 of a Connector: Conscientious

Conscientiousness is when you're careful and diligent. In the case of connection-making, conscientiousness is about being diligent and careful in the relationship. This includes doing what you say you're going to do, checking in, and overall being the right person to have a connection with.

Suppose you leave conscientious out of the equation. In that case, you often will look like you don't care about the other person or the relationship as a whole. When this happens, other people are less likely to want to be your connection in return. After all, nobody wants to be in a one-sided relationship.

An essential part of being conscientious is knowing when to say no and when to say yes. Some situations will arise when you simply do not have the time or energy to perform a favor. In these cases, it is more conscientious to say no. Just make sure to say it in a way that is compassionate, heartfelt, and respectful to the other person. In other cases, you should say yes.

### Mindset #7 of a Connector: Have a Generous Spirit

Do not expect for your connections to help you if you aren't willing to give to them. For this reason, generosity is a crucial foundation for rewarding connections. You cannot become a Connector without first having a generous spirit for your connections and the world around you.

No matter where you are, try to add something to the organization or people. Whether you are at the office, home, or gym, try to add something by being generous and attentive to the situations' needs and wants. Even if you don't get anything in return initially, nothing is ever really for nothing. It just might take a bit to see the results.

As you become generous, you might notice that certain people try to take advantage of you. Set boundaries to prevent this from happening. Having healthy boundaries in place does not make you any less generous. Instead, it is a way of being generous to yourself. If you aren't generous to yourself, there is no way to be helpful and beneficial to others.

## Diversity is Key

In the stock market, most investors want a diverse portfolio. This ensures that not all their money will be lost at one time in the case that a company should tank unexpectedly. Diversity is key in connections, too. Obviously, having diverse connections means more opportunities for help and perspectives. Still, diversity extends beyond the type of people you make connections with.

The modern world is equipped with countless ways to make connections with people. Use diverse mediums to create different types of relationships. For example, LinkedIn and other technology tools are a great way to diversify your connections. As the world continues to develop, you need to keep up with the times by using these helpful portals. Link, reach out, and promote your business on LinkedIn to expand your network and online presence.

More than LinkedIn, though, use other social media platforms to connect with those around you. Platforms like Facebook, Instagram, and Snapchat are more personal social media accounts. Still, they are a great way to connect with someone if you are interested in them for more than just business purposes.

As you build these online connections, remember to be authentic, and respect people's privacy. Having a connection with someone doesn't entitle you to every detail of their lives.

## What Now?

Kick your networking up a notch by becoming a Connector. Reach out to people with intentions to connect, but do so in an accepting, trusting, and conscientious way. If you authentically create relationships in this way, you will eventually see that your connections improve your life and career, making you feel a bit more lucky.

Michelle Tillis Lederman, CSP, PCC, named one of Forbes' Top 25 Networking Experts, is the author of several books including the internationally known The 11 Laws of Likability. ## How Finding Your Passion Changes Everything

by Ken Robinson, Ph.D., with Lou Aronica

### THE SUMMARY IN BRIEF

A 2-year-old teaches himself to read by watching *Sesame Street* and tries to teach other kids to count using his number blocks. As an adult, his math lectures draw standing-room-only crowds. A 9-year-old girl is thought to have a learning disability. A psychologist thinks otherwise and opens the door to an extraordinary life of dance. A young girl in Greece dreams of academic life and becomes one of America's leading political commentators. Terence Tao, Gillian Lynne and Arianna Huffington all took different paths to discovering their Element and each was changed profoundly by the experience.

The Element is the point at which natural talent meets personal passion. When people arrive at the Element, they feel most themselves, most inspired and achieve at their highest levels.

In *The Element*, learning expert Ken Robinson, Ph.D., draws on the stories of a wide range of artists, athletes, scientists, business leaders, academics and others to show you why finding your Element is essential for all of us. He also explores the conditions that lead us to live lives that are filled with passion, confidence and personal achievement.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to unleash the powerful driving force inside every human being.
- The key to the breathtaking diversity of human talent and passion, and to our extraordinary potential for growth and development.
- How to make any vision, any dream, a reality.
- How to find the place where your talents and desires intersect.

# THE COMPLETE SUMMARY: **THE ELEMENT**

**by Ken Robinson, Ph.D., with Lou Aronica**

**The authors:** Sir Ken Robinson, Ph.D., is an internationally recognized leader in the development of creativity, innovation and human resources. He has worked with national governments in Europe and Asia, international agencies, Fortune 500 companies, national and state education systems, nonprofit organizations and some of the world's leading cultural organizations. He was knighted by Queen Elizabeth II in 2003 for his service to the arts.

Lou Aronica is the author of two novels and co-author of several works of nonfiction, including the national bestseller *The Culture Code* (with Clotaire Rapaille).

## Introduction

The Element is the place where the things we love to do and the things we are good at come together. It is essential that each of us find his or her Element, not simply because it will make us more fulfilled but because, as the world evolves, the very future of our communities and institutions will depend on it.

The world is changing faster than ever in our history. Our best hope for the future is to develop a new paradigm of human capacity to meet a new era of human existence. We need to evolve a new appreciation of the importance of nurturing human talent along with an understanding of how talent expresses itself differently in every individual. We need to create environments — in our schools, in our workplaces and in our public offices — where every person is inspired to grow creatively. We need to make sure that all people have the chance to do what they should be doing, to discover the Element in themselves and in their own way.

To make the best of ourselves and of each other, we urgently need to embrace a richer conception of human capacity. We need to embrace the Element. ●

## The Element

Gillian was only 8 years old, but her future was already at risk. Her schoolwork was a disaster, at least as far as her teachers were concerned. She turned in assignments late, her handwriting was terrible and she tested poorly. Not only that, she was a disruption to the entire class, one minute fidgeting noisily, the next staring out the window, forcing the teacher to stop the class to pull her attention back, and the next doing something to disturb the children around her. The school was very concerned. This came to a head when the school wrote to her parents.

The school thought that Gillian had a learning disorder of some sort and that it might be more appropriate for her to be in a school for children with special needs. All of this took place in the 1930s.

### The Letter

Gillian's parents received the letter from the school with great concern and sprang to action. Gillian's mother put her daughter in her best dress and shoes, tied her hair in ponytails and took her to a psychologist for assessment, fearing the worst.

Gillian remembers being invited into a large oak-paneled room with leather-bound books on the shelves. Eventually, her mother and the psychologist stopped talking. The two adults left her sitting there on her own. But as he was leaving the room, the psychologist leaned across his desk and turned on the radio.

As soon as they were in the corridor outside the room, the doctor said to Gillian's mother, "Just stand here for a moment, and watch what she does." There was a window into the room, and they stood to one side of it, where Gillian couldn't see them. Nearly immediately, Gillian was on her feet, moving around the room to the music. The two adults stood watching quietly for a few minutes, transfixed by the girl's grace. Anyone would have noticed there was something natural — even primal — about Gillian's movements. Just as they

would have surely caught the expression of utter pleasure on her face.

At last, the psychologist turned to Gillian's mother and said, "You know, Mrs. Lynne, Gillian isn't sick. She's a dancer. Take her to a dance school."

Little Gillian, the girl with the high-risk future, became known to the world as Gillian Lynne, one of the most accomplished choreographers of our time, someone who has brought pleasure to millions and earned millions of dollars. This happened because someone looked deep into her eyes — someone who had seen children like her before and knew how to read the signs. Someone else might have put her on medication and told her to calm down. But Gillian wasn't a problem child. She didn't need to go away to a special school.

She just needed to be who she really was.

Gillian Lynne found her Element. Most people have not.

### Find Your Element

Finding your Element is essential to your well-being and ultimate success, and, by implication, to the health of our organizations and the effectiveness of our educational systems.

If we can each find our Element, we all have the potential for much higher achievement and fulfillment. We all have distinctive talents and passions that can inspire us to achieve far more than we may imagine. Understanding this changes everything. It also offers us our best and perhaps our only promise for genuine and sustainable success in a very uncertain future.

Being in our Element depends on finding our own distinctive talents and passions. Why haven't most people found this? One of the most important reasons is that most people have a very limited conception of their own natural capacities. ●

## Think Differently

One of the key principles of the Element is that we need to challenge what we take for granted about our abilities and the abilities of other people. This isn't as easy as one might imagine. Part of the problem with identifying the things we take for granted is that we don't know what they are *because* we take them for granted. They become basic assumptions that we don't question, part of the fabric of our logic. We don't question them because we see them as fundamental, as an integral part of our lives.

## 'The Shoulders of Giants'

Isaac Newton famously said, "If I saw further it was because I stood on the shoulders of giants." This is not just a phenomenon of science.

A good example of something that many people take for granted without knowing it is the number of human senses. When asked how many senses they have, most people will answer five — taste, touch, smell, sight and hearing. Some will say there's a sixth sense and suggest intuition. Rarely will anyone offer anything beyond this.

Physiologists largely agree that in addition to the five we all know about, there are four more. The first is our sense of temperature. Another is the sense of pain. Next is the vestibular sense, which includes our sense of balance and acceleration. And then there's the kinesthetic sense, which gives us our understanding of where our limbs and the rest of our body are in space in relationship to each other.

### Athletes and Performers

Athletes have a profound sense of the capacities of their physical bodies, and their achievements show how limited our everyday ideas about human ability really are. If you watch athletes, dancers, musicians and other performers of their class at work, you can see that they are thinking, as well as performing, in extraordinary ways. They draw from the deep reserves of feeling and intuition and of physical reflex and coordination that use the whole brain and not just the parts that we associate with rational thinking.

In these ways, athletes and all sorts of other performers help to challenge something else about human capacity that too many people take for granted and also get wrong — our ideas about intelligence.

How are you intelligent? Knowing that intelligence is diverse, dynamic and distinctive allows you to address that question in new ways. This is one of the core components of the Element. For when you explode your preconceived ideas about intelligence, you can begin to see your own intelligence in new ways. Discovering the Element is all about allowing yourself access to all of the ways in which you experience the world, and discovering where your own true strengths lie.

Just don't take them for granted. ●

## Beyond Imagining

We tend to underestimate the range of our senses and

our intelligence. We do the same with our imaginations. In fact, while we largely take our senses for granted, we tend to take our imaginations for granted completely. We'll even criticize people's perceptions by telling them that they have "overactive imaginations" or that what they believe is "all in their imagination." And yet, far more than any other power, imagination is what sets human beings apart from every other species on earth.

The imagination is vitally important in our lives. Through imagination, we can visit the past, contemplate the present and anticipate the future. We can also do something else of profound and unique significance.

We can create.

### Creative Dynamics

Creativity is a step beyond imagination because it requires that you actually do something rather than lie around thinking about it. It's a very practical process of trying to make something original. Some common features pertain:

- It is a process. Usually, the creative process begins with an inkling, which requires further development.
- Creativity involves several different processes that wind through each other.
- It involves using media of some sort to develop ideas.
- Creative work also often involves tapping into various talents at your disposal to make something original.
- People who work creatively usually have something in common: They love the media they work with.
- Creativity also uses much more than our brains. We, ourselves, are the medium of our creative work.
- Creative work also reaches deep into our intuitive and unconscious minds and into our hearts and feelings.

In the 19th century, William James became one of the founding thinkers of modern psychology. By then, it was becoming more widely understood that our ideas and ways of thinking could imprison us or liberate us. James put it this way: "The greatest discovery of my generation is that human beings can alter their lives by altering their attitude of mind. … If you change your mind, you can change your life."

This is the real power of creativity and the true promise of being in your Element.

## In the Zone

At the age of two, Terence Tao taught himself to read by watching *Sesame Street,* and he tried to teach other kids to count using number blocks. Within the year, he was doing double-digit mathematical equations. Before his 9th birthday, he took the SAT-M (a math-specific version of the SAT given primarily to college candidates) and scored in the 99th percentile. He received his Ph.D. at age 20. When he was 30, he won a Fields Medal, considered the Nobel Prize of mathematics, and a MacArthur Fellowship.

Dr. Tao is extraordinarily gifted. He's earned the moniker "the Mozart of Math," and his lectures — his *math lectures* — draw standing-room-only crowds. His academic record suggests that he could have been successful in several disciplines, but his real calling, his discovery of the Element, came via math when he was still a toddler.

"I remember as a child being fascinated with the patterns and puzzles of mathematical symbol manipulation," he told an interviewer. "I think the most important thing for developing an interest in mathematics is to have the ability and the freedom to play with mathematics — to set little challenges for oneself, to devise little games, and so on. Having good mentors was very important for me, because it gave me the chance to discuss these sorts of mathematical recreations; the formal classroom environment is of course best for learning theory and applications, and for appreciating the subject as a whole, but it isn't a good place to learn how to experiment."

### Brilliance and Passion

Tao probably finds himself in the zone regularly. In addition to being born with rare skills, he is also extremely fortunate because he arrived at his version of the Element when he was very, very young. He found the place where his brilliance and his passion met, and he never looked back.

No one was going to tell Tao to stop doing math because he'd make more money if he were a lawyer. In that way, he, and others like him, had an unencumbered path toward the Element.

But they *provide* a path as well. For they show all of us the value of asking a vitally important question: If left to my own devices — if I didn't have to worry about making a living or what others thought of me — what am I most drawn to doing? Tao probably never had to wonder what he was going to do with his life. What the rest of us need to do is see our futures and the futures of our children, our colleagues and our communities with the childlike simplicity prodigies have when their talents first emerge.

This is about looking into the eyes of your children or those you care for and, rather than approaching them with a template about who they might be, trying to understand who they really are.

We need to understand what puts them and us in the zone.

And we need to determine what implications that has for the rest of our lives. ●

## Finding Your Tribe

Tribe members can be collaborators or competitors. They can share the same vision or have utterly different ones. They can be of a similar age or from different generations. What connects a tribe is a common commitment to the thing they feel born to do. This can be extraordinarily liberating, especially if you've been pursuing your passion alone.

Finding your tribe can have transformative effects on your sense of identity and purpose. This is because of three powerful tribal dynamics: validation, inspiration and what is called the "alchemy of synergy."

Connecting with people who share the same passions affirms that you're not alone; that there are others like you and that, while many might not understand your passion, some do. It doesn't matter whether you like the people as individuals, or even the work they do. It's perfectly possible that you don't.

What matters first is having validation for the passion you have in common. Finding your tribe brings the luxury of talking shop, of bouncing ideas around, of sharing and comparing techniques, and of indulging your enthusiasms or hostilities for the same things.

Some people are most in their Element when they are working alone. This is often true of mathematicians, poets, painters and some athletes. Even with these people, though, there's a tacit awareness of a field — the other writers, other painters, other mathematicians, other players, who enrich the domain and challenge their sense of possibility.

### How Do They Do That?

Finding your tribe offers more than validation and interaction, important as both of those are. It provides inspiration and provocation to raise the bar on your own achievements. In every domain, members of a passionate community tend to drive each other to explore the real extent of their talents.

Sometimes, the boost comes not from close collaboration, but from the influence of others in the field, whether contemporaries or predecessors, whether directly associated with one's particular domain or associated only marginally. ●

## What Will They Think?

When Arianna Stasinopoulos was a teenager in Greece in the 1960s, she had a sudden and passionate dream. Leafing through a magazine, she saw a picture of Cambridge University in England. She was only 13 years old, but she decided on the spot that she had to be a student there. No one took her seriously. No one except Arianna herself, that is. And one other person.

Her mother decided that they had to find out if Arianna's dream was even remotely possible. She made some inquiries and learned that Arianna could apply for a scholarship. Arianna applied as soon as she was eligible.

To her delight and everyone's astonishment (except her mother's), Cambridge accepted Arianna — and she won a scholarship. She went on to graduate from Cambridge University with an M.A. in economics.

Now based in the United States, Arianna Huffington is the author of 11 books on cultural history and politics, a nationally syndicated columnist and co-host of a National Public Radio political roundtable program. In May 2005, she launched the *Huffington Post* Web site, "one of the most widely read and frequently cited media brands on the Internet." In 2006, *Time* magazine put her on their list of the world's 100 most influential people.

### Swimming Against the Tide

All cultures — and subcultures — embody systems of constraints that can inhibit individuals from reaching their Element if their passions are in conflict with their context.

The urban culture may not be best for someone who wants to run a small shop where he knows everyone's name. Parts of heartland American culture are not prime territory for those who want careers as scathing political comics. This is why Arianna Stasinopoulos wanted to leave Greece. Finding your Element sometimes requires breaking away from your native culture in order to achieve your goals.

In seeking your Element, you're likely to face one or more of the three levels of constraint — personal, social and cultural.

Ultimately, the question is always going to be, "What price are you willing to pay?" The rewards of the Element are considerable, but reaping these rewards may mean pushing back against some stiff opposition. ●

## Do You Feel Lucky?

Some "lucky" people have been fortunate to find their passions and have the opportunities to pursue them. Some "unlucky" people have had bad things happen to them. But good and bad things happen to all of us. It's not what happens to us that makes the difference in our lives. What makes the difference is our attitude toward what happens. The idea of luck is a powerful way of illustrating the importance of our basic attitudes in affecting whether or not we find our Element.

Describing ourselves as lucky or unlucky suggests that we're simply the beneficiaries or victims of chance circumstances. But if being in your Element were just a matter of chance, all you could do is cross your fingers and hope to get lucky as well. There's much more to being lucky than that. Research and experience show that lucky people often make their luck because of their attitudes.

We all create and shape the realities of our own lives to an extraordinary extent. Successful people take an active role in "getting lucky." They've mastered a combination of attitudes and behavior that lead them to opportunities and that give them the confidence to take them.

### Conscious Efforts

One way of opening ourselves up to new opportunities is to make conscious efforts to look differently at our ordinary situations. Doing this allows a person to see the world as one rife with possibility and to take advantage of some of these possibilities if they seem worth pursuing. If we keep our focus too tight, we miss the rest of the world swirling around us.

Another attitude that leads to what many of us would consider "good luck" is the ability to reframe, to look at a situation that fails to go according to plan and turn it into something beneficial.

People who find their Element are more likely to evolve a clearer sense of their life's ambitions and set a course for achieving them. They know that passion and aptitude are essential. They know, too, that our attitudes to events and to ourselves are crucial in determining whether or not we find and live our lives in the Element. ●

## Somebody Help Me

Mentors serve an invaluable role in helping people get to the Element. It might be overstating things to suggest that the only way to reach the Element is with the help of a mentor, but it is only a mild overstatement. We all encounter multiple roadblocks and constraints on the journey toward finding what we feel we were meant to do. Without a knowledgeable guide to aid us in identifying our passions, to encourage our interests, to smooth our paths and to push us to make the most of our capacities, the journey is considerably harder.

Mentorship is, of course, a two-way street. As important as it is to have a mentor in your life, it is equally important to fulfill these roles for other people. It is even possible that you'll find your own real Element is as a mentor to other people.

### More Than Heroes

We all have personal heroes — a parent, a teacher, a coach, even a schoolmate or colleague — whose actions we idolize. In addition, we all have heroes we've never met who stir our imaginations with their deeds. We consider Lance Armstrong a hero for the way he overcame a life-threatening illness to dominate a physically grueling sport, and Nelson Mandela a hero for his critical role in ending apartheid in South Africa. In addition, we forever associate people with heroic acts — Rosa Parks' triumphant stand against bigotry, Neil Armstrong's first step on the moon.

These people open our eyes to new possibilities and fire our aspirations. They might even drive us to follow their examples in our lives, moving us to dedicate ourselves to public service, exploration, breaking barriers or lessening injustice. In this way, these heroes perform a function similar to mentors.

Yet mentors do something more than heroes in our search for the Element. Heroes may be remote from us and inaccessible. Mentors are different. They take a unique and personal place in our lives. Mentors open doors for us and get involved directly in our journeys. They show us the next steps and encourage us to take them. ●

## Is It Too Late?

One of the fundamental precepts of the Element is that we need to reconnect with ourselves and see ourselves holistically. One of the greatest obstacles to being in our Element is the belief that our minds somehow exist independently of our bodies, like tenants in an apartment, or that our bodies are really just a form of transportation for our heads. The evidence of research, and of common sense, is not only that our physical health affects our intellectual and emotional vitality, but that our attitudes can affect our physical well-being. But

equally important is the work you do to keep your mind young. Laughter has a huge impact on aging. So does intellectual curiosity. Meditation can also provide significant benefits to the physical body.

The answer to the question, "Is it too late for me to find the Element?" is simple: No, of course not. Even in the cases where the physical degradations that come with age make certain achievements impossible, the Element is still within reach.

### Keeping Things Plastic

What this really comes down to is our capacity to continue to develop our creativity and intelligence as we enter new stages of our lives.

Research indicates that, as long as we keep using our brains in an active way, we continue to build neural pathways as we get older. This gives us not only the ongoing potential for creative thought, but also an additional incentive for continuing to stretch ourselves. There is strong evidence to suggest that the creative functions of our brain stay strong deep into our lives: We can recover and renew many of our latent aptitudes by deliberately exercising them.

Remarkable, life-enhancing things can happen when we take the time to step out of our routines, rethink our paths and revisit the passions we left behind (or never pursued at all) for whatever reason. We can take ourselves in fresh directions at nearly any point in our lives. We have the capacity to discover the Element at practically any age. ●

## For Love or Money

To be in your Element, it isn't necessary to drop everything else and do it all day, every day. For some people, at some stages in their lives, leaving their current jobs or roles to pursue their passions isn't a practical proposition. Other people choose not to do that for a whole range of reasons. Many people earn their living doing one thing, and they then create time and space in their lives to do the thing they love. Some people do this because it makes greater sense emotionally. Others do it because they feel they have no alternative but to pursue their passions "on the side."

Whether or not we can spend most of our time in our Element, it's essential for our well-being that we connect with our true passions in some way and at some point.

### A New Richness

Discovering the Element doesn't promise to make you richer. Quite the opposite is possible, actually, as exploring your passions might lead you to leave behind that career as an investment banker to follow your dream of opening a pizzeria. Nor does it promise to make you more famous, more popular or even a bigger hit with your family. However, for everyone, being in their Element, even for part of the time, can bring a new richness and balance to their lives.

The Element is about a more dynamic, organic conception of human existence in which the different parts of our lives are not seen as hermetically sealed off from one another, but as interacting with and influencing each other. Being in our Element at any time in our lives can transform our view of ourselves. Whether we do it full-time or part-time, it can affect our whole lives and the lives of those around us. ●

## Making The Grade

The core ideas and principles of the Element have implications for each of the main areas of education. The curriculum of education for the 21st century must be transformed radically. Intelligence is diverse, dynamic and distinct. Here is what it means for education.

First, we need to eliminate the existing hierarchy of subjects. Elevating some disciplines over others only reinforces outmoded assumptions of industrialism and offends the principle of diversity. Too many students pass through education and have their natural talents marginalized or ignored. The arts, sciences, humanities, physical education, languages and math all have equal and central contributions to make to a student's education.

Second, we need to question the entire idea of "subjects." For generations, we have promoted the idea that the arts, the sciences, the humanities and the rest are categorically different from each other. The truth is that they have much in common. There is great skill and objectivity in the arts, just as there is passion and intuition at the heart of science. The idea of separate subjects that have nothing in common offends the principle of dynamism.

Third, the curriculum should be personalized. Learning happens in the minds and souls of individuals — not in the databases of multiple-choice tests. Learning is a personal process, especially if we are interested in moving people toward the Element. The current processes of education do not take into account individual learning styles and talents. In that way, they offend the principle of distinctiveness.

### Teaching

The Element has implications for teaching. Too many reform movements in education are designed to make education teacher-proof. The most successful systems in the world take the opposite view. They invest in teachers. Mentoring and coaching is the vital pulse of a living system of education.

The Element has implications for assessment. Education is being strangled persistently by the culture of standardized testing. The irony is that these tests are not raising standards except in some very particular areas, and at the expense of most of what really matters in education.

The future for education is not in standardizing, but in customizing; not in promoting groupthink and "deindividuation," but in cultivating the real depth and dynamism of human abilities of every sort. For the future, education must be Elemental. ●

## Afterword

Finding the Element in yourself is essential to discovering what you can really do and who you really are. At one level, this is a very personal issue. It's about you and people you know and care for. But there is a larger argument here as well. The Element has powerful implications for how to run our schools, businesses, communities and institutions. The core principles of the Element are rooted in a wider, organic conception of human growth and development.

Sir Isaac Newton composed his theories at the dawn of the mechanical age. To him, the universe seemed like an enormous mechanical clock, with perfectly regular cycles and rhythms. Modern science has changed metaphors and, in doing so, has shifted our understanding of how the universe works.

In our own time, though, we still routinely use mechanistic and technological metaphors to describe ourselves and our communities.

The power of metaphors and analogies is that they point to similarities, and there are certainly some similarities in how lifeless computers and living minds actually work. Nonetheless, your mind clearly isn't a solid-state system in a metal box on your shoulders. And human organizations are not at all like mechanisms. They are made up of living people who are driven by feelings and motives and relationships. Organizational charts show you the hierarchy, but they don't capture how the organization feels or how it really works. The fact is that human organizations and communities are not like mechanisms: they are much more like organisms.

### Become the Best

The Russian novelist Aleksandr Solzhenitsyn understood the connection between ourselves and others. "If you want to change the world," he said, "who do you begin with, yourself or others? I believe if we begin with ourselves and do the things that we need to do and become the best person we can be, we have a much better chance of changing the world for the better."

### Aiming High

Human beings and human communities are the same. We need the right conditions for growth, in our schools, businesses and communities, and in our individual lives. If the conditions are right, people grow in synergy with the people around them and the environments they create. If the conditions are poor, people protect themselves and their anxieties from neighbors and the world. Some of the elements of our own growth are inside us. They include the need to develop our unique natural aptitudes and personal passions. Finding and nurturing them is the surest way to ensure our growth and fulfillment as individuals.

If we discover the Element in ourselves and encourage others to find theirs, the opportunities for growth are infinite. If we fail to do that, we may get by, but our lives will be duller as a result.

To make the best of our time together on this small and crowded planet, we have to develop our powers of imagination and creativity within a different framework of human purpose. Michelangelo once said, "The greatest danger for most of us is not that our aim is too high and we miss it, but that it is too low and we reach it." For all our futures, we need to aim high and be determined to succeed. To do that, each of us individually and all of us together need to discover the Element. ●

### RECOMMENDED READING LIST

If you liked *The Element*, you'll also like:

1. ***A Whole New Mind* by Daniel H. Pink.** The age of right-brained thinkers — artists, inventors, big-picture thinkers — has arrived. Learn the six essential aptitudes you'll need to excel in this new business environment.
2. ***What Got You Here Won't Get You There* by Marshall Goldsmith.** The corporate world is full of intelligent and skilled executives, but Goldsmith gives you the 20 habits to help you push for the very best in your career.
3. ***Talent is Overrated* by Geoff Colvin.** What's the real solution to the mystery of high performance? Colvin reveals the secrets of "deliberate practice." It's difficult. It hurts. But more of it equals better performance. Tons of it equals great performance.

## THE SUMMARY IN BRIEF

This book is for those who are stuck in the "elephant's dilemma" in their work. An elephant grows up tethered to a tent peg that he can't break free from as a baby elephant. The baby elephant grows up and has many more times the power and strength to break free, but it believes it is still unbreakably tethered to that post as it was as a child. Similarly, many wait safely in their corporate jobs tied to the never-ending cycle of business and never try to break free.

Jon Bostock in ***The Elephant's Dilemma*** will show you how to break free from the constraints of business and reimagine your future at work. It'll show you how to make business decisions that are more sustainable, more radical, and more disruptive so that you can leap into a more fulfilling future.

Further, Bostock shows the reader how to create an innovative business with a true competitive advantage. You can make your business sustainable and leave a lasting legacy upon others in a real and meaningful way.

## IN THIS SUMMARY, YOU WILL LEARN:

- How to break free from the constraints you have let yourself be limited by.
- How to reimagine your future.
- How to create a business with a competitive advantage.
- How to make your business sustainable and leave a legacy that changes the world.

## Introduction

This book is for those who are stuck in the elephant's dilemma in their work. The elephant grows up tethered to a tent peg that he can't break free from as a baby elephant. The baby elephant grows up and has many more times the power and strength to break free, but it believes it is still tethered to that post as it was as a child.

### You Are the Elephant

In a similar way, many wait safely in their corporate jobs tied to the never-ending cycle of business and never try to break free and do work that is more meaningful.

This book will show you how to break free from the constraints of business and reimagine your future at work. The antidote to being stuck in a career rut is to move. Moving. Leaping forward. You can do anything you want. You can look up from the day-to-day grind and look further ahead than the next quarter's profit projections. You can shift out of your rut and into a more fulfilling, meaningful career that will make your future work for you.

### Get Out of the Bubble

Today's neighborhoods encourage people to live in a bubble. They reduce a person's connection to their community. These McNeighborhoods are an illustration of the insular life of today, caring only about what's inside their bubble.

The same old work doesn't engage your mind. You get used to all the conformity, all the sameness, and you look elsewhere for something interesting.

The US generally appears to have stabilized. Compare the state of our society today to the developments of our past. Progress slowed. We stopped taking moon shots and, instead, focused on less weighty, less impactful innovations. We stopped coming together to take giant swings that shook our culture and became more divided.

If we don't start to innovate in ways more reminiscent of our past, we'll remain flat while the world's challenges peak. If we keep operating the same way we are today, with small steps taken here and there but no massive cultural swings, we'll end up with a lot of problems.

The solutions we have in place today will not hold up to the challenges of tomorrow. And often, we don't correctly predict what those challenges will be. Most of us did not see, or at least take seriously, the threat of a pandemic.

## You Are Capable of Creating Change

Think beyond what is best for your family and think about what is best for everyone. Your hardships don't have to impact your attitude and outlook on life. We need to look up and reach out. We need to join together as a community.

### Measuring Up to Mammoths

Elon Musk of Tesla dreams big. SpaceX and The Boring Company are just two more of his innovative ideas.

In an environment like GE, being one of 300,000 employees, it's hard to see the direct impact of your work. I knew our group did good work, but there was so much happening around us that it felt like our efforts were sucked into this big, bureaucratic machine where they just … disintegrated. We were trying to drive innovation, but we were like a single cog pushing hopelessly against a huge metal beast.

Starting a new company is a great deal about tolerance of taking risks. We need people to improve the world around them. Wherever you're at, break free from there. Shake off the chains of life as you know it, and imagine what would happen if you innovated in this world. It means starting with a single step.

### Tugging the Chain

Big companies do a really good job of keeping you just busy enough, distracted enough, tired enough that you don't look for more fulfilling work elsewhere. Their business life cycles keep pulling you back in, engaging you in challenging work that doesn't really affect much change. They cycle you through various opportunities that make you feel good for a short while, so you can push down the urge to do more meaningful work and snuff it out.

Being sustainable is about adjusting operations so they could sustain changes in ownership and management and the world. Ensuring a company is sustainable in those terms has a positive impact on employees, the local community, and the brand.

### Stepping Out of Stagnation

Stagnation is the killer of dreams. Maybe that's how you feel in your work: idle and listless, like you're incapable of moving anywhere more meaningful. It's a common trap. Significant steps are rarely easy. Breaking free of a known existence—even one that's kind of a downer—feels risky, and it often takes time to step into that.

If you don't feel you can take a big step forward into something different, a smaller step is essential. Breaking free and finding more fulfilling work starts with pulling on the chain, just a little, to test your strength. That's all you can reasonably expect to start with if you've spent your whole life being risk-averse, getting up at the same time every day, wearing the same color pants, putting on the right sock first, then the left, getting into your safety-rated sedan, and clocking in at a nice, secure company.

Even if things don't pan out, you learn from those experiences. You feel how empowering it is to impact the world around you. You're inspired. You gain confidence. You just feel good about yourself.

Break free from small expectations, know someone might laugh at your mismatched fashion choices, and keep doing it anyway. Create a reinforcing cycle of change that will move you from stagnation to satisfying payoffs.

## Identify Your Impact

To feel like your work is making a positive impact, you've actually got to make a noticeable, markedly positive impact. It's not enough to just nudge the scale. Yes, if you're not used to taking steps outside the normal way of doing things, you have to start small and get your confidence up. But then you need to look for bigger leaps.

Really think about the contribution you want to make in this world. Identify the impact you want to make, then decide on the best outlet for that change. Choose your path to get there. There are three main paths to take impactful business leaps: reimagining products and services, redesigning operations and supply chains, and aligning organizations into multidimensional sustainability. These three elements can elicit change in isolation, or they can be combined for greater effect.

When you focus on aligning with multidimensional sustainability, you find radical answers to challenges in our world. When you consider how you'll make your organization more sustainable, take a multidimensional approach. Look at the materials your product requires, the travel your executives take, the labeling your product uses, and every other aspect that contributes to your organization and its goal. Align those elements, and you'll find new possibilities to make giant leaps in your industry. The key is to identify the impact you want to make and the best outlet for that change.

## Imagine Change

After you've identified the impact you want to make on the world, you need to imagine how you can create that change. You need to envision how you'll make products, services, and operations more sustainable, efficient, minimal, or whatever you're trying to do. To imagine anything remotely interesting, you first have to erase what you already know. Get a whiteboard with nothing on it, and build the product, service, or operation up from scratch.

Think about what you're trying to create as a piece of art. With art, you start with something that isn't what it becomes. You begin a painting with a blank canvas, a drawing with a blank page. Solving problems is done best when you create without constraints. Start with a clean canvas. Then define the problem you're solving and establish the most efficient way of doing it. Everyday act like there's a whiteboard in front of you.

### Diversity of Thought

Groupthink is a phenomenon that occurs when a bunch of people come together to make decisions based on the same data. Usually, a desire to conform and support each other subconsciously encourages them to reinforce existing opinions without considering alternatives.

We sometimes forget the importance of fresh perspectives. If you want to avoid the traps of groupthink, where you can't come up with any new or innovative ideas, you must include people who see the world differently. You must deliberately bring together alternative viewpoints so that you can see new things. Then, you can solve issues that affect you and others who are not like you. You can have truly successful whiteboarding sessions where you invent innovative solutions.

When we search for diversity of thought, we must force ourselves to look beyond labels. We should seek out people who truly offer perspectives unique from our own. Find people with different belief systems formed by different experiences. A genuine drive to include varied people and ideas will serve you better than pencil-whipping "diversity" for the sake of political correctness.

Groupthink in your business will prevent you from breaking free and making leaps forward. And increasing diversity in your business isn't just a nice thing to do; it will result in more imaginative and more fulfilling business leaps. It's truly transformational for individuals and businesses.

### An Ecosystem of Kindness

When you're trying to do something new and innovative, you need people around you to participate. That might mean they lobby for your ideas, offer encouragement, or lend their efforts to your goal. This isn't just useful; it's essential.

Think of supporters as a personal board of advisors that provides unique perspectives, advice, and guidance. The more you can build out a diverse board of advisors, the better. As this is an informal congregation, it relies on kindness. You need others to kindly donate their time, energy, and insights to your cause. To encourage this, you must be kind to them.

### Permission to Break Free

Hierarchical thinking happens in corporate America. People don't usually like to take action unless given permission by their boss. In a lot of big companies, employees find themselves sitting back and waiting for the new corporate agenda to be pushed down from the top. Only then will they react to the instructions and start slowly shifting forward. They take incremental steps as far as they feel able, before waiting for more guidance from above. This is the habit of hierarchical thinking. It's a system that doesn't set anyone up to create a lasting impact. It just shuffles employees down a well-trod path no faster than the boss will allow.

We need people who will support and celebrate others who take risks. You need to rewire yourself to get comfortable being the outsider. It's creative and innovative and all-around awesome. You know no one will give you permission to do this new thing, but you have what you need to execute on it, so you don't bother wasting time waiting for approval. You just step outside the box and get moving.

## Create An Inspired Legacy

I don't care what industry you're in; there are a lot of companies doing similar things to yours but with a different philosophy. Alternatively, if you're willing to take on the risk, you can start your own company. There is risk involved in that. Find another way to step forward. Get funding—there are people who are willing to invest in great ideas. Find a company that'll pay you a set salary every month and let you work toward your goals.

### Make Your Mark on the World

The most important legacy is one that sustains this earth for future generations. This is what community is all about. We come together to achieve better, safer, more fulfilling environments. There is nothing more noble than taking action to contribute to your community in a lasting way.

### A Sense of Urgency

Bring a sense of urgency to the ideas you've learned. Remember to look out from your bubble to the wider world. It's not enough to give your kids a good education and assume they'll be okay. We're all affected by the world at large, and it's on us to ensure it survives. If you're reading this book, you're in a privileged position to break free from the chains of the normal way and make a mark on the world. It's not just your duty to yourself and your children; it's the path to fulfillment. It's what will quiet the nagging feeling that you're wasting your time on this earth. Working for something bigger than yourself will fulfill you.

Jon Bostock was a tethered elephant at General Electric for eleven years until he made his move and became the COO at Big Ass Fans (true story, real name). After restructuring the company and focusing on long-term economic sustainability, he was successful in shepherding the company's landmark sale. These concepts of disruption and sustainability inspired Jon to break free and start Truman's, a company designed to reduce waste and clutter in the consumer cleaning products industry.

## THE SUMMARY IN BRIEF

The why, where, and how we work has changed forever. Work isn't returning to "the way it was" and leaders who resist this will struggle the most. The job of staying on top of people and labor market trends, anticipating and delivering what is needed to cultivate a culture of excellence, attracting and developing top talent, and protecting employee well-being at a time of unprecedented stress is not an easy feat. Yet here we are.

With the pandemic fresh in our minds, now is the time to understand its impacts on our work lives, the way we organize work, and the way we lead others. In ***The Empathy Advantage: Leading the Empowered Workforce***, authors Heather E. McGowan and Chris Shipley have teamed up to document these seismic shifts and connect the dots about the new workforce that is evolved, empowered, and exhausted, creating a playbook for "leading in this new work era."

## IN THIS SUMMARY, YOU WILL LEARN:

- What the new normal of work looks like
- How to rethink your workforce
- Why you need to rethink your organization
- What it means to rethink your leadership

## The New Normal of Work

Workers adapted superbly to the challenge of maintaining business continuity amid the chaos that was the uncertainty of Covid-19. Our once separate personal and professional lives have merged. But the pandemic was merely a fast-acting catalyst for changes that have been afoot for a decade or longer. Shifting demographics, social norms, and generational experiences have permanently reshaped the workforce in ways larger than any one seismic event.

Our new workforce is now an amalgam of age, experience, and attitudes. Gen Z's entrance into the workforce permanently fixes this new composition. They are the most diverse, well educated, authentic, and socially engaged generation, and they would rather not work than work in jobs that don't reflect and respect their values and interests.

And there you are, smack dab in the middle of these converging trends, trying to figure out what this means for the people you lead and the organization you support. It starts with knowing and understanding the people you hope to lead, so let's start there.

## Part 1: Rethink Your Workforce

### Meet Your New Workforce

The diverse workforce is not coming; it is here. It was never safe to assume that workers who looked like you shared your motivations and experiences. Now, those assumptions are an occupational liability.

Our workforce is a melange of life experiences and rich perspectives that can make our work more enriching and more valuable. Our workforce, and now its leadership, is starting to look like the markets we serve. To tap that value, you're going to have to see–*really see*–the new workforce.

There is no racial majority in the 18 and younger cohort, the very people who are filling jobs today and will continue to fill jobs in the future. Within 10 years, in fact, Gen Z workers will fill 30% of the workforce. Racial reordering has given rise to the "People of the Global Majority," a reference to the global market that now comprises more Black, Indigenous, and people of color (BIPOC) than whites.

The workforce is also pan-generational from Boomers to Gen Z and everything in between. In a world that requires continuous learning and adaptation, an age-diverse workforce now has a distinct advantage over a singularly young or singularly older workforce because our brains develop different capacities at different ages. An age-diverse workforce enables all employees to benefit from these developmental peaks.

With gender we see some of the most profound changes in the composition of the workforce with more women than men achieving a university education and entering the workforce for the first time in history.

Adding well-educated women to the workforce has significant and universal benefits, especially now as we tackle thorny issues. This challenging future requires a style of working that is less about individuals executing tasks in isolation and more about collaborative exploration.

Finally, perhaps the most rapidly transforming demographic marker in the workforce is gender and sexual identity. Once firmly defined as fixed and binary, gender and sexual orientation are increasingly understood to be fluid and exist on a continuum. And increasingly, acceptance is being codified in law.

Awareness, openness, transparency, and acceptance go a long way to create a workplace and team dynamic that engages workers of every background. As we dive deeper into the digital economy, humans will continue to be the greatest source of value creation. Little optimizes the investment in humans more than diversity in the workforce.

### Understand Your Worker's New Habits

Prior to the pandemic, business and society had experienced a 15-year period of exponential technology-driven growth. The pandemic only accelerated that change. As the world changed, we evolved, and so did the way we work.

**We Embraced Existing Technology**: We started using the tools that were already all around us–many of them a decade old or older–including Zoom, Microsoft Teams, Google Meet, Skype, and more. Medical offices embraced telemedicine and consumers adopted every manner of app to stay connected professionally and personally. Small businesses and individuals adopted non-cash payment systems. QR codes finally had a reason to exist at scale. And we learned how to use all of it.

Given that very few of these technologies were new, this rapid digital transformation was due to *human transformation*. Technologies relegated to specific use cases became near universal. *We* transformed *ourselves* to enjoy the benefits of those technologies.

Purpose forms the heart of the new age of human-centric, or humanized, work.

**We Learned to Trust:** None of the virtual tools–indeed, remote work itself–would have been effective at all if we had not made the collective decision to trust one another, at a fundamental level. The trust we found in ourselves and one another helped us make it through three years of remote work. Only because we finally trusted our people and each other to work autonomously were we able to maintain performance and productivity.

**We Learned to Adapt:** The pandemic required everyone to confront unprecedented change. To keep pace, we needed a process of learning new skills and unlearning the habits and systems that prevented progress. Workers embraced agency to act and work in ways that make them more creative, more productive, and more fully human.

### Understand the Empowered Mindset

While the pandemic was experienced differently in one way or another by virtually everyone, one through line stands out. The relationship between individuals and organizations for which they work has forever changed. We have reaffirmed our values. We have reordered our priorities. We have reassessed our work. While the Great Resignation grabbed the headlines, the Great Reset is the real game changer.

Before the pandemic, life was what you had time for when your work was done. In the pandemic, the line between work and life blurred and work didn't always come first. In time, we settled into routines and many of us found that we liked tucking work into life much more than before, when we stressed about having a life outside of work. This reordering of life over work has empowered workers.

Our relationship to what we do and why we do it has also shifted. Workers now desire, or rather demand, meaningful work. Work is now filtered through one basic question: Is it worth it? Workers in every kind of role are seeking work that satisfies both economic and emotional requirements in a careful calculus that measures purpose alongside pay and flexibility alongside status.

We are at our best when we integrate our work with our inherent values. We are our best when we are both living and working our purpose. Purpose forms the heart of the new age of human-centric, or humanized, work. And it is the new organizing principle for companies and teams. When organizations make their purpose clear they attract workers who are dedicated to those values.

Perhaps most important to our new attitudes toward work in an era of remote and hybrid teams, relationships matter more than ever. It is our job as leaders to use our most human capability, empathy, to build the relationships that create the stickiness–the sense of belonging–that engenders engagement and builds organizational capacity.

Making the effort to really understand how your workers are thinking now, to dive into what truly motivates people to engage deeply in their work and with their colleagues, is so worth it, not simply because it creates a more positive workplace, but because it is the single most important thing you can do to unlock value in your business.

## Part II: Rethink Your Organization

### Upgrade Your Operating Models

Business leaders today have had a way of working, organizing, and leading that worked well enough when everything was familiar. These models and maps are comfortable; after all, they got us where we are today. But they bring an increasingly worrisome false confidence.

If the pandemic taught us anything, it has shown that they no longer work and layering them on top of a newly empowered workforce might just be dangerous. It's time, then, to throw them away.

In 2019, the Business Roundtable, an organization composed of the CEOs of the largest and most influential American companies, took a bold step and rejected the 50-year-old shareholder capital doctrine that valued a corporation almost solely on its stock price.

Instead, companies needed to embrace their *stakeholders*–the employees, customers, communities, and investors that in aggregate supported and benefited from the company. This

ushered in the Human Value Era, that puts the workforce at the center of organizational thinking and structure.

Instead of organizing around flat jobs that require more or less the same work every day, the better structure is to organize around projects. This enables people to come in and out of projects as needed, tapping skills when the demand requires them.

This shift from flat, jobs-based work to complex, project-based organizations is not just a nice idea; it's essential. In the modern knowledge economy, work has shifted from linear and predictable to complex and variable. It's time, then, to organize differently to tap the full potential of your team.

The best way to move forward is to abandon command and control structures that were built for scalable efficiency and embrace experimentation and review systems that are designed for scalable learning. Think of work as a set of activities that require individual and collective effort in order to reach an outcome.

In this definition, tasks aren't defined, outcomes are. The people doing the work have the latitude to do the work–the activities–required to reach the objective. That flexibility permits workers to be responsive to changing conditions, while staying fixed on the goal, rather than stuck in a job.

The organization itself naturally has expectations, aspirations, and preferences. A misalignment of these expectations between the organization and the people creates stress, and unchecked, that stress can lead to burnout. Today, we are confronting a decidedly more fragile relationship between the people and the organizations in which they work and we need to double down on our focus on people.

Benefits should not be seen as supplemental compensation. In the Human Value Era, benefits like healthcare, tuition reimbursement, and childcare combine to help your people perform better at work.

Time off matters, but flexibility is just as important. Workers want more flexibility and many more may be willing to rejoin the workforce if they were offered less "traditional" schedules. By turning benefits on their head and thinking of them not as supplemental compensation but as an investment in your company's most precious asset, benefits become an investment in the business.

The focus on value creation through scaled production of product and services was myopic, and blurred the importance of our most valuable asset: our people. To be successful in continuous change, we must focus on the development, engagement, well-being, and happiness of our people.

### Enable Your Empowered Workforce

Culture is a contract, sometimes written and often not, that directs how people within an organization choose to work together. Every organization has a culture. The best are intentional and well-articulated. Organizational values are clear and these clear values underpin decision making. People know what is in–and out–of bounds. They know what is expected of them, usually without being told. Culture is just what you do.

Change happens on top of a strong culture, not to one. The consistency matters. Culture is the operating system. It's how everyone in the organization understands and has context for actions and decisions. Culture enables distributed decision making–because people understand the context and parameters for actions. You work and decide and act within the cultural framework. Well-defined culture allows a business to grow and scale because everyone knows what they are working for and how to work together.

How can you tell if you're working in, or contributing to, a toxic culture? The signs are everywhere. Stress levels are high. Decision making is slow. People tend to feel underappreciated or believe they are being treated unfairly. These organizations tend to experience high rates of employee turnover. Work doesn't have to be that way.

Vibrant cultures are built on a foundation of shared values and trust, and nurtured with mindful intention. This mindfulness toward culture is a leading indicator of a healthy, learning, and engaging workplace. Culture is actuated by people who work in concert with shared values, mutual respect, and–most necessarily–implicit trust. Without trust, the potential of your culture cannot be realized.

Trust–or the lack of it–is expressed in every interaction, every mandate, every conversation. How you lead demonstrates your trust in your team and whether your team can trust you.

Trust runs up and down the org chart. The simplest, and sometimes hardest, way to achieve that bi-directionality is to operate with transparency. You will make mistakes. Own them. Correct them. Those are signs that you have listened, heard, and empathized with the concerns of your employees and customers.

People are more motivated and engaged when they feel a sense of shared purpose. That shared purpose makes people

Loosen your hold and enable your workers to contribute as uniquely and best as they are able.

feel valued and appreciated. It makes them feel seen, respected, validated, and empowered. Culture and purpose are the foundation for the trust and autonomy that empower workers to engage as a team working in league to a greater end.

Use purpose to fuel your organization. It is your best recruiting, retention, sales, and brand tool. Purpose is the *ultimate reason* for the work and is your unique competitive advantage. Clear-sighted purpose is the foundation of effective culture and the key to successful business adaptation. It is the expression of why your company exists and sets you apart. In fact, it can set you above.

Make your purpose evident in everything you do, everything you say, everything you sell, everyone you hire. Make your purpose a beacon so that your tribe can find you. Other companies can build similar things. They can provide better pay and perks. They can buy more advertising. But they can't outpurpose you once you have established your one, true, immutable purpose. That advantage will always fall to you.

## Part III: Rethinking Your Leadership

### Pilot Your Expedition Team

Leaders embracing the new challenges of the Human Value Era may not always have a clear line of sight to the objectives, but you can still move forward, taking your team on an expedition of learning, collaboration, discovery, and value creation in this new world of work.

An expedition is a journey into the unknown. In your work, it may be the exploration of a new product, service, or business model. It might be a collaboration to secure a new customer or launch a unique marketing campaign. It could be the daily journey of serving and supporting customers.

To run a successful expedition, it is essential that you put the right people in the right roles at the right times. Some people excel at problem finding, some at problem solving, others at scaling the novel idea while reducing risk. Knowing how to field your people properly is the most critical part of your job as expedition leader.

As you head out to lead your newly empowered workforce, relinquishing ideas, self perceptions, and behaviors that no longer serve you will lead to a more successful expedition.

**Relinquish the Primacy of Your Expertise:** Let go of ideas about yourself as an all-knowing leader. You are leading people now who have skills, knowledge, experience, and perspective that you likely don't have. Your job isn't to outshine your people. It's to guide them to bring back answers and approaches you might not have discovered on your own.

**Give Up Command and Control:** For too long, the boss gave an order and enticed performance by rewarding good work or punishing those who fell short. You need to move beyond that. Your job is to bring out the best in each of your people, freeing them to apply their unique talents to the task. Loosen your hold and enable your workers to contribute as uniquely and best as they are able.

**Abandon the "No News is Good News" Mantra:** Workers in fear of reprisal fail to share important information or sugarcoat bad news, lest they raise the ire of the boss. Strong leaders, however, know that their challengers are their secret weapon. Your people should be free and *encouraged* to dissent. This drives superior teams toward learning and innovation.

**Leave Meetings Behind:** Calendars are so full of meetings that we don't have time to actually do our work. And many of the people in those meetings don't need to be there.

Imagine that rather than scheduling meetings, you hold a "briefing" to start a project or a "review" to assess the progress of a project. You might even schedule a "post mortem" to evaluate the challenges and successes of a project once it is completed.

When we speak of purpose, it should be clear that there is not one singular purpose. When our individual purpose connects to purpose in our work and aligns with organizational purpose, incredible potential for value creation is unlocked.

When you fill the role as expedition leader who coaches your team, you are helping them align their purpose with

the organizational purpose–and that makes magic happen.

## Embrace Your Superpowers

"I. Don't. Know." Say it. Again. Get comfortable with those words. Because there is so much that you don't know. So much that others know that you do not. And that's just fine. Even if it's uncomfortable.

In the face of unprecedented uncertainty, ambiguity, change, and rapid formulation of new skills and knowledge, no leader can know it all. To acknowledge that you do not know, to be vulnerable to that truth, is a profound act of courage.

The ability to show up, to acknowledge that you don't know, to be brave in the face of uncertainty, these are the cornerstones of empathetic leadership in the Human Value Era.

When you open yourself to reveal your full, imperfect, authentic self you invite people to be their true selves with you. Your vulnerability creates a true connection and builds the foundation for psychological safety and belonging.

Acknowledging that you do not know also lifts a tremendous burden from your psyche and allows you to focus on what you and your team collectively know, identify gaps, and learn together. It is the path to innovation and creative collaboration.

It takes courage to recognize you don't know, and it is well worth the risk. Doing so imparts agency to your team, freeing them to contribute more fully and giving them a greater stake in the outcome of decisions. That, as an empathetic leader, is your highest objective. And it is the key to unlock all the other superpowers of your leadership.

**The Power of Awareness:** Your work as a leader is essentially to make decisions and manage both your emotions and help others manage theirs. Doing that requires a high degree of self-awareness, social awareness, and emotional intelligence.

**The Power of Candor:** Nothing cuts to the core like direct, honest communication, carefully and clearly delivered. Candor is easy when the going is good but it is tougher when the honest truth is less than pleasant. But that is when it matters most.

**The Power of Listening:** Deep listening is an act of vulnerability. You need to be open to really hear the ideas and concerns of the people who work with you. More importantly, you need to commit to following up on what you hear. You don't have to adopt every idea or placate every grievance but a "Thanks for sharing" response isn't enough.

**The Power of Being Human:** For too long, we validated ruthless, anti-worker behavior for the sake of the bottom line. In the new social contract between worker and employee, we are free to be more human as leaders and develop relational rather than transactional relationships with our workforce.

This means you can drop the charade of the tough-minded boss and embrace your empathetic self. You can be fully human, and that may just be the greatest superpower of all.

## Emerge the Empathic Leader

Change is inevitable. The pandemic-induced lockdowns put that in sharp relief. Change in the circumstances around you requires change in understanding, change in methods, change in process, change of mind, and change in self-perception. Change is hard and the magnitude of change brought on by Covid-19 seems nearly impossible.

The impulse to return to the before-times mode of operation and leadership is understandable. But here's the thing: you can't. You won't be going back, *ever*. Because everything *has* changed.

Everything about the who and how and where of work is different. There is no respite from change and you are already doing a great job navigating it.

This pandemic is surely not the last disruption. Climate change, geopolitical conflicts, technology disruptions, labor shortages, and inflation are just a few of the forces that will challenge organizations each and every day from now.

How do you lead through these challenges? With empathy. With trust. With compassion. Engaging your superpowers to become the best possible leader for these times. Let's go.

**Chris Shipley** has documented, influenced, and predicted the impact of technology on business and society for more than 30 years. Today, Chris is focuses her work on the human and organizational challenges in the face of technology- and economically-driven disruption. Future-of-work strategist

**Heather E. McGowan** helps leaders prepare their people and organizations for the Fourth Industrial Revolution. Heather gives lucidity to this topic through her illuminating graphic frameworks and powerful metaphors, all backed by deep research. Pulitzer Prize–winning NYT columnist Thomas Friedman frequently quotes Heather in his books and columns and describes her as "the oasis" when it comes to insights into the future of work.

# The Gap and The Gain

Dan Sullivan

# BOOK SNAPS™

Zooming In On Your Next Read

## The Gap and the Gain

By Dan Sullivan with Dr. Benjamin Hardy

Dan Sullivan is the world's foremost expert on entrepreneurship and has coached more successful entrepreneurs than anyone on the planet. He is the co-founder of Strategic Coach®, the leading entrepreneurial coaching program in the world, and author of more than 50 publications on entrepreneurial success

Dr. Benjamin Hardy is an organizational psychologist, author, and the world's leading expert on the application of the Future Self science. His books have sold hundreds of thousands of copies, and his blogs have been read by hundreds of millions.

## The High Achievers' Guide to Happiness, Confidence, and Success

Dan Sullivan and Dr. Benjamin Hardy want to share a simple yet profound strategy for maintaining happiness, positivity, and motivation so you can achieve your greatest goals. Many ambitious entrepreneurs are habitually unable to enjoy their achievements. They measure their success against the ideal they set, not how far they have come. ***The Gap and the Gain*** is a system for measuring progress. Its purpose is to explain why most ambitious people are unhappy and how to solve it. There are many ambitious people that have plenty of progress in their lives but they're still unhappy because they measure it wrong. It's easy for people to fall into cynicism and despair with negative thoughts but a simple mindset shift can easily transition them into the right setting.

If you're struggling in any area of your life and want to truly succeed, then you must learn how to live your life in the Gain and stay out of the Gap. This will not only help make you be successful but also, happy. This book will challenge everything you think you know about achievement. From reading this book you will learn that measuring your current self-versus your former self has boundless psychological benefits including heightening motivation, boosting confidence, and continued success in your life. It will help you see progression even when times are tough in present-day circumstances. It's about staying away from the Gap and transform yourself into a Gain in any given situation. The GAP is where individuals measure progress based on their ideals whilst the GAIN is where individuals look back and measure the distance they have traveled from their previous selves. Unsuccessful people focus on the Gap but successful people focus on the Gain! "The way to measure your progress is backward against where you started, not against your ideal."

Dan Sullivan, who is the world's foremost legendary expert coach on entrepreneurship. With forty years in the field, Dan has coached and helped many successful people with tens of thousands of success stories to prove it! The author of this book is Dr. Benjamin Hardy, an organizational psychologist and author. Benjamin and Dan have previously worked together and written a book called *Who Not How* which became a national bestseller. Hardy wrote this book using Dan's teachings and

tools, as well. "This one simple concept is a masterclass on positive psychology, healthy relationships, mental well-being, and high-performance. Everything that psychologists know about how to create a successful person can be achieved using the Gap and the Gain," says Dr. Benjamin Hardy.

## Embrace the Freedom of "Wants"

In the first chapter, you will learn how to embrace the freedom of wants and avoid the attachment of needs. The Gap is the unhealthy need to something outside yourself. The book states that when you are in the Gap, you have an external need for something outside of yourself. When you are driven by your needs rather than your wants, you have a desperation to attain that need. Simply let go of those external needs for things in your life.

A talented Olympic skater, Dan Jansen was set to win a medal in the Winter Olympics in 84' but he didn't. Every race after that, he was always shy of winning a medal. Many even would suggest that he was jinxed because something always would happen that sabotaged his win. Ten years later in the 94' Olympics, he had another chance at a medal and decided he needed to change his mindset. Instead of being in the Gap mindset and thinking about the races and medals he should have won in the past but failed. He choice instead to be in the Gain mindset and think of everything great in his life. He realized how truly blessed he was to be in the Olympics and decided to use those Gains as fuel and in the final race of his career he simply showed his gratitude to the sport he loved. He ended up winning the gold medal and breaking a world record. He used the Gain versus Gap mindset and finally won a medal that he had competed for over a decade. He let go of the external need to win the medal.

## Be Self-Determined

The second chapter of the book discloses a fundamentally important aspect of being in the Gain. That is to live your life in a self-determined way. In doing so, you will stop living in the Gap and measuring based on your ideals, which is an impossible principle to be aimed at. As Seth Godin explains, "Our current system of teaching students to sit in straight rows and obey instructions isn't a coincidence. It was an investment in our economic future. The plan: trade short-term child labor wages for longer-term productivity by giving kids a head star in doing what they're told." Children are trained to measure themselves against external reference points. All these external reference points become untouchable ideals. They are what society deem as successful but don't measure up realistically and therefore, why so many people are stuck in the Gap.

Dean Jackson, a marketing expert, says he made a list of ten things asking himself, "I know I'm being successful when..." This list makes up his personal success criteria. He references his list when he's trying to make decisions or presented with opportunities. Be self-determined by defining your own success criteria. When your reference point is internal, you make the final call of what success means to you, without other influences. The more you live with it and stay within it, the faster you'll get to where you want to go. Basically, external reference points make it impossible to feel successful because no matter what you've done or accomplished, the success criteria is always shifting. Therefore, you should consistently refine and update your success criteria as you advance on in life down the road.

## The Compound Effect of the Gap and the Gain

In the third chapter you will learn that being in the Gap can create a very negative effect in your life. The stress takes a major toll on your mind and physical body. Being in the Gap is a hard habit we fall into many times a day, and like any habit it's hard to break out of it. The more time you spend in the Gap the shorter your life span will be. However, being in the Gain mind frame has the opposite effect, its healing and restorative. There's even research that gives evidence that optimist people typically live ten years longer than pessimistic people. Other research has shown that unhappy people get sick easier. On average, unhappy employees take 15 more sick days than happy employees do.

In a research study, people were first assessed on their happiness levels, then were injected with the cold virus. The individuals who had happier levels at the beginning of the trial fought off the virus better than the less happy individuals. They had less symptoms as well, such as sneezing, coughing, and congestion. This clearly shows that the way we interpret an experience can literally affect how your body metabolizes the experience. Hardy explains that the Gap and the Gain is a useful tool because there is simple language for it that is easy to understand. Start using the Gap and Gain language to help train your brain to see the Gains. Call yourself out when you catch yourself in the Gap frame of mind, then vocalize the Gain instead. When you're in a conundrum, ask yourself what is the Gain here? How do we turn this into a Gain?

## Always Measure Backwards

Chapter four states that it's easy to forget about your past Gains, all the strides and accomplishments made throughout life. It's important to take time regularly to measure your Gains from different time frames. Hardy recommends journaling to help keep tabs of your daily successes so you can look back and see the Gains. He states, that most of us will forget majority of the Gains made, therefore, journaling will help keep record of them, so you can look back on them. Having a reminder of the easily forgotten past Gains can boost your hope, confidence, motivation, and resilience for the future and take you out of the Gap.

A public-school physical therapist named Jill Bishop, works with children with extreme mental and physical disabilities. Jill works with a child named Rosie who has a brain disorder that makes her incapable of learning and developing properly. Just last year, Jill accomplished teaching Rosie to walk on the grass but that accomplishment had been long forgotten by now. Jill was focused on new challenges and they seemed endless to her. However, Once the annual reviews came, Jill was relieved. Seeing and remembering all the important milestones that they had

> In the Gain, your motivation helps push through difficult challenges at hand."

accomplished and forgotten. She realized that the doctors were wrong and that Rosie is capable of learning and developing. Jill added that she believes teachers and therapists burn out much quicker when they focus on the problems and be in the Gap. Being able to regularly see progress is key to maintain the motivation needed to be in the Gain. In the Gain, your motivation helps push through difficult challenges at hand.

## Measure Three Daily Wins

Chapter five discloses that we all have the sweet spot hour of the day, that has the biggest impact on both short-term and long-term success. The use of this hour has effects that outweigh what you do with any other time of the day. It'll determine how productive and purposeful you'll be.

Hardy suggests that the last hour of the day can be used as your Gain-hour, one that transforms how you sleep and perform the following day ahead. Our behaviors before bed are heavily coded into our long-term memory. Unhealthy habits before bed can affect the day ahead. Dan Sullivan has been teaching his clients to write down three wins from the current day and continue to do this daily. Having a daily accountability partner helps keeping track and reporting. Asking a friend, a coworker, or even a family member to help track. Pearson's Law states, "When performance is measured, then performance improves. When the performance is measured and reported then the rate of improvement accelerates."

Kayla Harrison who is a two-time Olympic gold medalist says she visualizes winning the medal every night before falling asleep. She believes what you do during that hour before sleep sets the tone for the following day. This is where your deepest habits are formed. How you end the day doesn't just affect your sleep, it also dictates when you'll wake up and how committed you'll be for the activities planned for the following day. As Thomas Edison said, "never go to bed without a request to your subconscious."

## Transform Every Experience into a Gain

In the sixth and final chapter you'll learn that being in the Gain isn't only about seeing the bright side of things, it's about taking every experience life throws at you and transforming it to serve you. When a person is in the Gap, they ask why this is happening to them and act in a victim mentality. However, when you're in the Gain, you are controlling the meaning of your past. It enables you to turn every valley into a future peak. Being in the Gain empowers you to be better, not bitter. You look at your experiences and utilize them to become more adaptive and successful in your future. As Dan explains, "everyone who grows achieves their progress and improvement by transforming frustrating and painful failures into rules and measurements for satisfying success."

A man named Howard Getson woke up one morning discovering that he lost $2 million from the stock market crashing, saying it was the worst day since the Great Depression. He realized after mouthing those words that it was the worst for him but not for everybody. After that realization Howard thought he needed to rethink his system for investments. So, although, he had lost 2 million in a single day and was upset, with his new insight, he was able to get out of the Gap the very next day. Howard was able to take bad experience and turn it into a Gain, he measures success by adapting to change. Howard states, "the Gap makes you more psychologically rigid while the Gain increases your psychological flexibility."

In *The Gap and the Gain: The High Achievers' Guide to Happiness, Confidence, and Success,* Dr. Benjamin Hardy wrote this book to inform ambitious people the simplistic yet powerful concepts, that many high-achieving people are seldom happy until they learn the Gap and the Gain distinction. When we measure ourselves against the ideal, we're in the Gap. A person needs to recognize oneself in the Gap mindset and get out of it. By embracing the freedoms of wants rather than needs, becoming self-determined, and training your brain to see the Gains to get out of the habitual Gap.

Simply, measure the Gain, not the Gap. Hardy firmly believes that these concepts can be easily integrated into your work and day-to-day life. To get in the Gain you must remember to always measure progress backwards, take note of 3 wins daily, and transform every experience into a Gain. When we measure ourselves against our previous selves, we're in the Gain! Always recount your progress to help inspire the perseverance to keep going and celebrate the small victories along the way. He has learned from experience that it is a positive and permanent human skill that has proven useful in every entrepreneurial field it is taught.

## THE SUMMARY IN BRIEF

Many high achievers "have it all" but remain unfulfilled, feeling there must be more to life. Despite having success, they struggle with overwhelm, stress, and anxiety; are settling for okay when they really want more; or crave the chance to focus on a higher purpose. Are you one of them?

***The High Achiever's Guide: Transform Your Success Mindset and Begin the Quest to Fulfillment*** lays out a process for creating a new way of operating that you can use for the rest of your life to continue expanding and finding a holistic, redefined kind of success that has eluded you thus far. You'll learn how to do this by examining how you got here, what drives you, how you hold yourself back, and what it takes to define your new vision for life by facing fear, using your voice, trusting your instincts, and committing to a new way of being.

Author Maki Moussavi, a formerly unfulfilled high achiever who made her way out of corporate-land to a new career as a transformational coach, knows whereof she speaks. Her many insights, thought-provoking exercises, and "to-don't" and "do-instead" lists will inspire you to change your life.

## IN THIS SUMMARY, YOU WILL LEARN:

- Why many high achievers feel out of touch with their true desires.
- What the most toxic thing in your life is—and how to handle it.
- The importance of showing the world your authentic self.
- The keys to a fulfilling life.

## You've Been Programmed

In our fast-paced world, we barely take a breath between one activity and the next. We are so used to doing entirely too much that we don't know how not to do it. Unsurprisingly, we have a severely diminished capacity for tapping into our truest selves.

How do we, the high achievers, get this way? It all comes down to programming: the accumulation of the experiences that shapes our lives, that limits how we see ourselves, and that, along with continuous exposure to the expectations of the outside world, drowns out who we are at the core of our beings. We're so out of touch with who we are elementally because of the cacophony that is our lives that even though something is wrong, all we have to go on is this vague sense of unease that we cannot name or describe.

Many complex external influences have shaped the way you operate today. Your early experiences are likely to have led to the formation of limiting beliefs. "I don't have what it takes." "There's not enough _____ to go around." There are many more.

Mustering the courage to face your own limiting beliefs head-on will free you from them. Because you've been programmed, the key to unlocking your transformation is to rewrite the programming and patterns that are keeping you in the hamster wheel of stagnation.

### Toxic Fumes

The most damaging set of expectations you will ever be subjected to are those imposed on you by participating in toxic relationships in either your professional or personal life. Even when the person poisoning your atmosphere is your boss, spouse, parent, friend, or child, it's absolutely necessary to change the dynamic. Toxicity ruins your peace of mind, puts you on edge, makes you feel cornered, and steals any chance you have at joy.

Toxic people are manipulators. They feel entitled to whatever it is that you have that they need, and they take and take and take. The manipulator, who is often someone close to you, uses fear, obligation, and guilt to influence you.

The most effective way to handle any toxic relationship or situation is to establish boundaries. Logic will not work. Set the boundary, share it verbally, and make clear what the consequences are for violating it. The other person may act confused, cry, or get angry. You can't control their reaction and it shouldn't silence you. Don't rationalize or justify your position.

### Go Inside Your Head

Think about your limiting beliefs. How are they making an appearance in the form of patterns in your thought processes? For example, are you a worrier? Are you afraid to fail? Patterns can be very damaging. For example, if you believe that things don't go your way, you not only convince yourself of a bad outcome, you invite it.

Self-defeating patterns can be hard to identify—the key to doing so is to wake up, come out of autopilot mode, and become conscious of how the things you tell yourself lead to the patterns that bind you.

### Dig Into Your Relationships

The one–two punch of limiting beliefs and patterns has a major influence on how you relate to others, what you expect in relationships, what you tolerate, and how often you experience similar themes and challenges interpersonally. For example, if you have the limiting belief that you are uninteresting, your pattern may well be to isolate yourself. The people around you have no idea why you behave as you do. They often follow your lead and in doing so give you space to create the reality you're living in, even if it's not the reality you want. You must make a deliberate decision to wake up, tune in, and decide that you have within you everything you need to break the chains that bind you.

Limiting beliefs are rarely true. The most effective way to interrupt patterns is to repeatedly poke holes in the "logic" that was used to construct them until you drain the power of the initial belief.

## To Achieve or Not to Achieve

Generally, you've been taught that you'd better work tirelessly if you want to be successful, and it's implied that your needs outside the pursuit are not central to the success equation. Do what you're told, take on more, focus on what's wrong with you, and success is yours for the taking. Is it any wonder that success achieved by these means feels hollow and unfulfilling?

Spoken and unspoken expectations at work will, if you allow it, rule your life and rob you of your ability to move fully under your own power in the direction that you choose. Success that requires your acquiescence to staying limited must be redefined. Settling is terrible for your sense of self-worth. It does not equal success. And you can't continue in

this state indefinitely. You will burn out. The key to a fulfilling life lies within the intangibles that you have overlooked and deprioritized.

## How Fear Controls You

Fear, a primal biological and emotional response, services a critical purpose: survival. It can be difficult to differentiate between the useful kind of fear that keeps you alive and the limiting kind of fear that keeps you stuck.

Three illusions are fueled by fear:

**Failure.** Failure is never the end of the line. It's an opportunity to assess what you could have done differently.

**Loss.** Examining your life and making changes that help you align more with who you truly are may trigger anger, defensiveness, indignation, fear, and even jealousy in others. As you work on yourself, one natural consequence is feeling you've outgrown certain people or situations. This is a loss to be grieved and processed, but it makes space in your life for something better.

**Control.** We believe that we must know how something is going to turn out in order to move forward. But control is an illusion; it doesn't exist. Believing it does gives you tunnel vision—you're not open to opportunity. Let go of your iron grip. There is something out there that will light you up and energize you.

### The Dangerous Allure of Conditions

The most dangerous way to make excuses may be waiting to do what you want to do when the time is right. Your reasons for waiting may sound perfectly reasonable, but there's no such thing as perfect timing. Why is it so bad to vow to spend more time with your family later, when the big project at work is over? Because something else will come up to derail you. You're a high achiever, so work takes priority over everything.

Perfectionism is part of the problem. Do you feel that unless you can get to the gym five days a week, there's no point in exercising at all? Why? Won't your body benefit from three brisk walks? Do not allow the perfect to be the enemy of the good.

## What Are You Worth?

People nearly always use as an excuse for inaction that they can't afford to make less money and there's no money in whatever they really want to do. Thinking that there's not enough money in your idea and that you're not smart, talented, or driven enough to go after it are damaging limiting beliefs. Who says you have to quit your job to try your hand at what you're contemplating? And consider this: refusing to consider opportunities means that you've decided to stay in a compromise that isn't working for you; you're trading your time, health, peace of mind, and overall fulfillment for a salary.

> . . . refusing to consider opportunities means that you've decided to stay in a compromise. . .

A lot of high achievers have in common an inability to put our own needs first. Do you consider it a badge of honor that you're getting more work done by getting ridiculously inadequate sleep? You're sending a very clear message to yourself about your value when you don't make the time or money investment to refill your proverbial tank.

The most common excuse for not making yourself a priority? "I don't have time." What this means, really, is that you don't have priorities. It may make it easier to put yourself first in the list of factors when making any decision if you realize that this choice serves everyone around you, too.

Guilt and shame are at the heart of our worthiness issues. It's imperative that you wake up and look at the role they're playing in your life: they're keeping you stagnant, keeping you from loving yourself. The issue of money is a classic way we deny ourselves because we don't feel worthwhile. Do you resist spending anything on yourself, even though you can afford it? Why? If you treat money as the tool it is and use it to have experiences beyond paying for the basics, you allow it to play a powerful role in facilitating your enjoyment of life, which you deserve to do.

### Your Feelings Are Your Compass

We are bombarded with messages encouraging us to minimize our emotions in favor of logic and detachment. Dismissing emotions is fundamentally flawed and damag-

ing. It's how we end up in autopilot mode, resigned to the way it is. Your feelings act as your compass and help steer you toward and away from situations, people, and circumstances if you will allow them to.

### What About Your Friends?

When you vent with others who share your feelings, you create a tribe of the miserable who understand one another and bond through that understanding. It can bring you closer to your coworkers and friends, but venting is not a plan. It's a damaging pattern that can convince you that there's nothing better than the status quo.

Find people who are more interested in creating their realities than complaining about them. Then show up. Be authentic. Let people see you. It will bring in those who are good companions for you on this journey and clear out those who aren't.

Be cautious about who you confide in as you change your life. When you meet resistance and skepticism, your tendency early in your transformative journey is to let self-doubt creep in. And keep going—if you are experiencing fear or a sense of isolation, know that it will pass.

## Show Up and Use Your Words

Staying silent, censoring yourself, or otherwise hesitating in any way to show up is about putting the comfort of others ahead of your need to express who you are. Keeping your words inside is harmful. When you are constantly watching your mouth, others don't actually know who you are.

Speaking up does not equate to creating conflict. It's not up to you to make it okay for others. Being agreeable rather than truthful doesn't move anyone or anything forward. Be kind, not nice. Say what the other person needs to hear, not what they want to hear. And give others the opportunity to respond. No one can give you what you expect if you don't vocalize it.

The beautiful side effect of showing up authentically is that you open yourself up to a brand-new world of connections and possibilities. When you are genuine, people can really see you.

### Be Tenacious and Trust

When it comes to changing your life, you must be tenacious in the pursuit of what you envision. Bring your high-achieving A game and make it happen. Whether it's starting your own business or creating a life that works for you inside an existing corporate structure, you will face your own demons many times over. Humans aren't good at having the patience to allow events to unfold in the face of uncertainty, but you must trust the process.

Stop putting off your life. There is no right time to do this work. It will never be convenient or easy, and you don't know how much longer you'll be here. Find a sense of adventure and excitement and expect the best for a change.

Maki Moussavi is a corporate career veteran with a Master's degree in Genetic Counseling who left the glory of societally-defined success to become a transformational coach and motivational speaker. Maki has a passion for helping people see their true potential and supporting their journey to raising the bar for their lives. Her ability to break down complex concepts into accessible and actionable information was the backbone of her corporate achievements and is a critical component of her coaching and thought leadership today.

# The Hight 5 Habit

Mel Robbins

BOOK SNAPS™
Zooming In On Your Next Read

## The High 5 Habit

By Mel Robbins

Mel Robbins is one of the leading voices in personal development and transformation and a New York Times Bestselling author. Her groundbreaking work on behavior change has been translated into 36 languages and is used by healthcare professionals, veterans' organizations, and the world's leading brands to inspire people to be more confident, effective, and fulfilled. As one of the most widely booked and followed public speakers in the world, Mel coaches more than 60 million people online every month and videos featuring her work have more than a billion views online, including her TEDx talk, which is one of the most popular of all time.

Copyright © 2021 by Mel Robbins • Hay House Inc.

# Take Control of Your Life with One Simple Habit

There are plenty of books available today— and by 'plenty' we mean 'thousands'— that claim to offer transformative change with a single, simple adjustment to your daily habits. That 'one small trick' that will make you more productive, happier, healthier, and whatever superlative you want to choose.

With that in mind, it would be understandable to approach the latest in a long line of books of this type with a healthy amount of skepticism. But what if there really were a single habit that had the power to completely change your mindset and the way you approached every day?

Mel Robbins is a bestselling author and leading voice in the area of personal development and transformation. Her TEDx talk is one of the most popular of all time, and her collective videos have amassed over a billion streams. She's previously made publishing waves with her hit book, *The 5 Second Rule*, and is now back with another hit— ***The High 5 Habit***. According to Robbins, this new habit of focused self-worth was the key to breaking her out of one of the most difficult periods in her life and showing her a path to undoing self-doubt, jealousy, fear, and feelings of unworthiness. Now, she's put down everything this new habit has taught her— including a guide to making it work for each of us— in this book that's already a bestseller selling thousands of copies worldwide.

At the core of *The High 5 Habit* is the idea that even those of us who are constantly supporting, encouraging, and uplifting others tend to neglect one very important person in our lives when it comes to encouragement— ourselves. Robbins has set out to inspire all of us to give the same love and encouragement to ourselves that we usually reserve to others, and to do it in a formal way that will become an integral part of our day-to-day routine.

So, is *The High 5 Habit* as transformative as thousands of readers are already claiming? Let's explore it in a bit more detail to find out.

## What is the High 5 Habit?

One day, Mel Robbins woke up and found herself feeling her worst. In the book's introduction she recounts how her life

leading up to this point had been a whirlwind of unpleasant experiences and feelings. "The stress was nonstop. I'd been so busy taking care of and worrying about everyone and everything else, who was taking care of me?"

That morning, Robbins dragged herself out of bed and into the bathroom, where she caught her reflection in the mirror and found her negative feelings surrounding her recent stress compounded by negative feelings about her own appearance. She started picking apart the things she didn't like about the way she looked. Soon, she was caught in a spiral.

Then, Robbin did something that changed her mindset. She lifted her hand and met the reflection in the mirror in a self-high five. She didn't say anything, but she says that she was 'telling [herself] something she desperately needed to hear.' She was assuring herself that she could do it, that she could get through this, that she was worth love and self-care and kindness.

She writes about what happened next: "Immediately, I felt my chest loosen, I squared my shoulders, and I cracked a smile at how corny the high five seemed, but suddenly, I didn't look so tired, I didn't feel so alone, and that to-do list didn't seem so daunting. I went on with my day."

At its most basic, this is exactly what *The High 5 Habit* is. Each morning, Robbins encourages readers to first take a moment to stand in front of the mirror and 'be with yourself' for just a second. Don't focus on your appearance, but rather on who you are as a person. Next, whenever you feel ready, it's time to give yourself that high-five. It's simple, it's quick, and yes, it's a little bit corny. But it might just be the single most effective habit you pick up this year.

## Changing What We See in the Mirror

According to Robbins, one of the core benefits of this habit is that it changes our self-perception first thing in the morning, before we take on the day as the only person we have available to us— ourselves.

The habit itself may be simple, but the science behind it is sound. When we engage in gestures that carry an ingrained positive connotation, it actually changes the way our brain functions. It's the reason that smiling makes us feel happier, or performing an act of service for someone actually makes us feel more positive feelings towards that person.

The act of the high-five has a long established history in human culture as the most essentially positive physical touch you can give another person. It's an affirmation, it's a congratulation, it's encouragement, all wrapped up into one simple, snappy action. So, when we high-five ourselves, we find it more difficult to feel negative about our appearance, our decisions, and the day we face ahead. Subconsciously, your mind changes its thinking to match the positive physical gesture— making you almost incapable of thinking negatively about yourself.

The morning routine that many of us usually find serving as a chance to ruminate on all of our anxieties and insecurities suddenly becomes something else. It's the moment when we encourage, motivate, and inspire ourselves. In Robbins' words, we begin each day by telling ourselves: "I see you. I believe in you. I am here with you. You got this."

Soon, we'll have such a positive association with that moment in the mirror that we'll actually begin to change what we see when we look at ourselves. We'll feel good, positive feelings before the moment of the high-five even comes, because our brain will have created a connection between that bathroom moment and all of the encouragement that comes when we get there.

## The Comparison Wars

A significant portion of The High 5 Habit is centered around jealousy and bitterness. In one of the book's most poignant sections, Robbins recounts a story about how she let jealousy and bitterness nearly consume her.

"I remember this time when a friend of ours bought a beautiful house and threw a big party to celebrate. Walking in that door, into a home that was five times the size of ours, at a time when we had little kids and could barely pay our mortgage, I thought I was going to self-combust. I was so jealous that I could barely contain it, and I did what many of us do: I aimed it right at my husband. On the ride home, we got into a big fight because I started crying over the fact that "We'd never have a home that nice."

Whether each of us can point to an example as vivid as that in our own lives, we all struggle with feelings of jealousy. We look at others' lives and careers and think, Why can't I have that? Why do they get to have it and I don't? What did they do to deserve that? When is it going to be my turn?

Quickly, those thoughts turn from jealousy at what we're missing to resentment of ourselves for our failures. If I worked harder or were smarter, I would have those things. I should be much farther along in my path than I am now. What's wrong with me?

Robbins evangelizes the power of the High 5 Habit for combatting thoughts and feelings just like these. She also advocates for a more flexible attitude towards the feeling we call jealousy. What makes jealousy damaging, she says, is when we turn it inwards on ourselves and say, So-and-so has X and I'll never have it because I'm not good enough.

It's perfectly natural and even healthy, Robbin says, to look at something someone has and think, I want that for myself. As long as we remove the self-limiting thoughts that come next. Instead, we should high-five ourselves and think, Okay, what steps can I take today to get there?

## Starting Today, Instead of Tomorrow

In *The High 5 Habit*'s second half, Robbins introduces the concept that she calls Flip It. Like the high 5 habit itself, this concept is simple but surprisingly powerful.

To get an example of it for yourself, think of something that you want to change, try, or do in your life. Then, just as the

> **The more comfortable we become with unapologetically pursuing our dreams, the closer we'll come to living the life we truly want to live. . . "**

book's namesake habit requires you to physically take an action, you have to say the thing out loud. Whether it's achieving a fitness goal, improving your financial state, or completing a creative endeavor, say the goal out loud to yourself and allow yourself to feel that it is, in fact, possible. Now, think about the biggest limiting belief that's standing in your way. "I'm too out of shape to run a marathon." "I'm in too much debt to start saving." "I'm not a good enough writer to publish a book."

Finally, it's time to Flip It. Robbins says that while the idea of flipping a limited belief into the belief that you really can achieve something is simple, there are some steps that will help you really make that shift.

First, she advocates giving yourself a deadline. Even if the deadline is arbitrary, creating a deadline for yourself means that you're serious and you're not going to let anything stand in your way. It's you telling yourself that you have a time limit, so you'd better start carving out time each day for your goal because soon your time will be up to achieve it.

Next, you have to write your goal down. It can be in a planner, a notebook, on a note you keep by your bedside table, or even— ideally— on your mirror so that it can pair with your daily high-five. Robbins says the importance of this is that it serves as 'evidence' of your goal. "Every time you see a piece of evidence, a sign, a coincidence, or some positive spin on why you should [pursue your goal], I want you to write it down in your notebook.'

Robbins tells a powerful story of a cab driver who had dreams of moving to California and pursuing a career as an actor. But his limiting beliefs were tough to overcome, and his timeline was too vague and distant. She encouraged him to stop thinking it was possible, set a goal to move, and then start pretending that the universe was leaving clues everywhere to encourage him to follow his goal. He eventually broke down in tears at having finally unlocked the feeling that his dream was something achievable.

## Moving Forward

Near the conclusion of the book, Robbins drops what could be considered a sort of caveat. She lists all of the ways that habit and its surrounding principles can be transformative, encouraging, and positive in your life. She highlights how making choices from a place of self-empowerment and belief rather than doubt and jealousy can unlock potential you didn't know you had. She recounts the ways that the habit has transformed her own life and helped guide her toward greater understanding. But then she says something else— "That doesn't mean it was easy or perfect."

In the end, this is one of the most powerful aspects of Robbins' approach in *The High 5 Habit*. She has an absolute belief in her habit as a tool, and believes in the power of trusting in that tool for her readers, but she also acknowledges that it won't pave a path with gold towards whatever dreams and goals you may have. She acknowledges that there will be discomfort, though it will be temporary. The more comfortable we become with unapologetically pursuing our dreams, the closer we'll come to living the life we truly want to live, free from self-doubt and self-hatred.

Finally, Robbins leaves us readers with a straightforward daily checklist to put us in the right mindset each morning. Get up when the alarm rings, tell yourself that you are safe and loved, make your bed (a gift to yourself), celebrate yourself with a high-five in the mirror, put on exercise clothes, and set aside time to think about your dreams first thing in the morning before taking on other responsibilities.

Are any of these habits revolutionary? Of course not. Self-affirmation is certainly not a new concept. But together, they add up to a powerful mindset shift that can help just about anyone. "These practices are simple," Robbins says. "But I want you tot rust that doing them, one after the other, every morning doesn't just set you up for a better and more productive day. These practices are far more expensive. They will quiet your nervous system, focus your mind, and support you.

## Conclusion

Upon reading a summary of *The High 5 Habit*, one might be prompted to wonder— Do I really need to read an entire book about high-fiving myself in the mirror every morning? Even the author acknowledges just how simple the habit is on its surface.

However, the book is packed with insights, anecdotes, inspiration, and direction that add up to be a meaningful and genuinely helpful guide to everything the habit itself represents. The ultimate benefit is that by the end, you'll hopefully start thinking of yourself the way Mel Robbins thinks of all her readers— someone whose dreams are worth following and whose capabilities mean those dreams are always within reach.

## THE SUMMARY IN BRIEF

*Someone once said, "Talk is cheap because supply exceeds demand." Every day in North America, 10,000 or more people stand in front of a crowd and deliver speeches. Twenty-five minutes later, 9,998 are forgotten by everyone except perhaps the speaker and his or her subordinates. Some observers figure the conference business in the United States alone is worth $120 billion per year. That's a large cost for speeches being slept through by people bored with "bizspeak" and numbed by pointless PowerPoints.*

*Communications expert Tony Carlson knows what it takes to electrify audiences and make a lasting impact. In* The How of Wow, *he shares tips on getting attention, empathy and respect from audiences; developing a bigger and better stage presence; and making every speech a memorable and powerful experience for you and your audience alike. Giving speeches is a great way to get recognized and build your personal brand. Tony Carlson helps you gain and enhance your reputation as a public speaker without peer.*

## What You'll Learn In This Summary

✓ **How to get to know your audience.** Learn why audiences do not need to have points repeated to them three and four times in a speech. Discover how to engage your listeners with insight, wit and energy.

✓ **Why you should study the great speakers.** From preachers to politicos, find out why you should get to know the best speakers inside and out. Learn how they carry themselves, use their bodies and props, and hold crowds in rapt attention.

✓ **Why you must write with clarity and depth.** Simplicity is the best rule of thumb for a speech. Find out how to use vibrant, active verbs and avoid clichés.

✓ **How to deliver the goods**. Learn how to prepare for the moment, how to use your body to your advantage, and when it's best to say nothing at all.

✓ **How to get feedback.** Find out how to use your speaking opportunity to position yourself as an expert on your topic, building your brand so that you're the first person audience members will think of when they need that kind of expertise.

# THE HOW OF WOW

**by Tony Carlson**

## — THE *COMPLETE* SUMMARY

## Why Should You Care?

Delivering memorable speeches is a powerful tool to build your personal brand. You can make a name for yourself by working on your presentation skills. Besides, if you have ambitions of climbing the leadership ladder at your company, you need a name people know and respect. In this sense, a speech invitation is an *opportunity*, not an obligation. You have a chance to show what you are made of, as an expert in your field and as a person.

Consider it this way — on a beige canvas, even a dash of color makes an impact and becomes memorable. When you have a few dozen or more individuals in a room listening to you — and no one else is talking but you — you can be memorable. When else do you get that kind of opportunity to gain and maintain the attention of so many people, including your colleagues, peers and even your bosses? You have the chance to cast yourself in a very different light: a radiant light that could change your career.

Demonstrable communications skills enhance your promotability because the same things that make a good speaker also make a very promotable individual, particularly in organizations with an emphasis on engineering or other technical disciplines. Communication is the glue that often holds such technology-heavy organizations together, and provides the fuel that drives innovation and growth.

### *Communication and Individual Responsibility*

Peter Drucker describes management as both a social function and a liberal art. "Management is about human beings," he wrote. "Every enterprise is composed of people with different skills and knowledge doing many different kinds of work. It must be built on communication and on individual responsibility." Communication and individual responsibility are concepts that come together on the platform in the person of the speaker who demonstrates his or her personal commitment, expertise and leadership. Leadership, like public speaking, takes courage, articulation and a willingness to say the unpopular thing.

On the platform, mediocrity is never acceptable. Never settle for "good enough." Respect audience members enough to deliver real value — ideas they can learn from, imaginative scenarios that stimulate new avenues of exploration, and fresh opportunities for more

*(continued on page 3)*

## Understand Your Audience

Consider the following about the members of your audience:

✓ **They learn and perceive differently.** The audience is not a mob. It is a collection of individuals who all learn in a different manner. Some people are stimulated by visuals; some focus on auditory cues. Some learn best only by doing. You must make the connection with all these types.

✓ **Their memories are built on meaning and context.** The meanings on which memories are based are a function of our ability to recognize or create patterns. This right-brain activity, the creation of meaning and memorability, is close to the emotional core of an individual's being. The stronger the memory, the easier it is for us to make the right connections with our audiences.

✓ **They respond when you share your humanity.** This is the one thing that you have that connects you with every single person in every single audience. Take your shared experience as a living, breathing, functioning person in the 21st century and drive it into your audience's brains. Follow it up with as much rational, logical or technical discussion as you want, as long as you start and end in the right brain, with meaning, you will be remembered.

**The author:** Tony Carlson has 30 years of experience as a communications executive, award-winning journalist, educator and corporate writer. He is currently editor of corporate communications for Bell Canada.

## Why Should You Care?

*(continued from page 2)*

informed dialogue. You can and must connect with the audience in ways that others cannot, or do not. It's not difficult — you simply must want to do it.

### *Tried … but Not Necessarily True*

Why does every speechifying, how-to book insist on the old, tried-and-true model of speechmaking as the preferred blueprint? You know the steps:

1. **Tell 'em what you're gonna tell 'em.**
2. **Tell 'em what you came to tell 'em.**
3. **Tell 'em what you just told 'em.**
4. **Bask in the applause.**

Do we really think audience members are so stupid that they need to hear stuff three times? This conventional speech structure is tired. We've outgrown the old model because of the skills we've had to learn in an information-rich world: We process more information in a 24-hour period than the average person 500 years ago would come across in a lifetime. We must look for another way to be memorable.

The first response most people have to the prospect of giving a speech is to focus on the input — what they are going to say. This might seem logical on the surface, but dig a little deeper. By focusing first on what you're going to say, you effectively ignore what you want to get out of it.

### *Begin by Considering the End*

Consider that any communication requires at least three elements — the data to be communicated, the person sending out the information and the person receiving the information. The common approach looks only at the first two elements, with a focus on the point of view of the sender (the person speaking) and the material being pitched. Whether anyone is there to catch it is practically beside the point.

Wouldn't it make more sense to begin at the end and work back? Begin with what you want the audience to believe or do at the end of the speech, then figure out how to get there. Only when you know what you want the audience to do after the speech can you build a speech that the audience will remember, that will build your brand.

### *The Golden Goals of Speechmaking*

In any speech, there are two outcomes you need:

1. **The audience remembers *you* in a positive way.**
2. **The audience remembers your *headline* in a positive way.**

If you accomplish these golden goals, you will have extracted real value from the opportunity.

These might seem like modest ambitions, but consider the reality in which you are speaking — as one of several speakers put up in front of often less-than-attentive audience members, most of whom will be back at their desks, fully engaged in their lives after you conclude your talk. If you can be remembered in spite of *that* competition, you'll have done well.

In addition, never underestimate the ability of the modern human being to have information flow virtually uninterrupted in one ear and out the other without touching so much as one cell of gray matter.

You are the water; your audience is the horse. Audience members have been led to you, and you must make them drink. You have to connect with them to be memorable for them. ■

# Before You Write a Word

It's a necessity: If you want to be a great speaker, you must study great speakers. And some of the most effective speakers can be found on Sunday morning religious television. Set aside the theology and any negative feelings you might have about such figures as Oral Roberts, Jimmy Swaggart or other "televangelists." Look at the results — million-dollar ministries that employ thousands and run on multimillion-dollar budgets. Those results come from one thing — the ability of those people to speak and to enlist the support of their audience. That is powerful speaking.

### *Swaggart's Swagger*

Jimmy Swaggart swaggers back and forth across the stage, using every trick in his actor's repertoire — the floppy Bible, the glasses that he dons and removes as the situation demands, his flowing hair, his body language and even his sweat. They all say "commitment" and "passion." Not everyone has it in him- or herself to deliver a speech like Swaggart, but his approach to the podium shows us things we can and should learn, such as the following:

- **The body is a powerful prop.**
- **Movement can add drama, breaking down the wall between the audience and the speaker.**
- **Tone, inflection and pauses add color and emphasis.**

Some of the great speakers of our time have borrowed from evangelists. Bill Clinton's speeches were full of the ebb and flow of the great preachers of his Southern heritage. Martin Luther King Jr., too, never ventured far from his roots: His "I Have a Dream" speech has the cadence, repetition and rhythm that punctuate so many fundamentalist worship services.

Always have your ear out for what other speakers are doing. Make note of the best and what they do well; make note of the worst and what they do poorly. Adapt

*(continued on page 4)*

## Before You Write a Word

*(continued from page 3)*

what's best for you and ignore the rest.

### *Keep a 'Good Stuff' File*

Be a pack rat for interesting facts and thought starters. Collect trivia, newspaper clippings, Internet articles, magazine features — all of it grist for the mill even if only to act as a catalyst for an innovative theme. And do yourself a favor: Do the research yourself. Another person can read the exact same thing as you and not notice the same useful or oddball details you notice. Everyone simply has different filters. If you want that offbeat fact, that little anecdote that raises your talk out of the mundane, you have to keep alert all the time for these snippets. Like a magpie, collect shiny bits, because you just never know.

### *Find the Hook*

There's an energy that crackles through the room when you approach the podium to speak — a moment of expectation, of anticipation, perhaps of drama. It's a great moment, and not one you want to waste with conventional pleasantries. The audience is most open to a speaker in this moment, so the speaker must hook the audience with an indelible first impression.

Even before you write a word of your speech, spend time figuring out your hook. Your nervousness and the audience's anticipation are both human emotions. Therefore, the beginning of your presentation is the perfect moment to respond with a hook that sets itself right in the emotional center of the audience members' brains.

### *The Story Hook*

The classic model of a speech has been likened to a set of bookends — strong and broad at the start and finish, with a bunch of stuff in the middle. In other words, the speech has a strong start, a middle that proves the start, and a strong finish that reiterates the start.

Speeches should, however, follow a more classic, story-centered arc, building in interest and involvement from the opening to the climax. The tension in a story rises as complications arise, and the connection between the watcher and the watched strengthens until a resolution is achieved. The momentum builds: It doesn't stop to review what the audience already knows, nor does it head back to where the story began. Instead, it moves ever forward, toward a new, higher plain.

Indeed, from our earliest stirrings as cognitive beings — creatures who can react not only to physical stimuli, but also to abstract ideas — we learn the lessons of life and we absorb the values of our culture through stories. Does it not follow, then, that modeling a speech after the structure of a story might just be an effective way to connect with an audience?

For additional information on trivia for your "good stuff" file, go to: http://my.summary.com

## Professor Slams 'Chartjunk'

Edward Tufte is professor emeritus of political science, computer science and statistics, and graphic design at Yale University. His assessment of the rise of what he terms "chartjunk" is withering.

"It induced stupidity," he writes, "turned everyone into bores, wasted time, and degraded the quality and credibility of communication." Being in thrall to slideware, he claims, "routinely disrupts, dominates and trivializes content. Thus, PowerPoint presentations too often resemble a school play — very loud, very slow and very simple."

Presentations, he notes, should and will stand or fall based on the "quality, relevance and integrity" of their content. "If your numbers are boring," he adds, "then you've got the wrong numbers. If your words or images are not on point, making them dance in color won't make them relevant. Audience boredom is usually a content failure, not a decoration failure."

### *The Metaphorical Hook*

Being memorable from the first moment you open your mouth means plugging into the imaginative power of your audience. An image, not a picture, is worth 10,000 words. The theaters of our minds are often much richer, and certainly much more personal, than the theaters of the local multiplex. A good speaker can use that common experience to create powerful, personalized images in the minds of an audience — images that are sufficiently compelling in themselves to make the speech memorable.

### *The Location Hook*

Where you are is not only something you have in common with the audience: It can also be the source of an "Aha!" moment. There is nothing more immediate to audience members than their physical surroundings, from the size and shape of the room, to the view out the window, to the comfort of the chairs in which they're sitting. Location is tangible. Location is in your face. It can be an exceptionally compelling hook for a speech, because you can be confident that it is a shared human experience for everyone in the room.

Everyone likes to hear his or her hometown praised by visitors, and with a little bit of research, it's easy to come up with a nifty little fact that lets the locals know you've done more than localize a canned talk. You must, however, make it connect with your theme — that's the trick. If you don't, it will seem like the mandatory opening joke that has nothing to do with the reason you or

*(continued on page 5)*

## Before You Write a Word

*(continued from page 4)*

anyone else in the room is there.

### *The Time Hook*

Our culture and values are shaped by history — not the dry history of textbooks, but the living history of the people in our lives. It's like six degrees of separation with another dimension: time. It's fun to connect people to others who live at the same time through broad, overlapping circles of acquaintance. Add in a timeline, however, and there's a whole new level of connection.

Often, a great way to make the all-important connection with an audience is to bring to bear some historical context — an anniversary, for example. If an anniversary of some neat event falls on the day you're making your speech, it's a legitimate way to make a quick and lasting connection, as long as it has some relevance to your theme.

### *The Provocation Hook*

Most speeches are boring. Agree? Disagree? It doesn't really matter — that statement got your attention. Sometimes you need an in-your-face approach to catch your audience's collective ear, and a provocative statement might do the trick.

In most cases, the provocative statement will leave part of the audience thinking, "Right on!" and another part of the audience thinking, "Who does this person think he is?" Anyone left over will just be asking him- or herself how you're going to get yourself out of the corner into which you've painted yourself. Any way you slice it, though, you have the audience hooked with a little bit of drama right from the time the curtain goes up.

### *Keep the Focus on You*

In many organizations, no one gets up to speak without a laptop full of slides, reducing business plans and strategies to bullet points on deep blue backgrounds. Something must be on the screen behind the speaker, in part because it's so easy to do. Indeed, PowerPoint and other similar software are terrific products. They also happen to be the wrong products, most of the time, if your objective is to create a lasting impression.

There are numerous problems with using slides — some technical, some more fundamental. For instance, there is a limit to how much information a slide can actually carry. A single slide cannot usefully contain a large amount of material. If you cut your information down to what can easily be visible from the back of the room (typically 40 words, maximum), you end up with a tremendous number of slides, each of which displays a very narrow band of information.

### *The Arguments for Slides*

There are, however, a number of arguments in favor of slides, but each can be debunked with ease:

- *Slides help the audience keep track of where you are in the presentation.* The audience is not dumb. If your spoken text is sufficiently logical and interesting, the audience will be able to follow you without visual bookmarks. This is particularly true when you insert an updated agenda slide every time you switch to a new topic area. All you're doing is helping audience members gauge how much longer they have to count their teeth with their tongues until you're finished.
- *Slides help me keep track of where I am in the presentation.* This is the crutch argument, often heard from inexperienced speakers. If you need slides to keep you on track, you probably don't know enough about your topic to be up in front of a crowd.
- *Slides provide visual flair — they look cool.* Yes, you can make some attractive visual aids, but you shouldn't invest too much in that visual appeal. Regardless of how pretty your pictures are, they will not be a substitute for substance or ideas.
- *Slides are good because a picture is worth 1,000 (or 10,000) words.* Many people do respond most readily to visual images, but the stock photos that grace most slides look like they came from a Sears catalog, and the graphs and pie charts are often sterile depictions of even more sterile numbers. They are not totally useless, nor are they something on which you want to hang your entire connection with the audience. ■

## As You Write

Now, it's time to get down to it and actually write something. How do you put all your prepared points and supporting material into a 20-minute capsule you can deliver with conviction to an audience that will remember you and your message?

Keep one word in mind: simplicity. This does not mean writing for simpletons or dumbing down your speech in any way. Simplicity is clarity of thought and expression. Directness. Candor. It means using whatever means are at your disposal to simplify sometimes complex ideas, to give the ethereal some tangible heft.

### *Big Words Vs. Smaller Words*

The days of high-flown oratory are gone. It is better to stick to plain words, simply spoken. These will make a lasting impression. Why is it so difficult to do, though? Quite simply, most people write in a style that is different from how they talk. We talk normally, using everyday English, but when we write, we tend to gussy

*(continued on page 6)*

## As You Write

*(continued from page 5)*

up our language for fear of being seen as somehow not advanced or sophisticated enough to do the job.

Trouble is, sometimes the big word isn't the right word. When people try to get fancy in their choice of words, they invariably make it tougher for whoever is on the receiving end to determine exactly what is being communicated. Why camouflage ambiguity in big words? Why hide meaning when you can spell it out instead?

### *Don't Use the Passive Voice*

Nothing kills the momentum of the written or spoken word faster than the passive voice. It hides accountability and is the domain of the nameless, faceless and brandless bureaucrat. By using the passive voice, people avoid taking responsibility for actions or feelings, ceding their authority in the process.

For example, which would you say to your teenager:

- **"It is felt that one shouldn't stay out past one's curfew,"** or,
- **"I want you home by midnight, or else."**

You are the one in charge, so you would most likely say the latter. You're setting the limits, not some nebulous committee; thus, you must make that fact abundantly clear. Why would you do any differently in a speech?

### *Avoid Clichés*

People who pepper their remarks with clichés, consciously or not, frequently demonstrate nothing more than their grasp of the obvious and their lack of creative, original thought. If the language you use is filled with trite phrases, people may just assume your ideas are similarly unoriginal, noncreative or unmemorable.

### *Jettison Jargon*

The use of jargon (acronyms, shortened versions of words, and the like) is often a judgment call. A properly used piece of jargon can cut through much verbiage, enabling you to get to your point quickly and directly, as long as everyone in the audience knows what that jargon means. For example, everyone knows NATO is the North Atlantic Treaty Organization — it's a common piece of jargon. Telecom industry insiders know their DSL from their DTH, but bankers do not.

The risk of using jargon is a risk of alienating an entire swath of your audience. While its use can establish a higher level of intimacy with members of the audience who recognize and know a particular term, it can also put a considerable amount of distance between you and those who are not in the know.

### *Use Quotations Judiciously*

Some people have said things so well that it seems pointless to try to say them better. Why not just copy them (with proper attribution, of course)? How often have you heard speakers go to the well? "As Richard Nixon once said …" or, "In the words of Arnold Schwarzenegger, before he was governor …" It's a commonly used trick in the speaker's arsenal.

And that is its detriment — its commonality, its quality of being utterly forgettable. Another drawback is credibility: If you don't know who you're quoting or what the person stood for, how useful is the citation?

Using quotations also signifies a kind of ceding of your field and your audience's attention to someone else. Quoting someone famous doesn't show that that person would agree with you: It shows that you agree with that person. It does nothing for your brand, except perhaps to demonstrate your ability to research and/or memorize the words of others.

### *In Defense of Quotations*

That is not to say quotations are not useful. They do serve as fine thought starters, pointing your mind in directions it may not have been headed. Sometimes quotations are a very serviceable solution. If you feel you must use them, try to do so in an unconventional, unforgettable way. Work to surprise your audience, not bore them.

### *Practice Makes Perfect*

Your connection with the audience — your key to being memorable — likely rests on your performance, not the logical force of your content on paper. The only way to hone that performance is to practice performing. Here are some suggestions:

- **Practice aloud.** Know your material so well that, on the day of the performance, you can forget about everything but performing. Know the script backward and forward, with no surprises lurking in the middle of a paragraph. Make sure the speech fits the time you have been allotted. Practicing aloud turns the written word into the spoken word. Stand up when you practice, ideally at a lectern with your delivery copy in front of you (even more ideally, with a trusted adviser watching and listening).
- **Check for tongue twisters.** The tongue is trainable. With exercise, your tongue can get things right virtually all the time. And exercise means rehearsal. Test out where your words flow together. Find out where the tongue twisters are and change them.
- **Vary pace, pitch and force.** *Pace* is the speed at which you speak. *Pitch* is the note on the musical scale

*(continued on page 7)*

For additional information on language bugaboos, go to: http://my.summary.com

## As You Write

*(continued from page 6)*

you use, such as raising your pitch at the end of a question. *Force* is the loudness of your speech, from the intimate stage whisper of confidants to the hellfire-and-brimstone shout of an emotionally committed speaker. To fully engage your audience, vary all three components. To get that variance down correctly, you must rehearse.

- **Practice ad-libs.** One way to change the pace and reinvigorate audience members is to step away from the text of your speech and actually talk to them. Ad-libbing can strengthen your connection with the audience, but it is a skill that must be learned to be most effective. Consider planning your ad-libs carefully, to make sure you stay coherent and on-topic when you do turn from your prepared speech. ■

For additional information on how what can go wrong might just go wrong, go to: http://my.summary.com

## The Benefits of Silence

A well-timed pause in your speech can do a number of things. It can put a bold underline on a point you've just made, or it can set the table for a blockbuster idea. A pause engages the audience, even if it's not at a dramatic moment. It can signal a break for those whose attention has wandered and an opportunity for them to jump back in. For those who are still "with you," it provides a breather, a moment for reflection on what you've said, and a chance to internalize or to carry on their own inner dialogue with what you're saying.

A pause can also serve a very practical purpose for you — to give you time to catch your breath, to get over rising nerves, or even to take a drink. Of course, you must be as inconspicuous as possible when doing this, but even the briefest of silences can help refresh you quickly and effectively.

# Stand and Deliver

The time has come for you to give your speech — time to deliver. Now, it's all about confidence: confidence that all the planning and thought that went into your content was on track; confidence that your run-throughs have made you thoroughly familiar with your material. Now, it's between you and the audience, and it's up to you to make that all-important connection.

### *'Advancing the Room'*

Everything you've done in preparation for your speech has been to ensure that you are well within your comfort zone in terms of content, the audience, your timing and everything else. To ensure that you'll be comfortable, be sure to go to the venue before the event and check things out. It's called "advancing the room." Be thorough about it. When you rise to speak, you should feel as if you're in the meeting room where you have sessions with your team, or, better still, in your living room. You must feel comfortable, so you can forget your surroundings.

There are many, many details to check. Among them are the following:

- Where do you sit before being called up to speak?
- How many steps are there to the stage (in the dark, it's hard to tell)?
- Where is the water?
- Is the microphone too high? Is it too low? How does it adjust? If you prefer to walk around, can you get a lapel microphone?
- Does the lectern light work? Where is the backup bulb?
- What is the layout of the stage? Is there room to walk around?

For additional information on a speech delivery checklist, go to: http://my.summary.com

### *Walk-Through Steps*

Here are some additional things you should do when advancing the room:

**1. Be sure that any spotlights the lighting crew plans to use won't blind you from seeing your text or interfere with your eye-to-eye connection with the audience.**

**2. Check the sound system so you can hear what you sound like over the speakers.**

**3. If you insist on using slides, run through them a couple of times, checking for proper order and the pace of change from slide to slide.** Also, find out what method is being used to change the slides (laptop, handheld changer or backstage technician).

**4. If you're using a teleprompter, run through it with the operator so you can coordinate your efforts.**

**5. Find out what kinds of cameras might be used.** If your organizers have hired a still photographer, prepare yourself for flashbulbs and motion during your speech.

All this checking takes time, but it is crucial to make sure you're able to set aside any thoughts of logistics and focus on making the connection with your audience.

### *Be Yourself, Only Better*

Many presentation coaches tell clients that they "just have to be themselves" when giving a speech. They mean well — it's good advice to stay within your comfort zone. One problem with that approach, though, is that it can fool people into thinking they don't have to do anything differently, whether they're engaged in water cooler

*(continued on page 8)*

## Stand and Deliver

*(continued from page 7)*

chat or addressing a convention center crowd. The same tricks you use to make boardroom presentations will not translate well in a large room.

This is not to say you need to find a whole new "you" when you hit the platform. You must be *you*. Only be a *better* you. Speechmaker is only one of the many roles you have: one part subject matter expert, one part erudite, witty star. You have your words, but you also have yourself as an actor and your body as a prop. And you get to design that prop, defining the character you will portray.

### *Body Language*

There are a number of critical things to remember when considering the importance of body language in your speech. These include:

- Regardless of what you do with your body during the speech — walk around, stand still, etc. — make the action big enough to be seen from anywhere in the room.
- Make sure your body language is authentic. If, for example, you never talk with your hands in normal conversation, don't try it in a speech.
- Gauge whether it's appropriate to keep your hands in your pockets. Some say it's impolite; others say it's a good way to disarm and charm an audience. ■

# After the Talking Is Done

What you do after your speech is one of the most important aspects of creating a memorable impression and enhancing your personal brand. There are two key ways you can benefit from some thorough follow-up — to keep improving as a speaker and to spread the word of your personal brand beyond the audience in the room the day you spoke.

### *Use Feedback to Get Better*

If you want to find out how your performance went, just ask. Start with yourself. Do you think you stumbled? At which points in the speech did you feel you were losing the audience? At what point did your performance match what you envisioned in your rehearsal?

Secondly, find other trusted viewpoints. Ask your colleagues who attended the session with you, with the caveat that the honesty of their opinions (and the usefulness of those opinions) will depend on the relationship you have with them and the power differential between them and you. You can also ask them for suggestions for improvement.

Then, of course, there's the audience. One gauge of your success is how many people approached you after the speech to ask questions, make comments or exchange cards. You can get at least anecdotal evidence of how well you did by the nature of their questions and comments. You might also have the opportunity for formal audience evaluations. Often, these are put together by the event organizers who will, after crunching the numbers, give you the results of what the surveyed audience members thought of your appearance. What you're looking for here is an unfiltered critique from the most important people involved in the speech — the members of your audience.

### *Spread the Word*

Much of the mileage you'll get from your speech is word-of-mouth — from your own mouth to the listeners in the room, and from their mouths to their own circles of influence once they leave the venue. A memorable talk can elevate public discourse and connect you with important thought leadership. If you're great, your name and point of view will be on everyone's lips. You must, however, be able to keep the momentum going yourself.

That begins with inviting the messengers. These include:

- *The media.* Members of the media are paid to carry messages, and their reach is extraordinary, for good or bad.
- *Influential colleagues or friends.* Invite or entice them to come — even pay their way, if necessary. This accomplishes a couple of things. First, it ensures you have at least a smattering of allies in the room. It also enlists those people as messengers to spread the word of your brilliance to anyone in their circle of acquaintance they feel is appropriate.

### *Get It Out in Writing*

Through these messengers, you can also distribute copies of the text of your speech so that the paper appears on the desks of influential people, complete with the endorsement of a mutual acquaintance. No more cold calls for your words!

While you're considering sharing the text, think seriously about repackaging the content to provide more shelf life. The simplest way is to hand it to your Web gurus and have them post it in an easy-to-read print format on your organization's Web site. With a little more effort, you can trim your speech down to the length of an op-ed piece and send it to editors.

### *The Expert Is You*

You can also become an expert commentator for the electronic media. Ever wonder how news networks so quickly find those retired generals and security experts to appear on camera as soon as there's a breaking story? Those people are in a pool of experts, and they got there by making their expertise known to the producers. By delivering a speech on a specific topic, you can position yourself as an expert on that topic, increasing your profile and building your brand. ■

Influence Through Storytelling
*Page 3*

## The Summary In Brief

The power of influence plays an important role in all aspects of our lives. Whether it is pitching a business idea or getting the kids to do their homework, we try to influence others on a daily basis. By viewing influencing as a life skill that can be strengthened, we can learn how to inspire others to make a change, create deeper relationships, improve our performance, and build powerful, personal brands.

Nicole Soames, the author of ***The Influence Book,*** helps you achieve influencing success by explaining how to harness emotional intelligence to establish trust and rapport. Putting yourself in the other person's shoes and identifying how to motivate them on an emotional level makes it easy for you to convince the other person to say yes.

You'll receive practical ideas and techniques to unlock your inner confidence, prepare for any influencing situation, and deliver compelling storytelling to win hearts and minds. The more frequently you put your new skills into practice, the better outcomes you will achieve, and the more assured you will be.

## In This Summary, You Will Learn:

- How developing your emotional intelligence can help you become a strong influencer.
- How to identify different communication styles to quickly find common ground.
- How to use the storyboard technique to create influential stories.
- How to network successfully so you can become even more influential.

## Why Influencing Matters

Whatever your walk of life, you draw on influencing skills every day to get others to agree to your point of view. Imagine a teacher who is an expert in their subject but fails to inspire, or a developer who creates brilliant designs but can't persuade their client to implement them. It is time to understand the immense value influencing can bring to your life and to see it as a life skill that can be developed and strengthened.

Influencing is the ability to leverage your emotional intelligence to communicate effectively so that you make it easy for the other person to say yes. Creating a balanced relationship is at the heart of influencing and developing your emotional intelligence—the ability to focus on the other person's needs—is central to becoming a strong influencer. By combining emotional intelligence with business skills training, you can make a seismic difference in your performance and across all the relationships in your life.

### Develop A Confident Mindset

Self-knowledge is the cornerstone of emotional intelligence, so your first task is to give yourself an honest appraisal. Write down your key strengths, like deep empathy or creativity, and how they help you influence others. Next, identify weaknesses and areas for development, such as a fear of public speaking. Ask others to help you identify blind spots.

As another exercise, make a list of different influencing situations, such as meeting with a customer to sell a new product. Write down your motivation for each and how it makes you feel. Understanding your underlying motivations and emotional needs will help you be more prepared and confident.

In the 3 Circles of Influence described by Stephen Covey, the inner "control" circle represents things that are totally in our control, such as where we live and what we do. The middle circle, our area of influence, includes things that we can do something about, such as the quality of our work, the relationships we form, and results we can achieve. Focus your attention on the things within your influence circle. Identify areas you'd like to influence and set three goals for the year ahead, such as improving your relationship with a customer, mentoring a new employee, or becoming a thought leader in your field. Challenge yourself. Adopt a positive mindset as it will take time and perseverance to achieve your goals.

### Be Authentically You

It can be tempting to conceal weaknesses with bravado, but "fake it until you make it" rarely works and others can find it insincere. Strong influencers understand that the best communicators are able to connect with others in a genuine way. Be prepared to show your vulnerability. This makes you approachable and helps you build rapport with others. "People buy people" so being genuine and communicating in a way that is consistent and confident, without being arrogant, will help you develop an authentic voice and increase your credibility.

## Set Yourself Up For Success

Before an influencing conversation, work out exactly what you are going to ask for. By preparing thoroughly and seeing things from the other person's point of view, you will be able to answer questions and head off concerns, saving time in the long run.

### Recognize Communication Styles

Learning to identify different communication preferences will help you reach common ground quickly. One of the easiest tools is the DISC method, which breaks down four communication styles: Dominant & Driven; Influencing & Persuading; Secure & Steady; and Compliant & Considered. **D** types are fueled by results. They communicate in a direct manner and won't engage in chitchat. **I** types are people-oriented and enthusiastic. They want to be liked and crave recognition. **S** types are diplomatic. They tend to avoid confrontation and dislike being put under pressure. **C** types are motivated by processes. They are perfectionists, worry about being criticized, and prefer to communicate in writing so they can take their time. By recognizing the other person's style—people are usually a blend of types, you can better understand how they make decisions.

Note your own style, and how it is on a good day and a bad day. You can have a different style when you are stressed. For instance, on a good day an I type might be sociable, but on a bad day, frantic. Whatever the scenario, you'll influence others better if you respect their communications traits and align them to yours. When dealing with D types, communicate in a concise way, backing up statements with evidence. Expect I types to make a spontaneous decision. A S type is more likely to say yes to a simple concept that will be valued by others. C types are more methodical so supply details and pros/cons. Plot out the other person's DISC profile and what you can do to influence them more effectively.

## The Importance Of Relationships

Seeing another person's point of view and understanding their needs will help build a relationship and ensure that they

do not feel manipulated. Use Maslow's Hierarchy of Needs for insight into motivations. He identifies five stages of needs: physiological; safety and security; love and belonging; esteem; and self-actualization. This pyramid can be adapted for a business setting, with the primary need to make a profit and secondary needs to satisfy corporate strategies and fix pain points. Try filling out a pyramid for each of your customers and consider how you can help solve their needs.

Influencers can also create needs in the minds of others. Henry Ford said, "If I had asked people what they wanted, they would have said faster horses." The key to creating a need is to make a comparison that resonates by considering the other person's mindset. If they believe they are performing worse than expected, they will be more likely to be open to new ideas than if they are performing well. When you identified the need, outline the benefit you can deliver, and provide data that shows how you can help them improve. Even if they don't completely agree with your numbers, your aim is to demonstrate that you genuinely care about their needs.

Ask clever open and closed questions to connect and clarify. Prepare ahead, write down the needs your ideas can meet and questions you can ask. Keep DISC styles in mind. For example, lots of open questions might encourage an I type to go off on a tangent. Listen carefully to responses, paying attention to body language and tone, as well as words.

### Building Rapport

Uncovering or creating needs, listening with empathy, showing genuine interest and using commonalities to connect can fast-track building rapport. But you can inadvertently break it by making assumptions, getting too personal too soon, being inflexible, adding opinions inappropriately, and not preparing the next steps. Trust is built by delivering on your promises (reliability), having credibility and empathy, while minimizing your personal agenda. If you're too focused on yourself, the level of trust will automatically go down and you'll be less likely to influence.

## Influence Through Storytelling

Stories engage us on an emotional level. We are 22 times more likely to remember a story than facts alone. Using the insights gathered about the other person, you can create a story tailored to them. Build your story with analogies, rhetorical questions that prompt thought, reiteration to secure a key point, compelling numbers (a 90-day warranty sounds like a better deal than a 3-month one), mock-ups or visuals, and third parties to introduce a different perspective and establish credibility.

People buy the "why," not the "what." Lead with why the other party should say yes and demonstrate how you can help them. Focus on the benefits to them. Ask yourself: what's in it for them; how can I prove it; and why should they say yes. By building the story this way, relating it to their needs and backing it up with facts, you are likely to motivate on an emotional and commercial level.

Use the **STRONG** storyboard framework to ensure your story makes an impact.

1. **S**et the scene by creating context with the needs of the other person.
2. **T**ailor the story, going through each of the benefits of your proposal
3. Summarize your **R**ecommendations
4. Explain the **O**pportunity or the net benefits
5. **N**egotiate
6. **G**et to the next steps

Write out your key messages for each of these steps, starting with the big-picture recommendation, what's in it for them, and then work backwards. Detail the needs you are addressing and quantify the size of the opportunity. Prepare for negotiating curveballs by listing different variables and solutions. Outline next steps. Make sure your points are clear and concise. Keep asking yourself "so what?" from the other person's point of view.

### Deliver An Influential Story

If you don't deliver your story in an inspiring way, you'll struggle to convince the other party. Draw on your emotional intelligence and be present in the moment. Take steps to minimize anything that might distract you. Put effort into how you appear, what you say, and how you sound. Stand tall and make strong eye contact. Don't lose your personality when you start a presentation. Avoid vague weak speak, such as "hopefully we can agree," or "in all honesty," which can undermine your credibility. Because people speak faster under pressure, slow yourself down. If you want to land a key message, pause to emphasize it, and give the other person time to process. If you notice the other party's attention begin to wander, re-establish eye contact before continuing, and then dial up your energy.

## Control The Conversation

Despite all your preparation, you can't know exactly how people will impact a conversation. There are four interaction types: questions or statements; tactics; issues; and negotiation points. Each needs to be managed differently. Respond to questions and statements as they come up, but note if they embody a tactic, issue, or negotiation point. Recognize unfair tactics, like someone checking their phone as an attempt to shift the balance of power. If you spot a tactic, respond with humor, move the conversation, and get back to business. Take control by saying something about the need to work together or re-summarize to help the other party focus.

For a real issue, ask clarifying questions and show that you value the opinion. Ask if there are other issues. By helping them put everything on the table, you'll facilitate a smoother path to closure. Ask which issues are the most important so you can focus on addressing them. If you can't find a solution, start negotiating to find an overlapping position. Don't worry if you can't provide a solution on the spot, you may need to say that you'll get back to them.

Finally, close with confidence. A strong influencer will always put the next steps on the table as a way of checking if the other party is on board. Be specific with simple, definitive next steps.

## Influencing Via Phone And Email

When it comes to influencing, meeting in person makes a difference. It is better for building a relationship and you're more likely to close. You can't read body language on a call. If a face-to-face isn't possible, use Skype or pick up the phone. Email is a last resort. Be resilient: It takes perseverance to influence others, so always follow up with the other party, and maintain control throughout all your interactions. Make sure you keep nudging, without bombarding.

## Keep Fit For Influencing

Honing your skills takes practice. Adopt the principle of Plan, Do, and Review to help focus on areas you find challenging. Set a specific goal, use your skills, then review the conversation and how it went. Compare the actual to what you prepared for. Don't just focus on whether you achieved the outcome, note how you changed the other person's behavior. Rehearse. Film yourself as you practice your story to see how confidently you come across in your body language, tone, and overall presentation.

## Network For Success

Networking provides the opportunity to put your influencing skills to the test. Strong influencers tend to be givers; aim to be generous to others more often than not. Always respond promptly to requests; building credibility and trust will pay big dividends. Seek out every opportunity to grow your network. List people you know who can help you achieve your goals. Prioritize building relationships with them by following five principles: be interested—ask questions and listen carefully; be interesting—have something to say; be generous—invest your time; make connections; and keep in touch. Don't just take their card, follow up. By nurturing your relationships and behaving in an authentic, generous manner, you are on your way to winning other people's hearts and minds.

Nicole Soames is a highly qualified coach and emotional intelligence practitioner. She gained extensive commercial experience during 12 years of managing large sales teams at Unilever and United Biscuits, followed by 15 years developing and delivering training programs around the globe. In 2009, Nicole founded Diadem, a leading commercial skills training and coaching company. With 85 clients in 12 countries, Diadem has helped thousands of people become commercial athletes in influencing and selling, negotiation, account management, marketing, presenting, strategy, coaching, leadership, and management. Nicole is also the best-selling author of ***The Negotiation Book***, part of the Concise Advise Series from LID Publishing.

## THE SUMMARY IN BRIEF

Introverts across the world have been sold a lie: that our ability to network depends on having the "gift of gab." This is nonsense. You don't have to be outgoing to be successful at networking. You don't have to become a relentless self-promoter. In fact, you don't have to act like an extrovert at all.

The truth is, introverts make the best networkers . . . when armed with a plan that lets them be their authentic selves. In ***The Introvert's Edge to Networking***, Matthew Pollard, an introvert himself, draws on over a decade of research and real-world examples to provide an actionable blueprint for introverted networking. In this paradigm-shifting book, you'll discover how to overcome your discomfort through a clear networking system, use your strengths, connect with the right people, and much more.

Whether you're a small business owner struggling to make a living or a professional who's hit a career plateau, ***The Introvert's Edge to Networking*** is your path to a higher income and a rolodex of powerful connections.

## IN THIS SUMMARY, YOU WILL LEARN:

- To turn networking into a repeatable system.
- To leverage your innate strengths as an introvert.
- To target and connect with top influencers.
- To follow up, get feedback, and win validation.

## Why Introverts Make Better Networkers

You'd rather get a root canal than go to a networking event. But you know you're supposed to, right? Everyone says how important it is in landing that dream job, securing your next client, or connecting with a high-level contact who could launch you into the stratosphere. You know you should do it . . . but it's just agony.

How can introverts compete with extroverts, who seem to have natural charisma, the gift of gab, and the ability to effortlessly form connections? How can introverts succeed at networking while feeling authentic?

Introverts can outperform their extroverted counterparts by realizing two truths:

- The introvert's road map to success doesn't look like the extrovert's. We're different and we need to embrace that.
- Traditional networking doesn't work for introverts. We need a smarter approach that leverages our natural strengths.

Introverts have a natural edge when it comes to the way networking should really be done—not playing a numbers game and talking to as many people as possible but by being strategic, being prepared, practicing, and knowing how to cultivate deeper relationships with just a few of exactly the right people in the room. In other words, by playing a totally different game.

### Stop Copying the Extroverts

There is a type of networking called "strategic networking." It's a smarter and more effective style, one that introverts can dominate. Network strategically, and you will be rewarded with connections to people who value your work and who would love to help you reach your goals faster. It's your ticket off the hamster wheel.

This system ensures that introverts, if they're willing to do the prep work, easily have an edge over their extroverted counterparts. Naturally outgoing extroverts can walk into a room and just wing it. While it often comes off as transactional, they're usually unwilling to put in the time and effort this process requires. After all, they've made it this far on their own—why fix something that they don't see as broken?

Introverts, on the other hand, love being superprepared and equipped for success before they ever walk into the room.

So how do you go from an awkward and uncomfortable networker to a networking powerhouse? The answer lies in the three Ps: planning, preparation, and practice. Let's kick off the steps to this process by channeling your superpower: your passions.

## Channeling Your Superpower

Strategic networking is like getting a rocket ship into orbit. Each element of your rocket ship forms a part of your greater networking system. If your networking system is your rocket, then passion is undoubtedly the fuel.

This is why uncovering what you're truly passionate about and aligning it with what you currently do, or want to be doing, is vital. Without passion, while you will still be able to portray the most authentic version of yourself and likely still skyrocket your results, you'll always feel incongruent in the networking room. As such, you'll be missing the explosive force you need to truly get to orbit.

### Lighting Your Fire

Being connected with your passion and mission gets people to give you their time, money, networks, and ideas. They'll want to follow you, work with you, and help you get where you want to go. This is the kind of stuff that moves mountains.

To find your rocket fuel, you need to be able to answer three important questions:

- What do you want to see (happen, stop happening, change, or improve) in the world, within the workplace, with customers, with suppliers, with prospects, and so on?
- Why do you care?
- What's the driving passion behind it?

For the moment, don't worry about how you'll make money from your passion. The questions are not about why you're networking. They are about what's important enough to get you to jump out of bed in the morning, outside of the money you get paid or the worry of making none.

The answers may not come to you right away. Try asking yourself some of these questions to get the juices flowing:

- "I could have done anything—why this (that is, why did I decide on this profession)?"
- "Do I have any personal connection to the business or

To truly succeed at networking, you need to stop casting a wide net and instead focus on being the perfect fit for just a select few.

career I've chosen?"

- "At work, what do I get my greatest joy from? (Your answer to this question can include previous jobs or businesses.)"
- "What are the tasks that I do that make time fly?"
- "What do I hate seeing happen to (prospects, customers, suppliers, co-workers, and so on)?"
- "What do I love seeing (prospects, customers, suppliers, co-workers, and so on) experience?"
- What are my favorite types of problems to solve at work?"
- "What do I get the greatest joy from in my personal life?"
- "How can I make that relevant in my business or career?"

Let's now talk about why success doesn't come from being everything to everyone but being the only logical choice to a select few.

## You Can't Please Everyone

To truly succeed at networking, you need to stop casting a wide net and instead focus on being the perfect fit for just a select few. This is the group that will be motivated to hire you, buy from you, appreciate your work, and pay you what you're worth—the group that sees you as the only logical choice, regardless of your competition.

### The Basics of Niching

Discovering your perfect niche is easier than you think. We can find it in just three simple steps.

**Step one for business owners**. First, get out a pen and paper. You're going to make two lists. On the first list, write down the names of people who, when your phone rings with their number in the caller ID, you hear "cha-ching!" These are high-paying customers who pay you what you're worth and never haggle on price.

For the second list, write down the names of people who sing your praises. This may mean raving to others about your work or products. It could be people who consistently send referrals your way. They're the people who, when you ask for a short testimonial, write you a page. Think of these people as being on your "evangelists" list.

These need to be exhaustive lists. Put down everyone who's ever paid you well or had a positive interaction with you professionally.

**Step one for employees**. Think of your current and former bosses, direct or indirect managers, and even co-workers as customers. Which of them ensured you were paid your bonuses, gave you generous raises, or otherwise financially rewarded you? Who gave you opportunities that either directly or indirectly led to a monetary benefit? What external customers always wanted to work with you—and when the phone rang with their number on it, your employer heard cha-ching?

On your evangelists list will be the people always telling others about you and your outstanding work. They recommended you for special projects or awards. They constantly encouraged and supported you in seeking promotions.

**Step two**. Now you need to sort these lists. Look at all the names you've written down across both lists. You'll start to notice some similarities. Whatever you notice, sort them into groups according to those characteristics. This might include wanting help with a specific outcome, like veterans needing career guidance as they re-enter civilian life, or CEOs wanting to win an award like Great Place to Work. Maybe they're old-school retailers who want more of a digital presence on social media. It might be bringing systems and processes to their chaotic workday.

Or these groups might be sorted by one or more of the following: demographics, psychographics, geographic, or behaviors.

**Step three**. Get out a red marker. Looking across your sorted minigroups, circle the ones that you've made fantastic money from. Like your original cha-ching! list, these are people who, when your phone rings with their number

on it, you're almost assured it's money in the bank. Circle a group only if every person in it is a moneymaker for you or your company.

Next, go through your minigroups again, this time with a blue marker, circling the groups who sing your praises. Again, circle a group only if everyone in it is a raving fan, and consider niching further if many, but not all, names fit this requirement.

You'll notice some groups have just a red cha-ching! circle around them, which means great money, but they don't show you off to the world. You'll also notice a few groups with just a blue evangelists circle around them. They love you and you probably love them, but you need to make money.

Finally, you'll notice one, two, or even several magical groups, the ones that have both a red and a blue circle around them. One of these groups, and only one, is your target niche for all your networking efforts. Pick the group that most aligns with your passion and mission. In the long term, that's the one you'll make the most money from and love your life while doing it.

Now that you know your niche, it's time to discover your secret sauce. It's time to answer the question "What are the three main reasons they think you're so fantastic?" This is not about the reasons they hired you or purchased your product. This is about the unexpected surprises that make you a standout.

## Our Difference Defines Us

A Unified Message (UM) is the magic piece of the puzzle, the catalyst to interest and rapid growth within your target niche. It's just one, two, or three perfect words that will change the trajectory of your business or career forever.

A Unified Message is the hook that gets people to lean in. It is the key to starting a networking conversation on the right foot, so you never feel salesy or inauthentic. It works for people just getting started in their businesses and careers. It works for midlevel managers and struggling-to-survive freelancers. It works for multimillion-dollar business founders.

"I'm a programmer." "I'm a realtor." "I'm an HR professional." "I'm in customer support." "I work in a call center." The moment you identify yourself this way, the other person puts you in a commodity box.

A commodity is understood to be a material or product that looks pretty much like all its competitors. Milk, for example, is pretty much milk. Rice is rice. There's no substantial difference between them, so many of us feel it doesn't really matter which one we choose.

A Unified Message is the clean slate you need to attract your ideal prospects or employers. Think of it as a slingshot right into a discussion of who you are and the value you can provide.

### Crafting Your Own Unified Message

Go back and look at your answers to the last section. Not just the three main problems you solve or outcomes you provide, but all the wonderful things you identified as standout qualities. Looking at all these things that you do, and that your niche really appreciates, ask yourself, "What is the higher-level benefit of all that? What is it that my target niche really gets out of working with me? How can I summarize all of this in just two or three words?"

For example, Wendy's niche was working with high-level executives being relocated to China. The guidance she provided—helping the family as a whole to thrive in a country with far different cultural norms—was her real secret sauce. That's why her UM was the China Success Coach. It was this message as well as her package, the China Success Intensive, that took her from struggling to make just $50–80 an hour in a saturated market, to making $30,000 per family, with virtually no competition.

Keep in mind, you're not creating a tagline or slogan. Whatever you come up with, you must be able to use it in a sentence: "I am the [UM]." Just like saying, "I'm an accountant." Here are some other real-life examples:

- "I help thought leaders and influencers uncover why their website content isn't getting great rankings on Google: the Authority Detective."
- "I work with event planners wanting to create a memorable moment for attendees by providing laser light shows that dance to music: the Memory Weaver."
- "I help traditionally high-achieving executives get out of an uncommon funk: the Plateau Hacker."

In creating your UM, ignore the urge to be descriptive; the goal is actually to be somewhat vague and ambiguous. It's designed to be a hook. If your UM is obvious, they don't need to know more. Think of your UM as a movie trailer. It's not the whole show—it's just the teaser that gets people to buy a ticket to the full movie.

Now, let's talk about the different opportunities your UM presents in the networking room, and how to handle each one.

> You can't judge a book by its cover . . . or a cat by its box.

## Speak to the Right People

Now we have a plot twist: Networking is not primarily about finding people who want to hire you. Networking is really about meeting the people who, after one good networking conversation, could pave the way to a multitude of sales opportunities, the people who could help you land a job far beyond what you'd ever hoped for.

### Champions and Momentum Partners

So who are these magical people? They are champions and momentum partners. Champions are an elite group. They're the high achievers and influencers who really make the world go 'round. The people who can seriously give your rocket ship a huge boost. They might be connected with those impossible-to-access individuals. They might have won prestigious awards. Their work might have afforded them a great deal of respect or name recognition. They might have a popular magazine, mailing list, podcast, or social profile.

These people should be your most guarded and cherished network contacts. They should be the individuals you almost never ask anything of. They'll also likely be the people that offer you more support than you could ever expect.

Momentum partners are a small group of connections who willingly open up their Rolodex to you, and for whom you do the same. Whether it's an introduction to a podcast host, a magazine editor, an event organizer, a possible champion, a new prospect, or even another momentum partner, a good partnership should bring a wave of warm connections into the in-boxes of all parties involved.

### You Never Know Who You're Going to Meet

Think of every person you meet in the context of Schrödinger's cat, the thought experiment where you assume something both is and isn't. Erwin Schrödinger, the Austrian physicist who came up with the idea, proposed a scenario wherein a cat would be put in a box with a radioactive atom, a Geiger counter, and a flask of poison. When the atom decayed, the Geiger counter would detect it and go off, shattering the flask and killing the cat.

But when would the flask shatter? To someone looking at the closed box, you'd have to assume that the cat was both dead *and* alive.

You can't judge a book by its cover . . . or a cat by its box. Some of your best prospects, momentum partners, and champions are likely walking right by you—or sitting right next to you—without you ever taking advantage of the potential networking opportunity. They may not be dressed like how you'd imagine a champion, momentum partner, or even prospect would be dressed. They may not seem the "right" age. They may not even look like they're open to a discussion.

But don't assume the conversation is dead before before you open the box. Instead, have the Schrödinger's cat mentality and be open to connecting with people . . . anywhere . . . anytime.

### Do Your Research Before You Get in the Room

Before heading into an event, wouldn't it be nice to know who's going to be there? Wouldn't it be great to already have multiple conversations started so that, when you show up, you could just continue them? Wouldn't that take the pressure off?

Today, with social media, networking websites, and apps, there is a wealth of personal information out there—our "cyber footprint," if you will. People post pictures of themselves at events, they like and comment, they promote things they're going to, their friends and colleagues tag them . . . and it's all just waiting for you to discover.

And from these social profiles, you can usually guess if the potential connection is more likely to be a prospect, momentum partner, or champion. If you were selling to a board of directors or interviewing with a group of executives, would you research them first? Of course you would! Well, networking should be no different.

## What to Do in the Room

Through the previous sections, you've already uncovered all

the necessary ingredients for your Networking Playbook. All you need is the recipe for how they all go together, in a way that feels congruent and authentic to you.

Here's a basic script:

"I'm the (insert UM)."

They ask: "The (UM)? What exactly is that?"

"Thanks for asking!" (Share concise statement, drawing from your passion, your new understanding of your niche, and the three main problems you solve or outcomes you provide for them.)

**Option 1**: "Well, I hate seeing (niche) (define problems).

**Option 2**: "I love seeing (niche) (define success); however, I find that (define problems).

"Do you know anyone like that?" (Wait for response, which is almost always yes—especially if you've done all the right research beforehand.)

### Matthew Pollard's Networking Playbook

Here's what Matthew Pollard says when people invite him to explain what he does as the Rapid Growth Guy:

**Option 1**: "Well, I hate seeing introverted small-business owners, with strong functional skills, constantly stuck in a hamster wheel of struggling to find interested prospects, set themselves apart, and make the sale, all while feeling like they're selling to prospects who only seem to care about one thing—price. Do you know anyone like that?"

**Option 2**: "Well, I love seeing introverted individuals with enough skill, passion, talent, and belief in themselves to launch their own business. However, I find that many of them end up stuck in an endless hamster wheel of struggling to find interested prospects, set themselves apart, and make the sale. Do you know anyone like that?"

Of course they do. That describes virtually everyone in or associated with his niche.

He then says, "I'm on a mission to help these business owners realize they don't need to give up on their dream business—that there is a way they can earn a phenomenal income doing what they love. Not by getting better at their functional skill, as they're usually already great at that, but instead by focusing on three often neglected steps."

"Actually, you know what, let me give you an example. See, when Wendy"—or Whitney or Derek—"first came to me. . . "

At the end, after sharing his moral, when he says, "Does that make sense?" most people say, "Yes, that's me! I need what Wendy has!" or "I have the exact same problems that Wendy did!" or "Wow, you really know your stuff. I'm not a small-business owner myself, but I want to introduce you to—"

See, they've just experienced a powerful cocktail of passion, mission, and story. They've heard the enthusiasm in his voice and felt his excitement. How could they not be affected by it? If they were one of his potential niche prospects, momentum partners, or champions, how could they not be compelled to further the relationship?

Remember, most people are not very good at networking. So even if you do this in a way that is less than perfect, it will still be a whole lot better than the transactional pitchers out there or the unplanned, aimless time wasters.

## The Step Everyone Forgets

Have you ever been to a farmers' market? You can't help thinking of the months and months of work that went into all that beautiful, fresh produce.

Can you imagine having to plow all those fields, till all that soil, and then during spring planting season, get all those seeds in the ground? But the work doesn't stop there. For the entire growing season, you then have to ensure all the crops get the water and nutrients they need to thrive. Finally comes harvest, and you have to head out again to gather your crops. Then and only then, you get to take them to market and finally cash in on all that hard work.

Networking without follow-up is like farmers neglecting to tend to their crops. Sure, you'll get a few results, but without follow-up, you'll miss out on your biggest-yielding prospects, momentum partners, and champions—the relationships that require more time to grow.

### Follow-Up for Prospects

For example, for prospects you'll follow up in one of two ways, depending on what happened during your initial conversation.

If they agreed to a follow-up discussion and you scheduled it then and there, your follow-up is simply an email confirming that meeting. Something like this:

The goal is to discover what works, what doesn't, and what inspires interest within your niche.

"(Name), it was great to meet you yesterday, and I'm so pleased you found my guidance helpful. I greatly look forward to helping you further during our call on Friday the seventeenth at 1:00 p.m. EST. I'll also follow this email with a calendar invitation."

"If you have some spare time between now and then, I'd highly recommend checking out the below post/video/podcast interview: (Link goes here.) (Briefly explain what it will help them with—this should not be anything promotional in nature.) I think you'll get a ton of value from it. I look forward to speaking with you soon." (Follow up with your calendar invitation.)

If you didn't schedule a call at the event, but the person asked you to reach out with some options, then your message should look like this:

**Option 1**: "(Name), it was great to speak with you yesterday, and I'm so pleased you found my guidance helpful. As promised, below are a few times I'm available to chat further." (Offer two different days of the week at two different times, one in the morning and the other in the afternoon.) "Would either of these work for you? I look forward to hearing from you soon."

**Option 2**: "(Name), it was great to speak with you yesterday, and I'm so pleased you found my guidance helpful. As promised, below is a link to my scheduling app, where you can book in with my calendar directly: (Scheduling link goes here.) I look forward to speaking with you soon."

## The Feedback Factory

Now that you have all the elements of a successful networking system and have practiced your script to deliver it well, the first several times you go out networking should be about obtaining feedback—that's it. The goal is to discover what works, what doesn't, and what inspires interest within your niche.

### Validation

When it comes to your initial validation, while of course you want to confirm that your overall script and stories have the desired effect, there is nothing more important than confirming your Unified Message. You need to ensure that it intrigues and excites your niche, not puts them off or leaves you trapped in the same old commodity box.

### The Strength Architect

Jay Kali is a great example of validation at its best. Jay was really struggling in his online personal training business. While he did have a few regulars, they weren't paying the bills, and he hadn't had a single new client in more than eight months.

As Jay shared his homework within our Rapid Growth® Academy community, it quickly became apparent that, although he'd worked with many types of people, his real passion and a lot of his bigger successes came from helping women regain their strength after pregnancy.

Excited by his new niche, Jay went to work creating his stories and uncovering his Unified Message. With a little support from the group, it wasn't long before Jay had three amazing stories and had decided on a UM: the Strength Architect. All he needed now was a little practice, and he'd be ready to validate it with the world.

He decided to try it out at a conference he'd soon be attending out of town. During one of the breakouts at the conference, attendees were asked to take turns sharing what they did: "I'm a hypnotist." "I'm a copywriter." Person by person, they described themselves in terms of their functional skill.

When it was Jay's turn, he said, "I'm the Strength Architect." This was the only time, out of all the people in the breakout, that someone interrupted to ask, "What exactly is that?" Jay went right into the first part of his networking script and then asked, "Do you know anyone like that?"

Many people nodded their heads, and the group leader didn't seem annoyed that he was taking too much time, so Jay continued: "Well, I'm on a mission to help . . . " From there, instead of transitioning into a story, he concluded with, "I don't want to monopolize the group's time, though, so please feel free to find me later if you'd like to chat further."

As soon as the breakout wrapped up, several people asked Jay for his card. *That's* a validated UM.

After each networking event, do an assessment of how it went. Did they invite you to share more? Did you say your UM and remember to stop? How did they respond? Did you stick to the script? Did it feel conversational? Did you tell your stories well? Did they respond as expected? Were there any curveballs that you didn't know how to react to?

For discussions that didn't lead to a call to action, were they in your niche? If so, can you pinpoint where things went off the rails? Is there anything you could have done differently that could have improved the result?

When asking these questions, it's important not to self-criticize. If you didn't obtain the desired effect, it's not a reflection on you or your personality. It's just an indication that your networking system might need improvement.

## The Digital Frontier

While of course life would be easier if nothing ever went wrong, the sad fact is, things often do. That's why, even when things are going great—actually, especially then—you should leverage your hard work online. It's the last piece of the puzzle to safeguarding your career or business, and it's the key to possibilities far beyond what you could ever expect.

There are many people who know a lot about SEO, PPC, or whatever other acronym the jargon-focused digital marketers say is the key to online success. But don't get lost in thousands of tactics. Just take what you already have, keep it simple, and build out your first online assembly line.

Jay Kali, the Strength Architect, initially offered personal training online, targeting English speakers. But this forced him to compete against both live trainers and the hundreds of other online trainers doing the exact same thing—all with a similar bland message.

But after his successful validation at the conference, Jay simply embedded his message into his online content via Facebook and sent out a few direct messages. That, with a few basic website changes, led him to being booked solid and hitting a goal he'd set for himself almost five years before—all within less than six weeks from successful validation.

Stories of digital success go on and on. However, they could never have happened without the initial work in the networking room.

So, once you've successfully completed your validation and perfected your networking script, it's time to leverage all your hard work into the digital frontier.

Let's amplify your message to a global community.

# The Let Them Theory

Mel Robbins

Book Snaps™
In-depth reviews of best-selling business books.

## The Let Them Theory

**A Life-Changing Tool That Millions of People Can't Stop Talking About**

*By Mel Robbins*

**Mel Robbins** is the creator and host of the award-winning The Mel Robbins Podcast, one of the most successful podcasts in the world, and a #1 New York Times bestselling author. She has amassed 21 million followers online and is considered the most sought-after expert in life improvement, mindset, and behavior change. The Wall Street Journal calls her a "billion-view podcaster" and TIME magazine says she gives millions of listeners around the globe "a reason to believe in themselves."

*A Book Review by Soundview*

# Two Simple Words That Will Set You Free

"The problem isn't you. The problem is the power you unknowingly give to other people." Mel Robbins writes these words very early on in her book, ***The Let Them Theory: A Life-Changing Tool That Millions of People Can't Stop Talking About***. Prior to discovering her theory, Robbins, like many people, had spent years trying to make everybody else happy in an attempt to bring herself happiness. She found out, however, that no person can ever do enough to make everybody like them. She has since come to believe that "When you stop managing everyone else, you'll realize you have a lot more power than you thought – you've just unknowingly been giving it away." The power in her Let Them Theory stems from the fact that people can avoid wasting their energy when they stop trying to control other people and instead focus on themselves, and their actions.

## Let Them

Robbins explains that she first came up with this theory at her son's prom. She had been used to teenage girls planning out minute details of their prom months in advance. This was not the case when her son came of age. While she insisted he get his date a corsage, he insisted that the girl did not want one. She secretly bought one for the girl, believing herself to know better. When her son's date offered him a boutonniere, Robbins believed she was vindicated and pulled out the corsage she purchased, only to make the situation uncomfortable because the girl liked making her own arrangements and had already made her own corsage. After pictures, the group of teens decided to go to a taco joint in the rain, and Robbins, along with some other parents, tried to find reservations to a nice sit down restaurant. Finally, one of her daughters stopped her and told her mother to just let the teens do what they wanted to do. "Let them" she kept repeating. Finally, Robbins relented and gave her son money to go to the taco joint.

This one moment changed Robbins life as she started to use "Let Them" as a mantra of sorts for her life, letting people have whatever opinions they wanted to about her life and her choices and to do whatever they wanted to in life. This ranged from having opinions about what she posts online to the donut shop having a

right to be out of donuts. The more adopted this approach, the more she realized that most of her worries were not worth the time they took. People started to notice a change about her.

"Let Them [other people] be themselves because they are revealing who they are to you," Robbins writes. She posted a video online about this philosophy and had many millions of people view it within one day. People resonated deeply with this idea to the extent that many people started to get the words, Let Them, tattooed on their bodies. People, Robbins writes, have an innate need for control, but in the end, nobody can ever control anybody but themselves.

## Let Me

The Let Them Theory does not end with these two simple words, however. Power is found in the two words that follow: Let Me. Robbins relates the power in these words by describing an emotional reaction she had to a social media post a friend of hers made. Robbins used to be part of a social group but had lost close touch with the other women over the years. One night, however, she logged onto social media to find that the group had gone on a trip and did not invite her. They were seemingly having a wonderful time, and she was feeling profoundly excluded. She started worrying about what she did that caused her to be excluded, but she could not think of anything she did to hurt any of the women. Her immediate reaction was to fix whatever had been broken by contacting the women and trying to make amends. Finally, however, she reminded herself of her words, Let Them, and she was able to let go of a lot of the angst the photos and situation were causing her. She could simply "Let Them go on the trip." These words do not mean that she gave in; rather they mean that she acknowledged that she could not change what happened no matter what she did.

Robbins writes that "Trying to control people and situations doesn't calm your fears. It amplifies them." This theory is not something she simply came up with in isolation. It is deeply rooted in stoicism, Buddhism, Radical Acceptance, and Detachment Theory. Once a person has internalized Let Them and is able to move past controlling other people, they can move on to Let Me and decide the prudent course of action in the current situation, if action is even prudent at all. Deciding what to do in response to another's actions gives a person their power back.

Robbins explains that people get a sort of positive feedback when they say Let Them. This feedback stems from a sense of superiority that comes from knowing that they have been able to rise above a situation. These words gave Robbins the power, clarity, and space to acknowledge that nobody, including these women, owed her anything. If she wanted a better social life, she needed to do the work. With Let Me, she could decide to reach out to the women and extend social invitations to other people. Robbins was able to realize that nobody has a responsibility for her social life except herself.

This Let Me part of the theory is really where the power lies. Without it, people can feel lonely. It is in Let Me that people create the life they want with the reality they have. Loneliness is a sign that the theory has not been implemented properly or fully. The theory is "not an excuse to stop answering your phone, to shrug your shoulders, to refuse to talk it out with a friend or family member who is hurt, to stay in a situation that hurts you, or to ignore discrimination or dangerous behavior. It is not a license to give someone the silent treatment, ghost people, avoid hard conversations, or withdraw from your relationships." Well implemented, it should increase connection rather than exclude it.

## Stress and Everyday Hassles

Robbins goes on to explain how Let Them can help people avoid some stress in everyday life. Stress can even be reduced when a person encounters a long line at a coffee shop or bad traffic. Since situations like these cannot be avoided, "learning how to respond differently to the annoying and stressful situations every day will change your life." To do this, a person needs to create some distance between the situation and their reaction.

To explain how this works, Robbins explains a flight she was on. There was a man behind her coughing into the air without covering his mouth. Robbins had a lot going on and could not get sick. She asked the man to please cover up his mouth while coughing, but he refused. Everyday stressful situations like this one change the ways our brain functions and cause the "fight, flight, or freeze response." Living in this state is why many people are frequently exhausted. Once a person understands the stress response, they can use the Let Them Theory to help "reset [their] stress response." "The moment anything happens that stresses you out," Robbins writes, "say Let Them. Put yourself in the pause. Then say Let Me and take a breath."

When Robbins was on the plane, she could not stop the man from coughing. Instead of allowing herself to stew the entire time, she put on headphones so as not to hear him and she covered her mouth and nose with her scarf. It was the best she could do. She reclaimed her power and reduced her stress response. Robbins tells her readers that oftentimes there will be multiple different paths a person can take when they focus on their Let Me. She writes, "every situation will be different based on how you feel, what's going on in your life right now, how much time you have, how important the issue is to you, what your values are, and what the most effective approach is." Let Me allows the reader to "put [their] time, energy, and values at the center of [their] life." Robbins frequently considers how long a situation will bother her when she tries to decide how to proceed. If a situation will bother her for quite some time, it is obviously of more importance than a situation that she will easily and quickly get over. She maintains that "No matter how big the problem is or how stressful something feels, there's always something you can do through your actions and your attitude to make it better."

## Other People's Opinions

Oftentimes, what stops people from acting even in very positive ways in their lives is the fear of other people's opinions. It can be the most difficult to get along with those we are in the closest relationships with because they are the most likely to be honest, and we care the most about their opinions. To explain

> *. . . difficult adults are easier to get along with once a person realizes that most adults have the emotional maturity of an eight-year old and therefore act in similar ways to children.*

how this is the case, Robbins writes about how her mother was not happy with Robbins's fiance and eventual husband. Her mother told her that had she had the choice, this is not the man she would have chosen for her daughter. Robbins came to learn that this was because her mother feared that Robbins would never return to her hometown permanently if she married her husband. This fear made sense to Robbins, and she had to learn to let her mother feel this way. After all, she realized that she likely would have felt the same way in her mother's position. She let her mother feel how she felt, and then she married her husband despite her mother's hesitations. Realizing what was happening let Robbins step away from the power struggle. The Let Them Theory allows for acceptance, and because of that, it gives "space for a deeper connection, honesty, and love."

Robbins believes that difficult adults are easier to get along with once a person realizes that most adults have the emotional maturity of an eight-year old and therefore act in similar ways to children. The reason many adults fail to mature properly emotionally is because they were shut down as kids and were not allowed to express the full range of emotions. This means that as adults, they never learned how to process these emotions. While the Let Them Theory requires a person to allow adults in their life to act and feel how they choose, the Let Them Theory ensures that adults will not be vulnerable to the childish behavior of adults because they are able to choose how to respond to such behavior. Adult readers may also recognize themselves as having poor emotional management skills, Robbins writes, and when they do, they should show themselves mercy while working to develop these skills.

Once a person starts to realize the power they have to dictate their choices, they may start to notice that some of their choices feel wrong. This was the case with a man who started to believe that he was not supposed to marry his fiancee. He knew how upset his fiance would be and how much money people, including his parents, stood to lose should he call off the wedding. He knew that cancelling the wedding would make many people upset. Still, using the Let Them Theory, he called off the wedding, giving those who grieved or were angry time and space to feel those emotions. He knew that in the long run it was what was best for everybody, so he chose what he needed to do despite the feelings his actions caused in others.

## Comparisons

Robbins believes there are two types of comparisons people can engage in. The first type can torture people as they lament the blessings others have that they do not. She maintains that some people are just lucky in certain areas and there may be nothing a person can do to increase their own blessings in that area. Some people are just beautiful or smart or were born into money. In these situations, Robbins recommends merely letting people have those blessings without torturing yourself over them. People generally engage in upward comparison where they look at people who have more than they do and this makes them feel like they are lacking. Robbins recommends, "Let Them live their life. Let Me focus on mine."

The second type of comparison does not involve self-torture. This type of comparison can be a source of teaching in a person's life. When engaging in this second type of comparison, you look towards others who have what you want in an effort to emulate the steps they took to get there. In this way, you too can enjoy these fruits in your life. Here you can "Let Them lead the way." Robbins writes about a woman named Molly who was an interior designer. She knew the steps she needed to take in order to advance her career, but she never did them. Then one day Molly went online and found an annoying neighbor had taken those very steps she knew she should have taken and launched her own career. In this case, Molly could let herself be woken up by her friend to make the changes in her life and career that she was very capable of making.

## Adult Friendships

Robbins moves on to discuss how Let Them can help with the friendships people have as adults. She discusses what she calls, "The Great Scattering." Up until adulthood, many people spend their lives with people in the same stage of life, encountering the same situations. These people take the same classes and play the same sports. People do not move through their younger years alone. Once they graduate and enter the workforce, however, this changes. People may spend their time with the same people day in and day out, but they are not all at the same life stage and have the same energy as them. This leads many people to start to feel a lack of true friendship in their lives. There are "three pillars of friendship." These are "proximity, timing, and energy." If people are not nearby, in the same life stage, and have chemistry with each other, they are unlikely to become good friends. This is part of why friendships can fade: one of the three pillars can disappear. Robbins acknowledges that when people allow friends to fade away because that is what the other chooses, it can lead to loneliness. She cautions her reader that "friendships are not a tit for tat. Do not keep score. Reach out to people because you want to. But don't expect a response."

Making new friends as an adult takes time, and it also takes con-

scious effort. A person must be willing to make the first move in friendships if they want to develop a healthy circle of friends as an adult. Robbins recommends taking classes to meet people and reaching "out to the people you've been hanging out with to see if anyone wants to go" to any interesting events.

## Helping Influence People

Robbins moves then on to a person's influence. It is not possible to help somebody who does not want to be helped, and it often requires a person to make hard decisions. Robbins writes about a time her daughter started waking up in the middle of the night, afraid. Robbins allowed her daughter to come spend the night in her room each night, but the girl's anxiety continued to be a problem during the night. Eventually Robbins realized that in rescuing her daughter every time she was afraid at night, she was making it impossible for her daughter to grow. Even though it was incredibly difficult to do, Robbins started to gently walk her daughter back to her own room when she would come to Robbins, and this was what finally, after time, allowed her daughter to heal and to grow. Not all situations will be with children and will be resolved quickly, but when we allow others to fail, they give them the opportunity to grow. When we allow others to act how they choose, we can then choose how we want to react to them and show up for them and support them. Sometimes this is as difficult as withdrawing all financial support when a loved one with addiction fails to take the steps necessary to get better. Robbins maintains that it is important to "stop bailing out other adults." She suggests her readers "believe in their ability to heal, and create an environment where change is possible."

Robbins writes, "The reality is, adults choose who and how they love and sometimes they won't choose you. People's behavior tells the truth about how they feel about you… by chasing love, you chase away the deep and meaningful relationship you're worthy of." She maintains that people will demonstrate who they are and what they want. Robbins ends her book by discussing situations where we may want somebody to love them who does not. Her same principle of Let Them and Let Me apply here in the same ways it does in every other area of her book.

Robbins' two principles are incredibly easy to understand, and her book does an excellent job giving examples and illustrations that show how they work in different areas of life. By the end of the book, her readers have all they need to free themselves from the prison of other people's opinions and desires and allow themselves to live their own lives according to their own values. In this readable and highly applicable book, Robbins offers her readers a path to true internal freedom.

## The Long Game

**How to Be a Long-Term Thinker in a Short-Term World**

By Dorie Clark

Dorie Clark is a consultant and keynote speaker who teaches executive education at Duke University's Fuqua School of Business and Columbia University's Graduate School of Business. She is the author of Entrepreneurial You, Reinventing You, and Stand Out. The New York Times has described Clark as an "expert at self-reinvention and helping others make changes in their lives." Her books have been translated into eleven languages. Learn more and download your free self-assessment at dorieclark.com.

## Long-Term Strategy Gets Personal

Today's professionals live in a state of constantly being pushed to their limits. These limits are often exasperated by the urgent need for tasks to be completed, the overwhelming feelings associated with handling things themselves, and constantly feeling two steps behind. To combat this stress, they keep their head down, push forward, only focused on the next task at hand – never taking a moment to breathe for themselves. This is an endless cycle, one that takes a toll on both personal and professional goals.

Instead of only looking at the task at hand, Dorie Clark uses her book ***The Long Game: How to be a Long-Term Thinker in a Short-Term World*** to share her unique experiences and crates the framework necessary for professionals to take a long-term approach to their professional game instead of only looking at the tasks at hand. There are only 24 hours in everyone's day, by using the right strategies Dorie Clark explains how professionals can leverage their time more efficiently and in more powerful ways – utilizing a long-term approach to achieving goals instead of the stressful short-term approach.

## White Space

If you are a professional, you are all too familiar with the concept of being busy. The question is – why are you busy? Dorie Clark explains it like t, "You can't pour more liquid into a glass that's already full." We don't plan our time accordingly, and lack the white space needed in our lives to balance out the stress. So many of us keep packed schedules, but the truth about these schedules is that they keep us trapped by designs of our own, living life in autopilot going from one task and objective to another.

Dorie uses her own life experiences to explain how having a busy life and being numb to everything around us, replacing it with our workload can be normal. From going through a breakup, a death in the family, selling her home, and moving to another state, she still delivered sixty-one keynote talks during that year – mainly because the only time she didn't cry was when she was away from home, so she stayed busy. She uses several other scenarios to help explain how being busy can be the "drug" that replaces something else in our lives.

There is a reckoning that comes – one way or another. You can spot inefficiencies, which spark these big-picture questions:

*Should you be doing this task yourself?*

*Can you delegate it to someone else, or just stop doing it altogether?*

*Where should you focus your efforts to get the biggest return?*

*If today were a new day, would you invest in that project?*

By answering these questions, you can begin to set a pattern in your schedule that includes limits and true priorities within it. Instead of letting your work expand and fill all of your time, set boundaries around it. Sometimes this requires learning to say "no," even to the things you really want to do. We oftentimes say "yes" because we don't want to disappoint others, we are worried about being judged negatively, we want to avoid the hard conversations, we want to feel important and needed, and we are plagued by FOMO (the fear of missing out). Dorie explains that there comes a time when we have to let go of these unrealistic expectations of pleasing others and instead think more about ourselves. If it doesn't rank a nine or ten on the excitement scale for you, then it should automatically fall into the "no" category. Although this doesn't always jive in daily operations, we can begin looking at how we divide out our personal time.

One thing that most professionals are familiar with is the idea of using checklists – something you may use on a daily basis in your role to ensure a job is done correctly. What if you applied the same principles to your life? There are four questions that Dorie uses with her executive coaching clients to help them thing through requests, opportunities, and obligations:

*What is the total commitment?*

*What is the opportunity cost?*

*What is the physical and emotional cost?*

*Would you feel bad in a year if you didn't do this?*

The important point that Dorie is stressing in this first section is figuring out how to delegate your time to what matters most. While we may be rushed with deadlines or important tasks, our "white space" time is still extremely important – we just have to make sure we are turning down what doesn't excite us to make space for what does. The long-term impact of our decisions should be factored into this, not just our what it provides for us in the short-term.

## Focus Where It Counts

Your time is important, and now you have some extra sitting around. How do you decide what to do with it to maximize your long-term goals (which may not always be obvious)? Dorie focuses on providing the right recipe for focusing your time where it counts – setting the right goals, exploring, thinking in waves, strategic leveraging, and finding the right people within the right rooms. The goal is to optimize your time to overlook the short-term outcomes and focus more on the long-term outcomes.

Dorie talks about Google's statement when they went public in 2004 – "We encourage our employees, in addition to their regular projects, to spend 20% of the time working on what they think will most benefit Google. This empowers them to be ore creative and innovative. Many of our significant advances have happened in this manner." -Sergey Brin and Larry Page. The Google 20% concept was originally created by 3M, which allows 15% time to be innovative. Dorie finds the idea of cordoning off time for innovation as a way to explore and see where your passion takes you but finding this time can be tricky. She points out that Yahoo CEO Marissa Mayer made the comment that it requires 120% time to add in that additional innovation – something most professionals really don't have the time to do. You have to fight to be able to carve out an additional 20% of your time to do anything extra around your obligations.

The best way to really carve out your time is by thinking in waves. You have to alternate between modes in order to maximize what you get done. Dorie uses a Career Wave model that explains sequencing between:

- Learning
- Creating
- Connecting
- Reaping

This leads into her questions for achieving an optimal leveraging strategy:

*What should you spend your time doing?*

*What are the 20% of your activities that will yield 80% of the results?*

*What can you stop doing?*

*How can you use constraints to your advantage?*

*What are your hypotheses about the future and how do they inform my actions today?*

*How can you do something once and make it count ten times?*

*Where, and how, do you want to live?*

*What would it look like t stand up for your vision?*

*How can you combine work and your personal life to make both more enjoyable?*

*What forms of currency, connections, etc. do you have to leverage?*

You can use these to start thinking about the different types of networking opportunities you engage in – long-term, infinite, or short-term. Where will your connections get you and what can they do for you – in the long run? You have to consider the various impacts that these opportunities play within your life before committing to something that takes more of your time than you are truly willing to commit.

> . . . becoming a long-term thinker doesn't happen overnight – it's a long-term process that requires a strategy focused on achieving those goals."

## Keeping the Faith

Thinking about your goals and your long-term approach can be lonely and feel unfulfilling. Dorie explains that it is worth it though, in the end. In the first two sections she lays out the groundwork for creating the white space in your schedule and then allocating that time doing something with your goals in mind and how to achieve them. While they aren't something easily accomplished, they point toward a brighter future.

Dorie uses the story of J.K. Rowling's first Harry Potter novel and its twelve publisher rejections to explain using strategic patience when a plan doesn't work out. There are circumstances that occur that leave us in disbelief – how can it be happening to us? She talks about Anne Sugar who had to bounce back from rejection. As a successful executive coach, she was working for major companies and Harvard Business School's executive programs. She loved writing, and even took her online poetry classes for fun. No matter how much she wrote, she was always hearing about how she wasn't innovative enough – she was upset. To get rid of her sadness and self-doubt she talked to a friend who suffered similar setbacks – only to realize that their path was not the one she wanted to take. She never gave up and was eventually noticed for one of her Harvard Business Review stories – now she is a viral writer on LinkedIn.

As a rule of thumb, when things aren't looking as though they will go in the right direction, Dorie says to push forward and use these questions to stay on track:

*Why are you doing this?*

*How has it worked for others?*

*What do your trusted advisors say?*

These questions help you reconnect with your purpose and your strategy. To be recognized, and as an expert, it takes time. Don't be discouraged by the bumps along the way. There will be failures along the path, but it is what you do with those failures that makes the difference in how you achieve your long-term goals without focusing on short-term accumulation. Her explanation pushes toward using those failures as alternative paths to your goal and adapting the plans that don't work into something fruitful that allow you to leverage your connections.

In the same way that you experience failure, you will experience reward and according to Dorie, you have to reap those rewards. Her example of choice for this scenario is the infamous "marshmallow study" conducted by Walter Mischel at Stanford University's Bing Nursery School in the 1960s. Children were offered the opportunity to have one sweet treat now or they could wait 15 minutes in the room alone with the treat and receive two. The true value of this came years later when the study was put up against the life outcomes of those children. The ones who waited and showed self-control performed remarkably better on almost every measure.

Dorie explains that becoming a long-term thinker doesn't happen overnight – it's a long-term process that requires a strategy focused on achieving those goals. You have to start small because goals can feel overwhelming. Positive momentum comes by going one step at a time.

## The Three Keys to Becoming a Long-Term Thinker

No one said it was easy, Dorie puts this realization at the very beginning of her book. Through the research and real-life stories illustrated throughout, it is possible to create the winning strategy that drives you toward being a long-term thinker instead of focusing on the short-term benefits of any goal.

It takes a great deal of courage to carve your path to success and to be a long-term thinking, three habits must be cultivated:

1. Independence
2. Curiosity
3. Resilience

## Conclusion

Dorie Clark voices that everyone has the capacity to hone in on our individual skills, develop new techniques, and overcome the barriers to being better long-term thinkers. By using the strategies she illustrates throughout *The Long Game* and experiences that back it up, she provides the framework to play the long game instead of only focusing on what rewards a short-term solution provides.

## THE SUMMARY IN BRIEF

Even before the coronavirus hit, remote work was growing at nearly 30 percent per year, and now it's just a fact of life. There are many millions of people who once worked at a central location every day who now find themselves facing an entirely new way of working.

Written by the founders of the Remote Leadership Institute, ***The Long-Distance Teammate*** is the most authoritative single resource for helping remote workers get work done effectively, build relationships that are both productive and satisfying, and maintain a career trajectory when they are not in constant close contact with their leader, co-workers, or the organization in general.

***The Long-Distance Teammate*** tackles three important issues: navigating the personal and interpersonal, growing the skills to be productive, and communicating effectively—all from a distance. In short, there is a big difference between working at home and being an effective member of a team. This practical guide describes that difference and allows you to be a great remote teammate.

## IN THIS SUMMARY, YOU WILL LEARN:

- The 3 P Model for remote work success.
- Strategies for staying motivated when you work alone.
- The importance of ethical visibility.
- To lead great remote teammates.

## Introduction

The trend toward remote work is undeniable and is happening in more and more types of jobs. Even after the initial COVID-19 response, you're likely facing new ways of working. If you return to the office, it may be only part time, or the person at the next desk who has been there for ages may not be there some or most of the time.

Being a teammate will look very different than it did not too long ago and will continue to evolve.

Working remotely isn't just a new normal—something we must learn to live with—it is an opportunity to work in ways that provide great operational and productivity results for the organization, as well as provide individual teammates with the opportunity to be a part of great results while finding great meaning for themselves, too.

Being a long-distance teammate covers a variety of situations. It could mean being part of a team that will never meet face-to-face, or a team that sees each other a few times a year. It includes hybrid teams, where some work in the same location, and others work elsewhere.

The mindsets, skill sets, and habit sets you need to succeed as a part of a team in any of these situations are more similar than different.

### Three Key Words

Three words, teammate, connected, and engaged, are critical to successful, satisfying remote work.

There is a difference between a team member and a teammate. Anyone who shares a manager or works on the same project is a team member. A true teammate is something different and deeper than that. To be a teammate implies a social and emotional connection that goes beyond merely who you report to and work with.

Being connected as a long-distance teammate means connection to the work, your boss, the direction of the organization, and your fellow teammates; more than just technical connections, but interpersonal ones.

Engagement isn't something that is done to you—it is something you choose to do. Engagement is more than employee satisfaction. How much discretionary effort are you putting in? How much of your heart, soul, and effort are you putting into your work? Are you satisfied with just the bare minimum, or are you doing your best most of the time? It will take focus and work to achieve this picture.

## PART I: YOU AS A REMOTE TEAMMATE

This part begins with a model that will help you with every part of your life as a remote worker. Then we'll look at the mindset it takes to be a great remote teammate. After that we will get super practical—addressing some of the challenges you face every day: how to stay motivated, manage your time and productivity, and build routines that will support your success.

## The 3 P Model for Remote Work Success

When we begin working remotely, we are often energized. No commute! We can work in our Led Zeppelin T-shirt! We can take the kids to school and get so much more done when they're not there!

But after the honeymoon phase, you're left with the day-to-day reality of working without regular social interaction, knowing what is going on, or having access to the boss or your co-workers whenever you want it.

There are three factors that impact the overall quality of remote work. Three areas that, if you give them the attention they deserve, can greatly enhance the quality of your work, enhance your relationships with others, and help you create the kind of workplace and long-term success you desire, even when you don't work in the company's headquarters or right under your boss's nose.

**Productivity**. Getting tasks accomplished is not the same as being productive. By definition, productivity is the measure of work yielding results, benefits, or profits. It is about outcomes, not activity.

A team member focuses on their work and tasks. A teammate considers not only how to be personally productive to get the most and best work done in the time allotted but how to help the rest of the team and organization meet its goals. At the end of the day, real productivity is about getting more of the right or best things done—not how much time you spent doing it.

**Proactivity**. Research shows one word that both managers and workers agreed best describe a great remote teammate. That word is proactivity. Proactivity isn't just about tasks; it's also about your mindset.

When you have a question about your work, do you ask for

When we work away from others on our team, it can be hard to see a picture of our work that's beyond what we see right around us.

clarification immediately, or do you just try to work through it? In coaching conversations, do you accept that your manager isn't talking about your personal development plan, or do you raise the subject yourself? When that meeting is running long, do you speak up and try to get the team back on track, or do you sit back, roll your eyes, and go answer your email instead?

Both managers and team members say that the thing they look for most in a teammate is that kind of initiative. It requires bravery, trust, and engagement but may be the single most important component in your long-term success as a remote worker.

**Potential**. Finally, do you consider the long-term implications of your work and the choices you make? This is perhaps the most difficult thing about working remotely, and often contributes to feelings of isolation and disengagement over time.

What is your goal for this job in the short term? What do you want to accomplish here? How do you feel you can make the biggest contribution, and what are your goals long term? Does it help you build the skills and experience you desire? And how does this role fit into your vision for yourself?

You're already working away from others. If you consider productivity, proactivity, and potential, odds are you'll be more than a remote worker; you'll be a great teammate and member of the organization.

## Getting Your Mindset Right

Every day matters. It doesn't matter how you got here. It doesn't matter what the current work or role is, whether this is just a short-term job or gig to help pay for college, or if you don't plan to do this kind of work for long. The work may not connect to the work you love or plan, but the way you think about this job today and the way you do the work will have an impact on your long-term success.

It's not just your job. It's about organizational success. You are a part of an organization. You have been hired, one way or another, to help create great results for that entity. And so, it is in your best interest to think about your work (and it may be harder when you don't walk into an office with the organization's name on the door) from the perspective of the organization.

You're not just doing the daily work—to be most successful you must think about that daily work in the context of what you bring, not just what you take home every two weeks.

Likewise, it's not just your job; you're part of a team. When we work away from others on our team, it can be hard to see a picture of our work that's beyond what we see right around us. That's one reason why it is easy to forget that we're a part of a larger group.

A critical part of your ultimate success is recognizing your role on the team and making it part of your work every day.

**Your job = your work + team work.**

The teammate mindset starts with clearer expectations of yourself and from others. Until you see your work in this way, you can never have the kind of success and impact that is possible.

## Getting and Staying Motivated When You Work Alone

The good news about working at a distance is that you can (within reason) set your own pace, work on what you need to work on when you are at your best, and not be interrupted by silly questions and unimportant conversations. When you're on your game, you are super-productive, and everyone knows it.

Then there are the other days. Maybe you look at your to-do list and think, "Ugh. Why bother? Nobody notices anyway." Maybe no matter how busy you are, your task list never seems to shrink. Or it seems you haven't spoken to another human being in days.

When you feel this way, it can be hard to do good work, and there's nobody around to help you get past those feelings.

The truth is you are not alone. Let's discuss some tools to snap out of it faster and be in that lull state for shorter periods of time.

Once we realize that a momentary feeling of ennui (which is a fancy way of saying restlessness) or dissatisfaction is normal, we also know that the reasons fall into a few easily identified categories. We feel like we're lacking energy, focus, purpose, and useful feedback.

For example, let's address a lack of energy. One way to keep your energy level up is to not drain yourself. Work with your manager to meet the requirements of the job. Set a realistic, and agreed to, start and stop time for your work, and then walk away. Shut down your computer or close your office door when it's quitting time. If you don't have a door, at least shut down that laptop.

Make sure you set boundaries on how much you will allow yourself to engage with work from your phone during non-working hours.

Here are some other tips for keeping your energy level high:

- Take a break.
- Eat healthier.
- Get physical.
- Talk to someone pleasant.

## The Power of Establishing Routines

While a routine can become boring and uninspiring, developing certain habits and duplicating a successful process can have very real benefits.

According to Tracy Kennedy, the personal development expert at Life-hack.org, some of the benefits of establishing a morning and end-of-day routine include increasing productivity, reducing stress, starting the day on the right foot, controlling the day so the day doesn't control you, and balancing your personal and work life better.

### How to Build a Healthy, Productive Morning Routine

There is no such thing as a standard, one-size-fits-all way to face the day. But there are some best practices and rules of thumb to establish habits to start your day as a remote worker:

- Give yourself time to breathe and open your eyes before reaching for your phone.
- Be mindful of answering messages before you start work. If you absolutely must respond to an email or a message at the start of the day, make sure it's only that one, and return to your morning.
- Eat a healthy breakfast. Build your dietary habits into your routine, or you'll find yourself grabbing whatever is handy or fastest, and it's seldom the best for you.
- End your day as mindfully as you begin it. If you don't do something to signify you're off duty, your brain will nag at you to keep working. Turn off the lights in your home office. Close your laptop entirely.

## PART II: SKILLS TO HELP YOU SUCCEED

This part outlines the skills that take you far beyond technical expertise. In fact, these are the skills that will allow you to work successfully with others—especially in a remote or virtual setting. Being able to build trust, communicate more effectively, set clear expectations, and more will keep you from tearing your hair out. But you can set a higher bar for yourself than that.

This is about helping you engage and connect in new and more profound ways with your work and your teammates. To do that requires you to build and hone a new set of skills.

## Getting Clear Expectations for Your Work

While it might seem obvious, when we don't know what is expected of us, it is nearly impossible to succeed. Unfortunately, unclear expectations are the rule more than the exception, especially for remote workers.

This gets directly at "Productivity" from the model: Without clear expectations, how can you even measure your productivity in a meaningful way?

What should be included in "clear expectations"? When you have clarity from your leader (or others) in each of these areas, you can be sure that you are both on the same page: the work itself, the quality of the work, why the work is being done, the timeliness of the work, communication about the work, and how the work is done.

### How to Make Expectations Clear

Remember that the responsibility for having clear expectations rests with both parties—whether between you and

your leader, your teammates, or customers. If you aren't clear, you can—and should—do something about it.

If you are ready to be clearer and be kind as you do it, here are a series of steps you can take to create clearer expectations for yourself (and the other person too):

- Ask for time to have the conversation.
- Create a series of questions.
- Be clear on what you need.
- Have an open conversation.
- Write the expectations and metrics down.
- Agree and commit.

Ethical Visibility is about making sure that your work is recognized in the context of the team's work and results.

## Creating Great Remote Communication

Communication is inherently harder at a distance. It is hard enough across the desk from each other—and everything that distance adds makes it more challenging. If you want better communication in your work situation, you must recognize that creating better remote communication starts with you.

The main difference between working in a central location and working remotely is that we rely much more heavily on technology to connect us to our teammates when we're apart.

What are the types of tools that all good remote and hybrid teams need to have at their disposal? Key categories include telephony, asynchronous written and text-based communication, synchronous unified communication and collaboration, video conferencing, web meeting and screen sharing tools, project management tools, cloud file-sharing services, and cloud-based customer relationship management (CRM) and enterprise platforms.

### Picking the Right Tool

Since you have a seemingly endless array of technology, that means you can choose the right tool from those options. Here are four questions to ask yourself when you are ready to be more intentional about which communication tool to use.

**What is the purpose?** What am I trying to accomplish with this communication?

**What is the timing?** Do people need this information right away? What tool gets people's attention fastest? How urgent is it?

**What am I communicating?** In every case, try to think about what you are actually communicating and how that tool will help.

**Who is my audience?** If you know that people have a preference, then you might bow to that preference a little bit as long as it still makes sense with the other factors.

## Creating Ethical Visibility

One of the unintended consequences of working apart from your manager and your teammates is that you are often out of sight and out of mind. On your best days, this means you're not being interrupted all the time, and you're not being micromanaged or overloaded with tasks.

The flip side of that is you often feel ignored. Are you being considered for that promotion or that special project? Did you get asked for your input on that question? Why were you the last person to hear about that problem? It can feel like you are invisible.

How do you make yourself visible in a positive way to your manager and your teammates without seeming to make everything about you or coming across as vain or egotistical? This balancing act is called "Ethical Visibility."

Ethical Visibility is about making sure that your work is recognized in the context of the team's work and results. Ethical Visibility is,

**About the team's/organization's goals, not you**. Make sure that you're using words like "we" and "us." When making suggestions, put them in the context of what the group is trying to achieve, not how smart you are.

**Appropriate to the team culture**. Being ethically visible means that you stand your ground and contribute

but don't do it in a way that creates unnecessary tension or conflict within the team.

**Supportive and positive**. Be aware of others and their feelings—and how you might be impacting them.

**Judged by behavior, not intent**. This is hard to hear, but just because you didn't mean to be rude to Alice might not mean she doesn't think you were rude. Take feedback from others on how they want to be communicated with.

Remember this is harder when you work remotely from your teammates. Realize that being visible to your teammates is critical, and resolve to continually work at this.

## Building and Maintaining Relationships

Just because you are by yourself while you work in your home office, at the dining room table, or somewhere else doesn't mean that you are working alone. You are part of at least one team, even if you don't see people except on their profile photo or occasionally on the webcam. And since we are humans and not robots, we will (and must) interact.

Since that is true, whether we are introverts or extroverts, relationships matter in getting your work done.

Let's talk about how to build and maintain relationships when we are remote and not in the next cubicle or down the hall.

**Make it a priority**. You're busy. If you want to build and maintain relationships, though, you've got to make the effort.

**Use multiple communication channels**. If you want to invest in and build working relationships, you need to recognize that you need to use more of the tech at your disposal than just what you're used to. You will build relationships faster and more effectively with richer tools—more webcam and less email is a good starting point.

**Listen**. If you want to improve any relationship, improve your listening skills. If you are only sending emails, you aren't listening in ways that build relationships, so be thinking about your communication options.

**Build interaction, not transaction.** Ask yourself, "How do I make sure that at the end of our conversations, people feel it was worth their time and they feel valued?"

**Let them into your world**. Some people have tight boundaries, and other people have wide boundaries in relation to what they care to share about themselves (and know about others). Find the right boundaries for yourself and for them.

## Giving and Receiving Feedback

Feedback wasn't always plentiful when Norma worked in the office, but occasionally there was some simple acknowledgment from her teammates in the hallway. Now that she is working from home? Nothing. She is deafened by the silence, and without feedback she is left wondering about how she is doing. She is operating under the "no news is good news" theory but is unsure if that is accurate, and she'd really like to know.

The goal of feedback is to provide people with information, data, or observations that will influence them to change their thinking and behavior for mutual benefit. For that to happen, feedback must be heard, understood, accepted, and applied.

### How to Give Feedback as a Teammate

Since you don't have the position of boss, how you give feedback to your teammates is exceptionally important. Start with a question that asks permission to share your observations. For example, "Hey, can we talk about how meetings are going? I have some observations." Or "Would you be open to some feedback on X?"

Once you have agreement, here are a few tips to make the feedback you give more effective:

- Make it a two-way conversation.
- Use the phone or the webcam.
- Slow down.
- Stick to the facts.
- Make it meaningful.
- Be specific.
- Be kind.
- Be timely.

## PART III: YOU AND YOUR FUTURE

In this section, you'll read about taking care of yourself and planning for your future in a mindful, ethically responsible way. You might feel uncomfortable thinking this way, but

Spend some time on your own spiritual, mental, and social development. What are you doing to help center your own being?

who cares about your work as much as you do? Who is most invested in your future?

Remember that it's okay to balance your work and your personal life in a way that works for you and your family. It's okay to plan now for the next step of your working life, whatever that is. In fact, if you don't, who will?

## Taking Care of Yourself

Being a great teammate sounds like a selfless act; we help our managers, we look out for and coach our teammates, and everything is for our customers. What about you? If you're not healthy, motivated, engaged, and relatively sane, it's difficult to be productive, be proactive, or think about the potential of your work.

There are two big areas you need to consider when thinking about self-care: your physical comfort and well-being and work and home life balance.

### Your Physical Comfort and Well-Being

Here are some things you can do to make working remotely better for you physically:

- Get enough sleep.
- Stop checking your phone a half hour before bedtime.
- Set a natural rhythm. Find a bedtime and wakeup time that work for your body, and stick to that schedule as much as possible.
- Limit caffeine, alcohol, and sugars before bed.
- Schedule breaks.
- Get outside.
- Eat healthy.

### Work and Home Life Balance

Balance isn't some arbitrary formula or perfect destination. Don't get fooled into thinking work-life balance is some magical formula. It's what works so that you are meeting your commitments to your employer, yourself, and those close to you.

Build physical distance between your work and personal space. If you are lucky enough to have a separate work room or home office, make sure that your hobby doesn't also take place in that same space. If you work out of your bedroom, make sure that when you are not working, the laptop is closed and the monitor shut down so that you will be less likely to dive back into work.

Share your passions and outside interests with your teammates and your manager. Do you know what your teammates care about? It gives you something to talk about other than tasks and numbers, and often helps build personal relationships and connections.

Spend some time on your own spiritual, mental, and social development. What are you doing to help center your own being? This isn't some new-age question. It's vital to people that we learn new things and challenge ourselves beyond work.

## Managing Your Learning and Growth

You are responsible for your own career development and upgrading your skills. That's true whether you work in an office or from home, miles away from world headquarters. What is unique about working remotely is you may have more control and responsibility for making it happen whether it's part of your "individual development plan" or not.

Many of us have relied on the structure of the workplace and the organization to help us grow our skills. HR sends out notifications about upcoming classes. Your manager works with you on that individual development plan.

You want to grow your skills and become more productive. That requires being proactive and thinking about the potential impact on your work and goals. Learning, developing skills, and growing as a worker and as a human being is how you make the 3 P Model a real, living part of your professional life.

Self-directed learning can take many forms:

**Traditional training and learning through your organization**. Most organizations have training available in many different forms: traditional classrooms, virtual sessions, e-learning, and more. Talk to your manager and people in your organization about your goals. Go directly to the people in your organization to talk about funding.

**Investing in yourself**. Just because the organization doesn't have the right course or program or the budget for you doesn't mean that needs to stop you. Break the elephant into bite-sized chunks. While it might be nice to take a whole series of interrelated classes on Excel, start with the introduction, or cherry-pick the specific modules that will most interest or benefit you.

Seek less-expensive alternatives. There is no shortage of content outside your company, from a Harvard MBA to free webinars. While to some extent you get what you pay for, take advantage of low-cost and even free training to begin with. Udemy and LinkedIn Learning are just a couple of places to start.

## PART IV: IF YOU LEAD OTHERS

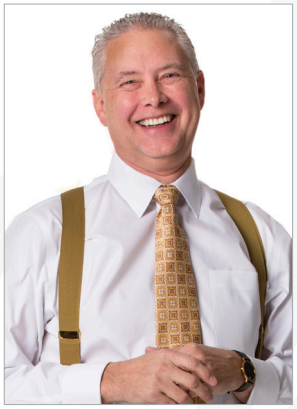
## Leading Great Remote Teammates

Many people aren't just leading remote teams; they work remotely themselves. This part is especially for you.

Every leader wears at least three hats, even if they don't think about it, even if some of the hats are gathering dust in the closet: the leader hat, the team member hat, and the communicator hat.

As the leader of a remote team, when you give them opportunities to step up, especially when they are working remotely, they will. Give them more tangible and meaningful ways to contribute, and they will thrill you with their results.

As a remote team member, think about how your team would grade you as a teammate. And what about the team of your peers? How are you doing in your relationships and trust building with them? How effective are those virtual meetings?



You must take your role as a communication conduit from your team upward and from management downward more seriously, and work at it harder. Make sure you know what is going on with your team, not just with the work but also with their emotions and stress. Hone your communication skills for sharing organizational messages, too.

The world of work has changed and is changing constantly. Working remotely using technology is part of that change. When you help people engage and connect, everyone wins. At an individual level, work becomes more meaningful and purposeful. As a team, you will be more successful and perhaps have some fun.

The organization and the people they serve win, too.

## THE SUMMARY IN BRIEF

Networking is often considered a necessary evil for working professionals. With social media platforms like LinkedIn, Twitter, Instagram, and Facebook, reaching potential investors or employers is much easier. Yet, these connections often feel transactional, agenda-driven, and dehumanizing, leaving professionals feeling burnt out and stressed out.

Instead, we should connect on a human level and build authentic relationships beyond securing a new job or a new investor for your next big idea—this is especially key as people head back to the workplace after a year of isolation. In ***The Lost Art of Connecting***, "serial connector" and communications expert Susan McPherson offers a simple, three-step methodology to help people go back to basics, tap into our humanity, and learn to be more intentional and authentic.

With helpful tips and useful advice on making the most of every step, ***The Lost Art of Connecting*** is the handbook we all need to foster personal and professional relationships that blur the lines between work and play—and enrich our lives in every way.

## IN THIS SUMMARY, YOU WILL LEARN:

- The one simple question that defines true connection.
- Why you need to first connect with yourself to connect with others.
- Communication strategies to help you practice relationalism.
- To follow up in ways that deepen your business relationships.

## Introduction

To build meaningful relationships you don't need to connect with the 8 billion people on this planet. In fact, you shouldn't.

Instead, let's use the illustration of a constellation. There are 250 billion stars in the galaxy. Not all of them align in just the right way to make that special sight that is the constellation. And like networking, you never know just how you are connected to another person until you put in the work to see the patterns.

Building meaningful relationships involves, first, defining what meaningful means to you; second, seeking others who not only share your values and your vision but also those who challenge you, expose your blind spots, and broaden the diversity and breadth of your network; and third, making those relationships deep and rewarding. That is the art of connecting.

Connecting comes down to one simple question: "How can I help?" Asking this question in any meeting, any introduction—any moment—immediately narrows your focus on how you can be of service and support to others. And isn't that what makes relationships feel meaningful?

Every single person is an introduction to something else: another person, a unique skill, a new project, or something you inevitably will learn about yourself. It should never be about, "What will I get from this person?" But instead, "What can I learn? What can I discover?" Or, "Who could I connect this person with?"

### A New Approach to Building Meaningful Connections

There's a method for creating your personal network of stars, for creating magic in relationships by asking "How can I help?" It's called the Gather, Ask, Do method. This method will not only help you create your constellation, but it will give you the tools to help others create constellations, too—many of them. And that is perhaps the most rewarding aspect of this method: not only the deeply nourishing relationships that you will develop but also the ripple effect of connecting others.

In the Gather stage, you will learn how to better connect with yourself, defining your business values and goals, and determine how you can help and whom, and who would help you grow.

In the Ask phase, you will continue to ask "How can I help," as well as deepen your relationships by asking more and more questions, building the depth of your connections and curiosity.

In the Do phase, you will take action—immediately doing the helping in all the ways that you possibly can, building trust, competence, and depth of connections.

## PART I: GATHER

In this section, you will learn how to gather the stars of your constellation by first examining your relationship with yourself and clarifying your goals. Then you will learn several tips and strategies to begin to expand your network of connections in ways that feel natural and inspiring and don't zap your energy.

## 'Help, I Don't Know Anyone!'

We've all been there: a networking event, the first day at a new job, or even just a big meeting. We walk into the room and—panic sets in—"I don't know these people!"

There are ever more ways to connect, but there are exactly as many ways to disconnect. Yet, with a simple mindset reboot, you can drastically improve your ability to build business relationships: Don't discount the possibilities in your current network. Start there and you will reap enormous rewards from what is right in front of you.

**Connect with yourself**. First and foremost, connect with yourself. Are you an extrovert who loves gatherings and people and derives energy from others? Or are you someone who prefers intimate gatherings and getting together less frequently? Knowing this about yourself is key to implementing the art of connecting in a sustainable way. When you stay intentional, you make the biggest impact—connecting and communicating with people without burnout or fatigue.

**Start with who you know**. Oftentimes in networking, we get pigeonholed into reaching out to specific people. But in reality, someone who is already in your immediate network might be able to introduce you to the correct person. One of the most powerful changes you can make right away to improve your business relationships is to change your mindset. Your existing network is your biggest asset—use it.

**Clarify your goal**. The next step is to clarify your goals. And here's where we start to zoom in on that "connect with

The best way to become a connector—to build a meaningful and robust network—is to take command and be the host.

yourself" mindset: What do you want to accomplish in your career and in your life? An important distinction: This is not the goal of your meeting or even necessarily the subject of your initial conversation. Right now, clarifying your business goals is for you to get clear in your objectives. (The goal of the meeting is to establish or deepen a long-term, reciprocal relationship—but more on that later.)

For now, what do you want to achieve: Are you looking for a new job or promotion? Launching a new business? Looking for a donor or funder? Whatever the case may be, make this very clear and write it down.

## Invite to Get Invited

Traditional networking is typically motivated by the desire to acquire something: a business card, an invite, a job, a connection, a partner or client, or funding for your business. But not only is that approach ineffective; it will also leave you frustrated and exhausted.

Instead of throwing business cards at a roomful of people who will likely add them to their recycling bin, consider a simple paradigm shift. The best way to become a connector—to build a meaningful and robust network—is to take command and be the host. Rather than waiting for an invitation (or to "get" anything at all), *do the inviting yourself*.

### FOMO Becomes JOMO

Hosting—rather than waiting to be invited—makes connecting easier in a key way. It completely transforms your inner monologue. When you're doing the inviting, any anxiety, fear, or dread you might have about networking can dissolve. Instead of wondering "Will I be invited?" your thoughts can become "Who should I invite?"

Asking yourself that question immediately puts you into a position of power: You are in control. FOMO (fear of missing out) can transform into JOMO—joy of meeting others. Instead of being a follower, waiting for permission, you become a leader: hosting, connecting, and building relationships, one gathering or call at a time.

**Define the purpose of your gathering**. Many people skip over this important step. But if you haven't set an intention or a goal, what's the point of getting together in the first place? Are you trying to raise awareness? Are you trying to educate people? Are you trying to fundraise for a cause?

**Host rather than wait to be invited**. Now it's time to decide how and with whom to do it. It doesn't need to be a fancy gathering, and it doesn't need to be a three-hour event. It doesn't have to be a big group of people. It could be a 20-minute call with a few neighbors to brainstorm ways to reduce wildfire risk in your area.

**Keep it simple and start small**. Building a network doesn't have to be overwhelming or draining. Having breakfast with three people sounds pretty easy, right? Let the guests you invite do your legwork for you by inviting a friend. Connections will unfold organically with hardly any effort on your part. All it takes is two committed people to quickly build to four people. Then, the next time you meet, ask each of those four to bring a colleague—and voila, you already have eight people.

## Zoom Calls, DMS, IRL Meetings, and Snail Mail, Oh My!

Business meetings used to take place primarily in one of two scenarios: over a meal (coffee, lunch, drinks) or in a conference room. But the pandemic has forever changed the game for meeting dynamics. Deciding where to execute your gathering can cause decision fatigue even for the most skilled executive. Should you gather on Zoom or Microsoft Teams? Or is Google Hangouts better? What about a pop-up event?

As you continue to add to your constellation of contacts, you will begin to develop a knack for knowing which particular medium (in real life, Zoom, phone call, or DM) is best in which instance and for which particular contact. Until then, here are a few suggestions to get you started, offering some scaffolding for knowing which particular venue is best.

**In real life (IRL)**. Whenever possible, it's best to meet someone for the first time IRL. Smiles, interpersonal chemistry, eye contact, the friendly buzz of a new kinship—these subtleties are nearly impossible to replicate online. If you need to have an important negotiation or discussion, or if you are interviewing for a job, in person is also best. You can avoid awkward digital hangups or miscommunication.

**Zoom.** Presentations (that don't need much discussion), status updates for an ongoing client or partner, or a replacement for an in-person meeting that can't take place due to cost, travel challenges, or distance, a Zoom meeting works best.

To make virtual meetings a bit more personal and connected, startup investor and advisor Fran Hauser recommends starting the meeting by following up on something someone said in the last call. "How did that client pitch go, Susan?"

**By phone**. For regular check-ins with clients and colleagues, especially if you work remotely. As much as people tend to avoid connecting by phone today, it's the perfect way to follow up with someone you've met with previously in person or by Zoom. Notice the way that you can listen—and be heard—by phone.

**Snail mail**. For the new business relationships, use snail mail as an opportunity to express gratitude for favors: thank you for the job referral, thank you for reviewing a résumé.

## The Constellation Effect

By now hopefully you are getting a sense of how the constellation analogy applies and how you can use it to cultivate your own relationships. There are synergies to appreciate and enjoy over the course of your professional career or even a lifetime.

Your ideal contact isn't derived by asking, "Who do I know in marketing," for instance, but rather, "Who do I know that cares about helping people?" Or, "Who do I know who cares about my line of work or the particular mission or objective I'm trying to achieve?" The key is to not limit your outreach by job titles, professional experiences, or even geographic locations. Keep your mindset focused on your mission and your overall goals.

The question you should also be asking yourself isn't "How do I build community and connections?" but rather, "Which ones should I focus on?" Which communities should you join, and which ones should you pass on? Which ones don't currently exist? Should you build that community? Or let someone else take the reins?

In that sense, you don't need to worry about finding "that" investor, *the* perfect contact. Instead, worry about finding someone who simply cares about your mission and your values. When you do that, there is no shortage of creative ways to reach your ideal networking target through indirect contacts. Since we now know all the ways our existing contacts have value, why not tap them?

Expanding your network through degrees of separation works. And when you have an inspiring mission and purpose—people will want to jump aboard.

### Nail Your Story

Making an authentic connection with someone starts with laying the foundation, by figuring out how you might best fit together. A smart first move is to know your own story, your narrative—what skills you bring and where you're headed—like the back of your hand. Because once you do make those connections with others—perhaps even contact your ideal client or partner—what happens then? Once that connection transpires, you need to be ready to make the most of it.

Distill your story down to its essence: What are you trying to accomplish? And how can you elevate your story into a mission that others can rally behind? When your story is polished and clear, it's significantly easier to figure out how you best fit with others—to create a constellation.

## PART II: ASK

In this section, you will learn how to start connecting the dots (or stars) that you have gathered together in Part I. The method boils down to the most important ask of all: "How can I help?" But beyond that, we will also narrow in on how asking more (and the right) questions will begin to align the stars of your constellation into the pattern you want.

## How Can I Help?

When you become really skilled at asking "How can I help," the magnitude of the constellations that you can build and the great work they can create in this world are truly awe-inspiring.

Reframing the classic "ask" to be nontransactional breaks down the barrier of quid pro quo that often stymies business relationships and makes networking events so unbear-

able. The minute you ask someone how *you* can support them, their ears perk up. It also establishes equality. You no longer give off the impression of a desperate someone who needs something or is afraid of being perceived as lower on the professional totem pole.

Instead, you tip the scale of power and control in your favor. By taking action, you establish yourself in a position to help, support, and guide.

> Engage a curious mindset: What does this person in front of you know that you don't?

### How It Fuels Learning

It is vitally important that we understand differing perspectives, for our business as well as our broader lives. Our country is in a deep polarization crisis: We don't understand people who we perceive to be different from us. Philosophically, it may be difficult to broker a conversation with someone whose political, social, and environmental views are so vastly different from our own.

But listening fuels understanding. And if you want to succeed in business, you will be infinitely more successful if you deeply understand everything you possibly can about your industry, the people in it, and the major problems that need solving.

Engage a curious mindset: What does this person in front of you know that you don't? It doesn't matter who they are—they know something (likely, a lot of things) that you don't.

### Draw the Line

But wait—can't being a giver put you in a position to be a doormat? Where is the line between giving too much versus too little? Adam Grant says that being a giver doesn't mean saying "yes" to every request. Instead, he proposes, it means setting boundaries around who, when, and how you help.

The *who* is about setting boundaries with takers—if someone has a history or reputation of selfish behavior, you're not obligated to help.

The *when* is about setting boundaries with time. Failed givers drop everything whenever they get a request; successful givers block out time for their own goals and for self-care.

The *how* is about setting boundaries with the types of help you give. The idea is to be what he calls a "generosity specialist": Help in ways that energize you rather than exhaust you, and in situations where you can add unique value.

## Know Your Ask: The Who, What, Where of Getting What You Want

Perhaps you've been making deeper business connections using the tools that you have learned. Maybe you've crystallized your offering so you're in a better position to ask for what you want from a specific person—and get it. Most pursuits require preparation, and making an ask is no exception.

### Prepare Your Oscars Intro

At the Oscars, or any awards ceremony, the recipient receives a warm introduction before they take the stage. It typically includes a two-minute spiel of that person's life or accolades along with a bit of humor and levity.

When you're preparing for a meeting, do you research as though you were preparing an Oscars intro for that person? Ask yourself: Could I stand up to introduce this person and hit their key five data points? The key five are age, school, passion projects, media, and company news. As digital sleuthing and research tools abound, there's no excuse not to have their bio down.

Your job now is to consider how they may like to interact. Some colleagues are huggers. Others are hand shakers, and with COVID-19, some prefer phone, others Zoom, others text.

Consider the geographic, social, and ethnic backgrounds of who you are meeting. The way that you build rapport with a 65-year-old board member in New York is very different than the way you will connect with a 26-year-old actress in Los Angeles. The way you build a relationship with someone in Michigan might be different than the way you would do it in Florida or Italy or Japan.

## Pitch Perfect

You've been reaching out to your contacts and have the per-

fect person to pitch or have started writing that ideal cover letter for that dream job. Maybe you need to hire a team member or find a producer for a television show or podcast you want to create.

But maybe you don't need to make the ask at all. Maybe what you need isn't permission or funding but courage and scrappiness.

Baratunde Thurston is a writer, comedian, commentator, and author of the book ***How to Be Black***. He says that on a Saturday after he took his last flight back to California from New York before lockdown in March 2020, he woke up with three words in his head: live on lockdown. He wanted to make an entertaining, interactive, and participatory show about the pandemic that was informative and fun and also driven by the people who are in it—in the audience.

Had he not been quarantined at the time, he would have put the wheels in motion to get all of the right approvals and people, funding, production, and hair and makeup. But since none of that was possible, he just started making the show. And people loved it. Instead of waiting for all the right pieces to fall into place—he just did it.

From that experience, he developed excellent technical skills: editing video, sound, and imagery and all sorts of things he hadn't done in a very long time. Don't get trapped in limiting your thoughts or beliefs; ask yourself tough questions about whether or not the ask needs to happen in the first place.

### Nail Your 4/4/4

For those asks that do need to occur, how do you handle them?

Nail the 4/4/4. First, your bigger vision, which you should always be thinking about: What do you need in four years? Next, what are your priorities for the next four months? Then bring it back to the next four weeks (or even four days). What's most critical?

When you're making an ask, be very clear in what you want before you even step into the room, send an email, or make a call. And once there, be abundantly clear in stating it.

Your ask should be specific, measurable, and time-bound: What exactly are you asking them to do and by what date? "Could you review my cover letter by next Friday?" "Could you lend 10 minutes of your expertise and hear my elevator pitch?" Whatever your ask is and however you deliver it, be assertive in communicating what you want.

## Communication 101

Pings, bleeps, blurts—these sounds pepper the landscape of our days. We live in a world of nonstop communication that happens across a head-spinning number of channels, time zones, and even languages.

The challenges are many: How do you communicate in a way that is efficient but not terse? How do you make your communications authentic and deep without inadvertently crossing a professional or cultural line? How do you draw boundaries to allow for critical personal time to avoid burnout but also make yourself flexible and available?

Striking the right balance in each of these pursuits requires prioritizing openness and transparency, as well as seeing the humanity of each person—valuing the relationship above all else, including the one with yourself.

### Practice Relationalism

When you communicate with others, regardless of the medium, keep the focus on the bigger picture. Viewing communication channels, styles, and messages through the lens of relationalism places the priority not on how many relationships you have but, rather, on their thickness and depth.

Every single human relationship you have in business—and every communication you send—should strengthen the notion that you see this person as a whole human.

Any email, text, or message you write and don't deliver face to face can be misconstrued. When you don't know someone's personality, it is easy to misunderstand the intention or meaning behind the words.

For sensitive or important conversations, reach out by phone. And if you feel put off by someone else's email, consider the fact that it could be a misinterpretation. Remember, you can always ask the recipient which format they prefer.

**Be explicitly kind.** Communicating with kindness pays off. Research on psychology, leadership, management, and neuroscience shows that meaning, joy, and satisfaction can come from the very relationships and communication we build with others in our work.

**Give feedback when needed**. Clear, effective, and authentic communication also includes feedback, a critical component of healthy business relationships. It's a step in the relationship that requires vulnerability: telling someone what you don't like about something they've said, done, or created.

For any relationship where there are potential synergies to help each other in business and in life, it's worthwhile to take the relationship deeper.

But when you learn how to skillfully say hard things well, feelings of closeness, connection, and respect can transpire. Especially when it's delivered with skill and with kindness, giving feedback can be—somewhat counterintuitively—a gateway to greater intimacy.

## PART III: DO

You made new contacts at events, through your volunteer work, through the gatherings you've hosted yourself, and even all the Zoom happy hours you joined. Now what? How do you take those connections from the realm of an acquaintance into a connection that is meaningful and deep? Through several small actions that build up over time.

### The Art of the Follow-Up

For any relationship where there are potential synergies to help each other in business and in life, it's worthwhile to take the relationship deeper. And what people so often ask is, how? How do you *do* that? How do you deepen a business relationship without feeling awkward or stiff?

Here are some simple tricks and strategies that you can use to make "following up" more dynamic, less rote, and not so much of a chore.

**Sew the first line of connecting thread**. When you first meet someone—especially if it's someone you feel a connection with or a shared passion or goal in business—you want to act right away once the doorway to the relationship has been opened to deepen that connection. What did you talk about? Is there a passion you share? Here are a few examples of follow-up emails:

"It was wonderful to meet you. I'm fascinated by the work you're doing in _____ field. Please keep me posted on your work. I'd love to find ways to support you and your endeavors."

"I saw this article on _____ and thought of you—it was great to connect! Let's keep in touch."

**Do the thing they told you to do**. Did you meet someone new who suggested a book you should read? Pick it up from your local library or the bookstore—and then write them to say you did so and to thank them for the tip. Did the person mention that they were just on a podcast? Listen to the episode and send a brief note, or better yet, promote the podcast on Instagram or Twitter.

Not only will these actions provide context into their work and their personality, you will also have another reason to connect. After you listen to the podcast you can write: "Fascinating podcast about impact direct-to-consumer marketing—I have some friends in this space I'd love to connect you to, if you'd like?"

**Find their chief differentiating factor (CDF)**. Each person has a chief differentiating factor, or CDF. This is each person's specific expertise or "secret sauce" that makes them unique. Once you learn what someone's CDF is, it's your job to *remind them of it*. If you reflect back on someone's specialness in a way that they can clearly see it—they will be forever grateful. The rewards for both of you will be huge.

### Spread the Wealth

It may come as a surprise that money can engender connection. But whether it's talking about money (hello, vulnerability) or putting your dollars where your passions are, even the tricky territory of giving, receiving, or talking about money, when used skillfully, can pave the way to greater closeness.

Whether it's a small contribution to a crowdfunding site or a larger investment in a business, putting your money behind the organizations and people you want to support is a great way to build relationships in a truly meaningful way.

You truly don't need to have a large savings account to do this. Just 10 dollars to a crowdsourced campaign could connect you to an organization you may care about for life, and that can introduce you to fascinating people.

Similarly, every frank and open conversation you're willing

to have about money is another way to engender depth, openness, and transparency in your business relationships.

### How to Ask For It

Let's say you're getting a new business off the ground. How do you ask for funding? Now there are these great vehicles, whether it's Kickstarter or iFundWomen.com, where you can raise that first 20, or 30, or 40,000 dollars. Yes, it's hard work. But that could get you to a place where you would have some cushion to bring on a programmer or a consultant to create your websites and your collateral.

When you have deep, meaningful relationships, it's a lot easier to generate support if you've already built the types of relationships you will need to fund your company.

## Always Take (And Innovate On) The Meeting

"Always take the meeting" is a quip that runs through many networking guides. You'll never know where a connection will lead, even if it takes you somewhere you didn't expect.

But let's take this advice one step further by encouraging you to constantly push yourself to innovate on what "meetings" even mean, in addition to saying "yes" to potential meetings as much as you can (without burning out, of course).

Every new mode of communication or gathering is an opportunity to learn something about how human beings operate and thrive. Some of the most common tools are Zoom, Slack, and email, but did you know that there are hundreds of other platforms and tools for connecting? Keep your eyes open for new platforms for connection, and be willing to try them out, even the new or unpopular ones.

"Always take the meeting" really means perpetually having your meeting hat on. This doesn't mean always be working; rather, keep the possibility of a fortuitous connection afloat in your mind.

While you may not meet a king as a result of any last-minute trips to the convenience store, you will no doubt make an untold number of friends, colleagues, collaborators, and partners in similar instances where you will be in some place for one thing but make a connection that can help or segue into an entirely different thing altogether.

If you pay attention to and cherish the people you meet at those various pit stops along your life's path, you will create enduring friendships. And if you are human, vulnerable, and kind—people will be much more willing to support you in the good as well as the more challenging moments.

Remember, it's so often the detours rather than the destination that matter most.

### How To Write One, How To Deliver It

# THE LOST ART OF THE GREAT SPEECH

## THE SUMMARY IN BRIEF

You don't have to possess a loud, sonorous voice, a pearly white smile, or a wild, charismatic stage presence to give a great speech; all the pleasant packaging and abundant confidence in the world will be rendered useless if your speech itself is illogical, boring or poorly written.

Richard Dowis, a former journalist and retired senior vice president of Manning, Selvage, and Lee Public Relations, knows that what ultimately counts — what ultimately stays with an audience long after the event is over — is the content of what is said. This summary teaches you how to effectively collect, organize and shape that content into distinctive, potent speeches. In the course of the summary, Dowis provides you with the following:

- ✓ A list of things to consider before you agree to speak, including the speech's format, topic and purpose.
- ✓ A discussion of the integral parts of the writing process.
- ✓ Explanations of the different ways in which you can organize your speech.
- ✓ A list of things your speech's opening should accomplish.
- ✓ Helpful hints on using effective, powerful language in your speech.
- ✓ A multitude of proven techniques that speechwriters use to make their speeches more interesting, meaningful and dramatic.
- ✓ Tips on using statistics effectively.
- ✓ Ways to add impact to your closing.
- ✓ The broad areas to consider when editing your speech.

Whether you have been asked to give a speech or to write one for someone else, your writing habits and style will ultimately determine the success of your endeavor. Turn the page for your first lesson in this lost art.

# THE LOST ART OF THE GREAT SPEECH

**by Richard Dowis**

## — THE *COMPLETE* SUMMARY

## Before You Speak

If you've been invited to speak at a function (whether as the sole speaker or one of a group of speakers), the function's organizers recognize that you have something to say on the given topic that others cannot or will not say. Your perspective is appreciated and your participation anticipated.

Once the organizers have extended the invitation to speak, keep the following points in mind as you consider the invitation and begin to prepare for your speech:

- **Format.** Will you be the sole speaker or one of a number of speakers on a given topic? Will the event be a panel discussion (with simultaneous participation from other speakers, a moderator and the audience), or will you be given the dais alone? The answers to these questions will guide all your preparation efforts.
- **Topic.** Do not agree to speak on a topic about which you feel uncomfortable or do not know enough. Be certain the event's organizers understand your credentials and do not "oversell" you to an audience, creating a set of expectations you cannot meet. If the event's organizers allow you to choose your own topic, choose one that is appropriate for the audience and event. If you suggest a topic that is different from the one given you by the organizers, stay as close as possible to the original idea; a variation on the theme is better than a different theme altogether. Make certain, also, that the topic is important to you; if it is not, it will sound phony and boring to your audience.
- **Purpose.** Determine what you want the audience to think or feel as a result of your speech — ask this question both of yourself and your sponsor. Write down a brief statement of purpose and keep it on hand as you write your speech.
- **Time.** Can your topic be managed in the time allotted to you? Consult with your sponsor; if you're given 15 minutes to speak on a topic that requires 30 minutes, you'll have to negotiate for more time, choose a different topic or decline the invitation altogether.
- **Details.** Assume nothing. Make sure you and your sponsor are on the same page regarding every detail of the event — from date, time and place to the pronunciation of any pertinent names (if you introduce or address specific individuals).
- **Know the organization.** Find out everything you can about the sponsoring organization and its membership before you accept the invitation to speak, then let those factors guide you in your writing efforts. ■

### Six Purposes of a Speech

From his experience in reading and writing speeches, Richard Dowis has identified six basic purposes of a speech:

1. **To entertain**
2. **To inform**
3. **To inspire**
4. **To motivate**
5. **To advocate**
6. **To convince or persuade**

A speech can have more than one purpose, of course. A president's state-of-the-union address, for example, should inform members of Congress about the progress his administration has made, convince them that his policies are good for the country and motivate them to work hard to pass those policies.

A speech is rarely made solely to entertain. Humor, as we shall see later, is mostly used to reinforce the other purposes of the speech.

### Choosing the Appropriate Topic

A young minister was invited to speak to a group of elderly men and women. The subject he chose was "The Sin of Lust." After the speech, a sweet little old lady came forward to shake the minister's hand. "That was a nice message," she said, "but with this group, it would be more appropriate to talk about rust."

# Preparing to Write

A well-written speech is a disciplined speech — it doesn't ramble; it fits the time allotted; it contains no superfluous detail but doesn't leave out anything important. Writing a speech forces you to think in specific terms, to apply discipline and creativity to the explication of an idea or topic. Having a written, polished script in hand allows you to relay your work with confidence and a necessary grasp of the subject.

Integral parts of the writing process include:

- **Research.** Before you begin to write, you must have a solid working knowledge of your subject from experience, interviews and reading. Reading is important — consult current books and articles on the topic of your speech to make sure your information is up-to-date. The Internet is helpful, too; online resources on just about any topic are plentiful on the Web. You will also want to include quotations, anecdotes, statistics and other useful information in your research effort.
- **Brainstorming.** Get together with a small group of people (organizers, experts, friends) in an informal setting and talk about the subject, throwing around ideas and sharing insights.
- **Purpose.** Don't even think about writing until you have a clear, focused impression of what the speech should accomplish. Take your statement of purpose and expound on it in detail — include specific topics you will cover and state explicitly what you want your audience to do, think and feel in reaction to those topics.
- **Outlining.** Create a road map — a list of points you want to make in the speech based on the topic and the time allotted. Read through that list. Analyze it, evaluating each point then pare down the list to three to five essential topics. Discarded points are not necessarily extraneous; they may crop up again to support, explain or reinforce your main points.
- **Identifying a thesis.** A single, strong, unifying idea should evolve from the paring process. This is the thesis of your speech, its core idea or statement.

### *Organizing Your Speech*

Once you have completed your research, laid out your goals in a statement of purpose, created an outline and honed it down to a cogent thesis, you must set yourself to the task of organizing the speech. A well-organized speech is the product of an orderly mind; regardless of how strong your arguments or how interesting your material, the speech will not succeed unless it is logically organized.

That said, there is no right or wrong way to organize a speech. The best method of organization depends on the material, the audience and your input and approach as speaker. Some of the most common methods of speech organization include the following:

- **Chronological order.** If you're telling a story, consider organizing the speech in chronological order, particularly if there is an element of suspense you can use to build to a climax.
- **The "Big Bang."** Some speakers start with a bang by stating their thesis in the first minute or so. This can be useful if the thesis is startling or unexpected. If you're not careful, however, the speech can go downhill quickly when your follow-up points are not as exciting as your opening.
- **The simple "Tell 'em" approach.** One time-honored approach goes something like this: "Tell 'em what you're gonna tell 'em (in your opening); tell 'em what you have to tell 'em (in the body of the speech); then tell 'em what you just told 'em (in your conclusion)." This approach has some merit, but may be too simplistic (even insulting), depending on the audience and the topic.
- **Cause-and-effect.** In this approach, state some problem that is pertinent to the speech thesis, give the cause of the problem, describe its effect, then suggest a solution. This works fine when the topic and supporting material are in sync; if you don't have the support, however, this approach will not satisfy your need. ■

***Regardless of how strong your arguments or how interesting your material, the speech will not succeed unless it is logically organized.***

## Thought Modules

Another interesting way of organizing your material when writing the speech is to break your facts and ideas down into small manageable units. These units — which could be termed "thought modules" — each consist of a single idea and all of its supporting material. For example, for one point of your outline you may have an interesting statistic, a pertinent quotation and an anecdote; those materials (the point and its supporting matter) comprise one thought module.

Once you have your material logically sorted into thought modules, you can organize those modules into whatever order best suits the needs of your speech.

# Beginning Well — What Your Opening Should Accomplish

Even the most accomplished speechwriters face the challenge of creating effective openings. In a very short time, these openings may need to accomplish as many as a half-dozen things:

- **Establish rapport between the speaker and the audience.** It is important to identify common ground between you and those who are listening to you. Who can forget John F. Kennedy's memorable opening in his speech in the divided city of Berlin at the height of the cold war — "*Ich bin ein Berliner,*" or "I am a Berliner" — which expressed solidarity (however symbolic) with his audience. The quick establishment of rapport is a key element in any speech opening.
- **Set the tone for the speech.** Is the occasion formal or informal? Serious or relaxed? Friendly or expressing opposition? Sometimes the tone you set does several things at once; if you open with a joke, for instance, you're telling your audience to relax a bit, even though the topic might be a serious one.
- **Establish or reinforce your credibility.** How detailed you make this opening depends largely on how much the audience knows about you in advance, from publicity, prior engagements and/or how you are introduced. While it is a good thing to play up your reputation and experience, you should do so in a way that does not appear boastful.
- **Arouse interest in a subject.** This, too, depends on the audience's knowledge of the topic and of your reputation, that is, on how much groundwork for discussion has already been laid in advance.
- **Take advantage of your "grace period" with the audience.** You will typically have several minutes at the beginning of the speech during which the audience is most attentive. A weak opening might squander that precious time.
- **Segue smoothly into the topic.** Be sure your opening — whether you use a joke, an anecdote or some other device — is relevant to your topic. It should segue cleanly and logically into the body of the speech, carrying your audience with it.

### *Five Types of Openings*

Although there are many ways to begin a speech, most seem to fall into five major categories:

- **Novelty.** This opening grabs the audience's attention through the use of a novel or outrageous act or point.
- **Dramatic.** This opening uses suspense or a startling statement to pique the audience's curiosity.
- **Question.** In this opening, the speaker asks a question that may either be a rhetorical one (for which no answer is expected) or a real question that he or she will answer in the course of the speech.
- **Humorous.** Starting the speech with a joke or funny anecdote can be a great icebreaker; it can also set the tone for the speech and make, support or illustrate a pertinent point. The humor must be in good taste and delivered with the right timing in order to be most effective.
- **Reference.** This is the most common opening, in which the speaker makes a reference of some sort, then uses that reference as a launching pad for the speech. ■

## The Novel Opening: An Illustration

Jeff White, of the credit-reporting and information services company Equifax, gave a speech in 1980 in which he predicted a time when his relatively narrow field would broaden to include all financial transaction services. He began the speech by thanking the audience for inviting him to speak "on this beautiful September morning in 1990," and with that he began "reminiscing" about the old days before his field had broadened. He continued the ruse for a minute or two before turning back to the present day, by which time he had roped his audience in with his novel opening.

# Watch Your Language

The greater our skill with language, the more clearly we think and the better we express our thoughts. Good speakers and writers have many words at their command; simply having them and using them with discretion, however, are two very different matters. Using language well in a speech often means using the strong, simple words that compose our everyday language. Contrary to what some people believe, the ability to use language is not comprised entirely of using words like cognizant, incumbent or instrumentality. Good writers and speakers know the grace, elegance and power of simplicity.

In other words, good speakers have confidence in their ideas, and do not need to couch them in floury or pretentious language. Here are some suggestions for making language work for you when you write or deliver a speech:

***(continued on page 5)***

### Watch Your Language

*(continued from page 4)*

**Be yourself.** Use language that is natural to you. If you're not a folksy person, do not try to sound like one of the guys down at the barbershop. If you're an adult speaking to a teen audience, do not try to show your mastery of teen slang. If you rarely tell jokes, don't open your speech with one just because you think the audience will expect it. If you try to use language that does not reflect your natural tendencies, you will sound phony and will, consequently, lose your audience's attention quickly.

**Talk with the audience, not at them.** Speak as if you're carrying on a conversation with your audience, not lecturing them. Use personal pronouns (I, you, we, us), contractions, and other conversational speech. Address the audience directly and avoid abstraction at all costs.

**Use appropriate personal references.** When you have a personal experience that can be used in your speech to emphasize a point, do not hesitate to use it. Keep in mind the fact that the reference must be appropriate for both the subject and the audience.

**Use active verbs and vivid nouns.** Verbs such as represent, indicate, postulate, cogitate and ascertain seem lifeless and colorless next to verbs such as run, cry, spring, jump, roar and burst — strong verbs that evoke images of flesh-and-blood creatures doing things. These words can be termed "gut words," because they seem to come from the gut rather than the brain. They are perfect for pulling the audience into an anecdote, or punctuating a point in simple, direct terms everyone can understand.

**Use active voice.** Voice refers to the relationship of a subject to its verb. If a subject is acting, the sentence is in active voice; if a subject is acted upon, the sentence is in passive voice. For example, "She threw the pie at him" is active because the subject (she) is acting (throwing the pie). "The pie was thrown at him by her" is passive, because the subject (pie) is acted upon (was thrown). Although passive voice is sometimes appropriate and necessary, most good writers and speakers tend to use active voice.

**Be aware of meaning.** Sometimes words have connotations that go beyond their dictionary definitions. Even words that are closely related in meaning (thin, slender and skinny, for instance) evoke different images and send different messages. When you choose your words, consider what images they conjure in people's minds.

**Get to the point.** Say what you want to say, then stop. If you follow this basic rule of thumb, your words will have power and your ideas will be well received. ■

## Avoid Jargon

Jargon is vocabulary that is indigenous to a particular trade, profession or group. Lawyers and doctors, for instance, have a particular way of speaking to one another, a kind of shorthand that sounds confusing to others. While you may use jargon when it is appropriate for both your audience and topic, it must be used properly and at the proper time. When jargon escapes those boundaries and seeps into general usage, however, your audience may be confused.

A good rule of thumb is this: If you're speaking to members of your own profession, use the language you use in everyday conversation with your colleagues. Do not, however, use professional jargon with a lay audience.

## Small Words, Big Ideas

The following speech by Winston Churchill is one of the most recognized speeches in the world:

*We shall not flag or fail. We shall go on to the end. We shall fight in France. We shall fight on the seas and oceans. We shall fight with growing confidence and growing strength in the air. We shall defend our island, whatever the cost may be. We shall fight on the beaches. We shall fight on the landing grounds. We shall fight in the fields and in the streets. We shall fight in the hills. We shall never surrender.*

There are 81 words in this famous excerpt. Only nine of those words have more than one syllable. Only four words have more than two syllables.

Simple words are usually the best to convey powerful ideas.

## "Secrets" of the Pros

So often, we are bombarded by offers of "secrets" guaranteed to provide us with some miraculous benefit — a longer life, an improved golf game, a winning lottery number, etc. There are no such "secrets" in writing speeches, only proven techniques that speechwriters use to make their speeches more interesting, meaningful and dramatic. Some of these techniques are as follows:

**The Rule of Three.** Writers, particularly speechwriters, have long recognized the almost mystical qualities of the number three, and have fashioned a rhetorical device called a triad, or "the rule of three." This device, quite simply, is the expression of related thoughts or ideas in a group of three, often with the initial words or

*(continued on page 6)*

## "Secrets" of the Pros

*(continued from page 5)*

sounds the same for all three, and almost always with each element of the triad using the same grammatical form. Some famous examples are as follows:

- Abraham Lincoln: " [T]hat a government of the people, by the people, for the people, shall not perish ..."
- Julius Caesar: *"Veni, vidi, vici"* ("I came, I saw, I conquered").
- Franklin Delano Roosevelt: "I see one-third of a nation ill-housed, ill-clad, ill-nourished."

Ideas grouped in threes are more memorable; when correctly constructed, they add drama, interest and rhythm to a speech. They also emphasize important points and make them stick in the minds of listeners.

**Anaphora.** Another often-used device in speechwriting is anaphora, or the repetition of a word or words at the beginning of successive phrases, clauses or sentences. Although speechwriters often combine triads with anaphora, the latter is also used when more than three elements are needed. One excellent example of anaphora is Dr. Martin Luther King, Jr.'s most famous speech, in which he began eight sentences with "I have a dream." Not only did the phrase echo and re-echo throughout the speech, it has continued to echo throughout history, even to this day.

**Alliteration.** Repetition in various forms can be effective, when used with reasonable restraint. Special care must be given when using alliteration — the repetition of several similar sounds in a sequence, with sometimes tongue-twisting results. Alliteration is difficult to read and may cause even the most seasoned speaker to stumble. While occasional intentional alliteration is fine, you must re-read your speech carefully, to avoid accidental alliteration in your speechwriting. In other words (and here we'll use alliteration), remember this: Always avoid any accidental alliteration.

**Hyperbole and understatement.** The exaggeration for the sake of emphasis, known as hyperbole, is another effective device when used properly. Hyperbole used for dramatic effect should be an obvious exaggeration, such as "He was big as a grizzly bear and twice as mean." At the opposite end of the spectrum, understatement can likewise be used to great effect to make a point, such as when the late Senator Everett Dirksen said, when considering a spending bill, "A billion here, a billion there. Pretty soon it adds up to real money."

**Transitions.** Good speechwriters can move smoothly from one subject to another — making transitions that don't jar or lose the audience. Transitions help ensure clarity by helping the listener shift gears mentally, from the opening to the body, the body to the closing. They also indicate that a change of position or a contradiction is on the way.

When writing articles or books, transitions can be created by using headings or subheadings; in speeches, you must find other ways of making transitions. Sometimes a slightly exaggerated pause or emphasis of a word or phrase serves as a transition. These are the verbal punctuation marks you can use to keep your speech from sounding choppy or jarring. ■

## The Power of Antithesis: Three Examples

Another common and useful device is placing an idea next to one to which it is sharply contrasted — a figure called antithesis. "Ask not what your country can do for you," John F. Kennedy said in his inaugural. "Ask what you can do for your country." That call to service, powerful and appropriate though it was, was made even more so by virtue of the juxtaposition of contrasting phrases in the sentence — an effective use of antithesis.

An antithesis is a conflict, and as with any conflict, it should be resolved whenever possible. This reconciliation will often emphasize the point of the antithesis. For example, at the Democratic National Convention in Atlanta in 1988, the Rev. Jesse Jackson compared his background to the background of Democratic presidential nominee Michael Dukakis in the following way: "His parents came to America on immigrant ships; my parents came to America on slave ships."

He then reconciled this antithesis with the following phrase: "But whatever the original ships, we're in the same boat tonight."

One of the greatest examples of antithesis is in a speech from the 1800s by *Atlanta Constitution* editor Henry W. Grady. Grady's purpose, to dramatize the plight of southern farmers, is powerfully achieved by a series of antithesis and a closing reconciliation:

> *They buried him in the midst of a marble quarry . . . and yet the little tombstone they put above his head was from Vermont. They buried him in a pine forest, and yet the pine coffin was imported from Cincinnati . . . The nails in his coffin and the iron in the shovel that dug his grave were imported from Pittsburgh . . . The wool in the coffin bands and the bands themselves were brought from the North. The South didn't furnish a thing on earth for that funeral but the corpse and the hole in the ground.*

## Using Statistics

When we think of statistics, we tend to think of dry, tedious recitations of facts and figures, not devices to enliven a speech. Yet, when used properly, statistics can dramatize or reinforce a point, bringing home a concept that might have otherwise drifted right past the audience.

Keep the following points in mind when using statistics:

**1 Statistics do not have to be dull, dry figures; they can be interesting and dramatic, depending on how and where they are used in a speech.** For example, if you are discussing junk food consumption, you can spice up your delivery by mentioning that Americans consume 75 acres of pizza every day and that seven percent of Americans eat at McDonald's every day. If you are discussing everyday hazards in the home, your audience may be amazed to learn that one American drowns in a bathtub every day.

### Use Visuals When Necessary

Some material simply cannot be explained without graphic illustrations, although visuals are not appropriate for every subject or audience. When you do have material that requires you to use visuals, keep the following suggestions in mind:

- **Don't use visuals as a crutch.** Make sure you have prepared a solid, well-written and thoughtful speech.
- **Don't let visuals take over a speech.** Use them to support or reinforce points, not to dominate your message.
- **Get your timing down.** Don't allow a visual to be seen unless you're ready to discuss it, and be sure to take it down after you've finished talking about it.
- **Avoid using handouts.** They distract attention from you and usually lead people to jump ahead and miss what you're saying.
- **Be sure everyone can see the visual clearly.** Be sure the layout of the room is conducive to showing visuals. Also, make sure you do not stand directly in front of the visual during your speech.
- **Stay in control.** Maintain good eye contact with the audience as you discuss the material on the visuals.
- **Avoid referring to the visuals as visuals.** Don't say things like "The next slide illustrates ..." Match your words to the slide and the audience will make the connection.

**2 You should try to express statistics in terms to which your audience can relate**. A trillion, for instance, is an incomprehensible number for most people; amounts in the trillions of dollars often go over people's heads. It would be useful, then, for you to provide some illustration that casts such an amount in a way that audiences can better conceptualize.

For example, telling an audience that the United States has spent $5.4 trillion on programs for the poor since 1965 is just fine, but a bit humdrum — people know that's a lot of money. Your point is better served by following that statistic with the fact that, with $5.4 trillion, you could buy every farm in the United States, as well as every factory, office building, radio station, TV station, telephone company, retail and wholesale business, hotel, airline and so forth. This expression illustrates the statistic in such a way that the audience can now picture a previously incomprehensible figure.

**3 You should avoid using too many raw figures, particularly when they are close together.** Use anecdotes or a pertinent reference in order to space out statistical information. This will help the audience relate an illustration to the statistic, increasing the likelihood of understanding and retention. ■

## Closing the Speech

Just as you have a "grace period" in the opening minutes of your speech during which the audience is at full attention, the period in which you close your speech is a similarly crucial time. A solid closing adds impact to your message — in all cases, you want to end with a bang, not a whimper.

You must first decide what you want your closing to accomplish, over and above leaving your audience satisfied by the speech. Do you want your audience to do something? To believe something? To feel a particular way about your subject? These things all relate back to the purpose and thesis of the speech (discussed earlier), both of which can be reinforced by a forceful closing — a parting shot, if you will.

Most closings fall into one of seven categories:

- **Summary.** The speaker briefly summarizes the high points of the speech.
- **Wrap-up.** The speaker closes the circle, so to speak, bringing together various points covered in the speech.
- **Direct appeal.** The speaker asks audience members to take a specific action.
- **Thesis.** The speaker reiterates the main point (or thesis) of the speech.

*(continued on page 8)*

## Closing The Speech

*(continued from page 7)*

- **Reference.** The speaker ties some reference to the subject of the speech — the date, location, event, etc.
- **Inspirational.** The speaker closes with a moving anecdote, poem or quote.
- **Humorous or anecdotal.** The speaker uses a joke or funny anecdote that makes a strong closing point.

In considering these closings, remember that closings, like openings, are rarely so neatly packaged; indeed, the best closing features a combination of two or more kinds. When thinking about your closing, think logically and creatively about how to best close a speech, and craft a closing that makes your speech most effective. ■

### Anaphoric Closings

Many of the rhetorical tools explained in the article "Secrets of the Pros" can be used effectively in the different types of closings.

In the following example, the speaker uses anaphora in the direct appeal that closes his speech:

*Let's monitor performance, let's complain when promises are broken, let's use our electoral muscle to get the sort of government we deserve. Let's work to get more women elected to public office. Let's humanize government to make it not only accountable, but responsive to the people who elected it. After all, who deserves it more than we?*

President George Bush used three anaphoric triads in the two-paragraph closing to his speech at the United Nations at the time of the Gulf War. The result is a particularly effective inspirational message of support.

*The world must know and understand, from this hour, from this day, from this hall, we step forth with a new sense of purpose, a new sense of possibilities. We stand together, prepared to swim upstream, to march uphill, to tackle the tough challenges as they come, not only as the United Nations but as the nations of the world united.*

*And so let it be said of this final decade of the 20th century, this was a time when humankind came into its own, when we emerged from the grit and smoke of the industrial age to bring about a revolution of the spirit and mind, and began a journey to a new age and a new partnership of nations. The U.N. is now fulfilled its promise as the world's parliament of speech. And I congratulate you. I support you. And I wish you godspeed in the challenge ahead.*

# The Final Stages — Editing Your Speech

Even after you have researched, outlined and written a speech, there is still more to do — you must give your speech a thorough editing. Keep in mind that this function may not always be your duty alone. Depending on your role — if you are writing for another speaker, for example — there may be others who have a hand in this important task. As Peggy Noonan, former speechwriter for Ronald Reagan, once noted, "A speech is a fondue pot, and everyone has a fork."

There are five broad areas to consider when editing your speech:

**Edit for content.** Question everything — check every statement, statistic and quotation for accuracy. Examine every simile, metaphor, analogy and illustration for suitability. Be critical of your use of humor, considering the audience at every use. Look at the overall content of the speech and ensure that it fulfills the purpose you set out to fulfill.

**Edit for organization.** Be sure your speech is a coherent, logical and unified presentation, not a random collection of ideas and information.

**Edit for style.** Editing for style will probably produce the most changes — if you rearrange word combinations, sentences and other structural and stylistic aspects of the speech, you will likely create new meanings and impressions, which you must address. Keep in mind that short sentences are easier to read than longer ones; simple sentences are better than complex ones; and all alliteration, rhyme and unusual combinations of words must always be intentional.

**Edit for language.** Do not overuse jargon or words of excessive length. Consider whether the language you use preserves natural speech patterns and rhythms — does it, in other words, sound like it was meant to be spoken, or read silently? Avoid use of passive voice, cliches, obscenity and generalities; focus instead on delivering an even-toned, interest and colorful speech.

**Edit for grammar.** Perfect grammar does not produce a perfect speech; too many instances of bad grammar, however, can damage an otherwise good speech. You must strike a balance between bending certain grammar rules to facilitate a conversational tone and adhering too closely to those same rules, sounding stilted or stiff in the process. ■

# The Magic of Thinking Big

David J. Schwartz

Book Snaps™
In-depth reviews of best-selling business books.

## The Magic of Thinking Big

*By David J Schwartz*

Dr. David J. Schwartz was a professor at Georgia State University in Atlanta and the president of Creative Educational Services, Inc., a consulting firm specializing in leadership development. He died in 1987.

*A Book Review by Soundview*

# Believe You Can Succeed

In ***The Magic of Thinking Big***, David J Schwartz, PhD sets out to give his readers advice to change both their thinking and their attitudes in order for them to become more successful in business and to live more satisfying lives. First published in 1959, Schwartz's book explores twelve different areas for his readers to examine in order to maximize their potential. Of primary concern to Schwartz is the manner in which people think and how their thoughts can either help or hinder them.

## The Power of Belief

Schwartz starts out discussing a vice president at a sales meeting who, when talking about an employee whose sales were many times the sales of his peers, says that the difference between the salesman who stands out and the other lower performing salesmen lies in the different ways the various people think. This is the very essence of Schwartz's book in which he says, "case history after case history proved that the size of bank accounts, the size of happiness accounts, and the size of one's general satisfaction account is dependent on the size of one's thinking." He believes that the reason most people fail to think on this large scale is because they allow themselves to be influenced by the people and by the environments around them, people and environments that lead to less desirable outcomes.

For Schwartz, believing in success is the crucial component to success. He believes that a person who believes they can do anything will, in fact, be able to do anything. What most people lack, therefore, is a belief in themselves. This disbelief in oneself goes beyond just limiting a person's estimation of themselves. When a person does not believe they are capable of doing something, others around them will also fail to see the potential in that person. Schwartz tells his reader that people can choose to focus on the thoughts of Mr. Triumph or Mr. Defeat each day. Each of these mental characters produces thoughts in a person's mind, and the outcomes people experience will depend on which character they choose to listen to on a particular day. If a person thinks triumphant thoughts, they will be more successful than the person who focuses on defeats. Schwartz urges his readers to think big, remind themselves that

they are a success, and focus on successes over failures. Along the same lines, much later in the book, Schwartz talks about a person's attitudes towards others. Just like he encourages his readers to listen to Mr. Triumph to train their thoughts about themselves, he encourages his reader to focus on the positives in other people and to avoid listening to those who put others down because it will draw a person's attention away from the positive traits in other people.

## Banish Excuses and Fear

Besides a disbelief in oneself, another obstacle Schwartz often sees people fall into is what he calls excusitis. He believes that all people he calls failures and the majority of people he calls average suffer from some form of excusitis. He mentions numerous different types of excuses people make for their failures. These include their health, their lack of intelligence, their age, and their luck. He believes that people need to overcome whichever form of excusitis they have as he knows that even people in poor health, the young, the old, and those without standout intelligence can succeed. In his discussion on luck, he tells his reader that he believes in causes and effects and when a person experiences an effect they consider to be either lucky or unlucky, they should look to see the cause of that effect rather than focus on luck.

Schwartz sees fear as a person's number one enemy, and he believes that people who have gained confidence and have overcome their worry have acquired their confidence and were not born with it. He believes that the way to overcome fear is to first identify it and then to take action. This action needs to occur swiftly as "hesitation only enlarges, magnifies the fear." In his later chapter on action, Schwartz states that successful people are active and less successful people are passive. After all, active people accomplish their objectives and earn confidence and income because of their actions while the passive person plans on doing what needs to be done but never actually does it. While ideas are important, it is action that gets results.

## Fostering Confidence

Schwartz believes that many people who lack confidence do so because of the way they approach memory. It is important, he believes, for people to focus on positive thoughts and memories. Schwartz believes that people who lack confidence dwell on the unpleasant and discouraging parts of life, so he encourages his readers to recall positive memories when they. He believes that people can create negativity around nearly any event or happening, but he believes that a person's mind will choose to cooperate with them when a person chooses to focus on the positive. He goes on to talk about how acting in accordance with one's conscience also helps a person build confidence. He goes on to discuss multiple different concrete steps a person can take to increase their confidence. These steps include sitting in the front seat and walking faster because "we can change our attitudes by changing our physical actions."

Schwartz goes on to say that "probably the greatest human weakness is self-deprecation – that is, selling oneself short." He admits that it is wise to understand one's own weaknesses so that a person can understand where there is room for improvement. Still, he believes that a person should know their value as well, and in order to do this, they can list out their chief assets and then consider successful people they know who do not exhibit this characteristic to such a high degree. This will help a person to realize that they do actually outrank successful people in key ways. Schwartz goes on to give specific ways that people can develop the vocabulary of a big thinker. This includes using "big, positive, cheerful words" to describe both one's feelings and other people. He also implores his reader to encourage others with positive language and to use positive words when describing plans to other people. He wants his reader to "look at things not as they are, but as they can be." A person can do this by considering the ways in which they can add value to things, to people, and to themselves. In his section on creative thinking, he believes people need to focus on how they can improve.

## Fostering Respect and a Healthy Diet

Schwartz then discusses respect and the way to command it from others. He believes that in order to get respect from others, a person must believe they are deserving of the respect. One way a person can command respect is through the way they dress, and he encourages his reader to "never leave home without feeling certain you look like the kind of person you want to be." He believes that what a person looks like on the outside affects how they feel on the inside because a person's appearance communicates something to both oneself and to others. Schwartz then discusses respect for one's work. He believes that there is a "correlation between a person's job respect and his job performance." In other words, if people think their job is important, they will perform higher quality work. When considering who to promote, he believes employers consider the work a person is doing at their present position in order to determine if they will do high quality work in a higher position. A person's attitude towards their job does not just flow in the direction of superiors, however, as subordinates will consider their job to be of more or lesser importance based on the attitudes of their superiors. He encourages people to create a commercial selling themself and to repeat this out loud and often in order to build their own self-confidence.

Schwartz believes that people are born with a certain capacity. What determines how much of that capacity they reach is the diet they feed their mind. He says, "companionship with people with big ideas raises the level of our thinking; close contact with ambitious people gives us ambition." He believes that people are destined to change, but what trajectory that change takes is determined by the environment a person cultivates in the future. He describes three types of people. The first group has surrendered to the idea that there is nothing they can do to get ahead. The second group has partially surrendered to this idea of failure, and after many years of struggle, they have determined that the effort is not worth the outcome, and they give up. The final group is those who never surrender. It is from this group that the most successful people come. It is not easy to stay in this group, however, and people must remain vigilant to never give into the influences that are trying to suppress them. He

> *Good home environments should help refresh people and give them new ideas.*

believes that there are negative thinking people everywhere and that people must always be on guard against them so as never to surrender themselves to these negative thoughts. Schwartz understands that people are susceptible to those around them, and so he encourages his reader to "be sure you're in the flock that thinks right." Likewise, he believes a person's home life influences their work life. Good home environments should help refresh people and give them new ideas.

## Beneficial Attitudes

Going along with what a person feeds their mind, Schwartz turns his attention to the attitudes a person holds. He believes there are three key attitudes a person should cultivate. The first is the "I'm activated" attitude which refers primarily to enthusiasm. He tells the story of a professor he once listened to who could not garner the attention of his students. Schwartz came to understand that students were not enthusiastic about the material because the professor was not. One way to increase enthusiasm is to dig deeper and learn more about a topic with the idea that the more a person learns about something, the more interesting they will find it. Second, he encourages his reader to live everything they do up. By this he means he wants his reader to smile at people and to have a confident handshake. He wants his reader to say what it is they have to say with life. He also encourages people to share good news when they come across it. After all, "other people want to be around alive, enthusiastic people." He wants his readers to constantly consider whether people around them are better off for having been with them.

Next he encourages the attitude of seeing other people as important. After all, people have a strong need to feel important. This attitude is important because it will encourage others to be cooperative. Along these lines, he encourages his readers to show their appreciation, call people by their names, and to share the credit with other people when success comes. He encourages appreciation both in the outside world as well as in one's home.

Finally, he encourages a service first attitude. He believes that most people want to make money and make this their primary focus. This approach makes people blind to the actions they need to take in order to actually make more money, namely invest in service. Schwartz believes that "'put service first' is an attitude that creates wealth." He believes that too many people are overly focused on their need to make more money when what they should be really focused on is how to be more productive to earn more money. In order to overcome this, he encourages people to "always give people more than they expect to get."

## Dealing with Failure and Setting Goals

People will fail. The difference between those who succeed at high levels and those who do not succeed is that those who are ultimately successful learn lessons from their failures and move on. He encourages his reader to consider highly successful people because he says readers will find that successful people have had to overcome huge obstacles in order to get where they are. Therefore, he encourages his reader to "decide right now to salvage something from every setback." Persistence will not be enough, however, as true success also requires experimentation.

Along with persistence and experimentation, Schwartz discusses the importance of goals. He believes both people and businesses need to look to the future to determine where they want to go if they ever want to be successful. He encourages goal setting in the home, at work, and in social spheres. The future he wants people to dream of is a big one.

Schwartz's book, *The Magic of Thinking Big*, was written in 1959. Because of this, the modern reader may take pause with some of his language, primarily that prizing the viewpoint of a male breadwinner in the workforce and a wife who stays at home. In addition, Schwartz refers to people at times along the binary lines of successes and failures. Despite this, Schwartz's book contains prized insights that can help both men and women in their professional and in their personal lives. Many of his principles revolve around being a person of both action and integrity. For Schwartz, treating people well and understanding other perspectives will help grow a person's own confidence as well as help them to grow in the esteem of others. The principles he provides are no less applicable or valuable today in our technological world than they were in Schwartz's mid-twentieth century. In fact, some of these principles may be even more important as the world becomes less and less personal.

## THE SUMMARY IN BRIEF

***The More Mindset: Break Mental Limits and Step into Extraordinary Results*** explores how deeply rooted beliefs, internal dialogue, and habitual thought patterns shape confidence, decision-making, and perceptions of possibility. Many individuals who appear outwardly successful still experience dissatisfaction, burnout, or uncertainty about their direction. These tensions often arise from unexamined beliefs absorbed from family, culture, and past experiences that quietly influence expectations and behavior. Recognizing these inherited assumptions reveals how fear-based thinking and negative self-talk can reinforce hesitation and limit progress.

The book presents a framework for intentionally redirecting thoughts and choices to replace limiting mental habits with more constructive patterns. Drawing on concepts related to neuroplasticity, emotional awareness, and mindset development, it outlines strategies for reframing adversity, challenging internal narratives, and cultivating habits that strengthen resilience and confidence. Practices such as visualization, gratitude, boundary-setting, and reflection are offered as ways to sharpen focus and sustain motivation during periods of uncertainty or stress. Ultimately, the work emphasizes aligning daily actions with personal values and long-term aspirations so individuals can reshape beliefs and expand the possibilities they see for their lives.

## IN THIS EXECUTIVE BOOK SUMMARY

- Examine inherited beliefs and internal narratives that shape confidence and choices
- Reframe fear, setbacks, and adversity as signals that guide growth and action
- Apply visualization, gratitude, and self-talk to redirect attention and sustain motivation while pursuing meaningful goals
- Establish boundaries and reflection habits that align daily actions with long-term purpose and personal values

## Introduction

As a single mom living in Scottsdale and a rookie entrepreneur managing my real estate career, people thought I had it all together. But inside, I was searching and longing for something more. The moment I raised my standards from what my life was to the life I dreamed of, everything changed.

The life I imagined became reality because of the mindset shifts I cultivated. These shifts helped me grow a multimillion-dollar foreign language company to five times its size when others saw it as impossible. Without the tools I will share, none of it would have happened.

This is about building a life, brick by brick. No shortcuts. But this time, you will be laying the kind of foundation that will weather any storm. You won't just think positive thoughts—you'll build something solid, something real.

You will gain a robust understanding of how to harness the power of your thoughts to change your life's trajectory, develop deeper self-awareness, and cultivate transformative habits that foster personal growth and fulfillment.

CHAPTER 1

## You Are What You Believe

From the moment you enter this world, your beliefs are shaping you. These beliefs, acquired both consciously and unconsciously throughout our lives, actively construct who we are, influencing our self-image and confidence. They shape our understanding of the world and guide our perspective, ultimately affecting our expectations, goals, and dreams.

Beliefs can be, and often are, passed from one generation to another without challenging their validity or origin. We absorb these unquestioned beliefs on face value because we trust the source. Oftentimes, these "psychological DNA-like residues" belong to our parents, our teachers, our friends, and the broader social network around us—our village. They become part of the framework through which we interpret our experiences and life events.

Some beliefs are positive; others are negative to the point that they harm us on a psychological level. Still others can paralyze our progress toward success, making it impossible to achieve our goals, become our true selves, and fulfill our potential.

While seemingly harmless, even comical or absurd, some of the beliefs we acquire in childhood can have surprisingly detrimental effects on our development that continue into adulthood, while others have more significant implications.

### What You Think, You Attract

Our stress, sadness, and discontent create an energetic resonance within our environment, which in turn reflects back on us, amplifying and perpetuating these negative emotions. Our thoughts and emotions influence the experiences we attract into our lives. In essence, the universe reflects, delivers, and re-delivers.

Your thoughts give you a level of vibrational energy. If you are emitting a frequency of constant worry, you will likely attract similar circumstances toward you, as they tend to match that energy. Choose your responses wisely. Acknowledge your emotions, release them, and then move forward. Shift that frequency.

This switch can be as simple as saying, "There are bigger problems in life; this one isn't one of them." This change in perspective can quickly shift your energy.

### Pushing and Pulling Through

People who are truly focused on not just changing but transforming their circumstances commit, in both attitude and energy, to allowing nothing to stop them.

You have the power to control your thoughts, redirect them by "changing the channel," and build new ones that will help you get whatever you want in life and take you wherever you choose to go.

You can achieve anything you imagine, and even more, when you live your life devoid of self-imposed limitations. Scientific research has shown that belief in oneself significantly improves the likelihood of success.

CHAPTER 2

## The Power to Make a New Choice

You wake up every day thinking, "This is the day when things will be different." But the harsh reality of dread lurks, residing in your stomach and biding its time for the opportune moment to strike. You try to convince yourself that this week, this month, this year will be different. But you simply can't muster the courage to take the next step.

Being in situations that deplete your energy, where you feel you were meant for more, is never the path you are meant to take, no matter what choices you've made in the past. Making a new choice now doesn't immediately guarantee instant change either. But it is the beginning of the change that's about to happen.

> As difficult as it may be to admit, you are responsible for the choices you make: the good, the bad, and even the choices you don't make.

The Power of Choice is one of the first and most vital concepts I teach. For success to occur in any area of life, it is essential to recognize that you *always* have a choice, regardless of the circumstances. As difficult as it may be to admit, you are responsible for the choices you make: the good, the bad, and even the choices you don't make.

### Your Journey

Ruminating on negative thoughts and beliefs gives them an undeserved sense of truth. These self-fulfilling prophecies can then dictate the course of your life. This negative self-talk is precisely the obstacle you must overcome through conscious choice. To break this cycle, begin by examining your internal dialogue.

The key is to prevent these negative thoughts from paralyzing you. Acknowledge them, but don't dwell on them. Otherwise, they can take on lives of their own and begin emitting vibrational energy. This is how we manifest things into our lives.

CHAPTER 3

## Breathing During the Storm

When you're going through life and feeling like you're stuck, unfulfilled in some aspect of it, or even worse, in the throes of a crisis, it can feel impossible to counter negative thoughts that aren't serving you.

It is precisely during these times of *perceived* impossibility that we need to explore strategies for navigating adversity. This is where growth begins. Remember, some of the most remarkable achievements were once deemed impossible until they were actually accomplished.

### It is Okay Until It's Not

Why do we consistently prioritize the needs of others over our own? Why do we habitually make promises to ourselves or tell ourselves that we'll eventually find the time, knowing deep down that these promises will remain unfulfilled?

I need you to confront the notion that you have no time for yourself. What you are doing is like driving a car on bald tires, thinking, "Well, I am just driving another week, so it will be okay." It seems fine until it isn't. Then one day the bill comes due: your health, your comfort, your happiness, and sometimes even your life.

### Set Clear Boundaries

Without clear boundaries, anything goes. You become susceptible to guilt trips and may feel obligated to comply with every request, regardless of your own needs. This dynamic isn't limited to client relationships; it extends to interactions with family as well.

Asserting your boundaries is essential. You must clearly communicate your limits and expectations because people around you are not mind readers. One mistake we make is assuming they should just know. The truth is, they do not. Make it crystal clear.

Don't apologize for upholding your values, your time, and your energy. When you consistently stand your ground, people will recognize that you mean business and respect your clear boundaries.

### Build and Boost Your Confidence

Confidence is like a winter coat: you have to wear it *every day*, because if you skip it, you will truly feel the cold. That means being proactive.

You must hold a pristinely clear vision in your mind of what your confident self looks like. To achieve it, you must know what that success looks like in vivid detail in the future, as if it has already happened.

Here are ideas on how to build and boost your confidence:

- Follow through on the promises you make to yourself, whether they are big or small
- Take action, even if it feels messy or imperfect
- Monitor your self-talk
- Practice daily gratitude
- Choose your environment wisely
- Visualize your success in what you want to achieve
- Elevate your energy
- Become your number one cheerleader

CHAPTER 4

## Happiness Is Not Something You Seek

Happiness is a fundamental aspect of the human experience. Feelings of accomplishment and pride are enriching and uplifting emotions, as they contribute significantly to our overall happiness. However, it is important to remember that we are the source. This means we have the power to cultivate a mindset that embraces the beauty and wonder in every aspect of life.

Happiness is a state of mind; it is a proactive choice you make and a behavioral practice you develop every day. The happiest people on earth are happy because they *choose* to be happy. If your happiness is predicated on the expectations of others or on external circumstances, it will leave you empty.

The constant narratives you feed your mind—or self-criticism, even over minor details—can significantly impact your overall happiness. By dwelling on perceived flaws, you may unknowingly prevent yourself from fully appreciating and enjoying the present moment.

So how do you build on that? How do you change your conditioned subconscious to see and feel happiness while simultaneously working toward your dreams? By focusing on the right things and by listening and speaking to your heart.

Cultivating happiness begins with a conscious decision. Start by appreciating the little things that bring you joy. Reflect on areas of your life that fill your heart with it. Identify the specific aspects of these experiences that bring you the most fulfillment. Pay attention to the positive emotions they awaken. True happiness arises from within.

### Countering Negative Thoughts

Engaging with negative thoughts and images strengthens the neural pathways you have created through repeated focus on these unhealthy states, emotions, thoughts, and images. This can lead to an exaggerated emotional response to even minor challenges, potentially triggering feelings of depression and anxiety.

The crucial factor lies not in the presence of these emotions, but in *how* we choose to respond to them. Your mind possesses immense power. By consciously choosing to counter negative thoughts that do not serve you and avoiding dwelling on them, you can break free from the cycle of self-sabotage and build what motivation psychologist Carol Dweck calls a "resilient mindset."

### Love Yourself

Before you can show up for others in your life, you need to love yourself. You need to do it unconditionally so that when you make a mistake, you don't berate yourself with shame and criticism. Make personal check-ins a habit:

- Reflect on yourself, your milestones, and what you want to accomplish next
- Review your broader plan and purpose
- Be present and supportive of yourself and those around you
- Let these habits build your confidence over time

CHAPTER 5

## Sorry, Not Sorry

Take time for yourself to figure out your life's journey and do the things that light your heart on fire. When you start doing the very thing that you feel the most aligned with—your true purpose and what you love—your life will shift in ways you never thought possible.

Your goals don't have to make sense to anyone but you. You are the only person who decides how big you want to dream. You don't need permission to live your truth. You don't need to apologize for your ambitious goals, and you certainly don't need to feel guilty for wanting to live life on your terms and with real purpose.

The biggest regret you can have is the shot you didn't take, the opportunities you didn't pursue, the ideas you didn't create, and the people you didn't let in. Begin, even if it looks messy.

There will never be a perfect moment to disrupt the status quo and pursue what you truly want. If you wait for ideal conditions, you may never begin. This is how dreams are suffocated—by believing that

- some things are possible and others impossible
- certain circumstances are right while others are wrong
- you are either ready or not ready

CHAPTER 6

## Change the Channel

Change is inevitable. Sometimes it's a welcome guest; other times, it demands a pivot. You have to shape both your identity and the meaning you assign to your circumstances. To do so, you must embrace the challenges that come with them.

> Ruminating on negative thoughts and beliefs gives them an undeserved sense of truth.

Imagine trying to "change the channel" of your thoughts. Just like on television, the channel you choose shapes how you feel. A comedy channel brings joy; a suspense channel brings tension and anxiety; and a horror channel brings fear. When facing challenges, it works the same: the *perspective* you choose—the "channel" you tune into—shapes your experience and your outcome. Remember, the angle at which you perceive challenges matters.

Practice with purpose until this mindset becomes second nature. Having the right perspective can do wonders. How we speak to ourselves and the questions we ask ourselves in those circumstances are of great importance.

People who refuse to allow negative language, thoughts, and images to saturate their minds during significant moments are simply light years ahead of those who do. They don't allow those thoughts to take flight; they challenge them. See yourself as a winner, and you will become one.

### It's Never a Failure

What makes someone say, "I have failed"? Maybe it's the belief that if you don't achieve what society deems worthy, then you have failed. Sometimes it's as simple as selecting the wrong answer or making the wrong decision. But isn't this what life is about? Nobody taught us how to "do life."

Release the notion that your life has to be perfect in the world's eyes. Challenges are clues—something you need to learn from. To stop or give up, refusing to try again, is my definition of failure. When you pivot, struggle, or fall, remember that there is something better on the other side. The only question you need to ask yourself is: Who do I want to be on the other side?

It may seem difficult to "pull yourself up by the bootstraps" when you are in the thick of the storm. It doesn't have to be that way. You have the one thing that is readily available to you, the greatest gift you can access at any moment: the ability to change the channel.

You alone can do that; nobody else can do it for you. Nothing will change unless you change the channel that you're on. Be an active participant in replacing your negative thoughts with positive ones. Don't get discouraged if it feels difficult at first. Ease comes with consistent practice. Put in the time to make your reality and your future better than they are now.

CHAPTER 7

## A Time to Move, a Time to Be Still

As with everything, awareness is power. When you are aware of how your mindset and subconscious affect your well-being, you can use that knowledge for good.

You must be able to distinguish between when it is time for you to steer—to put in the effort and go hard after your goals—and when it is time to ease off the pedal, calm your mind, slow down, and focus on your inner peace.

### Take Control of Your Anxiety

Focusing on nothing else but the future triggers anxiety, especially when it comes with a host of worst-case scenarios and what-ifs.

Anxiety is closely connected to the concept of FEAR (False Evidence Appearing Real). It can conjure feelings so powerful that they cause you to believe the issues in focus are real. Feelings are not facts; they stem from your thinking. Therefore, since you can change your thinking, you can also change your feelings, including feelings of anxiety.

Most people fail to realize that they are literally holding their breath during an anxiety attack. This can cause hyperventilation, further exacerbating physical symptoms and making it difficult to calm both the brain and the body.

Take five or even ten deep breaths. I like to use the 5-4-6 second method: breathe in for five seconds, hold for four seconds, and breathe out slowly for six seconds. Repeat. Even something this simple can make an immediate difference.

A proactive and productive way to manage anxiety with lasting effects is simple:

1. Stop
2. Breathe
3. Clear your mind
4. Be still

5. Focus on positive thoughts
6. Visualize yourself calm, cool, and collected
7. Use affirmations while imagining yourself in that state, such as: "I am calm, cool, and collected," or "All is well. I am loved, and I am safe."
8. Repeat

You can do this for as little as two to five minutes a day, or as many times a day as your schedule allows.

### Mental Detox

Mental detox is important for your well-being and for moving you toward your dreams. Here are some of the mental detox practices I use:

- Unplug
- Keep a gratitude journal
- Take a "friends and family" vacation
- Embrace the outdoors
- Take a "me, myself, and I" day
- Improve your inner dialogue

CHAPTER 8

## Visualization on Steroids

The power of visualization is real. Everyone has access to it, and anyone can practice it. To me, visualization is a way to rewire and train your brain to search for what can go right, *not* what can go wrong. By focusing on the bright spots and turning that insight into a mental image of what you want, you can produce powerful results.

All aspects of life carry energy. By intentionally directing that energy, you can shape your reality and conquer your goals. Manifesting your desired outcomes requires consistent daily actions that also boost your confidence and expand the possibilities you see for yourself and your circumstances.

Visualizing yourself successfully engaging in your goal activity is crucial to moving your life ahead in the right direction. It's that straightforward.

Celebrated author Napoleon Hill eloquently sums it up in his classic book *Think and Grow Rich*: "Whatever the mind can conceive and believe, it can achieve." My modern take: seeing is believing, and believing allows you to see. Visualization is simply the act of seeing and constructing the outcome you want.

### Momentum's Power Source

The Reticular Activating System (RAS) is a network of neurons located in the brainstem, where it connects to the spinal cord. This neural network operates below the level of conscious awareness, automatically filtering and prioritizing incoming and outgoing information.

Specifically, the RAS filters incoming information based on what it has been programmed to prioritize through focused visualization. Essentially, it allows only relevant details to reach your conscious awareness while ignoring what it perceives as unimportant to your current focus. These selected pieces of information are then processed into your conscious thoughts, influencing your emotions.

To put it simply, the RAS is like a genie in a bottle. You *tell* it what is important to you and what you want, and it delivers the tools you need to accomplish that.

CHAPTER 9

## Barriers Overrated

Most obstacles that we encounter in life are ones we place there ourselves. These self-imposed barriers often prevent us from taking the first step because we've already convinced ourselves that the situation is impossible. Remember, it all begins in your mind. What you believe will be.

Barriers to your dreams only exist because you choose to quit after a challenge. But dreams truly die when you continue to believe that your skills and capabilities are limited.

Meet challenges head-on with the mindset: "Yes, this might be hard, but it doesn't matter because I will push through, figure it out, and make it happen."

If you believe you can push through it, that you can overcome it, it's no longer a barrier. It's just a minor annoyance that you will deal with and then promptly forget.

### Breaking the Chains of Guilt

Self-imposed barriers, though often unseen, can be among the most difficult to overcome. One such pervasive barrier is guilt. This heavy emotional burden clouds our minds, distorts our vision of what we truly desire, and ultimately prevents us from pursuing fulfilling opportunities.

Whatever its origin, self-forgiveness is the path to overcoming guilt. A powerful tool in this process is engaging with our former selves. Through honest self-reflection and in-

> Some of the most remarkable achievements were once deemed impossible until they were accomplished.

ner dialogue, we can confront past hurts, clear our minds, and extend forgiveness to ourselves and to those who have wounded us.

### When Fear Comes Knocking

Fear is a natural part of life; it is not a matter of *if*, but *when* you will encounter it. This is where "change the channel" comes into play. Remember, we are a reflection of what we project, and we have complete control over whether we choose to answer the call of FEAR when it comes knocking.

You can slam the door in the face of fear and choose to open another door that leads to hope, peace, and opportunity. The choice is always yours. When you do that, life begins to happen *for* you instead of *to* you.

CHAPTER 10

## Create a Life Worth Living

I often see others settling for less than their hearts' desires. I was one of them. I was the one wondering, "How can I live a life of real purpose and live life on my terms? How can I stop settling and have more?"

I now have the answer, with certainty: by creating it for yourself. The magic of living life on your terms—the life you are ready to live—relies on three things in how you show up and what you feed:

- Your mind
- Your heart
- Your stomach (your second brain)

### Leverage Gratitude

Gratitude is one of the most important daily practices you can make time for. It works on many levels and can truly change your life. With consistency over time, you will notice even greater results.

When you think about the people and things you are grateful for in your life, you tap into a powerful resource. When things go wrong, as they sometimes will, you may feel tested, frustrated, or angry. In those moments, learn to pause, take a deep breath, and think about everything you are grateful for. Don't overthink it. Practice it consistently over time and notice the difference.

### Authenticity Matters

In our lives, we often wear a mask, a façade of who we think we are supposed to be. To become who you are meant to be, you must show up honestly as yourself and be comfortable with your imperfections.

Being authentic is a prerequisite for happiness. When you realize that you are a good person, deserving of praise and admiration for who you are and what you have accomplished, no matter how big or small it may seem, you will be able to appreciate and love yourself even more.

There is no reason you cannot have the life you desire. When you picture it, you will feel it. You need to have it burned into your mind's eye to the point that it feels almost within reach. This is the power of the true, authentic you. Don't ask out of fear. Ask with a hopeful heart and let the hope of your heart's desire lead the way. Build the image of your life on your own terms.

CHAPTER 11

## Be Open to Receive More

What does it mean to be open to receive more? Opening your heart, mind, and soul to receive more is like opening a door and allowing new, positive energy to enter. When your entire being is open to new opportunities, possibilities, thoughts, emotions, habits, and connections, those things begin to appear in your life.

We are all human, and we all make mistakes. That's how you learn. That's how you grow. Give yourself the grace you deserve. Allow yourself to be happy and open to living the life you truly want. Continue to see in your mind's eye where you want to be and what it feels like, and build on that vision.

### Be Happy and Celebrate Daily

Be happy today because today offers the chance to make a new choice, take a new step, and begin again. Be happy

today because you are privileged to open your eyes in the morning and are given the gift of another day. Tomorrow is not promised to anyone, but today is yours, so make it count.

In our day and age, people don't celebrate small victories nearly enough. Something grand has to happen—a graduation, a marriage, a birthday, a promotion. But what about celebrating the small things?

Underestimating the power of celebrating the small steps toward a larger goal is a mistake. Each small victory is a chance to invest in yourself.

The best part of celebrating your victories is the momentum it creates. When you gain momentum, everything begins to happen more easily, more quickly, and more effectively. This is when your whole being exudes an infectious energy that can move mountains. It's the kind of creative, exciting energy that fuels what once seemed impossible.

## Conclusion

Living your life to the fullest and being open to more require effort. Think about your life as a garden. You plant your seeds with intention. You pull out the weeds that do not serve you. You water your garden to nourish it. Then, you enjoy the fruits of your labor.

Putting this into practice involves a few simple habits:

- Reflect
- Show gratitude
- Reward yourself
- Look ahead
- Believe in your ability to dream bigger

*You* choose how big you want to dream. Never restrain yourself, your capabilities, or your potential; likewise, never let anyone else do the same.

If you feed your mind with negativity and denial instead of positivity and drive, and if you don't focus on your grit while working with your grace, you won't reach your goals. But if you work with the amazing gift you have been given—your mind—you will achieve remarkable things.

You will accomplish things in your life that no one ever dreamed possible, simply because you have discovered the power that lies within you for more.

Your potential is greater than any challenge you may face.

Your faith, focus, and action will unlock opportunities you haven't yet imagined.

Believe in yourself.

The best is yet to come.

**Diana Pagano** is a mindset coach, author, keynote speaker, and host of the *Make Things Happen* podcast. Founder of the MAKE THINGS HAPPEN™ movement, she helps individuals and organizations break through limiting beliefs and achieve next-level performance using strategies grounded in neuroscience and practical experience. A first-generation Mexican American from San Diego, Pagano overcame early financial instability and frequent moves to build a successful career in real estate and business leadership. She later helped scale a multimillion-dollar language company as executive vice president. Today she inspires audiences worldwide through speaking, workshops, and coaching that turn motivation into bold action.

# The Next Conversation

Jefferson Fisher

Book Snaps™
In-depth reviews of best-selling business books.

## The Next Conversation

**Argue Less, Talk More**

*By Jefferson Fisher*

**Jefferson Fisher** is a trial lawyer, writer, and speaker whose work to help people communicate during life's everyday arguments and conversations, with his practical videos and authentic presence, has gained millions of followers around the world, including celebrities and global leaders. He is a sought-after speaker on communication at Fortune 500 companies and governmental agencies, and hundreds of thousands of people subscribe to his actionable email newsletter and podcast. Fisher is a Texas board-certified personal injury attorney and the founder of Fisher Firm, where he helps people all over the United States connect to trusted legal services.

*A Book Review by Soundview*

# Change Everything with Your Next Conversation

Conversations happen in every aspect of life. They can be lighthearted, full of laughter and fun, and bring people together. They can share stories, convey information, and help further a common goal in ways that encourage both parties and bring them together. Conversations are a way for people to find common ground that helps them move forward together more unitedly. This is the ultimate goal for people, but getting there isn't always easy.

Conversations can be exceptionally challenging. What may have started as a quiet conversation in which the conversants are trying to find their way back to each other ends full of tension and harmful words that can't be taken back. It can divide groups of people instead of uniting them. Why does this happen? Particularly when simply trying to share one's feelings or what they feel is helpful information. When blood pressures rise and communications become charged, what can be done? Is there a way that difficult conversations can occur and end without rabbit trails, frustration, or heated words?

Jefferson Fisher believes so, and in ***The Next Conversation: Argue Less, Talk More,*** he shares the wisdom he has gained over the years. A lawyer by trade, he learned at a young age that communication and learning how to read people well was vital. Fisher started sharing his strategies via short videos online, and, after receiving thousands of messages from his social media followers, he realized their problem wasn't necessarily what they wanted to say. Instead, the issue was how to say what they were thinking or feeling in a way that would help them connect with people and avoid arguments and awkward moments.. Fisher states that part of the reason he wrote this book was to help people gain skills to help their next conversation go smoothly and bypass harsh, unnecessary words.

Communication is modeled and observed, and if the communication style that has been learned isn't healthy, then it is time to break the cycle and learn a new way of communicating.

*The Next Conversation* is divided into two parts. Part One teaches the reader how to connect with themselves so they know what to do and how to react well when conflict arrives. Part Two

teaches how to leverage their new mindset so they can better connect with the people around them. Fisher shares three rules for changing conversations for the better: 1. Say it with control, 2. Say it with confidence, and 3. Say it to connect.

Fisher is confident that the difficult conversations will be removed and that in their place, there will be space to experience real growth and real connections, allowing them to show up confidently in each space of their life. Each chapter ends with a summary that can be referenced quickly. Fisher encourages the starting by picking one tip that resonates with them and learn how to apply it well before moving on to the next one. Doing this will prevent feeling overwhelmed as though everything must be implemented at the same time. This is a process, and Fisher is confident that the reader will gain the needed confidence to communicate and connect well.

## Part One: The Essentials

While it is common knowledge that how one communicates matters, its ripple effect is not as commonly acknowledged. The way that someone communicates with their coworkers, servers, or friends is observed by the people around them, particularly children. They will then communicate that way to those around them, so what started as a drop in the ocean eventually creates a tidal wave the original communicator could have never anticipated.

Contrary to the popular belief that winning an argument is paramount, something else is more important. Rather than proving one's rightness, it is vital to understand and remember that people might be dealing with several different things simultaneously, and only the tip of the iceberg is being seen. It is essential to show compassion and recognize the struggle resulting from communication conflicts.

If the ultimate goal is winning an argument, the trust and rapport built between people will be broken. Instead, the goal should be unraveling the issue to reveal the matter's core and gaining an opportunity to connect with others. Doing this will allow conflict to evolve into connections and open doors for a more meaningful life.

When heated conversations end, one often thinks about what they could have said differently. When given the chance to speak to the other party again, they may have an idea of what to say, but it is vital to have a goal in mind before beginning the next conversation. Doing this will help organize thoughts and begin moving toward each other. The most basic goal should be to learn from the other person, not to prove something. Recognizing unrealistic and realistic goals and proposing to set them is the beginning of understanding the other person and their point of view. The next step is defining and setting values, the true north of the conversation. They allow the reader to stay authentic while navigating the conversation and help them align the conversation to meet their goal before it begins.

Despite all the ways technology brings people together, it doesn't make up for the connection that is longed for. This should be considered when approaching conversations because it could mean the difference between building or breaking connections with other people. Rather than connection, conversations through texts or email can seem more transactional because they focus on efficiency, not understanding or authenticity. Connection in this context is an understanding, acknowledgment, and discernment, which are vital to a conversation. It doesn't mean the result will be a happy conversation in which both parties always agree or come to a united resolution. It means that control and confidence are present when difficult conversations need to take place.

## Part 2: The Application

Rather than sharing quick fixes with the reader, Fisher provides a concrete three-step method for building a connection in the next conversation.

Say it with control.

Say it with confidence.

Say it to connect.

He explains that one's views, needs, and truth are the essentials of self-expression that make each individual unique and bring out an assertiveness they either didn't know or forgot they had. By following the directions shared, he promises the output will be a bolder, more assertive place in the conversation.

## Rule 1: Say it with control

Conversations that lead to harsh words and heightened tensions are often regretted almost immediately. While the spoken battle may be won, the relationship could have been lost, and it doesn't need to be that way. Learning to control oneself and recognize the triggers that ignite an argument's flame is essential—such as feeling threatened, becoming defensive, or facing personal attacks. This rising heat in a discussion is succeeded by cooling off - walking away from the conversation, reaching a place of mutual understanding, or encountering an impasse. The cooling process can only begin when there is a noticeable pause, and both parties can recognize the damage inflicted. These can also be labeled as Fight or Flight (heating) and Rest and Digest (cooling), and knowing these can help conversations be seen differently and lead to a place of internal curiosity. Fisher encourages reverse-engineering one's triggers, which results in becoming more adept at identifying what triggers the people around them and helping them defuse them.

Controlling the moment during a heated conversation is necessary because while it may not be possible to see a disagreement coming, the tension that leads up to it can almost always be felt. By learning how to leverage what the body is already doing, one can gain higher ground in an argument in a healthy way. Three highly effective tools can help weather the storm that comes in an argument.

The first tool is Your First Word is Your Breath. Taking a moment to breathe will allow for a moment of calm instead of letting heated words spill out. The next tool is Your First Thought

> *It is vital to remember that words don't just affect the person at the other end of the conversation but the person speaking.*

is a Quick Scan. When a Quick Scan is completed, the result will be a better understanding of how they feel in the moment, and it will help them keep control of their emotions. Finally, using Your First Conversation is Small Talk helps bring mindset to the forefront. It is vital to remember that words don't just affect the person at the other end of the conversation but the person speaking. Choosing words that treat oneself better will also serve them as they work to improve their overall mindset.

Learning how to control the pace of a conversation is helpful when learning to communicate thoughts effectively. Rushing indicates the speaker was planning their response instead of listening well to the other person. While silence in a conversation is considered uncomfortable, a well-timed pause can be an effective tool to help fix communication struggles. Pausing in a conversation allows for time to reflect, reconsider, and regulate and can be used to create meaningful moments in each conversation.

## Rule 2: Say It with Confidence

Feelings, like confidence, cannot be switched on like a light. To feel more confident, one must take a more proactive approach and pair it with assertiveness. Assertiveness is how confidence is expressed, and the pair feeds into each other. Taking small steps, choosing assertive words, and eliminating filler words in conversations will help strengthen sentences and arguments and empower the reader to meet their needs. By choosing and focusing on one of the ten ways to practice assertiveness, confidence will slowly begin to bloom until it becomes second nature in conversation.

Word choice and speaking pace are also indicators of confidence. Choosing words carefully and avoiding filler words will show those around that the speaker is confident and knows exactly what they are conveying. Eliminating unnecessary apologies will also assist as they grow in confidence. Even though it might come from a place that feels like humility, what is actually happening is underselling oneself, which will end up being a distraction.

Feeling confident is important when conversing with difficult people, and it can be even more so when they are relatives. It is typically advised to find common ground and live peaceably with each other, but when this can't be done, being assertive can change the perspective of the conversation. When met with a half-hearted apology, constant interruptions, and hurtful or insensitive comments, standing up for oneself is paramount as a form of self-care. The person making those comments seeks to make themselves feel better, so the reader needs to slow down and use firm, concise phrases to combat this and call out the behavior.

While they can be challenging to set, boundaries are also essential when taking and staying in control of a conversation. Setting boundaries is also healthy because it protects and prioritizes health and happiness over continuing to acquiesce to others. This can be avoided by creating a manual and enforcing it. Crafting replies and being prepared when someone starts to escalate and push buttons is a form of self-care and prevents being pushed around.

Enforcing boundaries can feel awkward, but the more it is done, the easier it will become. The boundary should begin with the value attached to the conversation to prevent others from pushing past it. If they are applying pressure on a topic that is uncomfortable or nonnegotiable, remind them of it. This needs to be quickly followed by naming a consequence, beginning a condition, and then an action step. Following through must happen if they persist trying to move past the boundary. Consistency is key, and holding boundaries firm is imperative on the path to gaining confidence.

## Rule 3: Say It to Connect

Connecting with people should be easy, but it can be tricky when neither party knows how to frame a conversation. While there might be a vague goal in mind, several rabbit trails and diversions will be on the way. Framing a conversation will make it easier to connect with others; it eliminates the small talk and the recaps that aren't needed and gets straight to the point of the matter at hand.

First, a direction must be set so that each party knows where they are going and where they will end up. When communicating this, the reader must be sure their goals and values are clear. Next, they should call their shot and share the projected end. It should be as specific as possible so that they know what the goal is. Finally, get their commitment to the frame that has been presented. Doing this will enhance the conversation by keeping what is necessary and ignoring what isn't, meaning each conversation will need a separate frame to avoid making things muddled or confusing. It will also help reach the goal of connecting.

Getting defensive in a conversation is costly and will ultimately break any connection that may have been made. Becoming defensive happens when something triggers, and it may show itself in ways such as giving someone the silent treatment or brushing off serious topics. It erects a wall that results from being uncomfortable, and while it is a mechanism designed to protect, it can prevent either party from understanding the other. When the trigger is allowed to take control, it looks for things to keep feeding the defensiveness. However, there is a way to stop allowing defensive break connections.

Continuing to be defensive doesn't have to remain the default

by purposing to understand the other person and what they are trying to communicate. It is essential to take a few seconds to pause and think about where they are coming from. It is more likely they are going through a hard time rather than taking verbal shots for no reason. Picking up every gauntlet that is thrown down isn't necessary, but what is crucial is showing them grace and staying in control of oneself. Refusing to enter into every argument presented will prevent walls being raised and preserve the desired connection.

Finally, having a difficult conversation and staying in control is possible. It doesn't have to become a situation where voices are raised, tensions are high, and the result ends with even more frustration. To start, set a time for the conversation when both parties are available to speak without distractions. Removing external factors will help avoid embarrassment and frustration. Asking the other party to set aside a time to speak also shows respect for their autonomy.

In today's world, it is common to begin with pleasantries to hopefully soften the blow when delivering difficult news, but skipping them and reaching the end goal would be more effective and succinct. Starting with unnecessary pleasantries and platitudes will only delay the difficult conversation that needs to take place. There is also the possibility that the pleasantries will delay the inevitable and see the original end goal ignored and pushed to the side. While it may seem harsh, it isn't because clarity in challenging conversations is a kindness to both sides and allows them to walk away with their dignity intact.

To avoid losing the end goal, it should be stated in one of the opening sentences. Moving everything else after that will bring clarity and allow the point to be made quickly. It will also ensure that the listener doesn't get lost because they became hooked on a word that then proceeds them down a rabbit hole away from the current conversation. This can easily be applied to conversations over text or email because removing pleasantries, justifications, and unnecessary words will help prevent confusing conversations.

Conversely, when approached by someone who wants to have a difficult conversation, it is essential for them to know that they are coming to a safe place. That means they know they can reach the reader and will not be shouted at or belittled for sharing their needs. Being a safe space, no matter what side of the conversation one might be on, is an excellent opportunity to connect with people. This doesn't mean the conversation will be easy but by being proactive and working to shift mindsets to be a person who is ready and able to handle difficult conversations.

## In Conclusion

*The Next Conversation: Argue Less, Talk More* by Jefferson Fisher is an enjoyable read that draws the reader in and shows them how to shift their mindset so they don't walk into their next difficult conversation being anxious. He shares the tactics he has learned and honed over the years, which have helped him gain confidence and communicate with the people around him. While it goes in depth, he states upfront that he is not a psychologist or a therapist but a man sharing what he has learned from the daily grind of conversations with people in his life. The reader will soon see the benefits in real life by putting the mindset tips he shares into practice. They will also see their confidence grow as they are able to share their thoughts, ideas, and more with the people around them.

Learning how to communicate well is not something that can be taught in school, but those skills can be gained if one is willing to slow down, read people, and change one's mindset. Knowing what to say is the easy part. Knowing how to say it is now easy, too.

# The Obstacle is the Way

Ryan Holiday

Book Snaps™
In-depth reviews of best-selling business books.

## The Obstacle is the Way

### The Timeless Art of Turning Trials into Triumph

*By Ryan Holiday*

**Ryan Holiday** is one of the world's bestselling living philosophers. His books, including T*he Obstacle Is the Way, Ego Is the Enemy, The Daily Stoic*, and the #1 New York Times bestseller *Stillness Is the Key*, appear in more than forty languages and have sold over 10 million copies. He lives outside Austin with his wife and two boys ... and a small herd of cows and donkeys and goats. His bookstore, The Painted Porch, sits on historic Main Street in Bastrop, Texas.

*A Book Review by Soundview*

# Turn Your Problems into Your Biggest Advantages

In his book, ***The Obstacle Is the Way***, author Ryan Holiday encourages his readers to see obstacles and impediments in a new way. Instead of seeing them as roadblocks or insurmountable problems, he wants his reader to draw on the experience that history provides and realize that it is not despite obstacles that people succeed but rather because of obstacles that they succeed. He looks at historical figures as diverse as General Dwight D Eisenhower and Laura Ingalls Wilder as well as those from as far back as ancient Athens and as modern as President Barack Obama to show how people from all areas of life and through the ages have been able to face obstacles and use them to propel them forward. For Holiday, "the obstacle is the way."

While each person has their own unique combination of obstacles, Holiday believes that "the responses they elicit are the same: Fear. Frustration. Confusion. Helplessness. Depression. Anger." To a large degree, we cannot control the obstacles that confront us. That does not leave us helpless, however. We can control both our attitude about the problem and our approach to the problem, and therein lies the opportunity. Holiday quotes Andry Grove of Intel as saying, "Bad companies are destroyed by crisis. Good companies survive them. Great companies are improved by them." Holiday's book is not just about business, however. His principles apply to all people in all walks of life. They are principles for a successful life, not just a profitable company.

"Turn it around. Find some benefit. Use it as fuel." This is the principle Holiday wants his readers to live by when they are faced with obstacles. There are three principles at play in changing obstacles into opportunities: "Perception, Action, and the Will," and he organizes his book according to these three principles.

## Perception

Holiday understands that it takes skill to properly align our perceptions, but it is a key to successfully meeting the demands placed upon us. Perception refers to "how we see and

understand what occurs around us – and what we decide those events will mean." These perceptions can either serve to strengthen us or to weaken us.

When discussing the discipline that beneficial perception requires, he refers to John D. Rockefeller's rise in the oil industry until he eventually controlled 90% of that industry. This all occurred within 20 years of the Panic of 1857. While those around him panicked as the financial crisis developed, Rockefeller stayed calm. He took the Panic of 1857 and used it as an opportunity to watch and learn. He saw it as a "baptism in the market," learning how many people were left unprepared for market challenges. He learned that because the market is volatile, it requires discipline to make a profit. As Holiday says, "For the rest of his life, the greater the chaos, the calmer Rockefeller would become, particularly when those around him were either panicked or mad with greed." Rockefeller was able to succeed because he taught himself "to see opportunity inside the obstacle," something many people cannot do. Holiday insists that when faced with obstacles, we have a choice: we can follow our emotions and the direction of the crowd, or we can filter them. This filtering requires discipline, but it is this discipline which can help a person determine the most prudent course of action.

Crucial to success in the face of obstacles is a determination to control what it is that we can control, namely how we allow something to affect us. Holiday writes about Rubin Hurricane Carter who went from being a boxing superstar to being incarcerated for a triple homicide he did not commit. Rather than allowing himself to fall into despair and rail against what he could not control, Carter chose to focus on what he could control. He spent all of his free time in prison working on his legal case instead of fighting against what he could not control: the rules and confines of prison life. Holiday explains that the large amount of time prisoners have on their hands is part of why some people are able to drastically turn their lives around while incarcerated. When inmates learn to accept where they are and control what they can, some are able to make great strides that prepare them well for life in the outside world. All of this requires controlling perceptions. Holiday writes, "There is no good or bad without us, there is only perception. There is the event itself and the story we tell ourselves about what it means."

"When we aim high," Holiday writes, "pressure and stress obligingly come along for the ride. Stuff is going to happen." When obstacles do arise, grace and poise are the most important characteristics a person can possess; these are even more important than talent is. He sees these attributes as acts of defiance because they require an individual to refuse to be intimidated. He believes that the road is tough, but there are always countermoves that people can make when faced with obstacles if they refuse to allow themselves to become overcome with fear and with a sense of failure.

NASA, Holiday explains, understands this need for a clear head in the face of obstacles. This is why before its first launch, NASA trained astronauts in hundreds of simulations. NASA knew things would go wrong, and they also knew that high above the Earth, panic will lead to death. Holiday says, "Uncertainty and fear are relieved by authority. Training is authority." We must understand that we do not have the luxury of panicking when faced with obstacles. Rarely does allowing our emotions to upset us give us options. Rather, oftentimes they get in the way of introspection, alertness, and wisdom. He does not encourage his reader to ignore feelings. Rather, he wants his readers to acknowledge them and deal with them. He does not, however, want them to believe that feeling something is the same thing as doing something.

When moving on to discuss objectivity, Holiday says that the thought, "This happened and it is bad" are actually two different ideas. The first part explains an objective reality, but the second refers to our interpretation of it. "The observing eye sees simply what is there," he paraphrases Miyamoto Musashi as saying; "the perceiving eye sees more than what is there." In other words, the observing eye does not see insurmountable obstacles; it just sees what is there. It is the perceiving eye that makes judgments about it. Holiday believes that these perceptions are not helpful as they inundate us with information we do not need. It takes strength to override our perceptions and the instinctual behavior they lead to. He encourages his reader to take themselves out of the equation and consider what advice they would give to another in the same situation. This will make it easier for a person to determine the correct course of action to take.

Holiday writes, "Problems are rarely as bad as we think – or rather, they are precisely as bad as we think." Because of this, people have to train themselves to avoid thinking about the meaning of everything. This requires training our brains from pursuing distracting thoughts and instead focusing on what is in front of us and what needs to be done. "It's our preconceptions that are the problem." Holiday maintains that there is always an opportunity in every situation. For example, instead of focusing on how problematic a difficult colleague is, a person can instead look at the opportunity that person gives them to appreciate good friends and keep alert while at work. Being able to become better because of obstacles is referred to as post-traumatic growth,and it propels individuals to new growth.

## Action

Holiday maintains that "Action is commonplace, right action is not." Our actions must be prudent and be in service of our larger goal. He tells the story of Demosthenes, Athens's greatest orator. Demosthenes had a lot stacked against him that could have and possibly should have held him back. He did not succumb to these obstacles, however. He took deliberate action to overcome them. Stripped of his rightful inheritance and suffering from a severe speech impediment, he decided to become a great orator, inspired by oration he had seen in the past. He took numerous steps to overcome his speech difficulties and he took every opportunity he had to improve his skills. When faced with setbacks in winning back his inheritance, he became flexible and creative, always taking steps to achieve the goal set before him. He eventually succeeded in winning back the small part of his inheritance that was still left. Holiday maintains that how we react to bad circumstances tells us a lot about ourselves. He believes that many people, even if they can conceive of a solution,

> *...a lack of persistence is what stands in the way of most people achieving their goals. "*

find themselves remaining stuck because it is easier to ignore a problem than it is to take right action. He writes, "No one is coming to save you. And if we'd like to go where we claim we want to go – to accomplish what we claim are our goals – there is only one way. And that's to meet our problems with right action."

The first part of taking action is simply to begin. People may be hindered from action because of fear or because of some other factor that is holding them back, but he says the first step is to "Take the bat off your shoulder and give it a swing." He maintains that most people could be doing more or trying harder to get where it is they want to go. And while beginning to take action is important, equally important is persistence. We must refuse to give in to failure, and we must quiet the noise around us that is keeping us from our goals. He believes that a lack of persistence is what stands in the way of most people achieving their goals. When obstacles arise, discouragement is acceptable; quitting is not.

When a person takes action, they will fail. It is an inevitable part of the process. He finds failures to be beneficial, however, because "Failure puts you in corners you have to think your way out of. It is a source of breakthroughs." He acknowledges that failure hurts, but he insists that the only way to make sure "we don't benefit from failure – to ensure it is a bad thing – is to not learn from it." Because of this, he does not want his reader to merely keep doing the same thing repeatedly with the same failing results. Rather, he wants his reader to listen to failure and find ways to improve because of it.

Holiday then moves on to describe The Process, a philosophy and method coined by the highly successful football coach, Nick Saban, of the University of Alabama. Saban would tell his players to focus on what they need to do at this exact moment rather than to look far ahead at future goals. As Holiday says, "Excellence is a matter of steps," and it requires people to excel at each of these steps successively while blocking out distractions. He believes this is a relaxing process because even the largest tasks are "just a series of component parts." While goals are important, the process of achieving them "is about doing the right things, right now. Not worrying about what might happen later, or the results, or the whole picture." Two factors are critical to taking steps. First, a person needs to perform each step, each task, with excellence, believing that nothing is beneath them. They must maintain this commitment to excellence. Second, they must remember the maxim, "think progress, not perfection." This requires people to look at where they want to go and accept, when necessary, imperfect solutions that can still end up bringing them to their goal. Sometimes this requires acknowledging that one way of doing things is impossible but then using this acknowledgment as an impetus to finding another way to solve the problem.

## Will

Finally, Holiday turns his attention to the will. He calls the will "our final trump card" because it is the one thing that can never be taken from us. Even in the worst and the most immutable of circumstances, people still have the power to "turn it into a learning experience, a humbling experience, a chance to provide comfort for others." This insistence on learning and growing is what he defines as will. Will allows for a person to find purpose in suffering.

Holiday writes, "If Perception and Action were the disciplines of the mind and the body, then Will is the discipline of the heart and the soul." To exemplify what he means by this, Holiday turns his attention to President Abraham Lincoln who suffered tragedy in his life and also suffered from melancholy that would be labeled as depression today. President Lincoln used his suffering as a way to help others. He used what he suffered to help him lead the country during one of its most tumultuous times. Holiday claims that the will is what can allow people to be happy despite the horrific things that can happen to them.

Holiday goes on to ask his reader if they are prepared in case a worst case scenario ever does happen. He says that nobody is born prepared for such times. Rather it is through mental practice that people can develop the steel backbone that is sometimes necessary to handle the sometimes exceedingly difficult periods of life. This strengthening is best done during good times so that we have it to rely on during difficult times. Stoics refer to this steel backbone as the Inner Citadel, and it can never be taken from a person by outside forces. This Inner Citadel can only be strengthened through challenges and difficulties. As Holiday says, "The path of least resistance is a terrible teacher. We can't afford to shy away from the things that intimidate us. We don't need to take our weakness for granted."

Part of this preparation for obstacles involves anticipating or thinking negatively. By this, Holiday encourages his readers to always make sure to include disruption in their plans. This requires people to come up with answers to some of their "what if…" questions, and then to go further and understand that if the worst really does happen that they will be okay. Holiday states that people will never be happy if they are looking to have other people always come through and for things to always go right because they simply will not. He does not see this attitude as pessimism because it can help people dig out from under weaknesses and manage setbacks as they come. Holiday knows that things could always be worse. He believes that it is an act of hubris to believe that we can control everything and that this idea of control is reinforced by breakthroughs that have made it possible for people to live more safely alongside

nature. But people cannot control everything, and he believes that this is fine. He says, "The way life is gives you plenty to work with, plenty to leave your imprint on."

Because something can be learned from every experience and because people can use their will to choose how to respond, Holiday believes that people can learn to love everything, even their obstacles. He writes, "We have to put our energies and emotions and exertions where they will have real impact…This is what I've got to do or put up with? Well, I might as well be happy about it." He understands that this is a foreign concept to many but that if we acknowledge that our opportunities come to us through our adversities, we can learn to love the obstacles because they provide fuel for our growth.

Perseverance is required for all that Holiday asks of his reader. This is different from persistence. Persistence requires a person to keep working despite obstacles until an objective is achieved. Persistence, however, is about looking at the big picture and is what gives a person the will to keep on fighting. This is important because there are many obstacles in life. We do not suddenly come to the end of them when we overcome one. Perseverance requires both energy and endurance. He believes that more people fail because of a lack of will than they do because of external circumstances. When people are faced with impossible situations, he believes one way they can shore up their will is by changing the focus from themselves onto how they can help other people, and he uses the example of Prisoner of War James Stockdale who used his time as a prisoner to help shore up his fellow captives.

Holiday is a stoic, and he ends his book by explaining how these principles of stoicism have been passed down through the years. He uses these principles to help guide his reader from perception to action and through the will. Right perception is necessary in order to take action. Choosing to and performing actions is critical to moving forward. No one gets anywhere without taking steps, and those steps must be rightly ordered. It is about focusing on the next step in front of us and taking that step. Both training our perception and acting on our goals requires will. It is the glue that holds the others together. Holiday breaks his book into three different sections, Perception, Action, and Will. Each of these sections is then broken down into smaller chapters pertaining to one small aspect of the larger principle. Because of this, his book is readable and easy to digest. He uses examples throughout history to exemplify his ideas, and these leave his readers with the impression that the greatest obstacles in life can be flipped and can, indeed, lead us to become stronger, better people, proving the maxim that what does not kill us makes us stronger.

## THE SUMMARY IN BRIEF

Many of us believe in equality, diversity, and inclusion. But how do we stand up for those values in our turbulent world? ***The Person You Mean to Be*** is the smart, "semi-bold" person's guide to fighting for what you believe in.

Author Dolly Chugh reveals the surprising causes of inequality, grounded in the "psychology of good people." Using her research findings in unconscious bias as well as work across psychology, sociology, economics, political science, and other disciplines, she offers practical tools to respectfully and effectively talk politics with family, to be a better colleague to people who don't look like you, and to avoid being a well-intentioned barrier to equality. Being the person we mean to be starts with a look at ourselves.

Whether you are a long-time activist or new to the fight, you can start from where you are. Through compelling stories and surprising science, ***The Person You Mean to Be*** guides each of us closer to being the person we mean to be.

## IN THIS SUMMARY, YOU WILL LEARN:

- To identify and manage self-threat.
- To use a growth mindset to fight bias.
- To understand how privilege creates systemic headwinds and tailwinds.
- The difference between diversity and inclusion.
- To show meaningful support to those who lack privilege.

## Introduction: Good-ish People

Many people believe in the American values of equality and equity, diversity and inclusion, the values underlying the founding of this country and many major spiritual teachings. Race, religion, ethnicity, sexual orientation, gender, gender identity, ability—they believe bias of all forms is wrong. They are believers.

Seventy percent of Americans, according to a Reuters poll, interact with people of a different race in their circle of friends, co-workers, and relatives. Among people under 30, this number rises to an astounding 90 percent. According to a CBS poll, 77 percent of us now personally know someone who is openly gay (compared to only 42 percent, less than 25 years ago).

Our workplaces are less gender-segregated. Our definitions of gender fixed at birth are evolving. So we are more diverse, and more divided, than ever before. Believing in the values of equality is no longer enough. We need to be people with the skills to make it better. We need to learn how to fight bias.

### Claiming an Identity

In speech and action, we express how we see ourselves and how we want to be perceived by others, a process that organizational scholars Caroline Bartel and Jane Dutton call "identity claiming." Psychologically, identity claiming is an ordinary and universal process. Each of us claims multiple identities.

Each of us has an intense craving for others to see and acknowledge our various identities, a phenomenon that Bartel and Dutton call "identity granting." We are vigilant for clues about whether our identity has been granted.

When we are unsure of whether an important identity has been granted by others, our craving for affirmation becomes more intense and urgent. Psychologists call this a moment of self-threat—our identity is being challenged or dismissed. Just as moments of physical threat trigger a hyper focus on self-preservation, moments of psychological self-threat do the same.

For example, if you value being seen as a do-gooder, then you feel self-threat when people judge you as a greedy person.

Threat, especially self-threat, is stressful. Threat-motivated stress can lead to bad performance, negative health consequences, and poor behavioral choices. We do not feel good and we usually do not treat others well. We become defensive. Our hopes of being a good person are diminished at times like these. Research reveals how our need for affirmation overrides our genuine desire to be a good colleague, friend, and ally.

We all fall into this pattern. We fish for affirmation. We center our needs, nudging away the needs of others. We seek what activists call "cookies," acknowledgments of our good intentions, even when the impact is costly to the cookie giver. We especially crave that affirmation when faced with a situation that challenges the believer identity we are claiming. The affirmation relieves the self-threat, but ironically, we end up acting less like—not more like—the people we mean to be.

### The Psychology of Good People

While none of us are good all the time, and some of us are far from good a lot of the time, we still see ourselves as good. How do we sustain this view of ourselves? We hold a faulty assumption that our behavior pivots around our ethical standards and our moral values. That is not how our minds actually work. Our behavior pivots around our identity. Even when we fall short, our reflex is to claim an identity as a good person. Evidence to the contrary is a self-threat.

As a result, people are prone to what researchers call "bounded ethicality." Bounded ethicality is the psychology of "good-ish" people. Good-ish people are sometimes good and sometimes not, sometimes intentionally and sometimes not, like all of us. This model of bounded ethicality challenges ways of thinking and talking in which you are either a good person or not, a racist or not, an unethical human or not.

Here, we expand on the model of bounded ethicality with a model of "ethical learning." This redefines what it means to be a good person as someone who is trying to be better, as opposed to someone who is allowing themselves to believe in the illusion that they are always a good person.

With that in mind, the following is for and about people of all races, ethnicities, genders, religions, physical and mental abilities, and sexual orientations, good people who believe in building a better workplace and world.

To do so, let's now learn the four ways in which builders are different than believers.

The difference between a fixed mindset and a growth mindset lies in whether we believe we have blind spots.

## Part I: Builders Activate a Growth Mindset

Mindset refers to our belief about our capacity to learn and improve. If you have a growth mindset about drawing, you believe that you can improve your stick figures with effort, time, and feedback. The alternative, a fixed mindset, is where you see yourself as fully formed—either as someone who is terrible at drawing or wonderful at drawing or somewhere in between—and destined to stay that way.

The fixed mindset is an "either/or" mindset because it allows no room for being a work-in-progress.

### When Growth Mindsets Matter the Most

The difference between a fixed mindset and a growth mindset lies in whether we believe we have blind spots. As builders, we should never make claims of not being racists, sexists, etc. These claims are rarely accurate and usually lower our credibility. Rather, we should say, and believe, "I know that I have work to do in this area." That statement, if made with sincerity, reveals movement from a reflexive fixed mindset to a more intentional growth mindset.

When people are angry at you, activating a growth mindset is critical to learning why they are angry. It is easy to write off the anger as sour grapes. This defensive dismissal—typical in a fixed mindset—is unwise.

As believers, we know that inequity is real in this country. Inequity triggers anger. Therefore, anger is a natural response from people from marginalized groups—whether they be women, or people of color, or gay people, or immigrants. However, the resulting anger can generate heat and self-threat. It can confuse or shut down fixed mindset observers.

As builders, our opportunity is to learn from this anger, not to recoil from or "tone police" it. When people are expressing anger about something being unfair, consider listening with the intent to grow from what you hear. Even if the anger makes you uncomfortable, do not let it stop you from listening.

Research says that when we view ourselves as works-in-progress, we are more willing to hold ourselves accountable for our actions. We are more likely to apologize to people we have hurt, and we offer better, more complete apologies. Accountability is higher, not lower, when we give ourselves room to grow.

Thankfully, psychologists such as Carol Dweck and others have tested a host of ways to help us activate a growth mindset. The gist of these interventions lies in listening to what our "mindset voice" tells us about who we are and our capabilities. Let's say you make a comment that you feel is legitimate and inoffensive. To your surprise, people are offended, and you are told that your comment is racist.

Your fixed mindset voice might lead you to think, "That is ridiculous. I am not a racist. I should have kept my mouth shut. I will just say that I am sorry the other person was offended and get out of this conversation as fast as possible."

Try to activate a different voice, which leads you to say, "That was not my intention. Would you be willing to tell me what I did wrong?"

### One of the "Good Guys"

At first glance, Rick Klau seems like the prototypically successful, straight, white Silicon Valley guy. He has had a bunch of cool jobs at Google, including working on their Blogger, Google+, and YouTube products. He is now a partner at an offshoot of Google called GV (formerly Google Ventures) that invests in and helps launch tech startups.

Rick's work straddles two industries that many people want to break into: venture capital and technology. He hires, manages, and evaluates the potential and performance of many ventures and people.

In that capacity, Rick says, "I felt strongly that women and underrepresented minorities should have equal opportunities in the workplace. And I would have told you that, as someone in a position to hire people, I had done a good job of ensuring equal opportunities. I would have told you that I was one of the good guys." Like so many of us, Rick is a believer.

Rick's boss insisted that he and his peers attend an uncon-

scious (sometimes also called implicit) bias training. Google, like many organizations, was (and is) trying to address the overwhelming whiteness and maleness of their organizations.

Rick took the Implicit Association Test (IAT) and received his implicit bias score. The web-based IAT was developed by the world's experts in unconscious bias, psychologists Mahzarin Banaji, Anthony Greenwald, and Brian Nosek.

Taking the test is like playing a video game in which you need to be both fast and accurate. The goal is to quickly categorize words and pictures, with less than a second allowed for each response. There is little time to think, which is the point. The test is not measuring what you would do if you had the time to think it over. It is measuring what your brain associates with what when you are on autopilot.

Rick did not like his Gender IAT score. Like more than 75 percent of us, he was faster at associating women with things related to family and home and slower at associating women with things like career and work. On the flip side, he was slower at associating men with things like family and home. This implicit result directly contradicted his explicit egalitarian gender beliefs. He emerged "spooked." His moral identity was at stake. Self-threat flooded his mind.

### Getting to Work

What happens next is a choice between growth and fixed mindsets. Individuals can use their IAT scores as a first step, not a last step, in examining how implicit bias might manifest itself in their work and world, which is precisely what Rick did.

Opening up his laptop and phone, he scrolled through his contacts. To his dismay, only 20 percent of the people in his contact list were women. Next, he reviewed his connections on Twitter and LinkedIn. The ratio was the same: 20 percent. What he believed and what he built did not match.

So Rick actively sought out connections with people who "didn't look" like him. He shifted the gender ratio of people with whom he interacted on social media. He made himself vulnerable by making that ratio publicly available and by publicly committing to change. He declined invitations to all-male panel discussions and suggested alternatives. He stopped referring to mixed-gender groups as "guys."

Rick knew he was not the only "good guy" with an unconscious bias and 20 percent problem. So he rolled out the unconscious bias training to all of the hundreds of companies in the GV portfolio. He even had the sessions recorded and posted publicly on YouTube. He encouraged others to take the IAT, study their contacts, and analyze their calendars. He shared what he was learning in online articles, blogs, and frequent tweets. He shared his slipups and his progress. He took a strong stand that we all could do better.

## Part II: Builders See and Use Their Ordinary Privilege

Visual attention researcher Jeremy Wolfe and his colleagues say we see what we expect to see. They re-created the airport security screening process in a lab and had study participants screen bags for "weapons." When the participants were told that the dangerous objects would appear 50 percent of the time, participants had a 7 percent error rate.

When the participants were told that the dangerous objects would appear only 1 percent of the time, their error rate increased to 30 percent. They did not expect to see something, so they did not see it, even when it was right there.

This is an example of what researchers call "bounded awareness." Bounded awareness is our tendency to not see, seek, or use readily available and relevant information.

Similarly, Nobel Prize winner Daniel Kahneman and his collaborator Amos Tversky demonstrated that our eyes and ears and minds approach the world with a point of view. Then we (unconsciously) set out to find evidence to confirm that point of view. This "confirmation bias" is the natural reflex to pay more attention to the stuff that supports your point of view while discounting or not even noticing the stuff that contradicts your point of view.

Stereotypes, both conscious and unconscious, also trigger the confirmation bias. Studies show that we are more likely to notice, remember, and search for additional information when it confirms a stereotype.

We can move from believer to builder when we see what is not visible and challenge it.

### How to See More, Respectfully

As you make your own efforts to counter the confirmation bias by entering conversations and spaces where people from marginalized groups are speaking more freely than usual, be prepared. Know that you will feel self-threat and that affirmation will not always be provided.

Do not allow yourself to write off what you are hearing

as "divisive." Stay where you are, so you can learn more, rather than exiting. Don't give up that access. Second, avoid jumping into others' conversations, arguing for your perspective, or sharing your views and experiences. You will feel self-threat that will make you crave affirmation. Don't let that cookie craving lead you to crowd out or hijack the discussion.

Third, notice the judgments you are having about other people. Challenge yourself to hear their experience without questioning its expression. Avoid being the tone police.

## Systemic Headwinds and Tailwinds

In this context, privilege may or may not have anything to do with money. Privilege is about whether cultural, legal, and institutional systems are experienced equally by everyone. The key insight is that many systems privilege some people over others.

Have you ever flown east-west versus west-east in the United States? You may have noticed a difference in flight times. It takes as much as 40 additional minutes to go from New York to L.A. versus L.A. to New York, for example. The difference lies in the headwinds one faces going west versus the tailwinds going east.

Antiracist educator and author Debby Irving uses an often-cited headwinds and tailwinds metaphor to explain the invisibility of these systemic, group-level differences. Headwinds are the challenges—some big, some small, some visible, some invisible—that make life harder for some people but not for all people. When you run against a headwind, your speed slows down, and you have to push harder.

When you have a tailwind pushing you, it is a force that propels you forward. It is consequential but easily unnoticed or forgotten. When you have the tailwind, you will not notice that some runners are running into headwinds. They may be running as hard as, or even harder than, you, but they will appear lazier and slower to you. When some of them grow tired and stop trying, they will appear self-destructive to you.

Our failure to see systemic headwinds and tailwinds in the world around us leads us to blame the people facing the headwinds. As a result, we confuse equality and equity. Equality says we treat everyone the same, regardless of headwinds or tailwinds. Equity says we give people what they need to have the same access and opportunities as others, taking into account the headwinds they face, which may mean differential treatment for some groups. We see a meritocracy where one does not exist.

## The Power of Ordinary Privilege

Ordinary privilege is the part of our everyday identity we think least about, because we do not need to. People who can walk are less likely to think about their legs than people who cannot walk. White people are less likely to think about their race. Straight people are less likely to think about their sexual orientation. The upwardly mobile are less likely to think about their economic mobility.

It is important to realize that this is not because there is anything inherently better about legs, whiteness, straightness, or upward mobility. Rather, the society in which we live is structured around these identities. Those whose identities do not vary from the norm are lulled into thinking that their experience is universal.

Since each of us has a multifaceted identity, each of us probably has at least one domain of ordinary privilege. What makes ordinary privilege a *privilege* is that it usually brings us some influence not easily given to those who lack it.

For example, psychologists Alexander Czopp and Margo Monteith found that white people who confronted a person expressing racial stereotypes were judged less negatively (by the offender) than black people doing the same. They also found that offenders felt more guilt and were more likely to apologize if confronted about their behavior by a white person than by a black person. Both black and white confronters were equally effective in decreasing the offender's future stereotyping.

Whether in organizations or on social media, ordinary privilege is a secret weapon. When those who are outside of the targeted group get involved, for better or for worse, they will be heard differently. The result of this reality is a great opportunity for each of us to see and use our ordinary privilege.

## How to Use Ordinary Privilege to Fight the Headwinds

Subha Barry, former head of diversity at Merrill Lynch and Freddie Mac, encourages us to share the work among multiple people, including those with ordinary privilege. "In organizations, we typically tap the same person to take the lead on these issues," Subha observes. "But, instead, we need to learn from how a flock of birds flies." The lead bird of the V formation literally flies into the headwind, cutting the wind so that the other birds can coast in the jet stream. The key to the flock's success is that the lead bird is not per-

manent. The lead rotates backward, allowing another bird to step into the role.

In her current role leading Working Mother Media, Subha advises organizations to "find other people to step up. Do it for a limited period of time and see what they come up with."

Do not rely on the same people, especially the people facing the headwinds all the time, to lead the flock all the time. Invite others in to be educated and to use their ordinary privilege. More of us can do more than we realize.

## Part III: Builders Opt for Willful Awareness

There are four modes of behavior that prevent believers from humanizing others and from engaging in builder behaviors. In these four modes—savior, sympathy, tolerance, and typecasting—good intentions are counterproductive.

By trying to be a hero, by feeling bad, by treating difference as something to be tolerated or ignored, or by typecasting someone to be someone they may not be, we operate in modes that do more harm than good. Look out for these four "good" intentions.

**Savior mode**. We have a range of motivations for helping others. We volunteer our time and contribute our dollars to people and causes and, in doing so, we feel good when others let us help them. Social scientists call this the "warm-glow effect."

That warm glow is a few favors away from being a serious problem in which we see ourselves as saviors who sweep into causes and communities to perform a rescue mission. In the savior trap, we get hooked on the warm glow. The work becomes more about us than others. We miss opportunities for others to take the lead or gain capabilities because we would lose the opportunity to be a savior. The way out of savior mode is to redirect your attention to the person or issue you care about.

**Sympathy mode**. The sympathy mode is much like the savior mode, but it is less about solving the problem and more about being the one who does not have the problem. We feel bad for those who do have the problem, but not in a way that connects us. Our well-intended sympathy makes it more about us than about them. Our own feelings are at the center. When we feel sorry for someone, we inadvertently put ourselves in the high-power position. For believers, this feeling of power can lead us to unintended perceptions and actions.

**Tolerance and difference-blindness mode**. We talk about tolerating gay people, and Muslims, and immigrants, and so on. Author Suzanna Walters explains the problem in her book ***The Tolerance Trap***. Tolerance is not an end goal, she says, but a dead end. Tolerance otherizes difference.

Corporate efforts to "manage diversity" are another well-intended but misguided example of the tolerance mode. Business school professor Martin Davidson explains in his book ***The End of Diversity As We Know It*** that managing diversity suggests there is a problem to be solved. The alternate approach is leveraging difference, where there is an opportunity to be seized. When organizations opt for managing diversity rather than leveraging difference, they engage in different activities and reap different outcomes as a result. The tolerance mode is defensive and narrow.

Color-blindness is another flavor of tolerance, and in America it is a popular flavor. Color-blindness is a version of difference-blindness and tolerance that ignores headwinds and tailwinds. When we do this, we unintentionally mask the reality that we are not all walking through life having the same experiences and the same conversations. In America, being black or gay or Muslim affects one's daily reality in ways both positive and negative. When we "don't see difference," we don't see the reality of headwinds and tailwinds.

**The typecasting mode**. The typecasting of women as "wonderful, more nurturing and benevolent than men" is what psychologists call "benevolent sexism." When "women are wonderful," they are penalized for "nonfeminine" behavior, such as competitiveness, ambition, conviction, and career focus. Women are put on a narrow pedestal, and the fall is steep. We also penalize men for behavior we expect from women.

Typecasting also emerges from other positive stereotypes, like the "model minority" stereotype of Asian Americans as smart, hardworking, docile, and wealthy. When we assume academic orientation, we miss athletic potential. When we assume financial security, we miss economic need. We see the pedestal, not the person.

All of us will fall into all of these modes some of the time. If we can approach that reality with a mindset of getting better, rather than of not being bad, we will feel less taxed by the fear of doing something wrong.

Inclusion is what happens before and after the official decisions in which people are formally brought into a group.

## Part IV: Builders Engage

Some people use "diversity" and "inclusion" as interchangeable buzzwords. However, building diversity and building inclusion are distinct.

Inclusion is what happens before and after the official decisions in which people are formally brought into a group. Think of diversity as the gateways to schools, organizations, and communities, and inclusion as the pathways leading up to and after that gateway. In other words, gateways are the decision points when we track the diversity numbers, such as admissions, hiring, promotions, and salary decisions. Pathways are the moments that shape those outcomes, but they are not tracked by a formal statistic.

### Meetings Are a Big Opportunity

The average employee spends about six hours per week in scheduled meetings with three or more attendees. Given how hard it is to synchronize multiple people's presence and attention in a single time and potentially a single space, one might expect meetings to be sources of great value. Instead, employees report a high failure rate that would be unacceptable in most activities; nearly half of their meetings are ineffective.

Tony Prophet, the chief equality officer at Salesforce, thinks this is a missed opportunity. Meetings are filled with "thousands of moments" that reflect the culture of an organization and the culture of more or less inclusion.

Meetings can operate as a keystone habit for inclusion. Just as systemic patterns in society will continue unseen and unfelt, so will systemic patterns in meetings. Meetings will replicate the headwinds and tailwinds of the organization and society unless we design them to do otherwise.

More "deliberative design" of meetings has the potential to redirect headwinds and tailwinds. One easy way to redesign meetings is to think about who sits next to whom. If you are noticing patterns in who sits with whom, and you have influence over the seating, consider assigning seats with a particular purpose in mind or even randomly.

At the core of an effective meeting is effective listening. Even if we are not in formal, senior positions and even if we do not attend meetings often, listening is still critical to inclusion. How well we do it has great influence over how others experience what communication scholars call the "talk-saturated" moments of our lives.

Few of us are good listeners. Most of us think faster than others speak, creating the potential for significant mind wandering. To make things worse, we are not as good at listening to some people versus others. Being a better listener also tunes us in to whose voices are being discounted or muted. This kind of pathway bias is hard to measure and prove to others, so it becomes critical that we bear witness to it when it happens (or listen to those who did bear witness). Then we can amplify those who are muted and include those who are excluded.

### Show Meaningful Support

Rabbi Eric Solomon welcomed his guests to the Beth Meyer Synagogue in Raleigh, North Carolina. As the new rabbi, his installation ceremony marked the beginning of his service in 2005. Many members of the synagogue, local community leaders, and leaders of nearby churches were arriving to participate in this long-standing tradition.

And something was different from tradition. When Rabbi Solomon first arrived, he had reached out to his counterpart in the Muslim community, Imam Mohammed Baianonie. They spent some time getting to know each other over tea and biscuits. Rabbi Solomon invited the imam to the installation ceremony, and he came, bringing members of his congregation and his blessings. Some people were surprised to see them walk in.

Surprise quickly melted into hospitality. For the first time that anyone could recall, a Jewish community leader had reached out to a Muslim community leader. "My congregation received our honored guests as if they were entering the Tent of Abraham. It was one of the proudest moments of my career," Rabbi Solomon later wrote.

Over the following decade, the relationship between the

rabbi and the imam grew. They talked about religion. They ate together. They brought their congregants together to do volunteer work in the community. They built a relationship between themselves and their communities.

Then a grisly triple murder became national news in 2015. Three immigrant Muslim graduate students were shot in the head in nearby Chapel Hill. Conflict over a visitor's parking spot in their apartment complex had presumably escalated. Amid growing Islamophobia, the Muslim community felt terrorized.

The funeral services were held on a soccer field to accommodate more than 5,000 attendees. From across the world, people and religious organizations reached out to express their condolences. The mosque was overwhelmed by the outpouring and needed help coordinating with all those reaching out. Because of the trusting relationship they had built with Rabbi Solomon, the leaders of the Muslim community chose him to play this delicate role.

### Lessons for Offering Support

Through this and other relationships, Rabbi Solomon has learned a few lessons about how to offer support. First, Rabbi Solomon explains, open your heart to what the other party needs, if anything. "It is very humbling to sit and say 'Let me let you lead. Let me ask questions and be curious and listen deeply. Let me listen to what you need.'" Showing support does not begin with having a solution. They know more than he does.

Second, he acknowledges that he sometimes experiences inner conflict while listening to people. Third, Rabbi Solomon explains, be prepared to be uncomfortable. "Sometimes, when I am proximate to someone's problems, I begin to realize how much privilege I have as a male, as someone with light skin, and so on," he confesses. "It can be very discombobulating internally. Even though I'm trying to be helpful, they are angry at me. And they have the right to be angry. But it can be socially, psychologically dangerous to feel attacked. It's very hard work."

Rabbi Solomon's description—hard work—perfectly explains how it feels to cope with self-threat. We will not always get the affirmation we crave. Craving the affirmation does not make us bad people as long as we work to see the craving for what it is and prevent it from being a burden to others.

All of us can opt for willful awareness rather than willful ignorance. All of us can engage. Each of us can find our own way to be builders and to support builders. The only wrong way is to settle for only being believers.

**Kendra Adachi** is a two-time New York Times bestselling author, the creator of The Lazy Genius Podcast, and an expert on compassionate time management. She lives in NC with her husband and three kids.

*A Book Review by Soundview*

# Manage Your Time Without Being At Its Mercy

Life can feel like a lot at times. Some aspects overlap in your personal and professional lives, but at the end of the day, you are probably left feeling overwhelmed and like you are pouring from an empty cup. So you panic and try to manage everything because that is expected of you, but you probably flop into bed, berating yourself for everything that didn't get done and how the rest was completed.

That doesn't feel very good, does it? Particularly for women, who are expected to be all things to all people and get everything done with a smile. You've probably picked up several different time management books and wondered why they're not resonating with you. It's because, in many ways, they're not written for you.

In ***The Plan: Manage Your Time Like a Lazy Genius***, Kendra Adachi proposes a necessary change. She shares that 93% of time management books aren't written with what women are expected to get done in mind. They are typically written by those who don't have a boss and don't have to manage the things a working woman has to deal with daily. She acknowledges that there is wisdom to be gleaned and gained from these books but wants to share a time-management book that highlights and amplifies women's voices and needs.

Adachi shares the time management wisdom she has gained and curated over the years to make the reader feel she is sitting across from them, sharing a warm drink and a laugh. The Plan is written in three sections that are easy for the reader to digest and refer back to. Section One highlights the principles of the PLAN; in Section Two, Adachi shares specific, practical strategies, and Section Three is filled with pep talks that will help the reader feel off-kilter due to various time-management struggles. Each closes with a recap and notes to ensure the reader fully grasps the knowledge she is sharing.

## The PLAN

Adachi begins by breaking down the principles of The PLAN for the readers, saying that each time they pick up The Plan will

be a chance for them to discover and apply something new. She states that the reader lives in an "everything at once" way of life that was amplified by the Digital Revolution being intermixed with the Industrial Revolution. A high level of productivity became the standard way of life. However, it was based on a male-dominant way of strategy and execution and didn't consider the unique challenges that women face, making them think they are the problem.

Adachi proposes that the system is not just the problem; the system is broken. With that in mind, she shares two beliefs for the readers to apply to their lives. First, she states that the goal the reader needs to work towards is not greatness but integration. Integration means the reader is living fully knowing and loving themselves. They can tend to their bodies instead of mastering them and forcing them to work at a capacity that does not fit how they want to live. The second belief is that the reader should start where they are, not with where they want to go. This will allow them to tend to their bodies in the season they are in with all of the things that come along with it, staying rooted in the present.

Adachi shares that since the goal isn't everything at once, the reader can use her visualization of being in the middle of the ocean on a pool floatie of their choice and move towards the shore at the pace that feels right to them and doesn't overwhelm them to the point of drowning.

As the reader begins shifting their mindset away from everything at once, Adachi encourages them to proactively and reactively name what matters. By proactively naming what matters, the reader will be able to posture themselves in a way that allows them to tend to their bodies and stay focused when facing the tasks ahead of them. They can also break down the task ahead of them into smaller choices, prioritizing what is most important even further. When the reader is faced with an in-the-moment decision, she tells them to either trust their gut or trust what already matters but to keep asking themselves what truly matters right now. Each season is different, and that will influence the decisions they make.

## Breaking Down The PLAN

Adachi shares that the lens the reader can use to manage their time is The PLAN, which highlights four points from her Lazy Genius principles: Prepare, Live, Adjust, and Notice. She states that these points can be as a three-pyramid, and the walls are labeled Plan, Adjust, and Notice, and they all support the reader as they Live. This contrasts with a culture that orients towards thinking about what was and what could've been changed. With this in mind, the reader can think of living as painting a picture, where the picture can be adjusted, rather than the static picture a puzzle presents. The reader can fully live in the moment, knowing that they can be kind to themselves and be flexible so they can focus on what they need.

As the reader learns how to Prepare well, Adachi states that the proper order for them to do this begins by naming what matters, calming the crazy, and trusting themselves as they face what's next. By naming what matters in the season they're in, they will be able to curb the instinct that tells them to charge frantically ahead and instead notice what has them feeling overwhelmed and then begin to calm the nerves they are experiencing. Once they have done this, the reader can trust themselves and see the situation more clearly.

Women face a unique struggle because they move into systems that weren't built for them and tell them they can't trust themselves. However, Adachi encourages them that while they will not always get it right, that doesn't make them untrustworthy; it simply makes them human.

Next, Adachi shares that while Living is a pretty basic concept, the reader is faced with so many inputs and is taught to take in as much as possible and she doesn't think that's a healthy way to live. Instead, she encourages the reader to recognize the power of the season they are in, stating that it will be challenging for the reader to live well if they ignore where they are now. They can do this by making the season smaller, breaking it down, naming what matters at the moment, and remembering three mindsets to help them as they begin the process. They need to match the expectation to the energy they can give, remind themselves that where they are is not forever, and they are allowed to change their minds.

Finally, Adachi calls the reader to Notice. When the reader does this, it must be done without judgment or swooping in to fix the problem. Noticing doesn't call for immediate change but might eventually lead to it. Rather, the reader is learning to listen to their bodies and how outside forces might be influencing them and noticing kindly. This will remind the reader that they are painting their lives, not forcing themselves into a puzzle. Noticing will allow them to adjust when needed. Adachi also reminds them that the goal is for the reader to integrate themselves, starting wherever they are.

## Bringing It All To The Table

Adachi takes a moment to speak directly to women and says that there is a link between a woman's ability to manage and their hormones. Since women cannot live according to the same rhythms that men do and yet are told they must, she shares an in-depth look at what women are up against and a strategy for them to help set a rhythm that works for them and their bodies. She believes that while a change is coming and more research and support is being done, it is up to women to change the narrative.

The strategy she lays out invites the reader to take the time to Notice, Prepare, Live, and Adjust, and states that it is for both women and those who don't have periods. This invites the reader to tune in with their body and its needs. Everyone experiences unique pauses and rhythms; when they understand it better, they can bring their whole self to every area of their lives.

The reader doesn't need a quiz to tell them who they truly are, though Adachi acknowledges the value in naming who you are. She states that no book or system can help the reader live a fully integrated life, so she encourages looking at life as a painting instead of puzzles. This allows the reader to adjust as they need to, depending on what they are able to bring to the table that

> *Adachi decides to switch up the PLAN acronym to NAPL to give the reader a tool to help them better manage their journey to integration.*

day. Everyone has a unique brain chemistry that influences how they are able to cope with situations in front of them, and Adachi wants the reader to embrace every color on their palate as they learn to embrace, honor, and love themselves on this journey.

Adachi decides to switch up the PLAN acronym to NAPL to give the reader a tool to help them better manage their journey to integration. She says they need a more comprehensive perspective on what matters to them. The reader is invited to Notice their energy first and allow it to influence how they manage their time, Adjust their expectations to the reality they are faced with, Prepare to pivot following the steps she lays out, and finally, Live, remembering the importance of relationships and connections with the people around them.

## Putting in the Work

Now that the reader understands this new way of living, Adachi invites them to explore the strategies she outlines. She cautions them not to apply everything all at once because that isn't how the PLAN is built; instead, she reminds them to start small. The strategies are laid out in a way that will guide the reader in a linear path, but instead, they are a collection that aligns with the PLAN and helps them as they face the unique situations they may encounter.

Rather than breaking down what they have learned so far, the reader is invited to continue painting their life and start with today. Today has its challenges and worries, and it's vital to recognize when they are being overwhelmed by fragmentation and urgency throughout so they can approach them with the necessary caution. By prioritizing what's important for that day, the reader can adjust based on the energy in their tank and still show themselves.

## Figuring Out What Works

For those who prefer to plan a week at a time, Adachi shares a strategy she says is like a capsule wardrobe. While there are staples to be utilized, one day might see the reader planning down to the minute while another might see them completing a couple of tasks written down on a scrap of paper and calling it a day. The reader is still getting done what they need to, but they are choosing to be flexible in how they do it, and they have a chance to discover new, fun ways to help them organize their week. However, when the reader decides to approach their week ahead, Adachi gently reminds them that staying grounded and kind to themselves is more important than staying on task.

Similarly, Adachi says that she thinks each month has its own unique personality, and as such, the reader needs to consider starting it where they are and looking back at where they were before they attempt to look ahead. By reflecting on where they were from month to month, the reader can help cultivate kindness for themselves in their life season. They can name what matters and make have-to and hope-to lists. The reader should avoid normalizing each month because not only is each moment of each month, they are different.

Adachi offers wisdom for readers as they seek to plan their seasons. She encourages them to keep naming what matters, noticing where they have been and where they are, and using this to help them adjust as they look ahead. These things can lay the foundation for the reader, as they have identified what is most important to them and put it in its proper place. Adachi shares questions that help the reader reflect on the past so they are grounded before they move into the future.

For readers who enjoy projects, Adachi shares tips for how to face them. Projects aren't simply limited to home renovations; she acknowledges that projects often have projects built into them. Whether it is an existing project or the reader hopes to start a new one, the reader is given a list of questions for both scenarios so that they can begin and finish the project. As a self-proclaimed recovering perfectionist, Adachi shares that a different way for the reader to see goals is by using a Someday list. This will allow them to still have goals to work towards, whether it is the acquisition of a skill or a dream vacation, while not feeling weighed down by their dreams simultaneously. However, not everything on the Someday List carries the same weight and should be treated and approached the same way, and the reader needs to take that into account.

Now that the reader has the strategies they need to fully integrate themselves into their lives instead of seeking greatness, Adachi encourages them to practice checking in with themselves to experience the fullness of the PLANs benefits. Whether it is a daily, weekly, or monthly check-in, the rhythm she suggests is the same. She calls the reader to prepare at the beginning, adjust where they need to be in the middle and notice where they have been at the end.

As the reader reflects on the different strategies and practices they have learned, Adachi says that as they move forward, their goal is simply to live an integrated life that begins precisely where they are, not where they want to be. They don't need to run and apply everything simultaneously because that is the old mindset trying to sneak back in and reclaim its place. Instead, the readers can remember to be kind to themselves and apply the principles they have learned when needed.

## Friendly Reminders

Before closing, Adachi encourages the reader with pep talks that she hopes will help them meet where they are. She states that the pep talks are not intended to be quick fixes; instead, they are there to help the reader catch their breath and avoid a Big Black Trash Bag moment. Feeling overwhelmed is not a place the reader must stay, and they should not.

## Setting Boundaries

When the reader is faced with a situation where something is added to their plate, Adachi reminds them to name what's important and learn to be okay with letting certain things and saying no to other things. Why? Because not everything can matter all at once, the reader can't be everything to everyone, and there will be times when their plan falls apart. When this happens, feelings of frustration and guilt attempt to swallow them, but the reader can recall the principles and strategies that Adachi shared with them. The reader needs to remember to take a breath, treat themselves with kindness, pivot when needed, and remember that they are working towards integration and not greatness.

## Working Through the Struggles

There are times when the reader may feel alone and unmotivated. There are also times they are exhausted, wish things were different, and may not even have a plan. When this happens, Adachi encourages the reader to find their circle and ask for help, redistributing the labor to ease some of their burden. It can also for the reader to reframe their mindset when they struggle with task initiation by starting as small as possible, and taking steps towards the task's completion. When exhaustion hits, she suggests taking a seventeen-minute nap. Even if sleep doesn't come, taking a few moments to purposefully be be still and quiet is helpful to the reader and she reminds them that rest is not a reward, it is a requirement so they are able to bring their best, whole self forward.

When life doesn't look quite how the reader thought it would or they're struggling with not having a plan, Adachi says that there is encouragement to found. She reminds the reader that they are allowed to care and where they are is good and invites them to do a Heartbeat Check In to help them in the season they are, saying that it's possible for the reader to present with their struggles as well as find the good that those struggles bring. It's possible for the reader to create a plan, whether planning comes naturally or is a struggle for them. A plan is not a requirement to living but it can be helpful when something springs up out of the blue. Not matter what, Adachi invites the reader to start right where they are to integrate their whole self into their lives, one small, helpful decision at a time.

*The Plan: Manage Your Time Like a Lazy Genius* by Kendra Adachi is an enjoyable book that is easy for the reader to digest and understand. Adachi gently guides them to a new way of thinking with humor and easy-to-apply strategies to help them on their journey as they adjust their mindset from what has been ingrained in them. She shares what has helped her and tells the reader that the goal is not greatness but integration so they can live their lives fully. She encourages the reader to be gentle with themselves and notice the different rhythms and pauses they experience. She reminds the readers to be gentle with themselves and that where they are is good right now and invites them to revisit the PLAN when they are ready to try a new strategy or principle.

## THE SUMMARY IN BRIEF

Development - a natural process that makes living beings grow over time into possible future selves - is a hallmark of all life. Yet what seems so simple for flowers and infants is far more complicated for adults. Development is possible throughout our lifetime, until our very last breath. As adults, though, we find that this same force that is supposed to move us to our potential can stall. When we encounter a seemingly intractable problem in some domain of our life and try to change, we can find ourselves at a loss.

What makes us stuck, why can't we change, and should we even keep trying? The battle for self-change is often grueling and painful, and we may want to give up, but giving up the struggle feels like abandoning the person we could become: our possible self. In ***The Possible Self: A Leader's Guide to Personal Development***, author, personality psychologist, and adult development expert Maja Djikic calls on us to not give up, helping us transform with knowledge and techniques that we can use to get unstuck and create a lasting change in our lives.

## IN THIS SUMMARY, YOU WILL LEARN:

- The five parts that make up the Wheel of Self.
- How to connect to our core wants to develop.
- Why changing behavior alone does not lead to lasting change.
- The three minds that work together to change frozen constructs.

## Part I: The Wheel of Self

### When the Wheel Stops Working

One way to think of the self is as having five different parts, arranged into a wheel: motivation, behavior, emotion, mind, and body. When most of us try to change, we often focus only on behavior. What we forget is that behavior is governed by the other parts of self.

When the Wheel of Self is moving well, all five parts of the self are in harmonious, developmental motion, seamlessly supporting the change. When in the midst of this process, we don't have to try to change, apply willpower, or develop habits to keep our new behaviors. It is as if all parts of the self conspire to develop a new way of being. When the wheel of self is moving well, we don't *try* to develop, we simply *do*.

What happens when the Wheel of Self stalls? We try, over and over again, to change, but our strategies to build new behavioral routines never seem to work. When we try to change behavior in one direction, while our minds, emotions, and bodies are fighting the opposite tendency, what we are producing is not a self change but a form of self fragmentation.

This kind of change leaves us stressed, exhausted, and full of guilt once we revert to the old behavior. *For a successful and lasting inner change, we need all the parts of the self to move together.*

Motivationally, what we want may get very intense and turn into a desire–a chronically unfulfilled goal. When we don't get what we want for a long time, we can lose hope, yet this hopelessness is temporary. We can try to stop wanting some change or pretend that we no longer want it, but the desire will surge again.
