scolding the wrong people for misbehaving. But it can also be leaving a sponge in a patient during surgery, causing a fatal infection, or wrongly diagnosing an illness.

The intensive study of errors in high-risk fields offers great insights into what causes people to make mistakes and what works best to prevent them. Although the expertise may be different, human reaction and behavior, for the most part, translate across professions.

James Reason, a professor of psychology at the University of Manchester in England, defines an error as the failure of a planned sequence of mental or physical activities to achieve its intended outcome when these failures cannot be attributed to chance. A slip or lapse is when action does not go according to plan — when we step on the gas instead of the brake. A mistake, however, is when the plan itself is inadequate to achieve its objectives.

We usually judge the severity of the mistake by the outcome or, as Bryans says, the scale of the consequences. A mistake can occur with the best information and the best intentions or through carelessness or lack of knowledge. In January, most banks will receive checks with the previous year written on them. We know every year those errors are going to happen. This type of error is called "strong habit intrusion" and is the most common of all error types.

### Active Errors versus Latent Errors

A concept that is key to how we think about errors is that of differentiating between active and latent errors. An active error, for example, is the pilot crashing the plane. The latent error is a design malfunction causing the plane to roll unexpectedly, which the pilot couldn't control.

"If you want to understand human error," writes Sidney Dekker, author of *The Field Guide to Understanding Human Error*, "you have to assume that people were doing reasonable things given the complexities, dilemmas, trade-offs and uncertainty that surround them. Just finding and highlighting people's mistakes explain nothing. Saying what people did not do or what they should have done does not explain why they did what they did."

Dekker talks about the tendency to examine the mistake from outside the tunnel, where we can clearly see every twist and turn, every possible problem, and observe where every road leads. How different that is from being in the tunnel, where we have to make split-second decisions, perhaps based on faulty data and unclear directions, often while we are stressed or scared. Hindsight bias makes us assume that a bad outcome could only be preceded by a bad process. It causes us to oversimplify history relative to how people understood it at the time it was happening.

Most of us know the story of how Moses became angry at his followers for creating the golden calf to worship while he was busy getting the Ten Commandments on Mount Sinai — and in his fury at his people's lack of faith, he smashed the tablets. The original tablets symbolized unattainable purity, Irving Greenberg, a Jewish scholar, says, and once Moses destroyed them, he and his followers had to work through heartbreak, reconciliation catharsis, and ultimately the creation of new tablets. This new set of tablets was "the product of hard-won repentances, built on realism, forgiveness and acceptance of others' limitations," Greenberg writes. "Out of our brokenness we become stronger than when we claimed to be whole."

We all — from Moses to us — must acknowledge that we can never be perfect, nor should we try to be. But defining mistakes and acknowledging them is only the beginning. It doesn't do us much good unless we also try to change our approach in ways that will benefit us and those around us. ●

## It Starts Early

Carol Dweck is a professor of psychology at Stanford University whose highly influential research has closely examined children's reactions to mistakes. She found the children commended for being smart are often less willing to take chances than those praised for making a greater effort. When we applaud children for their intelligence, she said, "we tell them that this is the name of the game: Look smart; don't risk making mistakes."

As a graduate student at Yale, Dweck started off studying animal motivation and learned helplessness: the animals sometimes didn't do what they were capable of doing because they had given up after numerous failures. Dweck wondered how this translated to humans — why do some children quit in the face of failure while others are motivated?

What Dweck's research showed is that whether or not we think we have the innate talent or skills to do something — as opposed to believing in general we can work and improve ourselves in most areas — has a significant effect on how we view mistakes. Those who see their abilities as fixed, as innate and inflexible, are "entity" believers in psychological parlance, or as Dweck terms it, they have "fixed mindsets." They fear mistakes because they think they are simply not smart or talented

enough to do the task required, and they learn to be defensive and foist blame on anything or anyone but themselves. Those who hold "incremental" beliefs, or in Dweck's language, "growth mindsets," see ability as a malleable quality and therefore believe that with enough effort they can overcome obstacles. They may not embrace mistakes, but they tend to see them as more of the process of learning than as a reflection of their intelligence or abilities.

Socioeconomic class, culture, and ethnicity all come into play when delving into how we respond to mistakes and our willingness to learn from them. It starts with not only the overt messages but also the covert messages our parents and other authority figures gave us. Do we tell our children that "it's okay to make mistakes" and then yell at them for spilling milk?

The key question is how much we believe we can do with what we were born with. If we believe our skills are pretty much set in concrete, we are going to avoid and dread mistakes, because what do they show us except that we've screwed up? If we believe that with more effort we can keep getting better and better, then we can view mistakes less harshly and as part of an overall process of growing and learning.

## "Fail Often, Fast and Cheap"

Chris Argyris, a professor emeritus at Harvard Business School, has spent decades writing about how employees in organizations learn from errors and is considered one of the great theorists in organizational learning. Argyris argues that most responses to errors fall into the category of single-loop learning — when a mistake is detected and corrected without questioning the underlying values of the system. The phrase is borrowed from electrical engineering: a thermostat is defined as a single-loop learner. The thermostat is programmed to detect states of "too cold" or "too hot" and to correct the situation by turning the heat on or off. Double-loop learning, on the other hand, means to question the underlying factors themselves and subject them to critical scrutiny — it turns the question back on the questioner and asks not only about objective facts but also about the reasons and motives behind those facts.

Not all mistakes are alike, and not all require examining and challenging the surrounding criteria. Imagine an office where workers constantly debated every error — making the wrong change, mistyping a law brief — rather than simply correcting the problem.

Sometimes, however, it may seem like single-loop learning is all that is necessary, but that just short-circuits the real learning process. Argyris gives the example of a CEO who found out that his company inhibited innovation in employees by subjecting every new idea to more than 275 checks and sign-offs. He promptly eliminated 200 of them, and the result was a higher innovation rate. It sounds like a successful case of identifying a problem and resolving it, but it is only a case of successful single-loop learning by ignoring a more fundamental problem of why the checks and sign-offs had been around for so long. A double-loop approach would require the CEO to ask employees who told him about the problem some tough questions, such as "What goes on in this company that prevents you from questioning these practices and getting them eliminated?"

### The Reasons We Play It Safe

In *Mistakes Were Made (But Not by Me)*, social scientists Carol Tavris and Elliot Aronson write that all of us share the impulse to excuse what we do, to convince ourselves that we didn't act in a bad or irrational way, and to avoid taking responsibility for harming someone. Most companies — like most people — don't see themselves as promoting a work environment where mistakes are feared and avoided. They say they encourage risk taking and innovation, but in reality, they don't. All too often mistakes are treated as something shameful that should be flung aside as quickly as possible rather than as something to be examined and learned from. And because of this, companies — and employees — fail to uncover systemic problems that may be leading to the errors.

Paul J.H. Shoemaker and Robert E. Gunther broke down into four categories the reasons that they think most human beings are resistant to making mistakes and therefore play it safe:

- **We are overconfident.** We are often blind to the limits of our expertise.
- **We are risk-averse.** This is because "our personal and professional pride is tied up in being right."
- **We tend to favor data that confirm our beliefs.** The result is that we don't often see the alternatives.
- **We assume feedback is reliable.** In reality, it is often lacking or misleading.

In their book *Leaders: Strategies for Taking Charge*, Warren Bennis and Burton Nanus advise that institutions reward admissions of mistakes as part of the organizational culture. Bill Gates, founder of Microsoft, is often quoted as saying, "How a company deals with mistakes suggests how well it will bring out the best

ideas and talents of its people."

While most people will do anything to avoid making a mistake, research has shown that some people actually respond better to certain types of training when they are encouraged to make gaffes rather than to avoid them. As Rutgers professor Stanley Gully states, failing to fail can restrict individuals from exploring alternatives, inhibit risk taking, and perhaps lead to complacency.

Carol Dweck argues that adulation of talent proved fatal for Enron. "Basically, it forced them into the fixed mindset. We know from our studies that people with the fixed mindset do not admit and correct their deficiencies."

The types of mistakes we make in the workplace may be of a different sort and have a different impact than those we make in other parts of our lives, but the tools we need to react to and learn from them in a positive manner are the same. Remember the words of Nike's founder, Phil Knight, who changed the sports shoe industry: "The problem in America is not that we are making too many mistakes but that we are making too few." ●

## It's Not Brain Surgery … *But What If It Is?*

Published by the Institute of Medicine, the *To Err Is Human* study immediately attracted enormous attention among both health professionals and the public. The study cited a staggering statistic: at least 44,000 people and as many as 98,000 people die each year in hospitals in the United States as a result of preventable medical errors. One of the report's authors compared that figure to three fully loaded jumbo jets crashing every other day.

The authors divided types of errors into four groups:

- **Diagnostic.** This includes error or delay in diagnosis.
- **Treatment.** This includes error in performing an operation, test, or procedure.
- **Preventative.** This includes failure to provide preventative treatment or inadequate monitoring.
- **Other.** This includes failure of communication, equipment failure, or other system failure.

The initial step, of course, was to examine why such errors occur. The report cited a number of reasons, including the decentralized and fragmented nature of the health care delivery system. Health care, the report stated, is a decade or more behind most other high-risk industries, like aviation, in paying attention to basic safety, and this is due partially to the lack of one designated government agency devoted to improving and monitoring safety.

A key point made in the report is that "the majority of medical errors do not result from individual recklessness or the actions of a particular group." More commonly errors are caused by faulty systems, processes, and conditions that lead people to make mistakes or fail to prevent them.

In trying to classify the severity of mistakes, we need to look not just at the mistake itself but also at the outcome and the reason it occurred. The concept of *Just Culture* represents an attempt to find the balance between only blaming the individual and never blaming the individual. An underlying idea in *Just Culture* is that we as a society are too focused on outcomes and not on choices and behavior.

### A Culture of Awareness

The way to create a culture more aware of errors, then, is not to institute an atmosphere where there is zero tolerance for mistakes. Rather, the idea should be to establish an environment where people feel safe to ask questions and experiment.

Although we strive to do the best we can, perfection is not an option. The cultural barriers to working through and learning from mistakes may be more ingrained in the medical field than in other professions, but the basics are true across the board. First of all, avoid scapegoating; the problem often isn't one of an incompetent worker but of a systemic failure.

We want, within reason, to accept the mistakes of others and have others accept ours. What we learn from the body of research that has grown out of addressing medical mistakes is that even in this most complex arena, such change is possible. ●

## Lessons from the Cockpit

The more I read about it, the more I realized how much has been discovered about why and how people make mistakes — and the best ways to try to prevent them — by studying aviation, and cockpit crews in particular. The research in this field provides the building blocks for understanding error prevention across all fields.

Robert Helmreich, professor emeritus of psychology at the University of Texas, is one of the pioneers in developing systems to make aviation safer. He became involved in pilot safety in 1979, after a "series of embar-

rassing aviation mistakes," Helmreich told me.

Helmreich approached flight safety in a novel way: rather than look solely at how people interacted with the technology, he and his people looked at the human factors that lead to error. These include poor communication, fatigue, stress, and overwork. The Human Factors Research Project worked on the assumption that preventing accidents is the goal, not discovering what went wrong after the fact.

As Malcolm Gladwell notes, "Plane crashes are much more likely to be the result of an accumulation of minor difficulties and seemingly trivial malfunctions." Once again, we look back at the idea of many latent errors leading up to the obvious active errors — and it's the latent ones we need to uncover and fix.

Many aviation experts, like Robert Sumwalt, who flew for US Airways for almost 25 years and is now a member of the National Transportation Safety Board, believes that virtually all accidents can be traced back to human error somewhere in the system. "In reality, we'll never get rid of error," he told me. What we have to do is figure out what mistakes people are likely to make and try to prevent them or build such a robust system that even if a mistake occurs, it won't be calamitous.

### Lowering the Risk When Mistakes Are Made

What has proved successful in aviation is a combination of training programs, observation, attitudinal surveys, and data collection. Part of the goal of crew resource management (CRM) is to get pilots to understand how stress, work overload, and fatigue can cause them to make mistakes. One of the changes that grew out of CRM was the institution of the preflight briefing. Another key change was that junior crew members are not only allowed but expected to speak up to the captain if there's a threat.

Research shows that highly effective cockpit crews use one-third of their communications to discuss threats and errors in their environment, regardless of their workload, while poorly performing teams spend about one-twentieth of their time doing the same. As data on accidents accumulated, it became increasingly obvious that most accidents were related to breakdowns in crew coordination, communications, and decision making. One important way to reduce those accidents was a shift toward a more open culture that allowed questioning and recognized human limitations.

In developing systems to avoid errors we can't just go on assumptions but need to closely observe and collect all sorts of information to truly understand how people involved think and operate. The first step in identifying why mistakes happen and attempting to prevent them is to pinpoint embedded beliefs — and the corresponding values, such as it's not manly to admit exhaustion — and then use hard data to show why such beliefs and values can be harmful. The next step is to find ways to solve those problems with a flexible and ever-evolving approach. ●

## Blaming You, Blaming Me

There is a general consensus that women agonize more and blame themselves more and that men get over their blunders faster and tend to point their fingers at others. But is there any research to back up the belief that men and women actually respond differently to their screwups?

Patricia Bryans, when working at Newcastle Business School at Northumbria University in England, researched management development, gender and emotion, and women in management and conducted one of the few studies directly looking at how men and women react to mistakes in the workplace. She found that "Women tend to internalize and personalize the experience of their mistakes, taking them 'to heart' and continuing to live with them long after the event. Rather than looking to find fault externally, women blamed themselves. For men, by contrast, feelings were more likely to be externalized, directed outwards through anger at others, blaming 'pressures' of the system or emphasizing the particularities of the context in which they were operating." Men were also less likely to retain strong emotions after making a mistake.

### Is a Woman's Expertise Blindly Disregarded?

What about how women are viewed by others? A 2004 study found that women are much less likely to be viewed as experts than men — even when they have the requisite knowledge. The researchers found that not only were women's opinions more often disregarded than men's, but women who had no particular know-how in the area were viewed more favorably than women with greater capability — because the women without expertise tended to go along with the status quo rather than challenge it.

Women tend to agonize more about their mistakes, at least in the workplace. Women, fearing their mistakes may be judged more harshly than men's, are far more reluctant to risk them. In addition, women may steer clear of the possibility of making mistakes because they tend to be more affected, more cast down by them than men. If something causes you pain, you'll do a lot to avoid it.

Simply understanding that someone of the opposite sex — be it a colleague or a spouse — has the tendency to react to mistakes differently can help us. Neither sex has a monopoly on the "right" way to cope with mistakes. We could each take something from the other's playbook. Women tend to be more emotionally devastated by errors they make and dwell on them far longer than men. If a great deal of energy is spent on beating oneself up, then there is not much left over to actually learn from mistakes. Being able to depersonalize mistakes helps us view them more objectively and learn whatever lessons can be learned from them. Men, on the other hand, tend to find others at fault and then leave the error hastily behind — or at least appear to. They aren't as shaken up by mistakes and thus can be more willing to take risks. But on the other hand, not much learning can take place if one doesn't realistically look at how the problem occurred and what can be done to prevent it in the future.

## You Say Mistake, I Say Lesson

It is easy to assume that our approach to mistakes — whatever that may be — is universal. But that's not true. Our response to errors grows out of deeply embedded cultural beliefs and values — beliefs and values we're often not even consciously aware of.

Most of the comparative work available relating in any way to errors and mistakes compared North American and Asian — primarily Japanese — cultures.

One of the main differences, broadly speaking, is that Japan is oriented toward the community and the group, while the United States is a highly individualistic society. Hazel Markus, professor of psychology at Stanford University, explained it to me this way: "You don't feel your performance is a function just of you and what's inside you. [In a Japanese school] the reality is interdependence of people — my behavior is a function of yours and yours of mine." Making a mistake, therefore, isn't a reflection of your lack of ability or intelligence but simply that you haven't learned something yet. "Often teachers asked for a show of hands from students who had obtained correct and incorrect answers to a problem, and the show of hands for incorrect answers was often substantial. Students who criticized their own thinking were warmly acknowledged, as were students who explained the thinking behind their mistakes, so that, as one teacher said, 'Everyone in the class can learn from the students who tried to solve the problem this way.' Mistakes became opportunities to help classmates rather than failures to be hidden."

### The Bay of Pigs

When Carol Tavris and Elliot Aronson published *Mistakes Were Made (But Not by* Me*)* in 2007, they stated that the last American president to tell the country that he had made a terrible mistake — and to show that he had learned from it — was John F. Kennedy back in 1961. OK, granted, it was a doozy: he believed the claims and faulty intelligence of his top military advisers, who assured him that once America invaded Cuba at the Bay of Pigs, the people would rise up in relief and gratitude and overthrow Castro. The invasion was a disaster, but Kennedy actually took on board the harsh lesson by reorganizing his intelligence system and no longer uncritically accepting the claims of his military advisers, a change that may have made all the difference in averting tragedy in the subsequent Cuban missile crisis. Kennedy told newspaper publishers, "This administration intends to be candid about its errors. For as a wise man once said, 'An error does not become a mistake until you refuse to correct it.'" The final responsibility, Kennedy said, for the Bay of Pigs invasion was "mine and mine alone." Guess what? Kennedy's popularity soared.

James Stigler, a UCLA psychology professor who has written extensively on Asian and American teaching practices, says that "For Americans, errors tend to be interpreted as an indication of failure in learning the lesson. For Chinese and Japanese, they are an index of what still needs to be learned." There is a real fear in this country, he said, that if students are allowed to pursue the wrong path in figuring out a problem, they might, in fact, learn the subject matter incorrectly. So teachers tend not to leave a mistake uncorrected for even a short period of time. That is not true in Japan. Americans are motivated to achieve success, while Japanese are motivated to avoid failure. This is not to say that people from Japan don't want to feel good about themselves, but rather that in their culture, individual self-esteem is not necessarily the road to satisfaction. It is more about maintaining face.

### Re-Examining a Culture's Take On Mistakes

When we're small children, we tend to think that how we live is how everyone lives. When we discover differences, we have to slightly rearrange our way of thinking — not everybody is like us. So it is when we investigate other cultures and their attitudes about mistakes; we re-examine our own way of measuring our successes and failures. The Japanese emphasis on effort, for example, can remind us that making mistakes while

trying something new is to be commended, not disparaged, and that although it is difficult to always keep this in mind, we shouldn't revere results while diminishing the value of process. If we effortlessly accomplish our goals, we haven't really learned anything. Others outside our own literal and figurative boundaries can help us rethink our own assumptions and goals. ●

## I Want to Apologize

There's a *New Yorker* cartoon that shows a wife saying to her husband, "I don't want your apology — I want you to be sorry." That pretty much sums up a large part of the apology problem: saying you're sorry doesn't really mean you are.

For such a seemingly simple interaction, apologies are surprisingly complex. A proper apology has three elements: an acknowledgment of the fault or offense, regret for it, and responsibility for it — and, if possible, a way to fix the problem. Because we often don't separate these three aspects, we frequently get caught up in who is to blame and find it difficult to apologize when it shouldn't be.

When apologizing we should be thinking of communicating rather than expressing regret, because expression is one-sided — more like a monologue that aims to get something off your chest. Communicating should be a dialogue that works toward a resolution. And while a good apology is important, we all also get annoyed by over-apologizers — those who can't seem to stop saying they're sorry. On the other end of the spectrum are those who avoid apologizing at all costs, afraid it will imply weakness or won't resolve the problem anyhow, so what's the point?

### An Accountability Shortfall

The last part of the apology triumvirate, accountability, is the area where most people fall short. Accountability does not necessarily — although it often should — mean some kind of restitution or changed behavior. But we expect that when someone is genuinely sorry and expresses regret, that as much as possible he will look back at what went wrong and try to avoid doing it again.

Over the past few decades, research has shown that what we learned back in preschool also works in the corporate world: saying I'm sorry — and meaning it — makes the other person feel better. And therefore, she might be less likely to sue. Or take her business elsewhere. Real-life examples and academic research show that people are apt to overestimate the cost of apologies and underestimate the benefits. In a British study of malpractice patients, 37 percent said that they would never have gone to court in the first place had they been offered an explanation and an apology.

If we can't apologize properly for our mistakes or accept others' genuine apologies, then we haven't learned all we can from our mistakes. If we can't express contrition in a clear manner — acknowledgment of transgression; regret and responsibility for it; and hopefully a way to fix it — then that may be because we have failed to come to terms with how we, or others, erred. An apology isn't separate from the mistake; rather, it's an integral part of the lesson to be learned. A genuine expression of remorse and an offer of accountability aims not only to repair what went wrong in the past but to help build greater understanding and trust in the future. ●

## Conclusion

There are no simple fixes, but there are ways all of us can shift our thinking about mistakes. Starting with our children, we can emphasize effort and deemphasize results. We can appreciate that we — and they — can't be perfect, nor is it a goal we should aim for. We should strive to do our best, but if the prize is ever-elusive perfection, then fear of failure will too often overshadow the willingness to experiment, take risks and challenge ourselves.

The truth also is, sometimes a faux pas is just a faux pas and there is no great lesson or wonderful epiphany at the end. It might just be a blunder that messes up your workday. We all make our share of those mistakes, and that's OK also. But if we can all forgive ours and others' errors more often, if we can acknowledge that perfection is a myth and that human beings screw up on a regular basis — and we can either simply feel bad about it and find someone to accuse or learn from it — then we are on the right track. Make no mistake about it. ●

## THE SUMMARY IN BRIEF

***Blink*** reveals that great decision makers aren't those who process the most information or spend the most time deliberating, but those who have perfected the art of "thin-slicing"—filtering the very few factors that matter from an overwhelming number of variables.

In his landmark bestseller, *The Tipping Point*, author Malcolm Gladwell redefined how we understand the world around us. Now, in *Blink*, he revolutionizes the way we understand the world within by exploring the decisions made by experts in museums, sales, sports, the military and the high-speed world of the New York Mercantile Exchange. Drawing on cutting-edge neuroscience and psychology, and displaying all of the brilliance that made *The Tipping Point* a classic, *Blink* changes the way you understand every decision you make. Never again will you think about thinking the same way.

## IN THIS SUMMARY, YOU WILL LEARN:

- Why some people follow their instincts and win, while others end up stumbling into error.
- How our brains work in the office, in the classroom and in the marketplace.
- Why some snap decisions have better results than those we agonize over.
- How some of the best decision makers utilize the theory of thin-slicing to their competitive advantage.
- How to read minds by watching facial movements.

## The Statue That Didn't Look Right

In September 1983, an art dealer by the name of Gianfranco Becchina approached the J. Paul Getty Museum in California. He had in his possession, he said, a marble statue dating from the 6th century B.C. It was what is known as a kouros—a sculpture of a nude male youth standing with his left leg forward and his arms at his sides. There are only about 200 kouroi in existence, and most have been recovered badly damaged or in fragments from grave sites or archeological digs. But this one was almost perfectly preserved. It stood close to 7 feet tall. It had a kind of light-colored glow that set it apart from other ancient works. It was an extraordinary find. Becchina's asking price was just under $10 million.

### Core Sample Findings

The Getty moved cautiously. It took the kouros on loan and began a thorough investigation. A geologist from the University of California named Stanley Margolis came to the museum and spent two days examining the surface of the statue with a high-resolution stereomicroscope. He then removed a core sample from just below the right knee and analyzed it using an electron microscope, electron microprobe, mass spectrometry, X-ray diffraction and X-ray fluorescence.

The statue was made of dolomite marble from the ancient Cape Vathy quarry on the island of Thasos, Margolis concluded, and the surface of the statue was covered in a thin layer of calcite—which was significant, Margolis told the Getty, because dolomite can turn into calcite only over the course of hundreds, if not thousands, of years. In other words, the statue was old. It wasn't some contemporary fake.

The Getty was satisfied. Fourteen months after its investigation of the kouros began, it agreed to buy the statue. In the fall of 1986, the statue went on display for the first time.

### A Problem

The kouros, however, had a problem. It didn't look right. The first to point this out was an Italian art historian named Federico Zeri, who served on the Getty's board of trustees. When he was taken down to the museum's restoration studio to see the kouros in December 1983, he found himself staring at the sculpture's fingernails. In a way he couldn't immediately articulate, they seemed wrong to him.

Evelyn Harrison, one of the world's foremost experts on Greek sculpture, was next. What did Harrison see?

She didn't know. In the very first moment of seeing the statue, all Harrison had was a hunch, an instinctive sense that something was amiss.

A few months later, Thomas Hoving, the former director of the Metropolitan Museum of Art in New York, was taken down to the Getty's conservation studio to see the statue as well. Hoving always makes a note of the first word that goes through his head when he sees something new, and he'll never forget what that word was when he first saw the kouros. "It was 'fresh'—'fresh,'" Hoving recalls. And "fresh" was not the right reaction to have to a 2,000-year-old statue.

### Cold Feelings

When George Despinis, the head of the Acropolis Museum in Athens, took one look at the kouros he blanched. "Anyone who has ever seen a sculpture coming out of the ground," he said, "could tell that that thing has never been in the ground." And later, Georgios Dontas, head of the Archeological Society in Athens, saw the statue and immediately felt cold. "When I saw the kouros for the first time," he said, "I felt as though there was a glass between me and the work."

Further investigations revealed more questions about the statue's authenticity. Now, in the Getty catalog, there is a

### Thin-Slicing Defined

A critical part of rapid cognition is known as "thinslicing." Thin-slicing refers to the ability of our unconscious mind to find patterns in situations and behavior based on very narrow slices of experience. In the theory of thin slices, a little bit of knowledge goes a long way. Thin-slicing is part of what makes the unconscious so dazzling.

This is the way that our unconscious works: It is sifting through the situation in front of us, throwing out all that is irrelevant while we zero in on what really matters. The truth is that our unconscious is really good at this, to the point where thin-slicing often delivers a better answer than more deliberate and exhaustive ways of thinking. Thin-slicing is not an exotic gift. It is a central part of what it means to be human. We thin-slice whenever we meet a new person, have to make sense of something quickly or encounter a novel situation.

picture of the kouros, with the notation "About 530 B.C., or modern forgery."

When Federico Zeri, Evelyn Harrison, Thomas Hoving and Georgios Dontas—and many others—looked at the kouros and felt an "intuitive repulsion," they were absolutely right. In the first two seconds of looking—in a single glance—they were able to understand more about the essence of the statue than the team at the Getty was able to understand after 14 months.

This summary is about those first two seconds.

## The Locked Door: The Secret Life of Snap Decisions

Here is a critical fact about the thoughts and decisions that bubble up from our unconscious. Snap judgments are, first of all, enormously quick: They rely on the thinnest slices of experience. They are also unconscious. Snap judgments and rapid cognition take place behind a locked door. We are not very good at dealing with the fact of that locked door. It's one thing to acknowledge the enormous power of snap judgments and thin slices but quite another to place our trust in something so seemingly mysterious.

Our world requires that decisions be sourced and footnoted, and if we say *how* we feel, we must also be prepared to elaborate on *why* we feel that way. That approach is a mistake. If we are to learn to improve the quality of the decisions we make, we need to accept the mysterious nature of our snap judgments. We need to respect the fact that it is possible to know without knowing why we know and accept that—sometimes—we're better off that way.

## The Storytelling Problem

On a brisk spring evening not long ago, two dozen men and women gathered in the back room of a Manhattan bar to engage in a peculiar ritual known as speed-dating. At the beginning, they mingled awkwardly, clutching their drinks, and then the coordinator of the evening called the group to order.

Each man would have six minutes of conversation with

### Snap Decisions in Sports

Vic Braden, one of the world's top tennis coaches, has noticed something during his many years of working with some of the world's best athletes. He has asked many of these professionals questions about why and how they play the way they do, and invariably he comes away disappointed. "Out of all the research that we've done with top players, we haven't found a single player who is consistent in knowing and explaining exactly what he does," Braden says. "They give different answers at different times, or they have answers that simply are not meaningful." One of the things he does, for instance, is videotape top tennis players and then digitize their movements, breaking them down frame by frame on a computer so that he knows, say, precisely how many degrees Pete Sampras rotates his shoulder on a cross-court backhand.

#### *An Inability to Describe How We Behave*

One of Braden's digitized videotapes is of the tennis great Andre Agassi hitting a forehand. The image has been stripped down. Agassi has been reduced to a skeleton, so that as he moves to hit the ball, the movement of every joint in his body is clearly visible and measurable. The Agassi tape is a perfect illustration of our inability to describe how we behave in the moment. "Almost every pro in the world says that he uses his wrist to roll the racket over the ball when he hits a forehand," Braden says. "Why? What are they seeing? Look,"—and here Braden points to the screen—"see when he hits the ball? We can tell with digitized imaging whether a wrist turns an eighth of a degree. But players almost never move their wrist at all. Look how fixed it is. He doesn't move his wrist until long after the ball is hit. He thinks he's moving it at impact, but he's actually not moving it until long after impact. How can so many people be fooled?"

#### *Ted Williams' Blind Spot*

Braden found the same problem with the baseball player Ted Williams. Williams always said he could look the ball onto the bat, that he could track it right to the point where he made contact. But Braden knew from his work in tennis that that is impossible. In the final five feet of a tennis ball's flight toward a player, the ball is far too close and moving much too fast to be seen. The player, at that moment, is effectively blind. The same is true with baseball. "I met with Ted Williams once," Braden says. "I said, 'Gee, Ted. We just did a study that showed that human beings can't track the ball onto the bat. It's a threemillisecond event.' And he was honest. He said, 'Well, I guess it just ***seemed*** like I could do that.'"

each woman. The women would sit for the duration of the evening against the wall on the long, low couches that ringed the room, and the men would rotate from woman to woman, moving to the next woman whenever the coordinator rang a bell signaling that the six minutes were over. The daters were all given a badge, a number and a short form to complete, with the instruction that if they liked someone after six minutes, they should check the box next to his or her number. If the person whose box he or she checked also checked his or her box, both daters would be notified of the other's e-mail address within 24 hours.

### Everyone Is Smart

Speed-dating has become enormously popular around the world over the last few years, and it's not hard to understand why. It's the distillation of dating to a simple snap judgment. Everyone who sat down at one of those tables was trying to answer a very simple question: Do I want to see this person again? And to answer that, we don't need an entire evening. We really need only a few minutes. When it comes to thin-slicing potential dates, pretty much everyone is smart.

But suppose we were to alter the rules of speed-dating just slightly. What if we tried to look behind the locked door and made everyone explain his or her choices? We know, of course, that that can't be done: The machinery of our unconscious thinking is forever hidden. But what if we forced people to explain their first impressions and snap judgments *anyway*? That is what two professors from Columbia University have done, and they have discovered that if you make people explain themselves, something very strange and troubling happens. What once seemed like the most transparent and pure of thinslicing exercises turns into something quite confusing.

### Behind the Locked Door

The professors found that when they compare what speed-daters say they want in a preliminary questionnaire with what they are actually attracted to in the moment, those two things don't match. This can be confusing. A speed-dater has an idea about what she wants in a man, and that idea isn't wrong. It's just incomplete. The description that she starts with is her conscious ideal: what she believes she wants when she sits down and thinks about it. But what she cannot be as certain about are the criteria she uses to form her preferences in that first instant of meeting someone face to face. That information is behind the locked door.

We have, as human beings, a storytelling problem. We're a bit too quick to come up with explanations for things we really don't have an explanation for.

## The Dark Side of Thin-Slicing

What makes thin-slicing possible is our ability to very quickly get below the surface of a situation. But what happens if that rapid chain of thinking gets interrupted somehow? What if we reach a snap judgment without *ever* getting below the surface?

Part of what it means to take thin-slicing and first impressions seriously is accepting the fact that sometimes we can know more about someone or something in the blink of an eye than we can after months of study. But we also have to acknowledge and understand those circumstances when rapid cognition leads us astray.

### Taking Care of the Customer

Being a successful salesperson is a task that places extraordinary demands on the ability to thin-slice. Someone you've never met walks into your place of business. Some people are insecure. Some are nervous. Some know exactly what they want. Some have no idea. Some know a great deal about your product or service and will be offended by a salesperson who adopts a patronizing tone. Some are desperate for someone to take them by the hand and make sense of what seems to them like an overwhelming process. A salesperson, if he or she is to be successful, has to gather all of that information—figuring out, for example, the dynamic that exists between a husband and a wife, or a father and a daughter—process it and adjust his or her own behavior accordingly, and do all of that within the first few moments of the encounter.

Most salespeople see someone, and somehow they let the first impression they have about that person's appearance drown out every other piece of information they manage to gather in that first instant.

The best salespeople try to be more selective. They try to pick up on whether someone is confident or insecure, knowledgeable or naive, trusting or suspicious—but from that thin-slicing flurry the successful salesperson tries to edit out those impressions based solely on physical appearance.

But if those impressions are happening outside of awareness, how on earth do you fix it? The answer is that we are not helpless in the face of our first impressions. They may bubble up from the unconscious—from behind a locked door inside of our brain—but just because something is

outside of awareness doesn't mean it's outside of control.

Our first impressions are generated by our experiences and our environment, which means that we can change our first impressions—we can alter the way we thinslice—by changing the experiences that comprise those impressions.

## Harnessing Thin-Slicing

Taking rapid cognition seriously—acknowledging the incredible power, for good and ill, that first impressions play in our lives—requires that we take active steps to manage and control those impressions. We must confront the consequences of first impressions and snap judgments. Sometimes we are successful, sometimes we are not. The following examples provide us with critical lessons on how we can better understand and come to terms with the extraordinary power of thin-slicing.

### The Structure of Spontaneity

Once, out of curiosity, Paul Van Riper, a Marine who served in Vietnam, consultant Gary Klein and a group of about a dozen Marine Corps generals flew to the Mercantile Exchange in New York to visit the trading floor. Van Riper thought to himself, I've never seen this sort of pandemonium except in a military command post in war—we can learn something from this.

After the bell rang at the end of the day, the generals went onto the floor and played trading games. Then they took a group of traders from Wall Street across New York Harbor to the military base on Governor's Island and played war games on computers. The traders did brilliantly. The war games required them to make decisive, rapid-fire decisions under conditions of high pressure and with limited information, which is, of course, what they did all day at work. Van Riper then took the traders down to Quantico, put them in tanks, and took them on a live fire exercise. To Van Riper, it seemed clearer and clearer that these "overweight, unkempt, long-haired" guys and the Marine Corps brass were fundamentally engaged in the same business—the only difference being that one group bet on money and the other bet on lives.

### Traders and Generals

"I remember the first time the traders met the generals," Gary Klein says. "It was at the cocktail party, and I saw something that really startled me. You had all these Marines, these twoand three-star generals, and you know what a Marine Corps general is like. Some of them had never been to New York. Then there were all these traders, these brash, young New Yorkers in their 20s and 30s, and I looked at the room and there were groups of two and three, and there was not a single group that did not include members of both sides. They weren't just being polite. They were animatedly talking to each other. They were comparing notes and connecting. I said to myself, These guys are soul mates. They were treating each other with total respect."

Improvisation comedy is a wonderful example of the kind of thinking that this summary is about. It involves people making very sophisticated decisions on the spur of the moment, without the benefit of any kind of script or plot. What is so compelling and terrifying about improv is the fact that it appears utterly random and chaotic. It seems as though you have to get up onstage and make everything up, right there on the spot. But the truth is that improv isn't random and chaotic at all. Improv is an art form governed by a series of rules, and everybody attends lengthy rehearsals to practice abiding by those rules.

### Repetition and Structured Practice

The game of basketball provides an apt analogy. Basketball is an intricate, high-speed game filled with split-second, spontaneous decisions. But that spontaneity is possible only when everyone first engages in hours of highly repetitive and structured practice—perfecting his or her shooting, dribbling and passing, and running plays over and over again—and agrees to play a carefully defined role on the court.

This is the critical lesson of improv as well, and it is also a key to understanding the camaraderie between the New York traders and the Marine Corps generals: *spontaneity is not random*. How good people's decisions are under the fast-moving, high-stress conditions of rapid cognition is a function of their training, rules and rehearsal.

## Verbal Overshadowing

Allowing people to operate without having to explain themselves constantly enables rapid cognition. Here is a very simple example of this:

Picture, in your mind, the face of the waiter or waitress who served you the last time you ate at a restaurant, or the person who sat next to you on the bus today. Any stranger whom you've seen recently will do. Now, if you were asked to pick that person out of a police lineup, could you do it? You probably could.

### Unconscious Cognition

Recognizing someone's face is a classic example of unconscious cognition. We don't have to think about it. Faces just pop into our minds. But suppose you were asked to take a pen and paper and write down in as much detail as you can what your person looks like.

Describe her face. What color was her hair? What was she wearing? Was she wearing any jewelry? Believe it or not, you will now do much worse at picking that face out of a lineup. This is because the act of describing a face has the effect of impairing your otherwise effortless ability to subsequently recognize that face.

### The Brain's Two Hemispheres

The psychologist Jonathan W. Schooler, who pioneered research on this effect, calls it verbal overshadowing. Your brain has a part (the left hemisphere) that thinks in words, and a part (the right hemisphere) that thinks in pictures, and what happened when you described the face in words was that your actual visual memory was displaced. Your thinking was bumped from the right to the left hemisphere. When you were faced with the lineup the second time around, what you were drawing on was your memory of what you said the waitress looked like, not your memory of what you saw she looked like. And that's a problem because when it comes to faces, we are much better at visual recognition than we are at verbal description.

## Insight Puzzles

Dr. Schooler has shown that the implications of verbal overshadowing carry over to the way we solve much broader problems. Consider the following puzzle:

***A man and his son are in a serious car accident. The father is killed, and the son is rushed to the emergency room. Upon arrival, the attending doctor looks at the child and gasps, "This child is my son!" Who is the doctor?***

This is an insight puzzle. It's not like a math or a logic problem that can be worked out systematically with pencil and paper. The only way you can get the answer is if it comes to you suddenly in the blink of an eye. You need to make a leap beyond the automatic assumption that doctors are always men. They aren't always, of course. The doctor is the boy's mother!

### The Inverted Steel Pyramid

Here's another insight puzzle:

### Too Many Choices

Columbia University Professor Sheena Iyengar once conducted an experiment in which she set up a tasting booth with a variety of exotic gourmet jams at the upscale grocery store Draeger's in Menlo Park, Calif. Sometimes the booth had six different jams, and sometimes Iyengar had 24 different jams on display. She wanted to see whether the number of jam choices made any difference in the number of jams sold. Conventional economic wisdom, of course, says that the more choices consumers have, the more likely they are to buy, because it is easier for consumers to find the jam that perfectly fits their needs. But Iyengar found the opposite to be true.

Thirty percent of those who stopped by the six-choice booth ended up buying some jam, while only 3 percent of those who stopped by the bigger booth bought anything.

Why is that? Because buying jam is a snap decision. You say to yourself, instinctively, I want that one. And if you are given too many choices, if you are forced to consider much more than your unconscious is comfortable with, you get paralyzed. Snap judgments can be made in a snap because they are frugal, and if we want to protect our snap judgments, we have to take steps to protect that frugality.

***A giant inverted steel pyramid is perfectly balanced on its point. Any movement of the pyramid will cause it to topple over. Underneath the pyramid is a $100 bill. How do you remove the bill without disturbing the pyramid?***

Think about this problem for a few moments. Then, after a minute or so, write down, in as much detail as you can, everything you can remember about how you were trying to solve the problem—your strategy, your approach or any solutions you've thought of.

When Schooler did this experiment with a whole sheet of insight puzzles, he found that people who were asked to explain themselves ended up solving *30 percent* fewer problems than those who weren't.

In short, when you write down your thoughts, your chances of having the flash of insight you need in order to come up

with a solution are significantly impaired—just as describing the face of your waitress made you unable to pick her out of a police lineup. (The solution to the pyramid problem, by the way, is to destroy the bill in some way—tear it or burn it.)

### 'Paralysis Through Analysis'

With a logic problem, asking people to explain themselves doesn't impair their ability to come up with the answer. In some cases, in fact, it may help. But problems that require a flash of insight operate by different rules. "It's the same kind of paralysis through analysis you find in sports contexts," Schooler says. "When you start becoming reflective about the process, it undermines your ability. You lose the flow. There are certain kinds of fluid, intuitive, nonverbal kinds of experience that are vulnerable to this process."

As human beings, we are capable of extraordinary leaps of insight and instinct. We can hold a face in memory, and we can solve a puzzle in a flash. But what Schooler is saying is that all these abilities are incredibly fragile. Insight is not a light bulb that goes off inside our heads. It is a flickering candle that can easily be snuffed out.

### Balancing Deliberate and Instinctive Thinking

There are two important lessons here. The first is that truly successful decision making relies on a balance between deliberate and instinctive thinking. Deliberate thinking is a wonderful tool when we have the luxury of time, the help of a computer and a clearly defined task, and the fruits of that type of analysis can set the stage for rapid cognition.

The second lesson is that in good decision making, frugality matters. Less is more. Overloading decision makers with information makes it harder, not easier. To be a successful decision maker, we have to edit.

### Recognizing Patterns

When we thin-slice, when we recognize patterns and make snap judgments, we do this process of editing unconsciously. When Thomas Hoving first saw the kouros, the thing his eyes were drawn to was how fresh it looked. Federico Zeri focused instinctively on the fingernails. In both cases, Hoving and Zeri brushed aside a thousand other considerations about the way the sculpture looked and zeroed in on a specific feature that told them everything they needed to know. We get in trouble when this process of editing is disrupted—when we can't edit, we don't know what to edit, or our environment doesn't let us edit.

## Market Research

Marketers have found that there is an inherent problem with trying to measure people's reactions. The Edsel, the Ford Motor Co.'s famous flop from the 1950s, failed because people thought it looked funny. The Edsel started out ugly, and it's still ugly.

By the same token, there are movies that people hate when they see them for the first time, and they still hate them two or three years later. A bad movie is always a bad movie.

### Ugly or Different?

The problem is that buried among the things we hate is a class of products that are in that category only because they are weird. They make us nervous. They are sufficiently different that it takes us some time to understand that we actually like them. Maybe the word "ugly" is just a proxy for "different." The problem with market research is that often it is simply too blunt an instrument to pick up this distinction between the bad and the merely different.

Market research isn't always wrong, of course. When testing products or ideas that are truly revolutionary, most companies understand that in these cases, the first impressions of their consumers need interpretation.

We like market research because it provides certainty—a score, a prediction; if someone asks us why we made the decision we did, we can point to a number. But the truth is that for the most important decisions, there can be no certainty. It is the new and different that is always most vulnerable to market research. It is hard for us to explain our feelings about unfamiliar things.

## Expert Testimony

The first impressions of experts, however, are *different*. This does not mean that experts like different things than the rest of us—although that is undeniable. When we become expert in something, our tastes grow more esoteric and complex.

Only experts are able to reliably account for their reactions. Our unconscious reactions come out of a locked room, and we can't look inside that room. But with experience, we become expert at using our behavior and our training to interpret—and decode—what lies behind our snap judgments and first impressions. It's much like what people do when they are in psychoanalysis: They spend years analyzing their unconscious with the help of a trained therapist

until they begin to get a sense of how their mind works. All experts do this, either formally or informally.

Whenever we have something that we are good at—something we care about—that experience and passion fundamentally change the nature of our first impressions. This does not mean that when we are outside our areas of passion and experience, our reactions are invariably wrong. It just means that they are shallow.

They are hard to explain and easily disrupted. They aren't grounded in real understanding.

## The Naked Face

Whenever we experience a basic emotion, that emotion is automatically expressed by the muscles of the face. That response may linger on the face for just a fraction of a second or be detectable only if electrical sensors are attached to the face. But it's always there. The face has, to a large extent, a mind of its own. This doesn't mean we have no control over our faces. We can use our voluntary muscular system to try to suppress those involuntary responses. But, often, some little part of that suppressed emotion—such as the sense that I'm really unhappy even if I deny it—leaks out.

### Facial Clues

We can all mind-read effortlessly and automatically because the clues we need to make sense of someone or some social situation are right there on the faces of those in front of us. There is enough accessible information on a face to make everyday mind reading possible. When someone tells us "I love you," we look immediately and directly at him or her because by looking at the face, we can *know*—or, at least, we can know a great deal more—about whether the sentiment is genuine. Do we see tenderness and pleasure? Or do we catch a fleeting microexpression of distress and unhappiness flickering across his or her face?

We make these kinds of complicated, lightning-fast calculations very well. We make them every day, and we make them without thinking. Mind reading allows us to adjust and update our perceptions of the intentions of others.

## Practice Makes Perfect

Our powers of thin-slicing and snap judgments are extraordinary. But even the giant computer in our unconscious needs a moment to do its work. The art experts who judged the Getty kouros needed to see the kouros before they could tell whether it was a fake. If they had merely glimpsed the statue through a car window at 60 miles per hour, they could only have made a wild guess at its authenticity.

Perhaps the most common—and the most important—forms of rapid cognition are the judgments we make and the impressions we form of other people. Every waking minute that we are in the presence of someone else, we come up with a constant stream of predictions and inferences about what that person is thinking and feeling.

### The Look of Love

When someone says, "I love you," we look into that person's eyes to judge his or her sincerity. When we meet someone new, we often pick up on his or her subtle signals, so that afterward, even though he or she may have talked in a normal and friendly manner, we may say, "I don't think he liked me," or "I don't think she's very happy." We easily separate into parts the complex distinctions in facial expressions. If you were to see a man grinning, for example, with his eyes twinkling, you'd say he was amused. But if you were to see him nod and smile exaggeratedly, with the corners of his lips tightened, you would take it that he had been teased and was responding sarcastically.

If a woman were to make eye contact with someone, give a small smile, and then look down and avert her gaze, you would think she was flirting. If she were to follow a remark with a quick smile and then nod or tilt her head sideways, you might conclude that she had just said something a little harsh and wanted to take the edge off it. You wouldn't need to hear anything she was saying in order to reach these conclusions. They would just come to you in a blink.

### Inferring Motivations and Intentions

This practice of inferring the motivations and intentions of others is classic thin-slicing. It is picking up on subtle, fleeting cues in order to read someone's mind—and there is almost no other impulse so basic and so automatic and at which, most of the time, we so effortlessly excel.

However, mind-reading failures happen to all of us. They lie at the root of countless arguments, disagreements, misunderstandings and hurt feelings. And yet, because these failures are so instantaneous and so mysterious, we don't really know how to understand them.

Mind-reading failures may sometimes fall into a kind of gray area, the middle ground between deliberate and ac-

cidental. They aren't always as obvious and spectacular as other breakdowns in rapid cognition. They are subtle and complex and surprisingly common.

### Unconscious Thinking

Our unconscious thinking is, in one critical respect, no different from our conscious thinking: In both, we are able to develop our rapid decision making with training and experience. Mind reading, as well, is an ability that improves with practice.

Malcolm Gladwell is a staff writer for the New Yorker. He was formerly a business and science reporter at the Washington Post. He was born in England, raised in Canada, and now lives in New York City.

## Talking to Strangers

**What We Should Know about the People We Don't Know** *by Malcolm Gladwell*

Malcolm Gladwell is the author of five *New York Times* bestsellers—*The Tipping Point, Blink, Outliers, What the Dog Saw,* and *David and Goliath.* He is also the co-founder of Pushkin Industries, an audio content company that produces the podcasts Revisionist History, which reconsiders things both overlooked and misunderstood, and Broken Record, where he, Rick Rubin, and Bruce Headlam interview musicians across a wide range of genres. Gladwell has been included in the TIME 100 Most Influential People list and touted as one of *Foreign Policy's* Top Global Thinkers. www.gladwellbooks.com

# Why Snap Judgments About Strangers are Often Wrong

Billed as a "classic Gladwellian intellectual adventure," Malcolm Gladwell's sixth book begins with a benign reminiscence of his father having a delightful conversation with a stranger in the lobby of the Mercer Hotel in New York City. The recollection that their conversation was constantly interrupted by people "coming up to him to take pictures and have him sign little bits of paper," suggests a celebrity encounter of which Gladwell's father was blissfully unaware.

The gentle nature of this opening story stands in stark contrast to the introduction: ***Step Out of the Car!*** That is revisited in the final chapter of the book and is attributed with igniting the author's interest in why we are so inept at talking to people we don't know.

## Sandra Bland

The traffic stop that took place on the perimeter of the Prairie View A&M University campus in July 2015 should have been routine. The fact that it resulted in Sandra Bland's arrest and subsequent suicide in her cell three days later escalated the case to prominence (propelled by a viral dashcam video of the interaction) amid a national debate about aggressive and allegedly racist police practices. Gladwell is very clear in his pronouncement that this "traffic stop gone awry," resonated with him more than any other police case.

The media response to the case was disappointingly familiar, with one side focusing on the larger racism issue, and the other examining the lives and personalities of both parties in microscopic detail. The greater concern for the author was that, in short order, the novelty of the case would dissipate to be replaced by a new story and people would move on to other things. Gladwell's position was more intransigent: "I don't want to move on to other things."

His response is to take the reader on a journey through history, psychology, and even some pop culture, using a diverse mix of scandals and other media events to make the larger point that because we don't know how to talk to strangers, we often set ourselves up for misunderstanding and conflict. The term 'stranger'

> **Gladwell challenges the notion that our faces are the billboards for our hearts by examining the deeply intuitive idea of transparency. . .”**

is never defined, as the author chooses instead to embrace an array of options, including someone we've never met, someone we've only talked to a couple of times, someone we may think we know pretty well, and someone we know only by reputation.

The author exemplifies the potential damage of such conflict between strangers through such cases as the conquistador Hernán Cortés meeting Montezuma II in Mexico in 1519, and British Prime Minister Neville Chamberlain meeting Adolf Hitler on the precipice of the Second World War. For Montezuma, cultural and language challenges led to his untimely death and the launch of an era of "catastrophic colonial expansion." For Chamberlain, the misunderstanding lay in the ease with which he was manipulated by Hitler. Politicians had witnessed Hitler's ascension on the strength of extremist Nazi rhetoric, but they remained eager to believe that he could be appeased because they were desperate to avoid another war. Chamberlain, relatively new in his role, was equally eager to believe Hitler's affirmations that he had no territorial ambitions beyond Germany's immediate borders. As such, he was primed to fall for Hitler's displays of sincerity and respect, including "the double handshake that he reserves for specially friendly demonstrations."

## Defaulting to Truth

Should Montezuma and Chamberlain simply be dismissed as naïve or gullible? Or is there something more substantive here that needs further examination? Gladwell clearly believes the latter, and his search for answers in this treatise begins with the work of a psychologist named Tim Levine whose work focuses on why we are so often deceived by strangers. The author guides us through a series of Levine's experiments in which college students are tempted by a proctor (on Levine's team) to grasp the opportunity to cheat on a test without fear of being caught. The resulting analysis affirms the universal human truth that people are more likely to assume that people are telling the truth—Levine's ***truth-default theory.***

Using Levine's research as a framework, the author moves on to examine three specific cases: Bernie Madoff, the investor responsible for the largest Ponzi scheme in history; Jerry Sandusky, the Penn State football coach convicted of sexual abuse, and Ana Montes, an apparently dedicated analyst at the United States Defense Agency who was discovered to be a spy for Cuba. Here again, the emphasis is not so much on strangers but on the ease with which miscommunication can be leveraged by those with a nefarious intent, prompting the default to truth response.

For the sexual abuse for which Sandusky was ultimately imprisoned, the fact that such conduct could go unpunished for so many years in the face of numerous doubts and suspicions about his conduct is indicative of just how powerful this default to truth can be. One area worthy of further examination would be just how many doubts are needed to overcome that default. For Ana Montes, her nickname of the "Queen of Cuba" within the intelligence community, was indicative of the high regard with which she was held. A rising star with impeccable credentials and an impressive track record, Montes had the perfect reputation for a default to truth. Any rumors or doubts were quickly discounted or dismissed outright without further investigation. Even in the face of irrefutable evidence, her superiors gave her the benefit of the doubt and five more years to spy for Cuba before her true role was finally revealed.

The author's approach to the Madoff case is unusual in that he chooses to focus not on the perpetrator but on Harry Markopolos, the independent fraud investigator who first raised concerns about Madoff with the Securities and Exchange Commission (SEC). Others had raised their suspicions about Madoff before, but in each case, while Madoff may have seemed strange or suspicious, no one entertained the possibility that his entire operation had been a scam from day one. They might not have believed that his stock- picking skills were based on an infallible "gut feel," but the alternative was so unbelievable that they settled for the answer given to them. By ***defaulting to truth***, they were placing their faith in the system to catch crooks or in their own abilities to sniff out those crooks. They were wrong on both counts.

Markopolos did not default to truth. He had arrived at the same conclusions that Madoff's consistent performance year after year didn't add up. Where he differed was that he was willing to consider the possibility that Madoff's entire operation was a scam. He didn't trust the system to expose Madoff, so he took it upon himself to do an extensive search on his own. His error, from the author's perspective, was his choice to present his findings to the SEC anonymously in a very cloak-and-dagger fashion, convinced that the revelations would anger high-powered financiers who could be expected to respond very forcefully. Gladwell's portrait of Markopolos sitting at home with a loaded 12-gauge shotgun, extra rounds, and a gas mask in anticipation of a raid by assassins "while the rest of us went calmly about our business," underscores a proposed trade-off that those who decline to default to truth may face.

## Transparency

Gladwell challenges the notion that our faces are the billboards for our hearts by examining the deeply intuitive idea of transparency first proposed by Charles Darwin. He begins by exploring why bail judges prefer to look at the people they are judging rather than processing decisions by email or even snail

“Not talking to strangers is clearly not an option, but not communicating effectively with those strangers is fraught with real dangers.”

mail. What is it they looking for? Do they really believe they can get a sense of the defendant by looking him or her straight in the eye? How well did that work for Chamberlain?

The author then takes a surprising detour from history and psychology by presenting the argument that the characters on the television show ***Friends*** expressed their emotions so transparently in their facial expressions that it allowed viewers to transcend even the most convoluted plot points. His conviction on this point is evident in the analysis of one specific episode—episode fifteen of season five, titled “The One with the Girl Who Hits Joey”—which he concludes to be so transparent that “you can probably follow along even if you turn off the sound.”

Using the Amanda Knox case—the American student studying in Perugia, Italy who was accused of murdering her roommate—Gladwell examines the darker side of transparency. In this instance, Knox’s facial expressions, dismissed by her defense team as “youthful American goofiness,” were interpreted as evidence of guilt. As an innocent person judged to be acting guilty, she spent almost four years in custody after being ***mis-matched.***

## Coupling

The retelling of the story of poet Sylvia Plath succumbing to her depression by turning on her gas oven and deliberately suffocating herself to death is a jarring read. The connection to strangers, the author goes on to explain, is the notion that the availability of the highly toxic “town gas” in London at the time, coupled or connected gas as a popular means of suicide. When British Gas later replaced the supply with cleaner and safer natural gas, suicide rates plummeted.

The broader point is well made. The “context in which the stranger is operating,” has a direct impact on our response. In other words, what is said can be as important as where and how it is said. Video evidence of Amanda Knox’s “goofiness” were presented out of context as damning evidence of her alleged heartlessness in killing her roommate without remorse. Bernie Madoff’s reclusive offices on the upper floors of the Lipstick Building in Midtown Manhattan, along with his “imperious manner,” gave him an aura of exclusivity that investors were only too willing to believe. Even as returns performed in direct contradiction to the broader markets, they were willing to suppress their natural skepticism and stick with him.

## Sandra Bland Revisited

After documenting Bland’s interaction with police officer Brian Encinia as the opening for this book, Gladwell returns to the case and examines Encinia’s actions through the prism of his police training—the so-called Kansas City approach to policing. This approach trains police officers to “suspect the worst of every car.” As such, they are actively suppressing any sense of defaulting to truth in believing that the people being stopped are guilty of nothing more than the traffic violation that prompted the stop in the first place. The disconnect, the author argues, is that the training should be situationally specific. If you’re policing in a known high-crime area or war zone, that approach may be appropriate for both officer and public safety. A traffic stop on the perimeter of a rural Texas university campus does not qualify as a war zone. Officer Encinia, by the author’s analysis, embraced the training to the point of indoctrination and was unable to make the distinction between a war zone and a rural campus. In this context, he was as primed to mis-read Sandra Bland’s responses as Neville Chamberlain was to take Hitler’s act on face value.

Gladwell concludes by acknowledging that his response to the Bland case has led him to a conundrum. Not talking to strangers is clearly not an option, but not communicating effectively with those strangers is fraught with real dangers. Whether it’s overzealous police officers, defaulting to truth, or mis-matching facial expressions, it’s clear that we’re not as good at this as we think we are. However, Gladwell argues, what we should not do when things go awry is automatically blame the stranger. “To assume the best of another is the trait that has created modern society,” he writes. “Those occasions when our trusting nature is violated are tragic. But the alternative—to abandon trust as a defense against predation and deception—is worse.”

Gladwell makes no apologies for his approach to this topic. The Sandra Bland case clearly struck a nerve and set him on a journey to investigate the broader issues at work in these types of exchanges—to “understand what really happened.” His ability to tackle large subjects and generate a few buzzwords in the process is already well-established as the terms tipping point and the quasi-metric 10,000-hour rule have joined the modern lexicon. Default to truth may rise from this work, but that term rightfully belongs to Tim Levine. The individual cases benefit from his traditional attention to detail and novelist pacing, but the meandering approach and lack of an overarching thesis may prove unpalatable for those readers who do not consider themselves true Gladwellian acolytes.

## THE SUMMARY IN BRIEF

Whether you're just launching a new venture, brand, start-up, or product, or you're stuck in a cycle of failed marketing campaigns or branding efforts, ***Brand with Purpose*** is your new go-to handbook for building a brand that has impact because it has something no other brand has— you.

In *Brand With Purpose,* author Ivan Estrada shares that the key to successful branding is finding your passion, staying true to your story, and determining what is the essence of you and your brand— then communicating that essence effectively to your target audience. Market research matters, but have you been doing you research? Through guided self-reflection, you'll be able to embrace your true self and build the career you've always dreamed of— whether as a solo entrepreneur, business leader, executive, or creative. In the end, you'll be rewarded with a brand that's about more than products or profits. You'll have a brand that's centered on purpose— and that's something timeless that leaves a legacy behind.

## IN THIS SUMMARY, YOU WILL LEARN:

- How to find the essence of you and your brand.
- How to communicate your brand to your audience in a way that builds trust.
- How your experiences, challenges, and obstacles hold the key to creating a timeless brand.
- How to generate loyalty and influence for your brand in ways you never imagined.

## Introduction

What is the concept "brand with purpose"? Having purpose is having an internal drive, sensing that fire inside, that oxygen that makes you feel truly alive. You can have "small purposes" that add up to a bigger drive. It takes some soul-searching and honesty to uncover pieces of you that may have been hidden. Knowing your purpose is knowing what you want to be remembered for.

This book will help you uncover your purpose to help you drive your journey of branding. Brand with purpose is having clarity in broadcasting the message and being seen for your gifts in a way that serves a greater good.

Not having purpose is more obvious: you feel lost, disconnected, you have a vague outlook on life, you don't feel connected to anything greater than yourself. Branding without purpose is broadcasting a message that doesn't feel authentic to you. We've all experienced this lack of purpose and had phases in my life where we had to redefine my purpose, because the old version of us needed a new journey. Let's take that journey together.

## What's Your Story?

We all have a story. It is helpful to look at your childhood strengths and experiences. See what has stayed with you as you traveled on your journey in entrepreneurship and branding. It is this story that gives you your authenticity and creates trust with your audience.

Your purpose can come from one moment or experience, and it can start with a smaller project that repeats and makes a bigger impact as you grow it. Your purpose can change over time, and it can stay local or go bigger. Examine your personal story and start something that shares your purpose with a community.

## Be Bold and Different

In order to have courage, you need to have fear. Courage is acting in the face of fear. A lot of us push away the fear, hoping it will disappear. You can never push it away. That is suppressing the fear, but it's still there.

Fears are so many, and you can end up collecting them—from fear of not being able to grow your business to fear of not finding that true love, of losing a loved one, of not being good enough, not being pretty enough, not being rich... and the list goes on. It's the collection of fears that holds you back from being your best self.

Don't hold yourself back. Dare to be bold, accept your fears for what they are, and be different when others are being the same. You'll be amazed at the opportunities that open up in front of you.

## Authenticity

If you are a solopreneur—someone who has set up and runs your own business—you can do two analyses of 1) your personality and 2) how you approach your business, and you will likely discover the two are the same. If you have a staff to support your business, you will consider the strengths and weaknesses of your team members in addition to your own (see chapter 7, "Building a Team, Expanding Your Brand").

You can do a SWOT analysis for yourself as an individual and also for your business to be aware of where you stand in your business environment. SWOT is an abbreviation for the internal aspects of Strengths and Weaknesses (S and W) and the external position of the business environment in terms of Opportunities and Threats (O and T). This analysis can help you discover new strategies based on your Strengths and Opportunities that will help you overcome your Weaknesses and Threats. This is a good exercise in which to involve your team members, friends, customers, and community members, so that you can get an in-depth view from all perspectives.

## Invest in Yourself

Do you have something symbolic that gives you strength and confidence? For some people, it might be a particular pair of shoes, a jacket, or a lucky charm.

Can you recall a story or moment where someone else believed in you? Maybe it was something someone said about your qualities or your brand?

Do you have rituals that make you feel more confident? For instance, doing a "power pose" for two minutes, as described in a TED Talk by Amy Cuddy, has helped job interviewees and test takers reduce their cortisol levels and feel more confident. Some people jump up and down or run to get the anxiety or stress energy out of their body. Other people do breathing exercises to get their body together and focus on being present. Can you do your ritual(s) before a

big presentation or meeting and see a difference?

Write down the answers to these questions to support you on the days you need a boost, a reminder to keep investing in yourself.

## Personalizing Video

What you do before you record, to be mentally prepared and have the right attitude when planning out your videos, is just as important as the actual recording. Confidence is key.

Whether it's the script content, the location, or the props, going into the filming process with passion will drive your project. Deep down, you have to know that what you're creating is going to be of value for someone, even if it's just one person. Being able to compel and excite even a single person should be enough to inspire you to make your ideas a reality. But it's not just about you, it's about what you're there to deliver to your audience. Once you change your headspace, setting up your personalized video branding will come with ease. It's all about taking a chance at the cost of failure. Being completely honest with yourself is what will lead you to growth as an entrepreneur. The true value will come from expressing your authentic self.

When people watch a video, they learn about your brand in two ways. First and foremost, the brand can be seen as the actual product or service that is being offered through the video. And second, the brand is who you are, and how well you are providing that product or service to the viewer. When people watch your videos, they will be looking at the personality, expertise, and energy you have in promoting and selling your brand. The product doesn't even really matter.

What is crucial to keep in mind is that your content is a way to show your audience who you are, and why they should trust you. The goal is to create an audience that looks at you as an expert in your line of business, even if you are still new. Through thoughtful, educational, and value adding content, you can create a group of loyal followers who will support you in your business.

## Social Media Influence

If you're an entrepreneur who is new to using social media for your business, start with searchable themes. Is it truly in line with your brand to post food photos even if food photos are popular?

You never know who is watching. Your intention behind social media is important. Some people don't click Like or comment on posts, but they are still paying attention, maybe without you knowing. Social media is a way for you to leverage time, maintain friendships, and to connect with more people than you could otherwise keep up with.

## Building a Team, Expanding Your Brand

As one person, you don't have all the skills you need to run a successful business. So you need to build a team, know what vendors or consultants to hire, and what staff you need.

First, if you haven't already taken some personality tests to get to know yourself better, it is important to identify your individual strengths and find where you need to fill gaps. In this chapter we have several types of assessments you can check out to see how they can help you know yourself and know what you need for your team. Second, you will want to have your prospective candidates or current colleagues take assessments so that you, as the leader, know how to manage your organization better.

## Finding Your Creativity: Be Inspired

"The key to being a successful creative person is to create. It takes a certain confidence level to sit down and put pen to paper, and face your fears... There are those voices that say maybe you shouldn't be doing this and stick to what you were doing. The main part of being creative is to defeat those voices. The most important thing: keep creating, keep developing your art, and keep learning about marketing."

—Austin Kleon, artist and author

What can you create every day? Some people like to try a new recipe or change up a recipe for something they already know how to bake. Some people like to keep a journal to write or sketch in. Make a commitment to be creative every day. What is that activity?

## Collaborations and Relationships

Arturo Villarreal grew up in a big family with a single mother in South Central LA. The family had financial challenges and he started working as a teen to help support the others. His loyalty and character as a teen earned him the respect of mentors, who took him far. In our interview, he

still credits the mentors who gave him opportunities and the training that laid the foundation for his company, Virtus. He also credits his team of employees and finds ways to develop his staff so they grow in their skills and stay invested in the company. He personally visits his client sites to make sure each project is going smoothly.

**Take care of your relationships.**

"You can have all the experience in the world, but if you forget to take care of your clients and the people who help make that happen, you have accomplished nothing."

Do you have a way of taking care of your relationships? If not, create a system to help you manage your clients and network. Think of ways to show you care. Do you need to mail a handwritten thank-you card or drop off a thoughtful gift?

## Networking and Philanthropy

Building a network is about the quality of connections. It's about the amount of time you spend with your colleagues. It's about creating a win-win scenario for each of the people in your sphere. It also comes down to chemistry and personality. At the end of the day, we do business with people we like, people with whom we have things in common.

Building a quality network has a compounding effect if it is done correctly. The crucial thing in building a network is not to forget about the people you met earlier. The follow-up and relationship building is key.

## Conclusion: How to Pivot

If you're afraid of a certain change that needs to happen with your career or business, let's do an inventory. Make a list of what is holding you back, your fears. Then write a list of what you will miss out on if you don't make that change. Look at your opportunities versus your fears.

Then find someone to help you take the next step towards your goals. If you don't know who that someone is, ask your network!

Take two pieces of blank paper. Draw a mind map of your current and previous brands and draw a mind map of your new brand five years from now. What similarities already exist? Are there qualities from your brand you would like to bring forward to your new brand? Are there qualities you want to highlight?

Who among your audience would transition to your new brand? How can you give them a call to action to join the audience of your new venture?

Visualize five years from now. How do you see your company growing? How will it need to pivot? What can you carry forward from your current branding, and what new audiences will you need to adapt to for that future company? How can you stay ahead of that growth and prepare for it now?

**Ivan Estrada** is an inspirational business leader and highly ranked real estate broker with extensive experience in the industries of real estate and finance. He is a top producer in the Los Angeles metro area, with a thriving team in residential and commercial properties. Ivan is part of a selected cohort of top entrepreneurs for the Stanford Latino Entrepreneurship Initiative. ## THE SUMMARY IN BRIEF

As a business executive, how do you ensure you're showing up your very best every day? How do you present the real, genuine you at work? And how do you create a culture where your employees can authentically flourish? Bart Foster wrote his book, ***BusinessOutside: Discover Your Path Forward***, to answer all these questions and more.

In *BusinessOutside*, Bart Foster reveals a science-inspired philosophy that reimagines corporate culture by bringing business outdoors, allowing for increased creativity, meaningful connections, and psychological restoration. Through a self-assessment of your personal values and discovery of your Zones of Genius, Bart shows how to rise above societal and outdated corporate norms that hinder growth. You'll learn the benefits of a natural setting, why feeling personally fulfilled matters in your career, and proven practices that will put you on the path toward an authentic, intentional life.

## IN THIS SUMMARY, YOU WILL LEARN:

- How to increase creativity, connections, and psychological restoration.
- How to assess your personal values and discover your Zones of Genius.
- How to rise above societal and outdated corporate norms that hinder growth.
- The benefits of working in a natural setting and why feeling personally fulfilled matters in your career.
- Proven practices to put you on the path toward an authentic, intentional life.

## Introduction

Following a science-inspired philosophy, BusinessOutside principles are taught to help people feel psychologically restored. In BusinessOutside retreats, participants are invited to tap into their true, authentic selves in a natural setting. People leave healthier, more creative, inspired, and renewed by experiencing genuine connections. By using BusinessOutside methods, business leaders can create organizational cultures that nurture and empower their people, helping them discover their path forward.

If more companies were made aware of the ways that working outside can bolster productivity and promote happiness, more workers would feel empowered to get outdoors. But the culture needs to change first, and that starts with the leaders. As a leader in your business, you have an opportunity to lead the way outside and establish a tighter team with more authentic connections and relationships as you do.

## Challenging Conventional Wisdom

Challenging conventional wisdom starts with reassessing and asking two key questions:

1. What Problem Are You Trying to Solve?
2. Are You Willing to be Accountable for Your Actions?

A great way to motivate a team is to move fast and be more innovative through a technique called the Five Whys, which taps into the cause-and-effect relationships underlying a particular problem. To use this strategy, start with your problem and ask the question "why" approximately five times to drill into each answer and ultimately identify the root cause of the original problem.

It can cost nothing to be innovative, and it doesn't have to take a lot of time, either. Yes, you can move fast and break things at the same time. How will you challenge the status quo and think outside the box? How might moving beyond conventional wisdom change your business and your life?

## Establishing Deeper Level Connections

The art of building relationships before you need them is only step one; it's the most superficial aspect of relationship building. After this step, you must continue investing in each relationship to deepen the connection and build trust.

There are some simple strategies you can implement to go the extra mile and show people you are interested in getting to know them. These simple steps apply to building relationships in business and the rest of life as well:

- Learn names
- Ask the right questions
- Give handwritten notes
- Add a personal touch

Make a list of five people who inspire you and give you energy. Now determine what meaningful steps you can take to spend more time with these people. Write them down and take that first step. Start small, then build.

## Personal Values Statement

I'm willing to bet that at least one area of your life doesn't reflect your personal values at all. Maybe you value health, but you're not scheduling time to exercise. Maybe you value friendship or personal connection but rarely see the friends who mean the most to you. Perhaps you really value fun and laughter, yet your whole day feels like a grind, from the minute you get up to the minute you go to bed and you can't remember the last time you had a good belly laugh.

Of course, you want to feel personal fulfillment in your career, but if a core value is fun and you don't have that, look at how you can start incorporating more fun, play, and laughter into your life. You don't have to make a dramatic change. Simply determine what fun looks like for you and take a step toward alignment.

## Zone Of Genius

You might be talented in many ways, but there's certainly no reason to spend all your time doing things that don't bring you joy. To find your Zone of Genius, start by answering the following "genius questions:"

- What do I most love to do? (I love it so much I can do it for long stretches of time without getting tired or bored.)
- What work do I do that doesn't seem like work? (I can do it all day long without ever feeling tired or bored.)
- In my work, what produces the highest ratio of abundance and satisfaction to the amount of time spent? (Even if I do only ten seconds or a few minutes of it,

an idea or a deeper connection may spring forth that leads to huge value.)

- What is my unique ability? (There's a special skill I'm gifted with. This unique ability, fully realized and put to work, can provide enormous benefits to me and any organization I serve.)

Some of these questions are professionally oriented, but you can think about how they relate to all areas of your life, including volunteer work, hobbies, and parenting.

## Energy Management

The most critical resource we have as human beings is our energy. There are four types of energy:

- Physical
- Emotional
- Mental
- Spiritual

It's normal to experience ebbs and flows in energy throughout life, but in order to live an intentional life and be our best selves more of the time, we need to align our energy investments with our purpose.

## Expand Your Circle Of Comfort

How can you reframe possibilities before you? How can you see the next step as a way to move outside your circle of comfort rather than as risk-taking? Yes, risk might be involved, but at a deeper level you are being called to expand, to grow.

Create a Plan to Fail. It works like this: Write down everything that would happen if you were to fail, on one page. This is your worst-case scenario. It will help you gain the perspective you need. You might realize that what you're about to take on is not going to be fun, but you won't die. Everything will be okay. In a worst-case scenario, you can rebuild. Catastrophizing a situation without truly thinking through a worst-case scenario prevents us from taking action. It keeps us in our circle of comfort.

Nature, in all her wisdom, has a lot to teach us about moving outside our circle of comfort. Take, for example, the mother eagle that pushes her babies out of the nest to learn to fly. It seems cruel, but in reality, that push, as scary and risky as it seems, is exactly what baby eagles need to learn to soar. And as scary as pushing yourself out of your comfort zone may seem, it's exactly what you need to soar, too.

## Identifying Your Ideal Environment

When you encounter an opportunity, challenge, or difficult decision, think of a person in your life whom you admire and respect. Imagine if they were faced with the same issue. What would they do?

A variation of this for corporations is called "Brand Takeover." Imagine your company is faced with an opportunity or a threat. Now imagine your company was taken over by another larger company (e.g., Amazon, Apple, Facebook, Nordstrom, etc.). Your company now has all the resources and people of the bigger company. What would you do differently? How would you react? Seeing from this new vantage point can be the key to getting unstuck.

## Regret Minimization

Let's look at how to prioritize with intentionality by using frameworks like Regret Minimization and Hell Yes or No. Start by considering how long you have left for any given event. Next, you can begin to look at all of the individual experiences you have left based on the time you have. Every time you are faced with a big decision, you can ask yourself which course of action you will regret more: doing the thing or not doing it? If you are honest with your answer, you will know exactly what to do.

To live your best life, you want to minimize the times when you are the one who has to shift because of decisions rather than being the one who decides. However, when we can get to more "Hell Yes" moments in our lives, we will be happier and most productive. The point is to be sure you are performing tasks in your Zone of Genius as often as possible.

## Anchors And Rockets

In the previous chapters, you assessed your personal values and Zone of Genius on a scale of one to five, with how often you are living that particular value or are in your Zone of Genius, in the previous six months. One was "Never," and five was "Always." Review anything you ranked a three or lower, and then take some time to consider the anchors that might be keeping you at that number. What is holding you back?

## Accelerate The Inevitable

BusinessOutside is all about leaning into the inevitable, and you're invited to come along for the ride. It's incredibly empowering to help drive the future.

1. Think deeply about what is inevitable in your business and your industry
2. Think deeply about what is inevitable in your personal life
3. Write these down clearly and concisely
4. What would happen if you helped accelerate this change?

## Make It Happen

I ask clients the following questions to guide them through the process of reframing their own mindset:

- What are the consequences of your current way of thinking, feeling, and acting?
- What are the facts?
- What assumptions are you making that might not be true?
- What can you control?
- What do you really want, consistent with your deepest values and beliefs?
- What will inspire you to act in new ways?

You can use these same questions to begin telling your new story. Once you realize you have agency over your mindset and the power to shift limiting beliefs into empowering ones, you have the rocket fuel to arrive at a fulfilled life. You now have the tools to create a future reality that is different from the current life you are living. You have the power to grow, shift, and propel yourself to any destination you have ever imagined.

## Conclusion

While BusinessOutside principles and methods are applicable to all at any time, they are critical in our post-pandemic world. The future of work will be hybrid, and remote workforces will crave flexibility, but still need the connection that can only come through in-person interactions. The return of the corporate retreat is coming, but it won't be like the boondoggles of the past. It will be a place to reenergize and return to alignment in every way.

Now is the time to challenge the status quo, push boundaries, find creative ways to conduct business, and get yourself and your team outside. Now is the time to create a life you love. It's time to do BusinessOutside. It's time to rethink how we do business. And that starts by tapping into your unique skills, passions, and creativity, so that you can then empower your team to do the same. It starts by recognizing there's no "professional" you and "personal" you. There's just you.

Bart Foster Is the founder and CEO of BusinessOutside®, a facilitation and training company focused on engaging, inspiring, and empowering individuals and teams to get outside in nature and outside their comfort zones. Bart is an entrepreneur and seasoned global executive who began his career at Kellogg's and Novartis. After climbing the corporate ladder and building a successful healthcare start-up, Bart found his true calling as an advisor, speaker, and coach to executives throughout the world.

# 10 Rules for Building a Successful Personal Brand and Fighting to Keep It

# CAREER WARFARE

## THE SUMMARY IN BRIEF

*What really separates those who get ahead? Hard work and accomplishments will only get you so far. If you intend to compete at the levels where the competition gets really ferocious — where everybody is hard-working and accomplished — you need a much more subtle advantage. You need the kind of reputation or "personal brand" that convinces people to trust you with new opportunities.*

*It's not easy to build a great personal brand, however. You first have to understand that people will judge you based on the way you behave even in the most insignificant moments. Then you have to become conscious of the personal impression you are making every day. Next you have to be noticed — and noticed for the right qualities. Ultimately, a big career requires everything from the right kind of manners, to the right style of handling your detractors, to the right instincts about when to leave a job and when to stick with it.*

Career Warfare *offers the unwritten rules of organizational life, the real truths you need to know in order to build the kind of personal brand that shouts "headed for the top."*

## What You'll Learn In This Summary

✓ How to build a personal brand that reflects what you are really worth.
✓ How to work with your boss, no matter where he or she stands in the organization.
✓ Why what you know isn't enough — your social skills count, too.
✓ Why sometimes you have to acknowledge defeat and move on.
✓ Why you sometimes have to take a stand and make enemies.
✓ How to handle the isolation that comes with success and not let yourself lose touch with those who really matter — your customers and shareholders.
✓ How to handle a major crisis without losing your identity or business.
✓ How to take the calculated risks that will let you rise to the top and avoid mediocrity.

# You Cost as Much as a Mercedes, So Act Like One

The greatest obstacle to building a good personal brand is self-absorption. Few of us escape seeing the places we work in terms of our own self-interest. But to build a personal brand that will help you succeed, you will have to turn self-absorption into a desire for self-respect and the respect of the people around you. You may still be a navel-gazing egotist, but at least you'll be an egotist who recognizes the value of other people's approval. In order to build a good reputation, you have to view your actions in the same way that the people judging you will view them.

## *Look Beyond Your Navel*

You can't build a good brand if you can't see yourself as others see you. Guard against excessive self-forgiveness. While you will tend to view your own less-than-heroic actions as no reflection on your basic goodness, others will have the opposite response — they believe you do what you do because of the kind of person you are.

Your behavior defines you — you are going to be judged by your external actions, not by your intentions.

## *Get Noticed*

The best way to establish a personal brand when you are new to an organization is by becoming uniquely useful. Be smart. Stake out your territory by finding something the organization is missing that you can provide. This may involve tackling less-than-glamorous tasks since the high-profile ones get plenty of volunteers. By doing what needs to be done rather than what you would ideally like to do, you set yourself apart. Do something humble but essential, and you'll get noticed by those in power.

When you are young, getting access to powerful people is the name of the game. If you gain access to power early, you will learn an enormous amount very quickly and put yourself in an entirely different category from your peers who communicate with these people only through a hierarchy.

## *Become a Product With the Right Features*

Getting the positive notice of powerful people is only the first step. You want them to help you move up. For that, you have to develop a brand that shouts, "Upward mobility."

How do you do that? Package yourself as an expensive product — because that's exactly what you are to your organization, your boss and your customers. You cost as much per year as a Mercedes. You'd better deliver the performance they expect from a luxury brand. When it comes to employees, certain things are not negotiable when it comes to being considered for higher office. To go far, you must develop a reputation for five key qualities:

- **Earning the organization money**
- **Telling the truth**
- **Being discreet**
- **Keeping your promises**
- **Making people want to work for you**

If you are missing any one of these qualities, you don't have the right kind of brand for a big career, and it is highly unlikely anyone will consider you executive office material.

Let's look at ways you can show you have the five key qualities. First, get yourself into a production or development job where you can be credited directly for beautifying the bottom line. Being a successful hunter can give you a huge advantage over your peers. If you're generating revenue for the company, the people

### You Cost as Much as a Mercedes, So Act Like One

*(continued from page 2)*

in charge will listen.

Second, be honest. Trust is the oil that greases the wheels of commerce. When you have a thriving business, the risks of dishonesty far outweigh any potential profit you might gain from it. Just consider how rapidly the market capitalization of WorldCom and Enron collapsed after their dishonest accounting practices came to light. A reputation for dishonesty is a career-ender.

Third, be discreet. If you aren't, no one with any power will trust you. Don't gossip and don't say anything in public or even in an e-mail (they have a tendency to become public, fast) that puts your company, employees or customers in a bad light. Do not write or record anything you wouldn't want subpoenaed or published.

Fourth, always deliver on time. If you overpromise and undeliver, you won't be trusted. On the other hand, showing you can do what other people cannot will propel you up the ladder. To elevate your personal brand, make bold promises and deliver.

Finally, you must be able to manage people effectively. Rise high enough, and you move from managing projects to managing people who manage projects. Eventually you will manage people across disciplines, at which point your ability to do things yourself is relatively meaningless. Your ability to get things done through others becomes what you're getting paid for.

How do you lead people? First, it's about the people, not the theory. They all need to be motivated differently. Second, know what you don't know. It's not your job to be an expert at everything, and you will never be effective if you insist on pretending that you are. Instead of teaching your subordinates to do their jobs, hire people with great skills who will teach you. Finally, treat subordinates fairly. ■

## Glamour Has Brand Value

Associate your brand with something glamorous and valuable, and you will become valuable, too. That's what the author did when he set out to establish his brand early in his career.

He convinced Mobil Travel Guides it needed a more aggressive campaign to call attention to its restaurant awards. Through press releases and food critic television slots, restaurants selected for the prize got tremendous publicity. Since these were arranged by the author, he quickly became a welcome sight at restaurants across New York City. He had no trouble getting reservations anywhere. Soon his bosses realized that getting into restaurants that were nearly impossible to get into required only a word from their junior associate.

Getting bosses and their out-of-town guests reservations at some of the world's best restaurants was quite an accomplishment for a junior associate, and wasn't quickly forgotten in a world where image counts for a lot.

If you have the opportunity, try to take advantage of what marketers call "the halo effect." Associate your brand with something glamorous and valuable, and by extension you will become valuable, too.

# Your Boss Is the Coauthor Of Your Brand

You have to pay your dues. You can expect your boss to take credit for your ideas, exploit your energy and siphon the positive attention your efforts attract. Early in your career, you will be making most of the money for the organization and expending most of the sweat while senior people reap most of the rewards. That's the way organizations work.

If you can't accept that reality, then you need to start your own organization. Otherwise, you simply cannot fight the power structure. It's dangerous to try to fight it because no one has more influence over your life than your boss. He or she determines how much money you make, what kind of experience you gain, how much authority you have, what the next step of your career will be and whether you'll be posted to Paris, France or Paris, Maine. To a great extent, your boss controls your personal brand.

Organizations are caste systems. Assistant vice presidents talk to assistant vice presidents. At whatever level your boss is, you can be sure he is talking about you to his peers. The caste system means that your accomplishments may win you one kind of reputation among your peers and subordinates and another in the boss empire. Your personal brand among the higher-ups is usually less dependent on objective evidence and more dependent on the subjective things your superior is saying about you. You must manage the relationship with your boss intelligently, no matter who he or she is.

### *Bosses Want Loyalty and Good Advice*

What do bosses want? More than anything, they want loyalty. That's because most bosses, deep down, are frightened. They want to make sure the people who report to them are not trying to do them in. The fastest method of suicide in organizational life is talking nega-

*(continued on page 4)*

## Your Boss Is the Coauthor of Your Brand

*(continued from page 3)*

tively about your boss to others. Hell really hath no fury like a boss scorned. Your boss will find a way to take you out.

Be especially wary of complaining about your boss to higher-ups. You will develop a reputation for disloyalty that senior executives will hold against you. This means that even if your boss is barely worthy of respect, you will have to give him a certain degree of loyalty.

Bosses also want good advice. This is a commodity that's hard to come by in organizational life. Bosses put subordinates into three categories — sycophants, contrarians and balanced players. Only the latter offer advice worth listening to.

Sycophants make up about 70 percent of the people in any organization. These are the people who agree with their bosses on everything. They don't want to be noticed, they want the kind of career that will reward them with a three percent pay increase every year, good benefits and a pension plan. Do not allow yourself to be thought of as someone who is afraid to speak your mind. It will brand you as mediocre.

You don't want to be branded a contrarian either. They make up about 10 percent of the workforce and disagree for the sake of disagreeing. The boss starts to cringe when a contrarian comes in the office because it is an unpleasant experience each and every time. Most contrarians are that way because they are the boss's intellectual superior and they cannot understand how their boss got this far.

Avoid the contrarian trap. Don't assume your intellect alone is enough to propel you to the top. It isn't — you need the right kind of character, too.

You should strive to be a balanced personality — the kind of person with the personal courage to tell the boss when he or she is right or wrong. Timing is important, too. Give advice before the decision is made, not after. Advice given too late looks like nothing more than a challenge to the boss' authority. ■

# Put Your Boss on the Couch

What you want from your boss is a good deal. In exchange for all you do for them, you want help building your brand. Not all bosses, however, will give you that help and it's not always easy to know who will and who won't. That's why you have to put your boss on the couch and play amateur shrink.

Many bosses fit into one of seven basic categories. Placing yours will tell you a lot about how supportive of your brand he or she will be.

### When To Say No

There may come a time when you have to challenge your boss's decision. When he or she wants to do something illegal, you simply have to resist, even if it costs you your job, Otherwise, it may cost you your career or even your liberty down the line.

If reasoning doesn't work, go sideways, go upward, blow the whistle, and call in the authorities. Just don't compromise your integrity for any boss.

- **The Little League Parent:** Many bosses treat you as if you are an errant son or daughter. Just remember, parents are self-sacrificing, bosses are not. Understand that what this boss does for you is not for love, but to further his or her own brand.
- **The Mentor:** Hope for one of these. A mentor will make sure your reputation rises in tandem with his or hers.
- **The Wastrel:** Sometimes you run into a boss you have to do everything for. If you do, tolerate his or her weakness and use the opportunity to build your own brand by taking on the assignments he or she can't or won't tackle.
- **The Pariah:** Try to keep your brand distinct from this boss. Defend yourself by proving your loyalty to the whole organization.
- **The One-Way User:** If your boss is one of these, you have to find a way to move on.
- **The Wimp:** Won't let you build your brand because he or she won't let you do anything.
- **The Know-It-All:** These bosses never listen. Avoid if possible.

### *The Power Balance*

There are four types of power you have against a boss who wants to stop you from building your brand:

**You can turn down passage on the Titanic.** During a job interview, you should be doing as much judging as the interviewer is doing. Bad bosses often give themselves away in interviews. Inquire about a potential boss's reputation before you take the job. Don't sign on if you think he or she is unlikely to enhance your brand.

**You can get out of Dodge.** Boss relationships are a Faustian bargain — you want experience and contacts, they want hard work and performance. The bargain is only meaningful so long as you are learning. Move on when you've learned what you can, or you risk being lulled into comfortable mediocrity.

*(continued on page 5)*

## Put Your Boss on the Couch

*(continued from page 4)*

**You can make friends in high places.** The boss's boss will notice your hard work, but don't whine or complain about your boss. If you do, you'll be branded as untrustworthy for violating the chain of command. Unless asked by a higher-up for input on your boss's less-than-stellar performance, don't raise the topic. Your best opportunity to shine may come during a crisis. If you are suffering under incompetent management, welcome upheaval. It will let you see who is really in charge — the people you need to win over on your way up.

**You can enjoy a dish best served cold.** Someday you may very well wind up in a position of power over the person who once abused his or her power over you. ■

# Learn Which One Is the Pickle Fork

Believe it or not, even in today's informal world, etiquette matters. Good manners are an essential tool of brand building. Without good manners, you will seem clueless about the world that successful professionals inhabit — definitely not a candidate for membership in the club. Whether it's fair or not, people interpret your cluelessness about how to behave as a sign that you are clueless about how to do your job, too. Good manners are a way of showing compassion and respect for your bosses, colleagues and subordinates.

The first rule for brand builders is, "Above all, avoid embarrassing yourself." Sometimes a single embarrassment can be enough to alter people's opinion of you forever. Go out of your way to not associate your personal brand with anything unethical, unsavory or just plain ugly.

## Don't Monitor the Bathroom

One lapse into embarrassment can derail a career. Consider the case of a senior vice president who created a water conservation program during a drought. Local government officials had recommended not watering lawns and fined people who wasted water. The vice president implemented his own conservation program and ordered employees to not flush every time they used the urinal. He actually issued a memo outlining when and how to flush. The drought passed, but he forever became known as the flush-control guy. Everyone understood that no matter what level he had attained in the corporation, his real level was that of bathroom monitor.

Personal habits in food and dress count. If you want success at a high level, it's important that you look and act it. Dress professionally. Dress appropriately. Make sure your clothes are the right size. It matters.

It's also important that your table manners indicate you are a worldly person, familiar with the rules of civilized life. Manners that demonstrate a lack of knowledge will hold you back. If you find yourself at working dinners with a dozen pieces of silver in front of you, take the time to learn which one is the pickle fork. It might not seem relevant to your personal brand, but it is.

Be careful about making snap judgments about people. Don't hurt your reputation by deciding too quickly who deserves your attention and who doesn't. It's dangerous to slight someone you don't know. Keep your prejudices, whatever they are, to yourself. Slowing down and observing people before you judge will keep you from developing a reputation as a horse's ass.

The most dangerous of all work occasions for your career are the ones that are supposed to be fun — the office parties, victory celebrations, conventions out of town and off-site meetings. You will be judged even in circumstances that seem like recreation. A lot of people, when offered any temptation — food, alcohol, sex or an opportunity to speak frankly — in a work related situation succumb so completely they destroy their reputations in the process. The office party is not a timeout.

So, not only should you not let your hair down at a social event sponsored by the office, but you should be twice as cautious about protecting your personal brand. Obey this one simple rule — don't drink. And don't hang around the boss.

The most dangerous event is the off-site meeting or retreat. The accommodations and the agendas don't matter, they are all snake pits for reputations. They are always driven by some executive's need to bring the organizational "family" together — a dysfunctional one. Someone always drinks too much and commits some form of self-immolation. Don't let it be you.

Don't bring a date to company events. Too much variety brands you, while bringing the same date may mean trouble when you split up. You will be judged most harshly if the person you are dating is someone you work with.

Marriage, on the other hand, is a public institution. How, why and whom you marry inevitably colors your professional brand. And those who marry and divorce repeatedly suffer. Don't let your spouse speak to your boss about your real or imagined grievances either. Doing so will give you a reputation for weakness you cannot possibly live down.

Treat your boss' spouse with great respect, but don't try to get too close. ■

# Kenny Rogers Is Right

If you intend to have a big career, pick your battles and avoid spending your time and energy in places where you will never move your brand forward. In "The Gambler," Kenny Rogers sang, "You got to know when to hold 'em, know when to fold 'em." Kenny's right.

### *Nepotism Means 'Not You'*

The best brand attribute you can possibly have in business is the right name. Ford, Rockefeller, Vanderbilt, to name a few. Consider that 60 percent of large public companies, according to the Family Firm Institute, are family-controlled. If you have the right last name and a limited amount of intrafamily competition, your chances of rising to the top are excellent.

The reality is that without the right name you may put in 30 years with a company only to find your ascension to CEO barred by a favored son. Dynastically inclined bosses may not care that you're the best qualified for the job. At a family run company, your brand will always be deficient — it will be the brand of a caretaker, a valued house servant, but never, ever the brand of a true leader.

Learn all you can at family run companies, but when the time is right for you to lead, find another sandbox.

### *If a Gang Controls the Turf, Set Up Shop Elsewhere*

Be careful about who runs the show, especially if the group looks less than diverse and you don't fit the mold. Unfortunately, discrimination is still alive and there are places where you will bang your head against the ceiling simply by virtue of who you are.

There are elements of your brand you cannot do anything about — such as having attended a community college instead of an Ivy League school, or you're a single mom, or born overseas. If you want to build a big career, you cannot afford to waste years in a place where the power structure is going to resist, no matter what your performance.

### *Don't Let the Hazing Go On Too Long*

The basic dynamic of established partnerships in law, consulting, accounting and architecture is that the old take advantage of the young. They hire the best and the brightest and force them to grind away 14 hours a day, six days a week for years, generating big bills for the firm's clients, at work well below their abilities under conditions that are demeaning — all on the off chance of making partner.

If you work in one of these industries, don't become so addicted to the place that you are irrational about your chances of making partner. Remember, partners aren't enthusiastic about adding partners — it dilutes their equity in the firm. They aren't going to share unless it's very likely that you will enlarge the pot with new business. If you can't, move on. If you don't make partner by your mid-thirties, you will be tainted and on the way out the door in favor of someone younger and cheaper. If you're passed over twice, move on.

### *Beware Entrepreneurs*

Entrepreneurial companies are dangerous. You can learn a lot from these cowboys, but don't stay too long. Entrepreneurs are difficult because:

- **Everything is personal and any show of independence is a betrayal.**
- **Entrepreneurs are insanely controlling.**
- **They don't like to share.**
- **They like to play Toy Soldier with their workers, buying the best and discarding them when bored.**

Do not allow yourself to be bound by gratitude or charisma to the point where your brand cannot grow. ■

# It's Always Show Time

It's not the big events that define you, but the patterns you establish over time. Little things matter even more as you rise. The pyramid narrows, there are fewer and fewer promotion shots and your superiors will be trying to distinguish between many qualified applicants.

Decisions from what to wear to how you treat an acquaintance on the train should be conscious. How you treat the receptionist can be seen as proof of your managerial abilities.

There are three kinds of meetings whose premises you should understand.

Staff meetings are particularly dangerous. Don't use them for anything except letting the boss know what's going on. Don't use them to argue for something you want from the boss. Don't attack peers. Staff meetings are designed to make the boss feel good, the proud patriarch or matriarch of a great team.

Watch your behavior at get-something-done meetings, too. Don't just cut off ideas, even those you know are useless. Tell the presenters you'll think about it. Let ideas flow, but make sure the group stays focused.

Then there are combat meetings — involving money or approval. At these, make sure you understand the players and the agenda. Be ready to admit victory or defeat when either is obvious and move on. Accept bad news gracefully. ■

# Make the Right Enemies

You cannot build an effective brand by never offending anyone. No matter how smart, hard-working or kind you are, you will make enemies. In organizational life, you never know how many enemies you really have, but it's always more than you think you have. Some will be your enemies simply by virtue of who you are — your sex, race, age or where you went to school.

You are especially likely to make enemies if you are ambitiously trying to build a personal brand by taking risks and accomplishing big things. The more successful you are, the more enemies you will have. Manage them by making your bosses' lives better and attaining the next office before the people who have it in for you can drag you down.

Your enemies will rarely confront you directly. Instead, they will try to hurt you without leaving fingerprints. They will often try to destroy your brand with gossip.

How do you know when an enemy is trying to do you in? The telltale signs include:

- **It's taking longer for your calls to be returned.**
- **People you used to get appointments to see easily now are often busy.**
- **People greet you with "How are you doing these days," code for seeing if you know your days are numbered.**
- **Many people are using the same metaphors about you.**
- **At parties, the boss's spouse barely glances at you.**
- **Other people are unusually concerned about your well-being.**

If this sounds familiar, find out what's going on and fight it energetically.

However, make sure that you distinguish between someone's willingness to disagree with you and disloyalty. Criticism is not a betrayal and deserves respect, not retaliation. An attempt to undermine your authority, on the other hand, deserves everything you can throw at it. If you can, make sure you fire traitors as an example to others. You have nothing to gain and everything to lose if you fail to make an example of someone who tries to undermine you.

Sometimes you have to take a stand even when your brand may take a hit. You may even have to provoke some giants. Don't be afraid to take on someone more powerful when those weaker than you need a champion. ■

# Don't Be Swallowed By The Bubble

Let's assume that you have done everything right when it comes to your personal brand. People trust you, want to work with you and respect you. You're rising in the ranks. Life is good. Now you're ready to handle the greatest danger yet — success.

Attention, praise, money and power can be isolating and unsettling. That's why so many successful people self-destruct. Becoming an executive is close to being royalty. As much as you may enjoy the flattery and perks, there are two problems with getting the royal treatment. First, it can be bad for your humanity. You get used to being "yes-sirred" and grow unused to being contradicted.

Second, it can be bad for your career. The more you're treated as exceptional, the more likely you are to believe the rules don't apply to you and the more likely you are to break the rules that are taken seriously by the rest of the universe. The implosions at Enron, Arthur Andersen, WorldCom, Tyco and Adelphia demonstrate that even pillars of the community succumb to the temptations of success.

Unless you are very careful, your achievements will nudge you into a kind of bubble that distorts your judgments. That can make you very, very arrogant and careless. It is almost impossible to avoid the bubble completely, but don't let it swallow you. Follow the six rules for keeping some perspective on your success:

- **Be skeptical of your own genius.**
- **Surround yourself with equally skeptical people.**
- **Keep friends who remind you of your humanity.**
- **Have some sympathy for your victims.**
- **Develop interests other than golf.**
- **Remember who feeds your family — your customers and shareholders.**

### *Build Goodwill Outside Your Kingdom*

Use your success to connect with the rest of the world. It's smart to win the approval of the community around you. One way to build goodwill is to treat the press respectfully. Cooperate with reporters, be generous with your time, and don't expect every story to be positive. Nonetheless, treating the press badly is a slow form of brand suicide.

Another goodwill builder is to create an organization the world admires. If you do, your shortcomings will be seen as the exception to the rule, not the rule itself.

*(continued on page 8)*

For Additional Information about how not to treat the press, go to: http://my.summary.com

## Don't Be Swallowed by the Bubble

*(continued from page 7)*

Finally, give back something significant, whether your money, your time or your influence in supporting good causes. Give because the world has made you prosperous and successful and you owe it a debt. Give where you can make a difference, locally and personally. If you do, you will build a goodwill reservoir you can tap. ■

For Additional Information about stockpiling goodwill, go to: http://my.summary.com

# The Higher You Fly, The More You Will Be Shot At

It doesn't take a crime or some extremely immoral act to generate negative news. Under the right circumstances, all it takes is the fact that you spend too much money on your hairdresser, you launched a product no one likes or you play racquetball on company time.

Everyone makes mistakes and everyone does well-intentioned things that look like mistakes. The more your profile has been heightened by success, the more likely any mistake you do make will get a broad airing. It's very simple. The higher you fly, the more interesting it is to shoot at you. Do people care if a White House intern is having an affair with a White House intern? No. But if the President is, now, that is interesting. And even more so if he lies about it.

Bill Clinton may be an extreme example of someone who seemed to enjoy flying high without a parachute, but there isn't any prominent person in any field whose brand has not been a target at some time. This includes university presidents, the heads of non-profits, movie stars, politicians and business leaders. It simply comes with the territory.

Prepare for bad news right now. Sooner or later, you will face unpleasant headlines. If you handle it well, you can turn what might be a year-long story into one that lasts a few weeks and inflicts no lasting injury on your brand. If you handle the attack brilliantly, you may even come out of your trial by fire with your brand enhanced.

The first tactic is to blunt bad news before it becomes a huge story. Explain bad news to the world. Forthrightness is disarming. And once the story breaks, behave in a forthright and reasonable manner. Explain yourself and move on. If you refuse and retreat to the bunker, the story changes focus from one mistake to every unfortunate thing you have ever done.

Don't even think of lying publicly or your brand will be finished. If you lie under scrutiny, you can no longer successfully refute anything, even the most outrageous story, because you will have no credibility. Remember, the truth may be bitter medicine for a brand, but a lie is toxic.

Whatever you do, don't go on a jihad. Don't blame your employees, your accountant, your students or your spouse. Don't blame a vast, un-named conspiracy. If you try to shift blame, you make a bad story worse. Finally, don't be your own lawyer. Get advice from people who can be realistic about what is happening to you. ■

# Make Sure You Stay A Contender

Somewhere between ages 25 and 65, most ambitious people go wrong. They start their careers ready to set the world on fire, yet at some point they make decisions that give them a personal brand that is notable only for its mediocrity. Even if you follow every rule in this summary, middle age and midcareer are dangerous. Your responsibilities are growing, you may have children, your parents are aging and you probably have a mortgage. All these things conspire against risk and change. To keep momentum going long after your colleagues' brands have settled into inertia:

- **Don't be generic, be Tylenol.** Be distinctive.
- **Get back on the horse.** It's foolish to throw in the towel after a setback or two.
- **Ask for opportunities and promotions.** It will remind your bosses that you are someone to keep in mind for big jobs.
- **Never sell your brand for short money.** Make sure assignments include interesting opportunities, not just a raise.
- **If lightning is about to strike, make sure you are standing in an open field.** Change will happen around you. You probably cannot control the events that lead to a promotion, but you can make sure that you are in a position to be the obvious choice.
- **Gamble shrewdly.** Promise to do something difficult and then deliver.
- **Create a brain trust.** Develop a circle of people whose advice you trust to help you bet wisely.
- **Tinker with success.** You are building your brand until the day you die, so expect to make adjustments.
- **Don't lie, cheat or steal.** Power won't protect you from disgrace.
- **Understand that the unexamined reputation is not worth having.** Be conscious every day of what you are building. This alone will set you apart from 99 percent of the people you will meet in your working life. You have to use your brand as a template for all your actions. Ultimately, if your brand is to mean anything, you have to live it to the very end. ■

## THE SUMMARY IN BRIEF

The only thing you can rely on in today's workplace is uncertainty. Between mergers and acquisitions, layoffs and team shuffles, pandemics and recessions, only the nimble survive. ***Change On The Run*** is your secret weapon to navigating it all.

Being successful in change is not about being perfect; it's about being fast and effective so you can move on to the next task or challenge. Written for the time-strapped manager, ***Change on the Run*** will help you line them up and knock them down. It's a laser-focused guide to navigating your way through disruption, without any time-consuming fluff or theory.

Change management expert Phil Buckley gives you tried-and-true survival strategies for responding to transitions and disruptions as quickly as possible. For each, Buckley applies his 80/20 rule—homing in on one action that will deliver 80 percent results in 20 percent of the time, with three key steps to achieving it.

Change is the norm in business. Let ***Change On The Run*** help you navigate it.

## IN THIS SUMMARY, YOU WILL LEARN:

- To assess your strengths and set personal goals.
- To develop a business case and a vision for change, as well as a plan for how to make it happen.
- To empathize with others, earn trust, and change your culture.
- To address resistance and make change stick.

## Welcome From Your Coach!

Uncertainty is now a workplace norm, and quickly managing change is a must-have survival and success capability. The following 22 tips, sampled from the full set of 44, provide advice on key tasks that most people face during a change initiative, in a format that's easy to absorb.

It's direct and to the point because you don't have time for theory or fluff. Each task includes the one action that will give you the best outcomes when you are short of time.

Under stress, people will often try many things at the same time, hoping the choices they make will resolve the situation—the more the better. This approach gives you poor results and a reputation for not being your best.

A better approach is to focus your energy and resources on the one action that will give you 80 percent of the results you want with 20 percent of the time and effort.

The number of workplace changes and the speed with which they are emerging have never been higher or faster. Being successful in change is not about being perfect; it's about being effective and fast so you can move on to the next task or challenge. These strategies help you line them up and knock them down.

## Part One: Managing Me

### Assessing Your Strengths

Everyone goes through a personal transition when their company goes through a business transition—this is normal. Most cope with the stress by busying themselves with change-related tasks, and often become overwhelmed from having too much work to do in the too-little time available.

A better approach is to first take stock of what you do well. Reviewing actions you do well is a good start to creating your inventory of change skills. Examples of actions are planning, motivating people, and problem solving.

Your past performance reviews can reveal patterns of these types of actions and behaviors that have served you well. Your network is another source of feedback on strengths. Examine skills you've observed, skills your manager has observed, and skills your team members have observed.

Ask people for two inputs: what you do well and what your "watch-out" areas are. Most people will give you balanced views. Once you have completed your research, pick your best three strengths to leverage when completing your tasks, knowing they will assist you in any situation.

### Setting Your Personal Goals

An organizational change project provides real opportunities for personal growth because it's dynamic, complex, and involves people at all levels and areas of work. Without personal goals, you're more likely to focus on completing tasks with little thought to increasing your abilities.

One of the first things you should do after joining a project is to decide how you want the experience to benefit you: How will you grow? Three areas of development will give you the highest return: skills (what you do well), behaviors (how you act toward others), and relationships (a connection you share with someone).

Knowledge (what you know) is the fourth, but focus on the first three for now.

Skills, behaviors, and the ability to connect with others are types of leadership capability. Telling the story about how you achieved all three is part of your career leadership narrative. To create that narrative, write down a goal for each category and what success looks like for each. Then track your progress over the project.

### Optimizing Your Limited Time

Most people have fewer resources to fulfill their change role than they need, and so must choose which activities are most important. Of all the tasks you need to perform, prioritize spending time with leaders as they are making decisions. These moments will determine the success of your project and will define where your knowledge and experience are needed most.

Status meetings are crucial to the success of change initiatives because this is where leaders review progress, evaluate risks, and make decisions, including on the allocation of resources. If you know what's being decided at these meetings, you can influence what data is presented and what questions get asked.

The better briefed leaders are, the better they will be at making the right decisions.

What decisions are project leaders making that will impact the success of the change? Document each decision, the decision makers involved, the date of decision, and the information required.

Expect criticism. Try to make sure that your plans and recommendations are better researched than the ones from those who challenge them.

**Success tip**: If you don't have access to the leader, give the information to someone they rely on for guidance.

### Making Decisions

Your most important change activity is to help leaders make decisions. Showing them the implications of their options will lead to better and more supported choices.

Often, decisions must be made quickly, either because there is little time for discussion or something has gone wrong. Listing pros and cons is a fast way to review options in the context of your objectives. Identify three options, and note the pros and cons of each.

Choose the option that best moves you toward achieving your goals. Once you've identified the best option, share it with leaders, and implement it if you have their support. If not, make modifications until all leaders support it.

Sometimes, you'll need to pivot to another option if leaders reject your first pick. If this happens, try to build in some elements of your best option to increase the probability of its success.

William B. Given, Jr. says, "When possible make the decisions now, even if action is in the future. A reviewed decision usually is better than one reached at the last moment."

You might say, "Based on the information we have now, this is the best way to proceed."

### Addressing An Emergency

Too often, people panic during an emergency. The "fight, flight, or freeze" response kicks in, emotions flare up, and reactions intensify. With all this commotion, most people don't focus on addressing the crisis, assuming others will take the lead.

Emergencies are excellent opportunities to take charge and show what you're capable of.

Ask these questions:

- "What are the facts?" Speak to those closest to the situation to gather facts.
- "What can we do to avoid or stop the damage?" Discuss options, gain agreement, and then suggest who's best to activate the option you've agreed on.
- "What do I need to communicate to stakeholders?" Once you neutralize the situation, identify the steps needed to return to normal operations. After getting agreement, communicate the recovery plan to leaders and others. Afterward, review what worked and what didn't to guide how you'll respond to future situations.

**Pro tip**: When people are panicking, they respond best to their name. "Raj, what do we need to do?" solicits the best response.

### Responding to Criticism

It makes sense that people have different views on what needs to be done, because major change initiatives are generally built on assumptions and incomplete knowledge.

Expect criticism. Try to make sure that your plans and recommendations are better researched than the ones from those who challenge them. The best response to critics is to ask for facts that support their view. Responding with "Tell me more" or "That's interesting; based on what evidence?" will invite the person to share their rationale.

If the rationale is not strong, you can present your justification and move on. If their idea is right, acknowledge the new information and say you'll incorporate it into your work. In the long run, they've done you a favor.

Sometimes people make up information to support their concerns. Viewpoints can appear factual when said with authority and confidence. Asking critics to support their contentions with empirical evidence generally separates truth from fiction.

Don't say "You're wrong" or "That's not true."

**Success tip**: Anticipating criticisms and rehearsing your responses to them will avoid emotional responses when you're asked to defend your views.

### Identifying Your Lessons Learned

Learning occurs in the moment. Something worked or didn't work because of specific factors, and we often lose learnings we don't record quickly. This is especially true in the middle of projects because we tend to remember only beginnings and endings, leaving the key middle ground foggy.

Documenting the context and details of your observations immediately while they are fresh in your mind gives you the best learning. Keeping a daily log, either paper or electronic, will help when you create a project summary. The details you record will enhance the stories you tell about what you did and how you did it.

Follow this lessons-learned assessment:

- "What worked well that I would want to repeat?"
- "What didn't work well that I wouldn't?"
- "What surprised me?"

**Pro tip**: Recording quotes from what people say will increase the accuracy and credibility of your lessons learned.

## Part Two: Managing the Work

### Developing a Business Case for Change

Only 7 percent of employees completely understand their company's business goals and strategies and what they need to do to help achieve them.

A business case identifies the anticipated benefits of making a change and the investment required to implement it. Benefits include increased sales, profit and/or market share; decreased costs; greater customer service; and retention of talent. These gains need to be greater than the investment of resources required to secure them: money, time, skills, and leadership attention.

The best business cases demonstrate how the proposed change will activate strategies chosen by leaders to achieve their goals.

First, identify the published goals and strategies that the change can contribute to. Next, estimate the benefits and costs of your project as suggested by articles, case studies, etc. Finally, create a narrative that describes how the change will improve the organization.

Statistics by themselves do not make persuasive cases. Leaders and teams are more likely to support changes they can imagine. Painting pictures through stories and metaphors makes them tangible and relevant.

### Creating a Vision for the Change

Provide a compelling picture of a better future, a future that aligns with this leadership question: "What does the company aspire to become?"

Once this is set, it acts as a North Star to align goals, strategies, and the resources to achieve them. Effective visions paint a picture of a different, better, and compelling future that the organization and its employees will benefit from.

Ask these questions:

- "What will be different (reason to believe)?"
- "Why will it be better?"
- "What will intrigue people about the future (what's cool)?"

Presenting the business need for these desired outcomes is necessary because it justifies the changes required to achieve it. People also need to know how the changes will affect them. Without this information, they're likely to believe and fear worst-case scenarios and make faulty assumptions.

McKinsey & Company reports that success is 6.3 times likelier when senior leaders share aligned messages about the change effort.

Outlining people's roles (attending training sessions, testing a new process, etc.) in adopting the change is important when sharing the vision. Being clear about what they need to do for the change to be successful gives them a sense of purpose and reminds them that their contributions are important.

### Creating a Change Plan

A good change plan describes how people will be able to adopt the change. There are three sections of an effective change plan: communication, training, and engagement.

Communication describes how people will get information, e.g., through emails, town hall meetings, newsletters, etc. Training captures skill-building activities, including learning sessions, coaching, and process walkthroughs. Engagement includes feedback opportunities such as plan review meetings, interviews, and surveys.

For each section, outline what will happen in month one, month two, and month three.

Resist the temptation to make your plan long and complex. Many people believe a big plan is better, but the longer and more complex it is, the harder it is to communicate and implement. The best plans are easy to understand and follow. The worst response to a plan is, "I don't get it."

**Pro tip**: Creating a plan early, even if you don't have a lot of information, will set a path to follow and demonstrate that you are in control.

### Competing For Resources

Most organizations take on change agendas that are larger than the resources available to implement them. Leaders struggle to prioritize multiple change initiatives because they all provide benefits, and generally there are differing views on which ones will deliver the most value.

Securing adequate resources to implement your plan is one of the most important negotiations you'll have. Meet with each stakeholder to better understand the benefits they'll get from your change. Greater detail backed by credible endorsements will make them more tangible and perhaps more valuable when compared to other projects, securing the resources you need.

Ask, "Why should your project receive resources over others?" Build your case by outlining the stakeholders, benefits, examples, and quotes. The better you can describe the project benefits, the more valuable and more worthy of the resources required to attain them they become.

### Communicating Effectively

Communication is the most important form of support people receive when going through a work transition. It's also one of the biggest enablers of successful change because it aligns everyone on their understanding of what's changing, why it's necessary, how it will affect them and what they must do to adopt it.

Setting up a frequent and consistent communication schedule creates the expectation that people will receive regular updates from leaders and the project team. Communicating honestly in ways that your audience can relate to creates the perception that these messages are the best sources of information.

You must regularly communicate even when there is nothing new to share. If you don't, rumors and speculation fill the void, and such counter-narratives will seem credible, distract people, and increase anxiety.

What are your audience's communication preferences? Consider each group, how they are impacted, their hopes and fears, what needs to be communicated, and who the best communicator is.

**Success tip**: Test your messages with a few members of your audience to avoid (or at least be prepared for) adverse reactions.

### Measuring Progress

People give little thought to measurement at the beginning of a project because they're too absorbed in planning activities.

Spending time up front defining and gaining buy-in for measures will save you considerable heartache throughout the execution phase of your project. The two questions you need to answer are as follows:

- What information can you track that will accurately communicate what you've completed at each plan checkpoint?
- Who can provide context around this data? For example, you could track percentage completion of training and include a quote from the participants' leader, such as, "My team felt the training provided them with everything they need to operate the new system."

It's important to get agreement from leaders on what data will be tracked and by whom. The clearer they are about how success will be measured, the more supportive they'll be at progress reviews.

**Pro tip**: The only important measures are ones that leaders find of value.

### Presenting at a Leadership Review

The most successful leadership reviews are conversations, not presentations. Be sure to engage leaders throughout, encouraging them to share their experiences and voice concerns.

Start each review by stating what you want to accomplish, and invite participants to share their needs. This will focus the leaders on your goals before they review the content. The more you get leaders to participate, including discussing feedback, the more invested they'll be in the decisions made. Make a mental note of who is contributing and who is silent.

Don't end the meeting until everyone has said something, even if you need to go around the table for final comments. Sending a summary of agreements to leaders will confirm

that you haven't missed any key points, as well as convey that you're in control.

Say, "Thank you for your active sponsorship and guidance to ensure the project is a success."

**Pro tip:** Leaders respond best when you speak with them as your equals rather than as your superiors.

### Identifying Project Lessons Learned

Managing the closing of a change project is challenging because most leaders and project team members have mentally moved on to their next roles and challenges. A lessons-learned exercise at the end of a change project is essential for building change capability in your organization. It documents which activities worked and should be repeated by other project teams, and which didn't and shouldn't.

The best lessons-learned reviews include members of all stakeholder groups, including leaders, project team members, and those going through the change. Ask representatives of each group to write down three things that worked and three that didn't, and ask them to detail why. Themes will emerge that are best explained by verbatim quotes from the feedback providers.

Scheduling a leader review meeting at the beginning of the project creates an expectation of measurement and a commitment to learning. Booking this meeting into calendars months in advance will increase the likelihood it will happen.

Success tip: Give people examples of areas to assess, e.g., leader support, communication, training.

## Part Three: Managing Others

### Empathizing With Others

Change management often fails when there's little understanding of, or empathy for, the people who are changing. Without deep knowledge of the environment in which they work, "ivory tower" assumptions guide change planning and lead to generic and ineffective support programs.

You need to understand people's beliefs, perspectives, and concerns before you can effectively help them prepare for change. Spending time with people where they work will give you a good sense of their needs. They know their challenges better than you do, and they know what help they need to overcome them. Ask people about their concerns, and listen to how they phrase them. This gives you insight into how to support them best as they adopt the change and reduce their resistance to it.

**Pro tip**: The only way to know what it's like to be seasick is to get in the boat.

### Earning Trust

Trust is the foundation of effective collaboration. Without it, people spend their energy protecting themselves from harm. When meeting someone new or learning about a change, people's "fight, flight, or freeze" response is often triggered, causing them to either defend their territory or hide. Both responses add risk and slow you down.

The best way to gain trust is to trust first. Asking for help displays the vulnerability that's essential to transparent and respectful relationships built on honesty. You make a positive connection that can become a lasting bond. It's like asking for a favor. It makes you indebted to the person and demonstrates that you value their support.

The type of help you ask for could be as simple as requesting honest feedback or asking someone to participate in a meeting. The request is more important than the type of help. Offering to return the favor and then doing so establishes reciprocity that propels future trust-based interactions.

### Changing Your Culture

All big changes require some form of culture change. This means modifying how people think, interact, and behave. Your challenge is that these traits are deep rooted and difficult to alter.

Since a culture is ultimately defined by leaders' words, actions, and behaviors, leaders must change themselves to change the culture. Identifying the most important new behavior that will enable the change gives leaders and their teams a target to focus on. Think about what the behavior looks, sounds, and feels like. Also, identify the opposite behavior and what it looks, sounds, and feels like.

When leaders model this behavior, they signal to employees the need to work differently to adopt the change.

Note that 86 percent of leaders report that they model desired behavior change, but only 53 percent of the people who report to these leaders agree.

Profiling examples of leaders demonstrating new behaviors

Large change projects require people to work through uncertainty, and their ability to make progress with insufficient information or experience is a must.

speeds up adoption by the people who report to you or work with them.

Furthermore, stopping a contrary behavior quickens the transition toward the new one. For example, if collaboration across teams is the new behavior, calling out information hoarding and poor communication reinforces the commitment to change how people work together.

### Building Team Confidence

Large change projects require people to work through uncertainty, and their ability to make progress with insufficient information or experience is a must. Moving forward under these conditions requires confidence that the team is skilled and effective at removing barriers to success.

People are at their best when they are confident in their contributions to meaningful work. Constantly reinforcing your belief in the team (and yourself) will build their confidence to move through uncomfortable and risky territory. People will rise to their potential when you remind them of their abilities and past accomplishments.

Recalling the successful experiences of each team member creates a bridge between past successes and current requirements. Also, reminding people of the skills they used on past projects (and outcomes they achieved) will help convince them they can do it again. Highlighting problem-solving skills suggest they will be able to work through any challenge.

Say "I know your skills and experience will help overcome any challenges we face."

**Success tip**: When referencing someone, address them by name, e.g., "Mel, your communication expertise is essential for this project."

### Avoiding Team Burnout

Burnout is a stress-related state of emotional, physical, or mental exhaustion. It occurs when the demands of a job are greater than a person's ability to manage them. Triggers include long hours, impossible deadlines, little control of inputs, hostile conditions, and low rewards. In other words, project demands.

The impacts of burnout are devastating—extreme fatigue, loss of motivation, drops in performance, insomnia, feelings of resentment, and hopelessness and illness.

Fortunately, the conditions that lead to burnout are easy to spot: Unrealistic expectations and insufficient resources are visible to all. To minimize burnout, review resource plans for gaps throughout the project. If conditions change (time, resources, scope), communicate imbalances to leaders immediately. Highlighting the risk of failure is the best defense against unrealistic expectations that cause burnout.

**Pro tip**: Include in team ways of working the permission to declare signs of burnout. This provides a lifeline to those in need and a warning that work and resources are misaligned.

### Addressing Resistance

It's natural for some people to resist change. The organization is asking them to exchange strongly held beliefs and routines for untested and uncomfortable ones.

Resistance can take many forms—from indifference, to not adopting new processes, to sabotage—and you need to address all forms quickly, or your progress will stall. People resist new ways of working for many reasons, including fear of the unknown, loss of control, being overloaded, comfort with the present, disagreement with what's new, or lack of skills required to succeed.

Address fears head-on because everyone (including leadership) is afraid of some part of the change and, therefore, will resist.

The first step to minimizing resistance is to listen to people's concerns intently. Their explanations will uncover their fears. Once fears are identified, you can refute them by stating the facts (e.g., "No, we're not moving the head office"), or explain why the change is necessary and what support will be provided (e.g., "We must move the head office to save money that will be reinvested in new product development. We'll help you move").

**Pro tip**: Demonstrate that you understand people's concerns—e.g., nod your head, ask clarifying questions, restate the explanations. People resist more when they feel their concerns are ignored.

### Making Change Stick

It doesn't take long for people to revert to pre-change ways of working once the excitement of go-live fades and the project team disbands; the familiary and comfort of past routines and behaviors are a greater motivator than the benefits gained from change.

For many, consequences both good and bad are necessary to keep them on track. Be clear on what they are (e.g., good: leader praise, high performance rating; bad: leader feedback, low performance rating). Before launching the change, set expectations for everyong, including leaders.

Typically, people will test a leader's resolve to enforce change by keeping one or two old practices. They will take on even more of them if they aren't noticed or if there are no negative consequences. Before long, the continuity of new processes is lost.

People must see leaders follow through on consequences before they take them seriously. Without real consequences, they will revert back to old ways. Quickly issuing consequences, both good and bad, will confirm that leaders are serious about the change and the need to support it.

What consequences will leaders support for good and bad behavior? For example, good (reinforcing) consequences include the following:

- Manager or leader praise;
- Input into performance review;
- Recognition at town hall meeting;
- Profile in newsletter.

Bad (corrective) consequences include

- Manager or leader feedback;
- Input into performance review;
- Change of role;
- Exit.

**Success tip**: Be clear on the consequences of supporting and not supporting the change before go-live so there are no surprises.

Managing change is like most things in life: One action will give us 80 percent of the benefits in 20 percent of the time.

Let's put this truism into action!

# Change Proof

Adam Markel

BOOK SNAPS™
Zooming In On Your Next Read

## Change Proof

By Adam Markel

Adam Markel is a #1 Wall Street Journal, USA Today, Los Angeles Times and Publisher's Weekly bestselling author of *Pivot.* Adam is currently the CEO of More Love Media and host of The Conscious PIVOT podcast, where he shares his insights on pivoting and resilience in today's fast paced market and interviews experts, innovators and influencers in the areas of business and life.

Copyright © 2022 by Adam Markel • McGraw Hill

# How to Thrive On Uncertainty

In Adam Markel's previous book, *Pivot*, he mentions the importance of sticking things out at least 50 pages. "Because when you read 50 pages and move on, you're not just giving up on a book, you're giving up on yourself." He asks for readers to think about what else they could be giving up on after 50 pages of their own lives. However, the world around us looks different from the way it did back when *Pivot* was written. Now that we, as a collective, have gone through major changes in short periods of time and continue to experience changes, Markel has found that there is a new goal we should set ourselves before we consider quitting on anything: 100 pages.

Getting through at least 100 pages (of a book, of life, of family, work, etc) allows you to develop the skills and habits to not only stick through the changes, but become resilient to them. Enough resilience and you become change proof. No matter what change comes your way, you'll be able to pivot through it and leverage the change for your personal and/or professional benefit.

## The Suck & Lifeguard Lessons

Change is like the suck - a term used by beach lifeguards to describe the water that pulls people out with the tide and threatens to drown them. If there is one thing we have all learned, especially from the last couple of years, it's that change is going to happen. That is non negotiable. Change will come into our lives and sweep us away from what we know: the way we live, our relationships, our business and work - change will happen to all of it. But once you enter the suck of change, you have a choice to make: You can either choose to fight it off or you can choose to be resilient. Our entire lives, we're told to fight through the storm, fight through what's hard, fight through change. But if you fight through the suck, you're only going to use up the limited resources you have, exhaust yourself, and end up drowning it in. You can't fight change because change is going to happen.

Markel talks about one of his first jobs, as a lifeguard. At the time, he took on the job thinking it was going to be a great way to get tan and meet some girls. But it was also a job that taught him some hard lessons that he carries with him through today.

***Book Snaps™*** is a publication of Soundview Inc. • 225 Wilmington West Chester Pike, #202, Chadds Ford, PA 19317 USA. • © 2022 Soundview, Inc. All rights reserved. Reproduction in whole or part is prohibited • Meghan P. Kozak, Editor-in-Chief • Kylie Waytuck, Graphic Designer • Order #FBR0622A

One of those lessons happened when the lifeguard team lost a swimmer. With only a month of experience, Markel and his team mates dove into the water, more than 10 feet into the current, searching for the missing swimmer. They never found him. As they were all called back in, no one wanted to admit defeat. Their crew leader, Bob, pulled them aside. Everyone's head hung low, "he told us we had to learn something from this horrible experience. To make sure no one went down on our watch again…was if we had each other's backs." He followed his speech with "No one goes down on our watch."

The thing is, when we're faced with change, especially a tragedy, it has a tendency to shake our confidence. We feel stuck, unsure, out in our own sucks and flailing. Sometimes it even feels like failure. Sometimes, it really is failure. Bob saw that in this team and had to make sure they understood. "Just because something tragic happened, just because the unthinkable happened, we still had a job to do. If we were going to do it to the best of our ability, we had to choose to move forward together."

That's the key. You have to choose to move forward as a team. You have to face the failures, ride the suck, and become resilient to be change proof. And you have to rest. Rest is how you build muscle and build resilience.

## Pause, Ask, Choose

A large portion of Markel's book references what he called "the change-proof model." And that model is to pause, ask, and then choose. If you're swimming in a current that brings you into the suck, (experiencing change) then this is the one tool that can at least bring you back to shore. It's a natural impulse to want to fight what's happening. As Markel says, "The thing about the rip current is there's nothing you can do about it. Literally…. You do not, I promise you, have the swimming ability to fight the movement of the ocean."

The only thing to do is to pause. Stop fighting and have an awareness of what's happening and how much energy you're expending. Pausing gives you a moment to reflect, understand what you might have lost in the change, and learn from that experience as a team so you can move forward.

Pausing yourself pauses the struggle. This gives you the moment to do the next step, which is the ask. As Markel states, "This is where we find purpose. Or to be more specific, this is where you frame the meaning of what you're experiencing."

Regardless if we're stuck in the suck or going through a pandemic, no matter how bad it is, our resilience is about coming to terms with what the universe has given us. The question isn't about why it's happening to us. The question is "what are we going to do about it?"

The last step is to choose. Imagine you're out in the rip current. You've paused to reflect where you are and what's happening. You're letting the water take you where it will because there is no fighting it. You've asked yourself "what am I going to do about it?" and made the decision: You're going to move with the current rather than make it move you. So you choose to recover the energy you saved by pausing and swim parallel to the beach, all the way to safety.

This is what we must do in business and in life: choose to ritualize our recovery no matter what change happens to us so we can have a higher performance in the future.

## Resilient Bodies, Hearts, and Minds

So what does change and uncertainty mean for us? It's simple, really: change = uncertainty = stress

Plato says, "All learning is remembering." However, Markel suggests it's a little different. "All learning is pain." By that he means that there is no way to learn without experiencing some kind of suffering. Through the stress and pain and traumatic experiences, we learn how to pause, reflect, and choose to move with the change to change ourselves. From the rapid growth of technology to the rapid changes in the pandemic, the problem is it creates a lot of stress. However, we can choose to believe that stress isn't necessarily bad. Our response to stress can propel us to understand what needs to be done and how to move with it. It can drive us into new action, to pivot in a positive and creative approach to handle the stress with resilience.

Markel says, "Dennis Charney of the Icahn School of Medicine at Mount Sinai New York and Steven Southwick at the Yale School of Medicine performed an analysis of resilience by talking to people who had experienced traumatic events." While several people suffered from PTSD, others had no symptoms of psychological distress. They found a few main factors that mark resilience. A sample of those factors are taken in verbatim below:

- Attention to health and good cardiovascular fitness
- Capacity to rapidly recover from stress
- A history of mastering challenges
- High coping self-efficacy - our belief in our own ability to succeed.
- Disciplined focus on skill development
- Cognitive flexibility
- Capacity to extract meaning from adverse situations
- Support (social and spiritual)

In other words, it's allowing the change to change you. Sometimes, it's easy to think we need to practice resilience. However, that is not the case. We're not practicing resilience. We can't. We have to perform it in order to become it.

As stated earlier, uncertainly equals stress. And to be resilient, we need to work through the stress. For our bodies, "exercise mimics the stress response. Active passivity. Calmly active and actively calm." Markel swims in the ocean to burn away the things that are no longer serving him and create new challenges that will. It makes him excited and nervous at the same time.

> We have the ability to train our minds to be comfortable with the things that make our thoughts uncomfortable."

He is putting himself in a situation that's outside of his control (the ocean, the rip current, the waves and possible suck) and doesn't turn his back on it. He looks into it. By putting his body under this kind of stress, he is actively creating resilience to face more situations outside of his control.

How about our minds? Are we able to create resilient thoughts? Yes. We have the ability to train our minds to be comfortable with the things that make our thoughts uncomfortable. The thing is, we cannot pause our thoughts. Even if you try to sit without them for thirty seconds, they still come. And as much as we'd sometimes like to go through electroshock rather than sit with our own thoughts, mental resilience has nothing to do with avoiding those thoughts altogether.

As a business leader, there will be times when you will need to calm yourself fast and effectively. That's where a ritual comes into play to pause and reflect:

- Inhale: breathe in
- Hold that breath for 10 complete seconds
- Exhale, breathe out

As you breathe in and out, imagine your emotions are pouring out of you and reaching other people. Imagine those same emotions radiating wonderfully to any part of your body. The practice of this kind of meditation daily helps to take the edge off your emotions and creates emotional flexibility. Spend time with yourself and your emotions. Learn to feel the wonderful ones to their highest points. Meditate daily and feel the difference on how you choose to allow your emotions to affect you.

Markel suggests as you do the breathing exercise to then ask yourself four questions:

- Do I like feeling this way?
- Do I want to let it go?
- Am I willing to let it go?
- When am I willing to let it go?

This way, you can take away some of the emotional power, even if it stays with you. Emotionally resilient people are actively calm and present. They know emotion has real weight. And emotionally resilient leaders know how to take away the power of the feelings that hinder them from moving forward.

People talk about having balance, that the balance of your mind body and soul is what will create happiness. However, it's not about the balance. Balance isn't the right word at all. You can't have equal weight in all areas of yourself. It just doesn't work that way. It's not about balance. It's about harmony. It's about all the pieces of yourself working together fluidly. So your mind can support your body. Your body can support your emotions and your emotions can drive your thoughts. When you are in harmony with all the pieces of yourself, you have more capability to not only choose to be resilient but actually become resilient, swim out of the suck of change, and pivot into a better future. You move with the change rather than fighting it.

## Change-Proof

As humans, we have the ability to imagine the future. As a leader in your business, you have the ability to imagine a future where your business grows, no matter who is in charge, if you lose that business, grow out of it, or sell it to someone else. Markel says, "No one can predict the future nor can anyone control it, but to be a change-proof person and leader, a healthy, thriving imagination is the tool that will help you survive any rip current you may face."

We no longer have the choice to be resilient. We have to be. Change is coming. It will forever come our way. We must choose to be change proof leaders so we don't end up in our own versions of the suck, drowning ourselves and those within our teams and business.

Being a change proof leader is the biggest and most complicated tool to have in your back pocket. Honing in on the change proof model is the practice we must perform in the face of any change: pause and reflect, ask yourself how to respond, and choose to recover your energy and move forward to the future.

Then we must create resilience in our minds, bodies, hearts and spirits. Use them as the vessel to be change-proof beings. Every day, we have a new opportunity to create whatever it is we have dreamed about. And moving with the changes that happen to us and around us rather than fighting against them is the path we need to take to get there.

Be a change proof human, a change proof leader, to create a change proof team that will build a change proof organization.

## 5 Steps to Realizing Your Goals and Resolutions

by John C. Norcross, PhD

### THE SUMMARY IN BRIEF

Is there a scientific formula you can follow to change your life?

Change is hard. But not if you know the 5-step formula that works whether you're trying to stop smoking or start recycling. Dr. John C. Norcross, an internationally recognized expert, has studied how people make transformative, permanent changes in their lives. Over the past 30 years, he and his research team have helped thousands of people overcome dozens of behavioral ailments. Now his cutting-edge, scientific approach to personal improvement is being made available in this indispensable guide.

*Changeology* encompasses the entire change process, and you will be guided through all five steps of a proven system that you can use to change on your own or customize to your own life.

Unlike 95 percent of self-help books, the Changeology plan has a documented track record of success. Whether you want to quit overeating or drinking or end depression, debt and relationship distress, Dr. Norcross gives you the tools you need to change what you want within 90 days.

Whatever your goal or resolution, you can use *Changeology* to achieve a life filled with better health and greater happiness.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to define your goals and get started in a new direction.
- How to pump up your motivation and prepare for self-change.
- How to prevent relapses into old patterns.
- How to master the skills that will help you sustain change.
- How *Changeology* differs from other self-help methods.

# THE COMPLETE SUMMARY: **CHANGEOLOGY**

**by John C. Norcross, PhD**

**The author:** John C. Norcross, PhD, is professor of psychology and Distinguished University Fellow at the University of Scranton, adjunct professor of psychiatry at SUNY Upstate Medical College, and a board-certified clinical psychologist in part-time practice. He has authored more than 300 publications and edited or co-written 22 professional books. His reach and influence are truly international, as witnessed by invited presentations in 30 countries and translations of his books into dozens of languages. Dr. Norcross has consulted with many health care organizations, including the National Institutes of Mental Health (NIMH) and leading pharmaceutical companies, to ensure the success of patients' behavioral change. *Changeology: 5 Steps to Realizing Your Goals and Resolutions* by John C. ## Introduction: Changeology What It Is and What It Can Do for You

Whether you're hoping to stop smoking or gambling, commit to exercising more, eliminate fast food and bike to work, or learn a new skill that will earn you a promotion, Changeology is a scientific program that can dramatically increase your chance of success.

Changeology personalizes your journey in two important ways: First, it guides you step by step and tells you exactly what to do and when to do it; and second, you'll be able to maximize the instructions with the help of an interactive website (www.changeology.com).

Behavioral research indicates that it takes 90 days to prepare for change, build a new behavior, become competent in the face of high risk triggers, and move past the likelihood of relapse. Brain research also suggests that it takes a few months of practicing a new behavior to create permanent change.

More than 75 percent of people maintain a goal for a week, but then they gradually slip back into the old behavior. However, research shows that almost all of the people who maintain a new behavior for three months make the change permanent; the probability of relapse after that is modest.

Our aim is to get you to your goal and keep you there; that will require a 90-day commitment on your part. It's time for you to become your own behavioral expert, your own changeologist. ●

# PART I: THE REAL SCIENCE OF CHANGE

## How Self-Changers Succeed: The Science

We have a love-hate relationship with the idea of changing our behavior. Change is desired and dreaded, venerated and vilified. No wonder we are so confused about it.

What sort of changes do we crave (and simultaneously resist)? Four clusters characterize the vast majority of people's ambitions:

- **Bad habits.** Specific actions that become stitched into daily life. Examples include excessive consumption of tobacco, food, alcohol and even money. These are behavioral excesses — too much of a good thing.
- **New goals.** You may desire to acquire or improve upon your skills, be it learning to run long distance, assert yourself or play the guitar. These are behavioral improvements — too little of what you seek.
- **Relationships.** You may be trying to enhance a romantic partnership, deepen your friendships, reverse troubles with your in-laws or maintain better relations with your co-workers.
- **Life satisfaction.** You make statements such as "I want to be a better person" or "I hope to deepen my spirituality." Or you set slightly more detailed goals such as wanting to be more generous, kinder and less selfish.

The process of change is amazingly similar across diverse goals and problems. People progress through the

identical stages — what I will call the 5 steps — for each of the 50-plus problems now researched. And they use the same fundamental strategies to speed their progress through those stages. The particular goals are different, but the journey to the goal is the same.

Let's take a look at each of the main stages of change so you can understand how we'll turn these into the five steps:

• **Contemplation.** This is the stage in which people are aware that a problem exists and are seriously thinking about overcoming it but have not yet made a commitment to take action. They are mulling it over, weighing the pros and cons. People can remain stuck in the contemplation stage for long periods.

• **Preparation.** Good intentions and small movements. Individuals are intending to take action in the next month and are taking "baby steps" toward change.

• **Action.** Individuals modify their behavior and environment in order to overcome their problems and reach their new goals. Action requires a considerable commitment of time and energy. You are in this stage if you have successfully changed in behavior for one day up to a couple of months.

• **Maintenance.** People work to prevent a relapse to their old ways and consolidate the gains attained during action. Stabilizing behavior change and avoiding relapse are the hallmarks of maintenance.

### The 5 Steps

Each stage reflects not only a period of time but also a set of tasks that must be completed if you are to move to the next stage, the next step.

Change, like any meaningful endeavor, proceeds sequentially through steps. The journey begins with the contemplation stage of specifying realistic goals, getting ready or getting *psyched*. The planning stage is all about *prepping*. How exactly will I do this thing? At some point you will jump from preparing and planning to *perspiring*, the work of implementing the new, desired behavior. Getting there is wonderful, but we need to keep you there, which entails *persevering* through slips and, finally, *persisting* over time.

To simplify the path, we'll refer to the 5 steps as:

• **Psych:** Get ready/contemplation

• **Prep:** Plan before leaping/preparation

• **Perspire:** Take action/action

• **Persevere:** Manage slips/maintenance

• **Persist:** Maintain change/maintenance

The 5 steps determine who successfully changes and who does not — regardless of other factors involved, including a strong desire to change. People can get derailed at any step. Some never get psyched enough to move to the next step; some get psyched but don't prepare; others prepare but don't execute; and still others burn out before they can persevere and persist.

Focus on goals where you're farther along in the 5 steps. Make any goals that seriously affect your health and wellness a priority. Concentrate on those goals for which you have the most energy and desire to change today. ●

## How You Will Succeed: The Keys

How does all this change fit into 90 days? Here's the general timeline across the 5 steps.

**TIMELINE FOR DOING THE RIGHT THING AT THE RIGHT TIME**

| **Step:** | 1. Psych | 2. Prep | 3. Perspire | 4. Persevere | 5. Persist |
|---|---|---|---|---|---|
| **Stage:** | Contem-plation | Prepar-ation | Action | Mainten-ance | Mainten-ance |
| **90 Days:** | 1 to 7-14 | 7-14 to 21 | 7-14 to 60 | 60-90 | 75+ onward |

The first week or two is rightfully devoted to increasing your motivation, identifying resistance and psyching yourself up for the momentous change ahead. Another week or two is spent in preparation. Of course, these will be tailored to your situation. Adapt the timeline, but do commit to 90 days — a month getting ready and then two months staying at it and avoiding the relapse. That's what thousands of successful changers have taught us over the years.

### The Change Catalysts

In instigating behavior change, catalysts are research-supported strategies that get us to the next step. They include such activities as tracking your progress, committing to a goal, raising awareness about yourself and the problem, rewarding your improvement, securing support from other people, rearranging your physical environment and so on.

The key to success resides in matching your efforts to your step. It's technically called step (or stage) matching. Step matching involves following certain research-proven catalysts while you're in a particular step. Integrating the change catalysts and the steps systematically directs you to success.

Do the right thing but at the wrong time in your journey and failure ensues, a phenomenon called mismatching.

Many people subscribe to a series of self-defeating myths that undermine their efforts to change. Let's demolish them:

• **Myth No. 1: People can't change on their own.** More than three-quarters of people who change their behavioral problems have done so on their own, without professional treatment. People are changing on their own all the time without treatment.

• **Myth No. 2: Most goals and resolutions are trivial.** People fulfill impressive ambitions all the time, including losing weight, stopping smoking, improving relationships, achieving financial security and increasing exercise. These are not trivial.

• **Myth No. 3: Change requires only willpower.** Your willpower or commitment contributes to your success. However, it's only one ingredient in the recipe. Our research shows that resolvers who rely on willpower to the virtual exclusion of the other valuable catalysts actually fail at a higher rate than everyone else.

• **Myth No. 4: It's all in my genes.** Genes exert powerful influences, but they don't determine our destiny. The brain-behavior interaction goes both ways: Your behavior impacts your biology and influences the expression of those genes.

• **Myth No. 5: I can't change; I've tried before.** This myth comes wrapped up in a lot of emotion: resignation, anger, apathy, fear. The consequences of not trying again are grave and the real possibility of success using Changeology is so much higher.

You need to abandon the "I can't change" myth and wholeheartedly believe that you possess the power to grow in fundamental ways. ●

## PART II: BECOMING A CHANGEOLOGIST IN 90 DAYS

# Step 1: Psych: Getting Ready

**Weeks 1 and 2:** Outline your goal and define the new you. Start counting and measuring the behavior you will modify. Think about the consequences of your problem and imagine a new life without it. Harness the awareness and emotions that will propel you into action.

One of the colossal mistakes people make when trying to change is overestimating the value of motivation while underestimating learnable skills. Here you'll learn how to acquire both commitment and skills.

You need to choose and define your goals in a way that will enhance your probability of success. Here are five proven methods:

• **It's all about you.** Select a behavior you genuinely want to change. This needs to be about you. Make sure you're doing this for no one other than yourself.

• **It should be measurable.** We refer to this as operationalizing a goal in a way that you can measure by counting or graphing. Tracking your progress increases your progress.

• **It has to be real.** A guaranteed recipe for failure is to select an unrealistic, unattainable goal. Distinguish between realistic, short-term goals and long-term fantasies. Ensure that your general goal is real.

• **It has to be under your control.** You don't have the power to bring about world peace and end global warming. You can control many of your own behaviors that are under your thumb.

• **It should be positive.** Goals expressed positively typically prove more successful than goals expressed negatively. Even if you want to terminate a problem, specify your goal as a healthy alternative behavior. Psychologically, it's easier to build in a new behavior than to root out a problematic one.

### Step 1 Catalysts

Here are the four catalysts that embody your first step:

• **Tracking your progress.** Tracking the progress of your goal works for at least three reasons. First, it keeps your eye on the ball. Second, it provides useful feedback, alerting you when you veer off course and telling you to adjust. Third, it is highly rewarding. We incorporate tracking progress into every step. You can track your progress through a variety of methods, including a graph, a diary or journal, calendar notes, or a daily record on your computer or cellphone.

• **Raising your awareness.** This entails becoming more conscious of the causes of, consequences of and cures for your problems. It helps to ask yourself: What led to my particular problem, and what maintains it now? What are the consequences, both desirable and undesirable, of my current behavior? What are the cures, the paths to my goal? Seek out information from unbiased sources. Request feedback from loved ones about the costs and consequences of your problem. If you seek more in-depth information, get a professional opinion from a psychologist, physician, nutritionist or clergyperson.

• **Arousing emotions.** People rarely change because of logic or facts. People change when their emotions compel them to confront facts. Harness your emotions

and redirect them in support of your change. The key is to stir up emotions in ways that propel you forward. Think about a threat, a fear, that is related to what you want to change. Let that fear linger, and let the pain fuel you. Expose yourself to other people who are experiencing similar fear-based struggles. Focus on the painful long-term consequences instead of the short-term comfy rewards of the behavior.

• **Committing.** Committing entails more than the mysterious, ineffable "willpower." Committing actually encompasses a set of identifiable skills that you can develop and practice. Declare your goal or resolution by saying it to yourself and perhaps one other person: I am getting ready for change. Post your pros and cons for change and remind yourself of your dual motivations in the morning or at bedtime. Create one or two short reminders that encapsulate your commitment. Find a person or two, dead or alive, who manifests what you seek in commitment and to whom you can turn for inspiration.

It is never — repeat, never — a good idea to rush through Psych in order to get to the later steps. Rash action without genuine preparation and commitment is doomed. ●

## Step 2: Prep: Planning Before Leaping

**Weeks 2 and 3:** Build your commitment and then make your goal public. Pick your start day and identify people who will support you. Take a few small initial steps — and prepare for liftoff!

This step describes what you need to do before jumping completely into action. Most people get so antsy and eager that they jump before they are prepared. They sabotage themselves by a lack of preparation and planning.

### Defining Your Goals

Begin with your goal in mind. It's difficult to reach the destination when you don't even know where it is. Vague goals beget vague efforts. Based on the new science and proven methods of setting goals, we'll get **SMART:** express goals in specific, measurable, attainable, relevant and time-specific terms:

- **Specific:** Tell me exactly where you will be in 90 days using positive terms.
- **Measurable:** Give an unambiguous definition that can be read, repeated and measured by others.
- **Attainable:** Better to try to "lose and keep off 15 pounds in 90 days" than a health-compromising and nearly impossible 50 pounds.
- **Relevant:** To you, of course, but also in terms of your life priorities.
- **Time-specific:** Specify the time frame, which in this book is typically the next 90 days.

Identify what triggers the problem and what maintains it. What are the environmental, interpersonal and mood triggers for your smoking, poor parenting, low esteem, drinking or arguments? Your answers will expose key clues to your behavior pattern.

Consequences occur after the problem and are usually contingent on it. The short-term consequences of our behaviors can often be very rewarding — yummy, soothing, releasing, sedating and so on. But the long-term consequences can be painful and destructive; sadly, we tend far more to the immediate than the delayed consequences.

Here's how to sleuth out your triggers and consequences. On a daily basis, track four features of the behavior that you'd like to change:

1. Time of day
2. Triggers: both the situation (where you were, what you were doing, who you were with) and your feelings (sad, happy, stressed, relaxed, bored, lonely)
3. Behavior: the magnitude or amount of the problem behavior (the number of drinks, the amount of money, the number of arguments)
4. Consequences: the short-term results of the problem behavior as well as the longer-term impact on your feelings and others' reactions

Helping relationships or social support can be a vigorous predictor of behavioral success. We work better by working together. Identify people around you — family, friends, co-workers, schoolmates and neighbors — who will support your self-change. One or two solid people will do, but three or four might be ideal.

Consider their availability, shared interests and ability to support. You want the support of those most able to help, not simply those who are most convenient or close to you. You might want members of your team to be relatively new to your life, independent of your ordinary routine. Consider joining an online support group. Getting your change team in place early creates a small victory and improves your level of competence in this endeavor — your self-efficacy — before your start day.

### Committing

We know from studies that people's mere desire to change does not predict success, but their level of com-

mitment does. Here is how we use commitment as we prep in the second step:

- **Make narrow choices.** Simplify your path, prioritize your goals and decide which methods you will use to achieve them. In self-change, less can be more.
- **Rest.** Prepare for the major operation, whether you think of it as surgical or a war operation, by resting. Like a runner before the race, don't run the day before; save your willpower muscles for the event itself.
- **Say it loud and proud.** We're looking for a public commitment to your goal. It's time to share your resolution with others.
- **Remember your goal.** Remind yourself about your commitment. Post not only the goal but also the baby steps toward that goal.
- **Propel the virtuous cycle.** Start changing your behavior, and as a result your motivation will improve. Success fuels motivation; motivation fuels success. If you wait for inspiration, you're ignoring half of the virtuous cycle.
- **Take baby steps.** Prime the pump before leaping into action by taking small steps. You have already taken several baby steps. Small steps add up quickly.
- **Practice before you need it.** Identify the healthy alternative behavior and begin practicing it. Acquire some comfort and confidence in performing it before you leap into the fire.

### Finalizing the Action Plan

Select a start or "go" date. Research highlights the value of beginning within a week of completing your plan. Pick a start day with fewer than usual pressures. Don't forget to tell your team when you intend to start.

Start strong and fast. Begin when you, your change team and your skills are in full force so that you secure success at the outset.

What's the mantra, slogan or image that will inspire you? Now's the time to generate it — or him/her. Here's one of my favorites from Ralph Waldo Emerson: The world is all gates, all opportunities.

## Step 3: Perspire: Taking Action

**Weeks 2 to 8:** Walk the talk — take action! Develop healthy alternatives to the problem, and build new behaviors. Reward yourself for a job well done. Cultivate your environment and support team to keep moving forward.

Step 3 is all about the fury of action, and it takes place at least two weeks — and perhaps up to 30 days — into the 90 days of change. In this step, we're aiming to act, to stay forward, to lean into the winds of change. Successful action requires four catalyzing strategies: rewarding, countering, controlling your environment and helping relationships.

### Rewarding

Since time immemorial, rewards have been used to modify and strengthen certain behaviors. We will use rewarding to strengthen your goal behavior in a systematic, intentional way. A reward consists of any consequence that increases the frequency or strength of the target behavior.

It should come as no surprise that what rewards one person, say, chocolate or a movie, will be a punishment for another person. Personal preferences must come into play here. The secret is to identify what rewards can modify your behavior and to create a reinforcement plan that you'll stick with for a couple of months. For example, you can reinforce yourself for reaching target behaviors and reward each baby step. Deliver the reward immediately and every time. Decades of research have revealed that to achieve the best performance, you should give yourself the reinforcer immediately after the desired response. Use many rewards of many types for maximum effectiveness.

Minimize punishing yourself, both in your daily behavior and in your thoughts. Rewards are more effective in the long run. Use more carrot and less stick.

### Countering

Do the healthy opposite of the problem behavior. You must engage in a healthy opposite, not simply know that you should do it. The eight most common countering methods are:

- **Diversion.** Keeping busy, enjoying life, engaging in fun activities, and cultivating friends and hobbies.
- **Exercise.** A well-known and potent anti-anxiety remedy.
- **Relaxation.** Meditation, progressive muscle relaxation, deep breathing, prayer and massage.
- **Assertion.** Say no to unwelcome offers and yes to healthy needs.
- **Healthy thoughts.** One's interpretations of an event may be more important than the event itself. Our beliefs, not the activating event, largely establish our feelings.
- **Exposure.** Directly confront dreaded situations.
- **Imagery.** Visualize yourself succeeding and thriving. Successful resolvers visualize the rewards of success,

while unsuccessful resolvers visualize the penalties of failure.

- **Acceptance:** Uncontrollable problems are things we should accept, whereas controllable behaviors are those we can change.

### Controlling Your Environment

We routinely underestimate the power of our environment to shape our behavior. That's been the key lesson of social psychology in the past 50 years:

- **Think people, places and things.** You have the ability to modify your contact with people, places and things.
- **Sniff out the detractors and the facilitators.** Remind yourself what detracts from and what facilitates your change.
- **Select, but also create.** If you don't see the appropriate environmental options around you, create the environment you need.
- **Bring new things in.** Add things to your home and work environment that remind you to keep on track.
- **Take temptations out.** Avoid high-risk situations and people that rekindle a problem. Build literal barriers between temptations and yourself.

### Helping Relationships Again

Scores of research studies have demonstrated the impressive contributions of social support to your health and happiness. Helping relationships improve our health and buffer us against the ravages of life. Find an experienced coach if you don't have one on your team already.

The change team you've already assembled will now be called upon for support, assistance and an occasional challenge. Here's how to tailor your change team:

- **Listen and support.** Active listening and genuine support are the backbone of successful treatment. You can receive empathy and affirmation from all sorts of people.
- **Chat frequently.** Keep in regular contact with your change team — several times a week, at a minimum.
- **Express what you need.** Your change team cannot read your mind. Be specific.
- **Keep it positive.** Ask your friends to stay positive about your change. Remind them that sarcasm, guilt and embarrassment are not helpful forms of support.
- **Put me in, Coach.** Ask for tips or skills of the day. Experiment to find what works best for you.
- **Return the favor.** Ask your friends about their feelings, focus on their experiences and balance the conversation.
- **Buddy up.** Accept as many co-changers and training partners as your schedule can accommodate.
- **Race to the top.** Friendly competition can spur people to greater heights.
- **Enlarge the team.** Include online support groups, work friends, neighbors and others you did not identify in the Prep step.
- **Invite challenges.** You'll probably profit from the occasional loving correction.

Please help your team members help you. ●

## Step 4: Persevere: Managing Slips

**Weeks 8 to 12:** Learn to say no and develop a plan for getting back on track after a slip. Avoid high-risk triggers, resist the urge and keep a positive outlook. Slips need not become falls.

As you work to realize your goals and resolutions, expect to slip — probably multiple times. If you understand and prepare for mistakes, however, they don't need to ruin your self-change effort.

To persevere means to continue toward a goal in spite of discouragement or opposition. For our purposes, to persevere is to continue toward your goal despite your urges to stop, cravings to regress and slips on the road to success. To persevere the strategies entail:

- **Avoiding high-risk triggers.** A slip is typically preceded by a trigger, a high-risk situation that increases the chance that you'll return to your old ways. Triggers can be practically anything that has historically been associated with the problem. Identify your triggers. Ask yourself where, what, when and who.

- **Practicing saying no.** Practice in advance for probable high-risk situations. Envision yourself in a scenario where temptations reign supreme. Begin in your imagination by saying no confidently and immediately. "No thanks, I don't want to bicker." "No, I'm quitting." Then practice with a member of your change team before saying it in a real situation.

- **Resisting the initial urge.** Smokers will crave a puff, overspenders will feel the need to buy, overeaters will plead for just a bite.

- **Responding constructively after a slip.** It helps to understand relapse as a process, a systematic chain of psychological events. How you respond to the slip —

not the slip itself — determines which choice you will make.

• **Preparing for the next time you slip.** You'll want a plan that incorporates lessons learned and prepares you better. Identify what you were thinking, what you were doing, what you were feeling and whom you were with when you slipped. Turn those triggers around and do the healthy opposites.

Achieving your goal, resolution or transformation in 90 days is a big project. It requires more than one person. Now is the time to further mobilize the change team you created during the Prep step. Research shows that the amount of help you receive from important people in your life predicts success a month into action. In the long run, support becomes crucial. ●

## Step 5: Persist: Maintaining Change

**Week 12 and beyond:** Keep using the strategies that maintain the new you. Have backup plans for those inevitable slips. Remind yourself that you can do this! Sustain self-change over the long haul.

The previous step, Persevere, was about overcoming obstacles and lapses; this step, Persist, is about maintaining change over time. You need to master both in order to permanently establish your new behavior.

Persistence requires the mastery of a series of skills and a fundamental shift in thinking; lasting change is a marathon, not a 100-yard dash. And the challenge is to persist for not just 90 days but for a lifetime.

• **Maintaining new behavior.** Maintenance is more than preventing relapse. When you think of persisting with your change, think of it as moving forward, as continually improving, as giving yourself an ongoing gift. The cornerstone of persistence is that it doesn't feel like dreary work anymore, it feels like healthy fun.

• **Boosting your self-efficacy permanently:** Think of self-efficacy as a house, one that can be built by hard work and success or destroyed by the lack of same. Success begets more success; success also begets more self-efficacy, which enables you to persist for 90 days and beyond.

• **Understanding the spiral of change:** As you've learned, relapse is the rule rather than the exception. The vast majority of people will follow the model three to six times before they reach the promised land of Persist for good. Self-changers typically cycle through the steps several times. The spiral demonstrates that people do not revolve endlessly in circles, nor do they progress all the way back to where they began. The route to behavior change is not a straight, linear line; it's a spiral path upward.

• **Distinguish between self-changes that end and those that require a lifetime of perseverance.** Do self-changers terminate the problem, reach their goals and exit the path? You can terminate the problem and exit the spiral if three conditions are met during Persist: your temptation to regress or relapse across triggers is very low, your self-efficacy to maintain is high across situations, and you have established a healthy lifestyle that precludes the old problem behavior.

There is a tight link between celebrating your growth and perpetuating that growth. Whoop it up, feel rightfully proud, spread the cheer and encouragement. You can pay it forward to others and yourself. ●

## Epilogue: The Adaptation of Changeology

If there is one overarching theme here, it's that we can change. We can adapt to life even when we're not 100 percent confident in that change from the get-go. Self-change is possible, prevalent and learnable! Even for involuntary and societal transformations not of our own making.

I wholeheartedly believe that the changes we seek and societal levels must start with each one of us.

Confucius said, "To put the world right in order, we must first put the nation in order; to put the nation in order, we must first put the family in order; to put the family in order, we must first cultivate our personal life; we must first set our hearts right."

My ardent hope is that I have given you plenty of direction and skills to begin to make a tremendous difference in your life.

Be the change you wish to see in the world — and bring that self-change into the world. ●

## THE SUMMARY IN BRIEF

Projects often fail not because of the vision but the articulation of that vision. In ***Communicate with Mastery,*** JD Schramm and Kara Levy show how to get the results you desire as a leader and communicator. The authors provide a treasure trove of frameworks and tools for leadership communication as developed and taught over the past decade at Stanford's Graduate School of Business.

Designed for the business leader on the go, ***Communicate with Mastery*** provides helpful approaches to vexing communication problems leaders face today in speaking and writing to various audiences. With the help of this book, you'll learn how to get the results you need, such as speaking with conviction and writing with impact; tailoring your communication to any goal, setting, or audience; scaling your leadership through effective coaching, and more.

Every time you write or speak, you need to make your words count. ***Communicate with Mastery*** shows you how.

## IN THIS SUMMARY, YOU WILL LEARN:

- The "secret sauce" for working toward communication mastery.
- To adopt the right communication mindset.
- Tips and strategies to tailor your communication expertly.
- The importance of coaching, both for yourself and others, for communication mastery.

## Introduction

Mastery in communication is an unattainable aspiration. There is no such thing as a perfect email, talk, book, or presentation. Each aspect of leadership communication can always be improved. With each successive iteration, leaders will improve their ability to communicate, knowing that perfect never comes.There is, however, a five-fold secret sauce to empowering leaders:

1. **Individuality:** Communication development is an individual sport. No two leaders communicate in exactly the same way. Good communication development means doubling down on your strengths as well as adding extra tools to your communication toolbox.
2. **Relevance:** When leaders write or speak, they should choose topics that matter to them (to the extent possible). The more that passion, interest, or applicability drive the message, the better it will be.
3. **Iteration:** Continual iteration (with feedback) is the key to improvement. Practice means failing, succeeding, trying new approaches, soliciting and integrating feedback, and then repeating.
4. **Feedback:** Leaders learn on both sides of the microscope. It's as valuable to give feedback as to receive it—and both of these sides of the coin are a skill you can learn.
5. **Stakes:** When you increase the visibility and reach of a piece, you increase commitment to making it great. Raise the stakes to encourage the best from yourself.

The foundation of individuality, relevance, iteration, feedback, and stakes provide a remarkable container for leaders to travel from uncertainty, to competence, to expertise, to mastery. You, too, can travel the same continuum using the lessons and activities this book provides. But you cannot learn to swim by watching swim practice from the bleachers—you gotta get in the water.

### PART I: SPEAKING WITH CONVICTION AND WRITING FOR IMPACT

## Adopting a Communication Mindset

Consider your communication mindset as a platform—every time you deliver a message, whether it's verbal or non-verbal, written or spoken, you'll stand on your communication mindset as the basis for all you do. Your communication mindset will ask you to think strategically, analytically, and empathetically about your audience and what matters to them. It will ask you to clarify the work that your communication is meant to do.

And it will invite you to make choices about the words, channels, visuals, and multimedia assets that will comprise your message. It is not only a starting place but the foundation for all effective communication.

### Know Your AIM

Professors Lynn Russell and Mary Munter co-created the AIM model, which stands for audience, intent, and message.

**Audience**: **the starting point for all communication**. How can you get to know your readers before they open the email or pick up the pitch book? How can you learn about an audience before you are in front of them? LinkedIn and Google searches top the online examples; finding information about individuals, groups, or firms with whom you plan to communicate has never been easier. It's relatively simple to find company bio pages, recent conference presentations, or public blog sites. Further, if you can find somebody who has recently spoken to this group who's willing to share that experience, all the better.

Audience-centric communication provides the foundation for everything else. It's not simply the first part of the AIM model; it's the place all leaders must begin their work to inform, influence, or inspire others.

**Intent**: **your reason for communication**. Intent is both the intention in your mind as a speaker or writer and the action in the minds of the audience. It's not simply what you want the audience to think, say, or do. It's what they choose to do as a result of the communication. Set a single clear intent for every communication you have—something from the audience's viewpoint that the speaker intends to bring forward. For example, "embrace our company's technology," or "endorse my candidacy publicly."

**Message: delivering on your intent with words that matter**. If audience is the "who" and intent is the "why," message is the "how." So consider how you will structure and channel your message. The channel for your message is the medium you choose for your communication. If you need to scale your communication to a broad audience, maybe you'll choose to prepare a talk that can be filmed and shared on YouTube; or you might choose to write a blog post that you can publish broadly, such as on Medium or LinkedIn. Once you've chosen your channel, it's time to

Writing matters more than ever now in business, and yet it's one of the hardest things to get people to focus on.

get down to the business of structuring your message.

Consider using an outline to generate some structure. What are the main points you wish to make in your communication? What are the key reasons and examples you can offer in support of those points? Once you've assembled a robust scaffold for your communication, you're ready to write, speak, chat, text, parlay, meet, or communicate in whatever other channel you've selected. Let your information about your audience inform your tone and word choice.

## Speaking with Conviction

When it comes to speaking with conviction, the good news is that we're all starting at an advantage. Every one of us has spoken successfully, meaningfully, and authentically before, and every one of us has—at one time or another—felt fully convicted of our ideas and convinced others to feel the same. The magic happens when we can investigate this process enough that we're able to repeat it consistently and, particularly, in high-stakes moments.

Once we open our mouths, we're actually communicating in three important ways: verbal (what we say), vocal (how we say it), and visual (what they see).

**Verbal: what you say**. This is what most of us think of first when we're crafting a message. These are the words we use to make our ideas known. As you prepare your communication, be intentional about the first words you're going to say. Will you begin with the problem you're solving? The solution you're offering? How will you open to capture (and keep!) your audience's attention?

Then, be equally intentional about the final words you'll speak. What are the last words you'll leave with the audience to make them act, think, or feel differently? And finally, how will you transition between the different sections of your presentation so that there's a sense of cohesion?

**Vocal: how you say it**. Be intentional about how you use the instrument of your voice—how loud, how soft, how quickly you speak to create excitement, and how slowly you speak for impact. Without a doubt, the best way to assess your own vocal communication is to record yourself speaking. It's easy to make a quick audio or video recording of yourself on a smartphone or a computer. Try speaking about your ideas, your goals, your company, your projects, or your challenges. Then evaluate your vocal success against five important metrics: pace, volume, clarity, filler words, animation.

**Visual: what they see**. More than half of what we communicate is non-verbal—neither in what we say or how we say it but in what we are not saying: through our body language, our mannerisms, and the way we use the space and items around us. This includes your eye contact, your facial expressions, your gestures, the way you sit, stand, or move, or even the way you're dressed.

Focus on five core aspects of visual communication that all great presenters should master: eye contact, posture, gestures, physical movement, and speaking space. More important than any other element is sustained, direct eye contact with the people you are addressing. It's important that speakers arrive at a place where they can feel comfortable holding four to seven seconds of direct eye contact with the audience.

## Writing for Impact: Active, Brief, and Clear

Writing matters more than ever now in business, and yet it's one of the hardest things to get people to focus on. Why is that? In a world of quick communication, we often forget that one of the most powerful tools for scaling our leadership is the written word. The best writing represents you in a way that feels as authentic as a conversation and connects you to an audience beyond your immediate circle.

The building blocks of business writing are the ABCs. All business writing should be Active, Brief, and Clear.

**Active**. Adjust your writing to the active voice whenever and wherever possible. This usually requires two steps: First, we have to be able to identify the passive voice in our writing. Second, we have to replace the passive voice with something more energetic and engaging.

The active sentence puts the protagonist at the beginning of the sentence. For example, "Tim kicked the ball," rather than "The ball was kicked by Tim." It more immediately answers the question "Who did what?" Not only is that sentence more concise and engaging, but it gives credit to Tim. When we write in the passive voice, we downgrade the human element of our communication—and it's the human element to which our audiences most strongly connect.

**Brief**. The attention spans of our readers are likely not what we would hope them to be. At best, they are unpredictable. As a leader, each of us wants to be known as some-one whose message is clear, concise, and unambiguous, and it takes time to write that way. But if we invest the time, our readers won't have to. And it's far more likely that they will make it through our document, grasp our message, and remember it.

Try eliminating weak verbs like "is," "was," "were," "has," "have," and "had." Using a more powerful verb creates a more engaging sentence that requires fewer words. You might also try reducing a phrase to a single word. "Made a decision" could become "decided." "Came into the room" could be "arrived."

**Clear**. If you've succeeded in writing actively and briefly, your writing should now be clear. To make sure, think back to the AIM framework. Ask yourself, "After reading this document, will the audience take the action I want them to take? Is it clear what I'm asking them to do? Is there any thought, phrase, or sentence that will cause the reader to stumble?" If there's a point in an email where a reader has to re-read a paragraph for clarity, it's not the reader's failing—it's the writer's.

## PART II: TAILORING YOUR COMMUNICATION TO GOAL, SETTING, OR IDENTITY

## Tailoring Your Communication to Your Goal

Though you should always consider your intent when you're crafting a communication, sometimes you can build on that exercise by using specific media, formatting, language, or information ordering to meet specific goals. The more measurable and specific your goal, the better you'll be able to customize your communication to meet the needs of your audience. Here are some of the most frequent use cases.

### Pitching

Let's focus on the type of pitching that challenges entrepreneurs every day: pitching your business venture or collaboration. Entrepreneurs should start with content when creating an engaging, memorable pitch. Chris Lipp's ***The Startup Pitch*** offers a very simple four-part structure to an effective pitch:

1. **Problem**. As you begin by describing the problem, it's important to describe it clearly, making sure that your audience understands the pain of the problem. Why is this such an issue? What are the repercussions of this problem and why do they matter? Raise the stakes by noting any trends you see for this problem. Is it getting worse as the population ages? Do environmental, economic, or time-based factors increase its impact over time? If that's true, then you can make the point that the need for your solution will only increase over time. Be sure that your audience understands the immediacy of the problem before you move on to phase two: your solution.

2. **Solution**. Chris Lipp opens his conversation of solution by addressing the importance of your USP, or unique selling proposition. Why are you able to solve this issue in a way that others haven't been able to yet? What's going to set your startup apart from anyone else who's trying to work in that space? In other words: why you, why this, why now? Think of Steve Jobs introducing the iPod Nano: He didn't tell us it had 16GB of memory or that it was two inches wide by three inches deep. Instead, he said, "Imagine a thousand songs in your pocket."

3. **Market**. As you move your focus to market concerns, you'll want to talk about the initial target market you've identified as well as any expansions you anticipate beyond that initial market. Share an estimate of the market size. Here's where you demonstrate that you've done your research—not only about what the market is but what potential it holds. As you discuss the market, you'll want to effectively capture the advantages of serving this market of consumers that you're targeting.

4. **Business**. Last, you'll want to cover the details of the business itself. What is your go-to-market strategy? Specifically, you'll want to share when and how you're planning to bring this product or service to the market. It's important to share your model for earning revenue and to offer some clarity around when you think that revenue model will begin to be profitable for you.

Our personal identities are not just an accessory to our communication; they inform our unique perspectives, leadership styles, and goals.

## Tailoring Your Communication to Your Setting

Just as you'll think carefully about your specific audience before crafting your communication, you should also think carefully about the setting in which you'll operate. Your communication strategy will be very different if you are presenting on the TED stage than if you are leading a team meeting.

**Meetings**. Before you even send out the invitation for the meeting, think about who needs to be there. Is everyone essential? Next, choose the location and the medium for the meeting. If you can bring everyone together in one place, do that. Tone will be easier to read, flow will be faster, and you won't have to deal with the vagaries of technology. But if you can't do that, you can and should still have a clear agenda and intent for your meeting.

Once you're in the meeting, stick to the guidelines you've set for yourself. If you're leading the meeting, get there early. Start on time, and end on time. Make your deck easy for your audience to follow by guiding them directly to each slide. Use highlights or sticky notes to emphasize important sections.

You'll also want to think about how to balance the voices in the room. Too often, meetings become the domain of extroverts. Look for opportunities to include voices that aren't as forthcoming.

**Virtual meetings**. Virtual meetings come with their own unique set of challenges and opportunities. On the plus side, virtual meetings make last-minute communication possible, are a low-cost alternative to pricey travel, and can allow you to include leaders who would otherwise not be able to collaborate with you.

But technology, while always progressing, can sink you if you're having connection, audio, or video problems. People tend to be less interactive virtually, so it's harder to gauge the tone of the group and how they're feeling. Time zone differences can make virtual meetings hard to schedule. Suggest that your audio calls be conducted over video. This will give you the all-important advantage of some visual connection with your colleagues and make you feel more present.

If you can't create a video opportunity, add as much dynamism as you can into your experience of an audio call. Use a headset rather than speaker phone, and walk around your room. Gesture as you would in person. Focus on vocal variety, energy, and confidence. You'll need to compensate for the lack of these visual cues with your voice and your word choice.

**On stage (TED Talks, LOWKeynotes, and the like)**. Without question, TED has changed the game for what's expected of presentations. To succeed in an onstage setting, work first has to be done on the content, the idea itself. Only after the idea, the argument, the stories, and their supports are crystallized should you focus on delivery. Divide your lead time in half, and spend the first half on content, then the second half on delivery.

When it comes time for delivery, familiarize yourself with the space in which you'll be presenting. The stakes are higher for this sort of a presentation, so don't let your environment be the factor that derails you—particularly when you can do the work to make it familiar ahead of time.

## Tailoring Your Communication to Your Identity

Our personal identities are not just an accessory to our communication; they inform our unique perspectives, leadership styles, and goals. We may perceive elements of our identities that we don't think twice about when communicating as leaders, but often we will need to reconcile core elements of who we are with best practices for how to communicate the ideas that matter to us.

Our identities exist in constant conversation with our environments, so use these suggestions as a starting point for how to navigate your personal identity within the context where you lead.

**Leading in your second (or third, or fourth) language**. In our increasingly global world, many of us may find ourselves presenting, speaking, negotiating, writing, studying, or working in a language that is not our native tongue. When you are leading in a language that is not

your own, it's important to remember that except where it impedes clarity, your identity—your accent, your traditions, your values—are central to the leadership you offer.

Your accent tells part of your story. It informs the path you took to arrive at your current leadership moment. And it offers useful context to your peers. Claim your international identity and own it proudly.

The only reason you might want to approach your leadership differently than a native speaker is if others have difficulty understanding your ideas. Clarity is key—be sure you can be understood in the dominant language of the group. If you are writing, seek out a coach who can encourage you to clarify unwieldy word choices or awkward constructions.

**Leading as a woman**. All of us operate with a mix of strength and warmth. As we become more skilled on each of these axes, we gain admiration from our audience. This is often more of a continuum stretching from warmth at one end to strength at the other.

Women may wish to try to read their audience and engage with more warmth or more strength based on what the situation requires.

Professor Allison Kluger offers these tips to enable women to be more effective communicators. Here are a few:

- **Grasp the landscape**. This is something Allison suggests women seem to do intuitively better than men; consider this your superpower. Take note of the setting, players, and issues, and use your knowledge of the terrain to navigate the meeting.
- **Reduce the apologies**. Too often women apologize unnecessarily. Don't apologize as a way to start or end a conversation. Be accountable for your mistakes, but don't overcorrect.
- **Accept compliments**. Accept and respond to a compliment so that you can own your own power.
- **Use humor**. Often the warmest way to diffuse a tough situation is through humor. Allison suggests comments like, "John, that sounded really good when I said it 10 minutes ago" to remind people of your efforts.
- **Manage the interruptions**. Research shows that men are more likely to interrupt women than the other way around; prepare for that, preempt it when you can, and call it out gently and firmly when it still occurs.

## PART III: SCALING YOUR LEADERSHIP: THE COMMUNICATION COACHING PROCESS

You cannot improve your communication skills simply by reading a book. Communication mastery is about getting better and better at speaking and writing each time you communicate.

Without a coach, you may simply be reinforcing bad habits, creating even more to unlearn when you really need to step up as leader with a larger span of influence. First, let's focus on how to be coached, then how to coach others, and finally how to create a culture that embraces communication coaching.

### When Being Coached

Each coaching engagement differs, but one thing that all successful coaching relationships share is an active and engaged participant. Here are some ways to maximize your effective engagement with your communication coach so you can meet your goals effectively.

**Establishing your goals**. You've got to know what you want to accomplish before you engage a coach, even though you will likely have to refine those goals once you begin work with a coach. As you consider your coaching goals, remember to stay flexible.

Set a few specific goals you wish to achieve through coaching—perhaps three. Then you might begin to look for a coach with expertise aligned with those goals, but don't be too rigidly attached. Your goals may change once you begin working with a coach who has a different perspective on your challenges and knows more about how to approach them than you do.

**Selecting your coach**. In some metropolitan areas there may be a network like the International Association of Business Communicators, which may allow you to find suitable possibilities. You may also want to contact local colleges or universities to see whether they have adjunct faculty who do this work as well.

You might reference the directories of two well-regarded coach training and accreditation organizations, ICF (International Coach Federation) found at coachfederation.org, and IAC (International Association of Coaching).

The best way to find suitable coaches can be word of mouth. Ask colleagues if they have suggestions, or see

Remember that what is obvious to you may not be obvious to the people you are coaching.

whether your HR office maintains a list of approved vendors for coaching. If it doesn't feel too risky to you, put a note out on LinkedIn or your company's Slack channel.

**Adopting a coaching mindset**. When you're being coached on writing, speaking, or a combination of both, it's important to keep an open mind, to take risks, and to try the techniques your coach recommends before disregarding them. A talented coach may have you engage in activities or exercises focused on helping you develop, but they may not be directly tied to the final product you are working on. Trust your coach.

For the best results, you'll want to develop a relationship with a coach over a period of time. That period may be a few weeks or a few months or even a few years, depending on your bandwidth and on the scope of the skill you're building. This allows your coach to know your strengths and opportunity areas more intimately, and allows you to build increasing trust in your coach.

Reiteration will be central to your successful coaching engagement. It's the virtuous cycle of feedback and practice, feedback and practice that will allow a leader to get the greatest benefit from coaching.

Simply put: The more you put in, the more you'll get out. If you practice repeatedly, you'll be able to refine your technique, hone your muscle memory so that the effort is less difficult, and feel confident that you've done all you can to ensure your best performance.

## When Coaching Others

Let's explore some of the behaviors, attitudes, and tools that make a coach truly effective. To coach others effectively, you need to exhibit

- **Patience**. Remember that what is obvious to you may not be obvious to the people you are coaching. Not only are they gaining familiarity with a new skill, but they will likely be reconciling their previous way of communicating with a new approach. Be patient and meet the people you're coaching where they are.
- **A focus on process over product**. A good writing coach will invest in asking leading questions to help the writer recognize opportunities for change, rather than editing the document.
- **Flexibility and creativity**. While you should always have a confident vision of where the coaching engagement and each coaching session are headed, a great coach will demonstrate full willingness to scrap the plan and address the issues that are top of mind for the leader. If one technique doesn't appear to be a good fit, try another.
- **Focus on the person you're coaching, not on yourself.** You will be better at the skills you are offering to the leaders you work with, and it will be valuable to model their use for clarity. But then, step back. Let them practice. Let the work be theirs. Let the words be theirs. Empower them to use the new skill partly your way and partly their way so that it feels authentic, repeatable, and effective.
- **Empathy**. Your coaching relationship is just one small chapter in the leader's experience. It may bring up issues of identity, worthiness, purpose, or fear. Be as empathetic as you can in recognition that the coaching process is personal and that what is personal can be sensitive.

Slow down, listen, and let the leaders you're coaching engage in the material in the way they need. It's also helpful to define what a good coach is not. Ideally, as a coach you should not be an editor, a ghost writer, a content creator, a philosopher, or a psychologist (although you may have moments of dipping lightly into each of these areas occasionally, depending on your experience). You are there to guide leaders with new tools, new approaches, and new skills that they can use to communicate effectively.

Together you may decide that you have a particular finish line, but your focus should not be on completing the goal for the leaders as much as outfitting them to do the work themselves, with your guidance.

## Creating a Coaching Culture

No great coaching relationship can exist in a vacuum. As with any endeavor we undertake, we excel when we operate within a culture that's conducive to our success. So what kind of culture promotes coaching success? We can promote radical candor in our organizations, model and mirror the behaviors we hope others will try, and ensure that the right coaching is coming from (and to!) the right people.

**Everyone can coach (but not everyone should).** Even the smartest, most motivated leaders need dedicated practice, feedback, and iteration to approach mastery of a new skill. Maintaining a clear distinction between skills coaching and offering a performance review can go a long way toward creating a culture open to coaching.

As a leader, it's important to avoid saying, "May I offer you some coaching on this?" when you mean, "I need to give you feedback on your performance." Effective coaching must be divorced from performance evaluations, and should be offered in a non-threatening, risk-embracing setting. That's why, for the most part, leaders seek outside consultants or coaches to coach their teams.

**Embracing radical candor**. In Kim Scott's best-selling ***Radical Candor,*** she believes that there are two intersecting axes that provide the framework for effective feedback. We must both "care personally" and "challenge directly." Only when you are strong in both of these dimensions is radical candor possible. If you can interact with your team with both "caring directly" and "challenging personally" in mind, you can model the type of feedback they should offer to you and to each other. Kim Scott's book is one of the most important titles for leaders to read.

**Mirroring and modeling best practices**. As you consider the creation of your organization's coaching culture, think about your personal communication. What are you offering others, verbally or nonverbally, as a suggestion for how they might share their ideas and interact? The more you can embody the style that works best for you, the more passive coaching you will offer to your community.

The next step is in your hands. You can only reap the dividends of your reading if you take action. Commit to writing and speaking with greater mastery, but also inspire others on your team to do the same.

When it comes to leadership communication, it's not the presentation you give, the report you write, or the message your audiences receive that matters; what matters is the message they both recall and retell.

We can only approach mastery in communication; we cannot achieve it. With every email we write and every talk we deliver, we get incrementally better and better. That's what mastery is all about. Approach mastery in your own distinct way. Perfection is impossible, but growth is always attainable.

### How Winning Streaks and Losing Streaks Begin and End

# CONFIDENCE

## THE SUMMARY IN BRIEF

*One moment you're up, one moment you're down. Whether they are businesses, sports teams, or organizations, those on winning streaks seem to get all of the advantages — adulation, career opportunities, good deals, and the benefit of the doubt. It's easy to feel on top of the world as a winner, but once you face setbacks and a losing streak, life becomes a cycle of loss and failure.*

*Losing once does not make someone a loser, but what is the difference between losing all of the time and keeping the ability to win? It is a question of confidence, and the conscious sense of accountability, collaboration and inspiration that gives people control over their responses to their circumstances. Presidents, managers, coaches and even individuals have the power to choose how they deal with a loss, and whether they are going to allow it to be the beginning of a trend, or have the confidence to learn how to win next time. By studying winning and losing teams, companies and organizations, Harvard Business School Professor Rosabeth Moss Kanter has found the keys to confidence and the way to find it when it is lost.*

*This summary presents the new theory and practice of success, and explains why success and failure are not mere episodes but self-perpetuating trajectories.*

## What You'll Learn In This Summary

✓ The three cornerstones of confidence and how leaders can use them to perpetuate a winning team.

✓ Why winning streaks build and continue over time.

✓ How a winning streak comes to an end when panic takes the place of confidence.

✓ How the lack of confidence caused by losing streaks becomes a self-fulfilling prophecy.

✓ The difference between a loss at the beginning of a trend and a wake-up call for winners who are not trying as hard.

✓ The steps necessary to create a culture of confidence in any organization.

✓ How to use the cornerstones of confidence in your everyday life to be an optimistic winner.

# CONFIDENCE

**by Rosabeth Moss Kanter**

## — THE *COMPLETE* SUMMARY

## Winners and Losers

After one of the highest-performing decades in its 100-year history, Gillette, the global consumer products company, slipped badly in the mid-1990s. Poor business practices and overpromising to Wall Street resulted in 15 quarters of missed earnings estimates before a new leader turned the company around and restored accountability. Gillette once had confidence, then lost it, then got it back.

People, groups and companies can get swept up in fortunate and unfortunate cycles of wins and losses. Confidence is often what causes these swings to rise and fall. Confidence is the bridge between expectations and performance; between investments and results.

Positive cycles or winning streaks create positive momentum and increase confidence. People who believe they will win are more likely to put in the effort to ensure victory. Their halo effect makes it easier to attract the best talent and the investments to perpetuate victory. Losing cycles also feed on themselves, destroying confidence along the way. Losing has a repellent effect that makes it harder for a team to bond and to attract new talent, and easier to fall behind.

### *Arrogance and Despair*

Confidence is the balance between arrogance — the failure to see any flaws — and despair. It is human nature to seek patterns and trends even in random events. But in non-random activities, where effort and skill make a difference, success and failure become self-fulfilling prophesies.

Failure and success are trajectories, directions and pathways. Each decision and action is shaped by what happened last time. Once set in motion, streaks harden, and to turn a cycle from decline to success, leaders must restore confidence in the system. In business as in sports, winning on the playing field is heavily influenced by what happens off the field. ■

**For additional information on how confidence affects a team's outcome, go to: http://my.summary.com**

## Winning Streaks

The positive momentum of success leads to a winning streak. Winning puts people in control of their circumstances and brings rewards that only perpetuate more winning.

Every winning streak begins when leaders create a foundation for confidence. Winning begets winning because it produces confidence at the following four levels:

**1. Self-confidence:** an emotional climate of high expectations.

**2. Confidence in another:** positive, supportive, team-oriented behavior.

**3. Confidence in the system:** organizational structures and routines reinforcing accountability, collaboration and innovation.

**4. External confidence:** a network to provide resources.

At each level, confidence both feeds winning and feeds off of it. This is how leading organizations such as General Electric, Toyota, Wal-Mart, Oxford, Harvard and the New York Yankees succeed year after year. What makes winning streaks even more dramatic is that winning is hard work. Losing is much easier.

### *A Mini-Virtuous Cycle*

People who believe in themselves are likely to try harder and longer, increasing their chances of success. They believe that their efforts will pay off in the future. These expectations translate into an investment of resources that improve performance in a mini-virtuous cycle. Leaders look more closely, invest more time, and give winners the benefit of the doubt.

Winning is contagious, and leaders can set an emo-

## Winning Streaks

*(continued from page 2)*

tional tone and shape expectations that produce initial wins. People naturally gravitate toward behaving in ways that support confidence. Accountability, collaboration and initiative are central to confidence, and they occur when winners work together comfortably.

External confidence is necessary for success. It includes money for investment, as well as the ability to recruit top talent. The whole context is enriched for winners. They get powerful networks, career opportunities, and better deals with those who want to be associated with them.

Winning streaks also feature leadership continuity. Losing teams or companies tend to churn their leaders, and everyone has to keep adjusting to new relationships. Continuity of people means deepening relationships, continuity of strategy, and the security to build on a plan rather than mindlessly follow a script.

### *Why Winning Streaks End*

Like everyone, winners make mistakes. One loss or fumble doesn't end a winning streak because winners usually receive the benefit of the doubt. Tough times can propel a team to get motivated again. But winning streaks do involve struggles that must be dealt with. The rules of sports and business encourage competition against unmitigated success. Teams become the ones to beat, so others try harder. New companies enter markets that appear lucrative.

Even so, it is not external forces that hurt winners; it is their own failure to maintain discipline and support systems. Paradoxically, winners get lazy and slack off the activities that made them winners in the first place. When things go wrong, they lose confidence and panic. During a game, anyone can be losing, but winners' confidence in their ability pulls them through. Panic distracts and prohibits good decision-making under pressure, while confidence calms and makes sure fumbles don't turn into losses.

### *Arrogance and Overconfidence*

Preparing for the worst-case scenario and practicing under the most difficult circumstances strengthen problem-solving and the ability to work through disasters. Confidence is based on reasonable expectations. When people become arrogant or overconfident, they miss some of the information associated with success and failure.

Being a success in the first place means surviving long enough to need maintenance and reinvestment. A winning streak requires renewal and rebuilding. Winners age naturally or reach their limits. Slowing momentum can start with removing just one element or ignoring one rule.

Winning ends when denial about threats and problems sets in. Winners can work through setbacks as long as they face problems head-on and their discipline remains in place. The antidote to denial is dialogue, which is made possible by confidence. Winners who reinforce accountability, collaboration and initiatives are better equipped to see mistakes and changes. They are willing to respond to trouble through self-examination and by assuming there is a solution rather than avoiding it. ■

### Connecticut Huskies' Investment Cycle

After 10 losing seasons out of 11, new coaches arrived for the University of Connecticut's Huskies women's basketball team in 1984. At that time, there was only one set of bleachers and only 50 people attended each game, but the university promised the new coaches the resources of a broad-based athletic program. As the team started winning, the school became more interested in investing resources to promote success. By the time the Huskies made it to the Final Four in 1991, they had a luxurious new basketball facility. By 1997, devoted Huskies fans made sure all games were sold out in advance. The team topped attendance records, was followed by seven full-time beat reporters, and generated $4 million in profit in 2001. In 2003, new donors paid up to $50,000 for four season tickets. Because of the Huskies, the WNBA decided to put a team in the area — its first team without a men's NBA team. The team got continually better over time because it received investment and confidence to fuel its improvement.

### Too Much Success at Chernobyl

In the lead-up to the Chernobyl nuclear disaster, experienced reactor operators allegedly violated safety rules because they had done so before without incident. It made life easier to have one less process. The operators were well-respected, award-winning experts who became overconfident and ignored the safety rules as they started to act automatically rather than reflectively. They reinforced one another's conviction that everything was just fine. The resulting disaster wasn't due to a failure of individuals, but to the breakdown of a system that had been very successful in the past. Fundamental pieces of the support for high performance were neglected.

**For additional information on the sources of denial, go to: http://my.summary.com**

## Losing Streaks

Losing streaks are escalating cycles of decline that erode confidence. Losing makes people feel out of control, and they give in to the temptations associated with defeat. Their powerlessness corrupts confidence, and then it gets weak.

*(continued on page 4)*

## Losing Streaks

*(continued from page 3)*

One of the biggest signs of losers is that they do not like to talk about being losers and they stop communicating. Whether they are individuals, teams or companies, people on a losing slide avoid dealing with the issue. No one wants to tell the world that he or she is responsible for starting a losing streak. Managers retreat to their own turf and defend it against change, not considering the effect on the organization. Secrecy and isolation accelerate the problem as people talk less and find scapegoats to blame for problems.

Next, people become mired in "learned helplessness" and believe nothing they do can really make a difference. They set less aggressive goals, find short-run solutions, and surrender to the timidity of mediocrity. They become trapped in "doom loops," self-perpetuation systems where responses to problems actually make the problems worse. Cutting costs might create a product no one wants, which reduces revenues, creating losses, making it impossible to borrow at reasonable rates, which increases expenses, and so on.

### *Habitual Losers*

Losing becomes a habit. Even winners can get dragged down when put in a losing situation, because the powerlessness of loss causes corruption and the system turns them into sore losers. When there are few coping mechanisms, people fall back on primitive self-protective behaviors that are the polar opposites of what it takes to win:

- **Communication decreases.** People avoid unpleasant conversations about problems.
- **Criticism and blame increase.** People do anything to avoid self-scrutiny.
- **Respect decreases.** People feel surrounded by mediocrity.
- **Isolation increases.** People don't want to be reminded of failure by others.
- **Focus turns inward.** People look out for their own interests.
- **Rifts widen and inequities grow.** People hoard assets, play favorites, and exhibit rivalries.
- **Initiative decreases.** People are paralyzed by anxiety.
- **Aspirations diminish.** People look for life satisfaction elsewhere.
- **Negativity spreads.** Contagious negativity reduces everyone's mood.

### *Why Losing Streaks Persist*

Whether one loss is a trend or a blip is not always clear, but once losses accumulate, they take on the weight of history. Past performance shifts expectations and turns into a self-fulfilling prophesy, as it did for the Panthers of Prairie View A&M University, a historically black college in Texas. The team had the longest unbroken losing streak in NCAA football history — 80 straight losses between 1989 and 1998. It had been 25 years since the team won more games than it lost, and the school's strong academics were overshadowed by the football team. Being treated like second-class citizens, deprived of its share of resources, and having no confidence are the conditions that set the team up to fail.

The Panthers were champions in the midcentury, but the civil rights movement in the 1960s changed the racial composition of college campuses — and their football teams. Good players were recruited to integrated colleges, and Prairie View didn't adapt. Its last winning season was in 1976, 6–5. At that point, the school was in trouble overall, and auxiliary reserves for athletics, dorm renovations, and student health were depleted. The team was kept alive by memories and support of alumni, but there was no investment in improvements. For a while, the team was coached by the golf coach, it had no scholarships, and the national media ridiculed it. It also found that other teams played harder against it to avoid the humiliation of losing to the Panthers. Referees gave the team's players more penalties assuming they couldn't possibly be winners.

### *A Platform for Confidence*

A new head coach was appointed in 1997 and gave the team a platform for confidence. With more scholarships, more staff, and less contact with the media, the Panthers played better and then won on Sept. 26, 1998. They had won one game, but still didn't have the patterns of winners. Even when a new coach arrived in 2000 and helped them wipe out bad habits, start winning, and get some respect, they retained the pathologies of losers, and a doom loop undermined their confidence. They lacked talent because they had weak and inconsistent leadership, because they lost, and because they had no resources. Finally, in 2000, the school started a capital campaign to infuse resources, but external confidence was still missing.

In 2003, C.L.Whittington took the head coaching job and instilled the team with school spirit. He put up pictures and trophies from the glory days, taught the team's players the school song, got them back in shape, enforced a dress code, and created more opportunities to bond. Players began to grow confidence and stop losing. But Whittington took it too far and began to bring back loser values. He rode them too hard, blamed everyone for problems, got into heated arguments, and was eventually fired.

Losing is not one act. It is a combination of economic, organizational, cultural and psychological factors that interact to make it more likely for people to respond in dysfunctional ways. That is why losing streaks are so hard to break. It was impossible for the Panthers to leap from loser to winner overnight, no matter how many people wanted it. Wins mixed with loser behaviors, such as disruption, churn, lurching, and lack of investment, do not overcome losing streaks. ■

# Turnarounds: The Art of Building Confidence

When it is time to make a turnaround, leadership matters most because confidence has eroded at all levels. Turnarounds are not for the faint of heart or impatient, and they have similar issues. These include:

- **Coming off a losing streak, the situation is always worse than anyone thinks.**
- **Promises of change have been made before to no avail.**
- **Those hailed as heroes when they arrive can become villains when they make unpopular decisions.**
- **If victory is too easy, it might be too temporary.**
- **Turnarounds run on several clocks that are not always in sync.**

There are three situations that trigger turnarounds: Some organizations are terminally ill; some turnarounds begin when a loss of external confidence finally compels change; and some turnarounds are simply an unanticipated byproduct of normal life events, such as succession. While each turnaround is different, they all start with the need to make unpopular decisions about a situation that's full ugliness has been denied. It's hard for that kind of clarity to come from inside the organization. New leaders are required because they are better able to disentangle system dynamics in which they are not caught up.

## *Rapid Leader Turnover*

But decline cycles are known for having rapid leader turnover. What is the difference between a leader who will stay and one who will soon be packing his or her bags? It is the confidence the leader shows in the people who must work to deliver winning performance. The turnaround leader's agenda is daunting, with endless problems, unpopular decisions, and skeptics to convert. These people often proceed unevenly and slowly. It takes minutes to destroy confidence, but forever to build it up. To satisfy people, it takes a combination of bold strokes and long marches to change culture.

There will be false negatives when actions with long-term objectives create apparent short-term losses. There are also false positives, early signs of recovery that bring so much relief that effort decreases. These false positives can provoke selfishness if they occur before spirit is restored. That is why early successes can sometimes be the most dangerous time in a turnaround. Stopping losses is not the same thing as gaining the confidence to create wins.

## *Face Facts*

The confidence to create wins starts with accountability. When people in losing streaks stop talking, practicing or trying, accountability is lost. James M. Kilts recognized that when he took over as CEO of Gillette in 2001. Gillette was a good-old-boy organization that valued seniority and corporate loyalty over competence. The company had star products, sometimes reaching 80 percent market share, but there was little focus on innovation by individuals. In the 1990s, the stars couldn't hide the underlying problems anymore, and it was easy for investors and employees to lose confidence. Gillette's downward spiral included stagnant sales with declining profits, market share, and stock price. The company slipped into a long cycle of decreasing communication, blame-shifting, and denial of responsibility for poor performance.

Before coming to Gillette, Kilts investigated the company. It was ending its 15th consecutive quarter in which it failed to hit earnings estimates. He could see that Gillette lacked accountability. He immediately set in motion a series of changes to restore responsibility and accountability. Two of his top goals were to provide straight talk about problems and expectations, and to have the courage to admit responsibility for problems.

## *Setting Expectations*

Kilts began the turnaround by explaining exactly what behavior he expected, including setting and achieving realistic targets, and not inflated targets to please Wall Street. He showed courage to break with the past by admitting errors after discovering the sales force was engaging in trade loading at the end of each quarter to make its unrealistic targets. When he asked salespeople why they engaged in this practice, they said executives told them to do it. Kilts admitted it was wrong and stood up to Wall Street by not issuing earnings advisories before the end of the quarter. Then people began to understand that he was serious.

Kilts stopped the trade loading, even when customers had budgeted for it and couldn't believe salespeople weren't going to reduce prices at the end of a quarter. It took nine months to stop the trade loading enough to convince salespeople to be confident to succeed without falling back on it.

For nine of the 10 quarters after Kilts' arrival, Gillette met or exceeded analyst forecasts. Market shares increased and quarterly financial targets were met. Innovation increased and confidence grew enough that when its rival Energizer bought Schick razors, Gillette was ready to deal with it.

The employees had confidence in Kilts because he named problems everyone knew were there, and put facts on the table for anyone to see.

## *Cultivating Collaboration*

After accountability, the next major cornerstone of confidence is collaboration. When people are isolated and avoiding or attacking each other, leaders cannot just

*(continued on page 6)*

For additional information on how Kilts turned around Gillette, go to: http://my.summary.com

## Turnarounds: The Art of Building Confidence

*(continued from page 5)*

tell them to "play nice." Seagate, the world's largest manufacturer of computer hard-disk drives needed to turn around a losing streak when the company slipped in the mid-1990s and 30 percent of its products required rework. No one was working together. Divisions worked as individual silos that focused on the best results for themselves, blamed others, and the senior staff members showed little respect for each other.

In 1998, Steve Luczo became Seagate's CEO. He and COO Bill Watkins decided on a new strategy and business model involving technology leadership, investment in innovation, and operating efficiencies. The problem was that the strategy would require companywide teamwork and mutual confidence that didn't exist.

### *Vision and Values*

First, they established a corporate management council to open a dialogue with senior management about vision and values. Once the council made a decision, members were expected to fully support it. Those who persisted in their dissent were phased out. Over 70 percent of management changed during the next two years.

In 1998, they started a new project to improve the number and quality of their disk drives. They had been producing 1,500 to 2,000 disk drives per line per day, and they chose a new goal of 20,000 drives per day, or one every 3.5 seconds. The leaders asked for it, but the workers said it couldn't be done because they had no confidence. But the engineers were told to stretch and not to worry if they made mistakes. Permission to fail created psychological safety and helped the team bond. An engineer found an innovative solution, and by 2003 they were producing 16,000 drives per day, giving Seagate a large advantage over competitors.

Seeing that collaboration could accomplish important tasks helped spread teamwork at Seagate, and cross-functional groups from many locations became a more common mode for solving problems. They created core teams that took leadership roles on projects, and were mainly responsible to one another. Membership on a core team gave people in the rank and file a way to shine and demonstrate leadership. A virtuous cycle developed where managers trusted people below; more work could be delegated; and there was more respect for the lower ranks, who developed more confidence and were willing to take on more responsibility.

### *Inspiring Initiative and Innovation*

The most damaging losing pathologies are passivity and learned helplessness. People surrounded by pessimism drag others down and find the worst in everything. A personal pep talk is not enough to overcome this pessimism; sometimes it takes a gigantic extravaganza.

### *BBC's Losing Streak*

By 2000, the British Broadcasting Corp. (BBC) needed a shake-up. The Web and declining audience were bringing it down, and there was little internal or external confidence. The BBC was being made to compete with independent external producers, but bureaucracy hampered creative efforts, and employees felt undervalued. External consultants reinforced another doom loop, sending the message that internal people weren't capable, and reinforcing passive resistance to top management, which induced them to hire more consultants.

Though there were still pockets of excellence, by 1999 the BBC was on a losing streak when Greg Dyke was appointed deputy director general. His first inspirational action was an internal TV broadcast to the whole organization promising more support for the BBC's programming and related services. In it, he said he planned to free up £200 million by reducing overhead and consultant fees.

### *'One BBC'*

In 2000, Dyke reorganized under a grand initiative — "One BBC" — to inspire his people. He enhanced self-confidence by showing them they were worth investment. He started at the top with the executive committee (familiarly known as the ExCo) helping executives unlearn defensiveness and become collaborators. Meetings were less formal and challenged people to express themselves. He created cards that said "CUT THE CRAP: MAKE IT HAPPEN" to shift losers' passivity to winners' initiative. With renewed confidence, ExCo executives hatched ideas and took back the new gospel of initiative to their own organizations.

*(continued on page 7)*

## BBC Just Makes It Happen

The following are some of the innovative ideas that came out of Greg Dyke's "One BBC" program:

✓ **Departures From Tradition.** A successful Scottish soap opera was produced locally rather than in London, the source of most programs in the past.

✓ **Innovations Through Collaboration.** Interactive features appeared on the BBC Web site through combined efforts of the news, sport, drama, children's program and "new media" divisions.

✓ **Fast, Decisive Actions.** Nightly TV news was moved to 10 p.m., which reversed a multiyear decline in viewership.

✓ **Surprising Successes.** A new trainee used funds intended for a training video to create a pilot for a comedy that ended up being the United Kingdom's top-rated comedy series, *The Office*.

### Turnarounds: The Art of Building Confidence

*(continued from page 6)*

"One BBC" generated tangible results by channeling £270 million into new broadcast programs. Ratings and audience satisfaction were up. By 2001, the executives were doing well, but there was still unhappiness in the ranks. Company leaders decided to be more ambitious and held a huge "Just Imagine" workshop with the top 350 managers, discussing ways to improve the company. The ideas were as small as changing the reimbursement process and as big as producing a BBC-wide orientation program for new hires.

People got bolder, their confidence grew, and the wins got bigger. Quality increased as collaboration between all of the divisions of BBC improved dramatically. BBC began involving more and more levels of management, and began implementing innovative ideas for systematic change. Confidence soared, and even when Dyke had to step down amid a national scandal in 2003, the employees were able to continue and inspire themselves. ■

**http://my.summary.com**

## A Culture of Confidence

Turning around a company or sports team is one thing, but how do you inspire confidence in a whole country — especially one that has suffered under oppressive regimes and economic depression? In 1994, Nelson Mandela was the first democratically elected president of South Africa. Before the end of apartheid, the country was in a classic losing streak. This included suppression of information, tribal rivalries, isolation and self-protection, passivity and helplessness, and a negative climate that produced low expectations and envy toward those in better circumstances. The country had weak institutions for accountability, collaboration and initiative; misallocated or squandered resources; and had declining external investment.

After spending 27 years in prison, people might have expected Mandela to be vengeful, but after being elected, he worked hard to put his whole country on the right track. He had to balance between addressing the pain and suffering that millions had experienced, and fostering a spirit of reconciliation aimed at moving the country forward. Mandela had to shift the cycle of decline.

Citizens of the country lacked confidence in leaders to lead, and in their own ability to improve their circumstances. Mandela knew he couldn't fix everything, but he could start programs and institutions that would shift people's behavior. He took the following steps:

- Mandela **opened dialogue and banished denial** by supporting a free press and promoting an election designed to ensure widespread input. All people were given opportunities and encouragement to participate in creating the new constitution.
- He promoted **respect and accountability** by being inclusive of all South Africans, black and white, and shepherding the controversial Truth and Reconciliation Commission.
- He promoted **collaboration** in his choice of colleagues. He favored inclusiveness of all races and highlighted the efforts of those around him. He emphasized that whites were fellow South Africans and urged them to stay in the country.
- He promoted **opportunity and enterprise** by making cuts and adjustments in the government's budget to satisfy outside investors. He phased in free compulsory education for all children, and required companies to draw up employee equity plans to phase in black employees and build a black middle class.

Mandela saw the long march ahead for his country, but all of his steps made things go in the right direction. There were doubters, but expatriates began returning, and foreign investment poured in. Mandela's confidence in himself and other people helps account for the remarkable and historically unique transitions he was able to make. ■

## Delivering Confidence: The Work of Leaders

Leaders certainly need self-confidence. It helps them persist through problems and triumph over troubles during unstable turnaround periods. But they must also have confidence in other people. If they only rely on themselves to rescue any situation, while focusing on other people's inadequacies, they undermine confidence and reinforce losing streaks.

When leaders believe in other people, confidence grows and winning becomes more attainable. Leaders multiply because everyone becomes less dependent on the commander in chief, and people at many levels take on leadership roles. Leaders establish the support structure to make further leadership possible. When people have confidence in one another, they are willing to lead and be led by the team.

Every leader must promote the three cornerstones of confidence. To ensure accountability, leaders must foster straight talk, communicate expectations clearly, and make information transparent and accessible. To make sure people feel connected, they must foster collaboration by structuring collaborative conversations, reinforcing respect and inclusion, and defining joint goals and definitions of success. And finally, to develop tools,

*(continued on page 8)*

## How Leaders Build Confidence in Others

✓ **Espouse high standards.** Give pep talks and messages that incite others to action by using positive expectations based on specific facts to justify their optimism.

✓ **Exemplify behavior.** Use the power of personal example to serve as a role model for their high standards.

✓ **Establish formal mechanisms.** Develop processes, routines and structures that embed winners' behavior in the culture and routine.

### Delivering Confidence: The Work of Leaders

*(continued from page 7)*

channels, rewards and permission for people to take initiative, leaders must open channels for new ideas, treat people as experts in their own work, and encourage small wins and grass-roots innovations.

Leaders connect people to tasks, to members of the team, and to the outside world. As winning streaks are associated with the growth of external networks of customers, fans, audiences, investors and public officials, it is important for turnarounds to restore external confidence by repairing and rebuilding stakeholder relationships. Kilts had to plug holes in Gillette's investor relations and trade relations. Mandela had to convince international businesses, foreign investors, and South Africans in exile that his country could shift to a winning cycle. ■

For additional information on how leaders make choices to define a culture of winning, go to: http://my.summary.com

# Winning Streaks, Losing Streaks and the Game of Life

How do these lessons about confidence help you in your everyday life? The secret to winning is not to lose twice in a row. Confidence brings the resilience to bounce back from defeat to victory. It does not guarantee that you will win every single time, but confidence makes people more likely to analyze problems and face them head-on, communicate and cooperate with those whose support they need, and take initiative to make adjustments or try innovations. People with confidence can count on themselves to shape events, and they know they will stay in the game no matter what.

The only good thing about losing is that it sounds an alarm bells and can shake people out of complacency. A setback represents a time to make a choice, to make a difference, or to slip into self-defeating behavior. The dividing line between winning streaks and losing streaks is the choice of behavior in response to setbacks. The choice to rally instead of getting discouraged is that of an optimist who assumes negative events are temporary glitches rather than a permanent state of affairs.

### *Internal Supports*

Successful people also have character, the internalized three cornerstones of confidence — accountability, collaboration and initiative — and the ability to support others. When the going gets tough, they draw on those internal supports. Character is shaped by values and the desire to achieve excellence in all pursuits, regardless of the outcome. They know that getting beaten by a better opponent is different than losing. As long as they are playing at the highest level, they will resume winning. Their standards are internal and they have the perseverance to stay in the game just a little longer. Winners define setbacks as detours, and they redouble their efforts to find a way around the obstacles.

One of the best things a winner can do when facing a loss is to think of others. Winners avoid the loser's temptation to shut down and withdraw. People must build their own mini-network, knowing that others can be remarkably generous.

### *The Long March*

Winners also avoid the loser's habit of assuming too much. Winners don't focus on the huge goal in the future; they work step-by-step to progress a little faster or a little smarter. They know they can't jump stages. Winning is a long march, and even when the problems seem overwhelming, winners focus on what they can control — being prepared, working hard, and accomplishing small wins that will improve the odds of achieving the next big success. ■

## THE SUMMARY IN BRIEF

Technology has enabled us to be more interconnected today than ever before. So why do so many of us feel isolated and undervalued at work? In these rapidly changing, challenging times, how do we develop the intuition, self-awareness, and interpersonal agility required to prosper?

Strong relationships are the bedrock of lasting success, meaning, and joy at work. In ***Connect First***, Dr. Melanie Katzman shows you an impactful approach to connect first as fellow humans, then as co-workers and colleagues, to forge the deep bonds that make a significant difference.

Katzman presents 52 actions, 19 of which are summarized here, that you can take immediately to create a deeply rewarding work life by connecting to yourself, your organization, and the world at large. These are the same life-changing techniques she uses with leaders and employees at the world's top companies to enhance productivity and foster fulfillment and joy at work—the hallmarks of true success. Let ***Connect First*** help you share in that success.

## IN THIS SUMMARY, YOU WILL LEARN:

- Why emotions matter at work and how to use them as a source of energy.
- Key strategies to establish respect, use your senses, and be self-aware.
- To foster loyalty, harmony, and courage.
- To dream big so you can have a big impact.

## Introduction

Corporate life assumes a convenient fiction: If we assign roles and responsibilities, create flowcharts and project plans, and delineate deadlines and deliverables, then somehow magically, coolly, and calmly, the work will get done.

Wrong! The truth is that organizations are run by people, and people run on emotions. Our feelings supply the energy to fuel our pursuit of profit and purpose. They are formidable and universal. They can't be ignored. Yet, to our great detriment, we have long pretended that emotions have no place in the office.

Achieving in business is often falsely equated with being rational, and efforts to be emotionally expressive can seem to make us too vulnerable. Yet, CEOs or fresh graduates, office workers or telecommuters—regardless of role, all seek security, cherish praise, and fear shame. We care, and we want to matter.

The future of work demands we recognize that emotions don't make us weak. Instead, they are our power tool, they're processed in the most primal, "animal" part of our brain, and they're critical to our existence.

Being "natural" at work just doesn't come naturally. Corporate titles and positions define us. We've lost the ability to really be ourselves. But it can be relearned.

### Connect First as Humans

What we need is a professional, practical way of establishing quality relationships by connecting first as fellow humans, and then as co-workers and collaborators. From this personal foundation, great teams are formed, and goals are realized.

Here is a guide to unleash personal capacity, increase organizational effectiveness, and, for those who dare, drive large-scale change. The ideas are divided into seven parts and take just a few moments to implement, yet have a lasting effect. Most of the suggestions cost nothing and don't take more than five minutes to implement.

Some of the recommendations may seem quite basic. That's precisely the point! Because too often we get the "basics" wrong, success, meaning, and joy are sucked out of the modern workplace. By attending to the simple but significant moments between people, you will secure your reputation and experience the beauty of how easily and quickly relationships can be improved.

## Part I: Establish Respect

Interpersonal niceties aren't superficial; they're essential. They are the quickest and easiest ways to connect first as people. Present yourself as the person people want to support because you won't take anyone's efforts for granted, no matter their position. Whether you are the CEO or the assistant, the manager or the associate, ignite joy by being your best and helping others do their best.

### Smile: Activate Immediate Connection

Smiling is a great example of a simple act that's powerful, controversial, and often omitted from our daily repertoire, potentially to our own detriment.

"Smile more" can seem like a command. Strangers demanding that you "Smile!" can feel patronizing, but that is not the intent here. Make an active choice to smile because it benefits you as well as the recipient of your warmth. Smiling is free and efficient. It asserts your intention to form a mutual, shared, equal connection.

A study from Penn State University found that people who smile appear to be more likeable, courteous, and even competent. Smile as you enter the building, walk the halls, or join a meeting room. Put your phone in your pocket and make eye (and smile) contact as you transition from place to place.

Find the balance that works for you. Smiling is effective, but being overly cheerful, especially for women, can undermine your authority.

### Call People By Their Names: Ignite Attention and Recognize Individuality

Hearing your own name is a neural ignition key, activating attention and engaging you in the interaction to follow. Names acknowledge existence, provide an identity, and are a passport to services and opportunities. Learning the names of people at work demonstrates respect and confirms that they have been noticed and are valued as people. If you want to connect first, start by calling people by their names!

To learn a name, to truly recognize who's around you, you must invest some intellectual capital. Get up from your desk now and walk for five minutes around the office. Do you know everyone's name? Now's a good time to ask. When introducing yourself, ask for the other person's name. Always. Make sure people know each other's names, whether in a meeting or walking a factory floor. When in doubt, make introductions.

At the start of a meeting, try welcoming everyone in, and then invite participants to join you in reflective silence.

There is no way to fake it. You either know a person's name or you don't. If you forget, apologize and ask to be reminded. You might want to describe when you met last: "I recall we had a lovely discussion about the sculpture in the lobby, but I'm afraid I don't remember your name."

### Got It? Then Say So! Help Co-Workers Manage Their Time

Do your part to stamp out undue worry and avoid the diminishment people experience when they feel ignored. When colleagues send completed projects, make requests, or share important announcements over email, reply with "Got it." This easy addition to your daily routine provides the psychological assurance that your colleagues have caught your attention—that you have received their message and they don't have to stress.

No one wants to send notes into the ether. "Got it" is a superfast point of personal connection indicating that there's a human on the other side of the electronic communication. Saying "Got it" shows respect for superiors, subordinates, and peers.

Respond with "Got it" as soon as you receive a request, special announcement, or finished project. Don't wait until you have read through lengthy documents or completed time-consuming tasks. First acknowledge receipt.

## Part II: Engage All of Your Senses

Knowledge is your competitive edge. What you don't know *can* hurt you. Hiding behind roles and computer screens won't cut it. To really excel, to deeply connect, you want office dynamics to unfold in Technicolor and surround sound. Invest a few minutes to shift your senses from automatic to manual and learn how to be *with* the people around you.

### See Everybody: Those on the Margins Often Have Greater Perspective

Attention is an unapologetic discriminator. To avert one's gaze from a fellow human being erases that person's existence. To lock eyes, even briefly, creates a connection, a validation that in this instant, we are here together.

Unfortunately, the privilege of being seen is not equally distributed in organizational life. Failing to acknowledge the presence of the people we work with reinforces a destructive hierarchy. In today's digitally connected world, many workers are out of sight, yet we recognize their contributions and value them as team members. But the flesh-and-blood janitors polishing your floor and cleaning your lavatory mirrors may remain invisible. They see you, but do you see them?

To connect first, open your eyes to all that surrounds you. As you enter and exit your building, take a second to catch the gaze of the people opening your door, sorting the mail, or cleaning the floor. Can you describe the design of their uniforms or recall what color their shirts were? Go back and reenter. Pretend you forgot something in the car.

Before you begin a meeting, scan the room. Have you made eye contact with everyone? Be intentional with your focus. Ask yourself if you would be proud if a secret camera in your retina played back what you have been watching.

### Silence: Be Quiet Together

Here's a surefire way to improve the quality of your meetings: Don't say anything for five minutes. Really. You can employ this technique to center colleagues at the start of a session or at the end of a meeting to ensure that you reach a productive conclusion. Studies show that inserting a few seconds of mental space between an event or stimulus and our response to it is the difference between an automatic aggressive reaction and a more considered and often collaborative solution.

At the start of a meeting, try welcoming everyone in, and then invite participants to join you in reflective silence. Say, "To get fully ready for today's discussion we will be doing something a bit different. We will be taking five minutes to be quiet together, to center ourselves as a group and make space for new ideas. Please put down your pens, mute your phones, and get comfortable in your seats. If you would like, you may close your eyes. Here's a chance to breathe together and release tension with each exhale. Let any thoughts that come into your mind go in one ear and out

the other. Practice focusing on your breathing."

Once the exercise is complete, invite any reactions. Don't be surprised if some people express discomfort. That's OK. Not everyone's a buyer at first. Remain confident that some colleagues will express a sense of connection, a release of anxiety, and a readiness to work.

### Eat Together: Food Is Bait for Conversation and Creates Connection

Breaking bread together is a time-honored tradition, demonstrating positive intentions to further a relationship. Carving out time to share a coffee, snack, or meal with co-workers is an obvious yet often missed chance to get information, expand networks, and resolve tensions.

Kevin Kniffin and his colleagues at Cornell's Food and Brand Lab have demonstrated the positive effect of eating as a unit. For example, cooperation among firefighters was almost twice as high among team members who ate with one another than among those who didn't. The behaviors underlying the firefighters' meal practices—collecting money, planning, talking, cleaning, and, of course, eating—all enhanced group performance on the job.

Encourage your co-workers to bring a beloved dish—perhaps a comfort food from their childhood (this is especially valuable when working with multicultural groups). Try being strategic with your invitations. Set aside a day each week to dine with someone at your company that you don't know well. Be aware of, but not constrained by, co-workers' food restrictions.

## Part III: Become Popular

In a rapidly changing world, the requisite skills for success are in constant flux; yet self-awareness (an appreciation of your impact on others) continues to predict career advancement. This part builds on the competencies discussed above by showing you how to be the person others want to connect with first. When you are the person people want to be with, opportunities multiply, and you are happier and more successful.

### Be Present: Showing Up Is Just the Start

We forget or don't even realize that those around us are often deeply impacted by our presence (or lack of it). It's a misconception that executive presence is about commanding a room. It's not about you being the star. Power results from your ability to tune in to the needs of the people around you.

It seems pretty obvious, but it's worth stating: Attending to others is impossible if you are not actually in the right place!

OK. You showed up. Now what? Here's a chance to implement the suggestions discussed above. Make eye contact, silence your internal chatter, listen deeply, and relax into the moment. Manage your mood, facial expressions, and body language to send the right signals. Be intentional with your attention. Identify colleagues and constituents who need face time.

Keep in mind that a Google Hangout or company hashtag does not replace in-person conversations.

### Be a Magnet: Become the Person People Want to Be With

When you are a magnet, your comrades are walking toward you at corporate gatherings. When teams are assembled and new opportunities explored, your name is at the top of the list. Impromptu office outings? You get an invite.

Being magnetic doesn't mean you are always extroverted, constantly lauded, or never alone. But it does mean that in your presence, people relax, feel safe, and know that you are on their side.

Magnetism isn't just a term of art. Our nervous systems transmit information through electromagnetic waves that are influenced by the people around us. This unconscious process opens the door to communal connection. We are drawn to people who provide a safe, reliable rhythm. Whether you own the company or answer the phones for the executives on the fourth floor, make biology work for you.

To ignite joy at work, radiate wonder, a readiness to engage, and a comfort with whatever the day brings, and observe how individuals (and their limbic systems) are drawn to you.

Prepare conversational gifts. Don't just race to the next meeting. Stop and think about your audience. How can you catalyze a quality discussion? What thought-provoking questions might you ask to ensure the conversation is keeping up with current events?

### Have a Point of View: Cultivate an Informed Perspective

Developing and continually refreshing an informed perspective makes you an organizational asset no matter where you sit in the hierarchy. When all you do is repeat what's already known, you run the risk of becoming an expendable corporate commodity—and a dull companion.

Dare to differentiate yourself: Expand your knowledge about topics that matter to your organization. Broaden your company's awareness about topics that should matter to them but aren't on their radar. Express an informed view about material that you are responsible for.

Stay curious. Use travel time to read blogs and listen to podcasts outside your field. Download or carry a book. Make it a point to read material from sources you don't agree with.

Talk directly to the people impacted by strategies and products you may be promoting, and bring those insights back to your team. Come to work prepared to teach people something new as a way of helping them feel smarter and more informed.

## Part IV: Grow Loyalty

Whether the office is a glass skyscraper or your parents' garage, you can't achieve your goals alone. Getting the most out of the people you work with takes more than just money. Tap into what makes your colleagues tick. When you're plowing through the to-do list, it's easy to forget about them—your co-workers; the recipients of your latest request who are missing their kids' soccer games, forgoing a date, or skipping sleep, just to help you hit another deadline.

The questions co-workers ask you may be about the project at hand, but the questions they ask themselves are, "Do I matter?" "Does my work matter?" At the heart of contagiously positive group cultures are people working because they care and feel cared for.

### Connect Jobs to the Larger Mission: There's Always a Why

We are not hardwired to pursue money. Money can't buy meaning, but work can offer it. Connecting our jobs to a higher purpose makes a meaningful difference in recruitment and productivity. McKinsey Co. reported that highly sought-after talent opted to work for companies with an inspiring mission. Bain Consultancy's study of 300 companies worldwide demonstrated it would take 2.25 satisfied employees to generate the same output as one inspired worker.

Connecting first as people, and then to the mission, is a renewable source of institutional energy. Construct positive identities. When introducing others, contextualize their jobs, illustrating the importance of their efforts in achieving larger objectives. Don't just say, "This is Meg, our night manager."

Try "Meet Meg. She's the reason why our hotel has the highest number of bookings from travelers arriving after 9 p.m."

Take a field trip. Are you raising money to provide glasses to impoverished communities? If so, set up a time to meet and hear about how the restored ability to see has enabled the women to make money as seamstresses—and buy fresh food for their families. Try to meet the kids and learn about the changes in their lives since their parents' eyesight improved.

Connecting first as people, and then to the mission, is a renewable source of institutional energy.

### Bank Social Collateral: Give Now to Succeed in the Future

Think more about what you can do for others than what you can get in return. It feels good and it's good for you. Many acts of great import to your peers take just a few moments. Making a well-placed introduction, pointing a colleague to pertinent research, or sharing an invitation to a relevant but lesser known professional conference all take about five minutes.

People don't care how much you know until they know how much you care. That's a key reason to connect first. To gain an audience for your ideas, first capture your co-workers' hearts.

Build a network of goodwill by paying it forward. Do a five-minute favor for anyone who asks. Yes, anyone. Try being generously attentive to those with whom you are in conflict. It may seem counterintuitive—it's hard and destabilizing but very effective. Our opponents are often the ones we watch most closely, so you are likely an expert in what they need. Rather than compete, reverse tactics: Offer to help.

### Generate Joy and Laughter: Energize Your Workplace

Do you want a bigger bonus, a boost in creative thinking, increased credibility, and greater opportunity? Humor at work is a serious business advantage. All things being equal,

89 percent of CEOs believe they'd rather hire someone with a good sense of humor. Managers displaying a good sense of humor are given more opportunities in organizations than those who take themselves too seriously.

Instilling joy and laughter at the office doesn't require a pocket full of jokes or a stream of one-liners. It's about relinquishing the relentless sense of urgency. Greater self-awareness is associated with occupational success. Be the first to joke about your idiosyncrasies. Be the source of levity, rather than the font of office tension.

You can't mandate humor, but you can model it. Start small. Share a joke or a funny passage, make a play on words, or create an unexpected acronym for the latest project. If you get a smile from one person today, that's success. Keep in mind that not every form of humor is appropriate. Work is no place for locker room and bathroom humor or political, sexist, malicious, religious, homophobic, and xenophobic jokes.

## Part V: Resolve Conflict

Deep connections are forged from, not in spite of, conflict. Your ability to work through differences allows you to engage a wider set of collaborators and learn more by experimenting with new ideas.

### Stand in Someone Else's Shoes: Experience Their Point of View

The resolution of any conflict comes down to the question, What really matters? The answer is seldom one you can ascertain alone. What was once crystal-clear blurs out of focus when you stand in someone else's shoes and see the view from that person's point. Standing in someone else's shoes helps you solve their problems, offers a new perspective on your challenges, and generates lasting goodwill.

Start a conference call by asking what everyone is seeing out their windows. This anchors you in their reality. Restrict the response to one sentence. It won't take long, and it literally "places" your remote team. The quick opening question humanizes the conversation that follows.

Did you just have the second tense phone call after five increasingly hostile email exchanges? Don't just sit there; do something. Ask the person you are sparring with if you can meet at a place that matters to them. It may be their office, the building site that's raising blood pressures, or the music shop that brings that person joy. No matter the choice, you will learn a great deal and connect more.

Ask open-ended questions, and be prepared for answers you didn't expect. Don't be afraid to ask for explanations of jargon, abbreviations, or words you don't understand.

### Apologize: Don't Justify or Explain Why

Openness about your mistakes sets the stage for others to share their errors. The gurus of regret concur on the recipe for an effective apology. It should demonstrate humility and, when possible, be delivered face to face. While email can be a tempting alternative, if you can't look a person in the eye, at least pick up the phone.

It's important to say the words "I'm sorry" or "I apologize" and to provide a clear, succinct indication of exactly what you're apologizing for. Endure the awkwardness. Incomplete or insincere efforts can backfire. Offer suggestions on how you will work to avoid the mistake in the future, propose ways to make amends, and then sit back and let the other person vent if needed.

Don't make excuses for yourself. Don't interrupt, argue, refute, or correct. Resist bringing up your own criticisms and complaints. Even when the offended party is largely at fault, apologize for your part in the incident, however small it may be. Once you've expressed your regret, put it behind you and move on. We are all fallible—no need to beat yourself up.

## Part VI: Fight Fear

Fear. It's pervasive. The organization is under pressure to innovate, and you dread being left behind. Downsizing? You might lose your job. Maybe there will be a merger or a new acquisition. The robots are coming. The company's computing platforms aren't competitive enough. You aren't keeping up with the systems.

You can't know what you don't know if you keep on talking to the same people. It's lonely at the top. And at the bottom. And in the middle. Survival in volatile, ambiguous environments requires agility and wisdom. Here's the moment to secure a place for new voices (from inside and outside of your organization) and create true partnerships through shared experience. No matter where you sit at the office, work is more fun when you are not afraid.

### Step Outside Your Comfort Zone: Being a Little Terrified Is Good for You

Resting in a place where stress is minimal, where you know what's coming next and can plan accordingly, may at first seem like a good plan, but the negative impacts are

> Be brave. Be messy. Luxuriate in the not knowing. At the root of innovation is the courage to ask a beautiful question.

insidious. You didn't sign up for the coding course when it was offered by the company because no one you knew was taking the class; you opted out of the entrepreneurs support group because you prefer playing video games with your brothers online; and you didn't take the time to get to know the new hires who have now been promoted over you. You've stagnated while everyone is moving on.

In an increasingly ambiguous and accelerated world, those who jump into the unknown, experiment, embarrass themselves, bruise their egos, and start again, position themselves for some of the biggest rewards. Being slightly on edge kicks your system into gear.

Try saying yes to three things you usually say no to, and then say no to three things you usually say yes to.

Create a personal mission statement about why you're stepping out of your comfort zone, such as "to build courage" or "to become more creative." Start a list on your phone, in a notebook, or on your office wall of ways you want to challenge yourself. Try putting a date beside each goal. If you have posted your list in your office, invite others to make suggestions or to join you.

### Be a Person First! Help Strangers Feel Less Strange

When it comes to small talk, your words may be forgotten, but how you make people feel will be remembered. Light chatter may seem trite, but it's the small talk that leads to the big talk. Studies show that tossing in a bit of interpersonal prattle builds bonds at the office, engenders a feeling of well-being, and creates a welcome break. The goal is not to become best friends; it's simply the enjoyment of sharing a topic of mutual interest—for a few minutes.

Management by walking around is the practice of wandering in an unstructured manner through the workplace to engage in unscripted, unplanned conversations. Promoted by Thomas Peters and Robert Waterman in 1982, the timeliness of this technique is ever more apparent as co-workers are communicating and being managed electronically, even when they work in the same building. Rather than being distracting, the judicious unannounced visit builds rapport and can facilitate the exchange of productive ideas.

Be pro-social in your chatter. Spread positive news about others. Research areas of potential mutual interest before you meet someone for the first time. You may uncover a shared hobby or cause. Come prepared to ask about it. Take a minute before diving into a business discussion to find that common bond.

## Part VII: Have a Big Impact

Time to be joyfully courageous. Most of us want to make a difference but get overwhelmed when confronted with the enormity of the problems before us. This part provides the tools to broaden your definition of success, to work across generations, to consider how you want to leave a mark, to be significant.

### Explore the Unknown: The Future Depends on It

It takes courage to say, "I don't know" or "We don't know." When employees are paid to perform, competency is too often equated with having the answer—on demand. We fear that not knowing will make us appear weak. Even more anxiety-inducing, sometimes we don't know how to formulate the question. We just know something is wrong—or we anticipate it will be.

Be brave. Be messy. Luxuriate in the not knowing. At the root of innovation is the courage to ask a beautiful question. Sometimes it's as simple as, "Why isn't someone doing this?" or "What if I tried to do that?"

Run toward, not away, from the question without an obvious answer. As you read the latest memo or sit in yet another meeting, stop to ask, "What are we avoiding because we don't know?" Bring people together to explore, not solve the dilemma.

Don't get lost in the details of execution while you're still toying with concepts. Examine your question from a distance. What patterns can you recognize?

### Leverage Your Platform: Make a Difference

Organizations no longer choose between social impact or profit. Governments *and* businesses are being called on to shape society. And it's easier than ever to collaborate across geographic regions. Businesses will increasingly be judged not only by the value they bring to their shareholders but also by their positive impact on society.

Whether you are a CEO or the newest associate, consider how your position provides you a chance to make a big decision or perform small tasks that will alter the world around you (for the better). This is not necessarily about investing more money, it's about investing attentional capital.

It begins with a desire to act with intention and an inventorying of your nonmaterial assets, such as the ability to speak up, share access, and be generous with your relationships. Our choices can have inadvertent negative or purposely positive civic, environmental, and financial consequences.

Make sure your choices are aligned with the person you want to be and what you want to achieve. Whether your company is big or just getting started, include a "social cost" when evaluating your financial budgets. Make reading the news an active exercise. What's getting you excited or frustrated? How can you support people working for causes you care about?

### Dream Audaciously: Move Beyond Success to Significance

How big a life do you want to live? This is not a prompt to consider how many acres of land you will own or parties with celebrities you will attend. Dr. Aravind Srinivasan, head of the purpose-led and profitable Aravind Eye Hospitals in India, put it well: "Success is what happens to you. Significance is what happens through you. Success is what comes to you. Significance is what you give away to others."

Treat yourself to some space and silence. How do you want to be in the world? What do you want to be known for? Legacies are not the province of the rich. We all have a chance to leave our mark through small daily actions that do make a difference.

By being intentional in who we choose to look at, listen to, eat with, and invite in, we solve problems and shift mindsets. Our jobs can be the source of community and pride; they can provide a platform for personal growth and social change.

Entertain the dream. It will give you energy. Think big. You can always crop the picture to fit reality. Trust yourself and others. Don't be afraid to share your dream. Saying it out loud starts to make it real.

Success, meaning, and joy are minted at the office in the interactions among people, by people just like you. We all have the power to connect first and significantly impact the future of work.

## The Power of Awareness in Business and in Life

by Bob Rosen
and Emma-Kate Swann

### THE SUMMARY IN BRIEF

Our world is changing faster than our ability to adapt. Ambushed by speed, complexity and uncertainty, many of us are unprepared for this acceleration. We act on autopilot as new challenges confront us. We are too reactive to problems and miss out on opportunities. We get hijacked by conflicting values and polarizing relationships. We face uncertainty with fear and mistrust. Stress and burnout are pervasive as many of us do not perform up to our potential.

*Conscious* is our wake-up call — to be aware, awake and accountable. Nothing is more important than understanding ourselves, our relationships and our surroundings. Being conscious helps us think deeper, learn faster and collaborate better. Authors Bob Rosen and Emma-Kate Swann reveal that the more conscious we are, the faster we adapt and the higher performing we become. Being conscious is the new smart.

*Conscious* is your personal roadmap through transformation, helping you adapt and accelerate into the future. Why not be the one with your headlights on while others are driving in the dark?

### IN THIS SUMMARY, YOU WILL LEARN:

- Why being conscious is the new smart.
- To know yourself honestly and discover your innate wisdom.
- To combat tunnel vision and develop a "Google mind."
- To live your higher purpose and build a shared consciousness.
- The true meaning of legacy and how to act on it.

## Conscious Is the New Smart

### The Wild, Wireless World

As humans, we find ourselves living at a critical inflection point in our history. Everything is changing around us, from technology and demographics, to geopolitics and climate, to lifestyles and marriages, and the list goes on. Our challenge is that the world is changing faster than our ability to adapt.

Only you can embrace these changes and adapt into the future. Lifting your gaze outside yourself while looking inward to remove the roots of resistance is how you become more conscious. With just enough urgency, resilience and curiosity, you can activate your mind to adapt. This requires transforming yourself in an increasingly disruptive and accelerating world.

Let's look at the six main disruptors we experience every day:

1. **Speed:** The pace of life is escalating, and it doesn't appear to be slowing down any time soon. This forces us to see, think, feel and act faster.
2. **Uncertainty:** Stability is an illusion, and uncertainty is reality. We want to believe that we will find comfort in the predictable, but it doesn't exist.
3. **Complexity:** Complexity is part of the DNA of the modern world.
4. **Technology:** As a powerful disruptor, technology is both our liberator and our slayer.
5. **Competition:** How do we find purpose and meaning in a world of powerful competitive urges?
6. **Globalization:** How do we succeed individually while thriving as one global planet and society?

How you respond to these forces can be energizing and create unlimited opportunities, or they can be demoralizing and sabotage our best efforts.

### Conscious Is the New Smart

In an age of acceleration, being aware is your single most important asset. It helps you stay agile in a frenetic world. It keeps you curious as the world becomes more uncertain and complex. And it helps you stay authentic and generous as your relationships get bumpier.

Being aware occurs at three levels of introspection:

**Aware of yourself**. This refers to your own understanding about who you are — how you see, think and feel; what motivates your actions; and how you impact other people.

**Aware of others**. This refers to your insights about other people, what motivates them and makes them tick, and how their actions affect you and others.

**Aware of your environment**. This refers to your understanding of life's situations and circumstances — the organizational, community and societal forces that affect you every day.

We need a new approach to living and leading. Being conscious is the new smart. By knowing who you are and staying committed to developing yourself, you can develop the confidence and bearing to effectively navigate in uncertain times.

### The Path to Being Conscious

Conscious people stay awake and aware of their own personal power while accepting the uncertainty of life. By living in an evolved conscious state, you can travel into the unknown, keep the bigger picture in mind and recognize the natural impermanence of life.

Here's the new road map to guide you through uncertainty and change — to help you adapt, transform and accelerate into the future; to prepare you for the changing times; to expand your potential and performance.

Research has found that the most successful people and leaders practice these four steps:

1. **Go deep — harnessing the power of introspection**. Learn how to get to know who you are, where you come from and why you act the way you do.
2. **Think big — getting curious and adaptive**. Explore how to deal with complexity and paradox.
3. **Get real — being honest and intentional**. Get real about your accelerators and hijackers. It is the best way to become more honest and intentional in leadership and life.
4. **Step up — acting boldly and responsibly**. Step up to your highest potential. Learn what a conscious leader looks like — how to champion your higher purpose, stretch people in constructive ways and be generous in your relationships.

## Go Deep to Discover Your Inner Self

The purpose of going deep is to take off your blinkers and eliminate what is holding you back. What's in it for you? Being more aware of yourself and others. Living up to your potential. Coping with the speed and uncertainty of change. Turning knowledge into wisdom.

A deeper mind enables us to be more broad-minded and less shackled by outdated assumptions about the world. Going deeper helps us access more positive emotions, by living with more hope, empathy, trust and generosity. It also helps us to make deeper connections with others and frees us to embrace new ideas and solve even bigger challenges.

### Who Is That Person in the Mirror?

When we look at ourselves in the mirror and reflect on who we are, some of us only see what we don't want to see: imperfections, insecurities and weaknesses. Others of us look into the glass and only see our idealized versions of ourselves: filled with wisdom, beauty and morality. Neither perspective takes you to the whole truth. For your whole story to emerge, you need to look deep into the mirror and become self-aware.

In the fast, disruptive world, it is too easy to lose our center and become vulnerable to the accelerations around us. If we don't know what is core within us, we are easily blown around by the winds of change. The key is to get centered, to get to know ourselves and to accept who we are trying to be.

To discover your real self, it's important to take a 360 approach to self-awareness: to look at yourself, others and your surroundings.

- Reflect on who you are and who you aspire to be — your values, passions and purpose.
- Seek feedback from family, friends and colleagues about how you are showing up in the world.
- Notice how your surroundings (challenges/opportunities/organization) are affecting you.

As we enter the cruel, crazy world, it doesn't take long, if we are lucky, to learn about what it will take to be successful to be our best selves. We immediately bump into three needs that are essential for getting ahead in life: our need for security, our need for acceptance and our need for control.

The need for security is about feeling safe and protected in the world. The need for acceptance is based on our desire to be loved and connected to others. The need for control is about shaping and influencing our own destiny.

If any of these three needs go unmet, they can be even more disruptive in our accelerated lives. There are two insights you can use to protect yourself. First, we often deny that we have unmet needs. We do this by distracting ourselves through negative behaviors like overeating, over-shopping, drug and alcohol addiction, staying busy, and the biggest addiction in the modern world — overworking.

Second, what we resist will persist. Many of us resist being present with the full gamut of our emotions. Acknowledging and accepting our feelings allows us to meet our unmet needs within ourselves.

### Discover Your Innate Wisdom

Part of being human is having innate capacity, an innate wisdom. We each have a natural intelligence, a genuine sense and sensibility, a fundamental sanity. Minds are naturally curious; hearts are naturally compassionate. What stands between us and our innate wisdom is the tough, cruel world we live and work in.

There is a wellspring of wisdom in each of us. And it's up to us to find and awaken it. How do you do this? You open your heart and you open your mind. An open heart fuels the fire: It enables us to be emotionally honest, compassionate and joyful. An open mind shines a light: It enables us to be self-aware and curious, practical and relevant. An open

mind and an open heart are both expressions of the better angels of our nature — principally, love.

There are four ways we express love:

1. **Love of purpose** — devoting ourselves to a greater purpose.
2. **Love of accomplishment** — having a desire to achieve.
3. **Love of others** — showing concern and care for those in your personal ecosystem.
4. **Love of yourself** — showing compassion for yourself.

Love is foundational, for sure. Yet in a bumpy, accelerating world, you must also build a strong sense of self to protect against the arrows on the streets. You must learn to exercise your inner resources: grit, self-control, willpower and self-compassion.

Our innate wisdom is based on a simple dilemma — live in love or live in fear. You choose each moment of every day. With an open mind and heart, you can be naturally authentic, joyful, forgiving and grateful.

### Discomfort Is the New Immunization

When you feel discomfort, don't shy away from the heat. Instead, walk intentionally across the hot coals. Like physical pain, discomfort serves a critical role for alerting you to what needs to be accepted, changed or avoided. You will be a more agile and resilient person if you make friends with the ups and downs of life.

You are far more capable of handling discomfort than you probably believe. Humans have a real capacity to transform discomfort into positive energy and momentum for change. The more conscious you are with your discomfort, the more seamless this immunization process will be. Most important, you have the power to learn from the bumps in your work and life and not be ruled by them.

An ancient Buddhist parable in the Sallatha Sutra explains that pain comes in two parts. The first arrow is the initial pain, such as a failure, rejection, loss or a simple backache. The second arrow is self-inflicted pain, caused by the story we tell ourselves about the situation.

The Buddha taught that there is no relief from the first arrow. It hurts and we must accept that. It's what we do with the second arrow that matters. Conscious people embrace discomfort by acknowledging it — by allowing negative emotions to arise, flow through you, like a wave rising and falling. If we accept the reality of the first arrow, we don't need to subject ourselves to the second arrow.

Pain is part of being human; suffering is self-imposed, and interferes with our ability to adapt to change. Conscious people accept that reality and avoid the suffering of the second arrow.

### Your Roots of Conscious Living

We all have the internal tools available to keep our feet on the ground while striving to achieve our potential. They are our roots for conscious living: how you live (physical), how you feel (emotional), how you think (intellectual), how you interact (social), how you perform (vocational) and how you see the world (spiritual). Our roots work together to nourish our mind and our heart. They help us thrive in the pressure cooker we often find ourselves in.

**Physical roots** include mind/body awareness — understanding how your body and mind work in tandem helps you manage health risks and rebound quickly from adversity, injury or illness; energy management; peak performance — practicing healthy habits every day boosts your ability to manage stress, enjoy work-life balance, tackle challenges head-on and optimize your health.

**Emotional roots** include self-awareness; positive emotions — demonstrating emotions like hope, compassion, joy, empathy, generosity, forgiveness and love is what sets the most effective people apart from their less successful counterparts; and resilience.

**Intellectual roots** include having deep curiosity; an adaptive mindset; and paradoxical thinking — evaluating ideas from all angles and considering seemingly contradictory concepts enables you to grasp complexity and make well-informed decisions.

**Social roots** include authenticity — being your true self in all situations and aligning your thoughts, words and actions; having mutually rewarding relationships; and nourishing communities.

**Vocational roots** include focusing on a meaningful calling; personal mastery — playing to your strengths and overcoming your weaknesses allows you to stretch yourself and perform your best; and having a drive to succeed.

**Spiritual roots** means living with a higher purpose; global connectedness; and generosity of spirit.

## Think Big to See a World of Possibilities

To think big will challenge you to look outside yourself to see the world clearly — to expand your mind, to inspire your curiosity and to tap into your creativity. To see the future as a world of possibility, you first need to overcome the pitfalls of being too narrow.

## A 280-Character Universe

Digital technology is the great human disruptor of our time. Unlimited global access to information allows anyone to learn just about anything, anywhere, at any time.

The trouble is more and better access to knowledge is no guarantee that we can make sense of it all. A plethora of information can make our mind feel as if it's in a constant state of hyperventilation. Our outer world is simply changing faster than the ability of our inner world to process it all. That is why the modern learner is overwhelmed, distracted and impatient.

Also, we have always tended to surround ourselves with like-minded people. Digital technology reflects this phenomenon. Left on its own, our technology encourages us to stay in our fishbowl. If you choose to live too narrowly, the machine can help you. If we mindlessly surf the Net, algorithms customized to our preferences perpetuate our unconscious biases. This dynamic contributes to polarizing people and reinforces the divisions among us.

Thinking big is the best way to navigate this ever-shrinking 280-character universe. But that is a conscious choice only you can make for yourself. You must become your own editor. The Internet is a big feedback loop that you can train to expand your horizon.

- Make a conscious decision to subscribe to both sides of an issue. Get Google Alerts for both sides of an argument.
- Read (and click on links) across disciplines, across industries, and include fiction.
- Pursue fresh ideas. Actively search for sources of information that will help you grow and develop.
- Ask others from different persuasions for alternative perspectives and suggestions.

## Leverage Your Personal Ecosystem

What's your #1 personal asset? Your skills? Your job? Your ambition? Your looks? Your mind? None of the above. Your greatest asset is your personal ecosystem. Who we know and how we connect to people in our personal ecosystems provide the strongest foundations and advantages in life and business.

To help you think big, you need to create a perpetual motion machine of ideas, energy and relationships to achieve your goals. You can only do this with a high-functioning personal ecosystem. Our sharing economy, powered by technology, is connecting people all over the world. Those who have personal power to make things happen — the networkers and collaborators — are the ones who will get ahead.

Think of yourself, your reputation, as a brand, like Coca-Cola, Land's End or Nike. We are all entrepreneurs, leading the brand of "You" — complete with our personal values and career aspirations, intellectual and emotional assets, and unique market differentiators. The key is to manage your career as if it were a startup business. Like entrepreneurs, we must invest in ourselves and take our product to market.

**Promote your personal brand, virtually and in person**. Communicate your passions, values and strengths. Don't be afraid to share your real self. Stay in touch and top of mind.

**Choose to share what you know**. Don't be shy or protective about giving information away. This helps others and builds trust. The more you share, the more people will share with you.

**Get connected**. Open your eyes. Your network is all around you. See each person as a gateway to new connections. Use technology to connect. But then meet in person to discuss shared life and business interests.

## Develop Your Google Mind

The need to learn faster, expand our minds and rewire our brains for growth is the personal and economic imperative for living in the 21st century. To apply a simplistic metaphor, we need to function more like a Swiss Army knife, rather than just a corkscrew or a carving utensil. Organizations are asking their people to work in expanding jobs, pushing them to learn outside of their proficiencies. More and more of these jobs require a combined set of skills, while the half-life of our knowledge and skills is shrinking quickly. The real challenge today is to stay relevant — to learn how to learn.

That's where the Google mind comes in. Curiosity, imagination and creativity are the core drivers to 21st-century learning. Just like Google's search engine, our mind needs to continuously refresh itself. With a Google mind, new insights are created, which expands our possibilities.

When you encounter something new, your brain tries to fit it into the world you already know. By adding more connections and associations, you expand your understanding. This, in turn, emboldens your creativity. Active curiosity strengthens your brain's wiring. The opposite is also true. If you do not stretch your brain, certain regions begin to atrophy. This is the principle behind the "use it or lose it" slogan.

Cultivate a beginner's mind. Reach back to your younger days, when you were most open and eager to learn. Remind yourself how you felt, the pleasure you experienced of learning something new, having an "Ah-ha" moment, or the excitement of sharing the moment with others. Keep those feelings top of mind. They will help you find motivation (when you're not feeling it) to get unstuck.

Activate the search engine of your mind. Tap into your curiosity by taking the time out of your busy days to be curious — stop and wonder for a minute, listen to a podcast, go searching on the web. Make curiosity part of your routine.

### "And" Is the New "Or"

A high-altitude mountaineer climbs the summit of Mount Everest carrying something that will surprise you. Aside from filling his pack with essentials like bottled oxygen, ice axes and high-calorie food, he carries a bottle full of little blue pills. That's right, Viagra. Mountaineers experience far fewer cases of frostbite or altitude sickness if they've taken Viagra before entering the "death zone" at the top of Everest.

The history of Viagra is a case study in unexpected discoveries and applications. Researchers were trying to solve the problem of poor oxygen transportation in the body that exacerbated cardiovascular diseases. In the process, they discovered Viagra. Without thinking big and exploring multiple uses, Viagra researchers would have produced a failed drug instead of one that is helping millions of people around the world.

A complex world requires a complex mind. Conscious people excel at "both/and" thinking. They broaden their perspective and create more choices by holding opposing ideas in their heads at the same time.

Approach challenges as paradoxes. Problems are to be solved; paradoxes are to be managed. In a complex world, we need to deal with paradoxes with a "more than one right answer" mindset.

Look for the "both/and" when making decisions. By getting the benefit of opposing viewpoints, you generally will arrive at a better decision.

## Get Real With Your Accelerators and Hijackers

To get real means to become honest and intentional in your life. It's about learning how to transform yourself and shaping the environment around you. If you can learn how to create the change you desire, you will thrive in a disruptive and accelerating world.

### Feed Your Accelerators

Accelerators drive us forward. They activate positive energy and support us to move across the gap. The more aware we are of our accelerators, the more we can use them to activate change.

What is needed to create real change in our lives and inside organizations is to raise awareness about what accelerates us forward. Examples could include our hope and optimism, confidence and generosity, or focus and practice.

Let's look at five common accelerators in more detail:

**Courage**. Courage is not the absence of fear. Rather, courage is moving forward in spite of your fear. Being courageous means practicing grit and persistence to face difficult situations with grace and dignity. Courage is not something you are born with. You need to practice being courageous so that it will be there for you when the going gets tough.

How would you show up and what would you be doing if you were more courageous? Who do you admire who demonstrated great courage? What could you emulate about them? How could practicing courage help you to thrive in uncertain times?

**Drive**. Drive is having and showing the motivation and commitment to achieve your goals in life. Drive is a go-to accelerator for leaders. Success comes from a combination of factors — from character and talent to ambition and practice. Drive is the common fuel that moves us forward.

**Practice**. Change requires focus, attention, repetition and practice — deliberate practice! All great performers — in sports, music, entertainment and, yes, leadership — practice intensely. Experts are made, not born.

The key is to focus. Our mind has a tendency to get distracted when bombarded with lots of external stimulation. Deliberate practice is about challenging yourself slightly above your competency level, repeating yourself and getting real time feedback.

**Resilience**. Resilience is being able to recover quickly from setbacks and adversities. You are much more resilient than you think. Resilience is like a muscle that must be exercised. The more you use it, the stronger it becomes.

Ask yourself, "When was the last time I fell down and got up?" "What did I say to myself?" "How do I consciously maintain my resilience in the moment?" "In a disruptive environment, what can help me get up more quickly?"

**Vulnerability**. In the eyes of others, you are more likeable, more trustworthy and more authentic when you

allow yourself to be vulnerable. Really. It sounds very counterintuitive, but being willing to accept and show your uncertainty or weaknesses is your strength.

Many people, especially men, run away from or work hard to hide their vulnerability by never showing their emotions, weaknesses or mistakes. But people are hungry to be with real people who expose themselves emotionally and show up as real human beings.

In what way will facing vulnerability bring you release, strength, truth and peace of mind? What weaknesses can you accept and share with others? How would doing this make you feel?

### Befriend Your Hijackers

In a disruptive and accelerating world, we are all vulnerable to being hijacked. Just about anything can kick us off center — disruptors and distractions, wanting to escape and ignoring reality, getting lost in our emotions and being blinded by our thoughts. Wherever we turn, our hijackers are lurking just under the surface.

Hijackers function a lot like Homer's sirens. We are easily lured by them and end up being tossed on the rocks. When we stop to look around, we notice our hijackers are controlling us versus us controlling them. We undermine our best selves and weaken our credibility and our leadership.

Let's look at five common hijackers:

**Self-criticism**. Are you hard on yourself? Do you criticize yourself and everything you do? Do you always look for ways you were responsible for a problem? These are common attributes of self-critical people. People who are hijacked by self-criticality have trouble expressing their full power in the world and push people away by their poor self-esteem.

Notice when you are self-critical. What triggers these thoughts? What other thoughts could you replace them with? Find the real reason for your self-criticism. What is it that you are afraid will happen? How realistic is that?

**Cynicism**. In a world of mistrust and "alternative facts," cynicism becomes a popular commodity. Doubting others and questioning people's motives becomes the norm. Everyday cynicism grinds you down and can sap your energy and joy. It is the primary indicator of burnout at work. What lies behind your cynicism? Is it your personality or a long history of disengagement? Might you be facing reduced resilience and/or burnout? What are you doing to nurture yourself?

**Being too controlling**. As the world gets more uncertain, the less control we have over it. Yet, in a strange way, the less control we have, the more we want to grasp for it. The more we grasp, the less control we actually have.

What is the difference for you between influencing and controlling? Where is the line? How do you distinguish between these? If you could dial this hijacker down, what would your actions look like?

**Aloofness**. People who are aloof create a feeling that they don't care about others, causing both separation and alienation. They generate feelings of contempt, and this makes others feel inadequate. Generally, this hijacker is driven by the fear of intimacy and human connection. Aloof people are distant and detached without even knowing it.

How might this hijacker constrain your career if you don't address it in our connected world? Who do you feel closest to at work? How did you make that happen? What can you take from this experience and apply to others?

**Hypercompetitiveness**. Healthy competition fuels our energy and accelerates performance. But when the need to win takes precedence over everything else, we can lose ourselves, our friends and our opportunities.

What effect does this hijacker have on your life and leadership? When it intrudes, how does it take over? How might you stop that? What will you do differently? And what will the payback of that be?

## Step Up to Your Highest Potential

Stepping up is about leadership and action. Many of us approach the world too cautiously, too timidly, too small. We fail to unleash our personal power, which is central to bold leadership. When we step up, we catapult ourselves into a much bigger version of ourselves.

Everyone today must be a transformational leader. Whether a web designer pushing the envelope on design, a sales manager finding new customers in unusual places, a government official streamlining bureaucracy, or a global executive bringing new solutions to Europe, we must all be champions of change.

### Live Your Higher Purpose

An irony of human life is that we all possess a higher purpose, yet many of us have no idea what it is. Our minds and bodies are intended for more than merely survival — they are vessels for deep social and emotional drives that give us meaning.

Ultimately, purpose is the connection between what we do and why we do it. Indeed, surveys show that three out of four executives report their principal driver in life is the

belief that their work has purpose and meaning. It's about being bold and stepping up. If we want to be conscious people, we really need to personify and champion our purpose. So, ask yourself these questions:

- What do I love doing and what am I passionate about?
- When do I feel most alive?
- What are my natural talents and skills?
- What do others say are my special abilities and qualities?
- What values am I most committed to and when do I feel best about myself?
- What would I change in the world if I could?

## Build a Shared Consciousness

What makes humans stand out is our capacity to be aware of our connections. True connectedness is based on shared consciousness — a belief that we need one another to excel and are stronger together than apart.

There are three essential behaviors needed to build shared consciousness: show up and be real, make and keep commitments, and make "we" your highest priority.

**Show up and be real**. Showing up involves the obvious: your physical presence, body language, tone of voice, what you say and do. It also means being mentally present and invested in others and what is going on around you. Being your real self means you share your thoughts and feelings, and you have the courage to expose yourself psychologically.

**Make and keep commitments**. People are hungry to be led by real people — leaders who are comfortable in their own skin. But it's the trust between people that holds everything together. Trust is the cornerstone for every great family, team and organization. Be credible, dependable, predictable and emotionally safe.

**Make "we" your highest priority**. Our accelerating world is quickly leaving the big "I" behind. Research on connections shows that people with larger and more diversified personal networks are higher performers; they get promoted earlier and are considered better leaders. They are successful because of their ability to energize people and attract high performers, raising the performance of the entire group.

Organizations of tomorrow will be concentric circles of interconnected relationships. Shared consciousness will be the glue that holds the community together.

## Leave a Legacy

Most people think of legacy as an altruistic celebration of self rather than what it could be, a positive contribution to the world.

We hope our life matters. It's only human to want to be remembered and recognized. Legacy evokes pride, joy, a sense of accomplishment and purpose. Our meaning comes from working toward something and giving something away. Only you can author your life and be your own human story.

Yet, we need to remember that we are building a legacy by every choice we make. Ours is not a legacy in waiting; it's a work in progress.

Conscious people see life in context and know what's important. They are leaving a legacy in every moment, every interaction, every day, to actively create a new and better world.

Very few of us get the chance to leave footprints on the moon or build a pyramid or create a company like Apple. Yet all of us can create a legacy that is just as meaningful. The real treasures we leave behind are when we take a new job, build a great team, mentor a colleague, care for an aging parent or volunteer in the community. It's the ethical choices we make, the artistic creations we produce, and the little acts we perform to protect the environment.

Conscious people deeply understand this. They know they can shape how the world sees them today and how they might be remembered tomorrow.

It's up to you to carve your legacy not in stone but in the hearts and minds of the people you have touched.

### MORE SV CONTENT ON LEADERSHIP

**Summary: *What Happens Now?* by Mark D. Nevins, John Hillen.** *What Happens Now?* shows leaders how to reinvent themselves in order to attain personal growth and organizational success by inspiring people, nurturing relationships, energizing teams, grooming successors and influencing stakeholders.

**Webinar: *How to Integrate Brand and Culture to Power Your Company* by Denise Lee Yohn.** In this Soundview Live webinar, Denise Lee Yohn provides a roadmap for increasing competitiveness, creating measurable value for customers and employees, and future-proofing their business.

## The Power of Awareness in Business and in Life

by Bob Rosen
and Emma-Kate Swann

### THE SUMMARY IN BRIEF

Our world is changing faster than our ability to adapt. Ambushed by speed, complexity and uncertainty, many of us are unprepared for this acceleration. We act on autopilot as new challenges confront us. We are too reactive to problems and miss out on opportunities. We get hijacked by conflicting values and polarizing relationships. We face uncertainty with fear and mistrust. Stress and burnout are pervasive as many of us do not perform up to our potential.

*Conscious* is our wake-up call — to be aware, awake and accountable. Nothing is more important than understanding ourselves, our relationships and our surroundings. Being conscious helps us think deeper, learn faster and collaborate better. Authors Bob Rosen and Emma-Kate Swann reveal that the more conscious we are, the faster we adapt and the higher performing we become. Being conscious is the new smart.

*Conscious* is your personal roadmap through transformation, helping you adapt and accelerate into the future. Why not be the one with your headlights on while others are driving in the dark?

### IN THIS SUMMARY, YOU WILL LEARN:

- Why being conscious is the new smart.
- To know yourself honestly and discover your innate wisdom.
- To combat tunnel vision and develop a "Google mind."
- To live your higher purpose and build a shared consciousness.
- The true meaning of legacy and how to act on it.

## Conscious Is the New Smart

### The Wild, Wireless World

As humans, we find ourselves living at a critical inflection point in our history. Everything is changing around us, from technology and demographics, to geopolitics and climate, to lifestyles and marriages, and the list goes on. Our challenge is that the world is changing faster than our ability to adapt.

Only you can embrace these changes and adapt into the future. Lifting your gaze outside yourself while looking inward to remove the roots of resistance is how you become more conscious. With just enough urgency, resilience and curiosity, you can activate your mind to adapt. This requires transforming yourself in an increasingly disruptive and accelerating world.

Let's look at the six main disruptors we experience every day:

1. **Speed:** The pace of life is escalating, and it doesn't appear to be slowing down any time soon. This forces us to see, think, feel and act faster.
2. **Uncertainty:** Stability is an illusion, and uncertainty is reality. We want to believe that we will find comfort in the predictable, but it doesn't exist.
3. **Complexity:** Complexity is part of the DNA of the modern world.
4. **Technology:** As a powerful disruptor, technology is both our liberator and our slayer.
5. **Competition:** How do we find purpose and meaning in a world of powerful competitive urges?
6. **Globalization:** How do we succeed individually while thriving as one global planet and society?

How you respond to these forces can be energizing and create unlimited opportunities, or they can be demoralizing and sabotage our best efforts.

### Conscious Is the New Smart

In an age of acceleration, being aware is your single most important asset. It helps you stay agile in a frenetic world. It keeps you curious as the world becomes more uncertain and complex. And it helps you stay authentic and generous as your relationships get bumpier.

Being aware occurs at three levels of introspection:

**Aware of yourself**. This refers to your own understanding about who you are — how you see, think and feel; what motivates your actions; and how you impact other people.

**Aware of others**. This refers to your insights about other people, what motivates them and makes them tick, and how their actions affect you and others.

**Aware of your environment**. This refers to your understanding of life's situations and circumstances — the organizational, community and societal forces that affect you every day.

We need a new approach to living and leading. Being conscious is the new smart. By knowing who you are and staying committed to developing yourself, you can develop the confidence and bearing to effectively navigate in uncertain times.

### The Path to Being Conscious

Conscious people stay awake and aware of their own personal power while accepting the uncertainty of life. By living in an evolved conscious state, you can travel into the unknown, keep the bigger picture in mind and recognize the natural impermanence of life.

Here's the new road map to guide you through uncertainty and change — to help you adapt, transform and accelerate into the future; to prepare you for the changing times; to expand your potential and performance.

Research has found that the most successful people and leaders practice these four steps:

1. **Go deep — harnessing the power of introspection**. Learn how to get to know who you are, where you come from and why you act the way you do.
2. **Think big — getting curious and adaptive**. Explore how to deal with complexity and paradox.
3. **Get real — being honest and intentional**. Get real about your accelerators and hijackers. It is the best way to become more honest and intentional in leadership and life.
4. **Step up — acting boldly and responsibly**. Step up to your highest potential. Learn what a conscious leader looks like — how to champion your higher purpose, stretch people in constructive ways and be generous in your relationships.

## Go Deep to Discover Your Inner Self

The purpose of going deep is to take off your blinkers and eliminate what is holding you back. What's in it for you? Being more aware of yourself and others. Living up to your potential. Coping with the speed and uncertainty of change. Turning knowledge into wisdom.

A deeper mind enables us to be more broad-minded and less shackled by outdated assumptions about the world. Going deeper helps us access more positive emotions, by living with more hope, empathy, trust and generosity. It also helps us to make deeper connections with others and frees us to embrace new ideas and solve even bigger challenges.

### Who Is That Person in the Mirror?

When we look at ourselves in the mirror and reflect on who we are, some of us only see what we don't want to see: imperfections, insecurities and weaknesses. Others of us look into the glass and only see our idealized versions of ourselves: filled with wisdom, beauty and morality. Neither perspective takes you to the whole truth. For your whole story to emerge, you need to look deep into the mirror and become self-aware.

In the fast, disruptive world, it is too easy to lose our center and become vulnerable to the accelerations around us. If we don't know what is core within us, we are easily blown around by the winds of change. The key is to get centered, to get to know ourselves and to accept who we are trying to be.

To discover your real self, it's important to take a 360 approach to self-awareness: to look at yourself, others and your surroundings.

- Reflect on who you are and who you aspire to be — your values, passions and purpose.
- Seek feedback from family, friends and colleagues about how you are showing up in the world.
- Notice how your surroundings (challenges/opportunities/organization) are affecting you.

As we enter the cruel, crazy world, it doesn't take long, if we are lucky, to learn about what it will take to be successful to be our best selves. We immediately bump into three needs that are essential for getting ahead in life: our need for security, our need for acceptance and our need for control.

The need for security is about feeling safe and protected in the world. The need for acceptance is based on our desire to be loved and connected to others. The need for control is about shaping and influencing our own destiny.

If any of these three needs go unmet, they can be even more disruptive in our accelerated lives. There are two insights you can use to protect yourself. First, we often deny that we have unmet needs. We do this by distracting ourselves through negative behaviors like overeating, over-shopping, drug and alcohol addiction, staying busy, and the biggest addiction in the modern world — overworking.

Second, what we resist will persist. Many of us resist being present with the full gamut of our emotions. Acknowledging and accepting our feelings allows us to meet our unmet needs within ourselves.

### Discover Your Innate Wisdom

Part of being human is having innate capacity, an innate wisdom. We each have a natural intelligence, a genuine sense and sensibility, a fundamental sanity. Minds are naturally curious; hearts are naturally compassionate. What stands between us and our innate wisdom is the tough, cruel world we live and work in.

There is a wellspring of wisdom in each of us. And it's up to us to find and awaken it. How do you do this? You open your heart and you open your mind. An open heart fuels the fire: It enables us to be emotionally honest, compassionate and joyful. An open mind shines a light: It enables us to be self-aware and curious, practical and relevant. An open

mind and an open heart are both expressions of the better angels of our nature — principally, love.

There are four ways we express love:

1. **Love of purpose** — devoting ourselves to a greater purpose.
2. **Love of accomplishment** — having a desire to achieve.
3. **Love of others** — showing concern and care for those in your personal ecosystem.
4. **Love of yourself** — showing compassion for yourself.

Love is foundational, for sure. Yet in a bumpy, accelerating world, you must also build a strong sense of self to protect against the arrows on the streets. You must learn to exercise your inner resources: grit, self-control, willpower and self-compassion.

Our innate wisdom is based on a simple dilemma — live in love or live in fear. You choose each moment of every day. With an open mind and heart, you can be naturally authentic, joyful, forgiving and grateful.

### Discomfort Is the New Immunization

When you feel discomfort, don't shy away from the heat. Instead, walk intentionally across the hot coals. Like physical pain, discomfort serves a critical role for alerting you to what needs to be accepted, changed or avoided. You will be a more agile and resilient person if you make friends with the ups and downs of life.

You are far more capable of handling discomfort than you probably believe. Humans have a real capacity to transform discomfort into positive energy and momentum for change. The more conscious you are with your discomfort, the more seamless this immunization process will be. Most important, you have the power to learn from the bumps in your work and life and not be ruled by them.

An ancient Buddhist parable in the Sallatha Sutra explains that pain comes in two parts. The first arrow is the initial pain, such as a failure, rejection, loss or a simple backache. The second arrow is self-inflicted pain, caused by the story we tell ourselves about the situation.

The Buddha taught that there is no relief from the first arrow. It hurts and we must accept that. It's what we do with the second arrow that matters. Conscious people embrace discomfort by acknowledging it — by allowing negative emotions to arise, flow through you, like a wave rising and falling. If we accept the reality of the first arrow, we don't need to subject ourselves to the second arrow.

Pain is part of being human; suffering is self-imposed, and interferes with our ability to adapt to change. Conscious people accept that reality and avoid the suffering of the second arrow.

### Your Roots of Conscious Living

We all have the internal tools available to keep our feet on the ground while striving to achieve our potential. They are our roots for conscious living: how you live (physical), how you feel (emotional), how you think (intellectual), how you interact (social), how you perform (vocational) and how you see the world (spiritual). Our roots work together to nourish our mind and our heart. They help us thrive in the pressure cooker we often find ourselves in.

**Physical roots** include mind/body awareness — understanding how your body and mind work in tandem helps you manage health risks and rebound quickly from adversity, injury or illness; energy management; peak performance — practicing healthy habits every day boosts your ability to manage stress, enjoy work-life balance, tackle challenges head-on and optimize your health.

**Emotional roots** include self-awareness; positive emotions — demonstrating emotions like hope, compassion, joy, empathy, generosity, forgiveness and love is what sets the most effective people apart from their less successful counterparts; and resilience.

**Intellectual roots** include having deep curiosity; an adaptive mindset; and paradoxical thinking — evaluating ideas from all angles and considering seemingly contradictory concepts enables you to grasp complexity and make well-informed decisions.

**Social roots** include authenticity — being your true self in all situations and aligning your thoughts, words and actions; having mutually rewarding relationships; and nourishing communities.

**Vocational roots** include focusing on a meaningful calling; personal mastery — playing to your strengths and overcoming your weaknesses allows you to stretch yourself and perform your best; and having a drive to succeed.

**Spiritual roots** means living with a higher purpose; global connectedness; and generosity of spirit.

## Think Big to See a World of Possibilities

To think big will challenge you to look outside yourself to see the world clearly — to expand your mind, to inspire your curiosity and to tap into your creativity. To see the future as a world of possibility, you first need to overcome the pitfalls of being too narrow.

## A 280-Character Universe

Digital technology is the great human disruptor of our time. Unlimited global access to information allows anyone to learn just about anything, anywhere, at any time.

The trouble is more and better access to knowledge is no guarantee that we can make sense of it all. A plethora of information can make our mind feel as if it's in a constant state of hyperventilation. Our outer world is simply changing faster than the ability of our inner world to process it all. That is why the modern learner is overwhelmed, distracted and impatient.

Also, we have always tended to surround ourselves with like-minded people. Digital technology reflects this phenomenon. Left on its own, our technology encourages us to stay in our fishbowl. If you choose to live too narrowly, the machine can help you. If we mindlessly surf the Net, algorithms customized to our preferences perpetuate our unconscious biases. This dynamic contributes to polarizing people and reinforces the divisions among us.

Thinking big is the best way to navigate this ever-shrinking 280-character universe. But that is a conscious choice only you can make for yourself. You must become your own editor. The Internet is a big feedback loop that you can train to expand your horizon.

- Make a conscious decision to subscribe to both sides of an issue. Get Google Alerts for both sides of an argument.
- Read (and click on links) across disciplines, across industries, and include fiction.
- Pursue fresh ideas. Actively search for sources of information that will help you grow and develop.
- Ask others from different persuasions for alternative perspectives and suggestions.

## Leverage Your Personal Ecosystem

What's your #1 personal asset? Your skills? Your job? Your ambition? Your looks? Your mind? None of the above. Your greatest asset is your personal ecosystem. Who we know and how we connect to people in our personal ecosystems provide the strongest foundations and advantages in life and business.

To help you think big, you need to create a perpetual motion machine of ideas, energy and relationships to achieve your goals. You can only do this with a high-functioning personal ecosystem. Our sharing economy, powered by technology, is connecting people all over the world. Those who have personal power to make things happen — the networkers and collaborators — are the ones who will get ahead.

Think of yourself, your reputation, as a brand, like Coca-Cola, Land's End or Nike. We are all entrepreneurs, leading the brand of "You" — complete with our personal values and career aspirations, intellectual and emotional assets, and unique market differentiators. The key is to manage your career as if it were a startup business. Like entrepreneurs, we must invest in ourselves and take our product to market.

**Promote your personal brand, virtually and in person**. Communicate your passions, values and strengths. Don't be afraid to share your real self. Stay in touch and top of mind.

**Choose to share what you know**. Don't be shy or protective about giving information away. This helps others and builds trust. The more you share, the more people will share with you.

**Get connected**. Open your eyes. Your network is all around you. See each person as a gateway to new connections. Use technology to connect. But then meet in person to discuss shared life and business interests.

## Develop Your Google Mind

The need to learn faster, expand our minds and rewire our brains for growth is the personal and economic imperative for living in the 21st century. To apply a simplistic metaphor, we need to function more like a Swiss Army knife, rather than just a corkscrew or a carving utensil. Organizations are asking their people to work in expanding jobs, pushing them to learn outside of their proficiencies. More and more of these jobs require a combined set of skills, while the half-life of our knowledge and skills is shrinking quickly. The real challenge today is to stay relevant — to learn how to learn.

That's where the Google mind comes in. Curiosity, imagination and creativity are the core drivers to 21st-century learning. Just like Google's search engine, our mind needs to continuously refresh itself. With a Google mind, new insights are created, which expands our possibilities.

When you encounter something new, your brain tries to fit it into the world you already know. By adding more connections and associations, you expand your understanding. This, in turn, emboldens your creativity. Active curiosity strengthens your brain's wiring. The opposite is also true. If you do not stretch your brain, certain regions begin to atrophy. This is the principle behind the "use it or lose it" slogan.

Cultivate a beginner's mind. Reach back to your younger days, when you were most open and eager to learn. Remind yourself how you felt, the pleasure you experienced of learning something new, having an "Ah-ha" moment, or the excitement of sharing the moment with others. Keep those feelings top of mind. They will help you find motivation (when you're not feeling it) to get unstuck.

Activate the search engine of your mind. Tap into your curiosity by taking the time out of your busy days to be curious — stop and wonder for a minute, listen to a podcast, go searching on the web. Make curiosity part of your routine.

### "And" Is the New "Or"

A high-altitude mountaineer climbs the summit of Mount Everest carrying something that will surprise you. Aside from filling his pack with essentials like bottled oxygen, ice axes and high-calorie food, he carries a bottle full of little blue pills. That's right, Viagra. Mountaineers experience far fewer cases of frostbite or altitude sickness if they've taken Viagra before entering the "death zone" at the top of Everest.

The history of Viagra is a case study in unexpected discoveries and applications. Researchers were trying to solve the problem of poor oxygen transportation in the body that exacerbated cardiovascular diseases. In the process, they discovered Viagra. Without thinking big and exploring multiple uses, Viagra researchers would have produced a failed drug instead of one that is helping millions of people around the world.

A complex world requires a complex mind. Conscious people excel at "both/and" thinking. They broaden their perspective and create more choices by holding opposing ideas in their heads at the same time.

Approach challenges as paradoxes. Problems are to be solved; paradoxes are to be managed. In a complex world, we need to deal with paradoxes with a "more than one right answer" mindset.

Look for the "both/and" when making decisions. By getting the benefit of opposing viewpoints, you generally will arrive at a better decision.

## Get Real With Your Accelerators and Hijackers

To get real means to become honest and intentional in your life. It's about learning how to transform yourself and shaping the environment around you. If you can learn how to create the change you desire, you will thrive in a disruptive and accelerating world.

### Feed Your Accelerators

Accelerators drive us forward. They activate positive energy and support us to move across the gap. The more aware we are of our accelerators, the more we can use them to activate change.

What is needed to create real change in our lives and inside organizations is to raise awareness about what accelerates us forward. Examples could include our hope and optimism, confidence and generosity, or focus and practice.

Let's look at five common accelerators in more detail:

**Courage**. Courage is not the absence of fear. Rather, courage is moving forward in spite of your fear. Being courageous means practicing grit and persistence to face difficult situations with grace and dignity. Courage is not something you are born with. You need to practice being courageous so that it will be there for you when the going gets tough.

How would you show up and what would you be doing if you were more courageous? Who do you admire who demonstrated great courage? What could you emulate about them? How could practicing courage help you to thrive in uncertain times?

**Drive**. Drive is having and showing the motivation and commitment to achieve your goals in life. Drive is a go-to accelerator for leaders. Success comes from a combination of factors — from character and talent to ambition and practice. Drive is the common fuel that moves us forward.

**Practice**. Change requires focus, attention, repetition and practice — deliberate practice! All great performers — in sports, music, entertainment and, yes, leadership — practice intensely. Experts are made, not born.

The key is to focus. Our mind has a tendency to get distracted when bombarded with lots of external stimulation. Deliberate practice is about challenging yourself slightly above your competency level, repeating yourself and getting real time feedback.

**Resilience**. Resilience is being able to recover quickly from setbacks and adversities. You are much more resilient than you think. Resilience is like a muscle that must be exercised. The more you use it, the stronger it becomes.

Ask yourself, "When was the last time I fell down and got up?" "What did I say to myself?" "How do I consciously maintain my resilience in the moment?" "In a disruptive environment, what can help me get up more quickly?"

**Vulnerability**. In the eyes of others, you are more likeable, more trustworthy and more authentic when you

allow yourself to be vulnerable. Really. It sounds very counterintuitive, but being willing to accept and show your uncertainty or weaknesses is your strength.

Many people, especially men, run away from or work hard to hide their vulnerability by never showing their emotions, weaknesses or mistakes. But people are hungry to be with real people who expose themselves emotionally and show up as real human beings.

In what way will facing vulnerability bring you release, strength, truth and peace of mind? What weaknesses can you accept and share with others? How would doing this make you feel?

### Befriend Your Hijackers

In a disruptive and accelerating world, we are all vulnerable to being hijacked. Just about anything can kick us off center — disruptors and distractions, wanting to escape and ignoring reality, getting lost in our emotions and being blinded by our thoughts. Wherever we turn, our hijackers are lurking just under the surface.

Hijackers function a lot like Homer's sirens. We are easily lured by them and end up being tossed on the rocks. When we stop to look around, we notice our hijackers are controlling us versus us controlling them. We undermine our best selves and weaken our credibility and our leadership.

Let's look at five common hijackers:

**Self-criticism**. Are you hard on yourself? Do you criticize yourself and everything you do? Do you always look for ways you were responsible for a problem? These are common attributes of self-critical people. People who are hijacked by self-criticality have trouble expressing their full power in the world and push people away by their poor self-esteem.

Notice when you are self-critical. What triggers these thoughts? What other thoughts could you replace them with? Find the real reason for your self-criticism. What is it that you are afraid will happen? How realistic is that?

**Cynicism**. In a world of mistrust and "alternative facts," cynicism becomes a popular commodity. Doubting others and questioning people's motives becomes the norm. Everyday cynicism grinds you down and can sap your energy and joy. It is the primary indicator of burnout at work. What lies behind your cynicism? Is it your personality or a long history of disengagement? Might you be facing reduced resilience and/or burnout? What are you doing to nurture yourself?

**Being too controlling**. As the world gets more uncertain, the less control we have over it. Yet, in a strange way, the less control we have, the more we want to grasp for it. The more we grasp, the less control we actually have.

What is the difference for you between influencing and controlling? Where is the line? How do you distinguish between these? If you could dial this hijacker down, what would your actions look like?

**Aloofness**. People who are aloof create a feeling that they don't care about others, causing both separation and alienation. They generate feelings of contempt, and this makes others feel inadequate. Generally, this hijacker is driven by the fear of intimacy and human connection. Aloof people are distant and detached without even knowing it.

How might this hijacker constrain your career if you don't address it in our connected world? Who do you feel closest to at work? How did you make that happen? What can you take from this experience and apply to others?

**Hypercompetitiveness**. Healthy competition fuels our energy and accelerates performance. But when the need to win takes precedence over everything else, we can lose ourselves, our friends and our opportunities.

What effect does this hijacker have on your life and leadership? When it intrudes, how does it take over? How might you stop that? What will you do differently? And what will the payback of that be?

## Step Up to Your Highest Potential

Stepping up is about leadership and action. Many of us approach the world too cautiously, too timidly, too small. We fail to unleash our personal power, which is central to bold leadership. When we step up, we catapult ourselves into a much bigger version of ourselves.

Everyone today must be a transformational leader. Whether a web designer pushing the envelope on design, a sales manager finding new customers in unusual places, a government official streamlining bureaucracy, or a global executive bringing new solutions to Europe, we must all be champions of change.

### Live Your Higher Purpose

An irony of human life is that we all possess a higher purpose, yet many of us have no idea what it is. Our minds and bodies are intended for more than merely survival — they are vessels for deep social and emotional drives that give us meaning.

Ultimately, purpose is the connection between what we do and why we do it. Indeed, surveys show that three out of four executives report their principal driver in life is the

belief that their work has purpose and meaning. It's about being bold and stepping up. If we want to be conscious people, we really need to personify and champion our purpose. So, ask yourself these questions:

- What do I love doing and what am I passionate about?
- When do I feel most alive?
- What are my natural talents and skills?
- What do others say are my special abilities and qualities?
- What values am I most committed to and when do I feel best about myself?
- What would I change in the world if I could?

## Build a Shared Consciousness

What makes humans stand out is our capacity to be aware of our connections. True connectedness is based on shared consciousness — a belief that we need one another to excel and are stronger together than apart.

There are three essential behaviors needed to build shared consciousness: show up and be real, make and keep commitments, and make "we" your highest priority.

**Show up and be real**. Showing up involves the obvious: your physical presence, body language, tone of voice, what you say and do. It also means being mentally present and invested in others and what is going on around you. Being your real self means you share your thoughts and feelings, and you have the courage to expose yourself psychologically.

**Make and keep commitments**. People are hungry to be led by real people — leaders who are comfortable in their own skin. But it's the trust between people that holds everything together. Trust is the cornerstone for every great family, team and organization. Be credible, dependable, predictable and emotionally safe.

**Make "we" your highest priority**. Our accelerating world is quickly leaving the big "I" behind. Research on connections shows that people with larger and more diversified personal networks are higher performers; they get promoted earlier and are considered better leaders. They are successful because of their ability to energize people and attract high performers, raising the performance of the entire group.

Organizations of tomorrow will be concentric circles of interconnected relationships. Shared consciousness will be the glue that holds the community together.

## Leave a Legacy

Most people think of legacy as an altruistic celebration of self rather than what it could be, a positive contribution to the world.

We hope our life matters. It's only human to want to be remembered and recognized. Legacy evokes pride, joy, a sense of accomplishment and purpose. Our meaning comes from working toward something and giving something away. Only you can author your life and be your own human story.

Yet, we need to remember that we are building a legacy by every choice we make. Ours is not a legacy in waiting; it's a work in progress.

Conscious people see life in context and know what's important. They are leaving a legacy in every moment, every interaction, every day, to actively create a new and better world.

Very few of us get the chance to leave footprints on the moon or build a pyramid or create a company like Apple. Yet all of us can create a legacy that is just as meaningful. The real treasures we leave behind are when we take a new job, build a great team, mentor a colleague, care for an aging parent or volunteer in the community. It's the ethical choices we make, the artistic creations we produce, and the little acts we perform to protect the environment.

Conscious people deeply understand this. They know they can shape how the world sees them today and how they might be remembered tomorrow.

It's up to you to carve your legacy not in stone but in the hearts and minds of the people you have touched.

# Conversational Intelligence

## How Great Leaders Build Trust and Get Extraordinary Results

by Judith E. Glaser

### THE SUMMARY IN BRIEF

The key to success in life and business is to become a master at Conversational Intelligence. It's not about how smart you are but how open you are to learn new and effective powerful conversational rituals that prime the brain for trust, partnership and mutual success. *Conversational Intelligence* translates the wealth of new insights coming out of neuroscience from across the globe and brings the science down to earth so people can understand and apply it in their everyday lives.

Author Judith Glaser presents a framework for knowing what kind of conversations trigger the lower, more primitive brain and what activates higher-level intelligences such as trust, integrity, empathy and good judgment. She helps us boost our Conversational Intelligence (C-IQ) to positively influence our neurochemistry, even in the moment; to express our inner thoughts and feelings to one another in ways that can strengthen relationships and success; and to influence the way we interpret reality, leading to extraordinary results.

*Conversational Intelligence* makes complex scientific material simple to understand and apply through a wealth of easy-to-use tools, examples, conversational rituals and practices for all levels of an organization. Glaser insists, "To get to the next level of greatness depends on the quality of our culture, which depends on the quality of our relationships, which depends on the quality of our conversations. Everything happens through conversations!"

### IN THIS SUMMARY, YOU WILL LEARN:

- How different parts of the brain influence conversations.
- Tools and strategies for learning Conversational Intelligence and raising your C-IQ.
- How to create Level III conversations in your organization.
- The importance of trust for building conversations that lead to successful change.

## Introduction: Discovering a New Intelligence

Conversations are not what we think they are. We've grown up with a narrow view of conversations, thinking they are about talking, sharing information, telling people what to do, or telling others what's on our minds. We are now learning, through neurological and cognitive research, that a "conversation" goes deeper and is more robust than simple information sharing.

Conversations are dynamic, interactive and inclusive. They evolve and impact the way we connect, engage, interact and influence others, enabling us to shape reality, mindsets, events and outcomes in a collaborative way. Conversations have the power to move us from "power over" others to "power with" others, giving us the exquisite ability to get on the same page with our fellow humans and experience the same reality by bridging the reality gaps between "how you see things and how I see things."

Conversational Intelligence is what separates those who are successful from those who are not — in business, in relationships and even in marriages. By understanding how conversations trigger different parts of our brain and how they either catalyze or "freeze" our brains in protective patterns, you can develop the conversational skills that propel individuals, teams and organizations toward success. *Conversational Intelligence is learnable*, and it is necessary to build healthier, more resilient organizations in the face of change.

The most exciting work to learn is how to navigate the three levels of conversations: Level I — transactional (how to exchange data and information); Level II — positional (how to work with power and influence); and Level III — transformational (how to co-create the future for mutual success).

## PART I: CONVERSATIONAL INTELLIGENCE AND WHY WE NEED IT

## What We Can Learn from Our Worst Conversations

Conversations are multidimensional, not linear. What we *think,* what we *say*, what we *mean*, what others *hear*, and *how we feel about it afterward* are the key dimensions behind Conversational Intelligence. Though conversations are not simply "ask and tell" levels of discourse, we often treat them as though they are.

Conversations are the golden threads, albeit sometimes fragile ones, that keep us connected to others. And why is this important? Human beings have hardwired systems exquisitely designed to let us know where we stand with others; based on our quick read of a situation, our brains know whether we should operate in a protective mode or be open to sharing, discovery and influence.

At the moment we make contact with other people, biochemical reactions are triggered at every level of our bodies. Our heart responds in two ways — electrochemical and chemical. When we interact with others we have a biochemical or neurochemical response to the interaction, and we pick up electrical signals from others as well. As our bodies read a person's energy — which we pick up within 10 feet of the person — the process of connectivity begins.

### The Push and Pull of Conversations

When we are out to win at all costs, we operate out of the part of the primitive brain called the amygdala. This part is hardwired with the well-developed instincts of fight, flight, freeze or appease that have evolved over millions of years. When we feel threatened, the amygdala activates the immediate impulses that ensure we survive. Our brains lock down, and we are no longer open to influence.

On the other side of the brain spectrum is the prefrontal cortex. This is the newest brain, and it enables us to build societies, have good judgment, be strategic, handle difficult conversations, and build and sustain trust. Yet when the amygdala picks up a threat, our conversations are subject to the lockdown, and we get more "stuck" in our point of view!

### Distrust Is the Road to Nowhere

No matter what we're doing in our professional lives, trust is the single most important element in the process I call "Creating WE," which is built on a level of trust that binds us together. Before we can interact openly with others we need to answer this question: Are you a friend or an enemy? This profound question is hardwired in us — it's been honed by evolution, and our lives have depended on answering the question correctly for millions of years.

Today, in business, our literal survival may not depend on toggling between friend or foe decisions from moment to moment, but our brains don't know that. To us, our livelihood may feel like a life-or-death issue. The moment we enter into a conversation, our brains map our "interaction patterns," and we read a great deal of information from the dynamics of the interaction. We know if the person is a "giver, taker or matcher." We know if we will be safe, if the person is friendly, or if she will harm us. We know whether we can trust him. All of this is hardwired into the way we process conversations, and this sensitivity can be called "vital instincts." They are the heartbeat behind our conversations.

## When We Lose Trust, We Lose Our Voice

Unfortunately, it's all too common for working relationships to sour over the issue of trust. Trust is not just the absence of distrust; the two take place in different parts of the brain. Distrust is signaled through the amygdala, and trust is signaled through the prefrontal cortex. The prefrontal cortex is where we compare our expectations of what will happen (or what does happen) against reality. This is where we match our worldview with that of other people; where those views align, we feel the greatest trust.

While trust takes place in the prefrontal areas of the brain where we are assessing the credibility, intentions and predictability of a person's behavior in the future, distrust takes place in the lower brain, where we are assessing another person's threat level. When we engage with others and feel uncertainty about how to interpret the interaction, our orbitofrontal cortex (lower part) activates.

### The Power of One Word

The promising news is that if we learn to identify the signs of developing distrust before the amygdala is triggered, we can activate the higher-level brain functions in the executive brain, where empathy, judgment, and our more strategic social skills reside. By learning to read the signals sent by the amygdala and head them off, we become far more effective at embracing trust — and we become more conversationally intelligent. We can learn to sideline signals from the amygdala by

- Noticing how we react to threats — observing whether we go into "flight, fight, freeze or appease."
- Labeling our reaction as normal.
- Noticing if we always choose the same reaction to threat (flight, fight, freeze or appease) and noting how much the threat impacts us.
- Choosing an alternative way to react at the moment of contact (breathe in, breathe out; go into "discovery conversations"; share how you are feeling at the moment; stay calm and do nothing).
- Becoming more aware of our responses and realizing we can override our emotions and shift into other responses.
- Transforming fear into trust, which is the heart of Conversational Intelligence.

## Moving From Distrust to Trust

Life would be so simple if we had total control of what happens moment by moment in our lives. But the reality is life is full of unexpected events, and many trigger us at a deep and visceral level.

When we are confronted with a threatening situation — called an "amygdala hijack" — our brain floods with cortisol, a neurotransmitter that tells the brain to close down the executive functions, making them inaccessible even if the intention is there. But when we use our Conversational Intelligence skills, the hormone oxytocin

is released, among other neurotransmitters. Oxytocin is associated with bonding behaviors, and new research in neuroscience suggests that oxytocin may play a dominant role in the brain and the heart as a regulator of our need for social contact.

How can we activate oxytocin and trust even in the face of betrayal and distrust? One strategy is the TRUST Model, made up of five steps a leader can take to restore trust. Each step provides a way to signal our brains to move into higher levels of trust:

**Step 1 — Transparency:** Quell the amygdala by talking about the threats and fears that are standing in the way of building trust. Be open and communicate with others to share and quell threats. Open, candid and caring conversations send messages of trust.

**Step 2 — Relationship:** Extend the olive branch, even with people you see as foes. Connect and engage in building relationships. Extending trust sends messages of friendship that shift the energy toward appreciation.

**Step 3 — Understanding:** Invite people into the inner circle. Talk openly about needs and aspirations. Reframe and relabel uncomfortable conversations as opportunities to get to know what's on each other's minds. This moves us from states of distrust of others' intentions toward understanding and trusting each other.

**Step 4 — Shared Success:** Have conversations that focus on mutual success. Lower your attachment to being right, and shift the conversation from entrenchment to discovery. Weave deeper threads of trust into the relationship.

**Step 5 — Testing Assumptions and Telling the Truth:** Test perceptions and assumptions about reality. Focus on closing the gaps between what you expect and what you get with others. Step into each other's shoes, and see the world from the other person's perspectives — the highest level of trust that we humans are able to experience together.

## PART II: RAISING YOUR CONVERSATIONAL INTELLIGENCE

## Challenges of Navigating the Conversational Highway

Conversations are "rituals" we embed into our culture and our relationships and which give us a way to successfully structure our engagements with others. Conversational rituals can be I-centric, like persuading someone until she gives in or intimidating someone before a negotiation so he gives up more than he'd planned. Conversational rituals can also be WE-centric — like shaking hands to greet someone before a difficult conversation or making up after an argument.

While conversational rituals are designed to help us connect more fully with others, human beings have conversational blind spots. These are beliefs that get in the way of us connecting mind to mind with others, and where we have blind spots, we also have conflicts and breakdowns. Common conversational blind spots include assuming that others see what we see and think what we think; failing to realize that fear, trust and distrust changes how we see and interpret reality; and the inability to stand in each other's shoes when we are fearful and upset.

### Bridging Our Reality Gaps

Blind spots spring from reality gaps. To bridge the reality gap, a great conversational tool is the Conversational Dashboard. It enables you to recognize the quality of your interaction dynamics, the level of trust you and others are operating with, and the outcomes produced by each level of conversation. As you use the Conversational Dashboard, you can begin to eliminate Conversational Intelligence blind spots and engage in healthy conversations at Levels I, II and III.

**Level I: Transactional.** Conversations can be categorized as "Tell and Ask" interaction dynamics. People are exchanging information, updates and facts that help us align our realities or confirm we are on the same page. There is not a lot of trust.

**Level II: Positional.** Conversations are characterized by "Advocate and Inquire" interaction dynamics. I am advocating for what I want (not just telling you), and I am inquiring about your beliefs so I can influence you to my point of view. Trust is conditional.

**Level III: Transformational.** Conversations are marked by "Share and Discover" interaction dynamics. When I share first, my brain receives a cue that I will be vulnerable with you and that I will open up my inner thoughts, ideas and feelings. Others in the conversation receive the signal that you are willing to be influenced, that you care about them, and that they can trust you to experiment and innovate with them. As we share and discover, we become "mentors of the experiment," and we will be able to co-create with one another to achieve greater shared success — far beyond what we ever imagined.

## Bringing Conversations to Life

Too often, leaders become mired in one type of engagement, trying the same tactics again and again, hoping for different outcomes. I call getting stuck in Level I conversations the "Tell-Sell-Yell Syndrome." A leader

who realizes her team is not getting her message about the vision and mission of the company may "tell more," hoping that more information will make a difference. If telling more doesn't create the results she wants, the leader may "sell" her ideas to get people on board; when this doesn't work, she is inclined to "yell" to get results.

Yet employees don't want more "vision"; they want deeper engagement with leaders who can help them execute the vision. When those dynamics don't emerge, employees often go into protective behaviors, pulling back from engagement rather than stepping into it.

Just as we can become stuck at Level I, we can get stuck at Level II. In the case of Level II positional dynamics, we get neurochemically hooked on being right. This dynamic is about advocating and inquiring with the intention of influencing others to our point of view. We can actually get addicted to being right. When we are right (and others are wrong), our brain produces feel-good hormones. An addiction to being right causes many corporate cultures to become toxic. We see lots of "alpha dominance" and its corollary, people who are drummed into submission and lose their voice, then complain about it.

### Expanding What's Possible

Moving to Level III conversations allows us to release the power of true exchange with other human beings. To make sense of our reality, it is essential that we understand the value of *sharing and discovering*. When we shape the space for TRUST, we keep the doors open for deeper exploration and discovery to harvest a picture of shared success. To do this we need to shift into a Level III mindset: we must stay open and nonjudgmental, be willing to be influenced, and focus on listening with an open mind.

Organizations create transformation when they figure out how to move people forward from Level I or Level II into Level III transformational conversations.

## Priming for Level III Conversations

While intention is what someone wants to make happen or plans to accomplish, the impact involves the quality of the experience from the perspective of the receiver — and that impact may not correspond with what the communicator intended. When communicators monitor and align intention and impact successfully, people trust them more fully.

### Using Our Third Eye

When conversations trigger the primitive brain, we lose our executive functions. That means that the part of our brain that contains our ability to connect, empathize, judge courses of action, and come up with fresh ways of engaging with others is disconnected from our conversational ability. We no longer have access to that part of the brain, so we rely on the part that is active — our "fight, flight, freeze or appease" impulses.

The antidote for falling into permanent disconnection and distrust is to activate your Third Eye. Envision an eye in the middle of your forehead. This eye is where wisdom resides. This part of our forehead is where the executive brain also lives. The intention of this is to engage leaders in activating their prefrontal cortex, the part of the brain that can reflect on what is happening from a neutral point of view, see other ways of viewing a situation, and choose alternatives that will serve their relationship better.

Trust lives in the prefrontal cortex, and engaging this part of our brain neutralizes threats and allows us to see alternatives in the moment, alternatives that have not been available before. Leaders who develop a Third Eye bring intention and impact together and adjust the conversation to create a more positive impact.

### Warm or Cold? The Choice is Yours

In preparation for important meetings, relationships, encounters and team sessions, there are things you can do to prime your brain for the best outcomes. Think of priming as a way of preparing the soil so you can establish a healthy garden. When you are with people with whom you have low levels of trust, you can raise the level neurochemically by shaking hands. When you reach out to shake hands, oxytocin is released, which triggers the brain to react, "This is a friend, not a foe."

Likewise, you can shift the outcome of a meeting by starting with a trust-building activity. Ask everyone in the room to identify the practices, or "rules," that would give this conversation and meeting the best outcome. Shape the space for trust and openness by sending the agenda ahead of time, rethinking the seating, and focusing on keeping conversations open, collaborative and non-oppositional.

## Conversational Agility: Reframing, Refocusing, Redirecting

At times, you may need to transform the conversational space so you and others can move forward together. This is when you draw upon transformative conversational skills such as reframing, refocusing and redirecting.

*Reframing* is a miraculous conversational tool for taking a difficult situation and turning it into an opportunity

for finding trust and common ground with someone. In reframing, you give the person you are talking with an opportunity to mentally take a break and think in a new way. *Refocusing* allows you to elevate people out of the place where they are stuck and point them toward another part of a larger topic where they can see connections they had not seen before. *Redirecting* helps a person move from a place of being stuck and emotionally bound to a place where she can see new opportunities.

### The Road Map for Conversational Agility

You can refocus your conversations to elevate the communication abilities of everyone involved, even when dealing with difficult subjects. I call this a Leadershift. Consider these five Leadershifts:

1. **Leadershift #1: From Fear to Transparency.** Making threats transparent and focusing on quelling fears shifts your neurochemistry. When fear emerges, have co-creating conversations with someone you trust. Ask the person to listen for opportunities to reduce the fear. Ask for help reframing the perceived threat and seeing it from a new perspective. Encourage conversations that promote transparency and trust.
2. **Leadershift #2: From Power to Relationship Building.** Refocus on relating to others. Reaching out to connect is vital to establishing trust. Decide on the core values that will guide your organization's actions and its agreements with and between leaders, employees, vendors and customers. Establish and practice rules of engagement that foster open, candid and caring conversations.
3. **Leadershift #3: From Uncertainty to Understanding.** To share views, perspectives and aspirations as a way of increasing understanding, listen to connect, not to reject. Ask for and listen to feedback from peers, employees, vendors, customers, competitors and others who may not agree with your perspectives and points of view. Ask "what if?" questions that open the doors to new ways of thinking without prejudging ideas that may be different from your own.
4. **Leadershift #4: From a Need to Be Right to Mapping Shared Success.** Step back from your position, and become curious about others' perspectives, knowledge and successes. This intentional shift releases dopamine, which creates curiosity in your brain. Initiate conversations about mutual success and what success looks like for each of us. Celebrate the successes large and small. Acknowledge the value of everyone on the team.
5. **Leadershift #5: From Groupthink to Group Cohesion and Partnering.** Step back from the conversation, and ask people to take time out to reflect on their decisions. Ask them to step aside from what they agreed upon to see if anything was left behind. This gives people permission to bring forward ideas that could benefit the whole group. This narrows the gaps and reframes them from "my idea" to "our idea."

## A Toolkit for Level III Conversations

The exercises in the Conversational Intelligence Toolkit are mental and conversational rituals that will help you deconstruct conversations and learn to reframe, refocus and redirect them. By using higher levels of conversational dynamics, you can move into higher levels of engagement as you learn to shape your interactions with others.

Often, we find ourselves in Level I transactional conversations in our day-to-day work. We update each other, pass along information necessary to do our jobs, and then move on to the next task. Our meetings can become transactional also, checking off to-do lists and not linking back with others until the next meeting. Later, we may discover that the takeaways we thought were shared by everyone were actually not aligned.

By bringing Level III conversational dynamics into our meetings, even in small ways, we can enhance each other's connectivity, insight, wisdom and shared view of success. We can also share our fears and concerns, sustaining a more transparent workplace so that we don't harbor fears and anxieties but rather harvest insights and wisdom.

### LEARN Exercise

With every meeting, major decision, conversation or even big organizational initiatives, you can enhance the levels of trust and decrease the levels of fear and distrust by doing an end-of-meeting activity. This activity gives everyone in the meeting a chance to exercise Level III dynamics and recalibrate their understanding of the meeting's content — it lets people share what they liked and didn't and create next steps that are meaningful for everyone.

Using the acronym LEARN, go around the room and ask people to speak to the letters of the word:

**L = Like:** What did you like most about this meeting?

**E = Excite:** What excited you the most?

**A = Anxiety:** What created the greatest anxiety?

**R = Reward:** What can we celebrate about the way we handled this meeting? Or, what do you now want to reframe, revision, redirect, restore, etc.?

**N = Need:** What are the next steps we need to take to stay on track?

This exercise also signals the amygdala to slow down and be quiet, and it allows people in the room to engage in the process of "coherence" or of getting in sync with others at the heart level. Heart-brain connection is very powerful and sends signals to the rest of the brain that all is well and we are okay with one another.

## PART III: GETTING TO THE NEXT LEVEL OF GREATNESS

## Leading with Trust: Laying the Foundation for Level III Interactions

Change is the nature of every successful company's journey. When the market shifts, successful companies need to be agile; they must be able to get in front of the curve and succeed time and again.

Change brings with it uncertainty, and uncertainty triggers fear. As leaders learn to reduce fear and increase trust within their organizations, they lay the foundations for higher-level conversations, where opportunities for greater innovation, collaboration and success are revealed. As leaders step into Level III, they bring people with them. They create a conversational space that allows people to share what's on their minds with candor and caring; they create conversational agility that nurtures people's ability to handle the unexpected; and they harvest wisdom and insights.

To help you elevate your culture to Level III interaction dynamics, start engaging in the seven vital conversations outlined below. Each one facilitates your ability to access Conversational Intelligence and to enhance your powerful ability to co-create with others.

**Co-creating Conversations:** Foster conversations — share and discover so people can understand how they can participate in creating a great culture and community. Shifting from exclusion to inclusion catalyzes Level III.

**Humanizing Conversations:** Set the tone for open and honest communication, helping people learn how to express what they are feeling and to move from being politically driven to being trusting, candid and caring. Shifting from judging to appreciating catalyzes Level III.

**Aspiring Conversations:** Help people to expand and embrace exciting and challenging possibilities. Shifting from limiting to expanding catalyzes Level III.

**Navigating Conversations:** Share information, exchange best practices, reduce the need to protect turf, and break down silos to pioneer new territories. Shifting from withholding to sharing catalyzes Level III.

**Generating Conversations:** Focus on innovative, creative, experimental and generative ways of leading rather than relying on well-worn grooves. Shifting from having all the answers to discovering the new catalyzes Level III.

**Expressing Conversations:** Teach people how to speak up, express their voice, challenge authority, and develop their ideas to contribute to the growth of the brand.

**Synchronizing Conversations:** Set the tone for an enterprise spirit, helping people move from a focus on "winning at all costs" attitude to a focus on contributing to their own growth in the context of enterprise growth. Shifting from compliance to celebration catalyzes Level III.

## Teaming Up Through Conversational Intelligence

Psychologist Bruce Tuckman's model for the developmental sequence of small groups has become the basis for almost all team and relationship development today. His model refers to four stages of team development: forming, storming, norming and performing. Team members progress through these four stages as they learn to become high-performing, collaborative colleagues.

**Forming:** Tuckman asserts that in the forming stage, teams come together to work on projects. In the background and in ways not always apparent, relationships are forming. Behavior is driven by a desire to be accepted by others and to avoid controversy or conflict. Trust is unknown, and people have a combination of fear and expectation simultaneously.

**Storming:** In Tuckman's model, every group has a storming stage in which people compete for power and status, for the best ideas, and for position in the in-group. People have low levels of trust; they are often competing with one another. Fear of loss abounds, together with fears about who has power and how to fit in. At the moment of contact, our defensive routines move center stage, influencing the dynamics of the team and focusing the brain toward social protection. People withhold information to make sure they have power; they play their status cards to ensure they have importance; they bond with the right people to position for success; and they fight to be right so

they are perceived as winners in the face of uncertainty. In many cases the barriers to trust have become so high that teams and relationships never move past this stage.

**Norming:** If the team makes the move into the norming stage, they have realized that sharing power and information is necessary for the team to not only survive but thrive. They try to figure out what collaboration means, set rules of engagement, and create team norms. The norming stage can actually become a process for creating compliance rather than for freeing the team to co-create.

**Performing:** The last stage is performing. The goal is for everyone to feel interdependent and for all to work at their peak. To move teams through this process with less "storming" and higher "performing, building trust through Conversational Intelligence is the key.

Here are five ways that leaders can eliminate fear within a team using the TRUST Model: Be present, tell people where they stand, provide context in every communication, catalyze co-creating in conversations, and use honesty at all times. As we apply the wisdom of Conversational Intelligence, we enable people on a team to engage in Level III conversational dynamics and encourage them to speak their minds, leading the whole team to achieve innovative breakthroughs we never thought possible.

## Changing the Game Through Conversational Intelligence

When we are frightened by change, our brains fall back into protective behaviors. It's as though all our instinctual networks know how to ensure we are not harmed. When we learn to apply Conversational Intelligence practices and spend more time in Level III interaction dynamics and rituals, we actually *instruct our brains* how to master, navigate and drive change as a natural way of life.

Following are four conversational rituals and success strategies that will trigger the natural ability for change to evolve:

- **See Resistance in a New Light:** Resistance and skepticism are companions to change. Stop thinking of your job as managing resistance and instead accept resistance as a natural part of change. People need to challenge new ideas before they can accept them. For full ownership and accountability to take place, people need to be in the conversation about how to change rather than being asked to merely comply. When leaders reframe in this way, they see that conversations release new energy for change — which will propel their efforts forward faster.
- **Welcome and Facilitate Conversations:** Create forums where people can have open, candid conversations and learn what is going on and where they belong in the newly emerging order. Transparency and openness have a facilitative impact, transforming fears into constructive strategies for success.
- **Engage Head, Heart and Spirit:** People are emotional during times of change. Use storytelling — narrative that engages people's emotions and creativity — to make change happen. Storytelling triggers the head, heart and spirit and causes us to bond rather than fight.
- **Create the Space for Change:** Create conversational practices that enable you to work on co-creating the future. These conversations are not about a quick fix or a new policy. This is not about lecturing or tell-sell-yell but about practicing navigating with others in and out of scenarios from many perspectives. Such an approach lets us arrive at practices and rituals for how work gets done inside our culture that we all embrace. Create the conversational space to help people find their place in the change process.

Conversations connect us and bring us into communion with others. Without conversations, our ability to evolve, develop and innovate drastically diminishes. For this reason, mastering our moments of contact is the art of great leadership — it's the art of great negotiators, great leaders, great actors, great writers and great human beings.

Everyone can become a master of Conversational Intelligence. We don't need to be visionaries or to have the top seven attributes of great leaders. We don't need to be born on the right day or have someone give us a million dollars. We don't need to have attended Harvard or been born into a distinguished family. Conversational Intelligence teaches us to see differently — to listen differently — and to process what we are perceiving differently. When we do that, we act in the moment in ways that create energy, activate energy, and help guide energy toward more productive and more powerful ends with others.

### RECOMMENDED READING LIST

If you liked *Conversational Intelligence*, you'll also like:

1. ***Rainmaking Conversations* by John E. Doerr and Mike Schultz.** Doerr and Schultz offer a research-based, field-tested and practical selling approach that will help you master the art of the sales conversation.

2. ***Crucial Conversations* by Joseph Grenny, Al Switzler, Ron McMillan and Kerry Patterson.** Learn how to handle the conversations that occur when the stakes are high, emotions run strong and opinions vary.

3. ***Fierce Conversations* by Susan Scott.** Scott explains how to transform everyday conversations by employing effective ways to get the message across.

## THE SUMMARY IN BRIEF

Relationships are the priority of life, and conversations help us care for our relationships with talking and listening. The quality of your life comes out of the quality of your dialogues and conversations. ***Crucial Conversations: Tools for Talking When Stakes Are High*** by Kerry Patterson, Joseph Grenny, Ron McMillan and Al Switzler — the founders of VitalSmarts — helps you think about what you really want to say.

With structure and wit, this best-selling book provides readers with a way to improve on the most fundamental element of organizational learning and growth—honest, unencumbered dialogue between individuals. The authors address the No. 1 reason managers and executives get derailed and offer helpful guidance on how to operate in a fast-paced, results-oriented environment. They provide readers with the tools to handle life's most difficult and important conversations.

This summary describes how anyone can master the skills of crucial conversations at home, work and play. The skills it delivers offer new techniques for working together in ways that enable us to succeed.

## IN THIS EXECUTIVE BOOK SUMMARY:

- Prepare for high-stakes situations with a proven technique.
- Transform anger and hurt feelings into powerful dialogue.
- Make it safe to talk about almost anything.
- The benefits of being persuasive, not abrasive.
- Learn how new techniques, skills and tools work together to enable successful crucial conversations.

## What's a Crucial Conversation?

A crucial conversation is a discussion between two or more people where stakes are high, opinions vary and emotions run strong.

The effects of conversations gone bad can be both devastating and far reaching. Research has shown that strong relationships, careers, organizations and communi-ties all draw from the same source of power — the abili-ty to talk openly about high-stakes, emotional, contro-versial topics.

### Masters of Crucial Conversations

Twenty-five years of research with 20,000 people and hundreds of organizations has taught experts that indi-viduals who are the most influential — who can get things done and *at the same time* build on relationships —are those who master their crucial conversations.

People who routinely hold crucial conversations and hold them well are able to express controversial and even risky opinions in a way that gets heard.Their bosses, peers and direct reports listen without becoming defen-sive or angry.

### Improve Your Organization and Health

In the *best* companies, everyone holds everyone else accountable — regardless of level or position.The path to high productivity passes not through a static system but through face-to-face conversations at all levels.

The ability to hold crucial conversations also has an impact on your personal health.The evidence is mount-ing every day.The negative feelings we hold in, the emo-tional pain we suffer and the constant battering we endure as we stumble our way through unhealthy conver-sations slowly eat away at our health. In some cases, the impact of failed conversations leads to minor problems. In others, it results in disaster. In all cases, failed conversations never make us happier, healthier or better off.

## Mastering Crucial Conversations

"Dialogue" is the free flow of meaning between two or more people. Each of us enters conversations with our own opinions, feelings, theories and experiences about the topic at hand.This unique combination of thoughts and feelings makes up our personal pool of meaning.This pool not only informs us but also propels our every action.

When two or more of us enter crucial conversations, by definition we don't share the same pool. Our opinions differ.

### Filling the Pool of Shared Meaning

People who are skilled at dialogue do their best to make it safe for everyone to add their meaning to the *shared* pool — even ideas that at first glance appear con-troversial, wrong or at odds with their own beliefs. Now, obviously, they don't agree with every idea; they simply do their best to ensure that all ideas find their way into the open.

As the Pool of Shared Meaning grows, it helps people in two ways. First, as individuals are exposed to more accurate and relevant information, they make better choices. In a very real sense, the Pool of Shared Meaning is a measure of a group's IQ.The larger the shared pool, the smarter the decisions. And even though many people may be involved in a choice, when people openly and freely share ideas, the increased time investment is more than offset by the quality of the decision.

On the other hand, we've all seen what happens when the shared pool is dangerously shallow.When people purposefully withhold meaning from one another, indi-vidually *smart* people can do collectively stupid things.

### Better Choices

Not only does a shared pool help individuals make better choices, but since the meaning is *shared*, people willingly act on whatever decisions they make. As people sit through an open discussion where ideas are shared, they take part in the free flow of meaning. Eventually they understand why the shared solution is the best solu-tion, and they're committed to act.

Conversely, when people aren't involved, when they sit back quietly during touchy conversations, they're rarely committed to the final decision. Since their ideas remain in their heads and their opinions never make it into the pool, they end up quietly criticizing and passively resisting. Worse still, when others force their ideas into the pool, people have a harder time accepting the information.

The time you spend upfront establishing a shared pool of meaning is more than paid for by faster, more com-mitted action later on.

## Start With Heart

How do you encourage the flow of meaning in the face of differing opinions and strong emotions? The truth is people *can* change. But it requires work. You can't sim-ply drink a

magic potion and walk away renewed. Instead, you'll need to take a long, hard look at yourself.

In fact, this is the first principle of dialogue: Start with Heart — that is, your own heart. If you can't get yourself right, you'll have a hard time getting dialogue right. When conversations become crucial, you'll resort to the forms of communication that you've grown up with —debate, silent treatment, manipulation and so on.

### Work on Me First

Although it's true that there are times when we are merely bystanders in life's never-ending stream of head-on collisions, rarely are we completely innocent. More often than not, we do something to contribute to the problems we're experiencing.

People who are best at dialogue understand this simple fact and turn it into the principle,"Work on me first." They realize that not only are they likely to benefit by improving their own approach, but also that they're the only person they can work on anyway. As much as others may need to change, or we may *want* them to change, the only person we can continually inspire, prod and shape — with any degree of success — is the person in the mirror.

There's a certain irony embedded in this fact. People who believe they need to start with themselves do just that. As they work on themselves, they also become the most skilled at dialogue. So here's the irony. It's the *most* talented, not the least talented, who are continually try-ing to improve their dialogue skills.

### Stay Focused

Skilled people Start with Heart.That is, they begin high-risk discussions with the right motives, and they stay focused no matter what happens.

They maintain focus in two ways. First, they're steely-eyed smart when it comes to knowing what they want. Despite constant invitations to slip away from their goals, they stick with them. Second, skilled people don't make Sucker's Choices (either/or choices). Unlike others who justify their unhealthy behavior by explaining that they had no choice but to fight or take flight, the dialogue-smart believe that dialogue, no matter the circumstances, is always an option.

### Refocus Your Brain

You're speaking with someone who completely dis-agrees with you on a hot issue. How does all this goal stuff apply?

As you begin the discussion, start by examin-ing your motives. Going in, ask yourself what you really want.

Also, as the conversation unfolds and you find yourself starting to, say, defer to the boss or give your spouse the cold shoulder, pay attention to what's happening to your objectives. Step away from the interaction and look at yourself — much like an outsider. Once you call into question the shifting desires of your heart, you can make conscious choices to change them.

### Return to Dialogue

Stop and ask yourself some questions that return you to dialogue:

- What do I really want for myself?
- What do I really want for others?
- What do I really want for the relationship?
- How would I behave if I really wanted these results?

## Learn to Look

As people begin to feel unsafe, they start down one of two unhealthy paths.They move either to silence (with-holding meaning from the pool) or to violence (trying to force meaning in the pool).

Silence almost always is done as a means of avoiding potential problems, and it always restricts the flow of meaning. The three most common forms of silence are masking, avoiding and withdrawing. *Masking* consists of understating or selectively showing our true opinion. Sarcasm, sugar-coating and couching are some of the more popular forms. *Avoiding* involves steering complete-ly away from sensitive subjects.We talk, but without addressing the real issues. *Withdrawing* means pulling out of a conversation altogether. We either exit the conversa-tion or exit the room.

Violence consists of any verbal strategy that attempts to convince, control or compel others to accept your point of view. Methods range from name-calling and mono-loguing to making threats.The three most common forms are controlling, labeling and attacking. *Controlling* consists of coercing others to your way of thinking.This includes cutting others off, overstating your facts, speak-ing in absolutes, changing subjects or using directive questions to control the conversation. *Labeling* is putting a label on people or ideas so they can be dismissed under a general stereotype or category. *Attacking* includes belit-tling and threatening.

### Look for Your Style Under Stress

When caught up in a crucial conversation, it's difficult to see exactly what's going on and why.When a discus-sion starts to become stressful, we often end up doing the exact opposite of what works.We turn to the less healthy components of our Style Under Stress.

To break from this insidious cycle, Learn to Look. Here's how:

- Learn to look at content and conditions.
- Look for when things become crucial.
- Learn to watch for safety problems.
- Look to see if others are moving toward silence or violence.
- Look for outbreaks of your Style Under Stress.

Most people toggle between holding back and becoming too forceful during stressful or crucial conversations. But typical behaviors can change. By identifying your Style Under Stress, you can make a special effort to avoid some of your silence or violence habits. Also, when you're in the middle of a crucial conversation, you can be more conscious of what to watch for.

## Make It Safe

When others move to silence or violence, step out of the conversation and Make It Safe.When safety is restored, go back to the issue at hand and continue the dialogue.The key is to step out of the content of the conversation. Don't stay stuck in what's being said.

Next, decide which condition of safety is at risk. Here are some questions you can ask about each condition of safety:

- Mutual Purpose. Do others believe you care about their goals in this conversation? Do they trust your motives?
- Mutual Respect. Do others believe you respect them?

### Apologize When Appropriate

When you've made a mistake that has hurt others (e.g., you didn't call your team to let them know that presen-tation plans were changed), start with an apology.When you've clearly violated respect, apologize. An apology is a statement that sincerely expresses your sorrow for your role in causing — or at least not preventing — pain or difficulty to others.

### Ask Questions to Keep the Brain Focused

When we present our brain with a demanding question, our body sends precious blood to the parts of our brain that help us think and away from the parts of our body that help us take flight or begin a fight. Asking questions about what we really want reminds us of our goal and juices up our brain in a way that helps us keep focused.

Clarify what you don't want, add it to what you do want and ask your brain to start searching for healthy options to bring you to dialogue.

### Contrast to Fix Misunderstanding

Sometimes people feel disrespected during crucial conversations even though we haven't done anything dis-respectful. An apology isn't appropriate in these circum-stances — it would be disingenuous to admit you were wrong when you weren't. How then can you rebuild Mutual Purpose or Mutual Respect in order to make it safe to get back to dialogue?

When others misunderstand either your purpose or your intent, step out of the argument and rebuild safely by using a skill called *Contrasting*.

Contrasting is a don't/do statement that:

- Addresses others' concerns that you don't respect them or that you have a malicious purpose (the *don't* part).
- Confirms your respect or clarifies your real pur-pose (the *do* part).

### CRIB to Get to Mutual Purpose

When you are at cross-purposes, step out of the con-tent of the conflict. Stop focusing on who thinks what.

Then CRIB your way back to Mutual Purpose:

- **Commit to seek Mutual Purpose.** Make a unilateral public commitment to stay in the conversation until you come up with something that serves everyone.
- **Recognize the purpose behind the strategy.** Ask people why they want what they're pushing for. Separate what they're demanding from the purpose it serves.

- **Invent a Mutual Purpose.** If after clarifying everyone's purposes you are still at odds, see if you can invent a higher or longer-term purpose that is more motivating than the ones that keep you in conflict.
- **Brainstorm new strategies.** Search for a solution that serves everyone.

## Master My Stories

A Path to Action explains how emotions, thoughts and experiences lead to our actions.We observe, ***we tell a story*** and then we feel before we act. Since we and only we are telling the story, we can take back control of our own emotions by telling a different story.We now have a point of leverage or control. If we can find a way to control the stories we tell, by rethinking or retelling them, we can master our emotions and, therefore, master our crucial conversations.

If strong emotions are keeping you stuck in silence or violence, try the following tactics:

- **Notice your behavior.** If you find yourself moving aw~~a~~y from dialogue, ask yourself what you're really doing. "Am I in some form of silence or violence?"
- **Get in touch with your feelings.** Learn to accurately identify the emotions behind your story.Ask yourself, "What emotions are encouraging me to act this way?"
- **Analyze your stories.** Question your conclusions and look for other possible explanations behind your story. Ask,"What story is creating these emotions?"
- **Get back to the facts.** Abandon your absolute certainty by distinguishing between hard facts and your invented story. Ask yourself,"What evidence do I have to support this story?"
- **Watch for clever stories.** Victim,Villain and Helpless stories sit at the top of the list."Victim Stories" make us out to be innocent sufferers.When you tell a Victim Story, you ignore the role you played in the problem.With "Villain Stories," we overemphasize the other person's guilt.We automatically assume the worst possible motives while ignoring any possible good or neutral intentions a person might have. In "Helpless Stories," we make ourselves out to be powerless to do anything.These clever stories cause us problems.The dialogue-smart recognize that they're telling clever stories, stop and then do what it takes to tell a useful story. A useful story creates emotions that lead to healthy action— such as dialogue.

## STATE My Path

Once you've worked on yourself to create the right condition for dialogue, you can then draw on five dis-tinct skills that can help you talk about even the most sensitive topics.These five tools can be easily remem-bered with the acronym STATE.

When you have a tough message to share, or when you are so convinced of your own rightness that you may push too hard, remember to STATE your path:

- **Share your facts.** Start with the least controversial, most persuasive elements from your Path to Action.
- **Tell your story.** Explain what you're beginning to conclude.
- **Ask for others' paths.** Encourage others to share both their facts and their stories.
- **Talk tentatively.** State your story as a story — don't disguise it as a fact.
- **Encourage testing.** Make it safe for others to express differing or even opposing views.

### Catch Yourself

When we believe strongly in a concept or a cause, our emotions kick in and we start trying to force our way onto others. As our emotions kick in, our ideas no longer flow into the pool. Instead, our thoughts shoot out of our mouths like water out of a raging fire hydrant. And others become defensive.When this happens, when our emotions turn our ideas into a harsh and painful stream of thoughts, our honest passion kills the argument rather than supports it.

Catch yourself before you launch into a monologue. Realize that if you're starting to feel indignant or if you can't figure out why others don't buy in, you need to recognize that you're starting to enter dangerous territory.

Back off your harsh and conclusive language, not your belief. Hold on to your belief; merely soften your approach.

## Explore Others' Paths

To encourage the free flow of meaning and help oth-ers leave silence or violence behind, explore their Paths to Action. Start with an attitude of curiosity and patience. This helps restore safety.

### AMPP

To encourage others to share their paths, use four powerful

listening tools that can help make it safe for other people to speak frankly.These four skills are called power listening tools because they are best remembered with the acronym AMPP — ***Ask, Mirror, Paraphrase and Prime.*** Luckily, the tools work for both silence and vio-lence games.

Here's how:

- **Ask to get things rolling.** Start by simply expressing interest in the other person's views.
- **Mirror to confirm feelings.** Increase safety by respectfully acknowledging the emotions people appear to be feeling.
- **Paraphrase to acknowledge the story.** As others begin to share part of their story, restate what you've heard to show not just that you understand, but also that it's safe for them to share what they're thinking.
- **Prime when you're getting nowhere.** If others continue to hold back, prime.Take your best guess at what they may be thinking and feeling.

### Remember Your ABCs

It's now your turn to talk. But what if you disagree?Some of the other person's facts are wrong, and his or her stories are completely fouled up. Now what?

As you begin to share your views, remember:

- **Agree.** Agree when you do.
- **Build.** If others leave something out, agree where you do, then build.
- **Compare.** When you do differ significantly, don't suggest others are wrong. Compare your two views.

Don't turn differences into debates that lead to unhealthy relationships and bad results.

## Move to Action

Having more meaning in the pool, even jointly own-ing it, doesn't guarantee that we all agree on what we're going to do with the meaning. For example, when teams or families meet and generate a host of ideas, they often fail to convert the ideas into action for two reasons:

- They have unclear expectations about how decisions will be made.
- They do a poor job of acting on the decisions they do make.

### Decide How to Decide

Here are the four common ways of making decisions and some dos and don'ts:

- Command. Decisions are made without involving others. Don't pass out orders like candy. When you face a command decision, ask which elements are flexible. When handing down an order, explain the reason behind the demand.
- Consult. Input is gathered from the group and then a subset decides. Don't pretend to consult. If you've already made up your mind, don't go through the charade of involving people only to do what you wanted to do all along. Announce what you're doing. Report your decision.
- Vote. An agreed-upon percentage swings the decision. Weigh the consequences. Know when to vote. Don't cop out with a vote. Votes should never replace patient analysis and healthy dialogue.
- Consensus. Everyone comes to an agreement and then supports the final decision. Don't force consensus onto everything. Don't pretend that everyone gets his or her first choice. Decisions should be based on merit, not on who offers up the options. When an idea doesn't work out, own the failure together.

This can be dangerous. In fact, when people move from adding meaning to the pool to moving to action, it's a prime time for new challenges to arise.

### Dialogue Is Not Decision Making

The two riskiest times in crucial conversations tend to be at the beginning and at the end.The beginning is risky because you have to find a way to create safety or else things go awry.The end is dicey because if you aren't careful about how you clarify the conclusion and decisions flowing from your Pool of Shared Meaning, you can run into violated expectations later on.This can happen in two ways.

First, people may not understand how decisions are going to be made.

The second problem with decision making occurs when no

decision gets made. Decisions drag on forever.

Both of these problems are solved if, before making a decision, the people involved decide how to decide. Don't allow people to assume that dialogue is decision making. Dialogue is a process for getting all relevant meaning into a shared pool.That process, of course, involves everyone. However, simply because everyone is allowed to share their meaning — actually encouraged to share their meaning — doesn't mean they are then guar-anteed to take part in making all the decisions.To avoid violated expectations, separate dialogue from decision making. Make it clear how decisions will be made —who will be involved and why.

When you're in a position of authority, you decide which method of decision making you'll use.

When there is no clear line of authority, deciding how to decide can be quite difficult.When decision-making authority is unclear, use your best dialogue skills to get meaning into the pool. Jointly decide how to decide.

### The Four Methods of Decision Making

There are four common ways of making decisions: command, consult, vote and consensus.These four options represent increasing degrees of involvement. Increased involvement, of course, brings the benefit of increased commitment along with the curse of decreased decision-making efficiency. Savvy people choose the one that best suits their particular circumstances from among these four methods of decision making.

Determine ***who*** does ***what*** by ***when***. Make the deliver-ables crystal clear. Set a f***ollow-up*** time. Record the com-mitments and then follow up. Finally, hold people accountable to their promises.

## Putting It All Together

After watching people at home and at work, as well as interviewing them, researchers have learned that most people make progress not by focusing on specific skills— at least to start with — but instead by applying two of these main principles.

### Learn to Look and Make It Safe

The first lever for positive change is Learn to Look. That is, people who improve their dialogue skills contin-ually ask themselves whether they're in or out of dia-logue. This alone makes a huge difference. Even people who can't remember or never learned the skills of STATE or CRIB, etc., are able to benefit from this material by simply asking if they're falling into silence or violence.They may not know exactly how to fix the specific problem they're facing, but they do know that if they're not in dialogue, it can't be good. And then they try something to get back to dialogue. As it turns out, trying something is better than doing nothing.

So remember to ask the following important question: "Are we playing games or are we in dialogue?" It's a wonderful start.

Perhaps the most common way that the language of dialogue finds itself in everyday conversation is with the expression,"I think we've moved away from dialogue." This simple reminder helps people catch themselves early on, before the damage is severe.

The second lever for positive change is Make It Safe. Dialogue consists of the free flow of meaning and the No. 1 flow-stopper is a lack of safety.When you notice that you and others have moved away from dialogue, do something to make it safer. If you simply realize that your challenge is to make it safer, nine out of 10 times you'll intuitively do something that helps.

Sometimes you'll build safety by asking a question and showing interest in others' views. Apologies, smiles, even a request for a brief "time out" can help restore safety when things get dicey.The main idea is to make it safe. Do something to make others comfortable.

These two levers form the basis for recognizing, build-ing and maintaining dialogue.When the concept of dia-logue is introduced, these are the ideas most people can readily take in and apply to crucial conversations.

## Yeah, But

People can think of a dozen reasons why these skills don't apply to the situation they care about. In truth, these dialogue skills apply to just about any problem you can imagine. However, since some are more difficult than others, here are two tough cases.

**1. Sexual or Other Harassment.** "It's not like anyone's blatantly harassing me or anything, but I don't like the way I'm being treated. How can I bring it up with-out making enemies?" Someone is making comments or gestures that you find offensive.The person does it sel-dom enough and he or she is subtle enough that you're not sure if HR or your boss can even help.

**The Solution.** Tell the rest of the story. If you've tolerated the behavior for a long time before holding the conversation, own up to it.This may help you treat the individual like a reasonable, rational and decent person — even if some of his or her behavior doesn't fit this description.

When you feel a measure of respect for the other per-son, you're ready to begin. After establishing a Mutual Purpose for the exchange, STATE your path.

If you can be respectful and private but firm in this conversation, most problem behavior will stop. And remember, if the behavior is over the line, you shouldn't hesitate to contact HR to ensure that your rights and dignity are protected.

**2. Failure to Live Up to Agreements.** "Yeah, but my teammates are hypocrites.We get together and talk about all the ways we could improve, but then people don't do what they agreed to."The worst teams walk away from problems like these. In good teams, the boss eventually deals with problem behavior. In the best teams, every team member is part of the system of accountabili-ty. If team members see others violate a team agreement, they speak up immediately and directly. It's dangerous to wait for or expect the boss to do what good teammates should do themselves.

**The Solution.** If your teammate isn't doing what you think he or she should, it's up to you to speak up.

When teams try to rally around aggressive change or bold new initiatives, they need to be prepared to address the problem when a team member doesn't live up to the agreement. Success does not depend on perfect compli-ance with new expectations but on teammates who hold crucial conversations with one another when others appear to be reverting to old patterns.

## Change Your Life

High-risk discussions don't come with notices and reminders. More often than not, they come as unwel-come surprises.

Emotions don't help much either. And, of course, cru-cial conversations are defined by their emotional charac-ter-istics. Your ability to pull yourself out of the content of a discussion and focus on the process is inversely pro-portion-al to your level of emotion.The more you care about what's happening, the less likely you are to think about how you're conducting yourself.

Between surprise and emotion, it's hard to know which is the bigger enemy of change. Both make it hard to remember to act in new ways.

### Scripts

Scripts are another enemy of change. Scripts are pre-bundled phrases we use in common conversations; they form the very foundation of social habits and often make change almost impossible.

With a script, you know both sides of the conversation. The good news about scripts is that you don't have to give conversation much thought.The bad news is that the more scripted an interaction, the more difficult it is to pull yourself out of the routine and try something new.

### Transfer Tips

Researchers examined 48 front-line supervisors who were learning how to hold crucial conversations. As they watched the trainees back at work, it became clear to them that only a few of them transferred what they had learned in the classroom back to their work site.The bad news is that most of them didn't change an iota.The good news is that some of them did. In fact, they used the new skills precisely as instructed.

The supervisors who found a way to apply the new skills taught the researchers the following four principles for turning ideas into action:

- **First, master the content.** That means not only do you have to be able to recognize what works and why, but you also have to generate new scripts of your own.
- **Second, master the skills.** You must be able to enact these new scripts in a way that is consistent with the supporting principles. As it turns out, simply under-standing a concept isn't enough.While it's helpful, even necessary, to talk the talk, you have to be able to walk the walk.You have to be able to say the right words with the right tone and nonverbal actions.
- **Third, enhance your motive.** You must want to change.This means that you have to care enough about improving your crucial conversation skills to actually do something.You have to move from a passive sense that it would be a good idea to change to an active desire to seek opportunities. Ability without motive lies dormant and untapped.
- **Fourth, watch for cues.** To overcome surprise, emotion and scripts, you must recognize the call to

action. This is usually people's biggest obstacle to change. Old stimuli generate old responses. If a problem doesn't cue your new skills, you'll return to your old habits without even realizing you missed a chance to try something new.

### Pick a Conversation

Pick a relationship. Pick a conversation. Let others know that you're trying to do better, then give it a shot. When you blow it, admit it. Don't expect perfection; aim for progress. And when you succeed, celebrate your suc-cess. Take pleasure in knowing that you're improving and so are your relationships. Finally, when the chance arises, help others do the same. Help friends, loved ones and co-workers learn to master their own high-stakes discus-sions. Help strengthen organizations, solidify families, heal communities and shore up nations one person —one crucial conversation — at a time.

Kerry Patterson, Joseph Grenny, Ron McMillan and Al Switzler are founders of VitalSmarts and leading authorities in organizational effectiveness and leadership. Their worldwide clients include 300 of the Fortune 500 companies. They are the co-authors of The Balancing Act: Mastering the Competing Demands of Leadership and Crucial Confrontations. They have also co-developed dozens of training programs.

# Dare to Lead

Brene Brown

Book Snaps™
In-depth reviews of best-selling business books.

## Dare to Lead

**Brave Work. Tough Conversations. Whole Hearts**

*By Brené Brown*

Dr. Brené Brown is a research professor at the University of Houston, where she holds the Huffington Foundation Endowed Chair at the Graduate College of Social Work. She also holds the position of visiting professor in management at the University of Texas at Austin McCombs School of Business. Brené has spent the past two decades studying courage, vulnerability, shame, and empathy. She is the author of six #1 New York Times bestsellers and is the host of two award-winning podcasts, Unlocking Us and Dare to Lead. Brené's books have been translated into more than 30 languages.

*A Book Review by Soundview*

# Cultivating Braver, More Daring Leaders

In her note introducing ***Dare to Lead: Brave Work. Tough Conversations. Whole Hearts***, Brené Brown quotes Theodore Roosevelt as saying, "It is not the critic who counts; not the man who points out how the strong man stumbles, or where the doer of deeds could have done them better. The credit belongs to the man who is actually in the arena, whose face is marred by dust and sweat and blood; who strives valiantly; who errs, who comes short again and again…who at the best knows in the end the triumph of high achievement, and who at the worst, if he fails, at least fails while daring greatly." These words form the basis for much of what Brown discusses in her book, a book in which she aims to help leaders lead more effectively, more honestly, and in a more healthy manner. Much of her book is aimed at leaders of organizations, but the information and insights can be generalized to all people who lead in any capacity, in the home, in the workplace, or in nonprofits or volunteer organizations. In fact, she defines "a leader as anyone who takes responsibility for finding the potential in people and processes, and who has the courage to develop that potential." Courage is central to Brown's idea of effective and healthy leadership.

## Daring Leadership

Brown discusses three key concepts of daring leadership. The first pertains to the importance of "rumbling with vulnerability." She understands that courage and fear are intimately connected. She believes that in moments when people feel vulnerable, they need "shared language, skills, tools, and daily practices" that can support them. She uses the term rumble throughout her book. For Brown, a rumble is a meeting or discussion whereby participants are committed to vulnerability, curiosity, and generosity. In a rumble, people must be adamantly committed to listening. For Brown, a person's leadership potential is limited by the extent to which they are willing to be vulnerable.

Second, Brown states that "self-awareness and self-love matter. Who we are is how we lead." All leaders experience fear. Fear is not the problem even though it is often the basis of many problematic behaviors. The real problem is the armor that people put on in order to deal with that fear. Brown's third concept

related to daring leadership states that "courage is contagious." People need to feel safe if they are going to show up without their armor, and it is the job of the leader to create that safe place. Daring leaders must "be connected to the people they lead." She is insistent that in today's contemptuous and adversarial culture, true leaders must hold themselves to a higher standard than that which is frequently seen in the public sphere.

## Vulnerability

Brown entitles the first section of her book, "Rumbling with Vulnerability," and she breaks this section into five subparts. Brown starts out this discussion by stating that if people are willing to put themselves out there into the world, they will inevitably fail at times. For her, vulnerability involves the willingness to go into arenas when a person cannot control how the situation will play out. She respects those willing to enter the arena. Brown does not see weakness in vulnerability; rather she believes that the decision to allow oneself to be vulnerable requires a tremendous amount of courage. Despite a desire to do so, people cannot protect themselves from being vulnerable. Some people, she claims, believe that they can protect themselves from vulnerability because they refuse to rely on other people. She insists that the science proves, however, that people are wired to need other people and community. Vulnerability is not something that can be engineered out of life.

Brown tells a story about her daughter who had her heart broken and confidence shattered when a friend shared a confidence of hers with others. Brown's daughter said she would never trust anybody in that manner again. The two talked, however, and discussed the concept of the marble jar. A marble jar is a metaphor. When people do something kind or that builds trust, they put a marble in the metaphorical jar. When they do something that breaks trust, they take one or many marbles out of the jar. Brown encourages her daughter to stick with the people who fill up the marble jar. Brown says, "trust is the stacking and layering of small moments and reciprocal vulnerability over time. Trust and vulnerability grow together, and to betray one is to destroy the other."

In tough conversations, Brown advocates for creating safe containers. People do this by asking others what is necessary for them to feel safe in the discussion. Another tool she advocates for using is the phrase "say more." She says that these two words can often help teams dig deeper and get to the heart of a situation. She also believes in clarity. To Brown, "clear is kind. Unclear is unkind," and she also encourages people to take breaks when necessary in conversations rather than trying to push through beyond what they are capable of in the moment.

Key to Brown's discussion in other books of hers is the topic of wholeheartedness which she defines as "engaging in our lives from a place of worthiness." She maintains that this concept requires integration of "our thinking, feelings, and behavior," and it requires people to put aside their armor. Some organizations see feelings like vulnerability as liabilities, and in such organizations, courage can never truly thrive. A person's ego wants to protect itself, but according to Brown, the ego is a small part of who a person is, much smaller than their heart. She then goes into a discussion of daring and armored leadership. In each situation, she gives an example of armored leadership such as perfectionism and then the alternative daring leadership trait, in this case, healthy striving. These sixteen different examples all demonstrate how attitudes and behaviors people use as armor can be turned into behaviors and attitudes that are more healthy and daring. Daring is beneficial for Brown.

## Shame and Empathy

Brown is a shame researcher, and she incorporates this research into this book on leadership. She claims that shame is a universal feeling that all people experience and usually fear speaking about. The problem is that shame becomes more powerful the more people refuse to speak about it. One time people feel shame in the workforce is when they are fired, and Brown insists that people ought to "give people a 'way out with dignity'" when firing them from an organization. Unfortunately, nefarious factors such as armor and a lack of vulnerability tend to get in the way of this in organizations permeated by shame, and terminations can strip people of their feelings of dignity.

Empathy can help people and organizations be resilient in the face of shame. "Empathy is not connecting to an experience, it's connecting to the emotions that underpin an experience." It requires people to try to see situations and the world the way other people do. It also requires an attitude of non judgment as well as the communication of one's understanding of another person's emotional state. Empathy looks different for different people, and so a person desiring to show empathy must be aware of the emotional cues of others. Empathy is not one size fits all. Brown then discusses numerous empathetic barriers including the use of sympathy, a horrified reaction, and the desire to instantly make the situation better on the part of the listener. These barriers inhibit empathy. People can build their shame resilience and their empathy by understanding shame's triggers, broadening their perspectives, and speaking about that which brings them shame.

## Defining Values

Brown then moves on to a discussion of values. She refers back to her opening Roosevelt quote and says, "in those moments when we start putting other voices in front of our own, we forget what made us go into the arena in the first place." She encourages people to develop clarity around their values because this clarity can help them in difficult rumbles. In order to live by one's values, these values first must be clarified, and she says that these values are not situation specific. In other words, our values are the same in the workplace and in the home. She gives a list of dozens of values, and she insists that her reader only select two of them. She believes these values should be "a definition of who we are in our lives." She then wants her reader to consider a few behaviors that are consistent with these values. She believes that a person can really only know another if they know their values. Organizations can take their values and turn them into operationalized behaviors that everyone is accountable to. People do not always find the benefit in discuss-

> . . . people in a group are more likely to act courageously if they have been trained on how to rise after falling."

ing values, but she believes this is because people do not take the necessary next step of turning them into behaviors.

## Trust

In her section on trust, Brown advances Charles Feltman's definition of trust: "choosing to risk making something you value vulnerable to another person's actions." At times, when people lack trust, they will discuss other people rather than discuss with other people. Trust is important because it "is the glue that holds teams and organizations together." Brown insists that trust should be discussed in reference to specific behaviors. To talk about trust, Brown uses the BRAVING inventory. This refers to

Boundaries

Reliability

Accountability

Vault (keeping private information private)

Integrity ("choosing courage over comfort")

Nonjudgmental

Generosity (believing the best interpretation of a person's intentions).

Brown encourages teams to consider behaviors that align with these BRAVING elements. For Brown, trust is not just something between people. She believes that individuals should work on trusting themselves as well. After all, a person will find it difficult to trust others if they do not trust themselves.

## Dealing with Setbacks

Brown's last section focuses on rising again after inevitable setbacks. One of the first considerations if a person wants to help another risk failing is to make sure the person is equipped "for hard landings." Brown's research has taught her that many organizations attempt to help people build resilience only after they have fallen. This is the wrong timing, she insists. She believes people need to be taught how to weather hard landings before they experience them. After all, people in a group are more likely to act courageously if they have been trained on how to rise after falling. Brown maintains that as parents practice lawnmower parenting by trying to rid their children of any challenges in life, the child is not given the opportunity to learn courage.

Brown advances her process of "Learning to Rise" which has three parts, "the reckoning, the rumble, and the revolution." During the reckoning, a person will be in tune with how they are feeling and recognize when something is off. The person ought to be curious about this feeling even if they cannot absolutely identify it. At this point, a person should be careful to not offload this emotion onto another person. Next, people go through the rumbling and should be aware that if they do not have enough data, they will be tempted to make up stories about what has happened. The brain likes patterns, and stories give the brain patterns. The problem is that these stories are not always accurate. Still, people should listen to the story they are telling themselves before they question the story to determine what it can tell them about their lack of information and understanding of both other people and of themselves. Wisdom can be found in the delta between the stories people create and the truth. Brown maintains that in today's world, revolution involves "taking off the armor and rumbling with vulnerability, living into our values, braving trust with open hearts, and learning to rise."

Brené Brown has written numerous books on issues such as shame and vulnerability. In *Dare to Lead: Brave Work. Tough Conversations. Whole Hearts*, she brings those insights to the world of leadership. This can involve leadership in the business sphere but also in families and smaller organizations. For Brown, leadership requires courage, and it requires the willingness to allow oneself to be vulnerable. Leaders must be willing to enter into difficult conversations and avoid putting on the different forms of armor she discusses throughout her book. Her book describes the principles she advocates for, and she frequently refers her reader to additional tools on her website to help put her concepts into practice. Her research is based off of work she and her team have done throughout the years, and she shares it in a way that can help leaders of all kinds enter leadership with more wholeheartedness.

## Daring Greatly

*by Brené Brown*

Dr. Brené Brown is a research professor with two decades of experience studying vulnerability, shame, empathy, and courage and how those emotions impact our social, professional, personal, and familial relationships. Her training program The Daring Way™ has coached everyone from executives to soldiers, parents to business teams. As of 2020, she is the author of five #1 *New York Times* bestsellers including *Daring Greatly* and *Dare to Lead*. Her TED Talk, The Power of Vulnerability, ranks in the top five most viewed TED talks in the world. In *Daring Greatly: How the Courage to Be Vulnerable Transforms the Way We Live, Love, Parent, and Lead*, Brené shows readers how shame and our inability to be vulnerable stands in our way of achieving greatness at work and at home. *brenebrown.com*

# What It Means to Dare Greatly Even When the Stakes Are High

Brené Brown borrowed the phrase "Daring Greatly" from a famous speech delivered by Teddy Roosevelt in 1910. In it he says that it is not the person on the outside passing judgement that counts. It is the person in the arena who "strives valiantly; who errs, who comes up short again and again." This person knows "there is no effort without error or shortcoming." This person spends everything in the worthwhile cause of "high achievement" and when failing, "at least fails while daring greatly…"

For Brené, this quote sums up what it means to be vulnerable, understand that both victory and defeat are equally important, and that being engaged and "all in" is everything. Daring Greatly requires courage and the willingness to engage, even when the stakes are high. We do it when we "dare to show up and let ourselves be seen." When we practice the courage to show up in this way, we foster relationships, make the most of our finite time, and leverage our gifts to make the "unique contributions that only we can make."

In 2010, Brené spent time with fifty Silicon Valley CEOs. She asked the then CEO of Serious Materials and *Inc.* magazine's 2009 Entrepreneur of the Year, Kevin Surace, a question before his talk on the topic of "disruptive innovation." The question she asked was, "What's the most significant barrier to creativity and innovation?" After thinking for a minute, Kevin responded, "I don't know if it has a name, but honestly, it's the fear of introducing an idea and being ridiculed, laughed at, or belittled. If you're willing to subject yourself to that experience, and can survive it, then it becomes the fear of failure or the fear of being wrong." He went on to say, "... Something related to fear keeps people from going for it." He then told Brené that he understood that she was a researcher but wasn't sure of her field. She responded, "I study that 'something related to fear'—I'm a shame-and-vulnerability researcher."

## Culture of 'Never Enough'

We live in a culture of scarcity. This "never enough" problem is the driver behind such thoughts as "never perfect enough,"

***Book Snaps™*** is a publication of Soundview Inc. • 2 Christy Drive, Suite 302, Chadds Ford, PA 19317 • © 2020 Soundview, Inc.

"never successful enough," and "never certain enough." In our culture we seem to be hyper-aware of what we don't have instead of being keenly aware of what we do have. We constantly assess ourselves in comparison to others in terms of our lives, marriages, families, jobs, wealth, and more. We spend "inordinate amounts of time calculating how much we have, want, and don't have, and how much everyone else has, need and wants." This feeling of scarcity is pervasive in our society and it is shame based. Healing from it requires vulnerability.

## Vulnerability Is Not Weakness

The primary myth around vulnerability is that it is equal to weakness. Brené says that it is actually the opposite of weakness. She defines vulnerability as "uncertainty, risk, and emotional exposure." "There's no equation where taking risks, braving uncertainty, and opening ourselves up to emotional exposure equals weakness."

Most of us have spent our entire lives believing that vulnerability and weakness are synonyms. They are not, and to believe so is to risk sacrificing a meaningful and purposeful life.

Putting our ideas, work, creations, products, or thoughts out into the world with total uncertainty as to how they will be accepted is vulnerability. Vulnerability should not be confused with failure. If we refuse to embrace vulnerability for what it truly is and see it as weakness, we lose an "essential emotional part of our lives."

Opening up and being vulnerable allows us to "reignite our passion and purpose" in any endeavor, be it personal or professional. Showing up, daring to take a chance when failure is a possibility is not weakness. "Vulnerability sounds like truth and feels like courage. Truth and courage aren't always comfortable, but they're never weakness."

## Shame Resilience Is Key

Brené tells readers that we cannot be vulnerable without first getting past shame. She calls this work "shame resilience" and it is "key to embracing our vulnerability." Shame is the feeling that gets in the way when we become terrified of what other people may think of us. When we attach our self-worth to how our products, creations, or ideas are received by others, that is tied to shame. She says, "in simple terms, if they love it, you're worthy; if they don't, you're worthless."

When we attach our self-worth to the things we produce or create we become less inclined to share them at all or we edit them down to a less innovative or creative version that is safer. If we take the risk of putting the "juiciest" version of our work out there and it is met with scrutiny or rejection, we are utterly crushed. Our shame shuts us down and tells us that we never should have tried in the first place.

Shame resilience is a skillset. Learning and applying those skills allows us to overcome our shame, access our vulnerability, and reap the associated rewards. Strong shame resilience skills allow you to put your work out there without putting "your self-worth on the table." We all want people to admire, like, and respect our work, but when they don't, shame resilience allows us to categorize that shortcoming properly as what we do, not who we are. Without our self-worth on the line, we are able to take greater risks, receive and give constructive feedback, be more engaged in our work, and be more tenacious in achieving our goals.

One of the key skills in overcoming shame is becoming aware of and quieting what Brené called "shame tapes." These are the messages we play in our head when we struggle or work on something challenging. Our shame tapes tell us things like "no one cares about this topic" or "successful marketers don't struggle like this." If we "cultivate awareness about shame and name it and speak to it," we render it powerless and can get on with "the business of truly living."

## Mind the Gap

There is a space between where we are as leaders, parents, or educators and where we want to be. Paying attention to and crossing over that gap requires us to show up in "new and uncomfortable ways" that are aligned with our values.

In the business world, there is always a strong focus on strategy and culture and the relationship between the two. Brené defines strategy as "the game plan" that maps out where an organization, group, or team wants to go and how they are going to get there. A culture is "less about what we want to achieve and more about who we are." In order to develop strategies that transform, we have to take a hard, uncomfortable look at our cultural values. We have to look in that gap between our best intentions and "how we actually live, feel, behave, and think."

Disengagement is often the root issue keeping a community, organization, or team from stepping over the gap. When leaders do not practice what they preach, followers become disengaged. We feel lost and void of purpose. When the things we do and say and feel are "routinely in conflict with the expectation we set in our culture, disengagement is inevitable." The goal is not perfection. Mistakes are to be expected and to be accepted.

What we do when those mistakes happen is what makes the difference between minding the gap and falling into it. Connection and engagement are daring strategies that require us to pay attention to the space between where we are standing and where we want to end up. Implementing daring strategies helps us develop daring cultures that foster engagement and ultimately, "transform the way we parent, educate, and lead."

## Rehumanizing Education and Work Through Leadership

Brené defines a leader as "anyone who holds her- or himself accountable for finding potential in people and processes." The word leader does not refer to "a position, status, or number of direct reports." Parents, teachers, community volunteers, and CEOs are all leaders who can dare greatly.

In order for leaders to "reignite creativity, innovation, and

> If a leader does not know how to recognize and combat shame and fear, the entire organization can suffer horribly before outward signs are seen.

learning" they have to have tough conversations that bring awareness, language, and understanding to the topics of vulnerability and shame. These conversations "shine light in the dark corners" and once they are illuminated, going back to the way things were is virtually impossible. Leaders can and must "rehumanize education and work" to realize a vision.

"Engagement, innovation, creativity, productivity, and trust" are all susceptible to the crushing blows caused by shame and fear. If a leader does not know how to recognize and combat shame and fear, the entire organization can suffer horribly before any outward signs are seen.

Shame does damage quietly, behind the scenes, escaping the notice of almost everyone until it is too late. Casual observations, like walking around the office or school, rarely uncover a shame problem unless the problem is already "acute."

For example, if a manager scolds an employee in the hallway for all to witness, that is a sign of a long-standing and serious shame problem. "Blaming, gossiping, favoritism, name-calling, and harassment" are all symptoms of a shame-based culture. Most of the time, it isn't so obvious and requires the assessment of a leader who knows the less obvious signs that are problematic and suggestive of a shame problem.

Schools are breeding grounds for shame. In Brené's shame research, 85% of the men and women interviewed "could recall a school incident from their childhood that was so shaming, it changed how they thought of themselves as learners." Even in adulthood, some of the participants could recall in great detail a specific incident where they were told or made to feel that they were not good at a particular pursuit. Brené calls these creativity scars and they stay with us always, unless we banish them.

The workplace has similar shame-related struggles. Bullying, humiliation, threats, public reprimands, and belittling reward systems are all indications that a work culture is mired with shame. Leaders need to take immediate and direct action when a "shame infestation" is discovered.

Brené recommends four strategies to build shame-resilient schools and workplaces.

- Support leaders who "walk the walk." These leaders dare greatly, encourage and help facilitate open and truthful conversations about the difficult topic of shame, and work to cultivate a shame-free culture.
- Engage in a conscious effort to seek out where shame-based tactics are being employed within the organization. Assess how co-workers, leaders, and classmates interact with each other. Look in the dark corners and shine light on the shame that is hiding there.
- Managers and leaders should cultivate engagement by normalizing the discussion of and elimination of shame. Ask people to share their struggles and look for commonalities with how those struggles are dealt with or experienced.
- All employees should be trained on "the differences between shame and guilt" and on giving and receiving feedback that is shame-free and focused on growth and engagement.

We are living in a time of heavy uncertainty. There is a veritable laundry list of huge worries and big picture concerns that are impacting every one of us in ways seen and unseen. Brené's twelve years of research in the areas of shame and vulnerability are more relevant now than ever. *Daring Greatly* is a map that anyone can read to navigate these rocky waters. Educators, leaders, community groups, congregations, and parents stand to benefit from the advice uncovered in Brené's research-based writing.

She likens our business and personal lives to an arena. We can either sit in the stands, casting judgement on those who dare to duke it out, or we can enter the arena ourselves. Brené says of parenting, "Raising children who are hopeful and who have the courage to be vulnerable means stepping back and letting them experience disappointment, deal with conflict, learn how to assert themselves, and have the opportunity to fail. If we're always following our children into the arena, hushing the critics, and assuring their victory, they'll never learn that they have the ability to dare greatly on their own."

The message for all is clear. Getting into the game of life fully and wholeheartedly takes courage, strength, and a willingness to be vulnerable. If we wait for the "perfect time" or until we are "bulletproof" to dare greatly, we are at risk of missing out on all of the greatness available to us in life. Our imperfection and our fallibility make us human, not flawed.

*Daring Greatly* helps us realize that we have to show up and let the world see us, totally and completely.

## Achieving Success Through the Pursuit of Fulfillment

by Todd Rose and Ogi Ogas

### THE SUMMARY IN BRIEF

For generations, we've been stuck with a cookie-cutter mold for success that requires us to be the same as everyone else, only better. This "standard formula" works for some people but leaves most of us feeling disengaged and frustrated. As much as we might dislike the standard formula, it seems like there's no other practical path to financial security and a fulfilling life. But what if there is?

In the Dark Horse Project at the Harvard Graduate School of Education, best-selling author and acclaimed thought leader Todd Rose and neuroscientist Ogi Ogas studied women and men who achieved impressive success even though nobody saw them coming. Dark horses blaze their own trail to a life of happiness and prosperity.

Yet what is so remarkable is that hidden inside their seemingly one-of-a-kind journeys are practical principles for achieving success that work for anyone, no matter who you are or what you hope to achieve.

In *Dark Horse*, Rose and Ogas show how the four elements of the dark horse mindset empower you to consistently make the right choices that fit your unique interests, abilities, and circumstances and will guide you to a life of passion, purpose and achievement.

### IN THIS SUMMARY, YOU WILL LEARN:

- The exciting potential of the Age of Personalization.
- The four key elements of the dark horse mindset.
- Why talent is not truly rare and how to create opportunity for all.
- Inspiring stories of the dark horse mindset in action.

## Breaking the Mold

In 2005, using the 10-inch reflecting telescope at Farm Cove Observatory in Auckland, New Zealand, Jennie McCormick discovered an unknown planet in a solar system 15,000 light-years away. A few years later she pulled off another uncommon feat when she discovered a new asteroid, which she patriotically christened "New Zealand." She has co-authored more than 20 papers in academic journals, including the prestigious *Science*.

Yet one of Jennie's lesser known accomplishments might be her most impressive of all: She became an internationally respected astronomer without obtaining a college diploma of any kind. In fact, she never even graduated from high school.

At the age of 15, she dropped out of school and took a job cleaning out horse stables. Not long after, Jennie's mother left her. Compelled to make her way on her own, Jennie attempted to pass the high school equivalency exam. She was not successful. By the time she was 21, Jennie had become a single mother, supporting her infant son by serving chicken combo meals at a fast-food joint. Her future, to put it mildly, looked bleak.

Then came her turning point. One night in her mid-20s, Jennie was visiting relatives who lived on the edge of an extinct volcano caldera, far from city lights. A family member handed her a pair of binoculars and urged her to peer up at the Milky Way, saying it was a sight that could only be seen in the backcountry. "I can still see myself lying down in the wet grass and looking through the binoculars at the sky and just, Oh my God! Wow!," Jennie recounts. "All those stars, it was just awesome. I was hooked! I knew nothing about them at all, nothing, but after that I just had to know more."

Jennie's stellar epiphany motivated her to learn everything she could about astronomy. Though she had little knowledge of science and few educational resources, she patiently trained herself to make precise observations with increasingly larger telescopes. In 1999, after 11 years of independent study and practice, Jennie cobbled together a domed observatory on her patio out of cast-off equipment and rusty parts.

Five years later, she employed a sophisticated observational technique known as gravitational lensing — harnessing the gravity of intervening stars to bend and focus distant light — to behold an exoplanet with a mass three times that of Jupiter. She became the first amateur to discover a new planet since 1781, when William Herschel discovered Uranus.

There is a term for those, like Jennie, who triumph against the odds — for winners nobody saw coming. They are called dark horses.

### The Age of Personalization

We are entering a new epoch demanding a very different formula for success: the Age of Personalization. We now inhabit a world where Netflix recommends movies you might enjoy, and Amazon suggests books you might like to read. Physicians increasingly prescribe the cancer treatment that will work best for *you*, given your unique physiology, health and DNA, instead of prescribing the generic treatment that works best on average.

You can no longer expect to work for the same firm your whole career; instead, most of us will switch jobs 12 or more times before we retire.

Philanthropic organizations are investing billions of dollars in personalized learning programs that can be adapted to each student's needs and abilities.

These epochal changes in the way we learn, work and live are all rooted in a single idea that animates the emerging Age of Personalization. Individuality matters.

Dark horses are not defined by their character. Nor are they defined by a particular motive, socioeconomic background or approach to training, study or practice. There is a common thread that binds them all together, however: Dark horses are *fulfilled*.

Dark horses provide a new definition of success suited for the Age of Personalization, one that recognizes that individuality truly matters: *Personalized success is living a life of fulfillment and excellence*.

The key to attaining fulfillment and excellence is a mindset that empowers you to fit your circumstances to your unique interests and abilities. This mindset can be rendered in plain English: *Harness your individuality in the pursuit of fulfillment to achieve excellence*.

## The Standardization Covenant

At the dawn of the Age of Standardization, American corporations became modern titans of industry by standardizing their products, including Exxon (originally Standard Oil, the first company to standardize kerosene), Kellogg's (originally Battle Creek Toasted Flakes Company, the first company to standardize breakfast cereal), and the Ford Motor Company ("Any customer can have a car painted any color that he wants so long as it is black").

The goal of all standardization is to maximize the efficiency of a system of production. The prime mechanism by which standardization accomplishes this is through the elimination of individual variation.

Standardization establishes fixed processes that convert fixed inputs into identical outputs, without deviation or fluctuation. In other words, the standardization mindset is committed to the principle that *individuality is a problem*.

It certainly made good sense to apply the standardization mindset to the manufacture of products. If you have a headache, you want every pill in a bottle of aspirin to be the same as every other. If you are driving across the country, you want a gallon of gas to be the same whether you buy it in Maryland or Missouri.

### The Standardization of People

But our collective notion of success — and our individual ability to attain it — was utterly transformed once we decided to standardize human beings the same way we standardize aspirin.

First we standardized work. Then we standardized learning. Then we integrated our standardized workplace with our standardized educational system, establishing standardized careers. And once the full passage of our experience was standardized from our first day of kindergarten until the morning of our retirement, it marked the complete standardization of a human life.

The establishment of standardized career tracks to professional excellence inaugurated the Age of Standardization's definition of success: attaining wealth and status by climbing the institutional ladder.

According to the terms of this Standardization Covenant, society will bestow its rewards upon you as long as you abandon the individual pursuit of personal fulfillment for the standardized pursuit of professional excellence.

The chief commandment for achieving success within the Standardization Covenant can be summed up in eight simple words: *Be the same as everyone else, only better*. The flip side of this commandment also happens to constitute the covenant's fatal flaw: Our standardized institutions of opportunity were never designed for personal fulfillment.

### The Turning Point

The unquestioning obedience to a system of talent development that ignores personal fulfillment has profound consequences for all of us. Most notably, it compels you to experience a crisis of soul-searching doubt when you realize you are not living a life of authenticity. It compels you to experience a turning point.

Anyone who experiences their own turning point must make a momentous decision. You can continue to pretend that if you just work harder, you will finally break through to success . . . or you can break the covenant.

Though the precise twists and twirls of every dark horse journey are unique, the first step of the journey is always the same: the decision to prioritize fulfillment. When dark horses make that choice, they do not focus on the potential wealth to be had or how masterful they might one day become.

Instead, they recognize that an opportunity exists that fits their individuality — and they seize it. From that point forward, they make their decisions based upon who they are rather than who others tell them they should be. And by continuing to make decisions in this manner, dark horses inexorably develop excellence.

Whether you are considering marching down the straight path or blazing your own winding one, you can

move forward by considering the four elements of the dark horse mindset. Let's now turn to those.

## Know Your Micro-Motives

In the name of efficiency, institutions usually collapse the entire variety of human passion into a single featureless "generic motivation," a simple one-dimensional metric ranging from high to low. Generic motivation goes by many different names, including self-discipline, resolve, tenacity, perseverance, fire in the belly and grit. But in the final analysis, all these labels are merely shorthand for "Your individuality does not matter."

But the fact of the matter is that ignoring someone's personal motives is not a particularly effective way to motivate her. Many institutions have therefore shifted from one-dimensional generic motives to a small set of "universal motives" that they hope can be leveraged to motivate students to work hard and stay the course. This short list of universal motives — competition, interaction, hunger — are all still attempts at boosting motivation on average while ignoring everything important about the individual students themselves. Like generic motives, universal motives are institutional rather than personal, general rather than specific, top-down rather than bottom-up.

Dark horses demonstrate the stark contrast between frequently touted universal motives such as "the desire for competition" or "the desire to be creative" and the finely tuned specifics of your own cravings, predilections and fascinations. If you want to attain fulfillment, it's essential to know exactly what puts the wind in your sails — not what someone else thinks should get you going. That's why Know Your Micro-Motives is the first and most crucial element of the dark horse mindset.

### The Micro-Motives of Birding

Alvaro Jamarillo is driven to classify creatures that are mobile, colorful and elusive. Today, he is a professional birder. "I've always liked birds, but when I entered my Ph.D. program in biology, I was told to stay away from birds. Instead, I was assigned by my biology professor to study leaf-cutting ants in Ecuador," Alvaro recounts.

"I got to the jungle and realized I was not excited by the ants. I was spending all of my time trying not to look at all the tropical birds around me, and then I finally realized — I loved birds. I was getting more fulfillment out of looking at birds and talking about them with nonacademics than I was getting in my academic program."

Eventually, Alvaro followed what mattered most to him and dropped out of his doctoral program. He started his own successful company, Alvaro's Adventures, taking guests on birding tours around the world.

But micro-motives run deeper still. Fellow birder Ted Floyd — the editor of *Birding*, the flagship magazine of the American Birding Association — is highly motivated to identify birds auditorily, by hearing the songs they sing. His ability to mentally analyze the qualities of birdsong is so highly refined that he can sketch the audio waveform of any birdsong he hears; his sketches consistently match up with the actual waveforms recorded by sonogram equipment.

### The Game of Judgment

You can take advantage of an instinctive activity that you perform every day to grab hold of the micro-motives concealed inside you and hold them up to the light. It's called "the game of judgment."

Your micro-motives are composed of strong and abiding feelings rooted deep within your unconscious self. They include subtle preferences, frank desires and private longings. Your goal in playing the game of judgment is to use your instinctive reaction to others to zero in on these live emotional wires and attempt to trace them to their source.

There are three steps to the game of judgment. First, become aware of the moments when you are judging someone. It's human nature to react to others, whether it's a mail carrier, police officer, neighbor, store clerk or someone tweeting about politics.

Second, identify the feelings that emerge as you reflexively judge someone. How do you know when you are on the scent of a micro-motive? When you have a vivid reaction. It doesn't matter whether it's positive or negative, celebratory or condemnatory, as long as the feeling is pronounced.

And third, ask yourself why you are experiencing those feelings. Be honest with yourself.

The purpose of the game of judgment isn't to coolly assess the merits and deficiencies of other people. It's not about *them* at all. The goal is to use your intense emotional response to ferret out the hidden contours of your own desires.

If you are judging a park ranger, you might initially think, "Being outside and around nature all day would sure be great!" You might also realize, "Even though being outside would be great, it does seem like a lonely job. I don't think I could handle the daily isolation." Now you've identified

two potential micro-motives: the desire to be around nature and the desire for steady social engagement.

For dark horses, passion is multidimensional and dynamic — and, crucially, under your intentional control. Dark horses reveal that passion is not something to be followed but something you can engineer. The key to engineering passion does not lie in following the one motive that burns hottest inside you but, rather, in deliberately leveraging as many different motives as possible. The more distinct micro-motives you can identify and harness, the greater your engagement will be with your life.

## Know Your Choices

Choice puts your individuality into action. It is the means by which you convert passion into purpose.

We're living in a golden age of consumer choice. Yet, when it comes to making important choices about your life — when it comes to school and careers — things have hardly budged in more than a century. That's because the Standardization Covenant took meaningful choice away from you and placed it firmly in the hands of institutions.

Our standardized educational system does not allow you to choose the length of your courses, the method of instruction, the textbooks you read, the pace of learning or even which courses you take. Most professions — including all of the most lucrative ones, such as medicine, science, engineering and law — demand that you complete a fixed and compulsory set of educational milestones before they will even begin to consider hiring you.

The business world isn't much better. It isn't called a corporate ladder for nothing! Your only choice in most large companies is to move up — or move out.

### Picking Is Not Choosing

This is the most quietly effective way that standardization extinguishes your individuality — by depriving you of the opportunity to choose. Our standardized institutions replace *choosing* with *picking*.

Choosing is an *active* process. When you have the freedom to choose, you can create your own opportunities, including ones that nobody else might consider. Picking is a *passive* process. When you pick a proffered option, someone else has already made the real choices, and you are merely selecting a piece of candy from their proffered box of chocolates.

If you were a bird, what habitat would you choose to live in? The tropical rainforest of the Amazon Basin? The high altitudes of the Tibetan Plateau? The chilly lakes of Minnesota? With so many habitats available, choosing one might seem like an overwhelming burden. But if you were a bird, the choice wouldn't be difficult at all. You'd simply choose the habitat that *fit* the kind of bird you were.

If you are free to search for choices that fit your individuality, you might discover opportunities that nobody else would even notice. That's why the second element of the dark horse mindset is Know Your Choices.

### Fit Determines Risk

Just like everyone else, dark horses minimize their exposure to unnecessary gambles by carefully evaluating the riskiness of a choice before they make it. What sets them apart, however, is how they evaluate risk.

Within the standardization mindset, risk has a very precise definition: the odds of success. But in the dark horse mindset, risk is determined by fit. Dark horses evaluate how well their personal pattern of micro-motives matches up with the features of an opportunity. Thus, fit is a multidimensional interaction between the individual and the opportunity.

The more of your micro-motives that will be activated by a particular opportunity, the greater the passion you will engineer by choosing it — and the lower the riskiness of your choice. If there is good fit, the opportunity is low risk. If there is poor fit, the opportunity is high risk.

As long as you Know Your Micro-Motives — and have a realistic appraisal of the demands of an opportunity — then you will be a better judge than anyone else of the riskiness of a choice, because you will be a better judge of fit. Even when all your options are good ones — *especially* when your options are good ones — the dark horse mindset implores us to choose the one with the best fit, no matter how hazardous it may seem to others.

## Know Your Strategies

There is no best strategy for developing excellence. There's only a best strategy for you. That's why the third element of the dark horse mindset is Know Your Strategies.

In the dark horse mindset, a strategy is a method for *getting better*. Thus, every strategy involves improving yourself over time. Identifying the right strategy for you is the key to attaining excellence.

Standardized institutions are not designed to help you discern the best strategy for you. On the contrary, they anoint a single strategy for everyone to follow — a One Best Way. But just because you can't do it the One Best Way doesn't mean you can't do it.

Astronomy is a field that depends heavily on mathematics. Unfortunately for Jennie McCormick, she dropped out of high school before taking a class in basic trigonometry. Fortunately, Jennie possessed other strengths. For one, she is endlessly curious. She is comfortable asking for guidance and is not afraid of appearing uninformed.

After her stellar epiphany, Jennie began attending free public lectures about the moon and planets at the Auckland observatory. After these lectures, she introduced herself to the professional astronomers who worked at the observatory. They responded to her enthusiasm and disarming congeniality, and one of the astronomers lent her a small telescope that she could take home.

Jennie is also very comfortable with technology. She became proficient at wielding both the computer hardware and software used for contemporary astronomical observations, not by studying books or taking classes, but by jumping in and learning by doing. Jennie never shied away from asking someone for assistance with a new task. And she gradually became adept at programming the kind of custom software necessary to automate telescopes during nightlong observations.

### The Nature of Strengths

A strength is a fundamentally different kettle of fish than a motive. Your micro-motives comprise part of your core identity and are therefore potent and resistant to change. Our brains are designed to know — to experience — our motives very directly.

But unlike the steady beacon of motives, strengths are inaccessible, contextual and dynamic. In other words, strengths are fuzzy. Our brains are not designed to intuit our strengths. Almost everything we label as a personal strength is an artificial construct imposed on you from outside yourself rather than something that emerges naturally from within yourself.

Composing limericks, programming web apps and performing ballet *pas de chat* are culturally defined abilities that do not pre-exist within you; they are assembled — with sustained effort — through learning. Strengths are also contextual. Any personal quality can be either an aptitude or a handicap, depending on the situation.

Even if you exert a personal quality in a context where it's a strength today, it might not remain a strength tomorrow. That's because strengths are dynamic. They are highly malleable, improving with practice and deteriorating through neglect.

Since strengths are fundamentally different from motives, you should take a fundamentally different approach when choosing a strategy than when choosing an opportunity. In the standardization mindset, choosing strategies is a matter of staying the course. In the dark horse mindset, choosing strategies is a matter of trial and error.

### Expect Failure

Compared to life choices, which can be irrevocable and costly, strategies are trial balloons. The process of Know Your Strategies, in fact, will be the first time you should *expect* outright failure while wielding the dark horse mindset.

Failure is the only way you can unearth the hidden contours of your fuzzy strengths. Every attempted strategy is a personal experiment. Does this approach suit me? Is it helping me make progress? If so, what might that say about my strengths? If not, what does this failure suggest about what I might try next?

When you learn to Know Your Strategies, you can engineer your own achievement.

## Ignore the Destination

The fourth and final element of the dark horse mindset advises you to Ignore the Destination. Destinations are great for institutions. They're catastrophic for fulfillment.

It made complete sense to obsess about your career destination during the Age of Standardization, because early in life you needed to select the educational ladder that would lead you there. Should you aim for an MBA? A nursing degree? The New York bar exam? Under the covenant, your chosen form of standardized excellence became your destination.

Dark horses take a different perspective. When they consider excellence, they presume that individuality matters. The individuality of micro-motives. The individuality of choice. The individuality of fuzzy strengths giving rise to a lavish variety of personal strategies. Put all these together, and you get infinite winding paths leading to an infinite variety of excellence.

If you believe in fuzzy strengths and the variety of excellence, then you can see that there is simply no way of knowing ahead of time what kind of virtuosity you might be able to reach. And if you don't know where you might end up, then it doesn't make much sense to unwaveringly march toward a constant destination. If you commit yourself prematurely to a straight path, you may close off numerous winding paths leading to far more satisfying versions of success.

Under the dark horse mindset, time is relative. Your pace of improvement is determined by the specific

opportunities you decide to pursue and the specific strategies you decide to try. That means the time that passes on your journey of self-improvement will always be relative to the decisions you make.

Instead of asking pointless questions like, "How long does it take, on average, to master tennis?" or, "Why am I taking so much longer than my peers to understand organic chemistry?," the only question you should ever ask yourself is, "Is this the right strategy for me?"

### Destinations Versus Goals

Dark horses may ignore destinations, but they don't ignore goals. In the dark horse mindset, there is a clear distinction between the two. A goal is born out of an active choice you have made. In contrast, a destination is someone else's idea of an objective that you have acceded to.

If you are in high school, then getting into Harvard Law School is a destination. There are too many unknowns and intermediate events between you and the destination, and the destination itself is entirely defined by the Standardization Covenant, anyway.

But there are many purpose-driven goals you can work toward right now, such as reading philosophy books, winning your next debate club match and trying to get an internship at a local law firm. Sure, it's certainly possible that you will end up at Harvard Law. But it's far more likely that the self-knowledge you obtain from your experiences pursuing these immediate goals will open up a whole new range of choices better suited for your authentic individuality.

The difference between a goal and a destination may seem like a game of semantics. It is nothing of the sort. They are divergent conceptions of what an objective ought to be that emerge from two distinct systems of reasoning.

## Tricking the Eye, Cheating the Soul

All the bitter differences between the standardization mindset and the dark horse mindset ultimately stem from their divergent views of human potential. The old mindset declares, "Only special people have talent"; the new mindset declares, "Every person has talent."

Both assertions cannot be true. You have to choose a side.

According to the standardization mindset, only a small minority of people are capable of attaining excellence (and therefore only a minority are capable of attaining fulfillment), and our institutions should possess the exclusive power to identify and reward these talented individuals.

According to the dark horse mindset, everyone is capable of achieving excellence and fulfillment, and our institutions should help every individual develop his or her potential to its fullest.

It seems perfectly obvious that talent is something uncommon and special because very few people ascend to the top of the ladder. Very few people make the national track and field team or the national Mathematical Olympiad team. Very few people get to play for the Boston Symphony Orchestra or write a book that makes the *New York Times* best-seller list or become a NASA astronaut.

### The Talent Quota

Nowhere does the rarity of talent seem more apparent than in higher education. We instinctively presume that the small number of admittees at prestigious institutions corresponds in some meaningful way to the available talent in the population. But none of these universities wait to evaluate the pool of available talent before deciding how many candidates to accept.

Our foremost institutions of opportunity enforce a talent quota. This means our institutions cap the number of individuals who may attain excellence before they know the actual number of students with the potential for excellence. Under the Standardization Covenant, talent is not rare by empirical fact. Talent is rare by institutional decree.

If an institution employs standards, it must accept all applicants who exceed a fixed and predetermined set of criteria. There's no way of knowing in advance what this number will be. But if an institution employs a quota, it must accept a fixed and predetermined number of applicants, no matter how many talented candidates apply. These two numbers will almost never match up.

Whenever you impose a quota on talent, no matter what the reason, then the assessment of individual potential is moved into the eye of the beholder.

Our system of talent development seems fair and meritocratic. But the reality is that our standardized institutions force each of us into the role of a contestant in a beauty pageant, pleading, "Pick me! Pick me! Pick me!"

## The Dark Horse Covenant

A system that only makes opportunity available to an arbitrary quota is not a true meritocracy. It is a quotacracy.

In a quotacracy, the opportunities of the many are sacrificed for the opportunities of the few. Make no mistake about what this means for any society that abides by the

Standardization Covenant: *Far more than half the population will never even get the chance to realize their full potential.*

But the Age of Personalization empowers us to create a system of opportunity that institutes a radically expanded form of fairness. A system where you still have to earn your success but where opportunity is available to anyone and everyone, instead of those who fit an institutional mold.

For the first time, we finally have everything we need to build a meritocracy that is worthy of the name: A democratic meritocracy.

We have the right economy for a democratic meritocracy. We have the right technology for a democratic meritocracy. We have the right science for a democratic meritocracy. There is only one thing missing — one thing that each of us must actively choose instead of passively accept: We must ratify a new covenant.

If we want a democratic meritocracy for ourselves and our children, then we must each choose to ratify a new social contract: *Society is obligated to provide you with the opportunity to pursue fulfillment, and you are accountable for your own fulfillment.*

## Equal Fit and Personal Accountability

The supreme institutional obligation under the Dark Horse Covenant is to provide Equal Fit. The supreme individual obligation under the Dark Horse Covenant is Personal Accountability. These two obligations — when conjoined together — are necessary and sufficient to inaugurate a democratic meritocracy.

Under Equal Fit, every person is given their best opportunity to succeed, according to their individuality. The hard part of providing Equal Fit — the part that requires a new social truth vested in a new covenant — is guaranteeing individual choice. Only by providing processes and pathways flexible enough to adapt to individuality can institutions provide meaningful choice.

Why would an institution ever want to hand over the power of choice to the individuals it serves? Because institutions that provide Equal Fit will flourish in the Age of Personalization.

One example is Summit Public Schools. Summit is a network of 11 public charter schools in California and Washington state serving grades six through 12. They were built upon a personalized approach to learning and teaching called Summit Learning. Summit's mission is "to equip every student to lead a fulfilled life."

The Summit educational program is explicitly designed to help every student engineer their own passion, purpose and achievement through three main components. Every Summit student has a dedicated mentor who meets with them one-on-one every week to support them in understanding and harnessing their individuality.

In class, students apply the knowledge, skills and habits they've learned to projects that prepare them for the scenarios they'll encounter after they graduate. Lastly, all students are guided through a learning cycle that teaches them how to set achievable goals, make effective plans, demonstrate their abilities and reflect on themselves and their progress.

Fulfillment is not something that can be given to you. It can only be earned. That's why the supreme individual obligation under the Dark Horse Covenant is Personal Accountability.

The calculus is simple: With greater freedom of choice comes greater personal accountability. You are accountable for Knowing Your Micro-Motives. You are accountable for Knowing Your Choices. You are accountable for Knowing Your Strategies. And when you are accountable for all of these, then you are responsible for your own fulfillment.

Which system of opportunity do you want to support? A quotacracy? Or a democratic meritocracy?

Our institutions are charged with maintaining our quotacracy and preserving the Standardization Covenant. In contrast, the Dark Horse Covenant must be ratified and upheld by every one of us.

If we do, then we can all achieve personal fulfillment that's true to who we are. With the dark horse mindset, we can harness our individuality in the pursuit of fulfillment to achieve excellence.

### MORE SV CONTENT ON CAREER & SELF-DEVELOPMENT

**Summary: *Unsafe Thinking* by Jonah Sachs.** In *Unsafe Thinking*, Jonah Sachs reveals a path to higher performance and creativity for anyone ready to step out of their comfort zone. Sachs introduces counterintuitive insights that have the power to change the way you work and the way you live your life.

**Webinar: *Reclaim Your Sanity and Embrace the Daily Grind* by Leah Weiss.** Mindfulness expert Dr. Leah Weiss offers a set of practical, evidence-based strategies for practicing mindfulness in the real world, showing people not just how to survive another day but how to use ancient wisdom traditions to sharpen their abilities.

Storytelling With Data
*Page 7*

## THE SUMMARY IN BRIEF

Organizations use data to identify problems or opportunities, but communicating well is the top skill gap in roles that involve using data. The essential skill for today's leaders is to shape data into narratives that make a clear recommendation and inspire others to act.

In ***DataStory,*** Nancy Duarte and her team explain the unique power of stories, which make the brain light up in ways that no other form of communication does, and how using story frameworks to communicate data will encourage others to act on your recommendations.

Duarte also decodes how the highest performing brands communicate with data, to teach you the most effective ways to turn your data into narratives that blend the power of language, numbers, and graphics. It's not about visualizing data; instead, you'll learn how to transform numbers into narratives that drive action. ***DataStory*** is your indispensable guide for harnessing the power of story to stand out in the age of big data.

## IN THIS SUMMARY, YOU WILL LEARN:

- Why you need to communicate data effectively and how to do it.
- To craft a data point of view (DataPOV) that persuades key decision-makers.
- To structure an executive summary as a DataStory.
- To make data stick by making it relatable.

## Introduction

There's nonstop buzz about data, big data, small data, deep data, thick data, and machines that are learning to analyze data. Many organizations are doing cool things that are supposed to improve our lives because of, you guessed it, data. But without identifying the story emerging from the data, it's of little to no value.

The human brain is wired to process stories. Stories engage our senses. When we find ourselves hooked to a particular storyline, that resonance begins in our brains. This is the first trigger to enabling a physical and emotional response.

Stories also bring us closer together. Spoken narrative creates a powerful connection between the storyteller and the listener. Thoughts, brain activations, and behaviors become synchronized, causing our brains to literally "tick together."

Stories move us to feel. They have the magical ability to fully immerse listeners, making them feel like they have been transported into the narrative. When we are mentally stimulated by stories, our attention shifts away from critical thinking and becomes distracted by positive feelings.

Finally, stories move us to act. A study had people listen to a story about a father's relationship with his young, dying son. Participants were monitored before and after they heard the story, and the result showed spikes in cortisol, which focuses our attention, and oxytocin, which is connected with empathy.

The most astounding finding was that narratives can compel us into action by physically altering the chemistry in our brains. Stories that capture our attention cause us to emotionally connect with others and feel motivated to embark on a course of action.

By transforming your data into vivid scenes and structuring your delivery in the shape of a story, you will make your audience care about what your data says.

## PART I: COMMUNICATE DATA TO OTHERS

## Becoming a Communicator of Data

Virtually every company in every industry already has access to vast stores of intelligent data that can offer a competitive advantage. We can use data to invent new business models, help employees become more productive, and improve customer experiences.

The challenge of collecting, storing, analyzing, and providing all of that data is daunting, and yet the bigger challenge is using the data well to drive decisions. To make sense of the overwhelming onslaught, more people in a greater number of roles must understand how to leverage the various kinds of data at their disposal and bring the findings to life. Executives must constantly make decisions based largely upon data analysis. They want it presented to them in an expert manner.

Maybe you spend much of your time diving into pools of raw data looking for patterns or potential problems and opportunities, crisscrossing through tables, and pulling nectar of insights from charts. That work can be wonderfully energizing. You can feel like a detective let loose in a ***Choose Your Own Adventure*** book.

But for those who'd like to move into roles that help determine what an organization should do in light of data findings, they must develop communication skills. You must learn how to communicate where data is suggesting the organization should go.

### The Data Doesn't Speak For Itself

Making a recommendation requires that you first judge the data: A chart goes up. Was that good? Was it expected? Should we keep going in this direction, or change course? Do we have all the data we need to make a good decision?

Then you've got to construct a point of view based upon your conclusions. Communicating that point of view takes guts. For some of you, it will be crossing a chasm in your career, taking a leap into an exciting but perhaps nerve-racking position of greater responsibility. Making a recommendation comes with great responsibility but also accountability. How well you present a case can be a make-or-break, career-defining moment. If you learn to present recommendations well, you will become a trusted advisor.

Even with so much data at hand now, we're not always going to be able to find definitive support for decisions within it. Almost all data is historical—a record of what has already happened. It's a recording of what was or what is, not what could be. That means you need to use creative thinking and problem-solving to help shape the future state.

We've all heard the phrase "the data speaks for itself," but the truth is, it almost never communicates clearly for itself. We have to give it a voice.

Making a good recommendation involves more than presenting data that proves—or disproves—your hypothesis. That's just a starting point. A recommendation then takes

When you see your insights coming alive for people and inspiring them to action, it's deeply satisfying.

the creative step of proposing which action should be taken, and a good one makes a persuasive case for that action. This involves taking a big leap from making sense out of data to telling a meaningful story with it. You narrate the story the data has led you to.

If you have been operating in a well-worn mental groove of analytical thinking, you may feel a bit out of your element at first. But stepping out of an analytical mindset and into creative mode is highly energizing and fulfilling. When you see your insights coming alive for people and inspiring them to action, it's deeply satisfying.

## Communicating to Decision-Makers

When preparing to communicate data, think through who will be involved in its approval, and tailor your approach to appeal to them. Consider carefully what different audiences need to hear and how they want to hear it. Whenever your audience changes, so should the language you use.

Here, the focus is on making recommendations to executive decision-makers. They're the toughest customers and the ones people are generally the most intent to learn how to appeal to. Once you know the best approaches for persuading them, you can easily draw upon these elements for recommendations you make to anyone.

Executives are under incredible pressure to perform. No single job description covers the responsibilities of every executive at all organizations, but performance is almost universally assessed according to six primary levers of performance: revenue and profit, market share, retention, costs, time to market, and risk.

All these executive levers are measurable with key performance indicators (KPIs), and almost all KPIs fall into one or more of these areas. If your recommendation is destined for the desk of an executive, it should propose improvement in one of these categories. Addressing these areas will ensure that executives see its value, and they'll be able to tell right away why they have to be involved in approving it.

### Understand How Executives Consume Information

Executives have personal preferences in how they receive recommendations. To communicate to them, find someone who can mentor you in understanding these preferences.

If an executive wants you to make a stand-and-deliver presentation, make sure you also have a Slidedoc. A Slidedoc uses presentation software to make a visual document that can be easily skimmed and understood quickly, with clear hierarchy. They might ask for details afterward.

If they prefer a conversation, do not wing it. Think through the key points you need to make, and structure your discussion well. This creates a mental guide of what to say. A single-page recommendation is a great attachment to an email or complement to a conversation. This should be a very tight, visual overview of your thinking so you have time for discussion.

If you are asked to present a recommendation to an executive, you must be prepared to be interrupted before you finish. Way before you finish. Most executives are in positions of leadership because they can swiftly assess information and challenge it well. In an effort to be expedient, they will cut in to gain clarity on the full picture of what you're suggesting and how well you've thought it through.

Most executive meetings get chopped into half-hour increments, so a good general rule is to formally prepare only 15 minutes so you have time for questions.

# PART II: BRING CLARITY THROUGH STORY STRUCTURE

## Crafting a Data Point of View

As you explore data, you'll begin to formulate thoughts about what it's telling you. A point of view will emerge from your deep thinking. Once you've taken a clear stance on what you've found, you're ready to construct a data point of view (DataPOV™).

A DataPOV should be structured as a Big Idea. A Big Idea comprises two parts:

- **Your unique point of view requires action**. Whatever the data is telling you, it's speaking to you. You dove deep into the data to gain perspective. You made nuanced observations, and the understanding you developed about what needs to be done and how to do it is yours. Own it by expressing a point of view and clearly stating the action called for.
- **What is at stake**. You also need to propose what is at stake, whether your recommendation is approved or not. There is some cost, whether human or financial, to every recommendation. Articulating the stakes clarifies the benefit and risk inherent to a recommendation.

Your DataPOV is the centerpiece of your entire recommendation, and all other material you present stands in support of it. Make your DataPOV clear by expressing it in a complete, well-constructed sentence. The DataPOV becomes the title page of your recommendation, and you'll use it as the title of your Slidedoc. This way, people will know right away what your recommendation is about, and you'll construct a thoughtful, logical structure to support it.

### Choose the Most Effective Action For Your DataPOV.

Choosing the best verbs for expressing your DataPOV will make it clear exactly which action you're recommending. The verbs associated with data have three distinct modalities:

- **Change**—We need to change who we are or what we are doing. Choose a "change" verb ("expand," "prevent," "adopt") if your recommendation is about transformation. It could be a big change or a small change.
- **Continue**—We need to keep going in the same direction. Choose a "continue" verb ("endure," "maintain," "prolong") if your recommendation is about endurance. These verbs are in no way a cop-out. Sometimes, full speed ahead is a great course of action.
- **Finish**—We need to complete this. Choose a "finish" verb ("release," "attain," "solve") if your recommendation is about completion. Sometimes, completion is about accomplishing a goal, and at other times, it is about calling it quits.

## Structuring an Executive Summary as a DataStory

One powerful attribute of stories is how they are structured. Whether it's a personal story told over dinner or one from classical literature or a movie, stories told well usually have a similar three-act structure.

Act I presents the situation. The main character is introduced in their environment, and their current circumstances are made clear. Act II presents the complication, or messy middle. An adversarial force is introduced, and the hero attempts to resolve the central conflict. They are building the new skills necessary to overcome the adversary. Act III presents the resolution. The hero confronts the adversarial force and resolves the central conflict. The hero overcomes the challenge or learns new skills that transform them.

### Write an Executive Summary in Three Acts

One of the most important pages in your recommendation is the executive summary, because it is your first interaction with your readers. Their decision to continue reading depends upon their impression of your executive summary.

The rise and fall in a story arc can be applied to the way you structure an executive summary. This construction is called the DataStory.

Act I introduces the situation in which your organization currently finds itself. There is a problem or opportunity identified in the data. For example, "The average subscription renewal rate per region is 62 percent."

In Act II, the middle of the DataStory reveals the central conflict. The data reveals measurable symptoms that must change in some way. For example, "Only 23 percent of clients in the western region renew their subscriptions." What's the measurement that will be reversed if your recommendation is approved? Or, what are the numbers that will increase with the new opportunity?

That is where the "mess" is. Reversing a number or hitting the gas pedal on a number creates a lot of work, because it requires someone to take action. The numbers in the middle of your story will change direction when the right actions are taken.

In Act III, the end of the DataStory is your point of view for how to solve the messy middle and create a positive outcome in the future. The actions proposed will transform your future data. For example, "We need to tailor our content to appeal to regional preferences to gain market share in the west." Notice how the third act is your DataPOV. It states how you'd like the DataStory to end.

## Creating Action Through Analytical Structure

Proposing a recommendation that combines the familiar structure of story with the strength and credibility of logic will clarify the decision you are trying to derive from the data.

Crafting a recommendation for approval is a blend of argumentative and persuasive writing. Why? You are not just trying to prove you have your facts right (argumentation). You are also trying to move others to action (persuasion). A written recommendation from data blends a bit from both types of appeals.

> For gaining buy-in, clarity always outperforms cool.

You cannot submit a recommendation to an executive (or anyone, for that matter) if it doesn't have an intuitively logical structure. Without clear logic, your recommendation will take time for others to make sense of, and you will undermine your case.

Your structure itself communicates a message about what's important, and in what order. Crafting a good structure helps others see the logic in your thinking, and the process actually strengthens your own thought process. The most widely used structuring devices are an outline or a tree structure.

### A Recommendation Tree

In the tree structure, all supporting information hangs off a single topic at the top. In a Recommendation Tree, that unifying point is your DataPOV. All the points below cascade from it. Using a tree structure helps you look at the whole without getting lost in the parts. This format also helps filter out any tangential subtopics that don't directly support your DataPOV.

Consider using a Recommendation Tree in which the DataStory is supported by three points. We've been conditioned since we were young to use three supporting points. It follows classic, logical argumentation and even basic essay-writing.

**Define actions to support your DataStory**. The best way to support the action you are recommending is to break it into smaller actions. When you run (verb), you must swing your arms, pump your legs, and breathe through your lungs. Those are all sub-actions. The way to get traction on your DataStory is to use a series of phrases with verbs to support your main, proposed action.

**Motivate by explaining why**. The people on the receiving end of your recommendation may well be the very ones who have to do the things you recommend. They're going to want you to persuasively tell them why the action is necessary. If you explain clearly why it's important, your suggestion is more likely to get traction.

**Include assumptions by stating "This is true if…"** When using data to predict potential outcomes, you are making a case based on conjecture, inference, speculation, and sheer guesswork. Due to the subjective nature of business assumptions, it's crucial to be transparent about all of those you've made in arriving at your recommendation.

For example, in order to forecast your organization's profit over the next five years, you may make assumptions about factors that impact your finances. Your conclusion may be based upon assumptions like interest rates staying constant, donors continuing at current giving rates, or office vacancies remaining high in your area.

Executives are well aware that in order to make predictions with data, we often have to make assumptions like the ones listed above. They'll be impressed that you are up front about them, and that they don't have to ask what they are. Also be prepared to justify them. Otherwise, your recommendation will come into question.

## PART III: MAKE CLEAR CHARTS AND SLIDES

## Choosing Charts and Writing Observations

It's important to choose the best type of chart for communicating insights. Many beautiful and engaging ways to plot charts are available today. Huge databases with stunning visual intelligence can display data that whooshes across screens, unveiling clickable layers of data beneath it. As data sets grow ever more vast, charts are getting more complex and sexy.

The use of complex charts and fancy-schmancy business intelligence tools helps uncover insights, but when it comes to

explaining the action you are advising, you must share your findings in a visually simple way. For gaining buy-in, clarity always outperforms cool.

Don't disregard all the breathtaking business intelligence tools you may have. Use them to aggregate and explore data. But then articulate your observations in the simplest form that will showcase the key points. This is usually done with a bar, pie, or line chart. Using charts that are more complex than they need to be adds mental labor to the reviewer and pulls attention away from the key insight.

### Write Clear Chart Titles and Make Descriptive Observations

Chart titles are to be factual and neutral. To write one, you need to convey what, how, and when measurement happened. Organizations track concrete nouns (people, places, things) and abstract nouns (ideas) to monitor the health of the organization.

A precise understanding of what you have measured is vital. For example, are you measuring the quantity of customers, or are you measuring the percentage of online customers who also shop at your retail store? This clarity must be captured in the title of your chart. For example, "2019 Monthly Profit by Percentage" is a neutral chart title, but "We hit our profit goal this year!" is not.

If chart titles are factual and neutral, an observation is a statement of insight you have from a chart. An observation supports your perception of the problem or opportunity in the data. It is an additional short statement that frames the chart. It could be placed above the chart title, used as a slide title, or inserted as a major subhead within a Slidedoc. For example, an observation is "Female CEOs of public companies spiked in 2017." The framing of an observation tells the readers what to focus on.

## Building a Skimmable Slidedoc

In our time-strapped world, people prefer information that can be consumed quickly. A Slidedoc is a visual document designed for quick consumption. It is intended to be read and distributed versus presented. You can create highly effective ones with presentation software.

Many executives like receiving content in slide format, because it constrains the amount of detail you can provide. Chunking content into slides makes reading efficient, and encourages the author to exercise great discipline in terms of being concise.

Many executives say "Send me five slides" when they want insights from you, and they are usually looking for a succinct Slidedoc to read. Because you won't be presenting it, a Slidedoc must contain enough meaty information to be a piece of standalone communication that can be consumed quickly.

**Think of a Slidedoc as a visual book**. Slidedocs borrow aspects from well-designed books and follow long-established formats. Because a Slidedoc is visual and skimmable, you can also think of them a bit like magazines, in which visual hierarchy is paramount.

The components of a book that precede the main text are collectively called the front matter. First comes your cover page, which is an opportunity to convey a message right off the bat. How many times have you picked up a book just because it had a great title? The cover includes a title, your name, and the date of completion. The title and possible subtitle should be a tight, snappy version of your recommendation.

Your table of contents (TOC) allows your reader to get a quick overview of the structure and understand the gist of what the recommendation is about. You should also include page numbers so readers can jump to the sections they feel need the most attention from them. If the body of your Slidedoc is fewer than 10 slides, you might opt to forego a TOC.

The next slide should be an executive summary. Don't use bullet points. Write text in full sentences to convey complete thoughts.

**Organize content to be readable**. Slidedoc layouts consist of four elements: data, images, diagrams, and text. For the layout of each slide, your content must be organized with a clear visual hierarchy that conveys what to read first and where to go from there. Take the time to highlight sections of text on each page so readers notice the important bits.

# PART IV: MAKE DATA STICK

## Marveling at the Magnitude

We use numbers at very large and very tiny scales that humans sometimes struggle to understand. In 2004, Facebook hit 2 billion users. In 2018, Apple became the first public company with a net worth of $1 trillion. In December 2018, the U.S. national debt hit $21.97 trillion. How do we make sense of these sums? How can we envision how large or small something is that we can't even see with the naked eye?

To help your audience understand the magnitude of the

Empathetically understanding the people whose actions generate your data helps guide you to better communicate with them.

data, compare it to things that are familiar to them. Data should always be precise. When trying to help others understand magnitude, though, exactitude isn't the point. You want to find an approximate comparison to convey the scale of the number quickly.

The common ways people sense scale are size, distance, time, and speed. For example, many charts measure quantities. If a number on your axis is a million or more, convert it into the size of something. For example, if sales of your product dropped by a million units, maybe that much product would fill half of the glassy high-rise your sales team sits in.

Time and speed are often related to one another in our lives, so they are good sources for comparison. For example, a good way to convey a distance is to say how long it would take to drive there at the familiar speed of a car or airplane, because time x speed = distance. According to cosmologist Fred Hoyle, if you drove a car upward at 60 mph, in about an hour, you'd be in space. To get to the Moon, it'd take 4,000 hours of nonstop driving (or almost half a year).

## Humanizing Data

Some data has nothing to do with humans, but most does. Most organizational data wouldn't exist without humans generating it. We are buying and selling goods, clicking on links, wearing devices, undergoing medical tests, selling homes, etc. You can find life experiences within the data of almost every chart.

Empathetically understanding the people whose actions generate your data helps guide you to better communicate with them. Think of them as characters in your DataStory. They either help the organization achieve your goals, or contribute to falling short of them. They are, in other words, either heroes or adversaries of your data.

In storytelling, a hero usually has a goal or desire they'd like to fulfill. In a DataStory, the hero plays a role in moving the data in a desirable direction. The hero could be a customer, user, employee, partner, donor, voter, or patient.

The adversary thwarts the hero or has a competing goal the hero must prevent the adversary from achieving. They throw roadblocks in the way of achieving the goal. In a DataStory, the adversary could be competitors, the media, an activist, investor, a mindset.

You identify the adversary by understanding the type of conflict your hero is experiencing. The hero in your data could be in conflict with a person, group, way of thinking, or system that creates a roadblock for them. Roadblocks come in many shapes, such as fear, bureaucracy, technology, bias, and even cancer cells. The way you communicate can rally the hero to overcome an adversary pushing data in an undesirable direction.

### Speak With the Characters

Data tells you what has happened in the past, but doesn't always tell you why unless you talk to the heroes generating the data or the adversaries against it. The best way to really understand your heroes and learn about their issues is to speak with a number of them.

Identify a random sampling of data heroes and speak with them, asking about concerns, opinions, and motivations. Talking to them reveals their adversary in a way quantitative data can't. With such powerful technological tools for probing into data, it's easy to lose sight of the fact that it represents the desires, pursuits, and problems of individual people.

## Storytelling With Data

Almost every recommendation requires a group of people to execute it, whether that's peers in your department, the executive team, or a broader audience. If you need to influence a department, customer, shareholder, or the entire company, you'll likely be asked to give a formal presentation.

When you have the stage, you can use cinematic design and storytelling techniques to make a presentation dynamic, revealing insights in a dramatic fashion. Make your DataStory truly come alive by creating suspense and telling an intriguing story with some elements of mystery. By strategically

withholding key features of your findings at first, you can give the audience an exciting jolt of surprise with a big reveal.

Let's say your team has worked very hard, and you're about to present the results. You can create suspense by having each bar in a chart revealed one at a time. If the team is unaware of the final outcome, this lets you set up how messy it's been and how hard they have worked. Then the team rejoices when they see the final, positive outcome.

Two ways to surprise an audience are to add context to the data, which may give your data a strikingly different meaning, and to zoom in or out of the data, to reveal a hidden feature of a chart or axis that shows an unexpected result.

### A DataStory Wins an Academy Award

Who would have thought a movie about a slideshow full of data would win an Academy Award? During the documentary ***An Inconvenient Truth***, the producers revealed data in an unprecedented way. Former U.S. vice president Al Gore delivered the presentation in a small studio in southern California. The producers commissioned a custom, 90-foot-wide, digital screen for the movie, and Gore stunned the audience with a startling reveal.

The primary screen was so big that Gore had to get on a scissor lift to point to a rising red line depicting the increase in atmospheric carbon dioxide levels predicted for future years. As the line ascended higher and higher, the audience could see the end of the rise was imminent when a yellow dot was displayed. After all, the screen only went so high.

What they didn't know was that the production team had built a secret screen above the 90-foot screen, which was hidden behind the stage drapery. The audience gasped as Gore continued to ascend on the lift as the extra screen was revealed, showing the shocking additional rise in carbon dioxide all the way to 2056.

We are only in the formative phase of the ways in which data will change our lives, and it needs the help of a communicator. Transforming numbers into narratives will become part of every leader's job.

We rely on data to tell us what has happened and stories to tell us what it means. Words are powerful. Skillfully wielding them only comes with practice.

As you journey through your career, may you master the science of data and the art of communicating it.

## THE SUMMARY IN BRIEF

There have been plenty of books written on the topics of success, self-improvement, and career advancement, but many fail to address one of the simplest and most powerful principles— you have to show up, day in and day out, and do the work.

***Day In, Day Out*** explores the secret power to be found in showing up and doing the work for a sustained period of time. Now the owner and founder of Dancer Concrete Design, Nicholas Dancer was once confronted with roadblock after roadblock on his way to success, and used the principles in this book to transform his situation.

Dancer addresses four of the most important elements of his approach— Move, Grow, Build, and Truth. Then, he applies these principles in concrete ways to growing a business and working effectively in a business environment. Throughout, he explores real methods and mindsets that can help you show up, day in and day out, to create something truly innovative and exceptional for your life or business.

## IN THIS SUMMARY, YOU WILL LEARN:

- The importance of moving forward, and how it impacts every undertaking.
- How to grow and develop through curiosity, adaptation, and becoming your best self.
- Why building up the people around you is the key to growth and leadership.
- How to care for others and believe in the best of each other.

## Introduction

Businesses, relationships, and even parenting can benefit from following vital principles to live a life of strength, love, and growth. These principles, shared in this book summary, are designed to convey the core factors that can transform the way you live your life, think about your career, lead your family, and even run your business.

Most people don't want to believe that they can achieve the results they want if they stick to the basics. They assume that in order to succeed, they need one more degree or that they need to be on the forefront of something 'new.' They follow an ever-elusive dream of doing less while getting more. This tendency to look for secrets and shortcuts isn't new to this generation or to us.

But none of these supposed answers work. We all think maybe they will work for us, that we are different, special, or the exception. But trying to skip steps to our own development just leaves us further behind.

These principles are for anyone who understands that great things need time to mature and develop, anyone who wants something different than the 'quick fix' or 'make it happen' bravado that floods the business section.

Each day you show up, you'll gain insight and tools to use in your own life and business. At some point, you'll realize you have accomplished a big task by doing just a little bit each day.

## Move

Progress is about movement. All adventures start with movement, with action. It's the moving that gets the work done, and moving forward is the only way to keep from going backward.

One of the most critical components of every journey is deciding which way to go. This is no different in business. To follow the way you've chosen, you have to be self-aware. Ask yourself: Where am I right now, and where do I want to be? Through constant self-awareness, you can stay on your path as you move toward your potential.

### Stay Away from Extremes

Pick any of the world's most successful and widely known companies today. If you track back through their history, you'll see that they were not built overnight. To have lasting results in any area of life, including business, you have to stay away from extremes. Build a sustainable rhythm and stick to it day in and day out.

Working with steadiness results in less low lows, a steady and effective output, and more energy freed up to focus on your ultimate goals (rather than dealing with the extreme consequences of extreme actions). The key to lasting results is to use your discipline to keep growing.

### Show Up

We all rationalize opportunities to take a day off or ease back from our day in, day out work. On those days, we have to remind ourselves to 'just press play.' Just sit down and start working. You'll be amazed by what you can accomplish on days you originally planned on simply slacking off.

That said, the idea of just showing up is no excuse for doing shoddy work. But if you're doing your best with the energy, knowledge, and skills you have right now, your effort is valuable and meaningful.

## Grow

Growth and development go hand in hand. It's about being curious— about learning, adapting, and working toward becoming your best self, because when you are at your best, everyone else around you also grows.

When you do your best, momentum builds. The momentum makes it easier to do great work on the same thing next time, and the momentum even flows into other areas of your life, making what used to seem impossible seem possible.

### Choose Your "Yeses"

In many areas of our lives, we find ourselves doing things we don't particularly want to do. We want to please people; we want to be liked. If we're going to say no, we feel we need to come up with some lame excuse. But do we?

We're adults. We get to choose when we say no, and we can leave it at that. For the things we do say yes to, it should be a "Wow, that would be amazing! Absolutely!" When we leave room in our lives by saying no to most things, we have the ability to do the things we truly are excited about.

### Let It Sit

If you run a business, you are likely constantly hounded by emails, text messages, request for decisions, and everyday work goals. If you don't prioritize time for yourself, that time will quickly be occupied by something else.

It takes a ton of energy to be two separate people, and it never works well.

It's important to find your own space to turn off all of your distractions. You need your thinking time.

Letting things sit is simply deciding to not make decisions right now. It's choosing to wait. Many people will bring you things that seem to require 'right now' decisions. It's your job to keep the path steady, and to allow time and space. Oftentimes, a single night of sleep helps orient us; it allows us the space to make the right decision.

### Be Yourself

It takes a ton of energy to be two separate people, and it never works well. You spend way too much time thinking about who you are in a particular moment, and you ultimately can't fool anyone. It won't take long for others to find out that the person you are at work is not the same person you are at home.

When you are yourself, you invite other people to show up as who they are, too. You remove the façade and allow people to just be people, not pretenders. It's when we give the world our true selves that we find the most joy in work and in life.

## Build

Build up the people around you, even when it's difficult or you're distracted by your own concerns and goals. Lead others and create alongside them to accomplish more than any of you could have done on your own.

We often fall into "if only" thinking. But if we take a step back, we realize what we're really saying. We're essentially waiting for life to be better. Rather than 'wait,' what if we approach life for what it is right now?

### Embrace the Suck

Society has conditioned us to desire and look for comfort, and it's easy for any of us to say we deserve it. Yes, we all have obstacles to overcome; you are likely working through an issue right now that is taking your time and bringing stress to your day. That's how life works. But that doesn't mean we are worthy of an extravagant reward at every turn.

Comfort is great, but that doesn't mean we can ignore the reality of discomfort. In fact, if we embrace the suck, we'll realize that we grow through pain. Our lives and businesses grow stronger when we deal with and learn from painful events directly.

### The Rule of 100

As we move through our days, it's easy to feel that any single decision won't have much of an impact on our lives. We don't think much of skipping a daily run, ordering the burger platter at lunch instead of the salad bar, or watching just one more episode of Netflix.

But when you're in a rut in life or moving in an undesirable direction, you can identify where you're going off-track with the 100x exercise. Ask yourself: What is the compound effect of doing this one hundred times?

Take a moment to focus on one decision you're making in your business or life right now. Multiply that decision by one hundred, so you can see the big picture. Let that bigger picture inform the present.

### Priority Points

A priority point is a point in time when your presence is more important than at any other time. Some people say they don't have time for daily huddles or it's not conducive to their business. That's bunk. A daily huddle is a short, simple strategy that ultimately saves time and money through improved communication. For every minute we spend on a daily huddle, we hope to save an hour in our day.

What are your priority points? There are not many better trades than one minute of communication for an hour of work. When you find these kinds of priority points, stick to them. They will be key drivers in your business and life.

## Truth

Truth is about caring for each other and believing in the best of each other. Truth and love are synonymous; love is

the deepest truth we have and lies at the core of all timeless principles, including the notion that you should love others as you love yourself.

Whatever choices we make, as long as we make them based on the truth we're seeking, they will be the right choices for us. Sure, a certain path might be better for you in a given time, but the key is to keep your focus on the bigger truth you're searching for. If you do, you can be more flexible with the specific paths you choose to get there. The truth is not a result of the path. Truth is always there.

### Falling is Okay

Learning to ride without training wheels comes with crashes, bumps, and bruises. During the process, we tend to retreat to our safety nets. But when we see that falling is okay and that we can progressively reach our goals, something clicks. We gain confidence and ultimately realize we can do something we couldn't before.

Falling is normal, and growing and getting somewhere in life requires a process. We need to be there for each other as we learn. We need to use the bumps to get stronger and ride on.

### Don't Wait for Perfect

Rarely will the stars align such that everything goes perfectly. That's the fun part of leading. You plan well. You do your best to prepare. But when something happens, you adjust. You find out what you do have and what you can do.

In business, we choose to figure it out. That's why people want to work with us— we solve problems and offer solutions. Don't wait for perfect. Find a way, and make it work.

### The Way We Work

At Dancer Concrete Design, the way we work can help inspire you and your business to transform for the better.

We insist on accountable, both within ourselves and with each other. We always leave things better than we found them, and we always strive to do the best work we can in the moment with the variables and challenges given to us. We do our best with what's in front of us right now, even if it sucks. We always choose impact over comfort.

We work hard, smart, and long. We don't look for the easiest way, but the best and most enduring way. We show up when it's tough and stay consistent, day in and day out.

## Conclusion

Nothing in this book is revolutionary or new. In the end, it's all about following a handful of key principles. These principles will help you build a great life, a life you love.

It's not about taking the cold shower or drinking the green juice. Sure, certain practices can certainly help us on our paths, but they are ultimately meaningless unless they lead us to real change. When you want real change, the quick-fix solution won't cut it. You'll need a day-in, day-out, little-bit-each-day solution.

As you show up, as you create, you'll find a secret power that wasn't so secret after all.

Nicholas Dancer owns and operates Dancer Concrete Design, a specialty concrete finishing company that started in his basement and has grown to be the leader for architectural concrete finishes in the region. He lives in Fort Wayne, Indiana, and his favorite thing is celebrating life with his wife, Alexis, and three sons.

## THE SUMMARY IN BRIEF

The modern world is filled with opportunities. From the Internet to easy travel, opportunities are nearly limitless for those who are motivated and driven. Because of how many opportunities are at our fingertips, it can be difficult to know which opportunities we should take up and which ones we should leave behind. In ***Discernment: The Business Athlete's Regimen for a Great Life Through Better Decisions,*** you can learn techniques for finding the best opportunities by making great decisions. Jeff Dudan, the book's author, draws on personal stories and time-tested techniques to help you become a leader and efficient problem solver.

More specifically, Dudan provides readers with sets of tools, models of thought, beliefs, and principles that can help you make the best decision quickly by comparing them against one another. Although written specifically for the business person in mind, any person who wants to be a leader and efficient problem solver will benefit from these techniques. Learn how to become a leader and problem solver that people look to for advice by using the tools and models of thought offered in this book.

## IN THIS SUMMARY, YOU WILL LEARN:

- How business is like a game or sport.
- Why discernment matters in the game of business.
- How to become a business athlete in your business.
- How to win the game called business.

## The Sport Called Business

One of the most beloved pastimes in the entire world is sports. Sports can motivate people to work grueling hours to perfect their game to become the best player possible. Whether it's the intoxicating environment or passion that comes with rooting for an underdog, sports captivate people worldwide. Brits love football. Americans also love football, but a different kind. Canadians love hockey. It's just that simple. Sports have a profound effect on people that seems almost to be inexplicable.

Oddly enough, business is the same way. There are winners and losers in business. You have to train to become a winner. The score is kept. Some people train and push themselves so they can compete at the next level. This then allows their team to perform and show up at luncheons, proposals, or anything else that might be considered the business game.

In fact, thinking of business as a game is helpful and accurate. You have to learn the rules of the game to succeed and excel. Those who think of business in such a way can be thought of as business athletes. They train endlessly to perfect their game, be the best amongst their competitors, and lead their team to victory.

## What Makes a Business Athlete?

Business athletes are those that know how to play the game of business well. Though they might not win every round, they win enough to be revered by their team and other competitors in the industry. From their endless training on the fundamentals of business, they can tackle problems with intelligence and wisdom.

However, business athletes don't ever stop learning. They continue to develop their technique and perfect their craft to continue to be the best. This makes them push themselves to compete and reach the next level in business. Furthermore, business athletes lead their team and carry the ball. They don't sit passively on the sidelines.

As a result, business athletes perform. When it's time for them to make a play, they do it with confidence and discernment, even if they feel stressed or insecure. It is this desire and ability to perform no matter what that separates amateurs from business athletes.

### Business Coaching

All impressive athletes have coaches on their side. No matter how naturally talented an athlete might be, their skills will never fully develop without a coach's help. The coach's goal is to pinpoint weaknesses, fix them, and let their strength shine. Without an intelligent and helpful coach, most athletes won't go very far. The same goes for business.

Any business athlete needs a business coach. Without a business coach, you could fall into the trap of making the same mistake over and over again without realizing it. At the same time, a business coach can help you find your strengths to best use them to score and win the game. Trust experienced and proven business people to coach and lead you to victory.

### When Discernment Comes Into Play

All sports are about decision making. When should you throw the ball? When should you run? If you don't know how to make your game decisions properly, you can never expect to grow as an athlete. Once again, the same principle applies to the game of business.

Business is nothing but a bunch of decisions that affect other decisions. To be the best business athlete possible, you need to start learning how to discern between different opportunities that come your way. Whether it's making an investment in a potentially risky but rewarding company or hiring a new employee, discernment is crucial to becoming a successful business athlete.

## Intelligence vs Experience

Many people make the mistake of believing that discernment has to do with intelligence more so than experience. Although you need to be intelligent to make good decisions, a lot of discernment is actually a result of experience, not intelligence. If you are taking the time to improve your business game, you are probably intelligent enough, but you might lack experience.

Experience allows you to know what opportunities you should pass up and which opportunities you should take. Certain opportunities will come with red flags that might be subtle or difficult to detect as a newbie. There is no shame in that. You just need to learn how to look for those red flags so that you can discern between what's worth your time and what isn't.

With that in mind, improve your discernment by using your smarts and experience to make well-informed decisions. You need both to succeed. Any person without intelligence cannot make good decisions. Conversely, any person without experience won't know what fact to follow. Find a way

to meld your intelligence and experience so that you make good decisions for yourself and company.

### Discernment is a Full-Contact Sport

Whether you're just starting out or the CEO of a company, decision-making is a full-contact sport. Every decision you make will affect someone or something else down the line. The higher up in the organization you go, the bigger impact your decisions make. In fact, some people refuse higher-level jobs for this reason. Being responsible for important decisions is stressful and difficult.

In a perfect world, decisions will be based on stable information that you can count on ahead of time. Unfortunately, business is a moving sport. This means you cannot predict the future, and outcomes are rarely certain ahead of time. This makes high-level decisions nothing more than educated guesses about probable outcomes.

Discernment does not ensure control over the end results, but it allows you to help understand and reduce risks when you decide. That should be the goal of every decision you make: to maximize benefits and minimize risks so you can win the game.

## How to Play the Game

If you have decided you want to be a business athlete, it's time to play the game. Even if you are an experienced business person, you should always check up on the game, see how it has changed, and improve your abilities. Here are 6 ways that will help you play the game of business:

### 1. Learn the Game

The only way to play the game is to know it. You know the game by learning fundamentals about business and constantly pursuing education and improvement. If you don't know the game, it is impossible to win.

Part of knowing the game also means knowing the type of team you want to be. You need to establish what you want to accomplish as a leader. This means that you need to know what discernment looks like in action. There's no way to practice discernment if you don't know what it looks like. As you are learning the game of business, learn the game of discernment too.

### 2. Know Your Values

Having good discernment means knowing your values and sticking to your guns. Discernment is often up to a gut feeling. If you are constantly listening to other people's values instead of your own, you can feel lost and unsure of your decision-making process. Know exactly where you stand on certain things so you can be led by your own intuition, not someone else's. Trusting yourself and your values make you different and let you succeed as a business athlete.

Learn your values by reflecting on your life and taking a good hard look at what you want. If you think you already know your values, great, but you should always look back at your values to see how they have changed or if they should change. Take an active look at your values, as well, so you can easily apply them to your business model.

### 3. Create a Game Plan

Before any big game, all good sports teams practice and create a game plan for the exact opponent they're going up against. Whether it is a harmless game for fun or a national championship, no sports team approaches a game without a game plan. Business athletes should do the same.

Create an active game plan so you can score and win the game. Your game plan should include your natural skills, values, and whatever opponent you are going against. Make sure the game plan is actionable and easy to follow. If it is vague or too intensive, you won't be able to execute it. Do your best to create a game plan that allows you to tackle any situation with confidence and intelligence. This will help you to make decisions.

### 4. Challenge Yourself and Develop Your Abilities

Once again, discernment is primarily about the experience, not intelligence. The only way to improve your discernment is to expose yourself to a lot of new experiences. This will expose you to business fundamentals so you can have better discernment. The best way to get more experience is to challenge yourself. Don't constantly settle by doing what you always do. Expose yourself to a variety of situations and people, so you increase your experience and have better discernment abilities.

Every player brings something new to the table. That includes you. You have special abilities that no other business athlete has to offer. Learn how to use those abilities to get what you want. More than that, continue to fine-tune those abilities, so they become more and more impressive. Your natural abilities will only take you so far. Develop them through challenging yourself and constantly learning so that you can be the best version of yourself.

### 5. Be a Leader

All sports teams have a leader. Normally, that leader is the captain, but there are other ways to be a leader without necessarily being a captain. All business teams have a leader, as well. Make yourself a winner by actively becoming a leader in your team if you are not already.

Leaders are the ones who make the tough decisions. If you want to be a leader who makes profound decisions, expect your mind, body, and emotions to constantly be challenged. No matter what decision you make, someone will not be completely pleased. It is up to you as the leader to know how to lead your team while still remaining fit for yourself.

If you do not train your mind to become a leader, you will likely fail under pressure. Train your fitness and leadership so that you can remain on top of your game, lead your team to success, and win as a business athlete.

### 6. Train Hard

Even after you have learned the game, discovered your values, created a game plan, and prepared yourself to be a leader, the grind does not stop. The moment you stop pushing yourself is the moment you will start sliding. Stay on top of your game by training hard, even when you are a winning business athlete.

Establish a training cadence and discerning habits to help you train around the clock. By incorporating discernment habits into your daily routine, you'll become more productive and better at decision making. As a result, you can expect to be a better leader and win at the game called business.

## Winning the Game

To win the game, you need to recognize great opportunities, understand their value, and know when they appear. You cannot do that without discernment. At the end of the day, discernment is what separates amateurs from business athletes. You could only win the game by enhancing your discernment to improve your decision-making abilities and leadership skills.

Discernment is about more than just knowing stuff, though. It takes a lot of hard work and effort to become a master in discernment. Only through hard work and training will you master discernment and improve your game.

### Your Training Starts Now

Become the business athlete you've always wanted to be by working hard and enhancing your discernment abilities. Your journey to becoming the best leader possible begins today. Start your training, and don't look back.

Jeff Dudan is a seasoned business builder, Undercover Boss, and former college football player. He went to Florida to paint in the wake of Hurricane Andrew and two years later launched AdvantaClean, a national restoration franchise that had 240 locations in 37 states when Jeff exited the company in 2019. He's since joined up with his brother, Mike, to start Dudan Partners, a catalyst for enterprise growth in the franchise industry. Jeff recently retired from coaching his kids' sports teams-thirty combined seasons in the past twelve years-and is a top Forbes contributor.

## Discipline is Destiny

**The Power of Self-Control**

*By Ryan Holiday*

**Ryan Holiday** is one of the world's bestselling living philosophers. His books, including *The Obstacle Is the Way, Ego Is the Enemy, The Daily Stoic*, and the #1 New York Times bestseller *Stillness Is the Key,* appear in more than forty languages and have sold more than five million copies. He lives outside Austin with his wife and two boys...and a small herd of cows and donkeys and goats. His bookstore, The Painted Porch, sits on historic Main Street in Bastrop, Texas.

# The Virtue of Temperance in the Modern World

Most people in any modern, developed nation have everything they need to survive and then some. Today, ordinary people live the way kings and queens would have been lucky to live in the past. We have the freedom to do anything we want, go anywhere we want, and believe anything we want. At the push of a button, we have access to all the pleasures and distractions in the world. With so many luxuries and opportunities at our fingertips, it can be challenging to live a life of virtue. In ancient times, four key components defined virtue: courage, temperance, justice, and wisdom. While each element is distinct from the rest, each virtue is interrelated. While it's challenging to live a virtuous life in today's world, it's not impossible. With some focus and determination, anyone can master each virtue and live a life of honor, glory, and excellence in every sense.

This is the second book in a four-part series on cardinal virtues written by the renowned philosopher and New York Times best-selling author Ryan Holiday. ***Discipline is Destiny: The Power of Self-Control*** focuses on self-discipline, "the virtue of temperance." Holiday defines self-discipline as "giving everything you have and knowing what to hold back. Temperance, he believes, "is not deprivation but command of oneself physically, mentally, spiritually – demanding the best of oneself, even when no one is looking, even when allowed less." This book was written to help everyone "figure out how to manage their emotions, abstain from what should be abstained from, choose what standards to observe." Holiday believes that "it is through discipline that not only are all things possible, but also that all things are enhanced. More than talent, life is about temperament. And temperance." This book dissects the virtue of temperance and shows us how to master ourselves; how to strike a balance between our higher and lower selves; how to live our best lives through self-control, moderation, composure, and balance.

## Part 1: The Exterior (The Body)

In today's modern world, it's pretty common to come across a person who appears to have everything they could ever want or need but still feels dissatisfied, discontent, and overwhelmed. Because it's so easy for us to get what we want, yet we're exposed to such an abundance of things that no one person can ever really have it all, it's almost impossible to live

in the moment and maintain a sense of gratitude for what's around us in our daily lives.

Temperance is about living a simple, modest life. It's about forging fortitude and self-control in all aspects except toughness and determination. Holiday believes that "We owe it to ourselves, to our goals, to the game, to keep going. To keep pushing. To stay pure. To be tough. To conquer our bodies before they conquer us." To begin developing the virtue of temperance, Holiday suggests, "When you have trouble waking up, when you find it hard, remind yourself of who you come from, remind yourself of the tradition, remind yourself of what is at stake. Think of how lucky you are. Be glad to be awake (because it's better than the alternative, which we'll all greet one day). Feel the joy of being able to do what you love. Cherish the time. But most of all, use it."

Beyond necessity, when everything we could dream of having is right at our fingertips, we become vulnerable to increasing desires, gluttony, laziness, and many other less-than-virtuous character traits. Even those who live their lives with the best intentions often end up neglecting their bodies and minds, falling into bad habits, and experiencing a state of internal imbalance. When our desires outgrow necessity, we find ourselves working harder and harder to get what we want and often ending up burnt out, stressed out, and in debt. Holiday reminds us that "No one is having less fun than an overextended, overcommitted person with debtors at their door . . . or a high-paying job they can't afford to lose. No one is less free than the person trapped on the treadmill moving faster and faster and faster but going nowhere. The less you desire, the richer you are, the freer you are, the more powerful you are. It's that simple."

The most important thing we can do to cultivate the virtue of temperance and achieve greatness is to take care of our bodies "Not just in the gym, but in the kitchen too." Holiday compares the human body to a high-end race car and urges us to "fuel accordingly." Following this seemingly simple path is far from easy. However, Holiday reminds us that "If we don't dominate ourselves physically, who and what does dominate? Outside forces. Laziness. Adversity. Entropy. Atrophy. We know that while it might seem easy to take it easy and more pleasurable to indulge our pleasure centers, in the long run, it is a far more painful route."

The path to greatness through temperance begins with self-discipline, and self-discipline starts with the body. A person who has gained mastery of their soul is a person who doesn't fear change or lack of abundance. A person who practices self-discipline and fuels their body well isn't only in better physical shape but is happier and more well-balanced. Holiday urges us to understand the importance of cultivating temperance, reminding us that "No one who is a slave to their urges or to sloth, no one without strength or a good schedule, can create a great life. Certainly, they will be too consumed with themselves to be of much good to anyone else. Those who tell themselves they are free to do anything will, inevitably, be chained to something. Discipline is how we free ourselves. It is the key that unlocks the chains. It is how we save ourselves. We choose the hard way . . . because, in the long run, it's actually the only way."

## Part 2: The Inner Domain (The Temperament)

While practicing self-discipline and taking care of the physical body are crucial first steps to cultivating temperance, it's important to understand that the body is only one vehicle for self-discipline. Imbalance can (and does) still exist in people who keep themselves in perfect physical shape. We all know or have heard of someone who is in complete control of their physical form, but their minds and lives are a mess. Holiday explains, "It doesn't matter how much discipline we exert over what we eat or when we wake up if we are driven by distraction, at the mercy of biases or bad moods, given over to temptation, impulses, or instinct. This is no way to live—in fact, this intemperance condemns a person to never reach their full potential, with perpetual misery as a possible chaser. True self-control means moderation not just in what we do, but also how we think, how we feel, how we comport ourselves in a world of chaos and confusion."

Holiday urges us to "work smarter, not harder," reminding us that "discipline isn't just endurance and strength" – temperance also requires us to be able to make the best of any situation, finding opportunities to adjust, grow, and improve regardless of the constraints of our world or profession. The ultimate test is to achieve temperance "creatively, consciously, calmly" with "equanimity and poise, even initiative and joy." Cultivating the virtue of temperance is an all-consuming, full-time endeavor. However, Holiday says, "It's the journey of a lifetime, one that gets more impressive (and rewarding) the longer you stay at it."

This journey begins with understanding the difference between the "higher self" and the "lower self." These align with "two types of mental processing we do, which psychologists call thinking fast, and thinking slow." Thinking fast is associated with your gut instincts and attributed to the lower self. Thinking slowly, rationally, and philosophically is attributed to the higher self. It's about pausing when the going gets tough and letting temperament prevail over fear, anxiety, and prejudice. One area where this rule can (and must) apply in many of our personal and professional lives is where it comes down to having the discipline to say no to superfluous things. Holiday explains, "The secret to success in almost all fields is large, uninterrupted blocks of focused time. And yet, how many people organize their days or lives to make this possible? And then they wonder why they are frazzled, unproductive, overwhelmed, always behind." When everything we agree to means saying no to something else, it's impossible to be committed to anything without developing the discipline to say no.

Holiday urges us to remember that "No one can say yes to their destiny without saying no to what is clearly someone else's. No one can achieve their main thing without the discipline to make it the main thing." It's equally essential to understand that once you decide to make that main thing your primary area of focus, you must put your entire mind into it. This leads us to Holiday's next area of focus: cultivating the discipline of patience. Holiday believes it's impossible for impatient people to do important things "because almost everything that matters takes longer

> Patient people understand that trying to achieve perfection is futile."

than it should, certainly longer than we would like. Meanwhile, the patient person is not only easier to work with, but more protected and resilient."

Patient people understand that trying to achieve perfection is futile. They have the discipline to avoid procrastination. They know that if and when they make mistakes, they can learn from them. They understand that "Discipline is not a punishment, it's a way to avoid punishment." Patient people also know that "You don't have to verbalize every thought. You don't have to always give your opinion—especially when it's not solicited. Just because there is a pause doesn't mean you have to fill it. Just because everyone else is talking doesn't mean you have to jump in. You can sit with the awkwardness. You can use the silence to your advantage. You can wait and see. You can listen more than you talk. You can speak only when you're certain it's not better left unsaid."

Cultivating temperance in your higher self requires you to create healthy boundaries for yourself. Understand, first and foremost, that "We don't need accomplishments to feel good or to be good enough. What do we need? The truth: not much! Some food and water. Work that we can challenge ourselves with. A calm mind in the midst of adversity. Sleep. A solid routine. A cause we are committed to. Something we're getting better at. Everything else is extra. Or worse, as history has shown countless times, the source of our painful downfall." Creating the boundaries you need to follow the rules above will give you the space you need to align your body, mind, and spirit so that you can discover all that you're capable of achieving, which is likely to be more than you thought possible.

## Part 3: The Magisterial (The Soul)

Once you've gained command over your physical body and have aligned your mind and spirit with it, the final test of mastering the virtue of temperance comes down to the soul. Temperance and restraint are common in monasteries and mountain retreats. However, Holiday asks us, "Can you achieve this stillness, this balance, in the chaos of real life? Surrounded by temptation? Whether the crowd cheers or jeers? Regardless of what would be tolerated, what you could get away with, what people even think is possible?" To find a person capable of mastering themselves mentally and physically on this level and having enough energy left to give of themselves is extremely rare.

This part of temperance is all about selflessness and sacrifice. It's about putting your ego aside and leaving other people's mistakes to those who have made them. It's about showing up, persevering, giving more, and living up to impossible standards. It's about keeping yourself together even in the most chaotic situations where everything seems to be falling apart, and everyone is watching and waiting for you to fall apart too.

Retreats are temporary, and conquerors aren't rare. "Talented writers, groundbreaking scientists, incredible athletes, bold entrepreneurs—all these types are rare. Rarer still, and all the more impressive, are those who manage to achieve these feats without losing control of themselves, without becoming slaves to their ambition, to their careers, to their urges," explains Holiday.

The secret to all this lies not only in self-discipline but flexibility. To be flexible in every sense of the word is an enormous challenge. It requires us to live and let live while resting comfortably in our own traditions and allowing new and improved ones to be created. It also requires us to adjust as the world, and our position within it changes – remaining true to our principles without becoming bitter, an outcast, or falling victim to failure. "Rigidity is fragility. Formlessness is unbreakable." It's all so much easier said than done.

The four virtues are about instilling good character in ourselves through the art of self-discipline. Self-discipline – and through it, temperance – must be cultivated. It's something you can only prove by the life you lead. "We can learn about virtue all we want, but when we get to the crossroads, there we will have to make a choice. Self-control must be observed physically. It must be embodied mentally. It must be rendered magisterially when our moment comes. It's our decision what this will look like. Not just once, but a thousand times in life. Not just in the past and the future but right now, today."

## THE SUMMARY IN BRIEF

Do you feel like some people have all the luck in business, but you are never one of those people, no matter how hard you try? Or do you feel like you could work for hours and hours and still not get that promotion or account that you have been working for? If so, you're not alone. The issue to this problem is finding a way to create your own luck instead of waiting on others to create it for you. ***Don't Be A Stranger*** explains exactly how you can become one of those lucky business people all by creating and maintaining strategic relationships.

In this book, Lawrence R. Perkins explains how you can succeed in business by creating your own luck through strategic relationship building. He explains that even though the world is getting more digitalized, business is still conducted with people you trust and like. By building strategic relationships, you can put yourself in the position to succeed while still maintaining a healthy life to work ratio. Written for introverts and extroverts alike, *Don't Be A Stranger* teaches you how to use your relationships to create your own luck and succeed in business without working harder.

## IN THIS SUMMARY, YOU WILL LEARN:

- The key to business luck is relationships.
- The importance of not being a stranger.
- How to be strategic in your relationship building.
- Sowing seeds and patience are crucial for beneficial relationship building.

## Introduction

Many business people struggle and seem to work non-stop while seeing little fruit from their labor. For example, you may work overtime, maybe even set company records or standards. Despite all of this work, you still may not get where you want to be in your career. Whenever you feel stuck in this way, it is really difficult not to feel jealous when looking around at some of the luckier businessmen around you. You may begin to resent your boss who comes in at 9:30 every morning while you have been there since 7:00.

Most people start to accredit professional success to luck, not hard work. Unfortunately, this is a sad reality for many people: no matter how hard they work, the luck of someone else gives them the edge in the office. This leaves thousands if not millions of business people stuck in an endless maze of trying to achieve financial success only to fail.

### Todd's Story

Believe it or not, but a successful private investor named Todd credits much of his current success in business to his email getting hacked. That's right. While most email hackings cause people a headache, it provided Todd an opportunity to connect with people from his past and experience professional success that he never saw coming.

What happened was Todd's email got hacked, and the hackers sent an email to everyone on his contact list. Three thousand emails were sent out, requesting for his contacts to wire money to an account in China. Luckily, people knew that it was a hack, and nobody fell for the scheme. Even more lucky, dozens of contacts responded, informing Todd of the hacking, and requesting to catch up after years of not talking.

Todd was happy to catch up with many of his old correspondences and friends, leaving his social calendar busy for weeks. To his surprise, many of these contacts turned into business opportunities for both him and his firm. Some lucky break!

### Meet Lawrence

Much like Todd, Lawrence had a similar experience. Only instead of an email hacking, Lawrence's lucky break was a miserable cocktail party.

Just six days after starting his business, Lawrence went to a cheesy luncheon where he got a business card of Gabriel, a lawyer in the area. Little did he know it at the time, but this business card would lead him to form other relationships and create a successful business.

The next day, Lawrence immediately emailed Gabriel using the business card he was given. From Gabriel, Lawrence met Robert, who introduced him to Lindsey, who introduced him to Will. From the four of them, Lawrence received tens of millions of dollars of business.

## Luck Explained

After hearing Todd's story and thinking on his own business success, Lawrence started reflecting on business luck in general. Soon, he realized that the key to business luck wasn't just waiting for someone else to make your business dreams happen.

Instead, business luck is up for you to create. No, that does not mean working harder, at least not in the traditional sense. In contrast, you create your own luck by strategic relationship building. In Todd's story, his extensive contact list and meeting with old acquaintances from his past opened up dozens more opportunities than before. Likewise, Lawrence's success was rooted in simply introducing himself to a lawyer named Gabriel, who then gave him other introductions for his business.

### The Business World Today

It is easy to assume that the modern world and all of it's digital growth means that business relies more so on facts and emotionless decisions than classic relationship building. That could not be further from the truth.

Surprisingly, the business world has changed very little despite modern advances. To this day, most people conduct business with the people they like and trust. In other words, much of business is based on strategic relationship building.

What this means for business people is that relationships are a crucial part of professional success. No matter how digitalized the world becomes, you cannot ignore the relationships you build or maintain, unless you want to get stuck in the maze. If you work endlessly but ignore relationships, you cannot get anywhere in life, not even in your career. You must incorporate strategic relationship building to create the professional life you dream of.

## What About Introverts?

Whether you are an introvert or extrovert, this advice applies to you. Luckily, you don't have to be over the top or extroverted by nature to successfully build strategic relation-

ships. In fact, those with introverted tendencies succeed just as much as those with extroverted ones.

Take Lawrence for example. Lawrence is a self proclaimed introvert. Even though he has an outgoing and gregarious nature, he would much rather stay at home and watch Netflix if left to his own devices.

Even before going to any event, he and his wife often joke about how they would rather stay home. After the event, however, they both are happy they went, having had a good time and created more connections.

### Don't Be A Stranger

Don't get us wrong, nobody likes being in a room full of complete strangers. Whenever you go to different events, however, being surrounded by people you don't know gives you an opportunity to make connections, hence turning a stranger into a connection.

Whenever you find yourself surrounded by people you don't know, don't be a stranger. Walk up to them with friendliness and eagerness and simply reach your hand out to them. Introduce yourself and let your relationship take off from there. Though it may be scary at first, the second you introduce yourself to the stranger, they are not a stranger anymore. That person who was once a stranger may become your best friend or business partner.

In other words, just by introducing yourself and forcing yourself to not be a stranger, you are no longer alone in the room and you create a valuable connection that may benefit you later on. Simply by following this advice everywhere in life, you can unlock basically limitless professional opportunities.

### It's Really That Simple

At this point, I can probably guess what you're thinking. Professional success cannot be that simple. If it were, everyone would simply put themselves out there, making one connection at a time. Though it is true very few people take advantage of this tip, it really is that simple. Just by reaching out to people you already know and forming new relationships, you put yourself in the position to be one of those lucky business people.

After all, it makes sense. Would you trust someone's financial business if you didn't like them or thought them to be an untrustworthy person? Probably not. The same goes for everyone else. People want to do business with people they like and trust. It's really that simple.

## Don't Just Be An Empty Suit

There is one catch to this simple tip: you can't just be an empty suit. In other words, you have to actually create and maintain valuable relationships that extend into the business room. Without the necessary relationship and business skills, there is no way to create relationships that are beneficial to your business.

What this means is that you need to have the skills necessary for your own profession. If you are an entertainer, be memorable and make sure to entertain. In contrast, if you're an accountant, count well.

If you are just an empty suit, your relationships will be nothing. You must be able to back up your relationships with necessary skill and abilities. Make sure that your skills specifically match the job which you are selling or offering. Luckily, you're not an empty suit, making this step easy for you!

### Getting Into the Nitty Gritty

With the proper skills in check to become not just an empty suit, it is time to really get into the nitty gritty of becoming a good strategic relationship builder. Without the proper relationship building tools, it can be impossible to translate your eagerness and communication to others in a way that is beneficial to either party.

First and foremost, realize that you're already good at building relationships. Every day, you make connections, whether it be at the grocery store or picking up your kid from karate. Simply think of how you connect with people in real life and apply that within your professional life as well.

Thumb through a contact book or contact list in your phone to find out who you already know. Use the relationships you already have as starting opportunities to plant seeds and continue the relationship. Just by being intentional with your relationships you can go along way. People just want to know that you care and notice them. Simply reaching out will do a whole lot of good, and all it takes is a little bit more intention than before.

## Be Strategic

Every relationship has a natural progression. What this means is that you need to be aware of these progressive stages to benefit both you and the other party.

When it comes to building relationships for business purposes, you need to be strategic in who you choose. For

example, some people are simply not as interested in your business or services as others. With this in mind, be strategic in your relationship building process.

If you find someone who would be interested now or in the future in your services, don't be a stranger and reach out. Even if the conversation doesn't go anywhere at first, it is important to sow seeds with people. After all, flowers don't grow overnight. You must plant the seeds, water, and nurture them until they grow overtime. Strategic relationship building is the same way. You strategically sow your seeds and then continue to nurture the relationship from there.

From one seed, you can grow your network dramatically. This is known as the transitive property of guys. You know one guy who knows a guy who knows another guy. Just by planting and sowing the seed with the first guy, you can be opened up to a transitive network of opportunities.

## Offer And Ask For Help

One thing that people don't realize goes a long way is simply offering or asking for help. Offering help shows a person that you care about them, while asking for their help shows that you trust and value them.

To keep your relationships growing after you sow seeds, offer help anytime you see an issue or the other person complains. This is especially true if your business directly relates to the problem at hand. Be generous with your help!

Similarly, don't be afraid to ask for help. You can't expect a relationship of yours to benefit you if you aren't willing to be open and honest about what you need. If you ask your connections for help, most of them will be eager to assist you in some way.

### Patience, Padawan

By continuing to be intentional and earnest in your strategic relationship building, you will start to receive more of that business luck you have been looking for. Before you get too eager, you have to remember patience, padawan. Just as a flower doesn't bloom overnight, neither will your success from your strategic relationship building. Be patient and continue to nurture your seeds as they grow and benefit you more and more.

For some people, the benefits will seem to sprout up overnight. For others, you may need to wait months or so before your relationships make a lasting impact on your business. No matter what, just remember to be patient and continue intentionally pursuing your strategic relationships.

## Conclusion

Just by strategic relationship building, you can stop depending on other people for your business success and sow your own seeds for business luck. Just remember to bring skills and intentionality that both attract relationships and prove that your business is worth their time.

From there, just sow your seeds and be patient, always remembering that businesses are built on relationships. You are now the next lucky business person causing envy in your office!

Lawrence R. Perkins founded what is now SierraConstellation Partners at age twenty-nine with few connections and very little capital. Lawrence grew SCP into a nationwide management consulting group serving nearly 100 large companies in their times of most dire need. Today, Lawrence is a recognized industry leader who's spoken at major industry conferences and has been cited by the Wall Street Journal, the New York Times, CNN, CNBC, and the Washington Post. Outside of work, Lawrence has built a remarkable life with his wife and daughter that includes interests ranging from reading and writing, singing and dancing, to cooking and running.

### The Surprising Truth About What Motivates Us

*By Daniel H. Pink*

Daniel H. Pink is the author of A Whole New Mind, a long-running New York Times and BusinessWeek best-seller that has been translated into 20 languages. Besides writing two other best-selling books, The Adventures of Johnny Bunko and Free Agent Nation, Pink has contributed to The New York Times, Harvard Business Review, Fast Company and Wired.

Riverhead Books, © 2009

*A Book Review by Soundview*

# A Better Choice Than Carrots and Sticks

Human beings have been studying how people can be motivated to do better work since the dawn of the industrial age. But for the latest results of the most important experiments in motivation — and the ways they can be applied in the modern workplace — author Daniel Pink delivers an impressive collection of evidence in his latest book, ***Drive***.

According to the latest science, we've moved a long way from treating people like beasts of burden, who were once dri-ven with the promise of a carrot or the threat of a stick.

In an earlier life, Pink worked in the White House as the chief speechwriter for Vice President Al Gore. In that role, Pink became adept at turning a phrase and making profound insights under-standable. In the speeches he wrote and in all the books he has written since, his skills at relating stories to an audience are apparent. Ultimately, the stories he tells lead readers in smarter directions.

## The Need for New Rules

In his first two books, ***A Whole New Mind*** (2001) and the ***Free Agent Nation*** (2005), Pink asserted how our thinking must change if we want to adapt to the work needs of the 21st century. While examining the latest science and business case studies, he was able to show how people have moved out of a time when industrial-era business practices were useful and into a better place even beyond the time of the corporate information worker.

A new set of rules is needed, and the success of Pink's books shows that he has a gift for envisioning what those rules should be. He is on to something, and employee-manager relationships will never be the same.

In 2008, Pink even wrote a business book that combined his principles for a better work life with the Japanese *manga* format to create a business book/comic book hybrid titled ***The Adventures of Johnny Bunko***. In that unique, informative and entertaining book, he offered his trade-mark career advice in a groundbreaking new style.

The following year, Pink returned to his love of scientific research and its applica-tion in the working world with *Drive*. Tackling the elusive topic of workplace motivation is no easy task, but with piles of academic and business studies to back up his ideas, Pink has creat-ed a fascinating tool kit that any employer, manager or business leader can use to evolve out of the 20th-centu-ry thinking that actually hinders workplace motivation.

## Monkey Puzzles Promote Revelation

The research that lays the foundation for the concepts and advice Pink delivers in *Drive* started back in the 1940s when a professor of psychology at the University of Wisconsin named Harry F. Harlow was studying the behavior of eight rhesus monkeys in his laboratory.

Although he set out to understand more about the ways in which they learn, he discovered a few important keys to human motivation along the way.

First, Harlow put a simple mechanical puzzle into each of the monkeys' cages to see how they reacted. The puzzle required the monkey to perform a series of simple steps to open a latch.

Instead of being compelled by either biological or extrinsic motivations, it seemed to Harlow that the monkeys were compelled by a *third* drive: an "intrinsic" motivation that provided its own rewards. In other words, these creatures actually enjoyed completing the task. Solving the puzzle was enjoyable enough to pro-vide its own reward.

Harlow wondered what would happen if he were to add some extrinsic rewards to the equation. Surely the monkeys would perform the task even faster and better. But the scientist discovered something even more inter-esting: The monkeys made more errors and solved the puzzles slower when they were offered food as a reward for solving them.

In other words, extrinsic rewards actually disrupted their performance. This was a new discovery indeed. Harlow hypothesized that this third drive — intrinsic motivation that comes from the sheer joy of completing a task — can be "as efficient in facilitating learning" as the other two drives, if not more.

## Edward Deci's Discovery

Although most people at the time believed that carrots and sticks and other types of external rewards and pun-ishments were the best ways to drive human behavior, Harlow's work indicated that they were all wrong! This was a radical theory back in the 1940s. In fact, it was so radical that Harlow moved his subsequent research in a completely different direction. Throughout *Drive*, Pink explores studies from a variety of other people whose work helps to support Harlow's theory.

Most scientists did not catch on to the deeper implications of Harlow's monkey study right away, but another researcher eventually picked up the torch and ran with it in 1969. That researcher was Edward Deci, a Carnegie Mellon University psychology graduate student.

Deci wanted to find out how pay influences the way people work over time, so he gathered some men and women for a study. Test participants were divides into two groups. Those in one group were never paid to solve a challenging puzzle. The other group went unpaid on the first day, was paid on the second day and was not paid on the third day. After the three-day experiment, Deci made an important discovery. He found that the people who were never paid to work on the puzzle actually worked on the puzzle longer each day than they did on the preceding day. But those who had been paid on the second day but went unpaid the third day actually worked less on the puzzle than they had during the time when they were being paid.

Deci concluded, "When money is used as an external reward for some activity, the subjects lose intrinsic inter-est for the activity." He found that rewards can create a boost in activity, but that boost eventually wears off and can actually reduce motivation over time.

## When Do Carrots Work?

Many more scientific experiments have been per-formed since both Harlow's and Deci's original studies of extrinsic and intrinsic motivation. In *Drive*, Pink expands on their findings while proffering the idea that the carrot-and-stick approach that has been favored by managers for decades can have negative effects on the motivation it was intended to create. But, in the name of fair and balanced reporting, Pink also offers a few cir-cumstances when that approach actually does work.

When do carrots work? Studies show that for simple, short-term tasks such as stuffing envelopes, paying peo-ple well to do it is actually a great way to get them to complete the task. Pink explains that acknowledging that the task is dull, explaining the importance of the boring task and giving people a sense of autonomy over its completion can be useful motivators in this situation.

## 'Type I' Behavior

After Pink firmly makes the point that carrots and sticks are usually the wrong way to go when trying to motivate people to do more compelling work, he pro-poses a new way to think about motivation. This new perspective on motivation is based around something Pink calls "Type I" behavior. (The "I" stands for "intrinsic.") This type of behavior is a counterbalance to the "Type X" behavior ("X" stands for "extrinsic") that has been the ruling theory on motivation in the work-place for many, many years. Connecting this approach to business and working life with a multitude of examples from the world of behavioral science and psychology, Pink describes how a better understanding of our "third" drive can help us better direct our own lives, create new things, learn more and improve our work and lives. Pink writes that Type I behavior "con-cerns itself less with the external rewards to which an activity leads and more with the inherent satisfaction of the activity itself."

One of the benefits of Pink's ideas about moving people from Type X behaviors toward Type I behaviors is the important

> . . . managers who tap into the power of autonomy not only enhance performance levels at work, but they also increase employee job satisfaction.

concept of work satisfaction. The formula for creating this satisfaction, which Pink describes throughout *Drive*, is made up of three vital ele-ments: autonomy, which is our desire to be self-direct-ed; mastery, which is our drive to improve what we do; and purpose, which involves our desire to be part of something that is larger than ourselves.

## The Importance of Autonomy

The first of these three important ways to tap into the power of intrinsic motivation is autonomy, which pro-vides a sense of personal choice that helps people feel good about the work they are doing. When we feel autonomous, we feel better about ourselves and our lives. A sense of autonomy, Pink explains, also has a powerful effect on our performance and our attitude. This theory is supported by a variety of behavioral sci-ence studies, including those by Deci, Harlow, researcher Richard Ryan and positive psychology inno-vator Mihaly Csikszentmihalyi.

In *Drive*, Pink describes how this new perspective on motivation is beginning to spread among many brilliant scientists and open-minded business executives. One of those executives is Jeff Gunther, the CEO of a computer software and hardware company called Meddius. Gunther is one of a new breed of forward-thinking business leaders who believe in the power of autonomy. That's why he allows the people who work for him in Charlottesville, VA, to do their work on their own terms. Pink explains how Gunther successfully applies the work of Cali Ressler and Jody Thompson, two for-mer human resources executives from Best Buy, to his people at Meddius. Ressler and Thompson are the inno-vators behind "results-only work environments," or ROWEs.

Meddius is built around the ROWE principle that says employees don't need schedules, they just need to complete their work. How and when they perform their work is up to them. Once the people at Meddius figured out the benefits of a ROWE, Gunther discovered that productivity increased, stress decreased and people were generally happier. After experimenting with ROWE during a trial period, Gunther found the program so successful that he moved his company to ROWE permanently.

Pink explains that managers who tap into the power of autonomy not only enhance performance levels at work, but they also increase employee job satisfaction. He also points out that one study at Cornell University found that companies that offered autonomy to their employees "grew at four times the rate of the control-oriented firms and had one-third the turnover."

The key to making autonomy work comes from what Pink calls "the four T's": *task, time, technique and team*. He explains that people work better when they have more control over their tasks. They can make choices about when they perform those tasks. They can also choose how those tasks get done as well as self-assemble the groups of people needed to perform more complex tasks.

## Defining and Understanding Mastery

The second part in the trilogy of elements that lead to more motivation is the concept of *mastery*. When people are pursuing mastery, they are fully engaged and working hard to become better at something that matters to them.

Pink writes that "flow" is an essential part of mastery. When we are in our personal flow, time disappears and we really enjoy our work. While in flow, we are chal-lenged, but not so much that we become frustrated. The task is also not so easy that we become bored. We are in flow when we are doing something that is perfectly matched to our abilities, yet we are also learning along the way.

While most employers and managers might not be able to facilitate flow every day for every employee, Pink writes that it is important to try to create as many opportunities as possible for an employee to work with-in his or her flow during the workday so he or she will remain more engaged and satisfied.

Pink writes that there are three principles that should be considered when applying mastery to a work situa-tion. First, mastery requires a person to see his or her abilities as improvable. It is a mindset. Second, mastery requires a little discomfort. Deliberate practice is not easy, so pursuing mastery will always require vast effort. And the third rule of mastery is that it is actually impos-sible to fully achieve. It is this illusive nature of mastery that keeps it somewhat frustrating yet captivating. That's the mystery that makes it so appealing.

## Connect With a Sense of Purpose

The final element in Pink's three-part motivation equation is *purpose*. We all need to find deeper meaning in our work.

The autonomy we create and the mastery we pursue must also connect to something bigger than ourselves to be truly satisfying. Whether this means creating a more meaningful legacy for those who will follow us on the planet or having a greater impact on the peo-ple around us today, Pink points out that research shows that a cause that is greater than ourselves can be one of the most powerful motivators of all. When leaders and organizations find meaningful ways to add purpose to the work of their people, they improve that work and create better organizations.

For example, one study of physicians at prestigious workplaces such as the Mayo Clinic shows that people in high-pressure jobs can cope with that pressure better when they are given a chance to do things in their jobs that are more meaningful to them. When a trial policy was put in place that allowed doctors to spend one day each workweek doing the work that had the most pur-pose to them, such as patient care, research or commu-nity service, they suffered half the burnout rate of other doctors who did not get to engage in those activities.

Pink shows that many studies and the policies that take them into account prove how effective the "purpose motive" can be when it is applied in many types of settings. Those studies demonstrate that short-term goals cannot motivate people over the long haul like the power of looking at the big picture and putting love and attention into the things that truly matter to us.

## A Better Way

When all three of these elements are combined in the workplace, the research found in Drive shows that peo-ple are more motivated to do their work because they are enjoying more satisfying work and careers along the way.

All the studies profiled in *Drive* point business leaders and organiza-tions in a new direction; they can improve their performance by shifting their management tactics and tech-niques to better reflect the latest dis-coveries made by forward-looking researchers and the experiences of executives who have taken their work seriously. Moving in this new direc-tion means moving away from old habits and outdated ideas that once dominated the business landscape. The point is that the carrots and sticks of yesteryear could actually hinder high performance.

The new world of work that Pink describes in Drive is built on leaders finding innovative and creative ways to tap into deep-seated desires: the need to be autonomous in our work, to get better at what we like to do and to find greater purpose in life.

When the leaders of today and tomorrow get better at offering all three of these things, they will begin to reap the benefits of the science and real-world experiences that Pink has compiled in his latest and most thought-provoking book yet. We are not donkeys. The time of carrots and sticks has come to an end.

## THE SUMMARY IN BRIEF

"Where do some people get their energy from?" If you've ever asked this question while looking at some people who light up every room they walk in, effortlessly spread their positivity, perform every task with immense enthusiasm, and carry tons of energy – this book unlocks the perfect answer.

The book ***Electric Life: 12 Microsteps to Pay Attention, Be Brilliant and Go Deep*** unlocks ultra-effective, but super-simple steps to help you tap into your reservoir of energy to reach your full potential.

By blending personal anecdotes with research-backed insights and tips, Author Bill G. Williams helps you nurture a growth mindset, create your own luck, celebrate your mistakes, and bring value to your every life, work, and community.

## IN THIS SUMMARY, YOU WILL LEARN:

- Ask the right questions about yourself and build a growth mindset.
- Why you should make "mis-takes" and celebrate them.
- How to intentionally create your own luck.
- How to pay attention, be brilliant, and go deep.

## Introduction

In this book, I'm giving you twelve tiny steps forward. I'm calling them microsteps because they aren't huge life changes that will require hours of your time to master. Not one of these microsteps is particularly difficult. I want you to gain energy, not lose it in the process!

To find that energy, we need to pay attention, be brilliant, and go deep. This book is about you, and what choices you can make based on knowing where your energy balance lies right now. It's about who you are, and the disconnect between that person and the person you want to be.

In the pages ahead, we will talk about our energy burning out, versus having the energy to go and do what we want to do now. We absolutely can create enough energy working so that we feel good every day, and so we have the energy to go and play after work. In fact, you can leave work feeling like you have more energy than you arrived with!

## Part 1: Pay Attention

### Chapter 1: Find Your Hurricane

Many of us have heard the legend that, engineering-wise, if you consider the weight of a bumblebee in comparison to the size of its wings, it should be impossible for that bumblebee to fly. But the fact is that bumblebees' wings are almost magic.

When bees fly, their wings flap in a rotating pattern known as the dynamic stall. This pattern creates a little gap in the airflow around them, lowering the air pressure. In that air pressure gap, bumblebees' wings operate at the perfect ratio to their bodies' shapes and sizes. So, bumblebees are, in effect, tiny little hurricanes. They bring the energy of a hurricane to every single flower they touch. All they have to do is show up! Just like bumblebees, we all have our own hurricanes.

Keep a list of all your accomplishments – a done list! In the corporate world, a company can only pay for your body to show up. Your job is to show up and be ready to work on time and to accomplish your tasks. Always have your resume on your desktop and always keep it up-to-date. Volunteer your ideas and be honest while doing it. Maintain a growth mindset. Ask questions and diversify your thoughts. Finally, remember why you're passionate about your job!

### Chapter 2: Choose Your Balloon

Human beings tend to interpret events as either good luck or bad luck. Often, we do this unconsciously. When we interpret events as good luck, we're usually happy about an outcome. When something bad happens, we think of it as bad luck. But there isn't any luck. Not really. There's just us, and how we perceive, use, and represent what we experience in the world, and even who we are. Good luck or bad luck – always question which it is you're experiencing and seek the other perspective.

Use your superhero power by being curious! Find out what events, workplaces, or social groups made you feel the most engaged and valued for your contributions. Detect who is in control of the conversations where you feel seen and heard.

Ask yourself, "How can I rethink my environment, even in the smallest way, so that I feel more alive and energized? What are the things I want to add to my life, to have an impact, and to change my balloon? What are the things I want to remove from my life so that they don't change my balloon? How can I get one percent more comfortable in my role at work?

### Chapter 3: "FINE" is Not a Feeling

The worst part of not knowing what we're really feeling is that the only lies for which we are truly punished are those we tell ourselves. So, before you can show up, you must know yourself. Check in with yourself and find out how you're feeling. Feeling just fine, or just neutral, about what's going on around you is, I believe, a form of lying to yourself. It's risking putting yourself into a mindset where you're not allowing yourself to see the whole picture of who you are.

People who understand and perceive their own emotions are better at understanding other people's body language, tone of voice, and facial expressions. Through emotional intelligence, we can build a greater ability to understand ourselves and other people. We can do this through the practice of empathy. In fact, when we feel empathy for others, we learn faster. It's a mindset neuroscientists call prosociality. We can learn emotional intelligence from the inside out through three simple choices:

- Choice 1: Thumbs up or thumbs down? There's a fine line between a thumbs-up "fine" and a thumbs-down "fine." Ask yourself: am I okay? Am I good? Choose one: thumbs up or thumbs down to know what you're authentically feeling right now.
- Choice 2: How Much? Ask yourself: how much of a thumbs-up or -down am I sensing in my body right now?

- Choice 3: What's the impact? Ask yourself: What's the effect that you're having on other people when you're feeling like this? Being aware of the impact of your feelings is the best way to create energetic potential.

Finally, ask yourself: Why are you choosing to feel your feelings? Can you choose to feel a different way? Focus on what makes you feel the way you want to feel.

## Part 2: Be Brilliant

### Chapter 4: Plug In

Your energy can be converted to different forms, but it can't be created or destroyed. When we're not using our energy, it's still right there, in potential form. We can do anything with our energy.

Decide what your desired results are – both at work and in life. Find out what breathes life into you at work. Tapping into your potential energy starts with plugging in. Whenever you go, connect to your energy source and recharge.

Give the energy you want to receive. Do you remember why you got into the industry you're in right now? There are always reasons to be passionate about what you do. Ask yourself: why is my work so important to me?

We gain energy when we're honest, transparent, and truthful – when we give something in exchange for others' energy, no matter how small it may be. So, if there are still reasons for you to be passionate about your work, start there. Remember these reasons, practice them, and put energy into them.

### Chapter 5: Be Self-ful

Self-recognition is the beauty of allowing yourself to imagine what's possible and fully move into a growth mindset that you have the capacity to build because it inspires you to show up. Don't think of noticing yourself, and, indeed, putting yourself first, as selfish. In fact, it's critical to your own life to be self-ful (not selfish). When you're happy with your life choices, you're involved. And involvement breeds commitment! You'll be passionate about clocking in every moment. So, take care of yourself and put your own oxygen mask first before you start helping others. Write down, in detail, which activities that you choose for yourself give you the most energy.

Get a good night's sleep, know how your body works best, and stay hydrated. When you take some downtime, sleep, look at your nutrition and nourishment, and remember to check in with how your body is coping with everyday stresses, you naturally feel better.

When your body and mind perform optimally, you get the energy to challenge yourself and gauge the kind of energy you're leaving in the room so you can constantly learn from yourself and get better every step of the way.

### Chapter 6: Power Your Curiosity

When a person is in an environment or culture that doesn't recognize and reward them for their contribution, they will disengage. This is why it's critical for you to intentionally choose to only become a part of work cultures where you can be engaged. Know what you want and be honest, transparent, and truthful about it.

Reward your desired behavior. Neuroscience shows us that most of what we do is influenced and controlled by the subconscious mind. We live on a kind of autopilot, which is both a good thing and a challenging thing. Autonomous processes are running in the background, and they help us navigate the repetitive parts of life (like making phone calls or driving a car). Our familiar choices are made repeatedly, and they become legacy patterns. Often, these patterns extend to our personality and other life characteristics. Genetic memory, collective frequencies of others around us, and personal habits become repeated and ingrained.

To gain energy, we must dial up a superhuman power of curiosity. We mustn't hesitate to ask questions and be curious. Our curiosity can refine what we want to do and where we need to make energy-giving changes. So, ask yourself: what am I doing out of habit? Do I really like doing it? Do I feel vulnerable to constant critique from others or from myself? Am I feeling managed, rather than led? What might I do differently? How would it feel to try on a different approach?

### Chapter 7: Celebrate Mis-takes

Mis-takes, not mistakes, are new chances and opportunities for learning, in however many takes you need. Kids, for example, will take a chance on almost anything. They are energy personified. As adults, we know that if we lose this sense of fun, and if we're not prepared to be wrong, we'll never come up with anything original, innovative, or groundbreaking.

So make mis-takes. Discover, by listening and thinking creatively, new and better ways of doing what you've always done. Remember: all of what makes us human has to come to

work. All of what makes us human has to come home as well. All of what makes us human is perfect in its imperfection.

### Chapter 8: Practice Pausitivity

Pausitivity is the art of pausing, observing, and taking it all in. It enables us to be grateful for what we have. Pausitivity is our chance to conserve our energy for a moment. In fact, reflection, according to experts, gets us one step closer to realizing our passions at work. Discover your truth and say it. Own it. Take a pause and observe, whenever you want to, to make things better. Neurological research shows that active self-reflection, where you take the time to reflect on who you are and what matters to you, allows people to build connections between old and new ideas. At work, this kind of mindful approach can directly improve performance on the job. Focus on what you know. This could include your life experiences and what you've achieved and experienced in the past. Remember, if you could do it then, you can do it now.

## Part 3: Go Deep

### Chapter 9: Show Me You

It is important to see people and notice the things around them that may be important. Communication is about being understood in the way that we intend to express ourselves. Employers, now more than ever, are requiring potential employees to converse with clarity. Communication skills are the cornerstone of effective problem-solving and are useful in both personal and professional settings.

Find what's special about the people you work with. Let them know what you value. Create a safe space for people. Have zero judgment about them. Start turning outward and invite a deep witnessing and presence with others. If we can start turning outward and invite deep witnessing and presence with each other, we can create more mutual security, more innovation, and more peak experiences. All in all, we can create more happiness.

### Chapter 10: Live Giving

What if we can give gifts as our authentic, true selves and not our manipulative, forced selves? Why? Because giving feels good. And when you give, don't expect anything in return. By gifts, I don't mean giving birthday presents. Instead, giving, according to me, is being able to create positive, life-giving energy between two people. Don't just give a present. Be present. And give because it feels good to give without expecting anything in return.

### Chapter 11: See the Back Row

Deep listening and leaning into a conversation are two important elements of being able to gain clarity. Connecting with people feels like home. It energizes us because we find the link between our stories and our spirits. There's a shared foundation between those of us with entirely different lived experiences, that comes to the forefront and makes our next steps together easier to navigate. If you don't have all the lights on in the room, you can't see the back row; the same goes for the front row. And the same goes for you, yourself. Let's all avoid RJF (resting jerk face) if we can. Listen, ask questions, clarify, and then respond. Find hidden voices and stories, and in them, a source for new meaning.

### Chapter 12: Cross the River

We are constantly in a state of confluence with those around us. Confluence is about realizing what intrinsically motivates us, paying attention to what intrinsically motivates other people, and going with that flow. But sometimes, it is not about other people at all. Sure, we are constantly in a state of confluence with those we meet. We can add to others' energy with our commitment, knowledge, and joy. We can also bring our muddy waters and dampen their enthusiasm and add to their fears, as they can do for us. And then we might start to think: Are other people stealing our energy? Maybe! If the waters are always muddy, that feels like a problem. So, retain your power and don't carry someone else's burden. Keep your river clean, while purifying others' and always self-acknowledge your growth.

## Conclusion

We have the ability to use our potential energy and translate it into self-ful action. I want you to leave work with energy, so that you can live this one precious life beautifully, floating in your own personal hurricane. And if there aren't still reasons to be passionate about what you're doing every day, then something has to change. Remember: your energy can be converted to different forms, but it can't be created or destroyed. I've given you twelve tiny steps forward. Start by taking one. Show up!

He's called "Electric Bill" for a reason. **Bill G. Williams** is on a mission to shock us out of our static daily routines. He is known for his unique brand of electrified methodologies for the workplace, and is now offering them to you in this book. Bill caters his solution-based strategies to individuals and corporations in the private, public, and not-for-profit sectors. This is Bill's first book. Tap into his energy; it's positively electric.

## THE SUMMARY IN BRIEF

Success is not quick and easy, but it is attainable if you learn to push yourself out of your comfort zone and risk-free life. Empower Yourself is a guide to mapping your goals, becoming highly self-aware of your strengths and weaknesses, overcoming your fears, and learning to be present and positive.

Author John Martin explains how following the steps outlined in the book will lead you to create the life you want, one decision at a time. If you want to make a change in your life, if you are willing to look within and act on what you learn, you can change your circumstances. By setting small, attainable goals and sticking with the process, all the success you dream of is within your grasp. Now is the time to make the decision to follow your dreams.

## IN THIS SUMMARY, YOU WILL LEARN:

- How to set goals.
- How to get over the fear of failure.
- How to control your mindset and weed out negativity.
- How to stay motivated.

## Assess Your Life

Write down your definition of success. Consider what your work, your primary relationships, and your overall lifestyle would look like. This is your ultimate goal. Whatever it is, your ultimate goal should be big enough to be challenging and inspire a sense of fulfillment.

Think about what made you happy as a child. Take a look at the kind of entertainment you like. What do you read or watch? This life examination can lead to the discovery of an interest that if pursued, could change your direction and give you renewed purpose.

Think about where you are now. Is what you are doing now in line with your ultimate goal? Will it lead to your ideal lifestyle?

Accept personal responsibility for your life. Even if there is a reason to blame others, overcome the impulse. It is not your boss that is causing you to be miserable, you are choosing to work there. If you're unhappy in a relationship, it's because you haven't taken the steps to improve it or leave it, if necessary. When you cut away the excuses, this is the cold truth. The good news is that if failures are your fault, then your success can come by the same method—your own choices. Once you accept personal responsibility for your circumstances, you can take steps to change them.

Be honest about your failures, habits, and current situation. Think seriously about why you do what you do for a living. It's critical to learn and embrace your reason why. When we are acting from consistent, authentic, and clear motives, we are getting closer to doing that thing we were meant to do.

Often, your self-assessment will reveal the need to make a significant change. Heed this. If you are assessing your life and find it wanting, make the decision to follow your dreams.

Achieving your ultimate goal means setting smaller, daily goals. Keep them attainable and in line with your ultimate goal. If you want to look for a more fulfilling job, your first small goal is to spend time updating your resume. Tomorrow, update your LinkedIn profile. The next day, send out five resumes. Little goals lead to bigger opportunities. This is why it is important to take action, any action, as long as it is in alignment with your ultimate goal. Use your why and your ultimate goal as guideposts to avoid getting distracted.

If you feel discouraged because you're not where you want to be, don't despair. It is never too late to try again.

## Self-Awareness

No matter where you are in life, when you know who you are, you have more control over it. Self-awareness takes effort and time, but it's a game-changer. When you know who you are, you waste less time thinking about what you should do; you do it, and you feel more confident about your decisions.

Journaling is a fantastic way to gain perspective. Document your thoughts throughout the day if possible. If you don't like to write, use your smartphone to record audio or video. You'll see your likes and dislikes, what motivates and excites you, and what causes you to procrastinate. Over a period of time, you will be able to recognize certain aspects about yourself and then accept or change them.

Some roadblocks that get in the way of self-awareness, include dwelling on the past and getting tempted by bad habits. Be thankful for your current opportunities rather than focusing on the past. In order to gain control of your life, you need to gain control of your impulses. If you are wasting money and time on bad habits and addictions, then you are losing resources that could be going toward your dream. Keep your goal in your mind and note what triggers a bad habit.

Poll close friends and family about your positive and negative traits to gain better understanding of how you appear to others. Ask what they see as your skills and what you are bad at; ask what they wish you knew about yourself that you don't. This can be uncomfortable, but useful.

Using all this data, you can learn your values, strengths and weaknesses, your goal, and your motivations. Now, act on what you learn. Double down on your strengths and work to minimize your weaknesses. Introspection will take you part of the way, but action is important. And remember, this process is never finished. Your new perspective will allow you to continue to set and reach goals.

## No Parking in Fear

Maybe you realize that big changes need to be made in order for you to achieve your goal. Often, this is the point at which people tend to get stuck. They know what should be done, but they stay parked in fear. There is no way to get rid of fear, but you can overcome it. Sometimes we overestimate the bad consequences of a change while downplaying the possible benefits. If you continually remind yourself of the positives and your goal, you can act. Eventually, you will become less fearful and hesitant to make decisions.

Failure is to be embraced, not feared. If you are not failing at something at least once in a while, you may be parked in fear. Sometimes it takes failure to learn, do better, and grow with the next effort, which increases your chances of success. It's the trying, failing, and trying again that eventually gets you on the path to success.

Fear of criticism can be overcome by owning who you are. An important truth is that not everyone will like you. Hear criticism and forget it if it's not constructive. If it is something you didn't know, learn from it. But if people are trying to pull you down, shake it off. Do things because they are right things to do, not to be liked. Accept that confrontation sometimes needs to happen. If you constantly bury your feelings in order to preserve someone else, you are suppressing yourself. If you have to say something, do it with as much tact as possible and let it go. If you let it consume your mind and energy, then you are wasting valuable moments.

Rejection also becomes more manageable the more often you experience it. What happens when you get rejected? Your feelings get hurt or you're embarrassed. What else? Not much. We blow up the consequences to such a level in our minds that we allow our imagination to dictate reality. Apply for that sales position, ask that person out. Get uncomfortable. Growth is living outside your comfort zone.

Imagine that you only have six months to live. You find yourself no longer procrastinating. You make the phone calls and the connections you had been wanting to make. Human relationships become more important. You spend more time with your loved ones. You stop caring about what people think of what you are doing. Would you die regret-free? Are you living your dream or are you living your fear? Don't let your fears be a roadblock to your success. Keep your goal foremost in your mind and put yourself out there. The more that you face and overcome your fears, the brighter the future.

## Choose Positivity

It is easy to be positive when life is going well. It is when you are faced with trials and circumstances beyond your control when you have to make a choice: You can focus on the negatives or you can look for the positive aspects—that's your test. The key to breaking through any obstacle is choosing positivity in your attitude and your actions.

We live during an amazing time. Look at your lifestyle, your relationships, and all the chances you've been given, and find a perspective of gratitude. When you start being thankful, it's hard to be negative and you'll stay calmer when something goes wrong.

Note when you start thinking negatively and stop yourself. If we think in a negative way, more negativity comes into our lives. Similarly, if we choose to think positive thoughts, more positivity is attracted to our lives. This is why it is so important to control your mind, choose your perspective, and weed out negativity. Watch the words you say. Statements like "I feel like crap" or "tomorrow's going to be rough," might seem normal, but they create negative thoughts. Choose positive statements. Be aware when you are in a conversation that turns toward complaining. Try to steer the conversation in a more positive direction or politely remove yourself.

Have boundaries when reading or watching the news. Violence, tragedy, and controversy sells ads and increases fear. This doesn't mean that we should avoid all discussion of news or politics, but have healthy debate or conversations with people from whom you learn different sides of an issue. That's how positive change will happen, not through calling each other names online. Turn off social media for a while and watch your problems diminish. Make it a point to talk with and connect to people. Get involved in your community. You gain the benefit of feeling better while also helping others to feel better. The more we look outside of ourselves, the better we will feel.

Our emotions are often cyclical. Sometimes, when you are feeling sad, give yourself permission to feel that way, knowing that you will soon feel better. Alternatively, forcibly change your thoughts to ones you enjoy. Pay attention to how your emotions change with the thoughts you choose. While we are not always in control of what thoughts enter our mind, we can choose how we react. Try smiling when you don't feel like it; laugh out loud. Positivity can also be called forth through physical activity. Not only does exercise boost your mood, it oxygenates the brain and gets the creative juices rolling.

If you are at a job or situation where you constantly complain and give off negative energy, leave. Not only are you hurting yourself with self-conflicting behavior, you are making it harder on the people who want to be there. That said, if you are honest about the reasons for being there, you can still be a positive person surrounded by negative people. Maintain your values and your work ethic at all costs, and do not let the environment dictate who you are. Set goals and give yourself a timeline. Bottom line, in a negative environment, maintain a strong sense of self and work hard to get out of that situation. Start a side project. It's not only useful as a plan B, but can provide additional experiences and skills. When things are rough in one area of your life

and you need to shift focus, it will give you another goal. Have a plan and stay positive.

It is hard to overemphasize the importance of being positive on the journey to personal success. Your attitude can make or break the process, and it is critical when facing obstacles.

## Stay Present

Try not to look back to the past, whether good or bad. Don't dwell on "what if" questions. Keep your thoughts on the present and get into what you are currently doing. This conscious effort will allow you to reach your dreams by consistently bringing your attention back to the work that needs to be done. It won't be long before you get into the flow state. When you are involved in a project, try to stay with it as long as you can without interruption.

There are times you might make an embarrassing mistake. Make amends where needed, but don't prolong painful or anger-filled circumstances by thinking about them for too long. So much time is wasted mulling over conversations that are long over. Let them go. Dwelling on past hurts is a form of procrastination. It might feel good to vent, and at times, it might be necessary to gain proper perspective. Go ahead talk to a partner or friend, but then let it go so that you can refocus. There is no need to go over every negative word because it only serves to give them more power. A key to happiness is staying in the present moment.

## Share Your Journey

Now is the time to open yourself up to the world and make connections. Developing relationships based on respect and mutual encouragement is crucial. If meeting people is outside of your comfort zone, start small. Get to know someone at work that you never really talk to. From there, you can be strategic in connecting with others in your industry that can become mentors or collaborators. We miss out on many connections, due to the awkwardness of a moment. Learn to work through it. It's often a numbers game in life, and this is an example. If you attempt to talk to ten people, and seven are full of their own thoughts, that still leaves three connections you made by being awkward enough to connect. It is worth it.

Even introverts can be social. Practice listening to others and ask questions based on what you hear. There is much to be learned in other people's stories. As you open up and share with others, you may be surprised to learn that you have also helped someone who heard your story. Think about the parts of your journey that can help empower others.

Each of us has unique skill sets, strengths, and weaknesses. Don't let pride or ego get in the way of asking for help. Get help on the weak spots of your endeavors and spend most of your time on your strengths. Offer your skills in exchange. When we help each other, we all win.

Believe that changing your circumstances is possible. If you don't overcome fears as quickly as you would like, give yourself grace. Undoubtedly, you will face downtimes where you second guess your decisions, procrastinate, and experience problems. When this happens, remember to stay present and allow the frustration to pass. You will feel ready to get back into the work soon. Keep moving forward, enjoying the process, and share what you are learning with others!

John Martin's titles include ***Empower Yourself*** and ***Increase Your Personal Productivity.***

His books are about how to do something different with your life. He provides tools and steps to analyze your mindset and strip away the beliefs you hold that are untrue and limiting your potential. Martin's content focuses on the truth about being authentic and aligning your goals with your strengths, and most importantly how to take action regardless of your current situation.

# 52 Essential Habits for Success

by Robert Stevenson

## THE SUMMARY IN BRIEF

Why is it that some people succeed while others fail or lead lives of mediocrity? Not that a life of mediocrity is bad; if that is your aspiration, then so be it. But if you aspire to be something more, then you need the answer to this question: "What do you need to do to be successful?" That answer seems to elude most people. Professional keynote speaker and author Robert Stevenson wrote a book to address that specific question.

Psychologists have suggested if you see, read or do something 14-21 times, it becomes a part of you. According to Stevenson, if you spend a few minutes in the morning and the evening reviewing and contemplating a single essential successful habit for seven days, then by the end of 52 weeks you will have absorbed and incorporated all 52 habits into your life.

## IN THIS SUMMARY, YOU WILL LEARN:

- How to establish the 52 successful habits into your personal and professional life.
- How to shorten your learning curve and reduce mistakes.
- Why the people with whom you surround yourself have a huge influence on your personal success.
- How to use the power of your subconscious mind to make you better.
- The importance of acting as if the whole world were watching.
- Why you must accept without reluctance that you are where you are today because of the choices you have made.

## Introduction

Give me the amount of time it takes to brush your teeth in the morning and evening, just that amount of time, no more, and I will show you a way to substantially improve your level of success.

There are some excellent books that address the topic of success in great detail. Many of them have had some outstanding suggestions of what one should do to be successful. However, these suggestions are often too difficult to implement. In most cases, after people read a self-help book, they appreciate the wisdom of the author, and have every intention of following through on the suggestions the author made.

The problem is they just get burdened down with all the steps they must take, things they must do, lists they must write and self-analysis they must ponder to help them become a better person. Even those who have really good intentions find it extremely difficult to stick to the plan the author has laid out in the book. Their intentions were good. They actually finished reading the book, but they became overwhelmed with all the things the author said *"they must do"* if they are to become successful.

Most people don't like to study, refer back to books or articles they read, prepare lists, or assess their current situation and then change the way they do certain things. So how do you replace old, unhelpful, sometimes destructive wasteful habits with new, helpful, useful habits without studying, list preparing and more?

The simple objective is for you to read one of the 52 habits for success every morning and evening for one week, then go to the next habit and do it again. It is that simple.

The reason why this program will be so effective is because you will be involving your conscious and subconscious mind in establishing the habits you need to incorporate into your daily life if you are going to be truly successful. You see, after you read the success habit with your conscious mind, your subconscious mind will then take over. Your subconscious mind will start thinking about this one simple success habit all day long until it becomes a part of you. You will begin to know it, you will understand it and subconsciously you will start to do it. Before long, these 52 habits will be permanently conditioned in your mind, to help lead you on your journey to an extremely successful life.

### Don't Shorten the Learning Curve

Don't try to shorten the learning curve by reading each success habit for one, two or three days, thinking you can obtain your desired goal sooner if you were to only shorten the amount of time you spend on each habit. Nothing worth having was ever accomplished well by taking a shortcut.

Yes, it will take you one full year to get through the habits if you want to get the full impact of the program. But you need to understand, it does not take one full year for you to start reaping the benefits of what the book teaches.

You will notice a huge difference in your life after only the first month. Just allow yourself to read, receive, and believe, and you will start achieving. It is a proven fact that what you read can affect your thoughts and actions, so I am going to affect them in a positive way. Everything you will ever be is totally up to you. You are where you are today because of your past decisions, and your future is completely in your hands. These success habits will help you make better decisions. Let them work for you. If you will take the time to absorb the habits, you will change your life for the better. ●

## Habits 1-5

**Habit #1: Believe in Yourself.** If you don't believe in yourself, why should anyone else believe in you? People want to be around confident people. One of the most important traits of leaders is the confidence in themselves. People don't want to follow someone who lacks self-confidence. When you first start out, you may have to "fake it before you make it." None of us were born with all the knowledge, experience and talents we would need to be successful. These are all developed skills. So relax and learn from your mistakes, realizing we have all passed this way before.

**Habit #2: Act as if the World Is Watching.** Thomas Jefferson said, "Whenever you are to do a thing, though it can never be known but to yourself, ask yourself how you would act were the world looking at you, and act accordingly." Even though that was said more than 200 years ago, it is still great advice for today, especially in this technological world with people carrying mini-video recorders in their cellphones. The next thing you know, your actions are being shown on national TV or on the Internet for all the world to see. So act as if there is a camera on you at all times and act accordingly.

**Habit #3: Practice, Drill and Rehearse, Then Take the Initiative.** If you want to beat your competition, then you have to be willing to put in the time to practice, drill and rehearse (PDR). The great ones don't need someone telling them to practice. They understand when they are not practicing, someone else is, and when they meet that person on the field of competition, that person will win. Success comes to those who take the initiative to do more, stay longer and work harder. The day you understand your success is dependent on you — your own desire, initiative and fortitude — is the day you start achieving greatness. To the great ones, PDR is not a motto on some wall, it is a way of life. Simply stated: If you want to be the best at what you do, then practice more than the rest and success will come to you.

**Habit #4: Don't Be Afraid to Fail.** It's amazing how much experience can be gained by making a mistake. As Henry Ford once stated: "Failure is the opportunity to begin again more intelligently." If you never try to do something beyond what you already know how to do, you will never get any better. Failure is a major component to your success process. You need to decide that there are no failures in life, only results. Failure isn't fatal unless you quit. If you don't like the results, then analyze what went wrong, learn and then alter your method.

**Habit #5: Make Goal Setting a Habit.** If you don't know where you are going, then how will you know when you get there? The vast majority of people don't set goals, and the vast majority of people do not reach their full potential. You have to decide what it is you want and write it down; some call it "thinking on paper." You then have to decide what it is you will have to do to make what you have written down become a reality. The first two steps in making a dream become a reality are to write it down and then set a deadline. Remember to be "SMART" about your goals: Specific, Measurable, Attainable, Realistic and Timely. It has been proven that people with goals earn twice as much as those without goals. ●

## Habits 6-10

**Habit #6: You Must Pay the Price.** One of the most valuable things you possess is your willpower. Great accomplishments come from great efforts. You will have to pay a price if you are to be successful. The question is: Are you willing to pay the price? Your actions are all that matter. Your actions are the only thing that will get you success. The price of mediocrity is far less than the price of greatness.

**Habit #7: Never, Never, Never Give Up.** Elbert Hubbard captures the point I am trying to make so profoundly in his words, "There is no defeat except in no longer trying. There is no defeat save within." Failure is just a result in the learning process; giving up is a choice, a very bad choice. Walt Disney was fired for lack of creativity and went bankrupt twice before he was able to turn his dream into a reality. At one time Donald Trump had a negative net worth of $900 million. Most people would have declared bankruptcy. Seven years later he was worth more than $2 billion. Bill Gates' first Microsoft company went bankrupt. He then became the richest man in the world.

**Habit #8: Hang Out with Successful People.** If you want to be successful, then you need to "hang out" with successful people. Watch what they do and how they work at their chosen profession. Unconsciously, you will start adapting these behaviors, habits, attitudes and opinions. Dr. David McClelland of Harvard found, after 25 years of research, that the choice of a "negative reference group" is enough to condemn a person to failure and underachievement in life. The good doctor simply means, if you hang with people who are going nowhere with their lives, then you'll be headed in that same direction. If you can't be around successful people, then read as many biographies/autobiographies as you can about successful people.

**Habit #9: Success Requires Self-Discipline.** Self-discipline is making yourself do what you need to do when you need to do it whether you want to or not. In the overall scheme of success, being self-disciplined is the most important trait you must possess. You can know, understand and identify what must be done, but if you don't have the discipline to do it, it's all for naught. The great ones get it done regardless of how they feel. Remember your action statement: If it is to be, it's up to me.

**Habit #10: Accept Criticism for the Benefits It Brings.** There is nothing fun about receiving criticism. It is amazing how painful words can be if we let them. Regardless of the agenda of the person giving the criticism, use the words to your betterment even if they were given for someone else's gain. This is all about creating a better you, not a better them. Filter out all pain and prejudice and allow only the things that will benefit you to enter your mind.

## Habits 11-15

**Habit #11: Contain Your Anger.** Anger is a self-induced reaction to an external stimulus. The amazing thing about anger is that it is unnecessary. Anger comes from within you. It is a response you choose to give when you feel you are being victimized, treated unfairly, cheated or taken advantage of. The next time you feel your anger raising up its ugly head, take a moment and get control, making certain that you don't say a word. Anger is a choice, not a cause or condition.

**Habit #12: Smile — It's Good for You and Those Around You.** There are thousands of languages we don't understand, yet a smile is understood no matter what language is being spoken. To successfully deal with people, you need to create trust, confidence and rapport. It is a proven fact that the simple physical response of a smile will help create all three. Smiling displays your frame of mind and warmth without having to say a word, and it puts you in a positive mood; this is all good.

**Habit #13: Look for Ways to Praise Often.** If you want to have a lot of friends in business and in your personal life, then look for ways to compliment (praise) them often. Make sure it is sincere praise and not contrived. Think how great you feel when someone tells you that you did a good job. Complimenting someone is not a hard thing to do, but we seem to forget to do it, even when the perfect opportunity avails itself. If you make it a habit to praise people rather than condemn, you will be amazed at how many people will want to help you.

**Habit #14: Shorten Your Learning Curve by Reading.** Life is too short for you to learn all there is to know by personal experience. Reading is an excellent way to shorten your learning curve. Reading will improve your creativity, vocabulary, spelling and language skills. Make it a part of your daily routine to read something (at least five days per week) that will help you become a better person.

**Habit #15: Never Neglect Your Body.** When you neglect your body, your energy levels diminish, fatigue sets in and illness ensues. Exercise is a key factor in all aspects of your success. There is a litany of incredible benefits to your overall health if you maintain a proper exercise program. So get up and get moving with some kind of structured exercise program a minimum of three times per week.

## Habits 16-20

**Habit #16: Be Positive — It's the Only Way to Act.** Being negative causes stress, illness, worry and anger; reduces productivity; and makes others not want to be around you. The remarkable thing about life is that every moment we have a choice regarding the attitude we embrace. Olympic gold medalist figure skater Scott Hamilton stated, "The only disability in life is a bad attitude." It doesn't mean bad things don't happen to positive people. It just means positive people don't let bad things hold them back.

**Habit #17: Watch What You Say.** Things have a way of coming back to haunt you. People take things out of context to support their own personal agenda. The best rule to follow is to say nothing about anyone you wouldn't have the courage to say directly to their face. Stick to what you know to be factual, not hearsay or rumor. Someday you may have to defend your comments, so make sure you speak only the truth.

**Habit #18: Want an Advantage? Be Early.** If you want to reduce your stress, then be early. Being late shows a lack of respect for whomever you're dealing with. Being early shows others you are motivated, organized and disciplined. Be known as the one they can always count on to be early, prepared and excited to be there, and you will have everyone wanting you on their team. True leaders don't keep people waiting.

**Habit #19: Do More Than Expected.** If you want to position yourself for success, then do more than expected. The people who do the minimum required will usually get the minimum return. All great athletes, musicians, actors, lawyers, doctors, businesspeople, etc.,

understand for them to excel at their profession, they have to be willing to do more than those around them.

**Habit #20: Say "Thank You" Often.** Two of the most powerful words in the English language are "thank you." These two words are so simple to say but so seldom used. We get so caught up in the speed of our daily lives that we forget to say the words that will help make people want to assist us again. Regardless of your position or status in life, you should never forget to say these two words. ●

## Habits 21-25

**Habit #21: Remember People's Names.** The words that are most familiar to you and the least threatening are the words that make up your name. When you first meet someone, try saying their name several times while you are speaking to them so it will help you better remember their name when they leave. People will be extremely impressed if you have just met them and you remember their name the next time you see them. It is a sure way of showing your respect for them by proving their name was important enough for you to remember it.

**Habit #22: Let Them Know You Care.** There is enormous power in sending cards, notes or letters to people. Using the Internet to stay in touch with friends, associates and clients is helpful, but if you want to stand out from the rest of the crowd, send them something they don't have to print off on their printer. If you want to really stand out, remember people on special occasions, holidays and especially their birthday. Always remember, people don't care how much you know until they know how much you care.

**Habit #23: Always Use Good Manners.** In this fast-paced techno-gadget world where people text rather than talk, email rather than converse and hurry rather than help, a person who shows a little common courtesy will be the exception rather than the norm. Treat everyone as if they were your equal, and always shower them with courtesy and good manners.

**Habit #24: Beware of Fads.** "Fads come and go." The problem with that statement is that they go. The desire to stay up with the latest fashion trends, wear the "right" clothes or tattoo, drive the "hot" car, or have the latest cellphone or technological gadget isn't new. It was that way 50 years ago, and it will be the same 50 years from now.

**Habit #25: Pay Attention to Your First Impression.** You will never get a second chance to make a good first impression, so that first impression really matters. You want the way you look to demand respect. People like to deal with individuals who are successful, and that means you need to look the part. If you want someone to pay attention to you, then you must first pay attention to yourself. ●

## Habits 26-30

**Habit #26: Prepare Now or Fail Later.** The great college basketball coach John Wooden (who won 88 consecutive games, 11 NCAA national championships, seven of them in a row) had a saying: "Failure to prepare is preparing to fail." The truly successful people leave nothing to chance. They put in the time, effort, research and thought to ensure they will achieve their desired goal. This is your life and you've got one shot at it. All success begins with a definite purpose, a specific objective and a plan to achieve it.

**Habit #27: Show Excitement in Your Greetings.** The simple expression of "I am really happy to see you" makes anyone feel good. Get up, make eye contact, give them a smile, and show a genuine interest in them. You will find that people will love to be around you, look forward to seeing you, and include you in their plans, parties and get-togethers.

**Habit #28: Be Persistent, Relentless, Determined.** What will separate you from those average souls out there who stay mired in mediocrity will be your willpower, your desire to see it through, to not fail, to pay the price to achieve success. Always think your next great victory is just about to happen. Thomas Edison failed more than 11,000 times trying to invent the light bulb. A person one time asked him what it felt like failing more than 11,000 times. Edison said, "I didn't fail 11,000 times. I discovered 11,000 ways how not to do it."

**Habit #29: Search Out Role Models.** In most cases, you aren't the first person to ever attempt your chosen goal. If you want to be great at your chosen profession, remember, others have passed this way before you who have learned great lessons they would love to share. In many cases, there are people who would love to share the lessons they have learned if you just ask them. People love a compliment. Approaching someone and asking for their help because you respect what they have accomplished and would like to learn from them is a great compliment to them.

**Habit #30: Never Waste Time.** When you are wasting your time, you are wasting your life. Your life is

a finite amount of time made up of moments. Successful people take full advantage of their time. They plan their day ahead of time. Time management skills are an essential tool for anyone who wants to be successful. You can do nothing about the time you have already lost, but you can do everything with the time you have left. Every minute spent in planning your day saves about 10 minutes in executing it.

## Habits 31-35

**Habit #31: Always Be Truthful.** The truth is but a simple thing, for it knows no right or wrong. There are those who would alter it; they will speak, imply, suggest what you know are not the facts. But the truth will remain the same, rest assured. The truth will rise above it all.

**Habit #32: Don't Gossip — It's a Waste of Time.** What do you accomplish when you gossip about other people? Nothing, except wasting time. You haven't learned a thing, you have helped no one and you have accomplished nothing. Don't get yourself caught up in the bashing, trashing, smashing, gossiping conversations. By wasting your precious time in this common activity, you are really hurting yourself.

**Habit #33: Concentrate on Your Strengths and Interests.** When you focus most of your time and energy on things you are good at, you will reap enormous rewards. Sometimes your strengths will be hidden in your interests. Focus on what you can do rather than on things you can't. If you aren't certain where your strengths lie, then focus on things you enjoy doing rather than on things you hate. Couple your interests with your strengths, and then commit to concentrated practice and study. Your concerted efforts will reap you enormous rewards, and you will also enjoy your journey toward success.

**Habit #34: Become Interested in Others.** Bestowing positive sentiments on or about others will eventually find a way back to you. Talk to people about what interests them, not you, and listen attentively. Getting people to talk about their favorite subject (themselves) is easy. Just start asking questions. Your objective in any conversation is to be listening more than you are speaking. By showing appreciation and admiration, by being agreeable and accepting, you will be a welcomed participant in any conversation. Being interested in others makes them more interested in you.

**Habit #35: Expand Your Vocabulary.** There are more than 650,000 words in the English language. The average person knows about 15,000 and a child of 5 knows about 5,000. A very scary statistic is that after the age of 30, the average person learns about 5 words per year. If you want to set yourself apart from the masses, start with learning one new word per week. The use of an excellent vocabulary will distinguish you from others and is usually an excellent indicator you are an intelligent person.

## Habits 36-40

**Habit #36: Don't Cheat the Face in the Glass.** There is a poem by an unknown author I have taken the liberty to paraphrase. I feel it best addresses the subject of cheating yourself.

*When you get what you want in your struggle for self and the world makes you king for a day, just go to a mirror and look at yourself and see what the face has to say.*

*It isn't your father, mother or wife whose judgment upon you must pass. The person whose verdict counts most in your life is the one staring back from the glass.*

**Habit #37: Admit When You Are Wrong.** Most people have more respect for a person who admits they are wrong than a person who won't. You will be amazed how people will be more forgiving of a person who admits they are wrong. It takes courage to admit you made a mistake. It is also a true sign of maturity by owning up to your errors and then moving on. Not being able to admit you are wrong shows a lack of self-confidence. Admit you are wrong, learn from your error and move on.

**Habit #38: Listen Every Chance You Get.** The need to listen to others is critical. Life is too short to be able to learn how to be successful all by yourself. If you want to profoundly increase your learning curve, start listening considerably more than you speak. You can't learn anything by being the person who is doing all the talking. You will be amazed at what you can learn from others if you just start listening. So start asking good questions, then close your mouth, listen and learn.

**Habit #39: Prepare a "Things to Do" List.** The key to being successful is for you to be the one running your day. Once you have established your goals, you must then start developing your plan of attack, what you need to do to achieve those goals. The perfect way to do that is to prepare a "Things to Do" list each night. You must prioritize the list in order of importance, with the most important on top. Consult that list at least three times per day so it will help you keep on track, and then knock them out in order of priority.

**Habit #40: Don't React — Get the Facts and Then Act.** There are two sides to every story, and the key to a successful career or relationship is to hear both sides before determining how you should act. Jumping to conclusions or reacting prematurely before you have all the facts can sometimes lead to horrible consequences for one or both parties. Every day I receive emails from friends and clients containing amazing stories. The problem is that many of them aren't true. They sound true and contain some elements of fact, but the majority of the story is embellished or totally fabricated. By passing the story on to someone else before you validate its truthfulness, you are helping perpetuate a false story, which could prove to be extremely hurtful to the people in the story. If you can't prove it, don't share it.

## Habits 41-45

**Habit #41: Beware of Quick Fixes.** Why is it we rarely have time to do it right the first time, but we always find time to do it right the second time? Anything worth doing is worth doing right the first time. Problems solved by quick fixes seldom stay fixed; therefore, it wasn't a fix, it was just a temporary remedy to a problem that still exists.

### Habit #42: Become Courageous

It takes a person of courage to overcome challenges and become successful. The following is repeated by the cadets during chapel services at the U.S. Military Academy at West Point.

*Make us to choose the harder right*
*instead of the easier wrong,*
*and never to be content with a half truth*
*when the whole can be won.*
*Endow us with courage that is born of loyalty*
*to all that is noble and worthy,*
*that scorns to compromise*
*with vice and injustice and knows no fear*
*when truth and right*
*are in jeopardy.*

**Habit #43: Sometimes You Must Lose a Fight to Win a War.** If you are trying to win an argument, then you are also trying to make the other person lose that same argument. Your victory has also caused a defeat. When you defeat someone, you haven't endeared yourself to that person. Everyone is entitled to their point of view. Sometimes by simply allowing a person to feel as if they are right, you can still get what you want. Words like "I can see your point" don't put the other person on the defensive. On the contrary, it shows you are willing to consider other possibilities, remedies or solutions.

### Be Like the Golden Bear

Jack Nicklaus, the world-renowned golfer nicknamed The Golden Bear, knows a thing or two about winning. Nicklaus raised his putter and nodded to the crowd after making an incredible shot; he didn't pound his chest in a display of egotism of how great he was. Be gracious in winning, humble in defeat and always confident.

**Habit #44: Strive to follow the Golden Rule.**

- CHRISTIANITY: Do unto others as you would have others do unto you.
- CONFUCIANISM: Do not unto others what you would not have them do unto you.
- JUDAISM: Whatever is hurtful to yourself do not to your fellow man.

The Golden Rule is a universally accepted principal. You can never go wrong incorporating it into your daily life.

**Habit #45: Ask for Help and Advice.** No one has enough time on Earth to be able to learn it all. You need to take advantage of those who have come before you and learn from their experiences. It is easier to have someone explain to you how to do something rather than you stumbling around trying to figure it out on your own.

## Habits 46-52

**Habit #46: You Have to Stretch Yourself.** It is amazing what you can accomplish when you put in the time, effort and practice. In order to keep progressing, you have to keep pushing yourself, stretching to achieve more. Mavis Lingren, when she was 62 years old, decided she wanted to run a marathon. The day she decided her goal, she couldn't run farther than a block. Eight years later she ran her first marathon. At the age of 86, she ran in the New York City Marathon, her 65th marathon in 16 years.

**Habit #47: Act Like You Have Been There.** Be gracious in your winning moment because there will

come a time when you don't win. By accomplishing the amazing feat and not making a big deal out of it, you will cause even more of a stir in the minds of others. Folks will be wondering how good you are when you don't make a big deal out of something. Carry yourself with confidence, show excitement for your feat but always act like you've been there.

**Habit #48: Handle Jerks Quickly and Cautiously.** "Jerks" are difficult people to deal with because they don't care about reasoning, and they especially don't care about you. Screaming, yelling, ranting or raving at them won't help either, because they are not listening. Those tactics only serve to worsen matters. To end a situation with a "jerk," you must first understand that you are not dealing with a rational person. Reasoning with them in any way will not work, so you need to minimize your losses. In simpler terms: Hold your tongue, and move on.

**Habit #49: You Have Got to Take the Shot.** It is a simple rule: You can't make the shot until you take the shot. Many a career failed because someone was just too scared to take the shot. Michael Jordan, probably the best pro basketball player to ever play the game, missed 50 percent of the potential game-winning shots he took. The key is, he took the shot. More important, he wanted to be the one who took the last shot. He wasn't concerned or thinking about the consequences of missing the shot. Success does not come to the timid or meek. In fact, success does not come to anyone; you must go out and get it. If you don't ask, you won't get. If you don't try, you have already failed. Prepare yourself; practice, drill and rehearse, then let it rip. If it doesn't work, then rethink, reload and take another shot. The only difference between a big shot from a little shot is the big shot was a little shot who just kept on shooting.

**Habit #50: Treat Everyone Special.** On your journey to being successful, you will encounter all types of people. You will meet folks who are talented, motivated, rich and/or powerful. You will also encounter folks who are less fortunate; people who, due to no fault of their own, haven't achieved any status, privilege, money or recognition in life. It doesn't matter who they are or what their status is, you must treat them all the same by treating them "special." By taking a few extra moments to be genuinely interested in others, you will greatly enhance your personal potential for success. You will never know when they might return your polite attitude or act of kindness with something that may prove to be extremely beneficial to you.

## Make the 52 Habits Work for You

Your choices will determine your success:
Choose to live a life of excellence.
Choose to rise above trivial things.
Choose to be courageous.
Choose to control your destiny.
Choose to never give up.
Choose to guard your integrity.
Choose to be punctual, orderly and diligent.
Choose to believe in yourself.
Choose to live a life of action, not words.
Choose to practice, drill and rehearse.
Choose to be a positive person.
Choose to never quit learning.
Choose to make the 52 habits a part of your daily life.

**And by making these choices,**
**you have now chosen to be successful.**

**Habit #51: Protect Your Integrity.** Everything in life can be taken away from you: your money, your home, your car and all your worldly possessions. You can lose your good health or even your life. The only thing that cannot be taken away is your integrity. Only you can give it up by lying, cheating and/or stealing. Integrity is a quality a person gives to him- or herself, so guard it, protect it, value it and respect it. Once you give up your integrity, you can seldom, if ever, get it back.

**Habit #52: Don't Procrastinate — It Kills Dreams.** You need to deal with whatever is holding you back. Many people create excuses or blame others for their inability to do what is necessary to become successful. The only thing really holding you back from reaching your desired goals is you. Remove the clutter in your life and focus on where it is you want to go, and then do it. ●

### RECOMMENDED READING LIST

If you liked *52 Essential Habits for Success*, you'll also like:

1. ***Extreme Productivity* by Robert C. Pozen.** Pozen provides readers with a tutorial to determine your highest priorities and match them with how you actually spend your time.
2. ***Drive* by Daniel H. Pink.** Pink examines the three elements of true motivation — autonomy, mastery and purpose — and offers techniques for putting these into action.
3. ***Linchpin* by Seth Godin.** Linchpins are the people who get the best jobs and the most freedom. Godin shows you how to become indispensable.

Career & Self-Development

# Extreme Productivity

## Boost Your Results, Reduce Your Hours

by Robert C. Pozen

### THE SUMMARY IN BRIEF

Robert C. Pozen taught a full course load at Harvard Business School while serving as the full-time chairman of a global financial services firm. He's written six books and hundreds of articles, raised a family with his wife of almost four decades, and served on many boards of local charities and public companies. Pozen is a prince of productivity, a man who has worked smarter and faster than almost everyone around him for more than 40 years.

In *Extreme Productivity*, Pozen reveals the secrets to workplace productivity and high performance. His book is for anyone feeling overwhelmed by an existing workload — facing myriad competing demands and multiple time-sensitive projects. Offering antidotes to a calendar full of boring meetings and a backlog of emails, *Extreme Productivity* explains how to determine your highest priorities and match them with how you actually spend your time.

Pozen shows that in order to be truly productive, professionals must make a critical shift in their mindset: from hours worked to results produced. He helps people at all stages of their careers read, write, and make presentations quicker and more effectively. He provides professionals with practical tips on how to efficiently use their time in the office while leading full and productive personal lives as well.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to set and prioritize your goals.
- How to improve your productivity in your daily routine.
- How to manage your subordinates and your boss.
- How to embrace change and use it to chart a satisfying career.

## Introduction

Success comes not just from hard work and careful planning — though those are both important. Success depends in large part on proper mindset: focusing on the results you plan to achieve, rather than the number of hours you work. The results are what matter most to your employer, clients and colleagues.

Let's begin with what I mean by "personal productivity." I mean the quantity and quality of your results in achieving your own objectives. I won't attempt to dictate what those objectives should be, only that you should clearly articulate them and their relative priority. You may be looking to climb the corporate ladder as quickly as possible or seeking a better balance between your professional and personal lives. In either case, you will benefit by getting more done in the hours you work.

What follows are specific and practical suggestions on how to increase your productivity at work. You can pick and choose whichever suggested techniques seem most helpful to you.

There are no miracle cures offered. Most of my recommendations call for rigorous thinking and disciplined behavior sustained over long time periods.

## Part I: Three Big Ideas

### Set and Prioritize Your Goals

No matter what your career aspirations are, you should begin by thinking carefully about why you are engaging in any activity and what you expect to get out of it. Establish your highest ranking goals and determine whether your actual schedule is consistent with this ranking. This process has six steps:

**1. Write everything down.** On one or two sheets of paper, write down everything you are required to do in your professional life. This includes all those routine tasks in your job description. It also includes any long-term projects.

**2. Organize by time horizon.** Divide your list into three time categories: Career Aims (5+ years), Objectives (3–24 months) and Targets (one week or less). Make sure that each of your Objectives has one or two associated Targets.

**3. Rank your Objectives.** Start by thinking about what you want to do, what you're good at, and what the world needs from you. You should also consider what your boss wants and needs. Rank your own list of Objectives on a scale of 1 to 10, with 10 being the highest.

**4. Rank your Targets.** Your Targets will typically fall into two categories: Enabling Targets help you accomplish your Objectives, and Assigned Targets are given to you. List your Enabling Targets and rank them based on the importance of the Objective in question and how effectively the Enabling Target furthers that particular Objective. In many cases, you should consider Assigned Targets low priority and spend as little time on them as possible.

**5. Estimate how you actually spend your time.** Take out your calendar and answer these questions: How many hours do you spend at work? What are the

three main activities on which you spend the most time? How many hours do you spend on company meetings, filling out forms or reports, or responding to emails? Now go back and compare your allocations of time with your ranked list of Objectives and Targets.

**6. Address the mismatch between priorities and time spent.** If you're like most professionals, you will find that you are spending no more than half of your time on your highest priorities. Some professionals have not carefully thought about their Objectives and Targets. They often neglect an important goal — until it becomes a crisis, demanding their full time and effort.

At higher levels in an organization, an executive's ego often causes him or her to spend too much time on certain activities. This discrepancy between top priorities and time allocation can occur at all levels of an organization. Some solutions will require changes in your personal habits. Other solutions will require changes in your organization's procedures — or the way you deal with them.

## Focus on the Final Product

Focusing on the final product is critical to efficiently completing your high-priority projects, which are often broad in scope and complex in content.

Think hard at the start of a project about where it's going: What are the critical issues and how are they likely to be resolved? After a day or so of gathering relevant information, write down your tentative conclusions for the project. Write the conclusions in the form of a rebuttable hypothesis that can be revised as the project progresses.

Start with rebuttable hypotheses to guide your research, but you should not wait until the end to evaluate them. By pausing and reflecting midway through the project, you will be able to focus the second half of your work on a better set of hypotheses.

Many professionals have trouble getting started on their highest priorities. Instead, they procrastinate by distracting themselves with more pleasant tasks. Chronic procrastinators pay a high personal price for their habit. As the deadline nears, they go into panic mode.

Break the project into smaller pieces and get going on the first steps. Clear your docket, set aside time to concentrate on the big project, and cut off access to distractions.

You can help yourself by creating evenly spaced, mini deadlines — interim dates for completing specific stages of the project. I suggest that each of these mini deadlines be tied to a personal reward for completing tasks, such as allowing yourself to eat an ice cream sundae or watch a favorite TV show.

Focus on results, not hours. Punching a time clock made sense in the industrial age, but it makes no sense for professionals. Their contribution is not the time they spend on their work but the value they create through their knowledge.

## Don't Sweat the Small Stuff

Though attention to detail is usually considered a positive attribute, your time commitment should vary according to the importance of the project and the needs of your audience. It may take you one day to do B+ work, but the rest of the week to bump it up to an A. For your highest-ranked Objectives and Targets, it is usually worth spending that extra time and effort. But for most of your low-priority tasks, B+ is quite often "good enough."

One technique for not sweating the small stuff is to follow the principle of OHIO: "Only Handle It Once." This means tackling your low priority items immediately when you receive them, if possible. If you let a backlog develop, you will waste a lot of time and increase your anxiety level. For example, every day you receive a barrage of requests for your time and knowledge from your co-workers, family, friends and people you don't know. When you get a request, decide promptly whether you should ignore it or offer a response. Respond immediately to important requests. Don't waste time by having to re-find an email or think twice about an appointment.

Waiting — for an hour, a day or a week — to respond to a legitimate request will double or triple the time involved. In the best case, you have to reread the request and think again about the issues it raises. In the worst case, you will spend a significant amount of time trying to find the request again.

Multitasking is a good way of accomplishing low-priority tasks efficiently. It's perfectly OK to skim a report while listening to a conference call. Don't try to multitask if both activities are mentally demanding. The rapid switching between topics wastes your brain's energy. And don't multitask in front of actual or potential customers; they expect your full attention.

Avoid the tendency to micromanage. Give your subordinates significant freedom to complete projects, even if you think that could lead to a higher risk of mistakes. Learn how to deal with, or get around, bureaucratic impediments that force you to spend too much time on low-priority tasks. ●

# Part II: Productivity Every Day

## Your Daily Routine

How can you make sure that you are accomplishing your highest goals every day? The key is to create a daily calendar that drives home your most critical Targets.

First, your calendar must record all of your daily commitments in one place in a way that you can easily see the purpose of each appointment and the importance of each assigned task. Second, the calendar must be mobile: you must be able to carry — or have electronic access to — your calendar during the whole day so you can easily add new items or revise your existing schedule.

Gaps are crucial to the successful schedule; they give you time to make calls, write notes or even think! Many executives line up meetings and conference calls for every hour of the day. That is a big mistake — you need time to digest what has happened and develop strategies for the future.

Next to a meeting or phone call, I write down my purpose for the event — what I want to get out of it. This ensures that I'm focused on the purpose of each meeting or call while I am engaged in them.

A very important part of my daily routine involves getting enough sleep and exercise, both of which are easy to brush aside when work gets busy. But skimping on either of these key activities will seriously harm your productivity.

## Traveling Lightly

Even if you have a productive daily routine when living at home, you will have a harder challenge when you travel across the country or around the world. Although improved telecommunication has somewhat reduced the need to travel, there will never be a substitute for face-to-face interaction in certain situations. Professionals should learn how to remain productive when on the road for business. The key to a productive trip lies in good advance planning. Here are some suggestions:

- Make a to-do list — one that you can use every time you travel — that includes the dozens of small tasks involved in preparing for a trip.
- Line up a driver from the airport and check out local transportation when you plan your itinerary.
- Be clear about your goals for the trip and make sure your schedule reflects those goals.
- Never check luggage on a trip lasting less than a week. Instead, take a large carry-on roll-aboard with the items you really need to bring.
- Carry a canvas bag on the airplane with tools for sleeping (eyeshades, earplugs) and reading materials (hard copies and flashlight or computer/iPad).
- Buy a business-class ticket for overnight flights. A good night's sleep is worth the extra price.
- Drink lots of water on the airplane — roughly one quart per four hours.
- Maintain your daily routine on the road: review your calendar each night, get eight hours of sleep and exercise daily.
- Get into your destination time zone as soon as possible to mitigate jetlag. Exercise as soon as you land so that you can stay awake during the day.
- Talk to your spouse and children every day while on the road. The phone is OK, but video chatting (such as Skype) is better.

## Efficient Meetings

If run correctly, meetings can be quite productive. They can help formulate and implement an organization's policy, and they can provide forums to discuss and resolve issues. Unfortunately, too many meetings lack focus and fail to achieve any meaningful purpose. And in most organizations, there are simply too many meetings and they last too long.

Before I call any meeting, I carefully think about what I want to get out of it. If I'm not satisfied with my answer, I don't go forward with the meeting.

There are two main reasons to have a meeting:

1. You should call a meeting if you need to establish a personal relationship with someone outside your organization, such as an elected official or new customer.

2. Meetings are often necessary if you want to engage people in a debate; face-to-face dialogue cannot be replaced by email or phone calls.

You should not call a meeting simply because "it has always been held." Some weeks, the meetings may be necessary — but the boss should decide every week whether the meeting is actually needed.

Many in-person meetings are unnecessary in light of recent developments in videoconferencing. It's unproductive to spend hours on air travel to meet in person when you already know the other attendees and have access to top-quality videoconferencing.

Most meetings can be completed effectively within 60 minutes, and meetings really should never run longer than 90 minutes.

Hand out materials to be read one day before the meeting so that people have a chance to actually read it.

After the introduction, organize vigorous debate on the key points. The most powerful executive in the room must be willing to be challenged.

At the end of the meeting, ask participants to collectively decide who should do each task and when each task should be completed.

## Part III: Developing Personal Skills

### Reading Effectively

If you want to be an effective reader, you have to know your purpose for reading and stick to it.

List all the news sources, virtual and physical, that you read regularly for reasons other than amusement. Ask yourself how you're reading each source: Are you concentrating on your goal for that publication, or does your attention wander every time you see an entertaining headline? Next to each publication, jot down an estimate of how much time you spend each week reading it. Does your allocation of time make sense, given your professional Objectives? If not, read only those sections that are relevant to your purpose or stop reading that publication altogether.

To implement the general principle of active reading, you should follow a three-step process:

**1. Grasp the structure of the reading.** Before you start to read a document, take a few moments to understand its structure — how it begins and ends, and how it divides the major topics in between. In books, look at the table of contents. In shorter works, glance at the headings. This will help you both read faster and understand more, because you already know how the author plans to move from one idea to the next.

**2. Read the introduction and conclusion.** First, read the introduction carefully, looking for the theme sentence or paragraph that will unlock the whole article or chapter. Then skip directly to the conclusion. Why? Because the conclusion tells you where the writer is going to end up. Only when you know where the writer is aiming should you read the body of the text.

**3. Skim the tops of the paragraphs.** Unfortunately, skimming has gotten a bad rap in the academic community. But I'm not talking about that kind of passive skimming. To actively skim the body of an article or chapter, you should read the top of each paragraph. A good writer starts each paragraph with a topic sentence, followed by supporting facts or arguments.

As you read an article or memo, constantly ask yourself what you want to remember from it. Think about your purpose for reading before and during your review of the material. Think about what you want to remember during and after you review the material.

### Writing Effectively

Writing is an essential skill for knowledge-based workers. They must compose documents to inform, lead, and persuade others both inside and outside their organization. Poor writing undermines professional productivity in many ways, frustrating customers, baffling employees, and creating office tension due to miscommunication.

Think of writing as having several distinct phases, including an initial phase of mapping the terrain and the second phase of translating that map into actual prose. Formulate a rough plan for the entire piece before you put pencil to paper. If you try to write without a plan, you will face an enormous challenge.

My approach to creating an outline is completely systematic: first I brainstorm, next I categorize, and then I outline the final product.

The three key elements of any essay are the introduction, the conclusion and the body. In my view, a good introduction must fulfill three objectives: provide the reader with context, state the main theme of the author and explain the organization of the writing.

Create an executive summary for long or dense documents that describes the big picture so that readers short on time can understand the main points.

Don't use your conclusion to merely summarize the piece; provide the reader with additional insight, such as broader implications or suggestions for future actions.

Use effective language. This means short sentences, clear relationships between clauses and proper use of antecedents for pronouns. Proofread your paper for grammar and spelling mistakes. When you've finished, proofread again.

Don't try to write and revise at the same time or you'll get hung up on every sentence. Don't try to write a long piece in one sitting; write every day for an hour or two in an environment that best suits you.

### Speaking Effectively

The thought of speaking in front of an audience terrifies most people. But public speaking is an important skill for most professionals. Because most professionals have not been trained in this area, they make predictable mistakes.

The key to effective speaking is preparing well before the event. Preparatory activities can be divided into three main areas:

**1. Know your audience.** Start by figuring out the three Ws of your audience — who they are, why they are attending, and what they care about. For internal meetings make sure you clearly understand the priorities of your boss and your colleagues. For an external speech, think about the "bread-and-butter" issues that will affect the livelihood of your audience.

**2. Structure your speech.** Write an outline of your presentation. Make sure that your line of argument is crystal clear. Divide your speech into its introduction, body and conclusion. The body of your speech should have a logical progression. One possible structure is: here's the problem, here's my analysis, here's how we could solve this problem.

**3. Practice your delivery.** After you've outlined your speech, rehearse it out loud several times. There is no other way to get comfortable with your speech so you can appear confident and natural. At the same time, rehearsing will show you the weak spots in your speech. A good way to rehearse is to present your speech to someone — a colleague or friend — who is willing to provide honest and constructive comments.

Your opening sets the tone for your whole speech. Put on a bright smile and start with a funny joke or amusing story. Next, introduce your audience to your thesis and show how the speech will be organized. At that point, your challenge is to turn the audience into active listeners.

Keep your speech as short as feasible — 30 minutes is usually as long as you want to go. Allow time at the end for a Q&A session. Be prepared for what types of questions may be asked. Get feedback — a video recording is best, but a frank colleague can also be helpful. ●

# Part IV: Managing Up and Down

## Managing Your Team

Managers can get the most out of their employees by helping them achieve meaningful progress every day. Sadly, most managers don't seem to be aware of this. To be an effective boss, you have to set up a system that enables both you and your employees to get meaningful work done. The heart of that system is delegation.

If you're following my advice so far, you're spending most of your time on Objectives and Targets that rank highest for you and your organization. But your lower-ranking goals still need to get done. Here is where delegation comes into play: it allows you to focus on your top priorities while other people complete or assist with your lower-ranking goals.

So what's the key to effective delegation? You and your lieutenants need to embrace the principle of "Owning Your Own Space." After setting clear goals for a project, give your employees broad discretion to decide how best to achieve these goals — and then get out of their way.

If you allow your workers to own their own spaces, they can adapt quickly to changing conditions rather than waiting for your approval. When you give your workers broad discretion to carry out projects, they feel responsible for the outcome and become much more invested in its success.

If you have the power to hire people, take advantage of it! If you select the right lieutenants, you will save thousands of hours through effective delegation. Here are lessons for the recruitment process:

- Ask candidates to talk about their personal history, starting with where they went to high school.
- Ask candidates how they made the biggest contribution in their prior jobs.
- Engage candidates in intellectual debate about a subject of their choosing that they know well.
- Try to gauge the creativity of the candidate by asking a question such as "What are all the possible uses of a brick for our business?"
- Choose the candidate with the most potential, not the person with the most experience in the industry.
- Make the reference calls yourself and press hard for honest evaluations, rather than the usual platitudes.

After recruitment, carefully build trust between you and your employees. Have integrity, be courteous, and communicate openly and frankly. Provide employees with support and resources to complete tasks that they have been assigned. Be their advocate elsewhere in the organization.

At the start of a delegated project, agree with your team on objective and subjective metrics for each project goal. Choosing the right metrics will often force you to have a deeper discussion with your team about what you really consider important. Make sure that you carefully design each metric to accurately capture the project's goals.

During the course of the project, discuss its status with your team and revise the project's goals and metrics if needed. But let your employees decide how to implement those revised goals and metrics. Tolerate and celebrate well-intentioned mistakes, but don't condone repeated errors or ethical lapses. If you need to criticize

your employees, do so in private. Address their specific behaviors; don't attack their personalities.

Be effusive with praise of your subordinates. It's very hard to give them too much positive feedback.

### Managing Your Boss

Just as your productivity depends on how you manage your team, it depends at least as much on how you deal with your boss by "managing up." That does not mean manipulating your boss or apple-polishing; it means establishing a mutually beneficial partnership.

Start by getting on the same page with your boss: give him or her a list of your assignments, ranked in order of importance from your perspective. Your boss can then amend the list if there are any misunderstandings.

Whatever the management style of your boss, he or she will become your biggest fan if you consistently deliver high-quality projects on time and within budget. When you do good work, your boss will be more receptive to your ideas and give you more discretion to run your own show. You should also be a team player. Willingly perform whatever tasks need to be done for your boss, even if they involve grunt work.

When you succeed, make sure your boss knows it, especially before performance reviews or bonus decisions. On the other hand, your boss will turn against you if you do not produce results as expected. If a project looks as though it may fail, make sure to give your boss plenty of advance warning. Bosses don't want to be surprised by long delays or major blowups. When you warn your boss of a serious problem, you should simultaneously offer possible ways to mitigate its negative effects. You should also accept responsibility for a problem that has arisen under your watch.

For conflicts that do arise, if the stakes are modest or your chances of prevailing are low, grit your teeth and go along with your boss's position. When you do decide to stand your ground, you have to do it in a problem-solving way. Do your research and keep the tone collaborative. These strategies are even more important if you and your boss have repeated clashes rather than a one-time disagreement. ●

## Part V: Pursuing a Productive Life

### Maximizing Your Career Options Over a Lifetime

You don't control the trajectory of your career. There are just too many factors beyond your control that will shape your job opportunities — such as global economic trends, political elections, industry regulation and company finances.

On the other hand, you can increase your probability of success by approaching your career with the right mindset. Career planning is not a one-time event; it's a continual process that has to be actively managed over a lifetime. At each step, ask yourself: what can I do next that will maximize my options in the future?

To start, establish some tentative Career Aims by critically evaluating your supply and the world's demand:

**1. Your Supply:** Think about your own interests and the skills that you can offer to employers. What topics do you find most enjoyable and interesting? Are you more adept at reading and writing or playing around with numbers? Consider not only your formal credentials but also your intangible personal skills, such as the ability to think on your feet or empathize with the less fortunate. To get a good understanding of the skills and interests that you need for particular jobs, talk to people already in these jobs.

**2. The World's Demand:** Evaluate whether there is sufficient market demand for your desired career. Even if there are some jobs for your desired profession, there may be too much supply relative to the demand. Don't just look at market demand by taking a snapshot in time; find out where the industry is going. Is it expanding or contracting?

After creating some tentative Career Aims, ask yourself how you can move your career in the right direction. You should pursue a combination of formal classroom education and informal learning on the job. Seek knowledge and skills — such as leadership skills, experiences in foreign countries, and stints at different types of organizations — that would be transferable to many types of jobs in the future.

### Embrace Change but Stay the Same

To make productive choices in the working world, you need to learn how to embrace change at each step and take advantage of the opportunities change presents. At the same time, certain aspects of the working world have remained the same over the years. These include the fundamentals of profit and loss and the ethical values of honesty and integrity.

Despite the inherent preference for stability, change at work occurs frequently at several levels. People change jobs more often than ever. Leadership and strategy change constantly. Over a longer time horizon, your organization's standing will not remain the same. At the global economic level, your career prospects are likely to

be adversely affected — and perhaps derailed — by short-term crises.

When you start thinking about your next career step, pay close attention to long-term trends. You can gear your career choices toward products or sectors that are attractive to the largest demographic group. You also need to stay on top of technological trends. Interdisciplinary fields can offer great potential for breakthrough changes.

Whatever path you take in developing your career, abide by these precepts:

• **Economic fundamentals.** A company must generate profits as well as revenues to remain a viable business, and stock prices ultimately reflect the company's expected stream of future profits. To be successful, your firm will have to deliver economic value over time, as reflected by a steady stream of profits rather than just a growing volume of revenues.

• **Your personal integrity.** Personal integrity includes not only complying with applicable laws, but also following your own ethical code on standards of business conduct. My code includes honest communications to all stakeholders, fair treatment of employees, and no misuse of corporate information. Identify three or four main principles that will guide your personal behavior over your professional career and write them down.

### Balancing Home and Work

What's the point of getting more done in less time? In my view, the point is not just to build a more rewarding career, but to enjoy a more rewarding life. The more efficient you are at work, the more time you'll have for your family, your friends and other aspects of life that you care about.

Imagine that suddenly you had five extra hours to spend each week. Suppose you would spend most of that extra five hours per week with your children. That means that extra time with your children is more valuable to you than extra time at work. Or suppose you would spend most of the extra time on yourself. That choice implies that you feel you have given up too much of your personal life to tend to your job and your children.

To shift the balance from work to personal activities, there are two areas you should focus on:

• **Find a flexible employer — or try to create one where you are.** Almost 80 percent of employers permit some workers to periodically change their starting and quitting times within specified ranges. In particular, many high-tech companies and customer service firms allow employees to work from home. Investigate your employer's policies on paid leave and flex time before you accept a job.

• **Change the way you work.** Go home for dinner. Although you may occasionally have to work late at night if there is a real emergency, there cannot be one every day. Protect your family time. You will have to be assertive and learn to say no. You may be anxious about setting limits with your boss. But remember: if you have shown that you are productive and trustworthy, your boss knows that you will get your work done with a more flexible schedule.

When you finally arrive home, concentrate your full attention on your family. This is not a place for multitasking. Avoid interruptions from work such as phone calls and emails. When you're with your family, avoid all but the most critical interruptions from work. Most issues from work can wait until tomorrow morning.

## Epilogue

Professionals at all levels should focus on results produced rather than hours worked. It's the best way, in my opinion, for you to get more done at work while enjoying more time with your friends and family. However, I've also been impressed by how much your approach to productivity should depend on your own specific situation. You should carefully consider your own stage in life and your organization's culture as you apply the lessons offered here.

Remember that you have control over your own mindset and behaviors on productivity. Write down your goals, divided into time periods and ranked in order of priority. Then you'll be in a good position to spend the most time on your highest goals and minimize the time you devote to less significant matters.

Regardless of your employer's culture, you can adopt most of the specific techniques in this book. Ultimately, it is within your power to boost your results and reduce your working hours.

# UNFINISHED BUSINESS
## Women, Men, Work, Family
**by Anne-Marie Slaughter**

© *2015 Random House, 352 pages*

For many years, women were expected to make a choice: career or family. It was impossible, they were told, to have both. A woman could not devote the kind of time and commitment needed to climb the ladder of success while at the same time giving birth and taking care of children. Eventually, feminists began to fight back, rejecting the forced choice. It was possible, they declared, to build a successful career while still nurturing a family. It was possible, they eventually declared, to have it all.

In 2008, Anne-Marie Slaughter, author of a powerful new book on women, men and work called *Unfinished Business*, believed the mantra. It was indeed possible, under the right circumstances, to have it all, and she was proof. Slaughter had a very high-profile job as dean of the Woodrow Wilson School of Public and International Affairs at Princeton University. She also had a family, including a husband who was a tenured professor of politics and international affairs at Princeton, and two sons, ages nine and 11. With the support and participation of her husband, Slaughter was able to thrive in her position while still leaving the office at 6 p.m.

In 2009, Slaughter was tapped by Secretary of State Hillary Clinton to become the first female director of policy planning. The position was, of course, Washington-based. In accepting it, Slaughter began a commuter existence, spending the week in Washington, then returning home on Friday nights to spend the weekend with her family.

Once again, it seemed that she had it all. But not exactly. Slaughter knew she really wasn't there for her boys. Her younger son, then 10, would cry on the eve of her weekly departures. (He once told her during one particular cry, "I don't want you to go. I don't care about the country.") After two years and much deliberation, Slaughter returned to Princeton and her position as dean of the Woodrow Wilson School. And for the first time, she realized that women could not have it all. It was a bit of a revelation for her.

Despite all the progress that women had made to become accepted in the workplace, despite growing efforts by companies to create conditions where women could marry, have children and still have careers, despite the overwhelming number of husbands who were ready to share the housework and child-caring duties, women, Slaughter concluded, still had to choose, at some point in their lives, between career and family. In 2012, Slaughter wrote an article in *The Atlantic* explaining why this was so, using her own experiences as a launching point.

The article would quickly become one the most read articles in the history of the magazine. Slaughter had clearly touched a nerve with both men and women, who had grown weary of hearing the "you can have it all" argument. This was especially true of working women who could not afford 24-hour nannies.

In the aftermath of her article, Slaughter traveled the country giving speeches about the dilemma of working women — and listening to both the support and pushback to her speeches and writings. For some, Slaughter was revealing the unfortunate truth. Women are the caregivers, and successful careers don't leave room for caregiving. For others, Slaughter was throwing in the towel, wrongly accepting that women will never have the advantage of men, who are allowed to have both careers and family.

Readers of *Unfinished Business* will discover that neither camp is correct. The core of Slaughter's thesis is that women cannot have it all… yet. It is not impossible for women to build incredible careers while nurturing happy families; it is just not possible today.

### Deceptive Half-Truths About Women, Men and the Workplace

The problem, according to Slaughter, is that those who are arguing that it is possible for women to balance work and family are basing their argument on a series of half-truths. The first half truth is that "you can have it all if you are just committed enough to your career." In fact, this argument is telling women to act like the men who sacrificed family life

for careers, barely participating in their children's lives. The fact is that those men knew that a parent — their spouse — would be home with the children. Most women today do not have stay-at-home husbands, which means there is no parent for the children at home. Making the decision to sacrifice family life for career under those circumstances is much more difficult.

Instead, women try to stay committed to their careers while juggling career and family life, which may work for a while until something — a child gets seriously ill or in trouble; an aging parent faces health-care challenges; a spouse gets a promotion, which reduces his time with the family — makes the entire balancing act tip over.

The second half-truth, writes Slaughter, is that "you can have it all if you marry the right person." The idea is that a woman finds a man who shares the domestic duties 50-50. The problem is that 50-50 is not good enough if a woman truly wants to rise high through the ranks; the husband will have to do more, which also means that the husband will have to sacrifice his own high career aspirations.

Finally, the third half-truth that women hold dear, according to Slaughter, is that "you can have it all if you sequence it right." The sequence might be to build your career, then have children when you are secure in your career. One problem is that depending on how long it takes to build the career, it may be biologically too late for children. And coming back to the workplace after having children doesn't necessarily mean you can step back on the ladder and continue on your merry way. The window of opportunity for a career to the top may be closed.

Half-truths about women are not the only half-truths that explain why women still cannot have it all. Slaughter also points to the half-truths about men that too many people have signed onto.

The first of these half-truths is that "men can't have it all, either." This half-truth is meant to disarm the women and their allies battling for gender equality. And in some ways, it is true. Men who take advantage of parental leave, for example, might be stigmatized and find they have forfeited real advancement in the firm. However, to declare that men and women have faced the same problems in juggling firm and family would be, in Slaughter's terms, "revisionist history." The cultural barriers that women have faced have been much more challenging for women who want to balance a career and a family than they have been for men.

> "The argument that women can have it all today is bolstered by half-truths that don't stand up to scrutiny and explain why women are still unsuccessfully fighting the battle to have the same opportunities as men — no more, no less. Men can have great careers and great families; will women ever be able to do the same? The resounding answer from Slaughter is yes."

The second half-truth related to men is that "children need their mother." No matter how hard fathers may try to support their wives, the presence of the woman is needed. For Slaughter, this belief is a crutch. Obviously men can't get pregnant, give birth or breastfeed. But that is where it ends. The rest can be done equally well by men.

The third half-truth about men emerges from the Bible, which says that "a man's job is to provide." This is an ingrained assumption about the roles of men and women that does not necessarily reflect reality. First, 40 percent of American women are the primary breadwinners in their families. In addition, economic challenges often require a two-income family — the man cannot provide on his own.

Finally, according to Slaughter, the discussion about women successfully managing great careers and happy families is tainted by half-truths about the workplace. The first half-truth is that "work-life balance is a women's problem." Slaughter argues that work-life balance is neither a woman's nor a man's problem. It's a problem based on the cultural perception of care. "It's a care problem" is a theme she explores in much more detail in the second portion of the book.

One of the most prevalent half-truths about the workplace is that flextime options are allowing women to build their careers while caring for their families. Unfortunately, while flextime is helpful, employees are often unable to access these programs. And even if they exist, taking advantage of such programs is often a "black mark" on the employee.

In short, the argument that women can have it all today is bolstered by half-truths that don't stand up to scrutiny and explain why women are still unsuccessfully fighting the battle to have the same opportunities as men — no more, no less. Men can have great careers and great families; will women ever be able to do the same?

The resounding answer from Slaughter is yes. After explaining why it's not happening today (no matter what some might say), Slaughter then launches into a compelling, inspirational how-to manual on how it can happen tomorrow.

## Care and Competition

The first step is recognizing that half-truths are just that: insufficient maxims that don't tell the whole story. For men and women to truly have equal opportunity, there must be a serious shift in the attitudes of society — not about women and men but about care and competition.

In blunt terms, caring for others is not valued in today's society. While we may all express the greatest admiration for motherhood, no one truly believes that saying, "I'm a homemaker" is as impressive as saying, "I'm chief marketing officer for a major corporation." The corporate ladder-climber wins the admiration points every time.

One of the telltale signs of this discrimination against care and caregiving, according to Slaughter, is in the low salaries that society is willing to pay for caregiving. Indeed, salaries in the care industry are among the lowest of any industry.

The most egregious result of this discrimination against caregiving is what Slaughter calls the "motherhood penalty." Career women, she writes, must pay a penalty for being mothers. That penalty is manifested in two ways. First, mothers who must occasionally take time off to care for their children are considered poor leadership material; they are not given the marquee assignments or other opportunities on which to build a career, and they are not offered promotions.

Another manifestation of the mother penalty is the woman who interrupts her career to spend time with her children; when she returns to the workplace, the years away from the office are considered wasted years. There was, in the minds of corporate decision makers, no value of any kind acquired through caring for children.

Slaughter challenges this assumption in a chapter provocatively titled, "Is managing money really harder than managing kids?" Why should caring for others be considered "easy" — even unskilled? Why should successfully competing in the workplace, in contrast, be considered difficult and a laudable accomplishment?

Slaughter's point, as she states explicitly, is not to devalue competition but to revalue care. There is merit to succeeding in the workplace, but there is equal merit in succeeding as a caregiver. After all, successful caregiving begins by turning "income into goods and services necessary for survival," which includes shopping, cooking, cleaning, washing, organizing and outsourcing. Successful caregiving also includes the emotional components of loving and nurturing. And most impressive of all, successful caregiving includes "teaching, discipline… coaching, encouraging, problem solving, character building and role modeling" — none of which sounds easy.

Having compellingly argued that caregiving is just as important and valuable as competing in the marketplace, Slaughter then denounces what she terms "the competitive mystique" — the idea that true success is measured by how effectively you compete. As long as the bias of the competitive mystique dominates our culture, women with families will never be considered the equal of women who choose to focus exclusively on their careers.

"Having compellingly argued that caregiving is just as important and valuable as competing in the marketplace, Slaughter then denounces what she terms 'the competitive mystique' — the idea that true success is measured by how effectively you compete."

The question is, how do we move forward? How do we defeat the competitive mystique? Slaughter answers these questions with another provocatively titled chapter: "The next phase of the women's movement is a men's movement." The heart of her argument remains the need to revalue caring, but in this case, this revaluation would be manifested in the way men are treated if they choose to be caregivers. In short, stay-at-home dads are not treated with the same respect as corporate-ladder-climbing dads. And the lack of respect does not end there, since stay-at-home dads must often face the surprise of others that they are actually good at caregiving. The gender bias is so pervasive that our culture believes not only that "real men" should not want to be caregivers but also that "real men" are incapable of being caregivers!

Thus, to revalue care, Slaughter concludes, women must begin by letting go of society's expectations of who women should be and what women should do — and they should also let go of their own expectations of who men should be and what they are capable of doing. "If we can let go of the mountain of assumptions, biases, expectations, double standards and doubts that so many of us carry around," she writes, "then a new world of possibilities awaits."

## Four Action Steps

In the last section of her book, Slaughter moves from mindset to "concrete" action steps. She begins with the importance of changing the vocabulary — how we talk. We have come a long way since all women were expected to be homemakers and all men the breadwinners. We are no longer surprised at finding women as lawyers, doctors or CEOs (although not as numerous as they should be). What is often overlooked is how a two-letter word, Ms., had a significant impact in helping women break out of the perfectly coiffed and pearled homemaker stereotype. Unlike the title for men, Mr., the original titles for women immediately identified them as married or unmarried. Feminists believed (correctly) that marital status was not the most important piece of information concerning a woman. "Ms. gave women their own identities, regardless of marital status," writes Slaughter. A seemingly small change in language had enormous symbolic significance.

In many ways, language perpetuates our gender biases. A stay-at-home dad is referred to as "Mr. Mom." He's not really a dad; he's a male mom. And male employees with children are not referred to as "working fathers." The implied "correct" gender roles are obvious in the phrases

"Mr. Mom" and "working mothers." Slaughter argues that all of us should make deliberate attempts to avoid phrases and words that reinforce gender stereotypes. Even the phrase "stay-at-home" is unfortunate, as it assumes that going to work is the normal state of things.

Another step for "getting to equal," according to Slaughter, is to plan a career that incorporates intervals when you are less focused on career and more focused on family. The best-laid plans, of course, are rarely realized, but thinking in terms of intervals can help prepare and manage family phases and work phases. Concepts such as career portfolios (of different jobs) and tours of duty also offer different career scenarios that build family-focused time.

"Another step for 'getting to equal,' according to Slaughter, is to plan a career that incorporates intervals when you are less focused on career and more focused on family. The best-laid plans, of course, are rarely realized, but thinking in terms of intervals can help prepare and manage family phases and work phases."

The changing world of work also offers opportunities for men and women to have meaningful careers and still be successful caregivers. The on-demand economy, for example, allows for growing numbers of freelancers to work in flexible situations in which they can toggle from intense family-oriented activities to intense work activities. Slaughter also cites the open-work movement, in which employees define the rules of their work environment (in conjunction with the district manager). The changing world of work also calls for employees to take charge by "managing up" — learning how to collaborate and communicate with and even lead superiors in helping you to meet your needs.

The last of Slaughter's four steps is focused on public policy, which includes building an infrastructure of care (e.g., high-quality affordable care, paid family leave for both women and men). Slaughter also believes that electing more women is important. As sexist as it sounds, research has shown that women in politics will work more on care issues and helping the disadvantaged.

## What About Leaning In?

Although the book culminates in several action steps, the core of Slaughter's message is that our culture must look at care and competition through a new perspective, or "new lenses," to use Slaughter's term. This focus on mindset and cultural assumptions is what separates *Unfinished Business* from women-empowerment and success books such as the phenomenally successful *Lean In*, by Sheryl Sandberg.

Slaughter admires Sandberg and has had experiences with readers of *Lean In* who have asserted themselves and become more successful as a result. *Lean In*, however, is about operating within the system, helping women to break down the barriers that keep them from the C-suite. For Slaughter, the conflict is not so much between genders but between the concepts of care and competition. In some ways, *Unfinished Business* is a manifesto for the liberation of caring — a call for us to value care as much as we value competition. It is a tall order, and perhaps taller in America than in other countries. Competition is the lifeblood of the American way; there is an almost survival-of-the-fittest attitude that permeates many of our policy discussions. Of course, Americans care about their children and their aging parents as much as anyone. But will a 24-year-old nurse working in an assisted-living facility ever be as valued as a 24-year-old Wall Street trader?

*Unfinished Business* is an audacious challenge to America to dramatically change some fundamental attitudes. As Slaughter writes, "Not valuing caregiving is the taproot, the deeper problem that gives rise to distortion and discrimination in multiple areas of American society. When we open our eyes and change our lenses to focus on competition and care rather than women and work, we can see new solutions and new coalitions that can open the door to progress and change. Care can provide a new political banner under which all women can unite."

**The author:** Anne-Marie Slaughter is president and CEO of New America. She is the Bert G. Kerstetter '66 University Professor Emerita of Politics and International Affairs at Princeton University and the former dean of its Woodrow Wilson School of Public and International Affairs. In 2009 Secretary of State Hillary Clinton appointed Slaughter director of policy planning for the U.S. State Department, the first woman to hold that job. A foreign policy analyst, legal and international relations scholar and public commentator, Slaughter was a professor at the University of Chicago Law School and Harvard Law School and is a former president of the American Society of International Law.

## THE SUMMARY IN BRIEF

Learning from our mistakes is the only way to make sure we don't make the same ones twice. But what if you could use every failure—large and small—to actually create a successful business, career, and life?

You can. ***Fail More*** provides the knowledge, insight, and tools to do just that. This one-of-a-kind guide teaches you how to take active, strategic measures to turn the sting of failure into the reward of growth. It reveals the setbacks that are both inevitable and valuable, and it delivers practical ways of quickly moving past self-judgment and -recrimination to create large and small goals, establish milestones for achieving them, evaluate your actions, use failing as a core tool for motivation, and much more.

By embracing failure, not just "getting past it," you will fly past your competition, whether you're building a startup, advancing in your career, or improving your personal life. The most underrated tool for success is failure. ***Fail More*** provides a pragmatic program for turning failure today into profits and growth tomorrow.

## IN THIS SUMMARY, YOU WILL LEARN:

- Why failure is not just acceptable but essential to success.
- To distinguish rational from irrational fear.
- To acknowledge and move beyond fear in order to reach your goals.
- To set goals and map out the steps to achieve them.

## Always Forward: Achievement Is on the Other Side of Failure

At an early age, our teachers, parents, peers, and the rest of the social order teach us that failure is the result of a lack of innate ability. We're taught to compete for perfection—a zero-sum form of induced combat that pits our genes against the genes of others.

When it comes to obstacles that could result in potential failure, people adopt a cycle of avoidance. Avoidance is our natural inclination, followed by frustration, anger, excuses, and ultimately surrender. We carry the vestiges of this thinking into our businesses and homes. It becomes a part of our life, and we have one of two choices: deal with it and navigate forward in spite of it, or succumb to it and say, "I quit."

To escape the regret of what-ifs, you must summon the courage to break the cycle of avoidance. When it comes to courage, Franklin D. Roosevelt's words resonate: "Courage is not the absence of fear, but rather the assessment that something else is more important than fear."

### The First Two Steps

And there it is! The first two steps to failing more productively are to recognize the cycle of avoidance and then have the courage to break the pattern and make the changes vital to growth.

The road to success isn't easy. If it were, we'd all be wildly successful. Herculean feats aren't required for sustained success. What is required is the persistence and willingness to do something every day that brings you closer to the realization of your dreams. Failure doesn't mean your efforts are over. It means they have just begun.

If you want to succeed, you have to fail more. The most significant difference between success and failure is the ability to learn from failure and apply the lessons to create success. Every failure comes with specific teachable moments, each of which deserves your undivided attention. If you don't heed those lessons, your failures are meaningless.

Failure can be a guide; it's a map that shows you where success lives. Think of life as an experimental lab—you are the innovator of your life, creating concepts that you can test in the field. Some of your ideas work and some won't, but each trial will give you a little more information, a little more encouragement, and a little more confidence. Each failed attempt will reveal what you have to do to make things work the next time. There can be no success without failure.

### The Poster Boy for Failure

Jack Ma, a Chinese business magnate, investor, and philanthropist, could be the poster boy for failing more. He found ways to fail that boggle the mind. Soul-crushing, hardcore stuff that would cripple even the strongest and most determined. He recalls, "I failed a key primary school test two times. I failed the middle school test three times. I failed the college entrance exam two times."

He applied to and was rejected from Harvard 10 times. Why he applied 10 times is a mystery that to date has been unanswered. He applied to be a police officer, but the police wouldn't even give him cursory consideration—prefacing their decision with three words, "You're no good." KFC was coming to China, and Ma, of course, applied for one of the 23 openings. Of the 24 applicants, only one wasn't hired. Can you guess who that was?

Ma knew that math wasn't his thing. Time after time, it was his issues with mathematics that made universities and employers turn him away. He realized that in order to move forward, he was going to have to leave behind the quantitative and focus on the qualitative aspects of his life.

It worked. Ma became fluent in English and secured his first job as an English teacher at the Hangzhou Dianzi University at the age of 24. Ma traveled to the United States in 1995 on an assignment, and he was introduced to the internet.

His first search was for "beer." He couldn't find any Chinese entries for beer, so he searched "China" and found no entries for the country either. Never lacking for inspiration, Ma channeled the innovator inside him and thought, "Why don't I make a website related to China?" He partnered with his friend Stuart Trusty, who worked as an internet consultant.

They developed a website, and it did well. But one year later, failure struck again. A state-owned enterprise, Zhejiang Telecom, took over Ma's innovative enterprise. He then moved back to Beijing and assumed a role in the Ministry of Foreign Trade and Economic Cooperation, building websites for the government.

Bureaucracy frustrated Ma, and he left to start a new internet venture, Alibaba, which would serve small businesses and would go on to become one of the world's largest companies. In 2018, Jack Ma's net worth was reported to be $40.9 billion, making him the wealthiest man in China. If he hadn't switched his focus to languages, he never would have come to the United States. This one success opened

Your dreams and aspirations for a better life can only become your lived reality when you recognize that fear is the ultimate dream killer.

the door to opportunities he never would have had if he just kept applying for the same jobs.

Failing more isn't a license to be irresponsible or to intentionally flunk life one mistake at a time. Instead, the goal is to constantly improve through intentional practice, while embracing the process and learning from the result. Success and failure both leave room for improvement. It's only through trying more that you can become more, learn more, and enjoy more.

## Recognize Fear

Anything in life of merit or value comes at a cost, with a sacrifice, and often with the clear and present possibility of failure. Refusal to acknowledge or engage in those activities that include the potential of failure means you're playing it safe.

You play it safe because you fear. Fear can sabotage your career and marginalize your life. Your dreams and aspirations for a better life can only become your lived reality when you recognize that fear is the ultimate dream killer.

It is important to recognize that fear originates from two sources: an avoidance of loss or an aversion to change. Once you understand where your fears originate, you can then weigh the course of action necessary to achieve your goals.

Fear disguises itself as procrastination or distraction. You think to yourself, "I'm not ready. It's not the perfect time. I'm not good enough. I'll be better tomorrow." Most fail to recognize that it's irrational fear that holds them back in life. We tend to blame external obstacles for our internal unwillingness to put ourselves in play.

But how do you recognize that it's fear that's stopping you? First, let's draw the distinction between fear and danger.

### Distinguishing Between Fear and Danger

Your ability to distinguish between rational and irrational fear will provide a guide to understanding what can cause physical harm and what is a product of your overactive imagination.

Rational fear is the early warning system that alerts you to danger. Conversely, irrational fear is a product of your imagination. When you perceive a "threat" and project future harm, your body reacts in the same way as it does to real danger. This fight, flight, or freeze response is a product of your genetic imprint.

Today's sabertooth tiger of your imagination can be an angry client or spouse, or it might be a deadline you're running up against.

Fear holds us hostage in a cycle of adrenaline release. The more dangerous the perceived situation, the bigger the buildup and release of adrenaline. Unutilized, adrenaline demands an outlet, and that unspent surge often results in anxiety and, left unchecked, the "black dog" of depression.

When we begin to fear fear itself, the trickle of adrenaline is released from the imagined consequences of confrontation. We feel out of control and helpless and caught up in a web of fear and adrenaline. Hypothetical scenarios create panic, and panic perpetuates feelings of fear and the release of adrenaline. This cycle of adrenaline release resulting in fear is physically and mentally debilitating.

There is a way to stop the cycle. To do this, we need to understand the difference between being aware of fear and accepting it:

- **Be aware**. Become acquainted with the feeling. Fear is a feeling. It holds as much power over you as you permit. Be aware that what you're feeling is human.
- **Accept it**. By accepting fear, you lessen its power. Expect it because it's never going away; then embrace and welcome the feelings that accompany it. This sounds crazy, but when you welcome the inevitable, you steal its power. When you expect it, you're prepared for it. Make a pact with yourself: "I can live with this." By making this statement, you take back your power—and you need this power to perform at your best.

## Break Through the Obstacles That Limit Success

Once you understand and rid yourself of the fear of trying something and falling short, you will be able to open doors you never even considered knocking on before.

The question is, how do you handle things? Are you more comfortable with risk? Did you learn from your failure? Have you been able to distance yourself from the emotional pain? Are you now ready to use logic and make a more informed attempt from failure to create a positive outcome?

When you move from emotion (fear) to logic (obstacle management), you can then visualize an outcome by walking through the imaginary steps it takes to achieve it. You have the lessons of failure at your disposal. Now you can rationally use them to avoid the pitfalls that you previously encountered. This is one of the gifts of failure: the ability to anticipate through logic and visualization. Anticipation asks the question, "How do I overcome this obstacle?"

Divide failures into two categories: major and minor. Quitting on your success is a major failure. It's a category of one. That's it. You're renouncing your responsibility to yourself to provide for a better station in life.

Everything else is a minor failure. Not only can you recover from a minor failure, but you already have done so a thousand times in your life. Whether it was attempting to walk, riding a bike, not getting a job, messing up a presentation, or failing a course, these are all things you can come back from.

Your goal is to improve every day, and you have to accept that minor failures are a part of that process.

### What Is It That You Really Want?

The purpose of life is to live your life to its most fulfilling promise. Purpose is your why. Purpose creates a passion that envelops, imbues, and creates the compelling how of what you do. To wake up every day with a chance to challenge and change, to improve and immerse yourself in the world.

Ask yourself what it is that you really want and what you are willing to sacrifice to earn it. Once you have the answers, you'll have a guide, but you'll still be confronted daily with the fear of failure. Whether it's resistance, procrastination, or distraction, it will be there in disguise.

Learn to say no to whatever it is—people, things, issues, or agendas—that derails or detracts you from doing whatever it is that brings you closer to what you must have. Learn the difference between what is important and what is urgent.

Here is where your victory over fear comes into play. It will give you the opportunity to break out of your comfort zone, to learn new skills, to become indispensable. Now that you know how to manage your fear, to embrace it, to use it, you can finally become unstoppable.

In order to get what you want, you have to do those things that give you the confidence to do just a little bit more the next day. Yes, there is an element of risk, but the next day brings the new opportunity that you create or one that you see, seize, and make available from your applied competence.

Career development holds personal responsibility as a nonnegotiable trait. Making a better way in life for yourself and others is an obligation. Don't cede your power. Don't give it away so someone else can dictate your fate. Your power resides in your personal responsibility to learn more, do more, and become more.

## Become a Master of Failure

Adam Kreek is a two-time rowing Olympian with a degree in geotechnical engineering and hydrology from Stanford University. Rowing is a mentally and physically demanding sport that revolves around the fact that the sum is greater than the individual parts. It's a team sport, but every person in the boat has to not only work together but do the work alone at the same time.

Kreek is a professional speaker today, and he informs his audiences that the most important thing he learned at the Olympics was a lesson on failure.

Kreek was the fastest starboard on the team until, he says, a "big, bald, Viking-looking guy named Jake Wetzel" started to kick his butt. Kreek didn't like being displaced as the fastest. His ego was dented, and he immediately thought Wetzel to be an idiot and someone he wanted to physically harm.

But Kreek stepped back from the emotional sway and reverted to the logic that served him well at Stanford: "Wait a minute—here we are competing against each other, but we're on the same team. Maybe I can learn from him."

One day Kreek approached Wetzel and asked him to have lunch. As they sat in front of a pile of bagels and a dozen eggs, Kreek asked Wetzel point-blank, "Jake, what's your secret to success? How are you so successful?"

Kreek didn't expect the answer Wetzel gave him. "I seek failure." Kreek was in shock and asked Wetzel if he was putting him on.

Wetzel went on to explain a Monday-through-Saturday step-by-step approach. He explained that he would pick one workout every week and train to his current limit, that boundary right before failure.

In his words, "I willingly push myself through my known limit, and know I will embrace failure. My body will fail on me and for the rest of the week as well. I will know what my limit is, and I will hover below it, and in fact, the greatest point of growth occurs right below your limit."

The lightbulb went on. Kreek found the brilliance in the method and embraced it as a way of consistent improvement. It became his edge. He embraced the process, method, and importance of failure, and it made all the difference. His team later won the gold medal at the 2008 Summer Olympics in Beijing.

> Failure is a powerful punch in the gut, but it is not as painful as the sting of regret.

### Use All Emotions as a Tool—Even the Negative Ones

To fail forward, you have to distance yourself from emotions. You're only human—you will feel emotions first—but you need to react strategically, not emotionally. Feel your emotions, move beyond them, and start using logic instead of feeling. Here's how:

**Take a deep breath**. Before you do anything else, take a step back and breathe deeply. Only when you start to slow down will your emotions start to quiet. Focusing on your breathing will help you to get out of the instinct part of your brain (the bottom) and into the rational part of your brain (the top).

**Feel your emotions; then check them**. After giving your feelings a little space for acknowledgment, it's time to let them go, to make the switch to strategic thinking. Ask yourself, "What is really happening here? How would I rather feel?" These cues will aid you in making the transition. Forgive yourself and forgive everyone involved.

**Create an objective framework**. It's important to evaluate the failure dispassionately. Take a step back and look at all parts of the equation. What kept you from your goal? What steps can you take to avoid the pattern of failure? From there, each specific failure will provide you with an opportunity to improve by giving you clues on how not to fail.

**Test-drive your new direction**. Once the clouds are cleared, you can start to see the answers. How can you move forward? What new steps do you need to take? What old ones do you need to abandon? Be specific and intentional about your goals, and visualize yourself making them a reality.

**Assign a value to failure**. Now that you see the results evolving, you will start to value failure as the tool it can be. Continue to be vigilant for signs of failure, and start tweaking your direction along the way.

**Create your success profile**. Once you've figured out what works, get out your journal and make detailed notes. Write down everything that brought you closer to a successful outcome. You can refer to this "success profile" to avoid slipping back to the old ways and the ineffective methods that failed to produce a successful result.

**Be grateful**. Make it a point to practice gratitude for opportunities that come your way. Sure, failure is a powerful punch in the gut, but it is not as painful as the sting of regret. Having the opportunity to change and move forward is something to be thankful for.

You might have to repeat some steps in this process if you feel you are not moving forward or if your new steps aren't working for you.

## It's Goal Time: Define and Plan for Success

Rome wasn't built in a day, and neither is success. Great accomplishments take time. Whether your "big goal" is crafting your next masterpiece, planning your ascent to the Oval Office, or positioning yourself for your next raise, focus on the fundamentals that make your big goal a reality. You must build your empire just like the Romans, stone by stone.

The laying of stones embodies a process. It's a systematic approach that is subject to disciplined habit, resolve, patience, and retrospection.

Experts define goal setting as the selection of a target or objective you intend to achieve. Rather than asking yourself what it is you want to achieve, ask yourself what it is you can endure to achieve it. What kind of pain threshold can you tolerate in pursuit of your goal?

The cost each of us must pay to enjoy the fruits of a better life is the pain of failure. The most significant advantage that failure provides resides in the lessons it doles out in the process. These lessons will shorten the distance between where you are now and where you intend to go, while lessening the pain of the next experience. The first lesson you can learn from failure is to avoid setting yourself up for it.

While you need crystal clarity about the nature of your goal, you need to break down the small steps you have to take to achieve it. If you are to approximate your potential, you have to start and stick with fundamentals.

**Stage 1: Play it forward by looking back**. Think about your time of demise. You're on your death bed reflecting on your life. Do you have regret? What would you have become if you had no self-imposed limits? Take the limits down, let your imagination run wild, and describe what that reality would have looked like.

**Stage 2: Get specific with your goals**. Create a "to-do" list that supports the goals drafted in Stage 1. For example, if you want to run a full marathon (26.219 miles), what do you need to do first? From the shoes you buy, to the partner you run with, to the pace you run at, you need to work up to a 5K, a 10K, and a half marathon before striking out for your big goal, the full marathon.

Use the same principle in your financial endeavors. If you want to be a millionaire, you first have to find your way to $100K in personal income. How do you get there? What do you need to do? Who around you is doing it now? And who has done it?

**Stage 3: Limit competing distractions**. When you have too many goals, you have no goal. What you have is a bunch of objectives, wishes, or wants but not a real "dig in, do what it takes, make it happen" goal. Competing goals look like this: "I want to be the star salesperson in my company, but I also want to be a triathlete. And, oh, by the way, I think a gourmet chef sounds good, too!"

Time, energy, and focus are vital in the pursuit of what you deem to be most important. You need to establish one major goal and separate that goal from all the other hobbies that seem like a goal. What are your competing distractions, and what do you need to do to limit them?

**Stage 4: Identify who, what, when, and where**. Who are those people who can help you achieve your goal? What can they contribute? When can they begin their contribution? And where do they begin?

**Stage 5: Keep track of your progress**. Start a success journal. Create two columns: one column for those accomplishments that brought you closer to your goal and another column for those distractions that impeded you from the tasks you needed to complete to make your day a success. Look for the lessons in your past successes and failures. What worked and why? What obstacles stopped you and why?

This is where honesty provides direction. If you're willing to learn from both columns, you have what it takes to make that progressive journey forward.

## The Road to Success

Your road to success is a process and a journey, not a destination. You can't pause along the road and hope improvement will ensue from lack of activity—success is always under construction.

The author Stephen King's road to success was anything but a straight line. As a matter of fact, his story is one of self-belief, perseverance, and talent. King wrote constantly and was rewarded with rejection slips after each submission to Alfred Hitchcock's ***Mystery Magazine.***

Over time, King started to make a game out of the rejection. Instead of throwing the slips out, he nailed them in a stack to his bedroom wall. Imagine going to sleep at night, looking at rejection, and waking up, only to face it the next day.

The rejection slips continued piling up, and soon the nail wasn't big enough to hold all the letters. So he got a bigger spike and kept on writing. In a capsule, this is the essence of ***Fail More***. Rejection will slap you in the face, not once, not twice, but so many times that you'll lose count. But like King, your purpose will compel you to keep going, adapt, and grow.

After myriad impersonal rejections, King found hope in the one personalized response he received after eight years of

Surround yourself with people who offer moral and intellectual support and feedback. You need assistance to become successful in life; you can't do it all alone.

failed submissions. Even though his manuscript was rejected, he found hope in the unsigned message that read, "Don't staple manuscripts, loose pages + paper clip = cor-rect way to submit copy." Although it was cold water to the face, King did find it useful. Often in the midst of failure, there is that ray of light that, however dimly, provides direction.

Even though the rejections kept coming, King was progressing, getting better and better. He was steadfast in his resolve to be published. His persistence would pay off again, when one of the magazines wrote back, "Your stuff is good, but it's not for us: Keep submitting."

King viewed rejection as a learning process, and he stayed with the process until he began learning, improving, and finally getting published.

### Channeling Your Inner Stephen King

Your goal needs to be clear and present, focused to the extreme. You must never lose sight of it. King found his purpose early. He loved to write; he wanted to be published, and nothing would stop that from becoming a reality.

King engaged in that intentional practice that leads to mastery. Are you ready to enter the 10,000 hours+ of practice that mastery requires? There are no overnight successes. You've got to do the work.

Do you have what it takes to be rejection-proof? Do you understand that rejection is a prerequisite for success? Accept that immediately, and get used to it!

Self-doubt and lack of confidence will derail you. No one will believe in you unless you first believe in yourself. Grow your confidence with small steps, little things that give you the impetus to try more. Don't run from rejection; use it as fuel.

Surround yourself with people who offer moral and intellectual support and feedback. You need assistance to become successful in life; you can't do it all alone. King had a major advocate. His wife believed in him, supported him, and encouraged him to keep going when he thought ***Carrie*** was a failure—and we should all be thankful she did.

## Embrace Risk

Every time you make a choice in life, you're taking a risk, and your life is a series of the choices you have made. When you assess the pain-gain game, know that to risk blindly is foolish.

Taking intelligent risk is a skill. Use the past to inform the present and positively influence the future. In order to risk intelligently, you need to

- **Be clear**—what is the worst thing that can happen if you fail?
- **Be real**—can you accept it?
- **Be practical**—is there a smaller risk you can take that will provide the momentum and experience you will need to take those bigger chances?
- **Be objective**—is the greater pain of failure emotional or financial?
- **Be prepared**—do you have what it takes to pursue the risk now? If not, when? Make a commitment to a timeline, do what it takes to prepare, get in position, and go forward.
- **Be aware**—as you're moving through the process, taking risks, and doing what needs to happen to win, conduct a "process audit." What is effective, and what can be improved upon? Adapt and apply on the fly.
- **Be reflective**—start a success journal and stay with it. This is where you can write what worked and what didn't work for you during the course of the day. Each day, you can learn from what happened the previous day if it's written down in a straightforward manner. No excuses, no bias—just straight-up facts. You'll find that what you learn every day will impact the week, the week the month, the month the year, and in time, it will make your career.

Nothing can happen unless you put yourself in play and take a risk. There's no perfect time, no magic formula. It's you and your willingness to either do or don't.

## Maintain a Mindset for Continued Success

Most of us reach a certain point in our journey—maybe it's a point we never thought we'd approximate—and then we tend to try to hold on to what we've accumulated. It may be a title, a salary, or a relationship, and we lay off the gas. We quit doing what enabled us to enjoy the life we currently have, and by doing this, we start to stagnate.

Stagnation pulls you back, so you have to work every day to keep improving—whether it's physically, emotionally, or intellectually.

Nature doesn't support the static: Nature, by definition, is dynamic. You evolve and adapt, or you become obsolete. It's often a rude wake-up call for those who think they can sit on success. You can't. Success is always under construction. It's always going to demand you do something to prove that you deserve it.

Perhaps you're at that point where you're motivated to make the change. Before you move forward, it may be beneficial to reflect. You'll find lessons in both success and failure hiding in plain sight.

Once you've reflected, it's time to ask yourself the questions that only you can answer:

- What is holding me back?
- Am I being honest with myself in my current assessment?
- Is there a common theme in the patterns of my past behavior that I can replicate or eradicate?
- Realistically, where can I set my bar of expectations?

Personal responsibility creates momentum, and momentum is the antithesis of stagnation. You generate momentum when you lose excuses and swing into action.

If you're going to create a better way of life and enjoy true happiness, you have to seek levels of improvement every day.

As you seek better, you're going to encounter setbacks, you're going to have missteps, and you're going to fail. Understand the nature of your fear, and use the tools outlined here to break through the sting of rejection and the despair of defeat to enjoy the deepest levels of true success.

## THE SUMMARY IN BRIEF

Failure can ruin lives and families. There's no denying it. It can destroy your health and obliterate your self-esteem. But it also holds a lot of value on the road to success.

***Failure Rules! The 5 Rules of Failure for Entrepreneurs, Creatives, and Authentics*** walks you through five essential rules to help you pull value from any failure—as proven by Andrew Thorp King, investor, fintech banker, podcaster, and two-time record label founder, and his personal stories of dramatic, cascading failures in business, relationships, art, and life.

The experience and immediate tangible results of failure suck. But if you follow the rules of failure—seeing beyond the mess and picking through the good stuff left in the rubble—you can move forward into success.

Embrace the F-word and let hard times make you stronger. Because after it sucks, FAILURE RULES!

## IN THIS SUMMARY, YOU WILL LEARN:

- Five essential rules to pull value from any failure.
- Key failure lessons from a diverse set of successful entrepreneurs, creatives, and authentics.
- How to strategically work for free (or for little).
- How to leverage chaos as an idea engine.
- The importance of loving meaning over money.

## Introduction

Failure happens to us all. It has different levels of visitation on each of us. When it comes, we need to revere it. Before it arrives, we need to plan how we will greet it. In anticipation of it striking, we need to decide ahead of time how we will handle it. We need to manage our fear of it with reason and strategy. When it hits us, we will likely only be lowered to the level of our preparedness, not strengthened to rise to the intensity of its challenges. So, it behooves us all to prepare for it.

Embedded within the structure of this book, I've distilled five critical rules for engaging with and thinking about the F-word—most specifically, rules that apply specially to entrepreneurs, creatives, and authentics. The 5 Rules of Failure is your field manual to help you look at your failures, discuss them with yourself, and guide you into putting yourself back together better on the other side of your failures.

## Failure Rule #1: Failure Purifies

Failure burns off the areas of our lives that can gain from being reimagined, reconfigured, and reconstructed. Failure removes external entanglements that accumulate in our lives that mute our internal spirit voice so we can have an opportunity to hear it clearly and fall into the current of our calling journey.

Failure strips us of inefficient foundations so we can create new ones that will serve us better as we move forward into the fullness of authentic living. Failure turns our attention inward by disassembling what is outward so we can restore the audacity, vision, and courage we need to actionably invoke our Divinity of Purpose. Failure purifies us so we can rise with renewed strength colored by the value of pain.

Eliminate all of the clear "hell no" realities of your life to more precisely chase your "hell yes" pursuits. Keep in mind that the benefits of failure's purification are not immediate or obvious; you need foresight and patience to recognize them.

When entering a new space, understand that accumulating knowledge, gathering experience, and building relationships are more valuable than compensation. Be ever-open to unexpected game-changing connectors and mentors entering your path; seek them out as ladders in your calling journey and climb.

Pay attention to the groaning discomfort of stagnant mediocrity; let it push you into pivot points that join you with the next steps of your calling journey. Deliberately create work conditions that allow you to fall into iterative flow states. This is more important than rigid plans or a blunt-force work ethic.

Diligently live your life each day with your legacy in mind; let the clearing of failure's purification be an opportunity to strategically rethink how you write the next chapter of your legacy's story.

## Failure Rule #2: Nothing is Safe

The world is inherently unsafe. Jobs, industries, economies, relationships, and physical health are all inherently unsafe. Therefore, meaning, fulfillment, survival, and prosperity can be found in holding tight to internal attachments and holding loose to that which is attached to the unsafe external world. Nonattachment to this unsafe world enables nimble reinvention. It allows a path toward being content in all circumstances. It produces the freedom for one to live to win in an unsafe world—in spite of having been born to lose.

Build sustainable conditions to mind your fire inside. When you feel the weight of having been born to lose, defiantly choose to instead live every day with the intent to win. Don't inappropriately glorify or outsource safety in your life. At the end of your life, you will appreciate the reasonable risks you took more than the safe comforts you protected.

Choose the hard right way over the easy wrong way, even if suffering and hardship follow. When chaos surrounds or befalls you, leverage it as a springboard for forward-enabling ideation. When you feel unloved, change your internal monologue to one that reinforces the uniqueness of your created Being; do this until that mode of self-talk becomes your new reality.

Define the internal operating system that regulates you; rely on it when failure strikes. Because circumstances are subject to fluidity and volatility, you must cultivate strong reinvention skills. Understand that it is not your employer's job to take care of you; that is your job. Therefore, you must soberly build contingency pursuits on the side in an attempt to create financial and fulfillment redundancy.

Diversify your pursuits, not just your savings and investments; this way, you increase the probability of both your financial and fulfillment continuity. Learn to identify the unique chemistry of your individual talent composite; then, use that composite to create outputs of blessing that no one

else can create in the way that you can.

Find ways to reasonably extend your imprint on your circumstances or they will unreasonably force their imprint on you. Find a way to manifest enthusiasm in your work, even if it's painfully manufactured. Learn to mind many fires inside and cultivate these fires so they burn maximally. Learn to detach yourself from that which may be lost, destroyed, or taken away; instead, attach yourself to the beauty of living in all circumstances.

When you abide by the promptings of your internal spirit voice, expect to travel into messy, unsafe spaces. Time is not your friend, so get busy living to the fullest—and remember that you must die. Even though a departure from the safe path may come with high costs, if bearing those costs helps join you with your authentic calling journey, it is worth it. Live your life in such a way that you know exactly what your book would look like—one you want those left behind to read.

## Failure Rule #3: Money is Spiritual

Money is an elusive, versatile tool loaded with spiritual power. If misunderstood, it can fuel envy and greed and ultimately the failure of self-inflicted emptiness, but if viewed and used properly, it can be a multiplier of blessings and an enabling thank-you note that can help lift valued recipients up and out of their failure valleys.

Focus on that which is eternal by embracing gratitude and rejecting envy and greed. Honor the transactions you engage in; strive to fully earn each payment you receive in honor of the inherent thank-you note it represents. Viewed properly, transactions are sacraments—earthly expressions of the spiritual connectivity that exists in exchanges of measured thankfulness. Pursue and value both money and meaning as you seek to marry them, but only love meaning, not money.

Desire is the foremost necessary component for overcoming failure. Guard your inner self first, your spiritual core; then, the benefit you deliver to the world will be maximized along with the probability of commensurately maximized financial rewards. Don't decouple meaning from money; instead, aim to marry them. Strive to maintain pursuits of meaning as long as you have the physical and mental capacity to do so, whether you're formally working or have retired from formal work.

## Failure Rule #4: Build Your Thing One and Thing Two Dependency (Failure Prevention)

Failure only rules after it first sucks. Because failure sucks while also being ultimately inevitable in some form, it is ideal to try and avoid as much of it as possible. Failure prevention and preparation go hand in hand. Prevent what you can to minimize the suck so you can reserve your energy to optimize the extracted value from the failure you cannot avoid.

Building thoughtful enabler pursuits (Thing One) to sustain and empower you as you chart your plans toward your highest value primary dream pursuit (Thing Two) will mitigate the failure that punctuates your calling journey path. Your enabler pursuit is your Thing One. Your aspirational dream—which carries the most weight within your calling journey—is your Thing Two.

Carefully building and managing strategic enabler pursuits (Thing One) can minimize failure and empower you as you scheme toward your highest value primary-dream pursuit (Thing Two). Most everyone needs a low-meaning Thing One pursuit to sustain them while working toward their Thing Two dream realization.

Although it is a longer road, the Thing One Active Model can enable amazing Thing Two accomplishments. Consider all viable Thing One pursuit options and combinations as possible mechanisms to achieve your Thing Two dream realization; be creative and be open to unusual sacrifice.

The most common Thing One enabler is holding down a simple day job while side-hustling your Thing Two dream forward over time. All pursuits carry the potential for meaning, but a Thing Two dream pursuit represents the highest conception of an attempt to marry money and meaning. If your Thing Two doesn't have a constant, driving tug, it may not truly be your Thing Two pursuit.

It is when failure leaves you in a state of disassembly that your Thing Two pursuit often becomes the clearest. Shape your Thing Two pursuit to resemble an amalgamation of your interests, experience, skills, and style in a way that is distinctly unique to you. At times you will need to burn the candle at both ends as your Thing Two pursuit pulls you into its calling path. You need to welcome this.

The information age has created a democratization of access and reach that can uniquely enable Thing Two dreams like never before in history. Anyone can couple

action with reasonable risks to pursue their Thing Two dream; it is repeating this coupling as a practice that will drive Thing Two achievability.

## Failure Rule #5: You Are Not Your Failures (Impression Management)

Never let the failure events you experience define you. You must detach yourself from the optics of your failures. Sometimes your failures may cause division around you. Prepare to accept this with peace, knowing your identity is not tied to your failures. Convert these rejections into amplified motivation as you move forward. Through this, make sure to be kind and good to those who judge you even as you decisively ignore their opinions.

Guard your idealism and choose objective responses to your failure events. If your failure confronts you with a tragic moral choice, learn how to choose wisely and own your decision with peace—regardless of the outcome. Process your failures with healthy humor and stay unmistakably authentic. Harness the creative reshaping power of chaos when your failure moments push you to rock bottom. Then submit with faith to the new streams the rocks at the bottom push you into.

When failure strikes, you cannot let the impression it makes on others affect you; be kind and good as you ignore the low-resolution opinions of others. Use rejection as fuel to energize your fire inside to burn into a brighter, more powerful flame. Don't wait for perfect conditions before acting in accordance with your internal spirit voice; own your decisions and reject the notion that good decisions must always produce predictably good outcomes.

When your internal spirit voice is in clear opposition to the external feedback loops that surround you, you need to bypass permission and act. You must protect your idealism in the midst of failure; reject any cynicism that may cause you to lose sight of your Thing Two dream.

Should you ever fall into dependency, embrace healthy shame and gratitude simultaneously; then leverage both sensibilities to motivate your fight back to self-reliance. Ready your mind for the time when you must choose the least bad option between two terrible options and then peacefully live with your choice. If your very Being feels like a landmine, know that you have the power to organize the chaos of each explosion you cause to shape new order that will synch you with your calling journey.

Sometimes you need to accept, even induce, division to forge forward with integrity as your authentic self as an entrepreneur or a creative. Cultivate an insightful, playful, and self-deprecating sense of humor in times of failure and let it ease the tension of your hard times. You—and only you—are the final earthly authority on the meaning of the failure events of your life. Every day you have the opportunity to re-sketch the story of the rest of your life—despite your failures. You don't need to come from wealth or have a stacked resume, a college degree, or substantial seed money to actualize your Thing Two dream; bulldog tenacity and vision can often suffice. You are not your losses or your sufferings, but you are how you decide to respond to your losses, sufferings, and failures.

## Conclusion

Failure Rule #1: Failure Purifies is true even in the smallest of things. Failure Rule #2: Nothing is Safe is inescapable. Failure Rule #3: Money Is Spiritual ubiquitously applies to all commerce, and money is most fundamentally a thank-you note. Failure Rule #4: Build Your Thing One and Thing Two Dependency is a sound way to prevent unnecessary failure and eliminate future regret. Failure Rule #5: You Are Not Your Failures is critical to embrace.

I am not my failures. You are not your failures. They are not their failures. Now go forth and internalize The 5 Rules of Failure. And remember that after it sucks, if you know its rules, then eventually, Failure Rules!

**Andrew Thorp King** is an executive fintech banker, spy novelist, speaker, punk rocker, podcaster, ex-bodybuilder, and serial entrepreneur. He founded two independent record labels-Thorp Records and Sailor's Grave Records-and has invested in many spaces, including online lending, fitness, lead generation, and independent music. He has also crashed and burned through bankruptcy, divorce, mortgage default, public assistance, and multiple business failures. But, like a jack-in-the-box after a punch, he pops back up every time, rebuilding his life-informed by failure-with a big smile on his face.

# How to Rise Above and Beyond the Norm

Review by Chris Lauer

## OUTLIERS
## The Story of Success
**by Malcolm Gladwell**

*© 2008, Little, Brown & Co., 309 pages, $27.99, ISBN 978-0-316-01792-3*

Imagine a gifted storyteller who has the ability to succinctly sum up the lessons he has learned as a groundbreaking journalist and turn those lessons into stories that transform his readers into devoted fans. First he hones his craft by writing dozens of newspaper columns, then he expands his range into magazine stories. Next, he widens his scope again by writing books that capture all of the reporting skills he has gained over a journalistic career built while working for some of the most respected publications on the planet. Over that time, he has been accumulating the thousands of practice hours needed to make him one of the most exciting and celebrated writers of our time. He has cultivated his career to the point where he finds himself head and shoulders above his peers. This outlier — a man whose experiences and accomplishments have elevated him to the top of his profession — is Malcolm Gladwell.

After many years as a venerated reporter for *The Washington Post* and *The New Yorker*, Gladwell has spent the last few years at the top of many lists of best-selling book authors. He has earned his fame by telling stories that captivate his readers and help them make sense of the tangled complexities of life. With his clever wit guiding the journey, Gladwell ventures into the hidden realms of our civilization. Along the way, he untangles our ignorance and delicately exposes the access points that allow us entry into the world of intelligent information gathering and exploration. The path he clears leads to intellectual breakthroughs of the most surprising kind.

After the success of Gladwell's first two international bestsellers, *The Tipping Point* and *Blink*, *Outliers* completes his triumvirate of classic yet timely books that help us get to know ourselves better and understand how the world works. Gladwell's rational, guiding voice draws readers through each of his three books. A master writer executing his craft, Gladwell gives his readers a plethora of fresh ideas to carry around with them for the rest of their lives. After reading his books, readers find themselves comparing all of their experiences that follow to the vast concepts and minute details brought to life throughout these marvelous tales.

### No One Gets There Alone

One of the magnificent revelations that emerges frequently throughout *Outliers* is the premise that no outlier reaches a pinnacle of success without the help of his or her own legacy. For example, Bill Gates might be a genius, but it was the fact that he was given access to one of the first modern computer systems at an early age that gave him the edge he needed to rise above the norm and become the billionaire entrepreneur he is today. Likewise, The Beatles might have been astounding musicians, but they achieved their record-breaking success with their long stints in Hamburg, Germany, as a young band performing every night for eight hours, for months on end.

One of the premises Gladwell pursues throughout *Outliers* is the commonality of successful people and

organizations. Although he often veers into other connected revelations made by some of the most cutting-edge researchers of our day, Gladwell proposes the theory that successful people, such as The Beatles, Bill Gates and dozens of others have each practiced at least 10,000 hours at their craft before becoming the successes we recognize today. The Beatles weren't simply genius musicians who took the world by surprise with their innate ability to perform and write songs in a vacuum, Gladwell points out. Instead, they succeeded because they practiced endlessly in Hamburg's breakneck performance culture, which allowed them to play so often and accumulate so much experience that, by the time they entered the mainstream, they were seasoned performers who were able to rise above the competition and become the success we recognize today.

## Thousands of Hours of Practice

Similarly, Gladwell explains, while Bill Gates was a privileged son of wealthy parents who was given all the benefits of a top education and exceptional upbringing, these advantages alone were not enough to make him one of the world's wealthiest men. Gates' family life was only part of the puzzle. Gladwell points out that several other factors must be explored to understand who Bill Gates is today. One of those factors was the purchase of a time-sharing computer terminal by the "Mothers' Club" at his school that allowed him to turn his interest in computers into a way of life during his most formative years. The thousands and thousands of hours he spent at the new computer terminal in his elite Seattle junior high school's computer club helped to prepare him for the changing world that he would be entering after high school and college. Gladwell's revelation is that Gates' experience writing code during his early years, plus his natural skills and ability to take advantage of the opportunities that came his way, added up to the man we now recognize as one of the most successful people of our era. Going even deeper into Gates' legacy, Gladwell also describes the importance of the place and time of Gates' birth, which turned out to be crucial in that he was able to drop out of Harvard after his sophomore year to start Microsoft.

"Gates' family life was only part of the puzzle. Gladwell points out that several other factors must be explored to understand who Bill Gates is today."

Explanations like these, fleshed out in highly researched detail, are the hallmark of Gladwell's work. As a writer, he's clearly fascinated by the minutiae that lead to the giant revelations that aptly define life and reality well beneath a first glance and initial tagline. Sure, some people at the top of their game can claim that they got to where they are by sheer chutzpa and determination, but the power of cultural legacy cannot be ignored. That's why Gladwell looks deeper into the phenomenon of success to reveal the underlying truths that are often obscure at the outset but that with additional determined study and examination, can be exposed.

## Logical Numbers

For example, since Gladwell is searching for the methods by which successful people have achieved their success, one question he asks is, "Why are Asians better at math than their U.S. counterparts?" Some might brush this question off with the terse assertion that Asians simply have higher IQs, and therefore people from China, Japan, Korea and other Asian countries score better on math tests than Americans do. But that answer doesn't go to the real heart of the matter, and Gladwell's inner investigative reporter will not be appeased by such a shallow, if not stereotypical, response. After examining the latest cultural research, he comes to some very provocative answers that might just hit the nail on the head.

For one, Gladwell writes, the Chinese, Japanese and Korean languages have numerical systems that are much more logical than those of English. Since the number-naming systems of Asian languages gave the words for their first 10 numbers much shorter, one-syllable names, such as the Chinese "si" for four and "qi" for seven, the memorization and understanding of their patterns is much easier and faster than is possible with their English equivalents. In addition, Gladwell explains, the Japanese, Chinese and Korean languages have more logic in the ways their words for numbers are formed. For example, in English, we say numbers above 10 as teens, so they start with the number and add "teen," such as "seventeen." But when we get to the 20s, we say, "twenty-seven." Think about it: Why does the number "seven" move from the beginning of the number in the teen to the end of the number in the 20s? This makes the English numerical system much more complex than the Korean language, for example, that expresses its numbers in a much more rational way. The word for 22 in Korean is equivalent to "two-

tens-two" and 12 is "ten-two." This simplicity, Gladwell reasons, helps give Asian students an advantage when it comes to math, and makes mathematical ideas much easier and faster to grasp for Asian students than for those unfortunate English speakers whose numerical system forces them to take longer to calculate numbers simply because of the length and complex construction of those numbers. But, as usual, that is not the end of Gladwell's reasoning on why Asians score higher on math tests than Americans do.

The other reason why Asians excel at math gets to one of the main points driven home throughout *Outliers*. This is the concept of cultural legacy. Our histories, and those of the great success stories, are driven by the idea that we are more than simply our individualistic selves. Each of us, instead, is the product of all of the people in our family and life who have contributed to our history and environment. The cultural legacies of the Asian nations, Gladwell asserts, have a commonality that contributes to the high math scores of their students, but these legacies have largely gone unnoticed by researchers. One cultural legacy, according to Gladwell and some of the world's top anthropologists, is the rice paddy.

## Mathematics and Rice Paddies

How does a culture that revolves around the cultivation of rice lead to higher math test scores? Although at first glance this assertion might seem somewhat preposterous, Gladwell once again digs deeper into the issue with insight based on the latest facts about cultural identity and cultural norms. Part of that connection is built on the fact that rice paddies are farmed year round. Because land can be scarce in Japan and China, many farmers must grow their crops on tiny plots of land that require constant attention and work. This labor-intensive crop forces its farmers to work long hours every day to ensure a successful yield and to keep hunger and poverty at bay. Gladwell explains that rice farmers have to work harder "than almost any other kind of farmer." Thanks to complex irrigation systems and cultivation needs, a successful rice farm requires 10 to 20 times more labor than a similarly sized corn or wheat field does.

So where do Asians' high math scores come in? Gladwell explains that the culture of people who must work 3,000 hours a year on a farm has helped to create individuals who naturally value the hard work it takes to master and complete complex tasks. This has led to the creation of students who spend more time on math problems than everyone else does.

Working harder than his peers was one way that Bill Gates rose above them to become a successful entrepreneur. It is also how The Beatles' long stints as a house band in Hamburg clubs gave them a distinct advantage over other bands at the time. Therefore, Gladwell concludes, it makes perfect sense that people from cultures that value the hard work it takes to cultivate rice would spend more time on math problems than those from other cultures would. And since the number systems of these cultures makes doing math somewhat easier than the number systems of English-speaking cultures, Gladwell writes, the students from these cultures naturally excel at mathematics, in part because of their common cultural legacy of rice farming.

## Hard Facts From Modern Research

Asking hard questions about success and then answering them with hard facts from modern research is only part of the beauty of Gladwell's writing strategy. In addition to his skills as a weaver of pertinent stories that make complex ideas more approachable, Gladwell has an inviting style that puts him as the narrator in the shoes of his readers while he guides them to the crux of his theories. One element that he uses time and again throughout *Outliers* is the conveyance of a backstory that he immediately discredits as only a partial and sometimes misleading truth. For example, when he tells the tale of his own legacy, he starts with a cursory depiction of his grandmother's life in a tiny village in Jamaica, and eventually leads to the birth of his mother. This brief story then leads to his mother's education, and then to her courtship and marriage to Gladwell's father.

> "Our histories, and those of the great success stories, are driven by the idea that we are more than simply our individualistic selves."

Next, Gladwell calls into question the very ideas that he has just presented: He calls that story of his grandmother's path to success a *lie*. By pointing out the missing pieces of his grandmother's story, he makes the profound point that no simple tale of a person's rise to success can be complete without an inspection of that person's cultural legacy. Then he tells the extended version of the same story of his grandmother, but this time he adds many vital bits of Jamaican history to illustrate the complexity that completes the idealized picture of the story that he has just labeled as false. The added depth that comes with his inclusion of facts about Jamaica's history in the slave trade, the country's educational system, an influential South African historian who helped

reform that educational system, how his grandmother benefited from those reforms, and many other details makes the story come alive with greater clarity than his first draft. This is how he helps readers get past the overly simplistic assumptions that are made when those types of important historical elements are either glossed over or ignored by a less-detailed story.

## Deeper Depths of Truth

By telling several incomplete stories and then retelling them with additional historical facts and cultural references, Gladwell puts into perspective the underlying message found in *Outliers*. The message is that simple stories cannot answer the greater questions we have about success and the ways we can achieve it. A simple story helps us get a taste of the underlying answer to the question, but it does not satisfy our deeper need to gain more clarity about reality and the depths of truth that help us make sense of the most important and complex questions we have about life.

The cultural legacies of the people Gladwell profiles in *Outliers* are not only fascinating, but are also necessary for creating a stronger foundation on which to build the real story of success. The outliers in his book — those people who lie outside of the norm thanks to their amazing successes — are the results of many factors, including the dates they were born, the cultural legacies of the places in which they grew up, the family members who mentored them, the opportunities they took and even the luck they had along the way.

In other words, not one of them became a success all by himself or herself. Each outlier had benefits of long storylines that led up to the individuals they became and their accomplishments in their fields. Opportunity, history, advantages, community and legacy are all at the root of the real story of success Gladwell tells in *Outliers*.

## Beyond Bootstraps

While the many lessons that Gladwell reveals in *Outliers* help to answer numerous questions about success in the fields of hockey, airlines, music, entrepreneurship, business, law and education, among others, the most important message that resonates throughout the book is that resourcefulness, hard work and an ability to make the most of our advantages and legacies are the keys to success.

"By relating the story of his own family, and those of a wide variety of others who either found success or failed in its pursuit, Gladwell demonstrates that the answers to questions about the origin of success are more complex than a few brief stories about people pulling themselves up by the bootstraps."

By relating the story of his own family, and those of a wide variety of others who either found success or failed in its pursuit, Gladwell demonstrates that the answers to questions about the origin of success are more complex than a few brief stories about people pulling themselves up by the bootstraps. And best of all, the reality that his reporting and journalistic skills reveals is one that helps us see that success is much more possible than we might have imagined if we were left with only an incomplete, cursory story. Instead, the secrets of success can only be found when we make a much more complete examination of ourselves and the world in which we live. *Outliers* provides a perfect example of how we can begin to re-examine all that we know to bring that elusive success within our reach. ●

**The author:** Malcolm Gladwell has been a staff writer with *The New Yorker* magazine since 1996. His 1999 profile of Ron Popeil won a National Magazine Award, and in 2005 he was named one of *Time Magazine*'s 100 Most Influential People. In addition to *Outliers: The Story of Success*, he is the author of two books, *The Tipping Point: How Little Things Make a Big Difference* (2000) and *Blink: The Power of Thinking Without Thinking* (2005), both of which were No. 1 *New York Times* bestsellers.

From 1987 to 1996, Gladwell was a reporter with *The Washington Post*, where he covered business, science, and then served as the newspaper's New York City bureau chief. He graduated from the University of Toronto, Trinity College, with a degree in history. He was born in England, grew up in rural Ontario and now lives in New York City.

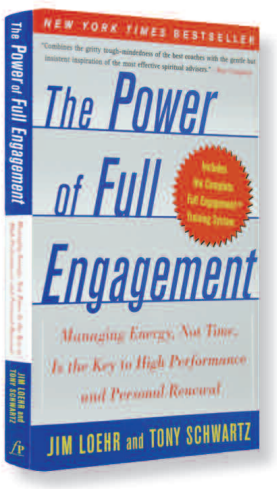
# You've Got the Power for Maximum Performance

Review by Chris Lauer



## THE POWER OF FULL ENGAGEMENT

**by Jim Loehr and Tony Schwartz**

*© 2003, Free Press, $15.95, 245 pages,*
*ISBN 978-0-7432-2675-2*

Many types of ideas cross through the busy intersection where self-help books and business books collide. Sometimes the titles are overly dramatic; other times they are short on timely facts and examples. Sometimes they are delivered with platitudes galore that evaporate quickly because they are missing the real substance needed to help business leaders do their jobs.

The thoughtful concepts found in *The Power of Full Engagement* are none of these. On the contrary, the principles described by co-authors Jim Loehr and Tony Schwartz in *The Power of Full Engagement* offer readers many thought-provoking lessons that can be used instantly to improve their professional and personal lives.

### Powerful Habits

The primary idea is plausible: Sustainable high performance is only possible when we find better, more habitual ways to positively expend and renew our personal energy. When we develop habits that are filled with positive physical, emotional, mental and spiritual experiences that are sometimes active and other times recovering, we improve our overall capacity to become fully engaged in our work and home lives.

When we are fully engaged, we have more physical energy and more positive emotional capacity, the authors explain. This is the best place to be whenever we're doing anything that requires us to perform at our best, and *The Power of Full Engagement* presents a step-by-step approach to reaching that place where we can become more energized physically, more connected emotionally, more focused mentally and more aligned spiritually. Another name for this wonderful place is what most people would call a happy, well-balanced life.

### Lessons for Athletes

The lessons that Loehr and Schwartz impart in their book are taken from their experiences and research while working with former top athletes during the stars' careers. These remarkable people include tennis champion Monica Seles, golfers Ernie Els and Mark O'Meara, hockey players Eric Lindros and Mike Richter, boxer Ray "Boom Boom" Mancini, basketball players Nick Anderson and Grant Hill, and speed-skating Olympic gold medalist Dan Jansen.

While helping these athletes to become the best of the best, the authors discovered many secrets to getting the most from one's skills and talents. Although Loehr and Schwartz never helped these sports stars work on backhands or slam dunks, they did help them master the ability to muster greater energy when a stressful moment required the athletes to operate at the peak of their capabilities.

Loehr, a psychologist, co-founded LGE Performance Systems, a training company where he serves as chairman and CEO. LGE helps executives, athletes and other people achieve full engagement in stressful environments. Loehr has also made a name for himself as the author of a dozen books, including

the best-seller *Stress for Success*.

### Lessons for Company Leaders

One of the things that sets *The Power of Full Engagement* apart from Loehr's other books is the input of performance expert Schwartz, who pushes Loehr's lessons in a new direction aimed at company leaders. As an expert on harnessing the science of high performance to improve energy, engagement, focus and productivity, Schwartz serves as the president and founder of The Energy Project. Organizations such as Google, Ford, Sony, the Los Angeles Police Department and Save the Children have all benefited from the lessons they have learned while employing Schwartz and his team of consultants to help them improve their work.

**"To help their readers understand the dynamics of full engagement, the authors break down personal energy into its four basic components: physical, emotional, mental and spiritual."**

Combining the knowledge and experiences of these two authors, *The Power of Full Engagement* offers readers a robust program for understanding and managing the necessary energy to not only develop enduring high performance, but also to build a healthy, happy and balanced life, inside and outside the workplace.

### The Four Forms of Energy

To help their readers understand the dynamics of full engagement, the authors break down personal energy into its four basic components: physical, emotional, mental and spiritual. In the clearest of terms, the authors explore the commonsense essence of professional energy by developing a set of principles that can be used to understand how the four parts of energy can be improved and tapped for better performance.

The first principle that the authors delve into states that full engagement requires us to use all four of our intertwined sources of energy. They add that when we master the needs that each of these sources addresses — sustainability (physical), security (emotional), self-expression (mental) and significance (spiritual) — we become better equipped to shift smoothly between moments when we require intense focus and the times when we need to renew our energies.

The second principle in Loehr and Schwartz's energy improvement process is the idea that we need to balance how we expend our energy with regular energy renewal. This is important because our energy capacity has a tendency to diminish when it is used too little or too much. Of course, we all need to rest after working hard, but the authors' message goes deeper than that. They not only focus on ways to improve how we manage our energy, they also describe, at length, how energy in its four forms can be combined and expanded.

### The Need for Flexibility

To start, they point out that strength, endurance, flexibility and resilience are the primary markers of physical capacity. They explain that these markers also apply to the other types of energy as well. For example, we can become more fully engaged by increasing our flexibility not just physically, but mentally, emotionally and spiritually.

To stretch ourselves mentally, we must spend more time flexing our mental capacity by moving between rational and intuitive thought patterns. Embracing multiple points of view can also help us sustain our focus over time and develop stronger concentration skills. Likewise, becoming less emotionally rigid by resisting defensiveness and exploring a wider range of emotions can help us rebound faster when faced with disappointments and frustrations. Similarly, spiritual flexibility does not mean giving up our values and beliefs. It simply means being more tolerant of the values and beliefs of other people when they are different from our own. If other people have beliefs that don't hurt anyone, the authors write, we can improve our own spiritual strength by respecting their beliefs just as we want them to respect ours.

### The Exercise-Performance Connection

While showing us how to regulate our energy through periods of intense work interspersed with focused periods of replenishing rest, *The Power of Full Engagement* also offers many smart facts and examples that support its lessons. For example, the authors go further than simply stating, "Strength and cardiovascular training have a powerful impact on health, on energy levels and performance." They also present numerous studies and statistics that back up their claims.

To link the connection between fitness and energy improvement to the working world, they point out that DuPont reduced absenteeism over a six-year period by providing its employees with a corporate fitness program. One of the added benefits of that

program was that participants used 14 percent fewer disability days than those who did not participate in the program. In other words, DuPont saved a total of nearly 12,000 disability days by creating the program.

The authors also cite another study that demonstrates the exercise-performance connection: The journal *Ergonomics* reported, "Fit workers committed 27 percent fewer errors on tasks involving concentration and short-term memory as compared to un-fit workers." With statistics and studies like these filling their book, Loehr and Schwartz provide readers with powerful encouragement to make physical exercise a regular habit.

## Exercising Emotional Energy

The authors write, "Physical energy is the raw fuel for igniting our emotional skills and talents." When our physical muscles are in tune, our emotional muscles are better able to serve us when we need to do our best work. How do we exercise our emotional muscles? The authors write that we can overcome our lack of confidence and impatience — two signs of weak or insufficient emotional muscles — when we learn how to control and balance our emotional energy.

*The Power of Full Engagement* has just as many real-life stories and statistics on the importance of balanced emotional energy as those describing the importance of balanced physical energy. For example, after showing how the more emotionally controlled Jimmy Connors was able to create a longer tennis career than the more emotionally charged John McEnroe, the authors offer some insightful findings from the Gallup Organization. They write, "Gallup found that the key drivers of productivity for employees include whether they feel cared for by a supervisor or someone at work." Employees require praise and recognition at work to operate at their best. Therefore, it makes sense that managers need to be able to exhibit high levels of positive mental energy at work to manage their people more effectively.

In other words, a leader whose emotional energy is better balanced and controlled is more likely to be able to communicate praise and recognition to employees than a manager who displays less confidence and exhibits more negative emotional energy.

Useful examples of people who display anxiety and rigidity show readers the detrimental effects of negative emotions on careers and organizations. Through these individuals, the authors encourage readers to explore deeper and higher-quality emotional renewal to balance out emotionally challenging situations. One important lesson they impart: Don't rely on television to provide you with quality emotional renewal. Researchers point out that television is more likely to create anxiety and low-level depression. Instead, seek more nourishing forms of emotional recovery, such as sports, museums, concerts and quiet times alone after intense days surrounded by other people. Look into your personal interests and choose the right one for you. By tapping into positive forms of emotional energy, we can find the confidence, control, interpersonal effectiveness and empathy that lead to improved performance.

## Balancing Mental Energy

Concentration is a vital part of Loehr and Schwartz's recipe for performance improvement and full engagement. They write that mental energy is just as important as physical energy to attain the ability to concentrate on an important task. Mental energy, they explain, comes from more than just sustained concentration; it is also derived from the exercise received when we move our thinking between narrow thoughts and broad ideas. We must also be able to focus between our internal cognition and our external observations. Reaching an optimum level of concentration also requires the "realistic optimism" that allows us to see reality as it really is while still moving toward our intended goals.

The authors explain that our mental energy must be balanced between expenditure and recovery, in the same way that emotional and physical energy require a focused balance. The interplay between these three types of energy is more than a shift from one to another. They actually feed on one another. The authors write that poor physical health, such as lack of sleep or physical fitness, and poor emotional health, such as anxiety or anger, have a negative impact on optimism as well. When we are stressed by difficult circumstances, their negative impacts will increase unless we do the work that keeps us balanced between expending energy and recovering energy.

## The Important Role of Spiritual Energy

While the spiritual part of Loehr and Schwartz's energy management program might raise the most eyebrows, it is actually the most important element in their four-part dissection of engagement's core. Thankfully, there is no denomination behind their advice. Instead, the spirituality they write about involves the inner workings of a person's life. These include such integral pieces of the human puzzle as values, purpose, truthfulness and accountability. Although these topics are often difficult to define

without slipping into platitudes and clichés, the authors accurately and professionally describe how spiritual energy can be tapped as a powerful source of passion, perseverance, commitment, integrity and honesty.

By offering straightforward examples of people who have made mistakes and found better ways through personal introspection, Loehr and Schwartz describe role models for spiritual growth that is not mired in divisive dogma or polemics. The spiritual energy they describe also fluctuates between expended energy and energy renewal. The authors explore the interconnected nature of these two aspects of spiritual energy and show how balanced spiritual energy can help anyone "override even severe limitations of physical energy." This type of hopeful message offers readers an added boost that can help put peak performance within their reach.

## The Training System

Learning about the dynamics of the four energies that lead to greater performance is enlightening, but putting them all together into a useful program of daily habits is an even more important task. Thankfully, Loehr and Schwartz provide a training system that turns the knowledge they impart into a regular regimen of rituals that can help readers benefit from the lessons. Behaviors are just as important as the information that feeds them, so the authors help readers create "positive energy rituals" that adapt their book's broad principles into daily or weekly routines.

Negative habits slow us down. Likewise, positive habits push us ahead. The authors write that rituals serve as the foundation on which we can rely when the storms of circumstances buffet and bruise us when we least expect it. They point out that pilots, CEOs, athletes and soldiers all rely on positive rituals to manage their energies. These rituals help them achieve their goals even in the most trying times of their lives, whether on the battlefield, in the boardroom or before the final buzzer.

The trick is to master the art of moving "rhythmically between stress and recovery," the authors write. By building strong, positive rituals that balance all four energies into every aspect of our lives, we are better prepared when stress rears its ugly head.

Good habits and positive rituals provide the practice we need so we'll be able to continue to move forward through tough circumstances. They prepare our bodies and minds so we can conjure high performance whenever it is required. These rituals also provide structures for our lives on which we can rely when we need them most.

## Creating Rituals to Improve Self-Control

Although they are extremely personal, since they must serve our own, unique needs, energy management rituals can be constructed fairly easily. For example, the authors point out, one couple simply developed the energy renewing habit of setting aside an hour and a half to talk together, uninterrupted, every Saturday morning. It might have been difficult to do this at first, with a bevy of demands flying at them from all directions whenever Saturday rolled around, but setting limits, changing habits and adjusting roles allowed them to work it out.

The key to these types of rituals is creating precise and specific behaviors that improve our self-control. When we master the when, where and how of our behaviors, the authors explain, we don't have to worry about getting things done. We easily reach our goals because we have created the rituals that tap into the four sources of energy that take us where we want to go. We connect to our purpose and values by making those connections a habit.

Loehr and Schwartz expertly frame the creation of these vital habits in a positive, compelling light. The result is a powerful guidebook to a better, and more engaged, personal and professional life.

**The authors:** Jim Loehr, Ed.D., is the chairman and CEO of LGE Performance Systems and is recognized worldwide for his contributions to the field of performance psychology. He has worked with hundreds of world-class athletes, as well as with police departments, SWAT teams, emergency service workers and the FBI's elite Hostage Rescue team. He has authored 12 books, including *Stress for Success* and *Toughness Training for Sports*.

Tony Schwartz is the founder and president of The Energy Project whose mission is to ignite a fire in the hearts of organizations and their leaders. He is the author of three other books, including *Art of the Deal* with Donald Trump, *What Really Matters: Searching for Wisdom in America* and *Work in Progress* with Michael Eisner. ## THE SUMMARY IN BRIEF

Being adaptable and flexible have always been hallmarks of effective leadership and a fulfilling life. But in a world of so much change and an ever-faster pace of change, flexibility and resilience can be stretched to their breaking points.

A world in flux calls for a new mindset, one that treats constant change and uncertainty as a feature, not a bug. ***Flux*** helps readers open this mindset—a flux mindset—and develop eight flux superpowers that flip conventional ideas about leadership, success, and well-being on their heads. They empower people to see change in new ways, craft new responses, and ultimately reshape their relationship to change from the inside out.

Whether readers are sizing up their career, reassessing their values, designing a product, building an organization, trying to inspire their colleagues, or simply showing up more fully in the world, enjoying a flux mindset and activating their flux superpowers will keep readers grounded even when the ground is too often shifting beneath them.

## IN THIS SUMMARY, YOU WILL LEARN:

- The three key steps in the Theory of Flux.
- The eight flux superpowers and how to use them.
- What it means to lead with trust.
- To boost your digital intelligence.

## Introduction: Who Moved My Future?

At home and around the world, it's an era to remember. Globally, we've witnessed the worst pandemic since 1918, some of the worst economic straits since the early 1930s, the greatest food insecurity in decades, and a climate catastrophe unprecedented in modern human history.

In the United States, this is compounded by social tensions on a scale not seen since 1968. Any one of these crises is enough to shake things up. All of them happening at the same time . . . is something else entirely.

We're living in a world in flux. The workplace is in flux. Climate is in flux. Organizations are in flux. Careers are in flux. Education, learning, and schools are in flux. Public health is in flux. Planetary health is in flux. Social cohesion is in flux. Financial markets are in flux.

And it's not just what is changing; it's how fast the world we've known is evolving. The pace of change has never been as fast as it is today, and yet, it is likely to never again be this slow.

Humans are not accustomed to this degree of upside-down-ness. We can be incredibly adaptable when we're forced to be, but on the whole, we much prefer stability and familiarity. Yet, if flux is our "new-now-next-never normal," then we need to be ready for—and have the tools to flourish in—this new reality.

### What the Flux?!

Flux is both a noun and a verb. As a noun, its most common contemporary definition is "continuous change." As a verb, to flux means "to cause or learn to become fluid." Hence, we're living in a world of flux (noun), and we'd do well not merely to flex our mental muscles but to flux (verb) them, too.

In a world in flux, we must learn to be comfortable with the reality that around the next corner is more change, much of which is unexpected, beyond our power to choose, or both. It's about a shift: from struggling with such change to harnessing and developing an eagerness to use it well.

Each and every one of us, for our entire lives, in some way has been following a script. Although each person's script is different, everyone's script is shaped by the same forces unfurling and the universal experience of being human. And with rare exceptions, your script is clear.

For many people, your script tells you to work hard and stay the course—whatever that course may be. It probably tells you to get good grades, go to a prestigious university, and get hired by a prestigious company. It may tell you to follow in your parents' footsteps. For a big subset of people, your script tells you that success is at the top of a corporate ladder, so you should climb it rung by rung and become CEO.

But many people's scripts are no longer fit for today's world—or one could say, they are fit for a world that's no longer there. And this is where Flux comes in. Individually and collectively, we are in the early stages of writing new scripts that are fit for a world in flux.

The Theory of Flux reveals the relationships between your old and new scripts, specifically how to transform an old script into a new script that's fit for today's world of constant change. This theory can be summarized in three steps:

- **Step 1: Open a Flux Mindset.**
- **Step 2: Use your Flux Mindset to unlock the eight Flux Superpowers:** run slower, see what's invisible, get lost, start with trust, know your "enough," create your portfolio career, be all the more human (and serve other humans), and let go of the future.
- **Step 3: Apply your Flux Superpowers to write your New Script.**

The relationship between the Flux Superpowers and Flux Mindset is similar to a hub-and-spoke structure: the Flux Mindset is the hub, and the eight Flux Superpowers radiate from it. When your Flux Mindset is opened, the Flux Superpowers can get to work.

## Run Slower

Take your pick of reasons to run. New and unexpected change happens every week, if not multiple times a day. It could be a new schedule that disrupts a routine that took ages to get right. Or a team that's behind schedule. Or a time-sensitive opportunity on the horizon.

The old script says we must run faster to keep up. But a world in flux has different race conditions because the finish line keeps shifting. Whether it's business demands, home and family priorities, responsibilities to juggle, relationships to nurture, or relentless uncertainty to decipher: The faster we run, and the more we run without resting or reflecting or even paying attention, the worse our results will be over time.

In an upside-down world that coaxes, cajoles, and coerces you to run ever faster, your key to true success and growth is to do the opposite: learn how to run slower. To thrive in a fast-paced world, slow your own pace.

Imagine for a moment that rather than optimizing for productivity, we optimized for presence.

In reality, running slower means plenty of motion and inquiry—at a sustainable pace. It means caring enough to quiet the mind and focus on what really matters.

### Instead of Productivity, Optimize for Presence

There is a better way to rethink our relationship to productivity, sustainability, and a world in flux. And guess what? It's right in front of us, and it's part of the new script.

For starters: Imagine for a moment that rather than optimizing for productivity, we optimized for presence. With the new script, rather than measure meetings, you can gauge presence: your ability to be fully in a moment, experience, or decision. One meeting in which everyone is fully present is worth more than a thousand meetings in which people are distracted.

So how does one learn to optimize for presence? Fortunately, there are many ways to begin.

**Stillness practice**. Start with 30 seconds, then one minute, two minutes, up to five minutes (or longer) of utter stillness. This is not meditation; it is even simpler. It's sitting, stilling your mind, and seeing where it wanders. Don't judge; just notice. Is your mind able to unwind, or does it speed up?

**Patience practice**. Cultivating patience is one of the most difficult yet most powerful ways to run slower. Pick something that you know will take time—say, waiting for an appointment—and deliberately don't fill that waiting time with social media apps, calls, word games, or whatever else. Just be . . . and wait. Do you feel tested or freed?

**Technology Shabbat**: Once a week, disconnect from the use of all technology with screens: smartphones, computers, tablets, and television. If that feels like too much, start with a few hours and build up to a day. Use the time for quiet personal reflection.

## See What's Invisible

Each of us is inspired by what we see. But in a world of constant change, that principle only gets us so far. How do we move beyond what we can see and find inspiration in what we can't? How do we learn to see differently and make the invisible, visible? This is all directly tied to writing your new script.

Learning to see what's invisible doesn't mean losing focus or ignoring what's visible. Quite the opposite, in fact: It's the ability to adjust your gaze, see the full picture, and really understand what's what. When you learn to see what's invisible, it becomes easier to embrace change today and a future chock-full of unknowns.

You deserve to see everything: what's visible and invisible. Tangible and intangible. What's right in front of you and what you can barely imagine. Why? Because the broader your vision, the more potential solutions you have at hand. The more holistic your worldview, the greater your capacity to help, to serve, to innovate . . . and to thrive.

### How Do You See Others? Consumer vs. Citizen

In today's world, we're seen first and foremost as consumers, or as futurist Jerry Michalski says, as "gullets with eyeballs and wallets." So long as we continue to consume, we're told, all will be well in the world.

But all is not well whatsoever. When we're treated as mere consumers for long enough, it affects how we think and behave, which also affects how we see. For example, we see our purchases as more important than our votes and what defines our self-worth.

At the societal level, we chase metrics like GDP that measure only economic activity "seen" as dollars and cents. GDP does not "see" a wide range of extremely valuable activities that underpin our economy and well-being, such as the invisible labor of parenting and volunteering, and the invisible value of shared (rather than owned) resources.

When we follow the consumer script, we also train our eyes to not see: to not see the full effects of what we buy, to not see those who are struggling. We even stop seeing when there are better paths forward.

One way out of this mess is to start seeing one another—and treating one another—as citizens and humans, rather

than as consumers (citizens not in terms of passports and borders but as participants and change agents in society).

This is a new script with a subtle yet profound shift: No longer merely passive purchasers and clickbait targets, we become proactive contributors. Together, we lead responsibly rather than follow blindly. We open our Flux Mindsets to develop this superpower and write our own new scripts.

In your new script, start by asking, Would you prefer to be seen by others as a consumer or as a citizen and catalyst for good? Beyond "buying stuff," what would you like your legacy to be?

Often times, whether you see or don't see something depends on your intention as you look. For example, whether we see people—and treat people—as consumers or citizens boils down to intention: If you want people to buy your products or click on your ads, that's seeing them as consumers. If you want to help, create, be of service, and help others reach their potential, that's seeing them as citizens and collaborators.

## Get Lost

Although many people would agree that getting lost is half the fun of life, the old script sees it as failure. Getting lost is a liability that's perceived to involve loss of some kind: "I've done something wrong, I've fumbled, and life will somehow be less as a result."

But in an upside-down world in which new changes hit every day—when familiarity is itself in flux—getting lost is part of a new script. In this world we are uprooted, disoriented, and unmoored constantly. Whatever compass you're using has gone kaput. What's more, this new landscape of change isn't something you or anyone gets to choose. Flux just is.

Once you've opened a Flux Mindset, getting lost becomes a virtue: a secret weapon and stroke of genius not only to embrace being lost but to actively seek out the unfamiliar and stretch beyond your comfort zone as well. Getting lost doesn't mean lacking direction or being foolish—that's just the old script at work again. Rather, it means being completely comfortable with what you don't (and may never) know. In the landscape of change, getting lost is how you find your way.

Fundamentally, this superpower boils down to your response: Does getting lost make you feel comfortable or distressed? Curious or anxious? Can you get out of your own way, or do you trip over your own feet?

When you open a Flux Mindset and learn to celebrate getting lost, this celebration becomes a piece of your new script. Until then, it may torment you: keeping you from making wise decisions, opening up to new opportunities, or being fully yourself.

Cultures that normalize getting lost are far better placed at navigating a world in flux, with or without GPS.

### Lady, Are You Lost?

On any given day, everyone is lost in some way. Yet when change hits, feeling lost can shift to feeling unmoored. Opening a Flux Mindset helps you regain your bearings while harnessing the strength that comes from getting lost.

There are many more ways you can get lost proactively in your daily life:

- Adopt the mindset of a traveler. Even if your adventures are limited to one room, your backyard, or your neighborhood: What do you carry with you? What do you really know (versus think you know or wish you knew about your environs)? What do you not know but could benefit from learning or exploring?
- Notice the first emotion triggered when unexpected change arrives. Do you see a crisis or an opening? Do you see an apocalypse or a bardo? Spend time with these feelings, and consider why they are your default. What happens if you try an alternative?
- Turn off your GPS. Orient yourself with your surroundings, as a human.

## Start With Trust

Today's global trust crisis makes headlines so often it's almost cliché. A global trust barometer has fallen to its lowest levels ever. Our trust in corporations, government, media, and academe seems fundamentally broken. Worse, we increasingly mistrust one another.

We've lost our bearings and urgently need to reestablish trust as our North Star: individually, organizationally, and societally. Without it, the future is beyond bleak.

When fully expressed, trust is an invitation to repair and strengthen relationships, an invitation to express your credibility, your reliability, your authenticity, and your values.

### When Trust Seems Broken, Assume Good Intent

In a world in flux, it becomes glaringly clear that trust is the

glue that holds relationships, organizations, and cultures together. When the world flips upside down, trust is how you anchor and right yourself. Trusted relationships help you ride the rapids of change with confidence. Mistrust surrounds you with fear and cuts you off from others.

Starting with trust doesn't mean being naive (again, this is the old script at work). Nor does it mean there aren't bad apples in society. The brilliant twist of this superpower is quite simple: Treat untrustworthiness as the exception rather than the norm. The effect is astonishing.

When it comes to trust, the new script isn't actually that new. In reality, it's timeless. It draws from universal human consciousness and indigenous wisdom that have been passed down for millennia. It's time to change the script back, starting with a few observations:

- Humans are naturally creative, curious, and trustworthy.
- Hamster wheels are not only not designed for humans, they are harmful to humans.
- Plundering natural resources is not okay.
- Trust is not built by marketing campaigns. Trust happens when we care for one another, look out for one another, and celebrate one another.

### The New Script: Lead With Trust

You might say, "I get the concept. But as a leader, really, what does it look like to start with and design from trust?" Here's a snapshot of what to do, where to begin, and what to aim for on the horizon.

**It sucks to hide everything**. When you design from mistrust, you have to hide information: from employees, from customers, from friends, ironically from whomever you wish to placate (or, in less-inspiring terms, from whomever you wish to co-opt).

For starters, err on the side of openness. Think open books: Let all employees see budgets, salaries, and metrics.

Then, go further: Let employees set salaries and bonuses, working together. Trust that if you delegate down and provide enough information, they'll get the job done well—and reciprocate the trust. You've just freed their genius and turned scarcity into abundance: When people feel trusted, they're not only more creative but more positively productive as well.

Treat untrustworthiness as the exception rather than the norm. The effect is astonishing.

## Know Your 'Enough'

In today's consumer-driven world, we are plagued by a stubborn script that proclaims "More is better" and taunts you for never doing, earning, or achieving enough. This script is old and crusty, but it remains very much alive.

Among its more popular manifestations is that you will never have enough: power to make a difference; prestige to feel important; money to be rich; choice to be satisfied; new toys to outshine your peers or neighbors; success, period.

And as we race to acquire more stuff, we leave essential priorities on the table such as:

- What is enough equality?
- What is enough integrity?
- What is enough well-being?

With your Flux Mindset opened, you can begin to reset your metrics and write a new script. This shift—from an interminable quest for more to a clear understanding of your enough—is simple yet profound.

Knowing your enough does not mean being miserly, uncharitable, or living in scarcity. Knowing your enough brings clarity about what really matters. When you know your enough, you have less anxiety and your ability to thrive expands a lot. Honing this superpower unleashes your full potential to the world.

### Leading With Enough

You're a leader and a seeker, but what does leadership in a world of enough look like? This superpower goes beyond dismantling hierarchies or establishing diversity, equity, and inclusion (DEI) initiatives. It has implications for responsible leadership and longevity, as well as sustainability and trust.

Ask yourself, and then ask your colleagues: Are you more likely to trust a CEO whose salary is in line with his team, or one whose salary is vastly greater? Why?

Next, consider your legacy. What do you want to be remembered for? Why do you do what you do?

Leading with the old script in hand, you might answer this question in terms of more: maximize profits, create a bigger company, have a bigger house, or build a big yacht.

Leadership with the new script and a Flux Mindset would answer in terms of paying everyone enough, ensuring everyone feels safe and valued, and treating others as peers rather than subordinates. Go back to your legacy. When you're gone, people won't remember whether you had "more." They will remember how you treated them.

In addition, if you're not having a conversation about enough, then you're leaving value (including money!) on the table. And here's why:

Conversations about more tend to focus on transactions: how to do more deals, monetize more interactions, and make more money. The time frame is short: The sooner money can be made, the faster you can cash out. In this world, people are consumers: They are mere means to a monetized end. There is no genuine care for their well-being beyond their ability to pay.

Conversations about enough, on the other hand, center on relationships: how to cultivate lifelong friendships, build sustainable and human-centric enterprise, and nourish the planet. The time frame is long: This is about lifetime leadership and evergreen legacies, with humanity at the core.

Relationships endure and sustain; deals are done and put on a shelf. Which do you want to be remembered for?

At the end of the day, knowing your enough means also fundamentally knowing that you are enough, just as you are, right here and right now. (It's not a typo. Both "your" and "you're" matter.) A Flux Mindset understands this intuitively. You are not defined by your purchases or stuck chasing ever more. Your worth comes from within.

## Create Your Portfolio Career

The coronavirus pandemic made it clear that the future of work isn't in the future: It is now. We blew through 10-year forecasts for remote work and "work from anywhere" in two quarters. Now each of us must write a new script for our careers, livelihoods, and professional purpose. Yours may have been in draft mode already, and with a Flux Mindset, it can get the kind of attention it deserves.

A Flux Mindset knows that the career of the future looks more like a portfolio: a diversified professional identity, with resilient roots and customized to you. For success and satisfaction in a world in flux, treat your career as a portfolio to curate rather than a path to pursue.

One's portfolio isn't limited to only professional roles; it includes capabilities that are customarily left off your résumé yet fundamentally make you, you.

For example, Binta Brown left a successful legal career advising Fortune 100 companies to launch her own firm representing musical artists, while she plays the saxophone and produces documentaries along the way.

Mari Nakama is a project manager and trainer at a scientific research company. She's also a fitness instructor, designs her own clothes, and co-runs a pottery studio with her partner. Each role nurtures her in a different way.

### Building Your Portfolio

Developing a portfolio career involves two phases: creation and curation.

**Step 1: What's already in it?** Whether or not you realize it, you already have a portfolio career. You just haven't necessarily been strategic about it. Pull out a piece of paper (or a blank Google document) and into it put things like, every role you've ever had, paid or unpaid; every skill you have that helps others; every topic you know comfortably more about than other people do; your superpowers, according to you; your superpowers, according to others; any new skills you've learned in the past six months, and so forth.

**Step 2: Be(come) the only**. Go back to Jerry Garcia. Don't be the best; be the only. What is your only? The key to one's "only" is that it's not about one skill. It's about your unique combination of skills, capabilities, interests, and dreams. This is your unique new script.

**Step 3: Cross-pollinate**. With a portfolio career, you rarely stay in your own lane. You're a cross-pollinator. You take a useful skill or expertise and parlay it into opportunities elsewhere, often in a completely unexpected arena. You translate across problems, roles, teams, and industries. You use your compass's orientation to discover new insights. In the process, you create new value, help others level up, and inspire them to write their own new scripts, too.

In a world with more robots, your key to thrive is to be all the more human—and to use your humanity to help others.

**Step 4: Redefine your identity**. With a Flux Mindset and a portfolio career, you are no longer defined by "what" you do. You are not defined by one profession. While you have many skills, you are not defined by them. Rather, you harness all of your capabilities and continuously reimagine how they can be combined and offered in new ways, creating new value and opening new doors.

**Step 5: Curate, forever**. Once your portfolio is sufficiently established, you can shift to curation mode. This is your ongoing, evergreen career: It is the script that, so long as you are breathing and thinking, you will continue to write. The essential point of portfolio curation is that it mirrors your growth, so long as you proactively take care of it.

## Be All the More Human (And Serve Other Humans)

In China, pedestrian lanes specifically for mobile phone users have been established, along with a new term to describe the phenomenon: "heads-down society." In 2019, teenagers spent an average of six hours and 40 minutes per day on their mobile, tablet, and TV screens. Assuming they sleep, that's more than 40 percent of their waking hours.

Automation is also proceeding at a breakneck pace. From e-commerce and driverless vehicles to text recognition and disease diagnosis, increasingly a wide range of activities and expertise that used to take intensive labor or many steps can now be done quickly, efficiently, and on almost any schedule by automated technology.

At the same time that we can connect with more people and learn more things than ever before in human history—with a mere click, swipe, or touch of a button—we are more divided and disconnected: from one another and often from our very own selves. We are alone, together.

In a world with more robots, your key to thrive is to be all the more human—and to use your humanity to help others. As you develop this Flux Superpower, your relationship to technology is reset. You harness the positive power of today's new technologies with the inner wisdom that none of them are as powerful as the "technology" of awakened human consciousness.

Being fully human means being wholly aware of your senses and your humanity: fully present and thoroughly, unabashedly yourself. This includes being comfortable with your discomfort (and occasionally being public about this) to harness it for greater growth.

Being fully human is also about showing up for others. When you're able to help others, you put interdependence into action. When you manifest a shift in awareness "from me to we," you unleash your individual capacity and our collective potential and make it easier to respond mindfully to change.

### Boost Your DQ

Digital intelligence, or DQ, is part of the new script. To truly succeed in the 21st century—and a world in flux—humans need to boost their DQ.

DQ is an overarching concept that encompasses a range of competencies to engage responsibly in the digital world. DQ includes skills related to digital safety, digital identity, digital literacy, digital rights, and digital communications. Having a high DQ means, for example, that you know when and how to put your device down and have a face-to-face conversation. It means responsibly managing your screen time, calling out cyberbullying, and knowing when you may be at risk of digital identity theft.

Fundamentally, having a high DQ means knowing that technology is only a means; it is neither a solution nor an end in itself. DQ is a human-centric compass for the digital world. It is an essential pillar of your new script.

## Let Go of the Future

From a young age, many people are led to believe that humans can predict and control the future. The messaging goes, work hard and you'll get a good job. Jump through the right hoops and the right doors will open. Make plans that will go as expected.

These instructions aren't bad, but each one assumes a predictable, controllable world . . . which couldn't be further from reality today. Today's world in flux demands a new script that understands, the ability to let go of your perception of control is where real control is to be found.

Letting go gives you control of what really matters, empowers you to move forward, and reminds you to live fully right now. With a Flux Mindset, you turn fear and frustration about tomorrow into fuel for your purpose, potential, and inner peace today.

### The New Script: 3 Shifts to Flux

Letting go of the future doesn't mean dropping it like a hot potato. Rather, it means reframing your relationship to the future and whatever change may come. There are three main ways this new script can be written:

**1. A mindset shift: from predict to prepare**. This shift recognizes that it's impossible to predict the future, nor is any one future guaranteed to play out. Rather, a whole bunch of different futures are possible, and your best approach is to be as prepared as possible for the prospects coming your way. Resist the urge to predict what "will" happen, and invest your energy in crafting initial responses to what "could" happen instead.

**2. An expectations shift: from "things will go to plan" to "plans will change."** Flipping your mental switch to treat change as the general rule, rather than the exception, improves everything: your ability to pivot, your foresight, and your compassion towards others as we all navigate today's landscape of uncertainty.

**3. A shift in focus: from known to unknown**. All too often, when solving problems or navigating change, people look to be better prepared should the same thing happen again. This isn't a bad strategy per se, but it's incomplete. What about things that haven't happened yet?

The future is only a concept; we can never truly know what it will be. When you shift to being in awe of life's mysteries, rather than expecting the past to repeat itself, your horizon literally and figuratively expands.

Absolutely everything that you do affects how you navigate change. You get better at whatever you practice. If you practice fear, you get better at being fearful. If you practice flexibility, you become more flexible. If you practice hope, you invigorate your capacity for hope.

Part of "what's next" is seeing flux as a practice. Being truly fluxy is a lifelong endeavor: It requires practice, practice, and more practice. The goal is improvement, not perfection.

And the upshot? Every day (and especially today!) gives you plenty of opportunities to do so.

## The Hidden Driver of Excellence

by Daniel Goleman

### THE SUMMARY IN BRIEF

For more than two decades, psychologist and journalist Daniel Goleman has been scouting the leading edge of human sciences for what's new, surprising and important. In *Focus*, he delves into the science of attention in all its varieties, presenting a long-overdue discussion of this little-noticed and underrated mental asset that matters enormously for how we navigate life.

Attention works much like a muscle: use it poorly, and it can wither; work it well, and it grows. In an era of unstoppable distractions, Goleman persuasively argues that now more than ever we must learn to sharpen focus if we are to contend with, let alone thrive in, a complex world.

Those who excel rely on what Goleman calls smart practice — such as mindfulness meditation, focused preparation, recovery from setbacks, continued attention to the learning curve, and positive emotions and connections — that help them improve habits, add new skills and sustain excellence.

Combining cutting-edge research with practical findings, *Focus* reveals what distinguishes experts from amateurs and stars from average performers.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to find balance and restore attention.
- The importance of working your mental muscle to sharpen your attention and focus.
- How to apply a 360-degree evaluation to yourself and others.
- What the act of accentuating the positive can do for your mindset.
- What mindfulness can do for you at the workplace.

# THE COMPLETE SUMMARY: **FOCUS**

**by Daniel Goleman**

**The author:** Daniel Goleman, a former science journalist for *The New York Times*, is the author of 13 books, and he lectures frequently to professional groups, business audiences and on college campuses. He cofounded the Collaborative for Academic, Social and Emotional Learning at the Yale University Child Studies Center (now at the University of Illinois at Chicago). He lives in Massachusetts.

## Introduction: The Subtle Faculty

Though it matters enormously for how we navigate life, *attention* represents a little-noticed and underrated mental asset. The good news on attention comes from neuroscience labs and school classrooms, where the findings point to ways we can strengthen this vital muscle of the mind.

For leaders to get results, they need all three kinds of focus. *Inner* focus attunes us to our intuitions, guiding values and better decisions. *Other* focus smooths our connections to the people in our lives. And *outer* focus lets us navigate in the larger world. A leader tuned out of his internal world will be rudderless; one blind to the world of others will be clueless; those indifferent to the larger systems within which they operate will be blindsided.

And it's not just leaders who benefit from a balance in this triple focus. All of us live in daunting environments, rife with the tensions and competing goals and lures of modern life. Each of the three varieties of attention can help us find a balance where we can be both happy and productive. Attention connects us with the world, shaping and defining our experience.

Anne Treisman, a dean of this research area, notes that how we deploy our attention determines what we see. Or as Yoda says, "Your focus is your reality."

## The Anatomy of Attention

The ability to focus in the midst of a din indicates selective attention — the neural capacity to beam in on just one target while ignoring a sea of incoming stimuli. There are two main varieties of distractions:

- **Sensory:** Notice the feeling of your tongue against your upper palate. It's just one of an endless wave of incoming stimuli your brain weeds out from the continuous wash of background sounds, shapes and colors, tastes, smells, sensations and on and on.
- **Emotional:** These loaded signals are more daunting. While you might find it easy to concentrate on answering your email in the hubbub of a coffee shop, if you overhear someone mention your name, it's almost impossible to tune out the voice that carries it. Your attention reflexively alerts to hear what's being said about you.

The biggest challenge for even the most focused, though, comes from the emotional turmoil of our lives, like a recent blowup in a close relationship that keeps intruding into your thoughts. Such thoughts barge in for a good reason: to get us through what to do about what's upsetting us.

The dividing line between fruitless rumination and productive reflection lies in whether or not we come up with some tentative solution or insight and then can let those distressing thoughts go — or if we just keep obsessing over the same loop of worry.

The more our focus gets disrupted, the worse we do. The ability to stay on one target and ignore everything else operates in the brain's prefrontal regions. Specialized circuitry in this area boosts the strength of incoming signals we want to concentrate on (that email) and dampens down those we choose to ignore (those people chattering away at the next table).

Since focus demands we tune out our emotional distractions, our neural wiring for selective attention includes that for inhibiting emotion; those who focus best are relatively immune to emotional turbulence.

Failure to drop one focus and move on to others can leave the mind lost in repeating loops of chronic anxiety. The power to disengage our attention from one thing and move it to another is essential for well-being.

## Attention Top and Bottom

Our brain has two semi-independent, largely separate mental systems. One has massive computing power and operates constantly, purring away in quiet to solve our problems, surprising us with a sudden solution to complex pondering.

This back-of-the-mind attention typically comes to the center of focus when the unexpected happens. You're talking on your cell phone while driving (the driving part is back-of-the-mind), and suddenly a horn honk makes you realize the light is now green.

"Bottom-up" has become the phrase of choice in cognitive science for such workings of this lower-brain neural machinery, whereas "top-down" refers to mental activity that can monitor and impose goals on the subcortical machinery. It's as though there were two minds at work.

**The bottom-up mind is**

- faster in brain time
- involuntary and automatic (always on)
- intuitive, operating through networks of association
- executor of our habitual routines and guide for our actions
- manager for our mental models of the world.

**The top-down mind is**

- slower
- voluntary
- effortful
- the seat of self-control, which can (sometimes) overpower automatic routines and mute emotionally driven impulses
- able to learn new models, make new plans, and take charge of our automatic repertoire, to an extent.

Top-down wiring adds talents like self-awareness and reflection, deliberation and planning to our mind's repertoire. Intentional, top-down focus offers the mind a lever to manage our brain. As we shift our attention from one task, plan, sensation or the like to another, the related brain circuitry lights up.

A surprising factor constantly tips the balance toward bottom-up: the brain economizes on energy. The bottom/top systems distribute mental tasks between them so we can make minimal effort and get optimal results. As familiarity makes a routine easier, it gets passed off from the top to the bottom. The way we experience this neural transfer is that we need to pay less attention — and finally none — as it becomes automatic.

## The Value of a Mind Adrift

The easy assumption that attention need be in the service of solving problems or achieving goals downplays the fruitfulness of the mind's tendency to drift whenever left to its own devices.

The inner tug to drift away from effortful focus is so strong that cognitive scientists see a wandering mind as the brain's "default" mode — where it goes when it's not working on some mental task.

However, while mind wandering may hurt our immediate focus on a task, some portion of the time, it operates in the service of solving problems that matter for our lives.

Also, a mind adrift lets our creative juices flow. While our minds wander, we become better at anything that depends on a flash of insight, from wordplay to inventions and original thinking. In fact, people who are adept at mental tasks that demand cognitive control and a roaring working memory — like solving complex math problems — can struggle with creative insights if they can't fully switch off their concentrated focus.

Among other positive functions of mind wandering are generating scenarios for the future, self-reflection, navigating a complex social world, incubation of creative ideas, flexibility in focus, pondering what we're learning, organizing our memories, just mulling life — and giving our circuitry for more intensive focusing a refreshing break.

## The Architecture of Serendipity

"New ideas won't appear if you don't have permission within yourself," Salesforce CEO Marc Benioff says. Case in point: Benioff took a month off to go to Hawaii just to relax, and in that open space he realized the potential for cloud computing, which led him to quit Oracle, start Salesforce in a rented apartment, and evangelize for what was then a radical concept. Salesforce was a pioneer in what is now a multibillion-dollar industry.

Open awareness creates a mental platform for creative breakthroughs and unexpected insights. In open awareness we have no devil's advocate, no cynicism or judgment — just reciprocity to whatever floats into the mind.

But once we've hit upon a creative insight, we need to capture the prize by switching to a keen focus on how to apply it. Serendipity comes with openness to possibility, then homing in on putting it to use.

Life's creative challenges rarely come in the form of well-formulated puzzles. Instead we often have to recognize the very need to find a creative solution in the first place. A classic model of the stages of creativity roughly translates to the three modes of focus:

- **Orienting:** where we search out and immerse ourselves in all kinds of inputs;
- **Selective Attention:** given to a specific creative challenge; and
- **Open Awareness:** where we associate freely to let the solution emerge — then home in on the solution.

### Finding Balance and Restoring Attention

It's not the chatter of people around us that is the most powerful distractor, but rather the chatter of our own minds. Utter concentration demands these inner voices be stilled. When we can turn such full attention to our senses, the brain quiets its default chatter. Brain scans during mindfulness — a form of meditation which focuses on one's awareness of the present moment — reveal it quiets the brain circuits for me-focused brain chatter, which in itself can be an immense relief.

Tightly focused attention gets fatigued — much like an overworked muscle — when we push to the point of cognitive exhaustion. The signs of mental fatigue, such as a drop in effectiveness and a rise in distractedness and irritability, signify that the mental effort needed to sustain focus has depleted the glucose that feeds neural energy. The antidote to attention fatigue is the same as for the physical kind: take a rest. But what rests a mental muscle?

Try switching from the effort of top-down control to more passive bottom-up activities, taking a relaxing break in a restful setting. The most restful surroundings are in nature, argues Stephen Kaplan at the University of Michigan, who proposes what he calls "attention restoration theory."

Such restoration occurs when we switch from effortful attention, where the mind needs to suppress distractions, to letting go and allowing our attention to be captured by whatever presents itself. But only certain kinds of bottom-up focus act to restore energy for focused attention. Surfing the Web, playing video games or answering email does not.

The key is an immersive experience, one where attention can be total but largely passive. This starts to happen when we gently arouse the sensory systems, which quiet down those for effortful focus. Anything we can get enjoyably lost in will do it.

## Self-Awareness

What allows people to have a strong inner compass, a North Star that steers them through life according to the dictates of their deepest values and purposes? Self-awareness, particularly accuracy in decoding the internal cues of our body's murmurs, holds the key. Our subtle physiological reactions reflect the sum total of our experience relevant to the decision at hand.

The decision rules derived from our life experiences reside in subcortical neural networks that gather, store and apply algorithms from every event in our lives — creating our inner rudder.

The brain harbors our deepest sense of purpose and meaning in these subcortical regions — areas connected poorly to the verbal areas of the neocortex but richly to the gut. We know our values by first getting a visceral sense of what feels right and what does not, then articulating those feelings for ourselves.

Self-awareness, then, represents an essential focus, one that attunes us to the subtle murmurs within that can help guide our way through life. And, as we shall see, this inner radar holds the key to managing what we do — and just as important, what we *don't* do. This internal control mechanism makes all the difference between a life well lived and one that falters.

### The Brain's Map of the Body

When Steve Jobs gave a heartfelt talk to a graduating class at Stanford University, his advice was "Don't let the voice of others' opinions drown out your inner voice. And most important, have the courage to follow your heart and intuition. They somehow already know what you truly want to become."

But how do you hear "your inner voice," what your heart and intuition somehow already know? You need to depend on your body's signals.

Our "gut feelings" are messages from the insula — tucked behind the frontal lobes of the brain — and other bottom-up circuits that simplify life decisions for us by guiding our attention toward smarter options. The better we are at reading these messages, the better our intuition.

There are two major streams of self-awareness: "me," which builds narratives about our past and future, and "I," which brings us into the immediate present. The "me," as we've seen, links together what we experience across time. The "I," in stark contrast, exists only in the raw experience of our immediate moment.

The "I," our most intimate sense of our self, reflects the piecemeal sum of our sensory impressions — particular-

ly our body states. "I" builds from our brain's system for mapping the body via the insula.

Such internal signals are our inner guides, helping us at many levels, from living a life in keeping with our guiding values to remembering our running shoes.

### A Recipe for Self-Control

Attention regulates emotion — as long as one can stay tuned to an interesting object of focus, the distress calms; the moment that thing loses its fascination, the distress, if still held onto, will come roaring back.

Our mind deploys self-awareness to keep everything we do on track: meta-cognition — thinking about thinking — lets us know how our mental operations are going and adjusts them as needed; meta-emotion does the same with regulating the flow of feeling and impulse. In the mind's design, self-awareness is built into regulating our own emotions as well as sensing what others feel.

At least three sub-varieties of attention are at play when we pit self-restraint against instant gratification:

1. Ability to voluntarily disengage focus from an object of desire that grabs our attention.
2. Ability to resist distraction and keep focus elsewhere.
3. Ability to allow us to keep focus on a goal in the future.

All this adds up to willpower.

### The Power to Choose

Of the many nuances and varieties of attention, two matter greatly for self-awareness. Selective attention lets us focus on one target and ignore everything else. Open attention lets us take in information widely in the world around us and the world within us and pick up subtle cues we'd otherwise miss.

Extremes in either of these kinds of attention — being too focused outwardly or too open to what's going on around us — can, as Richard Davidson puts it, "make it impossible to be self-aware." Executive function (as cognitive control is sometimes called) includes attention to attention itself, or more generally, awareness of our mental states; this lets us monitor our focus and keep it on track.

## Reading Others

The executive circuits that allow us to think about our own thoughts and feelings let us apply the same reasoning to other people's minds. "Theory of mind," the understanding that other people have their own feelings, desires and motives, lets us reason what someone else might be thinking and wanting. Such cognitive empathy shares circuitry with executive attention; it first blooms around the years between two and five and continues to develop right through the teen years.

### Getting the Context

Those who do business with diverse sets of people in a global economy need particular sensitivity to unspoken norms. The cross-cultural talent for social sensitivity appears related to cognitive empathy.

Ground rules for what's appropriate can create invisible barriers when people from different cultures work together. Culture aside, ground rules also shift greatly depending on whom you are with. There are jokes you tell to your best buddies that you should never tell your boss.

Attention to context lets us pick up subtle social cues that can guide how we behave. Those who are tuned in this way act with skill no matter what situation they find themselves in. They know not only what to say and do but also what *not* to say or do. They instinctively follow the universal algorithm for etiquette, to behave in ways that put others at ease. Sensitivity to how people are feeling in reaction to what we do or say lets us navigate hidden social minefields.

Where we see ourselves on the social ladder seems to determine how much attention we pay: more vigilant when we feel subordinate, less so when superior. The corollary: The more you care about someone, the more attention you pay — and the more attention you pay, the more you care.

## The Bigger Context

Pattern detection signals the systems mind at work. This sometimes uncanny ability lets us spot with ease the telling detail in a vast visual array (think "Where's Waldo?"). If you flash a photo of lots of dots and tell people to guess how many there are, the better estimators should be better systems thinkers.

A "system" boils down to a cohesive set of lawful, regular patterns. We learn how to read and navigate systems through the remarkable general learning talents of the neocortex. Such cortical talents — as in math and engineering — can be duplicated by computers. That sets the systems mind apart from self-awareness and empathy, which operate on dedicated, largely bottom-up circuitry. It takes a bit of effort to learn about systems, but to navigate life successfully we need strengths in this variety of focus as well as the two that come more naturally.

### System Blindness

Through human history, systems awareness — detecting and mapping the patterns and order that lie hidden within the chaos of the natural world — has been propelled by this urgent survival imperative for native peoples to understand their local ecosystem. They must know what plants are toxic, which nourish or heal, where to get drinking water, and where to gather food, etc.

Here's the catch: We're prepared by our biology to eat, sleep, mate, nurture, fight-or-flee, and exhibit all the other built-in survival responses in the human repertoire. But as we've seen, there are no neural systems dedicated to understanding the larger systems within which all this occurs.

Systems are, at first glance, invisible to our brain — we have no direct perception of any of the multitude of systems that dictate the realities of our lives. We understand them indirectly through mental models (the meanings of wave swells, constellations and the flight of seabirds are such models) and take action based on those models. The more grounded in data those models are, the more effective our interventions (for example, a rocket to an asteroid). The less grounded in data, the less effective they will be (much education policy).

The obliviousness to the systems around us is puzzling. We seem curiously unable to perceive in a way that leads us to prevent the adverse consequences of human systems, such as those for industry or commerce.

## Smart Practice

According to Anders Ericsson, a Florida State University psychologist, "You don't get benefits from mechanical repetition, but by adjusting your execution over and over to get closer to your goal. You have to tweak the system by pushing, allowing for more errors at first as you increase your limits."

Apart from sports that favor physical traits, almost anyone can achieve the highest levels of performance with smart practice. Smart practice always includes a feedback loop that lets you recognize errors and correct them — this is why dancers use mirrors. Ideally that feedback comes from someone with an expert eye. If you practice without feedback, you don't get top ranks. The feedback and the concentration matter — not just the hours.

Learning how to improve any skill requires top-down focus. Neuroplasticity, the strengthening of old brain circuits and building of new ones for a skill we are practicing, requires our paying attention.

Daydreaming defeats practice; those who browse TV while working out will never reach top ranks. Paying full attention seems to boost the mind's processing speed, strengthen synaptic connections, and expand or create neural networks for what we are practicing. At least at first. But as you master how to execute the new routine, repeated practice transfers control of that skill from the top-down system for intentional focus to bottom-up circuits that eventually make its execution effortless. At that point you don't need to think about it — you can do the routine well enough on automatic.

Focused attention, like a strained muscle, gets fatigued. Ericsson found world-class competitors — whether weight lifters, pianists or a dog-sled team — tend to limit arduous practice to about four hours a day. Rest and restoring physical and mental energy get built into their training regimen. They seek to push themselves and their bodies to the max, but not so much that their focus gets diminished in the practice session. Optimal practice maintains optimal concentration.

### In the Mental Gym

Think of attention as a mental muscle that we can strengthen by a workout. Memorization works that muscle, as does concentration. The mental analog of lifting a free weight repeatedly is noticing when our mind wanders and bringing it back to target.

That happens to be the essence of one-pointed focus in meditation, which, seen through the lens of cognitive neuroscience, typically involves attention training. You're told to keep your focus on one thing, such as a mantra or your breath. Try it for a while, and inevitably your mind wanders off.

So, the universal instructions are these: When your mind wanders — and you notice that it's wandered — bring it back to your point of focus, and sustain your attention there. And when your mind wanders off again, do the same. And again and again and again.

As in any workout, the more reps, the stronger the muscle becomes. More-experienced meditators, one study found, were able to deactivate their medial strip more rapidly after noticing mind wandering; as their thoughts become less "sticky" with practice, it becomes easier to drop thoughts and return to the breath. There was more neural connectivity between the region for mind wandering and those that disengage attention. The increased connectivity in the brains of long-term meditators, this study suggests, are analogous to those competitive weightlifters with perfect pecs.

Muscle builders know you won't get a six-pack belly by lifting free weights — you need to do a particular set of exercises. Specific muscles respond to particular training regimens. So it is with attention training. Concentration on one point of focus is the basic attention builder, but that strength can be applied in many ways. In the mental gym, the specifics of practice make all the difference.

## Accentuate the Positive

Negativity focuses us on a narrow range — what's upsetting us. A guideline in cognitive therapy holds that focusing on the negatives in experience offers a recipe for depression. Positive emotions widen our span of attention; we're free to take it all in. In the grip of positivity, our perceptions shift; when we're feeling good, our awareness expands from our usual self-centered focus on "me" to a more inclusive and warm focus on "we."

## Cutting Through the Hodgepodge

The scientific literature on the effects of mediation amounts to a hodgepodge of bad, good and remarkable results in a mix of questionable methodologies, so-so designs and gold-standard studies. After asking the dean of contemplative neuroscience, Wisconsin's Richard Davidson, to sort through it all and summarize the clear benefits for attention of mindfulness practice, he immediately recognized two: mindfulness and selective attention.

"Mindfulness," he said, "boosts the classic attention network in the brain's fronto-parietal system that works together to allocate attention. These circuits are fundamental in the basic movement of attention: disengaging your focus from one thing, moving it to another, and staying with that new object of attention."

Selective attention inhibits the pull of distractors. This lets us focus on what's important rather than be distracted by what's going on around us — you can keep your focus on the meaning of what you're reading instead of having it being pulled away by a distractor like an endnote in the text. This is the essence of cognitive control.

## Mindfulness at Work

Mindfulness, in the form of mind wandering, may be the single biggest waster of attention in the workplace. Focus on our experience in the here and now — like the task at hand, the conversation we're having, or the building of consensus in a meeting — demands that we tune down the all-about-myself murmurs of mind stuff irrelevant to what's going on right now.

Mindfulness develops our capacity to observe our moment-to-moment experience in an impartial, nonreactive manner. We practice letting go of thoughts about any one thing and open our focus to whatever comes to mind in the stream of awareness without getting lost in a torrent of thoughts about any one thing. This training generalizes, so that in those moments at work when we need to pay attention to this and drop our stream of thoughts about that, we can let go of the one and focus on the other.

Mindfulness training decreases activity in me-circuitry centering on the medial prefrontal cortex, and the less self-talk, the more we can experience in the moment. The longer people have been mindfulness practitioners, the more their brain can decouple the two kinds of self-awareness and activate circuits that foster a here-and-now presence for the task at hand, free of the mind's "me" chatter.

Building executive control helps especially for those of us for whom every setback, hurt or disappointment creates endless cascades of rumination. Mindfulness lets us break the stream of thoughts that might otherwise lead to wallowing in misery, by changing our relationship to thought itself. Instead of being swept away by the stream, we can pause and see that these are just thoughts — and choose whether or not to act on them.

In short, mindfulness practice strengthens focus, particularly executive control, working memory capacity, and the ability to sustain attention. Some of these benefits can be seen with as little as 20 minutes of practice for just four days (though the longer the training, the more sustained the effects).

## Seeing the Bigger Picture

Business leaders are increasingly pressured by the acceleration of complexity in the systems they need to navigate: There's globalization of markets, suppliers and organizations; the hyperspeed of evolving information technologies; impending ecological dangers; products coming to market and becoming obsolete faster.

Setting aside some regular reflective time in the daily or weekly schedule might help us get beyond the firefight-of-the-day mentality, to take stock and look ahead. Very diverse thinkers, from Congressman Tim Ryan to Columbia University economist Jeffrey D. Sachs, are calling for mindfulness as a way to help leaders see the bigger picture. They propose we need not just mindful leaders but a mindful society, one where we bring a triple focus: to our own well-being, that of others, and the operations of the broader systems that shape our lives.

# The Well-Focused Leader

Directing attention toward where it needs to go is a primal task of leadership. Talent here lies in the ability to shift attention to the right place at the right time, sensing trends and emerging realities, and seizing opportunities. But it's not just the focus of a single strategic decision-maker that makes or breaks a company: it's the entire array of attention bandwidth and dexterity among everyone.

Attention in organizations, as with individuals, has a limited capacity. Organizations, too, have to choose where to allocate attention, focusing on this while ignoring that. An organization's core functions — finance, marketing, human resources, etc. — describe how a particular group focuses.

Signs of what might be called organizational "attention deficit disorder" include making flawed decisions because of missing data, no time for reflection, trouble getting attention in the marketplace, and inability to focus when and where it matters.

## How Leaders Direct Attention

Leadership itself hinges on effectively capturing and directing the collective attention. Leading attention requires these elements:

- Focusing your own attention;
- Attracting and directing attention from others; and
- Getting and keeping the attention of employees, peers, customers and clients.

A well-focused leader can balance an inner focus on the climate and culture with an "other focus" on the competitive landscape and an outer focus on the larger realities that shape the environment the outfit operates in.

A leader's field of attention — the particular issues and goals she focuses on — guides the attention of those who follow her whether or not the leader explicitly articulates it. People make their choices about where to focus based on their perception of what matters to leaders. This ripple effect gives leaders an extra load of responsibility: They are guiding not just their own attention but everyone else's.

## Think Different

Companies with a winning strategy tend to refine their current operations and offerings, not explore radical shifts in what they offer. A mental balancing act — exploring the new while exploiting what's working — does not come naturally. But those companies that can both exploit and explore are "ambidextrous": They separate each strategy into units with very different ways of operating and cultures. At the same time, they have a tight-knot team of senior leaders who keep an eye on the balance of inner, outer and other focus.

What works at the organizational level parallels the individual mind. The mind's executive, the arbiter of where our focus goes, manages both the concentration exploitation requires and the open focus exploration demands.

## The Well-Focused Team

For a team, self-awareness means tuning in to the needs of members, surfacing issues, and being intentional about setting norms that help. Some teams make time for a daily "check-in" at the start of a meeting to ask how each person is doing. A team's empathy applies not just to sensitivity among members but also to understanding the view and feelings of other people and groups the teams deal with — group-level empathy.

Team focus can take the form of both whom in the wider organization to help and where to get the resources and attention teams need to accomplish their own goals. Or it can mean learning what the concerns are of others in the organization who can influence the team's capabilities or asking whether what the team is considering fits the larger strategy and goals of the outfit.

## Leading for the Long Future

The largest lens for our focus encompasses global systems; considers the needs of everyone, including the powerless and poor; and peers far ahead of time. No matter what we are doing or what decision we are making, the Dalai Lama suggests these self-queries for checking our motivation:

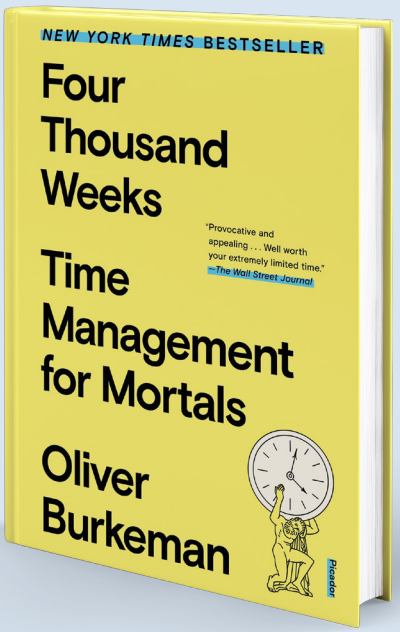
Is it just for me or for others?
For the benefit of the few or the many?
For now or for the future?

### RECOMMENDED READING LIST

If you liked *Focus*, you'll also like:

1. ***Working With Emotional Intelligence*** by Daniel Goleman. As Goleman documents, emotional intelligence is the essential ingredient for reaching and staying at the top in any field, even high-tech careers.

2. ***Ecological Intelligence*** by Daniel Goleman. Goleman reveals the hidden environmental consequences of what we make and buy and how we can drive the essential changes we all must make to save our planet..



3. ***Primal Leadership*** by Annie McKee, Richard Boyatzis, Daniel Goleman. Great leadership works through the emotions. The authors describe what managers and executives must do to be emotionally intelligent leaders.

*A Book Review by Soundview*

# Tools for Constructing a Meaninful Life

In his introduction to ***Four Thousand Weeks: Time Management for Mortals,*** Oliver Burkeman states, "Arguably, time management is all life is. Yet the modern discipline known as time management - like its hipper cousin, productivity - is a depressingly narrow-minded affair, focused on how to crank through as many work tasks as possible…." The average human being has 4,000 weeks in which to accomplish all that is to be accomplished because that is the length of the average human lifespan. While most other time management books attempt to lay out productivity principles in order to help the reader gain mastery over their time, Burkeman takes a different approach. He believes that control over one's time is not something that human beings can strive for because it is largely out of one's reach. The more tasks a person attempts to fit into their day, the more tasks will arise. Accomplishing more tasks will never allow one to experience the sense of calm and control most people try to achieve because there will always be more to do. Therefore, in his book, Burkeman attempts to rehabilitate his readers' view of time and to help them form a new perspective that will allow for greater peace. Whereas most time management books rely on tips and tactics, Burkeman largely focuses on philosophy and psychology to help his readers gain a sense of peace in relation to time.

## Choosing to Choose

In his first section, Burkeman explains that "the real problem isn't our limited time. The real problem… is that we've unwittingly inherited, and feel pressures to live by, a troublesome set of ideas about how to use our limited time." He goes on to explain how people in medieval England saw time differently. They did not see time as an entity. This mindset is hard for modern people to understand, Burkeman explains, because it is so foreign to how we see the world and time. Farming peasants in the past did not have pressure to get everything out of the way because farmers would always have more things to do. There is no end point to milking a cow because it will always need to be milked again the next day. These farmers' lives are task oriented lives where "the rhythms of life emerge organically from the tasks themselves."

While there are benefits to this type of life, Burkeman goes on to say that this mode of living keeps people from accomplishing more than what a small-scale farmer can accomplish because if a person wants to coordinate with other people, then time must be measured in a different way. He explains that a need for this coordination is what led to the creation of clocks, but this visibility of time changed how people related to it: it became abstract, separated from "the specific activities on which one might spend it." When time is viewed in this manner, it becomes a resource, and people feel the need to make better use of it. People also begin to start thinking and planning for the future and attempt to consistently use their time in service of the future. He says, "the trouble with attempting to master your time, it turns out, is that time ends up mastering you." What people need to do, he maintains, is to accept their limitations and learn to see that in a lifetime with limited hours, choices must be made. Every time a person chooses to do one activity, they are by necessity, choosing to forgo any number of other ways they could be spending their time. He believes there is freedom in this acknowledgment because people can choose to spend their time on activities that matter most to them.

Burkeman maintains that if we cannot get everything we need to do done in the specified time period, that we simply cannot get them done no matter how efficient we become. Instead of acknowledging this, however, he maintains that most people just dig their heels in deeper and try to work harder to get more done. But he maintains that "there's no reason to believe you'll ever feel 'on top of things' or make time for everything that matters, simply by getting more done." Part of the reason for this is that the more a person accomplishes, the more their goalposts change: more things will start to feel important and meaningful. Another problem with simply getting more tasks done is that it does not necessarily mean a person is spending more time on what is important or meaningful.

He maintains that most people do not have full control over their time and simply must accomplish certain tasks. He is not advocating for the renouncement of responsibilities. Rather, he wants his reader to understand that becoming more productive and getting more done in a day will not result in more peace of mind or take away a person's feeling of uncomfortable busyness. He encourages his reader to become okay with not getting everything done. This requires a person to focus on what is most important.

## Facing Mortality

Burkeman discusses the different relationship with time people have when they realize that their time on Earth is temporary. He describes this difference in relation to a ski trip he regularly takes with his family. If he had an unlimited amount of years on the planet and a corresponding unlimited amount of time, this ski trip would not have the same emotional intensity that it does. This is because part of the value in the trip is in knowing that the trips will not last forever and that his relationships with his family will not last forever because they are all mortal, and their time on Earth will come to an end. He does not believe that people can realistically spend all of their time with this acute awareness of their own mortality, but he believes that coming to terms with one's mortality, even in brief moments, can make life more meaningful. This is because when a person truly understands the limited number of years they have, they can choose to use those years in ways that are meaningful. While some people might approach their mortality with disappointment, wishing they had more time, he thinks about it all as possibility, knowing that he might never have existed at all. Instead of seeing mortality as a lack of an infinite number of years, he sees it as the addition of years that he need not ever have had at all.

What all of this leads to is the inevitability of procrastination. At any given moment, a person is procrastinating all of the things they could be doing but are not. He does not believe that the problem most people face is that they are not adequately focusing their time on the things that matter the most. Instead, the problem is that they have too many things that matter the most. People frequently try to allot time to their most important activities by taking care of the smaller or less important activities first to get them out of the way. This usually does not work, so Burkeman implores his reader to instead pay themselves first when it comes to time by making sure to devote at least some time each day to those things that mean most. He also encourages his reader to limit the number of projects they have going at any one time. When a person has too many projects, they can flip from one to the other when things get tough. What this ends up doing, however, is ensuring that very little actually gets completed. Finally, he encourages his reader to get rid of mid-level priorities, instead choosing to focus on what is most important.

All of the above recommendations refer to a type of procrastination that Burkeman calls good procrastination. There is another type of procrastination that is better avoided, and this stems from perfectionism. He believes that people tend to procrastinate on tasks they ought to do or want to do because they are paralyzed by their own limitations and perceived inability to achieve perfection. To these people, Burkeman reminds them that perfection is impossible. He says, "If you're procrastinating on something because you're worried you won't do a good enough job, you can relax - because judged by the flawless standards of your imagination, you definitely won't do a good enough job. So you might as well make a start." He also addresses those who avoid committing to a person or decision because they fear something better may come along. He says, however, that people are happier when they have made a commitment than when they are continuing to pursue other opportunities.

## Distraction and Attention

People have been concerned with distraction all the way back to the time of the ancient Greeks. Distraction is an important concern because "what you pay attention to will define, for you, what reality is." Attention, according to Burkeman, is life because a person's life is defined by what they pay attention to. Distractions can be things that keep people from the tasks they are meant to do, but even careers themselves can be distractions if they are keeping people from what it is they really believe they should be doing. A person cannot commandeer their attention completely. This would not even be ideal because in order

> *. . . the person who devotes all of his or her time to living in the present moment is trying to control time just as much as the person who is always using it for future gain."*

to survive, people need to be able to pay attention to dangers outside of their immediate task that need their attention. Social media and other digital commodities are designed and focused to draw a person's attention and to keep it on the app or website in question. Since these apps have so much of our attention, they can influence our reality by feeding us information that conforms with a worldview. He maintains that the technology industry is not wholly responsible for our distractions, however, because we willingly devote much of our time to these apps.

## Beyond Control

Burkeman moves on to discuss attempts to control time, and he does so by maintaining that any act a person participates in will take more time than they plan. Allotting more time to a task does not help, however, because people will still go over time. He believes that people who obsessively plan do so in order to claim control over the future. Because the future cannot be known, this obsessive planning and future focus creates the very anxiety the planning was meant to get rid of. There is another problem with inordinate planning. That is that there will always be more to plan. When one task has come to fruition, more will arise. Therefore, if a person is forestalling peace until all the planning is done, they will never find peace. All of this does not mean that Burkeman believes that planning is futile. He agrees that appropriate planning for the future is beneficial. The problem "is the need that we feel, from our vantage point here in the present moment, to be able to know that those efforts will prove successful." As an antidote to this, Burkeman urges his reader to realize that a person can never be certain about the future and that "the struggle for certainty is an intrinsically hopeless one - which means you have permission to stop engaging it." He believes it is precisely because time cannot be controlled that many spiritual traditions urge their followers to focus on the present moment

## Instrumental Time and Leisure

Burkeman then turns his attention to the instrumental use of time, that is using time as a means to another end. To illustrate the use of instrumental time, he relays author Steve Taylor's observation of people viewing the Rosetta Stone. Taylor noted that many of the people were spending their time taking photos and videos of the Stone. They were using their time with the Rosetta Stone to prepare for its future benefit of providing them with a photo they can revisit. This is an example of people using time for future rather than present benefit.

He describes people who consistently believe they will be happy when some particular task or moment is over, and he believes they will never actually be happy because they are constantly seeing the value of their present moment only in terms of how it can be used to influence the future. He then goes on to describe this concept in terms of child rearing. He discusses those who make parenting decisions based on how it will help their children in adulthood rather than making parenting decisions for the child that is in front of them now. In short, these parents see childhood as a training ground for future adults rather than as a valid state of life in itself.

Just as people choose to cooperate with the tech giants who want their time, people also choose to use our time solely as a means to an end. He believes people make this choice because it allots for a feeling of empowerment over time. He says, "therefore you had better stop postponing the 'real meaning' of your existence into the future, and throw yourself into life now." Still, he cautions that the person who devotes all of his or her time to living in the present moment is trying to control time just as much as the person who is always using it for future gain. He implores his reader to instead realize that they are always living in the present moment because that is all anybody ever really has. He ends his chapter by saying, "Living more fully in the present may be simply a matter of finally realizing that you never had any other option but to be here now."

Burkeman then moves on to discuss leisure, and he states that people in ancient Greece and Rome used to see work as being undignified. In the modern day, however, people often see leisure activities as not being worth their time, and people often feel guilty for engaging in leisure activities. Industrialization helped usher in this mindset because people were expected to make the most use of the time they devoted to their employers, and any time not spent on work activities was viewed as theft from the employer. The problem was intensified when people began to see leisure as an activity to make them more productive at work. It has gotten to the point where many people feel uncomfortable resting, and it becomes an unpleasant experience. Since people are not guaranteed a future, it becomes imperative for people to learn to enjoy the time they have. A person uncomfortable with rest can become accustomed to it if they avoid believing it must be pleasurable at first. Burkeman believes that this discomfort is proof that relaxation is necessary.

## Impatience and Patience

Another problem Burkeman confronts is impatience. People have become accustomed to things moving at a rapid pace, and this is true both at an individual level as well as at a societal level. People feel uncomfortable with slowing things down and tend to deal with that anxiety by hiding from it through productivity. He compares the mechanisms behind speed addiction to

that of alcohol addiction and maintains that both can be dealt with according to similar principles. Both addicts must surrender. He believes that when a person finally comes to a realization that they have very little control over how long tasks take, they can release some of their anxiety about time.

Burkeman believes that in today's society, patience and the acknowledgment of a lack of power it denotes can become a power in and of itself. The type of patience he advocates for takes strength to resist the urge to hurry. In order to live in this patience he advocates for three principles: "develop a taste for having problems," "embrace radical incrementalism" by allowing oneself to make slow progress on tasks and to stop at a predetermined time, and acknowledge that "originality lies on the far side of unoriginality," in other words that oftentimes people have to follow in other's footsteps before they can embrace true originality.

Many people believe that the true marker of control over time is being able to spend it however one wants to. Burkeman maintains, however, that people do not need complete control over their time as much as they need "greater outside pressure to use their time in particular ways." This means aligning oneself with a community. He believes "there's the profound sense of meaning that comes from being willing to fall in with the rhythms of the rest of the world." He believes that much modern productivity writing is focused on helping people avoid having others influence their usage of time when in reality social control of time can be beneficial to people. He believes people can try to achieve these benefits of community by focusing on activities in the physical rather than the digital world and by allowing the rhythms of community life to sometimes take precedence over a person's desire to master their own time.

Burkeman moves on to say that in the grand scheme of the world, individual lives matter very little. He believes that acknowledging the insignificance of life can lead people to freedom. He concludes by saying that when people are finally willing to admit that they cannot do everything, they will finally be able to focus on what really matters the most. Burkeman acknowledges that he comes from a family of planners. Throughout his research into time management techniques, however, he has come to believe that they will inevitably fail to lead people to peace because the very prospect of maximizing one's time in the hope of future peace is futile. There will always be more to do and tough choices will always need to be made. It is in submitting to these realities that Burkeman believes true peace and satisfaction can come. In his book, he walks his reader through philosophical and psychological insights that can ultimately lead them to true peace.

## THE SUMMARY IN BRIEF

How can high performers break free from ego-driven striving before sustained ambition turns into burnout? Many leaders and entrepreneurs achieve external success only to feel depleted, restless, and disconnected from any deeper sense of meaning—an experience that raises this question with growing urgency.

***From Burnout to Bliss: Dissolve Your Ego, Fuel Your Success, and Find True Fulfillment*** addresses this tension directly, offering a way to recover energy and clarity without abandoning ambition. The book reframes burnout not as a failure of discipline, but as a signal that identity and motivation have become misaligned. It explains how ego-centered achievement creates chronic pressure that ultimately erodes creativity, judgment, and well-being.

By blending scientific thinking with spiritual insight, Dr. Shaoqing Sun shows how dissolving the ego allows leaders to access a calmer, more resilient form of intelligence; one that supports sustained performance rather than constant overdrive. The author provides a practical roadmap for transforming pressure into purpose, making decisions from clarity, and building success rooted in presence rather than exhaustion.

## IN THIS EXECUTIVE BOOK SUMMARY

- Understand why ego-driven ambition leads to burnout and diminishing returns
- Learn how to restore mental energy and clarity while continuing to pursue ambitious goals without stepping away from performance or progress
- Discover how to lead with calm, conscious awareness under pressure, making clearer decisions and responding skillfully in demanding situations
- Explore practical ways to build sustainable success rooted in presence and purpose, aligning ambition with your deeper self

INTRODUCTION

## From Ego-Driven Striving to Conscious Leadership

The greatest hunger in life is not for material possessions or self-esteem. It is the yearning to unlock a hidden part of the self: *consciousness*.

Consciousness is the still and ever-present field in which all thoughts, feelings, and sensations arise. It is simply present, quietly perceiving what is.

Spirit is the vital force behind all biological systems. It's the engine that drives growth and transformation. It is our essence and it's why our brains are hardwired to guide us toward spiritual awakening. Life is meant to evolve. Without spiritual progress, even the most impressive achievements fall short of fulfillment.

Spirit and consciousness go hand in hand; one cannot exist without the other. These universal elements are fundamental to the human experience and play a central role in personal evolution and fulfillment.

Studies show that the brain's default mode network, which is associated with self-referential thinking and ego activity, can become overactive, perpetuating egocentric tendencies unless deliberately counteracted through practices such as mindfulness or meditation. When left unchecked, the ego shapes our thoughts and actions to serve only the self. It blocks natural energy flow and creates resistance to spiritual awakening.

The good news is that neuroplasticity also allows us to dissolve these self-limiting patterns and liberate ourselves, if we choose to do so. This transformation is rooted in understanding and dissolving the limiting power of the ego to unlock the boundless creativity, resilience, and clarity of consciousness.

As you move through life, you may find yourself caught in patterns dictated by the ego—an internal mechanism fueled by fear, insecurity, and a craving for external validation. Entrepreneurs, in particular, are vulnerable to this mindset. They might achieve early success driven by ego-based ambition, only to discover later that this path is unsustainable.

Lasting, meaningful, and deeply fulfilling success comes not from striving harder but from *knowing yourself* beyond the ego. When you become conscious of your thoughts, behaviors, and patterns, you begin to shift. The grip of ego loosens, space opens up, and you begin to see that your thoughts are not the truth of who you are. And in doing so, you begin to rewire your brain and consciousness starts leading the way.

CHAPTER 1

## Be Driven, but for the Right Reason

Chances are you are a driven person. You hate settling for the status quo and want more out of life. You don't want merely to survive; you want to thrive.

There are both profound upsides and dangerous downsides to being such a driven person. Being driven can propel you quickly toward success. Yet, that same power can become perilous if not properly managed. Without control, the very intensity that fuels success can also lead you to disaster in both life and business.

On one side, you have your relentless drive to build, to grow, and to win; on the other side, you have the voices around you urging you to slow down, be careful, and pull back. Maybe people have told you to tone it down or stop pushing so hard. Maybe you've even wondered yourself if you're going too far, too fast.

But here's what you need to know: The goal isn't to quiet your ambition; it's to redirect it. There's a big difference between being driven and being *consciously driven*. You may already feel that difference deep down. When your drive is rooted in ego and seeking status, recognition, wealth, or victory over others, it can take you far, but it comes at a cost. That kind of ambition burns hot but fast.

Your drive doesn't need to be suppressed; it needs to *evolve*. When you connect your ambition to something larger than yourself, everything changes. Your energy becomes sustainable. Your motivation becomes clear. And your success feels effortless, meaningful, and lasting.

Don't settle for less. Don't shrink your vision. Just aim it in the right direction. That's the path to lasting success. That's what conscious leadership looks like.

### Ego Defined

At its core, the ego is a mental construct, a stream of inner dialogue shaped by past experiences and future projections. It doesn't operate in the present; instead, it pulls us into memories of what was or anxieties about what might be. It is not your true self but an individualized construction made of collective concepts rooted in illusion.

But if left unchecked, it can create pain, resistance, and suffering. The ego-driven mind sees problems in everything and resists solutions that require flexibility or surrender. The ego cannot survive in the present moment. It needs the past or the future to stay alive.

> True success lasts, and it only lasts when it's rooted in conscious leadership and intentional living. ”

When decisions are made through the lens of ego, they often produce mediocre solutions and short-term gains rather than lasting impact. The key to breaking this cycle lies in discovering who you are beyond mental concepts.

### Opting for Conscious Awareness

Conscious entrepreneurs and business leaders make decisions grounded in love and passion, not fear and control. When they surrender to universal consciousness, they pursue their work with passion, free from attachment to specific outcomes. And when that happens, the dots connect naturally. Success follows, not as a chase but as a byproduct of alignment.

Conscious awareness, by its very nature, resides solely in the present moment. Through deliberate practices such as mindfulness and self-awareness, you train yourself to remain anchored in the present. This heightened presence allows you to observe your thoughts, emotions, and actions objectively.

If you're willing to embrace this higher level of awareness, everything can change. Your personal life will deepen. Your business will grow with greater stability. You'll stop operating in survival mode and start building something sustainable. Because the truth is that success that burns out isn't really success. True success lasts, and it only lasts when it's rooted in conscious leadership and intentional living.

### Put It Into Practice: Realigning Your Drive

**Step 1**

Grab a notebook or open your journal. Ask yourself the hard question: *What is fueling my ambition right now?* Be brutally honest.

**Step 2**

You don't need to dismantle your goals, but you do need to rethink the *why* behind them. Ask yourself the following:

- What does success look like for me if I'm operating from ego?
- What would success look like if I were operating from conscious alignment?
- Which one feels more sustainable? Which one feels more authentic?

**Step 3**

Set a five-day challenge. Each day, carve out fifteen minutes (just 1% of your day) to practice being still and present. No phone, no multitasking. Just you, your breath, and your awareness.

**Step 4**

Look at your current projects, business decisions, or relationships. Pick one area where ego might be running the show. Now ask yourself the following:

- If I were approaching this from service instead of self-interest, what would change?
- How can I show up here with presence, not pressure?
- What would a consciously driven version of me do differently?

**Step 5**

Every morning, ask yourself these three questions:

1. What do I need to do today? (tasks)
2. Why does it matter? (purpose)
3. How will I stay present while doing it? (mindset)

CHAPTER 2

## The Cost of Ego Is High

The emotional, mental, and physical price we pay for living egocentrically is high. That kind of life isn't just unsustainable; it's destructive. Relationships suffer, peace vanishes, and you lose the ability to experience joy, to connect, and to be fully human. And the worst part is you might not even notice it's happening.

In my thirties, I was doing five people's jobs, driving myself crazy, running here and there, traveling around the world to meet customers, and doing marketing and sales while working on product and technology development in the capacity of chief architect. It was way too much, so I was constantly anxious, frustrated, and emotional, angrily attacking anyone who didn't do things the way I wanted them done.

Looking back, it's obvious to me now: I was addicted—not to a substance, but to the pace, the performance, and the il-

lusion of control. Work became my escape route. It was my answer to every uncomfortable feeling. When I felt overwhelmed, restless, or numb, I didn't pause to investigate those feelings. I buried them by throwing myself even harder into work. That was my drug of choice and how I coped.

Only with the benefit of hindsight can I name what it really was: it was ego, and it was fully in control. So I want to encourage you to stop and ask yourself what this is costing you. Ask what you're trying so desperately to outrun. And please, don't wait for the crash to force the change. Because if you don't slow down, that crash *will* come.

### Put It Into Practice: Facing Your Ego, Restoring Your Connection

**Step 1**

Open your journal or grab a notebook. Quiet your mind and answer the following honestly:

- What has been the cost of my ego-driven actions?
- Who has had to pay that price?

**Step 2**

Review your list carefully and notice the following:

- When does my ego flare up the most?

Identify patterns: impatience, control, perfectionism, or defensiveness. Circle recurring themes. Ego thrives in your blind spots.

**Step 3**

For the next seven days, each time you feel driven by urgency, stress, or intensity, pause for a ten-second breath. Then ask:

- Is this my ego speaking, or am I acting from conscious awareness?

This brief pause helps interrupt habitual reactions and gives you a chance to consciously choose your next move.

**Step 4**

Choose one relationship you listed in step one. Reach out to that person with sincerity—not to justify your past actions but to acknowledge their impact. A simple message might say something like this:

- "I recognize my past behavior hurt you, and I'm genuinely sorry. I'm working on making real changes."

The goal isn't reconciliation; it's accountability. Showing humility through action is your pathway to restoring integrity.

**Step 5**

For five days straight, set aside fifteen minutes daily (only 1% of your day) for absolute stillness. Silence your phone and step away from distractions.

Ego dissolves in stillness. By prioritizing these moments, you retrain your mind to value presence over performance.

**Step 6**

Identify one situation, personal or professional, in which ego is currently in charge. Reflect deeply on the following:

- What would change if I acted from empathy and humility rather than ego?
- What does a consciously driven response look like here?

Then, take one small but intentional action this week to shift from ego to conscious connection.

**Step 7**

Start each morning with these three questions:

1. What am I prioritizing today? (tasks)
2. Who or what purpose does this serve? (intentions)
3. How can I remain connected and conscious today? (mindset)

Over time, this daily practice anchors you in humility, restoring your ability to lead and live with genuine presence and purpose.

CHAPTER 3

## The Crisis

While the cost of ego was great, the crisis that unfolded next was even greater. Individuals driven by unchecked ego often don't change until their world comes to a crashing halt. Such was my story.

The end of 2004 marked the beginning of what would become a seven-year crisis-filled existence. These years were marked by relentless hardship, emotional exhaustion, and a sense of despair so deep that, at times, I questioned whether I would make it through at all.

My life revolved entirely around my business. It was not just my occupation but the very foundation of my identity. I poured every ounce of myself into it and lived and breathed every part of it. So when things began to fall apart, I felt as though I was losing far more than a job or an enterprise. I was losing myself.

> Speed feels powerful, but if it's not built on structure, it breaks.

## Divert 1% of Your Attention

When someone tells you to *slow down* or *think things through*, it can feel like they just don't get it. You're not being reckless; you're being decisive. You're moving with purpose. And early on, that mindset can serve you well.

But here's the thing: that same intensity can also carry hidden risks. If you never take a moment to check your blind spots, you might miss something important, something that won't show up as a problem until it's too late.

You don't need to stop. You don't need to become cautious. If you can take just 1% of your energy, just enough to glance at the edges of your vision, you might save yourself from future pain. That's all it takes: 1% of your attention consistently applied to your foundation.

There's a seductive myth in the start-up world: build fast, break things, figure it out later. But when the foundation is weak, even small cracks can bring everything down. That's why I've become a believer in structure. Not as a constraint but as a launchpad.

## Put It Into Practice: Strengthen Your Foundation, Survive the Storm

### Step 1

Open your journal and list out the core areas of your business or life that feel most fragile right now. Ask yourself the following question:

- Where do I feel the most exposed, uncertain, or overextended?

### Step 2

Looking at your list, identify what got you here.

- Was it a lack of knowledge?
- Was it ignoring warning signs?
- Was it moving too fast to asking the right questions?

For each area, jot down what step you skipped. Awareness here is key.

### Step 3

For the next seven days, do a five-minute *blind spot check-in*. Before diving into your day, pause and ask the following:

- What risks or fragilities do I need to use 1% of my attention to scan for today?
- Is there anything I've been putting off that could turn into a future crisis?

### Step 4

Ask yourself the following:

- What am I currently building my identity around?
- What part of my self-worth depends on success, recognition, or control?

Write down your answers without judgment. Then, imagine what it would look like to separate *who you are* from *what you do*.

### Step 5

Even if you're early in your journey, take a moment to sanity-check your structure.

- Do I have legal clarity around intellectual property, licensing, or partnerships?
- Are my financials clean and reviewed?
- Do I have any agreements (formal or informal) that need revisiting?

### Step 6

Crises often reveal your true allies. Reflect on this:

- Who are the three people I'd call if everything fell apart tomorrow?
- Whom am I currently ignoring who could offer real wisdom or support?

Reach out to one of them this week, not because you're in trouble but because connection is your lifeline.

### Step 7

Speed feels powerful, but if it's not built on structure, it breaks. Ask yourself the following:

- Where in my business or life am I overoptimized for growth but underprepared for challenge?
- What would it look like to build for resilience here?

Choose one area and invest in the *boring* stuff: structure, compliance, documentation, and backup plans.

CHAPTER 4

## New Life Direction

One of the most common misconceptions is the belief that happiness and fulfillment are to be found in something external. But whether you call it God, Tao, or Buddha, that sacred presence does not exist somewhere far away. It resides within you. The spiritual search, then, is not a matter of reaching outward but of returning inward.

At the same time, many people place their faith entirely in the ego, assuming that their identity, intellect, and drive will shield them from life's hardships. They rely on ego to manage their discomforts and stay inside familiar routines, hoping control will protect them from suffering. But when life inevitably delivers a blow that the ego cannot absorb, the illusion begins to unravel.

Spiritual growth is not about mastering techniques or gathering knowledge. It is an inner transformation that occurs when ego slowly gives way to awareness, spirit, and deeper consciousness. This process doesn't add something new; it reveals what has always been there. As the inner fog lifts, you reconnect with your natural energy flow, the quiet current that nourishes love, clarity, creativity, and harmony.

No matter how many books you read or ideas you collect, there is a truth that only life can teach. Wisdom is not secondhand. It cannot be inherited, borrowed, or memorized. It must be lived. It must be discovered in the texture of your own experience.

You don't find truth by climbing higher or running faster. You find it by slowing down. By releasing your grip. By showing up fully for the life you're already living. The sacred isn't out there, somewhere else, waiting to be discovered in some far-off place. It's here. It's now. It lives inside your stress, your heartbreak, your quiet bravery, your burnout, and your longing.

### Put It Into Practice: Shift From Collapse to Inner Rebirth

**Step 1**

Open your journal and reflect on the moments or seasons in your life when you felt like everything was falling apart. Ask yourself the following:

- What version of me was trying to hold everything together?
- What finally gave out?
- What shifted internally as a result?

**Step 2**

For each moment you listed above, reflect on this:

- What lesson or insight was being offered through this unraveling?
- What new direction was life nudging me toward?
- What part of me needed to die so something new could live?

**Step 3**

For the next five days, set aside ten minutes each day to be still. No journaling, no background music, no phone, and no agenda. Simply sit, breathe, and allow yourself to be present.

**Step 4**

Look back over the last few months or years and reflect on what small but meaningful things have helped guide you forward.

- What seemed like a coincidence but felt more significant?
- What direction did those moments point you in?
- Are there themes or symbols that keep reappearing?

**Step 5**

Create a simple two-column journal entry each evening for the next week. In the first column, write down three to five actions you took that day. In the second column, describe the internal state you were in while doing them.

**Step 6**

Each day, ask yourself the following, quietly:

- Am I pushing or flowing right now?
- Where am I forcing something that wants to unfold naturally?
- What would trust look like in this moment?

**Step 7**

Instead of adding something new, choose one spiritual or grounding practice you already know and deepen it. This might be a short prayer in the morning, a breathing rhythm that calms you, or a book that realigns your perspective.

CHAPTER 5

## Embracing a New State of Being

The ego lives in fear, relies on familiarity, and thrives on approval. It is reluctant to experience the unknown, which is the very essence of life.

> Transformation does not send advance notice; it comes disguised as disruption.

There always comes a moment when you realize that continuing to tweak the old is no longer an act of wisdom but an act of delay. The real call is not to fix something broken, but to step into the much harder work of building something entirely new.

So here is the question you must confront: *What are you carrying today that is ready to be reimagined if only you would dare to release the old shape it once took?*

Transformation does not send advance notice. It comes disguised as disruption. It often wears the face of chaos, misunderstanding, and resistance. If you choose to move toward it, you will almost certainly be misunderstood. You will almost certainly be questioned. People will tell you that what you are doing is unnecessary, reckless, or even foolish.

You must move forward anyway. Because the deeper truth, the one that does not fit neatly onto a slide or a slogan, is this: what you are building now, with all your imperfect tools and incomplete understanding, has the power to serve people long after your name is forgotten. But it will only serve if you are willing to let go of what no longer works.

## Put It Into Practice: Step Into a New State of Being

**Step 1**

Open your journal and reflect on the systems, relationships, habits, or beliefs in your life that feel outdated or unstable. Ask yourself the following:

- What am I still trying to maintain that no longer truly serves?
- What am I afraid will happen if I let it collapse?
- What deeper life might be waiting if I stop propping it up?

**Step 2**

Think about one area where you feel stuck, hesitant, or overly cautious. Reflect on this:

- Whose approval am I subconsciously waiting for?
- What action would I take if no one else's opinion mattered?
- What is the cost of continuing to wait?

Write a single, clear sentence naming the step you would take if you trusted yourself fully.

**Step 3**

Each morning this week, before beginning your day, ask yourself the following:

- Am I focused on finding the perfect plan or on showing up fully present?
- What one small step can I take today without having everything figured out?

Write down your intention for the day, not as a goal to achieve, but as a way of being to embody.

**Step 4**

Notice where discomfort, fear, or internal resistance is strongest. Instead of avoiding it, approach it with curiosity.

- What feels most risky or vulnerable about taking the next step?
- What is the deeper invitation hidden within the resistance?

Spend ten minutes journaling about how you might move through it rather than around it.

**Step 5**

Take stock of the people closest to you. Reflect on the following:

- Who in your life helps you move forward into hard things with courage?
- Who encourages delay, safety, or avoidance?
- Who challenges you to expand rather than shrink back?

Write down the names of three people who energize your growth and commit to deepening those connections this month.

**Step 6**

Create one small, repeatable practice that grounds you in courage each day. This could be:

- a short mantra ("I move forward even when it is hard")
- a prayer or moment of silent alignment

- a physical gesture such as placing your hand over your heart before a difficult task

**Step 7**

At the end of each day, reflect briefly on the following:

- Did I meet the day fully, even if imperfectly?
- Where did I act from presence instead of fear?
- What is one thing I want to honor myself for today?

CHAPTER 6

## Egoless Leadership in Action

Just because you have embraced a new state of being doesn't mean the path is smooth. In fact, the path often becomes *steeper*, as the road to building something lasting and truly fulfilling is paved with adversity. The way you respond to that adversity defines everything. Egoless leadership is not about avoiding problems. It's about learning how to engage with them skillfully and purposefully.

When your mission aligns with something larger, something that serves others and contributes to humanity, you start to feel a different kind of momentum. Things happen that you can't explain through logic alone. There's clarity, alignment, and an unmistakable sense that the work matters beyond just profit or recognition.

Being an egoless leader doesn't mean you step aside and don't take responsibility, but it does mean knowing where you are strongest and creating space for others to lead where you are not.

And when you do that well, the entire company begins to breathe differently. It moves faster, thinks more clearly, and grows with purpose.

The ego self tends to see problems in everything, while those who lead without ego understand that every challenge carries within it the possibility for growth and transformation. Leaders who have released the need to control outcomes are able to embrace uncertainty because they recognize it as an essential part of life itself.

I no longer lead from fear or ego. I lead from presence and love. As a result, work no longer feels like a burden. It feels like an act of creation, a form of service, and a joyful responsibility that I am privileged to carry.

Each day, I begin with purpose. I take care of my health and well-being. I speak and act with intention. I empower others. I give my time and energy to what aligns with my values. I say yes with clarity and no without guilt. And in that space of conscious choice, everything becomes possible.

### Put It Into Practice: Step Into Egoless Leadership

**Step 1**

Open your journal and reflect on the areas of your work or relationships where you still feel the need to control, prove, or protect your image. Ask yourself the following:

- Where am I still trying to be the hero instead of building a team?
- What am I afraid will happen if I step back and let someone else lead?
- Where am I more concerned with credit than contribution?

**Step 2**

Take stock of what only you can do. Ask the following:

- What are the three things I do that energize me and create the most value?
- What tasks pull me out of flow or distract me from my deepest work?

Now draw a line. Commit to staying in your zone of genius and create space for others to thrive in theirs.

**Step 3**

Think of one area of your business or team where you need operational support or grounded execution. Then reflect on the following:

- Am I trying to find someone who thinks like me—or someone who complements me?
- Where could I benefit from different strengths, a different pace, or a different style?

Start imagining what it would mean to lead alongside, not from above.

**Step 4**

This week, practice leading without being the loudest. In meetings, try:

- speaking last instead of first
- asking questions instead of giving directions
- noticing whose voice is missing and drawing it out

**Step 5**

Reflect on your team or organization and ask the following:

- Where do people need permission instead of autonomy?

- Where have I created bottlenecks through my own need for oversight?

Choose one area where you can simplify, delegate, or step back—and let someone else own it fully.

**Step 6**

Each morning this week, begin your day with a question:

- What truly matters today?

Write it down before checking your phone or email. Let that answer guide your decisions, your calendar, and your conversations.

**Step 7**

Tell your team about a moment when you got something wrong, changed your mind, or needed help. Let them see your growth, not just your victories.

- What shifted when you let go of ego and led from clarity?
- What did it unlock for the company? For you?

Storytelling builds trust. Vulnerability builds connection. Try it.

**Step 8**

Before making your next major decision, pause and ask the following:

- Will this matter five years from now?
- What future am I shaping through this choice?

Write down what the wisest version of you would advise. Then move from that place.

**Step 9**

Pick one moment each day to practice egoless leadership. It might be:

- a quiet pause before a major meeting
- a breath before replying to conflict
- a walk where you reflect on the question, "What does leadership mean if I am not at the center?"

Let that presence reshape how you show up.

**Step 10**

At the end of each week, reflect not on what you achieved but on how you showed up:

- Did I empower someone else today?
- Did I act from clarity or control?
- Did I make space for joy, stillness, and purpose?

Over time, you will see that real success is not about doing it all yourself. It is about becoming someone who helps everyone rise.

CONCLUSION

## You Can Change Your Life

Life is a process to be experienced, a journey to be explored, and a purpose to be fulfilled. Truths only come from experience, and wisdom is only found through living. And once it becomes real to you, once you stop treating it as something separate and begin to live it in every breath, it changes everything.

Ego, mind, and consciousness are deeply interconnected dimensions of our inner life that together determine how we experience and respond to the world around us. As consciousness grows stronger, the mind becomes more flexible and creative, and your actions become more aligned with truth and love rather than fear and insecurity. When the ego no longer dominates the stage, the full potential of your mind and the quiet power of your consciousness can finally work together in harmony.

This entire journey, *from burnout to bliss*, is not about finding a new identity. It is about shedding the false ones. It is about releasing the need to be anything other than who you already are when all pretense falls away. It is about learning to live from the part of you that is not afraid, not reactive, and not bound by old patterns. It is about becoming quiet enough to hear the wisdom that has been speaking all along.

Trust that everything you need is already within you. You do not need to chase, to earn, or to prove. You only need to return to your breath, to your heart, and to the awareness that has always been here, waiting.

This is the journey. This is the invitation. This is the bliss beyond burnout.

**Dr. Shaoqing Sun** is the founder and chief geoscientist of C&C Reservoirs, where he has led innovation in analog intelligence for more than three decades. He created the Digital Analogue Knowledge System, a platform that helps global energy companies reduce uncertainty and improve operational performance. Drawing on his personal transformation, he is the author of *From Burnout to Bliss: Dissolve Your Ego, Fuel Your Success, and Find True Fulfillment*, which explores moving beyond ego-driven ambition toward clarity, compassion, and purpose. Dr. Sun divides his time between Beijing and London, where he lives with his family and continues advancing geoscience and human-centered leadership

# From Strength to Strength

Arthur C. Brooks

BOOK SNAPS™
Zooming In On Your Next Read

## From Strength to Strength

**Finding Success, Happiness, and Deep Purpose in the Second Half of Life**

*By Arthur C. Brooks*

Arthur C. Brooks is an American social scientist, the William Henry Bloomberg Professor of the Practice of Public Leadership at the Harvard Kennedy School, and Professor of Management Practice at the Harvard Business School. Prior, he was the president of the American Enterprise Institute for ten years, where he held the Beth and Ravenel Curry Chair in Free Enterprise. He has authored eleven books.

# Finding Purpose and Success As We Age

Many very successful people have gotten that way through hard work and an undying commitment to success. These traits can lead people to the top of their organizations, something many people strive for as they place being special over being happy. As Arthur C. Brooks posits in his book ***From Strength to Strength: Finding Success, Happiness, and Deep Purpose in the Second Half of Life***, this ceaseless striving for perfection and excellence can begin to produce diminishing results as people age. This is because, without exception, people's fluid intelligence peaks at some point relatively early on in life, giving younger professionals advantages that no amount of hard work in older adults can match. While this changes the playing field, it does not have to mean the end of productivity and purpose as a person ages if they change their trajectory and start focusing on tasks that utilize their crystallized intelligence, a type of intelligence that increases as a person ages. Brooks sets out to help people make this change with his book.

## Inevitable Decline

Brooks started his journey towards discovering meaning when he encountered a man on a plane who most people would recognize as being incredibly accomplished in life. While he avoids naming the man specifically, he tells the story of how this man told his wife that he would be better off dead. Brooks started to wonder what it was that leads hugely successful people to feel so unfulfilled in the later years of their lives. He discovered what he calls the striver's curse. He defines this as the tendency of people who strive for greatness during their peak years to feel terrified as they face their own physical and cognitive decline. These same people begin to feel unsatisfied with both their current successes and their current relationships.

Most people are familiar with the inevitable decline of professional athletes. Brooks states that it is not just athletes who decline in professional ability as they age; rather it is all of us. In fact, he says, "in practically every high-skill profession, decline sets in sometimes between one's late thirties and early fifties…the more accomplished one is at the peak of one's career, the more pronounced decline seems once it sets in." Unlike professional athletes who generally seem cognizant of their impending and eventual decline, many knowledge workers avoid facing such a

fact and expect a decline in their performance to not happen until they are in their seventies. This does not match with reality as Brooks understands it. He quotes a study by Benjamin Jones that shows that with Nobel Prize winners, the chances of great discoveries increases in a person's twenties and thirties and then "declines dramatically through one's forties, fifties, and sixties." While statistics vary by field, many people peak sometime in their forties. For creative careers, Brooks says a person's peak often occurs twenty years into their career. The reason for this decline is likely due to changes in the brain. The last part of the brain to develop is the prefrontal cortex, and this is also the first part of the brain to decline. It is responsible for multitasking, memory, and executive functioning among other things.

While this decline is inevitable, it does not always psychologically affect people equally. Some people suffer especially when they have lost esteem in the eyes of people who once looked up to them. This can lead people to feel irrelevant and useless. Studies show that people who feel useless are more likely to experience a disability or even to die. People who have been strongly driven by success and achievement are likely to feel the least happy after retirement as "high accomplishment affects people negatively when it finishes." This matches Brooks's "principle of psychoprofessional gravitation" in which he states that "the agony of decline is directly related to prestige previously achieved, and to one's emotional attachment to that prestige." Unfortunately, the glories of past achievements are not likely to provide people with solace once those achievements are gone. While Brooks clearly lays out the inevitability of decline, he does not end here. In his next chapters he goes on to show the areas in which people improve with age and helps lay out a plan for helping his readers embrace what it is they will begin to excel at in later years.

## The Second Curve

Earlier in the book, Brooks provides his readers with a curve of achievement and shows when they are likely to reach their peak. Working harder will not help a person stay at their peak longer. The most fulfilled people are those who are able to let this first peak, the peak of fluid intelligence, go and move on to the next curve, that of crystallized intelligence. While people's skills decline in some areas, their skills in others increase. For example, people's vocabulary increases, they get better at sharing ideas with others, and they get better at synthesizing ideas as they age. While fluid intelligence, "the ability to reason, think flexibly, and solve problems" diminishes, crystallized intelligence, "the ability to use a stock of knowledge learned in the past" grows. Crystallized intelligence continues to grow in a person's later years and may not possibly ever reach a peak. This crystallized intelligence is often what people refer to as wisdom. While some careers naturally lend themselves to crystallized intelligence, Brooks claims that many careers can be altered to better suit the intelligence a person has later in life. Brooks refers to first century BC Cicero who believed that older age is about service, wisdom, and counsel. Brooks believes that while people may not amass as much riches or fame when they center their lives around crystallized intelligence, what they do earn is often more valuable. He urges his reader to get off the fluid intelligence curve in which people will inevitably face age-related decline and jump on to the crystallized intelligence curve which will allow for continued growth and productivity, just in a different way.

## Chipping Away

Brooks goes on to describe the different ways that Eastern and Western people see art. He says that for many Westerners, art is about adding something to a blank canvas. For Eastern people, however, art is more about taking away what does not belong such as when a sculpture chips away at a block of jade to create a sculpture out of what is left behind. In a similar way, Brooks says, people in mid-life and beyond ought to start chipping away at what is unnecessary in life in order to leave behind what makes life meaningful. Many people, he says, pursue "money, power, pleasure, and honor" as well as their cousins, prestige and admiration. He does not believe that these are worthy pursuits after mid-life and that said pursuits will not lead people to what they most desire.

Unfortunately, success cannot make a person happy because, just as with addictive drugs, people need bigger and bigger successes in order to feel a satisfaction that is fleeting. Some choose to work harder as they get older to overcome their inevitable decline, but this leaves them running on a treadmill because they keep chasing after ever bigger successes as their ability to compete is declining. This leads many to dissatisfaction in older age. In order to overcome this, Brooks suggests that a person needs to temper their wants; this will allow them to be more happy with what they already have. Brooks gives multiple strategies for chipping away, and one of them is to begin to focus on smaller things rather than chasing larger things. Watching a flower can bring about a satisfaction that can be relived in the future in a way that an outward success cannot.

Many people, Brooks posits, are afraid of death, and for people who base their identity around their professional achievements, this fear of death can manifest itself in a fear of decline when a person cannot compete on the same level they could at a prior age. People cannot move to their second curve, their crystallized intelligence curve, until they have accepted the decline in their fluid intelligence. Acceptance of this decline is key. One step that Brooks thinks people need to take is to move from acquiring resume skills to acquiring eulogy skills. Resume skills are those that can help a person get ahead professionally but are never really considered by loved ones at the end of one's life. Eulogy skills, on the other hand, are the exact opposite. These are the attributes that people want others to remember about them at the end of their lives, and these are worth developing.

## Relationships

Many people who pursue success single-mindedly let their relationships suffer in the meantime. This can make decline even more painful as they have to experience it alone. People, Brooks states, are inherently connected "biologically, emotionally, psychologically, intellectually, and spiritually." People ignore this at their own peril as the secret to satisfaction after the inevitable cognitive decline resides in the interconnected nature of all

> All relationships require time and effort, but Brooks maintains that they are crucial for satisfaction later in life."

people. Brooks quotes George Vaillant as saying "happiness is love." Those who find themselves at the top of the leadership chain tend to be lonely because the position does not allow for community with those underneath them. This is a true source of suffering for people at the top of the hierarchical chain.

Romantic partnerships and friendships are often the most important relationships in a person's life, but falling in love is not what makes people happy. Rather it is the companionate love that persists after the strong rush of romance wears off that gives people what they truly crave. Romantic partners who see their spouse as their best friend have the best outcomes, but that does not mean that single people cannot achieve happiness and that those who are married cannot expect their romantic partnership to fully sustain them. Friendships are key. True friendships, Brooks claims, are easier for women than for men. All relationships require time and effort, but Brooks maintains that they are crucial for satisfaction later in life.

## Vanaprastha

Brooks explains the Hindu teaching of ashrama which are four distinct periods in a person's life that last approximately 25 years each. The first of these 25 years is spent learning, and in the second stage a person "builds a career, accumulates wealth, and maintains a family." The third stage is the one Brooks is most focused on, and this is called Vanaprastha. In this stage, a person begins to step back from "personal and professional duties, becoming more and more devoted to spirituality and deep wisdom." In short, they start to rely on crystallized intelligence. This requires a readjustment of goals. This stage prepares the way for the final stage where a person is focused on enlightenment. People search for spiritual growth as they age, and if they skip out on vanaprastha, they will suffer in the final stage because they will not be prepared for enlightenment.

One problem Brooks says that strivers experience at this point is that they previously may have shunned faith and have relied on their own abilities instead. This can make a journey back to faith feel humiliating for a person. This return to faith is normal, he says, and people are best off if they do not fight it even though it can cause significant changes in self-concept. To help overcome this discomfort, he urges his readers to realize that some of their earlier beliefs about religion may have been childish and that they leave those behind in search of a faith that is more mature and meaningful. As with relationships, the development of faith takes a consistent dedication of time.

Brooks aims his book at people who have achieved significant professional success in life, but it can be meaningful to a much larger swath of people than just the professional elite. The decline Brooks talks about happens to all people; it is just those who come from positions of great power who might experience its effects more acutely. Brooks ends From Strength to Strength: Finding Success, Happiness, and Deep Purpose in the Second Half of Life talking about vulnerability, something that people who have strived for greatness often shun. Brooks relies in part on the work of Brene Brown to explain that vulnerability and admitting one's weaknesses is not something that needs to be shunned because it is often through a person's weaknesses that others become more willing to approach them.

One benefit that people can glean from celebrating weaknesses is that they can finally relax. For a person who has spent their entire life trying to be the best, this can be a scary concept, but it can also be a liberating one. By admitting weakness, a person no longer has to pretend to be what they are not and can grow in true relationship with others. This is a worthy aspiration from Brooks's perspective as it is relationships and faith that make much of a person's later years meaningful.

While Brooks starts out his book stating that a person's professional decline likely comes much earlier than they expect and that the decline is inevitable and cannot be overcome, he maintains that this does not need to be the tragedy that some would see it to be. Rather, it can be an impetus to jump on a different path in life. This path can lead to happiness, contentment, and satisfaction throughout the second half of life. It is a path that can last a person many years as decline is not inevitable, and if it does come, it is much later in life. There is hope for much satisfaction in the later years of life, and Brooks provides his reader with ample ideas to consider as they map out these years of their lives.

# Give and Take

## A Revolutionary Approach to Success

by Adam Grant

### THE SUMMARY IN BRIEF

For generations we have focused on the individual drivers of success: passion, hard work, talent and luck. But in today's dramatically reconfigured world, success is increasingly dependent on how we interact with others. *Give and Take* illuminates what effective networking, collaboration, influence, negotiation and leadership skills have in common.

Adam Grant examines the surprising forces that shape why some people rise to the top of the success ladder, while others sink to the bottom. In professional interactions, it turns out that most people operate as *takers, matchers* or *givers.* Whereas takers strive to get as much as possible from others and matchers aim to trade evenly, givers are the rare breed of people who contribute to others without expecting anything in return.

Using his own groundbreaking studies, Grant reveals that these styles have a dramatic impact on success. Although some givers get exploited and burn out, the rest achieve extraordinary results across a wide range of industries.

Praised by social scientists, business theorists and corporate leaders, *Give and Take* opens up an approach to work, interactions and productivity that is nothing short of revolutionary. This visionary approach to success has the power to transform not just individuals and groups but entire organizations and communities.

### IN THIS SUMMARY, YOU WILL LEARN:

- What defines a taker, a matcher and a giver.
- How our reciprocity style affects our networking.
- How our reciprocity style influences our ability to collaborate and be creative.
- The power in Powerless Communication.

# THE COMPLETE SUMMARY: **GIVE AND TAKE**

**by Adam Grant**

**The author:** Adam Grant is an award-winning researcher and the single highest-rated professor at The Wharton School. He has been honored as one of *BusinessWeek's* favorite professors, one of the world's top 40 business professors under the age of 40, and one of Malcolm Gladwell's favorite social science writers. His consulting and speaking clients include Google, the NFL, Merck, Pixar, Goldman Sachs, the World Economic Forum, the United Nations, and the U.S. Army and Navy. He holds a Ph.D. in organizational psychology from the University of Michigan and a B.A. from Harvard University, and he is a former record-setting advertising director, junior Olympic springboard diver and professional magician.

## Good Returns

### The Dangers and Rewards of Giving More Than You Get

According to conventional wisdom, highly successful people have three things in common: motivation, ability and opportunity. If we want to succeed, we need a combination of hard work, talent and luck. There is a fourth ingredient, one that's critical but often neglected: success depends heavily on how we approach our interactions with other people. Every time we interact with another person at work, we have a choice to make: do we try to claim as much value as we can or contribute value without worrying about what we receive in return?

### Takers and Givers

Over the past three decades, in a series of groundbreaking studies, social scientists have discovered that people differ dramatically in their preferences for reciprocity — their desired mix of taking and giving. The two kinds of people who fall on opposite ends of the spectrum are called *takers* and *givers*.

*Takers* have a distinctive signature: they like to get more than they give. They tilt reciprocity in their own favor, putting their own interests ahead of others' needs. Takers believe that the world is a competitive, dog-eat-dog place. They feel that to succeed, they need to be better than others. To prove their competence, they self-promote and make sure they get plenty of credit for their efforts.

The opposite of a taker is a *giver*. In the workplace, givers are a relatively rare breed. They tilt reciprocity in the other direction, preferring to give more than they get. Whereas takers tend to be self-focused, evaluating what other people can offer them, givers are other-focused, paying more attention to what other people need from them. These preferences aren't about money: givers and takers aren't distinguished by how much they donate to charity or the compensation that they command from their employers. Rather, givers and takers differ in their attitudes and actions toward other people. If you're a taker, you help others strategically when the benefits to you outweigh the personal costs. If you're a giver, you might use a different cost-benefit analysis: you help whenever the benefits to *others* exceed the personal costs. If you're a giver at work, you simply strive to be generous in sharing your time, energy, knowledge, skills, ideas and connections with other people who can benefit from them.

### Matchers

In the workplace, give and take becomes quite complicated. Professionally, few of us act purely like givers or takers, adopting a third style instead. We become *matchers*, striving to preserve an equal balance of giving and getting. Matchers operate on the principle of fairness: when they help others, they protect themselves by seeking reciprocity. If you're a matcher, you believe in tit for tat, and your relationships are governed by even exchanges of favors.

Giving, taking and matching are three fundamental styles of social interaction, but the lines between them aren't hard and fast. You might find that you shift from one reciprocity style to another as you travel across different work roles and relationships.

Professionally, all three reciprocity styles have their own benefits and drawbacks. But there's one style that proves more costly than the other two. Research demonstrates that givers sink to the bottom of the success ladder. Across a wide range of important occupations, givers are at a disadvantage: they make others better off but sacrifice their own success in the process.

In the world of engineering, the least productive and effective engineers are givers. Going out of their way to help others prevents them from getting their own work done. The same pattern emerges in medical school. The givers go out of their way to help their peers study, sharing what they already know at the expense of filling gaps in their own knowledge, and it gives their peers a leg up at test time.

Across occupations, it appears that givers are just too caring, too trusting and too willing to sacrifice their own interests for the benefit of others. There's even evidence that compared with takers, on average, givers earn 14 percent less money, have twice the risk of becoming victims of crimes, and are judged as 22 percent less powerful and dominant.

### Who's at the Top of the Success Ladder?

So if givers are most likely to land at the bottom of the success ladder, who's at the top — takers or matchers? Neither. *It's the givers again.*

The engineers with the lowest productivity are mostly givers. But when we look at the engineers with the highest productivity, the evidence shows that they're givers too. This pattern holds up across the board. The medical students with the lowest grades have unusually high givers scores, but so do the students with the highest grades. Over the course of medical school, being a giver accounts for 11 percent higher grades.

Givers dominate the bottom and the top of the success ladder. Across occupations, if you examine the link between reciprocity styles and success, the givers are more likely to become champs not only chumps.

It's clear that givers, takers and matchers all can — and do — achieve success. But there's something distinctive that happens when givers succeed: it spreads and cascades. When takers win, there's usually someone else who loses. People tend to envy successful takers and look for ways to knock them down a notch. In contrast, when givers win, people are rooting for them and supporting them, rather than gunning for them. Givers succeed in a way that creates a ripple effect, enhancing the success of people around them.

## The Peacock and the Panda

### How Givers, Takers and Matchers Build Networks

For centuries we have recognized the importance of networking. By developing a strong network, people can gain invaluable access to knowledge, expertise and influence. Extensive research demonstrates that people with rich networks achieve higher performance ratings, get promoted faster, and earn more money. We meet many people throughout our professional and personal lives, and since we all have different knowledge and resources, it makes sense to turn to these people to exchange help, advice and introductions.

### Spotting the Taker in a Giver's Clothes

If you've ever put your guard up when meeting a new colleague, it's probably because you thought you picked up on the scent of self-serving motives. When we see a taker coming, we protect ourselves by closing the door to our networks, withholding our trust and our help. To avoid this, many takers become good fakers, acting generously so that they can waltz into our networks disguised as givers or matchers.

Luckily, research shows that takers leak clues. Well, more precisely, takers *lek* clues. In the animal kingdom, *lekking* refers to a ritual in which males show off their desirability as mates. When it's time to breed, they gather in a common place and take their established positions. They put on extravagant displays to impress and court female audiences. In the CEO kingdom, takers do a dance that looks remarkably similar.

For the taker CEOs, studies showed it was all about me. Big photos glorifying them appeared in their companies' annual reports. Takers typically saw themselves as superior, so they felt entitled to substantial pay discrepancies in their own favor.

Networks have become more transparent, providing us with new windows through which we can view other people's reputations and lekking. Now, it's much harder for takers to get away with being fakers. On the Internet, we can track down reputational information about our contacts by accessing public databases and discovering shared connections. Research suggests that ordinary people can identify takers just by looking at their Facebook profiles. Takers and matchers tend to approach networks by building and extracting value from their connections. They do give in the context of networks, but they tend to give strategically, with an expected personal return that exceeds

or equals their contributions. When takers and matchers network, they tend to focus on who can help them in the near future, and this dictates what, where and how they give.

### Reciprocity

Reciprocity is a powerful norm, but it comes with two downsides. The first downside is that people on the receiving end often feel like they're being manipulated. When favors come with strings attached or implied, the interaction can leave a bad taste, feeling more like a transaction than part of a meaningful relationship. Do you really care about helping me, or are you just trying to create quid pro quo so that you can ask for a favor?

There's a second downside of reciprocity, and it's one to which matchers are especially vulnerable. Matchers tend to build smaller networks than either givers, who seek actively to help a wider range of people, or takers, who often find themselves expanding their networks to compensate for bridges burned in previous transactions. Matchers operate based on the attitude of "I'll do something for you if you'll do something for me." When matchers give with the expectation of receiving, they direct their giving toward people who they think can help them.

As these disadvantages of strict reciprocity accrue over time, they can limit both the quantity and quality of the networks that both takers and matchers develop. Both disadvantages ultimately arise out of a shortsightedness about networks in that takers and matchers make hard-and-fast assumptions about just who will be able to provide the most benefit in exchange. At its core, the giver approach extends a broader reach and in doing so enlarges the range of potential payoffs, even though those payoffs are not the motivating engine.

Givers are able to develop and leverage extraordinarily rich networks. By virtue of the way they interact with other people in their networks, givers create norms that favor adding rather than claiming or trading value, expanding the pie for all involved.

## The Ripple Effect

### Collaboration and the Dynamics of Giving and Taking Credit

When it comes to being successful in any career, creativity can play an integral part. But who turns out to be the most creative and to promote creativity most?

Takers have a knack for generating creative ideas and championing them in the face of opposition. Because they have supreme confidence in their own opinions, they feel free of the shackles of social approval that constrict the imaginations of many people.

So is the secret to creativity to be a taker? Not so fast. Givers can be every bit as creative as takers. By studying habits in collaboration, we can gain a rich appreciation of how givers work in ways that contribute to their own success — and the success of those around them.

In Western culture, we have a tendency to privilege the lone genius who generates ideas that enthrall us or change our world. According to research by a trio of Stanford psychologists, Americans see independence as a symbol of strength, viewing interdependence as a sign of weakness. This is particularly true of takers, who tend to see themselves as superior to and separate from others. If they depend too much on others, takers believe, they'll be vulnerable to being outdone.

### Expedition Behavior

Givers reject the notion that interdependence is weak. Givers are more likely to see interdependence as a source of strength, a way to harness the skills of multiple people for a greater good.

A defining feature of how givers collaborate is that they take on the tasks that are in the group's best interest, not necessarily their own personal interests. This makes their groups better off: studies show that on average, from sales teams to paper mill crews to restaurants, the more giving group members do, the higher the quantity and quality of their groups' products and services. This is referred to as *expedition behavior*.

This term was coined by the National Outdoor Leadership School (NOLS), which has provided wilderness education to thousands of people, including crews of NASA astronauts. This behavior involves putting the group's goals and mission first and showing the same amount of concern for others as you do for yourself.

When givers put a group's interests ahead of their own, they signal that their primary goal is to benefit the group. As a result, givers earn the respect of their collaborators.

### Responsibility Bias

When partners overestimate their own contributions, it is known as the *responsibility bias*. It's a mistake to which takers are especially vulnerable. One of the factors at play is that we have more access to information about our own contributions than the contributions of others. We see all of our own efforts, but we only witness a subset of

our partners' efforts. When we think about who deserves the credit, we have more knowledge of our own contributions. This responsibility bias is a major source of failed collaborations. Professional relationships disintegrate when entrepreneurs, inventors and executives feel that their partners are not giving them the credit they deserve or doing their fair share.

## Finding the Diamond in the Rough

### The Fact and Fiction

Spotting and cultivating talent are essential skills in just about every industry; it's difficult to overstate the value of surrounding ourselves with stars. As with networking and collaboration, when it comes to discovering the potential in others, reciprocity styles shape our approaches and effectiveness.

Evidence shows that leaders' beliefs can catalyze self-fulfilling prophecies in many settings. Management researcher Brian McNatt conducted an exhaustive analysis of 17 different studies with nearly 3,000 employees in a wide range of work organizations, from banking to retail sales to manufacturing. Overall, when managers were randomly assigned to see employees as *bloomers* (those who show the potential for intellectual blooming or "spurting"), employees bloomed. McNatt concludes that these interventions "can have a fairly large effect on performance." He encourages managers to "recognize the possible power and influence in (a) having a genuine interest and belief in the potential of their employees…and (b) engaging in actions that support others and communicate that belief… increasing others' motivation and effort and helping them achieve that potential."

Some managers and teachers have already internalized this message. They see people as bloomers naturally, without ever being told. This is rarely the case for takers, who tend to place little trust in other people. Because they assume that most people are takers, they hold relatively low expectations for the potential of their peers and subordinates. Research shows that takers harbor doubts about others' intentions, so they monitor vigilantly for information that others might harm them, treating others with suspicion and distrust. These low expectations trigger a vicious cycle, constraining the development and motivation of others. Even when takers are impressed by another person's capabilities or motivation, they're more likely to see this person as a threat, which means they're less willing to support and develop him or her. As a result, takers frequently fail to engage in the types of supportive behaviors that are conducive to the confidence and development of their peers and subordinates.

Matchers are better equipped to inspire self-fulfilling prophecies. Because they value reciprocity, when a peer or subordinate demonstrates high potential, matchers respond in kind, going out of their way to support, encourage and develop their promising colleagues and direct reports. But the matcher's mistake lies in waiting for signs of high potential. Since matchers tend to play it safe, they often wait to offer support until they've seen evidence of promise. Consequently, they miss out on opportunities to develop people who don't show a spark of talent or high potential at first.

Givers don't wait for signs of potential. Because they tend to be trusting and optimistic about other people's intentions, in their roles as leaders, managers and mentors, givers are inclined to see the potential in everyone. By default, givers start by viewing people as bloomers…they simply start by seeing everyone as talented and try to bring out the best in them. They see potential where others don't, which sets in motion a series of self-fulfilling prophecies. In roles as leaders and mentors, givers resist the temptation to search for talent first. By recognizing that anyone can be a bloomer, givers focus their attention on motivation.

## The Power of Powerless Communication

### How to Be Modest and Influence People

Research suggests that there are two fundamental paths to influence: dominance and prestige. When we establish dominance, we gain influence because others see us as strong, powerful and authoritative. When we earn prestige, we become influential because others respect and admire us.

These two paths to influence are closely tied to our reciprocity styles. Takers are attracted to and excel in gaining dominance. In an effort to claim as much value as possible, they strive to be superior to others. To establish dominance, takers specialize in *powerful communication*: they speak forcefully, raise their voices to assert their authority, express certainty to project confidence, promote their accomplishments, and sell with conviction and pride. They display strength by spreading their arms in dominant poses, raising their eyebrows in challenge, commanding as much physical space as possible, and conveying anger and issuing threats when necessary. In the quest for influence, takers set the tone and control the conversation by sending powerful verbal and nonverbal

signals. As a result, takers tend to be much more effective than givers in gaining dominance. But is that the most sustainable path to influence?

The opposite of a taker's powerful communication style is called *powerless communication*. Powerless communicators tend to speak less assertively, expressing plenty of doubt and relying heavily on advice from others. They talk in ways that signal vulnerability, revealing their weaknesses and making use of disclaimers, hedges and hesitations. By using powerless communication, surely people wind up at a disadvantage when it comes to influence. Well, not quite.

It turns out that powerful communication doesn't always serve us well, and givers instinctively adopt a powerless communication style that proves surprisingly effective in building prestige. Givers develop prestige in four domains of influence: presenting, selling, persuading and negotiating. Because they value the perspectives and interests of others, givers are more inclined toward asking questions than offering answers, talking tentatively than boldly, admitting their weaknesses than displaying their strengths, and seeking advice than imposing their views on others.

### Presenting: The Value of Vulnerability

Expressing vulnerability is only effective if the audience receives other signals establishing the speaker's competence. In a classic experiment led by the psychologist Elliot Aronson, students listened to one of four tapes of a candidate auditioning for a Quiz Bowl team. Half of the time, the candidate was an expert, getting 92 percent of questions right. The other half of the time, the candidate had only average knowledge, getting 30 percent right.

As expected, audiences favored the expert. But an interesting wrinkle emerged when the tape included a clumsy behavior by the candidate. Dishes crashed, and the candidate said, "Oh, my goodness — I've spilled coffee all over my new suit."

When the average candidate was clumsy, audiences liked him even less. But when the expert was clumsy, audiences liked him even more. Psychologists call this the *pratfall effect*. Spilling a cup of coffee hurt the image of the average candidate; it was just another reason for the audience to dislike him. But the same blunder helped the expert appear human and approachable — instead of superior and distant.

### Persuading: The Technique of Tentative Talk

Alison Fragale, a professor at the University of North Carolina, finds that speech styles send signals about who's a giver and who's a taker. Takers tend to use powerful speech: they're assertive and direct. Givers tend to use more powerless speech, taking with tentative markers like these:

- Hesitations: "well," "um," "uh," "you know"
- Hedges: "kinda," "sorta," "maybe," "probably," "I think"
- Disclaimers: "this may be a bad idea, but"
- Tag questions: "that's interesting, isn't it?" or "that's a good idea, right?"
- Intensifiers: "really," "very," "quite"

These markers send a clear message to the audience: the speaker lacks confidence and authority. Lacking confidence is a bad thing, right?

When givers use powerless speech, they show us that they have our best interests at heart. But there's one role in which people tend to avoid talking tentatively: leadership. A marketing manager named Barton Hill found out why. He was invited to interview for a major promotion to a higher-level position where he would lead multiple business units. The interviewer opened with a softball question: tell us about your successes. Hill started talking about his team's accomplishments, using words like "we" and "us." Although Hill was the front-runner for the position, he didn't get it. The interviewer told him he didn't sound like a leader. The interviewer expected Hill to speak more assertively.

By speaking with greater speed, volume, assertiveness and certainty, takers convince us that they know what they're talking about — even when they actually lack competence. By failing to use powerful speech in his interview, Hill failed to create the impression of dominance. Yet the same powerless communication that cost him the promotion ended up earning prestige, making his teams successful.

## The Art of Motivation Maintenance

### Why Some Givers Burn Out but Others Are on Fire

Givers climb to the top of the success ladder through the unique ways that they build networks, collaborate, communicate, influence and help others achieve their potential. But givers are also more likely to end up at the bottom of the success ladder. Success involves more than just capitalizing on the strengths of giving; it also requires avoiding the pitfalls. If people give too much time, they end up making sacrifices for their collaborators and network ties at the expense of their own energy. If people give away too much credit and engage in too much powerless communication, it's all too easy for them to become pushovers and doormats, failing to advance their

own interests. The consequence: givers end up exhausted and unproductive.

There are two types of givers, and they have dramatically different success rates. *Selfless* givers are people with high other-interest and low self-interest. They give their time and energy without regard for their own needs, and they pay a price for it. Selfless giving is a form of pathological altruism, which is defined by researcher Barbara Oakley as "an unhealthy focus on others to the detriment of one's own needs," such that in the process of trying to help others, givers end up harming themselves.

Most people assume that self-interest and other-interest are opposite ends of one continuum. Selfless giving, in the absence of self-preservation instincts, easily becomes overwhelming. Being *otherish* means being willing to give more than you receive but still keeping your own interests in sight, using them as a guide for choosing when, where, how and to whom you give. Instead of seeing self-interest and other-interest as competing, successful people have found ways to integrate them so that they could do well by doing good. When concern for others is coupled with a healthy dose of concern for the self, givers are less prone to burning out and getting burned — and they're better positioned to flourish.

## Chump Change

### Overcoming the Doormat Effect

Givers tend to be humble and uncomfortable asserting themselves directly. Studies in controlled settings have shown that in zero-sum situations, givers frequently shy away from advocating for their own interests: when negotiating their salaries, they make more modest requests than matchers and takers and end up accepting less favorable outcomes. This reluctance to be assertive is especially likely to afflict agreeable givers, who pay a price in their pocketbooks.

For a number of years, researchers have known that successful negotiators tend to operate in an otherish fashion. In a comprehensive analysis of 28 different studies led by Dutch psychologist Carsten De Dreu, the best negotiators weren't takers or selfless givers.

The takers focused on claiming value: they saw negotiations as zero-sum, win-lose contests and didn't trust their opponents, so they bargained aggressively, overlooking opportunities to create value through developing an understanding of their counterparts' interests.

The selfless givers made too many concessions, benefiting their counterparts at a personal cost.

### The Best Negotiators

The most effective negotiators were otherish: they reported high concern for their own interests and high concern for their counterparts' interests. By looking for opportunities to benefit others and themselves, otherish givers are able to think in more complex ways and identify win-win solutions that both takers and selfless givers miss. Instead of just giving away value like selfless givers, otherish givers create value first. By the time they give slices of pie away, the entire pie is big enough that there's plenty left to claim for themselves: they can give more *and* take more.

Instead of assuming that they're doomed to become doormats, successful givers recognize that their everyday choices shape the results they achieve in competitive, confrontational situations. The dangers lie less in giving itself and more in the rigidity of sticking with a single reciprocity style across all interactions and relationships.

Although many successful givers start from the default of trusting others' intentions, they're also careful to scan their environments to screen for potential takers, always ready to shift from feeling a taker's emotions to analyzing a taker's thoughts, and flex from giving unconditionally to a more measured approach of generous tit for tat. And when they feel inclined to back down, successful givers are prepared to draw reserves of assertiveness from their commitments to the people who matter to them.

## The Scrooge Shift

Craig Newmark's "Craigslist" flourished by appealing to our basic matcher instincts. It facilitates transactions in which buyers and sellers can agree on a fair price, exchanging goods and services for what they're worth. Fundamentally, Craigslist is about trading value in direct exchanges between people, creating a matcher's preferred even balance of give and take. "We're not altruistic," Newmark writes. "From one perspective, we're like a flea market."

### Freecycle

Could a system like this function based entirely on giving instead of matching? In 2003, Ohio native Deron Beal decided to find out. Following the lead from Craigslist, Beal was aiming to create Internet-based local communities of exchange for anyone to access, connecting people who wanted goods with people who were ready to part with them. Beal set an unusual ground rule: no currency or trading allowed. The network was called Freecycle, and all goods had to be given away for free.

Although Freecycle grew in part by attracting people who already leaned strongly in the giver direction, it accomplished something much more impressive. Somehow, Freecycle managed to encourage matchers and takers to act like givers.

Interestingly, people often join Freecycle to take, not give. "People usually hear about Freecycle as a way to get free stuff. Your average person will join thinking, 'I can get something for nothing,'" Beal says. "But a paradigm shift kicks in. We had a big wave of new parents who needed help in hard times. They received strollers, car seats, cribs and high chairs. Later, instead of selling them on Craigslist, they started giving them away."

What drives people to join a group with the intention of taking, but then end up giving? The answer opens up another way that givers avoid the bottom of the success ladder. When dealing with individuals, it's sensible for givers to protect themselves by engaging in sincerity screening and acting primarily like matchers in exchanges with takers. But in group settings, there's a different way for givers to make sure that they're not being exploited: get everyone in the group to act more like givers. If a group develops a norm of giving, members will uphold the norm and give, even if they're more inclined to be takers or matchers elsewhere. This reduces the risks of giving: when everyone contributes, the pie is larger, and givers are no longer stuck contributing far more than they get.

## Out of the Shadows

Although many of us hold strong giver values, we're often reluctant to express them at work. But the growth of teamwork, service jobs and social media has opened up new opportunities for givers to develop relationships and reputations that accelerate and amplify their success.

In the mind of a giver, the definition of success itself takes on a distinctive meaning. Whereas takers view success as attaining results that are superior to others' and matchers see success in terms of balancing individual accomplishments with fairness to others, givers are inclined to characterize success as individual achievements that have a positive impact on others.

Taking this definition of success seriously might require dramatic changes in the way that organizations hire, evaluate, reward and promote people. It would mean paying attention not only to the productivity of individual people but also to the ripple effects of this productivity on others. If we broadened our image of success to include contributions to others along with individual accomplishments, people might be motivated to tilt their professional reciprocity styles toward giving.

There's a fine line between giving and clever matching, and this line blurs depending on whether we define reciprocity styles by the actions themselves, the motives behind them or some combination of the two. It's a deep philosophical question, and it's easy to identify with a range of views on how strategic matchers should be evaluated.

On the one hand, even if the motives are mixed, helping behaviors often add value to others, increasing the total amount of giving in a social system. On the other hand, our behaviors leak traces of our motives. If recipients and witnesses of our giving begin to question whether the motives are self-serving, they're less likely to respond with gratitude or elevation. When strategic matchers engage in disingenuous efforts to help others primarily for personal gain, fellow matchers may withhold help, spread negative reputational information, or find other ways to impose a taker tax.

To avoid these consequences, would-be matchers may be best served by giving in ways that they find enjoyable, to recipients whose well-being matters to them. That way, even if they don't reap direct or karmic rewards, matchers will be operating in a giver's mindset, leading their motives to appear — and become — more pure. Ultimately, by repeatedly making the choice to act in the interest of others, strategic matchers may find themselves developing giver identities.

We spend the majority of our waking hours at work. This means that what we do at work becomes a fundamental part of who we are. If we reserve giver values for our personal lives, what will be missing in our professional lives? By shifting ever so slightly in the giver direction, we might find our waking hours marked by greater success, richer meaning and more lasting impact.

# Glow

## How You Can Radiate Energy, Innovation, and Success

by Lynda Gratton

### THE SUMMARY IN BRIEF

You know them at first sight: teammates or colleagues, direct reports or bosses who radiate enthusiasm, positive energy and inspiration. Even in difficult circumstances they *glow* with an attitude that inspires others, fosters a great working experience for everyone and creates empowering relationships. Would you like to learn how to *glow*? Lynda Gratton shows you how in *Glow*.

Drawing on years of original research, Gratton identifies three principles that people who *glow* live by and three actions for putting each principle into practice.

To master the three distinct areas of their working life, people who *glow* are adept at understanding what they have to do as individuals, what they have to do as members of a team, and how to find their place in a company that encourages them to *glow*.

Gratton's aim is to engage and inspire you by focusing your attention on the key issues through a simple diagnostic profile. This will help you understand where you stand with regard to your own attitudes and competencies, your team and your organization.

*Glow* is an invitation to become more energized and innovative at work, and to radiate positive energy that will also excite and ignite others.

### IN THIS SUMMARY, YOU WILL LEARN:

- You *glow* when you radiate positive energy and that fosters a great working experience for yourself and others.
- How to create Hot Spots — the times, places, and occasions when whole groups of people become highly energized and innovative.
- Why *glowing* depends on the three principles of a cooperative mindset, networking and igniting latent energy.
- How to tap into the three resources of *glowing*.
- How being able to cooperate with others is crucial to your capacity to *glow*.

# THE COMPLETE SUMMARY: **GLOW**

**by Lynda Gratton**

**The author:** Lynda Gratton is professor of management practice at the London Business School. She was in the top 20 of the most recent *Times* (London) "Thinkers 50" list of leading management scholars and was chosen by the *Financial Times* as the business thinker most likely to "change how you view the world and live your life." She is the author of six books, including *Hot Spots, Living Strategy* and *The Democratic Enterprise*.

## The Secrets of Glowing

In an ever-changing world, how can you be sure that you will find and pursue great opportunities? How can you relentlessly create value in your work and for yourself? How will you stay ahead of the curve?

Fall short in any way and globalization gobbles you up. Around the world, someone, somewhere has already put in a bid to do it faster, quicker and cheaper. To stay ahead of the curve, you have to work with more energy, more enthusiasm and, most important of all, more innovation. It is this combination that will bring you long-term success in this globalized, technology-enabled world.

But how do you do this without becoming yet another victim of an "extreme job" — working harder and harder just to keep up, jeopardizing your health, alienating your family and friends, and moving further and further away from your true self?

### When You Glow

People who manage to stay ahead of the curve, who are energized, innovative and successful — and remain healthy and happy — seem to *glow*. You can see it in their faces and hear it in their voices.

You *glow* when you radiate positive energy that fosters a great working experience for yourself, excites and ignites others, and through your inspiration and innovation creates superior value and success in your work.

When you radiate this positive energy, great things happen. When you *glow*, you are able to create or find and flourish in "Hot Spots." Hot Spots are times, places and occasions when whole groups or a community of people become highly energized and innovative.

So the challenge is to learn how to *glow* and then to create, find and flourish in Hot Spots.

There are examples every day of people taking what they sincerely believe to be the best course of action to create value for themselves and others, yet instead of *glowing* and creating or finding a Hot Spot, they are inadvertently behaving in ways and creating situations that reduce their value and leave them devoid of energy and unattractive to others.

### The Three Principles That Are the Foundation of Glowing

People who *glow* live life according to three principles that form the foundation for their daily behavior. These principles are brought to life every day by nine actions. Together these principles and actions create a frame for their work life that stokes their enthusiasm and enables them to *glow*.

When you *glow*, you design your working life around three principles:

**The First Principle: A Cooperative Mindset —** You have a warm and positive attitude toward others and choose to work where cooperation flourishes. You have developed conversational and relationship skills and habits.

**The Second Principle: Jumping Across Worlds —** You have jumped across into other worlds and have learned to appreciate and learn from people who are very different from you.

**The Third Principle: Igniting Latent Energy —** You are able to ignite your own energy and the energy of those around you by discovering sources of ignition.

### The Nine Actions That Will Make You Glow Every Day

You live the principles on a daily basis through nine actions; three in support of each principle:

Action 1. You practice the daily habits of cooperation.

Action 2. You master the art of great conversation.

Action 3. You act on the "smell of the place."

Action 4. You know how to increase the value of your network.

Action 5. You are skilled at escaping the boundaries that constrain you.

Action 6. You find and move to boundaryless places.

Action 7. You ask questions that spark energy.

Action 8. You create visions that compel.

Action 9. You craft meaningful and exciting work.

## Your Glow Resources

You want to make *glowing* a daily experience in your working life rather than something that happens occasionally. You do this by working on the three principles and developing your skills and competencies.

You have three potential resources available to you to make *glowing* a daily experience:

- Your first resource is yourself. You have within you the power to develop the personal skills and capabilities that are the foundation for a life of *glowing*.
- Your second resource is your team, your immediate colleagues. They can play a key role in supporting and enabling you and other team members to practice the nine actions that will ensure that you *glow*.
- Your third resource is the community, business, or organization in which you currently work. Even if you work completely on your own, you are a member of a wider community of people who can provide a frame for you to develop these skills and habits.

### You Can Glow — It's You That Makes It Happen

As you increase your capability to *glow*, keep these points in mind:

- It's not about your personality — anyone who takes the nine actions can learn to *glow*.
- What are crucial are the everyday actions you take and habits you develop.
- Forget your pet theories and instead focus on the three principles.
- Work on all three principles, rather than concentrating on the one or two that are easiest for you.
- Find a few supportive people to engage with who can also profile themselves, and remember to listen and not become too defensive with one another.
- Patience is a myth. Take action now!

### An Introduction to the Glow Profile

As you progress through the three principles, you and your colleagues have the opportunity to complete the *Glow* Profile for each of the principles in turn.

The concentric circles of the *Glow* Profile (see Figure 3.2) are divided into three segments, representing the three principles (cooperative mindset, jumping across worlds and igniting latent energy). The inner circle corresponds to you and your work; the middle circle represents your immediate colleagues or team; and the outer circle your wider community, business or network within which you work.

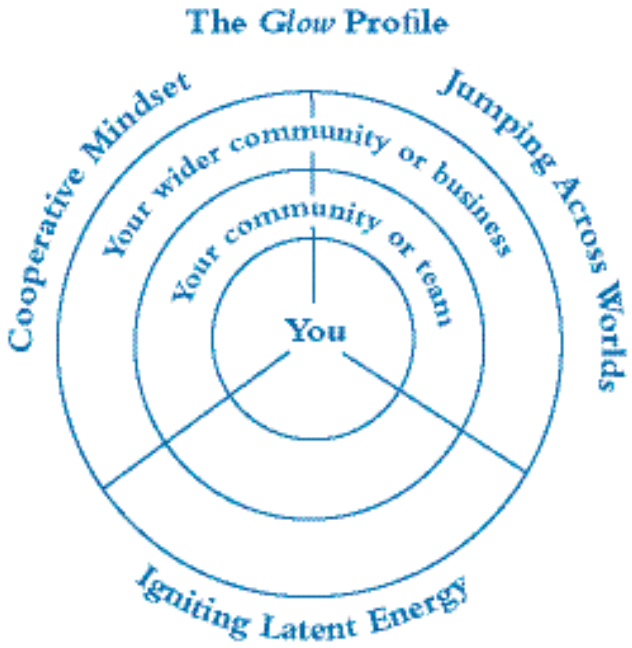

**Figure 3.2 Your Cooperative Profile**

## The First Principle: A Cooperative Mindset

You have said a resounding yes to staying ahead of the curve, to being able to create and flourish in high-energy places. You want a life where you *glow*, a working life of exhilaration, energy and insight. You have also said a resounding no to a life dominated by the "Big

Freeze" of political intrigue and gut-churning politics. Being able to cooperate with others is crucial to your capacity to *glow*.

## The Glow Profile

A *Glow* Profile is used to determine where you stand with regard to your own attitudes and skills, your team's attitudes and skills and the extent to which your company or community encourages you to be cooperative. There are five profile types.

1. Profile Type A — You, the team you work with and your wider community are highly cooperative, which creates a marvelous opportunity for you to *glow*.

2. Profile Type B — You, your team and the wider community are skilled in some aspects of cooperation, which suggests that developing the daily habits of cooperation will be crucial, while learning the art of conversation will also be useful.

3. Profile Type C — You are fairly cooperative but find yourself in a Big Freeze of limited cooperation, which suggests that you need to first concentrate on building your own cooperative skills, but then think seriously about acting on the "smell of the place."

4. Profile Type D — You are not cooperative but find yourself surrounded by a relatively cooperative team and community, which presents a terrific opportunity for you to learn from others. Developing the daily habits of cooperation could make a real difference.

5. Profile Type E — Neither you, your team nor the larger community values cooperation, which gives you and your team a great opportunity to think about the effect this is having and work together on developing the daily habits of cooperation, learning the art of conversation and acting on the "smell of the place."

## Action 1: Developing the Daily Habits of Cooperation

Habits are actions you take regularly that become part of who you are and define the person you have become. Adopting some of these habits requires you to develop a skill or an aptitude, while adopting others does not.

If you want to *glow*, you need to build into your daily behavior a set of habits that will enable you to cooperate with others with ease.

Here are five daily habits that are crucial to developing this aspect of yourself:

1. **The habit of sharing valuable information with others.** One of the most powerful habits of cooperation you can develop is "gifting": willingly sharing valuable information with other people.
2. **The habit of acting with discretion.** If you want to be cooperative, you have to learn to trust people and they have to learn to trust you.
3. **The habit of being open about yourself.** Cooperation flourishes when you have great conversations. For these to take place, you need to be open about your emotions and prepared to trust in an open and authentic way.
4. **The habit of using the language of cooperation.** You create stronger cooperation by making sure you use the word *we* rather than *I* when discussing business matters and by consciously using language that includes others to encourage *cooperation* among your *team of colleagues*.
5. **The habit of making and keeping commitments.** By making a commitment, you agree to a course of action you will take. Without commitments, cooperation simply becomes mere window dressing — a charade that you are playing.

Of course these habits come from within — they are about you. However, there are ways in which you can increase their potency. Since you develop habits by watching others, you need to be thoughtful about whom you have around you. Spend too much time with highly competitive people and you will abandon your cooperative habits.

The people who become your role models and mentors can have a profound impact on how your habits develop, so choose carefully. The most important influence on the cooperative habits of individuals or teams is how they see other people behaving. When people mentor you, they take a personal interest in you, they support your development and it is often from them you learn your habits. So choose your mentors with great care. This will mean at times steering clear of the person who looks most successful and instead choosing a mentor for his or her cooperative capabilities.

## Action 2: Mastering the Art of Great Conversation

People who *glow* know the art of great conversation and use conversation as the bedrock of their cooperation with others. They are able to bring emotional authenticity and analytical rigor to their conversations.

When you *glow*, one thing that is striking is the way you talk with other people. Sure, some of your conversations will be of little consequence, but many will be considerably livelier — thought-provoking, fascinating and purposeful.

Ask yourself this question: In what way do I most

typically converse, and what would it take to make my conversations more rigorous and authentic?

There are four ways to have a conversation:

***Dehydrated Talk.*** In these conversations, you bring neither the sharpness of analytical rigor nor the warmth of emotional authenticity. These conversations contain no doubt, no curiosity and no puzzling. Dehydrated talk is not the foundation for cooperation and it certainly won't help you *glow*.

***Disciplined Debate.*** These are good conversations in which analytical rigor is strong. In a disciplined debate, what you are talking about is based on fact rather than lazy thinking or prejudice. Disciplined debate can be a crucial igniter of a Hot Spot because it creates a context in which people feel prepared and able to ask the "big questions" that can engage and excite others and act as a focus for latent energy to emerge.

***Intimate Exchange.*** Emotional conversations flourish in your private life as you build trusting relationships with family and friends. You are able to talk about your emotions, explain your feelings to others and try to understand where they are coming from. This creates the basis for appreciating others. If you are to create cooperation as a foundation for *glowing* in your work life, you need the same level of empathy, mutual understanding and trust at work.

***Creative Dialogue.*** Creative dialogue results when analytical rationality and emotional authenticity are brought together to create important and meaningful conversations. Creative dialogue is crucial to your becoming energized and innovative. To have creative dialogue, you want to converse with people who are interesting and exciting and who are able to converse on broad and wide topics.

### Action 3: Acting on the 'Smell of the Place'

Sometimes you have no choice: If you want to *glow*, you may have to be prepared to move, to put yourself in a different place with different people. To do that you have to become skilled at understanding and acting on the "smell of the place." The smell of the place consists of all those subtle clues that tell you intuitively and rationally what a place is like before you join. Being aware of the smell of the place will help you find teams, communities and companies that will help you *glow* and avoid those that won't. *glowing* is a lot about you, but it is also about the company you keep.

These are the questions you should answer before you decide to join a team, community or company:

1. Is the language of the place cooperative or competitive?
2. How well does the executive team work together?
3. Will I be treated in a way that fosters cooperation?

## The Warmth of Cooperation

**When Cooperation Flourishes: Jill's Story**

I am a very driven person. From an early age I knew what I wanted to be and have always worked really hard to get there. I love the process of thinking about something and then bringing it to fruition. For me, the way I judge myself is the quality of my work — I have really high standards for myself and others.

When I left design college, I joined a small design team. At first I loved the work, really relishing working on my own and bringing my ideas to fruition. Then I began to feel more and more uncomfortable. I found I was not sleeping very well at night and often felt a pit of anxiety in my stomach.

At college we worked pretty much on our own, and I was used to doing my own thing. Here in the design studio I continued to work like this — getting in early in the morning, working on my project and leaving late at night. I felt increasingly exhausted and isolated.

The real shock came when, at the end of six months' work on a project, it came time to show the work to the clients. I was really pleased with mine. I had used all my skills and worked incredibly hard. Although I had done the very best I could, there were two areas of the design that I had completely failed to understand. I had not really come to grips with how the product I'd designed could be manufactured, and the prototype I had created was going to be too costly to mass market. It began to dawn on me that because I had worked so hard on my own, I had not had the benefit of my colleagues' insights and knowledge of the manufacturing process and of costing feasibility.

Looking back, that client presentation was a life-changing event for me. I began to realize that if I was going to excel in the way I wanted to, I had to learn to cooperate with others in a more skillful and thoughtful way. I had to make cooperation my day-to-day habit, and I had to get better at listening to and conversing with others.

## The Second Principle: Jumping Across Worlds

When your relationships with other people are built on cooperation, trust and appreciation, you have the

tantalizing possibility of undertaking extraordinary endeavors and *glowing*. However, it's not just your relationships with your closest colleagues that are so crucial. Think more broadly of the vast cloud of acquaintances, friends, and friends of friends who surround you.

Often when you work with other people who are very similar to you, you go through a process of homogenization whereby you become more and more similar and end up with mediocre and average ideas. However, when you jump across worlds, each person can contribute something unique. It is this combination of "uniquenesses" that is the magic of Hot Spots and what lets you *glow*.

Each of us has our own unique way of looking at the world. We have our own way of seeing situations and our own way of interpreting what we see; we can then generate our own unique solutions to problems (this has been termed *heuristics*); and we have our own unique way of predicting what we believe will happen.

If you think about your life and your work, you will see that, over time, you have created a way of looking at your world and deciding to act in it. These ways of looking — or heuristics — are developed through your past experiences. So your heuristics are influenced by such factors as whether your gender, your culture and the country you have grown up in, your religious beliefs and your education. They are also influenced by your life experiences and what you have learned from others. Your personally developed rules and ways of acting become the rules you use to define your world. The more cognitively diverse the collection of heuristics, the better able you and others are to create Hot Spots of innovation and energy and to *glow*.

## Connecting Different Worlds

Typically there are two events that can really energize a network and put it on the path to becoming a Hot Spot.

One possibility is that the variety within the network is expanded when someone with a different perspective joins. This variety increases the number of heuristics and begins the buzz.

The other important event that will transform the warm and trusting relationship to something much more dynamic and exciting is that the latent energy between group members is ignited.

It is astonishing to watch as the Hot Spot gains velocity and energy and more people are interested in getting involved. Some of the people who become involved are already associated. Others are acquaintances or even strangers, people who have been asked to join the job, project or task force, or have decided to do so of their own volition.

It is this combination of founding members, heritage relationships, acquaintances and relative strangers that bring this wonderful mix of insights, experience and ideas that fuel the Hot Spot and create a great context for people to *glow*.

## Action 4: Increasing the Value of Your Networks

People who *glow* are skilled at increasing the value of their networks and at balancing their networks between acquaintances and close friends who are similar to them with more extensive networks of people who are very different from them. They know that sometimes the most interesting and most innovative ideas come from people they barely know and who are very different from them.

The most valuable strategy you can adopt to increase the value of your networks is to both deepen your relationships and broaden your networks. You need strong, trusting and highly cooperative friendships and you need links with a wide variety of associates.

Remember that similarities and differences can come in all sorts of guises. Your friends or acquaintances could be of the same gender, be around your age, share a religion or culture, come from a similar background or have a similar profession. However, there are similarities and differences that are much deeper and less obvious yet still very important — for example, points of view, values or habits.

## Action 5: Jumping Out of the Boundaries That Constrain You

People who *glow* have broad and extensive networks and are skilled at jumping out of the boundaries that constrain them. They allow for serendipity in their lives and are prepared to meet new people and take the untrodden path to broaden their experiences.

It is wise to become skilled at escaping the boundaries that constrain you by building more valuable communities of practice and being prepared to wander away from your natural networks.

As you wander outside your normal networks, you must be interested and inquisitive about what you see and positive and open about the people you meet. To do this you need to allow for serendipity in your life by:

- Setting aside "golden moments" — leaving time for yourself
- Taking time out

- Taking mini-sabbaticals
- Creating broader networks
- Showing interest in and appreciating others
- Developing a fluid identity

### Action 6: Finding and Moving to Boundaryless Places

People who *glow* are adept at finding and moving to boundaryless places. They know how to escape from the "Fortress" and connect with teams and places that encourage them to grow by creating opportunities to jump across worlds.

The ability to *glow* is within you, of course, but it is also dependent on the context you are in — the friends and networks you have and the community, organization or business you are working in. If there are big walls around you, you may find it mighty hard to scale them; you feel as if you are trapped in a Fortress.

You will be surprised at how much potential there is to jump across worlds — even in a high-walled Fortress. Here are seven actions you can take right now to make the most of your current opportunities:

1. Pursue a boundary-crossing career path.
2. Seek out mentors with wide, diverse networks.
3. Make it known that you want to work in different functions or businesses.
4. Attend seminars and meetings outside your own group.
5. Join communities of practice outside your immediate work group.
6. Volunteer for socially responsible projects.
7. Widen your social and sports activities.

You want to be sure that your next job choice is more informed. Like many of us, you have probably in the past joined a company or accepted a project on the basis of rather superficial information. Perhaps you just accepted the first offer. To avoid joining a Fortress again, you need to understand what is really going on in the company. Here are three pointers:

- Ask tough questions in the interview.
- Examine the career information.
- Seek feedback from friends or online.

## The Third Principle: Igniting Latent Energy

You've created latent energy by behaving in a cooperative way and by jumping across worlds; now the scene is set for ignition. Without these sparks of ignition, you are consigning yourself to a "Country Club," a place where you feel comfortable and at ease but in which you will never, ever *glow*.

Country Clubs come in different shapes and sizes, but what they have in common is that they dislocate you from your work. This means that you never really get an opportunity to put your true self into your work, you no longer *glow*.

In the Country Club, underperformance is the norm, energy rarely sizzles and the mundane is venerated. In the Country Club, the big questions are stifled, visions are uninspired, and tasks are overspecified and homogenized. Here are the five telltale signs of a Country Club:

1. *Conflict seems remarkably low.* Everyone seems to agree with everyone else.
2. *Complacency is the norm.* There is an unquestioning belief in the status quo and an assumption that everything will continue as it has in the past.
3. *People are busy.* But be aware that busyness can mask a lack of focus and avoidance of the big questions.
4. *You sense that there are important matters that are being ignored.* But if you question why things are done in a certain way, you are made to feel that you don't really understand or that you are somehow naive.
5. *You notice that everyone is rather similar.* They look about the same, they act the same and they have the same point of view. Conformity is the norm.

### Action 7: Asking Questions That Spark Energy

People who *glow* are adept at asking questions that spark energy and require courage and focus. When you are able to engage with your own passion and beliefs, you become a source of energy for yourself and others. This energy is radiated to others as you *glow* and it ignites Hot Spots of innovation in your work community. Igniting questions have always been marvelous creators of energy and innovation.

Whether you realize it or not, you have big, igniting questions within your reach and inspiring visions in your head. The challenge is to form and access these questions and visions — and then to communicate them in a way that others find compelling and motivating.

Are there times when you feel it is not your place to ask big questions? By steering away from big questions, you are significantly reducing the possibility of *glowing* in Hot Spots.

Questions can be wonderful igniters of latent energy — particularly when they are big, important, conse-

quential and meaningful. Sadly, too often pragmatism means we focus on the day-to-day reality of living rather than the life-enhancing questions that permit us to *glow*.

### Action 8: Creating Visions That Compel

People who *glow* are able to create a compelling vision that sparks energy and is so exciting and engaging that others are drawn to it. A vision invites people into the future. It can describe what is important to you and can ignite the latent energy around you.

Visions are about the future — and a good way to begin to frame your thinking about the future is to go back to the ideas about questions, but this time phrase them as "what if" questions. Since "what if" questions are about events that have never taken place, you have to move beyond your conscious mind to access your ideas about possible futures. It is sometimes in your daydreams that you begin to rehearse possible futures and create a vision of what could ignite your energy. You ask "what if" questions every time you dream.

"What if" questions are about the future, not the past. By changing the focus of your vision, they serve to weaken the links to the past and strengthen the links to the future. Thinking about the future is a much less analytical and rigorous task than thinking about the past. So rather than accessing your rational and analytical mind, as you do when you are asking questions and engaging in disciplined debate, you are engaging your imagination and accessing your dreams.

We can all ask "what if" questions. The challenge to overcome is that we have been trained to look only to the past and ask "what was" questions.

### Action 9: Crafting Meaningful and Exciting Work

Visions and questions are excellent aids to keeping you ahead of the curve and helping you *glow*. To sustain energy over the longer term, you also need to be able to design your work and the jobs and projects you do in a way that brings meaning and excitement to you.

When the vision is a distant memory and the question begins to fade, tasks are what we do when we come to work in the morning, and they are what we are engaged in when we stay late into the evening; it is the tasks that help us *glow*.

Tasks are the parcels of time, activities and outcomes that define your working life. One of the reasons you *glow* is because you are engaged in something that resonates with you. You *glow* when you are engaged with tasks that are sufficiently complex that they capture your imagination or sufficiently meaningful that they capture your heart.

When your questions and visions resonate with your values and beliefs, you *glow* and it shows in your work. When you and others are engaged in a task that resonates with your values and beliefs, you are more likely to *glow* .

Meaningful tasks that can ignite latent energy can spring from your self image, values and passions — so the meaning comes from inside.

Meaning can also emerge from outside, through what is meaningful in your context, on the team, in the company or in the community. Tasks are meaningful to you because you can see that through their accomplishment you can make a difference — they have a consequence beyond you.

One impediment to creating interesting and meaningful work is the conviction that you are so busy you don't have time for anything else. If so, before you can think about making your work more exciting and meaningful, you may have to clear away some of the debris and face the problem of overdemanding work.

## Glowing Every Week

The challenge you face is to ensure that all the actions you take focus rather than dissipate your energy. People who *glow* over long periods of time stay on the path by focusing on the journey forward, by removing the obstacles on the path and by keeping track of progress.

### Keep Defining What is Important to You

Our lives have their own rhythms, and there will be times when more energy is available than at other times. People will say that cooperation is "unfocused" or that it's not up to you to ask the big questions or that you should focus on the immediate team. You will have to consciously and intentionally reduce these distractions — perhaps by avoiding these people, perhaps by spending time with the energizers around you rather than the distracters.

#### RECOMMENDED READING LIST

If you liked *Glow*, you'll also like:

1. ***Never Eat Alone* by Keith Ferrazzi with Tahl Raz.** This book goes beyond networking into the key skill of relationship building. It features a proven mind-set and skill-set to advance your community of associates.
2. ***Sway* by Ori Brafman and Rom Brafman.** Understanding the sway of irrational behavior helps us from falling victim to it. The Brafmans show you how to escape from under the influence of being irrational.
3. ***Winning* by Jack Welch.** In this book, Welch addresses his own management techniques and explores the external factors that can influence a person's and company's success.

# Goals!

Brian Tracy

SOUNDVIEW Executive Book Summaries®

FILE: SUCCESS/CAREER TECHNIQUES

By Brian Tracy

## How to Get Everything You Want, Faster Than You Ever Thought Possible

# GOALS!

### THE SUMMARY IN BRIEF

*The most important quality you can develop for lifelong success is the habit of taking action on your plans, goals, ideas and insights. In* Goals!, *renowned business strategist and motivation expert Brian Tracy provides you with the essential steps for setting and achieving goals, and for living a successful professional and personal life as a result. By practicing these rules and principles, Tracy explains, you can accomplish more in a shorter period of time than you ever thought possible.*

*In* Goals!, *Tracy teaches you how to identify in clearest terms the things you want out of life, then how to make the plan to help you achieve those things. He covers the psychology and the physiology at work behind the goals you set, and teaches you how to combat frustration and elongate the elation that accompany the work you must do to reach your goals. Tracy also shows how goal achievement can be a process one can use again and again, to reach ever-higher levels of success and happiness.*

## What You'll Learn In This Summary

✓ How to unlock your potential, take charge, and create your own future by setting goals for the things you want out of life, and creating a plan to achieve those goals.

✓ How to use vision, or "future orientation," to determine where you'll be in the future, and how you will get there. By imagining the ideal future, you can set yourself on the path to making it happen.

✓ How to clarify your values and determine your major definite purpose — the quantifiable, measurable, achievable goal that is most important to you *right now*.

✓ How to eliminate the limiting beliefs about yourself that are holding you back from achieving all you can achieve.

✓ How to measure your progress, every step of the way, as you push forward toward reaching your goals.

✓ How to maintain the fire and passion you feel for achieving your goals, by building momentum and persisting every day until that which you desire is yours.

# GOALS!

**by Brian Tracy**

## — THE *COMPLETE* SUMMARY

## SETTING THE STAGE

# Unlocking Your Potential

Success is goals; all else is commentary. All successful people are intensely goal-oriented. They possess the master skill of success — the ability to identify what they want, make a plan to attain it, and use the full scope of their personal power to achieve their dreams.

### *What They Didn't Teach Them at Harvard*

Consider this: In his book *What They Don't Teach You in the Harvard Business School*, Mark McCormack tells of a study conducted on students in the 1979 Harvard MBA program. In that year, the students were asked, "Have you set clear, written goals for your future and made plans to accomplish them?" Only 3 percent of the graduates had written goals and plans; 13 percent had goals, but they were not in writing; and a whopping 84 percent had no specific goals at all.

Ten years later, the members of the class were interviewed again, and the findings, while somewhat predictable, were nonetheless astonishing. The 13 percent of the class who had goals were earning, on average, twice as much as the 84 percent who had no goals at all. And what of the 3 percent who had clear, written goals? They were earning, on average, *10 times* as much as the other 97 percent *put together*.

### *Why Don't People Set Goals?*

In spite of such proof of success, most people don't have clear, measurable, time-bounded goals that they work toward. There are four reasons why people don't set goals:

- **They don't realize the importance of goals.** If the people with whom you spend the most time — family, friends, colleagues, and so forth — are not clear and committed to goals, chances are you will not be, either.
- **They don't know how to set goals.** Some set goals that are too general ("Be happy," or "Make a lot of money"); these are, in actuality, fantasies common to everyone. Goals, on the other hand, are clear, written, specific and measurable.
- **They fear failure.** Failure hurts, but it is often necessary to experience failure in order to achieve the greatest success. Do not unconsciously sabotage yourself by not setting any goals in which you might fail.
- **They fear rejection.** People are often afraid that if they are unsuccessful at achieving a goal, others will be critical of them. This is remedied by keeping your goals to yourself at the outset: Let others see your results and achievements once you've accomplished your goals.

### *A Little Every Day*

Make a habit of daily goal setting and achieving, for the rest of your life. Focus on the things you want, rather than the things you don't want. Resolve to be a goal-seeking organism, moving unerringly toward the things that are important to you. ■

# Taking Charge and Creating Your Own Future

In a study done in New York several years ago, researchers discovered that the top 3 percent of people in every field had a special attitude that set them apart from the average performers in their industries. These people viewed themselves as self-employed throughout their careers, no matter who signed their paychecks. They saw themselves as responsible for their companies, exactly as if they owned the companies personally.

You should do the same — from this point forward,

## Taking Charge and Creating Your Own Future

*(continued from page 2)*

see yourself as the president of your own personal services corporation. View yourself as self-employed, in charge of your life and career. Set goals, make plans, establish measures, and create strategies, just as the president of a company would. Market yourself well, enabling you to sell yourself for the very highest price in a competitive market. Know, also, how much of your services you want to sell, how much you want to earn, how rapidly you want to grow your income, and how much you want to be worth when you retire. This kind of financial strategy is up to you — you are responsible for that and all other aspects of your personal "corporation." You are, after all, the president.

### *The Barrier of Negative Emotions*

Most people don't take take charge and set clear goals for their lives because they are dragged down by negative emotions.

Negative emotions hold you back, and take away all the joy in your life. You must free yourself from such negativity — fear, self-pity, jealousy, anger and other pessimistic, ultimately harmful emotional reactions — if you are going to fulfill your full potential. Start by identifying in your life one or more of the sources of negative emotions. These sources include:

**Justification.** You can only be negative as long as you can justify that you are entitled to be angry or upset for some reason. As soon as you stop justifying and giving reasons why you're entitled to be angry, your anger and your negative emotions disappear.

**Rationalization.** When you rationalize your negativity, you attempt to give a socially acceptable reason for feeling bad or unhappy. You create ways of putting your negative emotions in a favorable light by explaining how they are acceptable. Stop rationalizing your negative emotions, as well as the events that cause you to feel negative.

**Hypersensitivity.** Some people base their entire self-image around the opinions of others, maintaining little sense of self-worth and leaving themselves prone to anger, shame, embarrassment and even depression. Remember that what other people think of you has no effect on you at all, unless you allow it to have an effect. As Eleanor Roosevelt said, "No one can make you feel inferior without your consent."

**The Blame Game.** No one else is responsible for your lot in life, or for the emotional reactions you have to various aspects of life. You are not a victim. Stop complaining, stop whining, stop making excuses and start to take control of your life. Only when you accept full responsibility for your life can you start to set goals and move ahead rapidly. ■

## Future Orientation

If there is one special quality that all great leaders have in common, it is vision. Leaders think about the future, where they're going, and what they'll do when they get there. They think about what they want, often many years in the future, and what can be done to achieve it. This leadership quality is called "Future-Orientation." Truly great leaders combine this orientation with an idealized long-term view of their lives — how their lives will look in x number of years, if they were perfect in every way — to create a personal strategic plan free of self-limiting beliefs.

For example, imagine if your work life was perfect five years from now. Answer these questions:

- What would it look like?
- What would you be doing?
- Where would you be doing it?
- With whom would you be working?
- What skills and abilities would you have?
- What level of responsibilities would you have?
- What kind of goals would you be accomplishing?
- What level of status would you have in your field?

Imagine anything is possible. What would that future look like? What would it take between now and five years from now to achieve all those things? Answer similar questions for your financial life, your personal family life, and your health and fitness. Once you have this ideal in mind, switch from future orientation to action orientation, and do what it takes to make your ideal a reality!

# Clarify Your Values and Find Your Purpose

The very core of your personality is your **values**; everything you do on the outside emanates from the values you have on the inside.

Think of your personality as a target with five concentric rings. The very center ring is your values — the core of your personality. Your values determine the next ring, your **beliefs**, about yourself and the world around you. If you have positive values, you will believe others are deserving of those values, and you will treat them accordingly.

*(continued on page 4)*

## Clarify Your Values and Find Your Purpose

*(continued from page 3)*

Your beliefs, in turn, determine the next ring out — your **expectations**. If you have positive values, you will believe yourself to be a good person; if this is the case, you will expect good things to happen to you, resulting in a positive, cheerful outlook.

Your expectations determine the next ring, your **attitude** — the outward manifestation or reflection of your values, beliefs and expectations. If you have a positive attitude, others will be drawn to you, and you will be more likely to find success.

Your attitude determines the fifth ring: your **actions**. You are happiest when your outside actions are congruent with your values on the inside. You always demonstrate your true values in your actions, particularly your actions under pressure. When you are forced to choose between one behavior and another, you will always act consistent with what is most important and valuable to you in that moment.

### *Integrity*

Perhaps the most important of all values is integrity. Someone once said that integrity is not so much a value in itself; it is, rather, the value that guarantees all other values. Once you have decided you are going to live consistent with a value, your level of integrity determines whether you follow through on your commitment. The higher your level of integrity, the happier and more powerful you will feel in everything you do.

### *Your Major Definite Purpose*

Since you become what you think about most of the time, a major definite purpose gives you a focus for every waking moment. Having a major definite purpose helps activate your subconscious mind on your behalf. Any thought, plan or goal that you can clearly define in your conscious mind will be brought into reality by your subconscious mind.

Your major definite purpose can be defined as the one goal that is the most important to you at the moment. It is usually the one goal that will help you achieve more of your other goals than anything else you can accomplish. It must have the following characteristics:

- It must be something that you personally really, really want
- It must be clear and specific
- It must be measurable and quantifiable
- It must be both believable and achievable
- It should have a reasonable probability of success when you begin
- It must be in harmony with your other goals

Here is an exercise to help you find your major definite purpose. Take out a sheet of paper and write down (in present tense, as if you had already achieved them) a list of 10 goals you would like to accomplish in the foreseeable future. After you have written your list, ask yourself which goal on the list, if you were to accomplish it immediately, would have the greatest positive impact on your life. In almost every case, this one goal is your major definite purpose — the one goal that can have the greatest impact on both your life and on the achievement of your other goals.

Write this goal on a separate sheet of paper, along with everything that you can think of that you can do to achieve that goal. Take action on at least one item on your list. Think about your goal morning, noon and night, continually looking for ways to achieve it. ■

**For Additional Information on how your subconscious helps you achieve goals, go to: http://my.summary.com**

# Analyzing Your Beliefs

Perhaps the most important of all mental laws is the Law of Belief, which states that whatever you believe in, with conviction, becomes your reality. You do not believe what you see; you see what you already believe, viewing your world through a lens of beliefs, attitudes, prejudices and preconceived notions. All improvement in your life comes from changing your beliefs about yourself and your possibilities. Personal growth comes from changing your beliefs about what you can do and about what is possible for you. Napoleon Hill once said, "Whatever the mind of man can conceive and believe, it can achieve."

### *Your Self-Concept*

Everything you do or achieve in life — every thought, feeling or action — is controlled and determined by your self-concept. Your self-concept precedes and predicts your levels of performance and effectiveness in everything you do. It is the master program of your mental computer; everything you accomplish in your outer world is a result of your self-concept.

Even if your self-concept is made up of erroneous beliefs about yourself and your world, as far as you are concerned, these are facts, and you will think, feel and act accordingly. In truth, your beliefs about yourself are largely subjective, often not based on fact at all. Your beliefs have been shaped and formed by your childhood, your friends and associates, your positive and negative experiences, and innumerable other factors. You may believe yourself to be limited in some way, and regard-

*(continued on page 5)*

### Analyzing Your Beliefs

*(continued from page 4)*

less of whether that is true, it becomes true for you.

The good news about beliefs is that all beliefs are learned, and can therefore be unlearned, particularly if they are limiting in any way. There are many things you think you know about yourself that are not true, and the starting point for unlocking your full potential is to identify self-limiting beliefs, then ask yourself, "What if they're not true at all?"

Imagine there is a "Belief Store," much like a computer software store you could visit and purchase a belief to program into your subconscious mind. If you could choose any set of beliefs at all, which one would be most helpful to you?

Consider this one: "I am destined to be a big success in life." If you absolutely believe you are destined to be a big success, you will walk, talk and act as if everything that happens to you is part of a great plan to make you successful. And if you act as if you are already the person you desire to be, your actions will generate the feelings that go with them. ■

## Ignore the Experts

Albert Einstein was sent home from school as a young man with a learning disability. His parents were told he was incapable of being educated. They refused to accept this diagnosis and eventually arranged for him to get an excellent education.

Dr. Albert Schweitzer had the same problems at school as a boy. His parents were encouraged to apprentice him as a shoemaker so that he would have a safe, secure job when he grew up. Both men went on to earn doctorates before age 20, and to leave their marks on the history of the 20th century.

In fact, according to *Fortune* magazine, many presidents and senior executives of today's Fortune 500 companies were diagnosed in school as being not particularly bright or capable. By virtue of hard work, however, they went on to achieve great success in their industries. Imagine what would have happened — or, more to the point, not happened — had Einstein or Schweitzer internalized the self-limiting beliefs those in school tried to impose on them. Thank goodness they and their parents recognized that limiting ideas about oneself are not based on fact at all!

## GETTING OFF THE GROUND

# Start at the Beginning

Once you have decided on your values, vision, mission, purpose and goals, the next step for you is to analyze your starting point. Exactly where are you today, and how are you doing in each of the important areas of your life, especially as they relate to your goals? If you want to lose weight, the first thing you would do is to weigh yourself to determine how much you weigh today. If you decide to begin an exercise program, the first thing you do is determine how much you are exercising today. If you want to earn more money, the first thing you do is determine how much you're making right now.

It is important to be as accurate with these calculations as possible; the more accurate you are, the better and faster you can improve — and the better goals you can set.

### *Zero Based Thinking*

When you begin to plan your long-term future, one of the most valuable exercises you can engage in is called zero based thinking. In zero based thinking you ask this question: "Knowing what I now know, is there anything that I am doing today that I wouldn't start up again today, if I had to do it over?"

It is difficult, if not impossible, to make progress in your life if you allow yourself to be held back by decisions you have made in the past. No matter who you are or what you are doing, there are certain things in your life that, knowing what you know now, you would not get into today if you had them to do over. The next question to ask yourself is, "How do I get out of them?"

Apply this to every aspect of your life and career — to the people with whom you associate, the jobs you have taken, the activities in your business, and the investments you have made. Once you have identified these things, be prepared to make any necessary changes by doing the following:

- **Determine what is holding you back.** What is the major reason you are not doing the things you truly want to do? Find others who are achieving success in these areas and determine what they are doing that you are not, and what skills they have that you do not.
- **Determine your level of skills and ability.** Identify the key result areas of your work — the critical tasks that you must have in order to do your job well. You must be good at every one of these in order to achieve the highest levels of success in what you do.

*(continued on page 6)*

## The Reality Principle

Jack Welch, the former CEO of General Electric, once said that the most important quality of leadership is the "reality principle." He defined this as the ability to see the world as it really is, not as you wish it was. He would begin every meeting to discuss a goal or problem with a single question: "What's the reality?" Peter Drucker refers to this quality as "intellectual honesty" — dealing with the facts exactly as they are, prior to attempting to solve a problem or make a decision.

If you want to be the best you can be, and to achieve what is truly possible for you, you must be brutally honest with yourself. You must sit down and analyze yourself in detail, to determine where you are today, as well as what you must do to get where you want to go.

### Start at the Beginning

*(continued from page 5)*

- **Identify your weakest areas.** Identify where you are below average or poor. How do these areas interfere with your ability to use your other skills? What key skills do you lack that are essential for your success? Identify them accurately and honestly, and make a plan to improve each one.
- **Imagine starting over.** Never allow yourself to feel locked in or trapped by a particular decision from the past. At any time, you could start your career over again, if you feel there is a limited future in your current direction.
- **Be prepared to reinvent yourself.** Stand back and think about starting your career over again today, knowing what you know now. If you had to start over again today, with your special combination of talents and skills, what would you choose to do differently from what you are doing now? ■

# Measure Your Progress

You have incredible mental powers that you habitually fail to use to their full extent. By systematically setting goals for your life and making detailed plans to achieve them, you will save yourself years of hard work and use vastly more of your thinking powers than the average person.

While your conscious mind enables you to identify and analyze your environment, your subconscious mind contains the great powers that allow you to accomplish great things. It is essential that you learn to tap into these powers in order to achieve your goals.

Indeed, your subconscious mind functions best with clear goals, specific tasks, deliberate measures and firm deadlines. The more of these you program into your subconscious mind, the more you will accomplish in a shorter period of time. Such things activate your mind's "forcing system," which helps eliminate procrastination and delay.

There are three keys to peak performance in achieving your goals — commitment, completion and closure.

When you make a firm **commitment** to achieve a particular goal, you step on the accelerator of your subconscious mind, enabling you to be more creative, determined and focused than ever before.

You must fight the temptations that keep you from **completion** of the tasks that lead to achievement. You must force yourself and discipline yourself to resist these temptations and push through to completion. Do what you must: Set benchmarks and create balanced scorecards, measures, metrics and deadlines for every key task. These things activate your subconscious forcing system, enabling you to start earlier, work harder, stay later and get the job done.

Bringing **closure** to an issue in your personal or professional life is absolutely essential for you to be in control of your situation. Lack of closure in the form of unfinished business or incomplete actions is a major source of stress, dissatisfaction and even failure in business. ■

# Eliminate the Roadblocks

Even with all the preparation, analysis and effort that goes into creating new goals, on average, people give up on their goals after one attempt at achieving them. Some do not even get that far, giving up before they even try once. The reason they give up is because of all the obstacles, difficulties, problems and roadblocks that immediately appear as soon as one decides to do something one has never done before.

Consider this, though: Successful people fail far more often than unsuccessful people. Successful people try more things, fall down, pick themselves up and try again, over and over again, before they achieve what they set out to achieve. Unsuccessful people try a few things, if they try at all, and soon quit to go back to their previous path.

There will always be obstacles that stand between you and anything you want to accomplish. The ability to solve problems is essential in any successful endeavor, and you possess that ability, if you desire the goal intensely enough; nothing can hold you back.

*(continued on page 7)*

## Eliminate the Roadblocks

*(continued from page 6)*

### *Dealing with Constraints*

Eliyahu Goldratt claimed one of the great recent breakthroughs in thinking when he wrote about the "Theory of Constraints." This theory says that, between you and anything you want to accomplish, there is a constraint or limiting factor that determines how fast you get to where you want to go. This theory rings true in so many aspects of our personal and professional lives — there are always bottlenecks that we must identify accurately, and then focus our energies on alleviating.

The 80/20 rule applies to the constraints between you and your goals — 80 percent of your constraints will be within yourself; 20 percent will be outside of yourself, in other people and situations. It is you personally who is usually the major roadblock setting the speed at which you achieve a goal. You may be afraid to make a change, or doubtful that you can really reach a goal.

However, negative emotions, like limiting beliefs, can be unlearned. Have you ever seen a negative baby? Children come into the world with no doubts or fears or helpless feelings at all — they learn to feel those emotions over time. And whatever has been learned can be unlearned, through practice and repetition.

### *Unlearning Helplessness*

Indeed, the way to get over a tendency like helplessness is by setting small goals, making plans and working on them each day. Over time, your doubts and fears will weaken and your confidence will grow, becoming the dominant force in your thinking. Other related issues to keep in mind include the following:

**Avoid the comfort zone.** Many people become complacent with their current situations; they become so comfortable in their job or relationship, that they avoid making any changes at all, even for the better. People who get stuck in a comfort zone, combined with learned helplessness, are almost impossible to help in any way.

**Set big, challenging goals.** Set big goals for yourself, then break each down into specific tasks, set deadlines, and work on them every day. Doing so will help break you out of your comfort zone.

**Organize obstacles by priority.** Make a list of all the obstacles standing between you and your goals, and organize those obstacles by priority. Look at each from different angles, until you find the best strategy to remove it.

For every obstacle that is standing between you and what you want to accomplish, there is a solution. ■

## HITTING YOUR STRIDE

# Keeping Your Goals at the Front of Your Mind

Once your goals are in place, there are a number of things you can and should do to maintain the momentum of change and achievement, regardless of whether your goals are personal, professional or both. Among these actions are managing your time, reviewing your goals daily, visualizing your goals continually, and persisting until you succeed. Consider the importance of each in the ongoing effort in which you must engage to make all your dreams a reality.

### *Manage Your Time Well*

To achieve all your goals and become everything you are capable of becoming, you must get your time under control — this is key to your feelings of happiness, confidence, power and personal well-being. A sense of control is only possible when you practice excellent time management skills.

The starting point of time management, once you have determined your goals, is the organization of your goals by priority and value. You must be clear, at any given moment, exactly what is most important to you at that time. Start by dividing all of your activities into "A" activities (those that move you toward your goal) and "B" activities (those that do not move you toward your goal). Eliminate any activity that does not help you achieve something you want for yourself or which will not lead you to success. Focus all your time on the "A" activities.

Separate the urgent tasks (those determined by external pressures and requirements, that must be done immediately) from the important ones (those that can contribute the very most to your long-term future). Apply the 80/20 rule to your task list, separating the 20 percent of your activities that will account for 80 percent of the total value of your activities. You can then practice "creative procrastination" on the less-valuable 80 percent, in order to focus your time and energies on the more valuable 20 percent. Keep yourself on track, focusing on the specific results you want and need to accomplish.

### *Review Your Goals Daily*

Get a spiral notebook that you can keep with you at all times. Each day, open up the notebook and write

*(continued on page 8)*

## Keeping Your Goals at the Front of Your Mind

*(continued from page 7)*

down a list of 10 to 15 of your most important goals, without referring to your previous list. Do this every day, day after day. As you do this, several remarkable things will happen.

The first day you write down your goals, you will have to give them some thought and reflection. The second day you rewrite your list (without referencing the first list), your 10 to 15 goals will change, both in description and order of priority. Some goals will drop off the list, only to reappear at a more appropriate time. Each day that you write down your list of 10 to 15 goals, your definitions will become clearer and sharper, until you are writing the same goals and descriptions every day.

About this time (which takes three to four weeks), something remarkable will happen in your life — it will take off! Your work and personal life will improve dramatically, your mind will brim with ideas and insights, you will attract people into your life to help you achieve your goals, and you will make progress at a rapid rate. Everything will begin to change in a positive way.

Put a deadline at the end of each goal, to activate your subconscious mind's "forcing system." Even if you do not know how the goal is going to be achieved, deadlines will spur you to actions, like an exclamation point after every goal.

This exercise is a test, to determine how badly you really want to achieve these goals. The more you can discipline yourself to write and rewrite your goals each day, the clearer you will become about what you really want, and the more convinced you will become that it is possible for you.

### *Visualize Your Goals Continually*

Your ability to visualize is perhaps the most powerful faculty that you possess. All improvement in your life begins with an improvement in your mental pictures. You are where you are and what you are today largely because of the mental pictures that you hold in your conscious mind. As you change your mental pictures on the inside, your world on the outside will begin to change to correspond to those pictures.

Indeed, the most successful people are those who visualize the kind of success they want to enjoy in advance. A successful salesperson, for example, will visualize and remember previous successful sales presentations. A successful trial lawyer will visualize and remember his or her performance in court during a successful trial. Successful doctors will visualize and remember their successful treatments of patients in the past. Always visualize the very best you've done and you'll repeat it in your future.

## The Four Parts of Visualization

There are four parts of visualization you can learn and practice to assure that you use this incredible power to its best advantage:

**Frequency.** How many times do you visualize a particular goal as achieved, or yourself performing in an excellent way in a particular circumstance? The more frequently you repeat a clear mental picture of your very best performance or result, the more quickly it will be accepted by your subconscious and turned into reality.

**Duration.** How long can you hold the picture in your mind each time you replay it? The longer you can hold your mental picture, the more deeply it will be impressed into your subconscious mind, and the more rapidly it will express itself in your subsequent performance.

**Vividness.** There is a direct relationship between how clearly you can see your desired goal and how quickly it comes into your reality.

**Intensity.** The intensity of a visualization refers to the amount of emotion you attach to your visual image. This is the most important part of the visualization process.

### *Persist Until You Succeed*

Every great success in your life will represent a triumph of persistence. Your ability to decide what you want, to begin, and to persist through all obstacles and difficulties until you achieve your goals is the critical determinant of your success. Persistence is self-discipline in action; it is the true measure of individual human character. It is, in fact, the real measure of your belief in yourself and your ability to succeed.

> ***"I can summarize the lessons of my life in seven words — never give in; never, never give in."***
>
> - Winston Churchill

Each time you move forward in the face of adversity and disappointment, you build up a habit of persistence. You become stronger, prouder and more powerful; you deepen your levels of self-discipline and personal strength. You develop the iron quality of success, the one quality that will carry you forward and over any obstacle that life throws in your path.

In the later years of his life, Winston Churchill was asked to address a school class on what he believed to be the secret to his great success in life. His response was, "I can summarize the lessons of my life in seven words — never give in; never, never give in." ■

## THE SUMMARY IN BRIEF

Humans are born communicators. As we grow older, however, parenting and societal influences make us second-guess ourselves and become more inhibited, less confident, and more afraid of failure. We think that we just don't have what it takes to be a competent public speaker. This is an emotional reaction not based in reality. With training, all of us can develop our public speaking skills.

***Grace Under Pressure: A Masterclass in Public Speaking*** unveils the tools that great speakers use to develop their skills. It is the rare book that addresses all three areas of a speaker's training: an understanding of what holds us back, physical training for vocal power, and delivery techniques to enliven performance. It is full of exercises to strengthen your voice and explore its role in sharing your message and connecting to your audience.

Author Lisa Wentz, a public speaking coach, draws on decades of training in psychology, theatre arts, and vocal pedagogy to deliver in-depth information essential for training yourself to become a speaker whom others will envy and admire.

## IN THIS SUMMARY, YOU WILL LEARN:

- What holds you back from being an excellent public speaker
- How to train and harness the power of your voice
- How the purpose of your speech affects its content
- What techniques will enliven your public speaking

## What Holds Us Back

The greatest challenges and the greatest opportunities with public speaking are often psychological, stemming from the experiences or conditioning that lie beneath the surface of our daily lives.

### Stage Fright

Public speaking exposes us and makes us vulnerable. It can trigger the flight-or-flight mechanism we inherited from our ancestors through 500,000 years or more of evolution. In our early evolutionary history, being watched closely was often preliminary to being attacked by an enemy or animal. Today, this instinct isn't helpful in the context of public speaking.

Physiologically, your muscles tighten, restricting your breathing and your voice. To work through this, you must address what is triggering you. The underlying cause is often an unrealistic expectation of perfection and a fear of judgment. Many try to cope either by avoiding preparation and any acknowledgment of the problem or by overthinking the event to the point of obsession. Neither of these coping mechanisms works.

### False Beliefs

Several common beliefs afflict would-be public speakers: the belief you should be good at something you haven't trained to be good at; the belief you're a fraud (you're not good enough to learn this skill); a potpourri of negative messaging you may have absorbed in your formative learning years.

### Compare and Despair

Comparing yourself to others serves no purpose other than getting you stuck. The path to becoming a confident speaker is not to become like someone else—it is to discover, develop, and bring forward your own physical training, presence, and purpose for speaking.

Like athletes and musicians, public speakers must train to become good. People are not magically born great speakers.

### Impostor Syndrome

Feeling like a fraud, unqualified to be doing what you're doing, is common, and strikes even people who by any objective measure are highly qualified and successful. Impostor syndrome is completely reversible.

### People in Positions of Authority Are Always Right

A 35-year-old man had been told by a teacher when he was a teenager, after he explained something in front of a class, "You are not smart and you never will be. Sit down." Many years later, he felt judged when he spoke, though he was successful and personable and had a good life.

There is no way of stopping all negativity and criticism, but you can learn how to interpret such situations and avoid absorbing these messages. Negative messages are not a reflection of who you are.

### The Inner Critic

As a public speaker, you need to cultivate an inner dialogue that supports you. This is easier said than done—you may need to bring your attention and efforts to dismantling an inner dialogue that is harsh, judgmental, and undermining.

Growing up in an environment where your basic emotional and/or physical needs are not secure can send messages similar to the effects of trauma. Alcoholic or dysfunctional homes are examples. Survivors of emotional, physical, or sexual abuse will often have an inner critic. This critic can have a debilitating effect until the person makes a conscious decision to remove it.

An inner critic often develops from unreasonable expectations. Children who grow up with high expectations to succeed become adept at hiding their inner critic. It does not occur to them that they have been deeply wronged by their caregivers, who gave them strong messages that failure of any kind was not an option. They were pressured to be "perfect."

### Physical Habits and Challenges

Various habits, patterns, and physical challenges may impact your public speaking.

Most of us adopt postural and nonverbal communication habits from the environment we grow up. Some are subconscious; some we are aware of. You probably identify with your habits as part of who you are. Not all of them are helping you to be a better communicator.

Observe yourself and determine if you have nonverbal habits, such as: throat clearing, coughing, speeding, or vocal fry (commonly associated with the "valley girl" accent).

Some people have damage to their vocal track that an ear, nose, and throat (ENT) doctor may need to address or a speech–language pathologist may need to diagnose. Difficulty swallowing, a breathy sound, a break in your voice when you change pitch, and pain when speaking suggest the need for a medical evaluation.

## Vocal Training

A speaker, like an actor, must understand and train their vocal use. Before you walk out to the podium, you should know how your instrument (your voice) works and how good use of your instrument affects the audience and serves your goals.

To train and harness the powers of your voice, you need to go off autopilot. This involves understanding how sound is produced; eliminating unnecessary tension; and learning to access, enjoy, and rely on your body's natural resonant capacities rather than straining your voice. The best attitude is one of curiosity, experimentation, observation, and gradual progress.

### Posture and Coordination

It is important for your body to be in its natural neutral posture: being balanced without excess tension or slouching, knees hip-width apart, feet parallel under the knees, and the back with its natural curve without overextension.

As adults we often lose the coordination and centered fluency of our movements because of inactivity or holding fixed postures for long periods (for example, sitting in front of a computer all day). For a speaker, this can result in a strained or limited voice and distracting movements and postural habits. The Alexander Technique can help you to restore your mind–body connection.

### Breathing

We can develop breathing habits—conscious and unconscious—that greatly affect our voice. Many speakers hold their breath while speaking and take little top-up breaths as they speak. This is not ideal.

The job of a public speaker is to make the powerful breathing fueling the voice seem fluid and harmonious, without using excess tension. The resonant sound of your voice, your articulation of sound, your ability to stay focused, your ability to calm an adrenaline rush, and your influence on your listeners are all dependent on how you breathe.

### Resonance

In voice and speech training, projection is called "resonance." Most speakers need to increase the resonant sound of their voice. It's not about making your voice perfect or fitting into an idea of what's beautiful. It's about being free of tension and letting your voice naturally emerge in all its character, range, and color.

## Delivery

There are reliable techniques that will enliven your delivery. These foundations of great stage presence and delivery have been used by theatre artists and directors for decades.

### Purpose and Setting

Why are you speaking and to whom are you speaking? Consider the purpose of the overall event and why you are being asked to speak. Because you're an expert? Because you have a personal story to tell that is relevant to the overall event? Because your purpose matches the overall part of a conference? These considerations should affect the content of your speech. To improve your public speaking, strip away your personal agenda (getting people to hire you or like you, for instance) and focus on storytelling.

### Structure and Storytelling

Humans are born storytellers. We are hardwired to share experience and information and to connect with each other using stories. Stories are powerful. They make your content relatable and memorable. They help the audience connect with the speaker and build a rapport so the audience is more open to suggestion. Most audiences are predisposed to be skeptical about what the speaker is saying. By telling a story, by getting people to relax and relate, you start to open their minds to different ideas.

Choose your stories based on the theme and purpose of your speech. Then, you need to focus on telling them well. Try some simple techniques to invigorate your stories and your storytelling delivery, like: using details and imagery, stressing words appropriately, and delighting your audience.

### Tone, Pacing, Pausing, and Body Language

There are essential techniques for developing a delivery that matches your content and that brings your message to life in a way that ensures you reach your audience.

### Tone

Match the tone of your delivery with your content. If you are sharing great news, you should be happy and upbeat. Sharing negative information should be done in a serious, sincere tone. If your audience is hostile, ground yourself in what you believe to be the truth and how it may benefit others. Bring courage, fortitude, creativity, and respect into your tone rather than fear, judgment, or discouragement.

### Pacing

Many speakers speed up their rate of speech due to adrenaline or nerves or a sense of pressure to entertain coupled with a fear of being boring. Slow down. Match your speed to your content.

### Pausing

Humans are not built to constantly hear and take in information. Continuously listening to the sound of a human speaking, especially while being expected to remember facts, ideas, or discussions, is exhausting. There is a need for silence—for pauses.

Pauses should be silent. Work to rid yourself of the dreaded verbal pause, such as "hmm." Instead of a verbal pause, breathe.

### Body Language and Stage Direction

Posture and coordination are the foundation of body language. What should you do with your hands while speaking? What feels natural to you, while maintain a neutral posture.

Where should you look while speaking? If your audience is large (over 100), your eyes should stay at the horizon level. If it is smaller, you'll need to occasionally make eye contact. Face the audience—don't ever let them see the back of your head.

### Presence

Presence refers to the command of attention the speaker has from the audience. The quality of your presence, or your effect on others, is something that can be consciously developed.

### Charisma and Gravitas

Charisma, or charm, is a quality that many speakers who deliver great speeches possess. But you do not need to be charming for your presence to be strong and commanding.

Presence flows from a speaker's authenticity and focus. The tone or mood you display should fit with your content and the objectives you'd like to achieve with the particular speech or moment. The audience wants to see you, not your idea of what an audience might like. You are interesting enough. Never worry about whether you are compelling or interesting.

## Bringing It All Together

As you come into the final stretch before giving a speech, pitch, or presentation, consult this simple checklist:

- Finish your slides, ideally, five to seven days before your talk.
- Ground yourself in your purpose and setting.
- Practice and time yourself.
- Ask the organizers of your talk appropriate questions so you are well prepared.
- Wear comfortable, stylish clothes that you feel confident in.
- Avoid wearing shoes that make noise when you walk.
- Minimize the amount of jewelry that sparkles.

The journey of a speaker is an ever-evolving process. Embrace it—enjoy the stage you're in, and work to make yourself a speaker you can step back and admire.

Lisa Wentz is the founder of the San Francisco Voice Center, a public speaking expert, and accent specialist. Considered one of the top coaches in the San Francisco Bay Area, Lisa regularly coaches speeches, presentation skills and accent reduction with executives and managers from Fortune 500 companies. Her resume includes Adobe, Genentech, Google, Oracle, Salesforce and VMware among others.

# Grit

Angela Duckworth

Book Snaps™
In-depth reviews of best-selling business books.

## Grit
By Angela Duckworth

Angela Duckworth, PhD, is a 2013 MacArthur Fellow and professor of psychology at the University of Pennsylvania. She has advised the World Bank, NBA and NFL teams, and Fortune 500 CEOs. She is also the founder and CEO of Character Lab, a nonprofit whose mission is to advance scientific insights that help kids thrive. She completed her BA in neurobiology at Harvard, her MSc in neuroscience at Oxford, and her PhD in psychology at the University of Pennsylvania. Grit: The Power of Passion and Perseverance is her first book and an instant New York Times bestseller.

*A Book Review by Soundview*

# How to Solve Painful Problems in Business

Angela Duckworth is a former math teacher, current professor of psychology, co-founder of the nonprofit Character Lab, and 2013 MacArthur Fellow. This particular award is sometimes called the "genius grant." When Duckworth got the news that she had been selected for the prize she was transported back to her childhood to "ponder the irony of the situation."

You see, throughout her life, her father had a habit of reminding her and her siblings of their intellectual shortcomings. He would regularly say, "You know, you're no genius." He seemed overly concerned with innate talent and intelligence and appeared to be disappointed that his offspring failed to measure up to his excessively-high standard. The girl who was told over and over that "she's no genius ends up winning an award for being one."

But, her father's offhand diagnoses were not really wrong. Duckworth is not an actual genius and she didn't become a MacArthur Fellow because she was superior to her colleagues at an intellectual level. She got there through passion and perseverance. She has spent her career engaged in work for which she is passionate. She challenges herself to be better and do better in that work continuously. When met with an obstacle that knocks her down, she gets back up. She writes, "I may not be the smartest person in the room, but I'll strive to be the grittiest." And that has made all the difference.

Duckworth has operated under the assumption that "in the long run, grit may matter more than talent." Years later she has the scientific evidence to back it up. And she doesn't stop there. Her research has shown that grit is liable to change and fluctuate, not fixed and therefore, it can be grown. In ***Grit: The Power of Passion and Perseverance***, Angela Duckworth summarizes all that she has researched and learned about grit so that you can apply it to your own calling in life.

## What Grit Is and Why It Matters

There are many ways in which we describe "grit" that we observe in everyday life. It is a "never give up attitude." It is a "kind of hang-in-there posture toward challenge." It is a deep-seeded

drive to keep going when times get tough. It is the will to pick yourself up and try again each and every time you fail. People who are highly successful in their chosen field, whether it be athletics, military, leadership, teaching, an artistic pursuit, or something else entirely, there are commonalities in how they operate.

Highly accomplished people are "paragons of perseverance." They are never complacent. They continue striving for the goal even when they have to do things that are "boring, or frustrating, or even painful" along the way. They never even consider giving up. Their passion endures, regardless of challenges. Duckworth writes, "In sum, no matter the domain, the highly successful had a kind of ferocious determination that played out in two ways.

First, these exemplars were unusually resilient and hardworking. Second, they knew in a very, very deep way what it was they wanted. They not only had determination, they had direction. It was this combination of passion and perseverance that made high achievers special. In a word, they had grit."

Having identified the common ingredients of grit, Duckworth set her sites on figuring out how to measure something that was completely intangible. She poured over her research notes looking for words and phrases and traits that showed what it was like to have grit. As she compiled the data, a list of questions emerged, half of which were about passion and half of which were about perseverance. These questions became "the Grit Scale–a test that, when taken honestly, measures the extent to which you approach life with grit."

A key finding from Duckworth's early work was that there was not a positive correlation between talent and grit. At first it was surprising to her that the talented would not endure and continue trying hard to achieve in their field. But she learned that "talent is no guarantee of grit." One of the deep explorations in the book is centered around this finding as Duckworth explores the reasons why.

People with "grittier" scores on the Grit Scale successfully complete Beast Barracks at West Point, graduate high school on schedule, stay in rejection-filled sales jobs, make it through Special Forces training in the military, and earn more higher degrees. The grittier the score, the more likely a person will stay the course.

It boils down to an insight that served as a foundational guide for all of Duckworth's later work. "Our potential is one thing. What we do with it is quite another." As a middle school math teacher, Duckworth could plainly observe that some of her students had greater innate talent in math than others. They just seemed to get it, without even trying. But when it came to performance, some of those talented kids failed to live up to their potential. And some who had lackluster innate ability put in hard work and achieved at high levels.

Aptitude and achievement are different animals all together, even in an area like math where we conventionally classify students into "math people" or "not math people." When we overly focus on talent, we lose sight of what Duckworth believes is far more important: effort.

Most of us are audience observers to those that are considered wildly talented. Musicians, professional or Olympic athletes, writers, and others awe us with their abilities to perform something so extraordinary. But we are missing most of the full picture. We are not privy to what happens behind the scenes. We do not observe the hours upon hours of training and conditioning and practice that results in the spectacular performances we witness. Our inclination is to shake our heads or shrug and say, "It's a gift! Nobody can teach you that." But Duckworth says we are wrong. There are innumerable factors that come into play and effort is a major one.

Now, Duckworth concedes that Micheal Phelps-level achievement is not available to anyone who puts in the required effort. There are anatomical advantages that cannot be selected, for example. The point is that greatness is something that is "doable" because greatness is really a compilation "of many, many, individual feats" and taken individually, they are each attainable. And further, we have the capacity to grow our grit and thus, improve our levels of achievement.

## Growing Grit from Inside Out

One need only attend a graduation ceremony from any higher-educational institution to hear the advice "do what you love." Despite the fact that we hear this message time and again, many of us choose practicality over passion. However, for some, "finding something you love" ends up being "a breadcrumb trail into poverty and disappointment." Is it ludicrous to advise fledgling adults to seek love over security? Duckworth revealed the "definitive answer" generated from scientific research on the topic over the last decade. Turns out, interest is a key factor.

"Research shows that people are enormously more satisfied with their jobs when they do something that fits their personal interests." People who have this level of job satisfaction are also "happier with their lives as a whole." They actually have better performance outcomes compared to those who do not have interest in their work, too. This goes for paid professional workers as well as students who are studying something that genuinely interests them. These interested students get better grades and stick with their degree program until they finish.

Of course, we cannot expect to make a living doing just anything that we have interest in doing. "Nobody is interested in everything, and everyone is interested in something. So matching your job to what captures your attention and imagination is a good idea. It may not guarantee happiness and success, but it sure helps the odds." Maybe, then, the advice dolled out at commencement ceremonies should be for young people to "foster a passion" so that they have a well of interests from which to choose.

Everyone has heard the saying "practice makes perfect." The kicker, though, is that not all practice is good practice. Those who become experts in their field and achieve greatness do not simply log more and more hours of practice. They practice differently than others. They do what Duckworth calls "deliberate practice." This involves several steps.

First, "set a stretch goal" that targets a specific and narrow component of the skill. Second, make intentional efforts to

> We can look for ways in which our work impacts the greater good and, in doing so, identify the purpose."

reach the goal with "undivided attention and great effort." Finally, seek feedback about what could be improved to make the performance of the targeted skill even better. This process is repeated again and again and again until the skill is mastered and a new stretch goal can be set.

Purpose is "the intention to contribute to the well-being of others" and it is also an important component to growing grit. When work has a higher purpose and meaning than the related tasks themselves, we are working with purpose. Duckworth's research showed that people who are grittier as scored by her Grit Scale are far more likely to "see their ultimate aims as deeply connected to the world beyond themselves.

For most of us, having purpose is deeply motivating. Interestingly, it is not the job itself that is or is not filled with purpose. It is more about how the person performing the job views it. We can look for ways in which our work impacts the greater good and, in doing so, identify the purpose.

Finally, grit relies on hope. This is not the kind of hope that something beyond our control will change. "It rests on the expectation that our own efforts can improve our future. The first kind of hope leaves it to the universe by pure chance or otherworldly intervention. We hope that tomorrow will be better. With the hope that influences grit, "we resolve to make tomorrow better." Intention and determination place us in the driver's seat with the firm understanding that what we do changes outcomes, not chance.

## Growing Grit from Outside In

Duckworth has more good news for those who are interested in helping others increase their grittiness. Parents, teachers, coaches, and organizational leaders can all "encourage grit" in the people they care about. Duckworth labels this kind of "bringing forth" as parentlike, whether it's coming from an actual mother, father, or guardian or if it is coming from a coach, teacher, mentor, or manager. "The word parenting derives from Latin and means "to bring forth." Therefore, you're acting in a parentlike way if you're asking for guidance on how to best bring forth interest, practice, purpose, and hope" in others.

There are two extremes on the continuum. To the far right of center, authoritarian parenting requires very high standards, little coddling, and more than the occasional scowl. On the other end of the spectrum are "child-centered" parents who lavish children with support, comfort, and choice on an unconditional basis.

In an attempt to answer which approach is best at fostering grit, Duckworth first states that there is a lack of research on the subject of parenting for grit but she is comfortable dispensing some advice on the topic nonetheless. Combing through separate research on parenting and separate research on grit revealed a pattern.

Duckworth says, "there's no either/or trade-off between supportive parenting and demanding parenting. When we look closely at the two ends of the spectrum, we find commonalities. Parents put the needs of their children first without allowing the children themselves to determine "what to do, how hard to work, and when to give up on things." In fact, research over a span of four decades has shown that "the children of psychologically wise parents fare better than children raised in any other kind of household."

This type of parenting style is both supportive and demanding. "When our parents are loving, respectful, and demanding, we not only follow their example, we revere it. We not only comply with their requests we understand why they're making them." In other words, parents who are gritty themselves end up having gritty children.

Angela Duckworth refers to research subjects who demonstrate grittiness in an exemplary fashion as "grit paragons." Time and time again, these high achievers report that they find their work to be thrilling, that they look forward to the challenges of each day, and that they know their passion-filled work serves a greater purpose than themselves. There is deep satisfaction in "doing something important" that is also very hard. In fact, the difficulty and joy they gain from finishing and succeeding through the difficulty of their task makes the internal reward all the more sweet.

In ***Grit***, Duckworth shows us that we all have the ability to become gritty and in doing so, both reach our highest potential and draw out the potential in others. It's an endeavor worth every difficult moment because gritty people "recognize that complacency has its charm, but none worth trading for the fulfillment of realizing their potential." Grit, as Duckworth poignantly puts it, is "putting one foot in front of the other. To be gritty is to hold fast to an interesting and purposeful goal. To be gritty is to invest, day after week after year, in challenging practice. To be gritty is to fall down seven times, and rise eight." And each of our lives, families, schools, organizations, and governments could use more of that.

## THE SUMMARY IN BRIEF

Many of us have been taught by society and our loved ones (as they were taught as well) that happiness and fulfillment come from fitting into a certain societal mold. The familiar model is to head to college, get a job, get married and have kids. Unfortunately, that expectation sometimes clashes with information we are receiving from our heart and intuition.

G. Brian Benson, in ***Habits for Success***, stepped away from his family's business. The experience had nurtured and grown him, but he left the business he no longer loved in hopes of building a new, more stable foundation for the rest of his life.

There comes a time in all of our lives when it becomes more painful for us to stay mired in our old habits than to step outside our comfort zone and risk the unknown as we journey toward finding our true voice. Your true voice is the language of authentic fulfillment, joy, and happiness. While speaking your true voice, creativity flows, fears subside, and peace of mind prevails. Join Benson in the journey which Ram Dass calls "walking each other home." Create habits for living authentically.

## IN THIS SUMMARY, YOU WILL LEARN:

- The importance of building a strong life foundation.
- Your flourishing will positively impact others.
- Life balance relies on daily practices.
- Care of your body and mind are essential habits for success.

## Start With Your Foundation

When we think of a foundation, we typically envision a building of some sort, perhaps a house or a skyscraper. When a house is built, the strength of its foundation is vital. The same is true for us. If we want to live authentically and be the best versions of ourselves and accomplish our goals and live out our dreams, the first thing we need to do is build a strong foundation.

An award-winning sand-castle builder explained her process. Interested onlookers often complimented her on the creative details of her work, but what those onlookers don't realize is that her most diligent efforts were spent on the building of a solid foundation. Generally, the first two hours of her process were spent analyzing the sand content, digging until the ideal grains were found, then saturating the sand and applying pressure to compact it into a solid formation. Only then could she get to work on the impressive detailing of her sand creation.

With a solid foundation, we achieve balance so we can make proactive choices instead of reactive choices.

### Step Out of Your Comfort Zone

When we leave our comfort zones, we're taking a risk and opening ourselves up to the possibility of stress and anxiety because we aren't sure what is going to happen next. Shilpa Chatterjee says: "Although anxiety is not exactly something we go chasing after, a little bit of it can actually be healthy. A hint of anxiousness can push us to take risks, get more done, and continually better ourselves. Healthy stress acts as a catalyst for growth, motivation, and optimal performance."

When we step out of our comfort zone and challenge ourselves, we are provided with so many new gifts. We become more productive. As we expand our capabilities and break through barriers, we find new, exciting possibilities in our lives. Your creativity will increase as you have new experiences and learn and grow from them.

### It's OK to Fail

Go fail a few times. Without failure, we wouldn't become the people that we are meant to become. It is such an essential part of building our foundation of success. You grow and build strength through the process of failure. While that doesn't make it any easier going through it, things do get better, and you will gain clarity. All successful people have had setbacks or bumps along the way to their success. English novelist John Creasey received 753 rejections slips before he went on to publish 564 books. It took Thomas Edison ten thousand attempts to perfect the light bulb.

### Get Creative

It is never too late to create. Georgia O'Keeffe worked steadily into her nineties, continuing her tradition of fine work. French impressionist Claude Monet painted well into his eighties, even after cataracts clouded his vision. Acclaimed architect Frank Lloyd Wright completed the design of the Guggenheim Museum in New York at age ninety-two—and Giuseppe Verdi wrote Falstaff, thought of as his most renowned opera, at the age of eighty-five. Get creative! Do what you love. You may just surprise yourself.

## Make Room For Others

The beast that tells us that we are not enough is the same beast that keeps us separated from others. When we share our truths, pains, and imperfections, we shine light on our true essence. When we reveal ourselves, we stand unencumbered in truth; it brings us closer together as a community.

### Let Go of Judgment

Benson led a workshop for twenty-one teenage boys who were incarcerated at a youth correctional facility in Oregon. Instead of having a lot of silence and looks of "why am I here" from the youth, he found many intelligent young men who couldn't wait to speak and share their experiences, their regrets, and their dreams.

Some talked about forgiving their peers or family members who played a part in having them incarcerated in the first place. Many told how they wanted to go to college and how they were going to make it happen. Some talked about wanting to raise healthy families even though it wasn't modeled for them while they grew up. Others spoke about forgiving themselves for the crimes that they committed so that they could move forward. Benson was reminded to never, ever judge a book by its cover. A strong foundation has no room for judgment.

### Connect with Others

In today's fast paced, instant gratification world, where people's lives are broken down and validated into social media "likes" and "tweets," we may forget to take a long deep breath and remember what life is all about. One man who recognized this was a British hairdresser. He

Once I was in the habit of running early instead of running late, my stress and anxiety levels went down, and I was more ready for the day.

would walk the streets on his days off and volunteer his time, giving haircuts to the homeless. Through a simple act of connection, he was able to let these folks know that they have value and dignity. So, the next time you interact with a cashier at the store, walk by a person asking for help on the sidewalk, or make a deposit to the clerk at your bank, give them a smile and remember that they are just like you. Through connection, we live richer, more satisfying, and expansive lives.

### Clean Up Your Disagreements

Do you have unresolved issues hanging over you? We are human; it happens. But to truly free ourselves of the pain, anger, guilt, or confusion we are holding onto, we need to make our best effort to clear things up. Which means to forgive the other person and move on or try to patch things up so you can go back to being friends or productive coworkers. This is so important for our mental, emotional, and physical wellbeing. Not to mention the strength of our foundation.

## Strive For Balance

Just like the juggler with too many balls in the air, the more things we have going on in our life, the more difficult it is to keep everything going without dropping the ball. As the pace of our lives accelerates, so does our need to stay in balance. It is simple daily practices that maintain our foundation.

### Be Kind

Wayne Dyer once said, "It's better to be kind than to be right." Watch how everything improves when you are genuinely kind. Next time you're given the opportunity to let someone merge into your lane while driving, don't hesitate. You'll feel better, they will be appreciative, and the positivity shared will inspire others to do the same.

It doesn't have to just be on the freeway—help someone out at the grocery store or hold the door when entering a building. Say hello to a stranger, make a donation to someone less fortunate, or pay a compliment to someone who looks like they could use one. Kindness is another form of beauty and an essential part of your foundation. Share it, spread it, and be it.

### Leave Ten Minutes Early

How often do you find yourself rushing late to work or someplace else where you need to be? How does it make you feel? Stressed? Angry? Guilty? There's a very simple technique you can use to eliminate all of those unwanted feelings that come from being rushed. Try leaving ten to fifteen minutes early. (Simple, right?)

The author relates, "When I started leaving ten minutes early to go to work, I noticed the difference immediately. I arrived at work feeling much more peaceful and balanced. I was ready to start the day. Prior to leaving ten minutes early, I would be scrambling in to work, usually carrying a load of anxiety and stress. I would start those days feeling behind and definitely not in flow. Once I was in the habit of running early instead of running late, my stress and anxiety levels went down, and I was more ready for the day. Allow yourself that extra time; you will be glad you did. If you live in Los Angeles like me, better make it forty-five minutes!"

### Attitude of Gratitude

Try and give thanks for all that comes your way, the good and the bad. You may ask, "Why would I want to give thanks for something bad that happened?" Well, we are here to learn and grow, and the greatest learning opportunities usually occur during trying experiences. Be thankful for them, and the new and hopefully wiser you who came out of a tough situation.

The trying times will eventually pass, and you will be better prepared the next time they come around, or even better yet, you can help someone else going through a tough time with your experience. Take the challenge to write down five to ten things a day that you are grateful for every morning. Watch your spirit lift!

## Take Care Of Your Instrument

Taking care of ourselves is probably the most crucial task that we are given, yet I don't think enough people give it the importance that it deserves. If your health fails, it can outweigh everything else that's going on in your life.

### Drink More Water

Did you know that 60 percent of our bodies and 75 percent of our muscles are made up of water? Is it any wonder that a lot of people get headaches or feel fatigued when they are under-hydrated? Water not only provides us with invaluable sustenance, but it also helps flush out our system, which in turn allows our body to run more efficiently and provide us with more energy. Being adequately hydrated is well worth the trouble of having to make a couple of extra pit stops during the day.

### Get More Sleep

According to Thomas Dekker, "sleep is the golden chain that ties health and our bodies together." Are you getting enough sleep? Please don't think that by taking another hour of sleep each night, out of the 24 hours we have available, that you will be less productive. It has been proven that those who are sleep deficient work more slowly and make more mistakes along the way. Getting more sleep will in turn give you more energy, make you more productive, and probably a much happier person.

### Go Exercise

Need a little more energy throughout the day? Want to lose a few unwanted pounds? Want to think more clearly and be more productive? Go get some exercise. If you are just beginning, it could be as simple as going for a walk three days a week. Make whatever you do a habit. There are many ways to get some exercise that don't require special knowledge or skills. For example, gardening, swimming, going to a park and throwing a Frisbee, and walking are just a few.

### Eat Better Eat Less

If you are struggling for energy during the day and feel very sluggish after you eat, then you might not be making the best food choices for your body. Listen to your body; it will tell you what works for it and what doesn't. What is good? Moderate intake and a balance of fruits, vegetables, grains, and poultry/ fish/nuts—clean and unprocessed foods. Eating better/eating less is an incredibly important part of keeping your foundation intact and solid.

### Meditate

Do you want to feel calmer, carry less stress, have more energy, and be more tapped into your intuition? Give meditation a try. Meditation gives our brain a rest from the busy life and schedule that most of us lead. When we are in the space of feeling balanced and rested, we are better able to pay attention and listen to our intuition, our highest form of intelligence. Why wouldn't we want to tap into that?

Greatness is already within all of us. Sometimes we just need to peel away a few layers and do some inner housework to access it. Look within, be open to new ideas, and practice new habits. Remember to laugh along the way, pick yourself up when you fall down, and know that it's a journey, not a destination.

Part 4: The Purpose Rules
*Page 4*

Conclusion
*Page 4*

## THE SUMMARY IN BRIEF

Success is the measure by which most entrepreneurs judge themselves. But success doesn't guarantee happiness—especially if it leads to burnout.

Dr. Manuel Astruc wrote ***Happiness Rules: Beat Burnout, Embrace Happiness, and Become a Better Entrepreneur*** as a solution to the problem of entrepreneurial burnout. In Happiness Rules, he offers practices developed using his knowledge of the mind and our motivations as humans—all gathered from his decades of work as a psychiatrist. And these rules aren't hypothetical; Manuel has used them himself to escape from the deepest reaches of burnout.

*Happiness Rules* teaches readers how to make happiness the engine to success—rather than the outcome—leading to more personal fulfillment as well as being more productive, energetic, and engaged at home and at work.

## IN THIS SUMMARY, YOU WILL LEARN:

- How burnout causes intense disruption to your life and work.
- How to take small, positive steps toward a healthier, more optimistic, and happier life.
- How to maintain a consistent, healthier state of mind no matter what issues you're facing.
- Tools to help alleviate burnout.
- How to restart that engine that has driven you to success and maintain it in a way that is healthier for you, your business, and those you care about.

## Introduction

Burnout is defined by the World Health Organization as an occupational syndrome, a response to a life that is out of order. It manifests in those who constantly and consistently put work before everything else. And it causes intense disruption to your life, your work, and your health.

These rules allowed me—and will allow you—to take small, positive steps toward a healthier, more optimistic, and happier life. If you are feeling exhausted, bitter, detached from work, or seeing a lack of effectiveness in your work—or if you are feeling a lack of purpose, a sense of stagnation, or emotionally numb—the Happiness Rules can provide you with a consistent, healthier state of mind no matter what issues you are facing.

But before you can follow the rules that lead you back, you have to first acknowledge where you are—and that you have a problem. You have to accept that you are facing burnout. That it isn't a weakness. That you're allowed to struggle. And that the consequences of ignoring this situation can be serious. Only then can we commit to change and make our way back onto the path of happiness.

## Part 1: Why We Need New Rules

1. The Cost of Burnout

Entrepreneurs are, by nature, fixers. And we're often very stubborn fixers at that. We see it as our job to dig in and repair whatever isn't working in our businesses in order to reach optimum effectiveness. Under normal circumstances, this serves us well.

However, burnout isn't a nail. It isn't a standard problem that we can fix by concentrating on it and executing a strategy. Unlike other problems, we can't work through burnout while we ignore our underlying stress and exhaustion. That only makes it worse. We have to look at burnout like an underlying injury to our body and mind. Burnout is your mind and body telling you to change what you're doing, not lean further into it. Ignoring the symptoms of burnout only makes the injury worse.

Here, we looked at the nature of burnout. There is a continuum of burnout. Ignoring early, mild signs—such as exhaustion, feeling detached or negative about work, or losing effectiveness at work—will lead to these issues getting worse. There's an inclination to find ways to deny that this is happening. We have to face the truth about burnout.

Over time, burnout spreads to affect not just work but the rest of your life, from family and friends to health.

2. Why Burnout is So Prevalent

In an effort to be happy and fulfilled, we chase success. Society tells us from a young age that hard work is the key to this success.

This is wrong, and our focus upon work above all else is unhealthy. There is a point at which working hard can cross a line into addiction—defined as continuing to engage in an activity in spite of evidence that it is hurting you. When we eventually face burnout, society has few ways to bring us back to health and satisfaction.

Modern medicine is good at treating a disease, but burnout is an occupational syndrome and we don't have a treatment model for it. Because of the limitations in our methods and the insurance system, modern medicine is incentivized to make a quick diagnosis instead of looking for a root cause. The system prefers a diagnosis like depression or anxiety and a pill for treatment rather than a syndrome that is harder to quantify.

There are four pressures that lead to burnout:

1. Highly demanding work
2. High level of responsibility
3. Low control
4. Low reward

Entrepreneurs are exposed to all four. Most entrepreneurs strive to be good leaders. They want to motivate their teams, innovate their industry, inspire their customers, and push their companies to the limit. Unfortunately, the very qualities that allow an entrepreneur to do all this are the ones that make them most at risk of burnout.

3. The Happiness Rules Preamble

Your situation is not hopeless. No matter where you are on the burnout spectrum, the Happiness Rules can help pull you out of it.

With that in mind, there are three facts to recognize about yourself and your situation:

1. You are not alone
2. Change is possible

3. There is hope

Each of these concepts is an integral mindset adjustment on the road to happiness and becoming a better, healthier entrepreneur.

To overcome your burnout, we'll find the way back to happiness through three sets of rules:

1. Health Rules
2. Growth Rules
3. Purpose Rules

## Part 2: The Health Rules

4. Getting Your Body into Shape

It is incredibly difficult to be happy and a successful entrepreneur if your fundamental physical and mental health is out of order. In fact, solidifying the foundations of your physical and mental health can arrest your slide into burnout.

Small steps provide the consistent action that creates what we call motivation, and that forward motion allows us to create life-long, life-changing habits in the same way peddling can get us across an entire city.

There is no real secret to building a good foundation for well-being and happiness. It has to start with your physical and mental health. Any system that ignores health is bound to eventually fail.

To start improving your physical health, go for the low-hanging fruit first. Those are the things you can change quickly and a little at a time: eat better, move more, and focus on sleep.

To develop new habits, use BJ Fogg's ABCs:

- Anchor: Anchor the new habit to something you do every day.
- Behavior: Start the habit with something almost ridiculously easy and then build on that as the habit gets ingrained.
- Celebrate: Celebrate the wins, give yourself a high five, pump your fist, and shout out "DONE!" This gives you a dopamine reward and encourages your body to want more.

5. Getting Your Mind into Shape

If you want the benefits of this process, you need to be dealing with your psychological health at the same time. It doesn't take a serious psychological illness to lead our brains into a cycle of negative thinking.

As with your physical health, you can start improving your mental health by reaching for that low-hanging fruit.

Cut out negativity in your environment from sources like news media, social media, and people. Our brains are remarkably easy to "prime" with even brief exposure to negativity, so limit the negative as much as possible.

You can also stop indulging "automatic negative thoughts" by putting up blinders to them rather than wallowing in them. You can start to do this through the "think, think, think" process developed in AA.

Finally, set rules for when to stop working. You won't always be able to follow them, but creating clear boundaries to avoid "workaholic" working is important.

By making these small changes, you can start to reorient toward a sense you are in control and even "prime" the mind for greater happiness and opportunity.

## Part 3: The Growth Rules

6. Learn and Grow

In a busy, stressful life, we often take every chance to make things less challenging. In some ways, this is one of the key motivators in entrepreneurship. Entrepreneurs are always trying to remove friction from the purchasing process for their customers and from their internal processes for their employees. Any time a challenge can be eliminated, we make a point of doing so.

However, we need challenges. It's hard to be happy being on autopilot.

By nature, we need to be learning. You should seek out the flow state—the state in which we feel our best and perform our best. According to author Steven Kotler, it occurs when we are operating about 4 percent beyond our capabilities, in a "stretch but don't break" situation.

You can also find new interests by cultivating the habit of exploring "adjacent possibles" that relate to your current strengths and interests. These require only a small commitment of time, energy, or money to learn about these new possibles.

Flow and adjacent possibles can lead to a program of learning and growing, all while hunting for new opportunities.

7. Strengthening Connections

We crave connection with us and react to social situations subconsciously. So the fact that modern life has left us so divorced from our relationships and communities is immensely difficult for our mental health.

We require a strong social network in our lives to provide meaning. This can be summarized through the 4 Cs: Connection, Community, Collaboration, Contribution.

Connection: The last fifty years have left us feeling isolated from our "tribe," and entrepreneurs are especially at high risk for this because of the nature of their work. We need to rebuild those broken ties to family and friends because there is a mountain of science that tells us the stronger our connections, the healthier and happier our lives.

Community: This is where we fit in; it's our place in our "tribe."

Collaboration: Humanity has dominated nature because of our ability to create well beyond what an individual can achieve. We crave this in our lives.

Contribution: We also crave a way to make our work matter.

We can use technology as a tool to build the 4 Cs in our lives. Find groups you want to join, seek out collaboration, or find your tribe through podcasts.

## Part 4: The Purpose Rules

8. Blaze Your Own Trail

The knowledge that things can change is central to the Happiness Rules.

We are never finished products. Our ability to choose what our life is and what it will become is our superpower. To enable that superpower, though, we have to flip the switch from living by default to living by design.

To start flipping that switch, ask yourself these questions: What are you uniquely good at? What are you curious about? What do you want? What do you want to contribute?

9. Creating Resilient Happiness

We live in a society determined to eliminate struggle. In a world in which our basic needs are easy to take care of for most of us and survival is assured—again, for most of us—we now work to reduce discomfort, eliminate friction, and increase convenience. Wherever possible, we concentrate our efforts on distracting thoughts of suffering and struggle with acts of pleasure.

We can be happy through any circumstances—without eliminating our other emotions and experiences. What's more, we have to develop more resilience in our happiness because pain and struggle are as inevitable as gravity. The Happiness Rules can't remove difficulties from your life, but they can give you control over how you respond to those difficulties. Struggle does not have to lead to unhappiness.

You can choose the way of happiness—of health, learning, connecting, and blazing your own trail—through everything life throws at you. That is the power you have over your circumstances, whatever they happen to be.

## Conclusion

In these pages, I have laid out my attempt to systematize and codify the tools I used to overcome and stay clear of burnout—so I could enjoy the ride, no matter what. One of the worst feelings I had in the midst of my own struggle was that I was alone and no one could help me through what I was experiencing. I hope this book has provided you the reassurance that not only have others been where you are but that there is a way through this.

I firmly believe that the best thing you could do for yourself today is to take your first small step towards implementing the ideas you've read about here. And tomorrow, take that next step. That step may be as small as buying healthier snacks or taking a ten-, or five-, or even two-minute walk at the end of your day. It may be turning off Netflix a little earlier in the evening and spending fifteen extra minutes reading about something that interests you—or going to bed fifteen minutes earlier. It could be an email to an old friend or signing up for a group that shares your passions.

Whatever step you choose to take, the most important thing is that you take one each day. Go at your own pace, but keep going.

**Manuel Astruc** is the founder of Your Next Act, a coaching program to help high-achieving entrepreneurs find the mental strength to not just survive their ventures but to thrive. When he personally experienced the effects of consciously choosing to embrace happiness in his daily life, he knew he needed to share the knowledge with others.

# The Power Of Finding Your Role In Life

Donald Miller is the CEO of Business Made Simple, an online platform that teaches business professionals how to grow and enhance their personal value on the open market. However, he wasn't always happily successful in business and life. He had to put himself into action in order to create meaning.

Before a life of meaning, Miller describes his life as apathetic, sleeping on the floor of an apartment he shared with friends. As an overweight man who spent his time pondering the crumbs in the carpet on the floor, his friends decided to hold an intervention. While this wasn't the magic moment for Miller to choose a life with meaning, it was a key point in time he would reflect back on while on the search for meaning. Not just in the one moment, but in every moment he has lived so far, all the way to the legacy he will pass on to his daughter.

## How to Create a Life of Meaning

As a person lives out their life, they are actually living out their story. It's that person's decision to live in a mindset that makes their story meaningful. As you write your own story, you can either choose to be a victim, villain, hero, or guide. Each one of us has a little bit of all these characters within us. However, the only character that gives us the option to find meaning is the hero. A victim leaves everything to fate, believing they are helpless and need to be rescued. A villain expelled negative energy to those around them. When Miller was sleeping on the apartment floor, he was living somewhere between both of these characters. He was waiting for someone to rescue him from the void he was in while also passive-aggressively leaving dirty dishes in his roommates' beds.

A hero experiences the same pain, but reacts to it as a challenge to learn from. As Miller says, "A hero wants something in life and is willing to accept challenges in order to transform into the person capable of getting what they want." Of course, it's not just about deciding which character you want to live as. It's also about curiosity and desire. The more Miller contemplated the elements that make a good story and how they apply to life, the more curiosity he had about who he could become. Identity is a key component in creating meaning.

***Book Snaps™*** is a publication of Soundview Inc. • 225 Wilmington West Chester Pike, #202, Chadds Ford, PA 19317 USA. • © 2022 Soundview, Inc. All rights reserved. Reproduction in whole or part is prohibited • Meghan P. Kozak, Editor-in-Chief • Kylie Waytuck, Graphic Designer • Order #FBR0522A

What Miller found is that meaning isn't a one time thing. Every hero's story journey has several subplots to keep the storyteller in constant motion and action. Action starts transformation. And the heroic transformation is where the creation of meaning takes place.

During a bike ride across the United States, Miller experienced the transformation from victim to hero. He decided to ask the question "Can I ride my bicycle across America?" and face the challenge by putting himself into action. The group of fifteen started in Los Angeles and cycled all Summer to end up in Delaware. Though a grueling physical activity, Miller and his co-cyclists found they felt a great amount of achievement after facing every challenge from dehydration to mountain trails. The greatest celebration was hitting the shores and realizing that every single person was able to face and overcome the challenge they set for themselves in the beginning.

Before the plane ride back, Miller stopped into a bookstore hoping for something to kill the time on the way back. What he found was a text that would set his tone for finding meaning in every subplot he chose to write for his life from then on out. His choice of reading? Viktor Frankl's *Man's Search for Meaning.*

This is when Miller learned Frankl's theory as to why so many people find themselves in an existential vacuum, floating through life and essentially contemplating their belly button lint. "Man did not have a will to pleasure, but a will to meaning. And when man couldn't find meaning, he distracted himself with pleasure."

Enter Frankl's formula to experiencing the meaning of life. The three part formula is quoted in verbatim below:

- Take action creating a work or performing a deed.
- Experience something or encounter someone that you find captivating and that pulls you out of yourself.
- Have an optimistic attitude toward the inevitable challenges and suffering you will experience in life.

All three pieces are needed in order to experience meaning. If any one of them is missing, you're likely to end up back in the existential vacuum, picking at your belly button lint. And not surprisingly, we've all stumbled across this formula, it's success, and the fall back into the vacuum.

Since Miller says meaning "feels as though my life is a story that is interesting to myself and also good for the world", the only way to have meaning is to make it. Action always comes first. It's the decision to do something - writing a book, creating a team, going on a bike ride across the United States. By deciding to challenge yourself through an action, you actually decide to make meaning.

By taking that experience and placing it outside of yourself (into the community around you, the community you create, or nature itself) you're able to keep yourself in hero mode.

And because challenges aren't a guaranteed easy street, you, as a hero, will experience struggle and possibly pain. It's your choice as to how you react to that pain. An optimistic attitude will allow you to learn from it and grow, keeping you as the hero of your story.

Whether it was writing his first book or his third, becoming a father to his daughter, or building a community on his property, Miller has taken Frankl's formula and created a strategy for anyone to live their life like a hero on a mission.

## Create Your Life Plan

In order to use Miller's Hero on a Mission Daily Planner, which he makes easily accessible via QR code, you must create a life plan. This will act like a guide to set goals, prioritize them, and take action.

Step one is to think of your life the same way many writers think of their stories: starting with the end. Most people don't love to think about the end because the end means death. But Miller says, "Because we know that our stories will end, we are gifted with a sense of urgency." In a way, our death gives us a stopwatch. And knowing that one day it will hit zero can make you want to take action sooner rather than later.

So Miller suggests step one of his strategy is to start by writing your eulogy. Think about the kind of impact you want to have on the people around you. Think about the accomplishments you want to be known for. Think about the community you want to build and the legacy you want to leave. All of this equates to the role you aim to play in your own story.

Notice he doesn't limit this to the career role you play. This is the role of life, who you want to be for your family, community, the planet, and so forth. This is who and what you, as a hero, love. It's about how you experience your life outside of yourself, just as Viktor Frankl included in his formula.

Miller points out his belief that Frankl tells us "to find something in life we love - something that strikes a sense of awe inside us - and then make it a daily habit to engage whatever that is." Again, this is in finding something that lights up our excitement outside of ourselves.

A hero's story is never completely about the hero themselves. It's also about the other characters who are affected. As we share our lives, stories, and challenges with others, it becomes less about individual needs and more about a group of protagonists who are seeking meaning together.

Sometimes, that means joining a community of people who share similar interests. Sometimes that means creating a community that doesn't yet exist. Miller gives examples of this, opening his home to a political panel discussion, camping in the wilderness with a group of friends, or inviting neighbors over to a dinner at a large farmhouse style table. A hero on a mission attracts other heroes on missions.

Writing a eulogy is the first step that will allow you to reverse engineer your life goals. It creates a vision for the legacy you

> A hero's story is never completely about the hero themselves."

want to leave behind, which will help you break down long term ten-year goals, a five-year plan, and a daily to-do list that will create impact over time.

In the start of *Hero on a Mission*, Miller references his wife, Betsy, and the child they are expecting. Becoming a father is one of his journeys. When his daughter is born, he realizes his mission isn't about him anymore. It's about what he leaves behind as a legacy. His love, his education, his will to provide an example for his daughter. It becomes very clear to Miller how his hero journey isn't forever. At some point, he will grow older and become a guide. He'll use his experience to help others, like his daughter, on their own journeys. And one day, he'll leave behind his legacy.

This part of Miller's story is reflected in his dog, Lucy, as well. As a puppy, Lucy had taught him the same thing Frankl did: to find joy in things outside of himself. Take a nap. Go for a run. Break from what you're doing and enjoy the outdoors every day. But as Lucy ages, Miller knows he will eventually bury her on Goose Hill, their retreat property, and enjoy the legacy she leaves behind.

This circle happens for all of us. And in Miller's opinion, this is the motivation for all of us to write our eulogy and create a life plan to fulfill what we write down on paper. This creates a vision, which then creates hope and belief in your own agency to accomplish that vision. But of course, you can't actually accomplish that vision without a plan in place. This is where the *Hero on a Mission* Planner comes into play. Heroes need to start their journey somewhere, and as Miller states, "once a storyteller knows where they want their story to go, they plan the moments that will drive their character closer and closer to the climactic scene."

So if step one is writing a eulogy (plot), then step two is writing the elements that make up your life's chapters. Afterall, if you're going to go through a transformation, you might as well plot it out to do so in the right direction.

Miller's ten-year, five-year, and one-year vision exercises are a direct roadmap in the correct direction. "The more care you take to determine the direction of your growth, the more likely your life will look the way you want by the time your story is over." The ten-year, five-year, and one-year plans have all the same sections to fill out. The idea is to continue to reverse engineer a plan, starting with the ten-year worksheet and working your way back. Each one gets closer to the short term goals that are more possible to do now. And once you get to the one-year exercises, it becomes apparent that in order to live out your life plan, you need to start now.

## A Hero Transforms by Taking Action

The *Hero on a Mission* life plan and journal are a tactical reverse engineering strategy to create purpose and meaning in life. You can't rely on fate to provide it for you, because waiting for fate means waiting to be saved as a victim. And while Miller makes a point to say there are real victims in this world who are forced into their situations and really do need saving, those of us who aren't in that situation should not choose to identify as a victim. We can save ourselves.

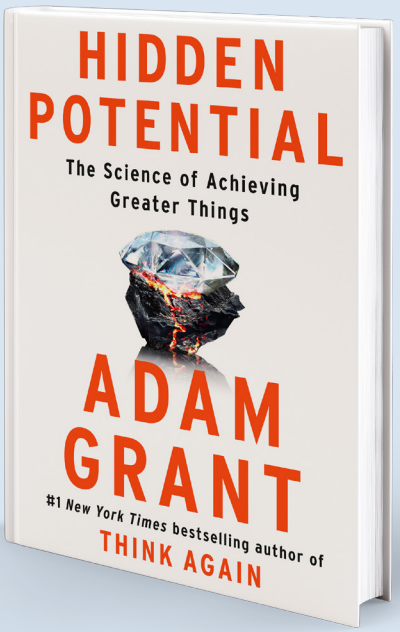
However, the only way to save ourselves from the existential vacuum is to take action. Find what brings us joy outside of ourselves. Find the community that will join your journey with you. Create a vision for the legacy you want to live. Then, work your way from a ten-year plan to a daily ritual in order to prioritize your goals and accomplish the vision of who you want to be.

## Wash. Rinse. Repeat.

Our lives are a continuous story and once one subplot finishes, it's easy to drift back into the vacuum, staring at the living room carpet and wondering where the crumbs came from. This *Hero on a Mission* plan enables you to take agency and keep yourself from drifting too far back there. As long as your actions are simple to execute, repeatable, and foundation, you'll be able to follow the roadmap straight to where you want to end up: With a legacy that reads just as profound as the eulogy you create to trigger the plan in the first place.

Miller talks about his success with the *Hero on a Mission* plan, "If I get up early and write every day, my entire life settles into a healthy rhythm." He didn't want to become a writer. He wanted to become a person who loves to write.

That's his encouragement to his readers: don't work to become the thing you love. Make a plan to become the person who loves to do the action you decide to take. Meaning only happens when you experience transformation. Transformation only happens when you take action. You have to put aside any tendencies that don't align you with hero energy in order to take the first step.



Be your own hero. Save your own self. Decide on transformative action and experience your purpose in life.

## Hidden Potential

**The Science of Achieving Greater Things**

*By Adam Grant*

Adam Grant is an organizational psychologist at Wharton, where he has been the top-rated professor for seven straight years. A #1 New York Times bestselling author and one of TED's most popular speakers, his books have sold millions of copies and been translated into 45 languages, his talks have been viewed over 35 million times, and his podcasts Re:Thinking and WorkLife have been downloaded over 65 million times. His pioneering research has inspired people to rethink fundamental assumptions about motivation, generosity, creativity, and potential.

*A Book Review by Soundview*

# Reaching New Levels of Mastery

In his book, ***Hidden Potential: The Science of Achieving Greater Things***, Adam Grant attempts to help people and groups grow and improve. He focuses his book on such topics as avoiding perfectionism, overcoming stagnation, and improving institutions such as schools and workplaces. He breaks his book up into three different sections, and he includes anecdotes, academic research, and statistics to help his reader understand the importance of each of his concepts.

## Skills of Character

The first set of skills Grant discusses are skills of character. He defines character as "your capacity to prioritize your values over your instincts" Grant sees character as being a plastic or moldable trait. It is not enough for a person to just know their values; more is required in order for a person to live by their values during difficult times. That is where character comes in.

Grant discusses discomfort and embracing awkwardness. For Grant, "the best way to accelerate growth is to embrace, seek, and amplify discomfort." He goes into a discussion of learning styles: an educational theory that maintains that different people learn in different ways. Grant believes that the idea of learning styles is a myth, and he believes that the research backs him up. People have learning preferences, he says, but these preferences can change over time. People develop these preferences based upon what makes them most comfortable. He wants his reader to embrace the discomfort of abandoning a preferred mode of learning, especially because a person's preferred way of learning does not always correspond to the way they learn best.

He moves on to discuss procrastination where he maintains that procrastination does not stem from laziness but rather from a person's desire to avoid the uncomfortable feelings associated with whatever activity is being put off. He believes in the value of doing uncomfortable things as he quotes Ted Lasso, "If you're comfortable, you're doin' it wrong." Grant believes that "it's not enough to simply accept minimal discomfort when it arises. Surprisingly, we're better off actively seeking out discomfort. To do this, people have to be willing

to try new things and make mistakes.

In his second chapter, Grant moves on to discuss ways a person can increase their ability to both absorb information and adapt to it. "Absorptive capacity is the ability to recognize, value, assimilate, and apply new information." This involves the way a person acquires information as well as the way they filter information. On one hand, people can be driven by reactivity and ego, but this often stops learning. Other people drive themselves by proactivity and ego. These people seek out input on what they do and are effectively able to respond to this feedback in ways that can make them better. Others are reactive and growth-oriented. These people are highly coachable because they are able to improve based upon feedback. The most effective people, however, are both proactive and growth oriented, and he describes such people as being sponges. They constantly seek improvement.

Grant's final chapter in this section focuses on dealing with imperfection. He demonstrates a rise in perfectionism in numerous countries including the United States. He believes one factor in this rise is social media where people are focused on curating images for these platforms. Perfectionism is not a good thing. In fact, research shows that perfectionism has no impact on a person's outcomes. If anything, people may perform worse if they are perfectionists than if they had more leeway in their expectations. There are three reasons that explain the harm of perfectionism. The first is that people who are perfectionists tend to focus on unimportant details, and this can cause them to overlook other important problems. Second, perfectionists tend to avoid situations in which they could fail, resulting in a failure to develop new skills. Finally, perfectionists are so harsh on themselves for making mistakes that they tend not to learn from them. In the end, he believes that perfectionism stunts growth. The key is for a person to create achievable and realistic standards and then adjust these standards as necessary. He admits that "finding beauty in imperfection is often easier said than done." Perfectionists do not benefit by hearing someone tell them to do their best. This can actually make performance worse. Rather, they benefit by people giving them both specific and difficult goals.

## Structure for Motivation

In the second part of his book, Grant moves on to scaffolding. The character skills he previously discussed are important, but sometimes more is required in order for a person to truly grow. In such situations, scaffolding becomes important. Scaffolding refers to aid that can be put into place that can help a person achieve what they would not otherwise be able to. Scaffolding frequently comes from outside of oneself, and as such, it is important for people to look outward to others when in need of help. It is important that scaffolding is particularly tailored to the task at hand and that it comes at the right time. Finally, it is important that scaffolding remains temporary so that people can put the structures to the side when it becomes appropriate.

In his fourth chapter, Grant discusses passion. He believes that a key to unlocking potential is "to transform the daily grind into a source of daily joy" He discusses the unsuitability of work obsession because obsessed individuals tend not to perform any better than other people. Rather, they are more prone to exhaustion, burnout, and boreout. He describes that latter as the emotional deadening that can occur from under stimulation. Hard work is important, but it is also important not to drive oneself to the point of obsession.

Instead of obsession, a person should aim for harmonious passion. This refers to "taking joy in a process rather than feeling pressure to achieve an outcome." When a person works within this zone, they are able to become absorbed in a project while the world slips away around them. This happens because the person is not motivated by shoulds. While his book focuses on this quality with musicians, he says it applies to many different areas, and that scaffolding is what will help people bring about that passion.

People can bring out the joy in an activity by incorporating deliberate play. This can come in many different forms including improvisational play and role-playing. He contrasts gamification with deliberate play. In the latter, people often incorporate gimmicks in order to provide subjects with a dopamine rush. This rush helps people avoid boredom. Grant does not believe that this is enough to help people turn something they dislike into something enjoyable the way that deliberate play can. With deliberate play, the goals is to change the very task in order to making it motivating

Next Grant discusses how a person can get unstuck. He believes that getting unstuck can prove to be one of the most difficult parts of skill development. This is where stagnation can come in. He believes that "a rut is not a sign that you've tanked. A plateau is not a cue that you've peaked. They're signals that it may be time to turn around and find a new route." He believes that sometimes this requires a person to choose a different path even if it requires backing up a bit. Researchers have found that after stagnating, people frequently decline before they are able to continue to improve. This improvement comes after a person has found a new method to help them overcome stagnation, and this involves trial and error. To demonstrate this, Grant discusses sports teams when a star player gets injured and cannot play. These teams tend to get worse briefly, but when the star player returns, they are better than ever because the other players had to, through trial and error, figure out ways to step up and improve. In many situations, there is not a clear guide on how to do this. Rather, people have to figure things out one step at a time. Usually, he believes that once a person starts moving down a new path, they will find they never really needed a map to begin with.

Grant discusses the role of teaching in the name of improvement. He references the old adage that people who cannot do something, teach it. He turns this around as he believes that teaching others is a primary way that people can learn and grow. He also finds that those who are experts in an area tend not to be the best teachers because they have forgotten the difficulties faced by beginners and tend to speak over their students' heads. Students often learn more from people who are not experts in a field for this particular reason. Grant comes to the conclusion that expert direction can lead people stranded and frustrated and that a person might learn better from someone with slightly

> **. . . expert direction can lead people stranded and frustrated and that a person might learn better from someone with slightly less expertise."**

less expertise. Another problem with looking to others for help is that often a learner will not share the same sets of strengths and weaknesses as those they are learning from. This means that the starting point towards a set destination is different for different people. Because of this, he recommends people getting advice and guidance from multiple people rather than just one.

In his last chapter in part two, Grant discusses facing daunting tasks. The key is to view daunting tasks as conquerable challenges rather than as threats. This requires a growth mindset and a belief in one's ability to improve. Sometimes scaffolding is necessary in order for a person to achieve this optimal mindset, and this scaffolding can come in the form of bootstrapping. Most people think bootstrapping refers to pulling oneself up out of a predicament or undesirable place without any help, but he says that this is not the case. Rather it refers to a person using the resources they have to improve their position. This is best achieved through interdependence rather than through independence. As an example Grant refers to a class he teaches at Wharton. He told his students that on a particularly difficult test, they could choose one person in their class with which to consult on a single question of their choosing. The students did better on the exam than students in previous years had. This is because the students studied together so they knew who knew what types of information. They worked interdependently.

Grant then moves on to two other types of scaffolding that can help a person overcome difficulties. The first is coaching. He believes that when people help others build confidence, they build their own confidence as well, and they also help a person find their own motivation. Second is through doubt. When people are doubted by experts, they can recoil and fail because they believe the opinions of experts. When people are doubted by less credible authorities, however, motivation can be increased because they want to prove others wrong. In this way, certain types of doubt can help people to achieve what they otherwise would not have been able to.

## Systems of Opportunity

Grant discusses systems of opportunity, beginning with educational opportunity. Grant describes how the education system in the United States "is built around a culture of winner take all" where people are pigeon holed by early perceived innate ability or lack thereof. Those who are perceived as gifted are given ample resources while those perceived as less capable are frequently punished. Finland, whose education system has been proven to be more effective than others, operates under the supposition that all students have abilities that manifest in different ways, and highly autonomous teachers are tasked with the responsibility of discovering and helping develop these abilities in each individual student. Furthermore, students frequently have the same teacher for at least two years in a row. This helps teachers get to know students well and because of this, teachers are able to tailor experiences for them more effectively.

Grant then discusses teams. Referencing the rescue of Chilean miners, he says that building teams is not just about gathering together the best group of experts. Rather, it is about relying on the strengths and contributions of all team members. A big part of effectiveness in groups relies on prosocial skills and the degree to which people understand the need they have for others. He maintains that people often choose the person who speaks the most to be the leader, finding that this to be is a measure of ability. He finds that reactive groups frequently do best with extraverted leaders, but introverts are better leaders for proactive teams where the contributions of many members lead to greater success.

In his final section, Grant focuses his attention on finding hidden gems in job interviews as well as in the college admissions process. He believes that in these arenas, people are at the risk of focusing too much on past achievement instead of looking for the potential for future achievement. It is important that people with authority in these positions focus on people who are still rising to the top amidst numerous roadblocks as well as to look for people who are capable of learning to do a job rather than just on how long a person has done a similar job in the past. He believes that context is important in the judgment of the suitability of individuals for a job or school.

Because he ends his book focusing on systems, Grant effectively shows how his principles can help people in their personal lives, professional lives as well as in their part as a member of a community. Adam Grant's book is highly readable because of the extent to which his concepts are backed up by stories of individuals as well as of groups. This leaves readers with a clear guide for success.

## THE SUMMARY IN BRIEF

Communication is at the heart of everything we do. It shapes relationships, fuels collaboration, and determines how effectively ideas become action. We rely on words, tone, and body language every day. Yet even with these tools, communication often falters. The problem isn't unclear messages; it's the gap between what is said and what is understood.

In ***How to Improve Your Communication Skills***, Alan Barker explores communication in its widest sense – not just the transfer of information, but the creation of shared meaning. At its core are conversations, the exchanges where trust is built, ideas are tested, and decisions are made. Barker highlights the skills that bring these moments to life, i.e. listening attentively, asking thoughtful questions, persuading with credibility and empathy, and telling stories that engage both head and heart.

***How to Improve Your Communication Skills*** also offers practical guidance for real-world challenges: presenting with confidence, running effective meetings, navigating tough conversations, and developing authentic networks.

Ultimately, communication is both an art and a discipline. When we focus less on the words we deliver and more on the understanding we create, we unlock the power to collaborate, influence, and lead.

## IN THIS EXECUTIVE BOOK SUMMARY:

- Recognize that communication is more than transmission – it succeeds only when true understanding is created.
- Use pattern-matching to interpret messages, connecting new information to mental models and past experiences.
- Build rapport by mirroring and matching visual, vocal, and verbal cues to foster mutual understanding.
- Strengthen conversations as the core of communication by asking questions, listening actively, and creating shared meaning.

## Part 1: What is communication?

Communicate – it's what we humans do. We're not alone, of course; every living thing sends messages in one way or another to help it navigate its environment or attract others. But we humans seem to have developed certain kinds of communication. We have an extraordinary command of spoken language, but just as impressive is our ability to read facial expressions, tone of voice, and gestures. Why, then, should communication be such a problem at work?

### The transmission model

We 'have' an idea. We 'put the idea into words'. We try to 'put our idea across'. The 'receiver' – hopefully – 'gets' the idea. This is the transmission model of communication. And it's very powerful. It governs all the processes and policies by which we communicate in organizations. It suggests that information is objective and measurable. Above all, it's simple. The transmission model is powerful, simple – and wrong.

Communication begins, not with transmission, but with understanding. No matter how effectively I transmit a message, it won't communicate to you if you don't understand it.

### Pattern-matching: The secret of understanding

So how *do* we understand? The simple answer is by pattern-matching. Mental models in our brains filter the information we pick up through our five senses and create meaning. Scientists call this process of filling in the gaps 'perceptual completion'. *How can I distinguish your voice from all the other noise in a crowded room? How can a taste bring back a childhood memory?* Our brains match information to a mental model and *complete* the pattern.

### Building rapport

Every time we meet another person, we're pattern-matching – seeking to understand each other by using our mental models. We usually refer to this process of establishing mutual understanding as 'building rapport'.

Rapport arises principally out of shared behavior. Or, more precisely, two kinds of behavior: Mirroring and Matching. Mirroring refers to the simultaneous 'copying' of another person's behavior. Matching usually has a built-in time lag. For example, if the other person uncrosses their legs, you would wait a few seconds and then do the same.

We can think of mirroring and matching in three kinds of behavior:

- Visual - posture, gestures, and facial expressions. The most important visual element is eye contact. Avoiding eye contact can be disconcerting while staring directly and constantly into the other person's eyes can feel intimidating.
- Vocal - we can vary our pitch (high or low), pace (fast or slow), and volume (loud or soft).
- Verbal - we build verbal rapport through the words we speak. An obvious way to build rapport verbally is to agree with what the other person is saying. An even more powerful technique is to ask a question.

### Communication: A new definition

Communication suffers not from garbled messages, information overload, or interruptions in transmission but because the process of creating shared understanding is breaking down. A clear sign of that breakdown is a lack of rapport.

### Conversation: The currency of communication

The fundamental tool of communication – the principal way by which we seek to share understanding – is conversation. Improving your communication skills means, more than anything else, developing your conversation skills.

## Part 2: Conversation: The basics

### How to start a conversation

How do you start a conversation, especially with someone you don't know? The key is to ask a question. Have a little store of questions ready. Look for something in your shared situation and ask a question relating to that. Keep it simple. It should be open, one that can't be answered with 'yes' or 'no'. Start with one of the six Ws – who, what, when, where, why and how. *How do you know the host? What interested you about this event?* Alternatively, start with a compliment or a relevant personal question. *I really enjoyed your talk. Tell me about that badge you're wearing.*

### Taking turns

The first golden rule of conversation is one speaker at a time.

To take your turn properly, you need to work out when to speak and what to say. And to do both of those things, you'll need to listen. By listening, you will be able to join the conversation naturally. First, come in on cue. Second, show that you've been listening. Third, say something relevant to what your companion has said.

The first golden rule of conversation is one speaker at a time.

### Using the Cooperative Principle

The second golden rule of conversation is to assume that the other person wants to say something meaningful to you. We call this assumption the Cooperative Principle.

The Cooperative Principle helps you take your turn more effectively. You can judge when your companion has finished making a point, or whether they need more time. You can then decide what to say yourself – which should link to what your companion has just said.

### Keeping the conversation on TRAC

The Cooperative Principle lays the foundation for four other assumptions we usually make in our conversations.

We usually assume that speakers in conversations will speak the truth, say something relevant to the topic of the conversation, contribute adequate information, and speak clearly. We can remember these maxims by using a simple acronym: TRAC — True, Relevant, Adequate, Clear.

### Making the most of small talk

One of the best ways to exercise your conversation skills is to hold some social, low-risk, low-stakes conversations.

Small talk is an opportunity to get to know other people and learn something from them. It's also an opportunity to build our own confidence in presenting ourselves to others. The best objective for a conversation is to make your companion feel good about themselves.

Small talk tends to be dominated by a few particular topics. Look for a topic that relates to the situation you find yourselves in or to the person you're talking to. To deepen the conversation, listen attentively. If your companion mentions the city where they went to school, use that detail to ask follow-up questions. Or use the link to tell a story of your own (keep it brief).

Sometimes the conversation will dry up. Or get stuck. That's okay. Have a store of moves ready that will allow you to end a conversation politely and respectfully – 'I hope you don't mind, but I have to…'.

## Part 3: Six ways to improve your conversations at work

### 1 – Clarify your objective

State your objective clearly at the start. This technique is called 'headlining'. For instance, *I want to talk to you about the development plan*.

Objectives roughly divide into two categories: exploring a problem and finding a solution. When you're thinking about your headline, ask: 'Problem or solution?' If you make your objective too specific at the start of the conversation, you might limit your options for success. In a negotiation, for example, think about different possible destinations – what's your preferred outcome, what would you be willing to settle for, and what's not negotiable?

### 2 – Manage your time

Conversations take time, and time is the one entirely non-renewable resource. Generally, an effective conversation will probably start quite slowly and get faster as it goes on. Manage time well, both for and in your conversations.

### 3 – Structure your thinking

You can improve your conversations enormously by giving them structure. The simplest way to structure a conversation is to break it in half. We can imagine thinking as a process in two stages. We do first-stage thinking when we're working out what we're thinking about; we do second-stage thinking when we're working out what to do about it. First-stage thinking explores reality and translates what we have found into language. Second-stage thinking then manipulates the language to decide on an action.

We can break down the two stages of thinking into four conversations:

- Relationship - an exploratory conversation seeking to build rapport and a shared understanding of our objective.
- Possibility - continues the exploration; it develops first-stage thinking and seeks to find new ways of looking at the problem.

- Opportunity - takes you into second-stage thinking; this is a planning conversation focused on future action.
- Action - involves agreeing what to do, who will do it, and when it will happen.

### 4 – Move beyond argument

If you want a conversation to move beyond argument, seek to do two things: distinguish ideas from people and think in parallel. We often identify with our own ideas. When that happens, criticizing an idea becomes, implicitly, a personal attack. When we think in parallel, everyone in the conversation should feel that we're thinking about the same issue or topic, and in the same way. The most satisfying conversations create the sense that we've found common ground.

The Ladder of Inference is another tool that can take our conversations beyond argument. At the bottom of the ladder is observation; at the top, action. We step onto the first rung of the ladder by selecting data (we choose what to look at). In the second rung, we infer meaning from our experience of similar data. In the third rung, we generalize those meanings into assumptions. In the fourth rung, we construct mental models (or beliefs) out of those assumptions. In the fifth rung, we act on the basis of our mental models.

### 5 – Make it visual

Many of our conversations use visual elements. There are lots of ways in which to make our thinking visual. We could draw on paper, draw on a flip chart, or build a model. Some of the most powerful visuals are the images we create in our listeners' minds with words we use.

### 6 – Summarize

Summarizing involves recognizing the specific point someone has made, appreciating the position from which they say it, and understanding the beliefs that inform that position.

## Part 4: The skills of enquiry

### Paying attention

'Seek first to understand, then to be understood.' We seek to understand by enquiring. And the skills of enquiry are the skills of listening. Listening starts with paying attention. Real listening means pausing our own thinking and allowing the speaker's thoughts to enter our mind.

Interrupting is the most obvious symptom of poor attention. We interrupt because we're making assumptions. Once you stop interrupting, the conversation will become quieter. Pauses will appear. Think of these pauses as junctions in the journey of your conversation.

### Treating the speaker as an equal

You'll only enquire well if you treat the speaker as an equal. Speaking raises our status; listening raises the other person's. If you raise your status, you automatically lower theirs. But raising their status might, in effect, lower yours.

Patronizing the speaker is the greatest enemy of equality in conversations.

### Cultivating ease

Good thinking happens in a relaxed environment. Cultivating ease will allow you to enquire more deeply and discover more ideas.

### Be encouraging

In order to liberate the other person's ideas, you may need to do more than pay attention, treat them as an equal, and cultivate ease. You may need to actively encourage them to share their ideas. One of the worst enemies of encouragement is competitiveness. Competition forces people to think only those thoughts that will help them win. Instead of competing, welcome the difference in your points of view. Then try to find common ground.

### Asking quality questions

Questions are at the heart of enquiry. We may stop ourselves from asking a question because we fear challenging authority, or looking stupid. Here are six main types of questions we can use:

- Closed questions – can only be answered with 'yes' or 'no'
- Leading questions – put the answer into the other person's mouth
- Controlling questions – help you to take the lead in the conversation
- Probing questions – build on an earlier question or dig deeper
- Open question – cannot be answered with 'yes' or 'no'
- Reflecting questions – restate the last remark with no new request

### Rationing information

Information is power. Withholding information can be a power move, putting you at an advantage over the other person. But offering too much information can also inter-

To ration information, don't interrupt, time your intervention, filter information, and don't give infomation to show off.

fere with enquiry; it can stop the other person thinking effectively. To ration information, don't interrupt, time your intervention, filter information, and don't give information to show off.

### Giving positive feedback

We use feedback to check that we've understood clearly. But feedback can do more: it can prepare us to switch from listening to speaking – from enquiry to persuasion. It can prepare us to move from first-stage thinking to second-stage thinking, from problem to solution. Begin your feedback by carefully reflecting your companion's idea back to them.

## Part 5: The skills of persuasion

The most successful persuasion will always include a great deal of influencing.

### Character, logic and passion

Persuasion combines three skills: Character (ethos), logic (logos), and passion (pathos).

Ethos is the skill of establishing trust and fostering respect. To develop your ethos, ask: 'Why should this person believe me?' Just saying you share someone's values isn't enough – you need to show it with examples.

Logos constructs an argument: it makes a case, finds reasons to support that case, links the reasons logically to the case, and uses the word 'because' to show the links. But logos never work in isolation. Every argument is based on assumptions. If your listener doesn't share your assumptions, logic alone won't persuade them.

Pathos is defined as an appeal to the emotions. The function of any emotion is to tell us what to do. So, if we want to persuade our audience to do something, we must engage their feelings.

### What's the big idea?

What do you want to say? A single idea is more likely to persuade your listener than a group of ideas because one strong idea is easier to remember. To find that big idea, ask three questions: What is my objective? Who am I talking to? What is the most important thing I have to say to them?

The best way to introduce your big idea might be to tell a story using the Situation, Problem, Question, Response (SPQR) method. Tell the listener something they already know and identify a problem that prompts your listener to ask a question. Your response should be your big idea.

### Arranging your ideas logically

Logic is the glue that binds ideas into arguments. An argument consists of three elements: a claim (the point you're arguing for), a reason (a statement that supports the claim), and the word 'because'. All the logic in your argument is tied up in that simple word: because. Look back at your big idea – that is your claim. It should provoke the question 'Why?' You must answer that question.

### Expressing your ideas

When we express our ideas, we need to combine the rational logos of our argument with the emotional and imaginative appeal of pathos. To express your ideas more vividly, use images, examples, and metaphors. By linking a topic to something the listener already knows, you create a bridge that allows them to cross over into your thinking.

### Remembering your ideas

The art of memory has been replaced by technology. But memory still plays an important part in persuading others. To remember your material, use visual aids such as mind-maps, flipcharts, and whiteboards.

### Delivering effectively

If you're saying one thing but your body is saying another, your listener is unlikely to believe you. To deliver your ideas well, maintain effective eye contact, use your voice well, and make your body language persuasive.

Professional persuaders observe their listeners' behavior and mirror it subtly. Try to match your own posture and movement to that of your listener.

## Part 6: Storytelling and the uses of narratives

### What is a story?

A story has four key features. First, it has a cast of characters, always doing something, interacting with their situation, their environment, or with one another. Second, it includes a moment of tension, a turning point or 'hinge' around which the story revolves. Third, it reaches a conclusion that gives the story social meaning. And fourth, it carries a moral – the 'so what' element, the reason for telling the story in the first place. A story without this final element will always leave us dissatisfied.

### How stories work

Stories are effective because they engage our attention. The human mind has a natural tendency to wander and daydream. A story latches on to that fantasizing tendency and channels it. And stories help us learn. They simulate experiences without us having to live through them; they create a sense of empathy and participation.

### How to tell a good story

To tell a good story, choose a message, choose your characters, and find the plot. Ask what you want your audience to think, feel, and do. Establish your story's subject, topic, and message. Identify the characters in the story, especially the hero. Map out the story's narrative arc.

### Using a narrative to explain

A narrative provides the underlying structure of a good story. We can use narrative structures to help explain and build your explanation around patterns of cause and effect.

### Using a narrative to persuade

We can also use a narrative structure to help us persuade. The trick is to link the narrative arc to the terms of the argument. A simple, powerful structure to do that is called ABT – *And, But, Therefore*.

## Part 7: Making a presentation

Think of a presentation as a formal conversation. It's not the most natural of conversations; you are speaking, and the audience is listening.

### Dealing with nerves

That nervous, jittery feeling is caused by adrenaline, a hormone secreted by your adrenal glands in the fight-or-flight response. Your task is to manage those nerves. And you can start by focusing on your breathing. Breathing in quickens the heartbeat and stimulates adrenaline production; breathing out does the opposite, slowing the heart and the production of adrenaline.

### Preparing for the presentation

The effective presenter understands that their presentation will be affected by a host of uncontrollable factors. You can't plan for the audience's mood. You may not even be able to foresee who'll be there. You can't plan for any sudden external development that might affect your topic. You can't plan for every question that you might be asked.

### Managing material

To make an effective presentation, you must take control of the material, the audience, and yourself.

To prepare the material, define your objective, analyze your audience, construct a message, create a structure, put it on note cards, design visuals, and rehearse. A presentation should *inspire* the audience.

### Controlling the audience

Your relationship with the audience matters much, much more than what you say. They'll forget most of what you say. But they'll remember you. Make eye contact and remember to smile. Animate your face and remember to make everything just a little larger than life so that your face can be 'read' at the back of the room. To control the audience, work on:

- Gestures - keep your gestures open, away from your body and into the room. Don't cross your hands behind your back, and don't put them in your pockets too much.
- Movement - moving about the room shows that you're making your own space, but rhythmic repetitive movement can be annoying.

### Looking after yourself

You will still be nervous as the moment of truth approaches. If you prepare adequately, you should be ready. Rehearse. Rehearsal helps you remember what you want to say, helps get the timing right, and helps you master nerves.

Just before you start, it can be useful to meet the audience and chat with them. It can break the ice and put you at ease. Pay attention to your breathing and articulate your words.

Tough conversations demand more than good intentions. They demand clear thinking, a clear strategy, and clear tactics.

### Answering Questions

Many presenters are as worried about the question session as about the presentation itself. Have a strategy for answering questions. For instance, decide when to take questions, anticipate the most likely questions, answer concisely and honestly, and if you don't know the answer, say so.

## Part 8: Holding a meeting

### How groups work

A meeting is a group of people thinking purposefully together. The group should be thinking in the same way at the same time. Groups have two objectives: task objectives and social objectives.

### Why meetings fail

There are numerous reasons why meetings fail. For example: the meeting is unnecessary, it is held for the wrong reason, the objective is unclear, the wrong people are there, the chair fails to control the meeting effectively, the timing is wrong, and the environment is unhelpful.

### Why are you meeting?

There are a number of good reasons for meeting: to exchange and evaluate information, to solve problems, to resolve conflict, and to inspire.

### Who is attending?

You will probably be taking one of three roles in a meeting. You might be the chair, you might be a participant, and you might be the administrator – responsible for recording the meeting, among other things.

### What's on the agenda?

The best meetings have a single, public agenda. The word 'agenda' is Latin for 'things to be done', so each agenda item is a task. As you gather items for the agenda, look for a logical order or sequence and, if you can, a common thread that holds all the agenda items together. No meeting, or part of a meeting, should last longer than 90 minutes.

### Where are you meeting?

The venue can have a powerful effect on the outcome of your meeting. Is it conveniently located? Is it accessible for people with disabilities? Are you meeting on home ground or on a manager's 'territory'? Everybody should be able to see each other and any screen or monitor. Seats should be comfortable enough to avoid numbness but not so comfortable that people can snooze!

### Meeting online

Meeting online can cut costs and save time; often, they're environmentally friendly. But they demand particular skills from the chair and participants.

When chairing online you should: give plenty of notice, know the technology, create a clear agenda, enforce one conversation at a time, schedule breaks, leave space for remarks, make a closing remark, have a strong internet connection, keep your camera on, dress for success, eliminate distractions, think about your camera background, respect other people's contributions, and know when to speak and when to listen.

### How will you chair?

Whether in a room or online, chairing requires you to do three things: keep the group focused on the task at hand, exploit the contributions of each individual, and develop an atmosphere in which the group can think together.

### Chairing responsibilities

The chair is responsible for making the procedural conventions clear at the opening of the meeting. Lead by example. Abide by your own rules: start on time, state the purpose or objective of the meeting, make all suitable introductions, announce procedures, and outline the meeting timetable.

Closing the meeting well is as important as opening it well. People must know exactly what will happen after the meeting, and who is responsible for making it happen. Delegate as many actions as possible. Summarize what has been decided. Make sure to emphasize the achievements of the meetings and thank everybody for attending and contributing.

## Part 9: Tough conversations

### What makes a conversation tough?

Tough conversations have three key features – the fog of uncertainty particularly in reading the other person's intentions; emotional arousal (emotions cloud our judgment, they often close down the rational part of our brain completely); and a combat mentality (happens when the first two features lead us to use defensive tactics).

### How we make tough conversations tougher

We can make tough conversations tougher by making poor tactical choices. The fog of uncertainty encourages us to blame the other person for the problem and creates a delusion of good intentions. Blame is, in fact, a completely natural and understandable reaction to uncertainty.

Faced with these uncertainties, our minds tend to respond emotionally. Emotional arousal causes us to oversimplify the problem and seek oversimplified solutions, forced either/or decisions, or generalized judgments. The problem, of course, is that this emotional arousal only serves to make a tough conversation tougher.

### Managing tough conversations

How can we break the cycle? We can only manage tough conversations better if we respect ourselves, the other person, and the conversation itself. Self-respect means understanding our own needs and working to meet them. Respecting the other person means remembering their needs and that they are trying to meet them. Respecting the conversation means thinking about it as a landscape to be navigated together.

### Three steps towards better tough conversations

We can adopt a number of techniques to break the cycle of a tough conversation: we can clear the fog of uncertainty by assuming constructive intent, asking questions, and using the Ladder of Inference. We can reduce emotional arousal by working on our breathing and our voice and by paraphrasing the other person's remarks before responding to them. We can transform combat into collaboration by using the 'how to' technique and by responding carefully to the four forms of adversarial thinking: critical thinking, ego thinking, political thinking, and rigid thinking.

Tough conversations demand more than good intentions. They demand clear thinking, a clear strategy, and clear tactics. We need to practice these techniques before finding ourselves in a tough conversation.

## Part 10: Reworking networking

### The power of a network

Effective networkers understand that our wellbeing – and our success – depends on our relationships with others, on the communities of which we are a part. We need to nurture those communities, and networking is one way to do that. Networking is the process of growing and maintaining our personal and professional network.

### Is networking changing?

Networking has changed since the Covid-19 pandemic. Many businesses retain a preference for online networking in terms of travel costs and environmental impact, not to mention the wider access to potential networking contacts. After all, an hour on Zoom can feel hard to beat. Online networking is undoubtedly here to stay. But face-to-face networking remains important. Networking can be strategic or spontaneous. Strategic networking is planned; spontaneous networking happens by chance.

### What makes networking work

Effective networking relies on three qualities. The first is an abundance of mentality. People with an 'abundance of mentality' understand that human resources – knowledge, intelligence, imagination – produce more when they're shared. Developing an abundance mentality means sacrificing something of our own: power, security, and certainty.

The second quality is generosity. An abundance of mentality allows us to give unconditionally. And the most important thing we can give in a conversation is attention.

The third quality is reciprocity. None of us can survive without others' help. Reciprocity helps build trust, which is the only sure foundation for cooperation and collaboration.

### Preparing to network

To prepare to network, you need to build your brand. Your personal brand is what others know you to be – your accomplishments, beliefs, values, and attitudes. To build a brand, we must create a self-introduction that develops rapport and generates interest; it can be one of your greatest networking assets. Keep your self-introduction short: use a verb, be distinctive, provide hooks, and engage. Rehearse. Practice makes perfect.

Now that you've prepared yourself, you need to set clear goals for the networking event.

Communication goes beyond transmitting information – it's about creating shared understanding.

### Networking conversations

However much you prepare, the moment comes when you have to get going. You have to walk into the room and start talking to somebody. At the start of a networking conversation, practice good eye contact and work on establishing rapport. It's more than likely that you won't remember the person's name within the first few minutes of your conversation. A trick to help a name stick is to use their name on first introductions and once or twice during the conversation.

Keep the conversation going by asking questions such as, *'What do you do for a living?'*; '*When did you start on this line of business?'* Be careful with the question 'Why?' It's difficult not to sound like an interrogator using that word however hard you try. Summarize and paraphrase. Check your understanding of what the other person is saying.

Practice joining groups. People worry about how to break into group conversations that are already in progress. One of the best ways to manage a group is to arrive early. You can judge the tightness of a group by how closely people are standing to each other. Conversations rarely survive being extended beyond three people. Look for two people talking and gently insinuate yourself as a third. Make eye contact. Respond to what someone is saying with smiles and nods and ask a question as your first contribution – it's a good way to enter a conversation without being too rude. Find different ways to enter a space by asking permission, such as, *'Excuse me, I don't mean to interrupt, but I overheard you talking about …'*

Close the conversations with care; never leave someone abrupt. Of course you could close a conversation by offering your business card. Business cards are gifts – treat them as such. Keep your card in good condition. Give your card respectfully and receive cards with respect.

### Following up and building your network

Don't waste the opportunities you've worked so hard for. Having contacts is of little use if you don't use them. There are lots of ways of reconnecting to people you have met. You could follow up with gifts of information, links to resources or other people, or ask for help.

Think about each networking relationship as being like a bank account. Make deposits and take care of how you make withdrawals. Use every opportunity to practice your networking skills.

## Conclusion

Communication goes beyond transmitting information – it's about creating shared understanding. People interpret meaning through mental models, pattern recognition, and rapport built with verbal, vocal, and visual cues. At work, breakdowns usually stem from lost understanding, not unclear messages. Conversations are the core, strengthened by open questions, active listening, and clarity (TRAC: True, Relevant, Adequate, Clear). Even small talk can build rapport. Structured discussions move from exploring problems to identifying opportunities and agreeing on actions. Persuasion relies on credibility, logic, and emotion, with stories making messages stick.

Strong communicators practice enquiry: listening fully, asking good questions, treating others as equals, and giving constructive feedback. Success in meetings, presentations, and tough conversations depends on preparation, clear goals, and respect. Meetings require focused agendas, presentations need confident delivery, and difficult discussions call for managed emotions and collaborative intent. Networking extends communication into lasting relationships, built on authenticity and reciprocity. In every context, true communication means achieving understanding.

# How Will You Measure Your Life?

by Clayton M. Christensen
James Allworth
and Karen Dillon

## THE SUMMARY IN BRIEF

In 2010, world-renowned innovation expert Clayton M. Christensen gave a powerful speech to the Harvard Business School's graduating class. Drawing upon his business research, he offered a series of guidelines for finding meaning and happiness in life. He used examples from his own experiences to explain how high achievers can all too often fall into traps that lead to unhappiness.

The speech was memorable not only because it was deeply revealing but also because it came at a time of intense personal reflection: Christensen had just overcome the same type of cancer that had taken his father's life. As Christensen struggled with the disease, the question, "How do you measure your life?" became more urgent and poignant, and he began to share his insights more widely with family, friends and students.

In this groundbreaking book, Christensen puts forth a series of questions: How can I be sure that I'll find satisfaction in my career? How can I be sure that my personal relationships become enduring sources of happiness? How can I avoid compromising my integrity — and stay out of jail? Using lessons from some of the world's greatest businesses, he provides incredible insights into these challenging questions.

*How Will You Measure Your Life?* is full of inspiration and wisdom and will help students, midcareer professionals and parents alike forge their own paths to fulfillment.

## IN THIS SUMMARY, YOU WILL LEARN:

- How to think about your life and purpose.
- How to get equipped to lead the type of life to which you aspire.
- What critical decisions can bring happiness and success in life.
- How to find happiness in your career.
- How to find happiness in your relationships.

# THE COMPLETE SUMMARY: **HOW WILL YOU MEASURE YOUR LIFE?**

**by Clayton M. Christensen**

**The authors:** Clayton M. Christensen is the Kim B. Clark Professor at Harvard Business School, the author of seven books and the cofounder of four companies, including the innovation consulting firm Innosight. James Allworth studied at the Australian National University, where he graduated with First Class Honors, and Harvard Business School, where he was named a Baker Scholar. He previously worked at Booz & Company and Apple. Karen Dillon is the former editor of the Harvard Business Review. She is a graduate of Cornell University and Northwestern University's Medill School of Journalism.

## SECTION ONE: FINDING HAPPINESS IN YOUR CAREER

## What Makes Us Tick

When you were 10 years old and someone asked you what you wanted to be when you grew up, anything seemed possible. Your answers then were guided simply by what you thought would make you really happy.

There are a determined few who never lose sight of aspiring to do something that's truly meaningful to them. But for many of us, as the years go by, we allow our dreams to be peeled away. We pick our jobs for the wrong reasons, and then we settle for them.

Too many of us who start down the path of compromise will never make it back. Considering the fact that you'll likely spend more of your waking hours at your job than in any other part of your life, it's a compromise that will always eat away at you. But you need not resign yourself to this fate.

When we find ourselves stuck in unhappy careers — and even unhappy lives — it is often the result of a fundamental misunderstanding of what really motivates us.

### A Better Theory of Motivation

There are two broad camps on the question of how the concepts of incentives and motivation relate to each other.

Back in 1976, two economists, Michael Jensen and William Meckling, published a paper that has been committed to memory by those in the first camp. The paper, which has been one of the most widely cited of the past three decades, focused on a problem known as agency theory, or incentive theory: why don't managers always behave in a way that is in the best interest of shareholders? The root cause, as Jensen and Meckling saw it, is that people work in accordance with how you pay them.

Well, there is a second school of thought — often called two-factor theory, or motivation theory — that turns the incentive theory on its head. It acknowledges that you can pay people to want what you want — over and over again. But incentives are not the same as motivation. True motivation is getting people to do something because they want to do it. This type of motivation continues in good times and in bad.

Frederick Herzberg, probably one of the most incisive writers on the topic of motivation theory, published a breakthrough article in the *Harvard Business Review* focusing on exactly this.

Herzberg notes that the common assumption that job satisfaction is one big continuous spectrum is not actually the way the mind works. Instead, satisfaction and dissatisfaction are separate, independent measures. This means, for example, that it's possible to love your job and hate it at the same time. This theory distinguishes between two different types of factors: hygiene factors and motivation factors.

On one side of the equation, there are the elements of work that if not done right will cause us to be dissatisfied. These are called hygiene factors. Hygiene factors are things like status, compensation, job security, work conditions, company policies and supervisory practices.

Interestingly, Herzberg asserts that compensation is a hygiene factor, not a motivator. Compensation is a hygiene factor. You need to get it right. But all you can

aspire to is that employees will not be mad at the company and each other because of compensation.

This is an important insight from Herzberg's research: if you instantly improve the hygiene factors of your job, you're not going to suddenly love it. At best, you just won't hate it anymore. The opposite of job dissatisfaction isn't job satisfaction but rather an absence of job dissatisfaction. They're not the same thing at all.

### The Balance of Motivators and Hygiene Factors

So, what are the things that will truly, deeply satisfy us, the factors that will cause us to love our jobs? These are what Herzberg's research calls motivators. Motivation factors include challenging work, recognition, responsibility and personal growth. Feelings that you are making a meaningful contribution to work arise from intrinsic conditions of the work itself. Motivation is much less about external prodding or stimulation and much more about what's inside of you and inside of your work.

### If You Find A Job You Love …

The theory of motivation — along with its description of the roles that incentives and hygiene factors will play — has given me better understanding of how people become successful and happy in their careers. If done well, management is among the most noble of professions. You are in a position where you have eight or ten hours every day from every person who works for you. I realized that if the theory of motivation applies to me, then I need to be sure that those who work for me have the motivators too. ●

## The Balance of Calculation and Serendipity

Understanding what makes us tick is a critical step on the path to fulfillment. But that's only half the battle. You actually have to find a career that both motivates you and satisfies the hygiene factors. You have to balance the pursuit of aspirations and goals with taking advantage of unanticipated opportunities.

### Balancing Emergent and Deliberate

I'm always struck by how many of my students and the other young people I've worked with think they're supposed to have their careers planned out step by step for the next five years. High-achievers and aspiring high-achievers too often put pressure on themselves to do exactly this.

But having such a focused plan really only makes sense in certain circumstances.

In our lives and in our careers, whether we are aware of it or not, we are constantly navigating a path by deciding between our deliberate strategies and the unanticipated alternatives that emerge. Each approach is vying for our minds and our hearts, making its best case to become our actual strategy. Neither is inherently better or worse; rather, which you should choose depends on where you are on the journey. Understanding this — that strategy is made up of these two disparate elements and that your circumstances dictate which approach is best — will better enable you to sort through the choices that your career will constantly present.

If you have found an outlet in your career that provides both the requisite hygiene factors and motivators, then a deliberate approach makes sense. Your aspirations should be clear, and you know from your present experience that they are worth striving for. Rather than worrying about adjusting to unexpected opportunities, your frame of mind should be focused on how best to achieve the goals you have deliberately set.

But if you haven't reached the point of finding a career that does this for you, then, like a new company finding its way, you need to be emergent. This is another way of saying that if you are in these circumstances, experiment in life. As you learn from each experience, adjust. Then iterate quickly. Keep going through this process until your strategy begins to click. ●

## Your Strategy Is Not What You Say It Is

You can talk all you want about having a strategy for your life, understanding motivation and balancing aspirations with unanticipated opportunities. But ultimately, this means nothing if you do not align those with where you actually expend your time, money and energy.

### Getting the Measure of Success Wrong

More than a decade ago, Seattle-based SonoSite was founded to make handheld ultrasound equipment — little machines that had the potential to truly change health care. Prior to these machines, the only thing that most family doctors and nurses could do when performing an exam was to listen and feel for problems beneath the skin. SonoSite's handheld ultrasound machines, however, made it affordable and easy for primary care doctors and nurse practitioners to see inside their patients' bodies.

SonoSite had two families of handheld products. Its principal product, dubbed the Titan, was about as big as a laptop computer. The other, branded the iLook, was less than half the size of the Titan — and one-third the price.

The iLook was not as sophisticated as the Titan or as profitable, but it was much more portable. The company's president and CEO, Kevin Goodwin, knew there was a promising market for it — the iLook had managed to generate a thousand sales leads in the first six weeks after its introduction. It became clear that if SonoSite didn't sell it, someone else was likely to develop the same compact, inexpensive technology and disrupt the sales of the more expensive machines — and SonoSite itself.

Eager to see firsthand how customers were responding to the new, smaller product, Goodwin asked to attend a sales call with one of the company's top salespeople.

The salesman sat down with the customer and proceeded to sell the Titan — the laptop ultrasound. He didn't even pull the iLook handheld out of his bag. After 15 minutes, Goodwin decided to intervene.

"Tell them about the iLook," Goodwin prompted the salesman. But he was completely ignored. The salesman continued to extol the virtues of the Titan. Goodwin asked one of his best salespeople three times to sell the iLook — in front of the customer. Each time, he was completely dismissed.

The salesman wasn't deliberately trying to defy Goodwin. In fact, he was doing exactly what the company wanted him to do — sell the product that provided the highest return.

The problem was that the salespeople were all on commission, and success for them was defined by the total value of their sales and gross margin dollars. It was much easier for Goodwin's best salesman to sell one of the laptop-size ultrasound machines than it was to sell five of the little products. In other words, Goodwin thought that he was giving clear instructions into the salesman's ear. But the compensation system was shouting the opposite instructions into his other ear.

### Allocation Resources Among Your "Businesses"

In the words of Andy Grove, "To understand a company's strategy, look at what they actually do rather than what they say they will do." Resource allocation works pretty much the same way in our lives and careers. Gloria Steinem framed strategy for her world as Andy Grove did for his: "We can tell our values by looking at our checkbook stubs." The dilemma of what machine to pull out of a salesperson's bag is very similar to the dilemma we all face near the end of a workday: do I spend another half hour at work to get something extra done, or do I go home and play with my children?

Here is a way to frame the investments that we make in the strategy that becomes our lives: we have resources — which include personal time, energy, talent and wealth — and we are using them to try to grow several "businesses" in our personal lives. These include having a rewarding relationship with our spouse or significant other, raising great children, succeeding in our careers, contributing to our church or community and so on. Unfortunately, however, our resources are limited, and these businesses are competing for them. It's exactly the same problem that a corporation has.

With every moment of your time, every decision about how you spend your energy and your money, you are making a statement about what really matters to you.

How do you make sure that you're implementing the strategy you truly want to implement? Watch where your resources flow — the resource allocation process. If it is not supporting the strategy you've decided upon, you run the risk of a serious problem. If the decisions you make about where you invest your blood, sweat and tears are not consistent with the person you aspire to be, you'll never become that person. ●

## SECTION TWO: FINDING HAPPINESS IN YOUR RELATIONSHIPS

## The Ticking Clock

The relationships you have with family and close friends are going to be the most important sources of happiness in your life. But you have to be careful. When it seems like everything at home is going well, you will be lulled into believing that you can put your investments in these relationships onto the back burner.

### Investing for Future Happiness

Many of us thrive on the intensity of a demanding job — one that we believe in and enjoy. We like proving what we can do under pressure. Our projects, our clients and our colleagues challenge us. We invest ourselves in our jobs. But in order to accomplish all this, we start to think of our jobs as requiring all our attention — and that's exactly what we give them.

Unfortunately, the same consequences that businesses face for failing to invest for the future apply to us too.

While most of us do have a deliberate strategy for creating deep, love-filled relationships with members of our family and our friends, in reality, we invest in a strategy for our lives that we would never have aspired to: having shallow friendships with many but deep friendships with none; becoming divorced, sometimes repeatedly; and having children who feel alienated from us within our own homes or who are raised by a stepparent sometimes thousands of miles away.

And we can't turn the clock back. ●

## What Job Did You Hire That Milkshake For?

Almost everyone has heard of the discount furniture store IKEA. IKEA has taken a totally different approach. Rather than organizing themselves around the characterization of particular customers or products, IKEA is structured around a job that customers periodically need to get done.

A job? Through my research on innovation for the past two decades, my colleagues and I have developed a theory about this approach to marketing and product development, which we call "the job to be done." The insight behind this way of thinking is that what causes us to buy a product or service is that we actually hire products to do jobs for us. The mechanism that causes us to buy a product is, "I have a job I need to get done, and this is going to help me do it."

### Cheaper? Chocolatier? Chunkier?

The job-to-be-done theory began to coalesce in a project that I worked on with some friends for one of the big fast-food restaurants. The company was trying to ramp up the sales of their milkshakes. The company had spent months studying the issue. They worked and worked on making the milkshake better as a result — but these improvements had no impact on sales or profits whatsoever. The company was stumped.

My colleague Bob Moesta then offered to bring a completely different perspective to the milkshake problem: "I wonder what job arises in people's lives that causes them to come to this restaurant to 'hire' a milkshake?"

So they stood in a restaurant for hours on end, taking very careful data: What time did people buy these milkshakes? What were they wearing? Were they alone?

Surprisingly, it turned out that nearly half of the milkshakes were sold in the early morning. The people who bought those morning milkshakes were almost always alone; it was the only thing they bought; and almost all of them got in a car and drove off with it.

We came back another morning and stood outside the restaurant. As customers emerged we essentially asked each of them in language that they could understand, "Excuse me. Can you help me understand what job you are trying to do with that milkshake?"

As we put all the answers together, it became clear that the early-morning customers all had the same job to do: they had a long and boring ride to work. They needed something to do while driving to keep the commute interesting. They weren't really hungry yet, but they knew that in a couple of hours, they'd face a mid-morning stomach rumbling.

### What Job Are You Being Hired For?

If you work to understand what job you are being hired to do both professionally and in your personal life, the payoff will be enormous.

Like those milkshake buyers, you and your wife can't always articulate what the fundamental jobs are that you each are personally trying to do, let alone articulate the fundamental jobs that your wife has for which she might hire a husband. Understanding the job requires the critical ingredients of intuition and empathy. You have to be able to put yourself not just in her shoes but her chair — and indeed, her life. More important, the jobs that your spouse is trying to do are often very different from the jobs that you think she should want to do.

It's easy for any of us to make assumptions about what our spouse might want, rather than work hard to understand the job to be done in our spouse's life.

### Sacrifice and Commitment

This may sound counterintuitive, but I deeply believe that the path to happiness in a relationship is not just about finding someone who you think is going to make you happy. Rather, the reverse is equally true: the path to happiness is about finding someone who you want to make happy, someone whose happiness is worth devoting yourself to.

Thinking about your relationships from the perspective of the job to be done is the best way to understand what's important to the people who mean the most to you. It allows you to develop true empathy. Asking yourself, "What job does my spouse most need me to do?" gives you the ability to think about it in the right unit of analysis.

But you have to do that job. You'll have to devote your time and energy to the effort, be willing to suppress your own priorities and desires, and focus on doing what is required to make the other person happy. ●

## Sailing Your Kids on Theseus's Ship

With the best of intentions, we hand our children off to a myriad of coaches and tutors to provide them with enriching experiences — thinking that will best prepare our kids for the future. But helping our children in this way can come at a high cost.

### Never Outsource the Future

The history of outsourcing in the American semiconductor industry, for example, chronicles the woes that betide companies that blindly adhere to outsourcing. At the outset, it made all the sense in the world to outsource the simplest of the steps entailed in making semiconductor products to Chinese and Taiwanese suppliers. The American semiconductor companies thought they were safe as they retained the more complex and profitable steps, such as product design.

But although the Asian suppliers started out by assembling only the simplest of products, they didn't want to stay there. It was low-cost work, and almost anyone could do it. They knew that they would be vulnerable to losing that work to an even lower-cost assembler. So those Asian suppliers strove to keep moving up-market, fabricating and assembling ever more sophisticated products. Now the suppliers in Taiwan, Korea, Singapore and China have become capable of making products and components that their American customers, who outsourced to these suppliers in the first place, could no longer hope to ever make.

### The Greek Tragedy — Inside Our Families

As a general rule, in prosperous societies we have been outsourcing more and more of the work that a generation ago was done "internally" in the home. There was so much work going on that children essentially worked for their parents.

Step by step over the past 50 years, it has become cheaper and easier to outsource this work to professionals. Now, the only work being done in many of our homes is a periodic cleanup of the mess that we make. In the absence of work, we've created a generation of parents who selflessly devote themselves to providing their children with enriching experiences — so-called soccer moms, a term that wasn't even part of the American lexicon until 15 years ago. They lovingly cart children around to soccer, lacrosse, basketball, football, hockey and baseball teams; dance, gymnastics, music and Chinese lessons; send them on a semester abroad to London and to so many camps that many children don't even have the time to get a part-time job in the summer.

Are the children developing from these experiences the deep, important processes such as teamwork, entrepreneurship and learning the value of preparation? Or are they just going along for the ride? When we so heavily focus on providing our children with resources, we need to ask ourselves a new set of questions: Has my child developed the skill to develop better skills? The knowledge to develop deeper knowledge?

### Children Learn When They Are Ready to Learn

Denying children the opportunity to develop their processes is not the only way outsourcing has damaged their capabilities either. There is something far more important at risk when we outsource too much of our lives: our values.

In outsourcing much of the work that formerly filled our homes, we have created a void in our children's lives that often gets filled with activities in which we are not involved. As a result, when our children are ready to learn, it is often people whom we do not know or respect who are going to be there.

There's a wonderful conundrum left to us by the Greeks. It was first put to print by the author Plutarch, and it's known as the Ship of Theseus. As a tribute to the mythical founder of their city — famed for slaying the Minotaur — the Athenians committed to keeping Theseus's ship seaworthy in the harbor of Athens. As parts of the boat decayed, they were replaced ... until eventually, every last part of the boat had changed.

The conundrum was this: given that every last part of it had been replaced, was it still Theseus's ship? The Athenians still called it Theseus's Ship, but was it?

If your children gain their priorities and values from other people ... whose children are they? Children need to do more than learn new skills. The theory of capabilities suggests they need to be challenged. They need to solve hard problems. They need to develop values. Children will learn when they're ready to learn, not when you're ready to teach them; if you are not with them as they encounter challenges in their lives, then you are missing important opportunities to shape their priorities — and their lives. ●

## The Schools of Experience

Helping your children learn how to do difficult things is one of the most important roles of a parent. It will be critical to equipping them for all the challenges that life

will throw at them down the line. But how do you equip your kids with the right capabilities?

### Is it Really the Right Stuff?

In 1979, writer Tom Wolfe captured the public imagination with his depiction of one of the most competitive professional environments in the world: the screening of American fighter pilots. To find out who should rise to the top, the pilots battled it out in an ever-increasing test of nerves, a kind of Darwinian gauntlet. Early NASA executives had decided this was how to identify who had been born with the "right stuff." Those who thrived under the white-knuckle pressure of the program were deemed natural-born heroes.

Many companies looking to make top staffing decisions tend to replicate the same kind of thinking: that somehow there is a definitive way to identify the difference between the good and the great. In business, the "test" is what a resume shows; you can tell by this whether a candidate is likely to thrive in a challenging new position.

If finding the right stuff is a good way to identify top talent, why is it so common to see executives with a successful track record in one company coming into another company with great fanfare — only to be quickly dubbed a failure and ushered out?

It wasn't until I came across work initially developed by Morgan McCall, a professor at the University of Southern California, in a book called *High Flyers* that I finally found a theory that could help people make better decisions about whom to hire in their future.

The "right stuff" thinking lists skills that are correlated with success. It is, using the description of theory discussed earlier, looking to see whether job candidates have wings and feathers. McCall's schools of experience model asks whether they have actually flown, and if so, in what circumstances. This model helps identify whether someone, in a earlier assignment, has actually wrestled with a problem similar to the one he will need to wrestle with now.

### Sending Your Kids to the Right School

Thinking back on your own life, I bet you had many visits to various schools of experience, some more painful than others. Obviously, it will help a lot if you can work out which courses will be important for you to master before you need them.

When I worked with Boy Scouts over the years, I always wanted the kids to take responsibility for organizing their own camping trips rather than letting the parents step in to do it. When they had to do it themselves, they learned how to plan and organize, how to divide responsibilities, how to communicate among a group and to appreciate what they'd actually put their own work into.

It sure would have been easier to allow the parents to work through and divide up the tasks on the "to do" list for every trip. We probably would have prepared efficiently for every eventuality — and the boys would certainly have had fun. All they would have had to do was show up. But we would have been denying them important courses — leadership, organization and accountability.

The natural tendency of many parents is to focus entirely on building your child's resume: good grades, sports successes and so on. It would be a mistake, however, to neglect the courses your children need to equip them for the future. Once you have that figured out, work backward: find the right experiences to help them build the skills they'll need to succeed. It's one of the greatest gifts you can give them. ●

## The Invisible Hand Inside Your Family

One of the most powerful tools to enable us to close the gap between the family we want and the family we get is culture.

### How Does Culture Form in a Company?

Culture is far more than general office tone or guidelines. Schein defined culture and how it is formed in these terms:

*Culture is a way of working together toward common goals that have been followed so frequently and so successfully that people don't even think about trying to do things another way. If a culture has formed, people will autonomously do what they need to do to be successful.*

Those instincts aren't formed overnight. Rather, they are the result of shared learning — of employees working together to solve problems and figuring out what works.

### This Is the Way Our Family Behaves

The parallels between a business and a family should be clear. Just like a manager who wants to count on employees using the right priorities to solve problems, parents want to set those priorities too so that family members will solve problems and confront dilemmas instinctively whether or not the parents are there guiding or observing. Kids won't have to stop and think about what Mom or Dad wants them to do — they'll

just go about it because their family culture has dictated, "This is the way our family behaves."

What is important is to actively choose what matters to you and then engineer the culture to reinforce those elements, as Schein's theory shows. It entails choosing what activities we pursue and what outcomes we need to achieve so that as a family, when we have to perform those activities again, we all think, "This is how we do it."

As people work together to solve challenges repeatedly, norms begin to form. The same is true in your family: when you first run up against a problem or need to get something done together, you'll need to find a solution.

It's not just about controlling bad behavior; it's about celebrating the good. This is what is so powerful about culture. It's like an autopilot. What is critical to understand is that for it to be an effective force, you have to properly program the autopilot — you have to build the culture that you want in your family. If you do not consciously build it and reinforce it from the earliest stages of your family life, a culture will still form — but it will form in ways you may not like. Although it's difficult for a parent to always be consistent and remember to give your children positive feedback when they do something right, it's in these everyday interactions that your culture is being set. ●

## SECTION THREE: STAYING OUT OF JAIL

# Just This Once…

Most of us think that the important ethical decisions in our lives will be delivered with a blinking red neon sign: CAUTION: IMPORTANT DECISION AHEAD. Never mind how busy we are or what the consequences might be. Almost everyone is confident that in those moments of truth, he or she will do the right thing.

The problem is, life seldom works that way. It comes with no warning signs. Instead, most of us will face a series of small, everyday decisions that rarely seem like they have high stakes attached. But over time, they can play out far more dramatically.

### 100 Percent of the Time Is Easier Than 98 Percent of the Time

Many of us have convinced ourselves that we are able to break our own personal rules "just this once." In our minds, we can justify these small choices. None of those things, when they first happen, feels like a life-changing decision. The marginal costs are almost always low. But each of those decisions can roll up into a much bigger picture, turning you into the kind of person you never wanted to be. That instinct to just use the marginal costs hides from us the true cost of our actions.

The first step down that path is taken with a small decision. You justify all the small decisions that lead up to the big one, and then you get to the big one, and it doesn't seem so enormous anymore. You don't realize the road you are on until you look up and see that you've arrived at a destination you would have once considered unthinkable.

If you give in to "just this once" based on a marginal-cost analysis, you'll regret where you end up. It's easier to hold your principles 100 percent of the time than it is to hold to them 98 percent of the time. The boundary — your personal moral line — is powerful because you don't cross it; if you have justified doing it once, there's nothing to stop you from doing it again. Decide what you stand for. And then stand for it all the time.

# Epilogue

I promise my students that if they take the time to figure out their life's purpose, they'll look back on it as the most important thing they will ever have discovered. I warn them that their time in school might be the best time to reflect deeply on that question. Fast-paced careers, family responsibilities and tangible rewards of success tend to swallow up time and perspective. They will just sail off from their time at school without a rudder. In the long run, clarity about purpose will trump knowledge of activity-based costing, balanced scorecards, core competence, disruptive innovation, the four Ps, the five forces and other key business theories we teach at Harvard.

What's true for the students is true for you too. If you take the time to figure out your purpose in life, I promise that you will look back on it as the most important thing you will have ever learned. ●

### RECOMMENDED READING LIST

If you liked *How Will You Measure Your Life*, you'll also like:

1. ***Great Work, Great Career* by Stephen R. Covey and Jennifer Colosimo.** How do you create a great career? Covey and Colosimo offer a complete handbook for anyone seeking answers.
2. ***Mojo* by Marshall Goldsmith with Mark Reiter.** The best-selling author and executive coach lays out the ways that we can get and keep our Mojo.
3. ***The Power of Full Engagement* by Jim Loehr and Tony Schwartz.** The authors discuss the four key sources of energy and provide a scientific approach to create energy management rituals that are specific to the results you need.

# How the World Sees You

## Discover Your Highest Value Through the Science of Fascination

by Sally Hogshead

## THE SUMMARY IN BRIEF

You already know how *you* see the world. But do you know *how the world sees you*? How is your personality most likely to impress and influence the person sitting on the other side of the desk or boardroom?

Once you know what makes you valuable to others, you're more authentic and confident and more able to make a positive impression. It all begins with understanding how the world sees you — at your best. *How the World Sees You* gives you the step-by-step method to describe yourself in just two or three words. This short phrase is your Anthem, the tagline for your personality. Your Anthem guides you like a mission statement, helping you to build your team, write a LinkedIn profile or captivate an audience.

To become more successful, you do not have to change who you are — you have to become *more* of who you are. Based on Hogshead's research with hundreds of thousands of participants, including dozens of Fortune 500 teams, hundreds of small businesses and over a thousand C-level executives, *How the World Sees You* reveals who you are at your best so you can create better relationships, grow your business, and become intensely valuable to those who matter most.

## IN THIS SUMMARY, YOU WILL LEARN:

- Why you need to know your highest distinct value and how to discover it.
- The Seven Fascination Advantages and how they form Archetypes.
- How to create and use Anthems to mobilize your distinct Advantage in business and life.
- How to help employees become more of who they already are.

# THE COMPLETE SUMMARY: **HOW THE WORLD SEES YOU**

**by Sally Hogshead**

**The author:** Sally Hogshead rose to the top of the advertising profession in her early twenties, writing ads that fascinated millions of consumers. Her internationally acclaimed book *Fascinate: Your 7 Triggers to Persuasion and Captivation* has been translated into over a dozen languages. She frequently appears in national media, including NBC's *Today* show.

From *How the World Sees You: Discover Your Highest Value Through the Science of Fascination* by Sally Hogshead.

## Where It Begins: Unlearn Boring

On the day you were born, you already knew how to fascinate. Like breathing and swallowing and smiling, the ability to fascinate is a hardwired survival mechanism. Fascination is an instinctive form of connection. We all have this ability in some form.

But over time, people can lose their innate ability to fascinate. They acquire layers of boring. Like an oyster protecting itself against the grain of sand, people build shells that they believe can shield them from a negative outcome. You've seen this before or perhaps experienced it. The employee who waters down his ideas in order to shield himself from criticism. The new entrepreneur who tries to run her business just like everyone else and ends up with a "me-too" product. In any pressured environment, it can be easier to stay in the background. Unnoticed seems easier than unworthy.

Hiding works for a while. But it always backfires. You will never be your most successful when evaluated according to criteria that do not allow you to stand out.

Most people are afraid they have nothing special to give. They think there's nothing distinctly valuable that they can offer. Even when people do want to rise above the fray, they are terrified by the prospect of what to do with the attention once they've successfully earned it.

Your most fascinating traits are your most valuable traits. Too often, these traits are the first to go in favor of blending in or avoiding criticism. Yet, when you dull your edges, on some level you're giving up.

### How You Add Value

Your personality has a specific Advantage. When you communicate according to this Advantage, you will be more likely to add distinct value. What makes the Fascination Advantage system different from other assessments? Most assessments measure how you see the world. This system looks at the cues and signals that you're intentionally or unintentionally sending to the world and the pros and cons of each.

As conversations become more compressed and the marketplace more crowded, you need to know how others see you and respond to you. Rather than just knowing your strengths, you need to know your *differences.* The Fascination Advantage combines both personality *and* marketing into one system.

## PART I: HOW DOES THE WORLD SEE YOU?

## Why Discover Your Highest Distinct Value

Let's say you think you're funny. As far as you're concerned, a sense of humor is one of your best traits. There's just one problem: Nobody else thinks you're funny.

It's not enough to only consider *how you see yourself.* You must also consider *how the world sees you*. If nobody else thinks you're funny ... well, you're probably not funny. Humor is in the eye of the beholder. So are likability, leadership, and a range of other subjective qualities that are rooted in the perception of others. You get a vote, but your listener has veto power.

You want your messages to connect, or to educate, or to inform or to inspire. No matter what your message is *about*, each one of your messages has an intended purpose.

**Rebecca S. Clement**, Publisher; **Sarah T. Dayton**, Editor in Chief; **Ashleigh Imus**, Senior Editor; **Amanda Langen**, Graphic Designer; **A. Imus**, Contributing Editor

Each time you communicate, you want people to listen and remember that message, and to positively anticipate your future messages. You want them to take action, change a behavior or be inspired.

### What the Violin Player Learned

In a recent experiment, one of the most famously exquisite violinists of our time, Joshua Bell, played in Washington, D.C. down in the subway, anonymously and without fanfare, drawing attention to his music only with his skill and priceless violin. Yet 1,000 people moved right past him through rush hour, oblivious. If one of the most celebrated musicians of all time cannot compete to earn attention in a distracted, competitive environment, how can you?

Today it's not enough to be the world's best if no one realizes you're there. In the battle against competition, our talents and skills are hopelessly lost unless we find a way to fascinate our listener. It's your job to show us why we should care.

Luckily, you already have the defining traits you need to stand out and be heard. Which is good, because you'll need to call upon every one of them. You're doing battle in a distracted and competitive world. Get ready to encounter the three deadly threats.

### Meet Your Archenemies

**Distraction** threatens your connection with others. Your listeners are distracted. Your customer goes from vendor to vendor. Your coworker goes from email to email. Your employees go from putting out one fire to the next. Every time you introduce yourself, you have about nine seconds to engage your listener. This is your window of opportunity for connection. If you earn their interest during those nine seconds, people will be more likely to engage further. If you fail to add some sort of value in that golden window, they're less likely to listen to what you say, let alone remember it or take action on it.

**Competition** threatens your ability to stand out and win. While businesses have been focusing on being "better," customers have gone in a different direction. *Different* is better than better. Different doesn't try to turn you into something else. Different allows you to highlight the singular traits you already have within you. You aren't necessarily better than your competition. But you are already different.

**Commoditization** threatens your relationships and loyalty. Commoditization is a silent assassin. It permeates your relationships with complacency, shaving off your points of difference, sapping your defining qualities, and eventually transforming you and your vibrant one-of-a-kind edge into generic replicas. If you become a commodity in the eyes of your customers, it means you're vulnerable. You can be easily replaced.

### Triumph by Adding Distinct Value

Beyond earning attention, leading with your specialized personality traits, and fighting the good fight even after you have earned the business, there is something you can be doing — should be doing — that will allow you to fascinate and succeed at every phase of the business cycle: Add distinct value. If you want to add value ...

- You become admired for a noteworthy ability to contribute a specific benefit.
- You're worth more than you're being paid.
- You deliver more than would normally be expected.
- You are the preferred option, even if you are more expensive or less convenient.

Your highest distinct value: You're already quite familiar with these three words, but they take on special meaning when combined. Let's break it down:

**Highest:** The pinnacle of who you already are; what makes you already exceptional.

**Distinct:** How you are different.

**Value:** Your specialized ability to deliver above and beyond what's expected.

When you live according to your highest distinct value, you become your most fascinating and most valuable self.

## How to Discover Your Highest Distinct Value

In certain types of situations, you will fascinate your listener. People will pay close attention to what you say. They'll ask your opinion and value your input. In these moments, you'll feel energized and purposeful, because it's clear you're adding value. In these moments, you're applying your most natural mode of communication. On the other hand, other situations put you at a real disadvantage. When you communicate in these situations, you'll struggle to get your point across. You won't be confident or feel at ease. You are unlikely to fascinate.

You know what fascination feels like. Fascination happens when you're engrossed in a cool project at work and feel so purposeful and focused that you completely lose track of time. This is the mental, emotional and physical state of focus, of being completely engaged.

When you're fascinated, you're not pretending or posing. You can drop the mask and just *be yourself.*

### The Art of Fascination

Think of your own favorite brands, maybe Apple or Pinkberry, Southwest or Zappos. When consumers are fascinated by a brand, it no longer has to compete on price. All great brands triumph over the three threats of distraction, competition and commoditization in the same way: by *adding distinct value.*

People will pay up to four times more for a product that fascinates them in some way. When a product is successful, it fascinates its customers; it is treated very differently than the generic version. People are willing to not only spend more but also spend more time with it. They make a greater effort to find it, they take better care of it, and they derive more enjoyment from it. The same is true for you.

When you make it easy for others to understand *how you are different* and *what you do best,* you're more likely to be rewarded for it. The key here is to fully recognize your *differences* rather than just your *strengths.* The reality is, strengths can be copied. People can copy your product, your pricing, your actions, your recipe or program or formula. But they can never replicate who you are. Who you are is the greatest differentiator you've ever had.

Once you understand what makes you different, you can leverage those differences to avoid commoditization. You are perfect for certain things. You are wrong for others. You do not have to be perfect for everything. Find the challenges that you're truly perfect for rather than merely adequate for. Find the situations in which you distinguish yourself, situations that allow you to fascinate effortlessly.

### Maximize Value, Subtract Everything Else

Every single time you communicate with someone, you are either *adding value* (and reinforcing why they should prioritize you) or *taking up space* (and reinforcing that your messages are irrelevant spam). In marketing, these interactions are sometimes called "touchpoints." They are points of contact. Every single interaction is a touchpoint.

Every touchpoint should highlight what makes you different and better. Every business email, every business lunch, every direct mail piece, every social media update and every expense report should reinforce your value proposition. If you can't improve people's perception of you or at the very least maintain it, then reconsider whether you should be engaging in the first place.

You will never rise to your greatest potential by being all things to all people. Maximize value. Subtract everything else. Remove it from the equation so that you're not being evaluated according to your dormant Advantage. Then you're far more likely to exceed expectations at every turn.

## PART II: THE FASCINATION ADVANTAGE SYSTEM

# The Seven Fascination Advantages

There are seven different ways to successfully communicate. Seven different ways to break through and win. These are the seven Fascination Advantages. Each of these has a distinct way of adding value. Each follows a particular formula. Each has a different approach to building relationships and fascinates for different reasons.

There isn't one Advantage that's better than the others. However, there are one or two that will be most effective and authentic for you. Tap into your particular Advantages, and you'll become the most valuable you.

**The Power Advantage:** Leading Through Authority. Power personalities speak the language of confidence. They inspire others through bigger goals and stronger opinions. Since they usually know what they want, they often lead the discussion. You'll find they ask direct questions, taking charge of a conversation, leaning in and stepping forward. They're comfortable in leadership positions and motivate others to rise to their best. Decisive and self-assured, they don't mind being the ones who make difficult decisions. Hire more Power personalities if your company needs stronger, more decisive leadership.

**The Passion Advantage:** Creating Warm Emotional Connections. Passion personalities speak the language of relationship. Their ability to forge relationships builds wide networks. Approachable and gregarious, they usually build rapport with prospects, customers and colleagues, which allows them to excel in positions that require strong interpersonal skills. Hire more Passion personalities if you want to build stronger personal connections with customers.

**The Mystique Advantage:** Thinking Before Speaking. Mystique personalities speak the language of listening. They tend to be solo intellects behind the scenes. Their ability to see the nuances of a situation and think things through gives them an edge over more outgoing personalities. Independent and analytical, they systematically gather evidence before reaching a conclusion and analyze statistics before making up their mind. Hire more Mystique personalities if you want to implement a more analytical approach or need to boost your team's negotiation power.

**The Prestige Advantage:** Achieving Success With Higher Standards. Prestige personalities speak the language of excellence. Their personal and professional aim is to always get better to exceed expectations. When excellence matters, they know how to push for success. Ambitious and determined, they don't want to disappoint. They help and encourage coworkers to achieve in everything they do. These overachievers are admired for their assertiveness, expertise and high-quality results. Hire more Prestige personalities if you want to raise standards, improve team performance or iron out quality issues.

**The Alert Advantage:** Careful Precision. Alert personalities speak the language of details. When details matter, Alert has an upper hand over less structured personalities. They are watchful, aware, with an ability to manage complex projects. Their risk-averse attitude helps them to avoid mistakes. They know the critical path of their projects by heart. They understand that minor issues can cause major delays. They never lose track of deadlines. They're able to juggle conflicting requirements, such as meeting tight deadlines without compromising product specifications. Hire more Alert personalities if you want to get things done.

**The Innovation Advantage:** New Ideas and Solutions. Innovation personalities speak the language of creativity. Their creativity gives them an edge when old solutions don't work anymore. These are the seekers of adventure. The experimenters. The proponents of the new. Their talent for new thinking helps them to propose unexpected solutions. They are able to develop a profusion of ideas, often quickly. Irreverent and entrepreneurial, they encourage others to break habits and to try new products and fresh ideas. Hire more Innovation personalities if you need to challenge the status quo or if you need more creative thinking.

**The Trust Advantage:** Building Loyalty Over Time. Trust personalities speak the language of stability. Their consistency defines their reputation. They follow through on what they promise and deliver on time. They are dependable, committed and trustworthy. Steady and focused, they get things done. They like to follow a proven method. Trust personalities create order in chaos. They develop a solid plan of action. They act and respond in predictable ways. Hire more Trust personalities if you want to create stability.

### What Are *Your* Advantages?

The first step in becoming an effective communicator is to understand how others see you. Then, once you know how the world sees you, you can concentrate on the best of those qualities and intentionally apply them. It all begins with knowing your top two Advantages.

Your **primary Advantage** is the mode of communication you naturally use. It's the most effortless way for you to speak, write and share ideas. It most closely describes how others are likely to see you.

Your **secondary Advantage** is the second most likely way for you to communicate.

Your **dormant Advantage** is the one you're least likely to use. It exhausts your energy and focus because this is your least natural mode of communication.

Your primary and secondary Advantages combine to form your **Archetype.** Your personality Archetype is composed of the top two Advantages that you are most likely to use in your communication to persuade and influence. ***Archetype = Primary Advantage + Secondary Advantage.***

## The Archetypes

Your Archetype is like your personality's own built-in superpower. It's already there. Each Archetype adds value in a different way, making it uniquely persuasive. Your Archetype defines how you intentionally or unintentionally express yourself and your ideas. There's no right or wrong here. Everyone has a highest distinct value. Here are descriptions of seven of the 49 personality archetypes. including their primary and secondary Advantages.

**The Ringleader: Power + Passion.** Ringleaders have the ability to energize their team. While some personalities might make you feel shut down or emotionally flatlined, a Ringleader is more likely to get you charged up. Their secondary Passion Advantage means that they know how to make you feel valued. Their personal dedication motivates you to contribute more as well. Ringleaders are driven personalities but not in a cutthroat, competitive way. They're inclusive; they know how to engage and inspire. They spark participation among teams; their enthusiasm is contagious. The Ringleader's top five adjectives are motivated, spirited, compelling, strong-minded and empathetic.

**The Beloved: Passion + Trust.** It's easy to like The Beloved. They build lasting relationships and earn loyalty by communicating with comforting stability. Beloveds are aware of relationships and the effect of their actions on others. They help those who are falling behind. They encourage those who feel neglected. They make an effort to help others feel welcome and at ease during team meetings. When a Beloved faces conflict, they'll gradually coax others to join their point of view. This ability to make

**The 49 Personality Archetypes and top 3 adjectives**

The Rockstar: bold, artistic, unorthodox
The Maverick Leader: pioneering, irreverent, entrepreneurial
The Trendsetter: cutting-edge, elite, progressive
The Artisan: deliberate, thoughtful, flexible
The Provocateur: clever, adept, contemporary
The Quick-Start: prolific, thorough, diligent
The Catalyst: out-of-the box, social, energizing
The People's Champion: dynamic, inclusive, engaging
The Talent: expressive, stylish, emotionally-intelligent
The Beloved: nurturing, loyal, sincere
The Intrigue: discerning, perceptive, considerate
The Orchestrator: attentive, dedicated, efficient
The Change Agent: inventive, untraditional, self-propelled
The Ringleader: motivating, spirited, compelling
The Maestro: ambitious, focused, confident
The Guardian: prominent, genuine, sure-footed
The Mastermind: methodical, intense, self-reliant
The Defender: proactive, cautionary, strong-willed
The Avant-Garde: original, enterprising, forward-thinking
The Connoisseur: insightful, distinguished, in-the-know
The Victor: respected, competitive, results-oriented
The Blue Chip: classic, established, best-in-class
The Architect: skillful, restrained, polished
The Scholar: intellectual, disciplined, systematic
The Evolutionary: curious, adaptable, open-minded
The Authentic: approachable, dependable, trustworthy
The Gravitas: dignified, stable, hardworking
The Diplomat: levelheaded, subtle, capable
The Anchor: protective, purposeful, analytical
The Good Citizen: principled, prepared, conscientious
The Secret Weapon: nimble, unassuming, independent
The Subtle Touch: tactful, self-sufficient, mindful
The Veiled Strength: realistic, intentional, to-the-point
The Royal Guard: elegant, astute, discreet
The Wise Owl: observant, assured, unruffled
The Archer: on-target, reasoned, pragmatic
The Composer: strategic, fine-tuned, judicious
The Coordinator: constructive, organized, practical
The Ace: decisive, tireless, forthright
The Editor-in-Chief: productive, skilled, detailed
The Mediator: steadfast, composed, structured
The Detective: clear-cut, accurate, meticulous

**Double Trouble Archetypes (there's too much of a good thing)**

The Anarchy: volatile, startling, chaotic
The Drama: theatrical, emotive, sensitive
The Aggressor: dominant, overbearing, dogmatic
The Imperial: arrogant, cold, superior
The Old Guard: predictable, safe, unmovable
The Deadbolt: unemotional, introverted, concentrated
The Control Freak: compulsive, driven, exacting

people feel safe allows them to establish secure bonds over time. The Beloved's top five adjectives are nurturing, loyal, sincere, tenderhearted and comforting.

**The Secret Weapon: Mystique + Innovation.** They are creative minds who produce agile solutions even when under high pressure. They are creative in a non-flashy way, preferring to do their work quietly. Secret Weapons enjoy working independently. They don't boast about their achievements. But they can produce great inventions, creative ideas and new product designs. They make great contributions to the company's performance, but they do so in an unassuming manner. The Secret Weapon's top five adjectives are nimble, unassuming, independent, reticent and autonomously creative.

**The Blue Chip: Prestige + Trust.** Their reputation for quiet excellence stretches far and wide. Their eye for detail is unmatched. Their direct communication style breeds trust. As CEOs you can expect them to meet or exceed the agreed budget year in and year out. They are quiet overachievers who continuously find ways to generate tremendous results. As with blue-chip stocks, others have confidence in their stability and high value. They are calm leaders who earn respect for their impeccable presentations, their outstanding results and their composed response to challenges. The Blue Chip's top five adjectives are classic, established, "best in class," safe and punctual.

**The Composer: Alert + Innovation.** Creative and goal-focused, Composers come up with innovations that contribute to your company's bottom line. When others suggest quick wins, a Composer will consider long-term consequences. Unwavering, they defend their long-term vision even if that means losing revenues in the short term. They know they can make up for potential losses. They have a clear vision for the company, and they focus on implementing it. Composers are open to new ideas, but they don't act on impulse. They work toward their vision of the required results — just like composers and artists have an image in mind when creating music or artwork. The Composer's top five adjectives are strategic, fine-tuned, judicious, rational and immediate.

**The Maverick Leader: Innovation + Power.** Maverick Leaders lead with a bold and unconventional vision. You recognize a Maverick Leader quickly. They're unafraid to take the lead and happy to propose a new direction for a product or market strategy. Even early in their career, they are confident enough to present their pioneering ideas to the board. And they do so with flair. If something starts to feel familiar, Maverick Leaders will start experimenting to see whether higher goals can be achieved.

They take their chances and depart from accepted strategies, processes or tactics. The Maverick Leader's top five adjectives are pioneering, irreverent, entrepreneurial, artful and dramatic.

**The Anchor: Trust + Mystique.** Anchors earn a good reputation for their solid thinking. Usually quiet, they have a distinct advantage because they keep their cool even under high pressure. They're able to come up with a workable solution when everyone else gets agitated. In team meetings they are plainspoken and businesslike. They don't reveal their innermost thoughts. Their quietness, however, doesn't stop them from making major contributions, because everyone listens when they speak. Anchors communicate their recommendations with solid, rational arguments. They keep their ideas and opinions firmly rooted in reality. That's why they're called Anchors. The Anchor's top five adjectives are protective, purposeful, analytical, calm and steady.

### Increase the Advantages of Your Team

Rather than trying to get employees to change (which doesn't work for long), help them become more of who they already are. Once you identify the Advantages that your team is using, you can help each person succeed by dialing up their existing traits. Rather than training people to follow a formula (and trying to force-fit them into a mold), you can support them in adding value in the way that is most effective and natural for them.

You wouldn't want to build a team with *only* Power or *only* Trust. When a group has an extremely high concentration of just one or two Advantages, it tends to be exaggeratedly strong in specific areas but very weak in others. Just as employers should seek diversity in gender and backgrounds, so should they also understand the Advantages used by their existing team members and potential hires, in order to build teams with a balanced and healthy interplay of perspectives.

## PART III: YOUR ANTHEM: THE TAGLINE FOR YOUR PERSONALITY

## The Fascination Laboratory

As much as we might like to think that we're all 100 percent special and unique, we're not. We're 99.9 percent average. Your human DNA is 99.9 percent the same as everyone else's. Only a minuscule amount defines our differences.

The same is true of our personalities. Like our genes, we have only a few truly singular characteristics. Yet, while there's not much that distinguishes you from everyone else, there is something. And it turns out, that something is more than enough. Your 1 percent is your distinct value. It describes the best of how the world sees you and how you are most likely to rise above and stand out. It's your own little zone of genius.

This is good news and bad news. First, the bad news. Struggling to marginally improve the less valuable parts of yourself won't work. At least, it won't work without a lot of strain and expense. Now the good news: Your built-in Advantages hold real promise for the way you can become invaluable and irreplaceable to others. Your Advantages reveal how you will be most likely to build a prosperous and fulfilling career.

### Your Anthem

Successful brands distinguish themselves from the competition, often with only a mere sliver of a competitive difference. Similarly, we will distill your personality's key defining qualities into just a few words, summarizing your key benefits.

Taglines are an exquisitely efficient piece of communication. They can convey a mammoth volume of information, distilling the essence of an entire company into a micro statement. Taglines tell you why to invest your time and money in a certain product. They establish what makes one brand different from another.

You might prefer to introduce yourself with a full-length resume, but in reality, your audience probably has the same attention span as a goldfish: nine seconds. Your Anthem solves this problem. This very short phrase is usually just two or three words. It describes *how you are different* and *what you do best*. An Anthem is your shortcut to how you are most likely to add distinct value to your coworkers, customers and your company.

## Discover Your Differences

First, identify the adjectives most strongly associated with your Archetype (see Sidebar). These adjectives indicate where you are most likely to be a high performer. By concentrating on these attributes, you are more likely to positively influence how the world sees you. Think of them as your built-in specialty.

If your Archetype is The Guardian (Power + Trust), for example, you are naturally suited to add value in situations in which you can be *prominent, genuine, sure-footed*. For the Blue Chip (Prestige + Trust), you're most likely to communicate clearly and effectively when your communication is *classic, established, best-in-class.* The Editor-in-Chief

(Alert + Prestige) can best support her team when she can focus on being *productive, skilled* and *detailed*.

Now, write down the three adjectives for *your* Archetype. Pick one adjective from the three. Find the one adjective that most closely sets you apart from everyone else. Then, use your adjective to complete these sentences:

"People can always count on me to be ... "

"I can solve certain problems better than anyone else because I am ... "

"I am better suited to serve my customers because I deliver solutions that are ... "

Now we're ready to create your Anthem to describe how you are different and what you do best.

## The Anthem Method

We're ready to customize a tagline that communicates the most valuable you, right from the very start.

**Step 1: Pick One Adjective (How You Are Different).** Look at the adjectives you wrote down, and pick *one* adjective. For example, if you are The Maestro, your three adjectives are *ambitious, focused* and *confident*. When selecting one defining trait of her personality, someone who is a Maestro might pick *focused*.

**Step 2: Pick One Noun (What You Do Best).** You do many things *well*. But what do you do *at your best*? When you are making a real difference on an assignment or task, what exactly are you giving to others? This word is a *noun* and forms the second half of your Anthem. It describes what you do best. Write down that word.

To get you started, consider some of these nouns: accuracy, action, attitude, character, creativity, credentials, efficiency, expertise, follow-through, insights, management, precision, problem-solving, reputation, solutions, team-building, tenacity, vision and others. These will help you envision your value in a more tangible way. You can also choose a noun related specifically to your expertise, industry or from your career highlights. Then ask yourself, "Which noun best describes what I do best"?

**Step 3: Bring the Words Together to Create Your Anthem.** Combine your adjective with your noun, to create a pairing of two words. This is your Anthem: the tagline for your personality. If you are The Victor, you might select *results-oriented* as your adjective and *action* as your noun. Pairing these two together, your Anthem is results-oriented action. This is what you stand for. It's your promise to co-workers and clients. You keep things moving forward, always in action, rather than passively observing.

Imagine that you take your new Anthem and describe it like this: "If you need someone who delivers [fill in your Anthem], I can help." Or "Even when things get tough, I promise to give [fill in your Anthem]."

The next time you have an important interaction, think ahead: How can the promise behind your Anthem solve this person's needs or give them more opportunity? An Anthem gives you more than just a snappy introduction. Many people find that it becomes their own rallying cry, a phrase that they can return to over and over.

Like a tagline, you can incorporate your Anthem throughout your marketing and communication. Make it the intro for your LinkedIn profile. Add it to your email signature. Put it above your desk, reminding you to always live to your fullest potential. Include it at the top of your "about" page on your website or on your bio. Use the wording in social media profiles. Knowing your Anthem gives you a sense of confidence when you introduce yourself. Beyond the first impression, however, it can also help you orient around one solid purpose and message.

### Your Team's Anthem

You can develop an Anthem to describe the highest value of your team, department or entire company. It's better than a mission statement, because it's based on the inherent Fascination Advantages of the group. Your goal is to show others the value of working with your team. A team Anthem can guide you internally as an encouraging way to rally people around a collective cause. If you take on new members or new hires, it can guide you like a north star for your purpose.

To highlight your brand's value, look no further than your employees. Employees are the living, breathing representation of your brand.

The greatest way to empower someone is to show them their highest value. Once someone understands how they naturally add value, they blossom. They become more confident, more persuasive and more influential.

Wouldn't the world be a better place if more people could realize their own highest value?

### RECOMMENDED READING LIST

If you liked *How the World Sees You*, you'll also like:

1. ***The Reality-Based Rules of the Workplace* by Cy Wakeman.** Learn how to calculate your true value to your organization by understanding your current and future potential against your "emotional expense."

2. ***MOJO* by Marshall Goldsmith, Mark Reiter.** Goldsmith lays out the ways that we can get — and keep — our professional and personal Mojo.

3. ***Influencer* by David Maxfield, Joseph Grenny, Kerry Patterson, Ron McMillan, Al Switzler.** The authors show how individuals — no matter who they are — can become the type of influencers that are bringing about change in the world.

## THE SUMMARY IN BRIEF

Are you ambitious, but feel you've never been given permission to seek out and discover what's possible for you, your life, and your career? Have you achieved some level of success but feel that you want to find that next level, and have begun thinking about the legacy you'll leave behind? Maybe you're unhappy with the state of the world and want to help be a force for good. Or maybe you simply want to be a force for good in the lives of your clients or customers.

If you're ready to 'begin'— whether for the first time or the tenth time— ***How to Begin*** is your guide to unlocking the best within you by doing work that truly matters. It's a practical guide to finding focus and courage as you set and pursue your Worthy Goal: a single, unifying vision and purpose that lights you up, compels you to grow, and serves a greater vision while challenging you outside your comfort zone. Overall, *How to Begin* is the key to avoiding regret in your life and career by starting today on something that matters, not tomorrow or the day after that.

## IN THIS SUMMARY, YOU WILL LEARN:

- How to find and strengthen your Worthy Goal.
- How to become clear on your commitment so you know what you're facing.
- How to develop resources that will help you meet your goals without having to face challenges alone.
- How to build momentum, progress, and impact.

## Find Your Focus

Worthy is a big word. It can feel a little.. earnest. Perhaps a little high and mighty. You might be thinking, "Who am I to be measuring things on a level of worthiness?" But "worthy" is less about an abstract moral rating and more about whether it's worthy enough for you to be committing to it.

Worthy becomes more accessible as a standard when you understand its three different elements: Thrilling, Important, and Daunting. They're the primary colours that allow you to paint the picture of your ambition. If you have all three of these in a goal or a project, you've got something intriguing on your hands.

The idea of taking this on gets you going. You're excited about this, not just in theory but in real life. Thrilling means something to you. It speaks to your values and lights up your receptors. It makes you rub your hands together and think: "Yes! This!" You'd be proud to do this. It's cool, fun, bold. It's an adventure you want to have.

With Thrilling, Important, and Daunting established as the base, you're ready to look for your Worthy Goal. Now, you may already have your Worthy Goal sketched out. You've just been waiting for a nudge and permission to get going. That's great... and even though you might be tempted, don't skip this section. The very worst thing that happens is you confirm you've totally nailed it. And a more likely outcome is you'll refine your Worthy Goal and make it even more compelling for you.

The first draft is always crappy. The first time you write anything, it's thoroughly mediocre. It's tepid and confused. It's overstuffed and underbaked. It's too specific and too vague, all at once. The same is true when you begin to claim a Worthy Goal. But we have to start somewhere, and when we start with full permission to write a crappy first draft, it's something.

Take your best shot at your Worthy Goal. Then go from there.

## Test Your Ambition

You've taken a brave stab at your Worthy Goal with your crappy first draft. It might be tempting to stop now, because it's already a big step forward to have something written down and declared. But don't stop here.

Don't. Stop. Here.

It's time to strengthen and fine-tune your draft by testing and triangulating this Here are three tests to work through. You don't have to "pass" all or indeed anv of the tests. You're just collecting feedback or information. But it's useful to run your draft Worthy Goal through these tests to see what data you gather.

### The Spouse-ish Test

Go tell your Spouse or other significant other (even a good friend) and clock their reaction. You don't need to agree with everything they say, but their response will absolutely give you some insights.

### The FOSO Test

Ask yourself 'Why' about your Worthy Goal, then create a reply that begins with 'for the sake of…' (or FOSO). If the answer is elusive, that could be telling you something.

### The Goldilocks Zone Test

In the Goldilocks Zone test, you're gauging the doability of your Worthy Goal. Is it too small and granular, or too abstractly aspirational? Does it have the 'just right' feel to it? Loading your Worthy Goal in the Goldilocks Zone is the way to ensure it has the right amount of 'heft.'

## Claim Your Goal

You're about to give your worthy goal one final working-over to get it as close as possible to a final draft that is genuinely thrilling, important, and daunting. After a final edit, you'll be ready to declare victory (or at least "Good Enough," which is often the same thing.

Rate the current expression of your worthy goal on a scale of 1-7 in the categories of Thrilling, Important, and Daunting. If your total score is less than 18, your Worthy Goal may not yet be ready. There may not be specific science behind this, but when facilitating people through this process, this calibration is a key step towards getting closer to a truly powerful Worthy Goal.

The Voting Test helps you reset how you're feeling about your worthy goal. It helps you step outside the subjective experience of wrestling with the details and gives you a more clinical (but still personal) reading against the three essential criteria.

No matter your score, the final challenge is to see if there's just one word or short phrase that, if added, would tighten the power and focus of your Worthy Goal. This word could

represent the commitment, reach, time, scope, standard, or outcome of your Worthy Goal. Or it could be something else. Use this new word or phrase to tighten up your Worthy Goal into an effective final draft.

## See Where You Stand

You have almost certainly declared an intention to do something that matters before, something that's in some way Thrilling, Important, and Daunting. It might have shown up, along with a glass of champagne, at midnight on December 31. It might have appeared at some other time, a moment when inspiration and ambition commingled. A tug on your sleeve, nudging you: Dream big. Dare bravely. Pursue boldly. Commit.

And commonly enough, not every time but likely the majority of times, you made little or no progress on it. You were becalmed, undone by some combination of: you didn't know where to start; you didn't know who to ask; you were denied access to resources and support; you made a few False Starts and lost heart; you were told you weren't the right person; you didn't trust the plan; you didn't master the skill immediately; you ran out of puff; you got distracted; you put it away "for now"; you were told to stop.

Don't do the usual and sweep these False Starts under the rug or conveniently "forget" about them. Instead, bring the stories out of the shadows and take a look. "Where," you can ask yourself, "have I seen something like this before?" Note all the versions and close relations to your Worthy Goal that you dabbled in or flirted with, versions that trailed off or never really got going; were shelved or put away in the drawer; were mocked or lost their mojo; were scaled down and then down again to nothing.

Acknowledge those times when you were disheartened, discouraged, discombobulated, distracted, and stuck.

## Weigh Up the Status Quo

What if you choose not to answer the call? Imagine not taking on this Worthy Goal. Imagine if you let this opportunity slide past.

It can feel like a sign of weakness or a betrayal somehow to bring that possibility to the surface. But answering it is absolutely essential for progress. There are very tangible reasons -Prizes- for not taking on the Worthy Goal. We're far more committed to the status quo than we realize. Until you fully understand this commitment, promises that run deep and are often unspoken and unrecognized, it's hard to shift that allegiance. Equally, there are very tangible consequences-Punishments-for stepping away from this opportunity.

Until you understand the cost to you and others for not taking on your Worthy Goal, you may never be pulled forward to commit.

Take the best three Prizes you get if you don't take on the Worthy Goal. List them below in the left-hand column. Then do the same for the Punishments, and list them in the right-hand column. Which way does the balance tip?

You can do this exercise in your head, or quite possibly the whole thing feels redundant--you just know the way things have played out. All of that's fine, so long as you've got a clear enough answer.

## Take Small Steps

With small steps, you're doing two things. First, fueled by curiosity, you're collecting feedback. It's the only way you can make your way forward in a complex situation: keep checking where you are, try some things out, collect feedback, and decide what's next.

Second, you're mitigating risk so you don't end up plunging off a cliff or running into one or more of the three terrors of the Fire Swamp, thus prematurely ending your quest.

Jim Collins of *Good to Great* fame explains the process of figuring out strategy thus: fire bullets, then fire cannonballs. Even if you're not a fan of military metaphors, this is helpful. Collins explains that bullets are cheap and low-risk. Firing them is a manageable commitment, one that helps you figure out the real target. Once you've identified the target, then you can fully commit and fire the cannonball. Collins says that most people don't fire enough bullets and fire their cannonball way too soon; or they spend their life firing bullets without ever having the courage to load up the cannonball.

## Remember Your Best Self

When you're across the threshold and on the journey, your feelings can swing back and forth between light and dark. There are times when every step feels assured, your confidence is unbounded, you're in the zone. Good times indeed.

Other times, doubt overwhelms you. Of course it does. You're on the edge of your own experience and compe-

tence. You're taking on something Thrilling and Important and Daunting. You've made a choice, which means saying yes and therefore also saying no.

You've decided not to dabble, not to keep your options open, but to commit.

In those moments of doubt, you'll be feeling some cocktail of confusion, anxiety, fear, heaviness, vulnerability, uncertainty, dread, guilt, and general dispiritedness.

That's all ok. That's normal. That's entirely expected and completely predictable. (Basically, don't make things worse by now beating yourself up for feeling that way. Perhaps throw your hands in the air and say, "How fascinating!")

How will you go on? By reconnecting to your Best Self.

## Don't Travel Alone

It's been said that we're the sum of the five people we're closest to. Our weight, our wealth, our ambition…it's the average of their weight, wealth, ambition, and so on.

As with everything apocryphal, it's not totally true. What is true is that it's important to have good people around you, particularly when you're journeying into the future.

There isn't room for everyone. That's ok, because quite frankly, you'd be better off without some of your current companions. It's not only who travels with you on the journey, it's also about who you choose to leave behind.

Who in your life wants you to stay unchanging?

Who takes more than they give?

Who in your life sows seeds of doubt?

Who has betrayed you and may betray you again?

Whose idea of you is historical, rather than future facing?

Who stains you with the worst thing you've done, rather than reminds you of the best you can be?

Who triggers the worst in you, or at least the less than great?

Who contributes to you being numb?

Who contributes to you being afraid?

Who colludes with you not stepping towards the Thrilling, Important, and Daunting?

If someone checks too many of these boxes, it may be time to check them at the door to your Worthy Goal.

## Conclusion

The time to start pursuing your Worthy Goal is today. The person to make it happen is you. The plan to make it happen is contained in this summary. Build your team, and get started.

**Michael Bungay Stanier** is at the forefront of shaping how organizations see coaching as an essential leadership competency. His book The Coaching Habit is the best-selling coaching book of this century, with over a million copies sold. In 2019, he was named the #1 thought leader in coaching, and he has spoken on coaching from Brené Brown's podcast to the TEDx stage. Michael founded Box of Crayons, a learning and development company that helps organizations transform from advice-driven to curiosity-led. He currently leads MBS.works, a place where people find the clarity, confidence and community to be a force for change.

## THE SUMMARY IN BRIEF

Many people experience a gap between outward success and internal alignment, often without a clear way to assess what is off track. ***How to Correct Your Life*** presents a structured approach to evaluating and correcting that imbalance through a practical system for personal and professional development.

At the core of the book is the CHERISH Matrix, which organizes seven key areas of life—career, health, ego and emotions, relationships, integrity, spirituality, and happiness—into a framework for ongoing self-assessment. It also introduces short, actionable "cheat codes" designed to guide decision-making, regulate emotions, and improve communication in real time.

The book further explores foundational concepts such as leverage, identity, habits, and mindset, showing how they shape behavior and long-term outcomes. Together, these elements provide a process for identifying misalignment, clarifying priorities, and building consistent routines.

Drawing on the author's experiences in medicine, business, and military service, the material emphasizes practical application, with a focus on daily execution and measurable progress.

## IN THIS EXECUTIVE BOOK SUMMARY

- Learn how to apply the CHERISH Matrix to assess key areas of life
- Use "cheat codes" to guide decisions, communication, and emotional regulation
- Understand how habits, identity, and leverage influence behavior and change
- Build routines that support consistency and long-term alignment

CHAPTER 1

## Building a Life You Cherish

In my early years, I built my life around a clear blueprint—one that included a successful career, a loving family, and a sense of balance.

I envisioned a life of prosperity and fulfillment and invested time, effort, and money into creating a legacy I could be proud of. Yet one day, I woke up and realized something was off. I was out of balance and had missed what mattered most.

Many people don't realize they're dying while they're still alive. I was one of those people.

My life looked great on paper, but I woke up every day with a gnawing feeling in the pit of my stomach. Something was out of sync. I didn't know what to do to change that.

Ultimately, I discovered a lifestyle operating system that helped me mobilize my optimal self, navigate the complexities and distractions of life, and turn things around. I found the CHERISH Matrix.

### The CHERISH Matrix

Seven areas of life require daily attention and focus to maintain a balanced life:

- Career
- Health
- Ego and emotions
- Relationships
- Integrity
- Spirituality
- Happiness

The CHERISH Matrix became the catalyst for greater accountability and execution. As I began implementing it, I developed a system of practical tools designed to make key ideas easy to recall and apply immediately. I call these tools cheat codes.

Cheat codes are key for those seeking rapid, measurable change. They identify what matters most in a given moment and provide a practical way to make effective and aligned decisions even under pressure.

These tools are especially useful in everyday situations—when emotions run high or conversations become strained. In these moments, having a simple framework helps you respond with clarity instead of reacting impulsively.

### PAUSE for Emotional Regulation

- **Perspective (pray)**: First, look at the big picture and draw from spiritual inspiration, if that is within your faith.
- **Ask clarifying questions**: Default to curiosity rather than reaction.
- **Understand**: Ask questions until you understand the other person's perspective.
- **Sacrifice**: Identify what you need to surrender at the moment.
- **Empathy**: Seek to understand and connect with the other person's feelings.

### SAVE for Navigating Emotionally Charged Conversations

- **Summarize**: Repeat what you heard expressed, matching the words, tone, and body language.
- **Ask clarifying questions**: Use questions to deepen understanding before responding.
- **Validate**: Provide space for the other person's emotions.
- **Empathize**: Ask yourself, "Can I tap into the other person's feelings?"

No matter your starting point, there are always opportunities to correct your life where and when you veer off course. The CHERISH Matrix and these cheat codes are your toolkit for lasting change.

CHAPTER 2

## Leverage

After my divorce, I needed to understand myself—my deepest faults, fears, failures, and needs. So I asked, "If I died today, what would I regret most?" Putting pen to paper, I made a list and drafted a *Regret Eulogy* to motivate myself to take action. It hurt. My regrets echoed in my mind as I envisioned lying in a closed coffin with no chance of a do-over.

When experiencing pain, we have a choice: We can face fear and grow by bringing discipline into our lives. It is only through embracing the pain of change that we grow spiritually and emotionally.

Pain can be a great motivator, but it does not sustain momentum. To move forward, I needed a compelling vision of the future. So I also wrote an *Ideal Eulogy*, describing a life I cherished.

> Having a simple framework helps you respond with clarity instead of reacting impulsively.

No single initiative changed my life more than writing those two eulogies. I built leverage by tapping into the emotions it brought, both positive and negative. I used those feelings to propel myself into the CHERISH Matrix and begin to create a life of fulfillment.

### Disgusted or Obsessed?

We do not make significant life changes until we hit one of two extremes: We become disgusted or obsessed. Disgust and obsession are both forms of leverage.

With the Regret Eulogy, we feel disgusted. We realize we are not remotely close to living an optimal life. This is good, and we *should* be repulsed by the pain of regret.

With the Ideal Eulogy, we feel a sense of obsession. We visualize a compelling future that inspires new ways to use our time, energy, and focus.

Change is not easy. A considerable part of life's joy is growth. When you embrace growth, you'll feel more alive than you have in a long time.

CHAPTER 3

## Gridlock

Trauma doesn't always scream. Sometimes it waits. Then, when triggered, it hijacks your present without warning. And, in doing so, it brings you to gridlock.

Although it might seem like we can't avoid reacting to these triggers, we do have the power to change how we respond to our past. We can become *malleable*.

### How to Change Our Past

When we have a trauma like this, we change, and so does the way we think about the rest of our lives. Something inside of us creates a global belief about how we will react under similar circumstances in the future. We create stories that explain the situation and the meaning we derive from it. These stories provide continuity and become our narrative.

There's one problem with this: That narrative may be inaccurate. And that can steer us wrong for the rest of our lives.

We need to be able to see our past clearly to create a new narrative. Creating this new narrative leads to a new identity, bringing us closer to our ideal life and self.

### Tools to Navigate Past Trauma

To overcome trauma, you need the right tools and the support of professionals.

I believe strongly in eye movement desensitization and reprocessing (EMDR). This is a therapy for effectively dealing with past trauma by consciously awakening your analytical mind. A trained EMDR counselor guides you to relive your past slowly and safely.

Accelerated resolution therapy (ART) is similar to EMDR, but you follow your therapist's hands with your eyes as they motion to the left and right. The therapist guides you to focus on the past trauma. With their help, you exchange painful memories for empowering ones.

### Forge a New Identity

Identity is who we are and the main driving force of human personality. It reflects how we see ourselves at our core and is expressed through "I am" statements. We can intentionally shape our identity. When we repeat "I am" affirmations consistently and with conviction, they begin to define who we are becoming.

We strengthen and evolve our identity by drawing on the strength and conviction found in our past narratives.

While we cannot change past events, we can change the meaning we assign to them. By reframing those narratives—and facing the past with courage—we can shape our present identity. It will be uncomfortable, but understanding it makes us better, and the pain is worth it.

### What Are Your Delusions?

To correct your life, you must explore your delusions. You need to be open to topics that have surfaced that make you unreasonably and instantly angry. In these moments, your brain does not function clearly—chemicals flood it, and you become temporarily irrational. As a result, you cannot examine your delusions in the moment.

Delusions are protective mechanisms that paralyze our growth and understanding of ourselves and the world. Facing them requires courage and being ready to feel uncomfortable. Only by doing so can we break free from acting without reason and start living a genuine and purposeful life. If not, we remain trapped in a victim mindset.

CHAPTER 4

## Foundations

Before you can start applying the CHERISH Matrix, you need to establish a strong foundation. There are four foundational stones, which are essential for success. These are:

- Cornerstone
- Keystone
- Touchstone
- Capstone

### Cornerstone: Locus of Control

Ultimately, you are in control of your life, whether you are aware of it or not. We are shaped by the decisions and actions we take every day. Understanding that we are the architects of our lives is the cornerstone of the CHERISH Matrix.

Of course, the answer to whether we control our lives is not a simple yes or no. It is more complicated. Our choices matter, but they are influenced by circumstance. The essence of correcting our lives lies in embracing a mindset of ownership. *I own my life. I control my life and accept with serenity the things I can't control.* It is a continuous process.

To correct your life, your locus of control needs to be internal, not external. Make conscious choices, and don't let subconscious decisions based on past trauma and delusion control you.

### Keystone: Expectancy Theory

Having a clear expectation of a fulfilled life is the keystone of correcting your life. I call this assumption "expectancy theory." We have four unique capacities that allow us to optimize this:

- **Self-awareness** – the ability to examine how we perceive the world and our role within it. It allows us to respond rather than react.
- **Morality** – the ability to assess what is right and wrong. It operates at a level deeper than our thoughts, feelings, and emotions.
- **Free will** – the ability to choose how we respond to situations. It gives us the power to do what is right, especially when life is hard.
- **Imagination** – the ability to envision something beyond our present reality. It empowers us to generate new possibilities.

### Touchstone: Habits

Our habits reveal whether we are working toward our ideal lives. They serve as a touchstone for change and help clarify our priorities.

Habits are a basic strategy of life. They allow us to operate effectively in a world that's constantly trying to disrupt our behavior. When we form habits that align with our priorities, they become intuitive. Living becomes much more effortless.

There are four steps to developing a habit, as detailed in *Atomic Habits* by James Clear and *The Power of Habit* by Charles Duhigg.

1. **Trigger** (cue): A trigger is what sets a habit into action.
2. **Motivation** (drive): This is your "why." Why do you want this, and what does it mean to you?
3. **Response** (action): This is the behavior we adopt.
4. **Reward** (feedback): What do we get out of a habit? Focus on the benefits of the habit.

### Capstone: Grit

Grit is that voice in your gut that says "keep going" when your mind is screaming to quit. It's pushing through pain, boredom, and failure. Life is short, and quitting is not an option. It shows up when no one's clapping, when nothing's working, and you keep going anyway. It is doing the hard thing *because* it matters.

CHAPTER 5

## The CHERISH Matrix

The CHERISH Matrix is the ultimate life checklist. It also provides a dashboard to monitor your progress. It allows you to be an objective observer of your own life—how you think, how you react, and the choices you make.

It is not just a tool; it is a blueprint to help you fight for your priorities before the noise of life drowns them out. It provides structure through patterns and rituals. Built through consis-

> We do not make significant life changes until we hit one of two extremes: disgust or obsession. ”

tency and discipline, these rituals are your weapon. You do not need more motivation. You need more rhythm.

Here's how to activate and engage the CHERISH Matrix:

**1. Determine how close you are to your optimal life**

When you look at your Regret Eulogy and Ideal Eulogy, what percent of your optimal life are you living now?

**2. Rank key areas of your life**

Look at the seven areas of the CHERISH Matrix (career, health, ego/emotions, relationships, integrity, spirituality, happiness) and score your life on a scale from one to ten.

**3. Set specific goals**

Now look at your scores and notice your lowest. Start asking questions why some scores are so low and what needs to change. In the initial use of the CHERISH Matrix, we look at our life globally. When using the CHERISH Matrix weekly, we ask, "What do I need to do this week to raise my score 20% or 30%?"

Next, set MAST goals:

- Measurable
- Actionable
- Specific
- Timed

**4. Uncover the principles driving your goals**

Once we have set goals to improve our lives, we need to examine the principles that drive those goals more closely. Principles are the guidelines we follow when making choices. They're solid, time-tested, and true.

To succeed in correcting your life, you must be crystal clear about the end goal and the principles that drive you.

**5. Set standards for yourself**

Make sure you set goals that challenge you. Goals that are too low and easy to hit keep us in our comfort zone but don't fuel growth. We tend to revert to a standard we have unconsciously set, so it's important to set ambitious goals.

**6. Craft a mission statement**

Identify the seven core principles that matter most to you based on your CHERISH Matrix goals. These will form the foundation of your personal mission statement. From these principles, you choose how to live and function each day.

CHAPTER 6

## Career

No matter what field you work in, your attitude can either elevate the people around you or make their jobs more difficult. Your mindset shapes your success in the workplace. Succeeding at work is not just about mastering the practical skills in your job description. It is also about seeing and engaging with the bigger picture and aligning it with your purpose in creative ways, even when asked to do more with less or work alongside difficult colleagues.

### PEAK for Peak Performance

By surveying audiences on what drives success in today's workplace, I have found that there are three critical aspects of employment: attitude, skill, and knowledge.

Adopting the mindset of a peak performer can help us take control of our attitude and actions. Organizations value these individuals for the advantage they bring.

- **Proactive**: Employees who take initiative, anticipate challenges, and communicate early are proactive.
- **Engaged**: Awakened. Passionate. Alive. When you're engaged, people can feel your energy as you walk into a room.
- **Adaptable**: An adaptable and flexible employee solves problems creatively, turning tough situations into chances to succeed.
- **Knowledgeable**: Knowledgeable employees are equipped with expertise, enabling them to enhance project quality and make informed decisions.

### GROWTH for a Growth Mindset

To become a peak performer, you need a growth mindset. The following framework outlines what that mindset entails.

- **Gratitude**: Looking for opportunities to be grateful is one of the best things you can do for your career,

but gratitude doesn't come naturally. It's a discipline that takes intention.

- **Resilience**: Resilient employees can adapt and bounce back in changing circumstances.
- **Optimism**: Optimism is looking forward to the future with the belief that good things are to come.
- **Wisdom**: Wisdom is putting things in context and considering the long-term consequences.
- **Tolerance**: Staying open to what others have to say, without feeling the need to set them straight, is tolerance.
- **Humility**: Humility is the ability to admit our imperfections, acknowledge our limitations, and learn from our mistakes.

High performers contribute more than average by tapping into three driving forces: play, purpose, and potential. If you're a leader or manager, embracing these forces in your workplace helps employees thrive.

### Building Workplace Culture

Building a culture of peak performers requires accountability and appreciation. Establishing both will keep your organization in balance.

Think of it as conducting a symphony, where each person knows their part and stays in rhythm. Generic praise fades fast. Genuine appreciation lasts when it is specific, heartfelt, and connected to an employee's purpose.

CHAPTER 7

## Health

Losing your physical health steals everything you have. Even if you don't lose your health entirely, neglecting it can rob you of the stamina, energy, and bandwidth needed to live a deeply fulfilling life. It can also erode your work performance.

Fortunately, regaining your resilience and energy is a momentum game, and once you take the first steps, you'll find that the rewards snowball. You need the right mindset to make lasting changes in your health.

Here are seven principles that will help you position yourself for success:

1. Willpower alone won't help you
2. Be proactive rather than reactive
3. Know your why
4. Goals don't matter without structure and accountability
5. Avoid unearned dopamine
6. Embrace the pain
7. Let go of regrets

### NSEW for Physical Health

There are countless books, seminars, and videos about how to optimize your biological health. Despite being a clinician, my nutritional education has been minimal. I don't pretend to be an expert. That said, here are some foundational truths that have helped me achieve my health goals.

- **Nutrition**: You can work out like a beast, but if you are eating poorly, it will catch up to you.
- **Sleep**: High-quality sleep allows us to heal more quickly, build muscles, and process information more effectively.
- **Exercise**: The best exercise program is one that you stick to. An ideal exercise routine will build your body and should include aerobic exercise, strength training, and a mobility routine.
- **Weight/Water**: Stepping on the scale is a poor measure of health, but it is better than nothing; it can still indicate whether you are overweight. Additionally, drinking adequate water helps your body flush out toxins.

CHAPTER 8

## Ego and Emotions

To correct your life, it is crucial to manage your ego and emotions effectively instead of letting them hijack you. This can be as simple as taking a breath when something triggers you, rather than reacting impulsively or bringing a personal problem into work.

Some people find that their ego causes many of the negative situations they face. The ego is "me-centric." *I am the center. All needs to revolve around me, in one way, shape, or form.*

To live a deeply fulfilling life, it is essential to become self-aware of how your emotions influence your actions. Only then can you genuinely help the people around you (your family, colleagues, and community) and develop a sense of purpose that transcends your own life.

> It is never a lack of resources;
> it is a lack of resourcefulness. ”

### PDQ for Managing Your Mental and Emotional State

You are in charge of your state. While there may be temporary interruptions, you ultimately control how you feel. When I recognize that I am in a negative state and want to change it, I aim to do so "pretty darn quick," or PDQ.

- **Posture/breathing**: Changing your posture instantly changes your state. Physical posture has a profound influence on our cognitive and emotional states.
- **Dialogue**: This refers to the internal dialogue we have with ourselves. "I am" statements can create an aspirational state, but they may feel inauthentic. Self-coaching statements that begin with "You are" are often more effective.
- **Questions**: They direct our focus. Real-life solutions emerge when the questions we ask become more important than the answers we find.

CHAPTER 9

## Relationships

If you want to correct your life, it's essential to prioritize your relationships. Too often, we take our key relationships for granted. There are people in our lives who love us dearly and treat us with kindness and respect. Yet, when we are having a bad day, they become our emotional punching bags.

While our intimate relationships often bring our greatest challenges, they also bring us the greatest joy. The true beauty of being in a relationship lies in growth, contribution, and deep emotional connection. Love thrives when both partners focus on giving rather than getting, making each other's happiness a priority. Relationships serve as a mirror for personal growth, helping us transcend our egos and cultivate unconditional love.

### The Eight Types of Love

The ancient Greeks recognized eight distinct types of love:

- **Philautia** – self-love. This is about embracing authenticity and identity and setting boundaries to protect who you are. Sometimes, it means saying "no."
- **Ludus** – playful love. This refers to flirtation or simple seduction—the initial spark of attraction.
- **Eros** – passionate, romantic love. This, the root word of "erotic," refers to the fiery, romantic love we see in the movies.
- **Pragma** – long-term love. This is enduring love, based on commitment and mutual understanding, the kind that sustains couples who have been together for decades.
- **Philia** – love of friends. This is the deep, affectionate bond between close friends.
- **Storge** – familial love. This is the natural affection we often feel toward family members, especially felt by parents toward children.
- **Agape** – self-sacrificial love. Often regarded as the highest form of love, it is selfless, unconditional, and compassionate, expecting nothing in return.
- **Mania** – obsessive love. Driven by insecurity and emotional dependency, this love is unhealthy. It often leads to possessiveness, jealousy, and even destructive behaviors.

True love is unconditional, meaning it is given without expectation. Love is a verb, expressed through our behavior and the actions we take in service to others.

### CASTLE for Loving Actions

No matter the type of love you are experiencing, loving actions deepen it. The CASTLE framework provides practical ways to express them.

- Compassion
- Appreciation
- Sacrifice
- Time and tolerance
- Listen
- Empathy

### Managing Conflict Constructively

All relationships involve conflict. I used to believe that effective conflict management was purely logical and rational.

That is how I approached problem-solving in medicine, business, and my relationships.

However, neuropsychological research shows that emotion and logic are intertwined in decision-making. We cannot solve problems effectively without input from both. It is therefore important to consider both the facts of a situation and how those involved feel about it, whether you think they should feel that way or not.

CHAPTER 10

## Integrity

Integrity is the essence of alignment with what is true in our lives. It means doing what is right, not what is easy. If you want to correct your life, start here. Stop lying to yourself. Own the truth, or it will own you. This requires consistent, rigorous honesty.

Integrity is not just about what you do; it is who you become. Living with integrity is not about being perfect but about consistency and correcting yourself when you fall short. It means being a reliable point of reference, even when everything else feels uncertain or chaotic.

### RISE for Living with Integrity

Consider how integrity connects to your personal values. When your behavior reflects your mission, you operate in a state of integrity, aligning your thoughts, words, and actions with your values. Integrity is your moral compass.

- **Reflect**: Your capacity to look at the past and evaluate right and wrong behavior.
- **Intention**: The act of choosing where to focus and deciding on the actions you are to take.
- **Self-awareness**: Your ability to perceive your internal environment and know what you are feeling and why.
- **Experience**: Your unique capacity to look at your past and create empowering meanings that allow you to grow and evolve.

### CHART for Building Integrity

Fortunately, we can all develop a higher level of integrity. It begins with a deliberate shift—charting a new course.

- **Courage**: Acting in the face of fear. When you are afraid to do what is right, it provides the strength to follow through.
- **Honesty**: Telling the truth—the whole truth—including all details people need to hear.
- **Accountability**: Taking responsibility for your actions and not adopting a victim mindset.
- **Respect**: Treating someone like their soul matters, even when it would be easier to be dismissive.
- **Trustworthiness**: Doing what you say. Say "yes" or "no," and stick to it.

Living in integrity builds trust and respect, creating a foundation for authentic and meaningful relationships.

CHAPTER 11

## Spirituality

I have no desire to convince you of my faith in God. I am challenging you to explore yours. What exactly do you believe? Is there a God? Is there an afterlife? Is heaven real?

When something positive happens to you, how do you perceive it? Is it luck, karma, or a blessing? The answer to that question often reveals a profound truth about how you perceive the world.

However you name it, it is important to notice our good fortune consciously. If you want to connect with your spirituality, you must have a heart for God. These are the steps, in exact order, that you should follow to hear from God with clarity and purpose.

### HEART for Hearing from God

- **Humility**: There is no spiritual growth without humility. An open mind requires that you allow your spiritual cup to be filled.
- **Expectation**: To understand your expectations of God, put pen to paper. What do you want God to do with your health, relationships, and children? Your afterlife?
- **Alteration**: To alter our expectations, we need to open our hearts for inspiration or a message from God.
- **Revelation**: When you know God's will for your life, you experience a revelation. The revelation is not usually a burning bush or a bolt of lightning; it is more of a gentle whisper.
- **Transformation**: When transformed, you won't see the world the same way. You won't be the same person again.

CHAPTER 12

## Happiness

Being happy means being in an optimal state and creating a life in which we have the resources to enjoy experiences with the people we love.

Happiness is not about the things you have or the money in your bank account. It is a mindset, a choice, and an attitude. You must choose it to attain it.

Fighting the tendency to rely on quick hits of gratification can be challenging. Our brains are hardwired to want new things. We are drawn to novelty, which shapes what we believe will bring happiness.

Enduring happiness comes from how I live each day and the mindset I choose. Deciding that happiness is internal and not letting external circumstances derail your life is one of the most important steps you can take to be happier.

### AGAPE for Building Happiness

To create an environment that supports happiness, I start my day off on offense. Priming the day to get myself into a peak state sets the tone.

- Altruism
- Gratitude
- Activities
- Positivity
- Exercise

### DECIDES for Eliminating Negativity

If we infuse our lives with negativity, we will struggle, so it's important to be aware of where we are doing this and subtract it. What must you eliminate from your life to find happiness?

- **Distraction**: Ruthlessly eliminate what blocks your priorities.
- **Ego**: Remember, "It's not all about me." Focusing on others makes happiness easier to find.
- **Criticism**: Do not let criticism defeat you before you begin. Adopt a more neutral perspective.
- **Indulgences**: Watch for immediate gratification driven by comfort or pleasure.
- **Drama**: Eliminate exaggerated or unnecessary conflict from your life.
- **Excuses**: Take responsibility for your life. It is never a lack of resources; it is a lack of resourcefulness.
- **Speed**: Keep your life calm and planned so you can be more available to help others.

## Conclusion

Now that you've learned to use the CHERISH Matrix, you have all the tools you need to create a life in which you're happy and moving forward on every front that matters to you. Even if you start to apply it in only one area of your life, I'm certain you'll begin to experience so many benefits that you'll want to go deeper.

We cannot control everything in our lives, but we have far more ability to build a meaningful life than most people realize. Once you begin applying what you've learned, you'll be on your way to a life that is more fulfilling than the one you imagined in your positive eulogy, leaving a life of regret behind for good.

**John Bielinski, Jr.** is an educator, clinician, and speaker recognized by *Guinness World Records* for delivering the longest medical lecture, raising funds for charity. As founder of CME4Life, an Inc. 5000 company, he has spent more than thirty years helping medical professionals improve critical thinking and clinical decision-making. A U.S. Marine Corps veteran who served in Desert Storm, Bielinski also brings frontline experience in emergency medicine. Known for his dynamic teaching style, he translates complex concepts into practical insight. Through his speaking, writing, and training, he empowers others to think clearly, act decisively, and lead with purpose, resilience, and enduring confidence.

*Page 6*

Learn the Difference Between Good Misses and Bad Misses
*Page 7*

## THE SUMMARY IN BRIEF

***How to Get a Return on Failure*** argues that failure is not simply an obstacle but a resource that can generate long-term growth when approached deliberately. The book's central premise is that successful people do not avoid failure; instead, they extract value from it by analyzing what went wrong and converting the experience into improvement. By treating setbacks as investments rather than losses, individuals can develop resilience, sharpen judgment, and progress toward larger goals. This approach reframes failure as a strategic tool rather than a setback to be avoided.

The book presents a series of practical tips designed to help readers rethink their relationship with failure, such as viewing failure as an investment in future success, keeping success and failure interconnected rather than separate, and distinguishing between "good misses" and "bad misses." By embracing the idea of a continuous improvement cycle, readers are encouraged to analyze setbacks, adjust their actions, and reengage with greater clarity and persistence.

Written by leadership expert John C. Maxwell, the book reflects decades of experience studying leadership, personal development, and organizational growth. By applying his leadership philosophy specifically to the role of failure, Maxwell shows how individuals and leaders can transform setbacks into catalysts for improvement and stronger future performance.

## IN THIS EXECUTIVE BOOK SUMMARY

- Reframe failure as a long-term investment that supports growth and learning
- Apply a continuous cycle of testing, failing, evaluating, and improving
- Distinguish good misses from bad misses to guide better decisions
- Use leadership practices to help others process failure and improve outcomes

## Introduction

What separates successful people from unsuccessful people? Do they start life with greater advantages, such as money, education, or upbringing? Have they received greater and better opportunities than others? Are they smarter? Or are they simply luckier?

Many of those factors certainly come into play. But the difference is *not* the avoidance of failure. Successful people fail as often as unsuccessful people. In fact, they often fail more. The difference is that they know how to deal with failure in a positive way, so effectively that they get a positive return on failure—an ROI.

They think differently, process failure differently, act differently, and as a result, achieve different outcomes. If you want to be as successful as you can be and reach your full potential, you need to learn how to get a return on failure.

CHAPTER 1

## See Failure as an Investment in Your Future

Failure will always be a part of your life. You cannot avoid it. But you *can* leverage it to create a better future for yourself. When you do that, it will separate you from the people who let failure stop or defeat them.

### Appreciate What You Can't Avoid

The first step toward seeing failure as an investment in your future is to learn to appreciate failure instead of simply trying to avoid it.

Appreciating failure means properly estimating the advantages it brings as you learn from it. Appreciation instead of apprehension will help you to see failure as an investment in yourself, your growth, and your future. But you must still properly prepare yourself to face failure positively. Here are seven things you can do:

**1. Expect to fail**

No one succeeds without failing along the way. As human beings, we need to anticipate failing. When you expect to fail, it softens your fall and shortens your recovery.

**2. Practice self-compassion**

Since we *will* inevitably fail, we need to give ourselves grace and compassion when we do. We need to be kind and understanding toward ourselves. We need to be patient with our struggles and work through them.

**3. Focus on the big game instead of the blame game**

The blame game is preoccupied with who is at fault. The big game concentrates on progress and production, which inevitably include both wins and losses. It acknowledges failure as normal.

**4. Embrace and live a positive life stance**

While we can't change the fact that we will have problems and experience failures, we can change our attitude about them. We can embrace a positive life stance. This doesn't make our failures disappear, but it does lessen their impact and put them into proper perspective.

**5. Reframe failure**

How you think about failure affects how you respond to failure. When you reframe failure by looking at context or any other factors, such as history, circumstances, relationships, and so forth, you obtain a bigger and better picture of their causes and remedies. This shift in perspective also removes some of the fear of failure and allows you to seize opportunities instead of avoiding them.

**6. Find the benefits of every bad experience**

If you want to move forward in life, you can't give up or cover up your failure. To use failure as an investment in your future, you have to find the benefits in every failure and use them to learn and grow. Never try to run from it or cover it up.

**7. Expect your failure investment to take time to pay off**

Nothing good happens when we give up. When we keep trying and adjusting, we find more and better answers. And if we keep believing, we never lose hope. The mission is greater than any failure we might face. Seeing failure as an investment in a better future not only makes a positive impact on you; it can also positively impact others around you.

CHAPTER 2

## Keep Success and Failure Together

People often think of success and failure as mortal enemies. Success is the hero of our lives. Failure is the villain. We root for success and keep failure as far away from us as possible. But life doesn't work that way. We should not be thinking about success *versus* failure. Instead, we should be thinking of success *and* failure.

Success and failure are present in every person's life, and we

> When you expect to fail, it softens your fall and shortens your recovery.

should intentionally *keep* them together because it puts us in a better position to get a positive return on failure.

### The Dangers of Separating Success and Failure

If we separate success and failure in our minds and convince ourselves that we can live with one and not the other, we create undesirable barriers to our potential. Here's what that looks like in practice:

- **Success alone creates overconfidence**. Confidence is good. Self-assurance is necessary for success. But believing you can't lose is arrogance. That kind of overconfidence is harmful. Arrogant people don't grow.
- **Success alone decreases our desire to ask tough questions**. People who succeed tend not to ask themselves "why" questions. Whenever we are confronted with failure, it is natural to ask why, to examine what happened.
- **Success alone makes us unappreciative**. If we experience nothing but success, we start to take the positive things in our lives for granted. We need the negative to truly appreciate the positive.
- **Failure alone makes us feel hopeless**. As troublesome as success alone may be, continual failure is even worse. Anytime people believe that failure is inevitable, they lose hope. More than anyone else in the world, discouraged people need to keep success and failure together.

### The Power of Keeping Success and Failure Together

Whenever failure and success are separated, we lose perspective. People attribute their successes to their skills and their failures to bad circumstances. That is not a mature or realistic perspective. The opposite is just as likely to be true.

There are three important benefits of keeping failure and success together:

- It presents a true picture of life.
- It allows them to complement each other.
- It develops emotional strength.

CHAPTER 3

## To Get Over Failure, Get Over Yourself

Failure often becomes exaggerated and prolonged in people's lives because it feels so personal. And this is only made worse by our natural human tendency to be selfish and preoccupied with ourselves. In other words, we can't get over our failure because we can't get over ourselves.

To overcome failure, each of us needs to conquer our inner toddler—looking beyond our selfish desires. When we do, we're better able to move past our failures. Getting over yourself means:

- thinking beyond yourself
- loving beyond yourself
- serving beyond yourself
- giving beyond yourself
- caring beyond yourself

One of the best ways to get beyond yourself is to recognize the difference between success and significance. Success is mainly about helping ourselves. Significance is mainly about helping others.

### How to Get Over Yourself

You can get over yourself by teaching yourself to think differently and to talk to yourself differently. When we're selfish and self-centered, we tend to evaluate everything that happens to us by how it affects us, not by how it affects others. We take everything personally. When we do that, we can't help but be discouraged.

Trying to grow up and take things less personally is easy to say but hard to do. There are specific steps you can take to become less preoccupied with yourself, shift your focus outward, and stop taking failure so personally. Here are seven ways to get started:

#### 1. Stop worrying about what others think of you

If we want to live more contentedly, we need to stop worrying so much about what others think. People think about us far less than we imagine, and the opinions of strangers should

carry little weight. The less we worry about how others see us, the more powerful we become.

**2. Put some distance between fault and failure**

There is great value in separating fault from failure. Refusing to place blame on ourselves or others not only reduces the emotional toll it takes on us; it also opens our minds to the lessons it offers. When we frame setbacks more positively, without assigning fault, we take them less personally and become more open to their benefits.

**3. Become comfortable with rejection**

No matter your history, profession, purpose, or aspirations, you will benefit from learning to reject rejection. It's simply another way of getting over yourself and working your way beyond failure to attain real achievement. When you get knocked down, never feel sorry for yourself and stay down. Reject rejection, and get back up.

**4. Follow the 24-hour rule**

Give yourself 24 hours to experience and process failure, and then move on. As someone pointed out, "You don't drown by falling into the water. You drown by staying there." Practicing this rule gets you out of deep water.

**5. Value progress over perfection**

The biggest failure is failing to start, which is often caused by perfectionism. So many of us want to know everything up front before taking action. In an ideal world, that would be wonderful. In the real world, that is impossible. To be successful, we must take action first, then figure it out as we go. Striving for progress instead of perfection moves us forward and makes us better.

**6. Become too big to let little things bother you**

The best way to ensure that small things don't bother you is to become bigger yourself. That means aspiring to achieve more significant things, striving to help more people, continuing to reach for higher goals, and learning and growing into your better self.

If you see failure as a small thing, it will become small. The bigger you become as a person, the smaller and less significant your mistakes will feel.

**7. Focus on the big picture instead of yourself**

Everyone else in the world is more important than any one person. Therefore, it's essential that we always look beyond ourselves. We need to focus on the big picture of making the world a better place by helping others. If you see others as more important than you, then your focus will be on *their* success, not *your* failure.

CHAPTER 4

## Use Failure to Make Yourself Better

You can let failure beat you down, or you can use failure to make yourself better. The choice is yours. If you're open to what failure can do for you, here are the ways you can use failure to improve yourself and your situation:

**1. Failure can make you more resilient**

Bouncing back from failure is one of the most valuable abilities a human being can possess. Unfortunately, it's a skill that many people today have a difficult time developing. You can become more resilient as you deal with failure by cultivating these practices:

- self-compassion
- recognition
- active learning
- cognitive agility
- problem solving
- finding meaning

**2. Failure gives you a reason to reflect**

Why do some people make the same mistakes over and over again? Because they never take the time to reflect. People can't discover why they made a mistake without examining their actions. Here's what I do:

- review by myself
- ask questions of myself
- talk to myself
- direct myself honestly

**3. Failure can help you develop good character**

Developing character is a never-ending process, and our response to failure is a major determining factor for who we are. The stronger we are in the face of defeat, holding onto our core values, the better our character becomes.

If you can face the hardships of life while retaining your values and bouncing back, you can come back much stronger than you were before. And you will be able to tackle bigger and more difficult challenges in your life.

**4. Failure can deepen your humility**

One of the greatest obstacles to learning and improvement is pride. It makes us think, *I already learned that.* In contrast, humility tells us, *I need to learn more.* And when we're open to learning, especially in the face of failure, we can become better as a result.

> The bigger you become, the smaller and less significant your mistakes will feel.

If you have a problem with pride, embrace the mindset of a learner to start the humility cycle.

**5. Failure can help you gain wisdom**

Most of the wisdom we can acquire in life comes from failure. Wisdom can come to us when we recognize the difference between what we cannot control and what we can, when we realize that some things we can understand and some things we can't. Knowing which is which requires thoughtfulness and life experience.

If we don't allow where we fall short to defeat us, we gain wisdom. We need to remember that failure is a temporary result of the actions we've taken that didn't work out. Defeat, on the other hand, is a choice we make.

**6. Failure observed can give you insight**

One of the smartest and least painful ways to learn from failure is to gain insight from observing others who have failed. Even the most stubborn person can become teachable and learn from the mistakes of others.

**7. Failure can prompt you to ask good questions**

As you learn to use failure to improve yourself, you should make it your goal to shift from questioning whether you're a failure to asking good questions about each failure you experience.

Author and business leader Jay Coughlan says that every time he or his team experienced a failure, he would lead them through a debriefing session that consisted of three questions:

- What did we do right?
- In hindsight, what would we have done differently?
- What are we going to change?

Asking yourself these kinds of questions is one of the best ways to use failure to make yourself better.

**8. Failure can challenge you to eliminate excuses**

Excuses are exits off the road to success. Every time we fall short and explain it away, we hold ourselves back. Whether we say we didn't do it, couldn't do it, or didn't try, the result is the same—we move farther from where we want to go. Excuses are not only deceptive; they can become habit-forming. They can keep us in a rut of failure. To eliminate them, we must first recognize when we're making them.

**9. Failure can prompt you to change**

It's been said that you can't teach an old dog new tricks. I'm not sure about that, but I do know that there is no age limit on learning from our failures.

Failure and mistakes can be hard on everyone. They can make people feel defeated. I think many people approach life like students who take a test, don't know the answers, and get a bad grade.

But life isn't like school. The point isn't to get a good grade the first time. It's to learn through the whole process so that you know more every day and are better prepared for whatever comes next.

CHAPTER 5

## Embrace the Value of Hard

In life, you're either doing the hard work of climbing uphill, or you're allowing yourself to slide downhill. There really is no standing still. Gravity has a pull that will take us downward unless we resist it.

If you want to achieve anything in life, you need to embrace the value of hard and accept that climbing is challenging, strenuous, difficult, and sometimes even grueling. You must be intentional, willful, and consistent to arrive anywhere worth going.

### Characteristics of Hard

You will be able to embrace the value of hard only when you understand the reality of it. To help you with that, here are six characteristics of hard that you would be wise to recognize, understand, and embrace:

**1. Hard never ends**

When you acknowledge that everything worthwhile is uphill and you embrace the climb, you accept that you are in for the long haul. You know better than to expect immediate results.

You apply your energy and time in measured increments and celebrate milestones of success along the way. This gives you *staying* power. That's what you need when you realize that hard never ends.

**2. Hard teaches us that the way up is down**

The key to a fulfilling and genuinely successful life on a deeper level comes from experiencing our downs. Loss can lead to gain if our attitude is right. We must fall and learn from those experiences to rise and move forward. You can receive a return on failure if you accept this necessary struggle and allow it to make you a better person.

**3. Hard is about what you do, not what you want**

Wanting something is easy; doing something is hard. What we do not only determines what we accomplish, but also who we become. You can shift your identity by choosing to be a different person and by doing things differently from how you've done them before. But to take those steps and become that better version of yourself, you must embrace hard.

**4. Hard is the seed of growth**

We learn more from failure than from success, and we can find a seed of growth in failure if we look for it. Adversity reveals the truth that the path of life is hard. It always has been and always will be. To fertilize the seed of growth during tough times, forget about your past achievements and allow yourself to become a beginner again. Have a learning mindset.

**5. Hard values what you have been through**

A lot of people don't strive to learn life lessons from hardship and failure because they find the process too difficult or painful. It requires determination and intentionality, and successful people embrace it. Because they value what hard teaches them, they don't shy away from it. And that learning opens the door to improvement and greater success.

**6. Hard gets harder unless you change your perspective**

Our perspective always impacts whether we see things as easy or difficult. If we expect everything in life to be easy, then nearly everything we experience will seem hard. The more we modify our expectations and embrace the normality and value of hard, the greater our ability to endure it, and the more we will learn from it.

CHAPTER 6

## Practice the Cycle of Improvement

Many people fear change. They don't want to give up the familiar. Or worse, they are so stubborn that they defend what they know doesn't work out of pride or inflexibility.

If we truly want to improve, how do we keep ourselves from settling into our comfort zone? How do we break out of the rut that has the potential to make us crazy or create stagnation that keeps us unsuccessful? The key is to develop a *reset mindset*. We need to find new approaches to the way we pursue success.

### The Cycle of Success

To help you develop a reset mindset where you can learn, unlearn, relearn, and improve, I want to acquaint you with what I call the Cycle of Success. What may stand out to you in this process is that failure is necessary for success. It assumes that you will take action, encounter setbacks, and learn from them instead of running away.

And one of the most valuable things about this cycle is that it can be used on a micro level on any given day, or it can be used for large business or leadership efforts. Here's how it actually works:

**1. Test**

The process starts with taking action because there is no progress or success without it. I like to think of this as testing because it removes hesitation. There is no pressure to make it perfect or to try to guarantee its success. A testing mindset believes there is a better way. Finding a better way usually requires going *many ways*.

**2. Fail**

If you are willing to test, you will fail. That may happen most of the time. The good news is that the cycle of success is exactly that: a cycle. Failure does not lead you to a dead end. It takes you to a temporary stop along the way on a journey worth taking, a journey that leads to success.

**3. Evaluate**

If we simply react to every success by celebrating and to every failure by avoiding the actions that led to it, we don't gain anything. But if we take the time to evaluate carefully, we can move on to the next phase of the cycle of success.

**4. Learn**

Every failure is a learning opportunity. The more you fail, the more you have the potential to learn. Each time you test, fail, evaluate, and learn, you develop layered learning. If we keep testing imperfectly and learning from it, the many lessons we learn from our losses will help us improve, layer by layer.

**5. Improve**

People who test, fail, evaluate, and learn put themselves in a position to improve. But learning alone isn't enough. Like good intentions, it doesn't change anything on its own. However, when you add improvement to learning, you can change *everything*. And here's the good news:

> Excuses are exits off the road to success.

- Everyone can improve
- Everything can be improved
- Every day has improvement possibilities

If you share that mindset, you open the door to many possibilities, and you will *always* get a return on failure.

**6. Reenter**

All this work in the cycle of success leads to this: the willingness to get back in the race and try again, only wiser and better prepared. Too many people become discouraged, and they quit because they didn't succeed the first, second, or third time. Successful people don't give up. They take the cycle of success full circle, reenter, and test again.

CHAPTER 7

## Learn the Difference Between Good Misses and Bad Misses

Most people think all failures are created equal, but that's a mistake. Once you understand they're not, you begin to appreciate the positive impact of good misses. Bad misses move us backward, but good ones move us forward when we know how to get a return on them. They help us fail forward—leading to breakthroughs instead of breakdowns.

Take a look at these seven key differences between good and bad misses:

**Good miss**: Failure discovered early

**Bad miss**: Failure discovered late

> Failure is like setting concrete. The longer you stay in it, the harder it becomes and the more difficult it is to get out. The sooner we are aware of it, the faster we can do something about it. A quickly discovered loss is a good loss, while an undiscovered and uncorrected one can become a bad one.

**Good miss**: Focusing on the benefits of failure

**Bad miss**: Focusing on the detriments of failure

> When we become preoccupied with all the bad effects of failure, not only does that negative past get in our eyes, but it also gets into our hearts. It's far better to look for the benefits in failure or loss. That requires people to embrace a positive mindset.

**Good miss**: Learning from failure

**Bad miss**: Fleeing from failure

> Most people try to avoid doing anything that might lead to failure, and if they *do* end up failing, they run away from it and pretend it never happened. The biggest problem with that is people who do those things never learn from failure.

**Good miss**: Failing in your area of strength

**Bad miss**: Failing in an area of weakness

> When you choose to do something you're not good at and you fail and you keep doing it, you're wasting your life because you will never receive a positive return on failure. Instead, stay with your strengths.

**Good miss**: Making adjustments

**Bad miss**: Making excuses

> Instead of making adjustments, many people make excuses. It's easier to move from failure to success than from excuses to success because excuses avoid personal responsibility, and a lack of responsibility leads to failure.

**Good miss**: Correcting a failure

**Bad miss**: Repeating failures without correction

> Failure is often not the cause of our problems; repeated, uncorrected failures are. To be productive and accomplish our goals, we must pay attention to our performance, recognize when we're making mistakes, and correct them.

**Good miss**: Taking positive action after failure

**Bad miss**: Mulling over negative emotions after failure

> When you experience failure, you need to acknowledge your emotions and process them. But then you need to move on. The best way to do that is to take action. The sooner you act, the sooner you can turn things around.

CHAPTER 8

## Lead Others Through Failure

Few things in life are more rewarding than adding value to others so that they can make a positive impact.

If you want to lead others through failure, I recommend taking these seven steps:

**1. Have up-front conversations about failure**

Leaders are responsible for being clear about the difficulties of the success journey for the people they lead. Up-front conversations create clear expectations, enabling people to have a realistic view of the ups and downs they should expect on their journey.

**2. Openly share your failures with others**

No matter what field you work in, openly sharing your failures with others is a good idea. It sets the right expectations for others, provides them with realistic examples of welcome behavior, and gives them permission to fail.

**3. Share the whole story, not just the highlights**

All of our journeys are complex. They take twists and turns. And the difficult parts are as important as, if not more important than, the easy ones. Helping others understand this prepares them to weather failure and come out on the other side.

**4. Close the gap for others**

Most people feel there is a great gap between success and failure, and they fear they will never be able to make the leap across that gap. If you're a leader, you need to try to help them bridge that gap.

**5. Redefine failure to help others change their perspective**

One of the most positive things you can teach people to do is redefine failure so they see it in a new light or from a different perspective. Here are five of the ways you can redefine it:

- think of yourself as a novice
- let go of perfectionism
- embrace ambiguity
- accept trial and error as normal
- view something that didn't work as simply unfinished

**6. Show others the bigger picture**

People who get tripped up by failure are often so focused on some aspect of failure that they lose sight of the bigger picture. By helping them regain sight of the bigger picture, you can help them get back into the game and succeed.

**7. Mentor others through the whole process**

Most of what I have suggested to help you lead others through failure has been focused on teaching. I want to encourage you to take that to another level by mentoring them through the entire failure process. Teachers say, "Sit down, and I'll tell you what you need to know." Mentors say, "Come with me. Let's walk this road together."

CONCLUSION

## The Future Favors the Bold

There are only three types of people in this world: the won'ts, the can'ts, and the wills.

The won'ts oppose everything. The can'ts never accomplish anything. But the wills accomplish everything because they know how to get a return on failure.

While it's true that learning to get a return on failure doesn't make success easy or automatic, it does open the door to many other life possibilities. Have the courage to seize them. If you pursue opportunities, you may fail, or you may succeed. But if you don't pursue opportunities, you will *always* fail. You give up that opportunity and all the potential it could bring. Plus, you give up something else: all the other opportunities it would lead to.

Keep doing all the things we tackled, and you'll continue to get a return on failure, make progress, and make the most of your opportunities. Do that, and success becomes inevitable.

## THE SUMMARY IN BRIEF

If you want to be heard, you need to know how to listen.

At a time when we are more technologically linked than ever, our conversations have never been more fractured and disconnected—because most don't know how to truly listen. The result? You constantly fight to be "heard" over all the noise and distraction. You feel frustrated, confused, and ignored and feel like no one is paying attention to you. You are tired of repeating yourself over and over again. At work and home, conversations leave you feeling drained.

In ***How to Listen: Discover the Hidden Key to Better Communication,*** Oscar Trimboli, host of the Apple-award-winning podcast Deep Listening, shows you how to unlock your listening superpowers to have more impactful conversations at work and home. Through stories, exercises, and tips, Trimboli shares invaluable insights to help you notice when you aren't listening—and what to do about it.

## IN THIS SUMMARY, YOU WILL LEARN:

- How to unlock your listening superpowers.
- How to have more impactful conversations at work and home.
- How to notice when you aren't listening – and what to do about it.
- How to reduce conflict and confusion in your life.
- How to master the art of communication.

## Introduction

Communication isn't all about what you say. It's about what you hear, how you react to it and respond. In short: it's about how you listen. And despite the fact that leaders typically spend upwards of eighty percent of their day listening, only two percent of them have ever had training in how to listen effectively. Listening is human and intuitive. Listening is a skill, a strategy, and a practice—a way to balance how you communicate. Rather than looking for the one breakthrough idea or for a one-off tip, trick, or technique, you can improve your listening in every moment and every meeting. Listening is practical, pragmatic, and actionable. All you have to do is focus on being better than you were in your last conversation.

Imagine operating in a world where there are shorter, more productive meetings, fewer mix-ups and misunderstandings, healthier relationships at work, higher employee trust, reduced unnecessary rework, sustainable organizations, and opportunities to think, hear, and see your most complex challenges differently. There are Five Levels of Listening, each of which requires the foundation of the previous level. This book will take you through each level in order.

You are building a lifetime skill; some patience and practice will create sustainable foundations and change the way you communicate for the rest of your life. Listening is the willingness to have your mind changed. Are you open to exploring? As you develop your listening skills, you'll not only reduce the conflict and confusion in your life, you'll spend less time in conversations because you'll be paying attention to what matters. When you master the art of listening, you'll master the art of communication—and create more powerful connections in all facets of your life.

## Why Listen?

For individuals, the cost of not listening is fractured relationships with others in your organizations or at home. People's sense of isolation or disconnection grows when their manager doesn't invite, encourage, or prompt for contribution. The result is that people go through the motions, and human potential is wasted. For companies, the cost of not listening is measured in lost customers, ignored employees, unsuccessful products and services, and unsustained profits. For charities, not-for-profits, and for-purpose organizations, the cost is never achieving the changes they want to bring to the communities and countries they seek to serve.

When you are open to improving your listening, conversations and projects take less time because there is less wasted effort re-explaining. The additional people, resources, and quality costs are minimized because your initial conversations are focused and more effective.

Mastering the art of how to listen in the modern world creates and sustains higher-quality conversations that take less effort and make a more significant impact. The principles of listening are simple, yet consistent daily practice takes effort.

## Get Ready to Listen

Many people think that listening is about questioning. When your mind is absent or wandering, these questions appear random to the speaker rather than something that expands the conversation. Aimless and arbitrary questions waste the speaker's time and diminish the relationship.

Listening is demanding and draining when you compete with the chatter in your mind. When we are not conscious of the thoughts that our mind processes before we start a conversation, the discussion will be disjointed and out of tune.

When we listen to ourselves, we quickly notice what is going on beneath the surface. Allowing the subconscious time to process makes listening light and liberating rather than draining. When you take three minutes before the conversation, it shows respect to yourself and to others. It rapidly brings to the surface any potential distractions. These distractions take two forms: internal and external. Listening is about being present and open to many possibilities.

## Give and Pay Attention

You default to listening for similarities because your mind is a pattern-matching machine. It's anticipating and comparing what the speaker is saying at lightning speed because you can listen four times faster than they can speak. It takes great awareness to notice where your listening attention is focused—on what's familiar or dissimilar.

It's ironic that when seeking the familiar to form a connection with the speaker—a common listening barrier—we send a signal to our mind that does the opposite. The act of accessing our memory to match similar experiences takes away from working memory while attempting to allocate working memory to the function of listening. It's happening so fast that you are not conscious of how your mind is processing the multiple simultaneous activities.

There is another way to listen. When seeking difference, you need to let everything in—you need to be very open in processing what they are saying rather than the sifting and sorting that takes place when listening for the familiar. Notice that you have two orientations: similar and different. Neither is correct—be flexible enough in your listening to notice which one is the most productive for the discussion or decision you need to make. It's about being conscious of whether you are listening for similarities. Noticing and adjusting the position of your attention during a discussion is a crucial foundation stone to increasing your listening capacity.

## Hear, See, and Sense

When listening to the speaker's content, there are three discrete and integrated elements: hear, see, and sense. Each element will help you build more awareness of the next layer in your listening. We will explore each of these in turn: Hear: the audio content that your ears, body, and mind capture. See: their facial expression and body language. Sense: the emotion present during the discussion.

Being conscious and flexible enough to notice a mismatch and reset accordingly is the skill. It may take a little longer to notice the speaker's style when you meet them for the first time. It's essential to notice how you hear them. It provides an early warning signal to how quickly you will be distracted in the discussion. Mismatched preferences between the speaker's preferred style and yours will accelerate how quickly you drift away.

Listening is collecting verbal and non-verbal content. After listening to the words, you should collect as many visual signals as you can comfortably process. Your eyes are an important part of creating a connection between you and the speaker. When it comes to eye contact, staring or gazing for extended periods of time can be interpreted as aggressive or intimidating. Keep your eyes in the triangle from their eyes to their chin. Focus on the triangle as an area, rather than exclusively and continuously on their eyes.

Visual signals from the speaker are commonly referred to as body language. Consider this hierarchy as a way to start noticing body language, and when you feel comfortable that you have increased your awareness at this level, progress to the next: first face, then posture, and finally breathing.

## Explore the Backstory

Not all speakers commence the story at the beginning. Rarely will they outline each scene, with all the characters and their parts, into a coherent sequence. When the story's content is close or personal, speakers tend to start the conversation from their opening scene rather than from the opening scene. Yet something powerful and transformational happens when a speaker says the entire story out loud from the beginning—from the idea's inception. Verbalizing all the components of the story to all the participants creates meaningful connections for the speaker and the listener. It creates shared understanding and meaning.

There are two distinct perspectives of a backstory: what happened in terms of actors, events, and relationships (the backstory), and how each person views and explains their role relative to others (their backstory). Your role as the listener is to listen to the backstory, their backstory, and their place in the backstory. Most backstories have lots of twists and turns and create deep and nuanced context, which creates a foundational shared understanding between all participants—past, present, and future.

## Notice How it is Said

Speech and language offer a palette of colors. Colors have range, intensity, and vibrance. They can blend to form subtle and nuanced variations. They can also be black and white. purple. Like color, language has patterns, opposites, and combinations. When listening to the word patterns, you gain insight into how the speaker uses vocabulary to make sense of their world. Their speech pattern is how they translate the world into their unique words, sentences, and stories. We will explore these patterns using the following categories: Language: The syntax of the dialogue—adjectives and pronouns Preferences: The way they portray their history and ideas Time: Their relationship to the past, present, and future.

## Focus on What is Unsaid

Listening to the unsaid is powerful because the speaker notices what else they are thinking, rather than only the first thing they say. Listening for their unsaid is the most potent form of listening.

Your role is to become a book editor and consider the speaker as a writer. A writer has many words in their mind and many ways of expressing an idea. The writer's mind is a random collection of different concepts and many words. The editor's role is to get to what the writer is thinking

about in the best way to express the concept—the essence rather than the first thing they write.

An editor encourages the writer through multiple attempts to improve what they write and how they write it. Each writing round progresses the idea and makes it easier for the writer and their readers to understand. If we don't accept that what people write the first time is what they think, why do you as a listener only hear what they say the first time and assume it's what they are thinking? Their complete thoughts are not in their first explanation.

The unsaid in a group discussion amplifies if it is not carefully uncovered. The unstated emerges when you invite them to express the idea with more details, depth, and nuance. This technique allows the speaker's language to catch up with their thoughts.

An elegant and skillful listener will notice the speaker's breathing and when it changes. They will notice where the speaker is breathing from, because it suggests how deep inside the speaker's mind, emotions, or body this idea has traveled. The longer and deeper the breath, the longer they have been thinking and reflecting on it.

## Listen for Their Meaning

It's powerful when you create the capacity in yourself and the speaker to express the essence of the issue or idea. If you can help them listen to themselves a little longer, reflect on what it represents to them, and connect their past with their aspirations for their future, it will change their mind and the rest of their life.

The speaker creates their meaning when they link the past and the future. It's your role as a listener to help create this connection. While listening for the meaning, your perspective moves above the dialogue and the discussion. You start to become aware of the energy and interaction between the speaker and the listener. You treat the conversation as another participant to be conscious of during the exchange.

Reimagine your perspective: let it move from two participants in a ballroom dancing together to the role of a spectator observing from above. In this state, your mind flows continuously through three perspectives without losing orientation, and it stays entirely in the moment. This helps the speaker alter and reimagine the backstory, their narrative, and the possible future. It allows them to access this change where they are experiencing it: thoughts, feelings, or words.

## Conclusion

Listening requires practice to progress. A focus on incremental improvement before you can move safely to the next level. A commitment to self-awareness and self-improvement. If you advance without mastery at the preceding stage, it's unlikely that you can perform consistently and effortlessly when listening at the next level. Despite the urge to rapidly test higher performance levels, doing so could damage your progress.

Listening is a contact sport, yet you can practice alone. Reading this book is a way to practice safely. Your listening will progress in every discussion and meeting—it only takes a moment of conscious awareness and presence. When you bring a mindset of being open to having your mind changed, the seeds of listening will flourish.

**Oscar Trimboli** is an author, host of the Apple award-winning podcast Deep Listening, and a sought-after keynote speaker. He is passionate about using the gift of listening to bring positive change in homes, workplaces, and cultures around the world. Through his work with chairs, boards of directors, and executive teams in local, regional, and global organizations, Oscar has experienced firsthand the transformational impact leaders and organizations can have when they listen beyond the words.

# How to Say Anything to Anyone

## A Guide to Building Business Relationships That Really Work

by Shari Harley

### THE SUMMARY IN BRIEF

We all know how it feels when our colleagues talk about us but not to us. It's frustrating, and it creates tension. When candor is missing in the workplace, employees feel like they're working in the dark. Leaders don't know what employees really think; managers are frustrated when outcomes are not what they expect; and employees often don't know where they stand performancewise.

Many of us remain passive against broken, indirect communication habits, hoping that things will miraculously improve — but they won't.

In *How to Say Anything to Anyone*, Shari Harley shares the real-life stories of people who have struggled to get what they want at work. With her clear and specific road map, she enables you to create the career and business relationships you really want — and keep them.

Harley urges you to take charge of your career by taking charge of your business relationships. Make your work environment less tense and more productive by practicing direct communication. Set relationship expectations, work with people how they like to be worked with, and give and receive regular feedback.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to ask for what you want at work.
- How to improve all types of working relationships.
- How to reduce the gossip and drama in your office.
- How to tell people when you're frustrated, in a way that resonates.
- How to take action on your ideas and feelings.
- How to get honest feedback on your performance.

# THE COMPLETE SUMMARY: **HOW TO SAY ANYTHING TO ANYONE**

**by Shari Harley**

**The author:** Shari Harley, a business speaker, trainer and consultant, started her career selling and facilitating programs for Dale Carnegie Training. She has also served as a trainer for American Century Investments and led leadership development and succession planning for OppenheimerFunds. In 2007 Harley launched CANDID CULTURE, a training and consulting firm that seeks to bring candor back to the workplace, creating a safe haven for employees and managers to speak honestly.

## The Case for Candor

Most of us have no idea how we come across to others or what our employers and colleagues think of our services. We don't know what people think, because, for the most part, they don't tell us. Instead, they tell other people behind our backs. This is why we need to encourage people to be candid with us, even when it hurts to hear their feedback. Otherwise, we'll operate under false assumptions and make unnecessary, career-killing mistakes.

Candor is not bad news, and a candid organizational culture is not necessarily about saying hard things. Instead, candor is asking more questions at the onset of relationships. Candor is stating expectations rather than expecting employees and vendors to read your mind. Candor is making a commitment to talk about things as they happen, not six months after the fact. In candid cultures, coworkers, employers and employees say what they need to say quickly and easily. They have created relationships in which all parties can speak openly without concern.

When you know what people think and say about you, you have choices. When you understand the impact of your behavior and consciously choose your outcomes, you are in charge of your career and your life. ●

## How to Establish Candid Relationships

Despite the abundance of training programs on giving and receiving feedback, speaking up in organizations remains difficult, and many people don't do it. We tend to think it's too difficult to confront people. We don't want to deal with the conflict, so we say nothing.

Be smarter. Rather than waiting for something to go wrong, set clear expectations at the beginning of working relationships and projects. Tell your coworkers you want to have good relationships with them. Make an agreement that when challenges arise, it's not only OK but also expected to discuss what's going on. Agreeing to talk about difficult situations before they happen makes it more likely that when breakdowns occur, you'll be able to speak up with less anxiety. ●

## You Get What You Ask For

### The Consequences of Insufficient Expectations

Lisa, an internal HR recruiter, is conducting a search for Carol, a hiring manager. Lisa doesn't get enough information from Carol when the job is posted. As a result, Lisa sources candidates who aren't appropriate for the position. Carol rejects every candidate she meets and finally decides that Lisa is incompetent. Lisa decides that Carol is difficult to work with and asks to support a different department. The two never speak to each other about their frustrations.

Does this scenario sound crazy? Of course! Yet it happens all the time.

If, at the onset of the search, Lisa and Carol had asked more questions about what was important to each person, had agreed to periodically talk about how the search was progressing and had given feedback when things weren't going well, their mutual dissatisfaction and the unfortunate outcome might have been avoided.

### Setting Expectations

Follow the steps below to successfully set expectations with clients, coworkers or your boss during a one-on-one conversation or at a project kickoff meeting:

**Step One: State your goal.**

"We want a great relationship. We want our work together to be easy and smooth."

**Step Two: Set expectations.**

"Let's have a conversation and agree on roles and responsibilities so everyone is clear about who will do what."

**Step Three: Agree on how you will work together.**

"Let's talk about how we will address challenges. Things will happen that we don't anticipate. We'd like to be able to talk about any challenge that arises — as it occurs — and not have anyone take anything personally."

**Step Four: Ask for feedback.**

"Anyone can say anything at any time. We all want the project to go well, and we need to know on a regular basis how you feel things are going. Knowing what's working and not working will allow us to make improvements. We should all periodically check in and ask for feedback."

**Step Five: Ask for permission to give feedback.**

"If we have concerns at any point during the project, we'd like to be able to speak up and have you trust that we are speaking from our commitment to your business and the project and from our desire for this process to go smoothly."

**Step Six: Agree on roles.**

"Let's also discuss who will be having those conversations. Should particular leaders have the discussions, or is it OK for anyone on the project to give feedback at any time? Either way is fine. We just want to be clear so people know what to do and what to expect."

**Step Seven: Agree on the communication process.**

"Let's agree on what way, specifically, and how frequently we'll check in to assess progress and evaluate how our working relationship is going." ●

## Taking the Mystery Out of Working With Others

When beginning to work with a new set of people, avoid unforeseen missteps and shorten the inherent learning curve by asking about their work habits and preferences.

After I tell people I want a good and candid relationship in which both of us can speak freely, I ask permission to ask a few questions. Then I get specific as I inquire about their working-style preferences.

### Asking Your Coworkers About Their Working-Style Preferences

Below are questions that you can ask coworkers, fellow team members and direct supervisors to get a clear sense of their working styles.

1. How do you best like to communicate? Via email, voicemail, text message, instant messenger or telephone or in person?
2. Are you a morning, afternoon or night person?
3. If we need to talk, do you prefer to work by appointment or would you prefer I drop by your office or give you a call?
4. If I need to reach you outside of regular business hours, what method is best? What time is too early and what time is too late to call?
5. How do you feel about being called on your cellphone?
6. What are your pet peeves? What types of things annoy you at work?
7. How will I know when you're frustrated?
8. If I need something quickly, how do you prefer to be interrupted?
9. If I have something to give you when you're not in your office, where would you prefer I leave it? On your desk or chair or in your inbox or with your assistant?

There is one hard-and-fast rule here: You cannot introduce these questions via email.

Taking the time to ask about another person's working-style preferences is a rapport builder. Emailing a list of questions is not. ●

## How to Create Candid Managerial Relationships

If an employee quits and his manager is surprised, the manager doesn't know his employee as well as he thinks he does.

Every manager should be able to answer the following two questions about each of his or her employees. If you can't, I'll go out on a limb and assert that you're not as good a manager as you could be. You're at risk of losing employees and never knowing why.

1. What are three things that will keep you with the organization?

2. What's the one thing that would make you leave the organization?

Your employees are keenly aware of your authority. Even those with whom you have good relationships know you're the boss, and there are some things direct reports just don't say to the boss. Because they fear the consequences, employees often don't state their greatest needs, even when not getting those needs met will drive them out of the organization.

As managers, we sometimes assume that others want what we want. Not the case. People need different things to be happy. If we don't ask them, we'll never know what those things are. ●

## Managing Up With Candor

Your boss is, of course, responsible for managing you. But savvy employees know that they also manage their bosses. When we don't manage upward, our careers stagnate.

### Ask for Feedback Along the Way

Everyone has a preference regarding communication of information — how much, in what format and how often. Even people who say they don't care usually have a preference. Some managers want to know exactly what you're working on at all times. Others are happy to receive periodic updates on just the big initiatives.

Why guess what your boss is expecting, when it's such an easy question to ask? Consider asking:

- Did my last update contain enough detail, or would you have liked more information?
- What can I change about how I put the data together to make it easier to review?

### Your Job Is to Make Your Boss Look Good

The higher someone gets in management, the more his performance is evaluated based on his team's performance. This is why smart managers surround themselves with the best people. Thus, regardless of what you think of your boss, your job is to make him or her look good. And the more clearly you understand how your boss is being measured, the better position you are in to achieve your own goals.

Knowing where your boss sees your department going helps ensure that your actions are aligned with his vision and focused on what's most important. What you think is important may not be what your manager thinks is important. Work on agreed-upon priorities. ●

## Strengthening Internal Business Relationships

The next step is to learn more about what the people and departments you work with do on a daily basis, the challenges they face, and how your work impacts theirs.

### Departments Don't Talk to Each Other

In my experience, most people in organizations know very little beyond the basics about what other departments do. We often don't know what types of challenges and constraints other departments deal with. And even less often do we know why other departments require certain forms, timelines and processes. Asking these questions helps people get their jobs done and eliminates much of the strife, redundant work and frustration that is prevalent in most workplaces.

Every department has its own way of doing things. There is a reason why payroll needs to be reported by three o'clock, why you must supply accounts payable with a $2 receipt for a cup of coffee when the federal government doesn't require it, and why you have to go through purchasing for some purchases but not others. For the most part, there is a good reason — at least in someone's opinion — for those practices.

Unfortunately, there is often little communication about these policies and procedures. We just expect people to know why we do what we do and to follow our rules. When other departments don't play along, we become annoyed, grumbling about how difficult they are to work with and how they make our lives hard.

In the absence of knowledge, people fill in the gaps. And it's never good. Give more information than you think you need to give.

For the most part, people will do what you ask, but they want to know why you're asking. They need to understand the rationale behind what they're being asked to do. Once they understand, they often stop complaining and follow the rules. ●

## Relationships Require Maintenance

Starting a relationship by asking what people expect from you but never checking in to ask how things are going is like taking someone's order in a restaurant but never checking back to see how he is enjoying his meal. If the food isn't quite right, the customer is forced to track down his server to make a request. But most people are not likely to do that. They are more likely to

leave a lousy tip and tell everyone they know how bad the service was. Your coworkers are no different. They're more likely to work around you than tell you they're dissatisfied.

The priorities of a business tend to change. What was important during the first quarter may not be a priority in the second. If you don't periodically check in and find out what's changed in your coworkers' departments, you could be dedicating time and resources in the wrong places and never know it.

### You Can Be Fired and Never Know It

The VP of marketing at a firm I used to work for got a call from a friend who had seen the VP's job posted on a job board. The friend said, "Hey buddy, I just wanted to see if you were still there. Your job is posted on Monster, so I figured you'd moved on."

That's what I call feedback. It isn't specific or particularly helpful, but it is feedback.

In this case, the company determined that the VP of marketing wasn't working out and decided to replace him. To reduce the amount of time the job would be vacant and to keep the current VP engaged, the company began searching for his replacement before telling him that he wasn't meeting expectations.

This is wrong, but it happens all the time.

If you want to control your career, you must identify your blind spots and know your reputation. The only way to find out is to ask.

Consider conducting what I call a Relationship Inventory — a method of touching base with the people you work with to see what's changed in their business since you last talked. It's also an opportunity to ask for feedback.

You can schedule a meeting to ask for an update and get feedback, or you can use an already scheduled meeting. It doesn't matter how you get the information; it just matters that you ask for it and respond appropriately. Just ask a few questions. You want to have a conversation, not conduct an interrogation.

## Relationship Inventory Questions

1. What's happening in your department that you want me to know about?
2. What's changed in your business since we last met?
3. What's working about how our departments are working together?
4. What's one change we could make that would make the biggest difference for you?
5. What's it like to work with the people who report to me?

## Can I Trust You?

You can tell your colleagues, your boss and your direct reports that you want good working relationships with them. You can ask for feedback and promise to say thank you. And you can ask about their working-style preferences. But none of this will make a difference if the people you work with don't trust you.

You have to demonstrate that you meant what you said and that you really are the person you say you are.

We've all received feedback or input that we've questioned or invalidated because of our relationship, or lack thereof, with its source. If you want others to hear your suggestions and take them as you intend them, you must have trust-based relationships. If you don't, every word you say will be questioned and tested.

As relationships develop, it's important not to kill them by damaging trust. Building trust takes time. Breaking trust can happen in a moment. Do your best to avoid the behaviors that are classic trust and relationship killers.

### Relationship Killer Number One: Gossip

People have a tendency to talk about us, not to us. If you haven't been gossiped about, you just need to get out and meet more people.

If you have something to say, say it directly to the person involved. If you're not going to speak to the person directly, say nothing at all. As we all know, this is easier said than done.

Gossip will destroy relationships, organizational cultures and careers faster than anything else. And we are all tempted to gossip.

### Relationship Killer Number Two: Breaking Your Word

Do the things you say you will do. Here's a goal to aspire to: Make only commitments you intend to keep. We all know this isn't possible, so do the next best thing. As soon as you realize you can't or won't keep a commitment, tell the people who are affected. Don't wait.

### Relationship Killer Number Three: Not Telling the Truth

We all do things we wish we hadn't done. We miss deadlines, make mistakes and disappoint people. Adults are not very different from kids when it comes to confessing to failings. We've all said, "It wasn't me" or "I didn't do it" way beyond the age of 9. We don't want to disappoint the people we work with.

### Relationship Killer Number Four: Withholding Information

When people don't know what is happening or why, they make things up. It stems from a human need to know and understand what's happening in our surroundings. However, made-up information that starts quite innocently can quickly spread throughout an organization, destroying the culture leaders are working to create.

A little candor in the form of an organizational announcement can mitigate the gossip and rumor mill. And the organization's leaders can build good will for being candid and trusting that employees can handle sensitive information. The more you trust people, the more they will trust you. ●

## Giving and Receiving Feedback — What, When, Why and How

Landmarks in driving directions serve as feedback, letting us know we're on the right track and are progressing toward our desired destination. Just as we need to know whether we're driving in the right direction, we need to hear both what's going well and what's not going well regarding our performance at work.

### Knowing When to Shut Up

Before we talk about how to give feedback, let's talk about what feedback is and what it isn't. There are two purposes for providing feedback: to either change behavior or maintain it. There are no other reasons.

**Give feedback when:**

- The person asked for your opinion.
- You asked for and were given permission to give input, and you have a specific example to share.
- The incident happened recently, preferably within a week.
- You are trying to help the person improve his or her performance or want to be sure he or she keeps doing something that is working.

**Don't give feedback when:**

- You're annoyed and it's a chance to express your frustration.
- You don't like this person and this seems like a perfect time to tell him or her.
- He or she hasn't asked for feedback but needs it.
- You don't have permission.
- It's a chance to blast someone in front of others.

### If You Can't Give an Example, You're Not Ready to Give Feedback

If you want to be sure people get really defensive, give vague feedback. Any time feedback can be interpreted in more than one way, it's too vague.

*Arrogant* means different things to different people and can be demonstrated in many ways. Telling Mark he is arrogant is unhelpful, but telling him specific behaviors and actions that made him appear arrogant is quite helpful. Without knowing the specific behaviors that created that unfavorable impression, Mark is left with guesswork, which creates paranoia and defensiveness. ●

## The Feedback Formula

Below are eight steps that will enable you to say anything — no matter how difficult — in two minutes or less. Conversations following these eight steps enable recipients to remember the situation; see the impact of their actions; speak on their own behalf; and create, hopefully with your input, a plan for the future.

**1. Introduce the conversation** so feedback recipients know what to expect.

**2. Empathize** so both the feedback provider and the recipient feel as comfortable as possible.

**3. Describe the observed behavior** so the recipient can picture a specific, recent example of what you're referring to. The more specific you are, the less defensive he will be and the more likely he'll be to hear you and take corrective action.

**4. Sharing the impact or result** describes the consequences of the behavior. It's what happened as a result of the person's actions.

**5. Having some dialogue** gives both people a chance to speak and ensures that the conversation is not one-sided. Good feedback conversations are dialogues during which the recipient can ask questions, share his point of view and explore next steps.

**6. Make a suggestion or request** so the recipient has another way to approach the situation or task in the future. Give people the benefit of the doubt. If people

knew a better way to do something, they would do it another way.

**7. Building an agreement on next steps** ensures there is a plan for what the person will do going forward. Too many feedback conversations do not result in behavior change. Agreeing on next steps creates accountability.

**8. Say "Thank you"** to create closure and to express appreciation for the recipient's willingness to have a difficult conversation.

If you're giving more than one piece of feedback during a conversation, address each issue individually. For example, if you need to tell someone that he or she needs to arrive on time and also check his or her work for errors, first go through the eight steps in the formula to address lateness. When you've discussed an agreement of next steps about being on time, go back to step one and address the errors. But talk about one issue at a time so the person clearly understands what he or she is supposed to do.

### Remove the Emotion and Deal With the Facts; How You Feel Makes No Difference

The eight-step Feedback Formula is short, simple and straightforward. But something is deliberately missing. The Formula focuses on the facts — not on how you feel about the person or situation. Too often feedback conversations contain the following phrases: "I'm so disappointed in you" or "I can't believe we're having this conversation again." How you as the feedback giver feel is not part of the Feedback Formula, because the conversation is not about you. It's about the other person and the impact of his or her behavior.

### When Do You Cut Bait?

Addressing the same behavior multiple times begs the question, At what point do you stop giving feedback and either end relationships or work around people?

There's a point at which you (a) give up and fire the employee, (b) rotate him to a job where he can be more successful, or (c) get him moved off a project or account and then work with the people who remain. That's an unfortunate reality.

But no matter the outcome, you can do the right thing by giving specific feedback in a timely way. If after a reasonable number of attempts you don't see sufficient change, work with the people who will work with you. ●

## Tips for Giving Feedback

Feedback conversations can strengthen your relationships and build trust. When you are willing to have a difficult conversation, you demonstrate that you care about the person and the relationship. If you didn't care, you'd say nothing, tell other people, cut the person off, or work around him or her.

When you have something difficult to say, sending an email or leaving a voice mail is easier than having a live conversation. You can hone what you want to say until your message is just right. You can manage your emotions and you don't have to deal with the other person's reaction.

But with an email, you can't manage your tone, see the other person's response or ensure she hears your message as you intended it.

### Good Feedback Conversations Are Planned

Feedback conversations are stressful. To ensure you say everything you want to say, plan your conversations.

About 10 years ago, I had a manager who was often volatile, unpredictable and irrational. To describe Kathryn as difficult to work with was an understatement. Talking with her was beyond stressful. I would get so nervous during our meetings that I'd forget to discuss half the things I wanted to say.

Before each meeting I made a bulleted list of everything I wanted to talk about and practiced particularly difficult conversations out loud. When Kathryn became emotional and I became flustered, I would look at my list, check off the last thing we talked about and move to the next item. Having notes of what I wanted to say kept me calm and ensured that I got what I needed from our very stressful meetings.

What follows is a series of questions for you to consider writing down the answers to as you plan for difficult feedback conversations.

- What's working?
- What's not working?
- What's most important for this person to know?
- What would you like this person to do differently?
- What are your requests?
- What do you want to say but know you probably won't?
- What will you say first? ●

## Dealing With Difficult Situations

The following strategies are for dealing with some of the most difficult situations that arise in the workplace. One note before we dive in: I wince every time I hear the term "dealing with difficult people." We deal with situations, not people.

**SITUATION: You work for someone who doesn't provide enough feedback.**

Managers are frequently promoted into management because they're good at their jobs. But doing something well and coaching someone else to do it are not the same thing. If all you hear from your boss is that you're doing a good job, and if you've tried the techniques for getting more feedback as outlined throughout this book and that hasn't worked, get feedback from a different source.

Simply ask your colleagues for specific feedback, and give coworkers permission to tell you. If the feedback isn't specific enough or you doubt its validity, ask someone else until you either get useful information or can validate the feedback you're questioning. While you deserve a boss who provides regular and specific feedback, you won't always have one.

**SITUATION: You were promoted and now your former coworkers and friends work for you.**

When you get promoted above coworkers and friends, I suggest having a one-on-one conversation with each new direct report and saying, "We were peers and friends, and now I'm your boss. It's awkward for me, and I have to assume it's awkward for you as well. I want us to have a good working relationship. The nature of our relationship will have to change. Before we go there, I want to give us both a chance to talk about how we're feeling. Want to start? What's this like for you?"

Choose your own words. The more transparent and willing you are to speak candidly about things people are thinking but not saying, the more respect you'll earn and the more solid your relationships will be.

**SITUATION: Someone tells you about a problem but asks you not to say anything.** Or someone gives you permission to pass the feedback on but doesn't want to be identified as the source of the information.

Being told something in confidence and then asked not to take action puts you in a very awkward position. When this happens, ask the person why he told you. Request that he not do it again unless he wants you to do something with the information.

There are times you simply cannot keep confidences. If this is the case, go back to the person who confided in you and tell her what you're going to do. Don't let her hear about it from someone else. The conversation could go something like this:

"Mary, I appreciate you telling me about the client's complaint. I know you asked me not to share it, and I want to respect your confidentiality. But it's a big deal and I have to pass on the feedback. How can I share the information so that you're comfortable? Do you want to talk to the director of sales yourself? I'm sure he'll be receptive. Or do you want me to talk to him?"

**SITUATION: Every time you give feedback to a certain person on your team, she cries.**

Giving a crier feedback is uncomfortable. Some people say people cry to manipulate and get out of a situation. I don't think that's true. I think we have a natural reaction to feedback and stress. Some of us clam up and say nothing, some of us get angry, and some of us cry. You are not responsible for how the recipient feels or reacts. When the person is calm, resume the conversation. ●

## Business Relationships That Really Work

It's safe to ask questions and tell people, at all levels and in all roles, the truth. CEOs don't have to hire consultants to find out what's happening in the organization. Employees willingly tell them. Projects are completed smoothly, and teams and departments work well together because employees understand what other departments and individuals do and how they impact each other. More gets done, in less time.

When you know what others expect and what your coworkers think of your performance — because you asked — you're able to manage your reputation and thus your career. Information is power, and power means control.

Changing an organization's culture starts with one person who is willing to do something differently. One person who asks more questions and tells the truth. Is that you?

The difference between relationships that work and those that don't is courage — the courage to make requests and tell the truth. One quality distinguishes people whose careers are on an upward trajectory. That, too, is courage.

You can say more than you think you can. Ask more. Assume less. Start today. ●

## THE SUMMARY IN BRIEF

There are thousands of jobs posted on career search sites that explicitly require strategic thinking. Organizations value individuals who can think strategically and want them on the front line of management as well as in the executive suite. Competent strategic thinkers are exceptions. For that reason, they are rare. One challenge of organizational development is in recognizing that prevailing culture often discourages deviation from the norm. Hence the cliché, the nail that sticks up gets hammered down.

Greg Githens, in ***How to Think Strategically***, draws from his experience as an employee and as a consultant, for an array of organizations: fast-growing entrepreneurial companies, family businesses, large businesses, government agencies, military, universities, and nonprofit community and professional organizations. He's worked with those at the top of the organization and those on the front line. Find the personal relevance in Githens' examples and questions. You will be rewarded with competence and mastery that will benefit you in all areas of your life.

## IN THIS SUMMARY, YOU WILL LEARN:

- The difference between strategies and goals.
- To identify the microskills needed for strategic thinking.
- Understand why ambiguity is a precursor to great strategy.
- How curiosity sparks insight for forward thinking.

## Competence and Cleverness

This book's big idea is that individuals are the sole practitioners of strategic thinking, and each person practices it in a way that can be judged as competent or not. Competent individuals have the capacity and ability to understand a situation and act reasonably. Strategy is a relationship among ends, ways, and means. People with competence and cleverness are the ones who connect the dots in the relationship.

### Moneyball

***Moneyball*** is a story about a brilliant strategy developed by an unorthodox leader willing to challenge conventional beliefs. Billy Beane, the general manager of the Oakland A's professional baseball team, believed that his rivals were not valuing talent correctly and that he could exploit his better knowledge. His policy was to secure the contracts of undervalued players and deal away overvalued players. Oakland's Moneyball strategy was effective and produced an exceptional result: over a multiple-year period, Oakland won more regular-season games than any other team (except the Atlanta Braves) and reached the playoffs several years in a row. They did this with the lowest payroll in the industry.

Beane recognized the reality of the situation. He observed and acted on his insights. Then he developed a new set of dominating ideas. His premise was that getting runners on base was the key to winning games. This stood in contrast to the traditional approaches. By changing strategy based on data, they were making a smart bet—and it worked. Beane, an individual with unique competence and cleverness, changed baseball.

## Future Thinking

Christopher Columbus is one of the most significant people in the history of humankind, bringing the lands that are now called the Americas to Europe's attention. Columbus spent much of his early life on the Mediterranean Sea learning the basics of seamanship. He later ventured north and south on the "Great Ocean," as the Atlantic was then called. He acquired the idea of finding a trade route to Asia by sailing west. Columbus was curious and listened for details as he talked to fellow travelers. He then organized his thinking by looking to the future. He thought in new ways. He studied the weather and learned map-making. All these parts of his narrative provided sparks of insight.

### Resources

Columbus had a big idea, but he needed resources. He undoubtedly found it logical to begin with a request for sponsorship from King John II of Portugal, because Columbus had contacts within the Court. Columbus also smartly developed a relationship with the Spanish royalty, who eventually provided him with the resources needed for his project.

### Cognition

Columbus' curiosity and other habits of mind are consistent with the concept of higher-level thinking. When Portugal refused support, Columbus pivoted to Ferdinand and Isabella of Spain, who were receptive when he most needed their sponsorship. A good strategy adapts to changing information about the situation. He began his voyages expecting to find large and sophisticated trading centers. He never found those cities, so he switched tactics, applying all he had observed and taking advantages of relationships he had built. Although Columbus needed the help of many other people, his individual experiences, insights, and effort are at the center of the story. He understood the situation, adapted to it, and formulated a reasonable approach to advance his interests and the interests of his sponsors.

## Microskills

Githens draws attention to twelve microskills of strategic thinking. They apply whether one is discussing military strategy, stock market investing, or governance of a philanthropic organization. We'll look at a few here.

### Curiosity

Curiosity is perhaps the most familiar of the strategic thinking microskills and the easiest to incorporate into a busy daily routine. One tip for keeping curiosity in operation is to monitor your thinking, asking yourself this question: "Am I in learning mode?" Strategic thinkers tend to question everything. They want to know how things work and wonder how they can be made to work better. They're curious about people and their backstories. Githens offers this tip: Find people whose points of view are the opposite of yours. Rather than try to change their minds, learn why they hold that point of view and how they arrived at it.

### Storytelling

The strategic thinking microskill of storytelling is a natural capacity. People understand the basics of stories: characters, tensions, actions, and resolutions. A story can explain an organization's current position in society and its relationship

to its rivals. One important use of story is the prospective story, one that involves the organization and its people in a new, different, future state. A story can help others make sense of ambiguity, lead people to adopt new beliefs, and organize their actions.

### Reflection

The microskill of reflection is sharpness applied to oneself. Your goal is to develop a continually improving understanding of what is important to you and your organization. Productive solitude provides the opportunity for you to test your inclinations and deepen your understanding of the nature of your present reality and the possibilities of the future.

### Fuzzy Front End of Strategy

Githens describes the crafting of strategy as three phases: the fuzzy front end of strategy, the structured back end of strategy, and the programming of strategy. On the front end, the strategic thinker is noticing interesting things—patterns, trends, coincidences, curiosities, and anomalies.

### Better Questions

A better strategy can be generated if answers are found to quality questions, rather than quality solutions found for poorly posed questions. The ability to ask short, excellent questions is a skill. Notice how a talented television interviewer helps a subject reveal important information. Since strategy often involves conflicting ideas, status, and hurt feelings, it's better to use a conversational tone rather than an interrogative or argumentative tone. Ask one high-quality question at a time and patiently wait for a thoughtful answer.

### Knowledge Soup

Knowledge soup refers to loosely organized, dynamically changing knowledge. The problem is related to ambiguity: parts of the soup make sense to some people and not to others; some people see the same "thing" and label it differently from others, some people see things that others don't, and so on. A strategic thinker retains an open mental stance to sense the big picture. She will be optimistic that she can find a way through the knowledge soup and reach clarity.

### The Uncomfortable Unknown

Strategic thinkers focus more on learning rather than knowing. The lesson for strategic thinkers is to keep stretching, putting aside the feelings of stupidity and frustration. The fuzzy front end of strategy is a venture into the unknown. The better your questions, the more you increase your probability of learning something useful.

### Pockets of the Future

In the year 1996, fewer than one percent of Americans used cell phones. Within a decade, the cell phone became an everyday part of people's lives. Details found in the present have significant future implications. William Gibson remarked that "the future is already here; it's just not very evenly distributed." Strategic thinkers are the ones who recognize the future.

### Anticipation

Anticipation, the ability to imagine the later-than-now, is a strategic microskill. There are three different kinds of anticipation. The first two are preparation and planning, both of which operate with the assumption that the future is "closed." Stated differently, in the first two kinds of anticipation, the strategist operates with the assumption that everything worth knowing is known. The third kind of anticipation is discovery and is "open" to emergence.

## Strategic Decisions

Louis V. Gerstner Jr. was the only outsider hired as CEO in IBM's history. He started in 1993. IBM's business model was a good fit for the situation in the 1960s, and it followed the natural inclination of operational thinkers to use specialization and process to solidify its advantages. The good fit of the 1960s became a misfit in the 1990s.

IBM first gained success with its accumulated proprietary expertise in the computing industry. Over time, it gained advantages over rivals and became an incumbent leader. Eventually, discontinuities emerged, such as personal computing and competitors—Microsoft and Apple. IBM noticed the discontinuity (emergent opportunity) and responded with a new strategy. They planned to break the company apart and function as small companies. Gerstner listened, asked lots of questions, and reversed the decision. He revealed that his decision to keep IBM together was the most important decision he made as CEO. Strategy involves making bets. No strategy can be guaranteed to succeed. Gerstner's decisions layered one over another to produce success.

### Spark of Insight

Insights are the secret sauce of strategy. An insight is a person's realization of a new and better explanation of the situation. The mind realizes insights through three pathways: finding connections, exploring contradictions, and using creative desperation. Try the following techniques to spark insight.

### Walking the Fenceline

Begin with an analogy: the property line of a residence resembles the periphery of an organization. The first step is to walk the fenceline stopping periodically to look out at your neighbors, and then turn toward your house to take your neighbors' points of view. The next step is to use your imagination to examine various stakeholders' points of view. For example, how does a customer see your organization? Or a new hire? Or a government regulator? Or a supplier? The walking-the-fenceline exercise will increase your empathy for the perspectives of others and help you to identify the issues that may have a broad or long-term impact. You can spot opportunities for innovation, which are often found at the fringe of the organization, where things are murky and ambiguous.

### Time Travelers

Imagine a time traveler (from the past or future) who has just appeared in the present. This involves the reframing technique of projection (because this is one person's point of view) and narrative framing (because the time slice has changed). The visitor from the past sees the present as a special world, full of changes in technology and culture. The visitor from the future sees the missed opportunities. This time traveler scenario can help further elaborate the time horizons through questions such as these: What would the time traveler recognize as familiar? What would the time traveler recognize as new?

### Mastery

A strategist will always seek to mature her perspective and talents. Trust in self and others, confidence, regulation of thoughts and behaviors, influencing others, high-quality conversations, and the courage of leadership are marks of an individual exercising personal and interpersonal mastery.

### Perspective

A person's strategic perspective is grounded in her personality, life experiences, and present point of view. Jen-sen Huang founded Nvidia, a graphics chip manufacturer. He explained that, as a member of the video-game generation, it seemed obvious that there would be a continuing demand by video gamers for better-performing computer chips. Huang saw the opportunity for a business model focused on creating and supplying those chips. To him, it was common sense, albeit a common sense that was unique to his team. It wasn't a matter of having a vision; it was a matter of holding a unique perspective. One person's strong signal is another person's weak signal, and one person's nonsense is another person's common sense. Everyone has their unique perspective, and that's a source of value.

### Dialogue and Deliberation

The goal of dialogue and deliberation is to deepen and enrich the sharing of knowledge. Knowledge can be a turning point for strategy. Billy Beane's conversation with Sandy Alderman pointed toward an unorthodox logic that evolved into the underpinnings of the Moneyball strategy. Lou Gerstner's meeting with Dennie Welsh led to a "mind afire" realization that IBM's future was a service-centric business model. It's possible that a conversation between Christopher Columbus and his brother sparked the insight that a voyager could exploit the prevailing winds to sail west and the westerly winds to return. Better-quality discourse can lead to better strategy.

Leadership is a choice to grapple with the multi-faceted nature of reality and the courage to help other people do the same. Ordinary leadership involves "perfecting the known," whereas the chief task of extra-ordinary leadership is "imperfectly seizing the unknown."

Greg Githens is a well-known thought leader in the project management community: PMI SeminarsWorld seminar leader, and PMI Chapter speaker. He is an executive coach & advisor for innovation and strategy, applying the tools of program & project management. He brings superb skills in analyzing growth opportunities, industry insights, customer value propositions, and design. He has strong business acumen and is focused on the vital topics of strategy and strategic thinking, innovation, go-to-market & new product development process, business development, business model optimization, value proposition design, governance and risk management.

*Page 2*

Part Three: How to Win People to Your Way of Thinking
*Page 4*

Part Four: Be a Leader: How to Change People Without Giving Of-fense or Arousing Resentment
*Page 6*

## THE SUMMARY IN BRIEF

Even now, the simple truths in Dale Carnegie's remarkable book are as fresh and vital as when they were first released in 1937. His principles for achieving success have withstood the ravages of time because they worked ... and still work!

Carnegie's advice has remained relevant for generations because he addresses timeless questions about the fine art of getting along with people: How can you make people like you instantly? How can you persuade people to agree with you? How can you speak frankly to people without giving offense?

As Carnegie, explains, the majority of our success in life depends on our ability to communicate and manage personal relationships effectively, at home and at work.

The core principles of this book, originally written as a practical, working handbook on human relations, are proven effective. ***How to Win Friends and Influence People*** will help you discover and develop the people skills you need to live well and prosper.

## IN THIS SUMMARY, YOU WILL LEARN:

- Techniques in handling people.
- Ways to make people like you.
- How to win people to your way of thinking.
- How to change people without offending them.

## Introduction

This book wasn't written in the usual sense of the word. It grew as a child grows. It grew and developed out of the reactions to my lectures, out of the experience of thousands of adults.

The rules we have set down here are not mere theories or guesswork. They work like magic. Incredible as it sounds, I have seen the application of these principles literally revolutionize the lives of many people.

"Compared to what we ought to be," said the famous Professor William James of Harvard, "we are only half awake. We are making use of only a small part of our physical and mental resources. Stating the thing broadly, the human individual thus lives too closely within his limits. He possesses powers of various sorts which he habitually fails to use."

## Part One: Fundamental Techniques in Handling People

### If You Want to Gather Honey, Don't Kick Over the Beehive

John Wanamaker, founder of the stores that bear his name, once confessed: "I learned thirty years ago that it is foolish to scold. I have enough trouble overcoming my own limitations without fretting over the fact that God has not seen fit to distribute evenly the gift of intelligence."

Do you know someone you would like to change and regulate and improve? Good! I am all in favor. But why not begin on yourself ? From a purely selfish standpoint, it's a lot more profitable than trying to improve others—and a lot less dangerous.

When dealing with people, let us remember we are not dealing with creatures of logic. We are dealing with creatures of emotion, creatures bristling with prejudices and motivated by pride and vanity.

Instead of condemning people, let's try to understand them. Let's try to figure out why they do what they do. That's a lot more profitable and intriguing than criticism; and it breeds sympathy, tolerance and kindness. "To know all is to forgive all."

As Dr. Johnson said, "God Himself, sir, does not propose to judge man until the end of his days." Why should you and I?

***Principle: Don't criticize, condemn or complain.***

### The Big Secret of Dealing With People

The only way under heaven to get anybody to do anything is by making the other person want to do it.

Let's cease thinking of our accomplishments, our wants. Let's try to figure out the other person's good points. Then forget flattery. Give honest, sincere appreciation. Be "hearty in your approbation and lavish in your praise," and people will cherish your words and treasure them and repeat them over a lifetime—repeat them years after you have forgotten them.

***Principle: Give honest and sincere appreciation.***

### He Who Can Do This Has the Whole World With Him. He Who Cannot Walks a Lonely Way.

The only way on earth to influence other people is to talk about what they want and show them how to get it.

Tomorrow you may want to persuade somebody to do something. Before you speak, pause and ask yourself: "How can I make this person want to do it?"

"If there is any one secret of success," said Henry Ford, "it lies in the ability to get the other person's point of view and see things from that person's angle as well as from your own."

When we have a brilliant idea, instead of making others think it is ours, why not let them cook and stir the idea themselves. They will then regard it as their own; they will like it and maybe eat a couple of helpings of it.

Remember: "First, arouse in the other person an eager want. He who can do this has the whole world with him. He who cannot walks a lonely way."

***Principle: Arouse an eager want in the other person.***

## Part Two: Six Ways to Make People Like You

### Do This and You'll Be Welcome Anywhere

All of us—workers in a factory, clerks in an office or a king on his throne—all of us like people who admire us.

If we want to make friends, let's put ourselves out to do

things for other people—things that require time, energy, unselfishness and thoughtfulness. If we want to make friends let's greet people with animation and enthusiasm.

If you want others to like you, if you want to develop real friendships, if you want to help others at the same time as you help yourself, keep this principle in mind.

***Principle: Become genuinely interested in other people.***

## A Simple Way to Make a Good Impression

Charles Schwab, one of the most successful men in America, told me his smile had been worth a million dollars.

And he was probably understating the truth. For Schwab's personality, his charm, his ability to make people like him, were almost wholly responsible for his extraordinary success.

Actions speak louder than words, and a smile says, "I like you. You make me happy. I am glad to see you."

Professor James V. McConnell, a psychologist at the University of Michigan, expressed his feelings about a smile. "People who smile," he said, "tend to manage, teach and sell more effectively, and to raise happier children. There's far more information in a smile than a frown. That's why encouragement is a much more effective teaching device than punishment."

To someone who has seen a dozen people frown, scowl or turn their faces away, your smile is like the sun breaking through the clouds.

***Principle: Smile!***

## If You Don't Do This You Are Headed for Trouble

The average person is more interested in his or her own name than in all the other names on earth put together. Remember that name and call it easily, and you have paid a subtle and very effective compliment.

Libraries and museums owe their richest collections to people who cannot bear to think that their names might perish from the memory of the race.

Most people don't remember names, for the simple reason that they don't take the time and energy necessary to concentrate and repeat and fix names indelibly in their minds. They make excuses for themselves; they are too busy.

Napoleon the Third, Emperor of France, boasted that in spite of all his royal duties he could remember the name of every person he met. His technique? Simple. If he didn't hear the name distinctly, he said, "So sorry. I didn't get the name clearly." Then, if it was an unusual name, he would say, "How is it spelled?"

***Principle: Remember that a person's name is to that person the sweetest most important sound in any language.***

## An Easy Way to Become a Good Conversationalist

The secret, the mystery, of a successful business interview? Well, according to former Harvard president Charles W. Eliot, "There is no mystery about successful business intercourse ... Exclusive attention to the person who is speaking to you is very important. Nothing else is so flattering as that."

If you aspire to be a good conversationalist, be an attentive listener. To be interesting, be interested. Ask questions that other persons will enjoy answering. Encourage them to talk about themselves and their accomplishments.

Remember that the people you are talking to are a hundred times more interested in themselves and their wants and problems than they are in you and your problems. A person's toothache means more to that person than a famine in China which kills a million people. A boil on one's neck interests one more than forty earthquakes in Africa. Think of that the next time you start a conversation.

***Principle: Be a good listener. Encourage others to talk about themselves.***

## How to Interest People

The royal road to a person's heart is to talk about the things he or she treasures most.

Talking in terms of the other person's interests pays off for both parties. Howard Z. Herzig, a leader in the field of employee communications, has always followed this principle. When asked what reward he got from it, Mr. Herzig responded that he not only received a different reward from each person but that in general the reward had been an enlargement of his life each time he spoke to someone.

***Principle: Talk in terms of the***

***other person's interests.***

### How to Make People Like You Instantly

Always make the other person feel important! You want the approval of those with whom you come in contact. You want recognition of your true worth. You want a feeling that you are important in your little world. You don't want to listen to cheap, insincere flattery, but you do crave sincere appreciation. All of us want that.

"Talk to men about themselves," said Disraeli, one of the shrewdest men who ever ruled the British Empire. "Talk to people about themselves and they will listen for hours."

***Principle: Make the other person feel important and do it sincerely.***

## Part Three: How to Win People to Your Way of Thinking

### You Can't Win an Argument

You can't because if you lose it, you lose it; if you win it, you lose it. Why? Well, suppose you triumph over the other man and shoot his argument full of holes and prove that he is non compos mentis? Then what? You will feel fine. But what about him? You have made him feel inferior. You have hurt his pride. He will resent your triumph, and he will still believe that he was right.

Which would you rather have, an academic, theatrical victory or a person's good will? You can seldom have both.

Opera tenor Jan Peerce, after he was married nearly fifty years, once said: "My wife and I made a pact a long time ago, and we've kept it no matter how angry we've grown with each other. When one yells, the other should listen—because when two people yell, there is no communication, just noise and bad vibrations."

***Principle: The only way to get the best of an argument is to avoid it.***

### A Sure Way of Making Enemies—and How to Avoid It

If you are going to prove anything, don't let anybody know it. Do it so subtly, so adroitly, that no one will feel that you are doing it.

As Lord Chesterfield said to his son: "Be wiser than other people if you can; but do not tell them so."

You will never get into trouble by admitting that you might be wrong. That will stop all argument and inspire your opponent to be just as fair and open and broadminded as you are. It will make him want to admit that he, too, may be wrong.

Two thousand years ago, Jesus said: "Agree with thine adversary quickly."

In other words, don't argue with your customer or your spouse or your adversary. Don't tell them they are wrong, don't get them stirred up. Use a little diplomacy.

***Principle: Show respect for the other person's opinions. Never say, "You're wrong."***

### If You're Wrong Admit It

Any fool can try to defend his or her mistakes—and most fools do but it raises one above the herd and gives one a feeling of nobility and exultation to admit one's mistakes.

When we are right, let's try to win people gently and tactfully to our way of thinking, and when we are wrong—and that will be surprisingly often, if we are honest with ourselves—let's admit our mistakes quickly and with enthusiasm. Not only will that technique produce astonishing results; but, believe it or not, it is a lot more fun, under the circumstances, than trying to defend oneself.

***Principle: If you are wrong, admit it quickly and emphatically.***

### A Drop of Honey

If a man's heart is rankling with discord and ill-feeling toward you, you can't win him to your way of thinking with all the logic in the world. Scolding parents and domineering bosses and husbands and nagging wives ought to realize that people don't want to change their minds. They can't be forced or driven to agree with you or me. But they may possibly be led to, if we are gentle and friendly, ever so gentle and ever so friendly.

The sun can make you take off your coat more quickly than the wind; and kindliness, the friendly approach and appreciation can make people change their minds more readily than all the bluster and storming in the world.

Remember what Abraham Lincoln said: "A drop of honey catches more flies than a gallon of gall."

***Principle: Begin in a friendly way.***

### The Secret of Socrates

In talking with people, don't begin by discussing the things on which you differ. Begin by emphasizing—and keep on emphasizing—the things on which you agree. Keep emphasizing, if possible, that you are both striving for the same end and that your only difference is one of method and not of purpose.

Get the other person saying "Yes, yes" at the outset. Keep your opponent, if possible, from saying "No."

It is a very simple technique—this yes response. And yet, how much it is neglected! It often seems as if people get a sense of their own importance by antagonizing others at the outset.

The Chinese have a wise proverb: "He who treads softly goes far."

***Principle: Get the other person saying "yes, yes" immediately.***

### The Safety Valve in Handling Complaints

Most people trying to win others to their way of thinking do too much talking themselves. Let the other people talk themselves out. They know more about their business and problems than you do. So ask them questions. Let them tell you a few things.

Listen patiently and with an open mind. Be sincere about it. Encourage them to express their ideas fully.

Even our friends would much rather talk to us about their achievements than listen to us boast about ours.

***Principle: Let the other person do a great deal of talking.***

### How to Get Cooperation

Don't you have much more faith in ideas that you discovered for yourself than in ideas that are handed to you on a silver platter? If so, isn't it bad judgement to try to ram your opinions down the throats of other people? Isn't it wiser to make suggestions—and let the other person think out the conclusion?

Twenty-five centuries ago, Lao-tse, a Chinese sage, said some things that readers of this book might use today:

"The reason why rivers and seas receive the homage of a hundred mountain streams is that they keep below them. Thus they are able to reign over all the mountain streams. So the sage, wishing to be before them, he putteth himself behind them. Thus, though his place be above men, they do not feel his weight; though his place be before them, they do not count it an injury."

***Principle: Let the other person feel that the idea is his or hers.***

### A Formula That Will Work Wonders for You

Remember that other people may be totally wrong. But they don't think so. Don't condemn them. Any fool can do that. Try to understand them. Only wise, tolerant, exceptional people even try to do that.

There is a reason why the other man thinks and acts as he does. Ferret out that reason—and you have the key to his actions, perhaps his personality.

Try honestly to put yourself in his place.

If, as a result of reading this, you get only one thing—an increased tendency to think always in terms of the other person's point of view, and see things from that person's angle as well as your own—if you get only that one thing from this book, it may easily prove to be one of the stepping-stones of your career.

***Principle: Try honestly to see things from the other person's point of view.***

### What Everybody Wants

Three-fourths of the people you will ever meet are hungering and thirsting for sympathy. Give it to them and they will love you.

"The human species universally craves sympathy," said Dr. Arthur Gates in his splendid book Educational Psychology. "The child eagerly displays his injury; or even inflicts a cut or bruise in order to reap abundant sympathy. For the same purpose adults show their bruises, relate accidents, illness,

especially details of a surgical operation."

***Principle: Be sympathetic to the other person's ideas and desires.***

### An Appeal That Everybody Likes

J. Pierpont Morgan observed that a person usually has two reasons for doing a thing: one that sounds good and the real one.

The person himself will think of the real reason. You don't need to emphasize that. But all of us, being idealists at heart, like to think of motives that sound good. So, in order to change people, appeal to the nobler motives.

When John D. Rockefeller, Jr., wished to stop newspaper photographers from snapping pictures of his children, he too appealed to the nobler motives. He didn't say, "I don't want their pictures published." No, he appealed to the desire, deep in all of us, to refrain from harming children. He said: "You know how it is, boys. You've got children yourselves, some of you. And you know it's not good for youngsters to get too much publicity."

***Principle: Appeal to the nobler motives.***

### The Movies Do It. TV Does It. Why Don't You Do It?

This is the day of dramatization. Merely stating a truth isn't enough. The truth has to be made vivid, interesting, dramatic.

You can dramatize your ideas in business or in any other aspect of your life.

James B. Boynton had to present a lengthy market report to one of the biggest—and most formidable—men in the advertising business.

"I didn't bother with tabulations of figures and data. I went to see this man, I dramatized my facts.

As I entered his office he was busy on the phone. While he finished his conversation, I opened a suitcase and dumped thirty-two jars of cold cream on top of his desk—all products he knew all competitors of his cream.

On each jar I had a tag itemizing the results of the trade investigation. And each tag told its story briefly, dramatically."

"I was presenting the usual dry facts, but this time I was using dramatization, showmanship—and what a difference it made."

***Principle: Dramatize your ideas.***

### When Nothing Else Works Try This

The way to get things done is to stimulate competition—stimulate the desire to excel.

"I have never found," said Harvey Firestone, founder of the Firestone Tire and Rubber Co., "that pay and pay alone would either bring together or hold good people. I think it was the game itself."

This is what every successful person loves: the game. The chance for self-expression. The chance to prove his or her worth, to excel, to win. That is what makes foot-races and hog-calling and pie-eating contests. The desire to excel. The desire to feel important.

***Principle: Throw down a challenge.***

## Part Four: Be a Leader: How to Change People Without Giving Offense or Arousing Resentment

### If You Must Find Fault, This Is the Way to Begin

It is always easier to listen to unpleasant things after we have heard some praise of our good points.

Beginning with praise is like the dentist who begins his work with Novocain. The patient still gets the drilling, but the Novocain kills the pain.

***Principle: Begin with praise and honest appreciation.***

### How to Criticize—and Not Be Hated for It

Calling attention to one's mistakes indirectly works wonders with sensitive people who may resent bitterly any direct criticism.

On March 8. 1887, the eloquent preacher Henry Ward Beecher died. The following Sunday, Lyman Abbott was invited to speak in the pulpit left silent by Beecher's passing. Eager to do his best, he wrote, rewrote and polished his sermon with the meticulous care of a Flaubert. Then he read it to his wife. It was poor as most written speeches are. She

might have said, if she had less judgement, "Lyman, this is terrible. That'll never do. You'll put people to sleep."

That's what she might have said. And, if she had, you know what would have happened. And she knew too. So, she merely remarked that it would make an excellent article for the North American Review. In other words, she praised it and at the same time subtly suggested that it wouldn't do as a speech. Lyman Abbott saw the point, tore up his carefully prepared manuscript and preached without even using notes.

***Principle: Call attention to people's mistakes indirectly.***

### Talk About Your Own Mistakes First

It isn't nearly so difficult to listen to a recital of your faults if the person criticizing begins by humbly admitting that he, too, is far from impeccable.

Admitting one's own mistakes—even when one hasn't corrected them—can help convince somebody to change his behavior.

***Principle: Talk about your own mistakes before criticizing the other person.***

### No One Likes to Take Orders

Resentment caused by a brash order may last a long time—even if the order was given to correct an obviously bad situation.

Asking questions not only makes an order more palatable; it often stimulates the creativity of the persons who you ask. People are more likely to accept an order if they have a part in the decision that caused the order to be issued.

For example, Ian MacDonald, general manager of a small manufacturing plant had the opportunity to accept a very large order, but he was convinced that he would not meet the promised delivery date unless his workers made an extreme extra effort.

Instead of pushing his people to accelerate their work and rush the order through, he called everybody together, and explained the situation to them. Then he started asking questions.

"Is there any way we can handle this order?"

"Can anyone think of different ways to process it through the shop that will make it possible to take the order?"

The employees came up with many ideas and insisted that he take the order. They approached it with a "We can do it" attitude, and the order was accepted, produced and delivered on time.

***Principle: Ask questions instead of giving direct orders.***

### Let the Other Person Save Face

Letting one save face! How important, how vitally important that is!

Even if we are right and the other person is definitely wrong, we only destroy ego by causing someone to lose face. The legendary French aviation pioneer and author Antoine de Saint-Exupery wrote: "I have no right to say or do anything that diminishes a man in his own eyes. What matters is not what I think of him, but what he thinks of himself.

Hurting a man in his dignity is a crime."

***Principle: Let the other person save face.***

### How to Spur People On to Success

I can look back at my own life and see where a few words of praise have sharply changed my entire future.

You possess powers of various sorts which you habitually fail to use; and one of these powers you are probably not using to the fullest extent is your magic ability to praise people and inspire them with a realization of their latent possibilities.

Abilities wither under criticism; they blossom under encouragement.

***Principle: Praise the slightest improvement and praise every improvement. Be "hearty in your approbation and lavish in your praise."***

### Give a Dog a Good Name

If you want to improve a person in a certain respect, act as though that particular trait were already one of his or her outstanding characteristics.

Give them a fine reputation to live up to, and they will make

prodigious efforts rather than see you disillusioned. There is an old saying: "Give a dog a bad name and you may as well hang him." But give a good name—and see what happens!

***Principle: Give the other person a fine reputation to live up to.***

### Make the Fault Seem Easy to Correct

Tell your child, your spouse, or your employee that he or she is stupid or dumb at a certain thing, has no gift for it, and is doing it all wrong, and you have destroyed almost every incentive to try to improve. But use the opposite technique—be liberal with encouragement, make the thing seem easy to do, let the other person know, that you have faith in his ability to do it, that he has an undeveloped flair for it—and he will practice until the dawn comes in the window in order to excel.

***Principle: Use encouragement. Make the fault seem easy to correct.***

### Making People Glad to Do What You Want

Always make the other person happy about doing the thing you suggest.

I knew a man who had to refuse many invitations to speak, invitations extended by friends, invitations coming from people to whom he was obligated; and yet he did it so adroitly that the other person was at least contented with his refusal. How did he do it? Not by merely talking about the fact that he was too busy and too-this or too-that. No, after expressing his appreciation for the invitation and regretting his inability to accept it, he suggested a substitute speaker.

In other words, he didn't give the other person any time to feel unhappy about the refusal. He immediately changed the other person's thoughts to some other speaker who could accept the invitation.

It is naive to believe you will always get the favorable reaction from other persons when you use these approaches, but the experience of most people shows that you are more likely to change attitudes this way than by not using these principles and if you increase your successes by even a mere 10 percent, you have become 10 percent more effective as a leader than you were before—and that is your benefit.

***Principle: Make the other person happy about doing the thing you suggest.***

Dale Carnegie was born in 1888 in Missouri and educated at State Teachers College at Warrensburg. As a salesman and aspiring actor, he traveled to New York and began teaching communications classes to adults at the YMCA. In 1912, the world-famous Dale Carnegie Course was born. Dale Carnegie's company became incorporated as Dale Carnegie & Associates, Inc. in 1954. He passed away a year later, leaving his legacy and a set of core principles to be disseminated for decades to come.

## THE SUMMARY IN BRIEF

There is a problem invading society as a whole – it is nameless, and consequently we don't understand it or what it is costing us. Businesses feel it; individuals feel it; yet humans, not technology, are to blame for it. In ***Human-Centered Communication: A Business Case Against Digital Pollution***, Ethan Beute nd Stephen Pacinelli explore the scenarios that shape the argument of digital pollution and its effect on businesses, individuals, and society as a whole.

Across most virtual channels, we lose clarity in our interactions – with tone, intent, and meaning becoming more difficult to express and discern. Many people often find themselves misunderstanding others or even misunderstood themselves. All of this miscommunication leads to people becoming confused or frustrated. Through this book, the authors explore the problems and how we can move toward becoming more human-centric in our communication methods to bring about more meaningful interactions in everyday life.

## IN THIS SUMMARY, YOU WILL LEARN:

- The problems currently plaguing our communication today.
- Real-life scenarios where digital pollution has hindered communication.
- How to move toward a more human-centric communication.
- How humans are to blame; not the technology.
- How to correct the error and miscommunication we face.

## Introduction

To cultivate a truly meaningful relationship, there needs to be as much time spent face-to-face as we build the connection. Once established, these connections can be sustained and deepened online, but it requires that initial foundation. Today, we aren't always afforded this sequence of events and people are not getting face-to-face interactions like they were once given. There is still a way to stay personal – and human – even when going virtual.

With all the annoyances found online – spam, bots, automation, robocalls, pop-up ads, spoofed accounts, phishing attempts, malware installs, data hacks, disinformation, and other forms of digital pollution – it is no wonder that we are continually being misinformed online due to their "human" features. It becomes impossible for us to decipher which is honest and safe from those that are misrepresented and dangerous. That is why most are finding that using video is the next best thing to being face-to-face – instilling trust once more in the interactions we have online, but it is not without its own flaws.

## Part One: Digital Pollution

When you think about digital pollution, you may think of a family member who spent several months, thousands of dollars, and several sleepless nights recovering from identity theft. The same thing happens when you throw up caution at a new friend request online for fear of a fake account using the name and photo of someone you are already friends with. Much like environmental pollution, digital pollution's harms are real, even when they are subtle. This pollution costs us time and money, but it also threatens other things, which are immeasurable and priceless – trust, relationships, bonding, and connection.

There are three categories of digital pollution – innocent, consequential, and intentional. The lines between these classifications are neither hard nor clear, but intent is what differentiates them, but judgements of intent are made subjectively by the recipient. With human-centric communication as an antidote to digital pollution, there is still potential for videos to pollute our digital environment – with intentional deepfakes that masquerade as authentic.

### Human-Centered Communication

We all know The Golden Rule: Treat others as you would like to be treated. There is a step above The Golden Rule that many people advocate for – The Platinum Rule. The Platinum Rule calls us to treat others as they would like to be treated, forcing us to shift our mindset from inside-out to outside-in. It makes us consider others' personal preferences rather than our own generalized rules, it calls us to form a general understanding of the individual.

These two rules provide insight into human-centric communication. You can approach every communication with the approach of The Golden Rule or The Platinum Rule. When you demonstrate warmth and competence, you show that you have their best interest at heart, which can earn you their precious attention. Human-centered design starts with empathy and understanding. But its success is in its compassion, acting to identify opportunities, improve processes, and solve problems.

### A More Human Funnel

There is a way to bridge digital pollution and human-centered communication as explained by Winning by Design founder, Jacco van der Kooij. He identifies that the wrong tool for the wrong job can exert too much force, producing negative consequences. There is a way to combat using too much force and in tern limit the consequences – it requires the proper order to design the process, and then select the best technology to support the process. Tools are levers that magnify power, so when we get turned around and put tools first, the likelihood and scope of negative consequences are magnified. When it comes to designing the process that focuses on your human-centered communication, it might be time to turn to a video face-to-face if you need to make a personal connection, manage emotion and tone, or need to break down detail or complexity.

## Part Two: Allies & Exemplars

### Emotion, Memory, and Motivation

Dan Hill, PhD shares what he considers to be the three distinct human qualities. These include speech/vocabulary, emotional flexibility, and sense of morality/need for vitality. Unlike rational thoughts, emotions are action oriented. If there is no emotion, there is no action – it is emotion that fuels us and if there is no fuel, things simply aren't going to happen. With the vast majority of our mental activity being visual, emotional, and subconscious, we must infuse messages and experiences we are creating with emotional components if we want something to happen from it.

### Noise, Attention, and Trust

When we ask better questions, we get better answers. Mathew Sweezey, researcher, marketer, and futurist, asked himself – why isn't our marketing working? This question would guide his work, learning that the journey doesn't necessary call for new marketing to create a revolution, but rather a shift in ideas, activities, and outcomes. Like human-centered communication, Mathew's proposed context marketing revolution puts customers first – The Platinum Rule. This breaks through the noise and motivates people to act, while creating the messages and experiences to help achieve that goal in the moment. The best way to help others is to create an approach that starts from the inside, rethinks the way we communicate, and adds video for face-to-face value in our communication.

### The Art (and Science) of Helping

Managing teams remotely can be complicated. Mario Martinez Jr. learned a way to navigate the struggles and frustrations that can come from the lack of face-to-face interactions to cultivate a fully remote workplace by using a human-centered management approach. Although they have never met, Mario and his team are as tight knit as family – much to do with his videos and messages that incorporate a personal touch with emotion and clarity his employees can benefit from. His use of video has allowed him to show his employees that he's a real person and not just management on screen. He has been able to use his invitation into his life to convey warmth, build connections, maintain trust, and enhance understanding within his team.

### The Teacher's Take on Connection

Viveka von Rosen is an expert on LinkedIn. She has created courses and has taught and train for strategy and tactics in almost every content format for more than a decade. She uses video to help enhance customer journey, create more engagement on screen, and builds confidence on camera. The goal is for a human-first philosophy that is consistent with human-centered communication. While tools and tech stacks vary, so do teams and company sizes. We all face out share of differences in our respective industries, but one thing is consistent, we are all human beings. We can enable our success when we work with and for our fellow humans. Directing back to the Golden Rule, Viveka states that to be human is to think of others first, to do no harm, and to treat others with the same respect that you want to be treated with. This opens the doors to building truly authentic relationships, even when you aren't face-to-face.

### Always Be Amazing

According to Shep Hyken, to be consistently amazing, you need to be better than average all the time. Something that has helped him reach this level of amazing is his emotional connection with his clients and community through his human-centered video approach. Regardless of the video style or channel, Shep keeps the other person top of mind with sincerity and gratitude – which is why people call him amazing. In a technology driven world, people want to use shortcuts to speak to people – like with automation. You can't automate cultivating real relationships. That is why you must automate what you can but strive to create human-centered relationships with people – it isn't something that can be digitized.

### People-First Prospecting

As humans, we should be striving to add humanity to our prospecting outreach and stop being robots. Morgan J. Ingram is a part of an exclusive club – one that requires creating mor than 10,000 videos for the purpose of building relationships and growing your business. As a part of his human-centered approach, Morgan consistently sends video messages and goes live across several social networks each day. His approach brings humanity to his sales process, making people feel more connected with him. He puts people first by sharing his story – but not though fancy developments – though real-life everyday situations from his webcam or smartphone. The video approach brings more connection than any blog or book could.

### The Year Of Video?

Dan Tyre predicted that people would start getting at least three video emails a day, but that still hasn't happened. An original HubSpot executive, Dan found out that when he incorporated human-centric video messages, his response rates rose from 50% to as much as 80%. He found that people don't need or want to be closed – they need to be helped. His method for this is to determine if they have a problem that needs solved, understand their decision-making process, engage early in that process, tailor your process to make it easy for the customer to buy, and focus on educating them. Using the extra layer of human-centered approach, even online, can help add thought and care to any digital format sent by using video. Success is about the tool or the technology, but about the personal touch you put with it.

## Part Three: Takeaways & Tomorrows

### Takeaways: Strategies and Philosophies

Taking a human-centered communication approach isn't new – it isn't radical. Instead, it is a restoration. In terms of environmental pollution, we take steps that help our natural environment through cleaner and healthier approaches. The same can be applied to digital pollution – taking a human-centered approach to add the personal touch necessary to eliminate the distrust and miscommunications that arise from it. The idea is to see the need for the change – human-centered communication starts with people. You must align with the needs and the wants of those affected to create a deep understanding and reach them. We have lost a lot of human emotion when we communicate, which is why using video helps instill the confidence back in human-centered communication, even if it isn't perfect. The flaws are what bring about the level of trust needed to circumvent the digital pollution that has fogged our ability to communicate with one another online. The final strategy is to stop selling and start helping. Just because you are selling something doesn't mean that you have to push it – it can solve a need, you just have to be willing to offer the help.

### Tomorrows: The Future of Human-Centered Communication

Implementing more human-centered communications in any area is a change for most – a movement away from dehumanization, disconnection, and digital pollution. This movement brings us closer to being more personal, create deeper connections, and implements more trust – which in turn provides us with stronger relationships and less miscommunications. Authenticity goes a long way when making connections – but there is that worry about deepfake videos that allow you to not only personalize videos, but also automate. Technology should be an amplifier of human intention – not be the one determining the intention. To protect authenticity and trust in digital spaces, it requires vigilance to meet whatever attacks may come its way.

## Conclusion

We have seen our share of miscommunication in the digital world, some of which we, as humans, can correct given the right opportunities. It doesn't take a full tech stack to create an impactful video, and even though we may stammer in front of the camera from time to time, it's the authenticity of our work that facilitate deeper relationships. Digital pollution doesn't have to drown out the efforts we make to remain digital when necessary, instead we can use digital advances to our advantage – working toward rehabilitating the relationships we once cultivated face-to-face. Throughout the case studies presented, one thing has been shown – being authentic, on video, and providing insight to those we share it with bring back the human-centered communications we all need.

Chief Evangelist at BombBomb and host of The Customer Experience Podcast, **Ethan Beute** helps business professionals be more personal and human through simple video messages.

A passionate storyteller by nature who measures his success by helping people reach their potential, **Steve Pacinelli** is Chief Marketing Officerat BombBomb.

## THE SUMMARY IN BRIEF

The greatest myth we all believe in? Professional growth comes from putting in more work. If this mantra truly worked, most women today wouldn't feel drained of time and energy despite putting their all into whatever they do.

The book ***I See You: A Guide for Women to Make More, Have More, and Be More – Without More Work*** unlocks the road to boost your impact, influence, and income without having to exhaust yourself. It offers a clear roadmap to create your boundaries unapologetically, harness your innate talents, delegate unpaid work at home, and ultimately enhance your income in the smartest possible way.

By bringing insights from her journey of building a successful business and coaching hundreds of women, Author Amy Kemp shows us how implementing small, consistent steps is all it takes to regain your time and energy and become a fulfilled and successful version of yourself.

## IN THIS EXECUTIVE BOOK SUMMARY:

- Tap into your natural genius for professional growth.
- Discover how to set clear boundaries and create a robust structure to succeed.
- Learn how to boost success while working for fewer hours.

## Introduction

This is not a book full of quick tips and strategies. I am not here in a position of authority, swooping in to impart my sage wisdom upon you. You are all experts in your own right, even if you don't know it yet. Women like you don't need a complete system overhaul. You may need some updates to the way you think, which we will work through together, but more than anything, you need to know that someone sees you... someone sees all of you.

As you read, I hope you feel like you're sitting in an intimate one-on-one coaching session with me. I am your personal guide, humbled and honored to be along for the journey. There's no secret you need to rush to find in the pages ahead. Most of what you need is already inside you; you just need to uncover it and the exercises at the end of each chapter will be your tools to do the important excavation work.

More than anything, I know that your families, your places of work and businesses, your communities, and our entire world need you at your best. When women are healthy and confident, everyone wins.

## Chapter 1: A Moment of Truth

After reviewing everything there was about our money, our trusted financial advisor, Tess remarked, "I'm so impressed with how organized you are with your budget. However, there's only one problem if you want to achieve your goals." She paused for what seemed like a long time and then said, "You're not making enough money." At that moment, I felt so ashamed and frustrated. For fifteen years, I worked on building a successful business in direct sales. How could I not have been making enough money? At that moment, I knew something had to change. I didn't know what I was going to do, but I was going to create the income we needed. But if was already exhausted by my work and life outside of work, where would I find the energy to create something new?"

Following this epiphany, what has transpired over the last five years has exceeded my wildest expectations. Today, I work with clients in one-on-one engagements I call Empower, where we dive deeply into their habits of thinking in one-hour sessions every other week. I lead small groups of women who live all around the United States through a four-month experience called Encounter, in which we identify and start to replace limiting habits of thinking together in biweekly lunch meetings.

If you're facing a similar roadblock in life, know that Awareness is the first step to overcoming it. Pull out your journal or meet with a trusted mentor or coach and spend some time answering these questions:

- What is it that you want or need to create most right now-more income, influence, and impact?
- What resistance comes up if you are told that creating what you want most doesn't have to require more work?
- What will happen if you don't change anything and keep living and working as you are for the next five or more years?

## Chapter 2: Leverage the Value of Your Natural Genius

Most women undervalue or can't easily identify their natural genius. Maybe because the places where we shine feel so easy to us that we assume those skills are easy for everyone else too. Most of us learn at a young age to downplay our strengths for fear of rejection.

But we all have our own natural genius and it's time to tap into it. Spend some time pondering your areas of unique genius. Seeing it in black and white can bring a lot of clarity. Decode these questions: What are the things I do daily that feel so easy to me but that astonish everyone else? What am I doing when hours pass but I barely notice because I'm so engrossed in the experience? Am I currently receiving any form of financial compensation for the use of these unique gifts? Am I undervaluing myself in these areas or not being adequately compensated because using my gifts feels so easy to me? What would be the tiniest step I could take toward being paid to use these gifts or being compensated more than I currently am?

## Chapter 3: Stop Giving So Much

Most women give and give without even considering their own well-being. We overwork our way to the top of the corporate food chain, sacrifice our physical well-being to earn the next promotion, and we don't even consider our own emotional health when we say yes to one more family obligation or volunteer role.

The truth is, that you can increase your influence, impact, and income without destroying yourself in the process. But first, you have to unearth some deeply rooted harmful stories about what healthy giving looks like, and you've got to learn to say no. Pull out your journal and answer the questions in each of the following categories.

Your role as a leader is not to be a vending machine.

### Living and Working Conditions

- What is my emotional response to my living conditions? Do they make me feel peaceful, calm, and safe?
- Is there any area of my living space that needs to be decluttered?
- What physical items are draining my financial resources?
- How do I feel when I walk into my workspace? Is that space-whether it be inside or outside the home conducive to me doing my best work?

### Physical Health

- Am I fueling my body with food and drink that provide my body with the best energy and allowing it to reach peak?
- If I keep eating and drinking the way I am right now, what will happen to my body in five or more years?
- If I don't like the results of my choices in twenty years, what accountability or help do I need to seek out in this area in order to be able to write down a different answer?
- What doctor, specialist, dentist, or naturalist do I need to contact to take care of myself or things I've been ignoring?
- Am I getting enough rest to perform at my best and to be fully present in my life?

### Mental Health

- If I have felt anxious, sad, or depressed, how long have these feelings persisted?
- Would my spouse or children or those closest to me say my mental health is affecting my relationship with them?
- Is there trauma in my past that I've never dealt with that continues to affect my life every day?

## Chapter 4: You Don't Have to Work More

When I was a brand-new leader, with only a small number of people on my team, I often felt consumed by a deep responsibility to make sure every person I led was happy and that they all were successful. However, this self-imposed expectation created a very fragile dynamic in my organization that looked like a bicycle tire with long thin spokes. I was at the center of the wheel and all the spokes led to me.

Your role as a leader is not to be a vending machine. A vending machine? Yes, that contraption to which people come, insert a currency, and get rewarded with a snack or drink in return. The followers of vending machine leaders come to their leaders with their currency: a question. The leader then provides the instant reward of an answer. The follower learns that the leader is the source of all answers. Everyone depends on the leader to solve problems, answer questions, and to move forward in their own growth and journeys. That's not healthy or realistic for a leader of a larger organization.

So, how to turn off the vending machine? First, start connecting the people you lead with other people on your team or in your network who are great at answering those questions, the experts on any particular subject. When you connect them with more people who can help them find answers, they start developing their own network of resources and start tapping into that network before coming to you. Your role as a leader is to ask questions, to listen, to occasionally provide tools, to believe in people, and to empower people. Your job is not to solve their problems and answer every question they have. It's to teach them how to solve and answer them on their own.

Delay your responses. Don't answer the email, text, or call immediately. In my experience, the person asking the "urgent" question will go find the answer if you aren't always at their beck and call. Finally, pull out your calendar and look at the next ninety days. How much scheduled guilt-free play is in there? I triple-dog (yep, I said it) dare you to increase what is there by just one step. You'll be amazed at how your productivity increases as the amount of guilt-free play in your schedule does!

## Chapter 5: Can I Get a Little Woo-Woo?

This matter-of-fact interaction with my physical therapist inspired the idea for a brand-new webinar and even the name

for that course and this chapter – "Can I Get a Little Woo-Woo?" It can be said in the tone of an exuberant cheerleader, encouraging people to give you a little shout. Woo-woo! Or it can be spoken with more of a teasing spiritual connotation, like we are stepping outside the boundaries of practical, rational thought to explore something a bit more... woo-woo.

Let's start unpacking this woo-woo idea by building a foundation of core beliefs upon which we can agree. There is a source of unlimited abundance and energy. We are all created by this source. We are all connected to this source. If we open ourselves to it, the energy from this source flows through our unique gifts and into the world. We feel most alive when we live in this flow.

Most of us go through our lives swirling in our conscious thoughts, and we forget how astonishingly powerful the subconscious mind is. This subconscious mind is where our thought habits live. Here are a few subconscious habits that keep the flow of this powerful energy from moving through you: unhealed emotional pain, mistreatment of any kind or unhealthy relationships, lackluster or missing boundaries, exhaustion, cheap "highs" —any addictive escape, fear, shame, secrets, comparison, isolation, and mental or physical illness. Many times, consciously recognizing the limiting thought habits that are creating blockage in our lives is all it takes to move us back into the flow of creation.

Provide your subconscious mind with a clearer image of what we want, and it will in turn provide better instructions we can follow to create those results. Again, the subconscious mind cannot magically provide the results we desire, but it can give us inspired ideas and we can choose to act on them. Remember, the fuel that keeps the subconscious mind working is faith that what we are imagining and desiring will come to pass.

## Chapter 6: Boundaries Protect You and Allow You to Grow

How do you know whether you are living behind thick impenetrable walls, lacking boundaries altogether, or if you have healthy boundaries? The answer is quite simple. You ask this really important question: What is motivating you to create the protection you feel you need? If your protection is motivated by fear, extreme self-protection, defensiveness, shame, or secrets you don't want anyone to know, then it is most likely a wall.

The creation of boundaries, on the other hand, is motivated by healthy, healed self-esteem. Basically, you love yourself enough to demand that you are treated with respect by all people. Boundaries are not mean. Our deeply ingrained cultural conditioning wants to tell us they are.

Here's what people with no boundaries feel:

- Isolation: Even when surrounded by people, few people actually see you or know you.
- Fear: You live in paralyzing fear that if people really knew you or your life circumstances, their opinions of you would change drastically.
- Overwhelm: In both situations, you don't have anyone but yourself to depend on to get things done and the weight of all your obligations is nearly unbearable.
- Resentment or Anger: In every setting, your needs are the last priority. No one notices or cares that you are sacrificing yourself completely, and over time, you grow angry and bitter.

You see, our intuition is an internal boundaries radar system. it's just that you can't stifle your intuition in one area of life, then have access to it in every other. When our boundaries are repeatedly violated by people in our lives, and we stifle our intuition in order to survive the inappropriate breach, we learn to ignore that intuitive feeling, our body's internal boundaries radar system, in every area of our lives. Our intuition is what tells us when we are worn out and need a break or when we need to be done working for the day. When we continuously push through these quiet feelings and keep working, we eventually pay the price.

## Chapter 7: This Is Where I End and You Begin

As I've better understood where I end and others begin, I have had to redefine my expectations of myself as I lead people. I have also had to learn that as a coach, I am not responsible for the experiences or outcomes of those with whom I work. I can journey alongside them, and the action they take as a result of my coaching can have a significant impact on their progress, but I cannot carry the weight of their burdens or feel like their failures and struggles are my fault.

Many women sabotage their growth, even turn down potentially life-changing leadership opportunities, because they don't have adequate boundaries here. People are not problems that need solving. They are spiritual and emotional beings that need connection. If you're going to make up a story, you might as well make up a good one. In

People are not problems that need solving. They are spiritual and emotional beings that need connection.

other words, when something unexpected or disappointing happens in your life or work, you always get to decide how you interpret what just happened.

Remember, protecting your own priorities is bound to upset those who benefitted most from your constant availability. Be your own safe space. Set goals that acknowledge them. Goals without boundaries tend to lead to short periods of frenzied activity followed by exhaustion, burnout, sickness, and relational strife.

Write down the parts of your life that need to be considered when setting goals. What caregiving responsibilities have you taken on in your life? Does your partner have a demanding career that requires you to be more flexible? Do you have any limitations on your energy, maybe because of health issues or commitments to volunteer roles? Then write down one or two goals that include boundaries, ensuring you are considering all parts of your life in your pursuit of what you want.

## Chapter 8: Money Is a Mirror

Your relationship with money is a powerful mirror of your relationship with yourself. Pause for a moment and think about your money. How much money do you have? With whom do you share your money? What do you do to earn money? Does money move freely around you, or does it feel stuck and stagnant? And where is all of your money?

Everything that just came to the surface in this brief scan of your finances has something important to tell you if you will simply pay attention. Money is a powerful mirror. For years, I believed that if I just had enough money, then I would finally feel fully safe and secure. The problem was that no matter how much money I made, the same fears of running out or not having enough still haunted me. The truth is that money has nothing to do with our feelings of security unless we let it. You are safe. You are secure. Separate those feelings from your bank account, and you'll see the flow of money start to head in your direction.

It's our attachment to the ebb and flow of money in our lives that steals our best energy, and it takes the precious energy we need to be able to create more income.

We all have our unique money stories. For example, "It's selfish to want more. I'm earning enough to pay our bills. I should be satisfied with survival." "To earn more, I will need to work more hours. I'm already maxed out! How can I possibly do more?"

Identify these subconscious stories and called into question their validity so you can write new ones that would serve me better moving forward. Remember, we earn what we believe we are worth. Expecting to be compensated, and understanding the value of your contribution. It's not about working harder or longer. It's about standing unwaveringly in your intrinsic value.

## Chapter 9: Do a Thorough Check of Your Environment

Women are currently living and working within many invisible but powerful systems that were not created with their best interests in mind. Our traditional economic system was not created with working women in mind, and it was created for a world that no longer exists.

Fortunately, we are in the midst of a cultural transformation of how we define the concepts of work and business. New definitions of these two concepts are breaking the mold of our traditional views and becoming the new normal, especially as our workforce becomes more diverse.

In her book *The Moment of Lift,* Melinda Gates defines unpaid labor as "work performed in the home, like childcare or other forms of caregiving, cooking, cleaning, shopping, and errands, done by a family member who's not getting paid." Most women don't even quantify the amount of time and energy this work takes on a daily, weekly, and monthly basis. We just do it without thinking. Based on these statistics, we know that most American women are not solely responsible for taking care of children and the home. Clearly, the majority of women are actively engaged in the workplace. However, as women have left the home to work, they have also continued to carry the bulk of the weight of

caregiving and homemaking, the unpaid labor in our world.

Assess how many hours per month you spend on doing this unpaid work. Are you astonished by the final number? Do you now know why you are so tired all the time? How do we shift the balance of unpaid labor in our world and lighten our loads so we can increase our influence, impact, and income? I've got six suggestions for you.

- Hire someone to do one thing off your unpaid labor survey.
- Be very aware of self-sabotage.
- Watch for naysayers. They will most definitely show up.
- Don't depend on husbands, wives, partners, or kids.
- Recognize the value of unpaid labor
- Categorize this as a stewardship

## Chapter 10: Surrender to Structure

Sure, structure has firm boundaries, but living with structure does not have to be restrictive. If this feeling of constant shame or hopelessness around structure resonates with you, or if your entire being recoils at even the thought of implementing a new structure because you know you won't stick with it, I'm here to help.

The five areas of our lives where structure or a lack of it causes the most frustration and pain are health, money, time, business, or work relationships.

- I've identified seven beliefs I have about structure that allow me to wholeheartedly embrace it. If you just try to change your behaviors without addressing these deeper mindsets, the changes you make in any area will continue to be fleeting.
- Structure is not a restrictive cage; it is the path to freedom. Structure doesn't limit our creativity; it gives us the freedom to create.
- Structure protects us from the inefficiency of multitasking. An important scientific fact: our brains cannot multitask
- The most powerful enemy of structure is the expectation of perfection.
- Embracing structure requires rest from it.
- At one edge of structure is mastery; at the other is loss of freedom.
- Surrendering to structure feels awkward and uncomfortable.
- You will never fully embrace structure until you recognize that your value is separate from your performance

Beneath residence to structure, you'll find unhealed pain. You will have to deal with this pain. No short cuts, no magic wands, no quick fixes. You have to heal. In the area where you struggle to embrace structure the most, can you backtrack to any experiences where you may still have unhealed pain? Instead of fighting through your resistance, can you surrender to some deeper healing work in this area?

## Conclusion: Respect the Mile

No matter what your "marathon" is, and no matter where you are in the training process, you absolutely must respect the mile you are running right now. The mile you are in right now might be a glorious, easy mile with lots of people cheering for you, promotions, financial abundance, and progress. Respect it. Or it might be a grueling, painful mile where you have lost your passion for your work, your best employee just left for another job, and you aren't sure you can cover payroll. Respect it.

Your mile, the one you are running right now, has something important to say to you. Are you listening? It will keep repeating the message until you get it. Respect it. Be in it fully. You will need what this mile has to teach you down the road, even if it's the worst mile of your life. The finish line is ahead, and it is important, but so is the journey, so is the mile you are running right now. So, respect the mile.

**Amy Kemp** is a successful entrepreneur and certified business coach with over twenty years of experience investing in people. As the owner and CEO of Amy Kemp, Inc., she coaches her clients in both one-on-one and small group engagements, and teaches in a variety of online webinars and in-person events each year. She lives in the Chicagoland area with her husband, Ryan, and their three children. You can learn more about her work at amykemp.com.

## THE SUMMARY IN BRIEF

Spark a transformation, professionally and personally! No person is an island. Every day, we realize more and more how interconnected we all are, and how much we impact each other, both consciously and unconsciously. And each and every day, our individual success relies to some extent on our ability to persuade and influence others.

The ability to persuade and influence is the cornerstone of success. In ***Ignite a Shift: Engaging Minds, Guiding Emotions and Driving Behavior,*** internationally acclaimed speaker Stephen McGarvey explores the subtleties of effective communication and highlights the essential fact that thinking impacts emotions which drive behavior.

*Ignite a Shift* is the quintessential guide to communication, positive persuasion and influencing with integrity. It reveals the proven techniques that the world's most effective leaders are using to motivate themselves and others to excel professionally and personally.

## IN THIS SUMMARY, YOU WILL LEARN:

- The importance of rapport as the foundation for persuasion and influence.
- The impact that language has on engaging and guiding others.
- How to identify and harness various motivational factors that drive people's choices and behaviors.
- How to negotiate effectively.

## Are You On The Right Road?

In our daily lives, thoughts and various other cognitive processes impact the emotions we experience moment to moment, and these emotions ultimately drive our behaviors. As we shift thinking, we can alter emotions which then drive a different set of behaviors. When we understand how this process works, we can create more congruent and purposeful behaviors both in ourselves and in others.

The goal of persuasion is to change someone else's behavior. This usually begins by changing one or more of their thoughts, beliefs, and values. Once we influence their thinking process, then their feelings and behaviors will change as well. We can use these techniques to change our own thoughts, feelings, and behaviors, too.

As a persuader, your goal is to move a person from their Current State to a Desired State. There are many techniques for leading someone to a Desired State, all of which boil down to this: engage and guide the person's thoughts. When that happens, their feelings and behavior will follow.

## Perception Is Real – Even When It Isn't

As persuaders, we have the opportunity to consider how we are communicating based on our expectations of others and how our expectations may cause other people to react and behave accordingly.

Our minds tend to seek subjective validation and search for evidence to support our existing beliefs. Rather than being intractable or permanent, these beliefs can be altered because they are actually processes rather than things. The processes of believing something and valuing something are closely connected, and usually even interconnected.

Your values serve as an internal navigation system, so when you're cognizant of what you value and why you value it, you can make better and more congruent choices in your life. In doing so, you will be drawn toward people, ideas, and situations that support and assist you as you achieve your goals. If you happen to identify a values conflict, examine your criteria and work to realign them with your values.

## Can You Trust Your Mind?

The mind is easily influenced by others—and by itself. In addition to being open to presuppositions, our minds regularly delete information and create distortions and generalizations by changing things and "filling in the blanks" when information is lacking.

While the human mind is able to process a seemingly infinite amount of information at the subconscious level, it appears to be limited to processing between five and nine (seven, plus or minus two) chunks of information at the conscious level at any given moment in time.

## Igniting Motivation

As persuaders, identifying what motivates a person in any given context teaches us a great deal about their Current State, how they think and feel, and why they do what they do. This knowledge combines to help us move them toward the Desired State. When we think about the factors that motivate us, we can generally divide them into two categories: motivational traits and working traits.

## Diving Into Your Unconscious

Most of what we consciously think about is based on deleted, distorted, or generalized information. This is problematic because it's this filtered information that we use to communicate with each other. As a result, our communication is inherently ambiguous since it is based on summarized, incomplete, and distorted information.

It's important to note that there are a variety of different language patterns to look out for when recognizing deletions, distortions, and generalizations. Comparative deletions, mind reading, and universal quantifiers are just a few examples.

The Meta Model and the Milton Model are opposite sides of the same coin. Each uses language strategically, yet differently, for specific purposes. As persuaders, it is critical for us to understand and use both models in order to gain a deeper understanding of a person's Current State and to shift them toward the Desired State.

## The Experience Of Being Understood

Masterful persuaders first build rapport with the person they are persuading and ask questions in order to gain a deeper understanding of that person's model of the world including their beliefs and values. Then, as progress is made toward the Desired State, the persuader knows how to connect what they are offering to something of relevance to the person, something that is meaningful to

them. Of all the concepts and techniques that we'll explore in this book, rapport is the most important because it is the foundation for influence.

Why is rapport so critical to persuasion? Because everyone craves the feeling of being understood; it validates our model of the world and gives us a sense of connection. By understanding how a person thinks and reflecting that understanding back to them, you provide them with the experience of being understood and they will be much more likely to trust you and follow your lead.

## Horse Sense

People communicate constantly, and a great deal of that communication takes place outside of spoken or written words. This can include facial expressions, eye contact, tone of voice, touch, our overall appearance, and countless other subtle gestures such as nodding our head or waving our hands.

We each use all of these representational systems to various degrees and in different ways. For example, one person might be mostly visual, moderately auditory, and slightly kinesthetic, while another person might be mostly kinesthetic, moderately visual, and slightly auditory—really, any combination is possible! It's also important to note that smell and taste also play a role in how some people process information.

The better you, the persuader, are at communicating in all of the sensory modalities, the better you will be at matching your communication to another person's dominant or primary processing style.

## The Million Dollar Question

The kinds of questions we ask guide our thoughts, emotions, and actions. The mind has a system for filing information, much the same as we would store information in a filing cabinet in different folders. Where a physical filing cabinet is limited by its size, the unconscious mind can store almost unlimited amounts of information. And the better the "files"—or memories—are organized, the easier it is to access the information. Effective questions can act as your access codes to the information.

Each question sends a person's mind on a quest, enabling us to elicit historical memories and information, allowing us to uncover Current State thinking, beliefs, and values, and giving us the opportunity to engage and guide the individual toward the Desired State.

## The Persuasive Power Of Stories

I've said it before and it's worth saying again: anything that we vividly imagine, our bodies will respond to as if it is real. Hence, stories can cause our neurons to fire the same way they would if we were actually performing the action that we are imagining.

Stories have the potential to shift a person from their Current State to a Desired State. This shift is accomplished by placing questions strategically throughout your story in a way that includes and engages the listener. If you ask the right questions at the right points in the story, then the person will find themselves involved in the storyline and will engage emotionally in the story. It's this engagement in the story that triggers and leverages the Think, Feel, Do process.

Using questions to engage and associate the listener into the storyline means that they actively become a part of the story, which evokes an emotional reaction. Stories that persuade people will engage their imaginations to enter into the storyline.

## Making, Breaking, And Reinforcing Connections

As persuaders, our goal is to engage and guide a person's imagination toward a Desired State because we know that once the desired thoughts are in place, feelings and behavior will follow.

There are many ways to make, reinforce, or break connections with words, tones, gestures, repetition, music, scents, images, and so on. Using presuppositions, you can guide a person's imagination, emotional state, and ultimately their behavior, from where it is now (the Current State) to where you want it to be (the Desired State). Be aware of presuppositions in your everyday language and either use them with intention or avoid them.

Words, gestures, tonality, and the whole range of verbal and non-verbal communication are highly influential in making, breaking, and reinforcing connections. You can use the totality of the options for communication to lead a person from their Current State to a more Desired State. Always use words mindfully because language is ultimately one of

the most powerful tools available to the persuader… and it's a skill that is worth mastering!

## Smarten Up!

When we think of goals, it's easy to set "big picture" objectives for ourselves that vary in terms of whether we can realistically achieve them.

You can help shift another person to the Desired State by ensuring that their goals, and yours, follow the SMART methodology. Setting a goal using the SMART model engages the Reticular Activating System (RAS), the part of the brain that plays an important role in attention. When refining our Desired State in the context of persuasion, remember that we need to ensure that we make the desired outcome relevant to the other person by connecting it to their current beliefs and values. This relevance activates their RAS and primes their mind to pay attention.

## Question Confidently, Challenge Respectfully, And Always Negotiate

The art of persuasion almost always involves some negotiation, whether the process takes two minutes, two months, or two years. Negotiations are most likely to fall apart if we move too quickly into details without ensuring that we have alignment and agreement at a higher level.

Remember it is our rapport and how we relate to another person, rather than a relationship, that allows us to lead someone from their Current State to the Desired State. Understanding the difference between rapport and a relationship will increase your ability to be bold and confident because you'll remember that rapport is elastic. Just as rapport can be stretched and even broken, it can also be repaired. You simply back up, re-establish it, and move ahead again using the techniques we have outlined in this book. This awareness allows you to be courageous and to challenge respectfully.

## Influence In Action

Results seem magical when you master the science and art of persuasion and influence, and as we well know, there is usually more at play than meets the eye. In your journey to mastering the arts of persuasion, influence, and effective communication, strive to always remain curious, authentic, and sincere as you engage and guide others toward a Desired State. To take control of your journey and reach your intended destination, begin by accurately mapping out your Current State and remain clear as to your Desired State. Doing so will allow you to engage and shift your own mind, emotions, and actions through the Think, Feel, Do process.

## Conclusion

The art of negotiation involves skillfully applying the valuable knowledge you've gathered through the totality of your life experiences along with the powerful persuasive techniques that you've learned as you've worked through this book.

**Stephen McGarvey** is a world-leading authority on unconscious communication, positive persuasion and influencing with integrity. Stephen has worked with businesses around the world to optimize their performance by helping them understand how their staff and their customers think and what unconscious elements/patterns drive their behavior. He has improved the performance of his clients internationally by speaking to a variety of audiences in a myriad of venues, ranging from the American Psychiatric Association Conference to numerous Fortune 500 companies.

## THE SUMMARY IN BRIEF

In every organization there are Impact Players—indispensable colleagues who can be counted on in critical situations and who consistently receive high-profile assignments and new opportunities. Managers know who these top players are, understand their worth, and want more of them on their team. While their impact is obvious, it's not always clear what actually makes these professionals different from their peers.

In ***Impact Players***, *New York Times* best-selling author and researcher Liz Wiseman reveals the secrets of these stellar professionals who play the game at a higher level. Drawing on insights from leaders at top companies, Wiseman explains what the most influential players are doing differently, how small and seemingly insignificant differences in how we think and act can make an enormous impact, and why—with a little coaching—this mindset is available to everyone who wants to contribute at their highest level. ***Impact Players*** is your playbook for the new workplace.

## IN THIS SUMMARY, YOU WILL LEARN:

- The key differences between typical contributors and high-impact contributors.
- The five practices that Impact Players have mastered.
- Strategies to develop the Impact Player mindset.
- Tips for recruiting and developing Impact Players in your organization.

## Introduction

Some people seem to know how to make themselves valuable. They pay attention. They look for the most productive places to put their capability to use. They make things work, and they get the job done, even when the job gets difficult. They not only deliver results but send ripples of positive impact throughout their team and across the organization.

Managers trust them when the stakes are high and turn to them in critical situations. They find a way to break through and make an impact while others are merely going through the motions.

Corporate leaders usually know who the superstars are and want more of them, but they struggle to explain what actually makes them different. Typically managers can articulate the more pronounced differences between their top and low performers; however, when it comes to their most influential, impactful players, the top of the top, there seems to be an ineffable quality about them.

The Wiseman Group's research based on 170 leaders from some of the most admired companies, including Adobe, Google, LinkedIn, NASA, Salesforce, SAP, Splunk, Stanford Health, and Target, from 10 different countries, revealed what managers need most from the people they lead, why it's easier for them to entrust critical assignments to certain people, and why they hesitate to fully support the efforts of others.

Additional interviews with contributors showed that it's not necessarily easy to become an Impact Player. You don't need special talent or capability, but you do need to understand the mindsets and behaviors that differentiate Impact Players from other contributors.

However, you can master these mindsets and practices. With a little coaching, this mindset is available to all those who want to step up and contribute at their highest level.

## PART I: THE IMPACT PLAYERS

## The Impact Players

Impact players make a significant contribution individually but also have an enormously positive effect on the entire team. Like an Impact Player in sports, the superstars in the workplace all have "game." They are smart and talented and have an extraordinary work ethic; but as with Impact Players in athletics, there is something more than just talent and work ethic at play. There's also their mental game: how they view their role, work with their managers, and deal with adversity and ambiguity, and how willing they are to improve.

Three different categories of contributors are

1. **High-impact contributors:** Those who are doing work of exceptional value and impact.
2. **Typical contributors:** The vast majority of people, who are doing solid (if not great) work.
3. **Under-contributors:** Smart, talented people who are playing below their capability level.

Here, the focus is primarily on the distinction between the top two categories (Impact Players and contributors) in order to explore the subtle, often counterintuitive differences in mindset that become big differentiators in impact. Each has a distinct mindset and way of working; one leads to a job well done, while the other carves a path to leadership and generates outsized value and impact.

### Understanding Impact Players

Research data made it clear that the approach taken by Impact Players isn't just marginally different; it is radically different—and it's rooted in how these professionals deal with ambiguity and situations they cannot control. While others get frustrated and either check out or freak out, Impact Players tend to approach such situations directly yet sensibly. They dive into the chaos head-on, much as a savvy ocean swimmer dives into and through a massive oncoming wave rather than panicking and being tumbled in the surf.

Impact Players respond differently to these perennial forces and frustrations at work: messy problems, unclear roles, unforeseen obstacles, moving targets, and unrelenting demands. Impact Players see everyday challenges through an opportunity lens, while others view the same challenges through a threat lens. This fundamental difference in outlook separates Impact Players from others.

The following practices are the five key differentiators between Impact Players and their colleagues.

- **Do the job that's needed**. While others do their job, Impact Players do the job that needs to be done.
- **Step up, step back**. While others wait for direction, Impact Players step up and lead.
- **Finish stronger**. While others escalate problems, Impact Players move things across the finish line and

The most impactful players don't just do their jobs; they do the job that's needed.

build strength along the way.

- **Ask and adjust**. While others attempt to manage and minimize change, Impact Players are learning and adapting to change.
- **Make work light**. While others add to the load, Impact Players make heavy demands feel lighter.

These five practices, along with the outlook that drives each, constitute the Impact Player Mindset, a framework for high-value contribution. Let's explore each of the five practices of Impact Players in detail.

## Make Yourself Useful

The most impactful players don't just do their jobs; they do the job that's needed. They venture out of the comfort of their role and work on the front lines of all types of problems. At the most fundamental level, this is about how to make yourself useful—how to understand what is important and then do the things that are important in a way that is extremely beneficial to your career.

### The Choice: Do Your Job or Do the Job That Needs to Be Done?

The world of work is getting messier—more complex, more chaotic, and more interconnected—thanks in part to the combined effects of globalization and technology. Complex problems—those involving too many unknowns and interrelated factors to reduce to rules and processes—are on the rise. These problems include challenges such as standardizing customer experience worldwide, reacting to disruptive innovation, creating a personalized learning experience for all students, controlling health care costs, and transforming a culture.

As problems become messier and mutate faster than a formal organization can respond, agility must come from the culture—the daily decisions and actions of people—not the organization structure. This leaves professionals with a messy problem of their own: "Should I stay in my lane, do my job, and attend to my duties? Or should I leave my post to pursue work in no-man's-land? If the latter, how can I make sure I still excel at what I've been assigned to do?"

Contributors see themselves as position holders. They do the work they're given and stay within the boundaries of their role but risk becoming so myopic that they lose sight of the overall strategy and veer off the agenda.

In contrast, Impact Players see themselves as problem solvers. They aren't trapped by antiquated organizational structures or overly enamored with their positions. They don't just do their job; they find ways to serve where they can be of greatest value. An overarching idea seems to govern their work: "I can be of service and solve problems."

Add to the service mindset a strong sense of agency ("I can act independently and make decisions") and internal locus of control ("I, not external forces, control the outcome of events in my life"). Now we have a winning formula for dealing with complex, messy problems that require more than a perfunctory response.

### The High-Impact Habits

**Habit 1: Learn the game**. To be of maximum value inside an organization—to be of service—we first need to know what is valued. We need to know the game being played. How clearly do you understand the skills and capabilities that are most prized in your organization? What are the top priorities?

**Habit 2: Play where they are needed**. When you know what's important now, you can focus your energy on doing the job that needs to be done and playing where you can have the largest impact. While Contributors play their position, Impact Players play where they are needed.

**Habit 3: Play with passion**. Impact Players work with a sense of purpose and conviction, but they work in service of the organization's unmet needs rather than their personal interests. Managers rarely described them as being passionate about a topic but often described them as being passionate about the work itself. Impact Players work *with* passion, not *on* their personal passion.

## Step Up, Step Back

The most impactful professionals aren't just loyal followers; they are ready leaders—the adaptive breed who are willing to step up and lead but who can also step back and follow others.

Ambient problems are the nonglaring, low-grade issues where the status quo is suboptimal but tolerable, such as a clunky business process that everyone complains about but isn't broken enough to fix. Some of these perpetual problems manifest themselves as organizational drag, a collection of institutional factors that interfere with productivity yet somehow go unaddressed, costing the US economy more than $3 trillion each year and reducing productivity by 25 percent.

Most people learn to live with these problems, but ambient problems erode performance over time. They are particularly damaging because they are easy to ignore. These problems become white noise in the organization. Left unattended, they become institutionalized, as people begin to accept them as inevitable or intractable.

That is, until someone takes notice and decides that the organization can, and should, do better.

When roles are unclear, people operating with a Contributor mindset look to their leaders for direction. They are loyal followers and supporters who carry out requests from their managers and collaborate with colleagues.

In contrast, Impact Players take charge of situations that lack leadership. When they see an opportunity for improvement, they don't wait for permission to act. They step up, volunteering to lead long before higher-ups in the organization ask them to do so. They are disruptors of the status quo who choose to lead rather than let things be. They offer a higher value proposition; instead of just carrying out the boss's direction, they can also rally others.

### The High-Impact Habits

Regardless of the impetus that propels them forward, Impact Players follow a distinct pattern as they step up and lead, bring others along, and, at the right time, step back.

**Habit 1: Step up**. When you see an opportunity to step up, the first step is getting into the room. And often, you won't receive an invitation. There are times when it's appropriate to invite yourself. Once in the right room, Impact Players aren't satisfied with passive participation. When an opportunity to contribute surfaces, they present themselves as capable leaders and take charge.

Those who take charge without a formal commission need tacit approval from their would-be supporters. Essentially, their peers and colleagues need to vote them into office. Voluntary leaders need the initiative to step up and take charge, but they must also demonstrate the humility to seek permission and garner support. When they can do both, other people choose to follow of their own volition.

**Habit 2: Enroll others**. Impact Players can lead without authority because they've acquired the power of assembly. By using their colleagues' time in efficient, productive, positive ways, they earn a reputation as someone who not only makes things happen but also respects others in the process. When they call a meeting, people come ready and willing to contribute.

With a common view of the problem, the group can establish a collective intent and a game plan. The leader continues to guide the nascent effort, ensuring the team takes action, achieves interim wins, and builds the momentum needed to sustain the effort.

**Habit 3: Step back**. Impact Players are versatile players who can both lead and follow, who pass the ball and share the glory. This flexible approach to leadership is again similar to the role of playmakers on a sports team, whose ability and willingness to move the ball to another player so he or she can make an attack is as important as their ability to take possession of a ball. This willingness to share and rotate the lead role creates a fluid, on-demand leadership model that enables organizations to respond quickly, adapt, and sustain commitment for the long haul.

Impact Players are not just heroes; they are hero makers. They pull others into the spotlight and lead the team so that there are multiple winners and potential leaders. And when the entire team looks good, so does the boss.

## Finish Stronger

A lot of professionals play a good game. They take action and work hard but too often stop before the job is finished. What happens when we stop just short of the goal line or celebrate early only to find that something we thought was done became undone? The most influential professionals—and entire teams—make a greater impact because they finish the job and finish stronger than others.

This practice is about how the highest-impact players deal

with adversity and unforeseen obstacles and get work done once things become difficult. It's about how to take ownership and move work across the finish line.

Impact Players have a touch of special agent in their blood—like Mary at NASA, dubbed "Mary the Mission Slayer" by her colleagues for her relentless drive to resolve problems that jeopardized her team's mission. They are ordinary people who have developed an extraordinary mental ability to withstand opposition and survive the gauntlet of everyday problems and ordinary challenges. They get the job done—hardships, villains, and all. As in the movies, they complete the mission without constant direction but summoning support from headquarters as needed.

> Being reactionary is often seen as a negative quality, but actually Impact Players are reactors.

### The High-Impact Habits

Impact Players offer a low-maintenance, high-accountability proposition: They take ownership, anticipate and wrestle down problems, and do what it takes to complete the whole job. They can finish strong because they anticipate problems and develop a plan.

**Habit 1: Finish the whole job**. The most impactful players tend to stick with problems longer. An Adobe manager described one such member of her team: "She's highly persistent. The harder the problem, the more she'll persist. The intellectual challenge drives her." Because these players persist longer, they make progress in the face of ambiguity.

Research showed that there were certain things that high-value contributors always (or nearly always) did: (1) take ownership and get a job done without being reminded; (2) act with integrity and do the right thing; (3) be easy to work with, likable, approachable, and positive; (4) learn quickly; and (5) apply their strengths to the work at hand.

**Habit 2: Maintain ownership**. It's not surprising that Impact Players take full responsibility. What is remarkable is that they retain it, even during setbacks and obstacles beyond their control. They don't hand it back when things get tough.

The most influential professionals can escalate an issue and ask for help while maintaining ownership of the solution. Google's Fiona Su manages to do both. She's known for her tenacity, independence, and ability to manage various internal stakeholders, but when she runs into trouble, she has no qualms letting her manager, John, know that this one is over her head and she needs help. She'll get him involved but more as a consultant than as a new owner.

**Habit 3: Anticipate challenges**. Impact Players don't have a superpower to see through walls or into the future; their strength lies in understanding that problems are constantly lurking around corners. They expect unpleasant surprises and normalize the challenges. With this mindset, obstacles aren't destabilizing or even distracting. Roadblocks become building blocks for growth, providing the resistance needed to become stronger and smarter and prove one's mettle.

## Ask and Adjust

The most valuable players are never finished. They are continually adapting, adjusting to hit the mark. How might the smallest adjustment to your approach lead to greater performance? This isn't about making radical, disruptive change; it is about the power and importance of making micro-changes, the small adjustments needed to stay on track. It's about tune-ups, not transformation.

For many professionals, work used to be like a game of darts: a game of skill with a clear target and a scoring system that makes it obvious how well you are doing. But as business needs continually shift, business targets are set into motion as well. The shot you once perfected no longer guarantees you'll hit the target. It now requires continual recalibration.

This constant shuffle creates so-called wicked problems—problems that change faster than we can solve them. You'll need to learn new rules, work with new players, and develop new skills and strategies. When targets are continually moving, you need continual feedback, guidance, and correction so you can adjust your aim.

Being reactionary is often seen as a negative quality, but actually, Impact Players are reactors—responding to changes in their environment and the feedback they are given. By being reactive (but not reactionary), they adapt to a chang-

ing environment, much like a chameleon changes color to fit its surroundings.

### The High-Impact Habits

When the world of work is changing fast, the critical skill isn't what you know but how fast you can learn. Savvy leaders know they need more than just a team of smart, capable people; they seek out players who have both the confidence and the humility to learn.

**Habit 1: Ask for guidance**. The Impact Players in the study showed greater levels of coachability, or responsiveness to guidance, than their peers did. It's easy to watch for signs of affirmation, but staying in tune with our stakeholders (and working on the right agenda) requires that we search for gaps: unmet needs, mismatched expectations, unflattering data, and contrary points of view. The top contributors didn't seek constant validation; they sought guidance.

**Habit 2: Adjust your approach**. Leadership expert John Maxwell once said that change is inevitable, but growth is optional. Instead of making big changes, fine-tune your approach by making a series of small adjustments in the right direction.

Jonathon Modica, a former HR leader at Adobe, exemplifies this ability to shift directions. When assigned to a high-profile project developing a new program for two senior business leaders, he started a meeting by framing the conversation: "I have some hypotheses to run by you." When one of the executives poked at his idea, he didn't become defensive or overreact.

Instead, he stopped, leaned back, and said, "Help me understand what you want to see differently." He asked a series of clarifying questions to help understand the issues and objectives. After the meeting, Jonathon took in their feedback and began testing each suggestion until they discovered an approach that fit best.

He left such an impression that the two executives later asked his manager, "When do we get to work on another project with Jonathon?"

**Habit 3: Close the loop**. Managers are willing to invest, but they want to invest in a closed-loop system, not a black box. When you ask for guidance and then close the loop, you let people know that their investment in you has yielded results.

## Make Work Light

This fifth and final practice is about how top contributors and leaders deal with pressure and unrelenting demands. When things are tough and the load is heavy, the most valuable players on teams make work lighter. Though they may not be able to reduce the workload, they make the work process easier and more joyful. They are like a bouquet of helium balloons.

Our workload can feel like a mounting debt that grows perpetually and follows us everywhere we go. There is too much work to get done each week, too many new tools and technologies to master, and more information than we can process, let alone retain.

Yet, our actual workload accounts for only a portion of the burden we experience at work. In one survey, over half of respondents said that their primary source of work-related stress didn't have to do with their workload; rather, they cited stressors such as people issues, juggling work and personal lives, and lack of job security.

When the pressure is on and the workload increases, typical contributors seek help rather than offering to help, becoming dependent on their bosses to relieve their burden.

Yet, other people, faced with the same workload and unrelenting demands, help lighten the load. While others create a tax, the most vital players offer a time rebate. They make hard work easier; the work doesn't necessarily become easier, but the process of working becomes easier and more enjoyable. They provide lift, not by taking on other people's work but by decreasing the phantom workload. They foster a light environment that lowers stress and increases the joy of work, both of which reduce burnout.

### The High-Impact Habits

**Habit 1: Be low maintenance**. Impact Players steer clear of noisy, taxing, and fruitless efforts like finger-pointing, complaining, showboating, and land grabbing. They eschew politics and dramatics that foment conflict but don't produce results. Each of these is an unproductive activity, a friction point that slows progress or stymies collaboration.

**Habit 2: Lighten the load**. Impact Players not only do their job well, they help their colleagues do their jobs well, too, which decreases the manager's worry load. When they lighten the load for their bosses and colleagues, they benefit as well.

**Habit 3: Lighten the atmosphere**. People enjoy

Failure to change is typically due to an overabundance of ambition, not a lack thereof.

working around Impact Players because they offer help and are easy to work with. While some players create a heavy, humid environment, they provide a light breeze. They help other people do their best work and create a sunny atmosphere, which helps eliminate the phantom workload.

Here are three of the ways Impact Players improve the environment and make work easier and more pleasant for all: bring levity, recognize others, and be human.

## PART II: DEVELOPING THE IMPACT PLAYER MINDSET

### Increase Your Impact

Carving a path to new behavior takes time. The road may have occasional epiphanies or transformative experiences; however, these changes are usually gradual, occurring in almost imperceptible increments. But each successive step strengthens nascent beliefs and reinforces new behaviors.

Failure to change is typically due to an overabundance of ambition, not a lack thereof. We generally fail by trying to adopt too many new behaviors at once. Instead of trying to simultaneously implement myriad outward behaviors, focus on one of the fundamental internal practices. These are called master skills—two core competencies that all the high-impact contributors in the study seem to possess.

**Master Skill 1: Changing your perspective**. Too many professionals are stuck in their own head, working on what *they* deem most important, not seeing beyond their own perspective. To increase our impact, we must know what is valuable to others. We must see through the eyes of those who benefit from our work.

Try pulling back from your position in the organization or work process and viewing your situation through a wide-angle lens. Ask yourself, "Who are the other players, and what do they need from me to be successful? Who are the people downstream who are affected by my work? Who are the people who benefit most from the work I do? What would benefit them most?"

**Master Skill 2: Changing your lens**. The five everyday challenges introduced above—messy problems, unclear roles, unforeseen obstacles, moving targets, and unrelenting demands—were like a Rorschach test. In the same situations, most people saw threats to avoid, but Impact Players saw opportunities to add value.

The difference between these two worldviews is much like the difference between a convex and a concave lens. Seeing ambiguity as a threat is like looking through a convex lens that causes light rays to converge at a single focal point, which tends to be ourselves. When we use a threat lens, we become myopic: We look inward, consider the situational impacts, and tend to see ourselves as standing alone, lacking control or organizational backing.

When ambiguity is viewed through the lens of opportunity, the resulting image is more expansive, and we tend to see what is happening around us. This is similar to the effect produced by a concave lens that disseminates light rays. With the opportunity lens, we view a broader context; we can see the upside as well as downside of our choices and the benefits to our stakeholders.

You can use cognitive reframing (a psychological technique to identify, challenge, and change the way a situation is viewed) to help you see opportunity in otherwise threatening situations. Specifically, recognize ambiguity, check your lens, reframe the situation, and replace with an opportunity lens.

### Build a High-Impact Team

A dream team isn't just a dream; it results from carefully curating players with the right mindset, developing them as individuals and as a team, and nurturing a robust, healthy culture. It is an act of bold, aspirational leadership. It requires purposeful development and the right type of coaching.

**Recruiting Impact Players**. Put simply, the best strategy for building a team of Impact Players is to hire people who already have the qualities that are most difficult to develop and then actively cultivate the other qualities. Insights from top executive coaches suggest that companies should hire candidates who are self-directed, community-minded, have a high tolerance for ambiguity, and are fun to work with, even in stressful times.

When these traits become table stakes, leaders can invest their training and coaching resources where they can produce real gains.

**Developing Impact Players**. More often, managers must create a dream team by conjuring brilliance from a group of inherited employees, an unruly cross-functional team, or a surprise summer intern who was a "gift" from a higher-up. In this case, it's the leader's job to grow the talent they already have. Managers need to create an environment in which the right mindsets and behaviors can grow.

If you want people to have a positive attitude, you need to create a positive environment. The best leaders cultivate a climate that is both comfortable and intense. They remove fear and provide the security that invites people to do their best thinking. At the same time, they establish an energizing, intense environment that demands people's best efforts.

The following five leadership habits will encourage the right behavior in a team:

**Define the W.I.N. (what's important now)**. If you want the people on your team to venture beyond artificial job boundaries and do the job that's needed, help them see what's most important at any given time.

**Redefine leadership**. Show your team that you can work as passionately as a follower as you do as a leader and that excelling as a follower is not a dead-end job but part of growing as a leader.

**Ask them to stay until the job is done**. When we hold people accountable for finishing their work, we send a powerful message that their work matters and that we believe they are strong enough to stay in the game, even when things get tough.

**Critique the work, not the person**. Think of feedback as critical information—data people need to calibrate and adjust their approach—rather than a critique.

**State what you appreciate**. Managers, if you want your staff members to make work light for you and others, make a practice of flagging behavior that you appreciate.

Though all people have value and bring capability to their jobs, some make themselves more valuable than others. They play bigger. They find a need and fill it. They turn uncertainty and ambiguity into opportunity.

Yet, the way they work is anything but random. They find out what's important to those they serve, and they make it important to themselves. They take the lead and finish the job. They stay light on their feet to adapt quickly, and they make work light for others.

How big do you plan to play? Where can you be of greatest value? What is life summoning you to do?

Tap into your passion and your purpose, and find a way to contribute, to create impact, to play bigger and better. Imagine the impact of starting right now.

## THE SUMMARY IN BRIEF

In ***Initiative***, author Joshua Spodek explains how entrepreneurship has gone wrong, becoming more akin to a dog show. Spodek describes this Dog Show Entrepreneurship as a high-tech, fast-growth, investor-backed, founders-in-their-20s, companies emerging from a Silicon Valley–like environment fueled by Shark Tank, media, and venture capitalists leading the way. The problem is that this approach feeds on myths about entrepreneurship that hurts entrepreneurs along the way—and worst of all, stripping away their desire and initiative for change.

Spodek presents Method Initiative as the cure for the lack of initiative running rampant in our culture. Method Initiative replaces Dog Show Entrepreneurship with initiative and creativity, academic conformity with practice of the basic skills, and the myths of entrepreneurship with building relationships and partners who share a vision for solving the same problem.

## IN THIS SUMMARY, YOU WILL LEARN:

- What is wrong with entrepreneurship today.
- The common myths that hold people back from taking initiative.
- How practice and initiative are the keys to entrepreneurship through building relationships and refining your ideas and strategies.
- Ten exercises you can work through to start your own problem-based project.

## Introduction

There is a problem among employees that run into problems in their work. Many want to go start a new company rather than taking initiative to start their own project that interests them and solves a common problem. Employees fall short of having the social and emotional skills to build relationships and act accordingly. Employees lack the experience, skill, and the belief to see and act on opportunities—to take initiative.

### The Problem

The basic problem is that our culture has turned initiative and entrepreneurship into a dog show. Dog Show Entrepreneurship is a high-tech, fast-growth, investor-backed, founders-in-their-20s, companies emerging from a Silicon Valley–like environment. Shark Tank, the media, and venture capitalists lead the way in this direction. Unfortunately, with examination, this type of entrepreneurship cares more about money than the entrepreneur. Joshua's dream company burst because of the tech bubble and post-9/11 regulations. He was replaced as CEO. This most discouraging even was one of the greatest learning experiences in his life.

### The Dog Show and Culture

People with the skills, experience, and beliefs to solve such problems, however unwanted, see these crises as an opportunity to help. Our society, sadly, is developing fewer such initiators. Changing the beliefs and goals of a system or culture can change it. So, there is hope.

### The Solution, Part 1: Initiative

The heart of this approach is initiative. Instead of working for your bosses, work with them. Take initiative, connect with people, and solve people's problems so well that they reward you for it.

Passion will increase throughout your life as you learn to sense your interests and emotions, as well as those of people around you. You will find and create more meaning, value, importance, and purpose in your relationships and in what you do. You will take responsibility for improving your situation and hold yourself accountable.

### Our Misguided Educational System

Successful initiators and entrepreneurs continue to arise without school. Many specifically leave school to greater success than those who finished. Our most educated are often the least skilled and feel the most trapped and helpless. Universities' interests conflict with those of students who want to succeed through practical initiative and responsibility. They are academic institutions. Academic means distinct from practice. The academic information schools teach is nice, but the behavior they teach is compliance—not social and emotional development that enable you to create meaning, value, importance, purpose, and passion in yourself and others.

### The Solution, Part 2: Method Initiative

Method initiative is about practice — much like laying piano. You start with the basics and advance. You become fluent in the language of your craft. Learning the piano and Method Initiative are both active, social, emotional, expressive, and performance-based (ASEEP).

I call what this book teaches Method Initiative, with a specific application being Method Entrepreneurship, which I've taught in person and online to hundreds of people, embodied in the exercises in Part Two. The exercises are our equivalent of piano scales and basic training.

### The Myths

Your biggest hurdles aren't external. Most people's biggest challenges are internal, usually beliefs justifying why they haven't acted. So many people believe and perpetuate the same beliefs that they become myths. Here are the top myths:

- The Myth of the Great Idea: People feel they need a great idea first. Most began not with surety and confidence but with people iterating and persisting with a glimpse of an idea.
- The Myth of the Great Résumé: People think they need to build their résumé first. The best way to build initiative is by taking initiative.
- The Myth of the Born Entrepreneur: Everyone learns with practice. Start where you are and with what you have.
- The Myth of the Great Elevator Pitch: Don't sacrifice development for a short pitch. Build relationships, practice communicating your ideas often, and reform and recast your vision as you go.
- The Myth of Needing Resources: Few social problems get solved by one person alone. Solutions come from teams, with different members contributing. Work to find the people who have the resources to help you.
- The Myth of Needing a Passion: What works in

finding passions is acting on what you have access to. Action leads to passion.

- The Myth of Too Many Passions (aka Fear of Missing Out, aka Fear of Regret): Act on an interest you sense has potential, develop skills, and apply them to your next one.
- The Sources of the Myths: What Method Initiative Overcomes: These myths feed on our need to protect ourselves and come from ignorance, vulnerability, fear of judgment, and insecurity. Your values and acting on them can reveal great discrepancies between values and behavior.

### Principles

The seven principles make sense even on your first read, but doing the exercises will imbue them with their full meaning and value. That growing meaning will tell you that you're developing the skills, experiences, and beliefs of effectively taking initiative.

1. Personality matters less than skills you can learn.
2. The idea of a lifetime comes once a month.
3. Better than a great idea is an okay idea plus market feedback, flexibility, and iterations.
4. Start where you are with what you have.
5. Pitch and they'll judge. Ask advice and they'll help.
6. The problem leads to the solution.
7. Almost nothing inspires like helping others so much that they reward you for it.

### Initiative, Action, and Passion

Life passions inspire us, giving us boundless energy. What works to focus us is what I call the Initiative-Action-Passion cycle. The last, beautiful, liberating main ingredient to Method Initiative is exhausting interests. Switching projects is like switching to another staircase that goes higher. Passion leads you to take more initiative, which leads you to act more, which increases your passion.

### Method Initiative: The Exercises

Method Initiative is a comprehensive progression of exercises that leads you to master the social and emotional skills, experiences, and beliefs of taking initiative to help others so they reward you for it. In the process you will create a supportive community, including valuable people in your field. Plan to 1) do one exercise, 2) reflect on it and write your reflections, and 3) do the next exercise. Repeat until the last exercise, or, if you exhaust an interest, restart and repeat the cycle with a new one. I recommend reflecting on the seven principles after each exercise. They will take on new meaning and importance with practice.

## You and a Problem You Care About

### Exercise 1: Personal Essay

Reflect on what brought you to this book. Direct your focus to a field you're interested in. 500 to 1,000 words is recommended. Name three people closer to your field of interest, three people with high status or value in your field, three relevant role models. These three can be people who are living or historical.

### Exercise 2: 5 Unsolved Problems

Exercise 2 is to think in the context of the field you wrote about in your personal essay and come up with five unsolved problems in that field. For each problem, write a potential solution.

### Exercise 3: 5 Close Contacts

Start developing your skills, experiences, and beliefs to attract people by sharing with them what you're working on and leading them to help you. List five people close to you likely to support you and unlikely to judge you. Family, friends, and colleagues can all work. Tell each about the projects from your last exercise. Ask each for a piece of advice on each. Write an improved version of the projects based on that advice.

## Creating Community

### Exercise 4: 10 Friends and Family Members

List ten friends and family members likely to support you and unlikely to judge you. Tell each your project and get three pieces of advice from each. Close each conversation by asking: i) "Is there anything to add that I didn't think to bring up?" ii) "Is there anyone you can think of you could put me in touch with who could help me with this?" The goals are to gather a list of the advice you got for your project and to write an improved version of the project based on that advice.

### Exercise 5: 5 People Who Feel the Problem

Find and talk to five people in the community you want to

serve who feel the problem you want to solve. Write each person's problem in his or her words. Five quotes, one from each person you spoke with, that states the problem in their terms from their perspective.

### Exercise 6: 10 People Closer to Your Field

Repeat exercise 4 ("10 Friends and Family Members") with ten people closer to your project's field. Tell each about your project so far and get five pieces of advice from each.

## Refining Your Solution

### Exercise 7: Create a Visual Model

Step 1: List the people and groups that your organization will interact with, along with what they will give and receive through your project's operation.

Step 2: Create a visual representation of your organization's operating model.

### Exercise 8: Details, Sustainability, and Financials

Your goal is to learn the operational details and assumptions as only financials reveal. Create a simple spreadsheet with 24 months of Revenues and Costs. Calculate the numbers.

Adjust the numbers until the project doesn't lose money.

## Creating Professional Relationships with Valuable People

### Exercise 9: Second Personal Essay

Write a personal essay about yourself in relation to:

The seven principles, your field of interest, the problem you want to solve, the people who feel the problem, your solution and goals, taking initiative in general, and your motivation and inspiration and purpose.

### Exercise 10: Valuable People

List ten people with value to your project whom you can reach. Tell each about the project so far and get five pieces of advice from each. Through this step, you may find that you have influential, resourceful people who are willing not only to help you but perhaps even employ you or fund your project.

## Conclusion

The way Method Initiative brings people together at work to cooperate and collaborate on passions becomes a new approach to the rest of life. It replaces isolation and alienation with support and understanding. Living by Method principles, Method Living, makes life about people—empathy, compassion, service, action, listening, understanding, making others feel understood, and so on. Once you start Method Living, there's no going back.

Beyond people using this book to learn and practice Method Initiative for themselves, teachers and parents should use it to teach the next generation to look forward to change with confidence and enthusiasm.

# Inner Excellence

Jim Murphy

Book Snaps™
In-depth reviews of best-selling business books.

## Inner Excellence

**Train Your Mind for Extraordinary Performance and the Best Possible Life**

*By Jim Murphy*

Jim Murphy is a Performance Coach (mental skills) to the best professional athletes and leaders in the world. Jim played professional baseball in the Chicago Cubs organization, coached with the Texas Rangers as well as in the Olympic Games. For his Masters Degree in Coaching Science, he interviewed 39 MLB GM's, field managers and coaches on how to build a championship team. In addition to coaching professional athletes and executives, Jim leads Inner Excellence offsite retreats at beautiful locations around the world. Jim is the president of the Inner Excellence Freedom Project whose mission is to build communities to alleviate spiritual and physical poverty around the world.

*A Book Review by Soundview*

# Mastering Your Inner Mind for Peak Performance

In his book, ***Inner Excellence: Train Your Mind for Extraordinary Performance and the Best Possible Life***, Jim Murphy shares with his readers keys he has learned that have helped him and those he has coached and aided move beyond fear and stagnation into lives of true meaning and worth. He believes that mindset is crucial in determining how a person both experiences and succeeds or fails in life. This mindset involves helping people focus on raising the level of excellence both in their lives and in the lives of those they compete with. Murphy maintains that a life focused solely on winning or gaining in certain areas of life is bound to lead to anxiety and fear. Rather than focusing narrowly on winning, Murphy wants his readers to seek out excellence in all areas of life, both external and internal. This, he maintains, will lead to contentment and a feeling of a life well lived.

## What We Pursue

Our culture, according to Murphy, is one set on a definition of success and a means of achieving it that will, in the end, fail to deliver what it is that people most want. Many people are likely familiar with Abraham Maslow and his hierarchy of needs. Murphy discusses people who Maslow termed self-actualizers. These people are not concerned with the external rewards that so often preoccupy the minds of most people. Rather, they have a firm idea of what they want out of life in the long term, and because of this, they are able "to develop an inner strength that [will carry] them through tough times." These people understand that their egos will want to protect themselves, and they actively work to bypass the needs of the ego in order to achieve their deeper dreams. These are the people Murphy hopes to help his readers become.

Western culture, Murphy maintains, is suffering from the affluenza virus. Because of this, people are focused on "possessions, achievements, looks, money, and status." The teachings of Maslow insist that these outward rewards will never bring true happiness. This is because the attainment of these riches often lead to envy and praise, and when this happens, we then

want ever more success in order to garner even more praise. One of the primary problems with this state of mind is that it is concerned primarily with others as people begin to want more not for themselves but in order to impress others. This ultimately leads people to feelings of emptiness.

Becoming self-actualizers requires people to develop self-awareness. This self-awareness is necessary because it allows people to perceive all of the world, rather than just what they can see through the lens of their own comparisons. Comparison can lead people to feelings of fear because in an effort to gain praise from others, they start to believe that they have no option but to succeed. This overwhelming desire to succeed can lead people to fear failure and become overly concerned with themselves and their appearance. This fear, according to Murphy's experience, stifles the freedom of people more than any other factor. Murphy is careful to note that while he insists that all people are self-centered because we necessarily see the world through the lens of our experiences, feelings, and perceptions, this is not the same as selfishness. Selfishness, in Murphy's view, is a moral issue whereas self-centeredness is just the lens through which people see the world.

Murphy moves into a discussion of self-consciousness. This occurs when people are attached to their past mistakes. He believes that when people feel self-conscious and afraid, they tend to turn to comparison centered around the five criteria of affluenza. "Looks and achievements" are especially relevant avenues for comparison because they are so personal. Murphy states that there will always be people who excel beyond us in these areas. This leads us to want ever more in order, leading to ever deepening affluenza.

## The Critic, The Monkey Mind, and The Trickster

A person must be able to control their thoughts in order to overcome the negative consequences of the affluenza virus, but there are three main obstacles to achieving more control over our thoughts. The first is the critic. "The critic is obsessed with (and attached to) our circumstances." It is the critic that is most concerned with comparisons. Murphy writes that "when we absolutely have to have something over which we are not in full control, we become a servant to it. In this we lose our power." In order to defeat the critic, we must learn to take our single-minded focus away from outcomes and focus it more on process.

The second obstacle to overcome is the monkey mind. The monkey mind refers to the "endless stream of thoughts" that are constantly running through our minds every moment that we are awake. These thoughts are often negative, fluttered, and unproductive. The main obstacle these thoughts provide is that they stop people from dreaming bigger. While Murphy understands there is a place for analysis, he believes that our minds become too focused on analysis as we replay our doubts. We become overly attached to our thoughts, and these thoughts establish their own reality.

The trickster is the final of the three impediments we may face as we try to gain control over our thoughts. Murphy writes that "when we're attached to our circumstances and invested in our goals, we don't reject the lies of the Trickster." Because of this, we can start to believe arguments about our own limitations. The Trickster tries to get us to believe that our "worth is entirely dependent on [our] results," and it uses "deception and accusation" to get a hold of us. The Trickster can get us to think either too highly or too lowly of ourselves, and both distortions lead to problems. When we base our identity on our successes and failures in this way, we begin to believe that we are a failure when we fail.

## Love, Wisdom, and Courage

Love, wisdom and courage are the "three pillars of excellence that overcome fear and form the foundation for mental strength and an extraordinary life." Love, for Murphy, is the antidote to fear. He wants his readers to lead from their hearts. This requires a pursuit of self-awareness so that a person can see what unique gifts and talents they have to offer the world. Murphy writes that "when you lead with your heart you have the capacity to see beauty and make connections only you can. You can connect ideas and people and dreams that no one else can." Instead of focusing solely on winning and defeating an opponent, someone who leads with their heart desires to always bring their best to a competition so that they can push their opponent to be their best. They pursue excellence in all areas and want to help others improve and grow as they, themselves, improve and grow. Competition is more about the pursuit of excellence than it is about single-minded victory.

Wisdom, for Murphy, "is the deep truth about who you are, why you're here, and what's possible in your life." This purpose must go beyond just the self and involve others. Wisdom also requires humility which Murphy defines as "an accurate view of self" as well as "freedom from self-inflation or self-rejection." Murphy believes that the byproduct of this clear view of self is gratitude. He believes that empowerment comes when a person finds a purpose that is rewarding in the pursuit of it, not just the attainment of it. The pursuit of a worthy purpose can infuse a life with meaning. Murphy writes, "your value increases and your concern for self decreases."

The final pillar Murphy focuses on is courage. "Courage," he writes, "is the ability to be fully present in adversity." It is easier to find courage when goals are focused on the process rather than on an outcome that we cannot fully control. Murphy lists four goals that focus on process. These are to give one's best, to be present, to be grateful, and to "focus on my routines and only what I can control." Winning is best achieved when it is the byproduct of a pursuit of excellence rather than the end goal itself. These three pillars of love, wisdom, and courage can help people in their pursuit of Zoe which "is absolute fullness of life, the selfless-actualization of those who are true to themselves."

## The Samurai

Murphy devotes considerable attention to the Samurai warriors in feudal Japan. These warriors followed what they called the "way of the warrior." This way prized "virtue and character above all else" and centered around "love, wisdom, and cour-

> *To achieve self-mastery, you need to, like the Samurai, 'let go of the fears and attachments that have mastered you - to surrender them to a power greater than your own."*

age." The Samurai "found pleasure in improvement, freedom in discipline, and connection in service to others." To achieve self-mastery, you need to, like the Samurai, "let go of the fears and attachments that have mastered you - to surrender them to a power greater than your own." Murphy believes that the strongest forces are love and fear and that with love we can overcome fear. It is in giving up one's life that one can gain the most. This is because clinging to one's life means a bondage to comparison. Samurai were always prepared to die, and Murphy believes that the highest purpose the rest of us can focus on is a "single-minded devotion to the purpose of your life." We must be willing to let go of our self-protection in order to love and so that we can allow our whole selves to engage in our pursuits.

Murphy then moves on to a discussion of the difference between happiness and joy. While many people seek out happiness in their lives, the pursuit of joy will bring more fruit. Happiness is dependent upon external circumstances. When good things happen to us, we feel happy. Joy, on the other hand, can be our companion even in the most dire of circumstances. "Joy is based on love and hope and truth, about who you are, created for glory, filled with infinite, inherent worth and unlimited possibilities." A pursuit of happiness often leads to a pursuit of comfort, but this can lead to a reactionary life. Murphy writes, "Stop running from discomfort and emotional pain. When you face it, you'll find out you're far stronger than you thought you were." Once people are able to divorce themselves from a fear of suffering, they will become more able to live lives of self-mastery. Murphy believes that "everything is here to teach" us and to help us to grow.

## Feelings

Murphy writes that "your state is the combination of your greatest desires, your beliefs about yourself, where you place your attention, and your physiology." Feelings dictate much of our lives, and they help determine how we experience the world. Our memories and beliefs filter our experiences. The results of this filtering creates thoughts which lead to feelings. Our feelings then determine our actions which in turn influence our results. There is a bias inherent in beliefs. Because of this, people can experience the same event in very different ways, drawing different conclusions.

Our brains are great at finding patterns. Patterns are how the brain is able to accommodate for so much information and make meaning from it. There are four processes through which our brains seek patterns: "assumptions, generalizations, deletions, and distortions." When we accept something without proof, we are working in the realm of assumption. Assumptions help the human brain because we do not need to take time in deliberation. Assumptions help us fill in the gaps when we have a small piece of information. For example, if we see part of an animal, our brains can fill in the missing body parts even when we do not see them or are focused on them. This can be problematic, however, when we want to narrow our focus and our brain keeps trying to zoom out and focus on aspects besides that which would serve us best. Murphy writes that "the key message here is that your focus improves when you can break down a task into its most basic element and concentrate on that alone."

Generalizations also deal with patterns but in a different way. When we experience a cause and effect, our memory stores that data and the next time we recognize the cause, we will come to expect the effect. Deletions occur when we filter out information that is not necessary. Oftentimes multiple things are happening at one time, and a person must be able to focus just on the necessary stimuli. Distortions occur when our brains give "too much meaning to a pattern." All of this is important because self-actualizers "organize their environment" purposefully, making sure to focus their time and attention on what matters most. They are intentional. Because of the importance of a strong and tailored focus, people need to learn how to both focus and relax and how to switch seamlessly between the two states.

## Beliefs

As mentioned previously, our beliefs are a key part of how we make sense of and perceive the world. Because of this, it is important that our beliefs are "in line with [our] dreams." Beliefs can develop quickly from external stimuli, but they can be changed. Just because a person is afraid of spiders because of one brief childhood incident does not mean they are destined to always be an arachnophobe. Beliefs are important because they "set the boundaries for what's possible in your life" and also because they "attract situations that keep those beliefs in tact." If a person begins to succeed in areas they did not believe they could, they will start to unintentionally sabotage themselves so that their outward circumstances reflect their inward beliefs. What we choose to believe about ourselves has great consequence.

Because of the power of beliefs Murphy maintains that "it's especially important to speak the truth about the past." He believes that it is important to think about negative past experiences as events that happened in the past rather than as ones that continue on into the present. Oftentimes the Trickster will appear when we try to move past failures. In times like these, it is important to stop negative thoughts as soon as we recognize them so that negative thoughts do not dictate our current realities. He believes that affirmations can be helpful in changing our current beliefs.

One belief that can harm us is a belief in the negative consequences that could arise should we achieve a particular goal. If we are pursuing a goal but deep down believe that the negative consequences of achieving it may be great, we may negatively and subconsciously sabotage ourselves. An example of this is when a smoker may have conflicting feelings about quitting smoking because if they quit smoking, they will lose the social ties they have that revolve around the habit. In these cases, "it's important to make sure your goals and dreams align with your true self."

## Subconscious and Resonance

Murphy claims three goals of the subconscious. The subconscious helps protect us from danger. It helps us live some aspects of our lives in the background to free up mental space for that which needs more attention, and it helps make sure our circumstances align with our beliefs. Our subconscious tries to protect us, sometimes to our detriment. For example, if a tennis player double faults, they may become distressed. The subconscious stores this feeling of distress in an attempt to protect against it in the future. The player then focuses on this in the future making it more likely that a double fault will happen again. When Murphy works with people struggling with fears and mental blocks, he tries to help them reprogram these painful areas. He does this in part by helping people remove emotion from the situation and figuring out what they could have done to change the situation and then inserting "a positive, high energy feeling – as well as the small change – into the context of the mental block." Finally, he has his clients "anchor that positive feeling into the original painful context." His clients are able to get rid of their fears permanently through this method.

Resonance refers to "the freedom and passion that come when we're fully present and in sync." Resonance depends on four factors. The first occurs when a person shares their heart rather than their ego. When a person performs in order to gain something from the performance, they likely will face great pressure. They will do better if they focus on sharing what it is they love. Second, they must work to pursue mastery, trying to improve in excellence. Third, they must strive to love their opponent, respecting them and realizing that great opponents are necessary for peak performance. Finally, a person must visualize presence. They must realize that failure is a part of the success journey. They must "visualize the path of mastery, seeking to be wholehearted and fully engaged" in life.

Murphy's purpose in his book is to help his readers achieve lives of deep meaning. While he works frequently with athletes, the principles he provides can guide people in all areas of life to achieve their biggest dreams and live lives of true meaning and purpose. While he walks his readers through his general principles, he ends each chapter with a list of questions to consider as well as activities they can partake in to implement the ideas in that chapter. Because of this, he is able to help make these principles concrete in the lives of readers despite the fact that much of the book talks about overarching ideas and principles. He ends with a list of the twelve steps developed by Alcoholics Anonymous because he believes that these principles can help people overcome stumbling blocks when other attempts fail because they are based on surrender, and this surrender can lead people on a path to excellence. Excellence comes to those who relish the process.

Rigor: Design a Relentless Daily Regimen
*Page 4*

Discipline: Become a No-Nonsense Master of "No'ing"
*Page 5*

Energy: Fuel a Fanatical Focus
*Page 6*

## THE SUMMARY IN BRIEF

When we are not where we believe we should be in our lives, we can feel a sense of inspirational dissatisfaction nudging us toward something better, and more. This dynamic can create a mental tension where although we are grateful for what we have and have accomplished, we also sense that we can become better. In spite of this, we can too often display the same thinking and tendencies that year after year have held us back. If you are in this state from time to time, or feel stuck there now, you can move forward after you intentionally change how you think.

Just as improving a physique requires intentionality, consistency, time, evaluation, adjustments, and trade-offs, so too does changing and building a mindset that makes you continually superior in performance to your former self in life's most essential arenas. That is the essence and purpose behind ***Intentional Mindset: Developing Mental Toughness and a Killer Instinct***. In it, Dave Anderson helps you become more intentional and less incidental when it comes to developing the killer instinct and mental toughness necessary to achieve your most essential goals.

## IN THIS SUMMARY, YOU WILL LEARN:

- The role killer instinct, mental toughness, and your WHY play in life
- The ten key success traits that are essential to building an intentional mindset
- The key aspects of each success trait
- How to continue your focus beyond the book

## Killer Instinct Gets Your Started, Mental Toughness Helps You Finish

Think of killer instinct and metal toughness as the "one-two punch" that accelerates success and knocks out complacency, with killer instinct being the impetus that "gets you started" and mental toughness being the driving force that powers you to fight to the finish.

Deficient killer instinct and mental toughness are the core causes of achievement shortfalls most often attributed to conditions such as bad breaks, bad upbringing, wrong job, wrong boss, and more.

Unconscious complacency is an enemy of personal progress and growth. It gives stagnation a foothold in your life and can make the dreams you envision seem always out of reach or even impossible. An important first step to jumpstart or accelerate progress and growth begins with developing greater measures of killer instinct and mental toughness.

There are ten key success traits that are essential to building an intentional mindset that increases your killer instinct and mental toughness, which form the acronym ACCREDITED: attitude, competitiveness, character, rigor, effort, discipline, intelligence, tenacity, energy, and drive.

## The WHY Fuels the Way

When it comes to achieving bigger goals, having clear and compelling internal motivators that fuel killer instinct and build mental toughness is non negotiable. This is your WHY. It lays out what you want for yourself and who is counting on you to come through. It is more than your goals; it's all the reasons you want those goals.

## Attitude: Build a Stronger ABLE So You're Able to Go Stronger

The acronym ABLE represents attitude, body language, and energy. The thrust of ABLE is that attitude influences body language, and body language impacts energy levels. It all starts with attitude, which is defined as a settled way of thinking reflected in one's behaviors or one's prevailing outlook on life.

People with similar skills, knowledge, talent, and experience go through identical trials but choose to handle it in a completely different manner.

### Seven Key Aspects of Attitude

1. **Responding well to negative things.** When negative things happen, instead of reacting quickly, take a few seconds to consider a more productive response, including a way to possibly benefit from it.
2. **Not being easily offended.** Regard an offensive incident as not mattering enough to invite misery into your life by repeating it, responding to it improperly, avenging it, or dwelling on it. No one can offend you without your consent.
3. **Demonstrate positive speech.** Words can inspire and words can destroy. Choose yours well.
4. **Focus on what you can control.** What you give your attention to grows bigger. Don't waste time on things you cannot control or affect.
5. **Maintain grace under stress**. Growth and maturity are shown in being able to experience negative or stressful emotions but not reacting to them.
6. **Avoid blame and excuses.** Taking responsibility for your actions, your results, and your life can be uncomfortable but blame is the anti-focus. Excuses are the DNA of underachievers.
7. **Make others feel better about themselves.** It takes a confident and secure person, and a selfless attitude, to shift one's thinking away from oneself and to build up others.

## Competitiveness: Go from Common Participant to Commonly Dominant

Within the context of Intentional Mindset, "competitiveness" is about competing with our former selves in a lifelong daily challenge for self-improvement in the ACCREDITED traits. The objective is to win victory over our former self. When you compete primarily with yourself, you continually raise your standards so that even if you fall short of your personal expectations, you blow away what others expected of you.

### Seven Key Aspects of Competitiveness

1. **Today's attitude is superior to yesterday's.** Handle aspects of your attitude better with each new day than you did the day before.
2. **Today's habits are superior to yesterday's.** Habits are behaviors that we repeat so often that

It isn't enough to know better.
To grow, you must do better.

they are automatic. Building an intentional mindset is about developing the discipline to do more of the right things and the self-control to avoid what is unproductive.

3. **Today's focus is superior to yesterday's.** It is vital that we consistently work to give attention to the activities and people that matter most.
4. **Today's discipline is superior to yesterday's.** Discipline fuels habits and subordinates temporary feelings to a better future. The key is to prioritize your future over your feelings.
5. **Today's knowledge is superior to yesterday's.** Enlarge your knowledge base and make yourself more valuable so you can add more value and achieve the valuables you have outlined in your WHY.
6. **Today's drive, energy, and motivation is superior to yesterday's.** When your WHY is clear and compelling enough, you will be on fire from within. Provoke and channel drive. Clarify and embolden motivators. Feed and manage energy.
7. **Today's results are superior to yesterday's.** The ultimate day would be one that sees fruit borne from past efforts, in addition to good seeds planted for future results.

When you build an intentional mindset, every day is more exciting, meaningful, challenging, and energizing than the day before. You approach each day not to get through it, but to gain from it, building the mental toughness and killer instinct you need to convert your most compelling WHY into a thrilling and fulfilling reality.

## Character: Cultivate a Rock-Solid Moral Code

Character can be defined as the moral and/or ethical traits that make up the individual nature of a person. Character is influenced by many things throughout our lives, but especially by our values and belief systems.

Strong character protects and helps leverage assets like talent, skills, knowledge, and experience. It ensures assets you have are applied rightly, with correct motives, even when life gets difficult or things do not go your way.

### Seven Key Aspects of Character

1. **Be honest in words and deeds.** Honesty is about being truthful but also encompasses freedom from deceit. Telling half truths or giving false impressions pricks the conscience, too and a guilty conscience is a mindset massacre.
2. **Accept responsibility.** Taking responsibility for your decisions, actions, results, and life allows you to learn and improve, build trust, and earn respect from others and yourself.
3. **Keep commitments.** Strong character is about doing what you said you would when it is not easy, cheap, popular, or convenient to do so. If others continually discover they cannot count on you, they are prone to reconsider whether they need you at all.
4. **Give complete effort at work.** You cannot afford to let yourself slack at your role because the stakes are too high. Doing less than you can eventually makes you less than you are.
5. **Put others first.** Putting others' welfare above your own demonstrates a serving spirit that builds your own self-esteem and confidence.
6. **Control your tongue.** Misspent words misuse energy and divert focus away from a *WHY* that matters most and onto a *what* that often means little or nothing.
7. **Remain humble and teachable.** There is no way you will put in the time and effort to develop an intentional mindset if you do not see the need for improvement.

Character leverages your skills, knowledge, talent, and experience by helping you stay out of your own way so you

can maximize those assets. It isn't enough to know better. To grow, you must do better.

## Rigor: Design a Relentless Daily Regimen

Rigor applies to having a highly structured daily routine that allows you to get more of the right things done, both consistently and with excellence. An intentional mindset helps you purposefully identify and execute your priorities on a given day and consciously work to improve your ability to perform them.

The goal of rigor is to develop better routines in all key areas of life. Rigor compresses focus and energy into what matters most, every day. It fosters discipline and enables consistency.

### Key Aspects of Rigor

1. **Schedule priorities in advance and successfully execute priorities.** Stop trying to squeeze your priorities into the day, and instead schedule your priorities and work the day around them.
2. **Today's daily routine is more effective than yesterday's.** Underachievers spend much of their life living in "someday." The problem with residing there is it takes all the pressure off performing well today.
3. **Make productive use of downtime and commute.** What you do in that time can make your WHY more attainable or create obstacles that can stall or reverse progress.
4. **Budget time to improve.** Life does not improve by accident and learning, like so much that is worthwhile in life, cannot be left to chance. Set daily time aside to improve yourself.
5. **Make time to add value to others.** Make time every day to encourage, equip, share, help, listen to, mentor, and coach other people. Adding value to others will challenge, stretch, and refine you in a way that makes you move valuable, too.

Rigor requires the killer instinct to embrace structure, follow processes, and attack your stated priorities each day. It also mandates mental toughness so that when things get tough during the day, or you get off track, you can remain tenacious and resilient and complete them regardless.

## Effort: Work Harder Smarter and Smarter Harder

People are fond of evaluating work ethic based on the number of hours or days they are at work instead of whether they are doing the most effective things intelligently and with vigor during those hours and days.

Working harder smarter means doing the right things with excellence and continually finding ways to improve them. Working smarter harder is about giving complete attention and effort to those high-impact activities, rather than doing them half-heartedly.

### Seven Key Aspects to Effort

1. **Do all that you can without holding back.** This aspect pertains to bringing all that you can to your vocation day in and day out.
2. **Execute the most essential tasks.** Effective execution is not just about getting a lot done, but getting the right things done. Doing more of the wrong things well, and often, cannot be declared as progress.
3. **Raise your basis.** Your basis is any routine that, while productive, does not challenge you as much as it once did because you have mastered it. Raising your basis involves increasing the most productive activities within a routine.
4. **Invest effort in growth.** Go beyond budgeting time to improve and give all you have to the time you budgeted.
5. **Don't spend major time on minor things.** You must limit things that are prone to rob our time if we let them.
6. **Say "no" to low-return things.** These can be former activities or bad habits you overlook, walk away from, and renounce or avoid altogether. Avoid what is unproductive whenever possible and escape when it is thrust upon you.
7. **Give all-out effort in various life areas such as family and exercise.** Any area you want to improve in your life requires an intentional mindset just as it does at work. It's about getting from the moment, not just getting through it.

Working smarter harder and harder smarter is an intentional, richly rewarding lifestyle that endows the doer with levels

You will not grow or progress by repeating the same old stupid things. You can grow and progress doing new stupid things and learning from them.

of self-esteem, self confidence, killer instinct, and mental toughness that are unattainable to those content to do just enough or who occasionally extend themselves, but only when it suits them.

## Discipline: Become a No-Nonsense Master of "No'ing"

Despite that discipline can sound like a punishing and restricting force that saps joy from your life, the opposite is true. In the context of this work, discipline can best be defined as an activity, regimen, or exercise that improves a skill, habit, or attitude.

Discipline is freedom, a morale builder, a bridge between where you are and where you aspire to be. No champion in any endeavor credited being undisciplined as their secret to success. A defined WHY makes it easier to know what to say "yes" or "no" to each day. "No" is a wonderful word, and highly disciplined people are "Masters of No'ing."

### Key Aspects of Discipline

1. **Execute a pre-work mindset and/or exercise routine.** This can be as simple as reviewing your WHY, reading or reciting affirmations, examining the day's priorities, or listening or reading to something inspirational or motivational. With exercise, it's all about challenging yourself to finish strong and resist the urge to rack the weight early.
2. **Execute commitments regardless of how you feel.** When you don't feel like executing key tasks or keeping other commitments but decide to do it nonetheless, you will feel even better about yourself than on the days you wanted to do them.
3. **Say "no" to shortcuts and instant gratification.** We are prone to repeat behaviors again and again until the wrong action has become a habit lethal to growth. Our actions have compounding effects, regardless of whether they are productive or unproductive.
4. **Spend less time with undisciplined "surfing."** Turning your head from an important task for just a moment can easily become an hour or even the entire day.
5. **Say "no" to excessive idle conversation and waiting/wishing/whining.** Limit or eliminate pursuing or listening to gossip, unmeaningful conversations, whining and complaining, or discussing personal problems with anyone the problem does not directly involve.
6. **Get off track less often than yesterday.** We all get off track from time to time. The challenge is to do it less often. The key to getting off the track less often is to be completely clear about what the track is in the first place.

Eliminate unproductive options to your downtime or daily routine to thus narrow your focus in a way that stimulates more discipline.

## Intelligence: Grow Your Smarts Before Stupidity Starts

If we know what to do but fail to do it, we are not just being lazy, forgetful, or apathetic; what we are doing lacks common sense and is, thus, stupid! To grow your potential you must become more intentional about doing more of what you know, learning better ways to do it, and doing it consistently.

You will not grow or progress by repeating the same old stupid things. You can grow and progress doing new stupid things and learning from them. In fact, this ability is a mark of intelligence.

### Seven Key Aspects of Intelligence

1. **Acquire new knowledge** in an area relevant to improving your key life sectors like finances, relationships, health and fitness, or spirituality.
2. **Practice or improve skills.** Prioritize strengths you are making stronger and focus on secondary abilities you have that are not at skill level, working to upgrade them.

3. **Ask for feedback** with the humility, killer instinct, and mental toughness needed to do so.
4. **Act on feedback** with the intent to make it work, not prove someone else wrong.
5. **Execute your action plan** and priorities before, during, and after work.
6. **Try new things.** It makes one uncomfortable which is essential to growth.
7. **Learn from mistakes.** We can turn the cost of our mistakes into bargains when we grow because of them and convert what we learned from them into results.

If there were ever an area of life where "it takes two" is true, it would be in applying both aspects of intelligence: acquiring and applying skills and knowledge. You must not only apply what you know works, but must also leave your comfort zone, continue to learn better and more relevant things, and also apply those. The consistent application of what is no longer optimal is not going to get you to your WHY.

## Tenacity: Hone a Rock Hardheadedness

Knowing when to persist and when to change your methods or course will be in direct proportion to the sharpness of your WHY. The clearer you get about what you want and why you want it, the more prone you are to adhere to the disciplines and principles that will take you there and avoid or discard what will not.

### Key Aspects of Tenacity

1. **Stay on track despite obstacles.** Engage your hardheadedness to return to the priority at hand, building your mental toughness, confidence, and resolve.
2. **Persist through tasks with excellence despite distractions.** When you have a setback, you still need to execute a priority and not do it casually or incompletely. You must do it very well.
3. **Keep going when you feel like quitting.** Set the bar high and expect more of yourself.
4. **Refuse to take "no" for an answer when pursuing a goal.** Learn from rejection, mentally regroup, and take another shot.
5. **Have encouraging self-talk.** What you say to yourself influences tenacity or surrender, confidence or compromise, drive or defeat.

When you feel stuck in the middle of a long and tough journey, you may not be able to see how or when you can possibly finish, but you don't have to know that much or see that far. All you need to see is how to get to the next step in front of you. And then choose to take that step. Then repeat. That is tenacity.

## Energy: Fuel a Fanatical Focus and Fight to the Finish

Energy provides the physical stamina to remain productive for the duration, and the mental fortitude to stay locked in and engaged so you can think clearly and execute well during the process. It is essential to become a more intentional daily manager of your physical and mental energy. This begins with your morning mindset routine and persists through the rituals, challenges, objectives, tasks, problems, and opportunities each day presents.

### Key Aspects of Energy

1. Increase mental strength by building and guarding your mind throughout the day.
2. Don't engage in evening activities that drain your energy tomorrow.
3. Stay mentally locked into the tasks that matter most by refusing the bait of distraction.
4. Power through when physically tired without "resting" at work.
5. Eat energizing food and stay hydrated.

When it comes to building, replenishing, and managing your daily energy levels, decide in which life areas your current habits or tendencies are your biggest foes. Be intentional and create a simple and workable action plan to address your self-afflictions.

## Drive: Become a Driven Driver, Not a Driver Who's Driven

A "driven driver" is one whose motivation comes from within and powers them to drive toward their WHY daily. On the other hand, a "driver who's driven" is one who must be prodded, cajoled, bribed, threatened, or otherwise motivated by outside forces. Drive can be considered a baseline

killer instinct. While drive prompts you to attack opportunities, especially those that come your way, killer instinct motivates you to seek out or make those opportunities.

### Seven Key Aspects of Drive

1. **Do a quality job of reviewing your WHY.** Don't miss the impact that comes with visualizing each element of your WHY and strengthening the emotional connection that takes you from merely reading the goal to seeing and feeling it.
2. **Choose and review your landing place.** Your landing place is your guard against getting off track. It is your couple of key priorities for that day that give you a place to come back to if you deviate off course.
3. **Don't require external motivation.** You cannot control whether you get noticed, complemented, rewarded, or applauded. If you are dependent on it, you are turning the motivational keys of your life over to people and things beyond your control, which is a recipe for personal powerlessness.
4. **Focus enough on the goals that matter most.** It requires significant discipline and mental intentionality to set aside or subordinate what is good or great to pursue relentlessly the goals that matter most.
5. **Focus enough on what you can control.** Giving time, energy, and focus to aspects of life you cannot control dampens your drive because feelings of helplessness and powerlessness ensue.
6. **Feel unstoppable despite conditions.** Tough conditions can cause you to take a shortcut, give up, enroll in the blame game, or lose emotional control. Rise to the challenge, power on, remain unfazed, and execute priorities with excellence despite adverse conditions.
7. **Avoid undriven people and drive-draining activities.** The thinking of an undriven person is a bad or wrong fit for anyone wanting to develop their killer instinct and become more mentally tough. Undriven people may make you feel worse about yourself, mock or put down your efforts because it makes them feel uncomfortable, or fill your head with unproductive nonsense.

Identify drive-draining activities or people that you need to limit your time with or avoid altogether. Decide on a substitute activity to put in their place. Remember that even trading in ten minutes per day of drive-drainers for something more productive compounds substantially over a lifetime.

## The ACCREDITED Course: Tailor Your Ten Weeks

If you choose, you can continue your journey to accelerate your mental toughness and killer instinct by taking the ACCREDITED course. In it, you will spend one week developing and evaluating each of the ten ACCREDITED traits discussed in ***Intentional Mindset***, focusing on the key aspects of each trait and you will evaluate your daily performance using a progress report found on the Learn to Lead site.

As is true with so much of your life that determines your future, what you do from here is your choice. With an intentional mindset you will raise your basis, narrow your focus, subordinate your feelings to your future, and add both years to your life and life to your years.

Dave "Mr. Accountability" Anderson is a leading international speaker and author on personal and corporate performance improvement. After an extensive career in the automotive retail business Dave, along with his wife Rhonda, began LearnToLead - entering its third decade - with the goal to help individuals and organizations reach their personal and corporate potential. bThe author of 15 books and host of the wildly popular podcast, "The Game Changer Life," Dave's no-nonsense messages impact readers and listeners in over 145 countries. Dave has spoken in twenty countries and presents 100+ times annually to a wide array of businesses, athletic teams, and nonprofits.

## The Summary In Brief

Productivity has many definitions, but one of the best ways to view it is work less hard, and fewer hours. Becoming more productive takes being more consciously aware of how you spend your time and efforts and analyzing whether you're spending them effectively. It's about properly setting goals and achieving them to the best of your ability. Always keep in mind that productivity is an ebb and flow process. Some weeks you will have balance and some weeks you may not.

In ***Jumpstart Your Productivity***, you'll discover how to define your goals in both your professional and personal life. You'll receive tools and techniques to help you choose a time management system, better plan your activities, and make a to-do list that works for you.

In addition, you will learn how to gracefully decline invitations that interfere with your productivity and how to control and manage the many interruptions that arise on a daily basis. And you'll learn about the importance and power of rest, recovery, and relaxation, and how they directly relate to your productivity.

## In This Summary, You Will Learn:

- Ways to help you get and stay massively productive.
- How to select and use a quality time management system.
- How to detect and eliminate productivity vampires.
- How to make and keep an effective to-do list.

## Set Goals and Write Them Down

When talking about productivity, you must decide what you are going to be productive about. You might be wondering, why should I set goals for myself personally and professionally?

Well, setting goals can be very motivating. They can help you plan better, make better decisions, increase your credibility, improve your thinking, and spend your time more wisely.

### The First Step in Defining Your Goals

The first step in defining your goals is actually defining them. How do you do this? The question is not really how to define your goals, but what it is that you want.

Start by writing what you want in these categories: Social, Professional, Love, Financial, Mental, Health, Family, Friends, Recreation, Spiritual, Community.

You can ask yourself questions like: What am I passionate about? What is it that I truly want? How would I know if I became successful? Why do I want success? Answer these in relation to each category.

### The Next Steps

Now that you've developed a list of your wants, you're ready to write down your goals for each on the basis of the ones that you have identified. Make sure your goals are specific with lots of detail.

Take your list of goals and transfer them to your calendar system (physical or electronic), and once you've written them down there, arrange the goals in the following time elements: Yearly, Quarterly, Monthly, Weekly, and Daily.

Now, ask yourself specifically what individual actions you need to take to make sure that each one is achieved. There will be your list of goals and in addition to it all the activities that are aligned with each one.

## Your Time Management System

If you want to be productive, successful, and credible, one of the main tools you need is some kind of system in place for managing and tracking your time. There are five types of time management systems: Phone-based, time management system apps, electronic/online, hard copy/written, and collaborative. But how do you know which system works best for you?

### Deciding Which Time Management System to Use

You will find that there are literally thousands of options available to help manage your time and productivity. There are some questions you can answer to lead you in the right direction.

First, ask yourself what it is that you need. Make a list of specific criteria that you want in your system. Then, consider the cost of the system. Is it user-friendly? Is it quick? Does it integrate with the rest of your technology? Do you like using it?

When you've answered these questions, ask other people which systems they prefer. Experiment with different kinds of systems. Take the time to do research to find out what systems are out there.

## Are You Wasting Your Efforts?

In 2015, the U.S. Bureau of Labor reported that employed persons worked an average of 7.6 hours on the days they worked. More hours were worked, on average, on weekdays than on weekends—8.0 hours compared with 5.6 hours.

On an average day, nearly everyone aged 15 and over (96 percent) engaged in some sort of leisure activity such as watching TV, socializing, or exercising. Of those who engaged in leisure activities, men spent more time in these activities (5.8 hours) than did women (5.1 hours).

On the days they did household activities, women spent an average of 2.6 hours on such activities while men spent 2.1 hours.

What can we learn from this study? It shows that people could be much more productive than they are. The average American spends over 5 hours of leisure time per day. This is a result of falling into habits and not thinking about what you are doing and how you are doing it.

### Productivity Vampires and What to Do About Them

Productivity vampires are the forces that prevent you from being able to accomplish what you want to accomplish and that interfere with your level of productivity.

When you work for yourself or for a company, there are activities that you get involved with each week; you need to analyze what those are and whether they are serving your greater purpose. You should note how much time you spend on e-mail, administrative work, meetings, instant messaging, phone calls, project work, travel, preparation, social media, and managing/leading.

If you find you are spending several hours on any of these, take steps to prioritize and minimize your time spent.

## The Key to Massive Productivity

If you want to be massively successful and massively productive, then you have to start planning for maximum success. In other words, if you want to be more productive, spend more time planning because the more time you spend planning, the more productive you will be.

For your goal to be successful you must set a measurement of success, a time frame for completion, and be as specific as possible in what you want to achieve.

### The Elements of Planning

The first element of planning is to look at time increments. If you're planning on achieving a specific goal, you can take that goal and break it into short-term (4–6 months), mid-term (6–12 months), and long-term (12–18 months) goals.

Next look at are categories for planning. That means placing goals under Resources, People, and Materials. Ask yourself, which resources will I need on this particular project to ensure that I will be successful? Which people will I need internally and externally to successfully pull off this project? What materials will I need to complete this project?

### Project Plan

Your project plan can be something as simple as a regular old calendar where you write the specific dates, an electronic time management system that will continually remind you electronically when things are due, or if you have a more complex project you can use project management software specifically made for managing large, complex projects. When planning, remember to have a specific plan that is all yours. Make sure it is time bound and written down.

## Make and Keep A To-Do List

Once you have your goals and your plans for the year, and then for the quarter, the month, and the week, then, of course, you will have the things you need to do every day. The tool you will use to do this is the world-famous to-do list.

### The Power of the To-Do List

This list should be aligned with your goals meaning it should include activities that help you achieve them. It should also be in writing. A written to-do list keeps you on track with exactly what you need to do and helps you keep track of what you've already done. It allows you to add to the list whenever something new comes up, and you can compare what you need to do for someone versus what you have on your list.

An effective to-do list will contain categories such as: Tasks to complete, Administrative work, E-mail, Phone calls, Travel arrangements, Meetings, Preparations, Household, Financial, and Social. You should prioritize your list items in each category as A, B, or C.

Remember that having a to-do list makes you more credible and increases your focus. It can motivate you, help you keep promises, and help clarify your thinking. You should include work items and other personal items in the same list, prioritize list items by deadline, have your to-do list with you at all times, and review it frequently throughout the day.

## Stop Saying Yes to Everything

The inability to say no is directly related to lack of productivity. If it is your habit and your approach to say yes to everything, that definitely has a negative impact on your productivity.

So, why do many people in life personally and professionally say yes when they really would rather say no? Some reasons are feelings of obligation, fear, or guilt. Do any of these apply to you?

### Why We Should Say No

In terms of productivity, there are some very powerful reasons why we should learn to say no. It is acceptable to say no when something takes away from your productive time, distracts you from thinking productive thoughts, and costs you in some way whether it's time, money, effort, or labor.

### How to Decide If You're Going to Say Yes or No

When a request is received, many people have a hard time deciding whether to do it or not and don't really know how to decide. There are questions you can ask yourself to help. Do I feel like doing it or not? Is this aligned with my goals? Will this result in conflict? What will be the impact? How will this affect other people?

## Control the Interruptions

It seems like at work we are constantly getting interrupted, multiple times per day and maybe even multiple times per

hour. That makes it very difficult to focus and be productive. How do we solve this dilemma?

### Different Kinds of Interruptions

In-person interruptions happen when you're sitting in your workspace and someone comes to ask you a question who does not have an appointment. What should you do in this situation? You can try to negotiate with the person visiting you, wear earbuds while working, move to a conference room or empty office where you can't be seen, avoid making eye contact while working on a deadline, or come up with some team guidelines so people know when and when not to interrupt.

Phone calls, emails, and meetings can also be a drain on your productivity. If you're in the middle of a project, you can let calls go to voicemail and call people back when you're finished. You don't have to respond to emails immediately, and you can turn off notification sounds. And if you have control over meetings, you can improve things by having an agenda, appointing a facilitator to keep conversation moving, and knowing the meeting's objective.

## Take Breaks, Boost Productivity

Scientific research shows that when people take breaks they are much more productive. In a study at Baylor University, Drs. Emily Hunter and Cindy Wu studied the break habits of close to one thousand workers. They found that taking a break in the morning, before lunch, was more effective at replenishing energy, concentration, and motivation. Workers who took breaks early in the day were more productive later in the day.

### The Break Manifesto

If you want to truly be more productive, you need to start habitually taking breaks at work. You can start by taking a break somewhere between when you start the work day and lunchtime. Leave your work area for 15 minutes and go take a walk. If you're worried about what other people will think, know that when you're more productive, they will realize that you taking a break actually has a positive impact, not a negative one.

Always take a 30- to 45-minute lunch break away from your desk. Disconnect from work by eating outside or in your company café. You should also take an afternoon break between when you come back from lunch and when you go home at the end of the day. If you take afternoon breaks, you will be much more productive when you come back to do more work.

Remember that productivity is an ebb and flow process. You'll achieve balance some weeks and others you may not. Always keep in mind that becoming more productive means becoming more aware of how you spend your time and making sure you spend it effectively.

Shawn Doyle is a professional speaker, book author, executive coach, and consultant. For the last 22 years, he has spent his time developing and implementing training programs on team building, communication, creativity, and leadership. His training programs help people become more effective in the workplace and in their lives. Shawn's clients have included numerous Fortune 500 companies, and his awards and honors are extensive. He is the author of twelve inspirational books.

# LEAN IN
## Women, Work and the Will To Lead
**by Sheryl Sandberg**

*© 2013 Lean In Foundation, 228 pages*

According to Sheryl Sandberg, "leaning in" is an ambitious challenge to women to push forward and chart their own course to reach significant personal goals. She notes that even though women are better off now than ever before in history, women's voices are still not heard equally. In fact, Sandberg believes that women should be dissatisfied with the status quo and push themselves to keep reaching for equality.

*Lean In* affirms that women often hold themselves back in their careers, whereas they actually deserve to move to the forefront, in leadership roles. Sandberg's chapters focus on adjustments that women can make, such as increasing self-confidence and not trying to do it all. She examines how women can "sit at the table," take on risks, embrace challenges and seek their own goals. She asserts that a better world will exist when "half of our institutions are run by women and half our homes are run by men."

A wide gamut of women will embrace this book: those who have choices as to where, when and how much they work and those who face challenges wherever they work. For both groups of women, Sandberg addresses practical ways to remove barriers that prevent women from getting to the top. These barriers are both external and internal. External hurdles include sexism, harassment and discrimination. The internal barriers, those that women build within our minds, are lack of self-confidence and reluctance to raise our hands. Women hesitate to assert themselves, according to Sandberg, by "pulling back when we should be leaning in."

### Gender Stereotypes and the Leadership Gap

So many times women have said of other women, "I don't know how she does it!" Sandberg notes that fear underlies many barriers to being both a happy mother and a competent professional: fear of failure, of being judged, of aspiring to too much, of not being liked, of attracting negative attention. She points to national trends: Highly trained women are scaling back and dropping out of the workforce in high numbers because integrating personal aspirations with professional goals has been very challenging.

Sandberg notes that different treatment of boys and girls, from birth through school, is a symptom of gender stereotyping, which becomes a self-fulfilling prophecy. A cause of this inequality is what Sandberg calls the "stereotype threat." When members of a group become aware of a negative stereotype, they are likely to perform according to that stereotype. This phenomenon may discourage girls from entering some technical fields, and girls may consequently hesitate to aspire to senior leadership jobs.

In fact, when a girl tries to lead, she may be labeled as bossy and may pay a social penalty. Even though girls outperform boys in many college classrooms, girls' academic gains have not been reflected in greater numbers of women in top jobs, writes Sandberg. This phenomenon is the "leadership ambition gap."

Women often feel undeserving and guilty instead of worthy of recognition for their high achievement (the impostor syndrome of underestimating ourselves.) Sandberg quotes Tina Fey: "The beauty of the impostor syndrome is that you vacillate between extreme egomania and a complete feeling of 'I'm a fraud.'" Research supports that when one feels more powerful and in charge, he or she has a higher tolerance for risk in reaching for opportunities. Sandberg acknowledges, "I know that in order to continue to grow and challenge myself, I have to believe in my own abilities. I still face situations that I fear are beyond my capabilities. But now I know how to take a deep breath and keep my hand up. I have learned to sit at the table."

## Does Achievement Put Women in a Double Bind?

Sandberg cites research showing that success and likeability are positively correlated for men and negatively correlated for women. Research reveals that even though no one admits to stereotyping, when a woman is successful both men and women like her less. In other words, we evaluate people based on stereotypes.

Therefore, women are held back because they keep themselves back, insists Sandberg. Successful women may be perceived as non-team players or as too aggressive. Women's self-doubt may cause them to downplay their achievements.

The nice-vs.-competence dilemma is explained by a Stanford professor, Deborah Gruenfeld: "Our entrenched cultural ideas associate men with leadership qualities and women with nurturing qualities and put women in a double bind." Thus, women feel they need to do the job and get along with everyone. Even when a woman negotiates successfully for herself, she may pay the price of sacrificing good will, Sandberg asserts.

As Mark Zuckerberg told Sandberg at her first formal review, "If you want to change things, you can't please everyone." Sandberg found that Mark was absolutely right.

## Multiple Ways to Climb to the Top

Even though a ladder is a common metaphor for a career, Sandberg insists that a jungle gym is a more appropriate comparison, because it provides various ways of reaching the top, through creativity and individuality. Women who are starting or changing careers or re-entering the workforce especially benefit from the growth alternatives that a jungle-gym model represents.

Sandberg's work history exemplifies a jungle-gym career ascendancy. Her first job after college was at the World Bank, which included a stint in India researching leprosy. Subsequently she attended Cambridge Business School and joined the Nonprofit Club, where she studied social marketing. After her next job at McKinsey and Company, she became secretary of the Treasury Department, where she was involved in national and international economic policy. As she perceived the exponential growth of technology, she moved to Silicon Valley, where she was employed by Google.

She admits that the best piece of career advice came from a friend, Google CEO Eric Schmidt: Only one criterion mattered when picking a career: fast growth. She has since advocated that employees seek "rocket ships within their companies" by seeking positions that encourage stretching and reaching, as on a jungle gym. Sandberg also advises that everyone develop a long-term dream, namely, an 18-month plan that is two pronged: It sets goals to help us focus on results, and it sets personal goals for acquiring new skills.

## The Results of Missed Opportunities

Millennial women are not as likely as men to characterize themselves as "leaders" or "willing to take risks." Yet, aversion to risk can cause a woman to avoid tackling challenging tasks that could advance her career. Women may avoid "stretch assignments" because they feel they do not have the skills necessary for that reach. Unfortunately, this leaning back is counter-productive because many skills are actually learned on the job, she observes.

Seeking challenges beyond one's comfort level triggers leadership in climbing the jungle gym. In short, managing a career involves willingness to take risks, seek promotions and choose growth opportunities leading to a seat on the rocket ship.

Studies show that people who are mentored and sponsored report having more career success than those who are not. Mentoring has become a key topic in women's seminars, because mentoring (advising, supporting and providing feedback) is regarded as important for career progression.

The question arises, how do mentees find mentors? This book reiterates that mentors select their protégées based on performance, potential and initiative. Advice for mentees therefore includes the following:

- Be open to feedback;
- Use your working time productively;
- Do not expect hand-holding or solutions to be handed to you;
- Be proactive in your job (don't wait for a mentor to be a Prince Charming).

In reciprocal mentoring, both the mentee and the mentor benefit, because both gain useful information, a sense of collegiality and commitment.

## The Challenge of Honest Dialogue and Honest Feedback

Authentic communication is as difficult yet as necessary in the workplace as it is in successful relationships. Yet, open communication is stymied at work for many reasons, Sandberg notes. One barrier is that performance is often assessed by someone else's perception, which makes people less likely to tell the truth. Many women also perceive that speaking honestly will label them as negative or non-team players.

Sandberg affirms that communication works best when people combine appropriateness with authenticity, so that we are not brutally honest but delicately honest. Effective communication starts with several steps:

- The realization that there is my point of view (my truth) and someone else's point of view (his truth);
- The I-message, wherein opinion can be stated non-confrontationally using the first-person pronoun;

- Simple, minimal words, not wordy nuances that can obfuscate the point;
- The ability to really listen and acknowledge the speaker's feelings ("I understand you are feeling … because …")

The advantage of knowledge derived from honest interchange is greater than wallowing in supposedly blissful ignorance, which seldom leads to improvement. As Sandberg explains, asking for advice and feedback builds relationships that increase collegiality and equality in the workplace.

## Eliciting and Fostering Honest Views

She tackles the challenge of how to encourage those around us to speak authentically. We can actively seek others' input by simply asking what the other person is thinking. ("Mike, what do you think about …?") Another way to encourage genuine dialogue is to speak openly about our own weaknesses, perhaps admitting our own impatience or quirks, which helps others to relate to us and opens up deeper levels of conversation.

Sandberg adds that thanking people publicly encourages them and others around them to continue the good work. Moreover, sometimes humor can effectively help deliver an honest message. At other times when humor is not appropriate, an uncomfortable situation can be relieved by honest human emotion, such as when Sandberg "cried on Mark Zuckerberg's shoulder!"

Indeed, sharing emotions may increase motivation. Sandberg uses the phrase "Bringing our whole selves to work": no strict line of demarcation between our personal and professional lives. She cites prominent thinker Marcus Buckingham's research that leadership derives from "individuality that is honestly and sometimes imperfectly expressed." This shift bodes well for women who often feel obligated to relegate their emotions to a stereotypically male image. She concludes that compassion and sensitivity are the cornerstone for more authentic leadership.

## A Career-Loving Parent or a Working Mom?

Even though we may follow the maxim, "To fail to prepare is to prepare to fail," Sandberg notes the paradox that when it comes to meshing career and family, planning too far in advance can close doors rather than open them. The time leading up to having a family is not the time to lean back but the time to lean in to one's job. Women who do not stretch themselves professionally before they become parents may fall behind. When a mom returns to the workplace, she may feel marginalized or underutilized.

As a parent of two children, Sandberg continued to lean into her job and options; she took a new job at Facebook when her second child was seven months old. She points out the irony: "Women wind up leaving the workforce precisely because of things they did to stay in the workforce."

Sandberg declares that women most likely to leave the workplace are those married to men at two ends of the income gamut: ones earning the least and ones earning the most. Mothers married to low-income-earning husbands often cannot find jobs that cover the cost of daycare.

Mothers married to high-income men often leave employment because the hours husbands work require moms to care for the children. She advises that professional women weigh the cost of child care against their future salary rather than their current salary, before they contemplate leaving. The exodus of highly educated women from the workplace contributes further to the leadership gap.

"Sandberg's message is that if society truly values the work of caring for children and develops ways to help parents balance family and career responsibilities, both employees and employer will benefit immensely. Access to paid family leave, affordable day care and flexible work schedules would narrow the leadership gap."

## Real Partnership: Why Men Must Be More Empowered at Home

Without realizing it, women who do not view their partners as equally capable of chores and child care discourage them from sharing in work at home. But if women take a more collaborative approach to household duties, men will more readily assume their share. (Sandberg humorously suggests that even if dads put the diaper on the baby's head, the wife should just smile!)

Underpinning this need for equal partnership is Sandberg's contention that spousal support is crucial to a woman's successful leadership. The metaphor of a pendulum swinging back and forth aptly describes how partners can coordinate work schedules with household chores.

Because studies on child development reveal that children with involved and caring fathers show significantly high

levels of cognitive abilities and psychological well-being, it is crucial that men be encouraged to lean into their families.

Gender-specific expectations bring many unfortunate self-fulfilling complications. The belief that mothers are more committed to family than to work penalizes women because employers assume women are not as professionally dedicated as men.

Surveys of younger generations of men reveal the enormous advantages of an equal partnership:

- Partners experience greater happiness in the relationship and higher satisfaction;
- Men participating in raising children practice greater patience and understanding;
- Both partners experience/practice flexibility and negotiation;
- Women earning money gain an increased ability to make decisions at home and in their future;
- Partners model examples of greater equality for the next generation.

## Pursuing a Career and Children: It's a Matter of Focus

"Can we do it all?" Of course, the answer is no. Expecting women to do everything right leads them to major disappointment and self-doubt. Sandberg notes that women who have achieved professional success by pushing themselves ahead may have difficulty distinguishing between essential and non-essential aspects of the job, curtailing hours or "unplugging." But women can maximize their efficiency by focusing on what is important (being home for dinner, attending Sally's game or Billy's parent-teacher conference.)

The new normal in both the workplace and home includes an overloaded schedule and pressure to excel. Women whose children are in daycare often worry that their children suffer, but studies reveal no gaps in cognitive skills or social competence between children cared for exclusively by their mothers and those in day care. Thus responsive, caring parents working outside the home are quite capable of providing secure and nurturing environments for their children.

When Sandberg founded Women@Google, she tackled the problem of how women perceive themselves on the job. She contends that women need to speak out and seek solutions to barriers that impede advancement. At Facebook she teaches managers to encourage women to both vocalize their plans regarding families and to continue seeking opportunities. As she says, "Talking can transform minds, which can transform behaviors, which can transform institutions."

## Ongoing Dialogue about Equality

Sandberg reports that women will enjoy real choice when they have supportive employers, colleagues and partners, and men will have real choice when they are respected for contributing inside the home.

Achieving equality also requires women to support other women. Ironically, women already in power often regard aspiring women as competition. The term "queen bee" describes gender discrimination: A woman leader tries to dominate and keep other women down.

Sandberg also reminds us that even when we disagree, we should keep our shared goals in the forefront. She calls for not less debate but more constructive debate. "We versus us" and "Us versus them" is counterproductive to the goal, which is "a coalition of support," where children see fathers providing school transportation and mothers happy at jobs.

*Lean In* is a canonical must-read for working women seeking empowerment. In this inspiring powerhouse of a book, Sandberg provides pragmatic advice on overcoming the biases and gender stereotyping surrounding working women. Sandberg's firsthand experience, extensive research, interviews and humor lend strong credibility to her advocacy of women leaning in and charging ahead in pursuit of individual growth and goal attainment. Her engaging call to action reminds us all that more women in leadership positions will create a more equitable world of both professional and personal fulfillment.

She shares her contagious optimism in her final hope that her own children will end up where they want to be by leaning in — all the way.

**The Author:** Sheryl Sandberg is Chief Operating Officer at Facebook and is ranked on Fortune's list of the 50 Most Powerful Women in Business and as one of *Time*'s 100 Most Influential People in the World. Prior to working at Facebook, she was Vice President of Global Online Sales and Operations at Google and Chief of Staff at the United States Treasury Department. Before that, she worked as a consultant at McKinsey & Company and as a research assistant at the World Bank. Sheryl serves on the boards of Facebook, The Walt Disney Company, Women for Women International, V-Day and ONE, and she chairs the board of Lean In. She received a BA in Economics from Harvard University and an MBA from the Harvard Business School. Sheryl lives in northern California with her husband, Dave Goldberg, and their two children.

## Leveling Up

### 12 Questions to Elevate Your Personal and Professional Development

*By Ryan Leak*

**Ryan Leak** is an author, speaker, executive coach, and filmmaker. He's known for two documentaries: The Surprise Wedding and Chasing Failure. The son of a preacher man, Ryan grew up in the church with a marketplace passion. Today, Ryan splits his time between speaking in churches and doing executive coaching and speaking in Corporate America through his company The Ryan Leak Group, LLC.

# Focus On the Person You're Becoming

Ryan Leak, in his book, ***Leveling Up: 12 Questions to Elevate Your Personal and Professional Development***, presents his reader with twelve questions to consider regarding how they conduct both their personal and their professional lives. Leak believes that by considering the answers to these questions, people will begin to notice the areas they can improve on which will help them go on to live more fulfilling lives defined by their own idea of what success is. Shortly into his introduction Leak explains that many people believe that their own leveling up is someone else's responsibility. "But leveling up is your responsibility. It starts with you," he says.

He then goes on to list the six stages that people are generally residing in in their life. They are as follows: aimless, stuck, coasting, developing, thriving, and mastery. The ideas in his book are meant to help people move up to the next level. He believes that questions help people do this "better than answers because questions equip people to lead themselves when no one else is around."

Leak starts off his list of questions by asking the reader what his or her definition of success is. Leak grew up in a poorer neighborhood but attended a private school in a wealthier neighborhood. This gave him a first hand glimpse into how different communities define success. He believes that the first step a person needs to take to define success for themself is to examine their current definition of success. Then, people can go through the success criteria to determine where the criteria came from and if they are worthy of keeping. It is important for people to understand where their ideas of success originated from as often they are based in what the person previously wanted but may not want anymore.

He says, "To find true success is to understand where your current definition of success comes from and make it yours." People must define success on their own terms. He believes that unless people clearly state what they consider to be successes, they will never know when to celebrate those successes, and they will be merely moving from one place to the next.

The next question Leak considers regards self-awareness as he asks his readers to consider what it is like to be on the other side of them: what it is like to work with them, live with them, and

do life with them. Many people, he believes, lack this awareness, and oftentimes it is the people who think they are the most self-aware who lack this trait the most. He wants people to consider what it is like to be on the other side of their facebook posts, emails, texts, as well as what it is like to be coached by them, led by them, and be friends with them. He urges people to err on the side of caution by assuming that they are not self-aware. He believes it is quite easy to start to believe a version of ourselves and reality that is partially based in truth and partially based in myth. He says, "One of the biggest myths about growing in your life and career is believing that it'll happen when somebody else changes. You will grow when you change." He believes that truly self-aware people are aware of their strengths, shortcomings, and their impact on other people.

Once Leak moves past self-awareness, he moves on to the question of self-improvement. The problem he sees is that when people want to be the best at everything they do, they usually fail as this is just not sustainable. Instead of always aiming to be the best, he urges people to try to be better than they were the day before. He urges people to look at what they can do to improve rather than placing the blame on other people.

He believes that focusing on self-improvement can offer five distinct benefits: it helps protect against becoming irrelevant, it helps protect against an overgrown ego, it can lead away from envy as it veers away from comparison, it helps prevent people from feeling offended by the criticism of others, and it helps protect people against the highs and the lows of the journey.

Moving on from the self to others, Leak next urges people to consider what credit they can give away to other people. He does not believe that anybody is self-made. Everyone has relied on others throughout their journey to get to where they are. He gives numerous examples of people, including Thomas Edison, who have gotten credit for inventions that they did not develop on their own. The problem he sees, though, goes beyond people taking credit for what is not theirs. In his coaching career, he constantly sees people who feel unseen or unvalued. Therefore, he believes people need to focus on who they can help share success with. Otherwise, both personal and our professional relationships can break down and suffer.

He urges people to adopt the following perspective: "I don't need to be that impressive. I don't need to be hailed, esteemed, or adored. It is better to share that spotlight with the team or the people in my life who deserve it. Everything I have has an army of support and love behind it."

While Leak urges people to give as much credit to others as possible, he also wants people to consider what mistakes they can own. This is difficult for many people because it often requires saying, "I am sorry." He wants people to use the words, "I might be wrong" much more frequently as he believes this forms the basis of intellectual humility. Too often people allow confirmation bias which is looking "for information that supports our views rather than rethinking our position." By admitting to mistakes, we help to avoid building in others.

The next question Leak considers is what risks a person needs to take. Part of the problem with considering risks is that people frequently suffer from decision fatigue. People have been asked to undergo so much change due to the pandemic that they suffer from change fatigue. Unfortunately, according to research, most employers overestimate how much change their employees can handle, and change that is forced on people is generally quite unpopular.

This does not mean, however, that change is not sometimes necessary and that taking calculated risks is important. Often companies stay insistent on the ways they do things without even knowing why things are done that way. Often companies that are able to think outside the box are able to thrive. Making no changes can become problematic in itself. He quotes a tweet that says, "if you ignore a problem for long enough, it either goes away or ruins your life." All options carry risk, those that involve making changes and those that do not. All of this requires a person to become comfortable with failure,

Returning back to interpersonal relationships, Leak next asks his reader to consider whose dreams they should support. He begins his chapter speaking about many of the unsung contributors who help the greats achieve what they do. Leak does not want to just be someone who helps others achieve their dreams; he wants to help others help others achieve their goals. He urges people to stop seeing themselves as the center of everything and instead see that they are part of other people's circles.

He says, "Our mandate is to discover the dreams of the people closest to us." He urges people to find out the dreams of those they know in both their personal and their professional lives. He believes, however, that people first need to look to the dreams of those in their inner circle. Once those needs are met, they can look outward and try to meet the needs of others in their spheres. A few ways that people can support others are through their influence, by "exposing them to new opportunities," and with time.

The question of integrity is the next one Leak approaches. This involves people asking themselves what the right thing to do is. All people, he says, are presented with opportunities whereby they could do the wrong thing without being caught. The problem, however, is that often people can tell when someone is acting without integrity. He says, "the tragedy is that they may have gotten away with their behavior, but deep down people trust them less because they could tell that person was giving the bare minimum. They might not know their colleagues have lost respect for them, but the shift is there."

The result of lying is a loss of trust. Leak believes that in order to level up in life, the trust of others is crucial. He says, "The basic idea of being a person of integrity is being a person who is whole. What you see is what you get." He urges people to consider what they would be willing to sacrifice their integrity for. The answer is not always an easy one to determine. One result of acting without integrity is that it becomes necessary for people to look over their shoulder to see if the consequences will catch up with them. He encourages his readers to try to figure out what is right for everyone and to seek out accountability.

> **Many people feel like they do not own their time because so much of it is spoken for by other people."**

Time management is something that many people struggle with, and this is the next question Leak considers. He says, "If we don't take control of our time, someone else will." Many people feel like they do not own their time because so much of it is spoken for by other people. Leak believes that he can quickly determine the trajectory of a person's life merely by looking at their schedule. Most people may have some of their time spoken for, but they have control over the time that is available.

Regarding time, he says that people need to start "treating it as the most valuable and limited resource we have." Other people will not value a person's time if they do not value it. He urges his reader to act proactively rather than reactively regard their time. The way he recommends doing this is to have people analyze their own calendar from the month before and see what they had on there that did not need to be and what they are missing out on that should be on there. Some important aspects of time management are to make room in one's schedule for growth and well as to make time for the people who are the most important.

Rest is not always something prized in modern culture, but Leak wants people to consider whether they have to do everything they are doing. He believes rest is crucial for people to thrive. Most people have pressures from their vocations, their parenting, their marriage or romantic relationships, their extended family, their friends, their community, their finances, and their health. Eventually people need to ask themselves whether they can do it all. It is not possible for people to perform at the best level in every aspect of life all the time. One way people can move away from this mindset is to consider where the high standards came from. Everyone, he says, is struggling. Guilt is a serious problem for people who believe they must do it all. Everyone will drop balls now and again. Leak urges people to consider which balls can be dropped without breaking.

In addition to rest, he also asks people to question whether they are enjoying life. Most people are told at some point what will make them happy. Much of this is culturally based. He quotes Stephen R. Covey as saying, "Between stimulus and response lies a space. In that space lies our freedom and power to choose a response. In our response lies our growth and our happiness." Leak refers to the research of psychologist, Martin Seligman, who says that there are three dimensions to happiness: the pleasant life which refers to enjoyment, the good life which refers to virtue, and ghd meaningful life which encompasses purpose.

The final question Leak asks the reader is whether anyone knows who they really are. This refers to transparency. It is hard for people to share who they are because there can be real and serious consequences for doing so. He does not believe that people need to tell everyone every aspect of their lives, but he does believe that everyone needs at least one person with whom they can share who they really are.

Unfortunately, the more power and influence a person has, often the more they have to hide who they really are. He brings up the process of code-switching which refers to when people speak and act differently depending upon the people they are around. Two downfalls of code-switching are loneliness and the danger of implosion that can occur when a person becomes filled with anger and hurt. He encourages people to become a safe space for others and to have their own safe person.

Ryan Leak, as a personal coach and speaker, is invested in helping people move up to the next level in their personal and their professional lives. His book asks questions that will help people move along this journey.

Along with numerous examples he encountered first hand and statistics compiled by experts, he helps his reader along this path. Each chapter ends with a recap as well as with an action point the reader can implement immediately to help along this journey. His simple ideas can lead to significant improvements in the lives of his readers when the questions are carefully considered and the suggestions are implemented.

## Creating a Dynamic Balance of Work, Family, Time and Money

# LIFE MATTERS

### THE SUMMARY IN BRIEF

*Everybody is concerned about work/life balance, but few understand that time and money are as important to life balance as work and family. Each area matters, and focusing on one without considering the others is ultimately unfulfilling because they are so closely interrelated. Even the term "balance" implies a one-time effort instead of an ongoing journey.*

*In reality, a lack of balance is a misalignment of the principles that are important to you, and how you act with regard to them. It is possible that your expectations about work, family, time and money are unrealistic, and therefore you don't see them properly. With unrealistic expectations, you do not act effectively, and you won't get what you want. By examining your own experience, and seeking wisdom and inspiration, you can develop your navigational intelligence to optimize your life choices and stop wasting energy, money and time on issues and behaviors that are not important or that do not invest in the future.*

*To truly make every aspect of your life matter, you must focus on those principles that are important and make decisions to live accordingly.*

## What You'll Learn In This Summary

✓ **How to discover and value principles** which allow you to lead a life that matters to you.

✓ **How to examine your expectations** about work, family, time and money, and why you see them the way you do.

✓ **How to optimize your efforts** to achieve maximum results.

✓ **How to develop and use navigational intelligence** to make decisions that align with your values and allow you to create balance in an ongoing fashion.

✓ **How to use the Time/Money Management Matrix** to determine where and when you are wasting resources and shift the focus to importance and investing rather than urgency and consumption.

✓ **How to implement this new synergy of balance** by building the character to make the decisions that matter.

# LIFE MATTERS

**by A. Roger Merrill and Rebecca R. Merrill**

## — THE *COMPLETE* SUMMARY

## What Matters in Life

For decades people have struggled to find a balance between what were traditionally considered enemies: work and life. Though people are getting better at meshing the two, there is still a gap between what many say matters and how they spend their time and money.

Look at your Palm Pilot or credit card statement. See if the way you are spending your time and money reflects the things that matter most to you. It still seems as though people have to choose, even though work, family, money and time are not isolated arenas. They are highly interrelated. The real issue is having the wisdom to be constantly balancing all areas no matter what the circumstances. ■

## The Three Gotta Do's

There is a lot of advice out there about how to make your life better, but in the area of life balance there are three pivotal "Gotta Do's." You must: validate expectations, optimize effort and develop "navigational intelligence."

### *Validate Expectations*

People often operate out of incorrect or distorted assumptions and paradigms. However, you will not get maximum quality results unless you align your expectations with reality. The way you see and perceive situations so drastically affects your thoughts, expectations and behaviors that you must learn to validate your expectations by understanding what is real and what is realistic. Timeless principles such as "trust," "hard work," and "love" are real, but valid expectations around the pace and results of your alignment with these principles must take into account what you can realistically expect from yourself and others.

Consider these commonly misaligned expectations:

**The ideal life is worry-free.** Is there really any evidence that life is easy for anyone, even people whose lives you may envy?

**"Balance" means equalizing the scale.** True balance is not allocating the same time and energy to both sides of a scale. It is constantly changing and creating the capacity to balance in life's dynamic circumstances.

**Faster is better.** Speed isn't everything and it can be

*(continued on page 3)*

## Aligning Expectations

Suppose you have validated the expectation that having financial security is important to you. It is "real" because it is based on the principles of self-reliance and sustaining a happy, peaceful life. You also know that "realistically" you are a long way from that goal with your expensive house, two cars, a boat, credit card debt, and a home equity loan, on all of which you are making the minimum monthly payment. You have two children in grade school and junior high, and no money set aside for education. Your only retirement assets are in a mutual fund that recently lost half its value. Today is Friday, and you and your spouse have the weekend off. How will you spend your time and/or money?

1. **Go to an expensive resort to get away from it all.**
2. **Buy a big screen TV to enjoy the new football season.**
3. **Go to the zoo with your children.**
4. **Attend a financial planning seminar.**
5. **Take some time to discuss ways you can get out of consumer debt.**

Obviously, some of these choices are more aligned with the expectation of achieving financial security.

## The Three Gotta Do's

*(continued from page 2)*

worse than nothing if it moves you in the wrong direction and cheats you out of the pleasure of the journey.

**Work and family are natural enemies.** Throughout most of history, "work" has been family work. Children worked and learned alongside parents as they performed the tasks that sustained life. Because the Industrial Revolution split family and work apart, accessing the full richness of both in our lives today requires us to work proactively to create a synergy between the two.

Once you create valid expectations, you must align your efforts with what is real and what is realistic and then leverage them to make sure you get the most results for your effort. In each area — work, family, time and money — consider **what** you do and **how** you do it to determine the "optimizers" that will help you create the most positive change.

### *Develop "Navigational Intelligence"*

The final "Gotta Do" is to develop the ability to deal with the tension between the need to focus and the need to be open to unexpected opportunities as you align and leverage your efforts with your expectations. It would be great if you could make a master plan and follow it to a T, but life is unpredictable.

Navigational intelligence is the ability to make good judgments in the decision moments, when both focus and awareness are required. By developing the gift of discernment, you can constantly scan for, recognize, and respond to what is most important to you, even when focused on something else. To calibrate discernment:

**Value principles.** Create a personal mission statement and read "wisdom literature" to keep yourself constantly scanning for priorities aligned with principles.

**Evaluate experience.** Learn from living. View mistakes as high-leverage feedback and take the time to evaluate and course-correct.

**Invite inspiration.** Be open to receiving personal insight that comes from a personal retreat, writing a mission statement, or quiet reflection. ■

# Work Matters

Clearly there is a difference in the way people see their work. To some, work is drudgery; a necessary evil. To others, it means fame and fortune. Work can also represent a life's mission, or a contribution of love. The differences in how people see work lead to differences in how they do their work, and ultimately, in what they get out of their lives.

Do you see your work as a joy, monotony, or an escape? The pleasure and satisfaction you get from work is as much a function of why and how you work as what you do for work. It is the context that matters.

For many people, the primary reason for working is economic. They need to pay debt and bills that cause much of the pain around the issue of balance. The fear of losing a job makes people feel trapped and compelled to work long hours. Other people work for a sense of personal fulfillment and self-worth. However, working to provide for those you love is one of the highest, noblest, and most fulfilling motives. It is not work and family that are at odds, but the cultural notion of my career and the focus on materialistic "stuff" that causes much of the imbalance. Work should be considered "our work" — work for the whole family.

Dual-worker families and single-parent families usually feel the pressure to work outside the home to meet economic expectations, and therefore can see work as a necessary evil. In other situations, though basic economic needs must be met, it often seems easier to spend more time outside the home at work than deal with the mental, social and spiritual needs that need attention at home. In all circumstances, we need to seriously consider whether the money is worth the other costs.

### *Work Optimizers*

The way you see work will also influence how you see yourself as a worker. It is possible to choose to be a great worker, but most people need some guidance or motivation. Considering research shows that most managers squander their time at inefficient tasks, and that the ability to manage money affects far more than the budgeting dimensions of an employee's job, here are some aligned, high-leverage optimizers to use at work:

**Be Proactive.** Take initiative and always think, "What can I do?"

**Focus on Job One.** Understand your organization, your role in it, and the vision of your boss and peers.

**Think Teams.** Maximize interdependent effort to achieve success.

**Create Partnership Agreements.** Make formal or informal agreements to create shared vision about what you are planning to achieve, why and how.

**Build on Your Strengths.** Align your work with your talents without sacrificing important priorities.

**Continually Improve.** Seek feedback and invest in professional development

**Just ... Work!** Develop good work habits. Make sure you are perceived as an asset for your dependability and ability to produce results.

You can simply do these optimizers or you can do them with awareness and build your navigational intelligence. Find timeless principles at their root, such as

*(continued on page 4)*

## Choosing Imbalance

On one occasion, the company for which *Life Matters* author Roger Merrill worked experienced intense growth, and he and his wife Rebecca made the decision to go into a period of conscious imbalance. Though he would be away from the family far more than they would usually allow, they agreed it would make an important contribution to the business and help them accomplish their shared long-term goals.

Things went well as Roger accomplished the company goals, and he and Rebecca teamed up to take up the slack at home. But when the agreed period of time was over, it was difficult for Roger to return to the old way. The unbalanced lifestyle had become a way of life. More and more, Roger felt he was missing out and allowing good things to take the place of best things.

After listening to his heart, Roger took a stand and set limits on the number of nights he would be gone each month. It wasn't easy, and there was a lot of pressure to do otherwise, but for him the decision was right. It increased quality time with family, freedom to contribute to church and community efforts, and time to write books.

### Work Matters

*(continued from page 3)*

responsibility, focus and alignment, and learn to consciously recognize and value such principles. Evaluate your own experience while using these optimizers and invite inspiration on unique ways to apply them to your own situation. Make the decisions that are right for you.

One way you can implement this at work is to solicit feedback from a sample of people — bosses, peers, customers — and send them an anonymous questionnaire. Attach a memo letting them know you are trying to find ways to improve and ask for a few minutes of their time to give some honest feedback. Ask someone to type up the results so complete anonymity will be preserved.

If you send out the questionnaire once or twice a year, you'll get some great information. Though you do not want to become feedback centered, you can read the questionnaires, think about them, and look for ways to implement the suggestions if they make sense. Some questions you may want to ask include:

- From your perspective, what do I do that is most useful?
- What are my greatest areas for improvement?
- What one thing do you think I should continue doing?
- What one thing do you think I should stop doing?
- What one thing do you think I should start doing?

### *Balancing Work and Family*

Work should truly become love for your family made visible. Work and balance are both principles, and they should be leveraged to bring maximum effectiveness in both areas. Involve children and family in building bridges between work and home. Here's how:

**Share the vision** of what you do and why with children.

**Teach children to work hard** in school and at home.

**Teach children to love work** by loving your work.

**Take your children to work**, to see how it helps the family.

**Participate in career days** at school.

**Share positive work experiences** with the family.

**Bring stories of work heroes home.**

**Be aware of what family members are doing** and keep in touch with notes or e-mails.

**Involve your family in work projects.** ■

## Family Matters

In relationships, the little things are the big things. Showing caring and commitment through small acts like listening, respecting others' space, and saying "thank you" consistently over time makes a huge difference in the quality of family life.

Many people consider family one of the most important things in their lives, but they are not satisfied with the quantity or quality of time they invest in their families. As with work, the way you see your family determines what you do with your family and what results you get.

### *How Do You See Your Family?*

From the *Brady Bunch* to the *Simpsons* to the *Sopranos*, the media shows very different views of family. We live in a time when social messages about family are mixed and the purpose of family is confusing. Family used to be a sacred institution, but now it seems optional, essentially social, and recreational.

But human history shows us that family is the nucleus of civilization, and as teenage suicides, out-of-wedlock births, divorce rates, and domestic violence statistics rise, it is clear we are headed in the wrong direction.

An ideal family would include members who love, trust, forgive, help and believe in each other. It would have members who work, serve, play and worship together. Few people believe their families live up to the ideal. But even if you think first of the faults in your

*(continued on page 5)*

## Family Matters

*(continued from page 4)*

family, remember, "ideal" does not mean "without challenge," it means "strength to handle the challenge." Also, the ideal family life is a saga of "becoming." No matter what your experience, your greatest impact on the happiness of future generations is to nurture them in principles of joyful family living.

Also consider your role in the family. Do you consider work the place to contribute, and home the place to crash? Family can give you great joy and satisfaction, but that only comes with work and sacrifice for the family. Once you align your expectations with the overarching principles, you can see both home and work as avenues of contribution. Capture your vision of the spouse/parent/family member you want to be. Be brutally honest with yourself concerning what kind of family member you are. Raise your sights to a mark and keep moving toward it.

### *Family Optimizers*

Begin to think in terms of family leadership and your unique opportunity to influence and nurture the members of your family. Though all members of the family have the opportunity to contribute leadership, the most important ingredient in a successful family is parental leadership. Parents have four basic roles:

**Provide the basic necessities of life: physical, social, emotional and spiritual.**

**Protect family members from physical, social and emotional harm.**

**Nurture family members in love and kindness.**

**Teach family members principles and values that empower them to have rich, rewarding relationships and joyful, fulfilling lives.**

Beyond these roles are some optimizers to further improve your family life:

**Create a Family Mission Statement.** Clarify a shared vision for the family.

**Have Weekly "Family Time."** Schedule a weekly time to bond, communicate, coordinate and play.

**Date Your Mate.** The most important thing you can do for your children is love your spouse.

**Have "Sneak-Ins" and "Sneak-Outs."** Share one-on-one time with children at home and away to build friendship.

**Hold Regular Parent Chats.** Develop your role as a parent by asking "What are you working on?" and "What can we do to help?"

**Have a Daily Family Wisdom Time.** Spend time each day discussing truly great thoughts and ideas throughout time.

### Merrill Family Mission

- ✓ To love each other ...
- ✓ To help each other ...
- ✓ To believe in each other ...
- ✓ To wisely use our time, talents, and resources to bless others ...
- ✓ To worship together ...
- ✓ Forever.

**Establish Clear Stewardships.** Make responsibilities and division of labor clear.

**Bring Heroes Home.** Talk about heroic acts of real people rather than glamorizing entertainment stars.

Again, approach these optimizers with awareness and build your navigational intelligence in the process. Seek and embrace principles such as contribution, creativity, stewardship, respect, love, service and forgiveness. You will discover other more personalized ways to apply them to your situation, and the navigational intelligence gained from examining your principles, experience and inspiration will help you know that you are making decisions that matter most in your family. ■

## Time Matters

Time becomes an important factor in life when it is necessary to coordinate all of the details and decisions that contribute to life balance, satisfaction and joy. Traditionally these challenges fall under the tricks and techniques of time management, but really they are a function of **personal leadership**. More than doing things right, it's doing the right things.

### *How Do You See Time?*

Like other parts of life, it is important to examine your expectations about time. In the Western world, the clock reigns supreme, and time is seen as a limited resource. Busyness becomes a status symbol and people are always working toward it. We also see time as the enemy. What is your relationship with time?

**How much of the time do you feel frustrated?** Frustration is a function of expectation. You may need to change your expectations or increase your ability to get things done.

**How much do you struggle with what is "realistic?"** Consider whether you expect too much or too little of yourself.

**Do you always think "Life will be better when ..."?** What is it that keeps you from immersing yourself in the present?

*(continued on page 6)*

## Time Matters

*(continued from page 5)*

**Do interruptions irritate you?** The expectation that life should move smoothly without any surprises is not realistic. And particularly in the family, interruptions are often opportunities to respond to what matters most.

**Does the way you feel about yourself affect the number of things you check off your to-do list?** Would you still get satisfaction if you couldn't check things off your list?

**Does your desire to do a lot of things reflect a lack of confidence in your ability to do a few important things well?** Don't mistake busyness for success and replace clarity around Job One with crisis-oriented urgency addiction.

**Do you feel that if you do the best you can, it still may not be enough?** Enough for what? Are your expectations of yourself too high?

**Do you honestly believe it's possible to have a satisfying work/family balance in your life?** Do you think it would be possible for someone else, but not for you?

### *What Is Urgent Is Not Always Important*

The most significant challenge to implementing high-leverage optimizers is to discern between what is **urgent** and what is truly **important**.

Quadrants I and III in the matrix to the right are where you run into urgency addiction, and waste time fighting fires or solving other people's problems instead of integrating high-quality values into your own life. In Quadrant IV you try to escape from all the urgency with wasteful, unaligned "downtime."

Quadrant II is the place to see the benefits of investing time in important activities like planning, preparing, recreating and building relationships. It highlights the importance of proactivity, because you don't have to do the things in Quadrant II now, but through investment and continuous improvement you can prevent fires instead of fighting them.

Time that is wasted in other quadrants can be better used in Quadrant II.

### *Time Optimizers*

Once you understand that time should be spent on issues that are important instead of those that are merely urgent, you can use the following optimizers to make decisions:

**Make Weekly Plans.** Review your personal mission statement and set goals for yourself each week, planning your schedule for greatest efficiency and synergy.

**Use Time Zones.** Schedule large, interchangeable blocks of time designated for different kinds of important activities.

**THE TIME MANAGEMENT MATRIX**

| | *Urgent* | | *Not Urgent* | |
|---|---|---|---|---|
| *Important* | Quadrant I | | Quadrant II | |
| | **Work**<br>Handling an irate client.<br>Meeting a deadline.<br>Solving a production line breakdown.<br>Handling a cash flow crisis.<br>Responding to a window of opportunity. | **Home**<br>Taking an injured child to the emergency room.<br>Resolving a "credit card declined" problem.<br>Picking up a child from school.<br>Helping a late-for-work spouse find lost car keys.<br>Taking advantage of a teaching moment. | **Work**<br>Doing long-range planning.<br>Creating preventive maintenance systems.<br>Developing professional skills.<br>Building networks.<br>Anticipating client needs. | **Home**<br>Truly recreating.<br>Nurturing relationships.<br>Creating a family mission statement.<br>Having a regular family time.<br>Going on sneak-outs.<br>Improving family health. |
| *Not Important* | Quadrant III | | Quadrant IV | |
| | **Work**<br>Handling junk e-mail (spam).<br>Writing unnecessary reports.<br>Responding to some drop-in visitors, phone calls, and voice mail.<br>Attending unnecessary meetings.<br>Organizational politicking. | **Home**<br>Being on time for unimportant television shows.<br>Doing some errands.<br>Responding to some telemarketing and junk mail.<br>Rushing between scheduled, but not highly meaningful, activities and events. | **Work**<br>Gossip at the water fountain.<br>Unnecessary Internet surfing.<br>Doing non-aligned hobby-horse activities. | **Home**<br>Watching mindless TV.<br>Playing excessive and addictive computer games or reading addictive light novels.<br>Mindlessly surfing the Web.<br>Nervous eating. |

**T-Plan Daily.** This structure allows you to put time-sensitive activities on one side and any-time activities on the other, so you can prioritize and "keep score" as you make decisions throughout the day.

**Track Your Time.** A time log will give you surprising insight into which quadrant receives most of your attention and how much time you spend on actual priorities.

**Build Relationships of Trust.** Life is highly interdependent, and your ability to resolve time conflicts depends to a great extent on the quality of relationships with the people involved.

**Use Technology in Your Personal Leadership System.** Learn to understand and use technology to your advantage.

You might find yourself questioning how to use these optimizers most effectively as you develop your level of competence with time matters. Do any of these sound familiar?

*(continued on page 7)*

## Time Matters

*(continued from page 6)*

**"I am out of control!"** Move into Quadrant II. Spend five minutes today doing something to make tomorrow better.

**"I'm doing all right, but ..."** Track your time to discover any black holes and target improvement areas.

**"I manage my time well, but I want to get to a new level."** Try working in the upper corner of Quadrant II where you anticipate potential opportunities and problems.

**"I'm a great time manager at work, but not at home"** (or vice versa). If the problem is at work, analyze Quadrant III time wasters; if the problem is at home, examine Quadrant IV.

The quality of what we "buy" with our time is a reflection of our ability to make decisions about what is important in our lives. To avoid getting sidelined, place a powerful planning focus on importance. But keep in mind that your plan is a flexible framework. Every day other people's urgencies, potential opportunities, and your own flaky inclinations will challenge your framework; it will be up to you to determine whether the interruptions are important and worth changing course for, or simply urgent irrelevancies or methods of procrastination. In moments of truth you need to ask yourself what is important, and stay with your priorities. ■

# Money Matters

In order to manage money properly you must align yourself with the fundamental principle of **investing** instead of **consuming**. Like time, money is a huge communicator of value and what we buy reflects what is important to us. Money is tied inescapably into work, family and time, so improving your ability to manage it will make a significant difference in the other aspects of your life.

What is your immediate response upon hearing the word "money"? Confidence, security, anxiety, guilt? Consider the myths that promote some of the many negative emotions about money:

**Money and Things = Success and Happiness.** You may want to be successful so you can have better clothes, homes and cars, but people who have those things often have large debts as well. These symbols are not substance and do not necessarily bring happiness. Often their price is far more than money and includes broken health and relationships.

**The Best Financial Improvement Strategy Is to Increase Income.** This seems like the obvious solution, but more money usually also includes less time at home, more job-related costs, and a higher tax rate. Often you are quickly back in financial stress, just at a higher level. How you manage what you bring in is far more important than how much you bring in.

**THE MONEY MANAGEMENT MATRIX**

| | *Urgent* | *Not Urgent* |
|---|---|---|
| *Important* | **Quadrant I**<br>Bills<br>Payments<br>Immediate needs<br>Tax penalties<br>Legal judgments<br>Emergency medical expenses for self, family members or friends | **Quadrant II**<br>Savings<br>Investments<br>Insurance<br>Capital investments (e.g., education, training)<br>Business investments and improvements<br>Investments in preventive health<br>Investments in more effective personal systems or tools |
| *Not Important* | **Quadrant III**<br>Impulse spending<br>Interest on borrowed money<br>Excessive entertainment<br>Guilt gifts<br>Excessive tools or gadgets<br>Urgency costs (e.g., overnight shipping charges because you want something *now*) | **Quadrant IV**<br>Waste<br>Loss from bad judgment<br>Self-destructive habits<br>Gambling<br>Excess purchases (e.g., a third car)<br>Tools with features you never use<br>More clothes than you could ever wear<br>Shopping sprees<br>Anything that is a waste when compared to values and principles |

**Money = Privilege = Children's Success.** The best clothes, cars and schools do not necessarily provide children with the opportunity to do more in life. Character strengths such as honesty, integrity and thrift are best taught through sacrifice, cooperation and the need to prioritize and choose. Children often need you and your time more than they need what extra money can provide.

### *How Do You Spend Money?*

All of these myths added to messages from advertisers and credit card companies and the "have it all" version of the American dream create expectations that cause people to make choices that lead to debt and frustration. People also get expectations about money from childhood. Frustration often ensues when two people marry and bring different expectations about money.

People who deal effectively with time or money see differently than those who do not. They see in terms of importance and investing rather than urgency and consuming. And because they see differently, they act differently and get different results. You must honestly assess your paradigms and expectations about money. Then look at your assets and debts, and consider your

*(continued on page 8)*

## Money Matters

*(continued from page 7)*

retirement. What will your situation be five, 10 or 15 years down the road if you continue in the way you are going?

Think about money using the same matrix as you did for time. Consider the difference between what is important and urgent. In which quadrants do you spend most of your money now? Many people are in Quadrants I and III paying bills, meeting immediate needs, and buying on credit. Quadrant II is where importance and investment combine. That is where you want to focus your attention and your money.

Invest your money in places that create growth. You can invest in your own business, real estate and mutual funds, but also education, skill development and humanitarian efforts. Focus on creating instead of merely consuming. Using the matrix to think about money shows the importance of proactivity, and shows how to not waste money in Quadrants III and IV.

### *Money Optimizers*

Time and money are very similar because they communicate what is important in your life. The more you learn about how you spend and invest both time and money, the more you learn about yourself. But they are different in the way you can allocate them. Time moves independently. You need to learn to respond in the moment as it continues to flow. Money doesn't move until you move it. You have to decide to put it where it will produce the greatest growth. Many time decisions must be made on the spot, but money decisions can be made in advance. Use the following high-leverage optimizers to help you make those decisions:

**Know Where Your Money Is Going.** Track your spending to find areas of waste and misalignment with your principles.

**Know Where You Want Your Money to Go.** Create a clear, and if appropriate, shared vision of where you want your money to go. Prioritize your top five financial goals and focus on them when you are tempted to waste money.

**Plan Weekly.** Keep an ongoing look at the differences between your values and approaches and keep working toward greater alignment.

**Increase Your Financial Intelligence.** Invest time in learning about money by reading, attending a seminar, or talking to people who know how to set their standard of living below their level of income.

**Build Margin.** Increase the space between resources and immediate needs in this time of increased economic uncertainties, downsizing and national disasters when you might need to draw on reserves.

## Wisdom Matters

After looking at work, family, time and money, and ways to validate, optimize and navigate in each area, draw back and look at them as a whole life system. How do work, family, time and money interrelate and create day-to-day life balance questions, such as: whether to stay late to finish a project; whether to take a new job; whether to pay for nursing home care for parents or take them into your house; or whether to stay at home with the new baby.

These questions will never be answered with "balance the scale" approaches. The perceived imbalance is really misalignment with principles; the best way to make decisions about this everyday dynamic equilibrium is with wisdom, or navigational intelligence. Wisdom is the ability to make the choices that create the positive consequences we want to have in our lives.

With each of the areas of balance, it is important always to revisit the three wisdom builders:

- ✓ **Value Principles.**
- ✓ **Evaluate Experience.**
- ✓ **Invite Inspiration.**

All these attributes of wisdom are enhanced by solitude, so it is important to have quiet, uninterrupted times when you can increase your connection to timeless truths, awareness and inspiration.

### Character Is the Key

The final key to accomplishing this dynamic balance is character. It is the difference between knowing the things that bring positive results and doing them. Many people know what to do to improve their finances or not waste time, but they procrastinate or are distracted by paths that appear to be easier. The decisions you make to spend time doing what is important instead of what is merely urgent builds your character strength. Character is forged in the crucible of daily living.

**Develop an Effective Financial System.** Enhance the financial dimension of your personal leadership system so you can know what resources you have, what you spend, what your goals are, and how to plan for them.

### *Navigating*

Though it may seem difficult to spend time in Quadrant II creating shared vision, having weekly meetings, or increasing financial intelligence, realize that if you don't, you will end up spending that time in other quadrants later by working longer hours, paying more bills, and handling financial crises. The greatest value of Quadrant II is the wealth it generates, not just financial security, but inner wealth and fulfillment. ■

## THE SUMMARY IN BRIEF

If you're overbooked, stressed, and feeling hopeless about it, this book is for you. Life really is what you make it, and you must make it work for you. The only way to do that is to set boundaries. Slowing down is "prioritizing on steroids." Rest is the new hustle.

***Listful Living: A List-Making Journey to a Less-Stressed You*** is intended to guide you to become a calmer, more balanced, and less stressed version of yourself through list making. By showing you how to look at where you are now, where you want to be, and how to meld the two, it walks you through what needs to happen to make sure you have systems in place to be less stressed for good.

Author Paula Rizzo, now an entrepreneurial media trainer, strategist, speaker, and author, was a very busy television producer. Then a burst appendix that went untreated for two days led to being off work for six weeks. This experience re-shaped how she views everything. She now lives her life with more intention and more mindfulness about the decisions she makes and where she spends her time. List-making helps her do it.

## IN THIS SUMMARY, YOU WILL LEARN:

- How to design the low-stress life you'd like to have.
- How to reduce your stress through list-making.
- The most important list you can make.
- Practical ways to prioritize your time.

## Prioritize Your Life

Before you can dive into this work, you need to get a baseline and know where you are right now. What matters to you? What are you tolerating? What's working? What's not?

What are your top priorities in life? Sleep? Money? Nutrition? Travel? Work? Meditation? Family? List your top ten priorities in order, most to least important. What's number one? Don't feel like you have to get the "right" answer. Draw a pie chart illustrating how much time you're currently giving your top five priorities. Be honest—don't judge yourself.

List the activities and commitments you said "yes" to this year in each area of your life. Then list those you said "no" to.

### Your Productivity Style

Determine what productivity style works for you. If you're not a morning person, don't try to become one. It will make you cranky and resentful. Once you understand your productivity style, you can arrange your work schedule accordingly.

Set a timer for five minutes and freely write down any words or phrases that come to your mind regarding your productivity today. Then set a timer for fifteen minutes and free write about why you feel this way. Be very specific. What is working or not working when it comes to your productivity and stress levels?

## Look, Listen, And Learn

Knowing the environment that will optimize your productivity and make you feel less stressed will help you cross tasks from your to-do list with ease. Use your senses to determine the optimal environment for you. Chart what you see, hear, smell, and touch in your work environment. Be honest about how every aspect makes you feel.

### The Golden Hour Of Productivity

Answer these questions in writing to determine when you are most productive: How productive do you feel in the morning, afternoon, and evening? What time do you start to feel sluggish during the day? What kind of work do you like to do in each part of the day? Look at your answers—what's your most productive time of day?

Pick a task that you've been avoiding from your to-do list and write it down. Then set a timer for twenty-five minutes. If you get distracted, you must stop the clock. Try your hardest to focus on only that one task for the time allotted. Take note of when your mind wanders and write it down. If twenty-five minutes doesn't work for you, try twenty or fifteen. Record how you feel about this exercise.

There's probably a big difference between how long a task will actually take you and how long you think it will take you. Find out how long specific tasks take you by timing yourself. Before you begin, write down your prediction and when you're done with the task, write down the actual time. You might be surprised!

### Burnout Syndrome Is Real

"Burnout syndrome," an official medical diagnosis, results from chronic workplace stress that has not been successfully managed. Characteristics include feelings of energy depletion or exhaustion, increased mental distance from one's job or feelings of negativism or cynicism related to one's job, and reduced professional efficacy.

But stress isn't all bad; it only becomes a problem when you don't give your body a chance to recover from a challenging situation.

Visualize a scene from the last two months when you felt your stress levels were through the roof. Describe it using your five senses in ten minutes of writing freely. How did it feel? What made it so stressful for you? Jot down a few words or phrases that come to mind.

Make four lists: stress on the body, stress on the mind, stress on your habits, and stress on your performance. Write down your symptoms in each category.

Is there a recurring theme in the stressful moments of your life? Write out what commonalities you see in the situations you've listed, considering who was there, what you were doing, where you were, when it occurred, and why it occurred.

What is your de-stress style? Self-care is kind things you do for yourself. The benefits are immense: it will lead to an improved mood, boost productivity, and send your optimism soaring. Small, deliberate actions can feed your mind, body, and soul. List your current self-care activities, including how often you do them and how they make you feel.

### Your Blue-Sky Intentions—Where Are You Going?

This part of the book is about where you're going. Don't worry about how you'll get there. Instead, focus on how you'd like your life to feel and look. Let your creativity roam!

## Design Your Ideal Day

Write about how you'd like to feel when you wake up in the morning—how you want to feel, not what you are feeling right now. List words to describe specifically how you'd like to start your day.

What would you like your evenings to look like in the future? Write out all the words that describe that moment as you would like it to be, with all the details.

Now, chart out your dream scenarios. This can be a work schedule or a home itinerary. Fill in when you'll do work, when you'll play, when you'll take breaks, etc. Arrange your scenarios by time of day—morning, afternoon, and evening—day of the week, and weeks in a month.

### Choose Your Friends Wisely

Notice how you feel when you're around certain people, rather than how you think you should feel. List the people who make you feel the calmest and most stressed out at work, at home, and in your community.

Who would you like to see more of? List those in your personal life you'd like to see and how often. Then list the people you'd like to check in with to grow your business or career.

### A Matter of Health

Staying healthy should be at the top of your list, but it takes work. In a perfect world, what activities or appointments will keep you healthy? How often would you do them and check in on your health matters?

### Determine How Your Time Is Best Spent

Your "yes" list! This bucket list might be the most important list you write. It's the list of the things you want to make time for in your life. Categorize your list (work, home, finances, books, etc.)

Then create a "no-thank-you" list of the activities you'd like to cut out of your life altogether or do less of. Perhaps these are things that used to bring you joy but don't any longer. Be honest.

Now list out the things you absolutely love doing that get you charged up. Label each one to indicate how often you want to do them.

Renew with self-care. Self-care is kindness that you aim toward yourself. It doesn't have to be a big, grand thing. Self-care isn't a selfish act. It's an act of nurturing your body, mind, or soul. What would feel good to you? An extra five minutes in bed in the morning? Getting a massage? The possibilities are endless. List them.

Hobbies you love to do can enhance your self-care routine. What are some hobbies or skills you've always wanted to learn that would make you feel invigorated? List them.

### Gratitude List

Off the top of your head, list three things that you're grateful for today. Focus on things that seem ordinary. Taking time out of your day to write down what you're grateful for will retrain your brain. Evolution has conditioned us to be highly biased toward negative information because it could be a threat to our well-being. So, we must make an effort to focus on what we're grateful for.

If a daily gratitude list seems like a chore, pause when you realize that something has just happened that you're grateful for in the moment. Awareness is the name of the game. Keep this up and it will condition your brain to look for those moments. Then write it down—anywhere. Build this gratitude habit.

### Your Passport To Stress-Free Living

This section of the book fits the puzzle pieces together so you can design the life you want with as little stress as possible. You have complete control here. Simple changes can make a big difference.

To begin, compare your "yes" list with your list of what you want on your "yes" list going forward. List out what you'd need to do to make sure the things that stressed you out from the first list don't end up on your plate again.

### What Is Your #1 Priority Right Now?

Write down here what your biggest priority is right now. This is the lens that you'll look through for every decision you make going forward. It may seem dramatic, but it's freeing to know your priority. If it doesn't align with a task, then you say no to that task as much as you can.

Say "no" to things you don't want to do and that won't serve you in any way, and practice ways to do so out loud.

## How Will You Spend Your Time?

At work. You can decide to only do certain things at specific times and/or on specific days of the week. This takes the guesswork out of scheduling. Too many options lead to

indecision and procrastination. Make a chart of the days of the week and fill in your ideal work week. Take into account your productivity style.

Then do the same for months. Are there recurring meetings, events, or conferences that you want to make sure to make time for? Write down what your ideal weeks of a month look like.

At home. The next exercise is to fill in your ideal home week. When do you want to cook dinner at home versus go out? When do you want to entertain friends? Who do you want to see and how often?

When do you feel like your most productive self? Before lunch? After it? List out what times of the day you'll do certain tasks.

You have to factor in some time to recharge your soul, rest, and recuperate. What helps you to relax and refresh? Fill in a chart or calendar with what you'd like to do on a weekly and monthly basis to recharge.

### Map Out Your Vacation Time

How many vacations would you like to take this year, and with whom? List out the locations you'd like to visit, who you'd like to go with, and for how long. Be realistic.

Pick one of those trips and write out what needs to happen for you to plan it. Then pick one thing on this list that you can do this week to get closer to having this trip happen. Put time in your calendar to do this task right now.

### Social Hour

List your priority people, how often you'll see them, what you'll do, and potential dates. Then pick one of the people and write out what needs to happen for you to plan out your time together. Pick one thing on the list that you can do this week to plan to see this priority person. And put time in your calendar to do this task right now.

## Produce Your Self-Care Calendar

This is all about you! It's your time. Look back to your self-care lists and schedule time for yourself. When you see a self-care activity on your calendar, it's key to treat it like you would any other appointment and respect it.

### Keep The Momentum Going

This is where the rubber meets the road. It's time to get serious about not only implementing the strategies you've laid out but also keeping the momentum going. Make a list of strategies to help you do so.

### Celebrate!

Take a moment to look back at what you've done, because it's a big deal. Write down a prize you'll give yourself for finishing the book. Put it on your calendar so you can claim your reward!

## Making Conversation

By Fred Dust

Fred Dust was a Senior Partner and Global Managing Director at international design firm IDEO. A leading voice and practitioner of human-centered design and networked innovation, he helps organizations in media, finance, retail, and health confront disruption stemming from shifts in consumer behavior, social trends, economic pressures, and new technology. Prior to IDEO, Dust worked as an architect and spent eight years working with independent artists and major art organizations. He chairs the board of Parsons and sits on the board of the New School, NPR, and the Sundance Institute.

## Overcome the Rift to Converse Meaningfully

Modern life presumably makes communication easier than ever but the quality of the connections and of those easily obtained conversations is dwindling. Fred Dust wants to change that. We all have the need to conduct important and sometimes difficult conversations but we seem to be challenged with how to do so in a meaningful and effective manner. Drawing on his people-centered design expertise, Dust has "become a kind of expert in the design of conversations."

Dust writes, "Constructive conversation is one of humanity's first and most powerful tools." Civilization's progress was made possible through conversation. Discourse among members of the public and those who were elected to represent us "has been the underpinning of all aspects of government and governance throughout history." We have lost the art of conversation, despite its irrefutably important role in our personal, professional, and societal experience. We live in a world whose pace makes it difficult to slow down and really engage in ways that propel us forward. What was once viewed as a disagreement between opposing views is now viewed as an impossible chasm between sides that are wholly divided, with both sides accused of lying. Young people are driven further inward, "only able to communicate through their devices" and we place weight on exchanges within social media that, in reality, only offer us the "thinnest slice of who we are as humans."

Dust acknowledges that it has always been difficult to "have important conversations across political, socioeconomic, gender, or racial lines" but presently the problem has extended into our personal lives. "We're having trouble talking to the people closest to us. It's happening between friends, family, coworkers, and people who share political beliefs and goals. The rift is visible everywhere." In ***Making Conversation: Seven Essential Elements of Meaningful Communication***, Dust teaches readers how to overcome the rift, cross the expanse between us, and heal our wounded ability to converse meaningfully. In doing so we can not only become more hopeful, we can change our lives and even the world.

## Conversations that Matter

Before diving into the elements of meaningful conversation, Dust describes the three components of conversations that matter. We all engage in various types of conversations from the phone call to catch up with a friend to the late night rolling laughter of sharing memories with family. Though important and valuable, these are not the kind of conversations Dust is teaching us to design. The book is focused on conversations that: have a difference of opinion or stance on the key issue, feel difficult, such as those centered around strategy, politics, or other hard subjects, and have an aim at a positive outcome with a result that "moves us forward."

## Element One: Commitment

Most of us find it fairly simple to commit to our position on an issue. Doing so allows us to "feel safe and powerful." Creative conversations ask us to commit to the conversation itself, not our own ideas. Commitment in this context refers to our ability to let go of our personal commitment and place that commitment on the others involved in the conversation as well as the exchange. Dust says that this level of commitment is "an act of courage and optimism" and is "just about the hardest thing in the world." Lucky for readers, Dust provides clear guidance on just how to commit to a conversation.

Early in life we are conditioned to choose sides, stand up for what we believe, and be fully committed to our values. Over time we seek out evidence to support our beliefs and even surround ourselves with others who share them. When we hear the word commitment, we often think of this kind. However, this steadfast and unshakeable commitment to ideas that, in reality, could be accompanied with "biases, intolerance, and even hate" is exactly the kind of commitment we have to let go of in order to have meaningful conversations.

Instead of being committed to our values, we have to commit to being open to the ideas of others and the process by which beliefs are born. "Exploration, community, and conversation" are the framework from which we build our values and those are the values that require commitment. "A creative conversation is about choosing to hold your existing beliefs more lightly; it's about committing to exploration and to staying engaged with a set of people that will help you in that exploration." It requires a shift in mindset that is simple at its core but incredibly difficult to make.

## Element Two: Creative Listening

Listening is not a skill we often attribute to creativity. However, Dust shows us that listening can be a creative act that is "generative, satisfying, and pleasurable." Far from the chore we sometimes treat listening as, creative listening can teach us how to support better storytelling, test outside perspectives, and embrace and accept our "own reactions and judgment."

Dust recounts how his mother was a "magical listener," partly attributed to growing up with a brother who was born deaf. She was fluent in sign language and as a result she developed a physicality that emoted her when she was listening. She seemed to listen with her whole body. When someone is really listening, they generate feelings in the speaker that make them feel uplifted, powerful, and understood. This is active, not passive, and the kind of listening that needs to be done during difficult conversations.

Listening can be practiced to become something we do not from "a sense of duty" but from "a mode of joyful discovery." To do so, we have to "do something else entirely." Mindful listening keeps us attentive to the conversation, despite not showing the typical outward signs of listening. While performing a repetitive or somewhat mindless task that keeps our hands busy, our minds actually tune in to the conversation with more awareness and consideration. Despite what we often see in meetings today, texting and responding to emails is not the kind of task that works. Dust referred to husking corn or knitting as examples. It is a repetitive, meditative action that someone allows us to let go and tune in. This kind of listening lets the words wash over us in a passive way as we "go deep into listening."

## Element Three: Clarity

The base component of a conversation is words themselves. The trouble with words is that they can often lead to misunderstanding. Words can have different meanings across contextual and cultural lines. Words can be technical or industry-specific, not understood by those outside of a particular line of work. Words and their multiple meanings create a "gap between the words we hear and the meaning behind the words someone else is using." This is why conversations should be designed with clarity in mind. Those participating in the conversation need to have a common understanding of what words will be used and what those words mean in the context of the conversation about to commence. "The right words unite us and show us our way forward together."

## Element Four: Context

If commitment, listening, and clarity are the scripts of conversation, "context, space, and the things in that space are the stage." The space shapes the conversation, inspiring collaboration and creativity or stamping it out before it has a chance to begin.

There are three considerations to make when choosing a space for a particular conversation. Those elements are "cultural associations, personal association, and the "archetype" effect." Looking at cultural associations, there are spaces that are iconic in their purpose. A courtroom, board meeting, or AA meeting are offered as examples. When thinking about these conversation spaces, we can immediately conjure what they look like. The opposite is also true. We can first conjure up the kind of conversation and assign an iconic space to that conversation, such as with a wedding proposal.

Personal associations, naturally, stem from our own personal experiences with important and meaningful conversations. Dust lovingly recalls a porch swing at his great grandmother's house, where they would sit together and she would share

“Negative personal associations can be even more powerful than positive ones, wiping out any benefit from a cultural association. . .”

stories. Sitting on that porch swing, even many years after her death, Dust would find himself “flush with warmth and wistfulness brought on by the memory of the conversations we had there.” Negative personal associations can be even more powerful than positive ones, wiping out any benefit from a cultural association, for example.

The archetype effect refers to the feelings and associations we have with particular types of spaces or items found in those spaces. The kitchen table, for example, has an extremely strong archetype effect. Dust shares an example of a Peruvian bank he and his team at IDEO worked with to foster confidence from customers and encourage more participation in the bank’s product offerings. The financial advisors worked in single offices with a glass wall that surrounded the bank lobby. After engaging with many customers in their own homes, most frequently at a kitchen table, the design team decided to incorporate kitchen tables into the bank design. Instead of closed offices, customers were invited to sit at a kitchen table. This one change made customers much more comfortable joining a conversation about the bank’s services and made all the difference.

## Element Five: Constraints

It may seem counterintuitive, but constraints actually promote creativity rather than inhibiting it. The rules of engagement must be clearly stated, fair, and focused on the desired result of the conversation. If these rules are not made known to all participants, invariably the “loudest voice ends up dominating, reducing the dialogue to their own monologue.” Everyone else becomes frustrated and the conversation is unproductive and unfair. Modern thinking praises the virtues of thinking outside of the box but most designers and other creative types understand that “the creative process is often easier to navigate when there is a box to start with.”

## Element Six: Change

Every important conversation has the potential to move people from an assembled mix of opposing energies to “a group of individuals intent on creation.” Dust calls this the “moment of change” and it is “what allows us to imagine moving a conversation forward and inspires the potential for action.”

The kind of change that is needed in conversations that matter is the kind that forges a collective. It is a moment that says “we showed up for one another and now we’re moving forward together.” It is a change that happens to the participants of the conversation, not a change in the conversation itself. With continued practice, we can become so comfortable that the conversation feels routine and we can more easily spot the change happening to us and others.

## Element Seven: Create

The final component is creation itself. Talk is necessary and talk is required to come to any conclusion at all. However, in the absence of actual action, all the conversing is rendered useless. “Creation is about moving from actionable ideas to just plain action.” This element forces participants to “get real” and figure out if they are the ones who can take the ideas into the actual world and do something with them.

Life sometimes makes conversations impossible to happen. If a community or family or work group are divided, it can seem unimaginable to gather round to talk. Those are instances where “doing can have the most significant impact.” Organize a block party, set a date for litter clean up, or tend to the natural areas around your community. “When you can’t talk, create” and you will come together.

*Making Conversation* is a clear, complete, and compelling book that offers readers a way to move forward during a period of ultra-division plagued by misinformation and an unwillingness to engage in meaningful discussions. Connection between individuals and amongst groups has never been technically easier but we seem to find it increasingly difficult to draw meaning or understanding from those connections. This thoroughly enjoyable read goes a far way to shifting that dynamic.

Intentional design can bring hope, empathy, and a sense of coming together when faced with the inevitable difficult conversations that occur in life. His broad experience in architecture, design, consulting, and coaching have placed Dust in countless countries and cultures. This lends extreme credibility to his writing. He is not merely theorizing that these elements work. He has put them into practice himself in situations that were ripe for misunderstanding and miscommunication and they helped him bridge the gap between sides.

Each element, which encompasses a fully-dedicated chapter, includes actionable practice work to make the element more clear and to learn how to apply it. Dust calls these “Conversation Breaks” and they will be a welcomed bonus to readers looking to put these elements directly into practice. It is clear that Dust intentionally designed the book itself as readers are left with the feeling they have been conversing with the author himself upon its conclusion. Organizations, family members, politicians, leaders, followers, friends, and foes all stand to benefit from the tenets Dust artfully lays out in *Making Conversation.*

# Making Yourself Indispensable

## The Power of Personal Accountability

by Mark Samuel

### THE SUMMARY IN BRIEF

Imagine waking up with enthusiasm every workday. Imagine being certain that you are highly valued by your boss and co-workers. Imagine feeling secure and in control because, even if jobs are being eliminated, you're too valuable to let go. In other words, imagine being indispensable.

Sound too good to be true? Not according to Mark Samuel, who has helped thousands of people around the world get on the path to personal achievement and fulfillment. He shows why the key to becoming indispensable is to embrace accountability rather than run from it in everything you do at work and in your personal life.

Becoming indispensable doesn't require a fancy degree, a senior management title or huge income. It's a mind-set available to anyone. You'll also discover Samuel's proven strategies for letting go of victimhood, figuring out what's really holding you back and taking smart actions to achieve your highest goals.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to exhibit the 10 behaviors of indispensability.
- Six choices that can have a direct impact on your results in life.
- A step-by-step process for overcoming challenges and obstacles.
- A road map to make yourself indispensable to everyone in your life.
- Insights and tools for achieving success and satisfaction at work and at home.

## Introduction

Making yourself indispensable is dedicating yourself to being "counted on" by others and yourself. Seth Godin makes this point in his book *Linchpin: Are You Indispensable*? when he says, "The only way to get what you're worth is to stand out, to exert emotional labor, to be seen as indispensable, and to produce interactions that organizations and people care deeply about." Just as Oprah Winfrey could be counted on by her audience and Nelson Mandela was accountable to the people of South Africa, you must be counted on by your customers, your manager, your teammates at work and your family at home. Ultimately, to develop confidence, happiness and a sense of fulfillment in your life, you must be able to "count on" yourself to honor your commitments that support your growth, your goals and your play. Thus the core competency necessary to making yourself indispensable is "accountability" — the ability to count on yourself and be counted on by others. Accountability is not determined by an event from your past. Accountability is an ongoing process based on the choices you make each and every moment. Living an accountable life leads to greater happiness, greater learning and making a meaningful difference to others.

## Committing to Make Yourself Indispensable

Making yourself indispensable is not about position, power or ego. It is about taking charge, overcoming obstacles and achieving your dreams at work, at home and in your life.

### Ten Behaviors of Indispensability

Based on hundreds of role models I have witnessed during my 25 years in business, I have identified 10 behaviors necessary for reaching the status of indispensability. For each behavior, take a moment and assess yourself on the 1-to-10 scale (where 10 is high and 1 is low). Add up the numbers to get your Indispensability Score.

**Behavior #1:** Be in service to others without expecting anything in return.

**Behavior #2:** Be dedicated to the highest standards of performance, teamwork and communication.

**Behavior #3:** Be open and adaptable.

**Behavior #4:** Keep commitments and agreements.

**Behavior #5:** Expand your role to support your organization, community or family.

**Behavior #6:** Be a valued resource to others.

**Behavior #7:** Be dedicated to self-improvement and professional development.

**Behavior #8:** Use obstacles and challenges as opportunities for improvement.

**Behavior #9:** Engage and include others when making decisions or changes.

**Behavior #10:** Acknowledge and value the contributions of others.

If you scored 85 to 100, you are probably feeling fairly safe in your circumstances. If you scored between 65 and 84, you're probably feeling a little vulnerable, but nothing critical. If you scored between 45 and 64, it is very important to identify areas for improvement and use the process and tools in this book to improve your level of indispensability. If you scored 44 or lower, you are in a very vulnerable situation. But you can change the situation very quickly with the clear intention to do so and by following the process and steps in this book.

### Making Choices to Be More Indispensable

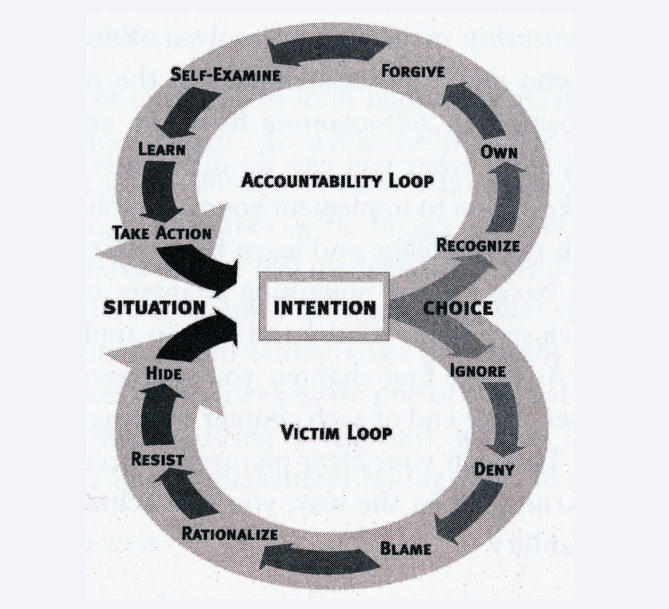
The choices we make have a direct impact on the results of our life. We make an infinite number of choices each day, but there are six fundamental choices that will dictate our life experience. Each choice is presented with a preference for making yourself indispensable, and while clearly these aren't rules but options based on the context of the situation, each preference represents where people tend to have weaknesses that prevent them from becoming indispensable.

**Choice #1: Purpose Driven or Goal Driven (the Master Choice)?** Goals without a purpose behind them will generally create an "empty" feeling of going through the motions. When you are purpose driven, you are dedicated. When you are indispensable, not only are you purpose driven, but your purpose is "service" to others. Being purpose driven leads to fulfillment.

**Choice #2: Play Big or Play Small?** Some people say that life is a game. If so, you have to determine what game you are in and how you want to play. Once you make the choice to play big by honoring and generously sharing your talents and gifts, you will experience a greater level of self-confidence, a greater sense of contribution and fulfillment, and a greater sense of recognition by others.

**Choice #3: Adaptable or Rigid?** Rigidity can come in many forms, including your mind-set or beliefs, your behaviors, your communication or your attitude. No matter how hard we try to resist change and remain in control, we are doomed to fail. Changing times require you to continually ask questions. When you are indispensable, you are continually reviewing the effectiveness and efficiency of your practices, your procedures, your assumptions and your beliefs.

**Choice #4: We Centered or Me Centered?** There is a choice to be made between caring for yourself at the expense of others and caring for yourself in support of others. We are connected and interdependent with others. The greater the "we," the more indispensable you become.



**Choice #5: Priority Focused or Activity Focused?** Unfortunately, most people are caught in the cycle of "more is better" and, as a result, keep adding priorities to their already full set of activities. When you scatter your energy, effort and resources across too many priorities, you risk breakdown from the lack of focus and attention. The indispensable person assists in creating a sense of calm and confidence.

**Choice #6: Value Others or Disregard Others?** Many people want to prove their value to others and, in so doing, neglect to acknowledge others for their contributions. Truly confident people have nothing to prove in terms of their value and, therefore, can share the value of success with others. Valuing others is really about expressing gratitude. Indispensable people are always looking for ways to help others grow. ●

## The Road Map

The foundation of becoming indispensable lies in taking personal accountability on the job, at home and in your life. This road map gives you a clear, step-by-step process for avoiding the Victim Loop and stepping onto the Accountability Loop moving up the trail to indispensability.

Making yourself indispensable is the destination, and personal accountability is the road map.

Accountability is taking action that's consistent with your desired outcomes. Knowing your desired outcomes is the key to accountability. If you don't know where you are going, it is impossible to get there. In other words, if you aren't clear on your "Picture of Success," it's almost impossible to be successful.

The Personal Accountability Model starts when a situation comes up — and it's usually a challenging one. Based on your *intention*, you have a *choice* as to how to respond. When you take the victim road, you *ignore* the problem, *deny* your involvement in it, and eventually *blame* someone else. Then you *rationalize* and justify why another person should take care of it and *resist* any attempt that others may make to get you involved. Finally, you *hide* to avoid dealing with it.

Given the same situation, based on an intention to *stay accountable*, you make a different choice. You *recognize* the problem and take *ownership* of getting it resolved. You *forgive* yourself and others who may have contributed to the problem. You are then in a position to *self-examine* how you contributed to the problem and *learn* what you can do differently to resolve it. Finally, you *take action* to implement your new solutions so that you can deal with the challenge and learn from your experience. This is the Accountability Loop. ●

## The Victim Loop

The Victim Loop is a way of life in which "stuff" happens to you. You don't seem to have a choice.

The surest sign is that you feel stuck — stuck in feeling angry, hurt, frustrated or discouraged; stuck in your job; stuck in your relationship at home; or stuck in physical pain. Everyone seems against you and you can't seem to get a break. Victimization is experienced regardless of intelligence, position of power, age or previous success.

There are six common phases of victimization that make up the Victim Loop. They don't always come in this order, but there is an underlying logic to how they progress. That's why we call it the Victim Loop.

**Phase #1, Ignore It: "Problem? What Problem?"** The problem with ignoring problems is that they usually get bigger — problems turn into crises, crises turn into breakdowns, breakdowns turn into lost jobs and eventually going out of business. When problems are ignored in organizations, they become underlying diseases that, when surfaced, elicit the response "That's just the way we do things around here."

**Phase #2, Deny It: "It's Not My Problem."** Denial is a tricky place to be because if the problem isn't yours to solve, it is someone else's responsibility, which leads you to further entrench yourself in victimization. For the organization, problems don't get resolved unless someone is assigned responsibility.

**Phase #3, Blame Someone: "It's Their Fault."** The rules of finger-pointing are pretty easy to follow: surface a problem, find someone else to blame, and blame away. There is always someone or something to blame. And you can even feel a false sense of control, domination and power by blaming others. This can go on with no end in sight and only leads us deeper into the Victim Loop.

**Phase #4, Rationalize It: "I Have Evidence."** It's hard to maintain the blame game without proof that we are right. We do anything to justify our lack of ownership. We convince others that our boss's decision was wrong, that we don't have enough resources or that it's not our fault that our performance isn't better.

**Phase #5, Resist It: "You're Not My Boss!"** When all else fails … get angry — throw a tantrum. Control is the issue and power is the goal. This is the point in the Victim Loop when conflict and irrational action start escalating. You are far from the original situation and you are still not dealing with it.

**Phase #6, Hide from It: "You Can't Find Me."** Having exhausted all other methods of avoiding the situation, you go into hiding. And, boy, are there lots of good ways to hide. Create busywork. Create unnecessary meetings, paperwork and projects. Generate a crisis. But the best way to hide? Stay confused!

When the pity party is over, you're stuck with yourself in the self-doubt created by knowing that you aren't achieving your goals or your Picture of Success. ●

## Intention: Take Charge of Your Life

Intention to take charge of your life is no small task. Creating a clear intention is part of developing that Picture of Success that represents your destination and changes your focus from victimization to accountability.

### The Mind-Set for High Performance

It is impossible to become indispensable without a mind-set for high performance. There are three essential elements to raising the bar on your mind-set of excellence. When put in place, these three things will lead you to a compelling destination that will drive every action you end up taking along the Accountability Loop to achieve your dreams of becoming indispensable.

**Step 1: State Your Intentions and Set Your Ultimate Goals.** There is no accountability without intention. Intention represents the desired purpose, goals and outcomes that are the basis of your plans and actions.

When creating your intentions, be true to yourself, your best self containing the wisdom, practicality and intuition that knows what is best for you and others. Your intention represents the combination of your purpose and "playing big" based on your unique talents, capabilities and opportunities to make a meaningful difference for others.

You can create intentions around any goals you want to accomplish. Your imagination is what limits your intention. So what's stopping you from achieving anything you

want? Declaring your intention clearly is the foundation for maintaining a positive focus and breaking free from the Victim Loop. It represents your commitment.

**Step 2: Picture What Success Looks Like to You.** The Picture of Success enables your intention to come alive. The Picture of Success describes the attitudes, behaviors and actions you would be exhibiting once you are accomplishing your intention. It's difficult to reach a goal if you don't know what it looks, sounds and feels like.

Your Picture of Success should include descriptive behaviors and actions you are taking that demonstrate what you are doing differently to achieve better results. As you read it and use it, you will refine it. It doesn't have to be perfect. It is a work in progress and the only way to fail is to not do it at all.

**Step 3: Test Your Picture of Success.** The challenge of creating a Picture of Success is that it can sound good but not be effective. There are a few ways to test your Picture of Success. Testing your Picture of Success begins with reviewing the six choices to being indispensable that we discussed earlier.

Does your Picture of Success clearly articulate your intention and purpose? Does it convey a clear picture of what you would be doing and how you would be communicating in order to "play big" and courageously? Does it include your ability to adapt as conditions change? Does it include impact on and benefit to others to ensure that you are "we centered?" Does it provide you a clear sense of priorities? Does it include how you will demonstrate your value of others? ●

## Recognize Your Current Reality

Call it what it is. Whatever it is. Be honest. Until you know what you are dealing with and are willing to call it out, you can't do anything differently. Recognizing your current reality is the first step in taking accountability to manifest your picture of success.

Recognizing your current reality has two main parts: identifying as many strengths and opportunities for improvement as possible and prioritizing the opportunities for improvement based on your current situation and what will move you forward to achieve your Picture of Success.

Common practice is to compare where you are today with current standards of excellence or with where you have been. While this is important for acknowledging progress, it can lead you astray from your intention and off the Accountability Loop. Achieve your Picture of Success to fulfill your intention, not just to get better. Your current reality measures the gap between your current performance and your desired future state described by your Picture of Success.

But how do you assess your current reality without going into negative self-judgment — feeling bad or getting discouraged? There are two ways to build your inner strength to face your current reality — a neutral frame of mind and a courageous heart.

With a neutral mind, you don't need to feel threatened by the truth. It is what it is, and there is no need to hide or judge.

You must have a strong heart and confidence in yourself to face your current reality. When you are accountable and on your road to becoming indispensable, you have the courage to search for the truth even when it could cause you disturbance. You don't cover up. You don't escape. You don't pretend. You boldly admit what doesn't work and you trust that you have the strength and resources to eventually find solutions. ●

## The Power of Taking Ownership

When you own something, you are more likely to take care of it. You are more likely to feel responsible for it.

When FedEx was first created, its founder, Frederick W. Smith, asked his employees to forgo their normal salary for weeks in order to save the company. Those who could, stayed, as owners of that problem, for the bigger purpose of keeping the company alive until it was successful. It was a risk. There were no guarantees, but that is what taking ownership is about: putting yourself on the line for your purpose, for sharing your gifts and making a contribution.

Before the economic downturn, I had failed to hire a financial planner to help us manage our increased funds. I had assumed that our business would continue to grow and neglected to make any contingency plan or recovery plan. And when other members of my management team had wanted to increase our expenses beyond what I was comfortable with, I had sat back in silence. During that time, we had lost sight of our purpose: to be a boutique company with a unique service that produces measurable results unlike those of other consulting firms. In one way or another, I discovered that I had *created* the problem by spending money that should have been saved for a rainy day, I had *promoted* it by participating in decisions that raised our overhead with little return, and I had *allowed* it to happen by not voicing my concerns when I had them.

I thought that admitting my accountability for ownership of the downfall of my business would make me feel even worse and more depressed. But the opposite was true. I was completely energized to see that I had a role in the downfall because that meant I could have a role in changing the situation. I got my power back by taking ownership. When you feel victimized and want to get your power back, take ownership by looking for the opportunity to learn and create a new pathway to your Picture of Success. It is very freeing.

Once you take ownership, problems are no longer running you. You are in command of them, even though they're not yet solved. ●

## Gaining Strength Through Forgiveness

Removing the barriers associated with guilt, resentment, disappointment and discouragement provides the strength necessary to move on in the Accountability Loop. The most indispensable and accountable people make mistakes, but their resilience begins with forgiveness and releasing the negativity of human error that plagues us all.

You will make mistakes, not keep a commitment to your boss and probably even not keep an agreement you made with yourself. It's bound to happen. Accountability is not about being perfect!

If you're making yourself indispensable, you're pushing the envelope on the status quo, taking calculated risks and inventing new pathways to higher levels of excellence. You are bound to make mistakes on that path.

The measure of accountability is based more on how you handle mistakes, mishaps and breakdowns than on getting everything right all the time. The reason forgiveness is the overlooked critical key to accountability is that when you don't forgive, you end up in either the blame game of making a problem someone else's fault or the excuses game of finding all of the reasons you shouldn't be blamed.

The sooner you forgive the humanness involved in any breakdown or inadequacy, the faster you move back to the Accountability Loop. And that is your only way to eventual success. Forgiveness is demonstrated by your actions to remedy the situation, not your words of apology.

The purpose of forgiveness is to let go of the baggage you don't need. What matters is that forgiveness is done for your own benefit. You become more confident when you forgive, knowing that you aren't stuck with your past and soon will be developing your better future. Forgiveness represents taking the high road — the accountable road. ●

### Letting Go: A Zen Tale

A young monk was traveling with an older monk when they came to a river. On the bank was an attractive, finely clothed young woman who could not cross the river without ruining her gown. The young monk heeded his vows to avoid contact with the opposite sex and looked away. But his elder walked directly to the woman and offered his help. He carried her across the muddy river and put her down. After she thanked him, the woman and the monks parted ways.

The young monk was shocked by the elder's behavior, and he silently stewed about it until, hours later, he could not hold his tongue any longer. "How could you do that?" he complained. "It is a violation to even look at a woman and you spoke with her. You carried her!"

The older monk thought about his young companion's criticism and, smiling, he replied, "I put her down on the other side of the river hours ago, but you are still carrying her."

## Self-Examination to Foster Solutions

Self-examination can be one of the most fun stages of accountability. It's an exploration of options without restriction.

Whenever there is a breakdown or problem, the most effective way to begin self-examination is to ask, "How am I creating, promoting or allowing this problem to continue?"

To effectively carry out the accountable step of self-examination to foster solutions, you have to combine analysis, intuition, innovation, creativity and patterning. All of these are what I refer to as critical thinking — the art and skill of looking at a problem or situation from several vantage points.

**Objectivity.** The ability to be unbiased and open to all other ideas about a problem and its solution.

**Global View.** The ability to see the "big picture" surrounding a problem or situation.

**Detail.** The ability to see all the fine and minute aspects of the problem or situation.

**Perspective.** The ability to see a situation from different points of view.

**Symptom-Source Link.** The ability to discern the difference between symptoms and root causes of the problem or situation.

**Integration.** The ability to balance and connect all critical thinking approaches in order to derive the optimal solutions to a problem.

Being indispensable doesn't mean that you are solving every problem by yourself. In fact, that is a good way to become dispensable very quickly. The more indispensable you are, the more you include others in your problem-solving process.

You can avoid a lot of grief or shorten the time you are stuck in frustration, disappointment or discouragement by using self-examination to ask yourself questions that will lead to new perspectives, new approaches, new thinking and, ultimately, a different way to do things to get better results.

It is very exciting to have fresh ideas, new responses and alternative solutions for moving forward on your Picture of Success. *Self-examination to foster solutions* puts you in the driver's seat for learning, making decisions and eventually taking action to make a difference. ●

## Master Learner — Your Default Response

Self-examination is the appetizer, while learning is the main course. Learning is the most important competency for anyone wanting to be indispensable — learning new skills, learning new habits, learning to correct mistakes and learning to improve performance. The day you stop learning is the day you become dispensable.

### Three Easy Steps to Learning

The first step is becoming *aware* of what works and what doesn't work about your role in the problem area that has surfaced. This could be as simple as the awareness that you are getting defensive or anxious, which causes you to communicate in a less effective manner.

The second step to effective learning is *understanding*. Do you understand what is behind your behavior, reaction or attitude?

The third step to learning is *motivation*. What is motivating you to make the change? Maybe you are internally motivated by your desire for a different result or maybe you are motivated by external drivers.

The foundation for any master learner is curiosity. Curiosity allows you to explore and try new things just to find out if you can stumble across a process, method or approach that not only breaks the norm, but also discovers a creative way to achieve better results.

### Teachers and Students

We are all teachers and students. While my clients hire me as an expert in accountability and making yourself indispensable, my view is that I am a student of accountability. It is being a student that has caused others to consider me an expert.

Learning is the outcome of every relationship we are in and every action we take. It begins in the relationship between parents and children. In relationships, we are constantly learning from and teaching each other.

Because we're all teachers and students of one another, it is important that we take responsibility for what we are learning from others in teaching those close to us. We must become aware of the impact we have on others as well as the impact others have on us to determine if adjustments need to be made in our relationships — whether at work or at home. ●

## Take Action to Be Successful

"Even if you are on the right track, you will get run over if you just sit there." — Will Rogers

Nothing you have read on these pages will do you any good if you don't take action on what you have learned.

It doesn't matter if you take a wrong step, but the surest way to fail at reaching your goals is to remain in place. The minute you stop moving, you ruin your chance of reaching your final destination. Remember the definition: Accountability is taking action consistent with your desired outcomes.

Action also builds other people's trust in you. When you take action — even if you don't always fully accomplish your goals — you prove that you're willing to accept challenges and try new things. You become the one who gets things done.

There are six strategies you can use to support efficient action:

**1. Keep Your Eyes on Your Picture of Success.** What is the purpose being served? What accomplishment do you intend the action to achieve?

**2. Do Differently.** This doesn't mean doing the same thing "louder." Doing differently is finding a way — any way — to take a different action than you did last time.

**3. Take Small Steps.** Break your actions down into small steps. Don't try to change everything at once. Go for small changes and let success breed success!

**4. Keep Moving.** Movement is the key to success. It's by moving that you gain the experience to determine what works and what doesn't work.

**5. Use Your Support Network.** Without support, you are putting too much pressure on yourself to keep the ball rolling or to pick up the pieces when something breaks.

**6. Have a Recovery Plan.** When you have a recovery plan, the breakdown results in the implementation of "next steps" rather than the occurrence of the next crisis that causes paralysis, blame and failure. ●

## The Missing Step: Celebrating Success

There are so many reasons for not celebrating success. You don't have time. You have to start the next project. It wasn't a big enough success to warrant celebration — there were even mistakes. While these all seem like valid reasons for skipping the step of celebration, none of these excuses are good ones. In fact, they represent a clear step into the Victim Loop. Remember, the first two steps in the Victim Loop are ignore and deny.

It seems simple to take accountability for success. But nothing could be further from the truth. Taking accountability for success means setting yourself and others up for even greater success. It comes with the responsibility to inspire, to teach, to prepare for future success and to sustain current success. And this doesn't happen through a simple pat on the back.

There are six steps for taking accountability for success:

**1. Recognize Your Success.** Ultimately, recognizing success is simply expressing gratitude — giving thanks for all the supportive effort, guidance, participation and problem-solving that led to achievement.

**2. Own Your Success.** It is important to acknowledge the contributions you made to the success. Regardless of their role and how much they were involved, it is important to acknowledge all of the owners who contributed to success.

**3. Forgive the Mistakes You Made Along the Way.** Achieving success will almost always include imperfections and mistakes. But to reap the benefits of learning it is critical to forgive the mistakes and celebrate the wins, no matter how small or large.

**4. Self-Assess Your Success.** By not conducting an assessment to learn from your success, you miss out on an opportunity not only to celebrate, but to learn. What worked well? What did you do differently that led to your success?

**5. Learn from Your Success.** Learning what specifically worked the best while you were accomplishing your goal, project or assignment means that you will have a greater chance of repeating your success. You will be able to replicate the best of your efforts to accomplish your next goal.

**6. Take Action to Celebrate.** What is the most meaningful celebration you can create for yourself? Your approach should not be determined by your needs alone. It should be based on the needs of the recipients and the reactions you desire from them. ●

## Living an Indispensable Life

By now you have probably learned one of the most valuable lessons for becoming indispensable — nothing can stop you except you! You can be slowed down and challenged, but as long as you are alive and continue making indispensable choices and demonstrating accountability, you will prevail.

Being indispensable is a never-ending pursuit of higher levels of excellence and service to others.

Making yourself indispensable doesn't mean you have "arrived." It only means that you have developed the inner strength and outer ability to take on bigger challenges and help even more people. It is very similar to building muscle. You can use weightlifting to make yourself stronger, but what happens when you stop lifting weights? The muscle atrophies.

One of the best ways to keep up your accountable behaviors and indispensable choices is to help others become indispensable. The greatest leaders are not those who achieve a business result. The greatest leaders are those who help other people become great leaders who get great results. Develop your plan for sharing the keys presented in *Making Yourself Indispensable* so that your team, your organization and your family become more accountable, more trusting, more successful and more fulfilling. Let it begin with you and never let that flame within you burn out. ●

## THE SUMMARY IN BRIEF

Motivation is at the heart of everything you do and everything you want to do but don't. Unfortunately, the ways we typically motivate ourselves don't work. Relying on sheer determination eventually becomes exhausting—it's not sustainable. And even setting goals can backfire—if you're not setting them for the right reasons.

In ***Master Your Motivation***, Susan Fowler says that motivation is energy, and what matters is the quality, not the quantity. Traditional "motivators" such as fear, guilt, or the promise of a reward provide low-quality, short-term energy. Drawing on the latest empirical research, she proves that high-quality, optimal motivation is a skill that you can learn and apply.

Science tells us that satisfying three basic needs—for choice, connection, and competence—is essential to optimal motivation. You need to feel like you've picked your path, not that you're being driven down it. Your goal should be linked to people or a purpose meaningful to you. ***Master Your Motivation*** shows you how to identify and shift the quality of your motivation and finally achieve success.

## IN THIS SUMMARY, YOU WILL LEARN:

- The three scientific truths about motivation and how to make them work for you.
- Three actions that allow you to master motivation as a skill.
- To overcome attitudes, distractions, and hazards that keep you from shifting your outlook.

## Part I: The Truth About Motivation

Three scientific truths are at the heart of mastering your motivation. Using them in combination could transform the way you approach goals and your life. Their discovery represents one of the greatest breakthroughs in motivation science.

### Three Scientific Truths

You have a natural yearning to thrive—thriving is your human nature. We want to contribute, feel fulfilled, and grow and learn every day. Recognizing our nature to thrive leads to a critical question: How do I thrive?

The answer is different than what we've been led to believe. Thriving doesn't depend on money, power, or status. Thriving doesn't come from promotions, perks, or driving for results. Thriving certainly doesn't happen through pressure, tension, or fear—or even willpower or discipline. Thriving requires Choice, Connection, and Competence.

**First scientific truth: You need to create choice**. You have an innate need to perceive you have choices, recognize and feel you have options within boundaries, and have a sense of control over what is happening at any time: "I am the source of my behavior." When you don't create choice, your energy is diminished, and you are less likely to achieve your goals.

**Second scientific truth: You need to create connection**. You have an innate need to feel a sense of belonging and genuine connection to others without concerns about ulterior motives, to pursue goals aligned to meaningful values and a noble purpose, and to contribute to something greater than yourself. When you don't create connection, your energy is compromised, and even if you achieve your goals, you are less likely to find the experience meaningful or worth repeating.

**Third scientific truth: You need to create competence**. You have an innate need to feel effective at managing everyday situations, to demonstrate skill over time, and to feel a sense of growth and learning every day. When you don't create competence, your energy is blocked, and your frustration at not being able to meet challenges or make progress puts achieving long-term goals at risk.

### Motivation Isn't What You Think

Motivation is the energy to act. The quality of your energy determines the quality of your motivation. Eating a candy bar produces energy—but eating a handful of almonds generates longer-lasting and more efficient energy. When your physical stamina dips, if you grab a candy bar, soft drink, or french fries, your blood sugar shoots up and so does your energy. Then what happens? You crash. Your blood sugar drops below what it was before, so you need more sugar, caffeine, or carbs.

A similar phenomenon occurs with motivation—how you fuel your psychic energy produces either a junk food motivational rush or a healthier alternative.

When it comes to motivation, the quality of your energy is what matters. Mastering your motivation requires letting go of the outdated notion that motivation depends on how much motivation you have. Creating choice, connection, and competence generates high-quality energy, which leads to optimal motivation. Optimal motivation delivers productivity and results but also increased creativity and innovation, an enhanced sense of well-being, and higher levels of work passion that sustain your high performance and help you thrive.

On the other hand, eroding choice, connection, and competence leads to suboptimal motivation. Traditional ways of motivating ourselves—from relying on external motivators such as winning rewards, acquiring power, or achieving status, to succumbing to negative forces such as pressure, fear, or shame—tend to result in suboptimal motivation. Appreciating the difference between optimal motivation and suboptimal motivation has real-world implications.

### Create Choice

You have an innate need for choice—to perceive that you are the one controlling your actions and the ongoing source of your behavior, even when influenced by outside forces. To master your motivation, create choice.

To create choice, you need to perceive you have choices; recognize and feel you have options within boundaries; and feel that you are in control of your actions.

When it comes to motivation, choice is different than freedom. In ***Man's Search for Meaning***, Viktor Frankl describes living through a World War II concentration camp. Frankl realized that even though he had no freedom as we would define freedom, his captors could not take away his choice. He chose to see the beauty of a sunrise, accept the punishment promised as he came to the aid of a fellow prisoner, and share a piece of his bread with another starving prisoner.

They couldn't rob him of his autonomy—his perception of freedom. He understood that you might not be able to

Because we are social animals, connection is our deepest and most profound need, yet it's probably the least fulfilled in today's modern world.

control your situation, but you can choose your thoughts, reactions, and perspective.

Ask yourself targeted questions to create choice. When it comes to my goal or situation,

- What choices have I made? If I made choices I'm glad about, why am I glad? If I made choices I wish I hadn't made, why do I wish I hadn't made them?
- What different choices could I make going forward? How do I feel about those choices? If I perceive I don't have any choices, why is that? Is it true or is it just my perception that it's true?
- Do I feel the goal or situation was imposed on me? If I feel imposed on by the goal or situation, where is the pressure (or fear, guilt, shame) coming from? Why do I think that is? Could my behavior and actions positively impact the outcome? If I feel restricted, powerless, or controlled by current boundaries, how could I gain a sense of control over the situation? Why is that important?

## Create Connection

You have an innate need for connection—to care about and feel cared about by others, find meaning in everyday moments, and experience a sense of unity as you promote the welfare of the whole. To master your motivation, create connection.

Because we are social animals, connection is our deepest and most profound need, yet it's probably the least fulfilled in today's modern world. Connection means authentically caring about others and feeling cared for by them.

To create connection, you need to feel a sense of belonging and genuine connection to others without concerns about ulterior motives; align goals and actions to meaningful values and a noble purpose; and contribute to something greater than yourself.

Ask yourself targeted questions to create connection. When it comes to my goal or situation,

- Can it give me a greater sense of belonging or genuine connection to others involved? If I feel a greater sense of belonging, why? Could my active involvement contribute to the welfare of others? Could this goal or situation lead to a bigger purpose? Why might that be important?
- Is it meaningful to me? If I find it meaningful, why? Are important values aligned to it? When I think about the purpose of my role, do I see any connection between this goal or situation and my purpose? Why? What is the impact if I don't get involved?
- Do I feel what is being asked of me is fair and just? If I feel it is fair and just, why? If I feel it is not fair and just, why? Is it worth standing up for given my values or purpose? Why?

## Create Competence

You have an innate need for competence—to experience progress, gain mastery, and feel confident and resilient as you meet the challenges life can throw at you. Competence reflects your need to grow and learn each day.

To master your motivation, create competence. To create competence, you need to feel effective at managing everyday situations; demonstrate skill over time; and feel a sense of growth and learning.

Competence doesn't necessarily equate to mastery. It depends on your goal. Maybe you haven't mastered the goal of schussing down black diamond ski runs, but you can create competence if you are effectively managing the bunny slope and focusing on what you learn so you see progress each time you ski down the hill.

You can create competence by asking yourself key questions. When it comes to my goal or situation,

- What skills or experience do I have that might prove helpful? What core competencies can I draw from to manage the challenges I face? Why are drawing on my skills, experience, and core competencies important?
- What new skills could I develop? What progress have I made in my skill development? Why is developing

skills and making progress important?

- What insights have I gained—or might I gain—that could help me moving forward? Why is moving forward important to me? Have I made mistakes? Why is learning from my mistakes meaningful? What have I learned that will help in the future?

## Part II: Motivation Is a Skill

The skill of motivation includes three actions to generate and maintain the optimal motivation you need for achieving your goals: identify your outlook, shift your outlook, and reflect on your outlook.

Before you delve into the skill of motivation, select a goal to work on. Pick a persistent problem where you need a breakthrough or a routine task that is affecting the quality of your work experience (such as expense reports). Select a goal or situation where you feel blocked, are procrastinating, or aren't progressing as you wish.

### Identify Your Outlook

No matter what journey you're on, you need to know where you are before you can decide the best way to get where you're going. That's why the first of three actions to master your motivation is to identify the type of motivation you have right now. You are always motivated. The question is, What type of motivation do you have?

Motivation science has verified six different ways of being motivated, called motivational outlooks. Each outlook has distinct characteristics that either create or erode choice, connection, and competence.

Three **suboptimal motivation outlooks** include the following:

**Disinterested motivational outlook.** When it comes to achieving my goal or resolving my situation, the reason for my motivation is "I don't care," "I am too overwhelmed," or "I don't have the energy to manage what's required."

**External motivational outlook.** When it comes to achieving my goal or resolving my situation, the reason for my motivation is "I have been promised a tangible reward or incentive," "I expect that it will bring me power, an enhanced image, or status," or "I hope that I will receive people's love or respect."

**Imposed motivational outlook.** When it comes to achieving my goal or resolving my situation, the reason for my motivation is "I want to avoid damaging a relationship with someone who has expectations of me," "I have feelings of guilt, shame, or disappointment in myself," or "I feel pressure. I have to do it. (I fear what might happen if I don't.)"

Three **optimal motivational outlooks** include the following:

**Aligned motivational outlook**. When it comes to achieving my goal or resolving my situation, the reason for my motivation is "I am able to demonstrate important values," "I derive a sense of meaning," or "I've made a conscious and deliberate choice to do the right thing."

**Integrated motivational outlook**. When it comes to achieving my goal or resolving my situation, the reason for my motivation is "I feel a deep sense of purpose," "I feel I'm being the person I want to be," "I'm tapping into a conscious but almost automatic way of being."

**Inherent motivational outlook**. When it comes to achieving my goal or resolving my situation, the reason for my motivation is "I'm having pure fun and enjoyment," "I have an unexplainable interest in and attraction to it," "I have always gravitated to it naturally."

Three of the outlooks, the disinterested, external, and imposed outlooks, reflect motivation lacking choice, connection, and competence (low-quality psychological needs). When a suboptimal outlook describes the type of motivation you have for your goal, you are less likely to achieve your goal. But even if you did achieve it, you are less likely to experience positive energy, vitality, or well-being.

On the other end of the spectrum, the aligned, integrated, and inherent motivational outlooks reflect motivation satisfying choice, connection, and competence (high-quality psychological needs). When an optimal outlook describes the type of motivation you have for your goal, you are more likely to achieve it. But even if you don't achieve your goal, you are more likely to experience positive energy, vitality, and well-being.

### Shift Your Outlook

Shifting from suboptimal to optimal motivation—the second action in the skill of motivation—is inspiring! Shift happens when you proactively create choice, connection, and competence. When you create choice, connection, and competence, you also create courage—the courage to take action for the right reasons.

Giving up a bad habit may be as simple as loving something you value more than you love the bad habit. You cannot align to values if you don't know what your values are—which raises the question, how do you know what you value?

To begin exploring your values, try this experiment: Make a list of five to 10 of your general life values. For example, family time, health and well-being, financial security, compassion for others. Now, evaluate your stated values against two questions:

- How do you spend your money?
- How do you spend your time?

These two questions reveal the veracity of your stated values—they expose whether your values are fully functioning in your life or you talk a good game.

> Reflecting on your outlook heightens your awareness of just how good optimal motivation feels!

Values are personal choices. Begin to explore the beliefs and values you currently hold. Proactively develop values you act on and cherish by making conscious choices about how you want to live your life. Then keep those values in mind as you shift your motivation to give up a bad habit or embrace a new habit for something—or someone—more important. Aligning goals with values is a powerful way to generate positive energy and experience optimal motivation.

The word "credo" is Latin for "I believe." A personal credo is a statement of your core beliefs, or guiding principles, and your intentions for integrating them into your everyday life. To create an optimally motivating credo to help you shift when you feel overwhelmed by a situation, external distractions, or pressure, include actions that will help create choice, connection, and competence. For example, consider statements such as these:

- "I create choice: I choose how I wake up and live my life every day. My choices reflect my values and who I truly am."
- "I create connection: What I do to others, I do to myself. My work is meaningful and contributes to a greater good."
- "I create competence: I consciously improve my skills because doing what I do well is one of the ways I contribute to others. By learning something new each day, I spark wisdom, progress, and change."

Perhaps developing your own credo can help you master your motivation and generate the positive energy to achieve your goals and live your dreams.

### Reflect On Your Outlook

Creating choice, connection, and competence increases your sense of well-being. Reflecting on your outlook heightens your awareness of just how good optimal motivation feels!

Mindfully feeling good makes you want to continue feeling good. You realize you have created choice—and can initiate more; you have created connection—and can develop more; and you have created competence—and can build more.

But reflecting, the third action in the skill of motivation, also proves helpful if you haven't shifted or you discover you have a suboptimal outlook. Months after attending a motivation workshop, Josie, one of the participants, said, "I was sitting at my desk when I noticed my stomach was tied in knots. I was feeling pressure and almost sick."

"I reflected on my motivation and identified I had an imposed motivational outlook for a meeting scheduled later that day. As I peeled away the layers to understand where the pressure was coming from, I realized it was a co-worker who would be in the meeting. She pushes all my buttons. I was anxious and worried about having to deal with her."

"I decided to see if I could shift my motivation. I considered my choices. I had choice—I could go or not go to the meeting. I'd chosen to go. I asked myself how I could create connection, and realized the meeting was aligned to goals that were important to me, and I could also live one of my values—being a team player. And then, like a time bomb going off when I least expected it, I got in touch with how it would feel if I could handle my co-worker with grace instead of being scared of her! It may sound corny, but I walked into the meeting feeling determined, uplifted, and purposeful."

Sometimes talking to yourself isn't crazy. Asking yourself questions and mindfully answering them is a form of reflection. Ask yourself, when it comes to my goal or situation,

- Why am I making the choices I am making? Why am I not making certain choices?
- Why is this goal or situation meaningful to me? Why isn't this goal or situation meaningful? Why do I hesitate to connect with the people involved?
- Why is gaining competence important to me? Why isn't learning from this goal valuable to me?

Research by Richard M. Ryan and colleagues shows that answering the "why" question reveals "whether one perceives the goal-directed behavior emanates from one's self or, alternatively, is brought about by forces or pressures external to the self." The questions to create choice, connection, and competence probe your whys and prompt something even more profound in the process: mindfulness.

Mindfulness is being aware of and attuned to what is happening in the present moment, free from judgment or impulsive reaction. The point of mindfulness is to free us from feelings, emotions, experiences, bias, prejudice, and preconceived notions that prevent new ways of perceiving our world. To master your motivation, reflect by being mindful of feelings, reasons behind your motivation, and new perspectives.

Through reflection, you realize that you can choose the quality of your experience anytime and anywhere. With practice, mastering your motivation shifts not only the quality of your motivational outlook but the quality of your life.

## Part III: What's Stopping You?

As human beings, we want to exhibit the positive tendencies of our human nature, and we yearn for optimal motivation. What's stopping us from creating what we naturally long to experience—choice, connection, and competence? Let's explore the answers.

### I Can't Shift

Gina, a district manager, had a good excuse for not shifting. In fact, she refused to shift. She was being held accountable to implement a new approach to selling that she vehemently disagreed with. After years of providing award-winning service to her customers, she was being asked to focus on upselling her customers instead of meeting their needs.

Worse, she was expected to hold her team accountable for following the new policy. To say she had an imposed motivational outlook is an understatement.

It became clear: She was feeding on self-righteous indignation—that red-hot energy that fires you up when you know you are right and they are wrong. The only way to sustain this insidious form of junk food motivation is to continue fueling the flames of negative energy through blaming, name-calling, and comparing your intelligence or status favorably to theirs. Gina justified her suboptimal motivation by recounting examples of how moving from values-based selling to a profit motive was already damaging long-term client relationships.

But to Gina's credit, when she reflected on how sad and deflated she felt, she realized she wasn't saying "I can't shift"; she was admitting "I don't want to shift." She acknowledged that she had chosen not to shift. Her honesty provided the openness to ask herself, "Why haven't I shifted?" and entertain the questions, "What if I did shift? Do I have any values that could support a shift?"

Reflecting on these questions gave rise to a mindful moment and to intriguing possibilities. What if she was wrong? What if she could learn something?

With her newfound awareness, Gina announced to everyone in the class—including her sales team, "I just shifted. I'll either learn that I am wrong and they are right. Or I'll learn from experience what doesn't work and be a more effective advocate against the approach." She decided to embrace the new approach, full steam ahead. Her conclusion: "Either way, we all win."

Gina's experience of reflecting on her reasons for not shifting recalls Byron Katie's brilliant process of inquiry to question the thoughts at the root of suffering, called "The Work." Katie asks you to answer four powerful questions when you have a negative judgment or conflict about someone or something:

- Is it true?
- Can you absolutely know that it's true?
- How do you react, what happens, when you believe that thought?
- Who would you be without the thought?

After you answer the four questions, Katie asks you to turn your negative judgment around—to find one or more opposites—and consider whether that turned-around thought or those thoughts could be true.

Without her realizing it, Gina's reflection had revealed answers to Katie's questions: Is it true that this new sales

Fatal distractions entice you, lure you in, and cast you into suboptimal motivation day in and day out.

approach is bad? How do you know it's true? Being open to the possibilities, Gina recognized the benefit of exploring the idea further. She'd either gain data to support the truth of her assertions or learn that she was wrong and fulfill her value for learning. Left with only constructive reasons for shifting, Gina could let go of her negative energy and focus on moving forward with positive energy, vitality, and well-being.

## Beware Fatal Distractions

Fatal distractions entice you, lure you in, and cast you into suboptimal motivation day in and day out. If you gravitate toward incentives, bonuses, prizes, rankings, competition, and recognition to feed your motivation, you have surrendered to the distraction of external motivation.

To arm yourself against a fatal distraction, you need to recognize one when you see it. Three of the distractions are so common—and so commonly projected as good things—that you may be surprised at how they erode your choice, connection, and competence without you realizing it. Beware materialism, the search for happiness, and busyness.

**Materialism**. Money is one of the most sinister fatal distractions because we all need money (or its equivalent) to survive. But there is a difference between needing money and being motivated by money. When money is your driving force, you do not control it; you are controlled by it—robbing you of choice. Money distracts you from high-quality reasons to do what you do—undermining connection. Money becomes the end goal instead of learning and growth—diminishing opportunities for competence.

Money does not buy happiness or the things that make you happy. In fact, the more materialistic your core values are, the more the quality of your life is diminished. A lower quality of life is reflected in a variety of ways, including low energy, anxiety, substance abuse, negative emotions, depression, and a likelihood to engage in high-risk behaviors.

With the insight gained through recent motivation research and the fascinating field of social neuroscience showing how our need to connect with others is more basic than our need for food and shelter, you can master your motivation and shift your focus from fatal distractions such as money and materialism to the more empowering values of acceptance, compassion, emotional intimacy, caring for the welfare of others, and contributing to the world around you.

**The search for happiness**. Consider what the word happiness really signifies. It derives from hap (n.) meaning "chance, fortune." Happy means "'lucky, favored by fortune, … prosperous;' of events, 'turning out well.'" Happiness depends on what happens. By its nature, something "making you happy" is antithetical to your psychological need for choice—the perception that you are the source of your own actions.

Instead of searching for happiness, an option is to focus on mastering your motivation.

**Busyness**. Maybe you wear busyness as a badge of honor: "I'm so busy doing important things that I don't have time for anything else!" If that sounds familiar, you might consider how it is that many of the most successful people in the world find time to refresh their spirit and connect with people they love. You have the same 24 hours a day as everyone else on the planet.

What fuels your inability to disconnect from work is important to understand. If your passion is fueled by fatal distractions—power, status, image, money—your passion may prove obsessive, not harmonious. You don't control obsessive passion—it controls you. If you are caught up in busyness for the wrong reasons, your busyness is a fatal distraction that erodes choice, connection, and competence.

## Work Hazards

Traditional techniques for motivating people at work have proven ineffective, faulty, or downright wrong. Yet, well-intentioned managers still drive for results, promote suboptimal motivation, and make creating choice, connection, and competence at work a real challenge.

Don't cast all the blame on your manager for resorting to carrots or sticks, praise or pressure, and promises or threats. Have you ever seen the competencies your manager is being held accountable for achieving? "Drive for results,

exceed goals successfully, constantly and consistently be one of the top performers, be very bottom-line oriented, steadfastly push self and others for results, assess staff members' hot buttons and use them to get the best out of the staff"—these are real expectations from real performance plans.

The real job falls to you to move beyond the carrots and sticks that can beat you up. Since motivation is at the heart of everything you do or don't do, why depend on others to do what you can do for yourself? You will discover that proactively creating choice, connection, and competence at work is worth the effort. Three ways to begin are to flip feedback, deepen connection, and advocate for justice.

**Flip the feedback**. Getting pure feedback on your performance is essential to your development and ultimate success at anything you do in life. Most managers don't like giving feedback, so maybe it's time you flipped the feedback. Don't wait for it; ask for it. Requesting feedback delivers the information you need when you need it but also results in less defensiveness—meaning you are more likely to hear what you need to hear and act on it.

**Deepen connection**. Your greatest opportunity to master your motivation at work is in creating connection. Even if you create choice and competence, they are incomplete without the meaning, sense of purpose, or fulfillment of connection. You create connection when you find meaning in whatever you are doing—especially at work.

**Advocate for justice**. If you work for an organization that you think is unfair, you have a choice. You can leave. You can continue feeling disconnected and joyless but not leave (or as it's often described, you can quit and stay—rationalizing that you need the money).

Or you can choose to stay and stand up for justice. You can work to open closed-door policies where information is used as a form of control. You can campaign against wage discrimination, favoritism, and implicit bias.

When you advocate for the principles of justice and fairness, you create deeper connection for yourself and with others.

A common thread of every great spiritual practice throughout history is the belief that human beings can raise their conscious awareness and live life at a higher level. The belief that change is possible entices you to greet a new day. Hope is a belief that things—and you—can change for the better.

We are beings with self-determination and the ability to reflect and mindfully choose who we are, what we believe, and how we behave. The skill to master your motivation may be your greatest opportunity to evolve, grow in wisdom, and be the light the world so desperately needs.

## Master of Change

**How to Excel When Everything Is Changing – Including You**

*By Brad Stulberg*

Brad Stulberg researches, writes, and coaches on health, well-being, and sustainable excellence. He is the bestselling author of The Practice of Groundedness and co-author of Peak Performance. Stulberg regularly contributes to the New York Times, and his work has been featured in the Wall Street Journal, Washington Post, Los Angeles Times, The New Yorker, Sports Illustrated, Outside Magazine, Forbes, and other outlets. He also serves as the co-host of The Growth Equation podcast and is on faculty at the University of Michigan's Graduate School of Public Health. In his coaching practice, he works with executives, entrepreneurs, physicians, and athletes on their mental skills and overall well-being.

*A Book Review by Soundview*

# Making Meaning and Moving Forward

Change is an inevitable part of life. Everybody experiences it constantly, and according to Brad Stulberg, the trick to living purposefully and productively with change is to accept it and to learn to adapt according to it. At the outset of his book, ***Master of Change: How to Excel When Everything Is Changing – Including You***, Stulberg discusses the different attitudes towards change that homeostasis and allostasis present us with. With homeostasis, the belief is that when an organism is presented with change, it will do all that it can to return to its original state. In life, however, Stulberg does not believe this is always either possible or practical. Instead, he relies on the notion of allostasis. Allostasis states that when presented with change, an organism will confront the challenge and change because of it, arriving at a new normal. He describes this pattern as being one of "order, disorder, reorder" rather than the homeostatic process of "order, disorder, order". Stulberg attempts to help his reader proceed through this process of allostasis in a manner that allows them to flourish despite the myriad changes that life confronts every person with.

In his book, Stulberg succeeds in combining research from numerous fields including psychology, religion, and philosophy, and he has a desire to share only those insights that are relevant across different studies and different fields. He does this because he believes individual studies can lead people astray if they prove to be inaccurate. As such, he trusts most what is replicated and believed to be true in numerous different areas. Because of this, his book is littered with quotes, propositions, and theories from everything from Zen and the Art of Motorcycle Maintenance to Tao Te Ching [tow-tay-ching].

Stulberg begins by discussing the importance of non-dual thinking. By this, he means "that truth is often found in paradox: not this or that, but this and that". He extols the virtues of rugged flexibility. He believes that people need to allow for changes and bumps in the road, but they must also be tough. He believes that the "result is a gritty endurance, an anti-fragility that not only withstands change, but thrives in its midst". This allows people the opportunity to change and adapt while still maintaining a "strong core identity".

Stulberg notes that one of the biggest problems people face

with change is accepting it. All too often, he claims, people make situations worse when they refuse to acknowledge change that is in their midst. If a person is able to accept change, Stulberg believes that he or she can "enter into conversation with change". Another critical factor in accepting change is something Stulberg calls the inescapability trigger. He proposes that people are much more likely to engage with change if they believe it is immutable. In order to get to the point of accepting change, a person must not only think and talk about the change and make plans concerning it but they must actually fully accept it.

In his second chapter, Stulberg moves on to the concept of expectations. He claims that expectations are a large part of how a person experiences the world and are a key component to happiness. As he writes, "Swaths of psychological research shows that our happiness in any given moment is a function of our reality minus our expectations". In other words, a person is happy when their situation is better than what they expected it to be, and they are unhappy or disappointed when reality does not live up to those expectations.

Stulberg then goes on to discuss Victor Frankl and tragic optimism. Concentration Camp survivor, psychologist, and author Frankl believes there are three types of tragedy people experience: suffering, guilt, and the realization that everything will pass away. Stulberg posits that because of the inevitability of suffering and negative change, it is irresponsible and impossible to expect ourselves to be happy at all times. Stulberg believes that tragic optimism is an antidote to this. "Tragic optimism," according to Stulberg, "is the ability to maintain hope and find meaning in life despite its inescapable pain, loss and suffering". This requires maintaining a positive attitude despite the setbacks that life presents. With tragic optimism, a person need not rely on denial, despair, and self-judgment because that person will accept that these are a normal part of life. This, according to Stulberg, is preferable to either toxic positivity or pessimism. Maintaining tragic optimism allows a person to see a situation clearly and then adapt to it as best they can.

Hope is a necessary component to maintaining peace in the midst of change. What can derail a person when faced with unwanted change is resistance. Resistance, Stulberg maintains, is what leads to greater suffering. He believes that resistance is multiplicative so that suffering equals pain times the amount of resistance a person holds against it. As an example of this, he describes the Mayo Clinic's Pain and Rehabilitation Center. The Center's aim is "to eliminate the overwhelming desire of patients to eliminate their pain". This allows patients to engage in more activities once they stop trying to eliminate their pain at all costs. The clinic is effective because it reduces resistance while improving expectations at the same time.

Stulberg moves on to discuss a person's sense of self, and he maintains that this sense of self must remain fluid if a person is to thrive. He explains that the closer a person's sense of self is tied to one area or pursuit, the greater difficulties they face in life. Things change, and having such a narrow, rigid view of self makes those changes much more difficult to endure. This does not mean that it is wrong to care deeply; it just means that a person's identity is most helpful when it is not rigidly tied to one pursuit.

He discusses complexity, differentiation, and integration when it comes to self-identity. He explains that in regards to evolution, the complex are more apt to survive. A species must have differentiation; this means that it must have numerous distinct parts. These parts also, however, must be integrated and work in unison with each other. In order for a person to thrive during times of change, this complexity will benefit them.

Along with these concepts, he discusses interdependence and independence and a belief that a person must nurture a sense of both. This requires a person to "be both singular and stable on the one hand and porous and constantly changing on the other". Stulberg summarizes psychologist Jane Loevinger by saying that a person needs to understand that an ego is not static over time; rather, it changes. A person must be cognizant of this and understand when their ego or self view become detrimental to their sense of well-being. Self-identity only becomes harmful when it becomes rigidly attached to one circumstance or characteristic. A person has a somewhat stable ego that is acting in the present moment. They also have a sense of the ultimate self which is connected to and influenced by everything around it. A person must keep in mind their ultimate self which is constantly changing and is not attached to any particular circumstance. This will help shield people from the distress that arises because of inevitable failures.

Stulberg moves on next to discuss boundaries. He analogizes boundaries to the banks of a river. They are what keep the water flowing in a steady and contained direction. The water itself, however, is fluid. People are fluid. They are constantly changing. They need boundaries, however, to keep them going where it is they want to go. Stulberg believes that while much of life is out of control, a person can control their own boundaries. These values are particularly important during periods of change and upheaval. He advises people to consult their core values when they are unsure of how to proceed in difficult circumstances. In general, these values provide stability when life starts to seem out of control. Stulberg writes, "But if you can know and trust in your core values, essentially knowing and trusting in the deepest parts of yourself, then you can courageously walk forward into the unknown". He recommends people develop a list of 3-5 core values, define those values, and then devise practical ways to implement them in everyday life. He believes in rugged flexibility, meaning that people and organizations must be willing and able to change in changing circumstances, but they also must strictly or rigidly adhere to their values.

Throughout his fifth chapter, Stulberg maintains that it is vital for a person to learn to respond rather than to react to situations. He discusses target fixation. This occurs in many different arenas, but one example he gives is when a person focuses closely on the car in front of them. They focus so closely, in fact, that they hit it inadvertently. He believes that this applies to all areas of life. In order to overcome this, he advocates for the expansion of a person's view. To expand one's view, he tells his reader

> . . . people need the ability to pause and consider responses rather than engage in knee-jerk reactions."

that when they find themselves focusing too heavily on anything, they should zoom their focus out and pay attention to all that is happening around them.

He then goes on to explain the neural circuitry referred to as the RAGE network. This pathway is activated when a person faces a threat to their safety such as a lion on the horizon. Evolution has equipped people with a fight or flight response to help them get out of such situations. This is a reaction, however, and since people are infrequently in this type of danger these days, it can prove detrimental for everyday 21st century living. Instead, people need the ability to pause and consider responses rather than engage in knee-jerk reactions. In order to move from this RAGE response to a more beneficial SEEKING response, he advocates pausing and naming emotions, processing and removing oneself temporarily from the situation, planning what to do based upon this more removed perspective, and proceeding to take small steps.

The key component in responding rather than reacting is a moment of pause long enough to allow a person to consider the most beneficial action. The more a person is able to pause and respond, acting on the SEEKING pathway, the more effectively they will be able to respond to situations. Because feelings are so important for determining behavior. This SEEKING pathway is important. This is because taking the time to pause and consider elicits a dopamine response which is pleasurable. This pleasurable effect will entice a person to respond in a similar way the next time they find themselves in a threatening or anxiety provoking situation. One way a person can activate this seeking pathway is through behavior modification.

Stulberg moves on to discuss activation energy. This can be helpful when a person is struggling, and feelings of despair or apathy are making it hard to do anything. This term borrowed from psychology explains that one small act can create a dopamine reaction which can spur on future acts. He maintains that sometimes when a person feels very bad, dwelling on those feelings can make it worse. What can help is taking one small action which may lead to other small actions. Stulberg writes, "productive actions are self reinforcing". If unsure of how to start down this path, Stulberg goes back to core values and advocates letting them dictate which action to take.

Finally, Stulberg discusses serious tragedies that occur in a person's life. These are situations that are not easy to overcome and that are hard to make sense out of. At the most extreme example, he refers to the loss of loved ones, but other situations such as a layoff or a health crisis can also be detrimental to a person's sense of self. In these situations, Stulberg strongly recommends against trying to force meaning onto suffering. He believes that over time people will come to find growth arising out of these difficult times, but that trying to force meaning on intense suffering when it is fresh can make people feel like failures because they will not be able to view suffering from a distanced perspective. Sometimes, he maintains, people have to allow themselves to sit with and accept their suffering. He believes that one of the most important things a person can hold on to during these difficult times is to remember that "What feels like forever now will not in the future".

In the end, Stulberg maintains, suffering and trauma do result in growth and resiliency. How long that takes often depends on the severity of the trauma. He maintains the importance of asking for help when needed. This is an important factor in resilience. Voluntary simplicity where a person focuses on what matters most is also helpful during the most stressful or difficult circumstances.

Stulberg finishes his book by answering five questions and giving ten tools to help people accept and embrace change. He also provides his reader with a list of core values and advice on how to implement these values most optimally. Throughout his book, Stulberg maintains committed to understanding the difficulties of change while helping his reader learn to adjust and adapt to inevitable life changes. He understands that some changes are so severe that they take time to adjust to and that surrender to them is sometimes the best step in working through to the other side. The one thing constant in life is change, both small and large and both good and bad, and the tools Stulberg provides can help his readers come to a better understanding of how to approach this reality in the most effective and beneficial manner.

## THE SUMMARY IN BRIEF

Mastering Business Negotiation *is a handy resource for any leader or manager who needs practical strategies and ideas when conducting business negotiations. The authors — one a professor of Management and Human Resources at Ohio State University, the other a principal of a firm that specializes in training for leadership, conflict resolution and business strategy — base their conclusions on solid research and their many years of experience in the field. With this book, they have reduced the huge volume of available information into an easily accessible resource for busy executives who need to prepare for everyday negotiations as well as for more complicated situations.*

*The authors contend that the basic skills and techniques of what they call "the master negotiator" are essential for resolving conflicts, handling difficult conversations, protecting oneself against a competitor and managing good business deals. Their techniques and suggestions cover negotiating from a variety of perspectives and parameters, from simple to complex. Many are based on the importance of the relationship between the negotiating parties and the respective levels of importance they place on the outcome. Specific tactics used during negotiations are detailed, such as collaboration, compromise, how and when to divulge true intentions, how to spot and use deceptions, and others. Invaluable for business executives, the book is also useful for more informal day-to-day negotiations on the job such as selling, buying and team building.*

*In this summary you will learn how to:*

- ✓ ***Understand the game so you can better control what happens.***
- ✓ ***Predict the sequence of negotiation activities.***
- ✓ ***Identify the strategies and tactics of other players in the game.***
- ✓ ***Apply the rules of the game that will lead to success.***

# MASTERING BUSINESS NEGOTIATION

**by Roy J. Lewicki and Alexander Hiam**

## — THE *COMPLETE* SUMMARY

## Negotiating Effectively

You may wonder if negotiation is different from bargaining or haggling or from broader processes of conflict management and conflict resolution. The answer is that these are, at best, different flavors of the same thing.

*Negotiation* is the proper term to describe this process, while bargaining and haggling are often used to describe the more competitive dynamics of the process. *Conflict management* and *conflict resolution* encompass a broader set of processes that may include negotiation and the involvement of third parties such as mediators and arbitrators. But the basic skills and techniques of the master negotiator outlined in this book are the key to resolving conflicts, handling difficult conversations, protecting oneself against a competitive adversary and managing good business deals.

They also help immensely with a variety of more informal day-to-day negotiations on the job: selling, buying, team building, product development, project management, hiring, correcting poor performance and much more.

Negotiation is the master practice that allows you to move in and out of business situations with confidence and success. ■

## The Negotiation Imperative

Negotiating is a bit like breathing. You don't have to do it, but the alternatives aren't very attractive. Negotiation is the daily give-and-take of social interactions. Once your eyes and ears are tuned to the language of negotiation, you realize that everybody negotiates constantly — all day long.

Is negotiation as prevalent in business as in life in general? What's true at home and among friends is even truer at work. We work in ever more interdependent ways. Nobody can accomplish anything alone, which means we often help each other at work — and just as often get in each other's way or run into conflicts and problems.

That's why the business that negotiates better generally grows and prospers faster than others. And that's why individuals who master negotiations are rated high in emotional intelligence by their peers, tend to be promoted more rapidly, are more productive and emerge as natural leaders. Whether it's sales, customer service, engineering, management or any other area of business, negotiation skills play a surprisingly large role in career success.

This, then, is the negotiation imperative: *Recognize the many times each day you have to negotiate and influence others. In doing so, treat these as opportunities to advance your personal goals, help your business prosper, and build stronger supportive relationships in a widening business and professional network.* ■

**For additional information on the negotiation imperative, go to: http://my.summary.com**

## The Flexibility of the Master Negotiator

Style flexibility is one of the hallmarks of the master negotiator. To master every negotiating situation and resolve varied conflicts, you need to adjust your approach to each. This is a little like dressing for the correct sport before you go onto the playing field. Don't

***(continued on page 3)***

**The authors:** Roy J. Lewicki is the Dean's Distinguished Teaching Professor at the Max M. Fisher College of Business, The Ohio State University, where he teaches courses in negotiation, leadership and management. He is the author of more than 30 books, including *Negotiation, Negotiation: Readings, Exercises and Cases* and *Essentials of Negotiation*.

Alexander Hiam is a principal of Insights for Training and Development, a firm that provides leadership, conflict-management and negotiation programs and materials to managers in business and government.

This is the third book that Lewicki and Hiam have co-authored; the others are *Think Before You Speak* and *The Fast Forward MBA in Negotiation and Deal Making*.

## The Flexibility of the Master Negotiator

*(continued from page 2)*

show up in shin guards and cleats for a tennis tournament. But do make sure you know how to play both tennis and soccer well enough that you can win either, depending on which you find yourself playing!

Athletes may not be able to switch games easily and still be the best at both, but master negotiators should be able to. That's because we're playing the bigger negotiating game, and it sometimes requires us to suit up for one type of negotiation and other times another. Getting ready for negotiation is more like staying in shape to play either tennis or soccer; although there may be some difference in the unique skills, both require a strong degree of basic athletic conditioning.

### *Choosing a Negotiating Strategy*

By considering the relative importance of both outcome and relationship, you are able to adapt your game to each negotiating situation. Untrained negotiators, and those who have taken a simplistic course in competitive tactics, generally use the same approach in every conflict situation. Yet each deal is different and each opponent may be different; you will get better results by flexing your style to suit the situation.

To choose the right strategy, you need to address these two important factors: the outcome and the relationship. When considering the outcome, you need to ask yourself what you will win or lose on the substantive issues in negotiation. When considering the relationship, you must ask how will the negotiation process, and the specific outcome settlement, affect your relations with the other player now and in the future?

The following strategies are based on varying degrees of concern for the relationship and for the outcome:

- **Avoiding (lose-lose)** — The priorities for both the relationship and the outcome are low. Neither aspect is important enough for you to pursue the conflict further.
- **Accommodating (lose to win)** — Importance of relationship is high, importance of outcome is low.
- **Competing (win-lose)** — Importance of outcome is high, importance of relationship is low.
- **Collaborating (win-win)** — Importance of outcome and relationship is high.
- **Compromising (split the difference)** — A combination approach used in a variety of situations. ■

# Getting Ready to Negotiate

It can be helpful to put the information gained thus far into a structured analytical framework. The following method is recommended for complex or high-impact negotiations. Allow plenty of time for this process. As you go through the analysis steps, be sure you thoroughly understand your strengths and weaknesses at each stage. This will help you make convincing arguments for yourself or against the other party.

**Step 1: Define the issues and goals.** Analyze the conflict situation from your own point of view. Look at the issues and decide which are major issues for you and which are minor.

**Step 2: Assemble the issues, and define the agenda.** List all issues in the order of their importance. This should be relatively easy because of the work you did on prioritizing goals.

**Step 3: Analyze the other party.** Although it may be difficult to obtain information on the other party, researching the other side is vital to planning a good strategy.

**Step 4: Define the underlying interests.** To define the interests and needs that underlie the issues you specified, remember the following "why" questions: Why do you want this item or goal? Why is it important to you?

**Step 5: Consult with others.** Unless this is a simple negotiation, other people will probably be involved. For example, if you are negotiating a bank loan, the loan officer probably has to clear it with higher-ups.

**Step 6: Set goals for the process and outcome.** Be sure you have a clear picture of your preferred schedule, site (location), time frame, who will be involved and what will happen if negotiations fail.

**Step 7: Identify your own limits.** It is very important to know these. These will arise from having a clear picture of your goals and their priorities, your bargaining range points, and your alternatives or BATNA (best alternative to a negotiated agreement).

**Step 8: Develop supporting arguments.** Once you know your goals and preferences, think about how best to provide supporting arguments for those goals. You will have accumulated many of these during your research. ■

# The Art of the Master Competitor

Competition is the strategy most of us associate with negotiation and deal-making. It is the classic bargaining or haggling style used in open-air markets throughout much of the world; it also rules in many boardroom negotiations.

### *The Impact of Competition on Relationships*

It's natural to use competitive negotiating if the relationship with the other party does not matter a great deal or you simply don't need to worry about the other party because you know this person can take care of

*(continued on page 4)*

## The Art of the Master Competitor

*(continued from page 3)*

himself or herself. For example:

- This may be a one-time negotiation with no future relationship (you are buying a coffee table at a garage sale, for example).
- The future relationship may not be important.
- The relationship exists but was poor to begin with.
- The other party likes to negotiate hard and views it as a challenging game.
- The other party has a reputation for hard bargaining or dishonesty and you need to compete just to make sure you don't get taken advantage of.

### *How to Prepare for a Competitive Negotiation*

To effectively prepare for a competitive negotiation, you must identify four key points. We will define these four points in terms of a buyer-seller exchange, which is usually referred to as the classic negotiation, but they apply to all competitive negotiations. They are:

1. *What you consider to be an acceptable deal*. This is your target point. A target point is the settlement you would like to achieve when the negotiation is finished.

2. *Where you will start*. Since most people expect that a negotiation involves the process of give and take, or making concessions, you probably will have to ask for more than you really expect to get (if you are the seller) or have to offer less than you will ultimately have to pay (if you are the buyer). This is your opening offer.

3. *What your limits are.* Think in terms of the most you will pay (as the buyer) or the least you will take (as the seller). This is your walkaway.

4. *What you will do if you cannot strike a deal with this other party*. This is your alternative.

### *The Benefits and Costs of Competition*

Competitive negotiation is widespread and often the right choice, but it has potential costs as well as benefits. Sometimes, as in negotiations within a family or work group, competition can create bad feelings and get in the way of positive, open communications. The following will help you decide when competition is most likely to be a good fit and when you might want to avoid it.

**Benefits: Situations Where Competition Is Effective**

- ✓ The goals of the parties may be short-term.
- ✓ The parties have no interest in establishing a deeper or more personal relationship with the other.
- ✓ The parties assume that their goals are incompatible — there is no way both parties can achieve their goals.
- ✓ The other party takes a competitive stance.
- ✓ The negotiators represent somebody else in negotiation — a boss, a labor union, an advocacy group — who will evaluate the negotiator well if the negotiator is strong, is competitive, doesn't give in and forces the other side to give in.

**Costs: Situations Where Competition Is Ineffective**

- ✓ Negotiations that rely on competition can be costly and time consuming, especially if each party holds out for all its demands.
- ✓ Time and goodwill may also be lost if the other party anticipates that you will be competitive and prepares in a similar manner.
- ✓ A major problem with competition is that it is a strategy frequently used by inexperienced or untrained negotiators who believe that it is the only way to negotiate.
- ✓ It is possible to underestimate the other party's determination in a competitive situation. When using competition, we tend to underestimate the strength, wisdom, planning and effectiveness of the other party and assume that we can beat them at their own game. ■

# Executing a Competitive Negotiation

As you interact with the other party, recognize that everything you do and every decision you make is part of the negotiation.

### *Rules of Thumb for Your Competitive Negotiation*

Once you get past the opening offers or demands of each side and into a pattern of concessions, any number of things can happen and it becomes difficult to anticipate what will happen next. However, if you follow these rules of thumb, you should be able to plot a successful course through the dangerous middle ground of a competitive negotiation:

**Stick to your planned target and walkaway points.** Try not to be manipulated by the other party. Watch out for the tendency to find a midpoint between the other party's asking price and your first offer and to settle there too quickly.

**Do not reveal your target until you are close.** Provide minimal information to the other party about your real target point. If you let your target point be known, you will be open to manipulation, particularly if you think you can do better than your target point. So reveal your target points only if you can't possibly do better.

**Never reveal your walkaway point.** Never let opponents know your limits. If you do, they will try to settle as close to your walkaway point as possible. Even worse, they may assume that this was a bluff and try to

*(continued on page 5)*

## Executing a Competitive Negotiation

*(continued from page 4)*

get you to take a deal less than your walkaway point.

**Get the other party to make big concessions.** If you believe that the pie is limited in size, then you want to get as much of it as you can while allowing the other side to get as little of it as possible.

**Keep your concessions few, slow and small.** When you have to give in, do so in small increments, one item at a time. Be patient, and remember that time is on your side. Most negotiators dislike the ambiguity and uncertainty of the middle part of negotiations and rush their concessions just to make themselves feel better about the pace of negotiations.

**Investigate the other party's level of concern for the outcome, other issues, and his or her costs of ending negotiation.** You may learn this through direct information — for example, if a company claims it cannot withstand a strike. And you may learn it from the behavior of people on the other side — for example, if they push to settle quickly. ■

# Mastering the Art of Collaboration

Though some say real negotiators aren't supposed to collaborate (they are supposed to fight to the bitter end for what they want), we all collaborate often. Writing a book is collaboration. Doing anything in business these days is a collaboration — between associates, department, divisions, companies, even nations. And collaborating is often the best way to handle differences and conflicts. Here's why:

Collaboration, as it has evolved in the field of negotiation and conflict handling, brings problem solving into the conflict equation. It treats the conflict itself as a puzzle or problem and harnesses all the combined abilities of everyone involved to find a good way to solve the problem or crack the puzzle. As a result, collaboration often creates breakthrough solutions that make all parties happier than if they had competed, compromised or walked away.

### *The Four-Step Collaborative Process*

There are four major steps used in carrying out collaboration:

**Step One: Identify the Problem** — Identifying the problem may sound like a simple step, but it's not. In the collaborative model, both sides are involved equally in the process of problem definition, and both need to agree fully on what the problem is. Beware of the tendency to define solutions before you have fully defined the problem. In fact, avoid discussing solutions until you have thoroughly understood and defined the problem. The point of collaboration is to treat the outcome as variable, not fixed. So don't fix it up front.

**Step Two: Understand the Problem** — In this step, try to get behind the issues to the underlying needs and interests. Learn not only about the needs and interests of each party, but also about their fears and concerns. The reason for getting behind their position is that positions

*(continued on page 6)*

## Finding Solutions

There are two major ways to go about finding solutions. One is to redefine the problem so you can find win-win alternatives for what at first may have seemed to be a win-lose problem. The second is to take the problem at hand and generate a long list of possible solutions. In the latter case of generating solutions, consider the following options:

**Expanding the pie.** If the problem is based on scarce resources, the object would be to find a way to expand or reallocate the resources so that each party could obtain his or her desired end.

**Logrolling.** If there are two issues in a negotiation and each party has a different priority for them, then one may be able to be traded off for the other.

**Offering nonspecific compensation.** Another method is for one party to "pay off" the other for giving in on an issue. The "payoff" may not be monetary, and it may not even be related to the negotiation.

**Cutting costs.** In this method, one party accomplishes specific objectives, and the other's costs are minimized by going along with the agreement.

**Finding a bridging solution.** In bridging, the parties invent new options that meet each other's needs. Again, both parties must be very familiar with the other party's interests and needs.

**Brainstorming.** This common method for generating ideas usually works best in several small groups rather than one large group.

**Forming breakout groups.** In this method, each negotiator works with a small group — perhaps his or her own constituency — and makes a list of possible solutions.

**Surveying.** Another useful method is to distribute a questionnaire stating the problem and asking respondents to list possible solutions.

Once you have a list of possible solutions, you can reduce the number of possibilities by rating the ideas. In communicating your priorities and preferences to the other party, it's important to maintain an attitude of firm flexibility: Be firm about achieving your interests while remaining flexible about how those interests might be achieved.

## Mastering the Art of Collaboration

*(continued from page 5)*

tend to be fixed and rigid — they are the result of a long reasoning process about how firm and tough to be. Try to get "behind" their firm position to more basic underlying interests, needs and values.

**Step Three: Generate Alternative Solutions** — Once you have defined the issues to the satisfaction of both parties, you can begin to look for solutions. Notice that this is plural: solutions. You want to find a group of possible solutions, then select from among them the best solution for both parties. In collaborations, the more potential solutions, the more likely it is that the parties will find one that both can embrace.

**Step Four: Select a Solution** — Using your prioritized list of potential solutions, narrow the range of possibilities by focusing on the positive suggestions that people seemed to favor most. One way to prioritize is to logroll by packaging each person's first choice together. ■

# Mastering the Art of Compromise

Compromising may be thought of as an "adequate for most occasions" approach to negotiation. In this strategy, each side will have to modify its priorities for the relationship and for the preferred outcome.

**When to Compromise:**

- A true collaboration does not seem to be possible but the relationship is important.
- A party's position is weaker than that of the other side.
- The parties are short of time or other critical resources necessary to get to collaboration.
- Your competitors are chasing the deal.
- When the resources are limited and can't be expanded or creatively shared.
- If both parties want to be assured that they gain something, and don't lose anything, on their key issues.
- If there are good options available on each side, one party might propose a compromise to obtain a concession on one of their more important objectives.

### *The Tactics of Master Compromisers*

Following are some suggestions for how to compromise successfully. Success in compromises is a personally satisfying outcome that also leaves the other party reasonably satisfied. Here are the tactics.

**Do your homework.** Know what you want. Be sure you have clear goals and objectives.

**Prioritize your goals.** If you are going to compromise, you need to know what you must have, as opposed to what would be nice to have.

**Know your walkaways and alternatives.** This can give you power in the negotiations, because at some point you may be better off pursuing your alternative than settling for a suboptimal agreement.

**Know which person will make the decision.** If the person you are negotiating with does not have the authority to make an agreement, you may be spending a lot of time waiting while he or she consults with the one who does.

**Show that you want to negotiate.** Say and do what is necessary to overcome the other party's reticence or distrust.

**Try not to be the first side to make a major concession.** Since making concessions may be interpreted as a sign of weakness, the other party may want to take advantage of this and become aggressive.

**Do not wait until the deadline to offer a compromise.** Compromises should be offered from a position of strength, not as a last-ditch gesture, which would suggest to the other party that you are in a weaker position.

**Start with small compromises.** A gradual or staged approach can help you to move toward more compromise. ■

# Three (or More) Is a Crowd

Negotiating is a challenge when there are just two parties. Add a third or fourth party with interests of their own and things become more complicated in a hurry. Two may agree, only to find the third upset and feeling that he is being ganged up against. Or one of the parties may be hard to bring to the table, preferring to stay disengaged and avoid conflict — which holds up the parties who want to resolve the conflict. These are just two of the many special problems that arise in a group negotiation. Group dynamics come into play, interweaving with the already complex dynamics of conflict and negotiation.

There are two forms of multiparty negotiations. In the first type, all the parties are at the table at the same time. This kind of a negotiation might occur in a team, task force, committee or decision-making group where there are different interests present and all must converge on a collective decision or agreement. In the second type, there are several parties, each of whom has different interests, but you deal with them separately and sequentially. Because the parties often find that they can gain strength in dealing with Y by forming an

*(continued on page 7)*

## Three (or More) Is a Crowd

*(continued from page 6)*

alliance with Z, these negotiations tend to be about forming and sustaining coalitions.

Entering into a coalition with others can yield several advantages:

- Coalitions can give you more power and leverage in a group. If several members band together, you may be able to push through a plan or program that no one member could gain individually.
- Coalition partners can sometimes bring strengths to the negotiation that balance your weaknesses. Coalitions can pool all kinds of resources: different skills, different ideas, different past experiences, contacts with different people. For example, voting coalitions emerge in government bodies all the time to support or defeat proposed legislation and policies.
- You can probably be more collaborative with your coalition members, which permits you to do more creative problem solving than you could if you competed with every other party to the negotiation.

### *How to Interact with Coalition Members*

To form durable coalitions, keep in mind the following tactics. These are considered helpful rules of conduct for interacting with your coalition members:

**Be honest about saying no if that's what you really mean.** Coalition members need to be clear about their concerns and objections rather than hedging.

**Share your information; don't hoard or conceal it.** The best coalitions use the rules of collaborative negotiation: Each partner trusts the other with information about their needs, strengths and weaknesses.

**Speak clearly and honestly.** Avoid political doublespeak with your partners.

**Don't take a new position or say yes just to be accepted in the coalition.** It takes real compatibility to form a good coalition.

**Try to find a common vision that unifies your coalition.** If there isn't one, see if you can provide it.

**Don't bad-mouth other parties.** In spite of the fact that you may think what you say will be kept a secret, it always seems to get back to the other parties and causes problems later. ■

# Mastering the Framing Process in Business Negotiation

Framing affects business conflicts and negotiations. Every time two negotiators define a problem or issue — in a similar or a different way — they have enacted frames that may make resolution easier or more difficult. And when a negotiator shifts his own or the other person's frame, negotiations may move forward or may deadlock and stalemate. Negotiators who master the art of framing are better at handling all sorts of business conflicts and come out ahead in negotiations.

Those who study perception and communication in conflict have defined a number of frames that commonly arise in conflict situations. The seven most common frames are:

**Characterization** — Characterization refers to the way parties define other parties in the conflict. In conflict situations, characterization frames are usually negative, and the other party is seen in weak, bad or otherwise unfavorable terms.

*(continued on page 8)*

## The Importance of Frames

The important message about frames is to understand the frames you are using and the frames others are using. When the parties are consistently not communicating, talking past each other or find their conflict escalating from simple differences to an angry confrontation, the problem is most likely rooted in a difference between their respective key frames.

### *Tips for Managing Frames*

Here are some general tips and techniques to help you manage frames during negotiations.

**Stop. Assess.** Figure out what frames are for. Everyone uses frames. By thinking about them before you make any moves or demands, you may be able to come up with a better approach or strategy.

**Don't talk issues if the other party is focused on process.** Some people have a strong process frame, meaning they focus on how the parties should go about resolving their dispute. If someone repeatedly asks process questions, stop talking about issues and outcomes and take the time to agree with them on the process — or agree to come back to them after the issues are defined.

**Don't be a victim of characterization.** Does the other party have a prejudice or negative assumption about you? Do you have one about him or her? Negative characterizations are common and tend to strengthen as a conflict escalates.

**Share personal feelings and pressures leading to past behaviors.** Empathy (emotional understanding) is a powerful weapon against negative characterizations. If the other party understands the factors leading you to act the way you did, he or she is less likely to blame you or be mad at you.

## Mastering the Framing Process in Business Negotiation

*(continued from page 7)*

**Identity** — Identity frames are the ways that parties define themselves. In conflict situations, identity frames are often the opposite of characterization frames.

**Outcome** — This frame refers to what the parties prefer as the specific outcome or resolution of their differences.

**Interests** — This fourth frame focuses on the parties' underlying interests (identified earlier). Interests are sometimes called aspirations in that the party focuses on attempting to satisfy his or her basic needs and concerns rather than push hard on obtaining a particular outcome.

**Rights** — Some people frame conflicts in terms of whose rights were upheld or violated. Whereas conflicts over interests are often resolved by negotiation, conflicts over rights are usually resolved by efforts to determine whose side is favored by the law, regulation or policies.

**Power** — Some people frame conflicts in terms of power: who is stronger, who has more resources or who is able to force the other to back down and accept a dictated solution to the conflict. People who are frustrated in their efforts to try to resolve a conflict by focusing on interests or rights often escalate to a power frame; those who have the power to enforce their will and make the other party do it their way will win the conflict.

**Process** — Parties often adopt different process frames in conflict. A process frame is the way each party prefers to work the conflict out or resolve it. ■

# Mastering the Power and Influence Process

Fundamentally, negotiation is all about each party's efforts to influence the other. Social interactions are all about influence. No person is an island. Yet most people never study influence in depth, and so they go through life, and negotiations, in constant ignorance of the forces of influence at work around and on them.

Your mastery of the arts of power and influence not only puts you in control of your negotiations, but also inoculates you against a great many ploys and tactics that will be used against you. While most negotiators don't know all the tricks in the influence book, many have preferred two or three of them and will use their special weapons on every unsuspecting negotiator they encounter. Some negotiators have won over and over by using just one or two of the more potent techniques. Do your homework and be prepared to identify and counter their influence moves.

### *Four Easy Defense Moves*

There are several major tactics you should be aware of and protect yourself against. These are:

**1. Watch out for cascading yeses.** If you are being maneuvered into agreeing repeatedly, the other party is herding you in his or her desired direction. Never let yourself be herded.

**2. Watch out for power plays.** Do you always have to accommodate more powerful players? You can defend against power plays by recognizing that you do have control over the outcome in every negotiation or interaction. This isn't a hostage situation; you have a lot more choice than you think.

**3. Watch out for strange requests.** Research shows that an unexpected request has considerable persuasive power when used in certain ways. Defend against strange requests and unexpected behavior by focusing away from the behavior and evaluating the substance of the request or position instead.

**4. Never let someone get you intoxicated during a negotiation.** Don't try to negotiate over a lunch or dinner where alcohol is being served. Drinking and negotiating don't mix.

### *The Balance of Power*

The most persuasive and influential negotiators often avoid loud, overbearing or overly colorful styles and instead rely on careful presentation, sound arguments and subtle tactics to win others over. As you negotiate, always keep one eye on the balance of power and the uses of influence. If you find yourself out-influenced and out-powered, stop and seek sources of additional power and influence for your side.

Your negotiating skills and knowledge of technique are valuable resources of influence and power, as are your abilities to manage your emotions and take the high road of reasoned, reasonable positions in any negotiation. The master negotiator is always mindful of power and careful to create sufficient influence to press his or her agenda forward. ■

# How Empathy = Bigger Profits and a Better Life

Michael Brenner once took himself through the exercise of listing out and counting every job he could remember ever having. He knew there had been quite a few but he was pretty surprised to see that the total came to 53, all within the span of 25 years. His varied experience meant that he had the opportunity to encounter people of every sort. The customer service jobs he held taught him just "how much mean people suck."

He says of the long list, "...inside corporate organizations and start-ups alike, I've witnessed unique management styles, workplace cultures, and bosses, all of which taught me a few lessons about business and how to manage it all. I've learned that sometimes your boss sucks. Sometimes you just want to get your job done without being challenged or questioned. But the real question is...How happy are we in our jobs?" Unfortunately, most people he queries about work are unhappy with their job itself, the culture in which they work, their boss, or the decisions over which they have zero power. They feel stuck. Brenner and his long list of jobs mean that he has experienced a bit of it all, with almost all of his positions having some aspects that are good and others that are bad. It got him wondering, "what separates the positive experiences from the negative?" "What makes us either love or hate the work we do?" "What makes us love or hate the lives we live?" Over thousands of conversations with people around the world, Brenner submits that the "overwhelming answer" he has heard again and again comes down to one simple thing. Mean people suck.

Mean people have a way of infecting those around them with meanness. Those on the receiving end of their ugly behavior suffer in silence until they finally fill up and lash out at those around them, shedding "some of that pain and frustration" that has sunk them so low. Despite regular and constant modeling and explicit teaching about being kind and taking care of one another and treating others as we'd want to be treated, there are still meanies out there that simply cannot put themselves in the shoes of another. "We know that we should be kind and have empathy, but why do so many of us, especially in the business world, not display empathy for others?" This is the central question that author Michael Brenner explores in ***Mean People Suck.***

## The Shocking Decline of Empathy

Science has proven that empathy is a learned behavior that we develop throughout our lives. Research has also shown that it is in sharp and ceaseless decline. "The University of Michigan Institute for Social Research found that we are 40 percent less likely to describe ourselves as having empathy for others today than we were 40 years ago, with the steepest declines coming in the last 10 years." This decline permeates our political system as well as our organizations.

We are born with "the capacity for empathy" but somewhere along the way, we lose it. Empathy and age tend to have an inverse correlation, which Brenner calls "the paradox of confidence." Brenner credits this downward slide of empathy on social change and disruptions. Our daily communications are less connected as they occur through text or social media. We find it much easier to be mean to people through the veil of technology. Unlike a mere couple of decades ago, "today, we can anonymously spew so much hate without any real fear of repercussion." The digital environment is almost entirely lacking in empathy and that has moved into our workplaces, with terrible consequences.

## Your Company Sucks, Your Manager Sucks, and Your Customers Know It

Organizational charts have existed for over a hundred years, providing a visual reminder of who is above, who is below, and who is in line with our own position. They are meant to help us out by showing us who is in charge, who we should go to for approvals, and who will make decisions about particular aspects of our job. There are, as you may imagine, loads of problems with traditional org charts.

Org charts are rigid, while the world demands flexibility. They only encourage "upward communication" when companies desperately need peer collaboration. We focus on what is best for us and how we can move up and up the hierarchy, rather than focusing on what is best for the organization as a whole.

In reality, companies are not organized into clean lines and tidy boxes. Human beings and their relationships "are complicated, constantly in flux, and can change so quickly." To account for this human element, companies have to rethink the org chart in a way that busts up the "silos throughout our organizations" and ensure that "all departments focus their efforts on the customer." But it's not just the company's method of organization that sucks. Mean managers suck, too.

Managers sometimes fall into an insistence trap, in which they come up with an idea that feels like a winner, but you know better. You can see that this idea will not work and is destined to not only fail, but to waste precious time and money in the process. But you say nothing. This is so often the case. We feel powerless to push back against those in a superior position to us and we go along with their idea, even when we know with certainty it is a terrible idea. Why do we do this?

Brenner says that it may feel like the buck stops with the boss, but in reality, you are part of the problem. In order to avoid the trap of implementing a doomed strategy, we have to step up and do some difficult insisting ourselves. We have to push back, explaining with crystal clarity that "all our wasted effort is in no one's best interest." If we can establish common ground with our managers, we can find a way for everyone to walk forward with freedom and purpose. Leaders have to get on the sidelines and start cheering for their people. Managers who champion their employee's ideas get better results for every stakeholder involved. When managers suck, customers can tell and they choose not to spend money with managers or companies that suck.

Modern consumers are savvy to say the least. Advertisements are completely ignored at best and seen as an annoyance that deters buying at worst. Brands must come to terms with the fact that consumers simply are not interested in being "reminded relentlessly of how great a product is." Consumers know that some companies suck and they are, increasingly, intolerable of this.

Customers need and desire connection with the brands they use. Companies that are successful at making this connection do so because they have a meaningful core mission that is consistently executed. Meaningful brands make a difference in the lives of others. They "stand for something and promote the values that their customers connect with" and people are moved by them on an emotional level. Brands that cannot, will not, or do not do this will have a very difficult time thriving in turbulent times.

## Empathy for the Win

Customers need to be engaged, employees need their ideas championed, customers have to be at the center of all decisions, and pain points of customers need to be addressed to drive growth. Knowing that these are the things a leader must do is just the beginning. How you do these things "will ultimately determine your effectiveness." This is where empathy comes into play.

Families, communities, businesses, and indeed, the world at large needs empathy. The dictionary defines empathy as "the action of understanding, being aware of, being sensitive to, and vicariously experiencing the feelings, thoughts, and experience of another...without having the feelings, thoughts, and experience fully communicated in an objectively explicit manner." It is putting yourself in someone else's shoes, even if just for a moment. In business terms, Brenner asserts that "Empathy is the counterintuitive secret to getting more of what we want."

Today we fail to realize that "infusing empathy into our workplace cultures also makes for a more profitable and stable business model." Communication runs more smoothly when we lend an empathetic ear. It makes us more strongly bonded to those around us. It is "essential in grabbing, and keeping, the attention of others, specifically our customers." It also drives "actual business results" by promoting a positive culture, decreasing turnover, increasing productivity, and improving the customer experience. "It can transform a business's profitability and interna cost level." In short, empathy wins. And it wins big.

> Acts of kindness and empathetic interactions spark others to behave the same way."

## 5 Tips to Deeper Empathy

No matter if you are a leader, manager, employee, spouse, parent, or friend, you will find that people will like you more when you "take interest in them and their concerns." Being empathetic will improve your life, at work or at home. Follow these five guidelines to avoid being the mean person who sucks, that everyone around you complains about.

1. Learn to listen. It is critical to first learn to ask questions, rather than talk ceaselessly about yourself. Once you learn to ask first, you have to learn how to genuinely listen to the answers. "This is easier said than done." Distraction is a major part of the problem. Our phones are constantly buzzing and dinging, providing endless opportunities "to look away when someone is talking." Put your own agenda, and your phone, aside when you are engaged in conversation with others. Make an intentional effort to try to see where the other person is coming from and be open to any feedback you may receive.

2. Try being kind. Stanford psychologist Jamil Zaki says, "Kindness is contagious." When we behave kindly towards others within a group, such as a team or entire staff at work, that kindness contributes to Zaki's theory called "positive conformity." Acts of kindness and empathetic interactions spark others to behave the same way. It is an idea as old as time itself. You attract more bees with honey than vinegar. Treat others as you would like to be treated. It works at work, too. "It's easier to get what you want from others when you're nice."

3. Don't take it personally. We've all been there. You are having a terrible day with one annoying set back after another. By the end of the day, you are feeling pretty impatient and crabby. The next person that happens along your way becomes the target of your sour mood and you lash out at them, unjustly. Guess what? You are not the only person who experiences this. Every human has bad days. Every human experiences circumstances beyond their control that occasionally become misplaced or projected onto someone else. When this happens, don't take it personally because it isn't about you. Instead of ruminating over it or looking for ways to pay that person back for their bad behavior, let it go. Don't carry it forward. Leave it in the past and maintain your overall happiness.

4. Remember the good times. It is sometimes hard to see the good in a bad situation. Of all the 50+ jobs that Brenner has held, none of them were all bad all the time. He still enjoyed moments of laughter and bonding with coworkers. He still learned valuable insights and lessons that he applies in his life and work today. He credits mean people with teaching some of the most valuable lessons of the lot! "Shifting your focus from dwelling on the negative to appreciating the positive changes your mindset." You become more open to positive experiences and you feel better. That's a win for everyone.

5. Find meaning in what we do. Brenner sums up this guideline with three simple phrases. "Be kind. Be cool. Be you." Go out into the world and into your workplace being authentic, empathetic, and nice and you will find meaning in all that you do. Brenner asserts that there is always meaning to be found, even in a job that you absolutely loathe. "If you can't find that larger purpose in the work itself, you might find it in working together with your teammates or colleagues." To do this, start by asking yourself four questions. "What do I know? What does the world need? What do I love? What are people willing to pay me to do?" Your answers will intersect to reveal the path to personal and professional happiness.

Brenner's book boils down to a simple, but profound idea. "Empathy for others is the key to getting the lives and careers we want." Every single one of us wants the same thing. We want to be happy, fulfilled, and make a difference through the work we do. We want our time on this planet to matter. Yet most of us fall short of that. We are not happy. We are unfulfilled. We do not put ourselves in the shoes of others. Some of us are downright mean. In Mean People Suck, Brenner makes a case for exactly what we can do about that.

All we really need to do is "make a choice." "Make a choice to not be unhappy, unfulfilled, disengaged and focus on others. Apply empathy where it matters the most. Make a choice for empathy–in business, in life." Empathy is the key to making meaningful connections, enjoying your work, creating meaningful solutions for your customers, and making a real difference in this world. Do not fall into the dismal trap of believing that the only way to get what you want is to take it. "Showing others that you care is the best way to get what you want and to live a better life in the process." You only have to ask yourself one question to make the change. "What choice will you make?"

## THE SUMMARY IN BRIEF

For many professionals, overcoming major career challenges may come with a high toll, professionally and personally, but what if the key to navigating these difficult moments was already in our possession? And what if living a full and rich life ultimately depends on three core principles: having a clear purpose, maintaining balance, and, as a result, achieving fulfillment?

According to ***Mind Odyssey: A Doctor's Guide to Training Your Brain for Purpose, Balance, and Fulfillment***, these are not abstract ideals, but trainable mental skills grounded in neuroscience. Drawing on Homer's *Odyssey*, the book likens modern careers to a long journey marked by progress, detours, and adversity. Purpose acts as an internal compass: the "why" that guides decisions through uncertainty and distraction. Balance provides the "how," allowing individuals to manage stress, regulate emotions, and respond thoughtfully rather than impulsively. Fulfillment represents the destination, emerging when purpose and balance align over time.

By combining scientific insight with personal stories and practical exercises, neurologist and biotech executive Dr. Spyros Papapetropoulos teaches readers how to train their minds to navigate uncertainty, manage pressure, and build sustainable confidence—allowing career success to support, rather than undermine, a meaningful life.

## IN THIS EXECUTIVE BOOK SUMMARY

- Understand how to define purpose as the intersection of ability, motivation, and recognition
- Find ways to train emotional balance to handle pressure and setbacks
- Acquire useful strategies for aligning time, ambition, and well-being
- Learn effective practices for sustaining fulfillment through curiosity, reflection, and community

## Introduction

When considering the many successes and unexpected setbacks in the course of a career, I often turn to Odysseus. For this "man of many talents," the journey is filled with incredible adventures, each marked by unbelievable feats. But it is equally full of tragedy and failure.

What ties the whole story together, though, is that Odysseus always knows his purpose. He knows why he continues on his journey across the Aegean Sea—in order to get back to his family. And that purpose allows him to see his destination: the place where he'll find true fulfillment.

Homer's epic poem has been foundational for many stories told ever since. These same elements—purpose, balance, and fulfillment—are equally important in a modern career as they were for a sailor in the 10th century BC.

Whether you're a salesperson, a software developer, a nurse practitioner, or a plumber, these same three qualities can allow you to guide your career through every trial ahead. They are so powerful because, in essence, they answer three key questions:

- Why do we do what we do?
- How are we going to do it?
- Where are we going?

Our *why* is our purpose. This is our drive, the engine that pushes us forward. Balance gives us our *how*. It's our ability to manage the inevitable turbulence that erupts from time to time over the course of a career. When we have balance, we're able to avoid overreacting to any situation—particularly negative ones. When we have purpose and balance, we naturally steer toward our fulfillment. That is exactly *where* we want to go in life.

Words such as purpose, balance, and fulfillment are vague and hard to grasp fully. But while I am fond of metaphors, mythology, and good stories, I've spent my career studying the brain. And every concept I bring up is backed up by not just literary analogy but also hard science.

We know with relative certainty where in the brain your purpose, balance, and fulfillment reside. And we can access these regions through conscious effort.

Achieving purpose, balance, and fulfillment is all about connecting the right neurons through the right synapses. In other words, you can train your brain to deal with negative situations and avoid the big dips or unnecessary highs that drag you and your career down.

CHAPTER 1

## Defining Purpose

Purpose is such a powerful guiding principle in the rough moments of a career because it's the meeting point of what we're good at, what drives and motivates us, and how we're perceived by others. Purpose is more than a job or even an entire career—it's what gives that work meaning for you.

Scientists believe that they now understand, at least partly, how and where the human brain generates the sense of purpose. It lies in the prefrontal and frontal cortex. This is the area of the brain that makes us human. It's where we form our emotions, regulate our behavior, and solve complex problems. It's also where we process life decisions by combining and analyzing memories and experiences. This makes sense because purpose is a uniquely human need.

### Create the Conditions for Introspection

You need to explore purpose (as well as balance and fulfillment) when life is calm and you're in relatively good physical and mental health.

The reason for this is that when we are in distress, our neuronal circuits are overwhelmed, and the amygdala takes control of our behaviors. The amygdala is the most primitive part of our brain, and it's where we experience fear, rage, stress, and anxiety. In those moments, the highway to the higher functions of the frontal lobe is cut off, and instincts take over.

In other words, the part of our brain where we do our processing and logical thinking—the part where we fashion our sense of who we really are—is not open for business as usual.

### Passion Is a Clue, Not a Purpose

Once you have the right conditions and the time to focus on purpose, you need to know what you're looking for. Importantly, purpose has to go deeper and be more personal than the impulses we all have in our work. Everyone works to make money, for instance. That isn't a purpose.

A purpose ultimately states what you care about in your position that goes beyond those material interests. What do you care about that doesn't earn you money or make you powerful or famous?

The advice most people give when searching for such a purpose is some version of follow your dreams or follow your passion. The problem with fusing the ideas of passion and purpose is that they are very distinct things. While purpose

> Gratitude is an antidote to that sense within us that we can do everything ourselves.

can provide a consistent center to your work for an entire career, passion burns brightly and then dims or burns out entirely. In other words, passion is a finite resource. It is a state of constant stimulation, and for that reason, it exhausts itself.

### Assessing Your Strengths and Signals

Passion is not our only clue to the nature of our purpose. We can also consider our natural skills and aptitudes. They can be a source of new possible candidates for our purpose or serve as disqualifiers when considering our potential as we follow our passions.

There's only so much we can do to understand ourselves. We'll always have gaps in how we perceive ourselves because we can only look from the inside out, making openness to outside criticism essential.

This is often the hardest step for people to take when determining their purpose. No one likes to be criticized or to hear they may not be as good at something as they'd hoped. But if we are willing to open our eyes and our ears, we'll find that many people are trying to tell us how much potential we have, one way or another.

CHAPTER 2

## Refining Purpose

We have two paths we can follow as we climb the mountain of our career: One of the paths builds directly on the foundational blocks we're discussing—purpose, balance, and fulfillment. The other follows the more common interests and impulses that people mistake for purpose.

Following your passion can end up leading you astray. This is how it happens. People enter a career because of a hobby or a general interest. Because they like this type of work for one reason or another, they're motivated to continue pursuing it. It becomes a passion for the work. Then, when they achieve moments of success, they feel true happiness.

The problem is this latter "happiness trajectory" is not a sustainable emotion. We constantly chase it, exhausting our reserves of passion and motivation. Then, we either fail to attain happiness and collapse into sadness, or we do achieve happiness, only to see it evaporate in a moment. Happiness is almost always short lived and is almost always followed by a crash.

In contrast, the "fulfillment trajectory" uses purpose as its starting point. When following the fulfillment trajectory, we're on a path that shines a little less brightly day to day. Instead of relying entirely on those passions and interests as our sole source of deeper meaning in our work, we use them to fuel our rise. Underneath, we have firmer stuff that prevents us from crashing when we achieve success or miss out. This means we can keep going up without suffering major falls.

This is a more consistent and sustainable path, one that can allow us to reach far greater heights.

### Dreams Versus the North Star

Dreams are valuable, just like passions and motivations. They can help inspire our purpose and even refine and redirect it, but they aren't our ultimate aim. Dreams can usually be fulfilled, and achieving them or even just getting close to them gives us that extra juice to keep moving forward on what is most important.

The North Star, in contrast, is a point we're always steering toward. It's always untouchable, always just out of reach. That's what allows it to provide our purpose with an ultimate direction, which keeps us fulfilled and balanced. This isn't something you expect to achieve; it's something you look up at from time to time to check your progress and the direction you're steering your career.

### Creating Harmony with Your Parallel Purposes

Having a clear North Star that is the ultimate extension of your purpose has value beyond your career. Knowing both your purpose and your North Star also allows you to better balance the other purpose in your life: your personal purpose. This second form of purpose includes everything else that goes into your life—not just your family and friends but also your health, spirituality, and community.

Every one of us has this dual and parallel purpose. We all serve two masters. The more time you spend building a career, the less time you're at home with family. The further you advance in your career, the more resources you have to

give your family. A setback at work will affect how you behave with your family, and vice versa.

And if these two purposes ever come into conflict—if balance is lost and one suffers too much for the other—we will struggle to progress along any trajectory. Therefore, we have to define, understand, and feed both of these purposes at the same time.

Once you know both these purposes, you can seek points of connection that allow you to nourish them at the same time. By finding these points of connection and monitoring the trajectories of your dual purposes, you can avoid most of the conflicts that appear over your time, attention, and energy. You'll know better where to allocate those resources to keep life moving in the right direction. This can only help in both areas of your life.

CHAPTER 3

## Protecting Purpose

Win or lose, when your primary motivation is some impulse toward a concrete improvement for yourself, you risk finding only disappointment at the end of the road. Either the event doesn't happen and you end up discouraged, or it does happen but doesn't live up to what you dreamed of for so long.

To exit this empty feeling, there are two clear paths forward from here. If you have fallen short of your ambition, you can give up and abandon your dreams. If you have succeeded and still feel let down, you can keep building toward something even bigger, hoping the next big achievement offers more lasting happiness.

The next win always has to be bigger. As with a drug, you never seek a smaller hit. This can work for a while, but as soon as you hit a bump in the road—as soon as you fall short of the next big goal—it can all come crashing down. As soon as that string of wins turns into a major loss, you're stuck with that empty feeling again. And it becomes all the more tempting to just walk away.

### Seek Impact Over Impulses

To ensure we are fully protecting our purpose, we need to understand thoroughly what counts as an impulse and what elements within ourselves we can rely on. We've already encountered impulses in one form. Our passions and motivations are long-term impulses that we can regularly dip into and satisfy. Here are the career-related impulses that offer a single, big boost in positive emotions:

- money
- power
- praise

These three impulses share certain characteristics. They're all common forms of rewards in our work. When we receive them, they feel wonderful in the short term. And after that initial boost, we adapt and require another, bigger hit to get the same boost next time.

This is known as hedonic adaptation, and it also follows us as we get more promotions and receive more recognition for our work.

The only escape from this is to enjoy these impulses while we prioritize the impacts of our actions. While an impulse focuses on the internal feelings of reward, an impact is external—it's about how our work acts upon others, whether those others are our colleagues, customers, family, society, or humanity at large.

CHAPTER 4

## Evolving Purpose

Your purpose is like a living, breathing part of you. It has to grow and change with you. You have to take care of it and nurture it. As you change through the years, your purpose has to take part in that same change process. Otherwise, it dies—it becomes useless.

If your purpose fails to evolve with you, one day, you'll wake up, punch the clock, and realize you no longer feel the fulfillment or balance you once did. To avoid that future, you have to regularly inspect your purpose to double-check that it accurately reflects where you are today.

If you find your purpose is no longer doing its job, there's no need to panic.

Ask enough questions with enough open curiosity, and purpose tends to present itself in its new form.

CHAPTER 5

## The Balancing Act

We all know how difficult it is to work with people who lack emotional balance. No one wants to work with a reactive colleague whose effort on a project is determined by the side of the bed they rolled out of that day. No one wants a manager who blows up any time a report comes in an hour late

> Time is our ultimate currency and the most precious commodity—and something we can never get back. ”

or who drinks too much at the office party when celebrating a big sale.

No matter your position, emotional balance is important for maintaining good team rapport, and it's a crucial part of good leadership. If we want to keep our team invested, positive, and moving forward successfully, we need to bring balance to our environment.

The key to achieving this balance is not blocking emotions but *training your brain to reset* to its natural equilibrium after that initial burst of feeling. You feel your emotions without letting them control you and overwhelm you. By resetting to your ideal mental condition, you leave all your neural networks open and active.

Along with follow your dreams, one of the most common pieces of advice offered professionally is to *trust your instincts.*

But our instincts can be wrong when dealing with complex problems or the modern work environment. Overall, we shouldn't rely heavily on them to guide our professional lives. They shouldn't play a prominent role in determining our purpose, and they definitely shouldn't be involved as determinants of balance.

### Training Your Brain

To train our brains to rebalance themselves requires consistent effort and, above all else, awareness of our mental state. This training is an active and intentional effort to recognize when our brain allows itself to be controlled by an overwhelming set of emotions.

Once we recognize our emotional imbalance, we should turn back to our purpose. This is one of the many reasons why purpose comes first. We need purpose in order to train ourselves to remain balanced.

Some of us have a natural ability to recognize when our minds drift in this way and return to purpose and balance. For others, this process takes significant effort and practice. The key, though, is to remain vigilant when your emotions are spiking and having an effect on how you're thinking.

In such moments, allow yourself to feel the emotions before turning your thoughts back to your purpose. This process also allows us to learn from the cause of our current imbalance. If this imbalance is the result of a mistake we made, we can admit the mistake instead of looking for the cause in others, and we can commit to avoiding it in the future and move forward.

CHAPTER 6

## Balancing Ambition

Like technology, passion, or financial compensation, ambition is a tool—a powerful one we need to utilize in pursuing our purpose. But when left unchecked, that same tool can drive us into poor decision-making just as easily as emotional imbalance does.

We face as much risk from too little ambition as too much. While too much ambition can destroy your purpose, too little can keep you from making any progress at all.

Unfortunately, we only have so much control over our level of ambition. That level is somewhat engraved in our personality. Whatever your level of ambition, you have to find balance in it. The risk of leaving ambition unbalanced is that it not only alienates our colleagues but also makes it difficult to recognize our shortcomings, accept feedback, or see which path is best for our career and purpose.

### Be Ambitious for Your Purpose

The first step to balancing ambition is to return our thoughts to our purpose. As we do this, we may have to push past some initial instinctive feelings about the state of our career and material interests.

Our natural instinct is always to seek more for ourselves, and ambition is one of the many manifestations of this urge. But we've already seen where this path leads. To short-circuit this pathway, we must firmly ground our ambition in purpose to see a better way forward.

Unfortunately, the relationship between ambition and purpose is not always straightforward. In some professions, they are almost synonymous.

But most of us have careers in which ambition and purpose are less obviously tied together. We don't approach our work with purpose directly in mind. Instead, we chart progress by

how well our ambitions are satisfied—tying ambition to our instinctive drive to secure ever more resources for ourselves.

To keep ambition in check, we have to tie these concepts more closely together. You can aim to move up in your company while linking that advancement to better achieving your purpose. That way, purpose becomes a meaningful check on unchecked ambition.

### Be Careful How You Compare

An important aspect of ambition is comparison. This is really how we feed our ambition. We can only know if we're moving up fast enough in our organization by checking if we are moving faster than those around us—or those who came before us.

Comparison is an inevitable part of our social existence. It's built into our nature; it is as instinctive as breathing.

So this is not something we should try to remove. In fact, comparison can be a useful ally in balancing ambition—but only if we employ it correctly. Ambition often leads us to think about the best-case scenario. This can be nice and motivating for our purpose, but it blinds us to the obstacles that are holding us back and the contingencies that make such a future less likely. Comparison can fill in these blind spots.

Through comparison, we can see where others stumbled as well as the strategies they used to overcome setbacks. We can create a more realistic picture of our potential success and prepare for what may be ahead. But if we aren't careful, it can also drag down our confidence.

### Gratitude: The Antidote for Ambition

When you see everything as the result of your efforts, your ambition sees no reason to ever shoot for anything but the highest possible bar of success.

This is where gratitude comes into play. Gratitude is an antidote to that persistent sense within us that we can do everything ourselves.

It forces us to look outside ourselves at those who can do things better and whose efforts and wisdom move us forward. It allows us to identify the contributors and their contributions to our success.

When we practice gratitude, we should even extend it to those who hold us back. We have to be grateful for the good and the bad that have happened in our professional career—because they are the reason we could ultimately end up where we are now.

CHAPTER 7

## Balancing Time

Time is our ultimate currency and the most precious commodity. This is a fact we all know on some level and something we all eventually learn on a deeper level—but when we're young, healthy, and focused on advancing in our careers, it doesn't compute; time feels like an infinite resource. So why not trade a little time in order to achieve another promotion ahead of schedule?

But every time we trade off time to give in to our instincts and feed our impulses, we have to recognize we're giving away something we can't get back.

We make this mistake because we fail to recognize that there are two separate concepts of time at play: objective time and subjective time.

Objective time includes the seconds on a clock, the days on a calendar, the rise and fall of the sun each day, and the passing of the seasons.

Conceptually, we bunch all our ideas of time into this category, but we actually experience time subjectively. Time passes more quickly or more slowly depending on our mental state—particularly our emotional state.

The only way we can truly use this resource well is by training ourselves to appreciate its nature. This process begins by simply taking stock of our time usage. After we take stock of our time balance, we have to focus on *appreciating* time. This word is crucial. When we appreciate something, we try to make the most of it. This is far better framing for our ultimate currency than enjoying our time.

If we focus on enjoying our time, we still feel the urge to speed through the tough moments. In that state of mind, we either waste time passively waiting for things to improve or, even worse, spend that time feeling stressed out and pessimistic.

### Learn to Say No

To improve our focus and appreciate our time, we have to be more careful about where we're directing our attention. We have to focus on the work that matters most so that we don't waste our time and attention on work that others can do. That means we have to accept that we aren't there to do everyone else's work. We have to learn to say no sometimes, even if that upsets people.

This is a particularly difficult lesson for entrepreneurs. Because it's their company, they feel a responsibility to pitch in

> Fulfillment is less an emotion than a mood—it's an overall state of being.

everywhere. Early on, that may be necessary, but when the company is running smoothly, their time is best spent leading, not getting involved in every task.

CHAPTER 8

## Clear Sailing

Fulfillment is where the whole process we've been learning has been leading. You can think of it as your reward for finding purpose and being balanced. It's a super balanced state—one in which we feel content and satisfied professionally, all while we increase our resilience to the tough moments in our career.

Crucially, this sense of fulfillment is different from happiness. While there is some overlap, it is actually a different category of experience from happiness. It is less an emotion than a mood—it's an overall state of being. We can be fulfilled and happy, but we can also be fulfilled and sad, angry, depressed, or anxious.

This distinction also tracks with what we know about how the brain operates. Happiness, as we've seen already, is driven primarily by dopamine.

Instead, fulfillment allows us to train our brains so they don't become flooded with neurotransmitters—whether these neurotransmitters cause happiness, depression, or panic. Reducing the firing of neurotransmitters such as dopamine allows another player in our brain chemistry—namely, endorphins—to better achieve their role. Endorphins dampen stress and discomfort. They give us a deeper sense of calmness and resilience.

This can be our overall state of being if we train our brain for fulfillment. When we break the cycle of dopamine surges by training for purpose and balance, we leave more room for endorphins to do their work. This is an ideal state to be in, both for our own positive mental outlook and for any efforts to achieve our long-term goals.

### Recognizing Fulfillment

Because fulfillment is a by-product of purpose and balance, we can access it once at least some of these other elements are in place. But we can become so distracted by the day-to-day demands of life that fulfillment can go completely unacknowledged. We sometimes even convince ourselves that we aren't fulfilled because we're still *lacking something*.

And this is a waste of our time because being fulfilled isn't about having everything. It's not about reaching a destination. Instead, it's about appreciating your sense of direction—whether in the times when you have the wind at your back, a clear sky above, and smooth seas in all directions or in the times when the water is choppy and the skies aflame with lightning.

In both cases, so long as you are balanced, purposeful, and sailing toward your North Star, you can be fulfilled.

CHAPTER 9

## Investing in Fulfillment

Taking care of your mental health is a crucial step in achieving fulfillment. If you don't have wellness within yourself, you are unlikely to be able to develop or improve other aspects of your life. You can't pour from an empty cup.

These days, work and home are two separate places with distinct responsibilities. The brain is a single organ. It doesn't dedicate one hemisphere to work life and another to home life. Instead, it experiences life holistically.

If we are stressed at home, that stress remains with us at work. If we're depressed about our career, we feel depressed on the weekends, wasting our precious time being absorbed in negative feelings rather than enjoying our family. Likewise, positive alignment in one area of life feeds into the other.

So once we have alignment between our purpose, balance, and fulfillment at work, the next natural step is to pursue it in our personal lives. Or, to coin a phrase, we have to expand these techniques across the rest of life in order to achieve "holistic fulfillment."

Luckily, once we achieve professional fulfillment, we are far closer to achieving fulfillment in our personal life. The reason is simple: The same techniques and principles we've covered for professional purpose, balance, and fulfillment also apply to our personal lives. It's all one brain. The training you've done in one area will work in the other.

### Committing to Continuous Curiosity

Achieving the wisdom of fulfillment is a great gift, and the earlier we can acquire it—professionally and personally—the better. But we have to remember that this is not the kind of wisdom we can learn, implement, and then forget. Like purpose and balance, fulfillment is not something we achieve once and then move on from. It's something that we cultivate and develop forever. And a huge part of that maintenance is simply committing to continuing to proactively explore ourselves and the world around us.

Many of us come by some of these lessons naturally at various points along our professional odyssey. We end up training our brain through experience—learning from times when we allowed our ambitions to grow too great or when we spent years aimlessly working without purpose—and perhaps we're lucky enough to put all of the pieces together at some point without consciously working on the process. But if we leave everything to nature and experience, we risk this wisdom coming too late.

Life is simply better the sooner we achieve these qualities. We are more content. Our relationships are stronger. And we achieve more in our work. We're all on a lifelong odyssey, so we may as well set ourselves up to sail with as much comfort, confidence, and contentment as possible—and do it as soon as possible.

CHAPTER 10

## A Lifelong Odyssey

The most frustrating obstacles we face are the ones that are beyond our control. Along with the exasperation we feel from the difficulty itself, there's a sense of helplessness when we realize there's little we can do to change our circumstances. When we lose our job because the company is downsizing or see a promotion go to an undeserving colleague because of nepotism, it stings more than if we had done something wrong ourselves.

It's nice to imagine that some technique or philosophical principle could give us more control over our destiny, but the reality is that sometimes, life just happens to us, and all we can do is react.

This is how it is to be on a lifelong odyssey. We're all out here sailing on the seas, heading toward our own individual North Star, and we have no control over the weather.

No matter how much we try to chart a journey under clear skies, the longer we're on the water, the more likely we'll run into a bad storm. But that's okay. We just have to accept that part of our journey is about rediscovery. It's about reassessing and reinventing our purpose, balance, and fulfillment—from now until our journey is truly over.

## Conclusion

If you choose to follow the ideas we've covered, you can train your brain to reduce these gods and monsters to interruptions in an odyssey leading toward your ultimate impactful purpose. You have the power to maintain balance even as you skim over choppy surf and to sail forth with a heart full of lasting fulfillment.

Since that's on offer, there's really no reason to wait any longer. There's no harm in starting to train your brain now. There's just absolutely no downside. It won't hurt your career or your family life. Far from it, in fact. Training your brain can only have a positive impact across every aspect of your life. Even just incorporating a few of the ideas can improve your quality of life.

This process will take time. There will be benefits from a little training, but real results will take consistency and effort over a longer period. Training your brain for balance takes consistent effort. The more you pursue these principles, the more benefits you'll see, but you have to pursue them consistently over time before they become automatic.

The sooner you start, the sooner you'll be swimming in the warm seas of fulfillment.

**Dr. Spyros Papapetropoulos** is a board-certified neurologist, neuroscientist, and biopharmaceutical CEO whose career spans science, entrepreneurship, and human-centered leadership. Born in Athens, Greece, he later built his career in the United States, serving as a professor at the University of Miami Leonard M. Miller School of Medicine and a consultant at Massachusetts General Hospital. He has authored more than two hundred peer-reviewed papers, books, and patents and contributed to multiple FDA-approved therapies. Today, he leads a biotech company focused on stress and anxiety treatments, mentors entrepreneurs, and focuses on creating organizations where scientific rigor and human well-being reinforce one another.

## THE SUMMARY IN BRIEF

Every so often a truly groundbreaking idea comes along. World-renowned Stanford University psychologist Carol Dweck, in decades of research on achievement and success, has discovered a truly profound idea — the power of our mindset.

Dweck has found that everyone has one of two basic mindsets. If you have the fixed mindset, you believe that your talents and abilities are set in stone —either you have them or you don't. If you have a growth mindset, however, you know that talents can be developed and that great abilities are built over time.

In ***Mindset: The New Psychology of Success***, Dweck makes clear why praising intelligence and ability doesn't foster self-esteem or lead to accomplishment, but may actually jeopardize success. With the right mindset, we can motivate others and help them improve, as well as reach our own goals — personal and profes-sion-al. Dweck reveals what all great CEOs, parents, teachers and athletes already know, and shows how a simple idea about the brain can create a love of learning and a resilience that is the basis of great accomplishment in every area.

## IN THIS EXECUTIVE BOOK SUMMARY:

- Learn how brains and talent can stand in the way of success.
- A deeper look into why praising brains and talent doesn't foster self-esteem.
- How does teaching a simple idea about the brain raise productivity?
- Insights on how a change of mind is always possible.

## Introduction

One day, my students sat me down and ordered me to write this book. They wanted people to be able to use our work to make their lives better. It was something I'd wanted to do for a long time, but it became my No. 1 priority.

My work is part of a tradition in psychology that shows the power of people's beliefs. These may be beliefs we're aware of or unaware of, but they strongly affect what we want and whether we succeed in getting it. This tradition also shows how changing people's beliefs — even the simplest beliefs — can have profound effects.

In this book, you'll learn how a simple belief about yourself — a belief we discovered in our research —guides a large part of your life. In fact, it permeates every part of your life. Much of what you think of as your personality actually grows out of this "mindset." Much of what may be preventing you from fulfilling your potential grows out of it.

## The Mindsets

For 20 years, my research has shown that the view you adopt for yourself profoundly affects the way you live your life. It can determine whether you become the person you want to be and whether you accomplish the things you value. How does this happen? How can a simple belief have the power to transform your psychol-ogy and, as a result, your life?

Believing that your qualities are carved in stone — the *fixed mindset* — creates an urgency to prove yourself over and over. If you have only a certain amount of intelligence, a certain personality and a certain moral character — well, then you'd better prove that you have a healthy dose of them. It simply wouldn't do to look or feel deficient in these most basic characteristics.

Some of us are trained in this mindset from an early age. Even as a child, I was focused on being smart, but the fixed mindset was really stamped in by Mrs. Wilson, my sixth-grade teacher. She believed that people's IQ scores told the whole story of who they were. We were seated around the room in IQ order, and only the high-est-IQ students could be trusted to carry the flag, clap the erasers or take a note to the principal. Aside from the daily stomachaches she provoked with her judgmen-tal stance, she was creating a mindset in which everyone in the class had one consuming goal — look smart, don't look dumb. Who cared about or enjoyed learning when our whole being was at stake every time she gave us a test or called on us in class?

I've seen many people with this one consuming goal of proving themselves — in the classroom, in their careers and in their relationships. Every situation calls for a confirmation of their intelligence, personality or char-acter. Every situation is evaluated: *Will I succeed or fail?Will I look smart or dumb? Will I be accepted or rejected?Will I feel like a winner or a loser?*

But doesn't our society value intelligence, personality and character? Isn't it normal to want these traits?

Yes, but. . .

There's another mindset in which these traits are not simply a hand you're dealt and have to live with, always trying to convince yourself and others that you have a royal flush when you're secretly worried it's a pair of 10s. In this mindset, the hand you're dealt is just the starting point for development. This *growth mindset* is based on the belief that your basic qualities are things you can cul-tivate through your efforts. Although people may differ in every which way — in their initial talents and apti-tudes, interests or temperaments — everyone can change and grow through application and experience.

Do people with this mindset believe that anyone can be anything, that anyone with proper motivation or edu-cation can become Einstein or Beethoven? No, but they believe that a person's true potential is unknown (and unknowable); that it's impossible to foresee what can be accomplished with years of passion, toil and training.

### The Growth Mindset

Did you know that Darwin and Tolstoy were consid-ered ordinary children? That Ben Hogan, one of the greatest golfers of all time, was completely uncoordinated and graceless as a child? That the photographer Cindy Sherman, who has been on virtually every list of the most important artists of the 20th century, *failed* her first pho-tography course? That Geraldine Page, one of our greatest actresses, was advised to give up for lack of talent?

You can see how the belief that cherished qualities can be developed creates a passion for learning. The passion for stretching yourself and sticking to it, even (or espe-cially) when it's not going well, is the hallmark of the growth mindset. This is the mindset that allows people to thrive during some of the most challenging times in their lives.

## Inside the Mindsets

When I was a young woman, I wanted a glamorous career,

but nothing too hard or risky. And I wanted it all to come to me as validation of who I was.

It would be many years before I was satisfied. I have a great career, but boy, is it a constant challenge. Nothing was easy. So why am I satisfied? I changed my mindset.

I changed it because of my work. One day my doc-toral student, Mary Bandura, and I were trying to understand why some students were so caught up in proving their ability, while others could just let go and learn. Suddenly we realized that there were two mean-ings to ability, not one: a fixed ability that needs to be proven, and a changeable ability that can be developed through learning.

That's how the mindsets were born. I knew instantly which one I had. I realized why I'd always been so con-cerned about mistakes and failures. And I recognized for the first time that I had a choice.

### Enter a New World

When you enter a mindset, you enter a new world. In one world — the world of fixed traits — success is about prov-ing you're smart or talented; validating your-self. In the oth-er — the world of changing qualities —it's about stretching yourself to learn something new; developing yourself.

In one world, failure is about having a setback. Getting a bad grade. Losing a tournament. Getting fired. Getting rejected. It means you're not smart or talented. In the other world, failure is about not growing. Not reaching for the things you value. It means you're not fulfilling your potential.

In one world, effort is a bad thing. It, like failure, means you're not smart or talented. If you were, you wouldn't need effort. In the other world, effort is what *makes* you smart or talented.

You have a choice. Mindsets are just beliefs. They're pow-erful beliefs, but they're just something in your mind, and you can change your mind. As you read, think about where you'd like to go and which mindset will take you there.

### Mindsets Change the Meaning of Effort

Author and *The New Yorker* writer Malcolm Gladwell has suggested that, as a society, we value natural, effort-less accomplishment over achievement through effort. We endow our heroes with superhuman abilities that led them inevitably toward greatness. It's as if Midori popped out of the womb fiddling, Michael Jordan drib-bling and Picasso doodling. This captures the fixed mindset perfectly, and it's everywhere.

A report from researchers at Duke University sounds an alarm about the anxiety and depression among female undergraduates who aspire to "effortless perfection." They believe they should display perfect beauty, perfect woman-hood and perfect scholarship all without trying (or at least without appearing to try).

Americans aren't the only people who disdain effort. French executive Pierre Chevalier says, "We are not a nation of effort. After all, if you have *savoir-faire*, you do things effortlessly."

People with the growth mindset, however, believe something very different. For them, even geniuses have to work hard for their achievements. And what's so heroic, they would say, about having a gift? They may appreciate endowment, but they admire effort, for no matter what your ability is, effort is what ignites that ability and turns it into accomplishment.

## The Truth About Ability and Accomplishment

Thomas Edison was no naïve tinkerer or unworldly egg-head. The "Wizard of Menlo Park" was a savvy entre-preneur, fully aware of the commercial potential of his inventions. He also knew how to cozy up to the press — sometimes beating others out as the inventor of something because he knew how to publicize himself.

Yes, he was a genius. But he was not always one. His biographer, Paul Israel, sifting through all the available information, thinks he was more or less a regular boy of his time and place. Young Tom was taken with experi-ments and mechanical things (perhaps more avidly than most), but machines and technology were part of the ordinary mid-western boy's experience.

What eventually set him apart was his mindset and drive. He never stopped being the curious, tinkering boy looking for new challenges. Long after other young men had taken up their roles in society, he rode the rails from city to city learning everything he could about telegraphy, and work-ing his way up the ladder of teleg-raphers through non-stop self-education and invention. And later, much to the disappointment of his wives, his consuming love remained self-improvement and inven-tion, but only in his field.

### The Myth of the Lone, Brilliant Person

There are many myths about ability and achievement, espe-cially about the lone, brilliant person suddenly pro-ducing amazing things.

Yet Charles Darwin's masterwork, *The Origin of Species*, took years of teamwork in the field, hundreds of discussions with colleagues and mentors, several prelimi-nary drafts and half a lifetime of dedication before it reached fruition.

Mozart labored for more than 10 years until he pro-duced any of the work we admire today. Before then, his compositions were not that original or interesting. Actually, they were often patched-together chunks taken from other composers.

### The Fixed Mindset Limits Achievement

The fixed mindset limits achievement. It fills people's minds with interfering thoughts, it makes effort disagree-able and it leads to inferior learning strategies. What's more, it makes other people into judges instead of allies. Whether we're talking about Darwin or college students, important achievements require a clear focus, all-out effort, a bottomless trunk of strategies, and allies in learning. This is what the growth mindset gives people, and that's why it helps their abilities grow and bear fruit.

## Sports: The Mindset of a Champion

Character is what allows you to reach the top and stay there. Darryl Strawberry, Mike Tyson and Martina Hingis reached the top, but they didn't stay there. Isn't that because they had all kinds of personal problems and injuries? Yes, but so have many other champions. Ben Hogan was hit by a bus and was physically destroyed, but he made it back to the top.

"I believe ability can get you to the top," said basket-ball coach John Wooden, "but it takes character to keep you there. It's so easy to ... begin thinking you can just 'turn it on' automatically, without proper preparation. It takes real character to keep working as hard or even harder once you're there. When you read about an ath-lete or team that wins over and over and over, remind yourself, 'More than ability, they have character.'"

### Staying On Top

Let's take an even deeper look at what character means and how the growth mindset creates it. Stuart Biddle and his colleagues measured adolescents' and young adults' mindsets about athletic ability. Those with the fixed mindset were the people who believed that:

- "You have a certain level of ability in sports and you cannot really do much to change that level."
- "To be good at sports you need to be naturally gifted."

In contrast, the people with the growth mindset agreed that:

- "How good you are at sports will always improve if you work harder at it."
- "To be successful in sports, you really need to learn techniques and skills, and practice them regularly."

Those with the growth mindset were the ones who showed the most character or heart. They were the ones who had the minds of champions. What do I mean?Let's look at the findings from these sports researchers and see.

### What Is Success?

**Finding #1: Those with the growth mindset found success in doing their best, in learning and improving.** And this is exactly what we find in the champions.

This idea — that personal success is when you work your hardest to become your best — was central to Wooden's life. In fact, he said, "There were many, many great games that gave me as much pleasure as any of the 10 national championship games we won, simply because we prepared fully and played near our highest level of ability."

### What Is Failure?

**Finding #2: Those with the growth mindset found setbacks motivating.** They're informative. They're a wake-up call.

Only once did Jordan try to coast. It was the year he returned to the Bulls after his stint in baseball, and he learned his lesson. The Bulls were eliminated in the playoffs. "You can't leave and think you can come back and dominate this game. I will be physically and mental-ly prepared from now on," Jordan said. The Bulls won the NBA title in each of the next three years.

### Taking Charge of Success

**Finding #3: People with the growth mindset in sports took charge of the processes that bring success — and that maintain it.**

How come Jordan's skill didn't seem to decline with age? He did lose some stamina and agility with age, but to compensate, he worked even harder on conditioning and on his moves, like the turnaround jump shot and his celebrated fall-away jumper. He came into the league as a slam-dunker and he left as the most complete player ever to grace the game.

## Business: Mindset and Leadership

### Fixed and Growth Mindset Leaders in Action

The fixed mindset feels so stifling. Even when fixed-mindset leaders are globe-trotting and hobnobbing with world figures, their world seems so small because their minds are always on one thing: ***Validate me!***

When fixed-mindset bosses judge people or mete out humiliation, a change comes over a place. Everything starts revolving around pleasing the boss. In *Good to Great*, author Jim Collins notes that in many of his com-parison companies (the ones that didn't go from good to great or that went there and declined again), the leader became the main thing people worried about. "The minute a leader allows himself to become the primary reality, you have a recipe for mediocrity, or worse."

When bosses become controlling or abusive, they put everyone into a fixed mindset. This means that instead of learning, growing and moving the company forward, everyone starts worrying about being judged. It starts with the bosses' worry about being judged, but it winds up being everybody's fear about being judged. It's hard for courage and innovation to survive a company-wide fixed mindset.

When you enter the world of the growth-mindset leaders, everything changes. It brightens, it expands, it fills with energy and possibility. You think, *Gee, that seems like fun!* It has never entered my mind to lead a corporation, but when I learned about what these lead-ers had done, it sounded like the most exciting thing in the world. Growth-mindset leaders start with a belief in human potential and development — both their own and other people's. Instead of using the company as a vehicle for their greatness, they use it as an engine of growth — for themselves, the employees, and the com-pany as a whole.

### Corporate Training: Are Managers Born or Made?

Millions of dollars and thousands of hours are spent each year trying to teach leaders and managers how to coach their employees and give them effective feedback. Yet much of this training is ineffective, and many lead-ers and managers remain poor coaches. Is that because they can't be trained? No, that's not the reason.

Studies by Peter Heslin, Don VandeWalle and Gary Latham show that many managers do not believe in per-sonal change. These fixed-mindset managers simply look for existing talent — they judge employees as competent or incompetent at the start and that's that. They do rela-tively little development coaching and when employees do improve, they may fail to take notice, remaining stuck in their initial impression. What's more, they are far less likely to seek or accept critical feedback from their employees.

Managers with a growth mindset think it's nice to have talent, but that's just the starting point. These man-agers are more committed to their employees' develop-ment and to their own. They give a great deal more developmental coaching advice, they notice improve-ment in employees' performance and they welcome cri-tiques from their employees.

### Are Leaders Born or Made?

When Warren Bennis interviewed great leaders, "They all agreed leaders are made, not born, and made more by themselves than by any external means." Bennis concurred: "I believe ... that everyone, of what-ever age and circumstance, is capable of self-transforma-tion." Not that everyone *will* become a leader. Sadly, most managers and even CEOs become bosses, not lead-ers. They wield power instead of transforming them-selves, their workers and their organizations.

Why is this? Authors John Zenger and Joseph Folkman point out that most people, when they first become managers, enter a period of great learning. They get lots of training and coaching, they are open to ideas, and they think long and hard about how to do their jobs. They are looking to develop. But once they've learned the basics, they stop trying to improve. It may seem like too much trouble, or they may not see where improvement will take them. They are content to do their jobs rather than making themselves into leaders.

Or, as leadership expert Morgan McCall argues, many organizations believe in natural talent and don't look for people with the potential to develop. Not only are these organizations missing out on a big pool of possible lead-ers, but their beliefs in natural talent might actually squash the very people they think are the naturals, mak-ing them into arrogant, defensive nonlearners. The les-son is: Create an organization that prizes the develop-ment of ability — and watch the leaders emerge.

## Relationships: Mindsets in Love (Or Not)

It had to be a person with the fixed mindset who coined the

phrase "Revenge is sweet" — the idea that with revenge comes your redemption — because people with the growth mindset have little taste for it. The sto-ries they tell about rejection are every bit as wrenching, but their reactions couldn't have been more different.

For them, it was about understanding, forgiving and moving on. Although they were often deeply hurt by what hap-pened, they wanted to learn from it. One man said, "That relationship and how it ended really taught me the impor-tance of communicating. I used to think love conquers all, but now I know it needs a lot of help."

For people with the growth mindset, the No. 1 goal was forgiveness. As one woman said: "I'm no saint, but I knew for my own peace of mind that I had to forgive and forget. He hurt me but I had a whole life waiting for me and I'll be damned if I was going to live it in the past. One day I just said, 'Good luck to him and good luck to me.'"

Because of their growth mindset, these individuals did not feel permanently branded. Because of it, they tried to learn something useful about themselves and relation-ships, something they could use toward having a better experience in the future. And they knew how to move on and embrace the future.

### Relationships Are Different

In his study of gifted people, Benjamin Bloom includ-ed concert pianists, sculptors, Olympic swimmers, tennis players, mathematicians, and research neurologists. But not people who were gifted in interpersonal relation-ships. He planned to. After all, there are so many profes-sions in which interpersonal skills play a key role —teachers, psychologists, administrators, diplomats. But no matter how hard Bloom tried, he couldn't find any agreed-upon way of measuring social ability.

Sometimes we're not even sure it's an ability. When we see people with outstanding interpersonal skills, we don't really think of them as gifted. We think of them as cool or charm-ing people. When we see a great marriage relationship, we don't say these people are brilliant rela-tionship makers. We say they're fine people.

Maybe that's why Daniel Goleman's *Emotional Intelligence* struck such a responsive chord. It said: There are so-cial-emotional skills and I can tell you what they are.

Mindsets add another dimension. They help us under-stand even more about why people often don't learn the skills they need or use the skills they have. Why people throw themselves so hopefully into new relationships, only to undermine themselves. Why love often turns into a battle-field where the carnage is staggering. And, most important, they help us understand why some peo-ple are able to build lasting and satisfying relationships.

## Parents, Teachers and Coaches: Where Do Mindsets Come From?

No parent thinks, "I wonder what I can do today to un-dermine my children, subvert their effort, turn them off learning and limit their achievement." Of course not. They think, "I would do anything, give anything, to make my children successful." Yet many of the things they do boo-merang. Their helpful judgments, their lessons and their motivating techniques often send the wrong message.

In fact, every word and action sends a message. It tells children — or students or athletes — how to think about themselves. It can be a fixed-mindset message that says: *You have permanent traits and I'm judging them. Or it can be a growth-mindset message that says: You are a developing person and I am interested in your development.*

### Messages About Success

It's remarkable how sensitive children are to these messages and how concerned they are about them. Listen for the messages in the following examples:

You learned that so quickly! You're so smart!"

- "Look at that drawing. Martha, is he the next Picasso or what?"
- "You're so brilliant, you got an A without even studying!"

If you're like most parents, you hear these as support-ive, esteem-boosting messages. But listen more closely. See if you can hear another message. It's the one that children hear:

- "If I don't learn something quickly, I'm not smart."
- "I shouldn't try drawing anything hard or they'll see I'm no Picasso."
- "I'd better quit studying or they won't think
- I'm brilliant."

How do I know this? For a long time, I was thinking about all the praise parents were lavishing on their kids in the hope of encouraging confidence and achieve-ment? You're

so smart. You're so talented. You're such a natural athlete. And I thought, wait a minute. Isn't it the kids with the fixed mindset — the vulnerable kids— who are obsessed with this? Wouldn't harping on intelligence or talent make kids — all kids — even more obsessed with it?

That's why we set out to study this. After eight exper-iments with hundreds of children, we had some of the clearest findings I've ever seen: Praising children's intel-ligence harms their motivation and performance. How can that be? Don't children love to be praised?

Yes, children love praise. And they especially love to be praised for their intelligence and talent. It really does give them a boost, a special glow—but only for the moment. The minute they hit a snag, their confidence goes out the window and their motivation hits rock bot-tom. If success meant they were smart, then failure meant they were dumb. That's the fixed mindset.

### Sending Messages About Process and Growth

So what's the alternative to praising talent or intelli-gence? Should we not praise our children enthusiastically when they do something great? Should we try to restrain our admiration for their successes? Not at all. We should keep away from a certain kind of praise —praise that judges their intelligence or talent, or that implies that we're proud of them for their intelligence or talent rather than for the work they put in.

We can praise them as much as we want for the growth-ori-ented process — what they accomplished through practice, study, persistence and good strategies. And we can ask them about their work in a way that admires and appreciates their efforts and choices:

- "That homework was so long and involved. I really admire the way you concentrated and finished it."
- "That picture has so many beautiful colors. Tell me about them."
- You put so much thought into this essay. It really makes me understand Shakespeare in a new way."
- "The passion you put into that piano piece gives me a real feeling of joy. How do you feel when you play it?"

I was excited to learn recently that Haim Ginott, through his lifelong work with children, came to the same conclusion. He writes, "Praise should deal, not with the child's personality attributes, but with his efforts and achievements."

One more thing about praise. When we say to chil-dren, "Wow you did that so quickly!" or "Look, you didn't make any mistakes!" what message are we send-ing? We are telling them that what we prize are speed and perfection. Speed and perfection are the enemy of difficult learning: "If you think I'm smart when I'm fast and perfect, I'd better not take on anything challeng-ing." So what should we say when a child completes a task — say, math problems — quickly and perfectly?Should we deny them the praise they have earned? Yes. When this happens, I say "Whoops. I guess that was too easy. I apologize for wasting your time. Let's do some-thing you can really learn from!"

### Our Legacy

As parents, teachers and coaches, we are entrusted with people's lives. They are our responsibility and our legacy. We now know that the growth mindset has a key role to play in helping us fulfill our mission and in helping *them* fulfill their potential.

## Changing Mindsets: A Workshop

The growth mindset is based on the belief in change, and the most gratifying part of my work is watching people change. Nothing is better than seeing people find their way to things they value. Studies have shown that when manag-ers are taught a growth mindset they become more effective; when students are taught a growth mindset their achieve-ment rises; and when peo-ple in general are taught a growth mindset they take on more challenges, they are more per-sistent in overcoming obstacles and they accomplish more.

Many people with the fixed mindset think the world needs to change, not them. They feel entitled to some-thing better — a better job, house or spouse. The world should recognize their special qualities and treat them accordingly. Imagine yourself in this situation.

***The Dilemma.*** "Here I am," you think, "in this low-level job. It's demeaning. With my talent I shouldn't have to work like this. I should be up there with the big boys, enjoying the good life." Your boss thinks you have a bad attitude. When she needs someone to take on more responsibilities, she doesn't turn to you. When it's time to give out promotions, she doesn't include you.

***The Fixed-Mindset Reaction.*** "She's threatened by me," you say bitterly. Your fixed mindset is telling you that, be-cause of who you are, you should automatically be thrust into the upper levels of the business. In your mind, people should see your talents and reward you. When they don't, it's not

fair. Why should you change?You just want your due.

But putting yourself in a growth mindset, what are some new ways you could think and some steps you could take? For example, what are some new ways you could think about effort and learning? How could you act on this new thinking in your work?

Well, you could consider working harder and being more helpful to people at work. You could use your time to learn more about the business you're in instead of bellyaching about your low status. Let's see how this might look:

***The Growth-Mindset Step.*** But first, let's be clear. For a long time, it's frightening to think of giving up the idea of being superior. An ordinary, run-of-the-mill human being isn't what you want to be. How could you feel good about yourself if you're no more valuable than the people you look down on?

You begin to consider the idea that some people stand out because of their commitment and effort. Little by little you try putting more effort into things and seeing if you get more of the rewards you wanted. You do.

Although you can slowly accept the idea that effort might be *necessary*, you still can't accept that it's no guar-antee. It's enough of an indignity to have to work at things, but to work and still not have them turn out the way you want — now, that's really not fair. That means you could work hard and somebody else could still get the promotion. Outrageous.

It's a long time before you begin to *enjoy* putting in effort and a long time before you begin to think in terms of learning. Instead of seeing your time at the bot-tom of the corporate ladder as an insult, you slowly see that you can learn a lot at the bottom that could help you greatly on your rise to the top. Learning the nuts and bolts of the company could later give you a big advantage. All of our top growth-mindset CEOs knew their companies from top to bottom.

## A New Source of Satisfaction

Instead of seeing your discussions with your colleagues as time spent getting what you want, you begin to grasp the idea of building relationships or even helping your col-leagues develop in ways they value. This can become a new source of satisfaction.

As you become a more growth-minded person, you're amazed at how people start to help and support you. They no longer seem like adversaries out to deny you what you deserve. They're more and more often collab-orators toward a common goal. It's interesting. You started out wanting to change other people's behavior— and you did.

In the end, many people with the fixed mindset under-stand that their cloak of specialness was really a suit of armor they built to feel safe, strong and worthy. While it may have protected them early on, later it constricted their growth, sent them into self-defeating battles and cut them off from satisfying, mutual relationships.

## The Road Ahead

Change can be tough, but I've never heard anyone say it wasn't worth it. Maybe they're just rationalizing, the way people who've gone through a painful initiation say it was worth it. But people who've changed can tell you how their lives have been enhanced. They can tell you about things they have now that they wouldn't have had, and ways they feel now that they wouldn't have felt.

Did changing to a growth mindset solve all my prob-lems? No. But I know that I have a different life because of it — a richer one. And that I'm a more alive, coura-geous and open person because of it.

It's for you to decide whether change is right for you now. Maybe it is, maybe it isn't. But either way, keep the growth mindset in your thoughts. Then, when you bump up against obstacles, you can turn to it. It will always be there for you, showing you a path into the future.

Carol S. Dweck, Ph.D., is a leading researcher in the field of motivation and is the Lewis and Virginia Eaton Professor of Psychology at Stanford. Her research focuses on why people succeed and how to foster their success. She has lectured to business, education, and sports groups all over the world and has been elected to the American Academy of Arts and Sciences. Her work has been prominently featured in such publications as The New Yorker, Newsweek, Time, The New York Times, and The Wall Street Journal. Mindset has been widely acclaimed and translated into 19 languages.

## THE SUMMARY IN BRIEF

In ***Motivate This!: How to Start Each Day With an Unstoppable Attitude***, comedian turned motivational speaker and author, Steve Rizzo asks readers to embrace the simple message that attitude is, in fact, everything. If you can do that, you will discover increased productivity, greater enthusiasm, new levels of success, and a higher degree of happiness.

The Common Sense Success Strategies will help you reframe your perspective so that you have the energy, motivation, and positive attitude to succeed despite any circumstances. In short, you will go from "woe is me" to "WOW is me!"

## IN THIS SUMMARY, YOU WILL LEARN:

- How your thoughts have a direct impact on your life experiences.
- Why enjoyment makes you more creative, productive, and resilient.
- How to nourish your soul to get a boost of optimism and stay motivated.
- How to bring balance into your life by honoring your cherished values.
- Seven Common-Sense Success Strategies will enable you to start each day with an unstoppable attitude to succeed.

## It's All About How You Feel

Your beliefs, positive and negative, are formed over a period of time throughout a consistent way of thinking. In other words, your thoughts create your beliefs. Your beliefs cause you to feel a certain way. The feelings you have on any given day, good or bad, dictate the tone of your attitude. The attitude you have on any given day regulates your overall degree of motivation. This entire process eventually leads to the choices you make and the actions you take.

The key to starting your day with an unstoppable attitude to succeed -and to keep that motivation going throughout the day- is to make sure you are feeling good during the process of whatever you are trying to achieve. Feeling good is the fuel that drives motivation.

A State of Feeling Good is the foundation on which everyone should build their business and their life. The way that you feel in any given moment is dependent upon and evoked by what you are thinking or saying out loud in any given moment. Your emotional state is the direct result of your thoughts and the tone of your thoughts becomes your life experience.

View your feelings as an emotional warning system. When you're feeling good and happy, you must be thinking good, positive, and productive thoughts. When you're feeling bad and crappy, you must be thinking bad, negative, and unproductive thoughts. Those feelings trigger sensations that can range from stress, frustration, and self-doubt to fear, anger, hopelessness, despair, and a host of other damaging emotions.

When you're feeling uptight or stressed out or experiencing any negative emotion at all, stop and acknowledge that something is not right in your world. As soon as you become aware of how you are feeling, the negative sensations will temporarily cease. In that moment of awareness, you enter into a whole new world of opportunities where you can choose healthier response alternatives.

## The Wrath of Self-Curse Talk

Nothing can kill motivation and stifle your attitude more than self-curse-talk. The thing to understand about self-curse-talk is that it reflects your internalized negative feelings about yourself rather than an empirical truth. Just because you feel it or say it doesn't make it true but if you believe that it is true, that's all that matters in the world.

Your subconscious does not know the difference between true and false. It cannot make independent judgments and instead understands your thoughts to be what they are-just thoughts. If you do not recognize and squash a negative thought when it pops up, your subconscious takes it as truth, thus affirming that negative feeling and further solidifying a belief system that will have negative consequences. That's what self-curse-talk does. It distorts your reality.

One negative thought can create a pattern of similar thoughts that eventually cause a negative emotional response, setting off unhealthy physiological side effects. You will be in the Negative Zone. Fostering a sense of awareness about this will produce a gradual shift in your way of thinking, which has significant positive mental, emotional, and physiological effects. The power of your beliefs is immense. They can motivate you, lift you up, and take you to the highest highs or they can drag you to the lowest lows.

> Feeling good is the fuel that drives motivation.

## Enjoyment: A Shift into High Gear

Now more than ever, we are having difficulty balancing our lives. Stress and negative emotions can become dangerous mindsets. Without realizing it, we allow enjoyment and our ability to laugh and have fun to become secondary at a time when they're most necessary.

Studies have shown that those who make a conscious choice to enjoy themselves and laugh throughout the day (and it is a choice) are more creative, productive, and resilient. They are also more likely to find solutions to complex problems easily. In other words, focusing on your happiness not only makes you smarter, it shifts motivation into high gear.

We have the power to operate from a position of optimism rather than one of negativity. Don't wait for a problem to be solved or a challenge to go away before you allow yourself to feel good. Don't wait for a goal to be fulfilled to be happy. Learn to exercise positive alternatives that will enable you to feel confident. ***"Don't wait for the storms of your life to pass. Learn to dance in the rain."***

## Nourishing Your Soul

There is a higher part of us, a force, a powerful energy in our lives, and if we adhere to this higher part, then life becomes easier to embrace, both at home and at work. It doesn't really matter what you call this part of yourself (Higher Self, God, the Light, Love, whatever). The name you give it does not diminish its power in your life.

Every time we think, feel, or choose to act in a negative way, we run the risk of separating ourselves from our natural state of joy and inner peace. The price we pay for this is the burning inner conflict that leads to physical duress and a host of mental and emotional disorders.

When alive to the personal identity of the Higher Self, life flows. Life is filled with peace, joy, and laughter because it is possible to fully appreciate who you are. When the Higher Self takes over, any challenge can be met head on, learned from, and life can forge ahead. It is this rock-solid attitude that opens up a motivational reservoir and fosters the soul to grow.

> Don't wait for the storms of your life to pass. Learn to dance in the rain.

- You nourish your soul when you:
- Learn lessons life is trying to teach you.
- Are compassionate, loving, giving, and forgiving,
- Engage in activities that give your life depth, meaning, and joy.
- Are grateful every day for what you have.
- Live in and enjoy the moment.

Nourishing your soul with these and countless other ways replenishes hope and faith and gives you a boost of optimism to stay motivated throughout the day. Your soul can lift you up and take you to the highest of highs but only when you take steps that foster it. If you ignore your soul, it can't help you.

## Honor Your Values

Your personal and professional lives make up the whole of you. If you put most of your time and energy into one area, you run the risk of leaving the other unfulfilled. This is especially common among high achievers. Some examples of cherished values that often become neglected because of our jobs include spending time with family, taking a weekend off without interruption from emails, phones calls, and text messages, or doing things that connect you to your spirit. These cherished values need to be experienced and expressed. They give us self-worth. Ignoring them for too long can only lead to unhappiness, regardless of how prestigious your profession is, how much money you make, or how successful you think you are.

When you are in a situation where you are trying to bring professional and personal balance into your life, ask yourself the three free-will "will" questions. It will reduce the gap between aspiring to be fulfilled and actually feeling fulfilled, thus reducing the risk of burnout.

1. Will there be personal consequences to the choice I'm making?
2. Will this choice affect others, now and in the future?
3. Will this choice make me happy, now and in the future?

## Seven Common-Sense Success Strategies

Employing these seven Common-Sense Success Strategies will enable you to start each day with an unstoppable attitude to succeed and to keep that motivation going throughout the day -every day- regardless of your circumstances.

1. **Shift into a State of Feeling Good as You Go to Sleep:** Every night as you're getting ready to go to bed, spend a few minutes thinking of all the things that you were grateful for during the day. Then, as soon as you get under the covers, relax, take a few deep breaths, and take a few moments to program your subconscious by repeating affirmations that begin with I am and I deserve. For example, I am capable of handling any challenge that comes my way. I deserve to be happy.
2. **Seize the Day:** Whenever you first rise, set your men-

tal stage and emotional gauge to feel good. Know that the creation of your day is about to begin and that you alone are its creator. Your first decision as creator is to focus on the things that please you and the things that you are grateful for.

3. **Unleash the Power of Your Humor Being:** The initiative and proficiency by which you utilize your sense of humor comes from your Humor Being. Take time every day to find the laughter within you and all around you. The easiest way to do this is to make fun of your own frustration. What's important is not necessarily to be funny in a stressful situation but rather to see the funny in a stressful situation. Or to allow yourself to step away temporarily from stressful moments and seek the laughter in other aspects of your life.
4. **Ignite Your Passion and Enthusiasm:** Enjoyment is the spark that ignites passion and enthusiasm. Get out of bed, plant your feet on the ground, and declare to the entire universe, "I'm going to enjoy this day!" and "I choose to be happy now!" Allow yourself to let go and have a BLAST with this. Whether you're in an up or down period, remind yourself that feeling good and cultivating true happiness (and inner peace) are your top priorities.
5. **Visualize and It Will Materialize:** Visualization is the application of your given gift of imagination to your faith and confidence. You can use it to discover ways to work through tough times, rise above your problems, and see the possibilities of a solution. It can also be used in the process of healing or to manifest a particular desire. Feel the things you desire with your heart and soul. Feel and experience the emotions as if you already have what you want.
6. **Meditate to Motivate:** Meditation is a very powerful activity that connects you to a higher part of yourself. There are many different types of meditation techniques, but the main goal is to train your mind so you can become aware and at peace in your surroundings. Take a few moments throughout the day to quiet and manage your mind through meditation. Notice how much better you feel and how empowered you become.
7. **Power Shift Your Focus:** Nothing in life is permanent, and our success and happiness depend on our ability to ride these waves of change with equanimity. Happy, successful, and optimistic people are not exempt from trials and tribulations. What they all have in common, though, is their uncanny ability to shift their focus to a higher part of themselves. This is called a Power Shift in Focus and it can have a profound effect on how you cope with any challenge and help you understand the great duality of life.

***Motivate This!*** will help you reframe your perspective so that you have the energy, motivation, and positive attitude to succeed despite any circumstances. In short, you will go from "woe is me" to "WOW is me!"

Steve Rizzo, affectionately known as the "Attitude Adjuster," provides the skills organizations need to get to a better place at work and in life. Once a national headliner with opening acts like Drew Carey, Rosie O'Donnell and Dennis Miller, this former stand-up comedian takes motivation and confidence-building to a whole new level.

Rizzo walked away from his stellar success to positively impact others, sharing his blueprint for realizing dreams, achieving personal excellence and attaining professional satisfaction.

The 5th Accountability: Contributing to Your Relationships
*Page 4*

## THE SUMMARY IN BRIEF

***No More Excuses*** is a way of looking at the world—a standard to which we hold ourselves and others accountable. It's a strategy that attracts others to us, because accountability is a universal trait of admired people. ***No More Excuses*** is not a slogan. It is a competitive choice.

***No More Excuses*** is about closing the gap between where we are and where we could be as individuals and as organizations. We can do this by learning and applying, on a personal level, the five critical principles that support an expanding "Accountability Zone" that has us at the very center. Author Sam Silverstein challenges us to expand our Accountability Zone by embracing the Five Accountabilities: right things, new space, process, expectations, and relationships.

Using interviews with Highly Accountable People from all walks of life including corporate CEOs, politicians, professional athletes, educators and more, Silverstein shows how the Five Accountabilities can be used to open doors, take advantage of new opportunities, and expand Accountability Zones in our lives, careers and our organizations.

***No More Excuses*** gives us the tools we need to design and live an excuse-free life.

## IN THIS SUMMARY, YOU WILL LEARN:

- To align your strategic intent with doing your right thing.
- To evaluate and optimize your space for growth.
- How to lead from the future instead of being stuck in the past.

### Introduction

Every meaningful achievement and every great organization starts with an individual who has established a personal Accountability Zone—a place where transparency is high, the values are clear, and the commitment to the Five Accountabilities is unmistakable.

## The 1st Accountability: Doing the Right Things

Be accountable for doing the right things. This means ethical execution of the activities that will support the goals you have chosen for yourself.

### Strategic Intent

Silverstein relates the story of Mount Everest explorer, Ronnie Muhl. Muhl told him, "One of the things that climbing Mt. Everest does for you is help you get very clear about what you should be doing and what you shouldn't be doing. Because so much of what you do has such direct impact on whether you live or die, you have to do the right things, and you have to do that consistently. … You get into the habit of asking yourself, 'If my life depended on the next action I took, how differently would I perform that action?'—because doing the wrong thing can have massive consequences."

How do we know what our own right things are? By asking a critical question, "Is what I am doing right now supporting my own strategic intent?" Strategic intent is nothing more or less than a driving goal, passion, or purpose that we are motivated to pursue at the level of excellence. On the individual level, strategic intent is that which you are personally most committed to making happen in your life at the level of excellence.

John Hannah held the strategic intent to become the best offensive lineman in the National Football League. He achieved that goal. How did he do it? In part, by using a single stance to throw off his opponents about what he was planning. He pursued that goal by studying game films for hours on end so that he could uncover opportunities that didn't look like opportunities to most people. He found his right thing, and that aligned with his personal goal of being the best offensive lineman in the NFL. It was something he was willing to pursue and execute at the level of excellence.

### Know Your Right Thing

We are each accountable for doing the right things consistently in life. If something is not working at the level of excellence for us, that fact is our responsibility and no one else's. That means choosing activities that support our strategic intent.

Once we have settled on a goal that makes sense for us, we must be relentless in pursuing the answer to this question, "What can I do consistently, with a commitment to excellence, that will make it easier to achieve this goal sooner rather than later?" We must pose this question for ourselves as individuals and for any people who are looking to us as a leader.

## The 2nd Accountability: Managing Your Space

We must be accountable to ourselves to create the new space we need to grow and innovate in our own lives, which sometimes means taking space from something else that we're doing. No one else is going to do that for us, and if we don't do it, it won't get done.

Be accountable for managing your space for new opportunities. This means being willing to step away from things that are working, even though they may be familiar, to make room for something that may work better.

Silverstein tells the story of finding space in his closet for a new and much-desired coat given to him by his daughter. "I went to put the big down jacket into my hall closet where all my other coats were stored. Guess what? It wouldn't fit. I began to wonder something. Why hadn't I gotten rid of some of those coats—thrown them away or given them to charity—years ago? The answer was that I had simply gotten used to seeing them each time I opened that closet door. I started pulling out old jackets that I didn't wear anymore and putting them into a big pile to give to a local charity. I just had to clear out the old stuff so that I could make room for the new stuff, the stuff that really mattered to me."

Your personal priorities must be based on your optimum choices, which are not necessarily your most familiar choices. Ask yourself, "If I finished my work by noon and I still had to do something productive for the afternoon, what would that something be?" What would you do with that time that could produce even greater results for you? We are each accountable for asking the questions that allow us to manage our own space.

### Ask What If?

We are accountable to ask what if. We are responsible to explore where we can create space that could be filled with something that could offer a greater yield.

A few years ago, Apple, the dominant player in the personal music player category at the time, dropped its best-selling product, the iPod Mini. Why? Because they were launching a brand-new product that took the iPod experience to another level: the iPod Nano. Most businesses would have been extremely hesitant to simply jettison a profitable product, let alone a category leader, regardless of what they had on the drawing board at the time. Apple was different. Why?

The answer: Apple's business philosophy was based on creating new space. The company's stated operating principle was that they would rather make themselves obsolete than watch the competition do it!

## The 3rd Accountability: Managing the Process

Managing the process is what happens when our strategic intent faces an obstacle, and we still move forward to take creative action toward attaining the goal. Effective people and effective organizations accept full accountability for managing the process rather than let unforeseen obstacles and unanticipated events manage them.

When the lives of the Apollo 13 astronauts were in grave and immediate danger, NASA didn't throw up its collective hands and say, "Well, I guess a successful outcome to this mission just wasn't meant to be." Why are so many people ready to relinquish their accountability for managing the process when they hit obstacles that are far less daunting?

To provide that kind of leadership, we must model the skill of thinking and acting creatively. Following the most familiar set of instructions wouldn't have gotten the Apollo 13 astronauts home safely, and it won't get your team past the many unpredictable challenges they will encounter.

### Examine Near Misses

One big asset in managing the process is close analysis of the phenomenon known as a near miss. The near miss idea applies not only to processes that affect human safety but to every undertaking with the potential to affect our strategic intent. That means we want to know about the sales that were nearly lost, the defective units that were nearly shipped, the P.R. disaster that nearly played out.

If we are truly accountable, we will recognize these events for the blessings in disguise that they are. Near misses tell us where there are likely to be challenges that keep us from realizing our strategic intent.

## The 4th Accountability: Establishing the Right Expectations

Expectations are the targets we set for ourselves. Once we accept them, they determine our actions, our outlook, and our destinies. They create our world.

### Mutual Expectations

Sometimes, when people think of accountability, they think of the traumatic experience of being held accountable to someone else's goal. Silverstein tells a story from his window business.

Competition was squeezing the production timeline. There had to be a better process. He could have mandated the new process. But, he took a different approach and got a better outcome. His team focused on developing shared expectations based on the situation being faced, the true capacities, and the company's strategic intent.

Instead of his holding them accountable for a goal that they had no role in shaping, he asked the team some questions: "What are all the steps in the process of making a window, and how long does each step take?"

Silverstein knew that just setting the target was not enough. He had to give his employees ownership of what was going to happen on the production floor. They had to feel empowered and challenged by the new goal, and they had to decide for themselves that the goal was realistic.

Without shared expectations, the production process had rambled aimlessly. With shared expectations, a quality product was manufactured in a much shorter period of time, and the customers were happier. What allowed them to turn things around? It was the ability to set and act on mutual expectations and the willingness to give the team both the responsibility and the authority they needed to do the job.

### Stretch Your Expectations

We have to be extremely careful with expectations, because if we're not careful, we can train ourselves to build our expectations around what was possible for us. That is very different from what is possible! The present and the future may have entirely different requirements than those faced in the past, and our own capacities may be far greater than we realize.

What are you using to establish your expectations—your goals for yourself and your organization? If it's past prec-

edent, or what you've always been able to do before, your expectations may not reflect your true potential, either as an individual or as an organization.

## The 5th Accountability: Contributing to Your Relationships

The final accountability involves our relationships with others and with the larger world. Success means managing our relationships. This depends entirely on the quality of our contributions.

Stop and think about any great accomplishment or positive event in your life. Whether it was your graduation, a promotion, or starting your own company, you didn't experience it entirely on your own. Whatever that achievement or positive experience was, it involved someone else.

Our accountabilities to manage our relationships come in two big categories. First, we need to contribute to our relationships with family, friends, and business associates. This falls under the heading of *personal accountability*. We also need to contribute to our relationships with the larger world in which we live. This is *social accountability*. The secret of successful relationship management in terms of both personal and social accountability can be summed up in one word: give.

How do you treat the key relationships in your life? Do you look for reasons to give? Or, do you look for reasons to give because you feel you owe someone something? There's a big difference. The kind of giving that supports relationships is the giving that doesn't think about what's gone before or what's likely to come back in return.

### Your Sphere of Contribution

Building relationships is about choices, and the choices should always be based on your values. To get a fix on your values, ask yourself, "How can I best serve this relationship in the short term and the long term?" Posing that question on a consistent basis allows you to create a group of values-based connections—this is your sphere of contribution.

Keep giving to the people in your sphere. Give time, give energy, give thought, and give care. The relationships will grow. Don't worry about what's coming back to you. Get better at giving than anyone else. This is one of the classic secrets of leadership. Someone always has to start digging the well. If you stop and take a look around, you'll realize there are a lot of wells waiting to be dug.

You can begin the job of building a more accountable world by building a more accountable you. That means practicing and implementing what you've learned here about right things, new space, managing the process, establishing expectations, and contributing to relationships. It means reaching the point in your life where you can say, "No More Excuses! I'm not going to make excuses, and I'm not going to buy excuses, and I want the world to know that." Remember that accountability is not a consequence—accountability is your competitive advantage!

Sam Silverstein is founder and CEO of Sam Silverstein Enterprises, Inc., a think tank dedicated to helping companies create an organizational culture that prioritizes and inspires accountability. He is both a sought-after speaker and the author of several books including ***Non-Negotiable*** and ***Making Accountable Decisions***. He is an internationally recognized consultant, coach, and business advisor. A past president of The National Speakers Association, his client list includes such organizations as AFLAC, Lucent Technologies, the National Association of Home Builders, Prudential Insurance Company, and the United States Postal Service.

## THE SUMMARY IN BRIEF

The goal of this book is to teach you how to overcome blind spots and become a more original thinker. The authors call this "non-obvious thinking." In ***Non-Obvious Thinking: How To See What Others Miss***, the argument is made that often the best ideas come from unexpected voices, the non-experts who bring an outsider's perspective.

At a time when social media algorithms fuel deep polarization in our society, our culture is desperate for more non-obvious thinkers. Old solutions for new problems rarely work. We need people who see what others don't, ask questions, and push back against the obvious status quo—people who have the empathy to put themselves in other people's shoes without dismissing alternate perspectives as misguided.

The world needs more non-obvious thinkers. Non-obvious thinkers are the instigators who come up with bold, original ideas that propel all of us forward—and have the courage and determination to turn them into reality. They are the ones who change things for the better. And every country on Earth is hungry for more of them. You can become one. This book will show you how.

## IN THIS EXECUTIVE BOOK SUMMARY:

- Discover how to create space for innovative thinking.
- Learn strategies to uncover hidden insights.
- Explore techniques to focus and sharpen your ideas.
- Transform your ideas by adding a unique twist and an unexpected approach.

## Part One: Create Space

Creating space goes beyond simply producing more time for contemplation. Sometimes it also involves creating the physical space to have new ideas. Or being more productive with the free time you do have so you can invest it in ways that can help you open your mind into unexplored directions and be more receptive to non-obvious insights.

Yes, having more time can help. But cultivating more mental agility to truly benefit from this additional space is the real cornerstone of non-obvious thinking, and it requires more than just reducing clutter or clearing your to-do list. In this section, you will learn proven techniques to create space, starting with something that you do every day but hardly ever think about.

### Start With Breathing

For an instinctual human function fundamental to life, surprising new science suggests we have much to learn about what good breathing truly means. Without proper breathing, our thinking can remain constrained and obvious. Shallow breathing can often lead to shallow thinking too. Breathing may be something we do every day, but most of us have never learned how to do it "right."

Breathing with purpose helps you do everything else with purpose too, which makes it the ideal first step to create the space required for non-obvious thinking to happen.

### Ditch Your Prebuttals

A prebuttal is a counterargument to what someone might say before they ever say it. It is the equivalent of shouting your disagreement with an unspoken idea, effectively shutting down any chance for genuine dialogue.

Prebuttals declare to the world that instead of choosing to listen and think, those who employ them believe that their perspective is the only one that matters.

Prebuttals are a lazy coping mechanism that can lead anyone toward a more narrow-minded perspective.

Human interactions aren't meant to be battlegrounds where you argue until you win. They can be opportunities to understand and see things you might have otherwise missed … if you let them.

### Make Oasis Moments

An oasis moment offers refuge from the usual noise and chaos of the everyday, allowing for reflection and open-mindedness.

Taking a short break from a chaotic situation, even just for a few minutes, can help prevent overstimulation at the wrong moment. In her popular book *Quiet*, author Susan Cain explains that one key difference between introverts and extroverts is the amount of stimulation they deem comfortable. While each of us has different ideal levels of stimulation, we all reach a point when we must regroup and quiet ourselves to recharge.

Finding "oasis moments" where you can slow down and reflect for a few minutes is the ideal way to create space in unusually crowded or busy moments.

### Embrace Danger

Embrace danger and invite friction into your life to heighten your awareness and build resilience.

When we bubble-wrap our world to make it ultra-safe or super-easy (or both), we risk losing the ability to learn from the mistakes we never make.

Embracing opportunities to take risks and make mistakes, on the other hand, opens you to push your own mental and physical boundaries. When we are in this heightened state of awareness from a hazardous situation, we are more likely to see things we otherwise would have ignored.

Taking more chances is not about recklessly careening ourselves down the equivalent of an icy road without a seat belt. Rather, it is about creating more space for experimentation and saying yes to more unfamiliar experiences.

### Change Your Rituals

What you do first in the morning matters—which is why everyone seems to have an opinion about it. Although experts may offer different advice about morning rituals, they seem to align on one suggestion: For any of these daily habits to work, you must stick to them. Consistency is key. Or is it?

To avoid getting stuck in a mental rut, try something different in the first moments of your day. Rituals are often presented as going hand in hand with perseverance and dedication.

While morning rituals do have the potential to evolve into positive habits, they can also get us into a mental rut. As they harden into rigid routines, they can have the effect of setting our brains on autopilot. And when we are in this sort of instinctual mode, we stop thinking. If what we do first in the morning matters, starting every day in the same way can make non-obvious thinking much harder.

Uncovering an insight can afford a new way to understand behaviors, habits, and perspectives.

Here's an alternative way to think about starting your day: What if you treated your morning rituals as a series of experiments? For a week, try drinking chai instead of coffee. Or charge your phone in a different location out of reach from where you sleep.

Instead of starting this morning in automatic mode, you can send a powerful signal to your mind that this is a day to be engaged and receptive to new perspectives and ideas.

### Allow Time Spaciousness

Practicing time spaciousness can help you avoid feeling constantly hurried or pressured by time constraints.

Perhaps the most widely read self-help book ever written, Dale Carnegie's *How to Win Friends and Influence People*, only happened after a literary agent finally convinced a reluctant Carnegie to publish the book after years of persistence. By the time the book came out in 1936, Carnegie had been teaching his signature course on public speaking and human relations for 24 years.

When it debuted, it was an instant hit, going on to sell more than 30 million copies worldwide and becoming one of the bestselling books of all time.

Allowing for more time spaciousness, like being more patient, can be challenging because it demands that we ignore some of the pressure the world puts on our shoulders. Giving yourself more time starts with the mental permission to slow down without feeling that any self-imposed pause is a failure.

## Part Two: Uncover Insights

An insight is a surprising truth that explains why things are the way they are.

Often, insights come from deep listening, research, or analysis. Occasionally they get illustrated in cleverly conceived and effective advertising stunts. But the common starting point for insights is observation.

Uncovering an insight can afford a new way to understand behaviors, habits, and perspectives. In this section, you'll learn techniques to help you make and explore your own interesting observations and transform them into insights, starting with a better technique for listening that will evolve the way you approach any conversation.

### Ask Story Questions

If you could take a master class in asking questions, Jacqui Banaszynski might be the ideal person to lead it. Banaszynski has inspired aspiring journalists for decades with her methods.

One of the many techniques she teaches students is avoiding pre-scripted interview questions. Instead, she suggests a dynamic, circular technique that involves crafting each subsequent question of an interview based on the answer received to the previous question. The goal of this approach is to shift the focus away from looking for answers to eliciting stories instead.

Asking questions that elicit stories rather than answers leads to more interesting observations.

### Hone Your Nunchi

Understanding what others think and feel without asking them directly is a familiar skill in Korean culture. Known as nunchi, this 5,000-year-old form of emotional intelligence is essential to navigating social pressures and sensitive topics.

In Japan, there is a similar concept called kuuki wo yomu, which roughly translates to "reading the air" or being able to discern the unspoken meaning behind what people say and do.

Both philosophies operate on the principle that what is being said or done explicitly doesn't always reflect or match the actual meaning, deeper emotions, or intentions of others. The practice of reading body language is also based on this idea: our physical actions reveal cues about our feelings that our words do not. Similarly, police interrogators have also learned to detect signs of lying by looking for subconscious bodily cues. Unusual rises or falls in vocal tones, non-congruent gestures (like nodding yes while saying no), and covering one's mouth while speaking are all telltale signs someone could be lying.

Being able to gauge the unspoken thoughts, feelings, and intentions of others opens a window into layers of meaning

others often miss. In Western cultures, where directness is both expected and respected, learning to read the air and becoming better at reading body language can also supercharge your ability to uncover insights.

It is like having access to the emotional subtitles of a situation, offering you an understanding and perspective that others who are less attuned will miss.

Some neurodiverse individuals do have difficulty seeing these social cues for reasons outside their control, but even those who struggle to read social cues can improve their social skills through direct instruction.

This neurodiversity can also create perspectives that allow people to see or experience the world in entirely different and nuanced ways that most others are missing.

### Get Your Hands Dirty

When we immerse ourselves in tasks we typically don't do, we can gain a deeper understanding of the processes, intricacies, and challenges involved. We also build empathy for the people who are doing those tasks.

Doing something yourself offers invaluable lessons you may not learn through observation alone.

### Spot Natural Wisdom

Tapping into nature's wisdom can open the door to discovering new insights from unexpected sources around us.

Observing nature's patterns—such as the changing seasons or the life cycles of plants—can offer ideas for how we might deal with or manage change ourselves. Nature can be a profound source of insight and inspiration at every level and often has been in the past.

For example, seeing various animals and their methods of camouflage to hide from predators has inspired a wide range of gear for military uses and outdoor enthusiasts also looking to disguise themselves in the wild.

By cultivating a practice of mindful observation of the natural world, we can harness its wisdom and gain unexpected insights to help solve any challenge we are facing. The key is taking time to notice these easy-to-ignore clues that have been there all along.

### Find the Right Room

Sometimes the best way to uncover insights is to be part of the right room so you can be inspired by the right people.

How to do this? Attend think sessions - or host your own. Expand your professional development by joining a friend to attend an event about their passion which you know little about. Sometimes finding the right room just requires opening a nearby door instead of walking right past it.

### Step Into Others' Shoes

Magazines and immersive experiences offer a uniquely captivating glimpse into the passions of people different from you. Beyond print media, digital media can also offer similar and even more immersive ways to extend your understanding of others.

Virtual reality, in particular, has been lauded as an "empathy engine" thanks to its visceral ability to help users shift their perspective and take on someone else's. Today, users can don a headset to immerse themselves in a virtual experience that simulates being a refugee in a holding camp or a prisoner incarcerated in solitary confinement.

Media and experiences like these can help us understand the lives and circumstances of others in an intensely human and unforgettable way. They pave the way for feeling genuine empathy for their lived experience in a way that reading an article about them or watching a documentary may not.

Being able to step into unfamiliar shoes allows us to think beyond our assumptions, biases, and limitations, opening us up to see what we might miss otherwise.

## Part Three: Focus Your Ideas

Focus also involves a similar process of distillation. Our favorite analogy to describe this is through a term that is usually associated with museums: curation. The art of curation is about discerning what is most meaningful.

In this section, we'll show you how to focus your ideas on what's most important so you can become a speed understander for yourself.

### Identify the Real Problem

Often, the path to non-obvious thinking starts with focusing on solving the right problem.

Building your skills to dig deeper to spot and spend your attention on those masked issues is a skill often associated with consultants. What they do is ask smart questions and learn from the answers to identify the real problem where they should spend their focus.

Learning when to appreciate when an idea is good enough instead of always seeking more options can be the key to focus.

### Discover the Water

A cornerstone of the search for alien life is the "Goldilocks zone," a term first coined more than fifty years ago to describe the theory that every star in the galaxy must have a region where conditions are neither too hot nor too cold—but just right—to sustain liquid water, which is still believed to be a prerequisite for all organic life (as we know it) to exist.

Pinpointing a common element among ideas can help you zero in on the bigger picture.

Seek that common element among your insights to focus on what really matters. That is how you find your water.

### Be A Satisficer

Barry Schwartz's *The Paradox of Choice* stunned the business world by suggesting that too many choices can diminish happiness and cause anxiety. One of the main points of the book is that people are maximizers or satisficers, depending on the situation.

Maximizers "seek and accept only the best," and they also score high on the regret scale. Even when they end up with a decision or outcome that is objectively better, they often struggle to be happy with their choices.

In contrast, satisficers "settle for something that is good enough and don't worry about the possibility that there might be something better." And, interestingly, satisficers are just as discriminating as maximizers.

Learning to appreciate when an idea is good enough instead of always seeking more options can be the key to focus.

Besides helping you avoid decision paralysis, a satisficer mindset allows you to focus on an idea without regrets and devote yourself to fully understanding and developing it - and perhaps seeing something in the process others have missed.

### See the Other Side

There is more than one way to see something; seeing it from a different perspective is the real challenge. In the famous "duck or rabbit" and "Magic Eye" optical illusions, the most important thing is not which side of the optical illusion you see first or even how quickly you can find the hidden message in the Magic Eye, but if you even see it.

And whether you can appreciate the perspective of those who seem certain everyone is just pretending to see something and there is actually nothing there at all.

### Add Constraints

Constraints can force you to be more creative by pushing you to do more with less. As you turn your attention to curating your ideas, consider imposing a few creative constraints of your own. When you are forced to innovate with less, you can focus your thinking in new and interesting ways.

### Use Augmented Creativity

Seeking collaboration partners (human or technical) to enhance your creative output can help you focus. Today, there are many ways to automate creative augmentation using generative artificial intelligence tools (Gen AI).

As Gen AI continues to become a larger part of our daily lives, workplaces, and any new professional tasks, the challenge to integrate and benefit from it in productive and ethical ways will become more urgent.

Yet if you learn to do it well, you will find yourself able to harness a superpower that makes you more productive, creative, and prolific.

## Part Four: Define the Twist

The final stage of our method, defining the twist, is about using your insights to create or imagine something new and original that no one else can or has before. Defining the twist is about taking your ideas in an unexpected direction. The twist is where the magic happens, where non-obvious thinking becomes concrete and actionable.

### Seek Flip Solutions

Flip the rules upside down to intentionally challenge conventional wisdom and do the opposite of what others do.

### Find Option C

Avoiding limited two-option thinking can help you arrive at nuanced, original third options that others are unable to imagine.

### Practice Enigmatology

Developing your ideas with a puzzle maker's mindset allows you to make the known unknown (and irresistible) again. Using enigmatology means drawing inspiration from what is already there and then applying a twist to make it unique and lasting.

### Think Un-Whatever

Defining your thinking and ideas as the opposite of the status quo can successfully offer a twist that sets them apart. Ask yourself, "what is the argument that no one else in my field would ever make?" The answer might lead you in a fascinating, non-obvious direction.

### Mind the Intersections

Examining the intersection of markets and industries might help you spot a non-obvious solution or idea. Seeking intersections can help you define a twist in your thinking and lead to a new combined direction that is better than its components.

### Create Your Argot

The words you use can help your ideas stand out as non-obvious or be dismissed as stale and obvious. Words often enter mainstream culture after starting as an argot - the lingo used by a particular group. Creating your own argot can be a powerful way to define an idea uniquely. This book and our philosophy are also examples of the power of an intentional argot.

Non-Obvious is the word and brand we chose to describe the sort of thinking we want to see more of in the world.

Non-obvious thinking often requires questioning the things we know so we can broaden and shift our perspective. Opening your mind to see other perspectives takes bravery. Choosing to engage with people unlike yourself or seeking information that is outside your usual media diet does too.

More than anything else, this book is about unlocking this sort of mental courage in yourself and using it to see the things that others miss. That's what non-obvious thinkers do, and the more of us there are in the world, the better the future will be.

Rohit Bhargava is on a mission to help the world be more open-minded by teaching others how to be non-obvious thinkers. He is the founder of the Non-Obvious Company and previously spent 15 years leading brand strategy for large global brands while at Leo Burnett and Ogilvy. Ben Dupont is co-Founder and Partner at Chartline Capital Partners venture capital fund that invests in B2B software companies. He co-founded yet2, an Open Innovation company in1999.

## THE SUMMARY IN BRIEF

We live in a world of constant busyness and striving that in myriad ways makes us feel compelled to push, control, and work harder. Too often this leads to exhaustion, burnout, worsening health, and diminished relationships.

***Not Doing: The Art of Turning Struggle into Ease*** describes and gives many examples of the philosophy of Not Doing. It suggests that we go with, rather than against, the flow, working in harmony with the natural energy around us. By effortlessly adapting to the environment, like the river that wends its way from spring to ocean, we can discover a new way of living, working, and succeeding, so that our action can sustain us, our organizations, and our environment for generations to come.

Diana Renner and Steven D'Souza, with more than 30 years' experience between them, consult, coach, facilitate, and train on a diverse range of leadership and management development programs. They wrote Not Doing to propose an antidote to a harmful narrow view about how we get things done.

## IN THIS SUMMARY, YOU WILL LEARN:

- The symptoms of a kind of doing that lead to exhaustion and burnout.
- How our ways of doing are often dysfunctional and counterproductive.
- The negative capabilities that are important to develop.
- How to improve your life with Not Doing—going with rather than against.

Coping with the complexity and uncertainty in the modern world is challenging. We might feel that despite our best efforts, we are

- making no progress in our work
- tempted to find a quick fix or jump into action
- overwhelmed by strong feelings, like anxiety or anger
- excessively busy
- lacking in joy and fulfillment

These are symptoms of a kind of doing that is not tuned in and working with the dynamics and energies of the system of which we are part. When we resist or try to control it, this can lead to exhaustion and the destruction of our health and well-being. To learn and grow, we have to surrender to the currents in the ocean, tap into their energy, and follow their lead. This is called Not Doing, which is not inaction or passivity; It is allowing and going with, rather than against, so it requires less energy and more awareness of the context in which we are working.

## The Dysfunctions of Doing

We live in a get-things-done world. We speed up and jump into action without taking time to think because we are faced with so much that is unknown. Too much busyness can become counterproductive, resulting in exhaustion, ineffectiveness, mistakes, and despair. Burnout symptoms lead the body and emotional system to operate in survival mode and ultimately shut down.

### Why We Do What We Do

In an achievement-oriented culture, the default focus is on the output—how much we are doing rather than what it achieves. Our dysfunctional relationship with doing is shaped by the economic myth—bigger, or more, is better.

When we manage other people, we can feel a strong expectation to provide answers and lead the way with confidence and certainty, even as we question our ability or responsibility to do so. When we feel overburdened, pressured to do more, and unable to ask for help, it is likely that we have taken on too much.

### Negative Capabilities

Waiting, patience, observing, and listening, are based on Not Knowing and Not Doing. Negative capabilities like these have low status in the workplace but are the very capabilities we should foster to make progress and facilitate the space for learning and growth—the space between doing nothing and overdoing.

## Let the Mud Settle

### Pause

Pausing, whether something life forces us to do or a choice we make, is an effective intervention to break momentum and create benefits we would otherwise not enjoy, including space for regrouping and reflecting before reacting.

### Create Space

A leader who creates space allows for different inputs, ideas, and experiences to emerge. The negative capability of creating space can be fostered in the workplace by valuing, creating, holding, and protecting the space between the words we speak, meetings we attend, and projects we manage; by not acting when we feel the urge to step in and fix; and by letting go of the need to control everything.

### Presence

If we can let the mud settle, we can become present to the current, sensing the flow, keenly aware of the forces at work. Presence is a way to engage with, tap into, and benefit from our environment.

### Silence

We are so addicted to busyness that we crowd out the internal voice, the subtle messages, the unconscious stories that we may need to hear. In silence, we can have an increased awareness of our own discomfort, our anger or frustration, our fear or nervousness.

### Solitude

Solitude has many benefits, such as creativity, intimacy, and spirituality. Solitude is about creating the experience of space and freedom, despite the constraints of roles and expectations of the outside world.

### Wait

We do everything we can to evade experiences of passivity and waiting, with our emphasis on activity and control. Rather than avoiding the discomfort, we can wait for new information to evolve, ideas to gestate, opportunities to appear, resources to become available, and relationships to develop.

### Deep Listening

Listening is undervalued and underutilized in the fast-paced world of work. Deep listening is a crucial skill when operating in complex and uncertain environments. In the absence of words and the compulsion to speak, through the quality of our attention and listening, we can have a positive impact on the world around us.

### Boredom

With boredom, as with the blank page that confronts a writer, there is great possibility. The individual allows nothingness to flow through them until new ideas and imagination emerge. If we give our brain space and time away from doing, we make space for ideas to take shape, filter through the noise, and reach our consciousness.

### Sanctuary

We need a sanctuary where we can find some space, protected from all the pressures of the roles we have in our lives.

## Let Go of the Shore

### Step Back

Stepping back temporarily is useful when people expect immediate action or when we feel pressure to solve problems quickly. It allows us to spend more time understanding the problem, collecting further information, and exploring alternative interventions.

### Let Go

Whenever we go through a period of change, or grapple with a complex problem or decision, we come face-to-face with the unknown. At this point, when we find ourselves at the edge, we need to let go of the certain and familiar, trust, and be open to new possibilities.

### Unlearn the Doing Instinct

We need to accept that uncertainty cannot be managed and unlearn the doing instinct. Old habits can be changed by slowing down, pausing, and becoming present to ourselves and our context.

### Get Out of the Way

In embracing Not Doing, we need to have courage to break the rules that get in people's way, regardless of the perceived risks. Leadership is about enabling people to learn and grow without assuming that we know best, without interfering in their process.

### Being There

Just being with someone can have a significant impact, beyond helping, advising, or solving problems. It forms a space—a negative capability—that has the capacity to contain the anxieties of a situation.

### Refrain from Reacting

Refraining from action can at times be the most compassionate thing to do. The danger in rescuing is that it has the potential to place the other person in a position of dependence, getting in thse way of learning and interfering in a process we have no way of fully understanding.

### Yield to Overcome

When someone is attacking us with words, how we stand, listen, and respond is key. Meeting force with force is not effective. If we are aggressive in the workplace, others will react by resisting our suggestions. We can relax in tough situations and yield like water, finding a different way to flow around the stone.

### Say No

For most of us, the ability to say no doesn't come naturally, especially if we value being helpful or being the go-to person or we associate meeting expectations with achievement and success. We need to learn what lies behind our impulse to say yes to learn how to say no respectfully and confidently.

### Less Is More

A minimalist approach is essential to working in complex systems characterized by flux and unpredictability, no right answers, emergent patterns, and many competing ideas. Attempts to make big changes in the workplace often result in unintended consequences that are negative, whereas small changes will accomplish more positive results.

## The River Knows its Destination

### Follow the Current

Following the current allows us to trust the creative process to unfold as a journey, recognizing that there may be several twists and turns along the way. Paradoxically, by not being attached to our goals, by holding them lightly, and focusing instead on the process, we can yield more effective, successful, and enduring results.

### Wandering

If we trust in the river's course, we can let go of the need to reach a destination and replace fear and control with curiosity. The less travelled pathway with its surprising twists and unexpected vistas may lead to more insights than a known highway if we are open to the learnings along the way.

### Let Things Emerge

When we are confronted with challenges and blockages, we can simply accept them as the river accepts the rocks and boulders in its way. We can observe the terrain, the natural patterns in our environment, becoming the soft around the hard, turning obstacles into opportunities.

### Active Surrender

In a world that values pushing through and working harder to get things done, what may enable us to be more effective is to actively surrender to what is happening right now, rather than resist or use more effort than required.

### Stillness within Action

In order to experience stillness, it isn't always necessary to stop. Not Doing is about carrying stillness within as we go about our activities. Not Doing is not inactivity or passivity. It is following the natural pace in our environment.

### Embodied Action

In our culture, which privileges the rational over the somatic and emotional, many of us live disembodied lives. Reading the environment is a key skill in dealing with complex situations, and it all starts with being able to read one's own feelings and sensations.

### Build Creative Capacity

Following your curiosity and letting things emerge may allow you to tap into the creative dynamic at the heart of the doing–Not Doing continuum.

### Be Water

In a world that is dynamic and constantly changing, we need to be less rigid and more adaptive and flexible, responding to the changes we see around us. Like water, which takes the shape of the cup it is poured into, we need to adapt to our environment without becoming set in our ways.

### Wu Wei

Wu Wei literally translates as non-doing. It means not inaction but effortlessness and spontaneous action, without struggle or excess effort, tuning in and taking time to follow our energy, not just our will.

### Do Nothing

What would our organizations be like if we took time to discovery where things flourish and under what conditions? What if we removed things that were necessary? What happens when we step back from our need to control everything and live in harmony with the natural world?

In the context of Not Doing, beautiful action is the culmination of all the negative capabilities explored in the book. It means that we pay attention to how we live and interact with the world and people around us. It is a call to action, one that is more purposeful and aligned with the natural flow of life. It encourages us to do right by the hand and by the people.

Diana Renner is a leadership educator and award-winning author. As the director and co-founder of the Uncharted Leadership Institute she helps individuals and organizations navigate uncertainty and make progress on complex challenges. She has written two books with co-author, Steven D'Souza, ***Not Knowing*** and ***Not Doing***.

Steven D'Souza is an international educator with international experience in the fields of HR, leadership, and talent management, diversity and organizational development. He is an experienced executive coach, working frequently with senior teams including at the CEO level.

### What to Say at a Moment's Notice

# OFF THE CUFF

## THE SUMMARY IN BRIEF

*The phrase "off the cuff" is believed to have originated with waiters who were among the first people to use their shirt cuffs as notepads to take orders or to calculate the tab. Hollywood directors were the next perpetrators of the practice, carrying notes to actors about the scene on their shirt sleeves. Impromptu speaking has likewise become known as off the cuff. The speaker is pictured as hurriedly jotting down notes on his starched shirt cuff during the meal and delivering them afterward from an arm's length note card.*

*About 99 percent of what people say is impromptu, which is defined as without preparation or advance thought. Virtually everything that people say — after-dinner speeches, discussions, product announcements, answers to questions during job interviews, new business pitches, media interviews, and arguments — is off the cuff.*

*Now, to help readers build up their confidence when asked to just "say a few words," writer and communications coach Anne Cooper Ready offers them a useful combination of encouragement and preparation to face impromptu speaking in* Off the Cuff. *In an easy-to-reference guidebook that helps readers put words together that motivate, direct, entertain, and get a point across, Ready teaches both the basic and advanced skills that are needed to solve communication challenges ranging from apologies and meetings to introductions and rallying the troops.*

*Delivering ways to speak easily, effectively and fearlessly,* Off the Cuff *provides readers with tips, tactics and strategies for successfully navigating through situations when communication skills are crucial, and helps them prepare for those moments when time to prepare is at a minimum.*

## What You'll Learn In This Summary

- ✓ How to face Americans' number one fear.
- ✓ How to display self-confidence when addressing an audience.
- ✓ How to keep it simple when communicating.
- ✓ The best ways to market yourself with proper business etiquette.
- ✓ The best things to say and the best times to say them.
- ✓ How to master job interviews, conferences, panels and workshops.

# OFF THE CUFF

**by Anne Cooper Ready**

## — THE *COMPLETE* SUMMARY

## The Cs of Communication

Communication is the third C after chemistry and compatibility in any relationship. Establishing a command of all the Cs of communication will change your relationships and the life that you build around them.

- **Concise.** Audiences appreciate respect for their time and will pay more attention when the end is in sight. It's better to let an audience out early than to drag it out.
- **Conversational.** The most effective way to plug a product, service or book is to mention it, by name, in conversation. Practice dropping your mention into conversation easily and naturally, without overdoing it.
- **Careful.** Good or bad, sound bites seem to live forever. Sum up the essence of your purpose in a sound bite you can deliver in a simple seven-second phrase.
- **Candid.** Tactful candor and simple honesty are very refreshing in today's world of bluffing and hype. Speak to audiences as you would a friend with a big mouth: with careful candor, circumspect trust, and respect.
- **Cogent.** Begin by deciding what opinion you want changed or action you want taken by your presentation, and go for it by being forceful and to the point.
- **Convincing.** Show respect for your audience with a logical presentation. The most compelling speech is one that makes sense.

### *Radiate Confidence*

- **Confident.** Fake it till you make it. Be prepared and rise to the occasion. Smile and radiate confidence.
- **Clear.** Logical flow can help you make your case. Test your logic on friends to make sure it stands up.
- **Compassionate.** Show your passion, compassion, warmth and humor. Radiate confidence and energy.
- **Cool, Calm and Collected.** Keep cool. Stay calm and collected. Bottom-line each point, one at a time.
- **Correct.** Check your facts. Acknowledge what you know and don't try to answer hypothetical questions.
- **Compelling.** Your communication should make people care. Touch your audience with your voice.
- **Consistent.** Consistency of message is crucial. Make your habits, behaviors and conversation consistent with your values.
- **Credible.** You need to be credible to be trustworthy. Establish credibility by name-dropping as background.
- **Crisis Conscious.** In a crisis situation answer questions with an acknowledgement of compassion, the bottom line in a sound bite, appropriate history, repetition of the sound bite, and the next steps you will take.
- **Controversial.** If controversy serves your purpose, use it. However, you should not be the only one who is served.
- **Charismatic.** Make everyone feel good about being themselves. From a handshake to handing over your business card, look at the color of their eyes. Once you've registered the color of the eyes that are being introduced to you, you've kept enough direct eye contact to be considered charismatic. ■

## Mastering the Moment

Imagine the pressure on an evangelist or president facing the flock during a breaking sex scandal. Integrity and authenticity go a long way in establishing your credibility, because the lens doesn't lie, whether it is in the eyes of your audience or on the front of a camera.

Lee Iacocca said that being honest is the best foundation — to be clear and candid about what must be accomplished and what sacrifices may be involved. And in the case of a serious problem, you cannot do much to put out a brush fire if you first insist there isn't one.

If you are in a relatively formal role in your professional life, trying to be folksy on a platform can be risky. You can also be a fish out of water if you are nat-

## Mastering the Moment

*(continued from page 2)*

urally casual and try to be formal because this is an "important" occasion. If no one ever laughs at your jokes, don't try to reverse the trend while standing before an audience. Be yourself — and be the best you can be at being you.

### *Master the Medium*

Know what presentation media you'll be using and how to handle it well. Go to the speech site days before and be very early on the day of the event to get the lay of the land and take care of logistics. You will be the one who looks bad when the monitor doesn't work, a microphone doesn't project, or a podium light flickers. Don't leave anything to chance or to somebody else. It is better to use an old-fashioned slide projector or even an overhead with ease than to fumble with a computer-based presentation you don't know how to operate.

If your medium is the media, offer to be a media resource as an expert in your field. Cultivate media contacts. Make yourself available for background or a sound bite when there's a breaking story.

To successfully master the moment, you must master your material. Adapt it to the level of the audience and have it organized in a way that will lead your audience to respond. When the material is second nature to you, this allows you the freedom to work the room and the audience. Keep your facts and processes in order.

Master the message by keeping whatever you are presenting simple and organized around a single idea, preferably a provocative, profound or at least cogent thought, to make it worth the audience's time. Presentations with several competing ideas only compete for the attention of an audience that is no longer clear about what is important. ■

# Business Etiquette

Recent history is littered with bodies that were brought down for arrogance or lack of humility. Sadly, arrogance almost always seems to be a front that masks an otherwise poor self-image. It inspires followers to root and, sometimes even vote, for a downfall, or at least a comeuppance.

### *Shaking Hands*

Conduct yourself properly. Those in business favor a simple handshake — not pulverizing, but firm. Save the two-hand handshake and air kiss for personal encounters or old friends. An executive may reach over and shake hands from behind his or her desk, but it is more gracious and welcoming when he or she comes around to greet the visitor. Appropriate greetings include "I am pleased to meet you" and "How do you do?" reinforced by a sincere smile and direct eye contact.

Here are some tips for association mixers, cocktail parties and networking events:

- **Arrive early, before the cliques are formed and begin your own conversation with new people as they arrive, informally playing the role of the host.**
- **Include others in your conversation to give them a sense of comfort and gratitude.**
- **Find or create an unofficial role for yourself (name-card maker, guest-list monitor, pollster) that gives you an icebreaker.**
- **Open a conversation with a genuine compliment that is appropriate for a business, rather than a personal, situation.**

### *Areas for Compliments*

In other than business casual situations, men's ties and women's jewelry are still their personal statements and thus, are usually safe areas for compliments. Avoid commenting on other items of clothing, hair, or eye color, particularly if you are the opposite sex. It seems too personal and may be read as inappropriate flirtation.

Tailor your practice to the culture and country where you are. Practicing a "less is more" approach is wise and prudent to creating a good business environment.

The best etiquette is following a version of the Golden Rule, do unto others as they would have you do unto them. ■

## Trade Show Etiquette
