## Ask

### Tap Into the Hidden Wisdom of People All Around You for Unexpected Breakthroughs in Leadership and Life

*By Jeff Wetzler*

**Jeff Wetzler** has been on a quarter-century quest to transform learning opportunities and unlock human potential. Blending a unique set of leadership experiences in the fields of business and education, he's pursued this quest as an international management consultant to executives in Fortune 500 corporations, as Chief Learning Officer at Teach For America, and currently, as co-CEO of Transcend, a nationally recognized education innovation organization. Jeff earned a Doctorate in Adult Learning and Leadership from Columbia University and a Bachelor's in Psychology from Brown University. He is an Aspen Global Leadership Fellow and an Edmund Hillary Fellow.

*A Book Review by Soundview*

# Find Out What Others Really Think, Know, and Feel

In his book, ***Ask: Tap Into the Hidden Wisdom of People All Around You for Unexpected Breakthroughs in Leadership and Life***, author Jeff Wetzler wants to open up, for his readers, the world that becomes available once you start asking questions. He is convinced that in the mere asking of the right questions of the right people, you can open up vast swaths of information that otherwise would be invisible to you. While he addresses his book primarily to people working in business, he maintains that the importance of questions is not just relegated to the world of work. The principles he lays out can be generalized to any area of life where a person wants to recognize pitfalls and weaknesses and unlock strengths and new opportunities. He breaks his book up into three parts. The first section deals with problems people face in relationships, particularly when it comes to the asking of questions. The second part covers what he calls, "The *Ask* Approach," and his final section teaches his reader how to build this approach into both their leadership roles and their personal lives.

After discussing how many people wish they could read the minds around them, Wetzler states that "people overestimate their ability to make accurate inferences about what others around them are really feeling or thinking at a given moment." Unfortunately, most of our inferences, he maintains, are incorrect. This is in part because both body language and a person's empathy can fail to provide adequate information into the thoughts and feelings of others. Wetzler maintains that the only accurate way to determine what another person is thinking is through asking them directly. This is not always easy. Wetzler believes difficulties arise because people have not been properly taught how to ask people the questions they need answers to. "Couple this dearth of knowledge," he writes, "with social norms that emphasize self-reliance, competition, and conflict avoidance, and you begin to understand why so many of us avoid asking." There is hope, however, as Wetzler believes that we will all be better off once people learn to ask quality questions, and this skill is, indeed, learnable.

## The Invisible Problem

Wetzler opens each of his chapters with an essential question the chapter attempts to answer. In Chapter 1, he asks, "What do you most need to know that people are least likely to tell you?" He tells the story of when he worked for Teach For America when their Northwest Summer Institute suddenly faced major challenges. This was a drastic situation because this training is what would prepare large numbers of teachers to face students come fall. Despite the fact that problems had been arising for quite awhile, nobody told Wetzler of the problems for months. While the problems with the Summer Institute were able to be overcome, Wetzler was left realizing that even though he had asked many questions, whatever he had done did not create an environment that was conducive to his colleagues telling him the truth. Instead, they attempted to solve problems on their own without his help. He knew something needed to change.

Wetzler then goes on to write about a tactic he learned called "the two-column case." When people use this technique, they create two columns on a sheet of paper. In the right column, they write down what was actually said during a conversation. In the left column, they then "write the unspoken thoughts and feelings they experienced throughout the interaction." This exercise helps people realize how much they are holding back from saying, and when extrapolated to the other person, can help a listener realize how much a speaker may be withholding in a conversation. These thoughts and feelings are important. Wetzler explains how it is our problem when others hold back from sharing because our decision-making and relationships suffer because of the omissions. Wetzler shares four categories of information that people generally withhold:

1. "Their struggles and frustrations…and what help they need
2. What they really believe or feel about an issue…and where their views come from
3. Their honest feedback for you…and suggestions for how you can improve
4. Their most audacious ideas and dreams…which they fear might sound crazy."

## Barriers to Sharing

Wetzler's second chapter attempts to answer the question, "why don't most people tell you what's most important for you to find out?" Wetzler believes there are four primary reasons why people withhold information: they're worried about the impact their words could have on themselves or others, they do not have the energy to deal with the answer, they do not believe their opinions or feelings will be valued, and they do not have the words required to properly share their feelings.

Wetzler believes that the number one reason people hold back sharing is because "they are worried about the impact of sharing." These impacts can be different in various contexts. For example, in some cultures, people are quite concerned with saving face, and as such, they may be concerned with embarrassing you with their insights. While trust can help overcome some of this reluctance, sometimes a closer relationship can actually make disclosure more difficult because the stakes are higher for the person trying to share. Another problem is one of estimation. People often believe they will cause more harm than they actually will with a disclosure while simultaneously underestimating the benefits they stand to reap.

While people fail to disclose information because they worry about the effects on the other person, some people fail to disclose information because they fear they will reap negative repercussions themselves. These possible repercussions include possible fears of both judgment and rejection, and people are susceptible to these fears in all areas of their lives. A fear of rejection also does not need to stem from personal rejection. If a person sees a colleague or friend get rejected for sharing an opinion, they likely will not feel comfortable sharing their own ideas, particularly if they are not high in the organizational hierarchy.

The next barrier Wetzler discusses is people who have difficulty putting their thoughts into words. This can happen because people think more quickly than they can speak, they do not have the necessary communication skills, and they worry the words they can find are not appropriate. The latter problem frequently has to do with emotional speech that people may have been conditioned to keep inside.

Wetzler's fourth barrier is a "lack of time or energy." This occurs when people know that providing insight into a situation will inevitably draw them more deeply into the problem than they have the energy to deal with. Wetzler notices this tendency in himself at times, and when he does, he tells those around him that he really is interested in what they have to say and that they have full permission to stop him from what he is doing. He tells his people that he will provide them with all of the attention he can give them.

A final barrier to communication occurs when people feel their opinions are not valued. This does not have to be an accurate assessment in order for it to be a powerfully prohibiting one. People can determine that you do not want to listen based upon prior experiences with you or even with experiences with people in a similar role to you. When people try to share and nothing changes, it can lead to people losing hope. Despite the seriousness of the barriers presented, Wetzler maintains, "Many of the barriers described in this chapter can be immediately overcome simply by asking."

## Choosing Curiosity

There are five key pillars to Wetzler's Ask Approach. These include choosing curiosity, making it safe, posing quality questions, learning to listen, and reflecting. When it comes to choosing curiosity, Wetzler asks, "How can you awaken your curiosity to make new discoveries and unexpected connections?" Unfortunately in conversation, people frequently already believe they know what the other person will say, and this stops conversation before it can even start. Curiosity, described as a drive state, can help

> *There are three types of questions that Wetzler suggests his reader avoid: 'clumsy questions, sneaky questions, and attack questions."*

overcome this. There are multiple different types of curiosity, and Wetzler is concerned with connective curiosity which "is a desire to understand more about the thoughts, experiences, and feelings of other people." This type of curiosity helps both the speaker and the listener because when the listener feels that what they say is taken seriously, they actually experience an increase in a desire to divulge information. For Wetzler, curiosity is a choice rather than an inherent trait, and it is a choice anyone can choose.

One problem people frequently face is they choose one aspect of a person's statement to focus on and then they draw conclusions and tell stories based upon that piece of information. All of this, of course, is subject to confirmation bias or the tendency people have to focus on information that confirms what they already believe while ignoring other information that could point them in other directions. In order to overcome this tendency to move quickly from a situation to a story, it is important to insert curiosity at different steps in the listening process. This can happen when a person asks questions of themselves at each step of the process, leaving themselves open to see how their conclusions or story may not be accurate. It is also important to keep in mind that there is a lot of information that we cannot access without honest answers to questions, and this includes "others' true intentions and motivations."

## Cultivating Safety

Next Wetzler turns his attention to figuring out how to make other people feel more safe in sharing. This is frequently an issue when there are differentials in power that can arise from age, sex position, race, or any other number of factors. Wetzler states, "sometimes being asked to share, particularly in a professional context, feels less like an invitation and more like a social threat." In these situations, it is important to consider the questions asked and the ways they are asked. People must feel psychologically safe in order to share, and studies have shown that businesses and organizations can sink or soar based upon how free people at different levels feel in expressing what it is they have to say.

Despite the importance of psychological safety, Wetzler affirms that this is not absolutely achievable in a work environment where there is always some level of risk in speaking out. To make speaking out safer for people, Wetzler proposes the safety cycle. The first step of this cycle involves creating connections. This can be done through sharing important stories as well as through being vulnerable oneself. Further, it is important to find both an appropriate time and place to have a meaningful discussion. This should be a time and a place conducive to the person you are asking questions of. Next, opening up yourself is important. This happens when the person looking for information acknowledges that there are insights that the other person has that they, themselves, are not privy to. Sometimes question askers are reluctant to share too much themselves because their words and opinions could bias the other person, and it takes more time. Still, this is an important step in building psychological safety. Finally, the third step in the safety cycle is radiating resilience. This becomes possible when topics are made discussable because the conversational participants acknowledge that there are things they may have to say that others do not want to hear. In addition, it is important for the listener to try to react calmly and appropriately when people share information they do not want to hear.

## Asking and Listening

Not all questions are equally helpful, and Wetzler's Chapter 6 helps his reader tap into the most important questions to ask. Wetzler acknowledges the truth that many people have been made to feel ashamed for questions they have asked, and this can make them more reluctant to ask questions in the future. There are three types of questions that Wetzler suggests his reader avoid: "clumsy questions, sneaky questions, and attack questions." The first set can be awkwardly worded questions that simply do not get the needed information because they fail to clearly ask for it. Sneaky questions, on the other hand, do not try to elicit information but instead are "designed to influence, convince, or maneuver the other person." Attack questions go further and attempt to actually hurt the other person. Clearly none of these questions will elicit the answers desired. Helpful questions, Wetzler states, contain the following criteria: "They signal true curiosity…They are clear and direct…They invite honesty…They tap into the other person's full story… [and] They create mutual benefit." Good questions help a listener understand more clearly all aspects of what it is the other party thinks and feels in relation to the issue at hand.

Wetzler moves on to ask "How can you hear what someone is really trying to tell you?" Here, Wetzler wants his reader to listen to all that the other person has to say, and this involves listening to their thoughts, feelings, and actions. Many people confuse the concept of listening with hearing. True listening is a far more active pursuit than merely just hearing what the other person has to say. When people listen in order to learn, they pay attention to all it is the other person is saying. A big part of this is getting rid of distractions, both internal and external. In addition, it requires a listener to be quiet so the other person has ample opportunity to speak. One effective technique Wetzler shares is sometimes referred to as the looping technique. With this technique, a listener paraphrases back what it is they heard the speaker say and then ask whether their interpretation was

accurate. This helps a listener know that what he or she has said is valued, and it also ensures that the listener really understood what it was that was being said.

## Responding and Reconnecting

In his final section on the *Ask* Approach, Wetzler turns to action as he states that "The hardest part of learning from others isn't asking the questions, or even listening to the answers. It's deciding what to do with what we hear." He believes that when given the gift of thoughtful answers, it is a questioner's responsibility to both reflect on what was said and to go back and reconnect with the giver of the answers. These steps are important for making sure that we understand what is most important and also in ensuring that communication is enhanced in the future rather than shut down. All of this does not mean that a person has to act on every bit of information they are given or accept as truth that which they know to be false. Rather, the listener needs to "separate the wheat from the chaff" and then respond in a way which makes the other party feel respected and appreciated.

Wetzler recommends that the first step in the sifting process is to record what was said. This "provides clarity and prevents you from second-guessing or immediately interpreting what you heard." It is after this first step is done that a person can then mine what they have heard for nuggets of value. Wetzler recommends a three turn approach. In the first turn, a listener is tasked with reflecting upon their own story about the situation at hand. On the second turn, they are tasked with reflecting on next steps, and on the third turn, they should focus on their own "stuff" to determine if there are deeper factors at play. Wetzler offers numerous tools to aid in reflection including journaling, conversation, coaching, and therapy, all of which can help a person delve deeper when performing these three turns.

Once the reflection is complete, it is time to turn to reconnecting in a way that helps to enable future sharing. Wetzler recommends starting this process with honest gratitude for what has been shared. Then, it is important to share the impact that the other party's words and insights had on the issue at hand. This includes sharing what you heard from the speaker so they know that their words and insights were taken seriously. Finally, it is helpful to let the other party know what actions are being considered because of the insights they shared. Because you may not choose to take all of the advice or act on all of the insights provided, it becomes important to explain the decision-making process to the other party as a form of reconnection after this process.

## Broader Context

Throughout his book, Wetzler walks his reader through different steps to take in order to become better question askers. He includes explorations of numerous real world situations in which the asking of questions benefited either himself or other people, demonstrating real world applications for his principles. While much of the book focuses on individuals, his advice and principles are not just relegated to individual leaders. These tactics are meant to be used throughout all levels of organizations, and to emphasize this, one of his later chapters focuses specifically on how to "unlock the collective genius of your team." In addition, he includes a chapter on harnessing these techniques in education. After all, children are natural question askers until this tendency is conditioned out of them by forces wanting to tell children what to think rather than opening up their own potential for discovery on their own and through others. Because of this, he provides guidelines for working with children that help to enhance this question-asking capability in them while it is still present.

Wetzler believes in the power of people to learn from other people. This power is most hindered by the reluctance people have to ask good questions. This, in turn, leads others to shut down, and knowledge and insights become siloed. Asking good questions is a skill, and it is this skill that Wetzler helps his reader develop in his book.

# 12 Rules for Life

Jordan Peterson

Book Snaps™
In-depth reviews of best-selling business books.

## 12 Rules for Life

**An Antidote to Chaos**

*By Jordan Peterson*

Jordan Peterson has taught mythology to lawyers, doctors and business people, consulted for the UN Secretary General, helped his clinical clients manage depression, obsessive-compulsive disorder, anxiety, and schizophrenia, served as an adviser to senior partners of major Canadian law firms, and lectured extensively in North America and Europe. With his students and colleagues at Harvard and the University of Toronto, Dr. Peterson has published over a hundred scientific papers, transforming the modern understanding of personality, while his book Maps of Meaning: The Architecture of Belief revolutionized the psychology of religion.

*A Book Review by Soundview*

# Not Your Ordinary Self-Help Book

Jordan Peterson's book, ***12 Rules for Life: An Antidote to Chaos*** is listed as a self-help book, but it goes beyond the ordinary prescriptions and how-to's of the traditional self-help book. Peterson provides his readers with rules that he believes will help them successfully live at the point where chaos and order are in proper proportion to each other, and he explains and defends his rules by employing deep dives into psychology, philosophy, and theology. He explores some of the great thinkers of all time in his chapters that mainly read as stand alone essays into his philosophy of life.

## Chaos and Order

In his first rule, "Stand Up Straight with Your Shoulders Back," Peterson discusses evolution and to explain how those characteristics that are deemed ideal are perpetuated. Evolution does not move towards a fixed point, however, because as society changes, so does the list of traits that are deemed desirable. Peterson believes that hierarchies have been around for half a billion years. When people experience defeat in this hierarchy, they have lower levels of serotonin which leads to more illness and less confidence among other things. When they experience success, their serotonin goes up as does their health and resiliency. Those on the low end of the hierarchy, he says, need to be constantly vigilant, and often they have to use the energy that ideally would be spent preparing for the future in dealing with current crises.

Peterson says that our habits can mess up our systems. This happens frequently through irregular sleep patterns and poor nutrition. Through situations like these, the individual becomes engaged in a negative feedback loop. Peterson says that when a person slumps, other people assign them less value in the social hierarchy. The individual's brain will pick up on that and will then produce less serotonin to reflect this lower status in society.

In his second rule. Peterson discusses chaos and order. Later in the book, he will expand upon this further and explain that order is predictability and chaos is what we do not know. Without chaos, growth cannot occur, but without order, people are not able to function properly within their lives. Because of this, the thriving

of human beings relies upon a balance of both order and chaos. Peterson starts this chapter by discussing how people are frequently adamant about making sure their pets receive medications they need, but people frequently do not take the medicine they need themselves. He mentions extreme cases where people need anti-rejection medications after life saving transplants but fail to take these medications. Peterson says that both the extreme cases as well as the more pedestrian ones occur because people see the evil within themselves, within all humanity, and deem themselves undeserving. People, he says, depend upon each other. As such, they have a responsibility to take care of themselves. As such, this second rule is that people should treat themselves like they treat people they are tasked with helping.

## Oneself and Others

In rule three, Peterson considers the people we spend time with. He explains that when a low achiever joins a group, the group does not raise up the low achiever. Rather, the whole group lowers itself. Because of this, it is important for people to decide who to spend time with. It is hard to spend time with high achieving respectable people because they expect something from those around them. Peterson says, "It's a good thing, not a selfish thing, to choose people who are good for you."

In rule four, Peterson relays the commonly shared advice to "Compare yourself to who you were yesterday, not to who someone else is today." Peterson shares how it is part of the act of maturing for a person to compare oneself to the dictates of parents and to those around them, but part of maturing into adulthood is learning to judge for oneself based upon one's own criterion. People are harsh critics, however. Peterson advises his reader to broaden the perspective of what it is they want. Instead of looking towards one, possibly unachievable, goal that will make everything better, he encourages his reader to instead look for what will make life better.

When a person broadens their perspective, they also broaden the possibilities they see. He advises his reader to look around and decide what one thing they could do that would make life better. If the person is not willing to do such a thing, then he recommends continuing to set the bar lower until the individual finds something that they are, indeed, willing to do in order to improve their life. He then advises his reader to reward themselves. By continuously doing this, a person can dramatically improve their life over time.

In rule five, Peterson encourages parents not to let their children do anything that makes the parent dislike them. This is not shared from the perspective of the selfish parent who wishes to have children always be pleasing and easy. Rather, it requires parents to actively discipline and mold their children's behavior into that which is acceptable by others. This, Peterson believes, should be a crucial aim for parents because children who have not been properly socialized will get rejected by society. Children will reap the consequences of their negative behavior out in the world, and poor and annoying behavior, he says, is better dealt with by parents who love their children rather than by the world which does not. Peterson believes that being a parent is not the same as being a friend because the parenting relationship is a greater relationship. Parents, he says, need to stop being afraid of being rejected by their children and instead do what is best for them by providing proper guidance and discipline when appropriate.

## Focusing Within

Chapter six begins with a discussion of the Columbine killers and their belief that the human race ought to be wiped out. Peterson uses this duo to advance his next rule that people ought to focus on their own lives before they criticize the world at large. He discusses the four approaches Tolstoy mentioned to deal with a bleak world of suffering. These include remaining ignorant of the problem, overindulging in pleasure, continuing to live a meaningless existence, or destroying life. While Peterson believes people can be motivated to such extremes as mass murder through their confrontation with evil and suffering, they can also choose to make good out of it. An example of the possibility of this is that some abused children grow up to be abusers, but most rise above abuse and stop the cycle. Peterson says, "That's a testament to the genuine dominance of good over evil in the human heart." Peterson urges his reader, in the face of personal and societal suffering, to look within and clean up their own life. He says to "Stop doing what you know to be wrong." This determination to clean up one's own life can help a person start to see the possibility for good in the world.

Rule seven is entitled, "Pursue What is Meaningful (Now What is Expedient.)" In this chapter, Peterson discusses the benefits of postponing gratification for the greater good. Small sacrifices can lead to small gains, but Peterson encourages looking for the greatest sacrifice that can cause the greatest gain. People's sacrifices need to be accepted and seen. "Satan," Peterson says, "embodies the refusal of sacrifice." Jesus, Peterson then points out, refused to sacrifice truth despite the repeated temptation by Satan in the desert. Jesus, instead, chose the greater good. Jesus "refuses to dispense with His responsibility for the events of His own life." Peterson believes it is important to prize what one can achieve in the future through sacrifice over the sacrifices that need to be made in order to get there.

## Searching for Truth and Understanding

In rule eight, Peterson urges truth over lies. He discusses a time when he had a landlord who was an alcoholic. The landlord would arrive at Peterson's home in the middle of the night trying to sell Peterson items like toasters in order to get money to purchase more alcohol. Peterson and his wife realized they could not keep enabling the man, and when the man asked Peterson why he would not purchase his items, Peterson told him the truth. The man respected Peterson for telling the truth, and no serious altercation occurred. Peterson believes that the human mind has an immense capacity for self-deception, and people must be ruthless in their attempts to pursue what is actually true. He believes that if people become attentive to their words and actions, they will ultimately start to feel a disparity

> Listening is not the same thing as giving advice."

when the two do not match, and this can be used to help a person actually discover what the truth really is. "If your life is not what it could be, try telling the truth."

In rule nine, Peterson encourages readers to truly listen to others and to believe that others have something to teach. Listening, he says, is not the same thing as giving advice. Peterson writes about how people think through their words, and this process is important in helping people to understand the world. When counseling clients, Peterson, unlike Freudians, looks at his clients because he believes it is important for them to see his physical reactions even when he does not say anything. This is one way that a listener can give an honest opinion, and people need the opinions of other people at times.

One specific way that Peterson recommends people listen to each other is to summarize what the person has said after they speak before proceeding to share one's own ideas. Then if the summary is inaccurate or deficient, the original speaker and the listener can work together until understanding occurs. This helps people truly listen. Sometimes it can take awhile to understand what a person is really saying because they are working it out themselves as they speak. True listening can lead to transformation.

In rule ten, Peterson tells his readers to be precise in their speech. This is because precision is necessary for growth. When people see objects, they see their usefulness. For example, when a person sees a car, they do not see all the different parts that make it run. Instead they see it as an object to get them from one place to another. This changes, however, when the car breaks down. Then this lack of understanding of the car leads one to feel the chaos of life. This is similar to how the victim of infidelity in a relationship feels. Once confronted with the truth, everything feels chaotic because the previously ordered world, including their own self, gets called into question. Peterson says that "Everything clarified and articulated becomes visible." To see a problem clearly is to admit that it exists. Peterson says, "If you shirk the responsibility of confronting the unexpected even when it appears in manageable doses, reality itself will become unsustainably disorganized and chaotic." Confronting problems with clear language can help people move forward.

## Power and Vulnerability

Peterson believes that children need to be able to do dangerous things, and he writes about this in rule eleven, and he writes about what he sees are the problems with a society that denigrates masculinity. He discusses the negative effects on young men when they are told that they are causing harm because they are the "beneficiaries of the patriarchy," and he mentions how his son told him that everyone knows girls do better in school. He explains how boys are falling behind and are making up less and less of a percentage of students in many higher education disciplines. This is not good for men, but it is also not good for women. Most women, he says, prefer to marry a man who is at least their equal in terms of education and success. When the percentage of men attaining those levels of success declines, successful women have fewer partners to choose from.

Peterson admits that any hierarchy is necessarily oppressive, but he does not believe that the patriarchal hierarchy was created solely by men to enhance the prospects of other men because women participated in such a system through the raising of boys who then participate in the system. Some men did and do use patriarchal systems in unjust attempts to gain and maintain power, but most men try to protect their wives and their children rather than overpower them. He believes that males toughen themselves and each other up, and that women want men who are strong.

Peterson's twelfth and final rule is to "Pet a Cat When You Encounter One on the Street." In this chapter, he discusses a life-altering, lifelong illness his daughter has and how he, as a parent, wished he could shield his children from vulnerability. People, he says, must learn to see what is beautiful despite the suffering that is around them. "They must see the good in Being." As such, he encourages people to pet cats when they see them and watch little girls twirling as ballerinas in play. Such are the small joys in life.

While Peterson's main points can be distilled into twelve rules, each of his chapters goes far beyond just the rules he advocates. Because he goes far beyond merely prescribing the course of actions he advises, he enables his readers to integrate these ideas and theories into life. They are a list of one man's ideas, developed from the wisdom of the greats, and some views are more liberal and conservative than others. In the end, however, his advice goes beyond those distinctions as he is able to provide truly valuable guidance for how to work through life in a world of suffering and vulnerability.

### Discover the Choices That Will Take You Beyond Your Talent

# TALENT IS NEVER ENOUGH

## THE SUMMARY IN BRIEF

*Talent is often overrated and frequently misunderstood. When people achieve great things, others often explain their accomplishments by simply attributing everything to talent. But that is a false and misleading way of looking at success. If talent alone is enough, then why do you know of highly talented people who are not highly successful?*

*Leadership expert Dr. John C. Maxwell knows that people are never successful by talent alone, and he outlines 13 crucial things you can do to maximize your natural talents and become a "talent-plus" person. He is weighing in on the subject of talent — and, as always, his opinion and his insights might surprise you.*

*A long-time admirer of great talents in sports, business, leadership and philanthropy, Maxwell says that what separates the talented from the truly successful is making the right choices. In* Talent Is Never Enough, *Maxwell lays out a road map for anyone interested in making the most of their natural abilities.*

*"People who neglect to make the right choices to release and maximize their talent continually underperform," writes Maxwell. "Their talent gives them an opportunity, but their wrong choices can shut the door." Talent, he contends, is a given, but success must be earned.*

*In this summary, you will learn:*

- ✓ ***How passion can empower you to outperform people with more talent than you.***
- ✓ ***The power of practice and how it can enable personal development, lead to discovery and demand discipline.***
- ✓ ***How teachability can expand your talent.***
- ✓ ***That anyone can make choices that will add value to talent and become a talent-plus person.***

# TALENT IS NEVER ENOUGH

**By John C. Maxwell**

## — THE *COMPLETE* SUMMARY

## Belief Lifts Your Talent

The first and greatest obstacle to success for most people is their belief in themselves. Once people figure out where their sweet spot is (the area where they are most gifted), what often hinders them isn't lack of talent. It's lack of trust in themselves, a self-imposed limitation. Lack of belief can act as a ceiling on talent. However, when people believe in themselves, they unleash power and resources around them that almost immediately take them to a higher level. Your potential is a picture of what you can become. Belief helps you see the picture and reach for it.

### *Three Beliefs Worth Buying Into*

**1. Believe in your potential.** Too often we see what is, not what could be. Too many people fall short of their real potential. John Powell, author of *The Secret of Staying in Love*, estimates that the average person reaches only 10 percent of his or her potential. Your potential is really up to you.

**2. Believe in yourself.** People who believe in themselves get better jobs and perform better in them than those who don't. Only with belief in yourself will you be able to reach your potential.

**3. Believe in your mission.** What else is necessary to lift a person's talent? Believing in what you are doing. Belief in your mission will empower you. Belief in your mission will encourage you. Belief in your mission will enlarge you.

### *Belief Determines Expectations*

If you want your talent to be lifted to its highest level, then you don't begin by focusing on your talent. You begin by harnessing the power of your mind. Your beliefs control everything you do. Accomplishment is more than a matter of working harder or smarter. It's also a matter of believing positively. Someone called it the "sure enough" syndrome. If you expect to fail, sure enough, you will. If you expect to succeed, sure enough, you will.

### *Expectations Determine Actions*

In 20 of the world's most primitive languages, the word for *belief* is the same as the word for *do*. It is only as people become more "sophisticated" that they begin to separate the meaning of one word from the other. Most people separate belief from action. So how can we bring these two things back together? Through our expectations.

There are two kinds of people in this world: those who want to get things done and those who don't want to make mistakes. If you're the first type, then you already expect to believe in yourself and take risks. But what if you're the second type? There's good news: You can grow.

### *Actions Determine Results*

Results come from actions. That may seem obvious in the physical realm. However, in the human realm, many people don't make the connection. They simply hope for good results. Hope is not a strategy. If you want good results, you need to perform good actions. If you want to perform good actions, you must have positive expectations. To have positive expectations, you have to first believe. ■

## Passion Energizes Your Talent

Talent doesn't carry people to the top — it's passion. Passion is more important than a plan. Passion creates fire; it provides fuel. As long as the passion is there, it doesn't matter if individuals fail or how many times

## Passion Energizes Your Talent

*(continued from page 2)*

they fall down. It doesn't matter if other people are against them or if people say they cannot succeed. They keep going and make the most of whatever talent they possess. They are talent-plus people and do not stop until they succeed.

### *Your Passion Can Empower You*

A passionate person with limited talent will outperform a passive person who possesses greater talent. Why? Because passionate people act with boundless enthusiasm, and they just keep on going.

**1. Passion is the first step to achievement.** Loving what you do is the key that opens the door to achievement. When you don't like what you're doing, it really shows — no matter how hard you try to pretend it doesn't.

**2. Passion increases willpower.** What do you sing about? What do you cry about? What do you dream about? The answers to these questions can often help people discover their true passion. While everybody can possess passion, not everyone takes the time to discover it.

**3. Passion produces energy.** Without passion, achievement becomes a long and difficult road. The secret of passion: *I am gifted at what I do. What I do makes a difference. When I do what I was made to do, I feel most alive.*

**4. Passion is the foundation for excellence.** Passion can transform someone from average to excellent. When you find purpose, you find passion. And when you find passion, it energizes your talent so that you can achieve excellence.

**5. Passion is the key to success.** Whenever anything fires people's souls, impossibilities vanish. Philosopher-poet Ralph Waldo Emerson wrote, "Every great and commanding movement in the annals of the world is due to the triumph of enthusiasm."

**6. Passion makes a person contagious.** Even a brief review of effective leaders and businesspeople throughout history would illustrate that their passion "caught on" with others.

### *Putting the Talent-Plus Formula Into Action*

If you don't possess the energy that you desire, then you need to fire up your passion. First, prioritize your life according to your passion. People who have passion but lack priorities are like individuals who find themselves in a lonely log cabin deep in the woods on a cold, snowy night and then light a bunch of small candles and place them all around the room. They don't create enough light to help them see, nor do they produce enough heat to keep them warm.

On the other hand, people who possess priorities but no passion are like those who stack wood in the fireplace of that same cold cabin but never light the fire. But people who have passion with priorities are like those who stack the wood, light the fire and enjoy the light and heat that it produces. If your priorities are not aligned with your passion, then begin thinking about making changes in your life. Will change be risky? Probably. But which would you rather live with? The pain of risk or the pain of regret?

Second, you need to protect your passion. If you want to keep a fire hot, you need to feed it and you need to protect it. Not everyone in your life will help you do that when it comes to your passion. In truth, there are two kinds of people: "firelighters," who will go out of their way to help you keep your fire hot, and "firefighters," who will throw cold water on your passion.

Finally, pursue your passion with everything you've got. What do you want to accomplish in your lifetime? How do you want to focus your energy: on survival, success or significance? Your passion has the potential to provide you energy far beyond the limitations of your talent. In the end, you will be remembered for your passion. ■

# Initiative Activates Your Talent

Talent-plus people don't wait for everything to be perfect to move forward. They don't wait for all the problems or obstacles to disappear. They take initiative.

### *Insights on Initiative*

If you want to reach your potential, you have to show initiative. Here's why:

**1. Initiative is the first step to anywhere you want to go.** Where you finish in life isn't determined so much by *where* you start as by *whether* you start. If you're willing to get started and keep initiating, there's no telling how far you might go.

**2. Initiative closes the door to fear.** Author Katherine Paterson said, "To fear is one thing. To let fear grab you by the tail and swing you around is another." We all have fears. The question is whether we are going to control them or allow them to control us.

**3. Initiative opens the door to opportunity.** No one can wait until everything is perfect to act and expect to be successful. It's better to be 80 percent sure and make things happen than it is to wait until you are 100 percent sure, because the opportunity will have already passed you.

**4. Initiative eases life's difficulties.** Psychiatrist M. Scott Peck stated, "Life is difficult." That's not most people's problem — their response to life's difficulties is. Too many people wait around for their ship to come in. When they take that approach to life, they often find it to be hardship. The things that simply come to us are

*(continued on page 4)*

## Initiative Activates Your Talent

*(continued from page 3)*

rarely the things we want. To have a chance at getting what we desire, we need to work for it.

**5. Initiative is often the difference between success and failure.** Too many people are waiting for someone else to tell them what to do next. Nearly all people have good thoughts, ideas and intentions, but many of them never translate these into action. Doing so requires initiative. ■

# Focus Directs Your Talent

Focus does not come naturally to us, yet it is essential for anyone who wants to make the most of talent. Having talent without focus is like being an octopus on roller skates. You can be sure that there will be plenty of movement, but you won't know in what direction it will be.

### *The Power of Focus*

Focus can bring tremendous power. Without it, you will often feel drained and unable to accomplish much. With it, you will find that your talents and abilities gain direction and intentionality, and those qualities pay off by producing results.

Focus increases your energy. If you desire to achieve something, you first need to know what your target is. Attempting everything, like attempting nothing, will suck the life out of you. Focus also lifts you and expands your life. However, people do not naturally remain focused — it must be intentionally sustained. Hall of Fame baseball player Hank Aaron said, "I think what separates a superstar from the average ballplayer is that he concentrates just a little bit longer." Aaron demonstrated that he was able to sustain his concentration — he holds the Major League Baseball record for the most home runs hit in a career.

If you desire to become a talent-plus person, you need to make focus your friend. Here's how:

- **Be intentional — make every action count.** People who are undecided about what they want to do or where they want to go cannot tap into their strength of will — or their talent. As a result, they will merely drift along.
- **Challenge your excuses.** We all have reasons for not doing what we ought to do. Should we let these things get us off track? No!
- **Don't let yesterday hijack your attention.** Too many people yearn for the past and get stuck in it. Instead, they should *learn* from the past and let go of it.
- **Focus on the present.** Just as you should keep your focus off yesterday, you shouldn't have it on tomorrow. If you're always thinking about tomorrow, you'll never get anything done today. Do certain things every day, like reading, listening to others, thinking and sharing those lessons with others.
- **Stay focused on results.** Anytime you concentrate on the difficulty of the work at hand instead of its results or rewards, you're likely to become discouraged. By focusing on results, you will find it easier to stay positive and encouraged. ■

# Preparation Positions Your Talent

Being unprepared puts you out of position. Ask negotiators what happens at the bargaining table when they are out of position. Ask athletes what happens when they are out of position. They lose. Preparation positions people correctly, and it is often the separation between winning and losing. Talent-plus people who prepare well live by this motto: "All's well that begins well."

### *Why People Fail to Prepare*

Talent-plus-preparation often leads to success, whereas talent-minus-preparation often leads to disaster. In hindsight, it's easy to recognize the value of preparation. So why do so many people fail to prepare? There are two main reasons:

**They fail to see the value of preparation before action.** Authors Don Beveridge Jr. and Jeffrey P. Davidson believe that lack of preparation is the primary reason for business failure today. "Poorly educated, poorly prepared and poorly trained people fail because they do not have the skills or the expertise to perform," the authors say.

**They fail to appreciate the value of discipline.** A frustrating thing about preparation is that it usually takes much more time than the actual event one prepares for. Musicians may practice many hours preparing to perform a three-minute piece. ■

**For information about preparation principles, go to: http://my.summary.com**

# Practice Sharpens Your Talent

It's a fact: You play at the level at which you practice. Consistently good practice leads to consistently good play. It sharpens your talent.

### *The Power of Practice*

There's a myth about highly talented people — it's that they are simply born that way. But the truth is people do not reach their potential unless they are willing to practice.

First, practice enables development. People refine old skills and acquire new ones through practice. That is where the tension between where we are and where we

*(continued on page 5)*

## Practice Sharpens Your Talent

*(continued from page 4)*

ought to be propels us forward.

Second, practice leads to discovery. Practice both shows and builds commitment. Your performance can always be improved. Finally, practice demands discipline. There is no easy way to become a disciplined person. Once the choice is made, there is a separation between the person who practices and the one who doesn't.

There is one more secret to successful practice that will help you sharpen your talent — it's summed up in the phrase "a little extra." Here's what it takes for someone to become a talent-plus person in the area of practice:

- **A little extra effort.** Art Williams, the founder of Primerica Financial Services, once stated, "You beat 50 percent of the people in America by working hard; you beat 40 percent by being a person of honesty and integrity and standing for something; and the last 10 percent is a dogfight of the free enterprise system." If you want to win that dogfight, then do a little extra.
- **A little extra time.** Successful people practice harder and practice longer than unsuccessful people do. Giving a little extra time requires more than just perseverance. It requires patience.
- **A little extra help.** Anybody who succeeds at anything does so with the help of others.
- **A little extra change.** Let's face it. Most people are resistant to change. Focus your energy to get the kinds of changes that will change you for the better. ■

# Perseverance Sustains Your Talent

Perseverance is not an issue of time or talent. Perseverance is about finishing. Talent provides hope for accomplishment, but perseverance guarantees it. No matter how talented people are, there is no success without perseverance. If you desire to become a talent-plus person, you need to understand some things about perseverance.

**1. Perseverance means succeeding because you are determined to, not destined to.** You can see this determination in successful people in every walk of life and at every age.

**2. Perseverance recognizes life is not a long race, but many short ones in succession.** Each task has its own challenges; each day is its own event.

**3. Perseverance is needed to release most of life's rewards.** How many highly successful people do you know who gave up? It's said that Walt Disney's request for a loan was rejected by 301 banks before he finally got approval.

**4. Perseverance draws sweetness out of adversity.** The trials and pressures of life — and how we face them — often define us. Confronted by adversity, many people give up, while others rise up.

**5. Perseverance has a compounding effect on life.** Every day that you do the right things, you invest in yourself. To do these things every day takes relentless perseverance, but if you do them, your success compounds over time.

**6. Perseverance means stopping not because you're tired but because the task is done.** To successful people, fatigue and discouragement are signals to draw on their reserves, rely on their character and keep going.

**7. Perseverance doesn't demand more than we have, but all that we have.** Perseverance means more than trying — it is an investment and a willingness to bind oneself emotionally, intellectually, physically and spiritually to an idea or task until it has been completed.

### *The Five Enemies of Perseverance*

Perseverance begins with the right attitude — tenacity. But the desire to persevere alone isn't enough by itself to keep most people going when they are tired or discouraged. Perseverance is a trait that can be cultivated, and the initial step to developing it is to eliminate its five greatest enemies:

**1. A lifestyle of giving up.** If you desire to be successful you need to be consistent and persistent.

**2. A wrong belief that life should be easy.** Having the right expectations going into anything is half the battle.

**3. A wrong belief that success is a destination.** As soon as you think you no longer need to work to make progress, you'll begin to lose ground.

**4. A lack of resiliency.** If we desire to persevere, we must not become dry, brittle and inflexible.

**5. A lack of vision.** People who display perseverance keep a larger vision in mind as they toil away at their crafts or professions. ■

# Courage Tests Your Talent

People think of courage as a quality required only in times of extreme danger or stress, such as during war or disaster. But it is much larger than that — and more ordinary than we think. Courage is an everyday virtue. The person who exhibits courage is able to live without regrets.

Why does talent need courage? The stakes were high for Winston Churchill as he carried out his duties as England's prime minister. He was doing more than just defending London and the empire during World War II, although those responsibilities were monumental. Freedom and democracy were hanging in the balance.

But his first tests didn't come when the stakes were high.

*(continued on page 6)*

### Courage Tests Your Talent

*(continued from page 5)*

They came early. If he hadn't possessed the courage to step up when he was young and untested, he never would have discovered the depth of his talent, nor would he have been ready when he had to perform on the world stage.

Most of us will never be asked to face flying bullets in a physical battle. Often our tests are much more private and involve an internal battle, and many people find that painful. In order to grow, we need to face truths about ourselves, and that is often a difficult process. ■

For additional information about how courage is tested, go to: http://my.summary.com

## How to Overcome a Pride Problem

Pride is a huge barrier to success and the development of talent. If pride is an obstacle to your growth, then you need to take some deliberate and strategic steps to overcome it:

**1. Recognize and admit your pride.** To defeat pride, we need to embrace humility.

**2. Express gratitude often.** Oprah Winfrey says, "Keep a grateful journal. Every night, list five things that happened this day that you are grateful for. If you can learn to focus on what you have, you will always see that the universe is abundant, and you will have more."

**3. Laugh at yourself.** People who have the problem of pride rarely laugh at themselves. But engaging in humor at your own expense shows that pride isn't a problem.

# Teachability Expands Your Talent

If you are a highly talented person, you may have a tough time with teachability. Why? Because talented people often think they know it all. And that makes it difficult to expand their talent. Teachability is not so much about competence and mental capacity as it is about attitude. It is the desire to listen, learn and apply.

Who is the most talented person who ever lived? Leonardo da Vinci would certainly be a strong candidate. Da Vinci has been called *Homo Universalis*, a "universal man," for his incredible ability to master diverse disciplines. What set him apart? Da Vinci's talent was extraordinary — but so was his teachability. His notebooks are a physical record of a mind that never stopped discovering and never ceased learning.

### *Teachability Truths*

The good news is that we don't have to have da Vinci's talent to be teachable; we just need to have the right attitude about learning. To do that, consider the following truths about teaching:

- **Nothing is interesting if you are not interested.** It's a shame when people allow themselves to get into a rut and never climb out. They often miss the best life has to offer. In contrast, teachable people are fully engaged in life.
- **Successful people view learning differently from those who are unsuccessful.** Teachable people are always open to new ideas and are willing to learn from anyone who has something to offer. American journalist Sydney J. Harris wrote, "A winner knows how much he still has to learn, even when he is considered an expert by others. A loser wants to be considered an expert by others before he has learned enough to know how little he knows."
- **Learning is meant to be a lifelong pursuit.** It's said that the Roman scholar Cato started to study Greek when he was more than 80 years old. When asked why he was tackling such a difficult task at his age, he replied, "It is the earliest age I have left." Every stage of life presents lessons to be learned.
- **Talented people can be the toughest to teach.** One of the paradoxes of life is that the things that initially make you successful are rarely the things that keep you successful. You have to remain open to new ideas and be willing to learn new skills.
- **Pride is the No. 1 hindrance to teachability.** While envy is the deadly sin that comes from feelings of *inferiority*, the deadly sin of pride comes from feelings of *superiority*. ■

# Character Protects Your Talent

Many people with talent make it into the limelight, but the ones who have neglected to develop strong character rarely stay there long. Why? Because people cannot climb beyond the limitations of their character. Talented people are sometimes tempted to take shortcuts, but character prevents that.

### *The Components of Character*

People are like icebergs. There's much more to them than meets the eye. When you look at an iceberg, only about 15 percent is visible — that's talent. The rest — people's character — is below the surface, hidden.

Tim Elmore, founder and president of Growing Leaders, tells some little-known details of the infamous sinking of the Titanic: "The huge and unsinkable ship received five iceberg warnings that fateful night of April 14, 1912, just before it went down. When the sixth message came in during the wee hours of the next morning, 'Look out for ice-

*(continued on page 7)*

## Character Protects Your Talent

*(continued from page 6)*

bergs,' the operator wired back, 'Shut up! I'm busy.' Those were his last words over the wire. They underestimated the power of the iceberg and overestimated their own strength. What an accurate description of so many people today."

So what exactly composes character? There are four elements: self-discipline, core values, a sense of identity and integrity.

### *Character Communicates*

Character creates a foundation upon which the structure of your talent and life can build. If there are cracks in the foundation, you cannot build much. That's why first you must develop within before you can achieve much without.

But once you build strong character, it does more than provide a platform for your personal success and the maximization of your talent; it also impacts others and allows you to build with them. Character does that through what it communicates to people:

**Character communicates consistency.** People who live without character communicate confusion to others. They can say anything they like, but their actions determine the messages we receive.

**Character communicates choices.** It's an interesting paradox. Our character creates our choices, yet our choices create our character. Once you get a handle on the character of a person, you can understand his or her choices and predict what they will be.

**Character communicates influence.** Today many people try to demand respect. They believe that influence should be granted to them simply because they have position, wealth or recognition. However, respect and influence must be earned over time, and they are built and sustained by character.

**Character communicates longevity.** If you want to know how long it will take to get to the top, consult a calendar. If you want to know how long it can take to fall to the bottom, try a stopwatch. Character determines which will happen. Character provides the opportunity for longevity in any career, relationship or goal.

### *Talent-Plus Character*

Here's how to become a talent-plus person in the area of character:

**1. Don't give up or give in to adversity.** It takes character to weather life's storms. At the same time, adversity develops character. Author and activist Helen Keller, who could not see or hear, remarked, "Character cannot be developed in ease and quiet. Only through experience of trial and suffering can the soul be strengthened, vision cleared, ambition inspired and success achieved."

**2. Do the right thing.** It's not easy to do the right thing when the wrong thing is expedient.

**3. Take control of your life.** Your character is always your choice. ■

# Relationships Influence Your Talent

In his book *My Personal Best*, John Wooden writes, "There is a choice you have to make in everything you do, so keep in mind that in the end, the choice you make makes you." Nothing will influence your talent as much as the important relationships in your life.

### *The Impact of Relationships*

Many people mistakenly minimize the impact that other people can have on their lives. Almost all our sorrows can be traced to relationships with the wrong people and our joys to relationships with the right people. The relationships in our lives really do make or break us.

### *The Directions Relationships Take Us*

Note whether a person makes you feel better or worse about yourself. How much energy does the relationship require? Les Parrott identifies a few of the types of people who are likely to hurt us and take energy from us:

- *Critics* complain or give unwanted advice.
- *Wet blankets* are pessimistic and habitually negative.
- *Gossips* spread rumor and leak secrets.
- *Control freaks* are unable to let go and let things be.
- *Backstabbers* are irrepressibly two-faced.

Relationships commonly go through four stages: surface relationships, structured relationships, secure relationships and solid relationships. As the level of relationship increases, so does the influence people have on one another. Every now and then a relationship goes beyond solid to become significant, a relationship that is pivotal to your life. The signs of a solid relationship are mutual enjoyment, respect, shared experiences, trust and reciprocity. ■

# Responsibility Strengthens Your Talent

Nothing adds "muscle" to talent like responsibility. It lifts talent to a new level and increases its stamina. But of the 13 choices that help to create a talent-plus person, responsibility is often the last choice people desire to make.

### *The Strength of Responsibility*

We live in a culture that overvalues talent and undervalues responsibility. If you doubt that, then examine

*(continued on page 8)*

### Responsibility Strengthens Your Talent

*(continued from page 7)*

## Talent-Plus Responsibility

The following steps will help you become a talent-plus person when it comes to responsibility:

**1. Start wherever you are.** If being responsible has not been one of your strengths, then start small.

**2. Choose your friends wisely.** If you have started your journey on the road to responsibility, make sure you have the right traveling companions.

**3. Stop blaming others.** If you want to be successful and maximize your talent as a talent-plus person, take responsibility for your own life.

**4. Learn responsibility's major lessons.** There are four core lessons: Recognize that gaining success means practicing self-discipline; finish what you start; know when others are depending on you; and don't expect others to step in for you.

**5. Make tough decisions and stand by them.** When he was mayor of New York City, Rudy Giuliani kept a sign on his desk that stated, "I'm responsible." In his book *Leadership*, Giuliani wrote, "Nothing builds confidence in a leader more than the willingness to take responsibility for what happens during his watch."

**6. Live beyond yourself.** This is the idea of taking responsibility beyond yourself by serving others. Holocaust survivor Elie Wiesel, who won the Nobel Peace Prize in 1986, spent the years after his time in Nazi concentration camps giving back to others.

the way we treat our athletes. When athletes are in high school and college, their reckless or irresponsible acts are often overlooked in proportion to the talent they display on the court or playing field. What a disservice to them. Responsibility actually strengthens talent and increases the opportunity for long-term success.

Specifically, responsibility helps strengthen talents through:

- Providing the foundation for success
- Leading to more responsibility, when handled correctly
- Maximizing ability and opportunity
- Building a solid reputation over time. ■

# Teamwork Multiplies Your Talent

In the Academy Award-winning movie *Rocky*, boxer Rocky Balboa describes his relationship with his girlfriend Adrian: "She's got gaps. I got gaps — together we fill the gaps." What a wonderful description of teamwork! Partner with others who have strength in those areas.

### *Teamwork Truths*

It's easy to see that teamwork is essential for tasks; however, a task doesn't have to be complex to need teamwork. Teamwork not only allows people to do what they couldn't otherwise do, it also has a compounding effect on all they possesses — including talent.

**1. Teamwork divides the effort and multiplies the effect.** Teams involve more people, thus affording more resources, ideas and energy than an individual possesses. Teams also maximize a leader's potential and minimize weaknesses.

**2. Talent wins games, but teamwork wins championships.** Teams that repeatedly win championships are models of teamwork. It's easy to see the fruits of teamwork in sports, but it is just as important in business. Harold S. Geneen, who was director, president and CEO of ITT for 20 years, observed, "The essence of leadership is the ability to inspire others to work together as a team — to stretch for a common objective."

**3. Teamwork is not about you.** The true measure of team leadership is not getting people to work. The true measure of a leader is getting people to work hard together.

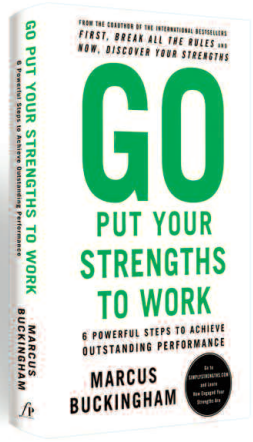
**4. Great teams create community.** All effective teams create an environment where relationships grow and teammates become connected to one another. That environment is based on trust. Little can be accomplished without it.

**5. Adding value to others adds value to you.** Too often people join a team for personal benefit. They want a supporting cast so that they can be stars. People who take advantage of others inevitably fail in business and relationships.

The reality is that there never has been nor will there ever be a talent shortage. Choose to become a talent-plus person. If you do, you will add value to yourself, add value to others and accomplish more than you dreamed was possible. ■

### SOUNDVIEW *Recommended Reading List*

**If you liked *Talent Is Never Enough*, you'll also like:**



1. ***The Power of You!*** **by Scott Martineau.** Martineau shows that fulfillment doesn't come from success at work or happiness at home; it comes from both.
2. ***Success Built to Last*** **by Jerry Porras, Stewart Emery and Mark Thompson.** Through interviews with 300 successful individuals, the authors uncover the secrets of their accomplishments.
3. ***The Carrot Principle*** **by Adrian Gostick and Chester Elton.** The authors team up to show readers how the best managers are able to use recognition to engage employees, boost performance and retain talent.
4. ***The Difference Maker*** **by John C. Maxwell.** The author argues that while attitude is important, it cannot change anyone into something they're not.
5. ***Go Put Your Strengths to Work*** **by Marcus Buckingham.** Research shows that most people do not make full use of their strengths on the job — only 17 percent of individuals believe they use all of their strengths at work.

### 6 Powerful Steps to Achieve Outstanding Performance

# GO PUT YOUR STRENGTHS TO WORK

## THE SUMMARY IN BRIEF

The strengths movement is everywhere: the corporate world, the worlds of public service, of economies, of education, of faith, of charity — it has affected them all. It has its detractors, but an appeal as universal as this begs the question, "Why?" Why do so many people from so many different worlds see such power in the strengths-based perspective?

Now that the strengths movement is in full swing, this summary answers that question and the ultimate question: How can you actually apply your strengths for maximum success at work?

Research shows that most people do not come close to making full use of their assets at work — in fact, only 17 percent of the workforce believe they use all of their strengths on the job. This summary aims to change that through a six-step experience that will reveal the hidden dimensions of your strengths. It shows you how to seize control of your assets and rewrite your job description under the nose of your boss.

With proven tactics from people who have successfully applied its lessons, this summary arms you with a radically different approach to your work life. It also opens up an exciting uncharted territory for you and your organization.

## IN THIS SUMMARY, YOU WILL LEARN:

- Why your strengths aren't "what you are good at" and your weaknesses aren't "what you are bad at."
- How you can take the simple steps each week to push your time at work toward those activities that strengthen you and away from those that don't.
- How to talk to your boss and your colleagues about your strengths without sounding like you're bragging, and how to talk about your weaknesses without sounding like you're whining.
- How a 15-minute weekly ritual will keep you on your strengths path for your entire career.

# Lead This Movement

Conventional wisdom tells us that we learn from our mistakes. However, the strengths movement says that all we learn from mistakes are the characteristics of mistakes. If we want to learn about our successes, we must study success.

Fueled by this idea, the first stage of the strengths movement — the stage we are in right now — has been dominated by efforts to label what is right with things. Thus, whereas the World Bank used to rank countries according to their negative qualities, such as poverty, violence and vulnerability, today it has developed a list of positive labels that capture a country's overall level of well-being, labels such as social capability, economic self-determination and sustainability of local customs.

## *High-Performance Teams*

Ask a nationally representative sample of the work force how often they feel an emotional high at work — a sure sign that they're playing to a strength — and 51 percent say "about once a week."

Our challenge now is to dramatically increase how often we play to our strengths. On high-performance teams, people say they call upon their strengths more than 75 percent of the time. For us to reach this level, we don't need to cast aside our current work and strike out for the perfect dream job.

Instead, we simply need to learn how to take our existing job, and each week, reshape it around our strengths — even in the face of interference from the world around us. To do this, we need to master a new discipline, one that brings order and focus to a series of incremental moves. If we put this discipline into practice each week, we will gradually, degree by degree, tilt the playing field so that the best of our job becomes *most* of our job.

## *'The Push Discipline'*

Simply put, we need to ditch the typical "pull" approach to work and replace it with the "push" discipline.

"Pull" looks like this: Somebody else tells you what is expected of you; your goals are set. Your best hope for achievement and reward, you tell yourself, is to try to focus your time so that you spend most of it on those few activities that will really drive your goals. As such, your goals pull you toward certain activities and away from others.

The "push" discipline looks very different. It begins with you taking responsibility for identifying your own strengths and weaknesses. Then, having identified them, you take a stand for them. In practical terms, this means that you push the people at work, along with their many expectations, toward your strengths and away from your weaknesses. These people — your colleagues, your customers, your manager — are good people, with good and appropriate expectations of you, but they don't know your strengths.

## *The Best of You*

You do know your strengths. It's your responsibility to know how to push each week for more opportunities to play to your strengths. This doesn't mean you should swagger into work each day and demand that you be asked to do only strength-based activities. No one would want to work with you if you did this. But what you can do each week is start this new discipline — discipline that begins with the simple question, "How will I ensure that I put my strengths into play just a little more this week than I did last week?" and ends with you building your job around the best of you.

## Lead This Movement

*(continued from page 2)*

Here are the six steps that make up this discipline:

1. **Bust the Myths.** Capitalizing on your strengths is the best way to compete.
2. **Get Clear.** Identify your own strengths and weaknesses.
3. **Free Your Strengths.** Learn how to volunteer your strengths to the team.
4. **Stop Your Weaknesses.** Learn the best strategies for lessening the impact of your weaknesses on the team.
5. **Speak Up.** Master the art of talking about your strengths without bragging and your weaknesses without whining.
6. **Build Strong Habits.** Build the right habits, so that week in, week out, and year upon year, you stay in control, always pushing toward activities that strengthen you, ever watchful for those that drag you down.

### *Two Places for Conversations About Contribution*

At work, the two most common situations in which you should have a "my strengths and weaknesses" conversation are the "how are we going to divide up the work" conversation with your teammates, and the one-on-one with your manager. You want them to know how to set you up so that you can make your greatest possible contribution. ■

# Step 1: Bust the Myths

A majority of us have come to believe in certain myths — three, to be precise — that our parents told us were true, that our teachers reinforced, and that today we hear in one form or another from our managers. These myths have become so ingrained in our lives that we no longer see them. They are core assumptions that even now we are passing on to our children, our students and our employees, and we are pleased with ourselves for doing so.

To help you bust each myth and figure out the best way to get a friend or colleague to bust it too, here are three questions that should prove revealing. Write down your answers after reading each myth. Later, when you're trying to persuade others, use these questions as a way to begin your discussion:

**1. How does the myth serve you?** Only by understanding how the myth helps people get through their day can you start to see how they can be disentangled from it.

**2. What would it cost you to stop believing in this myth?** Before we can think about what we will gain by changing our beliefs, we first have to fess up to what we will lose.

**3. How would it benefit you to believe the truth?** If we can capture in detail what we will gain by carving a life around our strengths, we'll keep fighting for it for the rest of our lives.

### *The Three Myths*

Consider these myths:

**Myth:** ***As you grow, your personality changes.*** Sixty-six percent of us believe this to be true. The truth is that as you grow, you don't change into someone else. You don't change your personality.

**Truth:** ***As you grow, you become more of who you already are.*** Getting a little better at something than you were before doesn't necessarily mean that you've changed the distinctive peaks and valleys of your personality.

**Myth:** ***You will grow the most in your areas of greatest weakness.*** Sixty-one percent of people believe this to be true. Instead, the truth is that you will learn and grow the *least* in your areas of weakness, and what learning and growth you do achieve will be hard-won.

**Truth:** ***You will grow the most in your areas of greatest strength.*** You may not be creative in all aspects of your life, but whatever your general level of creativity may be, you will be at the peak of your creative powers in your areas of strength. You will learn the most, grow the most and develop the most in your areas of greatest strength. Your strengths magnify you.

**Myth:** ***A good team member does whatever it takes to help the team.*** Ninety-one percent of people believe this to be true. The truth is that while you will certainly accomplish more if you collaborate with your teammates — there's no question that teams are more effective than groups of disconnected individuals — when you look closely at the most effective teams, you discover that the players on these teams are not chipping in and doing whatever the team requires of them.

**Truth:** ***A good team member deliberately volunteers his or her strengths to the team most of the time.*** Team members have realized that the right, most responsible thing to do is to identify where their strengths lie and then figure out how to arrange their time and their role so that they play to these strengths most of the time. ■

# Step 2: Get Clear

Your strengths are defined by your actual activities. They are things you do, and, more specifically, things you do consistently and near perfectly. Thus, if you are

*(continued on page 4)*

## Step 2: Get Clear

*(continued from page 3)*

a nurse, one of your strengths might be giving injections that seem almost painless to the patient. If you are in sales, you might have a strength in closing deals when competing head to head.

Strengths such as these are made up of three separate ingredients:

1. **Talents**, such as empathy, assertiveness or competitiveness.
2. **Skills**, such as knowing the steps involved in giving injections.
3. **Knowledge**, such as of which dosage is correct for a particular patient or who is your most dangerous competitor in the marketplace.

To capture the *specific activities* that constitute your strengths, you are going to have to go beyond generic talent labels and pinpoint how your actual activities in a regular week make you feel. Pay close attention to your feelings before, during and after your weekly activities. Only then will you get clear on exactly what your true strengths are.

### *The Four Signs of a Strength*

To help you, there are the four telltale signs of a strength. The acronym SIGN is a good way to organize and remember them:

• ***S* is for Success.** For an activity to be labeled a strength, you must obviously have some ability in it, and your success, measured or otherwise, is the best indicator of ability. How effective you feel in any activity — your *self-efficacy* — is a solid first indicator of a strength. But your strengths are more than merely what you're good at.

• ***I* is for Instinct.** You can't quite articulate why, but you find yourself drawn to certain activities repeatedly. You may feel a twinge of fear, but, unprompted, you put yourself in situations where you have to perform them.

• ***G* is for Growth.** Research by Mihaly Csikszentmihalyi, author of the seminal book *Flow: The Psychology of Optimal Experience*, has shown that happiness and concentration are very closely linked. The results from a study of more than 10,000 people, gathered over the last 25 years, show that, although our absolute level of happiness won't vary much, each of us is at our personal peak of happiness when we are deeply immersed in a specific activity.

• ***N* is for Needs.** Some activities just seem to fill an innate need of yours. When you are done with them, you feel fulfilled, powerful, restored — the exact opposite of drained.

The simplest and most useful definition of a strength is this: Your strengths are those activities that make you feel strong. The flip side is also true: "An activity that makes you feel weak" is the best definition of a weakness.

### *The Best Judge of Your Strengths*

No one can tell you which activities make you feel strong and which ones make you feel weak. Here, your perspective is, and will always be, sure and true. So trust it. Pay close attention to your appetites. Capture them, clarify and confirm them, and outstanding performance will follow.

Learning how to capture, clarify and confirm your strengths is your goal for this step. Examine the actual activities that fill up your week, look for the telltale signs that point to your strengths, and identify them. By the end of this step, you'll be able to write three statements that describe your strengths vividly. These three Strength Statements will stem from you pulling apart the jumble of activities filling your week, sorting out the strong from the weak, and then distilling the strong down to the most tangible level possible. These three activities will be you at your most productive, innovative, resilient and focused. They will be you at your best.

The most effective way to identify your strengths is through a simple three-phase process. This process will ask you to pay attention to your work more closely than ever before and to sort out exactly how the things you do make you feel.

### *Capture*

This process begins with the challenge of *capturing* which specific activities over the course of a week played to your strengths and which ones played to your weaknesses.

For one week, on a small memo pad, keep track of the times when you find yourself doing something that makes you feel powerful, confident, natural, authentic, etc. Likewise, if during the course of the week you find yourself feeling drained, frustrated, forced, irritated, bored, etc., write down exactly what you are doing. (You'll deal with your weaknesses in step 4.)

At the end of the week, sort the pages of activities that make you feel strong by spreading them out over a flat surface with the most positive pages on top, all the way down to the least positive pages on the bottom. Then "deal" off the top of your deck your top three pages and lay them out in front of you. These specific activities provide the raw material for your three Strength Statements.

*(continued on page 5)*

## Step 2: Get Clear

*(continued from page 4)*

### *Clarify*

Next you need to *clarify* the specific activities you've captured and arrive at statements that are both precise enough to preserve the original emotional punch and general enough for you to apply each week.

First, clarify the essence of each of your positive statements while not entirely losing their specificity. Second, identify exactly which aspects of the activity are critical and must be preserved if the activity is to generate in you the same positive emotions in future weeks as it obviously did this week. Ask the following four questions:

1. **Does it matter *why* I do this activity?**
2. **Does it matter *who* I do this activity with/to/for?**
3. **Does it matter *when* I am doing this activity?**
4. **Does it matter *what* this activity is about?**

You should now have three statements, derived from a regular week at work, that vividly capture activities that make you feel strong. Take a long look at them. Simply put, your goal for this coming year will be to figure out how to exploit each of these a little more efficiently week after week after week.

### *Confirm*

Finally, you'll want to *confirm* that these three are indeed your most dominant strengths.

You should go through the capture-clarify-confirm process twice a year. Pick a week and capture your emotional reactions to the activities of your week, then clarify and confirm what you captured. To seize control of your time at work, you have to know what your targets are, what you want to push your time toward. This twice-a-year process will set your targets.

Fill out cards with your top three Strength Statements. Keep them front and center on your desk, on your wall or in your top drawer. Whatever you choose to do with these statements, take them seriously. Elevate them. Spotlight them. Keep them directly in your line of sight. ■

# Step 3: Free Your Strengths

There are powerful forces pulling your week away from your strengths: the needs of your customers, the demands of your colleagues, the expectations of your boss, your own career aspirations. It will take a rare concentration of the mind to push back these forces, channel them, and thereby restore them to their proper place and influence in your time at work.

These forces won't ever disappear completely, nor should they. The key question for you is, "How can I use my strengths precisely to fulfill my customers' needs, to listen to the demands of my colleagues, to meet or renegotiate the expectations of my boss and to honor my career aspirations?"

Your answers to this question will certainly not sap your energy, but neither will they be smooth sailing. The world out there is, at best, indifferent to you and your strengths.

The most extreme answer is that the only way for you to free your strengths is to leave your current role or get out from under your misguided boss. In some circumstances, that is the right strategy. But it is the *fifth* possible course of action. There are four distinct strategies you must consider first:

1. **Identify exactly how and where each strength helps you in your current role.**
2. **Find the missed opportunities to leverage each strength in your current role.**
3. **Learn new skills and techniques to sharpen each strength.**
4. **Build your job toward each strength.**

### *Your Strong Week Plan*

We need to find those activities at work that play to our strengths and then fill most of our time with them. We need to turn the *best* of our job into *most* of our job.

To make this happen, you will need to establish in your life a specific routine or regimen that is straightforward enough for you to do regularly, but meaty enough to keep your time at work centered on and moving continuously toward your strengths.

The most effective routine is a Strong Week Plan. The seven-day week is one of the best weapons you have in your battle to build your entire life around your strengths.

At the end of each week, or over the weekend, or very early on a Monday, take 15 minutes to complete a Strong Week Plan. The plan challenges you to identify two specific actions that you will take each week to free your strengths (and two actions to stop your weaknesses). Devise a plan each week to push *toward* two specific activities and away from two others. Do this each week, every week, year upon year, and the changes you want to make in your life will both work and last.

### *Four Strategies to Put Your Strengths to Work*

After closely studying people who have managed to stay on their strengths path, and those who have man-

*(continued on page 6)*

### Step 3: Free Your Strengths

*(continued from page 5)*

aged to find their way back after taking a wrong turn, researchers discovered a clear sequence to putting strengths to work.

The word *FREE* captures this sequence well, with each letter referring to a distinct strategy for putting your strengths to work. Whenever you find yourself struggling to identify what you can do this week to capitalize on your strengths, pick one particular strength and then try one of these four strategies.

• ***F* is for Focus.** Identify how this strength helps you in your current job. If you want to have a strong week this week, begin by taking stock of how you currently use this strength to succeed.

• ***R* is for Release.** Find the missed opportunities in your current role. What new situations can you put yourself in to use this strength more? Can you change your work schedule to put yourself in these situations? What new systems or techniques can you try that will accelerate this strength? How can you measure how much you use this strength? Are you struggling with any of your current job responsibilities? How can you use this strength to help you overcome this?

• ***E* is for Educate.** Learn new skills and techniques to build this strength. What new skills can you learn to leverage this strength? What actions can you take to learn these skills? Who can you job shadow at work? Who can you talk to about how to use this strength more effectively? (e.g., a friend, teacher, manager or mentor.)

• ***E* is for Expand.** Build your job around this strength. How can you share your best practices using this strength with others? How can you expand your role to make better use of this strength? ■

## Step 4: Stop Your Weaknesses

By becoming intimate with the activities that weaken you and labeling them for what they are, you can take steps to stop their rotten work.

Activities that weaken you are like dirty little bombs, waiting to spread their cloud into your strength time — time you could be spending on the activities that make you feel strong. By identifying these toxic activities and naming them, you'll be able to recognize them the moment they appear and either navigate around them or suffer through them for only a finite amount of time. In effect, you can shut them up in a lead box and neutralize them.

Second, you'll be able to see them in their proper perspective. While it may feel like your entire job is contaminated, that's probably not true. In reality, just a few activities are ruining your days, corrupting everything else in your job. By identifying, naming and tagging them, you restore them to their actual size.

### *Capture, Clarify and Confirm*

Flip through your pages of negative activities and consider what you wrote. Try to zero in on those three activities that generated strongly negative emotions and are regular parts of each week. Look for the clearest signs of a weakness, which are the inverse of the strength signs. These signs will prove useful not only in pinpointing your three most dominant weaknesses but also in spotting future potential weaknesses before they spread and contaminate your entire work:

• ***S* is for lack of Success.** The most useful definition of a weakness is an activity that makes you feel weak. You are the true expert on what weakens you.

• ***I* is for lack of Instinct.** Avoidance, searching for someone else to do it and having to brace yourself are all good clues that you lack the instinct for it.

• ***G* is for lack of Growth.** When you are doing it, all you can think about is when you can stop. You aren't inquisitive about it.

• ***N* is for lack of Needs.** The only thing that makes you happy thinking about this activity is contemplating a world where you would never have to do it again.

### *Four Strategies to Stop Your Weaknesses*

There are four strategies to help you figure out how to minimize the amount of time your weaknesses take or the amount of distress they cause. As you did with your strengths, first select from your top three weaknesses the one that is currently proving most damaging to you. Then consider each of these four strategies:

• ***S* is for Stop.** Stop doing the activity and see if anyone notices or cares.

• ***T* is for Team.** Team up with someone who is strengthened by the very activity that weakens you.

• ***O* is for Offer Up.** Offer up one of your strengths, and gradually steer your job toward this strength and away from the weakness.

• ***P* is for Perspective.** Perceive your weakness from a different perspective.

When you find yourself struggling to identify what you can do to stop one of your weaknesses, turn to these four strategies and take action. You will always have more room to maneuver than you think. ■

## Step 5: Speak Up

Until now you've been working on your strengths and weaknesses largely on your own.

Now, in step five, you're going to speak up and get help. Specifically, you're going to go up to your manager and have a strong conversation with him. You're going to describe to this person what strengthens you and what weakens you, and you're going to have to do it in such a way that he winds up thinking not that you're trying to make life easy for yourself but, rather, that you are a responsible colleague looking for ways to contribute more — and at the same time make *his* life a little easier. By the time you're done, he must not only understand you better, he must actively want to help you maximize your strengths.

To reach outstanding levels of performance, you must stop tiptoeing. You must learn how to express — using unambiguous words and examples — what strengthens you and what weakens you.

Before you charge off to confront your manager, you should face up to your own fears. Not that they will ever go away completely, but by identifying what they are, you reduce the likelihood that they will trip you up at the critical moment.

### *Four Conversations*

To help you through your fears, follow this sequence of conversations. Of course, you'll want to vary the exact content of each one according to your unique situation, but if you ignore the sequence, or skip parts of it, your chances of getting other people to want to help you will fall sharply.

**Conversation 1: The Strengths Chat.** Start by having a chat with someone you're close to about what you've discovered about your strengths over the last five weeks. You are simply asking that she listen to you, that she be your audience as you try to find the best way to describe your strengths.

**Conversation 2: "How I Can Help You?"** Now you're ready to talk with your manager about what you would actually like to do differently, given what you've discovered lately about your strengths and weaknesses. Set up a "How I can help you" meeting. The point of this meeting is for you to describe to your boss just one of your strengths and exactly how you can exploit this strength to advance a specific project or improve a certain performance outcome.

**Conversation 3: The Weakness Chat.** Let a couple of weeks go by. Then call a close friend who cares about you. Tell her you want to chat about some of the things that weaken you. First, you must become good at claiming a weakness as a weakness, rather than pawning it off as something else. Try not to give your weaknesses a positive spin. You also need to learn the art of the comeback. You don't need this weakness so that you can fully appreciate your strengths. You just want to figure out how to navigate around it so that it doesn't drag you down as much as it does now. Call another friend and do it again.

**Conversation 4: "How Can You Help Me?"** Now you're ready for the next meeting with your manager. The point of the meeting should be to ask your manager to help you figure out how to be more productive. Before the meeting, pick the weakness that distracts you the most from playing to your strengths and develop three or four ideas for how to minimize it. ■

### Tips for Strengths-Based Managers

The role of all good managers is to do everything to turn each employee's unique combination of strengths and weaknesses into real-world performance. Here are a few tips that will help you play this role as effectively as possible:

- Your chief role is to listen to what your employee is saying, affirm what you hear her say, and offer ideas for actions that can be taken.
- If you really can't approve an employee's request because you absolutely need her to do that activity, keep in mind that if the activity is something that weakens her, it is not and never will be productive to ask her to do it repeatedly.
- If an employee wants to do more of an activity that you know he's really bad at, make sure you've accurately assessed the situation. Be completely sure of your assessment before shutting someone down.
- If the job has certain responsibilities that just aren't going to change, ask, "Does she have to spend a *majority* of her time on these activities to deliver outstanding performance?" If so, it might be time to suggest an alternative role. If not, what can she do differently to make the activities less draining, boring or frustrating?

## Step 6: Build Strong Habits

Faced with a world that doesn't really care about your strengths, your challenge now is to continue to accelerate your progress by building strong habits. To help you,

*(continued on page 8)*

### Step 6: Build Strong Habits

*(continued from page 7)*

there are five things you absolutely must do to fight for this strong life of yours. It is, after all, your career, your professional life, your success and satisfaction that are at stake.

**1. Every day look over your three Strength Statements and your three Weakness Statements.** It's up to you to fix them so clearly in your mind that you can recite them word for word from memory.

**2. Every week complete a Strong Week Plan.** Start each week with a plan for making the week as close to an ideal week as possible.

**3. Every quarter close the books on your strengths.** Put it on your calendar, once a quarter, to seek out your manager and have a 30-minute conversation about your strong quarter. Look back over your Strong Week Plans and identify three tangible achievements in which you contributed more to the team, based on either exploiting your strengths or minimizing your weaknesses.

**4. Every six months pick a week to capture, clarify and confirm your strengths.** Your underlying personality will not change much, but your strengths will. Capture these changes twice a year.

**5. Every year take the SET survey.** The Strengths Engagement Track, or SET, can be found at the Web site www.SimplyStrengths.com. Take the survey annually. You'll see movement, and this movement will serve as a leading indicator of your performance and contribution. Pay attention to it. It will show you your future. ■

## 'And What Happens If …'

You will inevitably face a few situations that will slow or even halt your progress. To prepare you to survive them with your strengths focus intact, here are the four most common:

**1. "What happens if I don't know if I should take this job?"** When considering a new role, the three questions most people ask themselves are: (1) What is the fundamental purpose of the role, and do I have an appetite for this purpose? (2) What are the kinds of people I'll be working with? and (3) What are the specific activities that will fill my week?

The most important question is the last one. It is the activities themselves that will determine your success.

**2. "What happens if I don't think I should have taken this job?"** Face up to it fast and take action to get yourself out of it. Occasionally this will mean packing up and leaving the role, but more often than not you'll be able to track your way back onto your strengths path without resorting to something quite as drastic. Identify a specific strength, take a stand for this strength, and volunteer it to your team.

**3. "What happens if I'm new to the job?"** Pick one of your strengths and lead with it. When all else is uncertain, this strength of yours will not only showcase you in the most self-assured and confident light possible, it will also provide a core of certainty from which you can start reaching out and filling in the gaps of your knowledge.

**4. "What happens if I'm constantly overworked?"** It took you a while to become overworked, so it will take you a while to get out from under it. Concentrate on your three strongest strengths and push everything else aside. See what happens after a month. You may find that an awful lot of stuff falls by the wayside.

### Soundview Recommended Reading List

**If you liked *Go Put Your Strengths to Work*, you'll also like:**

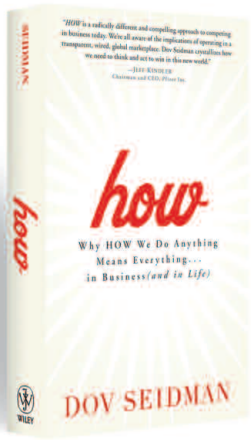
1. ***Talent Is Never Enough*** **by John C. Maxwell.** Maxwell, a leadership expert, asserts that talent is often misunderstood and overrated. To combat this, he suggests that people build their strengths and become a "talent-plus people."
2. ***What Got You Here Won't Get You There*** **by Marshall Goldsmith with Mark Reiter.** The corporate world is full of intelligent and skilled executives, but few will ever reach the top and, according to Goldsmith, subtle nuances make the difference.
3. ***How*** **by Dov Seidman.** According to Seidman, in this ever-increasingly competitive world, it's not what you do, but how you do it that sets you apart from the pack.

## Take Your Stand

You have distinct strengths. No one has quite the same configuration of strengths as you.

You will be at your most productive, creative, focused, generous and resilient when you figure out how to play to your strengths most of the time. When you do, your customers, your colleagues, your company and you will win. Everyone will win.

But it doesn't matter what other people believe. It only matters what you believe.



So let tomorrow be a different day than today. Let tomorrow be a stronger day than today. Let tomorrow begin with you asking yourself "What are my strengths, and how can I contribute them today?" and let every day thereafter begin the same way. You've always known what your strengths are. You've always known what lies within you. So trust your strengths, be proud of them, and take your stand. ■

# Why HOW We Do Anything Means Everything ... in Business (and in Life)

# HOW

## THE SUMMARY IN BRIEF

In the 21st century, it isn't WHAT you do that matters most. In fact, if you line up all the winners in business today, you will notice that few win by what they make or do. If you make something new (or just better, faster and cheaper), the competition quickly comes up with a way to improve upon it and deliver it at the same or an even lower price. Customers instantly compare price, features, quality and service, effectively rendering almost every WHAT a commodity.

Yet, the drive for differentiation — personal, professional and organizational — lies at the heart of all our business endeavors. We all still want to stand out, to be bold, to be valuable, to distinguish ourselves from the competition, to do things others can't copy and to be No. 1. We always will. But in a commoditized world, we are running out of areas in which to do so.

However, there is one area where tremendous variation and variability still exist, one place that we have not yet analyzed, quantified, systemized or commoditized, one area which *cannot* be commoditized or copied: the realm of human behavior — HOW we do what we do.

The people and companies that will rise to the top today and stay on top tomorrow — that will be rewarded, promoted and celebrated — are those that get their HOWs right. The world has changed to make this idea more relevant than ever, and it now represents the most powerful way to chart a course of enduring personal and organizational business achievement.

This summary breaks down what it's like to live in the transparent, hyperconnected world and points out the advantages associated with focusing on your HOWs instead of being absorbed with your WHATs.

## IN THIS SUMMARY, YOU WILL LEARN:

- How technological advances have created a hyperconnected world that demands transparency.
- What recent factors have increased the Certainty Gap throughout the world.
- How rules have failed in the 21st century business world.
- How "soft" things like trust and reputation are essential for success in today's transparent world.
- Why values-based self-governance is the future of business.

# From Land to Information

Back in feudal Europe — circa 1335 A.D. — we were a land-based world, and the people who ruled had control over more high-value land than anyone else. Land meant crops, as well as rent from serfs — tradesmen, farmers and craftspeople — who created the goods and consumables that drove the economy.

Fast forward a few hundred years to the birth of the Industrial Revolution. The invention of machines, powered mainly by the steam engine, brought a host of innovative ways to make things. The rate and scale of manufacturing increased exponentially. Fast forward again to 1994 and the birth of the information age. Technology allowed multifold leaps in the way we did things. Opportunity was everywhere, and though few had a clear vision of where it would lead, inventions, products and processes made things possible that were previously only a dream.

### *Getting Flattened*

In *The World Is Flat*, Pulitzer Prize-winning *New York Times* journalist Thomas L. Friedman details the global effects of this newly unfettered flow of information. He describes some of the unprecedented possibilities suddenly available, many of which are being exploited by the business world: new paradigms of collaboration, specialization, supply and distribution, and expansion of core competencies.

Friedman's macroeconomic and social analysis of our newly "flat" and interconnected world presents a vision of the forces reshaping global business in the 21st century. The free flow of information significantly changes the way internal business units perform and are governed and how individuals work together every day. ■

# Technology's Trespass

Relationships. Communication. Connection. Collaboration. This is how we fill the spaces between us. *Communicate* comes from the Latin word *communicare*, meaning "to share." So it follows that as the nature of the way we communicate changes, so does the nature of our relationships. Over the past decade, the intercession of technology into our relationships has radically altered what goes on in the spaces between us, has changed the way we do business and has given us easy access to information, creating a double-edged sword that cuts both for and against us.

### *The Ties That Bind Us*

In the days of feudal capitalism, running a company like IBM was a far simpler proposition than it is today. Remember the blue suits? IBM used to be famous for its strong corporate culture, so it impressed on everyone who worked there that the blue suit was the de facto uniform of the work force. If you worked at IBM, you knew what to put on every morning. Enforcing a companywide point of view was easier when the old fortress mentality still held sway. You could communicate policies, values, rules, goals and perspectives to your work force through vertical channels. Both corporation and employee benefited from this way of operating: Orders were given and everyone knew where to march.

Few businesses have fortress walls that shield and contain their work force anymore. Communication technology has replaced the concept of a work force with an array of laborers affiliated in countless open relationships. Full-time employees work hand in hand with members of joint ventures, colleagues in independently managed subsidiaries, on-site independent contractors,

## Technology's Trespass

*(continued from page 2)*

remote representatives of outsourcing companies, consultants working from home and as many more creative interrelationships that you can conceive. Add to that a global supply and distribution chain, and you get an organic tangle of human relationships that is difficult to control. The traditional fortresses of business have been overrun by an organic ecosystem filled with possibility.

### *Distance Unites Us*

Business in the information age is complicated not only by the new forms of relationships, but also by the increasing remoteness of those people. For centuries, local proximity determined the majority of our social functions. We dealt on a day-to-day basis with people who shared a common culture and therefore easily understood the behaviors and signals that occurred in the spaces between us.

Global connectivity sets that whole idea on its ear. We now find ourselves in a world where we are thrust together in all aspects of our lives without borders and without the homogenizing pressures of locality. From purchasing items from a seller on eBay to video chats with team members halfway around the world, at any time you might find yourself interacting with people whom you have never met in person and who don't necessarily speak the same language you do.

Before the Internet, our lives moved at a slower pace. We had time to get to know people, as well as experience personal contact in all of our dealings. Today, multinational companies commonly form teams of employees chosen from various divisions, countries and cultures. Global supply chains and international customer bases multiply and mutate faster than a flu virus. Mergers and acquisitions fuel growth and value creation with little regard to how the individuals will interrelate each day. We build our business relationships in a collage-like construct of hotel meetings, video chats, cell phone calls, e-mails and faxes.

Opportunity conjoins us faster than we have developed frameworks for understanding each other and getting along. Distance no longer separates us; new communication capabilities render distance irrelevant by connecting us instantly. Electronic communication is both a boon and a bane. It makes new, powerful networks of collaboration possible, but does so in strange and fractured language. It's the paradox of the information age: Technology connects us more than ever before, but those connections are more fractured and incomplete than we are accustomed to.

## The Expectation of Response Factor

Another pressure of instant communication is the Expectation of Response Factor. Messages appear instantly, implicitly insisting on a quick response. The Expectation of Response Factor exerts an influence on the quality of our communication, often forcing us to respond in less considered ways. In a medium whose nature transmits only part of our intended symbols at best, the virtual ticking of the electronic clock cheats us of the time we need for careful or meaningful expression.

### *The Age of Transparency*

We live in the age of transparency. With everything from personal records and profiles to databases easily accessed over the Internet, virtually everything about you can be discovered quite easily. The fact that *The New Oxford American Dictionary* lists "google" as a verb makes this clear, as does the sample sentence to illuminate its meaning: "You meet someone, swap numbers, fix a date and then google them."

Transparency exerts a profound influence on business. Before transparency, companies could form joint ventures to protect themselves from the ramifications of a dubious enterprise, believing that if the unit got into trouble it would not hurt the reputation of the parent company.

In a transparent world, however, when your joint venture transgresses, everybody knows who owns it. In the past, training its managers in proper conduct was sufficient to protect a company's reputation because line employees had little contact with the outside world and rarely got a company into trouble. Now, any employee can say something about a company in a chat room or in a blog and the next day it might appear on Web sites such as The DrudgeReport or The Smoking Gun. The new transparency doesn't allow you to hide. ■

# The Journey to How

Information is king, hyperconnectedness puts that information in the hands of many and transparency reveals all: This is our new reality. To fully consider the changes to the geography of business, we must open our minds to how these forces have created a new playing field for success.

### *The Certainty Gap*

We all carry a vision of ideal stability and security. We never achieve this ideal state because at any given time the conditions of our lives or the world around us create

*(continued on page 4)*

## Journey to How

*(continued from page 3)*

varying degrees of uncertainty and disequilibrium. This opens a gap between our ideal state and the realties of life, known as the "Certainty Gap," which exerts a profound influence on our ability to succeed. The Certainty Gap never disappears entirely; it gets larger or smaller as conditions change. When it is small, we hardly pay it any attention. When the Certainty Gap grows, as it has in recent years, we reach out for reassurance, for things that can stabilize us and give us confidence to go on. We look for something to fill the gap — *trust*.

Trust allows us to function in times of uncertainty, because trust calms the fears that uncertainty breeds. In times of high uncertainty we pay more attention to the source of trust: human conduct. Trust becomes, more vitally than ever, the currency of human exchange. Trust fills the Certainty Gap; it fills the space between where we are and where we would like to be.

### *Recent Factors Have Increased the Certainty Gap*

The following four factors have played a hand in expanding the current Certainty Gap:

**1. The dot-bomb:** When the dot-bomb fell, it exploded the bubble economy and set off a severe economic recession that has exerted persistent dislocating effects on employment and financial security.

**2. A rapid succession of egregious corporate scandals:** Corporate scandals like Enron, WorldCom and Parmalat have helped make corporations one of the least-trusted segments of society.

**3. The ever-increasing revelatory power of technology:** Suddenly, every facet of society seemed laid bare, flaws exposed for all to see: religious scandals, professional athletes on steroids, reporters for the *New York Times* inventing stories. Icons at every level of society suddenly seemed vulnerable.

**4. The 9/11 attacks:** 9/11 seemed to usher in a series of global attacks against civilians — Madrid, London, Bali and other places — that, coupled with destabilizing regional wars, left much of the world uneasy. The needs and procedures of physical security suddenly intruded into the day-to-day lives of many who had long felt safe.

### *Outbehaving the Competition*

To succeed, we must differentiate ourselves from the competition in an enduring fashion. As the market becomes more crowded, however, the possible areas of differentiation become fewer, creating new questions about the personal qualities the new world requires of us in order to thrive.

Leaders in 20th century capitalist enterprises historically differentiated themselves by WHAT they did. Those who could invent something and patent it won, and those who could not do so gleaned the fields for survival. The market provided great incentives and protections to innovate in WHAT.

But those days are gone. It is difficult to invent a better product in a world of commodities, and that is where we find ourselves. For example, Starbucks unleashes a newfound appreciation for coffee drinks, and now every diner and greasy spoon serves café lattes. It is harder now to innovate in WHAT. It takes a lot of luck and money to be a pioneer, and even if you pull it off, the ability of someone to reverse engineer your product in six months and not six years eliminates a lot of the incentive for doing so.

So businesses began to concentrate on innovating in HOW. Beginning in the 1980s, the focus turned to process management, or the HOWs of WHAT. We now live in a time when winning is about HOW generally. Total Quality Management (TQM), Six Sigma, Just-In-Time (JIT) Inventory, Enterprise Resource Planning (ERP), etc. — process culture now dominates business practice, aiming to improve profitability by reducing inefficiencies at every stage of the product development process.

However, everyone has gotten so good at process management, or the HOW of WHAT, that we have effectively leveled the playing field again. We have commoditized process and performance in the same way we have so much else, possibly to the point of diminishing returns. Still, there is one area where tremendous variability still exists, one place that we have not yet analyzed and commoditized, and which *cannot* be commoditized: the realm of human behavior — HOW we do WHAT we do. The tapestry of human behavior is so varied, so rich and global that it presents a rare opportunity, *the opportunity to outbehave the competition*.

It is no longer WHAT you do that makes a difference; it is HOW you do it. The emerging trend among leading-edge businesses today involves delivering not so much a better product, but a better experience to their customers. ■

## From *Can* to *Should*

Rules are rules, but unlike our desire to connect with others and our tendency toward value-based thinking, our brains are not hardwired for rules. Rules are a social phenomenon. However, as we begin to consider the new thinking needed to succeed in a world of HOW, we need

*(continued on page 5)*

## From *Can* to *Should*

*(continued from page 4)*

to examine our relationship to rules, and how our thinking about them helps us and sometimes holds us back.

### *Rules as Proxies*

Why do we employ rules as proxies? Because rules seem efficient, and modern society (and industrial age capitalism) was built on the foundations of efficiency. In a rules-based society, we often choose efficiency over value, but, while rules-based governance systems may often serve the values of fairness and representation, their seeming efficiency hides a deep and important flaw: *We often rely on rules when they are not the most efficient or effective solution to getting the result that we desire*. Understanding that flaw is vital to thriving in a world of HOW.

Another problem with rules is that they are not created in a very efficient or systematic way. Despite the best of intentions, people create rules haphazardly and often in *reaction* to behaviors deemed unacceptable to the larger goals of the group. Rules respond to behavior; they don't lead it. *Rules don't govern human progress; they govern the human past.*

### *Wrestling With Rules*

The central conflict with rules lies in the essential nature of our relationship to them: *Rules live outside of us*. Because of this, we spend a lot of time and effort wrestling with them, trying to find ways around them or ways of living within them. We will always invent new loopholes, and no rule can govern all the cracks.

Some think that breaking all the rules qualifies as creative thinking, but it is quite the opposite. *Working in opposition to rules is simply the negative space of working within them;* thinking in terms of what a rule excludes is as limiting as being bound by what it includes.

Human conduct is more complicated than what language can describe. It has a lot to do with aspirations and intentions, with back-and-forth interactions. Our relationships are two-way streets, and the interactions that travel them are dynamic. Rules, because they are made reactively, have difficulty keeping up with the infinite permutations and various shades of meaning that pass between people.

This presents us with a question: In a fast-changing world, is there a way to govern human behavior that proactively embraces change? The answer is yes. The key to long-term, sustained success does not lie in breaking the rules; it lies in transcending the rules and harnessing the power of values.

### *UMHS Says 'I'm Sorry'*

In 2001, the University of Michigan Hospital System (UMHS) in Ann Arbor suffered under a budget-busting load of medical malpractice litigation, a phenomenon that had seen exponential growth nationwide over the preceeding decade. Given the increasingly transparent nature of medical care, UMHS realized that it was going to incur liabilities in some percentage of cases despite doing everything it could to eliminate systemic errors. That year the hospital fought many malpractice claims and lawsuits in court but also settled more than 260 others at a cost of $18 million.

UMHS realized that it could do little to avoid lawsuits stemming from catastrophic errors that resulted in loss of life or limb. Instead, it focused on suits involving less serious consequences. In cases like these, UMHS administrators asked themselves, what *should* we be doing for our patients? Continuing to fight malpractice claims remained an option, but they chose a different course of action. They encouraged their doctors to say "I'm sorry" and helped doctors understand how to step up and admit when a mistake was made.

When UMHS announced this new approach, it was widely ridiculed as legal suicide. However, in the three years following the hospital's decision to apologize, medical malpractice claims and lawsuits against them dropped by nearly 50 percent and the per-case cost of defending against the remaining suits dropped 50 percent as well, saving UMHS millions of dollars.

How did UMHS arrive at a counterintuitive solution like apologizing? The hospital employs a values-based approach to pursuing corporate goals. Respect, compassion, trust, integrity and leadership — their stated values — inform everything they do. As an organization whose very core was grounded in the language of values, they tackled their mounting litigation problem by asking themselves not "What *can* we do?" but rather "Based on our values, what *should* we do?"

### *Unlocking 'Should'*

There is little in rules that inspires; by definition, you comply with them. To be capable of true success, you need an organizing principle more inspirational and compelling than rules. Thinking and communicating in the language of *should* — values-based language — by its very nature inspires. Values do double duty; they inspire us to do *more than* while simultaneously preventing us from doing *less than*. They create natural floors without creating inadvertent ceilings.

Twenty-first century business craves creativity and

*(continued on page 6)*

## From *Can* to *Should*

***(continued from page 5)***

innovation, and freeing yourself from the constraints of rules-based thought unleashes new pathways of exploration and possibility. There is hardly a business that doesn't suffer from the "grocery store syndrome." We can choose from any number of grocery stores, each one offering competitive prices. After price, the choice of where to shop boils down to customer experience. To provide this sort of experience, you need to think in ways that inspire your best achievement, to think in the language of *should*. ■

# Doing Transparency

As the world transitions to a bottom-up model in which each individual can contribute to the free flow of ideas, it opens up and becomes more transparent. An information society is a dialogical society, one based on the interactive sharing of information among mutually interested parties. Equalized access to information allows more people to act in an informed manner.

Transparency — the new condition of the world that allows us to see past the medium to get to the heart of the message — fundamentally changes almost every way we conduct our lives, demanding a new set of HOWs if we really want to thrive. To understand these changes, we must consider two types of transparency:

• ***Technological transparency*** describes the ever-evolving state of the networked world, the transparency that happens to us — transparency as a noun.

• ***Interpersonal transparency*** centers on the realm of how we do what we do — transparency as an action or as a verb. This is the active transparency we bring to our interactions with others.

The question before us is: How do we conquer our fear of exposure and turn these new realities into new abilities and behaviors? How can we become proactive about transparency?

### *Beyond Proxies and Surrogates*

In the days before information transparency made almost everything easily knowable, all we could really know about a company's "character" were the programs and procedures that stood as proxies for it. Those days seem to be gone. Think of how easy it is to see through to the inner workings of a company today versus just a few years ago. Chat rooms, online forums, instant access to financial reports, news coverage from around the globe — almost nothing goes unreported somewhere online, where it can be quickly retrieved.

Consumers, customers, regulators, judges and juries have begun to view companies from a characterological viewpoint. They pay more attention to, and care more about, the inner lives and characters of the companies with which they do business. They've begun to ask themselves whether a company has integrity and character. In such an environment, programs and proxies alone no longer suffice. Those passing judgment in our newly transparent age look past programs and proxies, deep into the culture of the company.

Soon these judgments will become pervasive and ingrained, affecting every evaluation of a company's prospects and its ability to perform in the marketplace. People will habitually ask: Does this company have a culture that is nimble and responsive, or one full of friction and dissonance? Due diligence will take on new and added dimensions, with these formerly soft issues weighing as heavily in the mix as balance sheets and assets. ■

# Reputation in a Wired World

Reputation is another one of those "soft" things, like trust, that everyone wants but few think about how to get. Today, the world of business is faster, more spread out, more transient and more fluid than ever before. Yet, paradoxically, the overwhelming capacity of technology to connect us and transmit information to us instantly and cheaply binds us together as never before. It creates conditions of interdependence as high if not higher than when locality bound us in commonality. In some sense, the whole world is now local (or *glocal)*. What does this mean for individuals and companies? From a reputation standpoint, what is old is new again. Reputation — how others think of you — is now more critical to your ability to build long-term sustained success than ever before.

Reputation is the sum total of your HOWs: what you stand for, what you can be trusted to do, your track record of accomplishment, the esteem you have earned and how you have been experienced by others. In a transparent world, reputation leads. It records your past but also creates expectations for your future. For individuals, reputation is also continuity. In a world where the average worker entering the job force will work for an average of 10.5 companies over the course of a career, external structures can no longer provide personal continuity, only your reputation can. Your reputation is a far more integral part of your personal package than ever

***(continued on page 7)***

### Reputation in a Wired World

*(continued from page 6)*

before. And reputation is built over time by your HOWs.

Conversely, a company can no longer assume that its corporate reputation supercedes that of its personnel. In a transparent world, people can see between the lines of what you do and discern HOW you do it. Nuance becomes revealed, and reputation accrues to those companies whose individuals represent those nuances to the world. ■

## Doing Culture

The General Electric Aircraft Engine Assembly plant in Durham, N.C., produces some of the most powerful and technically complex aircraft engines in the world. Every year, more than 400 of the largest engines across the globe roll out the door — engines that power large commercial aircraft like the Boeing 777 and the Airbus A320, including the engines that keep Air Force One aloft.

The special nature of GE/Durham does not reveal itself in its WHATs but rather in its HOWs. Over 200 people work at the plant, grouped into teams of fewer than 20 techs whose only command from management is the date their engine is scheduled to ship; the team decides everything else.

There are a number of things absent from the Durham plant: a time clock, a cleaning crew and tool lock-up. With the exception of a daily team meeting, workers come and go as they like, everyone cleans up after themselves and tools are not locked away, because the feeling is that if you can trust people to build an aircraft engine, you can trust them not to walk off with a torque wrench. There is also only one boss at GE/Durham, the plant manager, who often focuses on growth and improvement, not the specifics of every engine assignment.

The seemingly ungoverned culture has achieved some remarkable things. Over the course of five years in the late 1990s, GE/Durham reduced the cost of airplane engine assembly by over 50 percent. The plant reduced quality defects by over 75 percent. One in four engines ship with just a single flaw — usually cosmetic, like a scratch. Within the massive bureaucracy that is GE, GE/Durham stands as an outpost of team-oriented, consensus-based self-governance, a culture unto itself.

### *The Sum of All HOWs*

Culture is a company's DNA, the sum total of its history, values, aspirations and endeavors. For a company, culture is its unique character and lifeblood. Culture can be thought of as the destiny of an organization. The culture that grows around any given group of people is unique to them and can't be copied. Others can perhaps duplicate your HOWs in general, but the specific texture and quality of what they total thrive uniquely in the people who live by them.

Mastering culture is no longer a job for just those at the top of the organizational chart. An organizational culture represents the collective action of all the individuals that comprise it, so it is incumbent upon everyone who wants to do well to understand the intricacies of how culture works. ■

## The Four Types of Culture

Within the spectrum of culture, there are four specific types:

**1. Anarchy and lawlessness:** a state where everyone acts in their own self-interest with little regard for the group dynamic or organizational ethos. These cultures, by their very nature, build little of the predictability and certainty that capital-based enterprises require to thrive.

**2. Blind obedience:** a culture where no one questions authority and everyone does what they are told or faces the consequences.

**3. Informed acquiescence:** a rules-based culture, where those wishing to participate in the culture learn the rules and agree to abide by them. The rules are clearly spelled out and workers either embrace them or spend time trying to make things work under the rules. Informed acquiescence cultures tend to be management-oriented, with an established managing class and well-entrenched bureaucracy.

**4. Values-based self-governance:** a culture where employees believe in a set of values and uphold them through their actions rather than simply complying with rules. A values-based culture is governed by *should*. Employees believe in a value; they act on that belief; and they self-govern in the name of it.

There are no hard walls between these four basic cultures; most groups organize themselves in a progressive and evolutionary state embracing elements of all four.

## The Case for Self-Governing Cultures

Blind obedience, informed acquiescence and values-based self-governance are not just types of culture; they

*(continued on page 8)*

## The Case for Self-Governing Cultures

*(continued from page 7)*

also describe an approach to governing. Blind obedience and informed acquiescence cultures place most governance outside the individual in the hands of a boss or a set of rules.

Transparency and connectedness, however, make cultures based on one form of external control or another less ideal for our new world. Today, we need a working environment that connects people and groups more intensely, is powered by communication and information flow, and enfranchises individuals at all levels of the company to act quickly and autonomously when presented with new opportunities by the fast-moving marketplace.

### *Why Self-Governance Is the Future of Business*

There are many reasons why getting more values-based self-governance into every culture makes sense, including:

• **A horizontal world calls for a horizontal governance architecture:** Values-based governance minimizes the layers of hierarchy within an organization.

• **Self-governing cultures thrive on the free flow of information:** To unleash the power and creativity of a work force of inspired leaders, you must create an environment that unleashes the information they need to succeed. Transparency between people at all levels in all transactions actually makes these cultures stronger and more effective, and the free flow of information makes cultures more self-governing by increasing trust.

• **A leading company needs to be a company of leaders:** To push the bounds of creativity and innovation, you need people to live out there every day. Rules-based cultures contain an inherent tension between outside-the-box thinking and inside-the-box compliance. Self-governing requires each individual to step up and lead, to take responsibility both for their own work and for the performance of others.

• **Values-based self-governance cultures encourage employee development:** The conditions of the networked world make pushing vast amounts of information to workers' fingertips cheap and easy, but a values-based culture goes a step further and dedicates itself to educating its work force.

• **Self-governance builds universal vigilance:** Sometimes individuals join an organization but do not embrace its goals. In values-based self-governed groups, these individuals can't fool the culture; the vigilance of the group identifies the people who do not truly align with the values of the group and ejects them. Cultures like these are self-enforcing, thus reducing the need for external management controls. This form of self-governance takes advantage of the collective intelligence of the group to regulate the culture as a whole.

• **Self-governance shifts decision making from the pragmatic to the principled:** Values-based self-governance cultures are inspired by a mission and steered by values. They enshrine long-term principles in place of short-term gain and challenge each decision maker to fulfill them in every act they perform. Decisions made on the basis of sound principles provide a steady rudder in stormy seas.

• **Self-governance is a higher concept:** Values-based self-governance governs in the name of principles and values, not rules, and only principles and values have the ability to inspire. It speaks in the language of *should* rather than *can*. It calls us forth to wed our highest goals and aspirations to how we do what we do each day.

If values become the engine of culture, self-governance provides the scaffolding that allows everyone throughout the hierarchy to embrace and put into operation those values daily in everything that they do. ■

### SOUNDVIEW RECOMMENDED READING LIST

**If you liked *How*, you'll also like:**

1. ***Success Built to Last* by Jerry Porras, Stewart Emery and Mark Thompson.** Through interviews with 300 successful individuals, the authors uncover the secrets of their accomplishments.
2. ***Talent Is Never Enough* by John C. Maxwell.** According to Maxwell, talent is often misunderstood and overrated. To combat this, he suggests that people build their strengths and become a "talent-plus person."
3. ***A Whole New Mind* by Daniel H. Pink.** Pink offers a fresh look at what it takes for businesspeople and organizations to move from the Information Age to the Conceptual Age.

# Afterword

In a dialogic society, answering the phone on the second ring or always having a smile on your face is no longer enough; a connected, transparent world now looks past the proxies of service and looks to how the companies and people with whom they do business engage and interact with them.

Experience matters in a world where interrelationships matter, and not just customer experience, but every interaction with every person you encounter throughout the business day. Experience is becoming the great differentiator. Can you do experience? Can you do innovation? Can you do excellence? How do you measure success? Success is something you get when you pursue something greater than yourself, something of *significance*. Pursuing significance, in the end, is the ultimate HOW. ■

Career & Self-Development: Business Skills

# Linchpin

## Are You Indispensable?

by Seth Godin

### THE SUMMARY IN BRIEF

There used to be two teams in every workplace: management and labor. Now there's a third team, "the linchpins." These people invent, lead (regardless of title), connect others, make things happen and create order out of chaos. They love their work, pour their best selves into it and turn each day into a kind of art.

Author Seth Godin, CEO of Squidoo.com, explains that linchpins are the essential building blocks of great organizations. Like the small piece of hardware that keeps a wheel from falling off its axle, they may not be famous, but they're indispensable. And in today's world, they get the best jobs and the most freedom.

Have you ever found a shortcut that others missed? Seen a new way to resolve a conflict? Then you have what it takes to become indispensable, by overcoming the resistance that holds people back.

The world has changed (again) and the stakes are higher than ever. Now we're facing a full-fledged revolution — a hypercompetitive world involving arts and gifts and fear and the ability for you (or anyone) to make an indispensable contribution to something you care about. If you're not indispensable (yet) it's because you haven't made that choice. *Linchpin* will help you see that the choice is yours.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to focus on the things that really matter.
- How to get your dream job without a resume.
- How to see every customer interaction as a chance to give a gift.
- How to become a linchpin in your organization.

## Introduction

Where does average come from?

It comes from two places:

1. You have been brainwashed by school and by the system into believing that your job is to do your job and follow instructions. It's not — not anymore.
2. Everyone has a little voice inside his or her head that's angry and afraid. That voice is the resistance — your lizard brain — and it wants you to be average (and safe).

If you're not doing as well as you had hoped, perhaps it's because the rules of the game were changed and no one told you.

The rules were written just over 200 years ago; they worked for a long time, but no longer.

### Developing Indispensability

You weren't born to be a cog in the giant industrial machine. You were *trained* to become a cog.

There's an alternative available to you. Becoming a linchpin is a step-wise process, a path in which you develop the attributes that make you indispensable. You can train yourself to matter. The first step is the most difficult, the step where you acknowledge that this is a skill, and like all skills, you can (and will) get better at it. Every day, if you focus on the gifts, art and connections that characterize the linchpin, you'll become a little more indispensable.

## The New World of Work

The first chapter of Adam Smith's *Wealth of Nations* makes it clear that the way for businesses to win is to break the production of goods into tiny tasks, tasks that can be undertaken by low-paid people following simple instructions. Smith writes about how incredibly efficient a pin-making factory is compared to a few pin artisans making pins by hand. Why hire a super-talented pin maker when 10 barely trained pin-making factory workers using a machine and working together can produce a *thousand* times more pins, more quickly, than one talented person working alone can?

For nearly 300 years, that was the way work worked. What factory owners want is compliant, low-paid, replaceable cogs to run their efficient machines.

Our society is struggling because during times of change the very last people you need on your team are well-paid bureaucrats, note takers, literalists, manual readers, TGIF laborers, map followers and fearful employees. The compliant masses don't help so much when you don't know what to do next.

### We Need Artists

What we want, what we need, what we must have are indispensable human beings. We need original thinkers, provocateurs and people who care. We need marketers who can lead, salespeople able to risk making a human connection, passionate change makers willing to be shunned if it is necessary for them to make a point. Every organization needs a linchpin — the one person who can bring it together and make a difference. We need artists.

Artists are people with a genius for finding a new answer, a new connection or a new way of getting things done.

That would be you.

### Average Is Over

Our world no longer fairly compensates people who are cogs in a giant machine.

It turns out that what we need are gifts and connections and humanity — and the artists who create them.

Leaders don't get a map or a set of rules. Living life without a map requires a different attitude. It requires you to be a linchpin.

The only way to get what you're worth is to stand out, to exert emotional labor, to be seen as indispensable and to produce interactions that organizations and people care deeply about.

## Thinking About Your Choice

Can you become indispensable?

Yes, you can.

The linchpins among us are not the ones born with a magical talent. No, they are people who have decided that a new kind of work is important, and they're training themselves to do it.

It's not about what you're born with, it's about what you do.

### Teaching Remarkable

A great school experience won't keep you from being remarkable, but it's usually not sufficient to guarantee that you will become so. There's something else at work here.

Great schools might work; lousy schools definitely stack the deck against you. Why is society working so hard to kill our natural-born artists? When we try to drill and practice someone into subservient obedience, we're stamping out the artist that lives within.

Why are you working so hard to bury your natural-born instincts? Everyone has art in them, though it's buried sometimes. Markets are crying out. We need you to stand up and be remarkable. Be human. Contribute. Interact. Take the risk that you might make someone upset with your initiative, innovation and insight — it turns out that you'll probably delight that person instead.

Consumers say that all they want are cheap commodities. Given the choice, though, most of us, most of the time, seek out art. We seek out experiences and products that deliver more value, more connection and more experience, and those that change us for the better. You can learn how to do this if you want to.

### The New American Dream

Do you remember the old American Dream? It struck a chord with millions of people (in the United States and in the rest of the world too). Here's how it goes:

Keep your head down.

Follow instructions.

Show up on time.

Work hard.

Suck it up.

… And you will be rewarded.

As we've seen, that dream is over.

The new American Dream, though, the one that markets around the world are embracing as fast as they can, is this:

Be remarkable.

Be generous.

Create art.

Make judgment calls.

Connect people and ideas.

… And we have no choice but to reward you.

## The Skill of Leading

Leading is a skill, not a gift. You're not born with it, you learn how. And schools can teach leadership as easily as they figured out how to teach compliance. Schools can teach us to be socially smart, to be open to connection, to understand the elements that build a tribe. While schools provide outlets for natural-born leaders, they don't teach it. And leadership is now worth far more than compliance is.

## Indoctrination: How We Got Here

We've been taught to be a replaceable cog in a giant machine.

We've been taught to consume as a shortcut to happiness.

We've been taught not to care about our jobs or our customers.

And we've been taught to fit in.

None of these things helps you get what you deserve.

### Mediocre Obedience

It seems "natural" to live the life so many of us live, but in fact, it's quite recent and totally manmade. We exist in a corporate manufacturing mindset, one so complete that anyone off the grid seems like an oddity. In the past few years, though, it's become clear that people

who reject the worst of the current system are actually *more* likely to succeed.

Evolutionary biologist Stephen Jay Gould wrote, "Violence, sexism and general nastiness are biological since they represent one subset of a possible range of behaviors. But peacefulness, equality and kindness are just as biological — and we may see their influence increase if we can create social structures that permit them to flourish."

Mediocre obedience is certainly something we're capable of, but if we take initiative and add a little bravery, artistic leadership is something that's equally (or more) possible and productive. We've been trained to believe that mediocre obedience is a genetic fact for most of the population, but it's interesting to note that this trait doesn't show up until after a few years of schooling.

### In Search of Great Teachers

Great teachers are precious. Lousy teachers cause damage that lasts forever.

We need to reorganize our schools to free the great teachers from tests and reports and busywork, and to expel the lousy teachers. When schools were organized to produce laborers, lousy teachers were exactly what we needed. Now, lousy teachers are dangerous.

Don't blame the teachers. Blame the corporate system that is still training compliant workers who test well.

## Becoming the Linchpin

A linchpin is an unassuming piece of hardware, something you can buy for 69 cents at the local hardware store. It's not glamorous, but it's essential. It holds the wheel onto the wagon.

Every successful organization has at least one linchpin; some have dozens or even thousands. The linchpin is the essential element, the person who holds part of the operation together. Without the linchpin, the thing falls apart.

Is there anyone in an organization who is absolutely irreplaceable? Probably not. But the most essential people are so difficult to replace, so risky to lose and so valuable that they might as well be irreplaceable. Entire corporations are built around a linchpin or, more likely, a scattering of them, essential individuals who are worth holding on to.

1. Your business needs more linchpins. It's scary to rely on a particular employee, but in a postindustrial economy, you have no choice.
2. You are capable of becoming a linchpin. And if you do become one, you'll discover that it's worth the effort.

The easiest linchpin examples are CEOs and entrepreneurs, because they're the ones who get all the press. Steve Jobs at Apple or Jeff Bezos at Amazon or Ben Zander at the Boston Philharmonic or Anne Jackson at flowerdust.net. We look at these leaders and say, "Of course they're the linchpin. The organization wouldn't be the same without them."

### Create a Magical Experience

What about the way you feel when you walk into an Anthropologie store, unwrap a piece of Lake Champlain chocolate or send a package using FedEx's website? The experience could have been merely ordinary, merely another bit of good enough. But it's not. It's magical. It was created by someone who cared, who contributed, who did more than he or she was told. A linchpin.

Anthropologie has a buyer, Keith Johnson, who spends six months a year traveling the world, visiting flea markets and garage sales, looking for extraordinary things. Not to sell, perhaps, but to beautify a store. It's not easy to hire a Keith Johnson, which is precisely why his work is so essential to the company's success.

If your organization would get out of the way, and if you would step up, there'd be a slot like that available. For anyone.

## Is It Possible to Do Hard Work in a Cubicle?

Emotional labor is the task of doing important work, even when it isn't easy.

It turns out that digging into the difficult work of emotional labor is exactly what we're expected (and needed) to do. Work is nothing but a platform for art and the emotional labor that goes with it.

### The Gift of Emotional Labor

When you do emotional labor, you benefit.

Not just the company, not just your boss, but you.

The act of giving someone a smile, of connecting to a human, of taking initiative, of being surprising, of being creative, of putting on a show — these are things that we do for free all our lives. And then we get to work and we expect to merely do what we're told and get paid for it.

This gulf creates tension. If you reserve your emotional labor for when you are off duty but you work all the

time, you are deprived of the joy you get when you do this labor. Now, you're not giving gifts on duty, but you're not off duty much at all. Spend eight or 10 or 12 hours a day at work (not only in the office but online or on the phone or in your dreams) and there's not a lot of time left for the very human acts that make you who you are and who you want to be.

So bring that gift to work.

And what do you get in return? There are companies that now value this sort of labor and encourage it. More organizations are embracing this idea and hiring for it and rewarding for it.

In most cases, though, you get little in return. At least, little in terms of formal entries in your permanent file or bonuses in your year-end pay. But you do benefit.

First, you benefit from the making and the giving. The act of the gift is in itself a reward. And second, you benefit from the response of those around you. When you develop the habit of contributing this gift, your co-workers become more open, your boss becomes more flexible and your customers become more loyal.

## The Resistance

Your mind, the thing that drives you crazy and makes you special, has two distinct sections: the "daemon" and the resistance.

The daemon is the source of great ideas, groundbreaking insights, generosity, love, connection and kindness.

The resistance spends all its time insulating the world from our daemon. The resistance lives inside the lizard brain.

Daemon is a Greek term (the Romans called it a "genius"). The Greeks believed that the daemon was a separate being inside each of us. The genius living inside of us would struggle to express itself in art or writing or some other endeavor. When the genius felt like showing up, great stuff happened. If not, you were sort of out of luck.

Every time you find yourself following the manual instead of writing the manual, you're avoiding the anguish and giving in to the resistance.

### How the Resistance Evolved

The first part of our brain, the part that shows up first in the womb, the part that was there a million years ago — that's our lizard brain. The lizard brain is in charge of fight or flight, of anger and of survival. That's all we used to need, and even now, when there's an emergency, the lizard brain is still in charge.

There are several small parts of your brain near the end of your spinal cord responsible for survival and other wild-animal traits. The whole thing is called the basal ganglia, and there are two almond-shaped bits in everyone's brain. Scientists call these the amygdala, and this mini-brain apparently takes over when you are angry, afraid, aroused, hungry or in search of revenge.

It's only recently that our brains evolved to allow big thoughts, generosity, speech, consciousness and, yes, art. When you look at a picture of the brain, the new part is what you see: the neocortex. That's the wrinkly gray part on the outside. It's big, but it's weak. In the face of screaming resistance from the amygdala, the rest of your brain is helpless. It freezes and surrenders. The lizard brain takes over and tries to protect itself.

The challenge is to create an environment where the lizard brain snoozes. You can't beat it, so you must seduce it. One part of your brain worries about survival and anger and lust. The rest of it creates civilization.

The lizard brain is here to keep you alive; the rest of your brain merely makes you a happy, successful, connected member of society.

So the two parts duke it out. And when you're put on alert, the lizard brain wins every time unless you've established new habits and better patterns — patterns that keep the lizard brain at bay.

## The Powerful Culture of Gifts

In the beginning, there was the culture of potlatch and gifts. Caveman culture has a long tradition of reciprocity, and as Marcel Mauss has written, this reciprocity was used to build relationships and power. In the Pacific Northwest, Native American tribe leaders established their power by giving *everything* away. They could afford to give everyone a gift because they were so powerful and the gifts were a symbol of that power. Any leader who hoarded saw his power quickly diminish.

Then, quite suddenly, this ancient tradition changed. Money and structured society flipped the system, and now you get, you don't give. Power used to be about giving, not getting.

In the linchpin economy, the winners are once again the artists who give gifts. Giving a gift makes you indispensable. Inventing a gift, creating art — these are what the market seeks out, and the givers are the ones who earn our respect and attention.

### Giving, Receiving, Giving

Part of the reason for this flip is the digital nature of our new gift system. The Internet makes it possible for a

gift to spread everywhere, quite quickly, at no cost. Digital gifts, ideas that spread — these allow the artist to be far more generous than he could ever be in an analog world.

Thomas Hawk is the most successful digital photographer in the world. He has taken tens of thousands of pictures on his way to his goal of taking a million in his lifetime. The remarkable thing about Hawk's rise is that his pictures are licensed under the Creative Commons license and are freely shared with anyone, with no permission required for personal use. Hawk is both an artist and a giver of gifts. The result is that he leads a tribe, he has plenty of paid work and he is known for his talents. In short, he is indispensable. ●

## There Is No Map

What does it take to lead?

The key distinction is the ability to forge your own path, to discover a route from one place to another that hasn't been paved, measured and quantified. So many times we want someone to tell us exactly what to do, and so many times that's exactly the wrong approach.

Diamond cutters have an intrinsic understanding of the stone in their hands. They can touch and see exactly where the best lines are; they *know*.

The greatest artists do just that. They see and understand the challenges before them, without carrying the baggage of expectations or attachment. The diamond cutter doesn't imagine the diamond he wants. Instead, he sees the diamond that is possible.

### Seeing, Discernment and Prajna

You can't make a map unless you can see the world as it is. You have to know where you are and know where you're going before you can figure out how to go about getting there.

No one has a transparent view of the world. In fact, we all carry around a personal worldview — the biases and experiences and expectations that color the way we perceive the world.

The loyal employee has a worldview shaped by experience. She wants a stable place to work and she believes in you. So when you show her your plan, her worldview changes her feelings and her analysis of your plan.

And the lawyer and the competitor and the skeptic and the mother-in-law each have their own worldviews, biases and expectations. None of us knows the absolute truth, of course, but the goal is to approach a situation with the least possible bias.

So the manager and the investor seek out an employee with discernment, the ability to see things as they truly are. A Buddhist might call this "prajna."

A life without attachment and stress can give you the freedom to see things as they are and call them as you see them. If you had this skill, what an asset you would be to any organization. ●

## Making the Choice

You can either fit in or stand out. Not both.

You are either defending the status quo or challenging it: playing defense and trying to keep everything "all right" or leading and provoking and striving to make everything better.

Either you are embracing the drama of your everyday life or seeing the world as it is. These are all choices; you can't have it both ways.

### Heads, You Win

Perhaps the biggest shift the new economy brings is self-determination. Access to capital and appropriate connections aren't nearly as essential as they were. Linchpins are made, not born.

There's no doubt that environment still plays a huge role. The right teacher or the right family support or the accidents of race or birth location are still significant factors. But the new rules mean that even if you've got all the right background, you won't make it unless you choose to.

These are internal choices, not external factors. How we respond to the opportunities and challenges of the outside world now determines how much the outside world values us.

### How Does a Linchpin Work?

In a world with only a few indispensable people, the linchpin has two elegant choices:

1. **Hire plenty of factory workers.** Scale like crazy. Take advantage of the facts that most people want a map, most people are willing to work cheaply, most people want to be the factory. You win because you extract the value of their labor the labor they're surrendering too cheaply.
2. **Find a boss who can't live without a linchpin.** Find a boss who adequately values your scarcity and your contribution, who will reward you with freedom and respect. Do the work. Make a difference.

If you are not currently doing either of these, refuse to settle. You deserve better. ●

## The Culture of Connection

Most psychologists agree that there are five traits that are essential in how people look at us: openness, conscientiousness, extraversion, agreeableness and emotional stability.

Here's the thing: These are *also* the signs of the linchpin. Work — great work — has been transformed in just 100 years from doing things that involve heavy lifting to leveraging and enhancing your personality. If you hope to succeed because you are able to connect and work with other people, then that will require you to improve your personality in each of these five elements.

Do you know someone who is more open to new ideas or more agreeable than you are? More stable or extroverted? More conscientious? If so, then you better get moving. It's so easy to fall into the trap of focusing on using a spreadsheet or a time clock to measure your progress, but in fact, it's the investment you make in your interactions that will pay off.

### Creating a Culture of Connection

Think about business-to-business sales. The key point of distinction between vendors calling on a company is rarely price. It's the perceived connection between the prospect and the organization.

Now, consider job satisfaction. The key point of distinction between places to work is rarely the work you'll be asking the employee to do. It's the perceived connection between the employee and the people he or she works with.

Thus, the individual in the organization who collects, connects and nurtures relationships is indispensable. This isn't about recording the information in a database somewhere. This is about holding the relationships as sacred as they deserve to be. ●

## The Seven Abilities of the Linchpin

Linchpins do two things for the organization. They exert emotional labor and they make a map. Those contributions take many forms. Here is one way to think about the list of what makes you indispensable:

1. **Providing a unique interface between members of the organization.** A linchpin helps lead and connects people in the organization, actively and with finesse. This takes emotional labor, and it can't be done by following the instructions in a manual.
2. **Delivering unique creativity.** *Creativity* is personal, original, unexpected and useful. *Unique creativity* requires domain knowledge, a position of trust and generosity to actually contribute. "Unique" implies that the creativity is focused and insightful.
3. **Managing a situation or organization of great complexity.** When the situation gets too complex, it's impossible to follow the manual, because there is no manual. Linchpins make their own maps and thus allow the organization to navigate more quickly than it ever could if it had to wait for the paralyzed crowd to figure out what to do next.
4. **Leading customers.** The new model of commerce is interactive, fluid and decentralized. That means that organizations need more than a tiny team. It means that every person who interacts with a consumer (or a business being sold to, or a donor to a nonprofit, or a voter) is doing marketing as leadership. There's no script for leadership.
5. **Inspiring staff.** You can't say, "Get more excited and insightful or you're fired." Actually, you can, but it won't work. The front-desk worker at a hotel who runs out in the middle of the night to buy gym shorts for a guest isn't doing it out of fear of being reprimanded. He does it because he was inspired to do so by a leader who wasn't even in the hotel when the clerk decided to contribute.
6. **Providing deep domain knowledge.** Having deep domain knowledge by itself is rarely sufficient to becoming indispensable. Combining that knowledge with smart decisions and generous contributions, though, changes things.
7. **Possessing a unique talent.** If you want to be a linchpin, the power you bring to the table has to be very difficult to replace. Be bolder and think bigger. If you're not the best in the world (the customer's world) at your unique talent, you have only two choices: Develop the other attributes that make you a linchpin or get a lot better at your unique talent. ●

## When It Doesn't Work

What happens when the conversation doesn't happen, the product doesn't sell, the consumer is not delighted, your boss is not happy and the people aren't moved?

Make more art.

Give more gifts.

Learn from what you did and then do more.

The only alternative is to give up and to become an old-school cog. Which means failing. Trying and failing is better than merely failing, because trying makes you an artist and gives you the right to try again.

### Pulitzer Prize Fighting: You Might Not Be Good Enough

There's no guarantee that anyone who sets out to win a Pulitzer is going to win it. There's no guarantee that merely because you're passionate about Web design, your site is actually going to be popular.

The vivid truth is this: Now that we have the freedom to create, we must embrace the fact that not all creations are equal and some people aren't going to win.

That doesn't mean you're a loser. It might mean that you're making the wrong art, drawing the wrong map. If you're not winning as a stockbroker, perhaps your art lies somewhere else.

The challenge lies in knowing your market and yourself well enough to see the truth.

### Two Tactics That Can Help You

The system we work in is changing, but it's an evolutionary change, not a revolutionary one. Organizations rarely give linchpins all the support and encouragement they deserve. Which means that your efforts won't always get what they need to succeed.

There are two tactics that can help you:

1. **Understand that there's a difference between the right answer and the answer you can sell.**

Too often, heretical ideas in organizations are shot down. They're not refused because they're wrong; they're refused because the person doing the selling doesn't have the stature or track record to sell them. Your boss has a worldview too. When you propose something that triggers his resistance, what do you expect will happen?

2. **Focus on making changes that work down, not up.**

Interacting with customers and employees is often easier than influencing bosses and investors. Over time, as you create an environment where your insight and generosity pay off, the people above you will notice and you'll get more freedom and authority.

Don't ask your boss to run interference, cover for you or take the blame. Instead, create moments where your boss can happily take credit. Once that cycle begins, you can be sure it will continue. ●

## Summary

Every successful organization is built around people. Humans who do art. People who interact with other people. Men and women who don't merely shuffle money but interact, give gifts and connect.

All these interactions are art. Art isn't only a painting; it's anything that changes someone for the better, a non-anonymous interaction that leads to a human (not simply a commercial) conclusion.

Art can't be bought and sold. It must contain an element that's a gift, something that brings the artist closer to the viewer, not something that insulates one from the other. So, we need to remember how to be artists.

Artists, at least the great ones, see the world more clearly than the rest of us. They have prajna, a sense of what actually is, not simply the artist's take on it. That honest sight allows them to see the future over the cloudy horizon. As our world changes faster and faster, it is these honest artists who will describe our future and lead us there.

### Last Word

The only thing keeping you from being one of these artists is the resistance: the loud voice of the lizard brain telling you that you can't possibly do it, that you don't deserve it, that people will laugh at you. Anyone who makes the choice to overcome the resistance and has the insight to make the right map can become a successful linchpin.

You can't fake it, though, because human beings are too talented at sensing when a gift is not a gift, when we're being played or manipulated. And sometimes, our art isn't enough. It's not enough to get us a sale or even make us a living. But we persist because making art is what we do.

The result of this art, these risks, the gifts and the humanity coming together is both wonderful and ironic. The result of getting back in touch with our pre-commercial selves will actually create a post-commercial world that feeds us, enriches us and gives us the stability we've been seeking for so long. ●

# Mojo

## How to Get It, How to Keep It, How to Get It Back If You Lose It

by Marshall Goldsmith with Mark Reiter

### THE SUMMARY IN BRIEF

Mojo comes from the moment we do something that is purposeful, powerful and positive, and the rest of the world recognizes it. *Mojo* is about that moment — and how we can create it in our lives, maintain it and recapture it when we need it.

Top executive coach Marshall Goldsmith lays out the ways that we can get — and keep — our Mojo. He explains how our professional and personal Mojo is impacted by four key factors and the questions they ask: *identity* (Who do you think you are?), *achievement* (What have you done lately?), *reputation*, (Who do other people think you are — and what have you done lately?) and *acceptance* (What can you change — and when do you need to just "let it go"?).

Mojo is that positive spirit — toward what we are doing now — that starts from the inside and radiates to the outside. Mojo is at its peak when we are experiencing both happiness and meaning in what we are doing and communicating this experience to the world around us. This summary provides practical tools that can help anyone achieve both happiness and meaning, not only in business, but in life.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to integrate and focus your life and work.
- How to contribute to the world.
- How to find more meaning for your life through self-realization and self-actualization.
- How to deal with human behavior in your business and personal life.

## You and Your Mojo

The word "mojo" originally referred to a folk belief in the supernatural powers of a voodoo charm, often in the form of a piece of cloth or a small pouch.

Over time, the word has evolved to describe a sense of positive spirit and direction, especially in the shifting tides of sports, business and politics.

To other people, Mojo is a more elusive sense of personal advancement through the world. You're moving forward, making progress, achieving goals, clearing hurdles, passing the competition — and doing so with increasing ease. Sports people call this being "in the zone." Others describe it under the umbrella term "flow."

A new definition of Mojo spins off from the great value attached to finding happiness and meaning in life.

Mojo plays a vital role in our pursuit of happiness and meaning because it is about achieving two simple goals: loving what you do and showing it. These goals govern an operational definition: **Mojo is that positive spirit toward what we are doing now that starts from the inside and radiates to the outside.**

Our Mojo is apparent when the positive feelings toward what we are doing come from inside us and are evident for others to see.

Four vital ingredients need to be combined in order for you to have great Mojo: *identity, achievement, reputation* and *acceptance*.

### Measuring Your Mojo

How much Mojo do you have? How can you measure your Mojo?

There are people, who by all external measures — money, respect, power, status — are "winning." They are outpacing their peers and competition quite handily. And yet inside they derive little satisfaction or meaning from their job or achievements.

Mojo is not merely about the rush we feel when we're on a winning streak. It's not only about the direction we're heading in, nor is it about the pace of change we're creating around us. Mojo is an expression of the harmony — or lack of harmony — between what we feel inside about whatever we are doing and what we show on the outside. ●

## The Mojo Paradox

As much as we all claim to want happiness and meaning in our lives, there's a paradoxical catch that thwarts us at every turn. It is called the Mojo Paradox and it states: *Our default response in life is not to experience happiness. Our default response in life is not to experience meaning. Our default response in life is to experience inertia.*

In other words, our most common, everyday process — the thing we do more often than anything else — is *continue to do what we're already doing.*

Once you appreciate the Mojo Paradox, you become aware of its paralyzing effect on every aspect of your life, not just the mindless routines of eating or watching TV, but also things that really matter — such as the level of happiness and meaning in your life — and you become more thoughtful about turning things around.

How do we break the cycle of inertia? All that's required is the use of a simple discipline.

As you go through your day, evaluate every activity on a 1 to 10 scale (with 10 being the highest score) on two simple questions: How much long-term benefit or meaning did I experience from this activity? How much short-term satisfaction or happiness did I experience in this activity?

Simply record the activities that make up your day, both at work and at home, and then evaluate each activity by applying these two questions. At the end of the day you will have a chart that tracks your experience of happiness and meaning.

If you journey through life knowing that all of your activities will be evaluated on these two simple questions, you will tend to experience more happiness and meaning in each activity and, in the aggregate, you will have a happier and more meaningful life. ●

## The Building Blocks of Mojo

Before you can assess your Mojo, you have to determine who "you" are. How do you define yourself?

The first building block is identity. Identity is a complicated subject, and we make it even more complicated when we're not sure where to look for the best answer. Many people hurtle back to their past — to signal events, memorable triumphs, painful disasters — to define themselves. Some rely on the testimony of others — a boss or teacher's good review — as a means of defining themselves. Still others project themselves into the future, defining themselves as who they would like to be rather than who they actually are.

How do we know who we are? Our identities are *remembered, reflected, programmed* and *created*. First, review the various components of your current identity. Where did they originate? If your present identity is fine with you, just work on becoming an even better version of who you are. If you want to make a change in your identity, be open to the fact you may be able to change more than you originally believed that you could.

Assuming that you do not have "incurable" or "unchangeable" limitations, you can create a new identity for your future without sacrificing your past.

Your Mojo is that positive spirit toward what you are doing now that starts on the inside and radiates to the outside. To understand how you are relating to any activity, you need to understand your identity — who you are. To change your Mojo, you may need to create a new identity for yourself. ●

### Waiters and Mojo

What is interesting about waiters, at least in terms of Mojo, is the wide variety of attitudes that people bring to a narrowly defined job that ends with a monetary tip.

The best ones appreciate the process. They realize that the more engaging and positive they are, the bigger their tip. So no matter how they feel about their circumstances, they radiate a positive spirit (high Mojo).

The worst ones make it a point of honor to let you know that they find the job demeaning (low Mojo), that they are really more interesting in their other life (with more Mojo).

Finally, there are the career waiters. There's a professional snap to how they do their job, and they never hint that they would rather be doing something else. They are committed to doing the task well and they are capable of mining personal satisfaction from it. If they have a bad day, they don't take it out on their customers.

## Achievement: What Have You Done Lately?

Our achievements are the second component in creating our Mojo.

We tend to gauge our achievements by using two differing criteria. On the one hand, there are the accomplishments that make others aware of our ability and result in their recognizing us. This is what most people think about when they discuss achievement. On the other hand, there are the accomplishments that only we are aware of, related to our own abilities, that make us feel good about ourselves. Both are legitimate in their own way.

In the "best of all worlds" the two types of achievement could be the same — what we do that impresses others makes us feel great about ourselves. But it doesn't always work out that way. Sometimes we perform magnificently at work, to great acclaim, but it doesn't elevate how we feel about ourselves. Sometimes we do something wonderful for the world and no one else is impressed.

### False Assumptions

Chip away at the false assumptions that distort your achievements and you'll get a much clearer picture of what you've done lately. Without it, you'll never be

able to envision everything else you can do.

By increasing our understanding of achievement — what it means to us and what it means to the world — we can increase our Mojo. We can look at ourselves more objectively. We can determine what really matters in our lives. We can strive for achievement that really matters to us — and let go of achievement that does not create happiness and meaning in our lives. If we want to increase our Mojo, we can either change the degree of our achievement (how well we are doing) or change the definition of our achievement (what we are trying to do well). ●

## Reputation: Who Do People Think You Are?

Reputation is the third element in establishing your Mojo. It's where you add up who you are (identity) and what you've done (achievement) and toss the combined sum out into the world to see how people respond. Your reputation is people's recognition — or rejection — of your identity and achievement. Sometimes you'll agree with the world's opinion. Sometimes you won't. But many times you may not even be aware of it. You cannot create your reputation by yourself (the rest of the world, by definition, always has something to say about it). But you can influence it.

### How to Change Your Reputation

The truth is, reputation doesn't happen overnight. In the same way that *one event* can't form your reputation, *one corrective gesture* can't reform it either. You need a sequence of consistent, similar actions to begin the rebuilding process.

It's doable, but it requires personal insight and, most of all, discipline.

You have to be consistent in how you present yourself — to the point where you don't mind being "guilty of repeating yourself." If you abandon that consistency, people will get confused. The reputation you're trying to form gets muddied by conflicting evidence and eventually loses its sharp focus.

By impacting our reputation we can impact our Mojo. Having a reputation that others find bothersome can make keeping your Mojo as easy as "pushing a big rock up a steep hill." It is theoretically possible, but practically challenging. Having a great reputation — in an area that matters in your life — makes Mojo maintenance more of a joy than a chore. ●

## Acceptance: When Can You Let Go?

Worrying about the past and being anxious about the future can easily destroy our Mojo. It upsets us emotionally; it clouds our judgment; it fills us with regret and it can lead to self-punishment.

When we cannot accept a situation for what it is and refuse to forgive people for causing that situation, who do we ultimately hurt? The answer is always the same: ourselves. By carrying around anger and negative baggage, we weigh ourselves down. We limit our opportunities to find meaning and happiness. We kill our Mojo.

That's what makes acceptance as important as identity, achievement and reputation in building our Mojo. It's the element that liberates us from toxic emotions. When everything around us seems confusing, acceptance reminds us what really matters.

Try it the next time you find yourself engorged with anger at someone who has disappointed or hurt you. Ask yourself who is making you feel upset, angry or crazy. Then set aside every thought, every argument and every image about the people who are upsetting you. Blank all of it out — and focus on these people as they are in your life now. Not for what they did in the past. Not on what you want to happen to them in the future. They're being who they are. (If you had their parents, their genes, their résumé, you might be them, too.) You don't have to like them, agree with them or even respect them. Just accept them for being who they are.

When you can do that, you can forgive them for being who they are — and forgive yourself for being who you are.

Change what you can and "let go" of what you cannot change. ●

## Mojo Killers

When people lose their Mojo, it's usually because of a series of simple, hard-to-spot mistakes that lead up to the humiliating result — mistakes like these:

**1. Over-Committing.** Before replying with an enthusiastic "yes" to that next request, think of the long-term impact on your Mojo.

**2. Waiting for the Facts to Change.** When the facts are not to your liking, ask yourself, "What path would I take if I knew that the situation would not get better?" Then get ready to do that.

**3. Looking for Logic in All the Wrong Places**. If you focus on making a positive difference, instead of just

being satisfied with feeling "objective," you will benefit both your company and your career.

**4. Bashing the Boss.** The next time you start to bash the boss, think about what you may be doing to your own Mojo and the Mojo of the people around you. If you really have a problem with bosses, *talk to them* about it. If you feel that you cannot talk with them, leave. If you cannot talk with them and cannot leave, accept them and make the best of it.

**5. Refusing to Change Because of "Sunk Costs."** Are your decisions based on what you might lose or what you have to gain? If it's the former, your devotion to sunk costs might be costing you more than you know. It may cost you your Mojo.

**6. Confusing the Mode You're In.** If you look around your company, you'll see that the executives you most admire tend to be those who, with consistent discipline, never drift out of professional mode. They have clear ideas about their identity, achievement and reputation. They have chosen a role for themselves and they rarely go off script. That's why they have Mojo. ●

## Four Pointless Arguments

Arguing can put our Mojo at risk by needlessly creating enemies that could have been allies. Many of our arguments fall into classic patterns that, if looked at from a distance, would seem silly and beneath our dignity.

It is worth arguing over true injustice in the workplace or the world. But it is pointless to argue about perceived injustices that usually say more about our own egos than the "cause" we are championing.

By recognizing classic argument traps, we can better determine which battles to fight — and which to avoid.

**1. Let Me Keep Talking.** When we keep "fighting after the bell has rung," we can start damaging our reputation and, ultimately, our Mojo. In the end we will not win more arguments, we will win less. Our arguing will be viewed more as our own stubborn need to prove we are right than as a sincere commitment to help our organization.

**2. I Had It Rougher Than You.** You end up looking foolish when you try to glorify your past for all its deficiencies and all the suffering it brought upon you. All you're doing is creating a contest of competing memories.

**3. Why Did You Do That?** We never really know other people's motives for doing something that affects us. People do things that annoy or enrage us, and it's almost impossible to get to the bottom of why they did them, yet we waste hours trying.

**4. It's Not Fair.** Great influencers are like great salespeople. When the customers don't buy, they don't whine and blame the customers. They focus on what they can learn and do a better job next time. Great influencers keep their Mojo. Poor influencers lose it. ●

## That Job Is Gone!

Many jobs don't exist anymore. They've been exported beyond our borders. And even if they've stayed inside the United States, many of the long-term benefits that made them so attractive have been stripped out by cost-cutting and global competition. What's even harder to accept is that those jobs are not coming back.

The forces that created this new high-stress environment are not mysterious.

The biggest factor is globalization. Westerners not only compete with other Americans and Europeans for the best jobs, they have to compete with a wave of smart, highly motivated candidates from India, China and Eastern Europe.

Another factor is the dramatically increased gap in compensation between the top people in an organization and everyone else.

A third factor is decreased job security. The shortage of mid-level jobs has only widened the gap between society's economic winners and losers.

Another factor is the steady erosion in the past 20 years of company-funded guaranteed health care and retirement security. This affects professionals as well as wage earners, meaning that everyone worries more about long-term security.

A fifth factor is the global financial crisis that began in 2008. It has heightened the already-present fear in the workplace — fear of losing a job, or a home, or of ever finding high-quality professional work again.

The sixth and most lethal factor is new technology. New technology, hand in hand with globalization, has created a 24/7 world where work never seems to stop.

In this new world, Mojo is both harder to attain and more important to keep. When your competition is already responding to a tough new environment by working harder and longer, you need unique tools to separate yourself from the throng. ●

## Your Mojo Tool Kit

If you step back, you'll discover that you're still in control of your life and destiny. You have the power to create significant positive change.

*What can you change?* The answer is simple: You can change either You or It.

*You* is how you think, how you feel, what you say — basically everything about you that's under your control.

*It,* on the other hand, refers to any influencing forces in your life that are not you. It could be another individual, or a group of people, or a job, or a place, or a relationship, or the results of a choice you made in the past that needs undoing. It is everything that's not You.

Changing You is not inherently preferable or easier than changing It (and vice versa). The best approach depends on the situation.

Once you're aware of this "You or It" dichotomy, you begin to see manifestations everywhere and you begin to realize its impact on Mojo. You see that in all work and personal situations, Mojo is a function of the relationship between who you are (i.e., You) and your situation (i.e., It). If you cannot change You, Mojo is influenced by your relationship to It. If you cannot change It, Mojo is influenced by your relationship to You. It's your choice.

The following 14 actions can help you attack the challenge of changing You or It. Like tools, they don't work unless you grab them in your hands and use them.

These actions are organized into four parts, each corresponding to one of the four building blocks of Mojo: Identity, Achievement, Reputation and Acceptance. ●

## Identity: Making Sense of Who You Are

The following four tools can help reshape or refine the "you" that you present to the world:

**Tool #1: Establish Criteria That Matter to You**. Before you can establish or regain your Mojo, you first have to imagine what it looks like and what it takes to get there. If you write it down, that's your criteria. It's a good place to start.

**Tool #2: Find Out Where You're "Living."** A great way to test your Mojo is to consider your life at work — then consider your life outside of work. Research shows that people who find happiness and meaning at work tend to be the same people that find happiness and meaning at home! In other words, our Mojo is coming from inside ourselves — as much as it is from what we are doing. For the majority of people, the only way to increase overall satisfaction with life is to increase *both* happiness and meaning.

**Tool #3: Be the Optimist in the Room.** If you can maintain your optimism in the face of negative forces, you have an enormous advantage over most people. Optimism is not just a mind-set; it's a form of behavior that guides everything we do. It can be self-fulfilling. And it's contagious. The optimist in the room always has more influence than anyone else. People pick up on optimism and gravitate toward it.

**Tool #4: Take Away One Thing.** The untapped power of subtraction is within your grasp. It's as easy as saying to yourself, *My life might actually be better if I took away* _____ and fill in the blank. Subtract something from your life that is a "big deal." There are so many things we can lose in our daily lives without harming our Mojo that it's inexcusable if we can't identify *one item* to toss away to increase our Mojo. ●

## Achievement: Making It Easier to Get Things Done

The following tools offer courses of action that put our achievements in sharper relief:

**Tool #5: Rebuild One Brick at a Time.** Here are some rules to consider so you finish what you've started and people take note:

***First rule:*** Stop trying to be an oracle. Stop waiting for more information or for better circumstances before you get started.

***Second rule:*** Move quickly. You're constructing a sequence of successes, and you might as well do it quickly.

***Third rule:*** Say two no's for every yes. Be more ruthless about saying no, especially when other people try to steer you off course.

***Fourth rule:*** It pays to advertise. People have preconceptions about you. They not only filter everything you do through those preconceptions, but they are constantly looking for evidence that confirms them.

**Tool #6: Live Your Mission in the Small Moments Too.** Mission statements are now regarded as overbaked relics of the 1980s — a faddish buzzword of the same vintage as "excellence" and "quality." That may be true, but the fact that a concept is no longer the newest fad does not mean it doesn't have value. What turned mission statements into a corporate joke was how quickly companies broadcast their embrace of a concept and then didn't follow up on it with consistent action. You don't *write* a mission statement. You live it and breathe it. A lot of organizations never did that.

When you have a mission, you give yourself a purpose — and that adds clarity to all the actions and decisions that follow.

There's an underestimated value to articulating your mission: It focuses you, points you in a new direction, alters your behavior and, as a result, changes other people's perception of you.

**Tool #7: Swim in the Blue Water.** It's dangerous to extrapolate a personal strategy out of a corporate competitive strategy. We are human beings, not strategic business units. But there's some appeal in the idea that we can find a "blue water" alternative (the uncontested space) as we shape our personal aspirations. Our identities and reputations are made in small, incisive moments. We can't all be transformative geniuses who see the world in a paradigm-shifting light. But we can all find a way to differentiate ourselves, however minimally, from the thundering herd — and in doing so, we achieve a small slice of singularity in our world.

If you want to enhance your Mojo, you can do worse than pursue an achievement that has everyone wondering, *Why didn't I think of that?* ●

## Reputation: Taking Control of Your 'Story'

The following tools operate in that space where our identity and achievements intersect with the world and shape our reputation:

**Tool #8: When to Stay, When to Go.** Can you find more happiness and meaning by changing the situation? Can you find more happiness and meaning by changing yourself? What are your real alternatives? Conduct a Mojo analysis that clarifies what you need to change — make your decision — accept the trade-offs — and get on with life.

**Tool #9: Hello, Goodbye.** No matter how you dress up a dismissal, you still have to deal with the perception that something went wrong, you came up short and you may not be all that you're cracked up to be.

But it doesn't have to be quite that bad, not if you have a pre-exit strategy; leave the company (on positive terms) — before the company leaves you (on negative terms); accept that your identification with your vanished job is pointless, and move quickly to transfer your affections to something else; and ask yourself: How solid is my reputation? And is it solid because of what I've done or who I work for?

**Tool #10: Adopt a Metrics System.** We all employ personal metrics to measure our progress during the day. If we're on a diet, our metric is stepping on the bathroom scale each morning. Applying personal metrics when the numbers may be depressing not only tells us where we're failing but how to change our luck.

Once you have your personal metric, no matter how alarming the data, you'll know what to do next.

**Tool #11: Reduce This Number.** How much of our interpersonal communication is spent on pointless, negative, nonproductive topics?

What percent of all interpersonal communication time is spent on people talking about how smart, special or wonderful they are — or listening while someone else does this, plus people talking about how stupid, inept or bad someone else is — or listening while someone else does this? Reducing this number costs nothing, it will save you time and it will make your work and home life more positive. ●

## Why Blue Water?

The blue/red water metaphor comes from *Blue Ocean Strategy,* in which W. Chan Kim and Renee Mauborgne, two professors at INSEAD, France's leading business school, divided the marketing universe into Red Oceans (the known market space comprising all the markets in existence today), where companies outperform rivals by grabbing a greater share of existing demand, and Blue Oceans (the unknown market space, untainted by competition, comprising all the markets not in existence today), where demand is created rather than fought over and the growth potential is limited only by one's imagination.

## Acceptance: Change What You Can, Let Go of What You Can't

The following tools will help you deal with some elements of life that you may not be able to directly control:

**Tool #12: Influence Up as Well as Down.** Every decision in the world is made by the person who has the power to make that decision, and in most cases not you. If you influence the decision maker, you will make a positive difference. If you do not influence this person, you will not make a positive difference. Make peace with this. You will have a better life! And you will make more of a positive difference in your organization and you will be happier.

**Tool #13: Name It, Frame It, Claim It.** If you want to improve your understanding of a situation, give it a name.

Naming something lets us organize the action into a

coherent shape. It lets us compare the action to what has gone before. It helps us retain it for future purposes, so that we may recognize — and respond to — the action more brilliantly the next time we face it. Naming helps us learn, make sense and take control.

**Tool #14: Give Your Friends a Lifetime Pass.** When considering the actions of a friend who has offended you, ask one question: Am I better off or worse off because of having this person in my life?

If we can be that forgiving with family members, why can't we extend the same level of acceptance to people who, when all is said and done, have demonstrably made our lives better? ●

## Connecting Inside to Outside

You should not feel obligated do any of this alone! If you want to improve your performance at almost anything, your odds of success improve considerably the moment you enlist someone else to help you.

Some of us already practice this instinctively, when we enlist a friend to attend yoga class with us or commit to training for a marathon (an inherently lonely sport) the moment a friend agrees to join us. We enjoy the companionship and support, but knowing we're answerable to someone else, even if it's only to schedule a time for a training run, is also motivating. That small obligation keeps us focused. At some point we reach a point of no return where we don't want to disappoint a friend or don't want to be the first to give up. Pairing up provides us with a discipline that we cannot summon as readily working solo.

This "power of two" thinking works well for overt personal objectives, such as quitting smoking or losing weight or athletic training, where we're relying more on moral support, rather than instructive coaching, to reach a clearly marked finish line.

But enlisting someone else to help us isn't our first impulse when we dive into a self-improvement campaign involving our professional lives. Whether it's upgrading the quality of our customer base, or landing a big promotion, or executing a career U-turn, our initial impulse is to do it on our own. After all, it's our goal, our effort, our accomplishment and our payoff if we succeed. How can we share the burden — and glory — with someone else?

Part of the reason behind this is psychic self-preservation on our part; if we fall short of our goal, we want to contain the failure to a circle of one: ourselves. If no one knows what we're striving for, then no one can criticize us for faltering.

Don't let your ego block you from your goals. Start seeing every challenge as a choice between (a) I can do it by myself and (b) I may be able to do it better with help.

Once you accept that you are judged more on the result than on how many hands played a part in achieving it, you'll make the right choice. ●

## Coda: You Go First!

Do you want the people who love you at home to be happy? Do you want the people who respect you at work to be happy? You go first. You be happy. Mojo is that positive spirit toward what you are doing that starts on the inside and radiates to the outside.

Do you want the people that you love and respect to have Mojo? Show them yours! There are good people out there who look up to us. They respect us. They want to be like us. We are role models for them.

What message do we send to the people we love at home when we communicate that we are unhappy and that our lives at home are meaningless? *Being with you does not bring me joy and my life at home really doesn't matter that much to me.*

What message do we send to the people who we respect at work when we communicate that we are unhappy and that our jobs are meaningless? *I wish that I were not here today. I would rather be doing almost anything than working with you or in this company.*

On the other hand, what message do we send to the people — at work and home — when our Mojo is high? *I find joy in my life when I am with you. Being with you — in this home or in this workplace — matters to me. You are important and what I am doing with you is important.*

Is there any better message that we can communicate to the people who trust us, respect us and love us? Having a happier and more meaningful life will help the wonderful people in your life find more happiness and meaning. Don't just do it for you. Do it for them! ●

### RECOMMENDED READING LIST

If you liked *Mojo*, you'll also like:

1. ***How the Best Leaders Lead* by Brian Tracy.** Management expert Tracy teaches you the secrets he's taught executives over his long career.
2. ***Derailed* by Tim Irwin.** Sometimes the best way to learn the right way is to learn what others have done wrong. This book profiles the tragic downfall of several notable executives.
3. ***Execution* by Larry Bossidy and Ram Charan.** This book sets out a five-step process for getting successful results. It advises leaders to get more involved in the details of execution to get the job done.

Career & Self-Development: Change & Advancement

# Power

## Why Some People Have It — and Others Don't

by Jeffrey Pfeffer

### THE SUMMARY IN BRIEF

Over decades of consulting with corporations and teaching MBA students the nuances of organizational power, Jeffrey Pfeffer has watched numerous people suffer career reversals even as others prevail despite the odds.

He explains that our most common mistake is not having a realistic understanding of what makes some people more successful than others. By believing that life is fair, he writes, we tend to subscribe to the "just-world phenomenon," which leaves us unprepared for the challenges and competition of the real world.

In *Power* Pfeffer brings decades of insights to a wider audience. Brimming with counterintuitive advice, examples from various countries and surprising findings based on his research, this groundbreaking guide reveals the strategies and tactics that separate winners from losers.

Power, Pfeffer explains, is not something that can be learned from those in charge: Their advice often puts a rosy spin on their ascent and focuses on what should have worked, rather than what actually did. Instead, *Power* reveals the true paths to power and career success. Iconoclastic and grounded in real human interaction, this summary is an essential organizational survival manual and a new standard in the field of leadership.

### IN THIS SUMMARY, YOU WILL LEARN:

- How working in underexploited niches can help you develop leverage.
- How power can be used and harnessed not only for individual gain but also for the benefit of others.
- How well-established principles can help you obtain more influence.
- How to succeed and wield power in the real world.

## Introduction: Be Prepared for Power

Being politically savvy and seeking power are related to career success and even to managerial performance. For instance, one study investigated the primary motivations of managers and their professional success. One group of managers was primarily motivated by a need for affiliation — they were more interested in being liked than getting things done. A second group was primarily motivated by a need for achievement — goal attainment for themselves. And a third group was primarily interested in power. The evidence showed that this third group, the managers primarily interested in power, was the most effective, not only in achieving positions of influence inside companies but also in accomplishing their jobs.

In another example, Gerald Ferris of Florida State University and colleagues have developed an 18-item political skills inventory. Research on 35 school administrators in the Midwestern United States and 474 branch managers of a national financial services firm showed that people who had more political skill received higher performance evaluations and were rated as more effective leaders.

### The Real World

So welcome to the real world — not necessarily the world we want, but the world that exists. It can be a tough world out there and building and using power are useful organizational survival skills. There is a lot of zero-sum competition for status and jobs. Most organizations have only one CEO. There is only one managing partner in professional services firms, only one school superintendent in each district, only one prime minister or president at a time — you get the picture. With more well-qualified people competing for each step on the organizational ladder all the time, rivalry is intense and only getting more so as there are fewer and fewer management positions.

Some of the individuals competing for advancement bend the rules of fair play or ignore them completely. Don't complain about this or wish the world were different. You can compete and even triumph in organizations of all types, large and small, public or private sector, if you understand the principles of power and are willing to use them. Your task is to know how to prevail in the political battles you will face. ●

## It Takes More Than Performance

People in power are busy with their own agendas and jobs. Such people, including those higher up in your own organization, probably aren't paying that much attention to you and what you are doing. You should not assume that your boss knows or notices everything about your job performance or has perfect information about your activities. Therefore, your first responsibility is to ensure that those at higher levels in your company know what you are accomplishing. And the best way to ensure they know what you are achieving is to tell them.

For you to attain a position of power, those in power have to choose you for a senior role. If you blend into the woodwork, no one will care about you, even if you are doing a great job.

In advertising, one of the most prominent measures of effectiveness is ad recall — not taste, logic or artistry — simply, do you remember the ad and the product? The same holds true for you and your path to power. That's because of the importance of what is called "the mere exposure effect." As originally described by the late social psychologist Robert Zajonc, the effect refers to the fact that people, other things being equal, prefer and choose what is familiar to them — what they have seen or experienced before. Research shows that repeated exposure increases positive affect and reduces negative feelings, that people prefer the familiar because this preference reduces uncertainty and that the effect of exposure on liking and decision making is a robust phenomenon that occurs in different cultures and in a variety of different domains of choice.

The simple fact is that people like what they remember — and that includes you. In order for your great performance to be appreciated, it needs to be visible. But beyond visibility, the mere exposure research teaches us that familiarity produces preference. Simply put, in many cases, being memorable equals getting chosen.

## The Personal Qualities That Bring Influence

Ron Meyer, the president and chief operating officer of Universal Studios since 1995, is the longest serving head of a major motion picture company. A powerful figure in the film industry, he also provides an example of a life transformed. Meyer dropped out of high school when he was 15 and a couple of years later he joined the U.S. Marines. After leaving the Marines he got a job at a talent agency as a chauffer, a position that permitted him to learn a lot about the entertainment business as he listened to the conversations of clients. After working as an agent for the William Morris Agency, Meyer and some friends founded the Creative Artists Agency, a position that helped establish him as a power broker in Hollywood.

Meyer, like many successful people, profoundly changed over the course of his life. He developed qualities that permitted him to obtain and hold on to influence. If you are going to do likewise, you need to successfully surmount three obstacles:

- First, you must come to believe that personal change is possible. Otherwise, you won't even try to develop the attributes that bring power — you will just accept that you are who you are rather than embarking on a sometimes difficult path of personal growth and development.
- Second, you need to see yourself and your strengths and weaknesses as objectively as possible. This is difficult because in our desire to self-enhance — to think good things about ourselves — we avoid negative information and overemphasize any positive feedback we receive.
- And third, you need to understand the most important qualities for building a power base so you can focus your inevitably limited time and attention on developing those.

### Change Is Always Possible

People often think that whatever qualities are needed for building a path to power, either you have them or you don't, at least by the time you're an adult. But the biographies of Meyer and scores of other figures in political and business life belie that idea.

## Choosing Where to Start

Where you begin your career affects your rate of progress as well as how far you go. At two University of California campuses, the speed with which professors moved up a civil service-type salary ladder reflected the power of their academic department — those in more powerful departments moved up the salary scale more quickly. A study of 338 managers who began their career in a 3,500-employee public utility found that the power of the unit where people began their careers affected the rate of salary growth, with people starting in more powerful units moving up more rapidly. That study also found that managers who began their careers in higher-power departments, such as operations, distribution and customer service, were more likely to remain in high-power units as they changed jobs.

Prior to its breakup by the government, the road to the CEO position at AT&T was through the Illinois Bell subsidiary. If you wanted to be CEO at Pacific Gas and Electric, the legal department was the best place to build your career. The shift in power from engineers to lawyers was visible over time: In 1950, only three of the company's most senior positions were occupied by attorneys; by 1980, the comparable number was 18. For many years, finance was the route to the top at General Motors. At the University of Illinois, senior university positions were often filled with people from the physics department.

### Path to Power

We intuitively know that not all career platforms are

equal in value as a path to power, and research supports that intuition. But people often err in choosing where to start building their power base. The most common mistake is to locate in the department dealing with the organization's current core activity, skill or product — the unit that is the most powerful at the moment. This turns out to not always be a good idea because the organization's most central work is where you are going to encounter the most talented competition and also the most well-established career paths and processes. Moreover, what is the most important function or product today may not be in the future.

So if you want to move up quickly, go to underexploited niches where you can develop leverage with less resistance and build a power base in activities that are going to be more important in the near future than they are today. ●

## Getting In: Standing Out and Breaking Some Rules

The late Reginald Lewis was a successful African American corporate lawyer and founder of a buyout firm, TLC Group. TLC bought the McCall Pattern Co. in the early 1980s and, under Lewis' turnaround efforts, returned investors 90 times back their money. TLC later bought Beatrice Foods, creating the first black-owned company with revenues of over $1 billion and making Lewis one of the wealthiest people in the United States.

But back in 1965, Lewis wasn't someone with a prominent place in African American business history. He didn't have an international law program at Harvard and an African American history museum in Maryland named after him. He was just a young man from a tough Baltimore neighborhood who was graduating from Virginia State University and had set his sights on going to Harvard Law School. During that summer he was in a Rockefeller Foundation-funded program at Harvard Law School for high-potential black college students designed to interest them in careers in the law and help them prepare for the application process. There was just one problem — one of the rules of the program was that no one who participated could even be considered for admission to Harvard Law School. Moreover, Lewis had not taken the Law School Aptitude Test, or even applied to Harvard Law, and he wanted to start the program that fall.

Even as he was doing well in the summer program by expending enormous effort and standing out in the mock court trial to such an extent that 30 years later professors still talked about his performance, Lewis met with a Harvard Law professor and then with the dean of admissions. With these faculty members he pressed his case by forcefully arguing "the myriad ways an association between Reginald Lewis and the law school would be mutually beneficial." At the end of the summer, Lewis matriculated at Harvard Law School, becoming the only person in the history of the school who was admitted before he filled out an application.

### What's the Worst That Could Happen?

Lewis understood that the worst that could happen from asking for something would be getting turned down. And if he were turned down, so what? People who don't ask would not be any worse off than if they had not asked in the first place. If they didn't ask or if they were refused, they would not receive what they sought, but at least with asking, there was some hope. Some people do believe that worse things could occur: that their bold behavior could offend those exposed to it and they could develop a "bad reputation." Probably not, and the risk of standing out is well worth taking. ●

## Making Something Out of Nothing: Creating Resources

Resources are great because once you have them, maintaining power becomes a self-reinforcing process.

There are two simple but important implications of resources as a source of power. The first is that in choosing among jobs, choose positions that have greater direct resource control of more budget or staff. That generally means preferring line to staff positions, since line positions typically control more staff hiring and more budgetary authority.

Most headhunters will tell you that when they seek candidates for senior general management positions, including the CEO job, they look to people who have had responsibility running operations, and the larger the division or operation the potential candidate has run, the better, other things being equal. Job analyses such as the Hay system used to determine salary ranges consider the number of direct and indirect reports you have, as well as the amount of budget you can spend without higher-level authorization, as measures of your responsibility and consequently the economic value of your job. Getting control of resources is an important step on your path to power.

### Self-Enhancement

The second straightforward implication is that your

power comes in large measure from the position you hold and the resources and other things you control as a consequence of holding that position. It is easy for people, motivated by self-enhancement, to believe that the deference and flattery of others is due to their inherent intelligence, experience and charm. This may be the case, but not often. When you retire or otherwise leave a position in which you once had control over substantial amounts of resources, people will pay you much less heed and give you less attention. ●

## Building Efficient and Effective Social Networks

Two German professors, Hans-Georg Wolff and Klaus Moser, offer a good definition of networking: "Behaviors that are aimed at building, maintaining and using informal relationships that possess the (potential) benefit of facilitating work-related activities of individuals by voluntarily gaining access to resources and maximizing … advantages." Their study of more than 200 people in Germany developed some scales of networking behaviors that demonstrate what actions are required. These included:

1. Building internal contacts (e.g., "I use company events to make new contacts.")
2. Maintaining internal contacts (e.g., "I catch up with colleagues from other departments about what they are working on.")
3. Using internal contacts (e.g., "I use my contacts with colleagues in other departments in order to get confidential advice in business matters.")
4. Building external contacts (e.g., "I accept invitations to official functions or festivities out of professional interest.")
5. Maintaining external contacts (e.g., "I ask others to give my regards to business acquaintances outside of our company.")
6. Using external contacts (e.g., "I exchange professional tips and hints with acquaintances from other organizations.")

The networking behaviors they describe entail making some incremental effort to build, maintain and use social ties with people. The people targeted are not necessarily in your sights if you are focused just on your immediate job and company.

In general, jobs high in networking content require bridging separate organizations, brokering deals and relationship building to influence decision making. ●

### Jack Valenti's Political Power

When in 1966 Jack Valenti left his position as a White House aide to become head of the Motion Picture Association of America, he could provide political access to the movie studios that needed help staving off censorship and dealing with foreign governments on commercial issues, including the repatriation of funds. At the same time, he could provide an entrée to Hollywood and its enormous fundraising potential for the Democratic Party and Valenti's patron, Lyndon Johnson.

## Acting and Speaking with Power

We choose how we will act and talk, and those decisions are consequential for acquiring and holding on to power. Harriet Rubin was, for 11 years, the editor of a line of books called *Currency* devoted to understanding leadership. During that time she at once occupied a position of leadership and published leaders' autobiographies and books on leadership. Her experience suggested that the secret of leadership was the ability to play a role, to pretend, to be skilled in the theatrical arts. Rubin is right. Differences in the ability to convey power through how we talk, appear and act matter in our everyday interactions, from seeking a job to attempting to win a vital contract to presenting a company's growth prospects before investment analysts.

### Speaking Powerfully

The language people use and how they construct presentations and arguments help determine their power. Great orators move masses — Martin Luther King Jr.'s famous "I Have a Dream" speech and the speeches of Barack Obama in his campaign for the presidency being two notable examples. But power gets created in private interactions and small meetings, not just on a huge stage. There are some well-established principles that can help you subtly obtain more influence as you speak with power:

- **Interruption.** One source of power in every interaction is interruption. Those with power interrupt, those with less power get interrupted. In conversation, interrupting others, although not polite, can indicate power and be an effective power move.
- **Contest the premises of the discussion.** In most companies, the strategy and market dynamics are taken for granted. If someone challenges these assumptions — such as how the company is compet-

ing, how it is measuring success, what the strategy is, who the real competitors are now and in the future — this can be a very potent power play.

- **Persuasive language.** Language that influences is able to create powerful images and emotions that overwhelm reason. Such language is evocative, specific and filled with strong language and visual imagery. ●

## Building a Reputation: Perception Is Reality

For more than a decade, John Browne served as CEO of British Petroleum; under his aegis, BP bought Amoco and Arco as well as making numerous smaller acquisitions. Browne was named to the British House of Lords and was voted the country's most admired business leader numerous times. But as many observers point out, Browne is not necessarily the most obvious leader: He is short, less than 5 feet 6 inches tall; soft-spoken and awkward in social settings, essentially an introvert; and an intellectual in an industry known for brash, bold leaders who take big chances. Browne's rise to power and his consolidation of his position were based in part on his ability to build an image that served him well.

### Three Dimensions of John Browne's Reputation

Although Browne's reputation is multifaceted, three dimensions stand out: hard work and dedication, intelligence and intimidation of others. Browne was at BP throughout his working life, spending over 30 years in the company. He moved around the world including Anchorage, Alaska, New York, Cleveland and London, among others. He worked enormous hours. It is helpful to be seen as someone devoted to the company.

Browne's intelligence is legendary. Trained in physics, Browne always emphasized first principles and asked inquisitive questions. His analytical training permitted him to do well in his jobs both in finance and in exploration. But what comes across is how he used his intelligence and memory to build his reputation as being super smart.

The specifics of a useful reputation will obviously vary depending on the context and your own personal strengths and weaknesses. What is important is that you think carefully about the dimensions of the reputation you want to build, and then do everything in your power, from how you spend your time to what organizations and people you associate with, to ensure that is the image that you project. ●

## Overcoming Opposition and Setbacks

Because people come from different backgrounds, face different rewards and see different information, they are going to see the world differently. Consequently, disagreements are inevitable in organizations. Unfortunately, many people are conflict-averse, finding disagreement disagreeable and avoiding surfacing differences of opinion and engaging in difficult conversations with their adversaries.

As school leader Rudy Crew has said, "Conflict is just an opportunity for another person's education," for exploring why people think the way they do, and for sharing perspectives so the parties to the conflict can learn about and from each other.

Here are some ideas to make you more successful in surmounting opposition:

- **Try a little tenderness and leave people a graceful out.** One way to deal with opponents is to treat them well and leave them a nice way to retreat.
- **Don't get emotionally entangled.** Conflict arouses strong emotions, including anger, and these strong feelings interfere with our ability to think strategically about what we are really trying to do.
- **Don't take things personally — make important relationships work.**
- **Be persistent.** Persistence works because it wears down the opposition.
- **Advance on multiple fronts.** Leverage power from one setting to get influence in another.
- **Move first — seize the initiative.** If you move quickly, you can often catch your opponents off guard and secure victory before they even know what is happening.

### Coping With Setbacks

Most successful people have encountered setbacks along the way and survived. Reed Hastings, the highly successful founder and CEO of Netflix, had a much less successful experience with his first software startup, Pure Software, where he tried to fire himself twice. Bad things sometimes happen to good people. The issue becomes how and if they recover.

If you are going to persevere and recover, you need to stop blaming yourself, letting your opponents dominate the discussion of what happened and feeling bad about your complicity in your demise.

The best way to overcome any possible embarrassment is to talk about what happened to as many people as

possible. Making what happened less emotionally fraught is absolutely essential for your being able to think strategically about your next moves.

## The Price of Power

It was the late Nobel Prize-winning economist Milton Friedman who famously said, "There is no free lunch." Nothing comes without cost, and that is certainly true of power.

As you chart your course and make decisions about what you will and will not do to acquire power, consider carefully what you are striving for and if you really want it.

People who seek and attain power often pay some price for the quest, for holding on to their positions and confronting the difficult but inevitable transitions out of powerful roles. Here are some of the costs incurred by those who successfully pursue a path to power:

**Cost 1: Visibility and Public Scrutiny.**
An important lesson: If you are going to misbehave in any way, do so before you achieve a high-level position that makes you the object of constant attention by peers, subordinates, superiors and the media.

**Cost 2: The Loss of Autonomy.**
Many CEOs and other senior leaders block out time for themselves and the activities that they want to do. But all of them talk about the loss of control over how they spend their time as one of the big costs of being in a position of power.

**Cost 3: The Time and Effort Required.**
Building and maintaining power requires time and effort, there are no two ways about it. Time spent on your quest for power and status is time that you cannot spend on other things, such as hobbies or personal relationships and families. The quest for power often exacts a high toll on people's personal lives.

**Cost 4: Trust Dilemmas.**
The higher you rise and the more powerful the position you occupy, the greater the number of people who will want your job. The constant vigilance required by those in power — to ensure they are hearing the truth and to maintain their position vis-à-vis rivals — is yet another cost of occupying a job that many others want.

**Cost 5: Power as an Addictive Drug.**
The addictive quality of power makes it tough to leave powerful positions. But everyone eventually has to step down, and the drug-like nature of power makes leaving a powerful position a truly wrenching experience for some.

## How — and Why — People Lose Power

Studies of the effects of power on the power holder consistently find that power produces overconfidence and risk taking, insensitivity to others, stereotyping and a tendency to see other people as a means to the power holder's gratification.

In a study all too reminiscent of what goes on in workplaces every day, David Kipnis put research participants in a simulated work situation with a subordinate. Some people in the managerial role had little formal control over resources and had to influence through persuasion, while others were given the power to reward and punish those working for them. The more control participants had over levers of power such as pay increases or decreases, the more attempts they made to influence their subordinates. Moreover, those with more power came to see their subordinates' job performance as resulting from their control and less from the efforts or motivation of those they were supervising. And because the supervisors with power saw themselves as superior to those they were supervising, they evidenced less desire to spend time with their subordinates and wanted to distance themselves from those less powerful — even though in this experimental study who was a supervisor and how much power that person had was randomly determined and temporary.

### A Power Mindset

One lesson from the growing number of studies on the effects of power is how little it takes to get people into a power mindset were they engage in all kinds of disrespectful and rude behavior. Just giving them even modest control over meaningless rewards in temporary groups of strangers seems to be sufficient.

Overconfidence and insensitivity lead to losing power, as people become so full of themselves that they fail to attend to the needs of those whose enmity can cause them problems. Conversely, not letting power go to your head and acting as if you were all-powerful can help you maintain your position.

## Power Dynamics: Good for Organizations, Good for You?

Research shows what common sense suggests is true: Political struggles are more likely to occur and to be more fierce and power is used more often when resources are scarcer and therefore there is more struggle over their allocation. Studies of budget allocations in

universities found that when money was tighter, the relationship between departmental power and amount of the budget obtained was stronger.

The lesson is clear: You should always watch your back, but be particularly wary and sensitive to what is occurring during times of economic stress. That is when political turmoil and the use of power are likely to be at their peak.

The employer-employee relationship has profoundly changed over the past several decades, not just in the United States but in many countries. In ways big and small, both implicitly and explicitly, employers and their leaders have told their employees that they themselves are responsible for their own careers and, in many instances, their own health care and retirement.

So don't worry about how your efforts to build your path to power are affecting your employer, because your employer is probably not worrying about you. Neither are your co-workers or "partners," if you happen to have any — they are undoubtedly thinking about your usefulness to them, and you will be gone, if they can manage it, when you are no longer of use. You need to take care of yourself and use whatever means you have to do so — after all, that has been the message of companies and business pundits for years. Take those admonitions seriously.

## It's Easier Than You Think

It's important for you to find the right place given your aptitude and interests.

Although it is possible and desirable to develop your power skills, few people are comfortable changing their likes and dislikes. Yes, you can evolve and change, but only within limits. Therefore, the first step in building a path to power is to pick an environment that fits your aptitudes and interests — one where you can be successful in both the technical and political aspects, if any, of the work.

Finding the right place for you requires several steps.

- First, you must be brutally honest about your strengths, weaknesses and preferences — and because of the self-enhancement motive, not many people are as objective about themselves as they need to be.
- Second, you can't get trapped into following the crowd and doing something just because everyone else is.
- Third, to pick the right place for yourself, you must be objective not only about yourself but about the job and its risks and opportunities.

## The Dark Side of Politics

One dominant perspective in the research literature on organizations is that "politics is associated with the 'dark side' of workplace behavior and researchers have described political behavior as inherently divisive, stressful and a cause of dissent and reduced performance." The empirical evidence supports this view. Higher levels of perceived politics inside organizations are associated with reduced job satisfaction, morale and organizational commitment and higher levels of perceived politics are also correlated with higher intentions to quit.

### Take Care of Yourself — Don't Expect Justice

It's not just that the world is not always fair so you should stop counting on the triumph of your merit. People align with who they think is going to win. If you don't stand up for yourself and actively promote your own interests, few will be willing to be on you side. Since observers will see you as not trying to triumph and therefore losing, they will either not join your side or desert you, making your organizational demise more certain. Therefore, although self-promotion and fighting for your interests can seem unattractive, the alternative scenario is invariably much worse.

Not only can you survive, but you can even succeed if you learn the principles and the rules and are willing to implement them in your daily organizational life.

So don't complain about how life isn't fair, or that your organizational culture isn't healthy or that your boss is a jerk. You have both the responsibility and the potential to change your situation, either in your present job or in some new place. Stop waiting for things to get better or for other people to acquire power and use it in a benevolent fashion to improve the situation. It's up to you to find — or create — a better place for yourself. And it's up to you to build your own path to power.

### RECOMMENDED READING LIST

If you liked *Power*, you'll also like:

1. ***Talent Is Overrated* by Geoff Colvin.** What's the real solution to the mystery of high performance? According to journalist Geoff Colvin, it is a highly specific kind of effort, what he calls "deliberate practice."
2. ***Fierce Conversations* by Susan Scott.** Learn the effective ways to transform everyday conversations to get your message across.
3. ***MOJO* by Marshall Goldsmith.** Mojo comes from the moment we do something that is purposeful, powerful, and positive, and the rest of the world recognizes it. Executive coach Marshall Goldsmith lays out the ways that we can get and keep our professional and personal Mojo.

# StandOut™

## The Groundbreaking New Strengths Assessment from the Leader of the Strengths Revolution

by Marcus Buckingham

### THE SUMMARY IN BRIEF

*StandOut* is a one-of-a-kind invitation to discover and activate your unique competitive advantage at work every day.

*StandOut* offers top-notch business and leadership knowledge from one of the world's most acclaimed authorities on strengths. You also gain access to a powerful, cutting-edge online assessment tool — the product of a decade-long research initiative, rigorous statistical analysis and sophisticated psychometrics. Marcus Buckingham's *StandOut* offers actions you can use to find your edge and win at work.

Where other assessments stop at discovery and affirmation, *StandOut* takes the next step and provides practical advice on what to do to make the most of the strengths you have. Each of the nine possible strength roles is fully delineated with a wealth of detail.

While the advice and assessment are invaluable for people at every level of an organization, *StandOut* offers new insights and powerful tools specifically designed for managers.

Whether you are an individual who wants to find your edge, a manager trying to fully understand the strengths of your team or a leader in an organization looking to stay on the cutting edge of the strengths movement, you need *StandOut*.

### IN THIS SUMMARY, YOU WILL LEARN:

- Where you will be at your most powerful.
- How you can make an immediate impact.
- How you can win as a leader, manager, salesperson or individual contributor.
- How to use your strengths to win at work.

# THE COMPLETE SUMMARY: **STANDOUT**

**by Marcus Buckingham**

**The author:** Beginning with *First, Break All the Rules*, Marcus Buckingham's books have sold more than 4 million copies. Through his training and development firm TMBC (www.TMBC.com), he teaches managers how to turn their associates' strengths into performance. Before launching TMBC, he spent nearly two decades at The Gallup Organization studying what drives exceptional performance in the world's best managers.

## How to Accelerate Innovation

The StandOut strengths assessment *(available at standout.tmbc.com)* is an innovation delivery system. We designed it to reveal your edge and then feed you practical innovations, tips and techniques that you can use to sharpen this edge and win at work.

We all revere innovation. It is the mystical driver of progress, the secret sauce, the touchstone we reach for whenever our backs are against the wall. Our managers, our leaders, even our president cajole us to outthink, outsmart, "out-innovate" the competition. In these accelerated times, only innovation will keep us relevant, only innovation will allow us to keep thriving, only innovation can get us ahead and keep us there.

Every organization is on a near-constant search for "best practice." They convene conferences of top performers, pick their brains for the precious few actions and then capture what they hear in online "knowledge centers" in videos or in the course books of their corporate university. Though it is not always stated explicitly, the vision driving all of this activity is that innovation can be harvested and that, once harvested, it can be deployed at scale. Find a few key innovations, so the thinking goes, and we'll spread them to the many.

Normally what happens is this: An enterprising employee will come up with a new way of doing things. This new practice will spring from within her as an irrepressible manifestation of her personality. It will be authentic and natural, and she will use it to outperform her colleagues. This success will bring her to the attention of her superiors, who will interview her to discover her secret. Her new practice will be elevated up the corporate ladder, vetted by operations, human resources, training, communications and legal until, eventually, stripped of its unique characteristics and the person who made them, it will be introduced to the rest of the "field" where it will end its life as just another corporate program, smoothed out and lifeless, inauthentic for everyone else and ineffective for the company.

### The Best of the Best

We have studied the best high school principals, the best affiliate leaders of Habitat for Humanity, the best emergency room nurses and the best pharmaceutical sales reps, and whenever we interview excellent performers in the same position, we find this same phenomenon — extraordinary results achieved in radically different ways. Yes, there may be some similar practices among those who excel in a certain position, but no, for any position, there is no "perfect" profile; there are only perfect practices that fit your particular profile.

What your organization wants are not the few innovations that can be scaled to the many. Instead, what your organization wants are *many* practical innovations and a way to deliver these innovations to those *few* people who share the strengths of the person who dreamed up each one of them.

And this is what you want too. Instead of top-down initiatives that feel awkward and inauthentic, you want to be introduced to practical innovations that you might well have thought of ... but haven't yet; techniques that, when you try them out, feel as though you've done them before. You want to accelerate your creativity and

yet still retain your authenticity.

This is why we built the StandOut strengths assessment. Over the last decade, we captured many hundreds of techniques, practices and insights — for leaders, managers, client service positions, sales and for individual contributors of all kinds — and we loaded them into the back end of the assessment. Once you've completed it, you will receive only those practices that fit your particular strengths. You will receive the best practical innovations, broadcast on the You channel. ●

## The New StandOut Strengths Assessment

Spend 20 years building and analyzing tests that measure people's themes of talent and, over time, it becomes apparent that no matter how thinly you slice each aspect of each theme, certain themes wind up clustering into patterns.

For example, it is entirely possible to design an assessment that draws a distinction between themes such as significance, self-assurance, achievement drive and assertiveness and then measures them separately — Dr. Don Clifton and I did this with StrengthsFinder. What we now know, however, is that these four themes correlate closely with one another. In statistical parlance a set of highly correlated themes is called a "factor," but in the real world they combine to create a certain "personality," a certain way of engaging with the world. In the case of these four themes, we know this personality well. It is the person who wants others to come around to his way of thinking, who enjoys persuading, outsmarting or outwitting people, and who can even, on occasion, come across as aggressive. In the language of StandOut, this person is an Influencer.

Similarly, a combination of the themes strategic thinking, optimism, impatience and ambiguity tolerance creates another kind of person. This is the person who is at her best charging into the future, believing in every fiber that the world is a friendly place, that setbacks are opportunities in disguise and that the best way to find out what is around the next corner is to walk around the corner and see for herself. In the language of StandOut, this person is a Pioneer and is different from the rest of us: The uncertainty that unnerves us, thrills a Pioneer.

### StandOut and the 'Strength Roles'

To create the StandOut strengths assessment, we combed through the many hundreds of themes that are possible to measure, and identified the most common and powerful theme combinations. Of course, the number of ways to measure the fine shadings of human uniqueness is infinite; however, the number of powerful theme combinations is not. We found nine. We call them "Strength Roles." ●

## THE NINE STRENGTHS ROLES

## Advisor

You begin by asking, *"What is the best thing to do?"* and your thrill comes from knowing that you are the person others turn to for the answer. You don't necessarily want to be the person who actually makes the changes happen. Rather, being valued by others for your insight and judgment is what excites you. Since you live to be the expert, you are constantly on the lookout for information that will help people make better decisions. When you look out at the world, you pay attention to fine shadings of detail because these details will ensure that you give better advice. You know that the best advice is never general, but rather is tailored to the unique characteristics of the person's situation.

You can be demanding and opinionated, but, above all, you are discriminating: "good enough" is never good enough for you. There is always a better way, a better arrangement, a better solution and you come alive when you are called upon to find it. And when you do, you don't question your decision. The reason people seek your advice is precisely because you are so assured, so confident in your intuition. Instinctively you know this and you're proud of it.

### How to Take Your Performance to the Next Level

• An Advisor always needs people to advise. Analysis is fine, and can be fun, but the day you discover that you have no direct audience for your conclusions — sitting by yourself, analyzing for the sake of it — will be a very bad day for you. **Make sure you are always being paid to offer your conclusions to someone.**

• You are the kind of person who respects experts. Why? Because experts have studied their subjects deeply and can pinpoint which details make the difference, which distinctions really matter. You are wired to appreciate this kind of inquiry. **So ally yourself with a couple of carefully chosen experts in your field.**

• **Become a credentialed expert yourself.** Choose your discipline and then build your career around deepening your expertise in this discipline. Pursue all the professional and academic qualifications available within this discipline. ●

## Connector

You begin by asking, *"Whom can I connect?"* You see the world as a web of relationships and you are excited by the prospect of connecting people within your web. Not because they will like each other — though they might — but rather because of what they will create together. Your mantra is "One and one makes three" or 30 or 300. On your optimistic days, you see almost no limit to what people with different strengths and perspectives can create together.

You are a naturally inquisitive person, always asking questions about each person's background, experience and skills. You know instinctively that each person brings something unique and distinct to the table, something that no matter how small, might prove to be the vital ingredient.

### How to Take Your Performance to the Next Level

• **Stay attentive.** Interesting people are everywhere, not just at work or professional gatherings, but sitting next to you on the plane, at your child's birthday party, at the church planning meeting.

• You are inspired by extremely talented people, so try to **find at least two groups of experts in which you can play a leadership or organizing role.** It doesn't really matter what the group's expertise is. What's invigorating for you is hearing the discussions and listening to the different viewpoints of these "masters." Listen long enough and you will almost certainly come up with a new mission, a new possibility.

• **Discipline yourself to connect someone to something every day.** For example, send an e-mail each day that begins "I thought of you when I read this …" and then include a line or two about how this particular person might benefit or learn from what you sent. We rely on you for practical possibility thinking, so be sure to draw a clear connection between what you sent and what the person might be able to do with it.

• To expand your network, **go beyond your usual haunts and gatherings**. Once or twice a year, sign up for an exciting group experience — a cycling trip, a charity walk, a river rafting expedition — and go alone. Given your nature, it's almost guaranteed that you'll encounter someone who'll spark an idea of a new connection you can make. ●

## Creator

You begin by asking, *"What do I understand?"* You aren't immune to the feelings and perspectives of others, but your starting point is your own insight your and understanding. You see the world as a series of collisions between competing parts, pieces and agendas, and you are compelled to figure it all out. For you there's nothing quite as thrilling as finding a pattern beneath life's complexities, a core concept that can explain why things play out the way they do or, better yet, predict how things are *going* to play out.

You are a thoughtful person, someone who needs time alone to mull and muse. Without this alone time, events pile up on you haphazardly and your confusion starts to overwhelm you. So you look forward to time by yourself — early in the morning, late at night, long walks — and you use this time to get clear. You are a creative person. What form this creativity takes will depend on your other traits and talents, but whether you write, paint, sing, complete projects or make presentations, you are drawn toward making things. Each thing you make is a tangible sign that you have made some sense of the world, that you have organized the chaos in some useful way. You look at what you've made, you take pleasure in what you now understand and then you move on to the next creation.

### How to Take Your Performance to the Next Level

• As a Creator you will have to **figure out how to "own" your creations.** At one extreme, this might mean working only in fields where you are allowed to own the intellectual property you create, such as journalism or entertainment. Or you might work for a large organization only if they allow you to write papers under your name or file for patents under your name. If neither of these is a possibility for you, you will still need to figure out a way to "sign" your work.

### How Connectors Connect

In your head, or in your contacts, you store a large network of people who, you've met, learned about, catalogued and positioned somewhere within this network — each person with a link to at least one other person, and each with an open port for another link to be added. People are drawn to you because you are so obviously passionate about their particular expertise, and because you have so many practical ideas about how their expertise can be combined with others. You enliven and enlarge others' vision of who they are and what they can achieve.

• **Create a forum for safe experimentation,** a place where you can share new, as yet fragile, patterns of understanding. It could be a cross-industry group of like-minded thinkers. It could be an informal Skunk Works within your own organization. Whatever it is, it should be comprised of people who question you and challenge you with no agenda other than helping you to strengthen (or break) the sense you've made. This group will become your testing ground.

• **Seek out the "enemy camp."** Deliberately forge a relationship with people who see things very differently from you. They may discredit the sense you make. But by exposing yourself to them, you will prevent yourself from becoming complacent. ●

## Equalizer

You begin by asking, *"What is the right thing to do?"* You are sensitive to how everything in the world is interdependent, how movement in one part of the world causes everything else to move as well. Alive to this interconnectedness, you feel compelled to keep everything aligned. This need for alignment might be organizational — you sense when your world is disorganized and you get a kick out of restoring everything back to its rightful place. Or it might be ethical — you are acutely aware of who is responsible for what and you are quick to take action if someone doesn't live up to her responsibilities. You have no problem calling her out if she hasn't followed through, and you are just as willing to call yourself out when you drop the ball.

You see the commitments we make to one another as threads that connect us and allow us to share in each other's success. It pains you when you see these threads break, and so you are their passionate protector. At your best, you are our conscience, helping us realize how much we owe one another and how much we rely on one another. You hold us together.

### How to Take Your Performance to the Next Level

• **Seek out situations where you can stand up for the rights of others**. You are in your zone when you do this. No matter what your talents may be in other aspects of your work, when it comes to explaining what people truly deserve, you will instinctively find the words and the arguments to persuasively make their case.

• **Establish your precedents.** When has this situation happened before? What were the outcomes? People will always look to you for a fair hearing and your rationales will be better and clearer if you can point to previous experiences and situations.

• **Be thorough.** As your career progresses people will place more and more weight on your judgments. Always have at your disposal all the facts and, if possible, the data behind these facts. You need, and they need, to have confidence in your judgments. Lacking the facts and the data, you run the risk of being seen as merely judgmental. ●

## Influencer

You begin by asking, *"How can I move you to act?"* In virtually every situation, your eye goes to the outcome. Whether you are in a long meeting at work, helping a colleague get his work done or talking a friend off a ledge, you measure your success by your ability to persuade the other person to do something he didn't necessarily intend to do. You may do this by the force of your arguments, your charm, your ability to outwit him or perhaps by some combination of all of these. But regardless of your method, what really matters to you is moving the other person to action.

Why? Partly because you see where things will lead if the other person doesn't act, and partly because you are instinctively aware of momentum and become frustrated when you bump into someone who slows your momentum down — but mostly because you just can't help it. It's simply fun for you to influence people's behavior through the power of your personality. It's challenging, mysterious and thrilling and, in the end, of course, it makes good things happen.

### How to Make an Immediate Impact

• You are instinctively impatient. To ensure this does not rub your new colleagues the wrong way, **pick a roadblock that everyone agrees on and volunteer to be the one to tackle it.**

• Initially, because you are so action focused, people will wonder what your agenda is. To stop their wondering, be explicit with your teammates about it. **Tell them your agenda.**

• **Look for ways to measure your results.** You will be energized by the "proof" of whether you're ahead or behind. You are always at your best when you know exactly where you stand.

• Whenever you succeed in making something happen, **be deliberate in thanking people for their help.** If you don't do this, they may come to feel as though they are merely instruments in your plan of action. ●

## Pioneer

You begin by asking, *"What's new?"* You are, by nature, an explorer, excited by things you haven't seen before, people you haven't met. Whereas others are intimidated by the unfamiliar, you are intrigued by it. It fires your curiosity and heightens your senses — you are smarter and more perceptive when you're doing something you've never done before. With ambiguity comes risk and you welcome this.

Instinctively you know you are a resourceful person and, since you enjoy calling upon this aspect of yourself, you actively seek out situations where there is no beaten path, where it's up to you to figure out how to keep moving forward. You sense that your appetite for the unknown might be an attempt to fill a void and some days you wonder what you are trying to prove to yourself. But mostly you leave the questioning and the analyzing to others and revel in your pioneering nature. You are at your best when you ask a question no one has asked, try a technique no one has tried, feel an experience few have felt. We need you at your best. You lead us into undiscovered country.

### How to Take Your Performance to the Next Level

• You have a natural instinct for change. It will serve you well to "bottle" that instinct. **Work out a formula that captures your natural instincts for how to handle uncertainty**. Turn them into a clear process that other, less risk-oriented people can follow.

• **Find ways to showcase how your innovations have succeeded in creating new business opportunities or new products**. These examples of how inquisitiveness turns into performance will give people more certainty and they will become increasingly tolerant and even supportive of your pioneering spirit**.** ●

## Provider

You begin by asking, *"Is everyone OK?"* You are acutely aware of others' emotional states, particularly if you sense they are feeling hurt or slighted. You are instinctively inclusive, always looking for ways to draw others into the circle and make them feel wanted, heard and appreciated. You pay close attention to the differences between people, each person's likes, dislikes and foibles. *It's the only way to attend to their feelings,* you think.

You are protective of other people and will get angry or upset if you see behavior that is cavalier or dismissive of people's feelings. You are an intensely loyal and forgiving friend, but you are no pushover. Although your circle is large, it does have a perimeter and if someone's behavior offends you, you will exile them beyond the perimeter. But this exile will not last because in your heart you believe everyone can be understood, everyone can be redeemed, everyone can, in the end, be forgiven. At home and work, many will come to trust you and rely on you. You are their safe harbor, a consistently supportive presence in a world that doesn't care. And they love you for it.

### How to Make an Immediate Impact

• **Start by taking the temperature of your team.** You have an excellent sense of the institution you are joining — as in who is in relationship with whom, who are the heroes, what are the war stories — so feed this sense by listening and watching closely.

• **Get to know the troublemakers first** because in their minds they are misunderstood. You have a gift for allowing people to have their say and holding what they say without either criticizing it or condoning it. You just take it on. And this "taking on" lets them move out from their defensive mode and into a healthier, more productive frame of mind.

• If there are no troublemakers on the team, **start with those who need the most help**. How can you help them? If you're not the one to help, then can you secure the resources they need? ●

## Stimulator

You begin by asking, *"How can I raise the energy?"* You are acutely aware of the energy in the room and you feel compelled to do what you can to elevate it. You do this with your outlook — you are an instinctively positive person. You do this with your actions — you take a seat at the front of the room, you raise your hand to ask questions, you call upon others to contribute and volunteer. You do this with your humor — the smile in your voice.

Because you are an energy-giving person, other people are attracted to you. The world beats them down, but they know that in you they will find the power to lift themselves back up. You aren't soft and gentle. On the contrary, you challenge people to unleash their own energy and you become impatient when someone refuses to do so, sucking energy from you and generating none of their own. But others will continue to be drawn to you because they sense that, at heart, you cannot help being encouraging.

### How to Take Your Performance to the Next Level

• Over time people will come to lean on you for emotional uplift. This is a wonderful gift you offer them and to ensure that you can keep offering it, **you must set clear boundaries for your friends and colleagues.** You cannot take on everyone's full range of emotions.

• You are skilled at handling difficult people. **Volunteer for situations where success depends on you turning around an angry or obstinate person.** It's not that you should necessarily seek out conflict — you are not, by nature, a conflict seeker. It's more that you are driven to make everything right and you are at your best when you have to pull out all the stops to make this happen.

• You are naturally interested in human energy of all kinds — emotional, physiological, spiritual. **Research this subject.** Whatever your preferred research style, keep looking and you will soon find some new trick, insight or technique that will help you get better at what you do naturally. ●

## Teacher

You begin by asking, *"What can he learn from this?"* Your focus is instinctively toward the other person. Not his feelings, necessarily, but his understanding, his skills and his performance. You see each person as a work in progress, and you are comfortable with this messiness. You don't expect him to be perfect; in fact, you don't want him to be perfect. You see the possibility in imperfection. You know that imperfection creates choice, and that choice leads to learning.

Since you are energized by another person's growth, you look for signs of it. *Where was he last month?* you ask yourself. *What measurable progress have I seen?* You create novel ways to keep track of his performance and celebrate with him when he reaches new heights. You ask him a lot of questions to figure out what he knows and what he doesn't, how he learns best, what is important to him and what journey he is on. Only then can you join him at the appropriate level and in the appropriate way. Only then can you help him learn.

### How to Take Your Performance to the Next Level

• **Keep learning.** Keep researching your subject. Attend the cutting-edge conferences. Read the expert posts. Make this a priority.

### Why Teachers Should Develop Theory

As an instinctive collector of factual bric-a-brac, you will always be a fount of new ideas and insights. But if you want to excel at helping others learn, you need a set of theories on which to hang all that your inquisitiveness has yielded. Theories clarify. They help others make sense of things. And so they will make you a better delegator.

• **Become an overt champion of others.** Discipline yourself to reach across the organization and place people whose raw talent you have spotted into positions of real responsibility.

• When you champion young talent in this way, **make sure your explanations for why this is the right person, the right responsibility and the right time are vivid and detailed.** Become adept at describing the strengths you have seen in the person and why you think this strength will translate to the new, larger responsibility.

• **Always stay in touch with those whom you have helped to learn and grow.** Their continued success will be a constant source of joy for you. ●

## The Three Strengths Principles

The most basic challenge, of course, is that it's hard to see your own uniqueness. Your strengths are a part of you whether you're conscious of them or not. And because they're so woven into the fabric of who you are, they can actually be quite difficult to pinpoint. Certain things come so naturally to you that you don't see your ability to do them as unique; you just think it's you. Or rather, you don't even think anything. You just do what you do because it comes to you too easily to require any analysis.

Which points to a second challenge: other people don't care what makes them unique. As oblivious as we can be to our own strengths, it's even easier to ignore the particular and unique strengths of others. We assume that if we have a talent or inherent ability, everybody else does too. Or if we're not naturally drawn to doing something, we find it hard to understand why anybody else would be.

*Though your genius is ingrained, the right way to channel it is not.* This final challenge is that even if you do cut through the noise and identify what unique strengths

you have to offer, that's still not enough. To be truly your best, it isn't sufficient merely to understand *that* you're unique or even to understand what *makes* you unique. Sustained success comes only when you take what's unique about you and figure out how to make it *useful.*

Your strengths, in essence, are value-neutral. They can be put to good use or they can be put to bad use. If you don't own your strengths, they *will* come out anyway. But you won't be in control of how they do.

On your own personal strengths journey, here are three principles to guide you:

## Principle #1: Your Genius Is Precise

Current thinking about effectiveness advises us to be flexible, versatile quick studies, ready-willing-and-able to jump from one challenge to another. A close scrutiny of excellence, however, reveals that our edge — our particular genius — is quite precise.

We each have specific areas where we consistently stand out, where we can do things, see things, understand things and learn things better and faster than 10,000 other people can. And when we find ourselves in these areas, our "strengths zone" if you will, we are magnificent. Self-assured and flushed with success, we imagine we can do just about anything that we turn our minds to.

And yet we can't. Move us even slightly out of our strengths zone and our outstanding performance falls to average alarmingly quickly.

Robert Nardelli, president of GE's Power Systems division, is a genius-level leader, and leadership is transferable, right? Not necessarily. Install him as CEO of Home Depot or Chrysler and he doesn't look quite so impressive.

Malcolm Gladwell is a phenomenal writer, and since writing is writing, shouldn't his skill be transferable from articles to books? Not exactly. His true genius is the carefully argued, silky-prosed, 3,000-word article — today there is no one better. But when he comes to write his books, this genius accompanies him, he can't shake it and so his books all have the same recognizable quality: a series of elegant articles wrapped around a common theme.

Your genius will be similarly precise. This doesn't mean you shouldn't experiment with new positions or stretch yourself with new challenges, as Gladwell did in moving from articles to books. You should. But when you do, know that, consciously or not, you will bring your particular brand of genius with you.

## Principle #2: You Can't Respect What You Don't Remember

In a world that doesn't really care about you and your strengths, the responsibility falls to you to apply your strengths *consciously* every day. Ironically, the unconscious nature of strengths — the fact that you are most yourself when you vanish into whatever you are doing — makes this quite difficult to do. And yet, if you don't do it, if you allow your strengths to remain as unconscious, subliminal reactions, you won't have a lifeline to grab on to when events conspire to yank, lull or lure you off your strengths path.

One of the most important outcomes from taking the StandOut assessment is simply that you remember your results. This is why we've chosen to target only your top two strength Roles. We could keep cutting these Roles into ever-thinner slices or drill down into your third, fourth and fifth Roles, but what we would gain in complexity we would lose in practicality — a week after taking the test you wouldn't be able to recall what your strengths were, and since you can't consciously apply that which you can't recall, much of StandOut's power would slip away.

## Principle #3: You Must Reach Beyond Your Roles

Conventional wisdom tells you to push yourself beyond your comfort zone. Yet when you study the most successful people you discover that they do something quite different: They push themselves *within* their strengths zone. They certainly aren't complacent. It's more that they realize they will be at their most productive, their most creative, their most generous, their most collaborative if having found their edge, they spend their life sharpening it. How do they do this? By using the raw material of their life to add detail to their understanding of their strengths.

To sharpen your edge, use your top two Roles as a starting point for investigating what your strengths look like in the real world. ●

### The Ultimate Identity Theft Prevention Plan

# STEALING YOUR LIFE

## THE SUMMARY IN BRIEF

Before the age of 19, Frank Abagnale had successfully conned millions of dollars worth of checks while posing as a Pan Am pilot, doctor and legal prosecutor. It is his early life that has been captured in his best-selling memoir and 2002 blockbuster film *Catch Me If You Can*. However, now he has gone from fraud to a fraud-fighting consultant.

When Abagnale trains law enforcement officers around the country about identity theft, he asks them for their names and addresses and nothing more. In a matter of hours, he can obtain everything he would need to steal their lives: Social Security numbers, dates of birth, current salaries, checking account numbers, the names of everyone in their families and more. This exercise illustrates how easy it is for anyone from anywhere in the world to assume your identity and, in a matter of hours, devastate your life.

Considering that a fresh victim is hit every four seconds, this summary offers important tips and techniques from an unsurpassed authority on the latest identity theft schemes.

Abagnale offers dozens of concrete steps to transform anyone from an easy mark into a hard case that criminals are likely to bypass. Several anecdotes of creative criminality are included, which are as entertaining as they are enlightening. This summary provides clear, practical ways to protect yourself from one of today's most common crimes.

## IN THIS SUMMARY, YOU WILL LEARN:

- Who is at risk for identity theft.
- Why you should avoid offers that appeal to greed or fear in exchange for personal data.
- How to monitor your credit report regularly and know if anyone's been "knocking on your door."
- How to identify the people stealing identities.
- Why you should read privacy statements carefully and choose to opt out of sharing information whenever possible.

# The Sweetest Con of All

Identity theft is the wholesale lifting of someone's identity for illicit gain. It's stealing that identity, then using it to access a person's bank account, their personal information and their personal finances. It's becoming someone else for the bucks.

The rewards are enormous for a thief. Identity theft will afford you access not only to someone's wallet and bank account but to his or her very life, character and ability to borrow and spend. Technology has made identity theft easy to execute behind the shadowy cloak of a computer keyboard. You don't even have to be in the same city or country as your victim. You can steal someone's identity without being able to speak his language or pronounce her name.

### *A Federal Crime*

The federal Identity Theft and Assumption Deterrence Act, passed in 1998, made identity theft a federal crime. It carries maximum penalties of 15 years in prison and substantial fines. But police say they have little incentive to go out and arrest an identity thief. The FBI is under a directive not to investigate any white-collar crime under $100,000 in value, due to lack of resources and the shift in manpower over to fighting terrorism.

### *Who's at Risk?*

In recent years, identity theft has become a crime so versatile that the list of potential targets is endless. Anyone who has a credit card or a bank account, or who pays bills is at risk. Anyone who has a mortgage, a car loan, a debit card, a driver's license, a Social Security number, phone service, health insurance or a job is also at risk. If you use the Internet, you are at risk.

A 35-year-old New York busboy had the hubris to choose names off the Forbes 400 list, including Ross Perot, Oprah Winfrey, Michael Bloomberg and Ted Turner, gleaned additional information on them from the Internet, and became them. Tiger Woods was victimized by a California man who rented a moving truck and a storage locker in his name. Even the dead can become targets of this insidious crime. Identity theft is the fastest growing criminal activity in the country.

### *Every Four Seconds*

In 2001, there were about 750,000 documented victims of identity theft, and losses to banks and credit card companies amounted to $5 billion. In 2003, the Federal Trade Commission released the most exhaustive government study to date on identity theft, estimating that there had been 27.3 million victims in the prior five years. In 2004 alone, around 10 million consumers suffered from some variation of identity theft, and losses exceeded $54 billion. In 2005, it's believed that an identity was stolen *every four seconds*.

By shining a light on the diabolically creative and clever criminal mind, you as a consumer can clearly understand just how vulnerable you are to somebody becoming you. To effectively keep this crime from happening to you, you need to understand how it works in a comprehensive way — what the telltale signs are, who does it, how thieves get information and what they do with it. ■

# The Next Victim — and It's You

A woman with especially fussy tastes had been searching for her dream house for what seemed like forever. And then there it was: a postmodern house that was just the right size, in just the right neighborhood, and best of all, at just the right price. She had to move fast — others

## The Next Victim — and It's You

*(continued from page 2)*

had appointments to view it that afternoon — and so she said she'd take it. All that was left was to fill out the necessary paperwork, talk to the right people and have the bank process her loan application. Then word came back from the bank, and its verdict was bad. The mortgage was denied. Her credit was insufficient, and there was nothing they could do about it. She was shocked.

### *What Went Wrong?*

The deal breaker was identity theft. While she had been minding her own business and paying her bills on time, an impersonator posing as her was making mincemeat of her credit. Her doctor's receptionist had pilfered her information from his files, obtained multiple credit cards in her name, and then run them up to their limits, costing the woman the house she so fervently desired.

There are four key events that suggest that someone has become a victim of identity theft:

**1. Denial.** Denial of credit is the first sign of identity theft. Another form of denial is a notification of a rate increase on your car insurance or home insurance, or that your insurance is being canceled.

**2. Ripped off.** It's a pretty good tip-off that something is wrong when your credit card, bank or other financial statement contains charges that you never made. An even more obvious tip-off is a statement for a credit card or loan that you didn't know you had.

**3. Harassed and hounded.** When you get calls to collect on debts that you never incurred, an alarm ought to go off in your head. Get the information from the collector, then contact the company. When you speak to the company, tell them that you didn't purchase anything from them or apply for a loan, and if they'd like a sworn affidavit, tell them you'll send it.

**4. Where did the mail go?** If your bills stop coming, or there's an unusual decline in the quantity of mail you receive, that's a problem well worth investigating. It might mean that an identity thief has stolen your mail or has changed the address on your credit card statement so you won't notice the fraudulent charges on your account.

Often there is no sign at all that you've become the target of identity theft. Complacency always works to the very profitable benefit of criminals. ■

# The Road to Becoming You

The Internet is one of the most versatile research tools a criminal has ever been handed. It's no exaggeration to say that there are thousands of free and paid resources on the Web that can be unsuspectingly used for identity theft.

Every time you share a piece of information about yourself, without obtaining a binding guarantee that it will not be sold or shared, that information instantly enters the public domain and becomes fodder for an expanding information industry. The only exception is medical information. For that to be shared, a release has to be signed.

Between nosy washer warranties, dog pound questionnaires and computer disks tumbling off trucks, your private information is vulnerable in a million different ways, limited only by the ingenuity of the thieves.

### *Nigerian Letter Scams*

You might have received an e-mail that purportedly comes from the wife of a Lebanese businessman who has been killed in an explosion in Beirut. He left behind $86 million, and $20 million of it is yours if you help get the money into the United States.

This is one version of a classic scam with very long legs. This type of trap is known as a Nigerian Letter scam or a 419 letter, named after the pertinent African criminal code under which it can be prosecuted.

As identity theft has become the top game in town, Nigerian Letter scams have been reconfigured to steal your identity information. They don't necessarily even ask for your bank account number anymore. They'd rather get your name and Social Security number and use them for a full-scale identity assumption.

### *Phishing*

These e-mails, and numerous other renditions, are called phishing attacks. Today, phishing is one of the most productive ways identity thieves gather their source material. Phishing is highly efficient. Sending spam e-mail out to a million people doesn't cost a cent, but every

*(continued on page 4)*

## Fake Bank Ads

One popular e-mail phishing category is fake bank ads. If you call, you are asked the usual personal information. Later on, customers are told that they need to make an advance payment on their loan through a Western Union wire transfer to an address in Canada, identified as a "third-party consultant."

If you follow the instructions, the criminals succeed in making a double strike: They acquire some immediate cash, plus they get sufficient personal information to launch an even more rewarding identity theft.

## The Road to Becoming You

*(continued from page 3)*

"phish" that is hooked can be worth thousands of dollars.

The standard strategy is to phish using a cover that people are likely to recognize and trust, usually a bank, brokerage house, corporation or government agency. Citibank, eBay and AOL have been common choices. The message will set forth a phony but believable reason why you need to respond with your personal information.You're asked to respond to the e-mail or click on a linked Web address and answer the questions there. ■

# It Could Be Public Enemy No. 1 or It Could Be Grandma

An astonishingly diverse group of individuals is perfectly comfortable making at least a part-time living as identity thieves. They are people of all ages, all races, both sexes, all cultures, all religions, educated and uneducated, blue collar and white collar.

According to a 2004 study by Judith Collins, a professor at Michigan State University, in more than a thousand randomly selected identity theft cases, roughly half the culprits were women.

### *It's the Woman Who Served Your Omelet*

A 23-year-old waitress at a popular restaurant in Fenwick Island, Del., was arrested for using a hand-held credit card reader, known as a skimmer, to steal identities. The device reads and records the information on magnetic stripes, thus allowing criminals to make fake cards. She explained that at a party, a Russian man, who set up the scheme, approached her. He paid her $10 for Visa and MasterCard numbers and $15 for American Express.

Collins and her students at Michigan State, in their examination of identity theft complaints that had been filed with the police, called or wrote these victims and asked them, "How did the person get the information to steal your identity?" Of those who knew, a shocking 70 percent responded that the thief obtained the information from a low-level employee who sold it to somebody else.

Your information is everywhere, and workers with little if any security clearance know where the stuff is — and have the means and authority to get to it. ■

# What Your Duplicate Is Doing as You

In early 2003, a 72-year-old British man named Derek Bond, a retired engineer, grandfather of six, Rotarian and wine enthusiast, was arrested in South Africa, where he had been on a wine-tasting vacation with his wife. Told that the FBI had identified him as a wanted fugitive, he was imprisoned in a Durban jail. He was fingered, the authorities informed him, for masterminding a marketing scheme supposedly intended to market telephone calling cards that fleeced more than 200 investors of millions of dollars. Though he insistently professed his innocence, the police were convinced that they had their man. For three weeks, Bond was forced to sleep on a concrete floor.

After 20 days, he caught a break. The real culprit, an identity thief, was nabbed in a Las Vegas hotel room. Bond was released. It turned out that the crook had been using Bond's identity since as far back as 1989. Oddly enough, they were the same age.

### *They Go Bankrupt*

Crooks aren't particularly proficient at managing their finances, and being freelancers, their incomes can fluctuate a lot. Once they start relying on your credit, they draw you into all sorts of nasty outcomes.

Not long ago, a woman saw a notice in the mail that was addressed to her son. She opened it and was stunned to find him being summoned to appear at a meeting of creditors that was to be conducted as part of his Chapter 13 bankruptcy case. This was rather disturbing. Her son wasn't in any debt that she was aware of. After all, he was 5 years old.

A sweeping new federal bankruptcy law went into effect in October 2005, designed to eliminate so-called "bankruptcies of convenience" by people who have abused their credit without ever intending to pay the bills. The law is having a perverse effect on victims of identity theft. Debtors now have to repay some of their old debt, and there are no exclusions. That means that if an identity thief runs up excessive debt in your name and files for bankruptcy, you'll be held responsible for the bills. ■

# The 20 Steps to Prevent Identity Theft

Identity thieves — the professionals, at least — spend all their time trying to outwit you so they can steal your money, while you spend at most a small portion of your time trying to keep them from getting it. So the odds distinctly favor them. But you can reduce those percentages significantly if you take a number of fairly simple precautions.

The following are the 20 crucial steps that can best

*(continued on page 5)*

## The 20 Steps to Prevent Identity Theft

*(continued from page 4)*

keep you from becoming a victim:

**1. Check your credit report.** Keeping abreast of your credit history is your best self-protection technique by far. If an identity thief uses your Social Security number and name to open a new credit card account with a fake address and phone number, you may not find out about it until the damage is long done — unless you check your credit report periodically.

**2. Don't give out your SSN.** Just because a form contains a space for your Social Security number doesn't mean you have to fill it in. A good rule to adhere to is, the less information you give out, the better.

**3. Protect your computer.** If you're using a wireless connection to access the Internet, make sure it's secure. Use an encrypted service. It's vital to update your virus protection regularly. Install an adequate firewall. Assume that any e-mail that asks for your personal information is a fraud.

**4. Keep track of your billing cycles.** A missing bill doesn't mean that a credit card company or a mortgage holder is giving you a month off. Rather, it may mean that a thief has changed your address. If you know the MasterCard bill usually comes on the 15th and now it's the 27th, then something's up. Call and figure it out.

**5. Examine your financial statements like an obsessed accountant.** As soon as a credit card statement arrives, go over it carefully to make sure you really bought all that stuff. If you didn't, deal with it right away.

**6. Guard your mail from theft.** Make a practice of picking up your mail as soon as possible after it is delivered, lest some well-intentioned thief concludes you won't mind if he takes it. Consider investing in a locked mailbox, or if you live in a high-crime area, play it extra safe with a post office box. Take your outgoing mail to a drop box rather than leaving it in the mailbox in front of your home.

**7. Invest in a shredder.** Get into the habit of shredding all documents before you toss them in the garbage. This goes for all bills and papers that contain personal information, especially Social Security numbers and financial account numbers. And it certainly goes for those pre-approved credit card and loan offerings. If you're going to sell or discard your computer, wipe the hard drive.

**8. Practice safe shopping.** Shop only from secure sites that will encrypt your order information and your credit card number before sending them to a merchant.

**9. Avoid sketchy ATMs.** Be skeptical of portable machines that you see in delis and hotel lobbies, especially ones that have a cord protruding from the back that's not plugged in. That means the data isn't being sent anywhere — it's just recorded for a crook's eyes. Stick with real, secure bank ATMs.

**10. Be suspicious of unexpected calls or letters.** When a business calls or e-mails you and asks for personal information, indulge in a little healthy paranoia. It's usually a clue that something's wrong. Make it a rigid policy not to get personal unless you're the one who initiated the contact.

**11. Put real passwords on your accounts.** Come up with one password that you can use in multiple applications that no one else will know. And never write it down. A strong password is a random eight-character combination of numbers, letters and symbols. Better yet, pick something familiar to you but that only you will know.

**12. Keep your credit card close when shopping or eating out.** When you're out spending money, watch how salespeople and waiters handle your cards — make sure they don't have a chance to copy them. Be especially alert at a store or restaurant that you've never been to before.

**13. Use safe checks, and use them sparingly.** Make it a habit to always get your checks from your bank, because banks are far more likely to use ones that contain fraud protection features. These include things like a watermark, thermochromatic ink, chemically reactive paper, and light-sensitive ink and fibers.

**14. Secure the home front and office front.** Find a non-obvious location in your home where you can store your Social Security card, passport and all records, including credit card statements and tax forms, which contain personal information. Don't leave valuable personal information on your desk or computer screen.

**15. Carry only what you need.** Leave your Social Security card at home in a secure place. Carry only credit cards you plan to use.

**16. Spring clean your credit cards.** If you aren't regularly using a credit card, cancel it. The more cards you have, the more opportunities a thief has to steal from you. Maintain organized records of all your credit cards so that if a theft does occur, you can report it promptly and thoroughly.

**17. Opt out.** Get your name off of marketing lists that get sold and resold. If fewer businesses have and sell your data, fewer thieves will be able to steal it.

**18. Read privacy policies.** They are essential for understanding what your bank, financial institutions and

*(continued on page 6)*

### The 20 Steps to Prevent Identity Theft

*(continued from page 5)*

other businesses that you deal with do with your information. They will also tell you what restrictions you can place on the dispersal of your information. Elect all the restrictions available to you.

**19. Protect a deceased relative.** When someone dies, contact the credit bureaus and have a "deceased" alert put on the person's reports. Inform Social Security of the death yourself, directly, with a copy of the death certificate.

**20. Place fraud alerts on your credit reports.** Putting a *fraud alert* tag on your credit report will limit a thief's ability to open accounts in your name. If you've been a victim of identity theft, you can place an extended fraud alert on your report that remains in place for seven years. These alerts will slow down your ability to get credit, but as long as you're willing to accept that slight inconvenience, give yourself all the protection that's available.

Nothing is foolproof. But if you make it hard for thieves to get your identity, then their inclination will be to leave you alone and try someone else. ■

## Understanding Trade Lines and the Meaning of R2

One of the primary reasons identity thieves are so successful is that most people don't bother to read their credit report or even know how to read one. And even those who do often fail to appreciate how important it is and how a single line buried somewhere in the dense body of their report can radically affect their future.

As it is, something like 4.5 billion pieces of data are entered each month into credit records: bill payments, bankruptcies, court judgments, overdue child support payments, foreclosures and liens. One reason to read your reports religiously is that much of that information is wrong.

The Credit History section of your credit report enumerates all of your credit accounts and credit behavior. It's basically your history of borrowing, reduced to names and digits.

The accounts enumerated here are known as *trade lines*. Each trade line includes the creditor's name and the account number. Each trade line discloses when you opened the account and the nature of the credit.

When you look over your report, check each trade line very closely for accounts that you don't recognize. For the accounts that are legitimately yours, make sure the number in the Balance Owing column jibes with what you've actually spent.

### You Can Correct Your Credit Report

Any time you detect something amiss in your credit report, correct the discrepancy as quickly as possible.

The first thing to know is, it's your right to have your report corrected. The law states that both the credit bureaus and the information sources — the credit grantors who gave them the information about you — are responsible for correcting inaccuracies in your report. To make sure they really do, attack on both fronts: contact the credit bureaus as well as the information providers. Call all three major credit bureaus — Equifax, Experian and TransUnion — then follow up in writing. The credit bureau is allowed 30 days to investigate your case. The credit bureau then sends you a written report on the outcome.

### *Payment Codes*

Often the reports rely on payment codes that range from 1 to 9. The reports will use "R" to stand for revolving credit and "I" for installment, and then grade each account.

An R1 or I1 means you pay that bill within one month — in other words, on time. R2 means you pay within two months, and so on into escalating lengths of tardiness. R7 or I7 means your debts have been bunched together and are being repaid under consolidation. R8 is rather dismal news — your debt was satisfied by repossession. The worst news is an R9, which is when you've defaulted and the debt has been deemed uncollectible. R0 means you've just entered the wonderful world of credit and haven't been out there long enough for the credit wizards to judge your behavior.

If a trade line is unfamiliar to you but the bill payments are up to date, don't ignore it. An identity thief may have used your name and ID to get a loan, which he or she is temporarily repaying promptly so as not to attract attention. Don't make the mistake of thinking that an up-to-date account is a benefit to your credit score. You could wind up being denied credit later on when the person suddenly defaults on "your" loan — or even simply because you now have too much credit. ■

## Remember That Privacy Statement You Threw Away?

A privacy policy essentially tells you what personal information a business collects and how it collects it. It tells you

*(continued on page 7)*

## Remember That Privacy Statement You Threw Away?

*(continued from page 6)*

how the business uses your information, who it shares it with, and what "opt-out" options you have for limiting how your personal information is compiled and distributed.

When it comes to the opt-out options contained in privacy policies, there's only one smart move to make. Use them, all of them.

### *Selective Shopping*

Read your privacy statements and then evaluate the contents to decide who you want to do business with. Select your banks based on who does a better job of protecting your information.

If your bank doesn't offer the controls that it ought to, use another one. If a shopping site falls short in its privacy policy, shop at another place. Or complain vigorously about the policy, and maybe a miracle will happen and they'll rectify the deficiencies. ■

**For additional information on privacy policy statements, go to: http://my.summary.com**

# A Farewell to Checks

These days, Americans write something like 39 billion checks a year. That figure is starting to come down a little bit, but the prevalence of checks is still huge.

Writing checks is just too dangerous. Every check you write to the hairstylist or the cleaner has your name and signature, your bank's name and address, your account number and your routing number. Salespeople routinely ask for a driver's license or work number, as well as other personal information, and scribble that on the check. Certainly just the check front alone contains more than enough information to draft on your bank account — or become you.

### *Washing Checks*

If you are going to write a check to pay the electric bill or the gas bill, don't put it in the mailbox outside your house. Typically people put their outgoing mail in the mailbox and put the flag up, which is sort of like raising a red flag. It makes you vulnerable to an extremely common scam called *washing checks*.

There are criminals who drive through neighborhoods early in the morning to see that red flag, and remove the envelope containing your check to the electric company. They take that check home, put a piece of Scotch tape over your signature, and use an everyday household chemical to wash off all the information on that check except your signature. Then they can make the check out to themselves, fill in any amount and cash it.

So if you're going to mail a check, take it directly to the post office mailbox and mail it there. An even better precaution is to use a pen with permanent ink. ■

# They Got Me — Now What?

No matter how many precautions you take, you might become the victim of identity theft. It's important to follow an orderly protocol. Here are the steps to take:

1. **Call the credit bureau fraud departments.** Report the crime to the three credit bureaus so that they can put an alert on your file.

**2. Shut down all compromised accounts and documents.** Immediately pull the plug on the old and the new, both your own accounts that the thief may have been misusing and any new accounts that he or she opened in your name. When you reopen your accounts, make sure you have a new account number, and guard it with a fresh password.

**3. File a police report.** The report will help you remove the fraud from your credit report. Companies will want some kind of proof that you really are a victim. A police report is the best proof you can offer, because creditors assume you wouldn't file a police report unless you really meant it.

**4. Establish good records — of everything!** Send all letters certified mail, return receipt requested, from your local post office. That way you'll have a record of when you sent something and when it was received.

**5. File a complaint with the FTC.** Finally, once you've determined as best you can the extent of the fraud, file a complaint with the Federal Trade Commission, which can be done online at www.consumer.gov/idtheft, or by phone at 1-877-IDTHEFT. The FTC doesn't get involved in resolving individual cases, but the complaint is useful information in its work to investigate fraud, and it could spur a law enforcement response. ■

**For additional information on credit bureau fraud departments, go to: http://my.summary.com**

# The Crime That Keeps on Stealing

The dark side of identity theft is that it doesn't necessarily end, even when you take the recommended steps.

*(continued on page 8)*

## The Crime That Keeps on Stealing

*(continued from page 7)*

You're dealing with persistent criminals who don't relent and an imperfect resolution system. That combination makes it very hard to completely come out from under this insidious crime.

Even after one particular thief appears to be finished stealing your money, he or she continues to steal your sense of security. Once you've been violated, it's hard to feel safe again.

An elderly couple had a registered nurse living with them for years, caring for the man, who was sickly. When he died, the nurse left — along with his identity. When his widow wrote a check for his funeral, it bounced because the nurse had already cleaned out his account.

### *Criminal Records Live Forever*

When thieves commit other crimes in your name, you really face a burden that won't go away. It's easy enough to check your credit record, but there's no easy way to check your criminal record. If an identity thief has put a blot on your record, you don't know it until the police stop you. And you never know when it's going to reappear. ■

## Write Your Company and Congressperson — Now!

Society and public officials have a big responsibility. Congress and state legislatures need to provide consumers with more protection; so do the businesses that you patronize.

A group that calls itself Artists Against 419 — exasperated that law enforcement and companies don't do more about phishing scams — has actually been pursuing thieves on its own, a rare instance of a vigilante group aimed at white-collar crime. When one man found out that a department store had a videotape of the thief who had assumed his identity, he managed to obtain a copy of the tape and convinced a local TV station to run it on the evening news. Several viewers recognized the man and called in to finger him.

Every company in America, every government agency, every municipality and every health-care provider has to ask itself one simple question: What are we doing to protect the identity of our customers and our employees?

As a consumer, you've got to push them to get an answer to that question, because if they don't have the right answer, they're putting you at needless risk. ■

## Staying Two Steps Ahead (Or Three)

Identity theft will intensify in its tried and tested forms and in new variations as well. Identity thieves have already begun to invade cell phones and personal digital assistants and steal data from them. We're going to continue to see information swiped on a massive scale from companies and databases and sold not only in this country but overseas to those who wish to assume the identities of Americans. Even terrorists would be able to slip into someone's identity and get a job here and join a sleeper cell, because it is so easy to do.

Every precautionary action we undertake to prevent identity theft, therefore, has to take into account what could come next. Crime is a full-time job for its practitioners. Every move to thwart it has to anticipate the criminals' next move.

Here's a good example: The average phishing site lasts only five days before the crooks abandon it and move on to a new one. Why? It usually takes about six days for law enforcement or security experts to shut it down. So the thieves head elsewhere just before they hear the footsteps of the authorities closing in.

So you have to think two (if not three) steps ahead.

### *Protect Yourself*

We need to wake up to the fact that identity theft is a drama still in its first act. You must take steps to protect yourself. And you must start thinking like a criminal, and remember that a crook always looks for the easiest route to riches. Don't hand him or her a map.

We can't be idealistic and think we can stop identity theft altogether, but we can slow it down — a lot. We can possibly transform identity theft from a growth industry to one that is in steady decline. To do so, we must take prevention more seriously and press businesses, legislators and law enforcement to do the same.

We live busy lives, but this is a terrible problem. Remember, everyone is a potential victim. ■

### How to Thrive in a More-Faster-Now World

# THE AGE OF SPEED

## THE SUMMARY IN BRIEF

We are willing to make dramatic sacrifices to achieve greater speed because today our society pulses with new priorities and new demands. We've created a 24/7, CrackBerry, more-faster-now culture, and it is changing the way we work, relate, communicate and live. It's changing what makes an individual successful and what makes an organization viable. And it's changing key aspects of the basic human experience.

While this may seem terrifying to some, speed has a unique power to enrich our lives on an individual, organizational and even societal level. It is the lifeblood of the information age, it pushes businesses forward and it helps people spend less time doing meaningless things and make room for more significant living.

Speed is a fact of modern life. Yet many people and organizations let speed control them instead of the other way around. *The Age of Speed* is an examination of the role of speed in business and the individual experience and a proposal for a new perspective: that speed can be a powerful ally on both a personal and an organizational level.

By using case studies from renegade companies such as Geico, Patagonia, Nintendo and Netflix, author Vince Poscente unravels the notion that in today's world we need to slow down. Instead, he illustrates why harnessing the power of speed is the ultimate solution for those seeking less stress, less busyness and more balance.

## IN THIS SUMMARY, YOU WILL LEARN:

- The dramatic impact of the more-faster-now revolution.
- Why we must redefine the work-home-leisure model of time.
- How to categorize people and organizations into four types of speed profiles.
- Why being open to new ideas and opportunities allows you to be faster.
- Why multitasking is actually an impediment to speed.
- How being aligned with your authentic purpose allows you to take full advantage of speed.

# The Speed Phenomenon

We crave speed, and we won't be satisfied until we get it. Our tolerance of slow has decreased dramatically as our yearning for speed has increased. Today, wait time and downtime are considered unacceptable. Our tolerance is so low that 23 percent of Americans say they lose patience within five minutes of waiting in line. Though this may seem immature on the surface, the core of our intolerance may be rooted in something quite reasonable: Five minutes waiting is equivalent to surrendering five units of our most valued commodity — time. We've explored the potential of each minute, and we know just what we could have accomplished in those lost five minutes.

Consider what speed means for businesses. There is a new standard for fast but also a big opportunity: a widespread, deeply felt, unmet demand. People are desperate to save time — even 18 seconds makes a difference in the Age of Speed. Chase Manhattan Bank used its ability to cut average ATM transaction time from 42 seconds to 24 as a positioning strategy to appeal to the many speed seekers in its potential customer pool.

Think about the offbeat car insurance provider Geico. Geico used Speed Racer as a spokesperson and branded a tagline that's become almost unforgettable: "Fifteen minutes could save you 15 percent or more on car insurance." Geico's direct-to-consumer model is hardly business as usual in the slow-moving auto insurance market, but it works — in part by emphasizing the speed and instant gratification the model can bring to customers.

### *More Life, Please*

Today, a fantastic amount of living is within reach. Not only do we have the ability to pursue more options, we also have more options available for pursuing.

With more options available, we can chase more dreams. And since we have an unprecedented ability to achieve them, we manage to catch more dreams. The difference between what we can accomplish in 60 modern minutes and what we could do in an hour 30 years ago is astounding.

Every time we speed up the time it takes to complete an unimportant task, we create the possibility of more time to spend doing what we feel is significant. We want to spend less time on things we deem inconsequential, so we devour every chance to speed up the minutiae in our lives. Why do we need speed? We need it because it lets us live more meaningful lives. ■

# Evolution

Today, even when there is no clear reason to resist speed, our instincts often tell us to proceed with caution. Outdated perspectives, irrational fears and incongruous desires are often steering our response because negative perceptions of speed are ingrained in both our conscious and subconscious minds.

If we continue to reject speed out of hand, we'll never be able to get ahead of it. We'll be in constant conflict with the world around us — a world pulsing with speed. So we need to identify the root of our resistance and work to change our view so we can see speed for the positive force it can be and end our opposition.

### *Smelling the Roses*

Using speed to live a more meaningful life is counterintuitive for most people, because speeding up means compromising the journey, missing out on smelling the roses, right? Well, not necessarily. Not every experience holds deep intrinsic value. The suggestion of embracing speed is the idea of speeding up the *minutiae* in your life and work.

The key is identifying the difference between repetitive

## Evolution

*(continued from page 2)*

chores and passionate pursuits. If the activity is something you love, that you have a passion for, you may want to immerse yourself in the full experience each and every time. But for some things in life, we should pursue speed with zeal. When we speed up the drudgery, we have *more* time to cherish significant experiences.

In addition to asking ourselves if we need to stop and smell the roses, we should also question whether or not we're compromising our satisfaction by sacrificing the dramatic build of anticipation.

When choosing the best opportunities for speeding up, consider the value of both the experience leading up to the end and the value of the end. When the value of both is small, it is a good opportunity to use speed. On the other hand, when the value of one or both is significant, speed may compromise the pleasure you get from that experience.

### *A Love Triangle: Time, Quality and Cost*

Ingrained in our perception of products, services and activities is a very basic microeconomic concept: There is a balance that must be maintained between time, quality and cost; if you want more of one, you have to sacrifice another. It's a time-tested formula and the foundation of many decisions we make in our personal and business lives.

But in the Age of Speed, the rules have changed. Though it is unlikely that trade-offs among time, quality and cost will ever cease to exist, the old model is no longer a given. Because of technology, we have more shortcuts available than ever before, and these shortcuts not only save us time but often also save us money and produce equal or better quality.

If we can accept the positive potential that speed offers, we can do more, be more, live more. We don't have to assume that if we embrace speed, our lives will just get busier and busier. We need to adapt, evolve and shed our outdated or misguided perceptions of speed. We need to reshape the way we define, manage and categorize our time. ■

## The Big Blur

One of the most common side effects of the Age of Speed is blurred boundaries between work and home. One reason for the blur is that disconnection is becoming extinct at a phenomenal rate. Although work no longer keeps us chained to desks or even desktops, we're experiencing by "always-on" phenomenon — whether it's an e-mail, text message, instant message or cell phone call, we're almost always accessible.

The big blur between free time and work time makes us feel that our overall time is compromised and that it isn't ours to control. No matter how fast we think we're going, it seems harder and harder to dedicate time to the things we feel are significant.

Time has been associated with physical boundaries for more than a century. We got used to the idea that we work when we are in the office or at the factory. We do chores when we are in the kitchen. We relax when we are in the living room or at the park. This made time easy to define: work, home, leisure.

Today, however, work is no longer a place, it's a state of mind. Instead of three distinct segments of time, we have ended with one large pie of time filled with a constantly morphing mixture of work, home and leisure.

However, if we define a new alternative to the work-home-leisure model, we will be able to take advantage of all the opportunities available to us today more easily, and we will feel the benefits of an evolved way of life.

***(continued on page 4)***

## How Best Buy Uses the Values-Based Time Model

There is a growing trend among companies to promote boundary-free time for both employee development and bottom-line results. Best Buy, through its Results-Only Work Environment (ROWE), allows employees the freedom to decide where, when and how they work — as long as they get the job done.

Best Buy has moved far beyond the typical approach to flextime — allowing employees to start and end their days around a core set of hours — and encourages employees to break all the rules of standard business operating procedure. It's no longer about how many hours you spend in the office; it's about productivity and outcomes. This now leads to a totally different evaluation of how you spend your time.

The benefits are remarkable. Employees in divisions that are part of ROWE report that their family relationships, company loyalty and focus on their work have all improved since the program began. And these results are affecting the bottom line. Surveys have shown a 35 percent increase in productivity for employees working in the ROWE program.

Perhaps Steve Hance, employee relations manager, said it best: "I used to schedule my life around my work. Now I schedule my work around my life."

## The Big Blur

*(continued from page 3)*

### *Making a New Model*

Yvon Chouinard, founder and CEO of Patagonia, often tells the story of a trip he took with the leaders of his company to South America. The company had experienced phenomenal growth in the mid-1980s, but the recession at the end of the decade hit them hard. In a tough spot, they had to do something radical, so they headed to Argentina and climbed a mountain. When they reached the top, they didn't talk about strategy and bottom lines; they talked about their vision for an ideal future — not what they had to do, but what they wanted to do. They knew that if they went back to their roots and their passion, they could solve the problems they faced.

The Patagonia team realized that in their ideal company, there was no separation between work and home or leisure. They believed that they should enjoy the eight to 10 hours a day at work as much or more than the other hours of the day. They didn't think they should have to redefine their values and passion during business hours. And if their values didn't change from hour to hour or from Sunday to Monday, why should the way they focused their time?

When we stop applying the work-home-leisure framework to our time and start applying a framework based on values, we shift from a choked perspective focused on spatial context and tasks to an open, conscious perspective based on what we value and what we want to accomplish. In the Age of Speed, our time is more fluid — and that should be working in our favor, not making us feel stressed out and exhausted.

When we implement the values-based time model in our lives, time becomes the tool we use to organize our priorities and values rather than our duties and location, and how we spend our time reflects who we are rather than where we are or what we're doing.

If we stop judging our time according to outdated definitions of work, home and leisure, we are less likely to feel stressed out about the blurred lines. If we stop forcing the separation between those three areas of our lives, we won't suffer when they merge — instead, we'll find solutions.

Regardless of your work situation, shifting your perspective of time from a focus on tasks and physical location to a focus on values can help you deal with the daily pressures common in the Age of Speed. ■

# Four Profiles

If you're in an environment that requires speed, you must embrace it. And if you embrace it, you must know what it takes to succeed so you don't crash.

When evaluating these three core issues — whether speed is embraced or resisted, whether it is required in a specific environment or irrelevant, and whether it works for or against the person or organization in question — you will notice that there are four behavior patterns or profiles that have emerged in the Age of Speed: Zeppelins, Balloons, Bottle Rockets and Jets. Once you get to know them, you'll recognize the behaviors that categorize these profiles everywhere you look — in your colleagues, your family, your company, the receptionist at your dentist's office or the talking heads on TV. You may even recognize yourself.

### *Four Behavior Patterns in the Age of Speed*

**Profile No. 1:** Have you ever worked with or for a company that required five, seven or even 11 levels of approval for the simplest initiative or communication? You've probably been touched by a **Zeppelin**, and chances are good that you came away from the encounter trying not to scream in frustration.

Zeppelins proceed at a sloth-like pace and have a tough time maneuvering or changing course quickly. Today, they are obsolete: Zeppelins can't fly fast enough or soar high enough for the Age of Speed.

Zeppelins see speed as a harbinger of impending doom: greater stress, more work, chaos. They're blind to the world of options and opportunities that speed offers. Zeppelins commonly feel rushed, stressed out, not in control of their own lives. The only option for taking control, at least according to Zeppelins, is to slow down. If they need something fast, they feel sure they'll have to sacrifice something for speed. They'd rather take their time, whatever the cost.

**Profile No. 2: Balloons** are the happy individuals and successful organizations that don't seek speed and don't need to. Balloons have chosen to live outside the Age of Speed. Instead, they seek or create environments in which there are few external pressures demanding that they speed up. They interact with our fast culture only from a distance.

Where Zeppelins resist speed and face inevitable failure, Balloons resist speed but find success. Like their namesake — the hot-air balloon — these resistors float along, content to reach a general destination eventually. They can change their environment the way a hot-air balloon can change its altitude, so they can avoid situa-

*(continued on page 5)*

## Four Profiles

*(continued from page 4)*

tions that require them to move at speeds faster than they are comfortable with.

Balloons often inhabit niche markets, where their specialized skills are valued regardless of the time they cost. They find success primarily because they aren't actively resisting speed by putting themselves in its path and trying to erect a barricade. Their resistance is really more a form of avoidance.

In their general detachment from speed, Balloons give up some of their potential and some of their opportunities. But they make the sacrifice mindfully. Because they're almost always conscious of their choice and have sought out an environment that supports that choice, it usually works out well for them.

**Profile No. 3:** You can easily identify a **Bottle Rocket** as the endlessly energetic co-worker who powers through the day at top speed — always moving fast, but never managing to achieve anything of substance. It's the company that takes off and embraces speed at every turn — but either loses sight of its goals and fails to reach its once-glorious potential or stays stubbornly focused on the wrong path.

Bottle Rockets are devoted to speed — they embrace it in all things and their demand for it is high. Lacking agility, Bottle Rocket companies have difficulty adjusting to new standards, practices, new ideas and developments in their industry. They're so focused on going fast, they don't take time to understand why they're going fast, where they're trying to go, or what might be holding them back. The trajectory they follow doesn't necessarily lead to their true calling — nor to fast results.

**Profile No. 4:** Like Bottle Rockets, **Jets** embrace speed and actively pursue it; unlike Bottle Rockets, Jets have outstanding records for reaching their destinations safe and intact.

Jets harness the power of speed, turning it to their advantage. They are agile — open to change and innovation and in constant pursuit of new opportunities. They're aerodynamic — free from the drag that slows down others' lives, work and organizations. And they're aligned — in pursuit of a clear goal that is true to their strengths, passions and environment, with all their energy focused on that purpose.

Like Balloons, Jets have found their calling, but because they embrace speed instead of rejecting it, they flourish in their environment and don't need to place limits on their growth. They move fast but not just to keep up. Jets see speed as an ally, a power that propels them further toward their desires faster. They see it as a beneficent force that increases life, growth, energy and the value of what they do. They let the speed of their environment work for them.

If we don't want to resist speed by limiting our potential like Balloons or risking obsolescence like Zeppelins, but we also don't want to speed ahead recklessly and explode like Bottle Rockets, then we must learn to harness the power of speed like Jets. ■

# Agility

Threats and opportunities for a business surface faster today than ever before. Globalization and technology have multiplied the ranks of potential competitors and customers and raised the stakes of success and failure. This means that it's harder to compete and keep up with the rate of change, but it also means there are new opportunities at every turn. To speed up when we feel we cannot possibly go any faster, we have to open our minds and our organizations to the world around us. We have to be more sensitive to new possibilities.

To master the discipline of agility, we must also be flexible in our thoughts and actions. Being flexible is a test of our willingness to acknowledge weakness. To be truly flexible or create a truly flexible culture, we have to be willing to take risks — and we must have the courage to fail.

If we want to speed up, we also need to be responsive and be able to adjust quickly and correctly to changes in our jobs, our economy, our family dynamics, our customer or colleague relationships and our worlds. The rate of change has accelerated to such a degree that even people and organizations that want to be responsive are falling behind. Responding to change in modern times means being ultrasensitive to even the slightest shifts, rapidly analyzing those shifts and taking appropriate action immediately.

We can all speed up by making adjustments based on changes in our environment. Consider it an agility imperative, a requirement for going faster in a world that keeps going faster. ■

# Aerodynamics

To be aerodynamic is to be free of clutter, to be in your metaphorical perfect form, ensuring that excessive drag doesn't slow you down and add chaos to your

*(continued on page 6)*

## Aerodynamics

*(continued from page 5)*

organization, work, family, relationships and well-being.

Today's most common source of drag for individuals is obsessive multitasking — ironically, something we do in an effort to speed up and get more out of each moment. We multitask to stave off boredom or because it seems the only way to get everything done.

The problem is that multitasking doesn't necessarily speed us up; sometimes it slows us down. Brain scan studies reveal that if we do two tasks at the same time, we have only half our usual brainpower to devote to each. So when we multitask, we're really only half there for each activity.

Multitasking isn't the only issue. A different but related trend is that of accepting constant interruptions. But even if accepting interruptions has a negative effect on productivity, it would be foolish to suggest that we should — or could — stop it altogether. In the Age of Speed, the idea that we can proceed through our days by focusing on one project until completion, then another and another, is unrealistic, even a bit obtuse.

Today, we face real-time demands, so the way we work is more complex. We begin one task, shift to another, start something else, complete the first thing we started, continue the third thing we started and so forth.

It's gotten to the point that our activity patterns aren't even linear any more. We can — and often must — respond to issues as they arise, so our activity shifts from task to task as we race to keep all our plates spinning.

### *An Exercise in Consciousness*

How do we balance the speed benefits that interruptions and multitasking can provide with the clear drag they exert?

The answer is to take a conscious, analytical approach. We need to allow the disruptions that add speed but avoid the ones that detract from it. To simplify our lifestyles and cut back on unnecessary drag, we have to take control over what interruptions we accept and when we choose to accept them — when to multitask and when to focus.

The first step is to evaluate the importance of each task and decide whether to let it be interrupted. If we consciously assess the importance of the interruption and decide whether it's worth the switch, our behavior and results will more accurately reflect our priorities. For decisions about multitasking, ask yourself whether it's best to stay fully engaged in the activity at hand.

Next, we need to examine the total number of interruptions we allow and how often we multitask. By juggling too many tasks or allowing too many distractions, you condition your brain to stay over-stimulated, weakening your ability to concentrate.

Finally, we need to assess what kinds of tasks we're trying to perform simultaneously. Multitasking is a good option only if what we're doing is unimportant or simple enough that the decreased brainpower won't negatively affect our productivity or results.

### *Too Much of a Good Thing*

Once we've rid our workdays of unnecessary interruptions and productivity-sapping multitasking, work becomes less cluttered — more aerodynamic and faster. But if there's still just too much to do, consider ways to filter and process the information and work that's pouring onto your desk.

We drown ourselves in trivia and excess. Instead of simply letting this ocean of information and people flood unchecked into our minds, onto our desks, and into our lives, we have to limit the inflow by establishing trusted sources. Set aside time to review the volume of information, requests, personal contacts and distractions that enter your life each hour. How much of that would you be better off without?

### *Off the Desk and Out of the Inbox*

To clear away the excess, assign priorities to each task and curtail the amount of information that penetrates your consciousness. The next step is to process the tasks and information quickly. Note that this is not the same as completing tasks and consuming information. The difference is important. When you're processing tasks and information, you may end up completing or consuming some of them, but others you pass on to trusted destinations.

A trusted destination is someone or something you can rely on to give you what you need without supervision. Obviously, you have to choose your destinations wisely, but the system at work is an aerodynamic wonder. You don't have to do everything on your to-do list, you just need to get it where it needs to go to get done.

Within organizations, determining trusted destinations can be difficult. The more bogged down employees get doing work that somebody else could do faster and better, the slower the organization runs and the longer it takes for individuals, teams, departments and divisions to reach their goals. To help employees feel safe passing along tasks, contacts or ideas to others, leaders and managers must foster a culture of trust and implement tools to make finding trusted destinations possible.

The goal — for individuals and organizations — is to

*(continued on page 7)*

### Aerodynamics

*(continued from page 6)*

eliminate drag and to be sleek and aerodynamic. Once we are aerodynamic, we have the potential to be aligned. ■

## Alignment

To thrive in the Age of Speed, we need to find our focus point at the end of a tightrope that we never lose sight of as we race across. That focus point is our authentic purpose, whether it be personal, professional or organizational. When we are aligned with an authentic purpose, we get from beginning to end of any course with ease, balance and greater speed.

When you pursue an authentic purpose and your actions are aligned with it, everything happens faster. Speed comes naturally, almost effortlessly, with fewer obstacles.

It's just as important for an organization to identify its authentic purpose as it is for an individual. If a business is trying to achieve something that its employees, leaders, investors, customers or other stakeholders do not feel passionate about or at least connected to, advancement will come slowly, if at all. To find the authentic purpose, the leaders of an organization need to understand its true nature.

In the end, an authentic purpose is that thing, that dream, that gives people a sort of emotional buzz — that thing that they know beyond a shadow of a doubt is true and right.

But identifying the authentic purpose is only step one. For both individuals and organizations, it's vital to stay focused on the authentic purpose and make sure our actions consistently promote that vision.

How do you find your own authentic vision and support it through your decisions, actions and goals? You have to start with where you are and evaluate your current focus to see if it's locked onto a destination you sincerely want, need and can get to.

Like so many things in the Age of Speed, achieving alignment requires profound awareness of the things you do in everyday life. Take a step back for a moment, examine the ways you're expending your energy and resources and ask yourself: Are they aligned with my vision?

### *The Aligned Organization*

A business that is aligned knows exactly why it exists, is sensitive to how it fits into the world around it and acts only in ways that promote both of those forces. It has developed a vision that is intrinsically suited to it, and it is focused on its destination, supporting its vision with every single decision, action and goal. Because it knows exactly where it's going and is concentrating on getting there, it moves at top speed.

### *The Aligned Individual*

Individuals who are aligned achieve their goals at a remarkable pace, because they pursue things that matter to them and make the most of their true talents.

Once you have identified your authentic purpose and committed to aligning your efforts with it, finding the path of alignment is easy: To become aligned, seek simplicity.

Simplicity is needed to achieve and maintain speed. So the act of pursuing speed in life and business results in an environment of simplicity. This is counterintuitive, because we tend to think of slow as simple and fast as chaotic, but fast can be the surest way to simplicity. By its very nature, fast is simple, so simplicity is one of the foundations of success in the Age of Speed.

Being aware of the importance of alignment and conscious of its benefits in the Age of Speed will motivate us to discover our authentic vision and put all our efforts behind it. Without authentic alignment, we cannot achieve top speed; with it, we can accomplish phenomenal things. ■

### Nintendo's Alignment

The specs for Nintendo's newest video game console, the Wii, came from an era long ago when things were (or seemed) simpler. Released at the end of 2006, the machine has no DVD drive, no internal hard drive, no high-definition capability. Its graphics are only slightly better than those of the last generation of consoles, released around 2000. And it costs only $250 — compared with Sony's $600 PS3 and Microsoft's $400 Xbox 360.

But the lower-tech design isn't a mistake. Nintendo understands that graphics and technological advances are important but secondary to the pursuit of its authentic purpose of creating a fun, engaging play experience for people of all ages and skill levels. Because of its authentic alignment, even though Nintendo is in third place in industry market share, it's on the fast track to success.

## Harnessing the Power of Speed

We can leverage speed, using it to attain our goals. When we do that, we can get ahead of the rush, the demands and the exhaustion. Once and for all, we can make speed an ally.

*(continued on page 8)*

## Harnessing the Power of Speed

*(continued from page 7)*

If we don't learn to anticipate speed now, the consequences will become more and more negative over time, because the demand for it will only continue to increase.

Our desire for speed has almost completely evolved into full-fledged expectation. As our expectation for speed is met more regularly and in more situations, that expectation spreads to more and more facets of life.

Speed is rapidly becoming a commodity, and if we fail to compete in the area of speed in our environments and markets, we'll have no chance of attracting customers, clients or investors. Anticipating speed is not only necessary to be wildly successful, it's necessary to survive in the business world.

### *How to Reach for Speed and Turn It to Your Advantage*

When face to face with speed, we need to reach for it and turn it to our advantage — as a little Internet mail order business in northern California began to do in 1997. The company specialized in providing products its clients could get at brick-and-mortar stores around town, but with better prices, better selection and better convenience (the customer didn't even have to leave home). It was fast too: Customers' items generally showed up within 24 hours.

The company had it all — price, selection, convenience and speed — and its success in the local market set it up for expansion. Los Angeles was the obvious second market — a huge pool of potential customers not far from headquarters. But the city was out of range of the company's warehouses, so L.A. customers wouldn't get the quick delivery its current clients enjoyed. Suddenly, the company faced a decision: downplay the importance of speed to its customers or reach for speed and turn it to its advantage.

The company's leaders figured that if they met and even exceeded the demand for speed, they'd put themselves in a sweet spot for growth and market domination. Actively seeking speed would give the business momentum it could use to keep expanding. So the owners put it all on the line and decided to embrace speed. With a strong vision toward future growth, the company went $159 million into debt to ensure that it could distribute its products quickly to every new area it served.

The investment paid off. By 2006, Netflix, the once-small California company became a publicly traded corporation with 1,350 employees and $996.7 million in gross revenue.

Netflix can get DVDs to almost 90 percent of its customers in one business day, and its membership has increased from 239,000 in the first year to more than 6 million in 2006.

### *Anticipating Speed*

Once we anticipate speed and understand that the stakes are rising, the next step in an active approach to the advance of speed is to step forward and reach for it, to seek it out.

Reaching for speed itself is straightforward; the complicated part is finding the right places and the right ways to apply a fast, innovative touch. Anticipating speed, reaching for it and turning it to your advantage is the ultimate solution for harnessing the power of speed. It's a shift in perspective and a change in behavior: rather than reacting to speed as something to combat or stop, you seek it out, constantly looking for new ways to use speed to your benefit. ■

**If you liked *The Age of Speed*, you'll also like:**

1. ***Words That Work* by Dr. Frank Luntz.** To effectively obtain the power of communication, you must learn that it's not always what you say, but how you say it.
2. ***What Got You Here Won't Get You There* by Marshall Goldsmith with Mark Reiter.** The corporate world is full of skilled executives, but few will ever reach the top and, according to Goldsmith, subtle nuances make the difference.
3. ***How* by Dov Seidman.** According to Seidman, in this increasingly competitive world, it's not what you do but how you do it that sets you apart from the pack.

# Conclusion

If we want to thrive in an accelerated world, we need to use the power of speed to our advantage. It's the only way to get ahead of the rush that seems to be overtaking our lives and businesses.

Take a minute to think about the four profiles. If we want to be Jets, we have to embrace a perspective that promotes speed.

To be a Jet is to appreciate the benefits that speed offers — more life, more opportunities, more significance. Also, it is to be conscious of how we spend our time, of the tasks we accept, of how we embrace speed or when we reject it. If we truly want to soar, we have to understand our authentic purpose, be nimble and open to opportunities, be free of clutter and drag that can limit our potential, and seek speed out in unique and innovative ways. These changes are key to thriving in our more-faster-now world.

Your challenge is to embrace the oncoming force of speed and put these ideas to work in your life and business — to allow these concepts to inspire real action and extraordinary results. ■

# Work With Me

## The 8 Blind Spots Between Men and Women in Business

by Barbara Annis and John Gray

### THE SUMMARY IN BRIEF

Each day, men and women looking to bring their best to work are often challenged by false assumptions and mistaken opinions about the other gender-persistent blind spots that frequently result in misunderstandings and miscommunication, affecting their ability to find success and satisfaction in their work lives as well as in their personal lives.

*Work With Me* is a timely collaboration of Barbara Annis, world-renowned expert on gender issues in the workplace, and John Gray, author of the bestselling relationship book, *Men Are from Mars, Women Are from Venus*. Told through science, stories and the results of over 100,000 in-depth interviews with male and female executives of over 60 Fortune 500 companies, *Work With Me* reveals the Eight Gender Blind Spots that create tension between the sexes at work and in their personal relations: Do Women Want Men to Change? Do Men Appreciate Women? Are Women Being Excluded? Do Men Have to Walk on Eggshells with Women? Do Women Ask Too Many Questions? Do Men Listen? Are Women Too Emotional? Are Men Insensitive?

This work-personal life relational guide brings insights and offers solutions to help both men and women remove the blind spots that separate them, allowing for greater success and satisfaction in their professional and personal lives.

### IN THIS SUMMARY, YOU WILL LEARN:

- What "Gender Blind Spots" are.
- What "Gender Intelligence" is.
- How we stop misunderstanding each other.
- How we build trust and credibility with each other.
- How we achieve work-personal life harmony.

# THE COMPLETE SUMMARY: **WORK WITH ME**

**by Barbara Annis and John Gray**

**The authors:** Barbara Annis is a world-renowned expert on Gender Intelligence® and inclusive leadership, advocating the value and practice of Gender Intelligence in Fortune 500 companies, governments and numerous organizations across the globe. Her book *Same Words, Different Language* is considered a seminal contribution to the new conversation between men and women at work. She serves as chair emeritus of the Women's Leadership Board at the Harvard Kennedy School.

John Gray, Ph.D. is a leading relationship expert in the world and bestselling author. His book *Men Are from Mars, Women Are from Venus* is ranked by *USA Today* as one of the top 10 most influential books over the last 25 years. Founder of Mars Venus coaching, he has trained over 500 coaches in 27 countries to bridge the gender gap in business through gender-smart leadership, sales and team-building training programs.

## Introduction

Have you ever felt this way or heard comments such as these expressed by friends or coworkers? "I'm tired of being excluded and having my ideas dismissed." "Being the best person for the job means nothing here." "I have to be so careful in what I say and do." "I can't and won't act like someone I'm not."

There are millions of people like this who are stuck, failing or quitting — not because of their abilities but because they haven't figured out how to work effectively with the opposite gender. Women and men may see the same things, but they do so through a completely different set of lenses, very often thinking and talking past each other. This is due to what we call "gender blind spots": incorrect assumptions held by both men and women, stereotypic baggage that continues to cause our miscommunications and fuel our misunderstandings.

It's time for a cultural shift in our thinking. What we need now — more than ever before — is a new level of awareness and attentiveness to each other's needs, a depth of understanding called "gender intelligence." Gender intelligence is an awareness of the intrinsic nature of men and women beyond the physical and cultural. It's an understanding of and appreciation for our differences. It recognizes that gender is a function of both nature and nurture.

Only by understanding the nature of our differences can we then gain the insight into how to nurture, develop and complement our differences instead of denying and suppressing our own uniqueness and that of the other gender. ●

## Are We Really the Same?

Men and women are often uncertain how to act with each other and how to react to each other. Many men admit they don't understand women. Male behavior is more predictable, but not understanding or not trying to understand can lead to avoidance and not working well together. Both men and women are often hesitant to speak their minds or act in ways that feel authentic.

**Gender Facts:**

- **9 percent of men say they "understand women."**
- **68 percent of women say they "understand men."**

One major problem is we're trying too hard to be "equal" to each other, which has grown more to mean "acting the same." The fact is, men and women are different. We do almost everything differently. We communicate, solve problems, prioritize, make decisions, resolve conflicts, handle emotions and deal with stress differently. It's easy to say "we're all equal" and go about treating each other the same. But in the end, that leads us further away from valuing each other and finding the complement in each other. Without gender intelligence, men and women will never truly understand and appreciate each other's complementary nature. ●

## THE EIGHT GENDER BLIND SPOTS

# Do Women Want Men to Change?

Women are not as content in today's workplace as men are. From the boardroom to the conference room to the call center, women feel valued differently than men. Women often sense that they have to work harder than men do just to prove themselves, and they feel doubted for their competence and commitment.

Men, on the other hand, are generally comfortable with the rules of engagement in today's corporate culture. They're not aware of how their behavior affects women, and they don't feel that they're acting intentionally against women.

**Gender Facts:**

- **58 percent of men believe that women have as equal a chance of getting ahead as men do. Only 24 percent of women share that outlook.**
- **83 percent of men believe both men and women are experiencing the same level of job satisfaction.**
- **93 percent of women believe men have job satisfaction. Only 62 percent of women feel job satisfaction.**

Two generations ago, for a woman to pursue a career may have been a choice, but today it's an economic necessity. Yet, the work environment that women are entering does not welcome the way in which women communicate, collaborate and generally engage in business. When women say they want men to change, they are really asking men to remove the obstacles to their success and to value their contributions.

Here are some examples of how men unknowingly dismiss women by pursuing a course of action that may be understandable to themselves and other men, but that tends to prevent women from participating in ways that work for them:

What men say: *"Those issues aren't directly related. We need to focus on what's critical and doable now."*

What women say: *"Those issues seem relevant and may impact our decision. All things should be considered."*

What men say: *"There's risk involved, but beating competition to the marketplace is worth it."*

What women say: *"To minimize the risk, let's think through the options one more time. We may not be first to market, but we'll have a solid product."*

As much as men need to understand how women think and behave, women need to understand the same about men. ●

# Do Men Appreciate Women?

In the late 1940s, companies began surveying employees in an attempt to understand what motivated them to perform at their best. A pattern emerged, and the underlying principles are still found in almost every management training book today. These included offering employees a challenging job that aligned with their skills and interests, giving them the time and resources needed to accomplish the task, allowing them the autonomy to get the job done, and recognizing and rewarding them for their accomplishments. Back then, men made up the vast majority of the workforce. These ideas and principles were aligned with how men thought, behaved and preferred to work. Fast forward to this era, and the belief is that women will seek appreciation for the same reasons, but the data suggests otherwise.

**Gender Facts:**

- **79 percent of men feel appreciated at work while only 48 percent of women feel the same.**
- **82 percent of women want to be recognized for their effort in achieving the results.**
- **89 percent of men want to be recognized for their results.**

Men appreciate being acknowledged for their results. For men, it's not so much the journey or the efforts undertaken while achieving their objectives, but the successful completion of the task itself.

Men appreciate having the freedom to make their own decisions, not being micromanaged during the process of achieving their objectives, and having the latitude to make mistakes and learn from their errors.

What detracts from a man's sense of independence is offering him unsolicited help. It indicates to a man that he is not trusted or capable of accomplishing the job on his own.

Women feel most appreciated and validated when they're acknowledged for the challenges they faced in attaining those results. To most women, experiencing the journey is as valuable as arriving at their destination.

In addition, women tend to be relationship-oriented. Women generally approach projects collaboratively and cooperatively, while men tend to engage in work independently and competitively.

Only through expanding our gender intelligence can we begin to understand and respect our gender differences and learn to demonstrate and communicate appreciation in ways valued by the other gender and, in turn, acknowledge the ways appreciation is being offered. ●

## Are Women Being Excluded?

**Gender Facts:**

- **82 percent of women say they feel some form of exclusion — whether in business social events and casual meetings, in conversations or in receiving direct feedback.**
- **92 percent of men don't believe they're excluding women.**

A woman's feelings of exclusion don't stem from isolated instances or specific incidents but rather from a recurring pattern of male behavior at work that tends to dismiss a woman's ideas and questions during meetings, prevents her from participating in informal networks, and impedes her chances of benefiting from valuable mentoring opportunities.

One of the major obstacles impeding women's visibility, and therefore their chances for advancement, is their omission from informal networks of communication — those casual situations and social settings in which team bonding takes place. These informal networks and settings can include client lunches, drinks and cigars after a meeting, shooting pool and golf outings.

Many of the networks and events are typically exclusive to men, primarily because they've been traditionally designed around men's interests. Women don't necessarily want to prevent men from engaging in male-related activities, but they do want to feel a part of the team and benefit, as men do, from the personal growth opportunities that tend to surface during these informal events.

Women will commonly point to "men's club" behavior in meetings and at business socials and maintain that it's men's *intention* to exclude. A man, confronted with those comments, will recall all the times he was inclusive and respond with, "No, that's not true. I really did want to include you." He'll discount the claim because, in his mind, his intent was never to exclude. Men, in general, want to find ways to work with women. Men behave in ways that are natural for themselves and understandable to other men, and they assume women want to be treated the same way.

Women derive personal gratification and support by questioning issues and being questioned and by sharing their discoveries and decisions with others. As a result, women derive feelings of acceptance and involvement that are typically not as important to men.

Inclusion is generally not a top-of-mind issue for men. As a result, a woman may misread a man's behavior in team meetings as being aloof and indifferent, which tends to amplify a woman's feelings of exclusion. ●

## Do Men Have to Walk on Eggshells with Women?

Men often find themselves walking on eggshells with women in the workplace, an apprehensive and hesitant feeling that can potentially surface any time men interact with women. Examples of situations that men say they feel most uncomfortable in and take extra care not to offend and provoke an emotional reaction include bringing up certain topics that may raise too many questions and delay decisions; giving feedback during performance reviews; careless language, including sexual innuendo, off-color jokes and profanity; opening doors, holding elevators, buying lunch, or offering to carry heavy packages.

**Gender Facts:**

- **79 percent of men feel they have to be careful and indirect when providing women critical and timely feedback.**
- **82 percent of women say they want to receive direct feedback from men.**

Women don't believe that men need to walk on eggshells around them. They wish that men didn't feel that way and are often surprised that it occurs to the degree that it does. However, men often claim that they have a history of "saying the wrong thing," an awkwardness that many men confess dates back to their adolescence. They admit that their sense of caution is often a reaction to past situations and experiences, even if it was only an isolated incident when something they said or did caused a woman to react negatively.

Men walking on eggshells with women is clearly detrimental to both genders. It prevents men and women from bringing their authentic selves to work, being open and honest in their thoughts and actions, and building trusting relationships that can result in greater personal happiness and professional success. The only way to achieve a higher level of personal authenticity and trust is for both men and women to take steps toward understanding and valuing each other and not expecting the other gender to make all the effort. ●

## Do Women Ask Too Many Questions?

*"How long before we see the results of the new product test?"*

*"Two weeks, Susan. I'll email each of you the stats as soon as I receive them."*

*"But our regional sales managers are flying in next week for training."*

*"It's the best the vendor can do. The product has to be in test market long enough to validate the design. There's a number of other things I'd like to cover before this meeting is over, so if we can please move through the agenda."*

*"I'm still uncomfortable with this waiting period. Why didn't we let the vendor know we needed results sooner? Why do we have to wait two weeks?"*

*The team leader gets increasingly frustrated. "We interviewed three vendors before settling on the one we're using. Two weeks is the fastest response time we can hope for."*

*"Does sales support know about this delay? They're already preparing collateral and training modules for the sales managers' arrival next week, and everything is based on the current design."*

**Gender Facts:**

- **72 percent of men state that women ask too many questions.**
- **80 percent of women say they prefer to ask questions even when they know the answers.**

When we explore the challenges men and women face in working with each other, men often state that women tend to ask too many questions. Some men even say it's a major problem, especially during meetings in which they believe women's questions tend to slow down progress on action items and delay decision making.

Women generally acknowledge that they do ask more questions than men but that their questions are their best contribution, intended to stimulate an exchange of ideas, discover what's important and arrive at a best possible outcome.

The challenge for women is not in asking fewer questions but in understanding why men tend to believe women ask too many and in discovering how to frame their questions in ways that communicate better with men.

In our workshops, we often find that women ask questions aimed at four different purposes: to build consensus, to show concern for a project or for others, to offer feedback and to ask for support. Men typically don't ask as many questions. Men aren't as prone to building consensus and tend to think and process their ideas alone, even when they're working with others. They're more inclined to announce their opinions, be more direct in their requests and when offering feedback, and seldom ask for support unless they're overwhelmed with a problem and unable to solve it themselves.

The bottom line is that companies that have a blend of both approaches realize better results. Those that haven't yet learned to complement the different behaviors tend not to be as successful. ●

## Do Men Listen?

Without understanding the different ways and reasons a woman may ask a question to share what she knows or needs, make an opening remark to stimulate conversation, or express her feelings to show support, a man will often respond inappropriately or fail to react at all.

Common ways that indicate to a woman that a man is not listening are

- He ignores what she's saying,
- He interrupts her in mid-thought.
- He presumes to know what she's thinking.
- He becomes easily distracted.

### You Missed My Point

When men fail to give the proper signals that they're listening, women begin to feel that their words are not getting through.

Men love to solve problems and often feel honored to have the opportunity to help resolve an issue. Bringing a problem to a man is an open invitation for his advice. If he senses frustration or anxiety in a woman's voice, a man will tend to assume that it's his responsibility to step in and put her mind at ease. She'll feel he isn't listening when he interrupts her in midsentence with something like, "No, no, no, here's what you should do." He thinks his quick reaction and the relevance of his solution prove he was listening. The woman may only have wanted him to lend an ear, not render a decision.

When a man shows himself to be distracted, by not looking directly at a woman when she's talking with him, fidgeting with his watch, or looking around the room, a woman tends to take it personally and conclude that he's not interested in what she's saying or that she's unimportant to him.

In coaching women, I often stress that it's a communication style difference for women and a listening style difference for men that we need to bring together in the workplace.

Men need to learn the value of incorporating women's connective and consequential way of thinking to enhance problem solving and decision making. Women, though, need to verbally make that link so men can more readily associate the implicit value that women are bringing to that particular topic and to men's linear way of thinking. ●

## Are Women Too Emotional?

Yes, women are emotional, and they tend to express their experiences — their joys and frustrations, regardless of how large or small — more often than men do.

**Gender Facts:**

- **A man will tell up to three people of a negative or positive experience, but only if it's relevant and only if he knows them.**
- **A woman will tell up to 32 people of a negative or positive experience, even if it's not relevant and whether she knows them or not.**

Plainly stated, women share with others, while men tend to seek space and solitude.

When men have strong feelings, they'll externalize the issue and explode if it's a major problem or become quiet and shut down, especially if there's nothing they can do to immediately resolve the issue. They'll focus on something else to distract their attention away from the problem.

Women don't react as quietly and can't change their focus as easily as men can. They'll tend to personalize the situation — blame themselves — and find others to share their experience.

Men and women simply manage and express their emotions differently. A man at work tends to show very little emotion during the course of his day, whether in team meetings or in one-on-one conversations. A woman, in expressing what she may feel is a moderate and reasonable show of concern for a project or for a client, can be misinterpreted by her male colleague as being too emotional.

At work, one of the biggest problems with the perception that women are too emotional is that a man will tend to avoid a woman expressing her emotions or even attempt to tamp down her feelings by dismissing them out of hand or by rushing in with a quick solution: "Don't worry about it" or "It's not that big a deal."

Women often say they don't feel comfortable or safe showing their true feelings at work, whether it's happiness, anger, frustration or fear. They don't ever want to be perceived by the men in the office as being weak or irrational.

Validating a woman's perspective doesn't necessarily mean that a man has to agree with her feelings or intuitions. Her heightened emotional tone may, on the surface, suggest to him that she's feeling negatively, her feelings are final, and her mind is closed, but none of these is necessarily her intention.

A woman's emotional reaction and reflective thoughts can often be the perfect complement to a man's impulse to take immediate actions. Men can benefit from taking the time to explore the consequences of their decisions before acting too quickly. And women can gain from the impulse for forward momentum and the ever-present energy offered by the men on their team.

As men and women in the workplace learn to support each other more effectively, emotional tension decreases, while cooperation and collaboration increase. The result is better problem-solving, enhanced decision making and greater productivity. ●

## Are Men Insensitive?

It seems that since the beginning of time, a man has responded to a woman's claims that he is being insensitive with the same innocent, perplexed reaction: "No I'm not … How's that? ... When?"

Women often read and react to people and environments differently than men do, and they tend to bring more memory and empathy to virtually every relation and situation. Men are generally not as attentive. That doesn't necessarily mean that they aren't observant. Men simply tend to take in less, focus only on those things directly related to an objective, and often do this with far less concern for details. The actual blind spot is the belief that men are often purposeful in their indifference and forgetfulness.

**Gender Facts:**

- **72 percent of women say that men are not as attentive as women to people's feelings, situations and environment.**
- **68 percent of men tend to agree.**

Men understand, more than ever, that successful leadership requires becoming more perceptive of their environment and mindful of the needs, motivations and interests of the people around them. Nevertheless, being sensitive is not a natural and effortless response for men.

Knowing this, a woman can become more understanding when a man appears to be indifferent, self-absorbed or noncollaborative. She can appreciate that it's more than likely not personal or intentional on his part but stems from his preoccupation with his own thoughts.

A man's tendency is to be singularly focused and sequential and to make decisions as quickly as possible. Although a woman may have her own position already thought through, her inclination is not to give her opinion as much as it is to encourage ideas from others. Her tendency is to have everyone weigh in before she'll share her thoughts. She'll feel more comfortable with a decision, knowing first that all ideas have been explored.

Men believe they are performing at their peak by offering their best ideas without hesitation. They also believe that if others have something to say, they'll speak

up without being prodded. A man feels he is being sensitive by not putting another person on the spot, so he avoids asking directly for other opinions.

When women communicate, they tend to look directly at each other throughout their conversation. The more intent women are, the more they focus on each other's eyes.

A man, on the other hand, will tend to look away to stimulate his thinking process as he asks himself, "What's the solution to this?" His inclination is not to maintain eye contact while he's searching for an answer or lending greater concentration to the discussion. Instead, he'll look up or over or down, or even cock his head to the side. Another man will be comfortable with this behavior and think, "He must be focusing intently about what I'm talking about," while a woman's personal reaction will be, "Hello in there! He's so easily distracted. He probably doesn't even care about what I'm saying."

The bottom line is that there is equal opportunity for learning by both genders. It's not enough for a man to simply say "I'm just being myself" and not make an effort to connect more deeply with his coworkers and read situations around him with heightened awareness.

Gender intelligence will help a woman understand that what she may perceive as insensitivity or lack of care on the part of a man is most likely not intentional. This understanding can help her to become more direct in her interactions and to frame her conversations in ways that will ensure her male coworkers are more aware of her meaning, needs and expectations. ●

## GROWING IN OUR GENDER INTELLIGENCE

## Building Trust with Women, Increasing Credibility with Men

Recognizing and dispelling our blind spots and understanding and valuing our gender differences are the important firsts in creating professional and personal relationships that are built on a foundation of trust.

Trust must be present before we willingly open ourselves up to greater understanding and acceptance. It's the most effective way of relating to others, working with others and getting results. We each want to be trusted, we respond to trust, and we thrive on it.

**Gender Facts:**

- **95 percent of men and women consider trust to be the foundation of a working relationship.**
- **92 percent of women say men earn their trust through caring and concern.**
- **89 percent of men say women earn their trust by showing credibility and competence.**

For a man, trust is all about credibility — aligning with his goals, believing in him and helping him succeed. A man will place trust in a woman who understands, aligns with and acts upon those things that matter most to him — achieving the results and winning.

A woman can build her credibility with a man by first seeing the good in him and his efforts and supporting instead of correcting those efforts. When a man feels that a woman is not trying to improve him, he is much more likely to seek her out for her ideas and go to her often for feedback and advice. ●

## Bridging Our Different Values

Men and women often find themselves at opposite ends of the spectrum when it comes to what they value at work, how they prefer to work, what they expect of others, and what they expect of themselves.

Women most value building alliances, developing relationships, and collaborating toward a common goal while improving processes and people along the way. Women value sharing their leadership and decision making and ensuring everyone is involved. Women place value on improving performance and maximizing productivity.

Men most value achieving results, from their own efforts and those of others. Men value independent work and, when on a team, getting each individual to work as effectively and efficiently as possible toward a shared goal as well as doing the right and necessary things in the shortest amount of time. They're comfortable working in hierarchies and often declare their leadership. Men place value on alignment, momentum and results.

The blind spot preventing change is men's and women's inability to understand what's most valued by the other gender and why.

### Improve — Maintain

A woman's sometimes-endless pursuit of improvement to get something just right can cause her to fall into an improvement cycle trap — a perfection trap — in which overpreparation always succeeds in driving up her stress levels but not necessarily improving her work product.

At a recent keynote address to women executives in the financial services industry, I asked, "How many of

you believe you overprepare for meetings? How many of you have difficulty in knowing and accepting when 'good enough is good enough'?" Every hand in the room shot up.

Women often find themselves in the weeds because of their impulse to overthink an issue, improve a report, write an article or perfect a speech.

Men are on the other end of this spectrum. If something is working, their tendency is not to waste time looking to improve what's not broken.

While there's commonly a drive in women to improve things, there's often a desire in men to achieve more with what's already there. Men want growth and results, but they'll only feel compelled to change something when that something stops functioning. Men will adapt to change, but only if it's necessary and proven to be more effective than what they're already doing.

### Sharing and Declaring in Leadership

We distinguish what women and men value and personify in their leadership as *Sharing* in leadership and *Declaring* in leadership. Since the 1980s, shifts have occurred away from an exclusively male paradigm of leadership to a more decentralized and participative mode. Much of this change has been driven by the complexity and speed of global business and the need for companies to make quick and informed decisions, sometimes worlds apart. But change is slow, even for global companies whose workforces are comprised of as many women as men and who have customers who are virtually all women.

The reality is that there's value on both sides of the leadership spectrum — a centerpoint of leadership that incorporates the best of what women and men bring to the table. Organizations that have a greater balance of women and men in leadership are dicovering one another's value points and accelerating toward the sharing of leadership.

**Female Leaders**

- Define their leadership in the strength and power of their networks.
- Are aware of the specific situations and needs of individuals and groups and how those issues can affect the organization.
- Decentralize planning and share decision making.
- Directly empathize, encourage and praise others, and seek to resolve emotional conflicts through communication: "Let's talk about it."

**Male Leaders**

- Define their leadership through their accomplishments and the results of others.
- Are more attentive at the macro-level — the financial and operational needs of the organization — and not as concerned at the individual level.
- Centralize planning with performance measures and hierarchal decision making.
- Promote independent resolution of problems and control emotional vulnerability: "Less feeling, more doing!" ●

## Achieving Work-Personal Life Harmony

Today, a dual-income household is a global social norm. There is perhaps no other phenomenon that has had a greater effect on society, altering the way men and women interact and how families live and spend their time. The greatest challenge facing men and women today is how to juggle their jobs and family responsibilities so that everyone feels appreciated and fulfilled.

Regardless of country, women and men tend to describe the lack of balance quite similarly. Men feel the endless pressure to perform and deliver, while women feel they have too little time for daily life activities. In finding a work-personal life harmony, it's important to begin with self-care, for the greatest value you can give to others is when you are whole and at your best.

It is not out of our reach or idealistic to think that women and men, working together, can make our world a better place. This is what we characterize as gender-intelligence — men and women seeing the world through each other's eyes and valuing each other's line of sight. ●

### RECOMMENDED READING LIST

If you liked *Work With Me,* you'll also like:

1. ***Leadership and the Sexes*** **by Michael Gurian and Barbara Annis.** Learn how to use scientific gender intelligence for business success.
2. ***Don't Think Pink*** **by Andrea Learned and Lisa Johnson.** The authors examine the different ways women think and how companies can engage women with visible and transparent marketing campaigns.
3. ***What Got You Here Won't Get You There*** **by Marshall Goldsmith.** Only a handful of male and female executives will ever reach the pinnacle. Goldsmith shows that subtle nuances make all the difference.

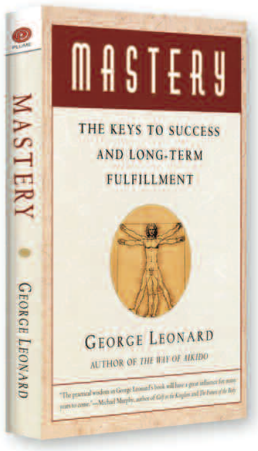
# The Journey to a More Complete Life



## How Everyone Possesses the Ability to Find Long-Term Fulfillment

***Review by Stephen Wolter***

In the mid 1980s, *Esquire* magazine began an annual series of articles about health, which it published under a special-section umbrella called "Ultimate Fitness." Author George Leonard, whose work was featured in the series, wrote at the time that fitness had "less to do with running a 2:30 marathon than with living a good life." In the fourth year of the series, the fitness section was dedicated to the concept of "mastery," a process in which something difficult becomes progressively easier through practice, until it ultimately turns pleasurable.

According to Leonard, reader response to the *Esquire* articles about mastery was phenomenal, so much so that he decided the topic deserved book-length treatment. His book *Mastery: The Keys to Success and Long-Term Fulfillment* was originally published in 1991 and remains in print today, having gone back to the publisher for 30 printings.

One reason for the book's continuing popularity — and not an altogether insignificant reason — may be its physical size. At 176 pages, you can read Leonard's *Mastery* in approximately two to three hours. The book is barely larger than the palm of your hand and can be tossed into a briefcase while adding only a few ounces of extra weight. Let's be honest here: Short books that cover some aspect of self-improvement are an ever-popular genre.

**MASTERY**
by George Leonard
*Published by Plume, Copyright © 1991, 176 pages, $14.00*

But an even more important reason that *Mastery* is still read 16 years after its publication may be that Leonard examines the topic of long-term fulfillment (something, just about everyone would agree, people want) and does so in straightforward, no-nonsense fashion. In fact, much of the book is the antithesis to an idea that Leonard loathes, namely, quick-fix solutions to whatever ails us. The quick-fix, antimastery idea described in this slim book is everything Leonard stands against. "We are continually bombarded with promises of immediate gratification, instant success, and fast temporary relief," he writes, "all of which lead in exactly the wrong direction." For every reader out there who's disillusioned by the notion of easy answers to difficult problems, Leonard's book should hold immediate interest.

The path to mastery can sometimes seem like an endless road, filled with setbacks and periods when little or no progress is made. But according to Leonard, it's the *journey* down that path that makes all the struggles worthwhile.

## Getting on the Path

Leonard writes that mastery resists definition even though it is something that can be instantly recognized. And in the book's first chapter, titled "What is Mastery?" he does a good job of dancing around a concrete definition of the term. Still, let's go with what Leonard does provide, which is that mastery comes in many varieties, follows a number of unchanging laws and brings rich rewards.

Most importantly, mastery is neither a goal or destination, but, as he puts it, a process, a journey. According to Leonard, it doesn't matter what you are trying to achieve, be it learning to type or learning the law, becoming a cook or becoming a doctor. Maybe it's just trying to be a better person, or a more content one. In any case, it's the *process* towards learning how to do or be those things that matters. That's what mastery is all about.

***"There's no way one can improve without practice. But the secret to mastery is when one begins to practice primarily for the sake of practice. 'Rather than being frustrated while on the plateau,' Leonard writes, 'you learn to appreciate and enjoy it just as much as you do the upward surges.' "***

The whole idea of mastering anything can be intimidating to many people, and Leonard writes that we tend to assume it is reserved for a relatively small number of individuals who possess exceptional abilities. But he believes the exact opposite is true. In his view, mastery is available to anyone who has started down the path of the learning process and is *willing to stay on it.*

## Mastering the Basics

To illustrate what he means, he uses the example of someone who, while not a skilled athlete, wants to learn the game of tennis. A teacher is needed, one who starts by leading the tennis student along in a series of baby steps: how to hold a racket, the correct motion of a forehand swing, how to move the hips and shoulders together with the arm's motion, and so on. The teacher stands in front of the student, on the same side of the net, and tosses ball after ball for the student to hit — not very exciting, perhaps, but the student gets to practice hitting a lot of balls with the tennis racket.

The most basic elements of the game of tennis are learned, and they are learned over a period of, say, five weeks. Meanwhile the student grows frustrated. He was hoping for exercise, competition, fun on the court. None of that is happening, and while the student has improved in all of the skills that he's practiced, he seems to have reached a plateau.

But the fact that the tennis student has learned some basics of the game, and that he has also reached a plateau during the five weeks of instruction, are two key ideas connected with mastery. At some point during the student's initial period of instruction there was a period of learning, and most likely, it took place in a short amount time; a "spurt," as Leonard refers to it.

That spurt of learning was followed by a longer period in which very little progress was evident to the student, just a lot of repetition, like practicing a forehand over and over and over. This is the period that Leonard calls the plateau. "There's really no way around it," Leonard writes. "Learning any new skill involves relatively brief spurts of progress, each of which is followed by a slight decline to a plateau somewhat higher in most cases than that which preceded it."

So here's the challenge for the tennis student, or any learner, who is trying to achieve mastery: How does one stay committed to the diligent practice that is necessary for improving the required skills, when the plateaus are often boring or even disheartening? Leonard doesn't mince words. There's no way one can improve without practice. But the secret to mastery is when one begins to practice primarily for *the sake of practice*. "Rather than being frustrated while on the plateau," Leonard writes, "you learn to appreciate and enjoy it just as much as you do the upward surges."

## The Enemies of Mastery: The Dabbler, the Obsessive and the Hacker

According to Leonard, the journey toward mastery is full of detours, and those detours start with the very people who are trying to make the journey. The author describes three different personality types who may be attracted to the idea of mastery, and who actually take the first steps in search of it, but who later deviate from the route that leads to achievement. He paints these personalities in broad, but distinctive strokes, and labels them the Dabbler, the Obsessive and the Hacker. Because the path to mastery is long and sometimes difficult, Leonard muses that these three personalities are drawn to other routes.

The Dabbler approaches new opportunities, pastimes or relationships with enthusiasm, and is overjoyed with the first signs of progress. But that joy quickly fades when the first plateau appears. A new job might get old very quickly, or a relationship can sour after the initial ardor cools down a bit. The Dabbler looks for a new pursuit before traveling any appreciable distance down the path towards mastery.

The Obsessive is a person who never settles for second best. Like the Dabbler, he is thrilled by the first spurt of progress because it is exactly what he expected. He worked hard to achieve that growth, but expects continued growth, even perfection, and he expects it *now*.

Because of this, he pushes himself mercilessly, ignoring the advice of friends who preach moderation. He's not like the Dabbler who gives up easily — he is, in fact, the opposite, a person who increases his efforts when he does not succeed immediately. Because of this, he doesn't understand the value of the plateau.

The Hacker, after learning and practicing enough to reach a plateau, finds himself content to stay there

indefinitely. He gets comfortable very fast, and then doesn't aspire to much more. As Leonard describes him, he might be a professional, a doctor or teacher perhaps, who doesn't bother with professional meetings. He's a worker who does just enough to get by. Or, back to our friend the tennis player, he develops a really solid forehand, but settles for a so-so backhand.

To Leonard, these three characters are emblematic of why so many people are not on the path to mastery. But for those individuals who conquer the negative personality traits of the Dabbler, Obsessive or Hacker, and who do find themselves pursuing mastery, an even bigger enemy awaits. This enemy is nothing less than modern American society and its rampant consumerism.

Instead of the path toward mastery, American culture — in Leonard's eyes — creates a path of endless climax, one in which each new experience is supposed to top the previous one. The path of endless climax, unfortunately, does not offer much opportunity to experience the plateau.

It's no surprise to Leonard that a culture in which the peak moment has to be *every* moment, would also find itself attracted to speed, quickness, and obtaining the next big thing *right now*. As mentioned earlier, Leonard has nothing but disdain for the concept of the quick-fix.

If anything is the polar opposite of mastery, it's the idea that great achievements can be achieved quickly and with little effort. Leonard mocks a culture that sells — even celebrates — concepts such as total fitness in 30 minutes a week, six-second abs, minute meals and speed reading as genuine substitutes for living a full and truly rewarding life. In Leonard's description of the pursuit of mastery, there is no such thing as a quick-fix solution. It simply does not exist.

## A Look at the Five Master Keys

Once a person makes the decision to pursue mastery, finding a way to successfully follow through and stay committed to this pursuit requires the proper tools. Leonard lists five tools that are essential for this task, tools that he refers to as "master keys." Leonard's keys are: (1) instruction, (2) practice, (3) surrender, (4) intentionality and (5) the edge; however the strongest and most accessible of these tools seem to be instruction and practice.

Self-instruction is certainly a possibility when learning a skill, and even practical for some pursuits. But on the journey to mastery, Leonard cautions against it. "The self-taught person is on a chancy path," he writes, and then goes on to describe a method for finding a good instructor instead.

This includes looking at a teacher's credentials, personality and even his students. How a teacher interacts with his students, what are his methods for instruction, and so on are issues that should be considered by the potential pupil.

Leonard draws on examples from his own life in this section of the book, sharing the story of when he was a young flight instructor during World War II. He is candid about both his successes and failures in the role of instructor, sharing with the reader how he had once made the mistake of separating his top-notch students from the mediocre ones.

The author writes that after the end of the war he came across one of his mediocre students, a shy man who finally got the nerve to tell Leonard exactly what he felt about his negative experience of having Leonard as a flight instructor. The author writes, "I had no adequate reply. Long before that time, I had begun to feel guilty about the way I had handled my first assignment as instructor. In fact, I never again segregated my students as I had done the first time."

***"Instead of the path toward mastery, American culture — in Leonard's eyes — creates a path of endless climax, one in which each new experience is supposed to top the previous one. The path of endless climax, unfortunately, does not offer much opportunity to experience the plateau."***

The second of Leonard's five keys is practice. As described by the author, practice should be both a verb and a noun when considering mastery. As a verb, the repeated act of practicing helps a person improve a particular skill. But on the journey towards mastery, Leonard finds that practice is even more significant as a noun — practice implies something that people are. A practice in this case is a calling, a vocation, an integral part of a person's life, or something one loves. "At the heart of it, mastery is practice," Leonard writes. "Mastery is staying on the path."

## More Tools for the Journey

In addition to his five keys, Leonard describes additional tools that will aid those trying to attain mastery. It's quite common for people to complain about how they lack energy when it comes to self-improvement. The desire may be there, but somehow even the simplest tasks are ignored, while precious energy is wasted on busywork.

Leonard traces this lack of energy back to childhood

and hypothesizes that from our earliest years we are taught that curiosity and independence are bad, while conformity is good. You may or may not agree with his ideas on how some of us evolve into lethargic 40-year-olds, but his antidote for this lethargy is full of solid and applicable advice. Maintain a program of physical fitness, he writes. Acknowledge the negative aspects of your life, but also, accentuate the positive ones. And tell the truth in your daily life. He describes the positive effect the truth has on an organization, when its executives are willing to tell it like it is.

There are other suggestions for regaining and maintaining energy that Leonard includes, and, on the flip side, he lists a baker's-dozen worth of pitfalls that can negate energy, commitment and any good intentions along the path towards mastery. These include personality traits such as an obsession with goals; being too competitive; a lazy lifestyle; vanity; and an unhealthy reliance on drugs. According to the author, it's often easy stepping onto the path of mastery, but getting waylaid is unfortunately all too common.

## Exercising the Body and the Mind

It should be noted that throughout the book Leonard makes frequent references to both Zen philosophy and, especially, to the martial art of aikido. He writes of the great influence aikido has had in his life, since he began studying it in 1970. As such, he includes a series of mind-body exercises from his Leonard Energy Training (LET), a discipline that was inspired by aikido, and which he feels will aid anyone in search of mastery. According to the author, "LET uses the body as a metaphor for the way you deal with the problems of daily life, and a learning facility for changing the way you deal with those problems, whether the problems are physical, mental or emotional." It is stated in the book that since 1973, LET has been introduced to approximately 50,000 people including corporate executives, couples and athletes — it's safe to say that since the book's publication that number has largely increased due to Leonard's continued popularity.

But beyond these exercises, the author sees aikido as a perfect example for illustrating mastery in action. He describes aikido as the most difficult of all martial arts, one that requires instruction from a skilled teacher, and something that takes years to learn. And with mastery, one must always be open to learning, no matter how long the journey.

## The Appeal of Mastery

The philosophy described in *Mastery* has something of a timeless quality to it, and that may be its greatest strength, along with its greatest appeal. The concept of mastery, as explained by Leonard, carries with it a simplicity that stands in stark contrast to our modern consumerist culture. And keep in mind, this book was written nearly a decade before the Internet and iPods were part of the national consciousness.

If in 1991 Leonard thought we were faced with numerous distractions that tempt us from the path of mastery, imagine what he could describe should he ever wish to publish a revised edition of his book.

Leonard, however, isn't advocating that our entire culture junk our laptop computers and cell phones. He is not writing about taking a giant step backward in time to some idealistic simpler time. That's not even a realistic option. Instead, he's describing a kind of road map through our modern world that leads to meaning, in spite of all the unsatisfying distractions that face us.

Towards the end of *Mastery,* Leonard writes that regardless of age, upbringing, or education, we are made up of mostly unused potential, and that it's our evolutionary destiny to use up that potential. That's a powerful thought, and an inspiring one — that each one of us has the ability to discover an unlimited amount of potential that we all possess.

Happily, putting all that potential to work *requires* work on our part. There are no shortcuts on the road to mastery, and that, according to Leonard, is one reason mastery provides such long-term fulfillment. It's a lifetime plan that provides satisfaction found in the simple virtues of learning, and practice, practice, practice. ■

**The author:** George Leonard has been called "the granddaddy of the consciousness movement" by *Newsweek* and *American Health* has dubbed him "the poet-philosopher of American health in the broadest sense." Leonard has written more than 10 books, including *The Life We Are Given* (1995) co-authored with Esalen Institute founder Michael Murphy and *The Way of Aikido* (1999) as the most recent. He is the president of the Esalen Institute and founder of Leonard Energy Training, a practice inspired by his decades-long interest in aikido.

# Uncertain Times, All the Time

## How Improbable Events Shape the World We Live In

***Review by Stephen Wolter***

Trying to describe Nassim Nicholas Taleb's latest book, *The Black Swan: The Impact of the Highly Improbable*, in a succinct fashion simply will not do the book justice. Yes, the ideas within *The Black Swan* can be condensed, and its abundance of fascinating ideas and observations can be discussed, dissected and explained. But in order to fully understand Taleb's absolute enthusiasm for the subject at hand — which in this case is how improbable events affect our lives and our world — the reader needs to pick up the book. *The Black Swan* is a kind of crazy kaleidoscope of ideas, each one practically bursting off the page, and Taleb has strong opinions about every one of those ideas. There's nothing lukewarm about this author.

In the book's prologue, Taleb calls his book a personal essay, and that's a fair self-assessment. Even when the book veers into the technical, Taleb's personal voice comes through loud and clear. Some readers might find Taleb abrasive. At times you might think he is full of himself, an egomaniac. But also consider that this is an extremely smart, confident individual who possesses a near effortless ability to explain complex ideas in an entertaining and thought-provoking manner.

**THE BLACK SWAN**
by Nassim Nicholas Taleb
*Published by Random House, Copyright © 2007, 366 pages, $26.95*

## All Swans Are White

Some 300 years ago, it was a popular assumption in the Old World that all species of swans were white. Every bit of empirical evidence confirmed this as true. But in the late 17th century, the discovery in Australia of a swan species that was completely black destroyed any previous notion that all swans are, and must be, white. It hardly mattered anymore that thousands of years of recorded history had only produced the undeniable truth that swans were white, because with the first sighting of a black swan, the undeniable truth was rendered false.

What does the story of the black swan teach us? Taleb describes it as a lesson that "illustrates a severe limitation to our learning from observations or experience and the fragility of our knowledge." Regardless of what we know from history, a single improbable event can change everything we think about the world. Taleb calls these improbable events Black Swans.

## How to See a Black Swan

There are three attributes found in Black Swans, according to Taleb. First, they are events that lie outside the realm of regular expectations. Black Swans are the name Taleb uses for outliers. No past events or prior evidence ever indicates that an outlier can possibly become a reality. In other words, outliers are completely unpredictable. Second, a Black Swan carries an extreme impact. And third, even though a Black Swan event is something that could not have been predicted, human nature compels people to create explanations for the occurrence of the event, making it explainable and, in retrospect, predictable.

By way of example, Taleb lists Black Swans from the last century: the events leading up to World War I; the rise of Adolf Hitler and World War II; the stock market crash of 1987; the fall of the Soviet Union in the 1990s; the fantastic worldwide growth of the Internet; and what is probably the most significant Black Swan in recent years — at least in the public's consciousness — the terrorist attacks of September 11, 2001. No doubt any number of historians

*"Wars, Taleb writes, are fundamentally unpredictable. The consequences of predicting the course of war can be disastrous if we live in a world in which we can only see white swans."*

would take issue with Taleb as to whether or not these events really were beyond the realm of imagination before they occurred, but readers should consider giving Taleb the benefit of the doubt. The argument concerning what major events in world history were truly improbable and what events were predictable can be discussed in another book — what Taleb is trying to explain in this book is the concept of improbable and unpredicatable occurrences.

As for the reliance on predictions, Taleb recoils from the idea, since according to his theory it is impossible to predict a Black Swan. Taleb writes that if these outlier events really are unpredictable, then by implication predicting the course of history is also impossible. Yet that is what human beings continue to do, much to Taleb's great distress.

"We produce 30-year projections of Social Security deficits and oil prices without realizing that we cannot even predict these for next summer," he writes. And even though colossal errors of prediction — from stock market returns to who will win the World Series — are ever present, what surprises Taleb even more is that people are seemingly unaware of how far off the mark these predictions are.

It's one thing to lose money on an investment, thanks to a prediction of a Wall Street analyst. But what happens when we make predictions and apply them to deadly conflicts? Wars, Taleb writes, are fundamentally unpredictable. The consequences of predicting the course of war can be disastrous if we live in a world in which we can only see white swans.

## The Day Before Thanksgiving

Picture this: Every day for three years a turkey is fed and cared for by a farmer. The turkey is well-treated and lives in a comfortable pen, and with every single feeding from the farmer, the turkey's belief in the farmer's role as a food provider is reinforced.

The pattern of feeding and care continues for three years, until one Wednesday in November when the farmer, carrying an ax, takes the turkey out behind the barn and … well, the next day is Thanksgiving, after all. What happens, from the turkey's point of view, is completely unexpected. As Taleb puts it, the event on that fateful Wednesday "will incur a revision of belief."

Taleb credits the story of the doomed bird to philosopher Bertrand Russell, and he uses it to illustrate this problem: How can we know what the future holds, based on our knowledge of the past? Making the question even more general, Taleb asks how it is possible to understand the properties of the unknown, based on what is known.

He considers the dilemma of "learning backward." If we learn from observation, shouldn't that tell us something regarding the world we live in? Well, consider the turkey, whose confidence in the farmer increases every day during its three years of life — right until the moment its head is placed on the chopping block. Suddenly, everything that has happened in the turkey's past proves worthless as far as predicting the future is concerned. (So much for observation.)

According to Taleb, the turkey's "naive projection" of future events can be applied to anything in our world. Not only might this learning backward be worse than having no value, he writes, it may actually have *negative* value. Something works in the past (the turkey gets fed), until one day when it no longer works (the turkey gets dressed for Thanksgiving dinner). This strikes at the very nature of empirical knowledge, because everything we have learned in the past turns out to be irrelevant, false or dangerously misleading.

History and societies, Taleb tells us, do not crawl along. Instead they make jumps. People, however, tend to believe that history moves in small and predictable increments. This is a form of self-delusion, not unlike that of the poor turkey who wasn't able to predict the monumental jump in his own life on the day before Thanksgiving.

## Tell Us a Story

One of the ways in which human beings are blind to the occurrence of Black Swans has to do with something that Taleb calls the "narrative fallacy," a problem that illustrates our need to turn abstract concepts into understandable stories. Taleb writes, "We like stories, we like to summarize, and we like to simplify, i.e., to reduce the dimension of matters." He sees this need for storytelling as something that distorts our view of the world, and this distortion is especially potent when we observe rare occurrences.

Taleb devotes an entire chapter of his book to examining both the psychological and physiological reasons that people need to create narratives in order to explain events. We can observe a sequence of facts easily enough, but Taleb writes that before long we start assigning explanations to link those facts together. In doing so, the facts become easy to remember and make

more sense to us.

The use of narratives affects our understanding of Black Swans. For one thing, we are attracted to the sensational, which is often an attribute of the narrative fallacy. As an example of the sensational, Taleb asks the reader to imagine sitting on an airplane bound for New York City. The passenger next to you tells a story about a person he knew who was murdered in Central Park in 1989. The victim left behind a wife and three children. It was a tragedy — one that could have been avoided — considering that the murdered man was a tourist who didn't have to take a stroll through the park on the day he was killed. Now, it would be possible for you to verify crime rates in New York City by using the Internet, or at the library, or from a variety of respectable sources. But anecdotal information has a strong pull, and it's difficult for you to shake this story about a single murder. As it turns out, you end up skipping a visit to the park.

Taleb is highly critical of the media for propagating narrative fallacies and the sensational. He chastises news sources that routinely attach causes to stories in which causes are not readily apparent. Market fluctuations are a prime example of how the media employs a narrative fallacy.

He describes the story of Bloomberg News reporting the movement in U.S. Treasury bonds on a day in December 2003. At 1:00 in the afternoon, Bloomberg linked a rise in U.S. securities to the belief that the recent capture of Saddam Hussein might not stem terrorist activity. Thirty minutes later, the same news source reported that with a fall in U.S. securities, the capture of Saddam suddenly made risky assets look like a good investment. An identical explanation was given as the cause of events that were completely opposite, all in the space of half an hour. The fact that bond prices fluctuate daily didn't seem to matter. Whether it's economic ups and downs or trying to explain why a certain candidate lost an election, Taleb writes that "a cause is proposed to make you swallow the news."

There are other reasons for our blindness to Black Swans, and Taleb spends a number of chapters discussing each at great length. These include focusing on preselected segments of known evidence, which can result in prejudices that are inaccurate; history's ability to hide Black Swans; and our inclination to "tunnel," which occurs when we focus on specific Black Swans, but ignore others that don't come to mind.

And finally, Taleb writes that we simply live as though Black Swans don't exist. Human beings really aren't hardwired to accept the phenomenon. Yet when a Black Swan occurs, and we can no longer deny its reality, we will try our hardest to explain how it happened in the first place.

## The World According to Taleb

Reading this book can remind the reader of having a long dinner conversation with someone who is extremely intelligent; someone who is curious about a seemingly endless number of topics, whose lengthy monologues are never dull and whose opinions are well-informed. The next morning you might not remember every topic you and your dinner companion spoke about during the course of your three-hour meal, but you know it was heady stuff, always interesting and occasionally exhilarating.

***"Taleb writes that we simply live as though Black Swans don't exist. Human beings really aren't hardwired to accept the phenomenon. Yet when a Black Swan occurs, and we can no longer deny its reality, we will try our hardest to explain how it happened in the first place."***

*The Black Swan* falls into a growing group of titles that is rapidly becoming a sort of specific genre, one that combines an intriguing mix of social psychology, economics, business and popular culture. This genre attracts a surprisingly large number of readers, and it might be a Black Swan for publishers. Titles in this genre include *Freakonomics*, *The Tipping Point*, *Blink*, *The Wisdom of Crowds* and *Made to Stick*, among others. Like these books, *The Black Swan* contains passages that can confound readers, leaving them with rereading as the only option. But then there's no shame in rereading, especially when the writer is as engaging as Taleb.

It is highly likely that among the titles listed above, — with the possible exception of *Freakonomics* — that *The Black Swan* will produce the most controversy of this genre. For one thing, Taleb isn't shy about doling out criticism, and he makes no attempt to sugarcoat his annoyance with economists, boring academics, journalists, Wall Street analysts, various Nobel laureates and any so-called expert (in apparently any field, except perhaps meteorology) whose primary function in life is to predict the future — a future that naturally does not include Black Swans. That's a lot of people Taleb might potentially pick a fight with. And experts aren't experts for nothing, even if Taleb thinks they're overrated.

He displays a special disdain for any true disciple of the bell curve. In one chapter, under the unambiguous title "The Bell Curve, That Great Intellectual Fraud," he

sets out to dismantle the theories of Gaussian distribution. It's a fairly technical portion of the book — Taleb advises some readers to just skip the chapter, especially if they are among the "fortunate people who do not know about the bell curve" — but he attacks his subject with the same enthusiasm that he displays in the rest of the book. In other words, he's not dull.

Some readers may accuse Taleb of repetition — that he is merely milking the same idea over and over across the space of 300-some pages. But then there will be other readers who disagree. Taleb is writing passionately about a topic he obviously loves to discuss. What some critics might see as repetition, others will view as an exploration of tangents. If some of these tangents don't seem pertinent to the promised topic of improbability, it is preferable to view them as part of a carefully layered argument in defense of a theory most laypeople were unfamiliar with, until now.

## Making an Example of a Swan

One of the only things that readers will have a true problem with in *The Black Swan* is Taleb's odd inclusion of the story about author Yevgenia Nikolayevna Krasnova, a neuroscientist whose first novel — originally published on the Web — later sold millions of copies in book form, but only after it was turned down by numerous publishers.

Her story, of course, is an example of a Black Swan, and if you've never heard of Ms. Krasnova, you shouldn't feel like you're living outside the literary loop. Krasnova is a fictional character that Taleb made up. He doesn't inform the reader of this fact until the chapter *after* he initially tells Krasnova's story. Why he would rely on such an odd device as using a fictional character to illustrate his idea about Black Swans is puzzling, especially an example that involves an unknown writer whose first book sells in the millions.

If that's the scenario he wanted, why not describe the story of a young British woman, an unemployed single mother, who gets it in her head to write a children's story about a boy wizard, and who ends up being England's most popular novelist since Dickens? That is undeniably a Black Swan! Not to mention, a Black Swan that actually happened. Instead, Taleb's fictional Krasnova comes off like one of those characters found in too many "how to" business books, in which the author needs to create a fake business populated with fake employees, just to prove his particular theories on how to manage a company.

That aside, *The Black Swan* is a terrific book, one that should make you think twice about how you perceive world events as well as events in your own neighborhood. It should certainly cause you to consider the source of the next prediction you read about, even if it's a prediction you agree with. Taleb can be blustery in his writing, like some opinionated old relative who never thinks he's wrong, but that only adds to the book's distinctiveness.

In the end, Taleb's world is one in which we can't predict Black Swans, and we can't stop them from occurring. "The rare event equals uncertainty," Taleb writes. An uncertain world is scary to most of us, but then it is the only world we have ever lived in. Taleb's introduction to this world is smart, entertaining and well worth the read. ■

## *The Black Swan* on the Lists

Since its publication in mid-April, Taleb's *The Black Swan* has managed to impress critics and readers as well as other authors. Chris Anderson, author of the 2006 best seller *The Long Tail*, has claimed the book to be "a delightful romp through history, economics, and the frailties of human nature."

The numbers don't lie either. *The Black Swan* has consistently been one of Amazon.com's best-selling books, and best sellers lists for *The New York Times* and *BusinessWeek* have both hosted the title for a number of months.

**The author:** Nassim Nicholas Taleb is an essayist, researcher and self-proclaimed "philosopher of randomness," in which he has a fascination with the issues surrounding uncertainty, probability, knowledge and luck. Taleb is the author of the best-selling book *Fooled by Randomness*, which has been translated into 20 languages. He earned an M.B.A. from the Wharton School of Business and a Ph.D. from the University of Paris. Taleb is currently the Dean's Professor in the Sciences of Uncertainty at the University of Massachusetts at Amherst.

# Great Work, Great Career

## How to Create Your Ultimate Job and Make an Extraordinary Contribution

by Stephen R. Covey and Jennifer Colosimo

### THE SUMMARY IN BRIEF

Anybody can have a great career. Your line of work doesn't matter. It's all in how you define "great career." If you define it as something that brings you a lot of money and power, then you might or might not achieve that "Alexander the Great" level of greatness. Of course, a livable wage is important, but isn't there more to a great career than just a paycheck?

There are two key hallmarks of a great career. A person with a great career makes a distinctive contribution and generates a strong feeling of loyalty and trust in others. Anyone, regardless of title, position or profession, can do these things.

*Great Work, Great Career* is about today and tomorrow. It's about getting a great job now and enjoying a great career for life. When we say a person has had a great career, what do we mean? Would you describe your current career as "great"? When you get to the end of your productive life, will you be looking back on a great career? And how will you know?

Authors Stephen R. Covey and Jennifer Colosimo grapple with these provocative questions. They have been associated in their work for many years as avid students of what it takes to build a great life and career. They provide tools and insights that will help you find answers for yourself, whether you're looking for a job or want to make the job you have more meaningful.

### IN THIS SUMMARY, YOU WILL LEARN:

- How you can bring a unique combination of talent, passion and conscience to the world of work.
- Why it is important to find and define the cause that matters most to you.
- How to understand your strengths and leverage them to make the contribution only you can make.
- How to create your own community of people who can help you in your great career — and how you can help them in turn.
- Why it is important to write out your personal contribution statement.

# THE COMPLETE SUMMARY: **GREAT WORK, GREAT CAREER**

**by Stephen R. Covey and Jennifer Colosimo**

**The authors:** Dr. Stephen R. Covey is author of the historic best-seller, *The 7 Habits of Highly Effective People*, and is co-chairman of FranklinCovey. He has worked for decades with leaders of nations and corporations in their quest for great performance. His storied career remains, as he says, "forever in crescendo."

Jennifer Colosimo is EVP and COO at FranklinCovey. An executive coach and catalyst for high-performance organizations, she has rich experience as a change-management consultant with Accenture and as a keynoter before thousands of FranklinCovey clients on building career competency,

## Great Work, Great Career

Fiona Wood was a young English athlete who wanted a career in medicine. She followed the usual track through medical school, married and, while raising six children, completed a specialty in plastic surgery. After moving to Australia, she went to work in Perth at a clinic for the treatment of burn victims.

The agony and scarring suffered by her patients moved her to wonder if there could be better ways to treat them. She knew that the longer a burn takes to heal, the worse the scarring. If only she could speed up the healing process from weeks to days, much of the pain and disfigurement might be avoided. Her experiments led her to invent "spray-on skin," a method of applying new skin cells over burns. According to Dr. Wood, the technique starts healing in days instead of the weeks needed for conventional skin grafts to work.

Then on the night of Oct. 12, 2002, her small hospital was flooded with victims of a terrorist bombing in Bali, many of them horrifically burned. Wood and her small team worked without rest for days and managed to save 25 of their 28 burn patients. Spray-on skin was part of the treatment. This accomplishment brought worldwide acclaim to Wood, and for the next four years she was voted in national polls "Australia's most trusted person."

### It's About the Contribution

Wood clearly shows us what it means to have a great career. It's not the acclaim or the fame, it's the contribution. A great career is all about solving great problems, meeting great challenges and making great contributions.

Speaking of their life's work, the French use the word "métier," which originally meant "ministry" or "service." It's a good word. It contains echoes of giving of self, ministering to the needs of others and finding the satisfaction that comes from providing a real and meaningful service. A great career does not rise from a need for outside affirmation, but from within you, from your own curiosity, from your own unique mix of talents and passion. It also rises from your conscience — from the whispers deep inside that point you to what you should do.

Obviously, a person like Fiona Wood could not make her contribution without gaining the skill to do so. But her conscience is just as key to the making of her great career as her competence. A great career requires both of these dimensions — the desire and skill to contribute, and a character worthy of the trust and loyalty of others.

### The Shift to the Knowledge Economy

We are now living in a time when great forces are converging to produce a new world. The landscape of the economy is undergoing a seismic shift, and with it the landscape of opportunity for each one of us.

The new Knowledge Age is full of turmoil and uncertainty. One daunting consequence of the shift from the Industrial Age to the Knowledge Age is the disappearance of job security. The lifetime job with a pension at retirement is about finished and probably not returning.

Still, there is a positive side to this risky but exciting new time: You can secure a great future for yourself by

becoming an indispensable solution to important problems. Instead of pointing with alarm at these developments, we should welcome this complicated new world with passion for the opportunities it presents. There's no shortage of problems, just a shortage of answers.

### Begin (or Begin Again) Your Great Career

The word "career" comes from the French word "carrière," which originally meant "going around in a circle," like a car on a circular racetrack. Carrière can also mean a "quarry," a place where people go to break rocks all day. Unfortunately, too many of us experience our careers in this way. We feel like we're going around in circles, getting nowhere. Or we feel like we're hacking away uselessly like prisoners in a rock quarry.

If you feel this way about your career, it's time to rethink everything. You are no longer bound by the old mindset that you're just a cog in a machine, a gear in some great bureaucratic wheel that goes around in meaningless circles.

The Knowledge Age entices us to ask questions, to challenge old assumptions, to look at the old intractable problems of the world and bring to them our unique answers. It challenges us to look at human need, poverty, misunderstanding, pain, ignorance and fear, and say to the world, as Wood states, "It doesn't have to be that way."

### Charles Dickens: A Case Study

At a point early in his career, the young author Charles Dickens was discouraged. He had a wife and four children to support with another child on the way, and was essentially out of a job. Plagued by self-doubt and mounting financial pressures, he found it hard to write and spent long, sleepless nights walking the streets of London.

As he talked by night with struggling street people, observing firsthand the social strains of child labor, poverty and hopelessness, an idea formed in his mind. These sights fueled his passion to help the poor and he began to see beyond his own problems. How could he make a difference? What did he have within himself to contribute to making a better world?

On Oct. 14, 1843, Dickens sat down to write with a renewed zeal. He combined this newfound passion with his genius as a writer to create a small book that he hoped would change the world, as well as his own fortunes. Six weeks later, he published *A Christmas Carol*, an immortal story that at once became wildly popular and transformed public opinion. Some observers connect the beginning of Britain's social reform movement with the publication of the book. For Dickens, it was also the beginning of a prosperous writing career. His novels made him rich, which enabled him to get involved in educating and reintegrating the poor into society through his Urania Cottage charity.

What was it that recharged Dickens and refocused his great career? He found that unique combination of natural talent, passion for a cause, and the call of his conscience to fill a great need in the world. What was true for Dickens is true for anyone.

It all comes down to finding work that (1) taps your talent, (2) fuels your passions, and (3) satisfies your conscience. But it's not just about you. It's also about answering a significant need.

## What Will Be Your Contribution?

At the core, there is one simple, overarching reason why so many people remain unsatisfied in their careers. It stems from an incomplete paradigm of who they are, their fundamental view of themselves.

Your value as a human being is not outside yourself — it comes from inside. Deep down, you must know that you are a being of virtually infinite potential and, unlike a machine, you have the power to choose what you will be.

Too many of us base our self-worth on externals, on being compared to other people. So many people equate their self-worth — or the worth of what they achieve — to money. If 30 years of data is to be believed, studies continue to show that salary is actually not as motivating to people as making a contribution in which they themselves believe. Salary is an expectation, not an incentive.

Some people have been socialized by constantly comparing themselves to others to the point that the locus of their identity moves from themselves to other people's opinions of them — to how well they stack up. They lose their identity. This is true "identity theft." They become incapable of making a unique contribution because they have devalued and lost what is uniquely worthwhile about themselves.

In the Industrial Age, people simply asked, "What's my job description?" Now, according to Peter Drucker, "Knowledge Age workers must learn to ask, 'What should my contribution be?' This is a new question in human history. Traditionally, the task was a given. Until very recently, it was taken for granted that most people were subordinates who did as they were told. The advent of the knowledge worker is changing this, and fast."

Working in the Knowledge Age with the old paradigm of the Industrial Age leads nowhere. Passively carrying out a job description in the turbulent realties of this new world can quickly leave you irrelevant, stranded on the sidelines. Why? Because your job description is obsolete the moment it's written. If you are not constantly changing to adapt to the challenges your organization faces, you'll be left behind.

If you have an Industrial Age paradigm, you see yourself as a tool used by others. On the other hand, if you have a Knowledge Age paradigm, you see yourself as a solution provider who brings a singular set of tools to solving significant problems. The difference between the Industrial Age paradigm and the Knowledge Age paradigm is fundamental. It's the difference between a passive person with no initiative and active person who takes responsibility for the future.

Adopting a Knowledge Age paradigm means that you bring your individual portfolio of strengths to relevant, meaningful problems and challenges. You are not a job description with legs. You are a knowledgeable, skilled, proactive, thinking and creative human being with unlimited potential; and you can leverage that portfolio of strengths to make your own unique contribution.

### Identify Your Portfolio of Strengths

A key step is to identify a portfolio of strengths you can leverage. These strengths can be divided into three categories: your talents, your passion and your conscience.

Why these categories? Because they sum up what you are — not just what you do. You are more than just a bundle of capabilities; that would make you a machine. You are more than just your passion and instincts: That would make you merely an animal. A key distinction is your conscience — the part of you that whispers what you *should* do with your life, what your *responsibility* is. Your talents, passion and conscience together add up to a whole person.

**Talents.** What unique knowledge, talents or skills do you have that can help you make a contribution? The category of talent is all about the tools you carry with you. In the Industrial Age, the company owned the tools and the means of production; the talents of individual workers were pretty much irrelevant. That's not so anymore.

In the Knowledge Age, as Drucker says, we each literally own "the means of production. ... Those means are in our heads and at our fingertips. ... Intelligence has become the new form of property. Focused intelligence, the ability to acquire and apply knowledge and know-how, is the source of wealth."

## Discovering Your Passion

Often you will find your talents through your passion. Back in the 1940s, a young American, Julia Child, found herself living in Paris because of her husband's job. There she discovered a passion for French cuisine and a talent she never knew she had. On her arrival in France, she had lunch in a little restaurant at Rouen. That first meal of oysters and sole meuniere was a revelation to her, like nothing she had ever experienced before.

It was "absolute perfection. It was the most exciting meal of my life." She became fascinated by truffles and patés and cheeses and wines — "wrestling with the subject of butter in sauces" — everything stirred her interest.

Pursuing her passion, Child applied to the finest school for chefs in Paris, Le Cordon Bleu. "By now I knew that French food was it for me. I couldn't get over how absolutely delicious it was. My friends considered me some kind of nut. ... They did not understand how I could possibly enjoy doing all the shopping and cooking and serving. Well, I did!"

**Passion.** Enjoying your career is just as important as using your talents, and that brings us to the category of passion. What job-related opportunities are you passionate about? Never downplay your own passion. Your passion is what fulfills you. It's a fire that comes from within, not from without.

Think about times when you were so passionate about a project, you couldn't think about anything else. Did you need to be supervised? Of course not.

Of course, your passion and talents don't necessarily connect. But often you will *find* your talents through your passion.

**Conscience.** Once you've defined your passion, you need to examine your conscience. The category of conscience surprises some people. Why should you listen to your conscience as you build your great career? Because your conscience, your moral compass, will whisper to you and tell you what contribution you should make. So answer this question very thoughtfully: What is your real responsibility to your organization, your customers and your co-workers? Your conscience tells you what your responsibility is.

## Discover Your Cause

The 21st-century economy is giving everyone a wild ride. It seems that turbulent times are here to stay. The

seismic shift to a Knowledge Economy has so disoriented many people that they have a hard time getting their footing. Some see only disaster. They see only millions of jobs gone up in smoke, whole industries laid to waste, and an economic landscape barren and scarce.

To others, the landscape has never been greener. The volatile, burned-over economy of the new century provides opportunities no one ever dreamed of in industries that didn't even exist a few years ago. What seems to some a disaster holds the seeds of renewal for others.

Regardless of the economic climate, so much depends on the paradigm or mentality that governs your thinking and actions. If you have a scarcity paradigm, you see only burned ground around you — sparse opportunities, limited possibilities. On the other hand, if you have an abundance paradigm, you see prospects springing up everywhere.

We've never had such opportunity as we do today. Turbulent times offer the chance, the opening, the break people have been looking for. If you're let go from your job, you're free to change everything.

Just look at Steve Demeter of San Francisco, who used to work on ATMs for a big bank. When he got interested in programming applications for the iPhone, he created Trism, a game he sold on the Internet for five dollars per download, and made a quarter-million dollar profit in two months.

Most of us probably won't be starting our own businesses launching iPhone games. But plenty of existing businesses still need your energy and talent. Yes, hundreds or thousands of others may be competing for those jobs. And the job you already have might be in danger. You can lament this situation or you can act.

Here are two mindsets you'll need. First, become a volunteer, not an employee. Second, become a solution, not a problem.

## Become a Volunteer, Not an Employee

Stop thinking about "getting a job" and start "volunteering for a cause." A job is something you do for money. A cause is something you work at because you believe in it. People used to talk about their vocations, not their careers. The term vocation literally means "calling" — a cause you are driven to serve based on a deep commitment and a conviction that it's worthwhile.

So change your mindset. Don't think of yourself as an employee, but as a volunteer. Where an employee has a job description, a volunteer has a cause. A job description is external, and the employee reactively accepts it. A cause is internal, and you proactively volunteer for it. The motivation for a job comes from *outside* you, while the motivation for a cause comes from *within* you.

One difference between a great career and a mediocre career is finding a cause you can volunteer to serve. We're not talking about earthshaking causes like solving world hunger or curing cancer. We're talking about any worthwhile cause, regardless of your profession. Until you see your work as a cause, you won't find the passion for it that marks a great career.

## Become a Solution, Not a Problem

Become a *solution* for your employer. Adopt a solution mindset. Especially in tough times, your employer or prospective employer doesn't lack problems to solve and challenges to meet. So stop thinking that opportunities are lacking — they're not. The "we're not hiring" message so many companies put out is simply not true. They are hiring and they will hire *you* if you are the best solution to a problem they *must solve*.

So how do you become a solution instead of a problem? The most important thing you can do is to truly become a knowledge worker. This means you must gain profound knowledge about the needs you feel called on to serve. Obviously, to gain that kind of knowledge, you must really research the company you want to work for — or, if you're trying to save your job, the company you already work for. It's not an exaggeration to say that getting the job you want is 90 percent research.

To begin, you must clearly define the need or problem you are driven to solve. Here's the key question: What is the job that needs to be done — the job only you can do? Please don't define this job only in terms of an inward-looking job description. The job that needs to be done is the one your customers need from you — whether those customers are external or internal to your organization.

Obviously, if you can offer a solution to some critical problem, you've suddenly become very valuable to your employer. The classic way to define a business problem is to identify the gap between current reality and some desired outcome. If you can put meaningful numbers to the outcome, your solution becomes more meaningful.

- What is the size of the problem? What is the measurable impact in terms of money, quality of product or service, or customer relationships? Can you express the gap in terms of "X to Y"?
- What is the timing of the problem? Does it occur every day? month? hour? How long would it take to solve? By when could you show progress? Express the timing in terms of "From X to Y by when."

In the Knowledge Age, curiosity and research ability are premium if you're going to get the job you want.

### Have a Solution Conversation

After you've paid the price to understand the challenges a company faces, present yourself as a solution to its problems, not as just another job seeker. Do not go just for a job interview. Go instead for a Solution Conversation.

Describe the need they have and how you can help them meet it. Show a better understanding of their significant issue than the people they already employ. Explain the opportunity you bring to them to meet that need. Show them what life would be like with you and without you. Suggest a trial period — even at your own expense if you have to — until they're convinced that you really are an answer they've desperately needed.

In such an interview, they will learn a few things about you. They will learn that you are a leader. You take initiative to make good things happen. You don't wait to be told what needs to be done; you already know.

One caution: Remember that interviewers hire people they feel are trustworthy. Don't exaggerate anything for effect; don't pad your resume. Stay focused on the company's needs and what you can realistically bring to those needs. Know your facts, but frequently check the facts against the interviewer's perception. For example, "Am I on track?" "Is that how you see it?" Use a helpful voice, not a self-important voice. If you approach the Solution Conversation with EQ, you will get the attention of decision makers. You will blow them away with the depth of your preparation and discipline.

Another caution: Don't come across as a threat. You might look presumptuous to people if you march into their offices, publicly air their problems in front of them, and position yourself as the solution they've always needed. There's a right way to do this and a wrong way. There's a helpful tone of voice and an arrogant tone of voice, and you need to know the difference. ●

## Contribute Your Best

If you know your strengths and have discovered your cause, you're just about ready to write your Contribution Statement. This statement will provide the direction for everything you do in your current job, or even for your entire professional life.

Before you write your Contribution Statement, let's deal with a common and understandable feeling you might have: You might not think you have much to contribute. It could be you've tried to get job after job and have been turned down. Maybe you don't feel valued at work, or believe you're too young or too old or too unimportant to contribute anything. You may feel alienated, frustrated or obstructed on your career path.

Frankly, many of these feelings come from your view of yourself, not from the views of others. If you have a Job Seeker paradigm, you see yourself as a prepackaged product that you're trying to push on a buyer. Your resume is your product brochure. On the other hand, if you have a Contributor paradigm, you see yourself as a solution to a genuine problem, concern or opportunity. You have a proposal that will make a difference. Your main challenge is to change your paradigm of yourself from helpless job seeker to powerful contributor.

### Write Your Contribution Statement

Your Contribution Statement is similar to a life mission statement, except that Contribution Statement defines the high purpose you want to serve and what you intend to achieve in your career or in your current role.

This statement is your "personal value proposition," a summary of your strengths and your commitment to a cause that transcends any particular job. You can also write a Contribution Statement for your current role at work. Spend the time to give this statement your best thinking and quality research. It will pay you back a hundredfold.

Follow these six steps to write your Contribution Statement:

**1. Write a tribute to an influential person.** Think about the most effective, influential people you have ever known personally. Choose one of them and write a tribute to that person. It could be a teacher, a co-worker, a friend or a leader you have worked for. What contribution did that person make to your life? Writing this tribute to another person will help you crystalize in your own mind the kind of contribution you might make in your role.

**2. Write down the tributes you would like to receive from other key people in your work.** These people could include your boss, your fellow team members and/or your customers.

**3. Review your strengths.** What unique knowledge, talents or skills do you have that can help you make a contribution? What job-related opportunities are you passionate about? What is your real responsibility to your organization, your customers and your co-workers?

**4. Review your cause.** What company or industry are you interested in (or already employed in)? What key problem(s) do they face? What is the size of the problem in costs, quality or relationships? What is the timing of this problem? What solution will you propose?

**5. Draft your Contribution Statement.** Taking all of this input into consideration, draft your Contribution Statement. Write freely. Take your time. You can always go back and rethink, refine and reshape your statement.

**6. Share your Contribution Statement.** If you're applying for a job, consider sharing your statement with the interviewers. Make it the centerpiece of your Solution Conversation. If you want to upgrade or transform your job, share your statement with your supervisor. Make an appointment to discuss it in depth. Listen to your supervisor's input. Make a plan together to enable you to make your contribution. ●

## How Will You Make Your Contribution?

Now that you've written your Contribution Statement, your task is to make it happen. You have to give up being helpless — at the mercy of the economy or your boss or your weak education (or too much education), or your skinny resume or your youth or your age or your gender or your race or your face or your special case. In other words, you have to give up being a victim.

The job market can be a daunting place — hiring freezes, downsizing, restructuring of whole industries, reductions in force — it all means fewer traditional, secure, well-paying jobs. It also means a lot more competition for many of the best jobs.

At the same time, employers face a host of new challenges in this turbulent era while still grappling with the old problems. To familiar issues like improving sales, product development and marketing, they add global competition, social responsibility and online commerce. Ironically, while employers offload employees, they have to hire more and more part-timers, consultants and contractors. They must still get the work done.

That's where you come in. No company wants to hire just for the sake of hiring, but they all want to solve problems. They need your contribution like a thirsty man in the desert needs water, but they must first recognize that you *have* water to offer.

There are certain hard moments that, if we are strong, will make all the difference in our lives. Hard moments are conflicts between doing what leads to success and just giving up.

### Work in Your Circle of Influence

Now, what if nobody answers your phone calls or emails or carefully considered proposals? What if your employers aren't ready to see you in a new or expanded role? What if you're really not in a position to become much of a solution to the problems they care about? What if the obstacles to your success look overwhelming? If so, you need to work on your Circle of Influence, not your Circle of Concern.

Imagine a circle that contains all the barriers to your career success. This is your Circle of Concern. Now imagine another, smaller circle inside the Circle of Concern. It contains all the people, knowledge, tools and capital you have to work with. This is your Circle of Influence. It might be very small for now, but if you invest your energies in growing that Circle of Influence instead of wasting your energies worrying about your Circle of Concern, your power to build your career will grow.

### Elisabeth Kübler-Ross: A Case Study

A marvelous example of a person who started small within her Circle of Influence was Dr. Elisabeth Kübler-Ross, a Swiss psychiatrist who, in the 1950s, began her career as a lowly intern in a very large hospital. Doing exhausting rounds as all new doctors do, she was disturbed by the way the hospital staff treated terminally ill patients. The dying were lied to about their condition, ignored and often left to die alone. So she began to break out of the routine and just sit with patients in the last stage of life, listening to their stories as they poured out their hearts to her. And she noticed that they would feel better, more at peace, after these visits.

Gradually, Dr. Kübler-Ross became more and more knowledgeable about how to treat the spirit of these patients who could no longer be treated for their physical ailments. Other doctors asked her to help their patients. Hospital administrators became interested in her work, which was entirely outside her job description. Eventually, a publisher approached her and, in 1969 she wrote *On Death and Dying*, a landmark book that transformed how the medical profession deals with patients at the end of life.

By working within her own small Circle of Influence, an intern of no particular importance with no institutional authority expanded that circle to influence the whole world. When she started her career, she had few

resources within her Circle of Influence — only her basic medical education and her own talents, passion and conscience. But she sensed a vast need and began to leverage her few resources to fill it. ●

## Build Your Own Village

There's another key principle to live by if you want a great job and a great career called "building your own village." That means creating and maintaining authentic relationships with key people who mutually support each other. They help you in building your great career, and you in turn contribute to their success. Your career success depends not only on yourself, but also on the people around you. In the workplace, you never achieve anything worthwhile alone.

One of the most common bits of advice for the job seeker is to "network." In some respects, networking is a relic of the Industrial Age. Too often, networking comes down to having a lot of contacts — a big list of names you will never know what to do with. Or you have a drawer full of business cards from people you can't even place any more. Industrial Age thinking sees people as tools. People are tempted to see each other as "means to an end." They seek out others only when they need something from them.

By contrast, in the Knowledge Age, people are important in themselves. Authentic relationships with co-workers, customers and suppliers are becoming essential. So network from a Knowledge Age mindset rather than an Industrial Age mindset. The best networkers are building a village of people who value one another for more than just what they can do for one another.

### Contribute to the Village

We tend to assume that some jobs, like teacher or social worker, are more about service than others. Some professions are even categorized as "service jobs," but this is a misleading paradigm. People with great careers always have a service paradigm. If you believe that what you do truly makes the lives of others better, if you satisfy a real business need or delight a child or inspire the mind, then you are serving others in your work.

One of the great paradoxes of life is that the self-serving careerist never has a great career. That's because such a person's vision never extends beyond the next rung on the corporate ladder. Someday, someone will sum up your career. Will you be just another link in a giant impersonal network? Or will you be remembered as one who served and contributed and gave your best to the "village"?

How do you build your village?

1. **Identify the members of your village.** There are two kinds of people: those you serve and support, and those who serve and support you.
2. **Create an Emotional Bank Account.** You know what a financial bank account is. You make deposits into it and build up a reserve from which you can make withdrawals when you need to. An Emotional Bank Account is a metaphor that describes the amount of trust and confidence in a relationship. When you plan your time, deliberately schedule activities to build your relationship with the members of your village.
3. **Carve out space for yourself on the Internet so people know to turn to you for expertise in your field.** You should start a career blog. On your blog, you can publish your career Contribution Statement, which will draw followers who value your contribution. Showcase your generic resume. Regularly post your ideas, discoveries, readings and accomplishments related to your contribution. Invite people who share your passion to add their own content. And stick with it — the richness and longevity of your blog can make a huge difference in building a great career.
4. **Practice synergy.** The village you build might ultimately be your greatest career achievement. It might even become the source of great new advances in understanding your field. It's a natural principle that you cannot achieve anything truly worthwhile alone — at least not in the world of work.

The energy you invest in *regularly* and *frequently* building your village will pay dividends not only in advancing your career, but also in personal satisfaction. You will get into the habit of service, which is the foundation of a great career. With a synergy mindset, you will learn from the best people in your life. And when you need them, they'll be there for you because you have been there for them. ●

### RECOMMENDED READING LIST

If you liked *Great Work, Great Career*, you'll also like:

1. ***Linchpin* by Seth Godin.** Godin shows you how to become an indispensable part of your organization.
2. ***Mojo* by Marshall Goldsmith.** If you've lost your drive and your job satisfaction has bottomed out, management legend Goldsmith will help you regain your lost Mojo and push for greater success.
3. ***The 7 Habits of Highly Effective People* by Stephen R. Covey.** Covey's classic best-seller offers a holistic, integrated, principle-centered approach for solving personal and professional problems.

# The Upside of Irrationality

## The Unexpected Benefits of Defying Logic at Work and at Home

by Dan Ariely

### THE SUMMARY IN BRIEF

In *The Upside of Irrationality*, social scientist Dan Ariely exposes the surprising negative and positive effects irrationality can have on our lives. Focusing on our behaviors at work and in relationships, he offers new insights and eye-opening truths about what really motivates us on the job, why we often overvalue the things we make, how we learn to love the ones we're with and more.

Drawing on the same type of experimental methods that made his previous book, *Predictably Irrational*, one of the most talked-about bestsellers of the past few years, Ariely uses data from his own original and entertaining experiments to draw arresting conclusions about how — and why — we behave the way we do. From our office attitudes, to our romantic relationships, to our search for purpose in life, Ariely explains how to break through our negative patterns of thought and behavior to make better decisions.

*The Upside of Irrationality* changes the way we see ourselves at work and at home — and casts our irrational behaviors in a more nuanced light. By showing how our irrational brains can affect our daily decisions, *The Upside of Irrationality* can help us become more aware of the inconvenient facts that often get ignored.

### IN THIS SUMMARY, YOU WILL LEARN:

- Why large bonuses can make CEOs less productive.
- How people can be better motivated to do their work.
- Why revenge is so important to us.
- Why there is such a big difference between what we think will make us happy and what *really* makes us happy.

## Introduction

When the designers of modern technologies don't understand our fallibility, they design new and improved systems for stock markets, insurance, education, agriculture or health care that don't take our limitations into account (think "human-incompatible technologies," and they are everywhere). As a consequence, we inevitably end up making mistakes and sometimes fail magnificently.

Behavioral economists want to understand human frailty and find more compassionate, realistic and effective ways for people to avoid temptation, exert more self-control and ultimately reach their long-term goals. As a society, it's extremely beneficial to understand how and when we fail and to design/invent/create new ways to overcome our mistakes. As we gain some understanding about what really drives our behaviors and what steers us astray — from business decisions about bonuses and motivation to the most personal aspects of life, such as dating and happiness — we can gain control over our money, relationships, resources, safety and health, both as individuals and as a society.

This is the real goal of behavioral economics: to try to observe the way we really operate so that we can more readily observe our biases, be more aware of their influences on us and hopefully make better decisions. Although we might never become perfect decision makers, an improved understanding of the multiple irrational forces that influence us could be a useful first step toward making better decisions. And we don't have to stop there. Inventors, companies and policy makers can take the additional steps to redesign our working and living environments in ways that are naturally more compatible with what we can and cannot do.

In the end, this is what behavioral economics is about — figuring out the hidden forces that shape our decisions, across many different domains, and finding solutions to common problems that affect our personal, business and public lives. Once you understand the way our human nature truly operates, you can decide how to apply that knowledge to your professional and personal life. ●

## Paying More for Less: Why Big Bonuses Don't Always Work

An experiment was conducted with MIT students to examine the relationship between bonus size and performance when the task was purely mechanical, as opposed to a task that required some mental ability.

The experimental design had four parts, and each participant took part in all four of them. The students were asked to perform the cognitive task (simple math problems) twice: once with the potential of receiving a low bonus and once with the potential of receiving a high bonus. They were also asked to perform the mechanical task (clicking on a keyboard) twice: once with the potential of receiving a low bonus and once with the potential of receiving a high bonus.

What did the experiment reveal? As you might expect, a difference was seen between the effects of bonuses on the two types of tasks. When the job at hand involved only clicking two keys on a keyboard, higher bonuses led to higher performance. However, once the task required even some rudimentary cognitive skills (in the form of simple math problems), the higher incentives led to a negative effect on performance.

**Rebecca S. Clement**, Publisher; **Sarah T. Dayton**, Editor in Chief; **Andrew Clancy**, Senior Editor; **Edward O'Neill**, Graphic Designer; **Chris Lauer**, Contributing Editor

The conclusion was clear: Paying people high bonuses can result in high performance when it comes to simple mechanical tasks, but the opposite can happen when you ask them to use their brains — which is usually what companies try to do when they pay executives very high bonuses. If senior vice presidents were paid to lay bricks, motivating them through high bonuses would achieve the desired outcome. But bonuses for people who need to think about mergers and acquisitions or coming up with complicated financial instruments could be far less effective than we tend to think — and there may even be negative consequences to really large bonuses.

The general conclusion is that using money to motivate people can be a double-edged sword. For tasks that require cognitive ability, low to moderate performance-based incentives can help. But when the incentive level is very high, it can command too much attention and thereby distract the person's mind with thoughts about the reward. This can create stress and ultimately reduce the level of performance.

## The Meaning of Labor: What Legos Can Teach Us About the Joy of Work

An experiment was created that would test people's reactions to small reductions in meaning for a task that did not have much meaning to start with.

One fall day in Boston, a tall mechanical engineering student named Joe entered the student union at Harvard University. On a crowded bulletin board boasting flyers about upcoming concerts, lectures, political events and roommates wanted, he caught sight of a sign reading "Get paid to build Legos!"

### Participant #1: Joe

A few days later, at the agreed-upon time, Joe showed up to take part in the experiment. As luck would have it, he was assigned to the meaningful condition. Sean, the research assistant, greeted Joe as he entered the room, directed him to a chair and explained the procedure to him. Sean showed Joe a Lego Bionicle — a small fighting robot — and then told Joe that his task would involve constructing this exact type of Bionicle, made up of 40 pieces. Next, Sean told Joe the rules for payment.

"The basic setup," he said, "is that you will get paid on a diminishing scale for each Bionicle you assemble. For the first Bionicle, you will receive $2. After you finish the first one, I will ask you if you want to build another one, this time for 11 cents less, which is $1.89. If you say that you want to build another one, I will hand you the next one. This same process will continue in the same way, and for each additional Bionicle you build, you will get 11 cents less, until you decide that you don't want to build any more Bionicles. At that point, you will receive the total amount of money for all the robots you've created. There is no time limit, and you can build Bionicles until the benefits you get no longer outweigh the costs."

Joe nodded, eager to get started. "And one last thing," Sean warned. "We use the same Bionicles for all of our participants, so at some point before the next participant shows up, I will have to disassemble all the Bionicles you build and place the parts back in their boxes for the next participant. Everything clear?"

Joe quickly opened the first box of plastic parts, scanned the assembly instructions and began building his first Bionicle. Once Joe started working on the next Bioncle, Sean took the construction that Joe had just finished and placed it in a box below the desk where it was destined to be disassembled for the next participant.

Like a man on a mission, Joe continued building one Bionicle after another, while Sean continued storing them in the box.

### Participant #2: Chad

The next person in line turned out to be a young man named Chad. Unlike Joe, Chad was subjected to a procedure called the "Sisyphean" condition. The term was used to describe the condition that the less fortunate among the participants experienced.

Sean explained the terms and conditions of the study to Chad in exactly the same way he had to Joe. Chad grabbed the box, opened it and began assembling the pieces, moving quickly from one to another. He went about the task cheerily, finished the first Bionicle in a few minutes, and handed it to Sean as instructed.

While Chad was putting together the first pieces of his next Bionicle (pay attention, because this is where the two conditions differed), Sean slowly disassembled the first Bionicle, piece by piece, and placed the pieces back into the original box.

"Why are you taking it apart?" Chad asked, looking both puzzled and dismayed.

"This is just the procedure," Sean explained. "We need to take this one apart in case you want to build another Bionicle."

Chad returned his attention to the robot he was building, but his energy and excitement about building

Bionicles was clearly diminished. When Chad finished his second construction, he paused and, after a few seconds, he said he would build another one.

Sean handed Chad the original box (the one Chad had assembled and Sean had disassembled), and Chad got to work. Meanwhile, Sean slowly took apart the second Bionicle Chad has just finished and placed the parts back into the second box.

### The Results

What did the results show? Joe and the other participants in the meaningful condition built an average of 10.6 Bionicles and received an average of $14.40 for their time. Even after they reached the point where their earnings for each Bionicle were less than $1 (half of the initial payment), 65 percent of those in the meaningful condition kept on working. In contrast, those in the Sisyphean condition stopped working much sooner. On average, that group built 7.2 Bionicles (68 percent of the number built by the participants in the meaningful condition) and earned an average of $11.52. Only 20 percent of the participants in the Sisyphean condition constructed Bionicles when the payment was less than $1 per robot.

In evaluating how the individuals' liking the Legos influenced their persistence in the task, you would expect that the more a participant loved playing with Legos, the more Bionicles he or she would complete. This was generally the case. But it also turned out that the two conditions were very different in terms of the relationship between Legos-love and persistence in the task. In the meaningful condition the correlation was high, but it was practically zero in the Sisyphean condition.

What this analysis says is that if you take people who love something and you place them in meaningful working conditions, the joy they derive from the activity is going to be a major driver in dictating their level of effort.

However, if you take the same people with the same initial passion and desire and place them in meaningless working conditions, you can easily kill any internal joy they might derive from the activity.

The translation of joy into willingness to work seems to depend, to a large degree, on how much meaning we can attribute to our own labor.

### The Division and Meaning of Labor

When we take tasks and break them down into smaller parts, we create local efficiencies; each person can become better and better at the small thing he or she does. But we often don't realize that the division of labor can also exact human cost. As early as 1844, Karl Marx pointed to the importance of what he called "the alienation of labor." For Marx, an alienated laborer is separated from his or her own activities, from the goals of his or her labor, and from the process of production. This makes work an external activity that does not allow the laborer to find identity or meaning in the work.

In today's economy, as we move to jobs that require more imagination, creativity, thinking and round-the-clock engagement, Marx's emphasis on alienation adds an important ingredient to the mix. At the same time, modern IT infrastructure allows us to break projects into very small, discrete parts and assign each person to do only one of the many parts. In so doing, companies run the risk of taking away employees' sense of the big picture, purpose, sense of completion and much of their motivation. ●

## The IKEA Effect: Why We Overvalue What We Make

The notion of attachment to the things we make, such as building a beautiful toy chest from IKEA, was deemed worthy of testing to understand the process by which labor begets love. In honor of the inspiration for the study, the overvaluation resulting from labor was called "the IKEA effect." The intent was to find out whether the greater perceived value resulting from the IKEA effect might be based on sentimental attachment ("It's crooked and barely strong enough to hold up my books, but it's my bookshelf!") or on self-delusion ("This bookshelf is easily as nice as the $500 version at Design Within Reach!").

Research results from an origami experiment showed that amateur origami creators had a substantial bias when evaluating their own work. Non-creators viewed the amateurish art as useless and the professional versions as much, much more exciting. In contrast, the creators saw their own work as almost as good as the experts' origami. It seemed that the difference between creators and non-creators was not in how they viewed the art of origami in general but in the way that the creators came to love and overvalue their own creations.

But investing effort is not enough. It turns out that completion is also a crucial ingredient for attachment. Research into this aspect led to results that implied that investing more effort does, indeed, increase our affection, but only when the effort leads to completion. When the effort is unfruitful, affection for one's work plummets.

In summary, these initial experiments suggest that once we build something, we do, in fact, view it with more loving eyes. As an old Arabic saying goes, "Even the monkey, in his mother's eyes, is an antelope."

According to the reasoning behind the IKEA effect, more effort imbues greater valuation and appreciation. This means that to increase your feelings of pride and ownership in your daily life, you should take a larger part in creating more of the things you use in your daily life.

### Labor and Love

The experiments related to the IKEA effect demonstrated four principles of human endeavor:

- The effort that we put into something does not just change the object. It changes us and the way we evaluate that object.
- Greater labor leads to greater love.
- Our overvaluation of the things we make runs so deep that we assume that others share our biased perspective.
- When we cannot complete something into which we have put great effort we don't feel so attached to it. ●

## The Not-Invented-Here Bias: Why 'My' Ideas Are Better Than 'Yours'

Regardless of what we create — a toy box, a new source of electricity, a new mathematical theorem — much of what really matters to us is that it is our creation. As long as we create it, we tend to feel rather certain that it's more useful and important than similar ideas that other people come up with.

### The Positive Side

Like many findings in behavioral economics, this, too, can be both useful and detrimental. On the positive side, if you understand the sense of ownership and pride that stems from investing time and energy in projects and ideas, you can inspire yourself and others to be more committed to and interested in the tasks at hand. It doesn't take much to increase a sense of ownership. Next time you unpack a manufactured item, look at the inspection tag and you might find someone's name proudly displayed on it.

There's a negative side to this, of course. For example, someone who understands how to manipulate another person's desire for ownership can lead an unsuspecting victim into doing something for him or her. Once we are addicted to our own ideas, it is less likely that we will be flexible when necessary ("staying the course" is inadvisable in many cases). We run the risk of dismissing others' ideas that might simply be better than our own.

Like many other aspects of our interesting and curious nature, our tendency to overvalue what we create is a mixed bag of good and bad. Our task is to figure out how we can get the most good and the least bad out of ourselves. ●

## The Case of Revenge: What Makes Us Seek Justice?

Revenge is one of the deepest-seated instincts we have. Throughout history, oceans of blood have been spilled and an endless number of lives ruined in an effort to settle scores — even when nothing good could possibly come of it.

It turns out that the threat of revenge — even at great personal expense — can serve as an effective enforcement mechanism that supports social cooperation and order. Overall, the threat of vengeance can have a certain efficacy.

What, exactly, are the mechanics and motivations underlying this primal urge? Under what circumstances do people want to take revenge? What drives us to spend our own time, money and energy — and even take risks — just to make another party suffer?

### 'Yours Is a Very Bad Hotel'

If you search for Tom Farmer and Shane Atchison on the Internet, you will find an amusing presentation called "Yours Is a Very Bad Hotel," an interesting PowerPoint act of comeuppance against the management of the Doubletree Club hotel in Houston.

One cold night in 2001, the two businessmen showed up at the hotel, where they had guaranteed and confirmed reservations. Sadly, upon arrival, they were told that the hotel was overbooked and that there was only one room available, but it was off limits due to air-conditioning and plumbing problems. Though the news was obviously annoying, what really irritated Farmer and Atchison was the nonchalant attitude of Mike, the clerk.

Since Mike was the service representative, they felt it was his job to demonstrate some compassion, and when he didn't, they got mad and got even. Like all good consultants, they prepared a PowerPoint presentation. Theirs described the sequence of events — complete with humorous quotes from "Night Clerk Mike." They included the calculated potential income that his incom-

petence would cost the hotel chain, along with the likelihood that they would never return to the Doubletree Club hotel.

The businessmen e-mailed the file to the general manager of the Doubletree Club hotel and to their clients in Houston. After that, the presentation enjoyed viral fame on the Internet. In the end, Doubletree offered to make amends with Farmer and Atchison. The two asked only that Doubletree fix the customer service problem, which it reportedly did. ●

## On Adaptation: Why We Get Used to Things (but Not All Things and Not Always)

To get a better view of the wonders of adaptation, let's consider the way our visual system functions. If you've ever gone to a matinee and walked from the dark movie theater to the sunny parking lot, the first moment outside is one of stunning brightness, but then your eyes adjust relatively quickly.

Our ability to adapt to light is just one example of our general adaptive skills. The same process takes place when we first encounter a new smell, texture, temperature or background noise. Initially, we are very aware of these sensations. But as time passes, we pay less and less attention to them until, at some point, we adapt and they become almost unnoticeable.

The bottom line is that we have only a limited amount of attention with which to observe and learn about the world around us — and adaptation is a very important novelty filter that helps us focus our limited attention on things that are changing and might therefore pose either opportunities or danger. Adaptation allows us to attend to the important changes among the millions that occur around us all the time and ignore the unimportant ones.

### What Can Pain Teach Us About Adaptation?

Another kind of adaptation is called hedonic adaptation. This has to do with the way we respond to painful or pleasurable experiences. For instance, try this thought experiment. Shut your eyes and think about what would happen if you were badly injured in a car accident that paralyzed you from the waist down. You see yourself in a wheelchair, no longer able to walk or run. You think that many of your future possibilities will no longer be open to you. In imagining such a thing, you probably think that the loss of your legs will make you miserable for as long as you live.

It turns out that we are very good at conceiving the future but we can't foresee how we will adapt to it. It's difficult to imagine that, over time, you might get used to the changes in your lifestyle, adapt to your injury and find that it's not as terrible as you once thought. It's even harder to imagine discovering new and unexpected joys in your new situation.

Yet, numerous studies have shown that we adapt more quickly and to a larger degree than we imagine.

### Faulty Predictions

In the end, although we can accurately predict what will happen when we walk from a dark movie theater to a sunny parking lot, we do a relatively poor job anticipating either the extent or the speed of hedonic adaptation. We usually get it wrong on both counts. In the long term, we don't end up being as happy as we thought we'd be when good things happen to us, and nor do we end up as sad as we expect when bad things occur.

Our reason for our difficulty in predicting the extent of our hedonic adaptation is that when making predictions, we usually forget to take into account the fact that life goes on and that, in time, other events (both positive and negative) will influence our sense of well-being. ●

## Hot or Not? Adaptation, Assortative Mating and the Beauty Market

To learn more about how people adapt to their own less-than-perfect looks, two ingenious young men, James Hong and Jim Young, helped to run a study using their Web site, HOT or NOT (www.hotornot.com). Upon entering the site, you're greeted with photos of a man or woman of almost any age (18 years of age or older only). Above the photo floats a box with a scale from 1 (NOT) to 10 (HOT). Once you've rated the picture, a new photo of a different person appears, as well as the average rating of the person you just rated.

Hong and Young provided us with the ratings and dating information of 16,550 HOT or NOT members during a 10-day period.

The data showed that the less hot individuals were, in fact, very aware of their own level of (un)attractiveness. Though this awareness did not influence how they perceived or judged the attractiveness of others (as shown by their hotness ratings), it did affect the choices they made about whom they asked to meet.

### Our Own Physical Attractiveness

The data from HOT or NOT and from other experiments showed that people do adapt to their own physical attractiveness by putting less emphasis on their partner's looks and learn to love other attributes such as kindness and sense of humor.

Simply put, less attractive people learn to view nonphysical attributes as more important. ●

## When a Market Fails

Basically, when a product doesn't work well for us, it misses the intended mark. One such example is online dating sites that try to reduce humans to a set of descriptive words too often fail to make real matches. More generally, companies disappoint when they don't translate what they're offering into something compatible with the way we think.

Take computers, for example. Most of us just want a computer that is reliable, runs fast and can help us do the thing we want to do. We couldn't care less about the amount of RAM, processor speed or bus speed (of course, some people really care about these things), but that's the way manufacturers describe their computers, not really helping us understand how the experience with a particular computer will feel. (The same goes for car insurance, annuities, etc.)

So how can markets be made more efficient and effective? Here's an example of social loans: Let's say you need to scrabble together money for a car. Many companies have now set up social lending structures that allow families and friends to borrow and lend from each other, which cuts the middlemen (banks) out of the equation, reduces the risk of nonpayment and provides better interest rates to both the lender and borrower. The companies that manage these loans take no risk and deal with the logistics of the loan behind the scenes. Everyone but the banks benefits.

The bottom line is this: Even when markets are not working for us, we are not utterly helpless. We can try to solve a problem by figuring out how a market is not providing the help we expect from it and take some steps to alleviate the problem (lending money to relatives, etc.). We can also try to solve the problem more generally and come up with products that are designed with an eye for meeting the needs of prospective customers. Sadly, but also happily, the opportunities for such improved products and services are everywhere. ●

## On Empathy and Emotion: Why We Respond to One Person Who Needs Help but Not to Many

Many results show that we are called to action only by individual, personalized suffering and are numbed when a crisis outgrows our ability to imagine it. If this is the case, what hope do we have of getting ourselves (or our politicians) to solve large-scale humanitarian problems? Clearly, we cannot simply trust that we will all do the right thing when the next disaster inevitably takes place.

Once we realize that the sheer size of a crisis causes us to care less rather than more, we can try to change the way we think about and approach human problems. For example, the next time a huge earthquake flattens a city and you hear about thousands of people killed, try to think specifically about helping one suffering person — a little girl who dreams of becoming a doctor, a teenage boy with a big smile and a talent for soccer, or a hard-working grandmother struggling to raise her deceased daughter's child. Once we imagine the problem this way, our emotions are activated and we can decide what steps to take.

In many ways, it is very sad that the only effective way to get people to respond to suffering is through an emotional appeal, rather than through an objective reading of massive need. The upside is that when our emotions are awakened, we can be tremendously caring. Once we attach an individual face to suffering, we're much more willing to help and, to a degree, that is far beyond what economists would expect from rational, selfish, maximizing agents. ●

## The Long-Term Effects of Short-Term Emotions: Why We Shouldn't Act on Our Negative Feelings

For better or worse, emotions are fleeting. A traffic jam may annoy, a gift may please and a stubbed toe will send us into a bout of cursing, but we don't stay annoyed, happy or upset for very long. However, if we react impulsively in response to what we're feeling, we may live to regret our behavior for a long time. If we send a furious e-mail to the boss, say something awful to someone we love or buy something we know we can't afford, we may regret what we've done as soon as the impulse wears off.

### Emotional Influences

Since it's impossible to avoid either relevant or irrelevant emotional influences altogether, is there anything we can do to keep social and romantic relationships from deteriorating? One simple piece of advice is to pick partners who would make an emotional downward spiral less likely. But how do you do this? Of course, you can avail yourself of hundreds of compatibility tests, from astrological to statistical, but all you need is a river, a canoe and two paddles.

Whenever I go canoeing, I see couples arguing as they unintentionally run aground or get hung up on a rock. Canoeing looks easier than it is, and that may be why it quickly brings couples to the brink of battle. Arguments occur far less frequently when meeting a couple for drinks or going to their home for dinner, and it isn't just because they are trying to be on their best behavior (after all, why wouldn't a couple also try to be on good behavior on the river?). It might have to do with the well-established patterns of behavior people have for their normal, day-to-day activities (arguing vehemently at the table in front of strangers is pretty much a no-no in most families).

### When There's No Clear Protocol

But when you're on a river, the situation is largely new. There isn't a clear protocol. There's also a fuzzy kind of division of labor between the front and back (or bow and stern, if you want to be technical). This context offers plenty of opportunities to establish and observe fresh patterns of behavior. And because the river is unpredictable, and canoes tend to drift and turn in ways you don't anticipate (much like life, which is full of new and surprising stresses and roadblocks), there is a lot of potential to create new behavioral patterns.

So if you're half of a couple, what happens when you go canoeing? Do you or your partner start blaming each other every time the canoe seems to misbehave? Do you get into a huge battle that ends with one or both of you jumping overboard, swimming to shore and not speaking for an hour? Or, when you hit a rock, do you work together trying to figure out who should do what and get along as best you can?

This means that before committing to any long-term relationship you should first explore your joint behavior in environments that don't have well-defined social protocols. It also means that it is worthwhile to keep an eye open for deteriorating patterns of behavior.

When we observe early-warning signs, we should take swift action to correct an undesirable course before the unfortunate patterns of dealing with each other fully develop. ●

## Lessons From Our Irrationalities: Why We Need to Test Everything

We humans are fond of the notion that we are objective, rational and logical. We take pride in the "fact" that we make decisions based on reason. When we decide to invest our money, buy a home, choose schools for our kids or pick a medical treatment, we usually assume that the choices we make are the right ones.

This is sometimes true, but it is also the case that our cognitive biases often lead us astray, particularly when we have to make big, difficult, painful choices.

### Know Your Limitations

Just as we use seat belts to protect ourselves from accidents and wear coats to keep the chill off our backs, we need to know our limitations when it comes to our ability to think and reason — particularly when making important decisions as individuals, business executives and public officials.

One of the best ways to discover our mistakes and the different ways to overcome them is by running experiments, gathering and scrutinizing data, comparing the effect of the experimental and control conditions, and seeing what's there.

Doubt your intuition and run your own experiments in an effort to make better decisions. Ask questions. Explore. Turn over rocks. Question your behavior, that of your company, employees and other businesses, and that of agencies, politicians and governments. By doing so, we may all discover ways to overcome some of our limitations, and that's the great hope of social science.

These are only the first steps of exploring our irrational side, and the journey ahead is long and exciting. ●

## The Key Principles to Take Your Business from Ordinary to Extraordinary

by Dr. Frank I. Luntz

### THE SUMMARY IN BRIEF

From the *New York Times* best-selling author and top pollster Dr. Frank Luntz comes an unprecedented examination of communication excellence and how top performers win in all areas of human endeavor by utilizing superb communication skills. From politicians to business icons, from CEOs to legendary sports superstars and media legends, Luntz shares their stories — in their own words — and demonstrates how their style of operation and communication is absolutely essential to their success. Luntz makes it clear that following the rules of effective communication is indispensable in any successful venture.

Luntz, the author of *Words That Work*, offers many new *"words that work"* for private one-on-one meetings with your boss, for public presentations to hundreds of colleagues or for television appearances that reach millions. There are dozens of specific lessons and recommendations — and each one directly illustrates the nine essential action-oriented principles of winning at every level: People-Centered, Paradigm-Breaking, Prioritizing, Perfection, Partnerships, Passion, Persuasion, Persistence and Principled Actions.

*Win* is an unprecedented examination of the art, science and language of winning, and a must-have for people who want to understand and emulate the winners of today. Do you have what it takes?

### IN THIS SUMMARY, YOU WILL LEARN:

- How to grasp the human dimension of every situation.
- How to know what questions to ask and when to ask them.
- How to see the challenge, and the solution, from every angle.
- How to communicate your vision passionately and persuasively.
- How to connect with others and create an enduring chemistry.

# THE COMPLETE SUMMARY: **WIN**

**by Dr. Frank I. Luntz**

**The author:** Dr. Frank I. Luntz is one of the most honored communication professionals in America today. *Time* magazine named him one of "50 of America's most promising leaders aged 40 and under," and he is the "hottest pollster" in America according to the *Boston Globe*. He is the author of *The New York Times* bestseller *Words That Work: It's Not What You Say, It's What People Hear* and *What Americans Really Want … Really.*

## What Is a Winner? The 15 Attributes of Winners

If I were to summarize 20 years of corporate and political communication research and discussions with America's business, political, sports and entertainment elite into a single, simple checklist, what differentiates genuine winners from everyone else is the following:

- The ability to *grasp the human dimension* of every situation
- The ability to *know* what *questions* to ask and when to ask them
- The ability to *see* what *doesn't yet exist* and *bring it to life*
- The ability to *see* the *challenge*, and the *solution*, from every angle
- The ability to *distinguish* the *essential* from the *important*
- The ability and the drive to *do more* and *do it better*
- The ability to *communicate* their vision passionately and persuasively
- The ability to *move forward* when everyone around them is retrenching or slipping backward
- The ability to *connect* with others spontaneously
- A *curiosity* about the *unknown*
- A *passion* for life's *adventures*
- A *chemistry* with the people they work with and the people they want to influence
- The willingness to *fail* and the *fortitude* to get back up and try again
- A *belief* in luck and good fortune
- A *love of life* itself.

These 15 Attributes of Winners are fundamental to the Nine Principles of Winning (AKA the Nine *P*'s).

### Winners Recognize Their Own Strengths and Weaknesses

Winners are self-aware. They recognize their own strengths and weaknesses, and respond to situations accordingly. Don't underestimate this. From Lehman Brothers to Circuit City, countless companies have struggled or gone under because of leaders who stayed in their comfort zones and didn't take the right action at the right time because they were afraid to make the wrong move.

Winners are also tuned in to the needs and desires of others, and this outward focus guides them to deliver revolutionary solutions, not just better mousetraps. They recognize where their strengths meet someone else's needs and double down on delivering the greatest value while ignoring lesser distractions.

Winners don't preach; they persuade. Winners clearly articulate their own principles and kindly, subtly invite you to adopt them. But the choice is yours. Sure, they lead and you follow, but you ultimately come to their point of view on your own. ●

## The Nine *P*'s of Winning: What It Takes to Get to the Top

Winners don't make excuses.

Because winners live for epic change and radically rethinking the status quo, they must be able to make the case with force and skill. They begin by engaging and inspiring the people who work with them and for them.

They persist over the objections of skeptics who are afraid of what change might mean. They prevail over critics who want to shut them down completely. Engage, inspire, persist, prevail — you need them all.

It's not as hard as it sounds. Most winners had certain attributes on the day they were born, but each of the nine essential principles can be incorporated into one's life. Winners are never satisfied with the status quo and always pursue more. Better. Higher. Faster. Easier. That's why they aren't satisfied with the skills they were born with; that's just the starting point on a path to greatness. These principles may not come naturally, they may take years of practice and you may not get them all right all the time, but the more you master, the more likely you are to win in the workplace and in the marketplace.

### The Nine *P*'s of Winning

So what are the nine principles of winning?

1. **People-Centeredness.** The job of all winning communicators is to recognize what is missing in the lives of others and then try to address it.
2. **Paradigm Breaking.** Winners are not improvers; they are game-changers. Three attributes define paradigm breaking: (1) the *attitude* of never settling for the conventional, (2) the *practice* of purposeful reinvention and (3) the *necessity* of using skilled communication to lead people in a new direction.
3. **Prioritization.** Winners know how to separate what must be done from what should be done — and that has a direct correlation to what they say and when they say it.
4. **Perfection.** If you're not driven to perfection, you'll never reach excellence. Without a burning desire to do what you do, it's almost impossible to find the internal strength to strive for perfection.
5. **Partnership.** Honest, open communication is paramount for a partnership to survive. Without it, trust and respect will simply wither on the vine. Your partnerships must also have balance. If one of you is a big risk taker, the other should probably be more prudent.
6. **Passion.** There isn't a winner anywhere who doesn't bring passion to what he or she does or how he or she communicates.
7. **Persuasion.** Winners don't preach; they persuade. They tell you exactly why you should accept their point of view, yet you feel like you came to their conclusions on your own.
8. **Persistence.** Winning is never really about a single game, product or performance. Winners know how to succeed over the long haul. In fact, they know that winning is *defined* by repeat performances and increasing achievements.
9. **Principled Action.** From Ken Lay to Jack Abramoff to Bernie Madoff, they will be known not for what they temporarily achieved, but for how they achieved it and, ultimately, how miserably they failed.

No, the *P*'s are not a simple gimmick. Look again and think about the most successful people you know: What may be just words to you are the principles by which they live. ●

### Passion at the Top

When you look at the expressions of passion of those at the top, there are three clear language attributes at play:

- First, they communicate confidence in themselves and in their products
- Second, the message always rests on results and solutions
- Third, there is a clear call to action at the end.

## People-Centeredness: Humanizing Your Approach

No matter what you may think of Bill Clinton's character or politics, he's the single most people-centered public figure alive today. Regardless of your ideology, when he speaks, you listen. He seems to have weighed the facts, studied the policy, listened to the different arguments and then subjected all those considerations to a simple question: How does this idea affect everyday people? It's no accident that the Clinton White House was famous for late-night, 12-round policy fights that were refereed by Clinton himself. He wanted you to know that he wasn't just feeling your pain; he was working hard to heal it. He studied like a wonk, but communicated like a friend. Translating one to the other is the rarest of political talents.

Clinton is the personification of a people-centered leader. He commands his voice and words — and even his face — in a manner that compels listeners, whether auditoriums packed with thousands, or individuals in one-on-one conversations, to stop, look, listen and learn. And whether he's actually in the room with you or simply on your TV screen, you almost always feel like he's talking to you and no one else. He creates an

authentic connection that can turn even his most ardent critics into momentary cheerleaders. Republican congressmen and senators routinely freeze like deer in the headlights when he speaks to them. Clinton understands people.

### What Every 'Would-Be Networker' Can Learn From Bill Clinton

Clinton provides a perfect example of what it means to be people-centered — and every would-be networker can learn from his example. For him, networking wasn't just a matter of passing out business cards, collecting those of others and making the most of the time at the event before calling it a night. And he didn't rely on charisma alone. Instead he had a *habitual practice* of coming home each night and meticulously recording each conversation in a growing library of index cards. He committed to memory not just where someone worked or what someone did, but *who they were*. So the next time he saw them, asking "How have you been?" wasn't just an empty formality; it was loaded with understanding that allowed him to meet that person's individual need to be known and valued. And no matter who we are, we all have that basic need for connection.

If you met Clinton, he remembered you. What's more, he treated you like an old friend. The lesson: Do not underestimate the simple power that recall has on an individual. Every person wants to be not just noticed, but memorable. In a world that moves faster and faster, and where people are treated more and more like commodities, the leader who slows it down — who truly treats people like individuals and not interchangeable pieces — wins. ●

## Paradigm Breaking: The Values of Being First

George Bernard Shaw once said, "You see things; and you say, 'Why?' But I dream things that never were; and I say, 'Why not?'" Years later, Senator Robert F. Kennedy ended his presidential campaign speeches with a similar refrain: "There are those who look at things the way they are, and ask why … I dream of things that never were, and ask why not?" Winners don't accept the world for what it is. They're driven by their ideas of how the world should be. Their vision becomes a mission and that mission reshapes the human experience. If you're not asking "*Why not?*," you're not in the winning mentality.

Shaw and Kennedy fully understood that 1 percent of the world's dreamers effect exceptional progress that is enjoyed by the other 99 percent of us who are content to stand back and watch. Notice they even both use the word itself — *dream*. Unlike other acts, dreams allow us to break free of our human limitations. In dreams, there are no rules. Gravity melts away. The sky can be any color we want. Dreams allow us to see a world that's different from the one we live in now. Prescient or not, they give us the ability to imagine a radically different tomorrow. Envisioning this type of inspired change is what I call paradigm-breaking.

Generally defined, a paradigm is "a set of assumptions, concepts, values and practices that constitutes a way of viewing reality for the community that shares them, especially in an intellectual discipline." In the simplest terms, paradigms are frames through which we look at the world. They help us organize information and make sense of it all. A paradigm-free world is a Hobbesian world where anything goes and no standards of evaluation exist. You cannot objectively judge things if there is no paradigm in place to create standards for evaluation.

### Winners Invent New Touchstones by Dreaming

By dreaming … by breaking paradigms … winners invent new touchstones and benchmarks and then *apply* the rules of the real world to those markers. This added level of creative freedom distinguishes winners from the rest of us and is the wellspring of many of mankind's greatest achievements.

Ultimately, paradigm breaking is the difference between innovation and breakthrough, between incremental and transformational. It's not just about making something "new and improved," it's about re-imagining the entire purpose of the original. But beware — transformation begets transformation. Even after you've broken a paradigm, you must continue to challenge yourself, because if you don't, others will. ●

## Prioritization: Creating Confidence One Step at a Time

Winners in politics and business have an uncanny ability to prioritize: to separate what must be done from what should be done. Winners are able to focus intensely on their priorities, and then pour all of their resources into those priorities. That enables them to underpromise and overdeliver. In an era of broken trust in institutions — where everyone promises the world and delivers peanuts — doing the opposite immediately distinguishes you.

Not surprisingly, the ability to define what matters most, to order tasks and allocate resources based on

commonly understood priorities, hinges on clear communication. You can accomplish the right things in the right order at the right time only when your entire organization understands what is important and why.

### Remarkably Efficient and Effective

Another essential trait that separates winners from everyone else is time management. You can't show me a winner in any profession who isn't remarkably efficient and effective in how he or she allocates his or her time. To the untrained eye, what winners accomplish in a typical day is unfathomable. In reality, they are *always* thinking, working and doing — and they do it faster and better than anyone else. There are entire books written about how to get the most out of every day, so I won't devote much time to it here. But I do have a time-management lesson from Rich DeVos, Amway's founder, that is worthy of a brief reference:

"It is fun to be in management. You sit in your big office and people come to see you. But that takes time, a lot of time, and I finally decided that I wouldn't see people in my office any longer. If somebody came to see me, I would say, 'Fine, I will be right down.' And I would go meet them by the front desk to find out what they wanted — money, a job, whatever. I would stand and talk to them right there, it would take five minutes and then I'd return to my office. But if they sit in your office, they are going to take five minutes just telling you what a beautiful office you have. By the time they get around to talking about what they want, it's a half hour or 45 minutes later. That's not an efficient way to mange your time."

### Articulate Your Priorities Quickly

Articulating your priorities quickly is one of the most important components of communication. First words build first impressions — impressions you have only a few precious seconds to make. Your audience walks into the room with their own set of priorities; time spent with you is time they're not spending on existing commitments. Thus, for you to get inside their heads and earn their attention, you have to move fast. If your first impression is powerful enough, people will never forget it. If not, they will *[forget your impression]* — and you as well.

If the first priority is about you, the second is about them, to determine exactly what matters most to the most people. FedEx CEO Fred Smith neatly summarizes his priorities in a single two-word catchphrase that can be explained in just one sentence: "If you talk to anyone who works for FedEx and ask them, 'What's the Purple Promise?' they will tell you 'I will make every FedEx experience outstanding.' There is not a lot of extra verbiage in there. It just says what every one of us has to do, every single day." His No.1 priority: predictability — which also happens to be America's top priority.

## Perfection: Why Great Is Not Good Enough

Many assume, incorrectly, that perfectionism is simply never being satisfied with what you're doing. But there's more to the story. Rarely will you find a perfectionist — an eccentric artist, a diligent writer, a world-renowned musician, a savvy businesswoman, an energized campaign volunteer — who goes around saying, "Yeah, that's good enough." For these people, the words good and enough never appear in the same sentence.

Anyone can criticize something, or say that others' work isn't good enough, or go around nitpicking the work that everyone else does. And, from time to time, these criticisms can be completely warranted and worth a second look. But what makes perfectionists different — and allows them to be winners — is that they take criticism and action a step further. They make excellence the standard by which they judge their work, the people around them and even themselves. They move us closer to the world as it could be, not just as it is.

### The Essential Nature of Communication Perfection

For my first book, *Words That Work*, General Colin Powell granted me two interviews — and both times he stressed the essential nature of communication perfection. In fact, Powell's words on the matter apply to almost every area of human endeavor. "If you are going to achieve excellence in big things, you develop the habit in little matters. Excellence is not an exception, it is a prevailing attitude." True, excellence is not perfection, but it's what motivates you to come as near to perfection as human endeavor allows.

It's not so much being perfect that makes one a winner; it's the *driving need* to be perfect that sets winners ahead of the rest.

## Partnership: Creating Alignment in Words and Actions

Winners understand that they need other people to get where they want to go. They understand, even if they'd never admit it, that they're probably not the smartest per-

son in every room. But, most important, they understand that a whole is often greater than the sum of its parts. And this is the driving force behind some of the most powerful and successful partnerships the world has ever seen.

The best companies are governed by leaders who understand that they exist because of a partnership with their customers, their employees and the communities in which they operate. It is a four-legged stool that cannot function any other way. Destroy any leg of that partnership and you destroy the entire enterprise. Winners always remember one thing — they do not offend the people they most need on their side.

### What We Can Learn About Teamwork from Sports Stars

The business world has a lot to learn from the sports world. The principles of winning that sports stars take for granted the rest of us need to learn. Sportscaster Jim Gray has been an astute observer of athlete behavior for three decades. For him, it's the partnership, the teamwork, that turns great players into winners. Says Gray:

"You're only as good as your weakest link. Michael Jordan didn't just show up at a game. He can't inbound the ball to himself. He has to throw it to somebody so they'll throw it back to him. He understood that if it weren't for *[former Chicago Bulls head coach]* Phil Jackson, *[former Chicago Bulls assistant coaches]* Frank Hamblen, Tex Winter and Jim Cleamons putting all of the right people in the right places, defensively and offensively, if he didn't have the trainer to tape his ankles, if he didn't have the travel secretary to make sure that plane got him there on time, if he didn't have the whole confluence of events that it takes to win, then he wouldn't win.

"LeBron James is great, but has LeBron James won a championship? No. Why not? Because all of the people around him are not fulfilling the expectations that he has, and they're not able to lift him to where he has to be because they all aren't doing their job as well as they need to be.

"You have to trust people, you have to allow them to do their jobs, and you have to put the best people in their jobs so that you can succeed as a leader. If you don't have good people around you and you think it's all about you, you'll be the first to hit the door. A lot of people who get near the top don't understand that it's not just because of them, it's because of everything that everyone has done for them that's put them there." ●

## Passion: The Power of Intensity

Winners eat, breathe, talk, sleep and live passion. Their work is a *part* of them and, in some cases, it completely defines who they are. Winners strive for perfection because they're driven by something deeper and more powerful than mere interest or curiosity. They never stop looking for ways to do things better and for where they can do more, where they can go that extra mile — and more — to blow away expectations and people.

The best advertisers understand passion. They manufacture it in 30-second bites that capture not just our emotions, but our memories. In fact, taglines that emphasize passion of some sort are among the most memorable. They stay with you long after the commercials that introduced them have hit the shelf. See how many of the following examples you still remember.

The Most Passionate Taglines and Advertising Slogans

1. Nike: Just Do It
2. Lexus: The Relentless Pursuit of Perfection
3. Visa: It's Everywhere You Want to Be
4. BMW: The Ultimate Driving Machine
5. FedEx: When It Absolutely, Positively Has to Be There Overnight
6. *The New York Times*: All the News That's Fit to Print
7. Hallmark: When You Care Enough to Send the Very Best
8. U.S. Army: Be All You Can Be.

Three elements separate real winners from those who merely play the game:

*Emotion* without vision is just the heart's way of throwing a tantrum for no reason.

*Vision* without emotion won't get you anywhere because it lacks drive; it has no reason to keep fighting the good fight.

And *commitment* without vision is meaningless because without clear direction, there's no sense of achievement when you get there.

### Passion Personified

The biggest difference between winners and everyone else is in how they communicate their passion to the people around them. Since I began working with and talking to America's most successful politicians, CEOs, business leaders and entertainment moguls nearly 20 years ago, the only thing as consistent as their passion is their ability to inspire a passion in the people around them.

In order to really motivate your work force to care about what you care about, you have to give them rea-

sons that connect with *them*, not just with you. They have to feel an emotional response to what you say, not just a rational one.

## Persuasion: Building Reputation and Earning Trust in Politics and Business

Winners don't win by simply telling people, "This is the way it is" or "This is how it's going to be." They convince us that what they're saying is true, that they can be trusted, so that we willingly follow their lead. Thanks to his powers of persuasion, Winston Churchill sold the British the stoicism and determination they needed to triumph over Nazi Germany. Even if they were scared as hell, they didn't show it. Don't underestimate how hard a "sell" this would have been for Churchill. It's easy to armchair quarterback this from the 21st century. We know how the war ended — the good guys won. But if you lived in 1940 Britain, with Hitler on the march, Europe in the hands of the Nazis and tens of thousands of planes, warships, rockets and more pointed at your tiny island … would you be inclined to believe a politician who said it was all going to be OK?

### Winston Churchill's Powers of Persuasion

Churchill knew the power of language, and the determination of his people, and marshaled his best arguments and delivery to galvanize them. Britain was clearly overmatched, but he utilized Britain's greatest weakness — its size and vulnerability — to his persuasion advantage. The truth is, the British people long relished their ability to do great things of global consequence *in spite* of their relatively small homeland. It was that driving spirit that built an empire. So when it came time to defend that island, when public spirits were lowest, Churchill tapped into a deep-running national current and went on the offense. In a speech delivered in the House of Commons on June 4, 1940, Churchill said:

"We shall defend our island whatever the cost may be; we shall fight on beaches, landing grounds, in fields, in streets and on the hills. We shall never surrender and even if, which I do not for the moment believe, this island or a large part of it were subjugated and starving, then our empire beyond the seas, armed and guarded by the British Fleet, will carry on the struggle until in God's good time the New World with all its power and might, sets forth to the liberation and rescue of the Old."

### Internet Revolutionaries Connect With Us

In more recent times, people like Bill Gates (Microsoft), Steve Jobs (Apple), Larry Page and Sergey Brin (Google), Jeff Bezos (Amazon) and Mark Zuckerberg (Facebook) have convinced us that computers, technology and the Internet will dramatically revolutionize the way people around the world shop, entertain themselves, find information, interact with one another and conduct business. They listened to what was missing, paid attention to what we wanted and came back to us with messages and products that resonated deep within our psyches. They connected with us, and because they were able to do so, we trusted them, we listened to them and eventually bought what they were selling.

Because they believed so strongly in what they were telling us, we were inclined to trust and believe in them as well. That's no small point. Trust is an integral part of communication and persuasion, and you can't really build trust if people don't think you actually believe in what you're saying.

## Persistence: Learning from Failure

Of all the attributes it takes to win, persistence is the most important because without it, winning is impossible.

I asked New York Mayor Mike Bloomberg, who is on everyone's top 10 list of most admired businesspeople, what he admired most in others. For him, adaptability and survival are the two essential characteristics of a winner:

"The business leaders that I really respect are people who are able to continue to do what they do in changing environments and for many years. Steve Jobs is in a business where you're only as good as your last product. He's gone from one business to another, he's mastered them all and he's in a business where even before your product goes out the door there's a competitor ready with something better. The most successful people can see what's coming and reinvent themselves. They don't sit around. They know how to stay relevant."

### Persistence Gnaws at You

Persistence, unlike its weaker, less successful little brother, effort, is a way of life. It gnaws at you. It will wake you up at 3 a.m. so you can go over the numbers one more time. And make no mistake: It will laugh at you when you stub your toe on the coffee table as you fumble for the light switch.

Everything about sports is preparation and persistence. "I'm going to give you the greatest Bill Walton-ism

ever, and I think he got it from Coach Wooden, 'Failing to prepare is preparing to fail,'" says sportscaster Jim Gray. "Preparation is everything in sports. You've got to do the work to achieve greatness. I've seen a lot of guys who've had magnificent talent who were in and out of the league before they started. You can have all the talent in the world, and all the pride in the world, but none of it means anything without the ability to endure. You have to endure to be great, and to be great you have to be prepared."

Says Sherry Lansing, the first female CEO of a Hollywood studio, "If the cause is bigger than you, you'll never be afraid of or hurt by rejection. Having been through a lot, I think you win by not giving up." ●

## Conclusion: Principled Action

With faith and trust in business, government, the media and many of the most important American institutions at an all-time low, these are the words that America wants to hear — and the qualities they want to see — from you:

### Language for Demonstrating Principles

***"Accountability"*** is the attribute most desired in the business community today — and, unfortunately, it's also the one perceived to be most lacking. Accountability is about those in power answering to those who put them there. It's about making things right when they go wrong.

The lack of ***"strict standards"*** is what sunk BP, Toyota, Goldman Sachs and other victims of the communication disasters of 2010. People want to know that your business won't bend to the wind as Arthur Andersen did to Enron. Standards alone are not enough; it's the diligence and rigor with which you uphold them that matters.

***"Corporate culture"*** has come to reflect a company's operating principles. Winners are acutely aware of their corporate culture and seek to define it as they define themselves. The most common corporate culture among winners: innovative, aggressive and even disruptive.

***"Moral compass"*** is to the individual what corporate culture is to the organization. It is desired (but not necessarily expected) of business and political leaders that they engage in socially acceptable behavior.

***"Social responsibility"*** is what Americans want more than good corporate citizenship. To them, social responsibility is defined first by respect for employees, followed by accountability to customers and service to the community.

***"Objective and unbiased"*** defines the kind of information Americans want from their business and political leaders. CEO letters in corporate annual reports that appear one-sided and lack candor will not just fail to resonate … they will actively undermine the credibility of even the most successful corporation.

***"Uncompromising integrity"*** is hard to prove, but if people believe you have it, you are a winner in their eyes. What differentiates a winner from everyone else is the willingness to make tough decisions in tough times.

In a survey we did in 2010, "***the simple truth***" was the second highest desired value in politics after accountability. It represents fundamental, commonsense principles many believe have been lost in the complications and compromises of modern life — and it appeals to their desire to see those truths restored.

***"A chief ethics/ethical officer"*** should exist in every corporation and organization in America, holding others accountable for their actions and behavior — an ombudsman but with C-level authority to instill accountability.

***"Say what you mean and mean what you say"*** is exactly what Americans want their political and business leaders to do. It defines accountability in action. Warren Buffett is the best illustration of a business leader whom Americans believe most upholds this desirable attribute.

### One Powerful Word: *If*

There is no single standard of winning. No secret recipe that — presto! — makes you a winner. However, there are many common traits of all winners. Together, they are factors you must incorporate in ways that suit your own style and objectives.

Every winner has elevated others, and in doing so, elevated him- or herself.

It comes down to a simple, powerful word: *If*.

If you can apply the principles of winning in a principled way, then you'll have truly won. If you can put others before you, and in doing so lift yourself *and* others to a higher place, then you are, indeed, a winner. ●

# You Already Know How to Be Great

## A Simple Way to Remove Interference and Unlock Your Greatest Potential

by Alan Fine with Rebecca R. Merrill

### THE SUMMARY IN BRIEF

Most people who want to get better — at hitting golf shots, negotiating with clients, delivering presentations or any other field of endeavor — seek out new information. They read a book, take a class, hire an expert tutor. But as Alan Fine has learned from many years of coaching athletes and businesspeople, this "outside-in" approach often doesn't produce the results people want. More information becomes a distraction rather than a solution, and high performance remains elusive.

Fortunately, there is a better way, as he discovered years ago while working with a 9-year-old tennis student. The more tips and tricks he gave her, the worse she played. One day, he told her to just forget all his instructions. Then he used a simple tool to help her change how she paid attention and what she paid attention to. Her ability to hit over the net instantly improved 1,000 percent!

Since then Fine has developed and honed a unique "inside-out" approach to performance improvement. In *You Already Know How to Be Great*, he shows us how to unlock Faith, Fire and Focus: confidence in our ability, high energy and passion, and focused attention on the things that really matter.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to use essential coaching concepts to improve your work and life.
- The most common mistakes made by people conducting engagement conversations.
- How to recognize the biggest obstacles to our performance.
- A simple process that can help you achieve greatness in any area.

# THE COMPLETE SUMMARY: **YOU ALREADY KNOW HOW TO BE GREAT**

**by Alan Fine with Rebecca R. Merrill**

**The authors:** Alan Fine is the president of InsideOut Development, which offers training programs, executive coaching and organizational consulting. Companies that have adopted his unique approach to performance improvement include IBM, NASA, Honeywell, Procter & Gamble, Gap and Coca-Cola. Rebecca R. Merrill is the co-author of many books, including *First Things First* with Stephen R. Covey.

## Up Front

Do any of these scenarios sound familiar?

- You know that if you had a regular exercise program you'd have more energy and feel better. You've bought a variety of exercise equipment. You've tried a lot of different types of programs. Each time, you've lasted about three weeks. You ask yourself: "What's the matter with me? Do I just not have the character to do this — or was I somewhere else when the exercise genes got passed out?"
- You've been told that your job as a manager includes coaching the people in your division, so you've been meeting with them regularly, giving them good instruction and trying to help them improve. But much of the time, your help doesn't seem to matter, and sometimes it's even rejected. One person you need to talk with about an accountability issue refuses to even meet with you. You think: "How can I coach these people, and how can I do it in a way that will truly make a difference?"
- Your organization is not performing as well as you'd like. You've tried a variety of approaches and had some success, but the goals you set at the top never really make it down the line and your employees are not fully engaged. You spend most of your days dealing with internal problems instead of external opportunities. You keep asking yourself: "How can I raise performance throughout the organization? What can I do to get everyone fully engaged and on the same page?"

These scenarios represent a range of common experience, but they have one important element in common: They all deal with issues of performance — either in self or in others. Most of us want the results of top performance. We want the enthused organization, the engaged work team, the exceeded sales quotas, the responsible child, the low handicap on the golf course, the increased energy and the washboard abs. But even when we know what it takes, we don't always have the tools that make those kinds of results possible.

The premise presented here is that EVERYONE has the potential to perform better; potential is blocked by interference; interference can be reduced by focused attention; and focused attention can be simply and systematically increased. ●

## Part 1: Paradigm and Principle

I decided to do the training necessary to qualify as a Registered Professional Coach, which was the highest tennis-teaching certification a person could get in the United Kingdom at the time.

It was as a certified coach eight years later that I stood on the court on that gray day that totally changed my life. I had been working with one of my students — a shy little 9-year-old girl. Her mother and I both agreed that she was a bit uncoordinated, but her mom felt that if I could help her improve a little, she would be able to participate in the group sessions, which would be very good for her socially. The instructions I'd given her had been very simple ("Shake hands with your racket." "Hit the ball on its way down." "Hit the back side of the ball."). But the best she'd been able to do was to hit the

ball about five times consecutively across the net.

Feeling frustrated as I watched her struggle, I decided to try something different. I'd just begun to expand my approach to coaching, including studying disciplines such as Neuro-Linguistic Programming™, psychosynthesis, Zen and everything I could find on sports psychology. One particular approach that caught my attention was Timothy Gallwey's *Inner Game of Tennis*. The basic idea is that we each have a Self 1, the analytical, critical self ("You didn't hold the racket right." "You should have hit that differently." "You moved too slowly, you dummy!") and a Self 2, the natural, curious self that learns by experience and performs best without the interference of Self 1. Performance improves when we're basically able to silence Self 1 and free Self 2 to do its thing.

### A Blinding Glimpse of the Obvious

So I said to this little girl, "Look, let's not worry about all the instructions I've given you over the past six weeks. Just say 'bounce' when the ball touches the ground and 'hit' when the ball hits your racket. That's all. Just focus on those two events. Don't worry about anything else." The first time she tried it, she hit 53 shots in a row over the net! The girl was thrilled. Her mother was so shocked she literally fell off her chair leaning forward to watch. Personally, I was astonished and frustrated. My fundamental view as an educator had been challenged. Was it possible that much of the specific technical instruction I'd been giving my students was not only not helping them but was actually getting in the way?

It was at that point that I was struck with a "blinding glimpse of the obvious." This girl hadn't been performing poorly because she didn't *know* what to do; it was simply that there was too much *interference* getting in the way of her doing it! And sadly, the principal source of that interference was me.

That day on the tennis court, that little girl improved her performance by over 1,000 percent, or 10X. Can you imagine what would happen if you were to get that kind of breakthrough performance — or even a 10th of it — in your team or organization or in other areas of your life?

Prior to that day, I had believed — as most people do — that the best way to improve performance is to increase knowledge. This is an "outside-in" approach. It assumes that people are lacking in some way and that additional knowledge has to be put in from the outside to help them improve. Clearly, this is the most common approach used to improve individual and organizational performance. It reflects the fact that individuals, managers and leaders tend to see performance problems as knowledge problems and therefore look for knowledge solutions.

There are times when a lack of knowledge really is the problem, but much of the time the biggest obstacle in performance isn't not knowing what to do; it's not doing what we know. In other words, the problem is not as much about knowledge *acquisition* as it is about knowledge *execution*. ●

## The Heart of Change

In their book *The Heart of Change,* Harvard Business professor John Kotter and Deloitte Consulting principal Dan Cohen assert that "changing behavior is less a matter of giving people analysis to influence their thoughts than helping them to see a truth to influence their feelings. Both thinking and feelings are essential, and both are found in successful organizations, but the heart of change is in the emotions. The flow of see-feel-change is more powerful than that of analysis-think-change."

## The Nature of Performance

As I continued to work to help people and organizations improve performance, I had another blinding glimpse of the obvious. Knowledge was not the only thing — or even the most important thing — being blocked by interference. There were three other elements at the very heart of high performance. And not only were these elements important in and of themselves; they were also important because they facilitated the use of knowledge. When these elements were blocked, performance suffered. When they were unleashed, performance soared.

I've come to call these elements Faith, Fire and Focus.

**Faith** has to do with our beliefs about ourselves and our beliefs about others.

**Fire** has to do with our energy, passion, motivation and commitment.

**Focus** has to do with what we pay attention to and how we pay attention.

Faith, Fire and Focus are what create engagement. They are how we get the 10X performance!

Because the impact of these three elements is so significant, I have become increasingly convinced that ***what separates high performers from everyone else is their Faith, Fire and Focus.*** And because the impact of inter-

ference on these elements is so profound, I have also become convinced that ***reducing interference to Faith, Fire and Focus is probably the least recognized but most effective way to improve performance.***

The good news is that there is a simple, scalable, replicable process that can make that happen.

### A Model of Performance

Together, Knowledge, Faith, Fire and Focus create the "K3F" model of human performance.

If you think of this model as a wheel, Knowledge represents the rim. Faith, Fire and Focus are like spokes supporting the wheel. The rim without the spokes or the spokes without the rim would render the wheel useless — as would a weakness of any of the four basic parts. Therefore, all four parts are vital to performance success.

Obviously, some basic Knowledge is essential. You'd find it hard to be a salesperson if you didn't know anything about your product, your customers or the competition. You'd find it difficult to excel at tennis without knowing what a racket is, what a ball is and the object and rules of the game.

However, it is Faith, Fire and Focus that drive the quality of performance and performance improvement. It is what creates results in organizations where people:

- genuinely believe in the viability, competency and purpose of the organization;
- are enthused about and engaged in their work;
- know what to pay attention to and are focused on the key objectives that would make the organization successful; and
- are able to fully execute on the Knowledge they already have.

When Faith, Fire and Focus are released, extraordinary things happen. This is when possibility opens up.

### Getting Rid of Interference

To one degree or another interference affects our Faith, Fire and Focus — and our performance — nearly every day. Some of this interference is external. It comes from things that are mostly outside our direct control. In the marketplace it might be the economy, new technology or increased competition. On the tennis court it might be the wind, the sun, the court surface or an opponent. At home it could be economics, the media or the demands and expectations of family members and others. Onstage it might be the lights, another performer's missed cue, the rustling of programs in the audience or the sound of a siren outside the theater. In many situations it's judgmental communication — both verbal and nonverbal — from other people.

But much of the interference that affects our performance is *internal*. A good deal of it comes from our response to external interference. It's reflected in the stories we tell about ourselves, the way we approach situations in watch-out mode, the way we worry about the past or the future or think of all the things we should be doing instead of focusing on the present. It's manifest in the conversations we have with the "800-pound gorillas inside our heads" — the internal dialogue that goes: "You have to do this the 'right' way." "Don't screw this up!" "What will others say?"

We all have our gorillas. No one is exempt. And it's the noisy chatter of these gorillas — not busyness — that creates internal interference. In fact, it's possible to be very busy and still have the quiet mind necessary for top performance, as long as you're focused.

So how do we get rid of interference? Usually, we can't change the external interference. It's just the way things are. However, by reducing the internal interference, we can free ourselves and/or others to get at higher performance. And the simplest and most accessible way to get rid of internal interference is through Focus — through changing *what* we pay attention to and *how* we pay attention.

After a lifetime of studying human performance, Claremont Graduate University professor Mihaly Csikszentmihalyi suggested that we all perform best when there is a balance between our perception of the challenge we are facing and our perception of the skill we have to meet the challenge. In other words, we need to have enough challenge to keep us excited, but not so much that it overwhelms or discourages us. According to Csikszentmihalyi, this is when we're most likely to get into a state of "flow" — a state where we're focused, fully engaged and intrinsically motivated. In this state, we process things faster, learn faster and are often not even aware of time or space. It's in this state that whatever we're doing seems almost effortless. ●

## Part 2: Process

In sports such as tennis and golf, the term *swing velocity* describes the speed and direction of the racket or club, which in turn controls the speed and direction (and therefore accuracy) of the ball. Obviously, the faster and more accurately you hit the ball, the more likely you are to win. This same combination of speed and accuracy has a similar effect on decision making and, therefore, on the results we get in any area of performance.

Decision Velocity, then — or the speed and accuracy with which we make decisions — is critical to top performance in any area of life.

So the question is: How can we create the Focus that increases Decision Velocity and leads to breakthrough results? We can do it through a process called GROW.

### Creating Focus Through 'GROW'

The GROW process is basically a map of human decision making. It provides a simple way to create Focus, reduce interference and improve performance in any area of life. Having since recognized the vital roles of Faith, Fire and Knowledge as well as Focus in top performance, I now place that performance model at the very center of the GROW process.

This is how GROW works. Whenever we make a decision, we eventually go through four phases. We think about the following:

**Goal:** What we want to do.

**Reality:** The circumstances we're dealing with (or how we perceive them).

**Options:** How we might move from our Reality to our Goal.

**Way Forward:** What action we want to take.

By giving order, discipline and focus to these phases as we go through, we can significantly reduce interference, increase the speed and accuracy of our decisions and improve performance.

### Using the GROW Questions

A few fundamental questions in each of the four areas make a significant difference in helping people clarify their thinking. These questions are listed below.

**Goal:** What issue do I want to work through? What do I want from this GROW "session" (meaning time devoted to resolving the issue)? What are the consequences if I do not take action?

**Reality:** Briefly, what's been happening? What have I tried so far? What were the results? In what different way might others describe this situation? Is my goal still realistic?

**Options:** Describe fantasyland. If I could do anything to make progress on this issue, what might I do? If others are involved, what would they need to see or hear to get their attention? If I were watching myself work through this issue, what would I recommend? Do any of these options interest me enough to explore further? If I were to act on this/these chosen option(s), how might I go about it?

**Way Forward:** Do any of these options interest me enough to take action? How will I go about it? What might get in my way? How might I overcome that? What and when is my next step? ●

## Coaching for Breakthrough

The inside-out approach gives us a different way to think about coaching itself. It's far less about providing additional Knowledge than it is about releasing the Faith, Fire and Focus that was inherent and natural in the performer as a child but is now suppressed by interference. It's not about looking at people in terms of what's wrong, broken or missing; it's about looking at them in terms of what's inside that we can help out. It's about removing interference and making it safe for people to dare to dream, to dare to think about what's possible — and then helping them find doable first steps.

Thus, a coach using the inside-out approach is always looking at an individual's performance through the lens of that person's Faith, Fire and Focus as well as Knowledge. He or she is constantly asking, "Where is the person low — in the area of belief, passion or attention? What is it that's getting in the way? How can I help remove it? What Focus will most significantly increase this person's Faith and Fire?"

### Getting Into the Performer's World

It's easy for coaches to get blindsided by what *they think* people have to pay attention to — to get so focused on the task that they miss the window through which a person can actually pay attention. What's helpful is for the coach to get into the world of the performer — to find the window through which the performer sees — and then ask him or her to look a little more carefully through that window. And if that window only allows someone to see one thing, to then work on that one thing and expand the view as the performer is able.

Inside-out coaching is not as much *Knowledge* coaching as it is *Focus* coaching. Even when the issue involves Knowledge, it's about helping the performer focus on the doable steps that enable him or her to gain or use Knowledge most effectively. It's not about solving the problem for someone; it's about helping that person solve the problem for him- or herself. It's about helping a person take full ownership for the solution.

Therefore, while a coach using the inside-out approach provides critical knowledge (such as the laws of physics, biomechanics or competitive tactics in sports), his or her primary objective is to increase the performer's awareness by helping that person focus on

and learn from real-time experience. And the more the coach can remove interference, the more quickly the performer will learn.

## Coaching for Engagement

When a performer is unwilling and/or unaware of a performance issue, you're no longer dealing with a performer-driven conversation. You're dealing with a coach-driven conversation. In other words, you can't begin by drawing Goal, Reality, Options and Way Forward out of your performer.

Instead, *you* have to start. *You* own the agenda. It's *your* goal. You're trying to take this valued person from where he or she is to where *you* want him or her to go — which is basically to where he or she is willing to engage in a performer-driven conversation about the issue. Until the performer reaches that point, you're the one who's driving the conversation.

In situations such as these, ***the biggest challenge isn't the situation or the performer; it's your own interference.*** And that changes your initial task as a coach. In breakthrough conversations, it's the performer who has the interference. Your job as a coach is to help the performer clarify his or her thinking.

Only by getting rid of your own interference first can you effectively help others get rid of theirs. This is the same principle you see in operation when a flight attendant instructs you to put on your own oxygen mask before trying to help others put on theirs.

### Giving Feedback

In the process of taking valued people from where they are to where they want to go, we often need to give performers feedback to help them become aware of an issue or an opportunity to improve their performance. Until we can help performers increase their awareness of the gap between what they think they're doing and what they're actually doing, they can't take responsibility for doing things differently.

For most people, feedback is a paradox. Most of us say we want it and on the surface will tell you it's valuable. But we're often anxious about receiving it.

The reason is that rather than understanding feedback as a perception of data, many of us see it as just another name for criticism delivered in a sensitive way. It creates interference because we hear the information as judgment. Our reaction is to discount, avoid, or become defensive when people tell us what we "should" have done.

## Common Mistakes in Engagement Conversations

As people work to integrate the inside-out approach in conducting engagement conversations, the most common mistakes are these:

1. **Failure to Plan.**
2. **Failure to Listen.**
3. **Failure to Follow the Process.**
4. **Falling Into Outside-In Coaching.**
5. **Making Comfort the Driving Force.**

## Inside-Out in Teams and Organizations

It's easy to tell the difference between teams and organizations in which Faith, Fire and Focus are high and those in which they are low.

An organization *with* Faith has a clear, compelling sense of mission and purpose that is effectively communicated to and passionately believed in by people on every level of the organization. People have a strong "We can!" belief and a firm conviction in the organization's resilience and ability to effectively learn and adapt in a changing environment. An organization *without* Faith is filled with fear, doubt or lack of clarity concerning its value proposition as well as the value of the organization's purpose and/or its viability in changing circumstances.

An organization *with* Fire has a positive energy directed toward the accomplishment of the purpose of the organization. An organization *without* Fire is filled with apathy, lack of interest and resigned compliance (rather than enthused commitment). What energy exists is often turned into negative fire, which is manifest in politicking, backbiting and criticizing.

An organization *with* Focus has clearly articulated key priorities that lead to the accomplishment of the organization's purpose, and those priorities are given robust attention on every level. An organization *without* Focus is filled with distraction, miscommunication, redundant effort, waste of resources and poor execution.

Just as the inside-out approach can help a coach look at the individual performer in terms of Faith, Fire and Focus as well as Knowledge, it can help managers and leaders look at teams and organizations through the same lens. And when teams and organizations move ahead with all four elements of high performance, the possibilities for breakthrough performance are truly amazing.

## Part 3: Practice

Inside-out is more than a process; it's a way of thinking and interacting with others that helps eliminate interference, increase Decision Velocity and improve performance in any area of life.

Although the inside-out approach is simple and most people are able to implement it immediately, there are times when you have to deal with a particularly difficult issue or you just get stuck.

Below are two of the most common types of responses:

### Creating Accountability

***"The person I'm trying to help says, 'I can't come up with any Goals' or 'I can't come up with any Options. You're the coach; you tell me what to do.'"***

"Tell me what to do!" is a phrase I used to hear often in coaching kids in tennis. They'd play really well in practice, but when the pressure was on, they'd want to abdicate their responsibility for deciding what to do next. They'd want a higher authority to tell them what to do.

One of the main purposes of the inside-out approach is to help people accept responsibility for their own performance. That's when they really get engaged. That's when they stop blaming and accusing and begin to tap into their own Faith, Fire and Focus.

No matter how hard it may be (and this is one of the main challenges for a coach), you're almost always better off if you avoid the temptation to simply tell people what to do. It may seem quicker and easier in the moment, and it may temporarily feed your ego. But it won't empower the individual to create consistently high performance.

The first time I went rock climbing, there was a man about 50 feet up on the rock face, completely frozen. He was holding onto the rock for dear life and, despite the instructor's calm and repeated instructions, he just couldn't seem to move. As the afternoon wore on, the man finally became convinced that he either had to get past his panic or he was going to be on the mountain face all night. It was at that point that he finally began to take action that would get him safely to the ground.

The key to working with someone who is paralyzed by some belief (whether that person is being overpowered by a gorilla or is stuck in an unproductive story) is to help him or her get in touch with reality and the consequences of different choices. You might say, "So what's going to happen if you don't take action? What is the consequence? Isn't that okay with you?" If he or she says, "No, that's not okay," then you can say, "Well then, let's look at our Options."

Helping someone who initially feels hopeless is a bit like pushing a stalled car to get it moving from a stationary position. It's that initial movement that's the hardest. But once there's a bit of momentum in any direction, the pushing doesn't take as much effort.

The first objective is to shift the belief from "it can't be done" to "maybe there's a possibility here." In other words, help shift the Faith in order to engage the Fire and Focus. One approach is to use empathic listening. You may even need to start in the Reality phase of the process and ask the person to describe what he or she sees as hopeless. Then you could do a bit of probing — "How do you know this is hopeless? What is it that's telling you it's hopeless?"

At some point the person will probably get enough off his or her chest that you can say, "Now given what you've said, are you open to the possibility that there may be another way to look at this? If so, what might your goal be?" If you time that question right, it will begin to engage the person's Faith, Fire and Focus so that he or she can begin to move forward.

### Managing Your Own Interference

***"I worry that my coaching skills are so poor that they will come across as artificial and manipulative to the person I'm trying to help."***

Those 800-pound gorillas in your head will always have something to say about anything you do. The trick in getting past their chatter is to focus on simply following the GROW process — even if you think it's going to be clunky. All the evidence I see is that even when the coach feels awkward in doing so, the performer doesn't experience it that way at all. This is because the GROW questions are not new to the performer. They're questions we all ask already; now we're simply asking them in a disciplined, ordered way that creates more Focus and reduces interference. In fact, you can just read them — even mechanically — and it doesn't come over as manipulative or artificial. Just be up front and make sure your motive is to help.

***"Sometimes it's hard for me to see people's potential, and that throws me back to the outside-in approach — 'Just listen to me and do what I say!'"***

Sometimes it is hard to suspend judgment and genuinely see someone's potential. I've got a judge in me that makes decisions about people just like anybody else. But I've learned to not believe everything that gorilla says to me. I make a conscious effort to look beyond what he's saying. I combine the results of that effort

with what I know about kids and learning and that's when I begin to see what's possible.

*Everybody* has the potential to perform better because everybody has a phenomenal ability to learn. We were all born with it — even that person in the organization you may have transferred out because you thought he was a disaster. Once upon a time, that person was a cute little one-year-old, hungry to learn and get into everything. What you're seeing now is a buildup of years of emotional defense against the world.

And as long as you judge him based on that buildup — "Oh, that's Chuck. That's just the way he is" — you're going to be scanning for evidence to validate that belief. It's like what happens when you buy a red car or name your new baby "Aidan." Suddenly, you become amazingly aware of all the red cars on the freeway and all the boys who've recently been named "Aidan." So you'll be scanning for evidence to validate your perception of what you see as the present (not the potential) Chuck. As a result, you will never be able to help him get rid of the interference that's blocking his Faith, Fire, and Focus and contribute most meaningfully to the organization.

## The Faith Behind the Focus and the Fire

I first met "Divot" at the National Sports Center for Wales in the winter of 1986, where he was training with the other members of the Welsh Amateur Golf Team. Born and raised in a mining town in South Wales, Divot was 20 years old.

He had a talent for golf that had enabled him to become a member of the national team. Even so, the national coach, who'd asked me to spend the weekend with the team, had taken me aside and said, "Don't waste too much time on this one. He's technically so poor he'll never make it. Besides, he's not the sharpest pencil in the box!"

By the end of the first day, there was one thing I knew for certain: If ever I saw a learner, this was one. Despite his discomfort, he was there, asking question after question and displaying all the symptoms of a rabid learner. So not only did I try to respond to his questions throughout the weekend; I continued to do so after the team event.

The more I engaged with Divot, the clearer it became to me that he had plenty of Fire. What we needed to address was his Focus and his Faith. Up to that point, he'd been focused on what he thought others believed about him and their opinions had formed the basis of what he believed about himself. What we needed to do was help him shift his attention to something that would help him change his belief about himself.

As we worked together over the next few years, our Way Forward included three areas of Focus. First, to keep his mind quiet as he hit the ball, he would focus on saying "back" when his club reached the top of his backswing and "hit" when the clubface hit the ball. Second, to keep his mind quiet when he wasn't hitting the ball, he would focus on maintaining a confident and upright posture — the same posture he had when he played well. And third, to change his belief about himself in general, he would focus on changing some things he was paying attention to that were giving him negative messages.

What enabled him to develop and carry out these options was creating an environment in which he felt safe to process his own experience without fear of judgment or being pushed. The more we were able to remove the interference to his Faith, Fire and Focus, the more his learning increased and the more his performance improved.

At the time of this writing, Divot had taken first place three times on the European Tour, represented his country nine times in the World Cup and been featured in the top 50 of the Official World Golf Rankings. He was also ranked in the top 40 of the all-time money winners on the PGA European Golf Tour.

***Your Own Way Forward: The finest service we can give to other human beings is to make it safe for them to explore their own experience.***

This is when people begin to reconnect with their Faith, Fire and Focus. This is when they begin to dare to dream, to think about what's possible. This is when transformations and breakthroughs happen.

The Faith, Fire and Focus inside you is something that is truly amazing, and your ability to release it in yourself and others will not only transform you and those you help; it will transform the world.

# The Power of Professionalism

## The Seven Mind-Sets That Drive Performance and Build Trust

by Bill Wiersma

### THE SUMMARY IN BRIEF

When only 17 percent of employees believe their leaders have the organization's best interests at heart … When only 18 percent of Americans trust lawyers completely ... When the Google search "Has U.S. business lost its way?" yields 159 million hits … Something is very, very wrong. Is it any wonder that cynicism is at an all-time high and trust at an all-time low?

The solution? Professionalism. Professional ideals build trust. And trust is the foundation for both personal and organizational success. Better professionals — and more of them — is the antidote for much of what ails the business world.

In the tradition of business consultant Bill Wiersma's demonstrated ability to shift people's thinking in new and powerful ways, be prepared to think about what it means to be a professional in a whole new light.

In *The Power of Professionalism*, Wiersma outlines the seven key mind-sets of trusted professionals, offering a blueprint for both individuals and organizations interested in fostering a culture of professionalism.

### IN THIS SUMMARY, YOU WILL LEARN:

- Why defining professionals through an occupational lens is not only antiquated, but counterproductive.
- Why a professional's mind-set is more important than his or her technical skills.
- Why people, despite the inherent responsibilities, willingly embrace the mantle that comes with being a professional.
- Why organizations whose members view themselves as professionals outperform, outsmart and outlast other organizations.

## Preface

Professional ideals, for both individuals and their organizations, have an inseparable correlation to success. Why? Because developing a culture centered on professional ideals, by default, builds trust.

To paraphrase Bill George, former chairman and CEO of Medtronic: We, in business, do not need more self-indulged people — whether revealed through financial shenanigans, power trips or appeasing one's ego. And we certainly don't need more laws. We need better professionals — and more of them — the great antidote for much of what ails business today.

If trust is the bedrock of personal and organizational success, then organizations should develop their people and culture with professional ideals as their cornerstone. Most organizations don't.

John Toland, the Pulitzer Prize-winning author, said, "It is human nature that repeats itself, not history." And it's the unproductive aspects of human nature that produce distrust.

Consider the 2008 meltdown of the U.S. financial markets. To paraphrase a popular political catchphrase: "It was about confidence, stupid." Unfortunately, stupid is as stupid does. Financial institutions took brazen risks, regulators were asleep at the wheel and consumers bit off more than they could chew. The result? Stakeholders lost trust — that increasingly rare trait that makes everything from financial markets to executive teams work! A 2002 Watson Wyatt study showed that high-trust organizations outperformed low-trust organizations by 286 percent in total return to shareholders (that is, stock price plus dividends).

Professionalism is unique; it's the ladder upon which all other organizational virtues mount. The greater the quality of professional ideals within an organization, the greater the likelihood stakeholders will have confidence in it.

## PART I: WHY PROFESSIONALISM MATTERS

## The Power Within

Three days after an explosion at a plant had killed two and caused hundreds of thousands of dollars in damage, the company's team reassembled at headquarters. Everyone was surprised to see Steve taking the lead at the press conference.

Recent events had been particularly bittersweet for Steve. His well-deserved promotion to division head had been announced only a few days before the accident, and the scheduled start for his new assignment, several states away, was eminent. But Andre, Steve's best friend, had been killed in the explosion.

Rumors surfaced that a gas leak was behind the explosion. Predictably, the aggressive construction schedule associated with the plant's expansion work came into question.

How could Steve face the media?

The press conference started out innocently enough, with the usual suspects asking the usual questions. Then one reporter dropped a bombshell, asking if Steve would like to comment on the impending grand jury investigation that had been announced just hours earlier.

The company's team had not been apprised of the investigation, which in and of itself was a bad omen.

The grand jury would be investigating possible criminal negligence on the company's part along with probable malfeasance by company officials.

### Holding It Together Under Difficult Circumstances

Steve had flawlessly and carefully addressed each reporter's questions. How he managed to hold it together under such difficult circumstances was a wonder to the entire staff. The latest question, however, was like a poke in the eye. Not only would the grand jury investigation challenge the actions and character of the exceptionally talented and dedicated staff, it would also threaten the future of the company, which had been a town fixture for more than 40 years.

Without wavering, Steve responded, "Clearly, many questions remain. But I do know that, as professionals, our people hold themselves to incredibly high standards. They would never knowingly compromise plant safety. In order to get to the bottom of this, I will personally be heading up our company's internal investigation."

Everyone's jaw dropped. Certainly Steve, as operations manager, was the most qualified to head up the investigation. But what about his promotion?

Despite the company advancement, Steve saw this unfortunate incident as vitally important unfinished business. It was something he could not walk away from. Steve postponed his long-awaited promotion indefinitely. His bosses understood and reluctantly supported his decision. Everyone marveled at the way Steve conducted himself. He distinguished himself and rose above the fray in a critical time of crisis.

People who conduct themselves as consummate professionals make everyone around them better. When your career is in its twilight, you'll look back fondly at the Steves you have known as having made the biggest difference. ●

## It's a Bigger Tent Than You Realize

Professionals know what they're doing, both technically and in other tangible ways. However, as important as technical competence is, professionals are not typically defined by their competence. Technical competency is the *minimum* requirement when considering whether or not someone is a professional.

Tammy Farris, program manager at the University of Arizona's Eller School of Management MBA program, characterized it perfectly: "Education and training (that is, technical competence) are just paying one's greens fees — they enable you to get in the game."

Once in the game, professional competence enables individuals to demonstrate that they technically know what they're doing. If you can do that, people will trust your technical competence; they'll have confidence in you. For example, a surgeon with an ability to bring relief to a suffering patient will be regarded as a professional much easier than a colleague who possesses the same training but lacks the skill to apply that knowledge effectively.

Too often, however, people automatically equate *expert* with *professional*. That's a natural, but often inappropriate conclusion. Experts are not necessarily professional.

### There Are Millions of Professionals

Beyond deserving nurses, paralegals, flight attendants and real estate agents, there are literally millions of people who (1) demonstrate mastery in their work and (2) conduct themselves in a way that engenders trust. You've met them. They're trusty auto mechanics, conscientious grocery store managers and invaluable executive assistants. Most of these people don't view themselves as professionals. This is unfortunate. If they thought of themselves as professionals, their performance and morale would jump up another notch. For those who don't quite measure up, the aspiration to become a professional becomes a springboard in raising their sights and performance.

People who view themselves as professionals have higher morale, better job satisfaction and more job longevity. Organizations whose members view

## The Power of Mind-Sets

First and foremost, the mind-set reflects who a person is, not what a person does. The seven mind-sets transcend temperament, social hierarchy and intellectual prowess. They are not techniques (that is, built from best practices or admired competencies, etc.) that work in one situation but not another. Rather, they're foundational or principle-centered.

However, they're just as applicable to savvy veterans as they are to brand-new hires, just as pertinent in an aggressive Wall Street firm as in a benevolent nonprofit, as helpful for the gregarious extrovert as for the reserved loner or as insightful for the Ph.D. boss as for the self-taught tradesman.

themselves as professionals outperform, outsmart and outlast other organizations. There's plenty of room for everyone if you're willing to put up a bigger tent.

## The Psychology of Being a Professional

The views we hold of ourselves are as important, if not more so, than the views we hold of others. Thus, it shouldn't come as a surprise that people who view themselves as professionals excel beyond those who don't.

The renowned psychologist Carl Rogers was a pioneer in his work on self-views. He actually referred to them as self-concepts. Whether you call them self-concepts, perceptions, views or self-views, identities or self-identities, it's really the same thing. These views define who we believe we are.

### Aspirational Identities

Leadership expert John Maxwell noted, "It's how we perceive ourselves to be that determines who we are." But there really is (as Paul Harvey would say) more to the story.

For myriad reasons, self-perceptions can simply be wrong. And even if they're right, those perceptions are defining what is, not what's possible.

For those with fairly accurate assessments of their self-esteem, it is significantly, although not exclusively, influenced by what you *do* — in other words, conduct. Each of us has certain standards of conduct — regardless of whether those standards originated from civil or ethical sources — that we understand to be appropriate. And our worthiness, if we're being honest, is measured against those standards. Cheating on an exam, for example, should lower your self-esteem if you understand that cheating is inappropriate.

Current assessments are more like a report card or a snapshot; they do not reflect future possibilities.

### Your Aspirational Identity Raises Your Sights

An aspirational identity, however, is primarily about who you are or wish to be — as opposed to what you do (which is defined by conduct). It's forward looking. It raises your sights. It suggests possibilities.

The way to master life's lessons in personal leadership (and, in the process, become a trusted professional) is to first aspire to be a leader.

Seeing yourself as a professional is one of the highest forms of motivation because it's intrinsic, internally driven.

## The Professional Balance Approach

Scissors require two blades in order to function properly. Over-dependence on only one blade (for example, technical competence) proves to be ineffective. It's only when the second blade (how you go about your work) is added that the scissors become viable. Naturally, the sharper the blades, the better they function.

Most of us know from experience that when things go wrong, the root cause is frequently attributed to how the situation was handled. Such moments of examination are unprofessional because they make lasting bad impressions. People should be motivated to avoid these and, over time, they will come to a greater appreciation of how important the *how* really is. They will appreciate people who, armed with two blades, prove to be the sharpest tools in the shed.

In the workplace, professional is arguably the ultimate aspirational identity, transcending your title, vocation or educational pedigree. People who view themselves as professionals tend to excel beyond those who don't because they expect more of themselves.

## Trust: The One Thing You Have to Get Right

Because of distrust, nations go to war, economies fail and cynicism breeds. In many ways, human history has been charted by the impacts of distrust. It's a game changer. With trust, people tend to be more confident, proactive and hopeful. Without trust, people tend to be more skeptical, withdrawn and pessimistic. Trust is to mental health what clean air and water are to physical health.

The most predictable and powerful way to demonstrate concern for the welfare of others is to prove one's trustworthiness with the things that are of greatest importance to others.

Trust is the emotional glue that supports one's priorities, protects one's self-interests and ensures respect for one's values. When someone is found to be untrustworthy, almost without fail, it is because of a violation of one of these three concerns. Taken collectively, what trust does for individuals also applies to organizations.

Three elements are needed in order to build trust: character, competence and judgment.

Is anything else expected of someone to be considered trustworthy? Yes! In a word, *consistency*. There's an inseparable correlation between trust and consistency, especially when it comes to behavior. You can have consistency without trust, but you cannot have trust without consistency.

Without consistency, you don't know who or what you can count on. And it's that uncertainty that can become an insurmountable barrier in developing trust. Aspiring professionals must commit to consistently show up as a professional should, not merely when it suits their needs. There's nothing like a mixed message, a double standard or creative rationalizations to undermine one's credibility.

Whether it's a leader issuing an organizational edict, someone declaring his intention or an employee making a personal commitment, if one's words and deeds don't match up, they simply won't be credible. Ultimately, these people won't be found to be trustworthy.

## The Big Picture

It's no wonder that we hear a lot about the need to return to homespun values, getting back to the basics and remembering what made us great as a country. It's about acting responsibly, being self-reliant, demonstrating loyalty, being industrious, exercising discipline and restraint, taking pride in one's work and having a reputation of being trustworthy.

What is the embodiment of homespun values? In a word, professionalism. Of course, that means being a professional. That's what this is all about — *being* something. *Being* honorable — something that characterizes professionals to a tee.

We need better professionals — and more of them — to be the great antidote for what ails business today. Trustworthiness provides an unshakable foundation for success, both individually and organizationally. But in order to leverage the power associated with professional ideals, people must understand them with some level of specificity and appreciate why it matters to them.

# PART II: THE SEVEN MIND-SETS OF TRUSTED PROFESSIONALS

## Mind-Set 1: Professionals Have a Bias for Results

This mind-set is not a bias for action. Nor is it a bias for execution or for success. It is a bias for results. It's the bottom line. But the results must be the *right* results. Results based on illegal activities or unethical behavior are, even in the best light, unacceptable imitations of the real thing. Likewise, results based on convoluted business models, while legal, later prove to be not only unsustainable, but foolhardy. The 2008–2009 financial crisis that was caused, in part, by intricate and sophisticated financial engineering schemes is a striking example of delivering the wrong results.

Delivering results demonstrates trustworthiness. Without it, you'll ultimately be forced out of the game regardless of how high-minded your people are or how noble your cause.

Just as important is the need to deliver the right results in the right way — ensuring that the outcomes are sustainable and not just a flash in the pan. Anyone can hit the bull's-eye once, but it takes professionals to do it time after time!

Sustainable results are dependent on going about your business in the right way.

### Don't Start Out in the Penalty Box

Getting results is much easier when you're passionate about what you're doing. When your work is stimulating, aligned with your values and complements your skill sets, you have a natural nexus for generating the right results.

But just being passionate about your work is not enough to produce results. Passion does not guarantee the right outcome.

What gets professionals to the starting line is their passion for positive results. What gets them to the finish line is — even when things are tough — is their professional will.

## Mind-Set 2: Professionals Realize (and Act Like) They're Part of Something Bigger Than Themselves

Each of us, as professionals, has an inherent obligation to the organization (or client) we are a part of to put its interests ahead of our own. Consider the alternative: an organization full of people holding a me-first mind-set. It won't be long before the organization is out of business. And, of course, organizations don't lose, people do. In this instance, owners and employees alike.

Of course, putting the organization's and client's interests ahead of our own — in the extreme — can be self-defeating. You cannot be married to your work, and

yet there isn't always a black-and-white distinction.

There's plenty of gray in these matters. So you've got to be prudent. You've got to be smart. But one thing is for sure, the individual who consistently looks out only for himself will quickly be shunned by conscientious colleagues and disdained by managers because he has proven himself to be untrustworthy. Those employees who prove themselves to be trustworthy do so because they have allowed their successes to be a byproduct of their organization's or client's success. As a professional they:

- Commit to the success of their firm, organization or client.
- Realize success transcends their own parochial interests.
- Collaborate as an effective team member.

## Mind-Set 3: Professionals Know Things Get Better When They Get Better

Mind-set 3 — which builds off and is dependent on Mind-set 2 (Something Bigger) — has as its aim the need to satisfy something bigger than oneself. It's outward looking. Its aims are to advance the interests of someone (or something) other than self (which is consistent with Mind-set 2). This mind-set enables things to get better. But make no mistake, in the course of achieving something bigger, personal growth (and perhaps personal wealth) occurs. But that wasn't the principle objective or the professional's motivation. Growth happens as a natural and powerful byproduct of practicing Mind-set 3.

For instance, talk to anyone who has worked in a disaster relief effort (Hurricane Katrina, the 2010 earthquakes in Haiti and Chili and China, the islands recovering from the 2004 Indian Ocean tsunami). Aid workers come back changed for the better, but that change wasn't their original intention, aspiration or motive. Nevertheless, a profound change occurred as a byproduct of their selfless efforts.

### Selfless Efforts in the For-Profit World

This phenomenon is not limited to individuals in the midst of such altruistic deeds. Similar changes occur in the lives of people in the for-profit world. You see this metamorphosis in the members of an especially high-performing team involved in bringing an important product to the market (such as Medtronic), people who are transforming an industry (such as Apple) and especially in such transformative times as recessions and economic recovery in the men and women devoted to revitalizing a brand (such as Ford). These experiences often mark some of the most dramatic professional growth of a person's career, but this isn't growth for the sake of growth. Growth comes as a byproduct of serving a higher purpose.

## Mind-Set 4: Professionals Have Personal Standards That Often Transcend Organizational Ones

Best-selling author David McCullough, a two-time winner of the Pulitzer Prize, is a master of the art of narrative history. His books are considered masterpieces. Some of his best-known works are *Truman, 1776, The Path Between the Seas* and *John Adams*.

McCullough has had 40 years of bliss as an author. He loves what he does. He won't name any of his books as his favorite, however, he readily acknowledges that his happiest, most fulfilling years were those invested in writing *John Adams*: "It was a privilege to keep company with those people. They set such a high standard for us." McCullough speaks openly and generously of his admiration for Adams (plus Adams' wife, Abigail) noting, "Character is what counts, above all."

HBO ran *John Adams* — starring Paul Giamatti and Laura Linney — as an eight-part mini-series to rave reviews. What made this possible? It was the trust McCullough had in producer Tom Hanks. The standards he saw in Adams (the ones that drew McCullough so fervently to him) were the same ones that attracted him to Hanks.

### Professionals Hold Themselves to Exacting Standards

Hanks is like so many trusted professionals who hold themselves to exacting standards. And while it helps that their organizations also have standards, these professionals aren't necessarily dependent on them to do a good job, to be responsible or to be respectful to others. Their standards are integral to their character. Professionals who hold this mind-set:

- Have personalized a core set of values.
- Do what's right over what's expedient by taking a long view.
- Rise above the fray, stay focused and avoid pointless drama.

For clarification, personal standards can mean a myriad

of things. Used here, it means one's personal values, one's moral compass (one's definition of right and wrong) or one's core beliefs.

## Mind-Set 5: Professionals Know That Personal Integrity Is All They Have

It has been said that integrity is the mother of many virtues. How true! For those holding this mind-set, it's much more about who they are as individuals and much less concerned with having to think about doing the right thing. In other words, people who hold this mind-set act naturally (and usually quickly) when faced with having to make a tough call. After all, it's who they are and it's consistent with their character.

There are three important underpinnings of integrity:

- Authenticity and honesty.
- Delivering on one's commitments (both explicit and implicit).
- Refusing to violate the trust others have extended to us.

Perhaps more than any other mind-set, the integrity mind-set has the greatest potential to inspire trust.

## Mind-Set 6: Professionals Aspire to Be Masters of Their Emotions, Not Enslaved by Them

Mastery of one's emotions produces three especially important byproducts. Each is essential in inspiring trust in others:

- Professionals are respecting when it's difficult to be respectful.
- Professionals maintain their objectivity and keep their wits about them.
- Professionals manage their ego and resist the urge for immediate gratification.

Let's be clear, emotions aren't bad. After all, our emotions "wind us up and make us go." Trust is an emotion. Trust is a good emotion. Trust is emotional glue.

### Emotional Consistency Is Important

Some would have you believe that professionals should be dispassionate. Please disregard that notion. The passion you have for your work, your values, your ideas and your people is wonderful. Keep these emotions alive. Feed them. But keep in mind that emotional consistency is important. People distrust those who exhibit emotional extremes.

As author C. Terry Warner noted, "One sign of the immature mind is the ease and frequency it feels offended." Emotions, as we have learned through sad experience, can trip us up and make smart people dumb.

Here are two important points: (1) Each of us is responsible for our emotional reactions to experiences and people, and (2) we, alone, are responsible for our external responses to those internal emotional reactions.

### Emotions Are Self-Induced

Events trigger emotions. This is an automatic reaction — or that's what most people believe. But that's not really the way it works. Rather, emotions are determined by what we think about an event, not by the event itself. In other words, our interpretation of an event ultimately becomes the precursor to the emotion we experience. Simply put: Emotions are self-induced.

Thus, to master one's emotions is to master one's constructive thinking. As renowned psychologist Seymour Epstein said, "It is one thing to suppress the expression of an unwanted emotion or impulse and quite another not to have the emotion or impulse in the first place." Constructive thinking enables that level of mastery! This is what enables especially effective leaders to remain calm in a crisis while others are swept up in the moment.

## Mind-Set 7: Professionals Aspire to Reveal Value in Others

Mind-set 7 is all about aspiring to reveal value in others. The word *aspire* is especially important and illustrative in understanding this particular mind-set. Aspire suggests intent, priority and, most importantly, proactivity. For those who possess this mind-set, what they do for people is not an afterthought, it's a long-term investment in people. Professionals with this mind-set find great pleasure in the growth and success of others. They're comfortable in their own skin. They aren't threatened by another's success.

Professionals who hold this mind-set:

- Readily extend trust.
- Recognize the value other professionals bring to the table.
- Aspire to lift others through their demeanor and actions.

The genesis of this mind-set can sometimes be traced to one's philosophy of life, sometimes to purely practical reasons and sometimes to altruistic values based on idealism. Or perhaps a combination of these. Regardless of

the reason, Mind-set 7 has an undeniably positive impact on the recipient because it builds confidence and inspires trust.

## PART III: UPGRADING THE CULTURE

## Your Competitive Advantage Is Hiding in Plain Sight

Understanding the importance of trust is one thing; building it is quite another. Build professionals and, by default, you build trust. Trust is the one thing you must get right in order to achieve competitive advantage.

Culture is learned. The trick for leaders is to shape the environment in a way that is stimulating. Since people, especially professionals, motivate themselves, it's imperative that a leader creates the right environment, assignments, opportunities and sanctions for professionals to motivate themselves to get the job done. Leaders *can* shape their organization's DNA. David Lawrence, CEO of Kaiser Permanente, observed, "The winners do it less wrong."

### Make Professional Standards the Foundation

Your ideal culture will be the one that delivers the results your organization demands. Regardless of the form your culture takes, it's imperative that its foundation is based on professional standards. Former Harvard Business School Professor David Maister said, "It is easier to find the discipline and motivation to behave professionally if everyone around you is doing the same." But not only does a culture of professionals provide superior competitive advantage, it uplifts and motivates more than any other culture.

While creating a professional environment is no easy task, it raises the bar and expectations. And great expectations are evidence of great respect, which is not lost on professionals. Given the never-ending waves of retirements in the years ahead, and the cultural teaching that goes with them, there's no better time than now to get the lesson plans right.

## Professional Ideals: The Centerpiece of Success

Here are three things to consider implementing that constitute a digest of how to more effectively integrate professional values into your organization:

- **Start with Yourself.** The laws of credibility demand that we walk our talk. This prompts a thorough look in the mirror. Realize that this is not about leading others; it's about leading yourself.
- **Leverage People's Natural Motivations.** Despite the apparent costs, people willingly embrace the mantle that comes with being a professional. It proves to be a free and often untapped source of motivation.
- **Be Persistent.** People are proud to associate with an organization they deem professional. Given the opportunity, they will welcome the prospect to make it so.

### Build Your Culture

The priorities that are of the utmost importance to the leaders of virtually any organization are all driven by the degree of professionalism achieved by leaders, managers and employees. The higher the degree of professionalism, the better the attainment of priorities, all of which drives better results. This is the underpinning of my advice to every leader: Build your culture around professional ideals.

This is especially important because culture is to an organization what character is to an individual. And organizations whose culture encourages members to practice the seven professional mind-sets will have a competitive advantage over those who don't.

Clearly, leadership holds the biggest lever of all when it comes to driving professional ideals deep into an organization's culture.

The hope is that more people will begin to see themselves as professionals and start taking advantage of their many opportunities. Of course, they need to live up to the ideals associated with being a professional. But as they do, they will begin their own transformation and gain tremendous personal power.

The second hope is that leaders will embrace these professional ideals as the centerpiece of their cultures and instill the seven mind-sets in their people. It's in their interests to do so. An unprofessional environment repulses, frustrates and dispirits, but a professional environment attracts, challenges and uplifts.

# Brief

## Make a Bigger Impact by Saying Less

by Joseph McCormack

### THE SUMMARY IN BRIEF

The only way to survive in business today is to be a lean communicator. Busy executives expect you to respect and manage their time more effectively than ever. You need to do the groundwork to make your message tight and to the point. The problem is most people don't have the know-how or verbal discipline to do the up-front groundwork and get to the point. As a result, they waste precious opportunities with decision-makers and get too comfortable and verbally sloppy with co-workers and long-time clients.

*Brief* is a step-by-step approach to getting to the point quickly and ensuring that your message is delivered with maximum impact. Author and senior marketing executive Joseph McCormack tackles the challenges of inattention, interruptions and impatience that every professional faces. His proven B.R.I.E.F. approach, which stands for Background, Relevance, Information, Ending and Follow up, helps simplify and clarify complex communication.

*Brief* will help you summarize lengthy information, tell a short story, harness the power of infographics and videos, and turn monologue presentations into controlled conversations. Long story short: *Brief* will help you gain the muscle you need to eliminate wasteful words and stand out from the rest.

### IN THIS SUMMARY, YOU WILL LEARN:

- The forces demanding our attention and making brevity more important than ever.
- The Seven Capital Sins that prevent clear, simple communication.
- How to use BRIEF maps, narratives and visual media to make your message more succinct and compelling.
- How to apply BRIEF principles to every message, from simple progress updates to company victories.

# PART I: HEIGHTENED AWARENESS IN A WORLD BEGGING FOR BRIEF

## Why Brevity Is Vital

Today's world is on information overload, and there isn't enough time to sift through all the messages. If you can't capture people's attention and deliver your message with brevity, you'll lose them. Smart people present to busy people, who are constantly flooded with information, are regularly interrupted, are easily distracted and often grow impatient. When they don't get the clarity they need quickly, they check out. You know you have terrific ideas to pitch and important information to share. So how do you get the other person to listen to it?

The modern, multitasking mind is a barrier — and brevity is the key to entry. When you think you have an hour and you wait to deliver the good stuff until the end, you're too late. You already lost your audience in the first few minutes. But if you capture their attention and manage it right away, none of these challenging circumstances will affect your presentation. You have to get to the point in five minutes, not 50. A master of brevity says less and gets more done.

### BRIEF Balance: The Harmony of Clear, Concise and Compelling

To be brief doesn't just mean being concise. Your responsibility is to balance how long it takes to convey a message well enough to cause a person to act on it. That's the harmony of brevity when it's striking the right chords. There's a tendency to think brevity is pushing for less and runs the risk of being superficial and lacking substance.

Brevity starts with deep expertise. Only with thorough knowledge can you accurately make a summary. Being brief can demonstrate how you've gone through that learning experience. The road to brevity, then, requires hard work and lots of time. Doing all the digging and analysis on your own time saves the members of your audience from doing the labor themselves.

## Mindful of Mind-filled-ness

People can think clearly when they are safe on land. When they are drowning, however, there is only one thing on their mind: finding a life preserver. The new brutal reality is that people are drowning in information. It floods them everywhere they go.

Executives today wake up in the morning and immediately grab their smartphones to check texts, email, updates, sports, stocks and news. On the commute into the office, they make calls and send and receive a dozen emails, all the while trying to "relax" by listening to music. They get to work to face meeting requests, more emails, funny YouTube videos, the company newsletter and a few voicemails, and then they jump onto the corporate portal. And the day hasn't even started yet.

By the time you step into the picture, their attention is severely taxed. Although you may get a head nod every once in a while, that doesn't mean you've broken through. They're just being nice. You need to understand your enemies to defeat them. These four forces are constantly playing against you:

- **Information inundation:** an unending flood of words, images, sounds and social media.
- **Inattention:** an inability to stay focused on one item for more than 10 seconds.
- **Interruptions:** a steady stream of problems competing for time and consideration.
- **Impatience:** a growing intolerance for results.

### What Does It All Mean?

These days, it's no longer possible to get by on the merit of your idea, title or allotted time. You have to put it in a smaller package and make it easier to consume and digest. You must boil it down and get to the point quickly, or be forgotten. Get ready — it's a whole new world. If you are used to preparing a seven-course meal, get ready to serve tapas. Lean communication is your new advantage.

## Why You Struggle with Brevity: The Seven Capital Sins

Why can't we simply add "being succinct" to our tool belt, alongside punctuality and neat handwriting? There is no single reason why people find it hard to be brief. Love of talking seems to be the logical front-runner, but in reality, it is among a short list of seven key contributors that can be deadly if left unchecked.

**1. Cowardice:** You hide behind meaningless words and don't have the guts to be clear and take a stand. Your leadership team doesn't know what to do with your assessment and guidance and subconsciously starts questioning your leadership ability.

**2. Confidence:** You are a know-it-all and, to everyone's dismay, cannot restrain yourself from explaining every painful detail. Nobody likes to talk to you because once you start, there is little they can do to stop you.

**3. Callousness:** You are selfish and don't respect people's time. Even though you are in a hurry when people speak to you, time stands still when you have the floor. If people see that you don't respect their time, they'll stop respecting you.

**4. Comfort:** You let yourself get loose and wordy with people who know you. You have a double standard: you're succinct with important people, yet long-winded with those you know well. You should treat everyone the same way; they are busy and begging you to be brief.

**5. Confusion:** You choose to think out loud when it is still not clear to you what you are thinking — which is a big mistake. Even though your idea is still developing and in lots of pieces, people will make judgments about you and your abilities.

**6. Complication:** You firmly believe that there are some things too complex to be simplified — even though the world highly values people who can simplify difficult concepts. When they don't get it, they lose patience and trust.

**7. Carelessness:** You are often verbally sloppy and let your mind and message get mixed up, leaving people guessing and frustrated.

Consider this list to be a personal checklist of what you need to work on to become a lean communicator and a master of brevity.

# PART II: HOW TO GAIN DISCIPLINE TO BE CLEAR AND CONCISE

## Mental Muscle Memory to Master Brevity

To learn brevity, you need a plan of attack — details on *how* you're going to change. Four proven approaches can be used alone or together to create *mental muscle memory*, that is, habits we should adopt and never abandon because they make us better professionals. The approach looks something like this:

- **Map it:** BRIEF Maps are used to condense and trim volumes of information.
- **Tell it:** Narrative storytelling is used to explain in a way that's clear, concise and compelling.
- **Talk it.** TALC Tracks (talk, active listening, converse) turn monologues into controlled conversations.
- **Show it:** Visuals attract attention and capture imagination.

Each of these helps you manage people's mind-filledness and keeps them focused and on track.

## Map It: From Mind Mapping to BRIEF Maps

Professionals seem to think they can outgrow outlines. Although it's a common requirement in school, people abandon them as they get older. This is especially true — surprisingly — when preparing for important communication, whether it's a big pitch, meeting, progress report or email correspondence. There's no outline to be seen.

It's a huge mistake to make, especially when you consider the vast amount of information you have to handle, distill and disseminate in these situations. Five immediate benefits to outlining are they keep you prepared, organized, clear, contextual and confident.

The practice of mind mapping — or visual outlining — is spreading steadily through the business world. Its adoption makes sense, since all the ingredients that make this method so attractive are present nowadays: a widespread adoption of software, broad use of whiteboards, growing impatience with linear learning, and a strong preference for visual presentations.

Mind mapping software providers like Mindjet are giving individuals a simpler and more powerful tool to wrestle with information overload and put order to chaos. What makes software like Mindjet — and even free, toned-down tools like Bubbl.us — so appealing is that they're highly visual, logical and intuitive to use and share.

### BRIEF Maps: A Practical Tool for Delivering Brevity

A specific type of mind map — a BRIEF Map — improves communication by simplifying complex messages into a one-page visual outline. BRIEF Maps can outline progress reports, capture meeting summaries and synthesize strategies. They can articulate a corporate vision, isolate a key aspect of a new product, or simplify a complex initiative or issue that could potentially take a long time to understand. The focal point or headline of your communication is called the BRIEF Box; that is step 1. From there every BRIEF Map is organized the following way:

**B:** Background or beginning
**R:** Reason or relevance
**I:** Key information
**E:** Intended ending
**F:** Expected follow-up questions

Brevity is all about preparation and preassembly. When you successfully prepare to deliver important messages, you are confident that you've already thought through the key information your audience needs. You're giving people a preconstructed message. A BRIEF Map is a visual outlining tool that prepares you to be succinct.

## Tell It: The Role of Narratives

It can be frustrating for people to visit a company's website, read it and leave without knowing what the company does. And that happens all too often — not just online but in meetings, presentations and conferences. Businesspeople talk but *say* nothing.

Thankfully, organizations are beginning to notice that telling stories is a strategic way to manage people's attention. It's not only an acceptable business practice these days; it's the key to establishing a powerful, common and lasting understanding. Yet how many companies tell a good story? Most are eminently forgettable, usually because they all sound the same.

### Think About Your Audience: Journalism 2.0

You're not a journalist, and you don't think like one — but you should. Anybody who regularly communicates important information and wants to get and hold people's attention can benefit from a crash course in journalism. Key considerations of a great story include a strong headline, compelling lead paragraph, clear sense of conflict, personal voice, consistent narrative thread, logical sequence of events, character development and a powerful conclusion. And it must make sense, have a point and come to a resolution.

Keep stories short and to the point. We're not talking about "Once upon a time" here. We're talking about a corporate narrative that explains why, how, who, when, where and so what. These stories must tackle and decode business issues, strategic decisions, new trends and complex market dynamics — while making all of it personal and intelligible. People are buried in corporate-speak, but you can help them by embracing narrative storytelling to be clear, concise and compelling.

## Talk It: Controlled Conversations and TALC Tracks

To be brief means to avoid endless monologues and to start having conversations with a rhythm, a purpose and a point. Real brevity invites and encourages really good, meaningful, *controlled* conversations, meaning two people talking willingly — and enjoying it — but not feeling the conversation has to last forever to be worthwhile.

A controlled conversation is a disciplined conversation. What you're talking about matters to the person you're talking to, and your active listening tells you what matters to that person. You have the other person's interest and assent. Controlled conversations make you feel free to stop at any time and not risk alienating anybody or feeling awkward.

### TALC Tracks: A Structure for Balance and Brevity

TALC Tracks — talk, active listening, converse — are a tactic for organizing almost any exchange in a powerful way to keep it brief and memorable. The TALC approach is not a formula; it is an adjustable method that helps you track the ideas your conversation partner shares and

project interesting paths for the conversation to follow. It doesn't just call on the techniques of mapping or storytelling; it's about having a balanced, controlled conversation. Let's look at each part in detail.

- **T, or talk:** Somebody starts talking. Let that person say what he or she is going to say. Don't worry if it lasts one minute or five; just let the person talk.
- **AL, or actively listen:** Closely listen to what the other person is saying with interest the entire time. Listen for key words, names, dates and even a basic narrative thread.
- **C, or converse.** When a natural pause comes, jump in and comment, question or even bridge to a different topic that's related to what's being said. Contribute to building *one* conversation.

The concept of the controlled conversation and TALC Tracks means that you'll be prepared for conflict or agreement. You can keep a conversation on point and represent your agenda effectively while respecting what someone else has to say. Controlled conversation isn't about controlling *the conversation* as much as it is controlling *yourself* in the conversation. That is what will make you an effective communicator.

## Show It: Powerful Ways to Make a Picture Exceed a Thousand Words

We are transitioning from a text-based world to a visual one. Screens and interactive media pervade all parts of our lives. Screens are in our homes, our classrooms, our elevators, even our bathrooms. They have replaced phones, books, newspapers, billboards and printed menus.

Studies show that whereas we remember only 10 percent of what we hear and 30 percent of what we read, we remember a whopping 80 percent of what we see. There is an enormous opportunity for visual communication to increase the effectiveness and brevity of what we communicate. The days of text-heavy news pages are over. For *all* industries, communicating effectively today requires communicating visually.

### Connect an Image with Your Story

Infographic designers need to first understand the essential point of what they are trying to communicate. This is the easy part. The hard part is finding a correlating visual that explains the story with images. Here are some easy ways to jump into the visual world: Google images that relate to your presentation; draw during your presentations; find short videos online; make short videos of your own; use a whiteboard to illustrate; bring in small items for show-and-tell lessons; look into prezi.com for a different kind of presentation; show stunning photography instead of words; substitute icons for frequently used words.

### The Age of YouTube and Business

Video storytelling is becoming a more prominent way not only to educate and market but also to entertain and engage audiences. Companies around the world are creating their own YouTube or Vimeo channels to tell their story visually. But as with any form of communication, when you create a video, you must be highly sensitive to your audience. You want to keep videos short. The average video on YouTube is about three to five minutes; after that amount of time, people start to lose interest and click away. Also, be mindful of the time *and* the quality. If your videos have an amateurish feel, you will lose your audience immediately. You want to think more like a broadcaster and less like a marketer.

## PART III: GAINING THE DECISIVENESS TO KNOW WHEN AND WHERE TO BE BRIEF

## Meeting You Halfway

When you're in a meeting, you're not working. You're stuck in a conference room, and all your productivity has screeched to a halt. But how can brevity break the bonds of wasteful meetings? Let's look at a few easy targets we can hit to make a dent:

**Meeting Villain #1:** Time. Meetings often waste time because people schedule *too much* time for them. Trim your agenda to what's necessary. If you need to talk about one item for only seven minutes, don't allocate 10. Although three extra minutes might not seem like much, this habit will accumulate hours of lost time. Giving yourself more than you need is like throwing valuable minutes down the garbage chute.

**Meeting Villain #2:** Type. There is very little creativity when it comes to meeting design. From the agenda to the way the room is set up, organizers often end up repeating old, tired habits. But to get more done, you need to find innovative ways for attendees to interact. Design meetings to be succinct and to succeed. One approach is to stand in huddle formation to indicate you won't be there for long. It's a novel method that removes the comfort of the common meeting. Another effective way to change up meeting design is eliminating PowerPoint altogether. Speakers can use video, illustrations, or even have their comments

drawn in real time by meeting illustrators.

**Meeting Villain #3: Tyrants.** A widespread brevity killer in meetings is the *tyrant* — the dominant voice that stifles the chance for conversation. This type A personality does most of the talking because of rank, personality or position in the company. Three polite ways to offset the overbearing voice include assigning active listeners (appoint someone to moderate a more balanced meeting), use a talking stick (whoever has the stick can speak, while everyone else must listen), designate time slots (give everyone a limited time to talk).

## Leaving a Smaller Digital Imprint

It's official: we're all wired. Everyone's glued to his or her electronic devices — in airports; at the office; walking between meetings; before, during and after work; even sneaking it at home. A 2013 study on Internet trends by Mary Meeker and Liang Yu reports that people check their smartphones an average of 150 times a day.

So what are the dos and don'ts of brevity in the digital age? You need to be economical with every word, or you'll be chalked up as just another source of white noise. The last thing people want to read are paragraph-long status updates. You're doubtlessly connected to people who are serial online updaters, begging for constant attention, yet unwittingly screaming to be passed over. Don't imitate their bad habits.

This new, long-winded abuse of power can quickly be career limiting — because these individuals are training the world to tune them out. They may have good intentions, but they aren't sensitive to being brief. They fail to appreciate that everything they post, share or send must be valuable, pertinent and to the point.

### Social Media Squeeze

Social media is an arena where masters of brevity thrive. Your content can reach an unlimited audience, so make sure it is finely tuned to meet customers' expectations of brevity. According to Adam Brown, corporate social media pioneer, "the most effective social media posts are around 80 characters." From blogs to microblogs to Twitter, Instagram and beyond, there has been a growing emphasis to make communication easier and short to produce and share content online.

But the level of energy and commitment needed to create quality social media cannot be ignored. Brown states, "Most people consume social media on their mobile devices. It's very likely the person is on the move — on the subway, waiting to pick up their kids. The bottom line is, they're doing something else. So you've got to get those nuggets of wisdom or conversation or storytelling briefer and more succinct."

## Presenting a Briefer Case

If the mere mention of the word *presentations* immediately triggers what your PowerPoint is going to include, then you need to think again. Your mind should instead leap to your audience's needs and wants. However, few executives feel comfortable without the crutch of their slides when left standing alone in front of a room of people. Unfortunately, the people in your audience don't care. They have even more on their minds and will check out mentally or grab their smartphones or tablets if you don't get to the point. Thankfully, we are seeing some relief on the horizon. New presentation formats from conferences like TED limit the presenters to no more than 18 minutes and dictate strict presenter guidelines.

### Training as a TED Talk

TED is a set of global conferences focused on technology, entertainment and design. TED presentations showcase videos of the best, most inspiring ideas in 18 minutes or less. TED speakers and employees always use plain, short words; they know that being brief honors their audience's time and attention. Their mission is simple — "ideas worth sharing." And while your idea might be worthy, it's the sharing part that gets tricky.

TED website editor Emily McManus explains that you need to invest time in honing your presentation's structure and content. It's all about timing the material to guide the audience through the necessary premises. "By five minutes in, you need to get into the middle arc of your story," McManus said. "The best thing you can do if you're trying to compress is *not* try to tell the entire story of your entire field in 15 minutes. Rather, you want to give an intriguing single story."

You can use official TED standards to make your presentation TED Talk-worthy. If you can't meet that challenge, then it's time to go back to the drawing board. For your next PowerPoint presentation, cut the number of slides in half. Then do it again. And again. Even better, present *without* slides. If people want or need more information, they'll come to you. As long as you value their time, they will see you as a treasured, objective source of information.

## Trimming Your Sales (Pitch)

Everyone is in the business of buying and selling ideas. And whatever side of the table you've sat on — either as the seller or buyer — you've seen what both great *and* terrible look like when it comes to brevity. Regardless of which end you're on, people should feel balance, respect and restraint throughout the buying and selling process. Executive Elie Maalouf knows that even if you have all the right experience and recommendations, you still need to convince the board during your presentation. Those critical moments are the time to tailor your material to the audience.

This is also true for sales presentations. Don't waste time introducing yourself to clients who already have access to basic information. It's your job to *convince* them why your recommendation should merit their support. Sharing only new and meaningful information will transform your presentation into a conversation. Timing is crucial in these situations. As Maalouf explains, "If you don't make an impression that you have something different and valuable in the first five or 10 minutes, the chances of the next 20 minutes being of use to you are slim — because people are going to fault that impression very early."

Remember, simple and clear doesn't mean trivial and juvenile. Relieve your audience by delivering the right information clearly and at a pace that doesn't cause people to fall behind. "Brevity should not be conflated or confused with lack of information," Maalouf warns. "Give your audience brevity and assurance." Imagine that you're in an office elevator with a potential customer. Can you deliver your pitch in the time it takes to get to your floor? Practice giving it in two minutes. Don't make the mistake of assuming that the more you say, the more prepared you will sound. Busy executives will cut you off or tune you out.

## Help Wanted: Master of Brevity

Even the most well-prepared and accomplished professionals go into job interviews nervous and self-conscious. Brevity plays a key role during an interview. It helps you stand out clearly from the others, ask good questions and listen. When people get nervous, they start talking — a lot. An interview is a time for control, discipline and awareness. Don't pour it on. Make a positive impression in the first five minutes. Stay in the moment, and be in the conversation. You may be the best candidate in the world on paper. But if you're not careful in person, you can flush away everything that you've worked for.

Good interviews live the principles of BRIEF. You are short and to the point. You make it easy for your potential employer to understand who you are, where you've come from, and why you've been successful. People understand that you and your resume are the same.

### Let Others Lead the Conversation

Doug Hinderer, head of human resources at the National Association of Realtors (NAR), observes, "The most common mistake a candidate makes in an interview is talking too much." According to Doug, it's just a matter of time until an undisciplined interviewee either says something stupid or reveals too much information. "When I talk to people about how to interview for a job, I tell them to look at it like a tennis match. The interviewer is going to serve up a question. Respond to it, be done with it, and wait for the next question."

*For the candidate:* Be prepared; create a BRIEF map that quickly explains why you're qualified; tell a story, and have a few snapshots of successes that you can share; keep it conversational; listen closely; ask good questions, and make sure it's a balanced dialogue.

*For the interviewer:* Listen closely; sandwich the better questions; put the meat of the interview into the middle so you're more comfortable and you are not rushing at the end; don't sell; if you believe the candidate is strong, don't start hyping the benefits of the opportunity.

## I've Got Some Good News

Certainly brevity applies to bad news, but why do we have to exercise brevity when sharing good news? Everybody loves to hear something positive. But consider that your role is to deliver the headline and let it sink in, not pile it on. Those moments when you share a success story or an accomplishment need to put you and your company in a positive light. Especially in these instances, discipline and choice details give people a good impression without making them feel as though you're bragging or overconfident. It's time for clarity and humility.

### Speak the Language of Success

International marketing strategist David Meerman Scott has redefined how businesses share their success stories. "The new rules of marketing and PR are to create great content on the Web and that serves to generate attention," Scott said. Unfortunately, for most businesses, telling the stories of their success gets lost in translation. They choose to speak an unintelligible language that is more confusing than

compelling. "It tends to be just the same words that everybody else uses, to the point that words like 'innovative' or 'cutting-edge' are just completely meaningless," Scott said.

Being creative with your content is vital, yet Scott aptly warns against letting your ideas wander too far from the main point. Analogies can help simplify your idea — *if* they accurately reflect your core message. Scott has angled the language at technology company HubSpot to talk directly to the company's target audience. This keeps their brief message from getting lost in unfamiliar terms or turns of phrase. "They're communicating like human beings — because when human beings have a conversation, they don't use that impressive, overused language."

## And the Bad News Is …

If it's hard to give someone bad news, don't make it harder by dragging it out. Nobody wants to be the bearer of bad news — whether telling your boss the project is going to be late, telling your significant other you've bounced a check, sharing negative feedback from your most important client, or having the unfortunate responsibility of having to fire somebody.

In all of these moments, taking the time to prepare and get to the core of the issue quickly will make the pill easier to swallow. Remember, there's almost always a silver lining. No matter how dire the situation looks, we're never really doomed. Yet, belaboring a point will make what's painful unbearable.

### Give It To Them Straight

If you have the unfortunate responsibility to fire someone, deliver the bad news in a kind, humane but firm way. You have to talk about the details, but it's not a time to get into a long discussion that could lead to a stressful, unnecessary dispute. Consider these three things:

- Avoid lengthy discussions.
- Keep it short. Realize that the person will need time to process after you've delivered the bad news; don't try to have the person understand on the spot.
- Doors close all the time. Help those who hear bad news recognize the moment and then focus their energy on rebuilding.

Delivering bad news is a matter of mastering and minimizing a moment. It's about having integrity. Being brief is your best bet to being honest.

## Got-a-Minute Updates

When someone asks you, "How's it going?" be ready to give a straight answer. Everyone needs to give superiors updates. It's a part of our daily reality. Typically, we give these progress reports on the go. People stop by the office, shoot off an email, bump into each other in the hallway, or pick up the phone and call. These are moments when it's vital to paint a clear picture.

If you are giving people progress reports, being brief requires that you give them *what they are looking for* — not all of the other details and information they really don't care about. They want to know about what *result* you are driving. Some people refer to this as the say-do ratio: the relationship between what you say and what you do. When it comes to progress reports, it's better for you to get to the point. Just say, "This is what I'm doing; this is what I am getting done." Then, you have the results speak for themselves.

### The Most Important Question: Why Am I Here?

For the past several years, Jim Metcalf, CEO of USG Corporation, has required all his direct reports to state the purpose of each meeting up front. Metcalf realized that his direct reports were draining his valuable time because they simply wanted to update him, not get a decision from him. He prefers short meetings, and if he can get them, short summaries and no meeting at all. Metcalf asks the same follow-up question at every meeting. "Why do you need me here?" That direct, no-nonsense approach sends a clear signal: brevity is part of the business.

In a world where we are inundated with information and highly inattentive, we have very small windows of time to make an impact, with no margin for error. The impact of BRIEF starts here with you when it's lived every day. Be better. Be brief.

### RECOMMENDED READING LIST

If you liked *Brief* you'll also like:

# Die Empty

## Unleash Your Best Work Every Day

by Todd Henry

### THE SUMMARY IN BRIEF

Most of us live with the stubborn idea that we'll always have tomorrow to do our most important and valuable work. We fill our days with frantic activity, bouncing from task to task, scrambling to make deadlines and chase the next promotion. But by the end of each day we're often left asking ourselves, "Does the work I did today really matter?" We feel the ticking of the clock, but we're stuck in first gear, unsure of the path forward and without a road map to guide us.

*Die Empty* is a tool for people who aren't willing to put off their most important work for another day. Author Todd Henry explains the forces that keep us in stagnation and introduces a process for instilling consistent practices into your life that will keep you on a true and steady course.

It's not about slaving over a project or living on a whim — it's about embracing the idea that time is finite and making the unique contribution to the world that only you can make. Henry shows how to cultivate the mindset and the methods you need to sustain your enthusiasm, push through mental barriers, and unleash your best work each day.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to find your sweet spot and balance the three kinds of work to become a developer.
- How to recognize and avoid the Seven Deadly Sins of Mediocrity.
- How to define your battles and learn to be fiercely curious so you can find your voice.
- The five areas of conversation that bring better clarity, focus and trust to the team.

## Die Empty

We have only a certain amount of time available to us, and how we choose to spend our days is significant. There are things we would like to do and experiences we would like to have before we die, many of which are desires we've suppressed for months or even years. We feel the ticking of the clock and the accompanying sense that we may be missing our opportunity to make a contribution to the world. However, we often ignore these impulses as a result of the relentless pragmatics of life and work.

How do you set in motion a course of action that will allow you to unleash your best, most valuable work while you still can? The marketplace is filled with platitudes about living a life of fulfillment, landing your dream job, and discovering your purpose, but when you are in the midst of the fray, it can feel futile to think about anything other than hitting your deadlines and chasing the next promotion. The only way to avoid this scenario is to instill consistent practices into your life that keep you on a true and steady course.

### Don't Die Full of Your Best Work

You've probably heard, "No one ever lay on their deathbed wishing for another day of work." Yet, a great many people do regret not having treated their life with more purpose and would give anything to have one more chance to approach it with the kind of intention and conviction that imminent death makes palpable.

Work encompasses much more than just how we make a living. Any value we create that requires us to spend our time, focus and energy — whether in the context of occupation, relationships or parenting — is *work*. Humans are wired to find satisfaction by adding value through toil. Thus, for centuries work has been a deeply ingrained part of our identity and our understanding of our place in the world.

The phrase "die empty" could easily be misunderstood to mean spending every ounce of yourself on your career. In fact, it means that you possess a one-of-a-kind combination of passions, skills and experiences; there is something you bring to your work that no one else could. If you relinquish that power, then it will never see the light of day, and you will always wonder "what if?" The price of regret is incalculable.

### Your Sweet Spot

In baseball, there is a place on the bat called the "sweet spot," the best part with which to strike the ball. It will send the ball soaring a lot farther than if you hit it even a few fractions of an inch off the mark with the same effort. Similarly, you have a "sweet spot" in your life by which you will add the most unique value through your efforts.

These opportunities will only become clear over time as you act. You have to try different things and devote yourself to developing your skills and intuition before you will begin to see noticeable patterns and understand your unique value. The one overriding goal is to bring a newfound clarity and sense of urgency to how you approach your work on a daily basis and over your lifetime. Patience is required. This is a long-arc game, but it must begin now.

## Your Contribution

When you're gone, your work will stand as the single biggest testament to who you were and what you

believed. Engaging in deeply gratifying work does not require you to check out of life, pack your bags, and head off on a pilgrimage. It simply requires consistent, focused efforts to cultivate your instincts and skills and make measured progress on your goals.

As you consider your current body of work and the sum of the value you've created, is it reflective of what you truly care about? Because we are biologically hardwired to form habits around rewarding activity, when we accomplish a goal or taste the sweet fruit of success, it's tempting to keep pushing the same levers over and over again. However, this approach is often a fast track to mediocrity. The key to long-term success is a willingness to disrupt your own comfort for the sake of continued growth.

### The Three Kinds of Work

Even though work sometimes feels like one massive, melded blend of tasks, conversations and meetings, it can be parsed into three different forms: Mapping, Making, and Meshing. To truly unleash your full capability and to ultimately find your sweet spot of contribution, you must engage in all three.

**Mapping** is planning, plotting your objectives and setting priorities. You often map instinctually, as when you make a list of tasks to accomplish or block off time on the calendar.

**Making** is actually *doing* the work. It is creating value of any kind, including executing tasks, making sales calls, designing, writing, engaging with your direct reports, and tackling your objectives.

**Meshing** involves the "work between the work" that actually makes you effective. It's composed of activities that stretch and grow you, such as acquiring new skills, reinforcing or enhancing knowledge or cultivating your curiosity.

In the hustle of daily life, it's easy to overlook Meshing and focus mostly on Mapping and Making, largely because they provide a more immediate payoff. Depending on how disciplined you are about engaging in the three types of work, there are four profiles you can fall into: Developer, Driver, Drifter, Dreamer.

**Mapping + Making + Meshing = Developer.** The Developer is constantly weaving together available resources and opportunities to create value. He works with urgency and diligence, making plans and then executing them, learning from his action and then redirecting as needed. He knows that opportunities are valuable only if he is prepared to take advantage of them. If you want to die empty of regret, you must focus on becoming a Developer.

**Mapping + Making – Meshing = Driver.** The Driver is extremely focused on results and spends most of his time planning and checking tasks off lists. He is obsessed with today's results but does little to increase his platform for future effectiveness. The Driver typically fails to unleash his full potential or find his sweet spot.

**Mapping + Meshing – Mapping = Drifter.** The Drifter frequently bounces from project to project and goes wherever his latest whim carries him. Because of his failure to map effectively, the Drifter fails to follow through on many of his ideas and projects.

**Meshing + Mapping – Making = Dreamer.** The Dreamer is a talker, but he rarely accomplishes much. He can be effective when he wants to but quickly loses interest and rarely finishes what he starts because he's always moving on to the next great thing.

There is nothing inherently wrong with any of the types in moderation, as long as you are aware of how they have the potential to consume your work. To truly put yourself in the best possible position to unleash your best work, you must adopt a Developer mindset, meaning that you are disciplined about Mapping, Making and Meshing so that you leverage all the opportunities and resources at your disposal.

## The Siren Song of Mediocrity

When we start our career or an exciting project, everything is new. We throw ourselves into the work with full vigor, because we know that we need to prove our worth to our manager or clients. However, over time familiarity sets in, and some of the aspects that once seemed new and exciting become predicable and mundane.

It's a cycle that we will go through many times as we take on a new job or assume new responsibilities. As we progress in our career and accumulate more knowledge, there are fewer experiences that instinctively spark our curiosity and challenge us to rise to the occasion. We quickly grow stagnant, relying on our existing skills to perform our work. We've succumbed to mediocrity.

The key to avoiding this slippery slope isn't just to work harder or longer; it's to ensure that you are intentionally disrupting your own work rather than circling the wagons and protecting the ground you've already taken.

### Seven Deadly Sins of Mediocrity

There are several key areas where mediocrity repeatedly creeps in and causes neglect of Mapping, Making and

Meshing, leading to ineffectiveness. These common and destructive slipping points are referred to as the "Seven Deadly Sins of Mediocrity." They are organized alphabetically to make them easier to remember, "A-B-C-D-E-F-G."

**1. Aimlessness.** A general lack of cohesiveness within your day-to-day activities, not a lack of drive to succeed. The key to conquering aimlessness is to concretely define the battles that you need to fight each day in order to make meaningful progress; then focus your efforts on those above all else.

**2. Boredom.** Boredom means your mind has grown weary of the rut you're in and is ready to jump the tracks and try something new. Yet, we often succumb to it and allow it to zap our brain of its creative firepower. The cure for boredom is intentional and applied curiosity.

**3. Comfort.** When comfort becomes the goal of life, we cannibalize future progress for the sake of temporary stability. The key to overcoming the ill effects of a love of comfort is a commitment to continual growth and skill development.

**4. Delusion.** To add the value you're capable of adding, you need to cultivate self-awareness. You must have an accurate sense of your skills, weaknesses and core drivers. Then, you need to orient your daily activity around that self-knowledge so that you are building on a solid foundation rather than on wishful thinking.

**5. Ego.** No matter how successful or skilled you are, you will inevitably fail at many things in your work. For some people, the stigma of failure is simply unbearable. To countermand ego, you must be in a state of continual learning and openness to correction.

**6. Fear.** The key to countermanding fear is to instill a practice of strategic, intentional and purposeful risk-taking in your life in work. Experiment, play, and find your voice through taking small chances to express yourself through your work.

**7. Guardedness.** When life is flush with obligations and pressures, the first thing that often gets the boot is our relationships. When you isolate yourself from other people, you cut yourself off from some of the most valuable opportunities to grow and collaborate. The solution to guardedness is to build a system of checks into your life to help you scan for relational outages, and to remedy them before they become destructive.

Be on the lookout for the Seven Deadly Sins of Mediocrity and eliminate them whenever you can. The best defense is almost always an at-the-ready offense.

## Define Your Battles

Success in emptying yourself of your best work each day depends on your ability to define the right battles, and do the small but critical tasks that will help you progress toward your true objectives rather than just the ones that others expect you to strive for.

Have you ever thought about what's truly important to you? What battle would you be willing to fight anytime for any reason? What triggers your primal instinct to act? Your through line is the theme of your life and work. It's your thesis statement. It's the "delta," or the change, that you wish to see through your efforts. Unfortunately, the complexity of the modern workplace can squelch our sense of mission and cause us to drift. We grow numb to the prompts and cues that once lit a fire inside of us.

Some "calls to arms" that were once vibrant and clear to us can subtly fade over time. Perhaps we are admonished to be more practical, patient and realistic. Over time, we learn the art of compromise. The problem is we often compromise the most valuable thing: the fire that drives our best work.

Identifying a through line around which to devote your focus, time and energy is a journey, not a onetime task. The process requires persistence and a good deal of self-awareness, both of which can be challenging to muster when you are already managing the complexity of expectations, objectives and relationships that comprise an average workday. But if you want to lay your head down each night satisfied with how you spent your day, it's important that you draw the right battle lines and stand on principle in how you engage your work.

### Misguided Passion Can Fuel Aimlessness

The inherent problem with the advice "follow your passion" is that it frames the conversation as if you are the center of the world, or as if a state of joy, bliss or fulfillment is the objective of life. When this is your mindset, you're starting off with the wrong question and will ultimately spend your life chasing after the next buzz when things get dull. The most fulfilled people I've encountered in the marketplace approach their work, in any context, with the question "What can I add?" rather than "What can I get?" They choose worthy battles, then engage in them with everything they have.

### Welcome to the Battle

No army would charge into battle without understanding the battlefront. Yet, many of us do this daily with our work. Priorities are difficult. When you choose one thing

to focus on, you automatically choose not to focus on others. This is why some people fall into aimlessness: They don't like the discomfort of having to say no to very good things that *aren't* the most important things. Remember, you cannot fight on every front. You must choose your battles wisely and win them every time.

Consider these questions to help you establish your battle lines:

- What will you stand for today? What will you refuse to compromise on no matter what? What will define your terms of engagement?
- What do you know you should be doing but have been ignoring? These are things that have been weighing on your mind for a while now and things that you care deeply about, but you've been ignoring them either (a) you fear that you won't have time for them or (b) you haven't defined them enough to know your next steps.
- Where are your "open loops"? These are the unfinished projects, the halfhearted efforts or the unreconciled relationships. These must be either acted upon and made a priority or immediately closed and put aside. You must become good at pruning your projects and commitments so that you have energy available for your most important work.

*To avoid aimlessness, you have to stand for something.* You will ultimately be remembered for the battles you chose to spend your time fighting. Act with urgency and diligence today to define your through line and your battles; then carefully allocate your focus, time and energy on things that matter to you.

## Be Fiercely Curious

All great feats and brilliant accomplishments begin with a question: Why? How? What if? The pursuit of sustained, great work demands a commitment to pursuing the answers to a never-ending series of inquiries. However, in dealing with daily life and work, our curiosity can become worn. We can fall out of touch with our deeper questions and lose the will to ponder. While a curious, questioning mindset may seem inefficient when we're under pressure, it actually makes us more effective in everything we do.

The phrase I use for highly productive but mentally stagnant professionals is "busily bored." They're cranking through a lot of work, and they're doing what they have to do to meet their expectations, but they are bored silly. They no longer find their work stimulating and they're kind of going through the motions.

They're not stretching their mind.

They're not acknowledging their deeper questions.

They're not trying new things.

They're living with unchecked, limiting assumptions.

The saddest part is that when confronted with a topic other than work, they light up with enthusiasm and delight. The problem isn't that they lack the capacity for wonder and interest; it's that they can't seem to apply the same level of curiosity to their work.

To avoid becoming one of the busily bored, you need to stoke the fires of your curiosity by addressing its two forms: specific (diving deep into topics of interest) and diverse (exploring possibilities through purposeful questioning). There are two strategies for doing so: Establish hunting trails, and develop possibility thinking.

### Establish Hunting Trails

If you want to integrate applied curiosity into your work and life, you need to have a system to support that aim. You must establish parcels of structured curiosity in your life, which means setting aside time and giving your self permission to stoke the fire of your curiosity in a way that doesn't interfere with your more urgent work.

Give yourself permission to not know things. Some people see ignorance as a point of failure, but successful people see it as acknowledgment of reality and opportunity for growth. As you go through your day, note things that you don't understand, and rather than shying away from them, turn them into questions to pursue. Keep a list of questions in a place where you'll see them often.

Set aside time on a regular basis to immerse yourself in books, films, magazines and other resources to stoke the fire of your curiosity. Keep a list of resources that strike you as interesting, and set aside time to experience them each day.

As you consider a problem you're trying to solve in your work, how could you develop a prototype that will help you begin to explore it in new ways? Is there something you could build or sketch that would give you a fresh perspective? Are there ways you could play around with the problem, break it apart, and recombine the pieces into something new? You may find that the shift in perspective radically alters your insight into the core issues you're trying to solve.

### Develop Possibility Thinking

A second strategy for developing your curiosity is to leverage possibility thinking, especially in how you engage with your projects. With a little intentional effort at the beginning of the process to define the "edges" of the

problem you're solving, it's possible to get up to speed more quickly, explore more potentially relevant solutions, and leverage your full creative problem-solving skill.

When you have clear boundaries to work within, you can feel more comfortable asking extremely divergent questions and exploring initially irrelevant-seeming possibilities. Structure yields freedom to creatively roam. There are four elements that can help you explore the edges of your problem:

**Aspirations:** Ask yourself what the project is aspiring to become. List three to five words; then use those as a jumping-off point for ideas or new questions to pursue.

**Affinities:** Ask, "What is this problem or project like," or "Can I see any patterns here?" See if you can identify any similarities that can provide you with traction.

**Assumptions:** As you consider your project, ask yourself, "What assumptions might I be making about this?" Spend time intentionally challenging any assumptions you uncover, and use them as a basis for generating new thoughts and ideas.

**Attributes:** What does the problem look, feel and sound like? Once you've listed several attributes, use them as a jumping-off point to generate ideas.

## Step Out of Your Comfort Zone

Growth is about daily, measured and disciplined action. It's about embracing purposeful skill development and pursuing new opportunities that stretch you to step beyond your comfort zone, even when it means venturing boldly into the unknown.

Yes, there are always others who are more qualified to act. Yes, you will certainly be more safe in your comfort zone — for a while. But eventually, this craving for safety will become a suffocating force.

There is always the possibility of failure, but unless we assume that risk, there will also be little chance of great success.

### Step, Sprint, and Stretch

Growth doesn't happen by accident. It's the result of intentional effort and consistent progress. There are three kinds of goals that help you grow: Step, Sprint, and Stretch. A step goal is a very short-arc goal (often daily) that helps you maintain forward progress, even if it's small progress. A sprint goal is a medium-arc goal (a week or two weeks) that causes you to go beyond yourself for a season in order to increase your capacity, and a stretch goal is a long-arc goal that forces you to go far beyond your comfort zone.

For step goals, ask yourself, "What will I do today, no matter what?" Sequence enough step goals in a row, and you will eventually make significant progress. For a sprint goal, consider an intermediate goal that will help you make progress on your stretch goal, and determine what you will have to do each day to accomplish it. Turn the daily increments into step goals.

The important factor when choosing a stretch goal is that it's something you can control and measure. If you can't control it, you can't plan for it. What's important is that you focus on consistent, measurable progress, and always have each kind of goal in your life at all times. You should have a set of step goals you are accomplishing today, which should be helping you accomplish a set of sprint goals over the next few weeks, which should be leading you toward a set of long-term stretch goals.

It's important to be choosy about which goals you pursue and how. You probably already know where you are falling short or playing it safe. *You cannot pursue greatness and comfort at the same time.* Commit today to stepping outside your comfort zone and set some goals to help you get there. In short, grow.

## Know Yourself

The stories we believe about how the world works often play a critical role in helping us interpret the meaning of events. They provide a framework — a *worldview* — through which we filter our experiences. As such, the stories we tell ourselves can be either motivating, contributive forces or limiting, destructive forces as we strive to unleash our best work. It's important that we gain an understanding of not only what those deeply held beliefs are but also how they might be affecting our daily activity.

As much as damaging beliefs can derail you, helpful and strategically chosen narratives can energize you and keep you aligned with what truly matters. You must choose an ethic to guide your choices, then ensure that this ethic is carried out in your actions.

### Establish Your Code of Ethics

Values alone, while important, are inadequate to drive daily action. Instead of falling back on a set of passive values, you must transform them into a code of ethics — a set of operating instructions for your daily activity. This "code of ethics" is a series of words that concretely defines how you will engage in your work. It defines ahead of time how you will make decisions, interact with others, and make choices when things get difficult.

To establish your code of ethics, dedicate a few hours to reflecting on your life and work and how you might want to engage differently. Consider the conclusions you came to when examining the people you admire and while excavating the narratives/assumptions you carry.

Were there any themes that you discovered? What characteristics of your heroes do you wish to emulate? What patterns/narratives/assumptions do you want to break? How would you want others to describe you?

Begin writing words that describe how you'd like to engage in your work. Narrow them down to three or four. Put them someplace you'll see them frequently. It's not about achieving perfection; it's about giving yourself a lens through which to view your work and a starting point for measuring your effectiveness. Your code of ethics will (and should) change over time as your needs evolve.

Strive to know yourself, because once you do, you will be brilliantly positioned to make a valuable and unique contribution.

## Be Confidently Adaptable

Confidence and adaptability prevent an inflated ego from stalling progress on your most important work. While a deep confidence is typically necessary for success, an overinflated ego can cause you to forfeit your best work if you do not feel that you are being appropriately recognized for your efforts. Your ego becomes a problem when it gets in the way of your ability to set aside your personal need for recognition in the face of work. The key counterpoint to ego is adaptability. This means cultivating the willingness to confidently bend to your environment while still maintaining a strong sense of self and purpose. To maintain traction and prevent ego from stalling your progress, you must develop the ability to subvert your egocentric needs for the sake of the work, which in the end is often the best thing for you as well.

Rather than striving for control, we should instead be striving for influence. I can attempt to corral my organization by instilling stringent rules or by requiring that I be a part of every decision, but it is far more beneficial for me to influence the organization to think and act effectively.

### Confidence vs. Overinflated Ego

You should be certifiably and aggressively confident in your abilities and opinions. You should fight to have your work seen and utilized, and you should never bow in the face of pressure to compromise. You must never allow your fear of developing an inflated ego to cause you to shrink back from the important work that's before you. You can't be afraid to confidently draw lines in the sand.

The difference between someone with confidence and a person with an overinflated ego is that the confident person is willing to take a stand on behalf of the work and what they believe is right, whereas the person with the overinflated ego is more concerned with how they will be perceived and how much credit they will receive.

In the end, an overinflated ego is about protection, whereas confidence is about progression. While confidence is essential to performance, it's critical that you not allow your need for an ego boost to usurp your ability to pour yourself fully into your work, even absent the recognition you rightly deserve. It is a tragedy to look back and realize that you failed to engage fully and freely because your ego demanded something more.

## Find Your Voice

We all do lots of activities as a function of our job. We have roles and responsibilities, tasks to check off, and so on. But what do you do when you *work*? What are the things that you look back on after a long day and think, "*That* was great." That work — that you alone are capable of — is your voice. It is the unique combination of passions, skills and experiences with which you alone are capable of approaching your work.

However, many people succumb to the paralyzing forces of fear and choose to stay "close to the middle" or simply do what's expected by others rather than engaging in the small risks necessary to uncover and apply their voice to their work. In doing this, they sadly leave much of their unique contribution unrealized.

You will discover your voice through tiny clues that become apparent over time and as you follow them and apply what you learn to your work.

### Open Your Eyes

Great work results when you stop doing only what you *know* you can do and instead begin pursuing what you believe you *might* be able to do with a little focused effort. Make an inventory of your most important work, and then spend some time considering each project. Are there hunches you have about the direction of these projects that you're ignoring because you're afraid of where they might lead or of what they might cost you? Have you been ignoring any intuitive nudges?

In order to discover and act on your voice, you need to develop the capacity to pay attention to little clues. Don't worry that society tends to celebrate stories of overnight success even when there's no foundation to sustain it. Your best work will emerge with patient attention, time and

strategic action. Start now, but don't rush. Walk slowly, and you'll discover your voice along the way.

## Stay Connected

From the earliest moments of our lives, we understand our place in the world through our interactions with others. But relationships can be uncomfortable and challenging at times. However, closing ourselves off to others — especially in hectic times — is the worst thing we can do. When we disconnect or become guarded, we reduce the potential for serendipitous insights and connections that often come through unexpected interactions with others, and we also limit our own ability to stretch outside our relational comfort zone, which is the very thing that often leads to the discovery of new insights about our abilities and preferences.

Relationships — especially in the workplace — take effort, and to stay connected demands that we build practices to help us engage with purpose. But even if you have these practices in place, it's still possible to allow your connections with others to remain shallow and without the kind of honest urgency that forges trust, commitment and effectiveness.

Avoidance is a common tactic in the face of uncertainty. We may instinctively do it to defer dealing with a relationship, but that tends to create even more damage.

You need to have a structure in your work rhythms to help you "clear the decks" and engage in these important, though not urgent, conversations frequently so that you are freed up to do your best work.

There is a false belief in many organizations that tension and conflict are signs of an unhealthy team. But an effective team consists of people willing to fight for their ideas, challenge others when necessary, and stand their ground when confronted. In the end, however, those same people must be willing to bend to the ideas of others and submit to the decisions made by the leader, knowing that they can't win every battle.

Unfortunately, managers are often uncomfortable with these fits and spurts and attempt to squash team conflicts so as to preserve peace. There's a false belief that tranquility equals health, but a tranquil team is often a sign of imminent death because it may mean that no one cares enough to make waves.

### Use Probing Questions

Teams are often great at talking about tasks and strategy but abysmal at discussing the intangible factors that affect their workflow. There are five areas of conversation that can bring better clarity, focus and trust to the team:

**The Clarity Conversation.** This conversation is designed to bring alignment and combat dissonance. Key questions include, "How does what I'm doing tie into why our company exists?"

**The Expectations Conversation.** The objective is to clarify each person's expectations so that there is no misunderstanding or room for misinterpretation.

**The Fear Conversation.** The fear conversation is all about shining light into dark, unspoken places and neutralizing fear where it lives.

**The Engagement Conversation.** This conversation is about helping you identify patterns of energy and enthusiasm in others and tap into the deep well of inspiration around you.

**The "Final 10 Percent" Conversation.** This conversation is about getting the "final remnant" of feedback that others may not volunteer unless you ask for it.

The better you get at these conversations, the more clarity, alignment and energy you'll find in the work environment, and the better equipped you'll be to unleash your best work. We need to fall in love with the process, not just the end product of our work. Make sure you're nurturing your process. It's the only thing you can truly control, and it's the thing you'll always have regardless of where you end up.

## Forward

You can have the map, and there can be gas in the tank, but unless you're willing to fire up the engine and put your foot on the gas, you'll never get anywhere. Intention and theory don't change the world; decisive action does.

Your life will be measured by what you gave, not what you received. Spend it building a body of work you will be proud of. Engage today with urgency and diligence. Live and work as if today is all you have. If you do, you will be able to lay your head down each night satisfied with your work, and in the end, you will die empty of regret but full of satisfaction for a life well lived.

# Rookie Smarts

## Why Learning Beats Knowing in the New Game of Work

by Liz Wiseman

## THE SUMMARY IN BRIEF

Is it possible to be at your best even when you are underqualified or doing something for the first time? Is it still possible, even after decades of experience, to recapture the enthusiasm, curiosity and fearlessness of youth to take on new challenges? With the right mindset you can.

In a rapidly changing world, experience can be a curse. Being new, naive and even clueless can be an asset. For today's knowledge workers, constant learning is more valuable than mastery.

In this essential guide, leadership expert Liz Wiseman explains how to reclaim and cultivate the curious, flexible, youthful mindset called Rookie Smarts. Wiseman reveals the different modes of the rookie mindset that lead to success: Backpacker, Hunter-Gatherer, Firewalker and Pioneer.

*Rookie Smarts* addresses the questions every experienced professional faces: Will my knowledge and skills become obsolete and irrelevant? How will I keep up? The answer is to stay fresh, keep learning and know when to think like a rookie.

## IN THIS SUMMARY, YOU WILL LEARN:

- How to cultivate a curious, flexible mindset.
- How rookie and veteran talent can form powerful teams.
- The four modes of the rookie mindset that lead to success.
- How to be at your best when doing something for the first time.

## Introduction

Sometimes not knowing is more valuable than knowing. A certain genius gets sparked in our rookie state, and a learner's advantage kicks in.

Is it possible that we can be at our best when we are underqualified, doing something for the first time? With the right mindset we can. When we are stretched to reach beyond our current capabilities, we can open ourselves up to learning from everyone and everything around us and tap into a different mindset called "Rookie Smarts."

Sometimes a young professional has been given the chance to hit above his weight class. Other times an executive has taken on a new assignment outside her area of expertise. Once out of their comfort zones, these rookies experience a sense of challenge and exhilaration. Whether the rookie is a new college grad or a seasoned executive, behind them you will likely find a manager who took a risk and bet on their ability to learn quickly.

In other organizations, driven people can be seen idling away at a job they've been doing for years. They confess that they've become stale in their jobs, working well past their sell-by date. They feel themselves wasting away, anxious that their hard-earned knowledge and skills will become obsolete, wondering if they will be fit to work anywhere else.

While experience provides a distinct advantage in a stable field — like the realms of bridge building, ballet or concert piano performance — it can actually impede progress in an unstable or rapidly evolving arena. When the world is changing quickly, experience can become a curse, trapping us in old ways of doing and knowing, while inexperience can be a blessing, freeing us to improvise and adapt quickly to changing circumstances.

Fortunately, even the most experienced professionals and organizations can tap into their rookie smarts. Those who choose to live and work on a learning curve will experience greater vitality in their careers and will be well positioned in the new game of work.

## PART I: ROOKIE SMARTS LIVING ON THE LEARNING CURVE

## The Rise of the Rookie

Rookies are more capable than we might expect. We often see it on the athletic field, but it also plays out in the halls of the workplace. Research suggests that, in many cases, inexperience can work to your advantage: It can spark a dazzling performance and help you compete with, if not surpass, even the most talented, experienced players. Not only does inexperience confer an advantage, but also it is desperately needed in today's rapidly evolving world of work.

### The Research on Rookies

My team of researchers studied almost 400 workplace scenarios, comparing how rookies versus veterans tackled work assignments. We defined a rookie as someone who had never done that type of work and a veteran as someone who had previous experience with that type of work — both regardless of their age. Our work yielded four major, surprising observations.

**First, rookies are strong performers.** Rookies consistently outperformed veterans in innovation and time to completion.

**Second, rookies have a unique success profile.** The highest-performing rookies sought out expertise in others, connected the dots, experimented, learned from

mistakes, and focused on making incremental gains. Conversely, the top-performing veterans were fast to act, marshaled resources, found simple solutions, persisted along a path, and focused on solving the right problem.

**Third, rookies aren't always what they seem.** While we might think of rookies as clueless and bumbling, in actuality, rookies listen more, are more likely to ask for help, believe they have a lot more to learn and learn faster. And while we might think of rookies as bold risk-takers, the research showed that rookies actually work more cautiously, biting off smaller pieces and checking in frequently with stakeholders to minimize risk.

**Finally, experience creates dangerous blind spots.** With experience come habits, and once we form a habit, our brain stops working. As we build (and come to rely on) experience, we also become desensitized to the world around us. As we climb to the top of the learning curve, we also tend to stop seeking feedback. We also stop exploring new domains and paths. With experience inevitably comes bad experiences. While these quickly scar over, we often dismiss ideas and ventures that might reopen these wounds.

### The Rookie Smart Mindset

You can start drinking from an intellectual fountain of youth by putting yourself into the rookie smarts mindset, which is characterized by four distinct modes: Backpacker, Hunter-Gatherer, Firewalker and Pioneer. Each mode is a component of how we tend to think and act when we are in a rookie assignment: doing something for the first time.

**1. Backpacker:** Because rookies typically have nothing to weigh them down and nothing to lose, they are open to new possibilities, explore new terrain, and act wholeheartedly. The mindset is *unencumbered*. In contrast, veterans can too easily act as Caretakers. Having accumulated a track record, a trophy case and the spoils of success, they maintain the status quo. The mindset is *protecting*.

**2. Hunter-Gatherer:** Because rookies are disoriented and lack know-how, they are forced into a sense-making mode that causes them to pay close attention to their environment and reach out to others for guidance. The mindset is *alert and seeking*. In contrast, because veterans are often confident that they understand their environment, they don't seek new information. They act like Local Guides who stay close to what they know, doling out advice rather than seeking out learning. The mindset is *advising*.

**3. Firewalker:** Because rookies lack situational confidence, they operate cautiously but quickly in an effort to close a knowledge or a performance gap. They take small, calculated steps, move fast and seek feedback to stay on track. The mindset is *cautious and quick*. In contrast, because veterans feel capable, they tend to operate like Marathoners running the long race. It is a mindset of *staying steady, pacing oneself and plodding along*, assuming one is still doing a great job.

**4. Pioneer:** Because rookies are traversing uncharted and often uncomfortable territory, they improvise and work tirelessly to provide for basic needs. Their work pushes boundaries as they take ownership and create value for others who follow in their footsteps. The mindset is one of *hunger and relentless pursuit*. In contrast, because veterans are well established and have access to more resources, they tend to behave like Settlers and put down roots. Having already established themselves, they stay in their comfort zone, follow protocols and rely on what's available. The mindset is one of *comfort and consumption*.

### The Perpetual Rookie

Learning how to pivot between savvy veteran in some situations to rookie in others gives you the agility and helps you innovate and stay relevant. For example, if you are beginning a new product development cycle, you might invoke your rookie smarts by talking to outside experts, asking the naive questions, and carefully orchestrating a quick experiment to test the viability of bold ideas. However, if your project team is floundering, dead in the murky waters of corporate bureaucracy, you might toggle to your veteran savvy — what veterans are capable of contributing when they are at their best — helping the team clarify their goals, simplifying their approach, and connecting them to the people inside the organization who can speed their progress.

When the world is changing fast, you want a rookie on the job. Not just any rookie — you want someone with rookie smarts. You want someone who can free herself from the past, mobilize the expertise of others, operate cautiously but quickly and then forge ahead into new territory. In short, you want someone who can learn.

## Backpackers: An Unencumbered Mind

Too often our managers become burdened by yesterday's ideas, today's resources and the expectations for continued performance tomorrow. Instead of using their success as a launching pad, they become anchored in place, guarding and protecting the status quo.

### The Backpacker's Way

The rookie has an unencumbered mind that allows him to question the establishment and a hopeful mindset that allows him to see new possibilities.

**Practice 1: See New Possibilities.** Like a hiker who trudges obliviously past a snake lying quietly in the brush, rookies simply walk past the obstacles they don't see. And because they don't know what they are supposed to be looking for, they can end up seeing what others fail to notice. How do rookies identify new possibilities? They ask fundamental questions, see new patterns and find mistakes.

- **Ask the Fundamental Questions.** Newcomers, without the weight of knowledge, ritual and rule to constrain their thinking, often ask questions that cut to the core of an issue. It isn't that experienced people don't recognize problems. But the longer we live with a problem, the less likely we are to think we can do anything about it. People fresh to a problem haven't convinced themselves that they can't solve it.
- **See New Patterns and Find the Mistakes.** When we have identified a pattern, it becomes difficult to ignore the pattern and to see what actually exists. We fill in the blanks, mentally forcing reality to conform to the pattern we expect to see. Fundamental errors can go undetected by those with mastery. On the other hand, novices can find mistakes and logical flaws in conventional wisdom. Their lack of pattern recognition also accelerates and fortifies their learning since our brains retain what they work harder to obtain.

**Practice 2: Explore New Terrain.** It is difficult to escape the gravitational pull of comfortable competence. But when we have not yet developed a body of expertise, we are free to explore new terrain and find new paths.

- **Take Shorter Paths.** Freed from convention and protocol, neophytes find simple patterns and direct paths.
- **Make Bigger Asks.** Not knowing perceived limits enables rookies to score more often, and it also allows them to score bigger gains.
- **Act Erratically.** Without a preestablished pattern, rookies can act erratically, which can confuse those with mastery and catch them off guard.

**Practice 3: Act Wholeheartedly.** Without reputation, rookies can operate without ego or fear of falling. They have nothing to lose and nowhere to go but up, which spurs them to act boldly and reach higher.

- **Act Boldly and Recover Quickly.** Bold action brings mistakes and necessitates the courage to recover quickly.
- **Work Passionately.** Working wholeheartedly — without reservation, without exception, without limitation — is at the very core of our humanity. Through full engagement we find deep meaning in our work and serve beyond self.

The unencumbered Backpacker can venture out, but the rookie's naivete prevents him from wandering aimlessly. Aware of his own lack of knowledge, the rookie embarks on a desperate, focused, diligent search, hunting for experts who can teach him and guide his way.

## Hunter-Gatherers: Finding Expertise

The *echo chamber* is a pervasive disease of our time. This term captures our tendency to customize and configure our environment so that we only hear and see our own thoughts and beliefs echoed back to us.

Veterans, brimming with opinions formed by years of experience, can insulate themselves in this echo chamber and begin acting like small-town locals — old codgers sitting around Joe Bob's coffee shop, having the same conversation they've been having for the last 20 years. Their opinions are predictable, their observations routine. In this mode, we are confident that we understand our surroundings, and we stop asking questions and seeking guidance. Old ideas and opinions reign supreme, while new ideas and information bounce off the walls.

### The Hunter-Gatherer's Way

In a hunter-gatherer system, the focus is outward, venturing forth, harvesting game and foraging for resources to bring back to the tribe. Rookies work in Hunter-Gatherer mode because they have no existing resources or expertise to tend to or rely on. Here's what rookies do when operating in Hunter-Gatherer mode:

**Practice 1: Scan the Environment.** Sense making, or rapidly converting information into intelligence, begins with gathering data. Rookies are sense-making machines. Whether they are connecting the dots between data points or connecting with colleagues across a company, their value comes in their outward orientation. And, in this hungry search for much-needed knowledge, they seek out experts to teach and guide them.

**Practice 2: Seek Out Experts.** Rookies are four times more likely than veterans to ask for help. With little to lose and everything to gain, rookies seek help and reach out to experts who can guide them and augment their deficits. In addition to reaching out more often, when they do reach out, they reach out to far more people — five times as many on average. When you ask one veteran, you get one expert. When you ask a smart rookie, you gain access to a team of experts.

**Practice 3: Mobilize Ideas and Resources.** The best rookies seek out and marshal expertise and bring back their newfound network, like a big-game hunting prize to feed their community. In complex environments, winning organizations tap into the greatest number of brains. Crowdsourcing is growing as a viable and efficient alternative to in-house or expert-led solutions to complex problems. Perhaps it is a flash mob of talent, mobilized around an immediate challenge, which then dissipates when the problem is solved. But these talent pools can extend beyond simple crowdsourcing to form lasting learning communities.

## Firewalkers: Moving Cautiously but Quickly

Understanding the physics behind walking on fire unlocks one of the keys to those with rookie smarts. They move like firewalkers: both cautious and quick. How can a lack of experience actually help someone take bold action without getting burned?

The rookie's reality consists of a glaring, gaping hole between what they've previously done and what they must now do. They don't necessarily lack self-confidence. What they do lack is situational confidence — the easy assurance that you've successfully completed a similar task in the past. Consequently, the rookie feels anxious, uncertain of his footing and eager to prove himself.

The rookie's anxiety is not of the clinical variety that causes people to shut down; rather it is a productive paranoia, an urge to break out of one's comfort zone, to join a new peer group, to move to the next level of performance. Our study revealed that people in rookie situations were twice as likely to feel pressure to impress their coworkers than in situations in which they were more experienced. They also reported feeling more pressure to impress their bosses in these rookie situations. Yet, counterintuitively, employees were more likely to feel a debilitating sense of pressure in situations in which they had more experience. In other words, pressure to perform propels rookies forward while the same sort of pressure impedes progress for veterans.

### The Firewalker's Way

Anxious to establish themselves as productive members of a peer group, top-performing newcomers propel themselves forward through iterative cycles of experimentation while learning to stay deeply connected to their stakeholders. In their mad dash to advance, the top-performing newcomers tend to take small steps, move quickly, and seek feedback and coaching.

**Practice 1: Take Small, Calculated Steps.** The newcomer is operating in the dark, so she minimizes risk by taking small steps. Rookies use every available sense to navigate their way through an unfamiliar environment. They maintain close contact with their surroundings to avoid unanticipated obstacles and calibrate their movements in order to mitigate the risk associated with exploring new territory. Rookies aren't big risk takers. They only act boldly when they don't realize they are acting boldly. They take risk out of a venture with their small steps and continual feedback loops. Once they realize how clueless they actually are, rookies become risk-mitigating machines.

**Practice 2: Deliver Quickly.** Instead of pacing themselves for a long, slow race, rookies tend to operate in bursts and often at full throttle. Despite, or perhaps because of their speed, rookies can quickly get off track. Just because they solve problems quickly doesn't mean that they are good at figuring out which problems are the most important. Knowing they are highly motivated to move fast, a wise manager will make sure the rookie is pointed in the right direction before the starting gun goes off.

**Practice 3: Seek Feedback and Coaching.** Moving cautiously but quickly in unfamiliar terrain, rookies require constant feedback to know if they are on track. Because rookies seek frequent feedback, they regularly receive vital information that helps them quickly learn and calibrate their performance. As they adjust, their adaptability invites the coaching that so naturally follows feedback.

Smart managers need to make sure rookies have a regular stream of feedback and information to help them calibrate their performance and the connection points to stay on track. And, if experienced managers are truly smart, they will ensure that they, too, are receiving the same sorts of feedback to help them optimize their own performance.

Because rookies lack confidence, they operate cautiously but they also operate quickly, seeking to close the knowledge gap. Through feedback, they rapidly convert information into intelligence.

You don't need to walk on coals to develop a Firewalker's mindset. You simply need to move closer to the heat in whatever venture you are pursuing and begin to take well-considered risks. And if you fail fast, make sure you learn faster.

## Pioneers: Forging Ahead

Like pioneers, rookies build paths through new territory every day, whereas veterans tend to stay where it is comfortable and settle in. For too many wizened workplace veterans, work becomes the equivalent of ordering a hamburger at every new restaurant we try. Once comfortable and consuming the fruits of previous labor, we can slip into a mode of behavior where we rely on what's available, follow protocol and stay in a comfort zone.

### The Pioneer Way

Rookies are willing to tolerate discomfort and evince a relentless drive to tame the wilderness and survive. In our research, we've found that those who are new to a situation or type of work tend to build new tools and structures, improvise and work relentlessly.

**Practice 1: Build New Tools and Structures.** How does working in "survival mode" focus your energy and attention? We learn because we have to. Out in the field, in the moment, we must improvise and adapt to ever-changing conditions in order to survive.

**Practice 2: Improvise.** We found that those new to a task were twice as likely to believe they didn't have the resources or skills they needed. So they have to get scrappy and make do with the resources they can scrounge up. Rookies are improvisers and imperfectionists.

When faced with constraints, we improvise. We get creative. Improvisation can lead to discovery and land us in new places.

**Practice 3: Work Relentlessly.** Perhaps the most motivated are those who lack another choice. For example, when the boss has already hired a backfill for our former job, we have no choice but to push forward. There are several conditions that cause newcomers, facing large gaps in their knowledge and capability, to move forward with urgency, working relentlessly along the way.

1. Basic needs are not yet met. When we are on the bottom rung of the ladder, and when that rung is mostly underwater, we are propelled to climb.
2. New player. When we are the new guys on a team, we are highly motivated to establish ourselves as players.
3. Public scrutiny. When all eyes are on us, retreat can equal failure.

## PART II: CULTIVATING ROOKIE SMARTS

## The Perpetual Rookie

Perpetual rookies are leaders who, despite years of experience and success, maintain a rookie mindset. They stay amazed — curious, humble and fun-loving. Instead of clinging to a false sense of mastery, they live and work perpetually on the steep side of the learning curve. These leaders aren't just rookies by circumstance; they are rookies by choice and through deliberate practice. It is a choice available to each of us.

**Curious.** Most researchers agree that curiosity is an innate, basic emotion that can be nevertheless easily extinguished by habit, routine and other life experiences. Once lost, how do we rediscover our innate curiosity? By breaking habits and thrusting ourselves into new and unfamiliar circumstances where our assumptions are challenged and our senses can be overloaded.

**Humble.** The first step to learning is accepting that we don't know everything. When we recognize our own limitations, we seek guidance and remain open to correction. Humility, without regard for expertise or position, allows for the development of coachability and teachability. In fast times, everyone is winging it — even the leaders at the top. But amazing things can happen when we admit that we don't know.

**Playful.** If mastery requires deliberate practice, being a perpetual rookie requires purposeful play. When our work is play, time flies and we stick with it. We forgive mistakes, improvise and learn. We invite others to join the fun. This levity effect lightens our load as we climb an arduous learning curve.

**Deliberate.** Perpetual rookies are also deliberate; they approach their work with a great deal of intentionality. They are likely to be mindful of what they are doing and how they will do it. They don't jump in impulsively or erratically; instead they deliberately adopt an open mindset. The real skill of the perpetual rookie is knowing when to play the role of veteran and when to don the rookie cloak. In times of tumult and transition the best leaders know when it is time to stop, unlearn and relearn.

## Rookie Revival

What does it take to rouse us from the comforts of convention, from the boredom and complacency and downright unhappiness that so many professionals experience?

In surveying approximately 1,000 professionals, we found a strong correlation between "challenge level" at work and "satisfaction level" at work. As the challenge level goes up, so does satisfaction. Unfortunately, job satisfaction plummets for those shielded from real challenge.

Taking on more work can be exhausting, and yet, ironically, the antidote to this strain of burnout isn't *less* work.

The cure for burnout is *harder* work. The escape from a mountain of work is not *through*, but *up* — up the learning curve, that is. It is in these moments, when we start working our intellectual "muscles" again, that we feel the most engaged.

### Learning to Relearn

Here are some strategies for planning your own climb on new terrains. First, change your mindset: Shift from the certainty of leadership to the uncertainty of learnership. Second, change your venue: Place yourself in a situation that demands rookie thinking and behavior. Finally, pace yourself.

**1. Shift from Leader to Learner.** Psychologists use the term "confirmation bias" to capture the tendency of people to favor information that supports their preexisting beliefs or hypotheses. One reason we are susceptible to confirmation bias is that once we are deemed experts, once we are in a position of power, the costs of being wrong can feel dangerously high. Another reason we accept information that supports our preexisting beliefs is that doing so often appears to be the shortest, most direct route between where we are and where we'd like to be. To defeat the blinders of confirmation bias, we need to shift our sights: Instead of looking down from our position of leadership, we need to begin looking outward and upward.

**2. Step into a Discomfort Zone.** When we leave our comfort zones, we become more likely to encounter what cognitive scientists call "expectation failure." These are situations when we expect one thing to happen but are surprised when something else takes place. When things work as we expect them to, we begin to assemble mental scripts that explain the world around us. These scripts help us predict the outcomes of our actions while at the same time limiting our thinking. It is easy to become boxed in by our scripts. But when we are in an unfamiliar situation and things don't work the way we expect them to, our scripts fail. Without a way to explain events, we are motivated to seek and find new explanations — we are motivated to learn.

**3. Take Small Steps.** When the gap is too big, we break. We may simply give up, or we may even be forced out. Those who master the learning curve, on the other hand, have sized the gap just right by taking on challenges that are uncomfortable but not impossible to achieve. As we take small steps, we build our capacity to climb up steeper, higher paths.

Aspiring perpetual rookies must continually guard against routines. The very rituals that rejuvenate us, at some point become the habits that bind us. In your pursuit of renewal, break routines, change rituals and be skeptical of dogma. Maintaining our rookie smarts is like maintaining a house or your health — it is never done.

## The Rookie Organization

Rookies are more capable than most people imagine. A manager at eBay remarked, "I had thought that people who were new to the work were empty and I needed to fill them up. But they come whole and full, just like any other collaboration." Still, rookies need leadership and guidance. In fact, rookies tend to operate at their best working under vigilant, mindful leaders — leaders who give them freedom to explore new possibilities coupled with enough responsibility to propel them up a learning curve. Rookies need managers who know when to rein them in and when to unleash them, and they need to be placed in an environment conducive to learning and insight. Here are three ways vigilant leaders can maximize the contributions of their rookie talent:

**1. Freedom with Direction.** To provide clear direction, do the obvious — clarify what needs to be accomplished and why it's important. Set the guardrails and criteria for completeness of solution. But remember to also direct them to the experts who can provide guidance. You can help activate the Hunter-Gatherer mode by providing a set of contacts, making introductions, and even challenging them to consult with at least five experts. Once you've given clear guidance on what, why and who, let them figure out how.

**2. A Constructive Challenge.** Offer stretch goals, but don't overwhelm rookies. When someone is in a rookie assignment, err on the side of making the first challenge doable — make it a constructive "micro-challenge," one with enough tension to create movement and with just the right mix of relevance, difficulty and opportunity for recognition. When leaders offer a right-size challenge, people contribute quickly, build confidence and are readied for bigger challenges.

Along with a micro-challenge, rookies need micro-feedback — a steady stream of information to help them correct course and stay on track. The best feedback comes in small doses and quick bursts. It is typically delivered in drive-by fashion rather than in formal meetings.

**3. A Tightrope with a Safety Net.** When people are working above their current skill level, with real responsibility and visibility, they are essentially walking on a tightrope. Veteran leaders and mentors must not only place the rookie up on the tightrope; they must also be there

to catch them when they fall. In establishing a safety net, remember that:

1) the best safety nets aren't managers, but rather senior colleagues and project managers (who oversee the client engagements rather than directly manage staff).

2) the safety net should be positioned as a service, a benefit to which an employee is entitled, rather than a punishment.

3) managers should have a large enough span of control that they can offer meaningful coaching and mentoring but not enough time to micromanage their junior talent.

4) when someone is a complete rookie, the rope may be set low and the net set high. But as rookies gain experience and have success, the manager can raise the rope and lower the net without rookies even knowing the parameters have changed.

The rookie holds an equal if not greater obligation. Rookies need to be willing to work outside their comfort zones, ask for help and learn quickly. They also need to let their management know when they are ready for a stretch assignment. Despite these expectations for rookies, managers don't need to wait for someone to declare their readiness. Sometimes people just need a push.

## Building Powerful Teams

Not only are rookies capable of doing amazing work themselves; they are frequently the critical spark that ignites a team of veterans. Often the combinations of rookies working in tandem with veterans is what produces truly spectacular results. Here are four configurations that have the potential to produce stellar results.

**The Ground and the Spark.** In this power duo, the veteran typically brings clarity, gravitas of purpose and a ground to reality. The rookie brings new energy and determination.

**The Talent Scout and the New Talent.** In this power duo, the rookie brings novel ideas and an innovative approach, while the veteran sees and champions the promise and potential in their work.

**The Advisor and the Entrepreneur.** One of the most powerful talent configurations in technology and innovation-driven organizations is the partnership between the rookie entrepreneur and the veteran business adviser. The rookie brings new ideas and technologies that have the potential to disrupt an entire industry. The veterans typically open up their business networks, creating rich terrain for rookies in Hunter-Gatherer mode. Veteran business leaders provide critical advice and words of caution. To generate a big impact, pair someone who wants to change the world with someone who already knows how the world works.

**A Hetero-Genius Team.** When a team is composed of people of dissimilar backgrounds and experience levels, working together can be harder, but it can also produce better outcomes, especially where creative, cutting-edge thinking is needed. When the distinct talents of both the veteran and the rookie are appreciated, the tension between their disparate contributions sparks collective brilliance. When either is dismissed, the tension dissipates into frictional loss.

## Rethinking Talent Management

Adjust your talent management practices to keep the entire organization agile and in a state of constructive challenge. For example:

**Hiring** — Hire for traits shared by perpetual rookies, such as curiosity, humility, playfulness, and deliberateness.

**Job design and succession planning** — Design jobs so that each job has a rookie component, rotate talent to keep it fresh, and, when considering a candidate for promotion, look for a history of success in rookie assignments.

**Learning and development** — Target your development investments when people are in rookie assignments and are most open to learning.

Rookie smarts isn't an age or an experience level; it is a state of mind — one that is available to those willing to unlearn and relearn. It is also a choice. As the world of work speeds up, we can either slow down and get left behind, or we can quicken our step and keep up. It is a choice between the dull ache of stagnation and the short-lived discomfort of unlearning what has worked for us in the past, and then relearning what we need to know now.

In the new world of work, the game will go to the learners.

# Springboard

## Launching Your Personal Search for SUCCESS

by G. Richard Shell

### THE SUMMARY IN BRIEF

Everyone knows that you are supposed to "follow your dream." But where is the road map to help you discover what that dream is? In *Springboard*, award-winning author and teacher G. Richard Shell helps you find your future. His advice: Take an honest look inside and then answer two questions: "What, for me, is success?" and "How will I achieve it?"

You will begin by assessing your current beliefs about success, including hidden influences of family, media and culture. These are where the pressures to live "someone else's life" come from. Once you gain perspective on these outside forces, you will be ready to look inside at your unique combination of passions and capabilities. The goal is to focus more on what gives meaning and excitement to your life and less on what you are "supposed" to want.

Drawing on his decades of research, Shell offers personalized assessments to help you probe your past, imagine your future, and measure your strengths. He then combines these with the latest scientific insights on everything from self-confidence and happiness to relationships and careers.

*Springboard* will help you reevaluate your future and envision success on your own terms.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to discover your innermost desires and follow them to success.
- How to ask the right questions in order to discover what success means to you.
- How to craft your own goals and devise your own success based on your unique skills and personality.
- How to focus on what gives meaning and excitement to your life, not just on what you think you are "supposed" to want.

## PART I: THE FIRST QUESTION: WHAT IS SUCCESS?

Examine your current assumptions and beliefs about success. Once you begin to think about it, you may be surprised at how many of your ideas about success originate from your culture, family, friends and exposure to mass media. As you become more aware of these sources for your beliefs, you can decide whether to embrace, reject or integrate them into new and more creative ways to approach your life. Life usually demands trade-offs. Where do you set your priorities?

## The First Answer: Choose Your Life

Consider these four important theories about success.

First, finding out what success means to you often involves trial and error, not just theoretical contemplation. You have to take risks, try things out and experiment. Your search may involve flashes of insight that will turn out to be false signals. But you must nevertheless summon the courage to try out new roles, admit they do not suit you, and return to the search process.

Second, your goals do not just appear out of thin air. You need to become aware of the success values your culture and family endorsed. That way, you can be sure the ideals you are shaping your life around truly reflect *your own freely chosen* values.

Third, success is a multidimensional concept, not just a work-related one. Family and personal relationships matter too. Fourth and finally, success is not a single, once-and-for-all destination. It is a journey with way stations, stopovers and campgrounds. You can get to one place, enjoy it and then move on.

### Your Success Values

To help you understand your own intuitions about success, I have devised a values assessment called the Six Lives Exercise. This diagnostic will help you investigate where your ideas about success come from and lead you to more detailed reflections on all the topics ahead. Here's how it works: Read through all six of the following biographical sketches. Then, go back and think more carefully about them. Finally, rank them from most to least "successful," giving your top choice number "1" and your bottom choice number "6." No ties are allowed. Respond as honestly as you can. Once you have ranked them all, we will see what your choices may reveal about your current success thinking.

**Teacher.** Patricia Kelly teaches physics and serves as head coach of women's track at a suburban high school (children ages 14-18). Her spouse manages a chain of retail stores his family founded 30 years ago. Pat has led her school's "Science Olympics" teams to three regional championships and one National title over the past five years. Under Pat's guidance, the high school has placed a number of students in the country's top scientific universities (places such as MIT and Cal Tech in the U.S.). Pat has two daughters, one of whom earned a Ph.D. in physics and is now working for a high-tech company. The other ran into trouble in high school, never graduated, and lives in a distant city. She has rebuffed all attempts by the family to stay in touch with her.

**Banker.** Jane Ruly has worked for her entire career at a multi-national bank in a large city, where she has risen through the ranks to become a regional vice president for wealth management services. She is fiercely loyal to both her employer and its customer base. Jane is an accomplished marathon runner and a single parent who divides her non-working time between fitness training and her young child, Julie, who has severe learning and physical disabilities. Friends and family members have encouraged Jane to find an institutional home for Julie so she can "get on with her life," but Jane responds that "Julie

is my life — I would never dream of letting anyone else take over her care." Last year, Jane ran the New York Marathon while pushing Julie in a specially-rigged carriage — a feat that earned her a segment on an international news television program about parents of children with disabilities. She has dated several men over the past few years, but she has never believed in marriage — in part because her own parents were so unhappy together.

**Wealthy Investor.** Peter Tailor is a private equity investor who balances his mostly single life (he married once but divorced four years later) between homes in London, New York and Bermuda. He made his first fortune guiding a startup Internet company through its early stages and then selling it to a large competitor. His $240,000 investment turned into a handsome payoff of $50 million. It has been all "upside" since then. A leading business magazine recently published a cover story on Peter, revealing him to be an avowed free thinker, lover of freedom and committed libertarian. In the article, he said, "I love the excitement of placing a big bet and seeing it pay off." His passions outside the office include parties in far-flung places ("I like to work hard and play hard") and hang-gliding ("being in the air alone gives me a sense of freedom"). He donates generously to conservative political causes and is consulted by influential politicians across the globe for his opinions regarding the global economy.

**Stone Mason.** Fred Hampshire is a stone mason who has lived his whole life near a large city. A passionate student of historical architectural design, he has been married to his wife Mary for 52 years, and he has three children (a lawyer, a banker and a homemaker) and seven grandchildren. "Every piece of stone you pick up is different," he once told a news reporter. "In my work, I can see what I did the first day I started and watch it grow. And I go back years later and it is still there to see. It's a good day laying brick or stone. It is hard work, but you get interested in fitting each piece in just its right spot, and the day is over before you know it." Hampshire admits that money has sometimes been a problem, but he proudly points out that he personally helped to build homes for each of his three children.

**Tennis Pro.** Janice Chung is a hardworking, professional tennis player who has won four major tournaments in her career and finished in the top 15 money-winners in seven of the past 10 years. She started playing tennis with her father at the age of 5, and, as a result of the relentless drills her father insisted on, she perfected her game. Tennis has dominated her life since then. A few years ago, she founded the Chung Tennis Institute, a group that provides free tennis instruction and "life skills training" to young women who live in a poor urban neighborhoods. She is married to a real-estate developer and, unable to have children herself, has adopted three Korean kids, now aged 2, 6 and 7. "It's a tough life on the tennis circuit," she told a tennis magazine recently. "You don't get as much time with your children as you would like."

**Nonprofit Executive.** Bill Paulson used to be an award-winning investment advisor for wealthy families in a major city, where he was well known for his ability to manage complex estates. He has been married for 20 years to his wife Terry (a child development counselor), and they have four children. Bill was considered a "top producer" in his office and earned more than anyone else in his group. But five years ago, Bill quit his job and took a huge pay cut to become a top administrator at a fast-growing nonprofit service organization founded by a charismatic religious leader from South Africa. "I heard God's call," Bill told the local paper, "and I answered." Bill's main project has been help to carry out the group's "international mission" helping rural African villages secure clean water supplies. Bill helped to organize a coalition of religious charities to fund this work, and his investment skills have doubled the investment value of the money raised to date. The family is planning to take the next two years off to go live and work in a rural community in an impoverished African country, where they will run one of the coalition-funded water projects. Bill's and Terry's kids range in age from 8 to 16, and none of them want to go. But Bill and Terry are determined take the entire family.

## The Two Sides of Success

If you are like most people, you probably measure success in two different ways. The first is the private, "inner" perspectives of fulfillment, satisfaction and happiness. Each person profiled in the Six Lives Exercise has some claim to inner fulfillment. But most also have something missing. The Wealthy Investor has no family. The Tennis Pro's work takes her away from her children. One of the Teacher's children won't speak to her. The Banker's disabled child dominates her life, and she seems unable to commit to a long-term relationship. The Nonprofit Executive's children are in rebellion about leaving their friends for an isolated life in rural Africa.

Against these compromised claims to inner harmony, only the Stone Mason appears to "have it all." He has a stable, loving relationship with his wife of 52 years. His three accomplished children and grandchildren live nearby. And he takes a sincere, craftsmanlike satisfaction in his work — a job that he controls and which enables him to see the fruits of his labors every day. His work appears to be meaningful to him. There is almost a Zen-like, spiritual dimension to the Stone Mason's life.

Thus, people who pick the Stone Mason's life as number one or number two are usually voting for a life with more of this "inner" dimension of success. Most of us would be hard put to define anyone as "successful" whose life lacks joy or satisfaction.

But there is a second, more public "outer" perspective on success that motivates many day-to-day actions and decisions much more than the quest for inner happiness. These are desires for achievement, social recognition and respect.

Seen from this perspective, the Stone Mason's life is missing something that all the other lives seem to have: a notable accomplishment that has been recognized by his society or his peers. All the other people profiled have achieved something that a broader social group has taken note of, ranging from quasi-celebrity status (the Wealthy Investor and Tennis Pro) to international media attention on behalf of a worthy cause (the Banker) to good works on behalf of the poor in Africa (Nonprofit Executive and Teacher).

People who rank the Stone Mason near the bottom of their Six Lives may admire the Stone Mason's devotion to the satisfactions of a craft and a family, but they see overall success in life as including more emphasis on that outer-achievement perspective.

If one of these lives spoke much more clearly to you than the others, that may be telling you something about

the direction you want your life to take and what, for you, constitutes the true measure of success.

Balancing the inner and outer sides of success is not always an either-or trade-off. If you pick the right work, for example, you can gain inner satisfaction from the activities that result in outer achievements. And if you seek the right inner satisfactions, work sometimes takes care of itself.

**Success Step #1: Balance the two sides of success.**

## An Easy Answer: Be Happy

People often define success in terms of happiness, but you may be surprised, once you start to think about it, at how hard happiness is to pin down.

People use the word "happiness" to describe at least three different things: a momentary positive emotion, an overall evaluation of the past or hope for the future, and a deep sense of joy, connection and meaning.

### Momentary Happiness

Happiness is one of life's great positive feelings, an emotional experience of joy, love, warmth, rapture, pleasure, tenderness, intimacy or exhilaration. Momentary Happiness comes in bursts. It makes gloomy days brighter and sunny days sweet. No matter how you define success, Momentary Happiness ought to play some role in it.

Two simple ideas can increase your supply:

**Slow down and pay attention.** Increase Momentary Happiness through one simple adjustment in your life: pay more attention to the pleasant aspects of it.

**Reframe your expectations.** Research by Professor Dan Gilbert at Harvard reveals that expectations surrounding events such as weddings, graduations and birthdays that are grounded in cultural assumptions about what is "supposed" to make us happy often interfere with experiencing Momentary Happiness. When expectations run high, future events seldom measure up.

Just as mindfulness helps you focus more on the pleasant things that are already happening, it can also help cure you of unrealistic expectations and adaptations.

### Overall Happiness

Raising your Overall Happiness is not the same as increasing the number of Momentary Happiness experiences you have on a given day. Increasing Overall Happiness can pay meaningful dividends.

To measure your Overall Happiness, imagine a ladder with steps numbered zero (worst possible life) to 10 (best). On which step do you stand at this time?

Most people rank themselves between six and 10 on Overall Happiness scales. We are not happy all the time; neither are we sad all the time. Like the earth's tides, feelings of overall satisfaction ebb and flow.

Researchers suggest four ways to help raise one's score:

1. **Make your health a priority.**
2. **Achieve some long-term goals.**
3. **Invest in your relationships.**
4. **Make enough money.** Research shows that wealth can improve your Overall Happiness. Achieving it produces a bump in Overall Happiness associated with conquering difficult-to-achieve challenges.

### The Third Path: Wisdom Experiences

Wisdom Experiences may be more important to inner success than any form of conventional happiness. Marty Seligman, author of *Flourish: A Visionary New Understanding of Happiness and Well-Being*, argues that the cheerful moods of Momentary Happiness and the positive memories that provide the sources for Overall Happiness are "not entitled to a central place in any theory" of the meaningful life. Seligman suggests combining five elements to create a life worth living: positive emotions, engagement, relationships, a sense of meaning that comes from serving a purpose larger than yourself, and accomplishments, both short-term and long-term. When folded together, these create well-being.

**Success Step #2: Define happiness for yourself.**

## Society's Answer: Seek Status, Fame and Fortune

When everyone around you agrees on what success means, it is all too easy to join them. And if you allow others to define your goals for you, then there is a pretty good chance you will end up holding a prize you did not choose and do not want. At that point, you will finally have to define success for yourself. Examine two of the most important outside influences on success beliefs: culture and family. Each can pose unique problems.

Families sometimes complicate the journey to authentic success by laying a heavy burden of expectations on their children. Later in life, the habit of striving to satisfy other people's aspirations can be hard to break.

Individuals take their cues about what is "good or desirable" in life from what they think their culture judges to be good and desirable.

Success values within any given community are often invisible because they are so little debated. Parents, siblings, coaches, bosses, clergy, inspirational speakers, lyrics to

popular songs communicate powerful suggestions about success. All these cultural inputs work their way into the subconscious mind.

The invisible cues provided by your culture then set the benchmark that, when you meet or exceed them, give you a sense of achievement. Those same benchmarks also instill dismal, defeated feelings when you think you have fallen short.

The values your family and culture instilled in you will play a defining role in how you measure your success. To define it for yourself, you need to consider which of those values you endorse and which ones you reject.

### Success Addicts: Hungry Ghosts

Those who acquire an obsession with symbols of conventional success turn into Hungry Ghosts, which is the name Buddhists give to people who cannot get enough status, wealth or power. The "Big Two" — fame and fortune — dominate mass media images of what success means. Anyone who relentlessly seeks status, recognition or power to bolster his or her self-image as a "somebody" is at risk.

As you consider your own ideas of success, keep these factors in mind:

1. You can never be successful if you spend your life living someone else's dreams.
2. People who choose status, fame or fortune for its own sake will never feel secure enough, famous enough or rich enough.
3. When you get past all the cultural success symbols, two things stand out as worth achieving: financial security and the informed respect of people who know you well.

**Success Step #3: Gain perspective on your family and your cultural beliefs.**

## An Inspired Answer: Find Meaningful Work

Your concept of success may be about more than work. But doing work that matters to you is probably a step in the right direction. Consider what deeply felt experiences may serve as sources of inspiration to find meaningful work.

The concept of meaningful work encompasses three interlocking circles: *Reward Driven Work*, which is work that others will reward you for doing; *Talent-Driven Work*, or work that uses your talents and strengths; and *Work That Ignites You Emotionally*, which is work you are passionate about, paid or not.

The place where all three circles intersect is where many people find the most sustainable forms of meaningful work.

### Seven Foundations for Meaningful Work

Here are seven specific foundations on which to build a conception of work as more than just a job or a career. These are captured by the acronym PERFECT.

**Foundation #1: Personal Growth and Development**

"Jobs are like college courses. Each one you take teaches you a set of new skills and offers a fresh perspective on life. They aren't meant to be permanent, most of them. They are only stepping stones." Holly Robinson, *Huffington Post*

**Foundation #2: Entrepreneurial Independence**

Meaningful work can be as simple as "autonomous work." People find their way into a life of entrepreneurial independence from almost any imaginable background.

**Foundation #3: Religious or Spiritual Identity**

Religious faith is not required for work to have meaning, but vocations that embody commitment to religious or spiritual values can and do constitute meaningful work for millions.

**Foundation #4: Family**

The right kind of parent-child relationship can foster a deep sense of vocation-based meaning, promoting growth in parent and child alike. Children given the freedom to choose their own path often find meaning in the work they select by striving to justify the confidence their families placed in them.

**Foundation #5: Expressing Yourself through Ideas, Invention or the Arts**

For those with creative talents, history suggests that work involving personal, original expression — whether through music, painting, words, designs or inventions — can be deeply meaningful. The people who choose a life of self-expression are the creators of culture in each new generation.

**Foundation #6: Community — Serving a Cause, Helping People in Need**

Work that serves a purpose bigger than yourself, whether it is helping people in the community or serving a cause you believe in, can be a source of deep meaning.

**Foundation #7: Talent-Based Striving for Excellence**

Aspire to the highest standards of excellence in any field for which you have talents. Start with a passion and develop it into a lifelong commitment to excellence. Or start with a talent, commit to developing it, deepen it with hard work, and finally arrive at a passionate commitment.

Final word of advice: The distance between a job or career and "meaningful work" is often shorter than you

think. Consider the "sweet spot" where talent, passion and your ability to earn a living overlap.

**Success Step #4: Seek meaningful work.**

## PART 2: THE SECOND QUESTION: HOW WILL I ACHIEVE IT?

# Discover What You Can Do Better Than Most: Capabilities

Julia Child, the world's first television food celebrity, once summed up her success in a single sentence: "The more I cook, the more I like to cook." When you enjoy some activity, you tend to practice it. And when you practice hard at something, you keep getting better. Eventually, it is something you do better than most. Sometimes it becomes something you can do better than anyone else in the world.

Success starts with the thing you do better than most, whether that is writing, working with your hands, doing calculations in your head, making a tight and convincing argument, cooking or creating designs. It usually resides in the unique *combination* of capabilities you bring to what you do.

### Capabilities: They Are Always Closer Than You Think

The tools you need to make a more satisfying life are usually close at hand. Success often comes from building on what you already know — and know how to do.

In his famous Acres of Diamonds speech in the late 1800s and early 1900s, Russell Conwell, one of the most famous motivational speakers in America and founder of Temple University, told of Ali Hafed, a wealthy, happy farmer who went on a fruitless search for diamonds throughout the Middle East and all across Europe. Finding nothing, he was reduced to rags and threw himself into the ocean, dying a broken man. Meanwhile, the new owner of his farm came across a "curious flash of light" in the stream. It was not long before he discovered that the river in Ali Hafed's backyard was littered with diamonds. The farm went on to become one of the largest diamond mines in the world.

What exactly is involved in looking for diamonds? Be self-aware and honest about two things. First, you must pay attention when you feel dissatisfied with the status quo. Without some measure of dissatisfaction, you lack the motivation to start your search. Second, you must tune in to your inner voice — your intuition — and monitor the excitement you feel about your new directions.

Start looking for four diamonds — capabilities that are in your own backyard and that will create your bridge to the future.

**Diamond #1: Interests and Passions**

No matter who you are or what stage of life you are in, you have natural interests and passions for particular activities, subjects, sports, people, careers, purposes, shows, media or even games.

Start your diamond hunt by surveying passions and interests. Do not leave anything off the list, even common interests. These activities become the foundations in some successful lives.

**Diamond #2: Aptitudes and Skills**

The search for your capabilities also involves cataloging the things you do "a bit better than others" — your natural talents.

Understand the role genes play in abilities. Your ultimate income level, educational attainment and professional status will have a lot to do with the genes your parents passed on to you.

Experiences in life — both inside and outside the home — interact with genes to bring out those capabilities so they can become skills and talents the outside world observes.

You can choose to expose yourself to new experiences and environmental pressures throughout your life. Rapid progress in any new activity triggers a new genetic "expression."

**Diamond #3: Past Experience**

Each stage of life builds on the last. Successful people find constructive ways to repurpose what they have already done to launch into the next stage. Capabilities change and expand as you move from first jobs through later career moves, hobbies, additional education and training.

Successful people are smart about reaching out to create the experiences they need to give them credibility for the leap.

New experiences — especially those associated with getting trained and credentialed — frequently open up areas of activity never explored. It is the combination of these activities with your prior experiences, skills and aptitudes that offer fresh, potentially satisfying ways to spend time.

Keep in mind that the process of gaining experiences usually involves improvisation and trial and error. You need to be ready to change direction as you figure out which aspects of a new activity actually suit you and which do not.

**The Final Diamond: Your Personality Strengths**

One of the most important capabilities you bring to any activity is your unique combination of personality-based strengths. Four key aspects of personality that relate most directly to success are your attitudes about other people (Social Styles), your drive to achieve (Action-Orienta-

tions), inclinations toward intellectual or creative activities (Mindsets), and your emotional response system (Emotional Temperaments.)

We learn a lot when we see ourselves reflected in the looking glass of other people's perceptions. And you will be surprised to learn about the different versions of "you" other people reflect back to you based on the social role you play when you interact with them.

Of course, in the end, you — and only you — get the last word on defining yourself.

**Success Step #5: Look inside to find your unique combination of capabilities.**

## Set Yourself on Fire: Motivation

To motivate yourself to succeed, you need two kinds of energy. First, there is the slow-burning fuel of innate, satisfaction-based motivation. Second, there is the hotter, more urgent energy of competition for resources, rewards and recognition. The first kind of motivation aims you in a direction and gives you a reliable, steady, renewable supply of energy to keep moving. The second turbocharges your performance, adds adrenaline and powers you up when you need a motivational surge.

Satisfaction-based motivation is critically important to sustaining any interest or activity for a long time. But without reward-based drives, you may lack the intensity needed to do your best work. The highest levels of performance result from a combination of *both* satisfaction and reward-based motivations.

### Staying Motivated: Six Renewal Rituals

No matter what your sources of motivation, you need ways to renew it as you move through a day that poses different challenges and calls on different levels of effort. Here are six techniques that can make the difference between success and failure.

1. **Make yourself accountable:** Bring your posse. Set up a support group.
2. **Connect with role models:** Find people who inspire you.
3. **Create a motivational ritual:** Make it a habit.
4. **Compete with yourself:** Make up a prize. Create your own reward-penalty plan.
5. **Prove someone wrong:** Show them what you've got. "I'll show them!"
6. **Channel your strongest emotions:** Turn up the heat. Achieve a level of "creative stress" based on strong emotional energy.

**Success Step #6: Energize yourself by combining satisfaction-based and reward-based motivations.**

## Learn to Fail: Self-Confidence

The right kind of self-confidence is central to achievement. Confidence operates on two levels.

Level One Confidence relates to your basic and deepest sense of self — the belief in your own autonomy, moral character and ability to take action in the world. These beliefs can be forged at any stage of life through successfully overcoming a challenging obstacle that life throws in front of you. Level One Confidence can also be instilled through respect shown to you by people whom you yourself respect — based on their genuine accomplishments and character. Finally, this basic form of confidence sometimes develops through sincere faith in powers beyond your own if you are a person inclined toward such faith. The best kind of Level One Confidence combines a secure belief in yourself with an equally firm commitment to high standards of personal character.

The second type of self-confidence — Level Two — applies to specific skills and activities you undertake. Level Two Confidence, built on the belief that you can "get smarter and better" when you set your mind to it, can literally transform your actual capabilities, including problem-solving ability, academic performance and work outcomes.

A success "mindset" includes the willingness to learn, challenge your skills, focus on effort more than results, and treat failure as a stage on the journey rather than as the end of the road.

**Success Step #7: Cultivate Self-Confidence**

## Focus Your Mind: Passion, Imagination, Intuition and Reason

There are four distinct personal powers everyone uses to get things done. Think of the four forces of Passion, Imagination, Intuition and Reason (PIIR — pronounced "peer") as your achievement team — a group made up of four talented specialists each offering something unique and valuable.

When it is aroused, your Passion is the strongest, most dominant member. Your basic needs, fears and desires provide the impetus for everything you do — and play special roles in keeping you excited about long-term projects and pushing you across the finish line.

Reason contributes the analytic, logical planning skills you need to craft and carry out the goals your Passions dictate. Imagination and Intuition provide creative and integrative talents. They help you envision the future, create new solutions, and make lightning-quick adjustments when unexpected problems arise.

With these four mental powers at your command, the achievement process can get underway.

**Step #1: Consult Your Passions — Identify a Worthy Goal.** What do you want that could make your life more fun, purposeful, interesting or challenging?

**Step #2: Let Your Imagination and Intuition Generate Ideas.** To engage the powers of the subconscious mind, frame a good problem, load up on data related to it, and trust the intuitive powers to start coming up with ideas. Ideas often occur when the intentional parts of the mind either are shut down entirely or are in a distinctly relaxed state: during sleep and during relaxed moments of daydreaming, meditating, bathing, walking or driving.

**Step #3: Commit to a Specific, Challenging Plan.** Consider a set of criteria used by many businesses called SMART: A SMART plan is one that is Specific, Measurable, Actionable, Relevant and Timely. Bring more commitment to your goal: write it down, talk to others, announce it in public, and acquire a sense of accountability for it.

**Step #4: Break it Down into Small Steps.** Big goals are inspiring but are also daunting. Break them down into small, manageable chunks.

**Step #5: Improvise and Adjust — Then Close the Deal.** Life rarely works out exactly as we planned it. Successful people understand that chance and serendipity play an important part in life. When one plan falls through, step back, remember your focus and take another path.

**Success Step #8: Focus the powers of your mind to achieve long-term goals.**

## Influence Others: Credibility and Dialogue

Nobody achieves success alone. Sooner or later, you need to influence other people to make things happen. When you do, the most important tools you bring will be your credibility and your ability to engage others in genuine, give-and-take dialogue.

A large part of your success in dealing with others derives from your awareness of the automatic, semiconscious reflexes that enable humans to signal to one another that they are willing to engage in everyday cooperation.

### Getting Things Done Through Working Relationships: Credibility

Building rapport is key, but to influence someone about an important idea, you need something more than rapport. You need the substance that comes with having credibility. Credibility arises from other people's perceptions of four things: your formal and informal authority, knowledge, reputation for getting things done and your trustworthiness.

Think of credibility as a chair supported by four legs. The more secure your credibility is on each of its four supporting columns, the easier it is for your audience to take you seriously on an important matter. Your influence starts to wobble — or collapses altogether — as you take away each leg of the chair. If your audience thinks you lack relevant authority, are poorly informed about a subject, have never handled a similar problem or cannot be trusted, then you will have a much harder time being heard.

**Success Step #9: Engage others; exercise influence.**

## Conclusion

Defining and striving for success give you the opportunity to think about your life, relationships, talents and future goals. That kind of reflection, when focused on the right subjects, almost always yields substantial dividends. It can help you recognize which pathways have a better chance of leading you toward your own vision of success.

# Triggers

## Creating Behavior That Lasts — Becoming the Person You Want to Be

by Marshall Goldsmith and Mark Reiter

### THE SUMMARY IN BRIEF

Do you ever find that you are not the patient, compassionate problem solver you believe yourself to be? Are you surprised at how irritated or flustered the normally unflappable you becomes in the presence of a specific colleague at work? Have you ever felt your temper accelerate from zero to sixty when another driver cuts you off in traffic?

As Marshall Goldsmith points out in *Triggers*, our reactions don't occur in a vacuum. They are usually the result of unappreciated triggers in our environment — the people and situations that lure us into behaving in a manner diametrically opposed to the colleague, partner, parent or friend we imagine ourselves to be. So often, the environment seems to be outside our control.

Even if that is true, as Goldsmith points out, we have a choice in how we respond. In *Triggers*, Goldsmith shows how we can overcome the trigger points in our lives and enact meaningful and lasting change. Goldsmith offers a simple "magic bullet" solution in the form of daily self-monitoring, hinging around what he calls "active" questions, six "engaging questions" that can help us take responsibility for our efforts to improve and help us recognize when we fall short.

With these and other strategies, *Triggers* can help us to achieve change in our lives, make it stick and become the person we want to be.

### IN THIS SUMMARY, YOU WILL LEARN:

- The most common belief triggers that keep us from changing.
- To identify your triggers and use active questions to counter them.
- The power of the environment to influence behavior and the importance of structure to change behavior.
- Why a "good enough" attitude can harm interpersonal relationships.

# THE COMPLETE SUMMARY: **TRIGGERS**

**by Marshall Goldsmith and Mark Reiter**

**The authors:** Marshall Goldsmith has been recognized as one of the top 10 most influential business thinkers in the world. He is the author or editor of 35 best-selling books, which have been translated into 30 languages. He is one of a select few executive advisors who have been asked to work with over 150 CEOs and their management teams. Mark Reiter is a literary agent and writer who has collaborated on books with Twyla Tharp, Phil Dusenberry and Mark McCormack, in addition to Marshall Goldsmith. ## PART I: WHY DON'T WE BECOME THE PERSON WE WANT TO BE?

### The Immutable Truths of Behavioral Change

There are two immutable truths of behavioral change:

**Truth #1: Meaningful behavioral change is very hard to do.** It's hard to initiate behavioral change, even harder to stay the course, hardest of all to make the change stick. Adult behavioral change is the most difficult thing for sentient human beings to accomplish.

There are three problems we face in introducing change into our lives:

- We can't admit that we need to change — either because we're unaware that a change is desirable, or, more likely, we're aware but have reasoned our way into elaborate excuses that deny our need for change.
- We do not appreciate inertia's power over us. Given the choice, we prefer to do nothing.
- We don't know how to execute a change. There's a difference between motivation and understanding and ability.

**Truth #2: No one can make us change unless we truly want to change.** This should be self-evident. Change has to come from within. It can't be dictated, demanded, or otherwise forced upon people. A man or woman who does not wholeheartedly commit to change will never change.

If you want to be a better partner at home or a better manager at work, you not only have to change your ways, you have to get some buy-in from your partner or co-workers. Everyone around you has to recognize that you're changing. Relying on other people increases the degree of difficulty exponentially.

What makes positive, lasting behavioral change so challenging — and causes most of us to give up early in the game — is that we have to do it in our imperfect world, full of triggers that may pull and push us off course.

The good news is that behavioral change does not have to be complicated. Achieving meaningful and lasting change may be simple — simpler than we imagine. But *simple* is far from *easy*.

### Belief Triggers That Stop Behavioral Change in Its Tracks

Even when the individual and societal benefits of changing a specific behavior are indisputable, we are geniuses at inventing reasons to avoid change. It is much easier, and more fun, to attack the strategy of the person who's trying to help than to try to solve the problem.

That genius becomes more acute when it applies to us — when it's our turn to change how we behave. We fall back on a set of beliefs that trigger denial, resistance and ultimately self-delusion. They sabotage lasting change by canceling its possibility. We employ these beliefs as articles of faith to justify our inaction and then wish away the result. These are called *belief triggers* and they are:

- If I understand, I will do.
- I have willpower and won't give in to temptation.
- Today is a special day.
- "At least I'm better than..."

**Rebecca S. Clement**, Publisher; **Sarah T. Dayton**, Editor in Chief; **Ashleigh Imus**, Senior Editor; **Amanda Langen**, Graphic Designer; **A. Imus**, Contributing Editor

- I shouldn't need help and structure.
- I won't get tired and my enthusiasm will not fade.
- I have all the time in the world?
- I won't get distracted and nothing unexpected will occur.
- An epiphany will suddenly change my life.
- My change will be permanent and I will never have to worry again.
- My elimination of old problems will not bring on new problems.
- My efforts will be fairly rewarded.
- No one is paying attention to me.
- If I change I am "inauthentic."
- I have the wisdom to assess my own behavior.

There is an even larger reason that explains why we don't make the changes we want to make — greater than the high quality of our excuses or our devotion to our belief triggers. It's called the environment.

## It's the Environment

Most of us go through life unaware of how our environment shapes our behavior. When we experience "road rage" on a crowded freeway, it's not because we're sociopathic monsters. It's because the temporary condition of being behind the wheel in a car, surrounded by rude, impatient drivers, triggers a change in our otherwise placid demeanor. We've unwittingly placed ourselves in an environment of impatience, competitiveness, and hostility — and it alters us.

Even when we're aware of our environment and welcome being in it, we become victims of its ruthless power. We think we are in sync with our environment, but actually it's at war with us. We think we control our environment, but in fact it controls us. We think our external environment is conspiring in our favor — that is, helping us — when actually it is taxing and draining us. It is not interested in what it can give us. It's only interested in what it can take from us.

It's not all bad. Our environment can be the angel on our shoulder, making us a better person. Much of the time, however, our environment is the devil. That's the part that eludes us: Entering a new environment changes our behavior in sly ways, whether we're sitting in a conference room with colleagues or visiting friends for dinner or enduring our weekly phone call with an aging parent.

Some environments are designed precisely to lure us into acting against our interest. That's what happens when we overspend at the high-end mall. Other environments are not as manipulative and predatory as a luxury store. But they're still not working *for* us.

Consider the perennial goal of getting a good night's sleep. Sleep should be easy to achieve. We have the *motivation* to sleep well. We *understand* how much sleep we need. And we have *control*: Sleep is a self-regulated activity that happens in an environment totally governed by us — our home. So why don't we do what we know is good for us?

It can be blamed on a fundamental misunderstanding of how our environment shapes our behavior. It leads to a phenomenon that Dutch sleep researchers at Utrecht University call "bedtime procrastination." We put off going to bed at the intended time because we prefer to remain in our current environment — watching a late-night movie or playing video games or cleaning the kitchen — rather than move to the relative calm and comfort of our bedroom. It's a choice between competing environments.

The environment that is most concerning is *situational*. It's a hyperactive shape-shifter. Every time we enter a new situation, with its mutating who- what- when- where- and- why-specifics, we are surrendering ourselves to a new environment — and putting our goals, our plans, our behavioral integrity at risk. It's a simple dynamic: a changing environment changes us.

## Identifying Our Triggers

What if we could control our environment so it triggered our most desired behavior — like an elegantly designed feedback loop? To achieve that, we first have to clarify the term *trigger*: A behavioral trigger is any stimulus that impacts our behavior.

A behavioral trigger can be

- direct or indirect
- internal or external
- conscious or unconscious
- anticipated or unexpected
- encouraging or discouraging
- productive or counterproductive

It's helpful to take a closer look at these last two dimensions of triggers — encouraging or discouraging, productive or counterproductive. They express the timeless tension between *what we want* and *what we need*. We want short-term gratification while we need long-term benefit. And we never get a break from choosing one or the other. Encouraging triggers lead us toward what we want and productive triggers lead us toward what we need.

Try this modest exercise: Pick a behavioral goal you're still pursuing. List the people and situations that influence the quality of your performance. Don't list all the triggers in your day; stick to the trigger or two that relate to one specific goal. Then define it. Is it encouraging or discouraging, productive or counterproductive? If you're falling short of your goal, this simple exercise will tell you why. You're getting too much of what you want, not enough of what you need.

This exercise can 1) make us smarter about specific triggers and 2) help us connect them directly to our behavioral successes and failures. It's a reminder that, no matter how extreme the circumstances, when it comes to our behavior, we always have a choice.

## How Triggers Work

How does a trigger actually work within us? Are there moving parts between the trigger and the behavior?

The classic sequencing template for analyzing problem behavior in children is known as ABC, for antecedent, behavior and consequence. The antecedent is the event that prompts the behavior. The behavior creates a consequence. A common classroom example is: a student is drawing pictures instead of working on the class assignment. The teacher asks the child to finish the task (the request is the antecedent). The child reacts by throwing a tantrum (behavior). The teacher responds by sending the student to the principal's office (consequence).

But when we're changing interpersonal behavior, we're adding a layer of complexity in the form of other people. Our triggered response can't always be automatic and unthinking and habitual — because as caring human beings we have to consider how people will respond to our actions.

In adult behavioral change, there is a modification to the sequence of antecedent, behavior, and consequence. There are three eye-blink moments — first impulse, then awareness, then a choice — that comprise crucial intervals between the trigger and our eventual behavior. These intervals are so brief that we sometimes fail to segregate them from what we regard as our "behavior." But experience and common sense tell us they're real.

When a trigger is pulled, we have an impulse to behave a certain way. We can think. We can make any impulse run in place for a brief moment while we choose to obey or ignore it. We make a choice not out of unthinking habit but as evidence of our intelligence and engagement. In other words, we are paying attention.

The more aware we are, the less likely any trigger, even in the most mundane circumstances, will prompt hasty unthinking behavior that leads to undesirable consequences. Rather than operate on autopilot, we'll slow down time to think it over and make a more considered choice.

We already do this in the big moments. It's the little moments that trigger some of our most outsized and unproductive responses. The slow line at the coffee shop, the second cousin who asks why you're still single, the colleague who doesn't remove his sunglasses indoors to talk to you.

Some of us suppress the impulse. Some of us are easily triggered — and can't resist our first impulse. We have to speak up. This is how ugly public scenes begin. These tiny annoyances should trigger bemusement over life's rich tapestry instead of turning us into umbrage-taking characters from a Seinfeld episode.

# PART II: TRY

## The Power of Active Questions

Asking active questions is a magic move. Like apologizing or asking for help, it's easy to do. But it's a different kind of triggering mechanism. Its objective is to alter our behavior, not the behavior of others. But that doesn't make it less magical. The act of self-questioning — so simple, so misunderstood, so infrequently pursued — changes everything.

When asked exclusively, passive questions can be the natural enemy of taking personal responsibility and demonstrating accountability. They can give people the unearned permission to pass the buck to anyone and anything but themselves.

Active questions are the alternative to passive questions. There's a difference between "Do you have clear goals?" and "Did you do your best to set clear goals for yourself?" The former is trying to determine the employee's state of mind; the latter challenges the employee to describe or defend a course of action.

### The Engaging Questions

In an ongoing study with a steady stream of participants in leadership seminars, people answered six active questions every day for 10 working days.

1. Did I do my best to set clear goals today?
2. Did I do my best to make progress toward my goals today?

3. Did I do my best to find meaning today?
4. Did I do my best to be happy today?
5. Did I do my best to build positive relationships today?
6. Did I do my best to be fully engaged today?

Thirty-seven percent of participants reported improvement in all six areas; 65 percent improved on at least four items; and 89 percent improved on at least one item.

Given people's demonstrable reluctance to change at all, this study shows that active self-questioning can trigger a new way of interacting with our world. Active questions reveal where we are trying and where we are giving up. In doing so, they sharpen our sense of what we can actually change. We gain a sense of control and responsibility instead of victimhood.

Injecting the phrase "Did I do my best to . . ." triggers trying. Trying not only changes our behavior but how we interpret and react to that behavior. Trying is more than a semantic tweak to our standard list of goals. It delivers some unexpected emotional wallops that inspire change or knock us out of the game completely.

Imagine the Daily Questions you'd want on your behavioral change list. If you're like most people, the objectives would fall into a predictable set of broad categories: health, family, relationships, money, enlightenment, and discipline. List the goals on a chart so you can score them at the end of each day. Where appropriate make sure you begin each question with "Did I do my best to . . ." Now study the list and rate your chances of doing well over the next thirty days. If you're like most people — and 90 percent of all people rate themselves above average — you will give yourself a better than 50 percent chance of hitting your targets on all your goals.

At the start of any self-improvement project, when our confidence is high, that's a reasonable assumption. But in a world where we are superior planners and inferior doers, it rarely works out that way.

That's the secret power of daily self-questioning. If we fall short on our goals eventually we either abandon the questions or push ourselves into action. We feel ashamed or embarrassed because we wrote the questions, knew the answers and still failed the test. When the questions begin with "Did I do my best to . . ." the feeling is even worse. We have to admit that we didn't even try to do what we know we should have done.

Commitment. Motivation. Self-d iscipline. Self-control. Patience. Those are powerful allies when we try to change our ways, courtesy of Daily Questions.

There's one other ally we've left out of this discussion — the coach.

## Planner, Doer *and* Coach

There's no inherent magic to charting our Daily Questions on a spreadsheet. The only essential element is that the scores are reported somehow — via direct phone contact, email or a voice message — to someone every day. And that someone is the coach.

At the most basic level, a coach is a follow-up mechanism, like a supervisor who regularly checks in on how we're doing (we're more productive when we know we're being watched from above). At a slightly more sophisticated level, a coach instills accountability. In the self-scoring system of Daily Questions, we must answer for our answers. If we're displeased, we face a choice. Do we continue suffering our self-created disappointment, or do we try harder?

At the highest level, a coach is a source of mediation, bridging the gap between the visionary Planner and short-sighted Doer in us. The Planner in us may say "I'm going to read *Anna Karenina* over vacation," but during a holiday packed with enticing distractions, it's the Doer who has to find a quiet corner and get through Tolstoy's many pages. A Coach reminds us of the unreliable person we become after we make our plans.

Three benefits of Daily Questions are 1) If we do it, we get better; 2) We get better faster and 3) Eventually we become our own Coach. Over time, after many reminders, we learn and adapt. We recognize the situations where we'll likely stray from our plans. We think, "I've been here before. I know what works and what doesn't." And after many failures, one day we make a better choice. That's the moment when the Planner and Doer in us are joined by the Coach in us. We don't need an outside agency to point out our behavioral danger zones, or urge us to toe the line, or even hear our nightly scores. We can do it on our own.

## AIWATT

Here is a first principle for becoming the person you want to be. Follow it and it will shrink your daily volume of stress, conflict, unpleasant debate and wasted time. It is phrased in the form of a question you should be asking yourself whenever you must choose to either engage or "let it go."

**"Am I willing, at this time, to make the investment required to make a positive difference on this topic?"**

The first five words form an acronym, AIWATT (it rhymes with "say what"). Like the physician's principle, "First, do no harm," it doesn't require you to do anything, merely avoid doing something foolish.

AIWATT is the delaying mechanism we should be deploying in the interval between trigger and behavior — after a trigger creates an impulse and before behavior we may regret. AIWATT creates a split-second delay in our prideful, cynical, judgmental, argumentative and selfish responses to our triggering environment. The delay gives us time to consider a more positive response.

The 19-word text deserves close parsing: "Am I willing" implies that we are exercising volition — taking responsibility — rather than surfing along the waves of inertia that otherwise rule our day. We are asking, "Do I really want to do this?"

"At this time" reminds us that we're operating in the present. Circumstances will differ later on, demanding a different response. The only issue is what we're facing now. "To make the investment" reminds us that responding to others is work, an expenditure of time, energy and opportunity.

"To make a positive difference" places the emphasis on the kinder, gentler side of our nature. It's a reminder that we can help create a better us or a better world. If we're not accomplishing one or the other, why are we getting involved? "On this topic" focuses us on the matter at hand. We can't solve every problem. The time we spend on topics where we can't make a positive difference is stolen from topics where we can.

AIWATT isn't a universal panacea for all our interpersonal problems. It's been given prominence here because it has a specific utility. It's a reminder that our environment tempts us many times a day to engage in pointless skirmishes. And we can do something about it — by doing nothing.

## PART III: MORE STRUCTURE, PLEASE

## We Do Not Get Better Without Structure

We do not get better without structure. Structure limits our options so that we're not thrown off course by externalities. If we're only allowed five minutes to speak, we find a way to make our case with a newfound concision — and it's usually a better speech because of the structural limitations (most audiences would agree).

Imposing structure on parts of our day is how we seize control of our otherwise unruly environment. When we formulate our bucket list we're imposing structure on the rest of our life. When we attend church every Sunday or track our weekly running mileage, we're using some form of structure to gain control of the wayward corners of our lives. We're telling ourselves, "In this area I need help." And structure provides the help.

Successful people know all this intuitively. Yet we discount structure when it comes to honing our interpersonal behavior. Structure is fine for organizing our calendar, or learning a technically difficult task, or managing other people, or improving a quantifiable skill. But for the simple tasks of interacting with other people, we prefer to wing it — for reasons that sound like misguided variations on "I shouldn't need to do that."

## We Need Help When We're Least Likely to Get It

At the intersection where structure and behavior bump up against each other, there's a paradox. We rely on structure to govern the predictable parts of our lives. But what about all the unguarded interpersonal moments that aren't marked down on our schedules? The annoying colleague, noisy neighbor, rude customer, angry client, distressed child or disappointed spouse who unexpectedly demand attention when we're neither prepared nor in the best shape to respond well?

That's the paradox: *We need help when we're least likely to get it.* Our environment is loaded with surprises that trigger odd, unfamiliar responses from us. We end up behaving against our interests. Quite often, we don't even realize it.

### The Awful Meeting

Imagine that you have to go to a one-hour meeting that will be pointless, boring, a time-suck better spent catching up on your "real" work. (We've all been there.) You have no interest in masking how you feel about the meeting. You walk in sporting a sullen look on your face, signaling that you'd rather be anywhere but here. You slouch in your chair, resisting eye contact, doodling on a notepad, speaking only when you're called on, making perfunctory contributions. At meeting's end, you're the first one out the door. Your goal was to spend the hour being miserable — and you succeeded.

Now imagine at meeting's end you will be tested — just you — with four simple questions about how you spent that hour: Did I do my best to be happy? Did I do my best to find meaning? Did I do my best to build positive relationships? Did I do my best to be fully engaged? If you knew that you were going to be tested, what would you do differently to raise your score on any of these four items?

Some typical responses are: "I would go into the meeting with a positive attitude." "Instead of waiting for someone to make it interesting, I'd make it interesting myself." "I'd try to help the presenter in some way instead of critiquing him in my head."

Everyone has good answers. That's the motivational kicker in knowing you'll be tested afterward. It turns the indifferent environment of a boring meeting into a keen competition with yourself. It makes you hyperaware of your behavior.

By taking personal responsibility for your own engagement, you make a positive contribution to your company — and begin creating a better you.

## The Trouble with 'Good Enough'

There are no absolutes in behavioral change. We never achieve perfect patience or generosity or empathy or humility (you pick the virtue). It's nothing to be ashamed of. The best we can hope for is a consistency in our effort — a persistence of striving — that makes other people more charitable about our shortcomings.

What's worrisome is when the striving stops, our lapses become more frequent, and we begin to coast on our reputation. That's the perilous moment when we start to settle for "good enough." Good enough isn't necessarily a bad thing. In many areas of life, chasing perfection is a fool's errand, or at least a poor use of our time. We don't need to spend hours taste-testing every mustard on the gourmet shelf to find the absolute best; a good enough brand will suffice for our sandwich.

The problem begins when this "good enough" attitude spills beyond our marketplace choices and into the things we say and do. In the interpersonal realm, good enough is setting the bar too low. It disappoints people, creates distress where there should be harmony, and, taken to extremes, ends up destroying relationships.

Let's look at four environments that trigger good enough behavior:

**When our motivation is marginal:** If your motivation for a task or goal is in any way compromised — because you lack the skill, or don't take the task seriously, or think what you've done so far is good enough — don't take it on. Find something else to show the world how much you care, not how little.

**When we're working pro bono:** Pro bono is an adjective, not an excuse. If you think doing folks a favor justifies doing less than your best, you're not doing anyone any favors, including yourself. People forget your promise, remember your performance. Better than nothing is not even close to good enough — and good enough, after we make a promise, is never good enough.

**When we behave like "amateurs":** We are professionals at what we do, amateurs at what we want to become. We need to erase this distinction — or at least close the gap between professional and amateur — to become the person we want to be. Being good over here does not excuse being not so good over there.

**When we have compliance issues:** When we engage in noncompliance, we're not just being sloppy and lazy. It's more aggressive and rude than that. We're thumbing our noses at the world, announcing, "The rules don't apply to us. Don't rely on us. We don't care." We're drawing a line at good enough and refusing to budge beyond it.

# PART IV: NO REGRETS

## The Circle of Engagement

Forcing people to think about their environment in the context of fundamental desires like happiness, purpose and engagement concentrates the mind, makes people reflect on how they're measuring up in those areas — and why.

When we assess our performance against the Engaging Questions and come up wanting in any way, we can lay the blame on either the environment or ourselves. We love to scapegoat our environment. We don't set clear goals because we answer to too many people. We falter on existing goals because we have too much on our plate. We're unhappy because our job is a dead end. We don't form positive relationships because other people won't meet us halfway. And so on.

And as skilled as we are at scapegoating our environment, we are equally masterful at granting ourselves absolution for any shortcomings. Honestly assessing the interplay in our lives between these two forces — the environment and ourselves — is how we become the person we want to be.

But don't forget to highlight the value of two other objectives. The first is awareness — being awake to what's going on around us. Few of us go through our day being more than fractionally aware. We turn off our brains when we travel or commute to work. Our minds wander in meetings. Who knows what we're missing when we're not paying attention?

The second is engagement. We're not only awake in our environment, we're actively participating in it — and the people who matter to us recognize our engagement. In most contexts, engagement is the most admirable state of being. Is there higher praise coming from a partner or child than to hear them tell us, "You are always there for me"? Or anything more painful than to be told, "You were never there for me"? That's how much engagement matters to us. It is the finest end product of adult behavioral change.

When we embrace a desire for awareness and engagement, we are in the best position to appreciate all the triggers the environment throws at us. We might not know what to expect — the triggering power of our environment is a constant surprise — but we know what others expect of us. And we know what we expect of ourselves.

The results can be astonishing. We no longer have to treat our environment as if it's a train rushing toward us while we stand helplessly on the track waiting for impact. The interplay between us and our environment becomes reciprocal, a give-and-take arrangement where we are creating it as much as it creates us. We achieve an equilibrium described as the Circle of Engagement.

## The Reciprocal Miracle

Here is an example of how it works: Jim's wife, Barbara, called him at work when he was having one of those Category 4 hurricane kind of days. Everything going wrong: clients ticked off, division chief riding him, assistant called in sick. His wife said, "I just need someone to talk to." Evidently she was having a rough day at her job, too.

The statement "I just need someone to talk to" is a trigger — a trigger for Jim to stop what he's doing and listen. He's not being asked for his opinion or help. He's not being asked to say anything at all. Just listen. It is the easiest "ask" of his day. He should cherish it as an unexpected gift.

But at the precise moment Jim hears Barbara's voice, it's not a certainty that he will accept the call as a blessing. A trigger, after all, leads directly to an impulse to behave in a specific way, and Jim had a full menu of impulses to choose from, not all of them desirable.

He could become even more frazzled than he was before the phone rang. In other words, use the trigger to elevate his existing emotions. He could tell his wife that he's really swamped at the moment and promise to call her back later or discuss it at home. He could give Barbara his perfunctory attention and multi-task while she's talking. In other words, award the trigger a lower priority than his wife attaches to it — and hope she doesn't notice.

He could have self-righteous thoughts about how his wife's problems pale in both severity and significance to his own and then demonstrate in exquisite detail that she is not as miserable as he is. In other words, he could compete with Barbara's trigger and "win." He could pursue the highly dubious strategy of proving that, once again, he is right and she is wrong.

Or he could listen.

Jim made the right choice: He said, "I was getting ready to point out that she wasn't the only person having problems. Then I remembered the words: 'Am I willing at this time to make the investment required to make a positive contribution on this topic?' I took a breath and decided to be the guy who she needed to talk to. I didn't say a thing. When she finished venting, she said, 'That felt good.' All I could say was, 'I love you.'"

This is the reciprocal miracle that appears when we are aware and engaged. We recognize a trigger for what it really is and respond wisely and appropriately. Our behavior creates a trigger that itself generates more appropriate behavior from the other person. Jim's wife triggered something thoughtful and wonderful in him, and he reciprocated by triggering a feel-good response in her. In the most positive way, each had become the other's trigger. Whether they knew it or not, they were running laps in a virtuous circle of engagement — and keeping the circle unbroken.

Now it's your turn. Think about one change, one triggering gesture, that you won't regret later on. Then do it. It will be better for you. So much better, you will want to do it again.

### RECOMMENDED READING LIST

If you liked *Triggers*, you'll also like:

1. ***Mojo* by Marshall Goldsmith, Mark Reiter.** Mojo comes from the moment we do something that is purposeful, powerful, and positive, and the rest of the world recognizes it. Goldsmith lays out the ways that we can get — and keep — our professional and personal Mojo.

2. ***What Got You Here Won't Get You There* by Marshall Goldsmith.** The corporate world is filled with executives who have worked hard to reach the upper levels of management. But only a handful of them will ever reach the pinnacle. Goldsmith shows that subtle nuances make all the difference.

# Getting to It!

## Accomplishing the Important, Handling the Urgent, and Removing the Unnecessary

by Jones Loflin and Todd Musig

### THE SUMMARY IN BRIEF

From the authors of *Juggling Elephants* comes the only guide you need to sort through the many priorities of your life, know what your IT (Important Thing) should be, and understand how to get IT done.

How busy are you? Is your mind constantly racing through lists of all the things you could and should be doing? Does your day often feel as though you're treading water in an ocean of rushes and deadlines, trying to keep from drowning while handling the increasing demands of your work and life?

Don't give up — help is on the way. You just have to find your IT. The Important Thing. Define IT. Plan IT. Focus on IT. Get excited about IT.

Identifying IT isn't just the first step in the process of getting focused and heading in the right direction: it's every step. *Getting to It* provides the necessary tools to accomplish the important, handle the urgent, and get rid of the unnecessary. Want to enjoy a more fulfilling life? Get to IT.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to recognize when you're working too hard on the wrong things.
- How to devote your physical, mental and emotional resources to getting what is important done.
- How to better evaluate where you're spending your time and energy.
- How to set yourself up to achieve more success at work and in your personal life.
- How to work on and accomplish your most important things.
- How to get those you work with on board with your goals.
- How to say "yes" to what is important and "no" to what is not.

## What Is IT?

### In Your Struggle to Get It All Done, What's Not Getting Done?

It's possible that other people already admire you as someone who has it all together. Do you privately wonder how much longer you can maintain your pace and your reputation for always delivering on time? Are you often merely getting by rather than thriving, hoping that something (other than retirement or winning the lottery) will come along to rescue you from this stormy ocean of hurry, deadlines, and the constant juggling act of balancing never-ending work and life demands?

There is a solution to help get you focused and pointed in the right direction. In a word: IT. *Of everything you could do in the next moment, IT is the most important thing.*

The problem, you tell yourself, isn't in deciding what must be done; often circumstances or other people have made those decisions for you. The problem is in all the steps required to accomplish a number one priority.

Constantly stepping back and analyzing what's driving your choice of IT is more than just a useful exercise; it's critical. Clarity of thought and purpose is necessary not only in determining IT; it's essential to efficiently organizing all the steps required to accomplish IT.

So where do you begin?

### Types of ITs and the Need to Identify Them

There are ITs that make you want to get out of bed in the morning and ITs that make you want to hide under the bedcovers all day.

Long-term ITs might range from your lifetime achievements to goals that require only a year or two to accomplish. Short-term ITs are goals you want to accomplish in six months to a year. Daily ITs are the "here and nows." Most often, they're in competition with a thousand other demands on your time and energy.

When you identify your IT for any period of time, you start a process of planning to make IT successful.

But without a well-conceived plan for how you're going to spend your time, almost anything can arise to distract you from what you really want to accomplish.

The question for you is, "What price are you paying for allowing things of lesser importance to dominate your schedule instead of spending more time on those you care most about?"

## Defining IT

### Define IT or Everything Else Will Define You

How do you narrow the list and define what IT is for you? The process we suggest consists of five steps:

1. Stop what you're doing for a moment.
2. Review your funnel.
3. Evaluate your possibilities.
4. Use your filters.
5. Develop plans to say no to everything that's not IT.

A key challenge for people with too much to do is that they are overwhelmed with so many potential activities that they don't know where to start or how to determine what should or shouldn't get done.

The typical solution is just to tackle the task that is most convenient or enjoyable and work as long and as fast as possible, or focus on the task that is screaming the loudest for attention.

Let your first IT be to stop.

## Reviewing Your Funnel

The narrow neck of a funnel demonstrates the limiting effect of time and resources on our ability to tackle potential tasks or activities. It's important to remember that only so much can be done to increase the flow of tasks that actually get completed; there are only so many hours in the day.

Our mental funnel does the initial work of helping us determine what gets done. With a universe of possibilities flowing into our finite funnels, there's a limit to what can flow out. Pour too much liquid into a funnel, and it overflows. The actions we know are important are displaced by those that seem urgent or unnecessary. Just because something forces its way into your schedule does not make it important.

Even with impossible demands, we often say, "I'll see what I can do." Then the task of determining whether the seemingly impossible is really impossible becomes just another item in the funnel.

A strong understanding of what you have done to let tasks enter your funnel prepares you for the next step in the process: filtering what makes it through the funnel to become IT.

## Evaluating Your Possibilities

You already employ some mental filters as you determine what possibilities become IT for you. Mental filters used to define IT can be positive or negative. Negative filters can come in the form of harmful attitudes that limit you from undertaking tasks for poorly examined reasons, such as assuming you're too old, not educated enough, too poor or not handsome enough.

When evaluating your possibilities, be prepared to search out the negative filters you might have in place that prevent you from making room for activities, attitudes, dreams and goals that would actually enhance or improve your life.

More recognizable are the positive benefits of filters. There are moral filters, safety filters, social norms, religious principles, and filters you have developed over time based on your unique wisdom and understanding.

There are also practical filters that can limit or enhance your ability to get things done, such as resources or lack of resources and your health.

## Using Your Filters

Your goal with filters is to line up your options to ensure an orderly flow through your funnel so you have clearly defined ITs. Being conscious of your filters ensures that you won't make choices haphazardly.

Generally, the key to refining your choices to the optimum IT is to be proactive and strategic rather than reactive and tactical.

To get what is *most* important, you might need to employ some "tactical prioritization." With a tactical filter, you're looking at the immediate situation and environment around you and making frequent adjustments.

Take time to ask yourself these questions:

- What deadlines are approaching?
- As an employee, what priorities are set for me (either documented or implied) by my organization?
- How much time do I have to devote to the ideal goal right now?
- What is the one action I could take today — this hour — that would get me an inch closer to accomplishing my most important goals?
- What is the one obstacle that needs to be removed before I can make progress toward the ultimate goal?
- What is the one conversation or discussion I should have with someone that would help me (and possibly others) clarify what is most important?

Commit to selecting your goal carefully and consciously and then choosing courses of action that align with the goal. Invest the time it takes to identify fully what is most important in the long run and also what is most important right now to move you in the straightest possible line toward that goal.

Choosing your IT wisely and being willing to say no to things that matter and instead saying yes to that which matters most can make a difference.

Scope creep is a common challenge in many organizations and a prime example of the need to have the right filters in place. You are assigned a project with specific outcomes, but as you begin to complete each element of the project successfully, the scope is broadened, more tasks are added, and it's now grown beyond you or your team's ability to accomplish with any degree of excellence. Having (and communicating) the filters that prompt you to resist adding new tasks to this project is critical.

There will always be more possibilities in your funnel than you can ever hope to complete. Ultimately, you will have to say no to the possibilities recommended by others that don't align with your filters.

## Believing IT

### You Know What You Believe About IT, But Do You Believe What You Know?

Regardless of the scale of your IT, a firm conviction that IT can be done is crucial to staying on track. You can reinforce this conviction by doing the following:

- Confirm your commitment of time and energy.
- Engage your heart.
- Remove the "Four Ns."
- Visualize the eventual benefits.

Whatever IT is, IT rarely gets accomplished without the willpower to make IT a reality. Without the involvement of your heart, you might quickly be overwhelmed with countless reasons why you can't possibly succeed at IT.

To maintain your belief in IT, you must eliminate as much as possible of the negativity you're likely to encounter. The most prevalent negative thoughts typically stem from fear.

If it's the fear of failure, find someone who has accomplished something similar, and learn from him or her. If it's the fear of risking financial loss, counter it with rational measures to minimize the potential downside — what financial managers call "hedges." If it's the fear of not having enough time, go back and review your filters. Also, think about other items on your schedule that you could delegate, delay or delete to make more room for IT.

The key is to focus on completing IT. The more your capacity is occupied with positive thoughts and possibilities, the less room there will be for your mind to engage in negative thinking.

The mental strength needed to accomplish IT is available to you if you have a positive attitude. Once you master the skill of keeping a positive attitude, you'll naturally be looking forward to the benefits of accomplishing IT: "We're going to get this marketing plan implemented, and then I can have my life back!" Visualize those benefits. Find words to describe what your situation will be like when you accomplish IT. Stick with positive words like clarity, peace, fulfillment and relief. Draw on the power of visualization.

Believing you can accomplish what is most important to you simply means that you know that the joy, satisfaction, peace or reward that comes from accomplishing IT is worth far more than merely allowing the possibility to stay indefinitely in your funnel or get forced out by a million other things. Allow yourself to make the journey. Believe IT can happen.

## Communicating IT

### Many Are the Plans and Few Are the Successes of the Person Who Has Dreams but Tells No One

Communicating the most Important Thing you're working on to those who have (or should have) a great interest in ITs success can be a crucial part of the process. Communicating your values, goals and activities builds a framework of support that helps you in your quest to achieve what is most important to you.

Communicating a goal, project plans, or an intended change in attitude, work habits or behavior allows other people to assist you when you need help. They can provide resources, serve as a sounding board, give encouragement, or even offer ideas.

Your ability to communicate your vision and passion is what will convince them of ITs importance and your level of commitment.

Remember that communicating IT warns others that things will change not only for you but for them as well. As you plan your communication, ask yourself these questions:

- What's in IT for them?
- Why should they be excited about IT for me?
- Why should they be excited about IT for themselves?

You might need to accept accountability and tolerate some pressure once you've announced your goal to others, especially if there's a deadline involved.

You might see the attention of others as pressure, but bear in mind there are two kinds of stress: eustress (positive) and distress (negative). Whether that pressure comes from within yourself or you're aware of people monitoring whether you're going to make your goal, you have the option of viewing whatever stress you encounter as eustress, pressure that drives you forward to your goal.

Your willingness to share your own story about achieving IT despite daunting odds can encourage others to have confidence that their own IT is achievable.

## Planning for IT

### ITs Rarely Scream at Us. They Wait Patiently Behind Everything Else

Individuals and organizations often develop elaborate plans to improve their attitudes, income and prospects for future performance, but then they fail to follow through on the plan. What determines success or failure is both a plan and the execution of that plan.

As you plan to accomplish IT, consider other priorities already on your schedule for the year, month or week ahead. The big question to answer is, "How do I accomplish IT given the commitments I already have in place?"

Consider the obstacles and limitations likely to impede your progress. Make a list! It may be finances: How are you going to pay for IT? Personnel: Do you have the right people in place, and do they share your commitment? For whatever roadblocks and speed bumps you can anticipate, prepare workarounds and alternate routes.

### Determine Milestones

Simply put: What do you want to accomplish, and by when? People identify their IT but then let time pass until IT is no longer relevant. Here are two suggestions to keep in mind when setting milestones on the way toward completing IT.

• Set a deadline. Pick a date for completion, and then plan backward, determining as realistically as possible how much time will be allocated for each step along the trajectory to reaching that deadline. If the time required by all the steps added together extends well beyond your deadline, ask yourself whether it's possible for several subprojects to proceed in parallel, or put your imagination to work coming up with unconventional but workable shortcuts.

• Equip yourself with ways to measure work in progress. Your planning might indicate you'll reach your goal with plenty of time to spare, but real-world situations often prove to be stubbornly unyielding. If you set daily or weekly benchmarks and then have a system to compare actual progress against predetermined interim goals, you'll at least avoid being surprised too late to make adjustments.

### Create Your Actual Plan for IT

Consider these time-tested tips when planning your stepping stones toward IT:

• **Write things down.** Getting things out of your head and onto paper (or into a computer file or smartphone app) frees your memory for moment-to-moment tasks.

• **Plan to focus** on the ITs that require a lot of mental work at the beginning of the day, when you're fresh and energetic.

• **Prioritize, prioritize, prioritize.** Prioritizing allows you to devote your brainpower to getting one thing done rather than bouncing from possibility to possibility.

• **Do a double-check on your to-do list.** Starting with your highest priority task, block out on your calendar when you are going to begin it and how long it will take. Continue down your task list, blocking out times for each task.

• **Employ the Four-D strategy.** The Ds are delegate, delete or delay — and one more D: do! More often than we admit, tasks that ought to take only a couple of minutes to complete end up taking much more time when they've been put off. In many cases, the most effective way of keeping a molehill from becoming a mountain is simply to finish it while it's manageable.

• **Create gaps and buffers of time.** Be realistic about what you can accomplish in an hour or in a day. Allow time for the inevitable interruptions and crises. If your schedule is too full, the tendency is to drop the Important Things for the merely urgent ones. Research suggests that tasks typically take 20 percent more time than expected. So if you have a task you think will take an hour, add another 12-15 minutes just in case.

• **Develop a habit or build a routine into your plan.** A routine can walk you through a series of ITs that need to be accomplished on a regular basis. If you give some thought to how best to order tasks, the most logical and productive flow, you can execute a series of tasks almost as if it's a single task.

If you create a plan to accomplish each IT, your days have the potential to go much more smoothly — and you're more likely to get your most Important Thing done. You'll know where your time and energy need to be applied.

## Doing IT

### Failure at an IT is Often Better Than Success at Something Else

A seemingly small number of people have the capacity to get everything done. They're on top of deadlines, prepared when called upon, and can execute well at a moment's notice. It would appear as if their funnel doesn't narrow at the bottom — everything imaginable flows through to completion. They have an amazing ability to make things happen.

You can be such a person.

Conversely, many people have a very narrow outlet at the bottom of their funnel. They may have all sorts of plans, possibilities and ideas but fall short when it comes to executing them ... they simply can't get IT done.

You can be that person as well.

### Focus on IT

To accomplish IT and do IT well requires that every resource you have at your disposal be aligned with IT. Even if IT requires only five minutes to complete, being able to focus your physical, mental, emotional and even financial

energy effectively on IT for those few moments can have a major impact on getting IT done.

Remember that IT is your first priority — that's the whole point. Instead of thinking of IT last, reflect on IT first, and schedule the appropriate tasks and activities to achieve IT. That way, you're less likely to run out of time or energy before you get around to IT.

Deep, focused attention to IT is your best hope for completing IT effectively and efficiently instead of leaving IT unfinished and having to return to IT later — turning it into yet another distraction preventing you from making progress on the next IT.

Multitasking may sound like an effective way to work on IT, but don't be tempted. The end result is frequently time and energy wasted in jumping from one item to the next (and back), inhibiting your natural ability to focus intently on getting IT done.

## Manage Interruptions While Working on IT

An MIT study found that when employees are interrupted, they lose time and efficiency in two ways: First, the diversion itself takes them away from the task. Second, to get back into the task, they need to warm up their thinking again and refamiliarize themselves with where they left off.

Most interruptions probably do have some connection to your work responsibility or personal values. To better manage your interruptions and minimize their impact, consider the following strategies:

• Review some reasons why other people interrupt you, and address their workflow habits before changing your own. Are the interruptions the result of people lacking information, knowledge or skills that only you possess, a situation that could be easily corrected by documenting and distributing what you know? Are their requests similar? If there's a pattern, what one change would eliminate a host of interruptions?

• Determine whether the interruption is important enough for you to change your current workflow. Will handling this interruption help improve the productivity of other members of your team, allowing you to get more ITs done as well?

• Be less available when you want to focus on IT. Turn off email notifications and send your phone calls directly to voice mail. Physically move out of an environment where you're frequently interrupted.

## Measure Your Time on IT — or Not on IT

People who are successful at accomplishing what is most important don't have to guess where their time is spent. They know. They realize that spending time on the "right work" is key.

A good way to measure where your time is spent (or not spent) is to use a time log for a week or two. It's a simple experiment. Just label the days of the week across the top of a spreadsheet and the time you want to track in 15- or 30-minute increments down the side. Set an alarm for the top of each hour. When the alarm goes off, stop what you're doing, and record in detail what you've accomplished over the past hour — an entry for each 15- or 30-minute segment. We realize this exercise is unnatural and a hassle, but the information you'll be gathering is likely to be very telling.

At the end of the week, review your activities. Total the amount of time you spent in definable categories such as meetings, returning calls, writing email, working on the XYZ report, talking with customers, eating meals, taking breaks, etc. Be honest with yourself — total up the time you feel you've been less than productive. Have your team do the same.

Now, what are you going to do about it? Ask yourself these questions:

- What activities are getting the bulk of my time? Are they IT for me by choice?
- How can I alter what I'm doing so that I'm spending more time on IT?
- What activities can be eliminated to allow more room for IT?

## Take Care of Yourself so You Can Take Care of IT

Take care of yourself so that you're in the best condition to accomplish IT. Here are some statistics from the Families and Work Institute:

- *Thirty-two percent of Americans report that their work life has a primarily negative impact on their lives off the job.*
- *Nearly two out of three individuals are overweight or obese.*
- *Nearly half (48 percent) of U.S. employees have not engaged in regular physical exercise in the last 30 days.*
- *One third of the workforce shows signs of clinical depression.*
- *Thirty-nine percent of U.S. employees took fewer vacation days than the number for which they were eligible.*

To keep your body humming along and working at peak performance, keep these suggestions in mind:

• **Set warning signals** that tell you when you're working too hard or putting too much stress on your body.

• **Get enough sleep.** You'll be less able to focus and you'll have less energy during the day if you don't get enough rest. Sleep deprivation is implicated in all kinds of

physical maladies, too, from high blood pressure to obesity.

• **Exercise.** Walk, run, bike, do yoga, lift weights, swim, mountain climb ... mix it up! Exercise is vital.

• **Take a break.** You should have bursts or sprints of focus and productivity (no more than 90 minutes at a time), and then take a break.

• **Watch what you eat.** Make sure you have a good breakfast to jumpstart your day and your energy level. Monitor the quality and quantity of your lunch. Keep lunch light and healthy. Consider energy foods throughout the day.

• **Do more of the things you love.** Doing the things you enjoy builds positive-feedback routines and helps you maintain your energy level.

• **Don't get discouraged!** Overcoming self-destructive habits is hard work, but do you really prefer keeping them to making a little effort to form positive habits?

## After Accomplishing IT

### The Journey May Be More Valuable Than the IT Itself

The moment of bringing closure to IT is a good time to take stock of your achievement and what you've learned. There is much to gain from reflection and consideration of what went well and what didn't, which steps were effectively planned, and which were overlooked on the path to accomplishing IT.

While reflecting, consider questions such as these:

- What is the single biggest thing I learned during this process that I can apply to the future?
- What was the source of my greatest struggle?
- What can I do to better prepare myself or my team so that I don't face setbacks next time?
- What was an "aha moment" for me? What did I learn about myself?
- How could I have communicated better and gotten more people "on board"?

If others were involved in IT, get their observations and reflections as well.

Construction contractors make punch lists of all the little things that need to be wrapped up before closing out a project. The items on this list are usually the fine details that really put the finishing touches on the project. As part of your planning, make a punch list and finalize it so you don't have to keep adding trivial afterthoughts that drag out the conclusion of IT. When all items on the list are checked off, have a celebration — and move on.

## Doing IT Again

### Your Next IT Awaits

You know the next Important Thing awaits. Once you've successfully accomplished an IT, you probably have a clearer idea of where you want to go next, and you've equipped yourself with valuable tools to guide you efficiently. You just have to answer, "What's my next IT?"

Before you move too quickly, however, reflect on the possibilities that have been in your funnel for some time, waiting for their chance. Which opportunities can you now move along into your action plan, and which no longer belong?

You might not want to assume that you know what your next Important Thing should be. You might not want to engage in the next action until you've given yourself a chance to review your situation.

Consider giving your attention first to your values, beliefs and priorities filters. Don't put off the opportunity to concentrate on the deeper and richer things in life. You can be constantly busy checking items off your to-do list, or you can spend your time on something that really adds value and meaning to your existence.

To ensure that you are continually aligned with your values and goals, ask yourself some of the following questions:

- What circumstances or conditions are different than they were one year ago? Six months ago? Two weeks ago? The key is to be aware of how possibilities in your funnel may have changed based on these conditions.
- Based on these changing circumstances or conditions, what new goals, opportunities or passions do I need to consider now to determine what IT will be for me?
- Are my daily activities fulfilling my needs?
- Is my focus on a major IT causing me to neglect other areas?
- Am I moving forward, staying the same (getting stale) or moving backward (regressing)? Ask this question as it relates to work, relationships and your personal well-being.

The value of a course correction or adjustment cannot be overstated. In fact, the busier you are, the more important it is to take stock of the conditions around you and see how they affect your choice of IT.

People often jump to the conclusion that an Important Thing has to be a major change or giant project. This doesn't need to be the case. Ask yourself what small adjustments, repeated and amplified over time, might make a big difference in your life or the life of someone near you.

You are ultimately the one who decides what you will accomplish and focus on. Whether your next IT is a baby step or a big leap, don't sit back and watch your life go by. Seize the moment, hour, week and year to accomplish what is important to you and those around you.

## Working with Others on IT

### Is Some Part of Your IT also an IT for Them?

Most ITs will require some level of "buy-in" or participation from others. Fail to get other people to change, and the IT you're working on may remain unnecessary, misguided or even threatening in their hearts and minds. And without the participation of others, it might mean that you end up doing all the work yourself. So how do you lead others to and through it? Communication is key.

### Encourage Feedback and Ideas on How to Accomplish IT

When individuals are asked for input on how a community lot — a neighborhood vegetable garden, a local park — should be changed, they develop a sense of ownership and engage more fully in making IT successful. Although you may already have the end result in mind, asking questions and synthesizing responses allows others to come to the same conclusion. The process of collectively reaching the same conclusion can be so much more effective than simply telling the team, "Here's the objective and here's how we're going to do it." Working together on the strategies, tactics and outcomes creates buy-in that's crucial to success. You also might be pleasantly surprised as new and even better ideas are brought to the table.

We recommend using the Six S strategy to create an action plan that best accomplishes IT:

1. *Seek* out the strengths of those on your team.
2. *Set* clear expectations. Clearly describe each individual's responsibility, actions that need to be taken, and the desired outcome from those actions.
3. *Search* for opportunities to stretch others.
4. *Schedule* clear deadlines: What is to be completed in what form, by whom, by when?
5. *Synchronize* goals, outcomes and values that will eliminate or at least minimize activities that don't fully contribute to achieving the desired end.
6. *Sustain* a focus on IT — keep the "heat," the sense of urgency, simmering through strong communication and firm accountability.

### Closure

When IT is completed, assign final tasks, and formally declare the project complete once they're accomplished. Don't savor your achievements so long that everyone forgets the feeling of being in the throes of a battle with an uncertain outcome; rather, put IT behind, and align everyone to move forward to the next Important Thing.

## Wrapping IT Up

### A Successful Life is a Succession of Successful ITs

Focusing on and achieving your Important Thing is a process ... one that never ends.

Be the one in the meeting who helps the group find clarity on IT. Don't hesitate to seek assistance when you lose your own path toward IT. Set an example for others by the way you strive to achieve IT. Too many of us have been settling for something else rather than the Important Thing for far too long.

Henry David Thoreau offered a powerful and somewhat painful observation: "Most men lead lives of quiet desperation ... and go to the grave with the song still in them." Your sense of defeat or frustration may come from your awareness of a task at work that never got accomplished. You might have felt it during a difficult time in a relationship or when you gave up a private goal or dream. Thoreau intended to remind us that we all have some potential, ability or purpose within us that we may never achieve if we don't set aside desperation and take committed, purposeful action.

What's the song within you waiting to be sung? Your Important Thing is waiting. Get to IT.

## New Ideas on How to Keep Delivering Extraordinary Results

by Mark Sanborn

## THE SUMMARY IN BRIEF

Since writing *The Fred Factor* almost 10 years ago, Mark Sanborn has met many people who were inspired by the original Fred to turn the ordinary into the extraordinary. What motivates these real-world "Freds"? In *Fred 2.0*, Sanborn digs deeper, revealing principles that inspire these Fred-like individuals.

Freds are millions of people who have been inspired by Mark Sanborn's real-life mailman Fred Shea — and the millions more who exemplify Fred's code for success without knowing the real-life Fred. What makes Fred so extraordinary? He's a man who is passionate about his ordinary job, treating those on his mail route as his friends. In the process, he has turned an ordinary job into something truly extraordinary — and you can too.

*Fred 2.0* explains how maintaining a creative focus on extraordinary service can drive the results you're seeking. The lessons from *Fred 2.0* will truly benefit readers whether they work on their own or lead massive organizations. Sanborn reminds us that your life is what you make it. Let *Fred 2.0* inspire you to reach even higher and do more!

## IN THIS SUMMARY, YOU WILL LEARN:

- The four most powerful benefits of pursuing the extraordinary.
- How to cultivate creativity without additional time and stress.
- How to discover and apply your signature difference.
- Steps to elevate your customer experience.

# THE COMPLETE SUMMARY: **FRED 2.0**

**by Mark Sanborn**

**The author:** Mark Sanborn is the *New York Times* bestselling author of *The Fred Factor* as well as six other popular books. He is president of Sanborn and Associates Inc., an idea studio dedicated to developing leaders in business and in life. He is a noted authority and an in-demand speaker on leadership, customer service and extraordinary performance.

## Normal Is Overrated

The Fred concept is based on the story of the real-life postal carrier Fred Shea, who delivered my mail for nearly a decade. When I first met Fred, I was so impressed by his performance that I started paying attention, taking notes about him and talking about him in my speeches and seminars, and ultimately writing a book about him. The account of his ability to take the ordinary job of putting mail in a box day after day and make it extraordinary made a connection with those who heard or read it.

Why did the book succeed? I think a main reason is because it wasn't about a big name like Bill Gates or Warren Buffett. What does Fred have to work with? He has a blue-gray uniform and a bag. That's pretty much it once he leaves the substation. And yet he makes artistry out of his work. If Fred can be extraordinary in what could be a tedious job, then there is no reason why you and I can't reinvent our own work, whatever it may be.

### Why Be Normal

We don't talk much about normal unless we want to get back to it after a period of upheaval. That's because normal is what we get used to. Normal is easy, familiar. But is that the best we can aim for each day — to be normal? Is it possible that we aim too low?

If you want more out of life, go for more. Raise your expectations. Settle up, rather than down. In other words, *recalibrate to great*. What's the point of exerting extra thought and effort into being extraordinary? Being extraordinary brings us delight, sets us apart, defends our position, and determines our happiness and success. The good news is that the difference between ordinary and extraordinary isn't as big as you might think.

## It's Always About Service

The Fred philosophy is built on timeless values like personal responsibility, authentic relationships and respect for others. It is a mindset that looks for and seizes opportunities to turn the ordinary into the extraordinary. Even so, it's one thing to know and another thing to do. Being a Fred is about what we believe and what we do.

### The Why Is Always a Who

Why do you do business with a certain company? Great prices? A person was responsible for the pricing. Wonderful service? Obviously people provide that. High-quality products? Thank the people in research, development and manufacturing. Being a Fred isn't about the job you hold but how you do the job. Freds can be in any department, and in the best organizations they are in *every* department.

### Fred Throws Birthday Parties

Dr. Matt Messina is a dentist in Ohio. We met many years ago at a dental association meeting. I asked him how he applies the Fred principles in his practice. Here's what he shared with me: "My staff began looking for elderly patients in the schedule with appointments near their birthdays. They started stocking cupcakes and candles and made a point of singing 'Happy Birthday' for the patients at the end of their appointments."

A smile came across Dr. Messina's face. "There's nothing as heartwarming as seeing an 87-year-old man cry because someone remembered his birthday. We discovered that he had no family nearby and thought his birthday would pass without any fanfare. We have learned so much about our patients, their family birthday traditions, their

joys and their sorrows. People began to intentionally schedule appointments on their birthdays."

That is the nature of Fred. Fred may not be in the customer service department, but you'll always find him serving others. Practicing the Fred Factor is about being of great service, building better relationships, and creating new value — regardless of what department you work in or what your job description says.

## Start With Commitment

It's not always easy being a Fred. It takes commitment. But that commitment gets easier as time goes on. Why? Here's Fred's secret: The person who benefits most when you act like a Fred is *you*. Being a Fred enriches others, but it also expands you, breaks the bonds of self-absorption, makes you more employable, creates positive influence and is more fun, among other benefits.

All any of us have are ordinary days and ordinary work. But we have a choice about how we will do that work. If we commit to an attitude of service and excellence, our ordinary tasks will become extraordinary.

### The Three Characteristics of Committed People

1. Committed people are generally happy: Not everything we must do each day — at home or at work — makes us happy. In those cases we need to remember that how we choose to do anything has a significant influence on the emotions we experience. Doing an unpleasant task cheerfully trumps doing a pleasant task begrudgingly.
2. Committed people are clear about what they do and why they do it: What you do to make a difference is important, but so is the reason you do it. It's true that providing great value as an individual or an organization often results in great benefits to the provider. But even if it doesn't, the reward is in the doing.
3. Committed people have goals: A commitment without a goal is like a trip without a map: Odds are you won't get to where you want to be. Knowing the kind of difference you hope to make greatly increases the likelihood of success.

## Work With Passion

Being a Fred is possible only if you have the right purpose and are driven by your passion. But passion isn't about doing only the things we like to do because that isn't real life. Passion is about arranging your work and your life as much as possible to do the things you are passionate about as often as you can. Passion is something we're willing to give ourselves to despite the cost.

### How Can You Find Your Passion?

Here are some questions to prompt your thinking about what you're passionate about:

- What would you do for free? Is there an activity you enjoy so much that you'd do it for free even if other people would consider it work?
- What riles you? Are there problems or annoyances that drive you up the wall? Perhaps you can find your passion in fixing them.
- What interests you? What do you like to read about and study? Do you find yourself returning to the same topics again and again? Your heart may be telling you what it wants; you just need to recognize it.
- Who interests you? What groups of people do you tend to notice? Are you drawn to coach, counsel, encourage or teach? Some people have a heart for young children. Other people like to support young entrepreneurs. Find out what demographic you're wired to connect with.
- What will minimize your regrets? If you have regrets at the end of your life, what do you think they'll be? We tend to ask ourselves, "Will I regret doing this?" But often the better question is, "Will I regret *not* doing this?" Minimizing regret means being able to seize the moment when opportunity arises. We can do this only when we're clear about what is both important and worthy to us.

## Cultivate Your Creativity

Creativity is an essential ingredient in delivering extraordinary results like Fred does. The simplest definition of creativity is producing something new or different that has value. By definition, then, to be creative is to offer value to those you live with and work with. Creativity isn't just about macro-level ideas that come from the top of an organization. It also encompasses our smaller, daily routines.

### Jump-Start Your Creativity

Here are a few simple ways to jump-start your everyday creativity:

**Think Again:** Don't underestimate the value of second, third and fourth thoughts. In our jobs and home life, our first answer is often to do things the way they've always

been done. But the best solution may lie elsewhere. And we may not arrive at it until we've thought about the problem two or three or even four different ways.

**Noodle on It:** *Noodling* is my favorite slang word for letting little ideas simmer. This might sound counterintuitive when you're trying to be productive, but rest and downtime go hand in hand with creativity. If you want your brain to do your work for you, you have to treat it right. If you aren't able to sleep on it, give yourself a break and daydream a little.

**If You Don't Know, Ask:** Creativity often comes from asking questions — of ourselves and of others. Is there a better way to do this? Why has it always been done this way? More often than not, these simple questions will spark some creativity, and that creativity will create value.

**Go Back to the Drawing Board:** When we encounter a problem, the easiest approach seems to be the one that has been tried before. But what would happen if we started with a clean slate? Sometimes a fresh start is exactly what we need to reach our goal.

**Use "Creative Sparks":** The inspiration for creativity can come from anywhere. When you come across something that stimulates your thinking, chances are it will do the same for others. So look for inspiration, and then take time to share it — whether it comes in the form of pithy quotes, insightful articles, funny videos or inspiring images.

**Break the Rules:** Conventional wisdom controls much of what we do. These little rules usually start with someone saying, "Everyone knows …" or "They always say …" But are "they" always right?

**Add and Subtract:** Give more of what your customers want, and get rid of what they don't want. Adding a little something could be just what you or your company needs to do to deliver excellent service. Sometimes a solution you're working on might be one step too complicated. Are there unnecessary hoops that you or your customers are jumping through that could be eliminated?

**View the Problem Through a Different Lens:** How is the problem you're facing solved in Mexico or in Europe? Even if you physically can't travel, think about how you might solve your problem if you lived in the Caribbean or in Scandinavia. Visit a retailer, a museum, an auto dealer, a library or a business different from your own. Look for ideas they're using successfully, and find a way to adapt them to your work.

## Develop Your Difference

We all make a difference, from small to significant, in our interactions each day. Being a Fred is about choosing to make a positive difference. You'll be most influential when your difference-making is based on your unique abilities, desires and passion. You can make a difference in the world, or you can commit to making *your* difference.

### What About "Them"?

*Them:* the naysayers, critics and curmudgeons who not only choose not to make a positive difference but also discourage you from and judge you for doing so. I asked Fred the Postman for advice about negative coworkers. He said, "Keep on keeping on. Let criticism roll off your shoulders. They need your example."

Many years ago I spoke to the staff of one of the top restaurants on the Las Vegas strip. Their reputation for both food and service was world-renowned. I assumed I'd be preaching to the converted when I talked about the Fred principles, but afterward a waitstaff employee pulled me aside. "What you talked about is my philosophy too," she said. "But I take a lot of heat for it. Some of the others here say I'm working too hard and making them look bad. They tell me to relax and be more like them. What should I do?"

I addressed the key issue: "They don't have the same enthusiasm and passion you do. Your good work is making their mediocre work apparent. So here's your choice: You can bow to their criticism and become mediocre too. Or you can use your best sense of humor to laugh it off and keep doing what's important to you."

That's the choice all of us have: bow to the critics or live by our own values.

### Discovering Your Signature Difference

These four simple questions will help you uncover your signature difference and live it out:

*What is Your Unique Style?* Authenticity means being true to yourself. What is your temperament like? Are you bold and outgoing? Or are you quiet and even-tempered in your approach? When people describe you, what are the words they most often use? Don't just think of your signature difference as the difference you want to make but also as an extension of what makes you different.

*What Are Your Signature Strengths?* What do you see as your "best self"? What do others say your strengths are? Knowing your strengths and talents will give you some clues as to the ways you can make the most significant difference. One lawyer I know who specializes in business negotiations offers his services as a mediator to individuals who can't afford legal representation.

*What Are Your True Passions?* We might assume that the things we love are limited to our hobbies or our free time, but our passions can be the fuel to make a true difference in our world.

*What do You Want to be Remembered for?* Your legacy is what you will be remembered for. Think about what you might want to be known for after you're gone. Then ask yourself, "What did I do to build my legacy today? Did I make sure that everyone I crossed paths with will remember me the way I want to be remembered?"

### Defining Your Signature Difference

In order to make a signature difference, you need to find the intersections between your contributions and the needs of those around you. First, consider your unique style, strengths and passions. Next, think about the needs of those around you — in your workplace, your family, your circle of friends and your community. Then write out your signature difference in the form of a personal commitment statement.

## Build Better Relationships

Fred Shea stood out from other postal carriers for many reasons, but the primary one was his sincere interest in getting to know me. Fred's influence came from his ability to relate to others and build genuine relationships with those on his route.

### Steps to Building Better Relationships

You may be convinced that relationships are essential to the health of your business or organization, but you aren't sure how to strengthen the ones you have and build new ones. These six steps will give you a place to start:

1. **It Isn't Enough to Build Relationships if You Don't Maintain Them:** The only thing worse than not creating a good relationship at all is creating a connection with customers that they can't rely on. When a service provider seems interested initially but doesn't maintain the relationship after the sale, the customer feels manipulated.
2. **It Doesn't Have to Take Much Time:** It isn't about how much time you spend with those in a professional setting (although that is important) but how quickly and authentically you are able to demonstrate your concern and commitment. Being fully present when engaging with others is effective and doesn't have to take much extra time.
3. **Friendliness Is a Choice, Not a Response:** The test of friendliness is the ability to be pleasant to someone who is being unpleasant to you. Instead of fighting fire with fire, try responding to negativity with positivity. It may not change the other person, but it will keep him or her from changing you.
4. **Employees Rarely Treat Customers Better Than Their Employer Treats Them:** Treating employees differently than you expect them to treat customers is shortsighted, if not delusional. You communicate more powerfully with your behavior than you do with your words.
5. **Nice Isn't Enough if You're Not Competent:** Relationship is important, but make sure you're offering a good product and good service first.
6. **Relationships Aren't Built in a Day:** We build relationships over time by giving those we interact with our consistent and undivided attention.

### Five Surprising Words For Building Better Relationships

Here are a few key words to remember as you pursue connections with people at work and at home.

*Love:* Love in work clothes is about treating people with dignity and respect. The real test of love is the ability to be kind and considerate to those who don't make it easy to do. I'm not talking here about abusers or situations where you might need to draw boundaries. I'm talking about extending love to those who can be prickly, unhappy or indifferent. We can't always win such people over, but we can refuse to respond in kind to their negativity.

*Redemption:* Redemption isn't a word you hear much in business, but it can transform relationships. It is about recovering something that was lost at some cost to yourself — whether through your actions, words or money.

*Mercy:* Mercy means not giving people what they deserve when they fall short of your expectations. It's also about giving them the benefit of the doubt — or cutting them some slack.

*Grace:* Grace is about giving people what they don't deserve — extending unmerited favor. If we all got exactly what we deserved and only what we deserved, most of us would not be where we are today. If you approach others with the attitude that you will only give them as much as they give to you, your relationship never will have the chance to grow beyond that point.

*Compassion:* Compassion isn't just a feeling of deep sympathy and sorrow for another person who is stricken by misfortune; it is a feeling that is also accompanied by a strong desire to alleviate the suffering.

## Elevate the Experience

An elevated experience happens when you are expecting something standard or run of the mill, and you end

up with something more. The best proof of your commitment to customers is to C.A.R.E.: Create A Rare Experience. Here are ways to elevate the experiences you provide and to really C.A.R.E.

- **Eliminate Worry:** In my years of observing the business world, I've come to define a professional as someone who is more worried about the solutions to your problems and needs than you are. If you are willing to take on your customers' problems to reduce the worry in their lives, they'll reward you with loyalty.
- **Be Involved Before, During and After:** A sale doesn't create a customer. Selling merely creates a transaction. What happens before and after the transaction determines whether you have a customer for life or a customer for that transaction only.
- **Pay Attention to Details:** Despite our best intentions to provide something extra or something elevated, if we don't attend to details, all our efforts will be wasted when the customer gets something less than he or she expected.
- **Fabricate Fun:** Entertainment really elevates the experience when it happens in a nontraditional environment. The attendants at Southwest Airlines are known for joking or even singing their way through the preflight instructions. Some are so entertaining that passengers have posted videos of them on YouTube. Talk about free advertising and brand evangelism!
- **Look for Problems to Solve:** Are there some simple measures that would elevate your customers' experiences? Are there problems your customers are facing that could be solved easily? Often an elevated experience can be provided by solving simple problems that no one else has identified. Be the first to find them.

## Renew Your Resolve

I frequently encounter people who tell me they used to practice the Fred philosophy. But not anymore. The common explanation is they lost their passion and enthusiasm. They got tired, burned out or discouraged. The challenges of life overcame their commitment, and they lost heart. If you truly desire to be extraordinary, you have to keep your commitment vital and ongoing. It may be time to renew your resolve.

### Staying the Same Just Isn't Enough

Success, however it's defined, is a moving target. Staying the same isn't enough because yesterday's success can easily become tomorrow's mediocrity. We need to be intentional about keeping our commitment solid and our enthusiasm strong. Here are some ways to renew our resolve:

- **Decide to be Happy Here and Now:** We all have our lot in life. But often it's simpler than we make it. We have a choice: We can change our lot, or we can accept it. If we aren't able to change our lot in life despite our best efforts, we're down to one option: Accept it. But the way we accept it makes all the difference.
- **Try Something Different:** While it's wise to find a career that's a good fit for you, don't make the mistake of thinking a different environment is necessarily going to solve all your problems. People often think they will be happy if they could just find a different job. However, I've observed that unhappiness tends to follow people. If you aren't happy now, a different job probably won't make you happy either. A better alternative might be to do your current job differently.
- **Remind Yourself Regularly:** Sometimes when we're making life changes, our biggest challenge is remembering to carry out the decisions we've made. It isn't that we're not committed to taking this step to do something new or implement something better. It just takes a lot less energy to do things the same way we've always done them.
- **Rethink Your Perspective:** Take some time for reflection. Are you living by your values? Are you happy and successful? Are you productive or just busy?
- **Reward Yourself:** Every day do two things: something challenging and something fun. One will make you better, and the other will make you happier.
- **Take Time to Rest:** Renewing your resolve can help you keep your nose to the grindstone when you need to. But you can't keep your nose to the grindstone for long periods of time without breaks, or you will lose both your nose and your resolve. Rest is a critical ingredient for both happiness and productivity.

## What If You're a Head Fred?

Some people think leadership is about telling a better story, but leaders don't just tell a better story; they make the story better. A leader has the unique power to instill a sense of significance in others. That means it's not enough to be a Fred yourself; you also need to develop and lead other Freds.

### How to Lead Freds

Here are 10 things you need to do to be a head Fred.

1. **Lead by Example:** Fred-like behavior isn't something you can command or demand. Instead, you must be willing to model what that behavior looks like in your own performance — not only in how you treat customers but also in how your treat your employees and colleagues.
2. **Start With What's Right Instead of What's Wrong: When you start with what's right and who is responsible, good things start happening:** You give recognition where it's due; you focus the rest of the team on a positive example; and you feel better about your role as the head Fred.
3. **Encourage People to Try:** You might need to prove your employees' own significance to them. Show them specifically where they can shine, and encourage them to try. Reward the attempt, not just the outcome.
4. **Ask for and Share Ideas About How to be Like Fred:** Regularly solicit examples and techniques from everyone on your team about how to turn the ordinary into the extraordinary.
5. **Remove Barriers and Obstacles:** One of your goals as a leader is to make it as easy as possible for your team members to succeed. If you have protocols that hinder performance, either remove them or give people a free pass if they break them. As long as their behavior is moral and ethical, don't get hung up on needless policies and procedures.
6. **Be Their Champion:** When your Freds do something noteworthy, tell everybody, including other departments. And make sure higher-ups in the company know.
7. **Give Them the Freedom They Need:** Don't treat everyone equally, or you'll create an organization of mediocrity. Treat everyone *fairly*, but make sure that those who perform best get appropriate preference. Performance should have its privileges.
8. **Teach the Fred Principles Consistently:** The four basic Fred principles are everybody makes a difference; it is all built on relationship; you can add value to everything you do; and you can reinvent yourself continually. Consistently remind people about the principles and practices you want them to implement.
9. **Recognize and Reward:** Behavior that is rewarded tends to be repeated. Use both formal and informal rewards when you see people acting like Freds.
10. **Enjoy:** Someone recently asked how they could achieve Fred-like performance without creating added stress. If your attempts to encourage extraordinary performance are stressful, you're not doing something right. Freds don't work harder because they have to but because they want to.

## Build a Team Fred

While our individual actions have an effect, our group efforts have the potential of even greater impact. The only thing more powerful than a committed individual is a team of committed individuals.

### How to Build a Team of Freds

1. **Hire for Fredness:** Paul Noris, president and CEO of the Bank of Central Florida, says that when his company has an opening, the team looks for applicants who tend to enjoy being of service — who have a heart to serve. He believes the bank's ability to provide a high level of client service starts with a willing employee who sees service as the core of his or her being.
2. **Theme the Team:** Using a theme not only focuses the attention of your team, but it also creates a fun, celebratory atmosphere, which is part of what the Fred philosophy is all about.
3. **Freducate Everyone:** There is power in reading good books and sharing ideas as a team. People tend to learn more (and implement more) when they are engaged in educational opportunities together.
4. **Deal With Derfs:** The opposite of a Fred is a Derf. That's *Fred* spelled backward. What's the best way to deal with Derfs? The first strategy is to use positive peer pressure. When you recognize and reward others for doing the right thing, they'll become less tolerant of those who intentionally or inadvertently undo their good work. Another strategy is to give constructive feedback. With gentleness but directness, let the person know how he or she is perceived and why. People can't change what they don't understand.

## Raise a Fred Jr.

Parents and educators frequently remind me about the importance of teaching the Fred principles to children. The sooner someone understands these timeless truths, the sooner they'll start experiencing the benefits, and the sooner they'll start developing healthy, lifelong habits.

Whether they learn these lessons at home, in school or in extracurricular activities, kids need to know that they can make a difference. They need to know that education isn't a preparation for life — education is life. Students need to learn how to build healthy relationships and use their creativity to build value for themselves, for their family and friends, and eventually for an employer. Young people also need to realize that each day is a chance to try again — to be better than the day before.

## Create a Community of Freds

What can you do to help spread the Fred spirit in your own community? Find like-minded people. You always can accomplish more by cooperating with others (think Team Fred). With the energy of a group, not only will you have more good ideas, but you'll also be buoyed by your teammates' moral support and encouragement.

Create Interest. Share Fred's story and explain the benefits, both practical and personal. Use all the media at your disposal to spotlight what you are trying to accomplish. Everyone has limited time, energy and resources, so people need to see the payoff — not just psychologically and spiritually but also practically.

## Best Always

*Best Always.* That's how I've been signing correspondence and autographing my books for years. I have two reasons for this signature: First, I want to wish the recipient the best of life always. Second, it is my philosophy and commitment to give my best always. When I do anything less, I not only disappoint those who depend on me, but I also disappoint myself.

That doesn't mean that every single thing I do gets the same investment of attention and effort. That would be wasteful and downright impossible. When you know what is important to you in your life and work, you should apportion your talents and efforts so you can give the best you have to those things.

Once we've made a commitment to do our best, where do we begin? These steps may seem like common sense, but unless we make a conscious effort to implement, it's easy for them to slip through the cracks.

- Slow Down. If you're moving too fast, good things will have a hard time catching you.
- Get Out. Opportunity will rarely come to your door.
- Pay Attention. We learn more when we start noticing more.
- Do Something. Don't be a spectator in the game of life.
- Enjoy Life. We enjoy life no more and no less than we choose.
- Get Better. Better is always an improvement. It moves us forward.

### The Three Loves

In order to do and be your best, you need three kinds of love:

1. **Love What You Do:** That doesn't mean you love every single moment of every day, but it does mean that at the end of the day, you realize you're doing work that is important and beneficial.
2. **Love the People You Serve With:** Next to your family, you probably spend more of your life with your coworkers and colleagues than anyone else. Loving them is a key to a rewarding career. The good news is that you don't necessarily have to *like* them. Love is a higher calling, a deeper value. At work, the basis of love is a shared commitment to striving toward a common purpose, servicing customers, and making a positive difference. Life is too short to work with people you find impossible to love. Make the choice to love.
3. **Love the People You Serve:** Customers vote with their time and money. People could get their needs met at any number of businesses or organizations, but they've chosen yours. They've given you their trust and their money. That transaction is so valuable, but it's often taken for granted. We should honor that trust by reciprocating with a love born out of appreciation.

If you can have all three of these loves, it sets the stage for you to do and be your best always. And if you have these three loves, I can assure you that you are a Fred.

Ralph Waldo Emerson said, "Make the most of yourself, for that is all there is of you." Doing your best in whatever you do will make you the best you can be. What we do, especially for others, defines the impact of our lives. It's all we have to offer. Make it better. Make it *the best*.

# The Achievement Habit

## Stop Wishing, Start Doing and Take Command of Your Life

by Bernard Roth

### THE SUMMARY IN BRIEF

Co-founder of the Stanford d.school Bernard Roth introduces the power of design thinking to help you achieve goals you never thought possible. Achievement can be learned. It's a muscle, and once you learn how to flex it, you'll be able to meet life's challenges and fulfill your goals.

In *The Achievement Habit*, Roth applies the remarkable insights that stem from design thinking — previously used to solve large-scale projects — to help us realize the power for positive change we all have within us. Roth leads us through a series of discussions, stories, recommendations and exercises designed to help us create a different experience in our lives. He shares invaluable insights we can use to gain confidence to do what we've always wanted and overcome obstacles that hamper us from reaching our potential, including don't try — DO; excuses are self-defeating; believe you are a doer and achiever, and you'll become one; become open to learning from your own experience and from those around you; and more.

The brain is complex and is always working with our egos to sabotage our best intentions. But we can be mindful; we can create habits that make our lives better. Thoughtful and powerful, *The Achievement Habit* shows you how.

### IN THIS SUMMARY, YOU WILL LEARN:

- How you define the meaning of everything in your life.
- Why reasons can sabotage your achievement goals.
- The difference between trying and doing.
- Strategies for getting unstuck and finding assistance.
- The assumptions underlying your self-image and how to redesign it.

# THE COMPLETE SUMMARY: **THE ACHIEVEMENT HABIT**

**by Bernard Roth**

**The author:** Bernard Roth is the Rodney H. Adams Professor of Engineering and the academic director of the Hasso Plattner Institute of Design (the d.school) at Stanford University. He is a leading expert in kinematics, the science of motion, and one of the world's pioneers in the area of robotics. In addition, he has created courses that allow students to directly gain understanding and experience about personal issues that matter to them.

## Introduction

Ask people to think about who stops them from accomplishing the things they want. It's always entertaining to listen to them explain how their parents, spouses, children, colleagues, bosses — you name it — prevent them from reaching their goals. These perceived obstacles are simply excuses; in almost every case, when you really dig down, it's you who are sabotaging yourself. Yes, sometimes there are real external obstacles, and most people don't realize that they have the power to overcome them.

When you *do*, you are using *power*; when you *try*, you are using *force*. In life, if you want to get things done, it is much better to be powerful than to be forceful.

Of course the switch isn't so easy to make in real life. We've all had the experience of making up our minds to do something and then not doing it. In order to make the switch we must understand our behavior. The classic model (and popular wisdom) says that we think things through first and then act on our thoughts. Interestingly, this does not hold up in clinical testing. Most of our action is more the result of habit than reasoning.

So that leads to a question: How do you bridge the gap between trying and doing, between talking about something and acting on it, and ultimately between failure and success?

Design thinking is a set of general practices developed over the years that are effective in solving design challenges. A design challenge can apply to just about any kind of product or experience. It's not just about how to build a better mousetrap (though that's part of it); it's also about things that are not physical objects: how to improve the wait time at a popular amusement park, how to clean up a highway, how to more efficiently get food to needy people, how to improve online dating and so on.

Design thinking is normally applied outward — toward building solutions for other people's problems in a business or school setting. Here it is used toward improving your own life and interpersonal relationships, designing the best version of yourself.

## Nothing Is What You Think It Is

Let's first acknowledge that the meaning we find in people, objects and our own circumstances is subjective. These things have no inherent meaning. Functional and dysfunctional behavior both result from choices people make based on meanings they create. This also means that we have the power to alter our perceptions, revising perceptions that bring us down and enhancing those that help us. To learn how to get a better handle on your perceptions, emotions and behavior, it is useful to look at how you think.

Take a few deep breaths. Close your eyes for a few minutes. Then open them and move your attention around the room from one object to another. Each time you notice an object, say it has no meaning (as in, "The chair has no meaning"). Then think of people in your family and in your life and things you hold dear, such as your biggest accomplishments and most prized possessions. Name each, saying it has no meaning. When you are finished, sit quietly for a few minutes and then reflect on your experience.

The point of the exercise is not to get you to change any of your relationships. Rather, it is to empower you with the realization that you have chosen the meanings you give to all of your relationships. People who do this exercise often become more aware of how important a

person or item is to them, and they realize that they have the ability to change the meaning something has to them.

### The Familiar Unfamiliar

To forge a new attitude toward the events and relationships in your life, you must learn to look at them with a fresh perspective.

Most people have a cognitive bias called functional fixedness that causes them to see objects only in their normal context. There are creativity exercises structured so that the use of the materials and tools in their ordinary way will generally lead to no workable solutions or, at the very most, mundane ones. The really exciting solutions come from overcoming functional fixedness and using these everyday items in new ways. To see the possibilities it is helpful to take the viewpoint that *nothing is what you think it is*. You need to make the familiar unfamiliar.

Just as things in the material world can be transformed from their common use into something different, so too can behavior and relationships. It's difficult at first to break through preconceived notions; however, once you do it, you'll find it opens the world up to you. Stop labeling things in their usual way. You are not a loser because you lost your job. Make the familiar into the unfamiliar, and the result can be amazing and delightful, as opposed to dull, nonfunctional and ordinary.

You can remove labels entirely; you can also re-label to great effect. Recent studies reinforce the idea that relabeling can change behavior. Experimenters have found statistical evidence that, for instance, if you ask people to be voters, you get more voter turnout than if you simply ask people to vote. Similarly, if you ask people not to be cheaters, there is less cheating than if you just ask people not to cheat. The inference is that people are more concerned with reinforcing their self-image than with their actions; thus, to change behavior, you first change self-image.

Once you learn that it is possible to change your habits and develop new attitudes about things, you have a new tool to use in both your professional and your personal life. For most people it is probably easier to change their attitude toward dishwashing than their attitude toward depression. Yet if you start with the small stuff, you will find it easier to tackle the harder stuff in life.

## Reasons Are Bullshit

The problem with reasons is that they're just excuses prettied up. Our society loves reasons. Perhaps the illusion that there is a single known reason for each thing we do is comforting. Unfortunately, the world doesn't work that way.

Reasons exist because if people didn't explain their behavior, they would seem unreasonable. So we are faced with a paradox: We need reasons so we appear reasonable, yet when we use reasons we are not taking full responsibility for our behavior. We use them to hide our shortcomings from ourselves. When we stop using reasons to justify ourselves, we increase our chances of changing behavior, gaining a realistic self-image and living a more satisfying and productive life.

Letting go of the need for reasons to justify your behavior is useful in every part of the design-thinking process. It can get you unstuck from dead ends and lead to new approaches and insights.

Many reasons are simply excuses to hide the fact that we are not willing to give something a high enough priority in our lives. But not having reasons would lead to a strange existence. Without reasons, you would look like an unreasonable person to everyone else. So where does this leave us?

There is a twofold approach to the problem: one for the external persona and one for the internal self. *Externally* you use reasons in everyday conversation when you need to, and thus appear to be perfectly normal and reasonable. *Internally* you look at the reasons your external self offers, and question each of them. The internal self also looks at the reasons given by the people you are interacting with. Simply by noticing how reasons are used, you can gain insight into your own behavior and your relationships with others.

## Getting Unstuck

Once we see an obstacle in our path, we walk around that obstacle. Unfortunately we sometimes have difficulty. We often think we're surrounded. How do you walk around obstacles? The answer lies in changing the way you think about the problem.

Design thinking emphasizes that you always make sure you are working on the real problem. When you can't find the answer, it is often because you are not asking the correct question.

One of the main causes of losing sleep over a problem is that we think we are dealing with a question when in fact we are dealing with an answer (a solution) that turns out not to be a good fit to our actual problem.

A way around this dilemma is to ask, "What would it do for me if I solved this problem?" The answer to this can then be converted into a new, more generative question.

By changing the question, you alter your point of view and dramatically expand the number of possible solutions.

Changing the question is often enough to lead to a satisfactory resolution and to make the original difficulty disappear.

### Ways to Get Unstuck

Once you have a problem statement, there are many formal methods that can assist you in generating solutions.

- Hard work
- Create a supportive environment
- Relax
- Brainstorming
- Lists
- Meta-lists: lists that contain the names of things from which to make more detailed lists.
- Idea logs
- Humor
- Conversation
- Forced transformations: purposefully modifying your ideas to make the conventional into the unconventional.
- "What if?": a great way to start a question during idea generation. What if there was no gravity? What if there was blast-off house paint?
- Working backward: Imagine that the problem has been solved, and then work back to the beginning. This way you can see what all the milestones are.
- Storyboards
- Mind maps: Mind maps are great for providing a broad understanding of how diverse parts relate to the whole.
- Diagram yourself: In this method you examine your own problem-solving process and strive to make it ambidextrous, meaning that you use both right-brain and left-brain activities equally.

## Finding Assistance

When it comes to achieving what you want in life, it's rare that you can do it entirely on your own. Often you'll need a little assistance from your friends. We are all better off when we assist each other to figure things out.

It's okay to ask for assistance. Look for people in your life who have accomplished things that you want to accomplish, and talk to them about how they did it and what they would do differently if they had to do it over. Get feedback from as many people as you can. You don't need to follow all or even most of it. Keep in mind that the more input you get, the more you have to sift through for gems.

### Good Artists Copy; Great Artists Steal

Steve Jobs often mentioned that he believed "good artists copy; great artists steal," a quote he attributed to Pablo Picasso. The truth is, there's very little new under the sun. Everything you can think of has, at least in part, been thought of before, and it would be stupid to ignore the wisdom of the people who've preceded you.

So don't be too concerned about "stealing." Of course, don't take credit for someone else's work or simply copy something outright without improving it or putting your own spin on it. Understand that it's okay to build off others' ideas, and don't be too possessive of your own. Some people are fiercely protective of their own data and ideas, often for years, until they can publish their work. The public good would be much better served if people worked more collaboratively. Commit yourself to radical collaboration.

### The Curse of Networking

You've undoubtedly been told about the power of networking — handing out your business card at social luncheons, showing up at key events and promoting yourself.

But if what you're really doing is trying to buddy up to people you think are on a higher plane than you are to get help from them, it's a lecherous relationship and it's not genuine. Never pretend that you have a relationship with someone that goes beyond what's really there. Don't assume it's okay to use someone's name to get in the door, even if you consider that person a friend. Ask first, or it's likely to backfire. Life is not about using other people as you climb to the top.

Stay real, instead, and build friendships. When you forge real relationships, the word networking doesn't even come into play. You naturally think of each other when opportunities arise. You ask for assistance and they show up, because they are friends and that's what friends do, not because you gave them a fake smile and a firm handshake at a luncheon. Let people see you as human. Be real. Be proactive in making friendships wherever you land. Invite people out to eat or over to your house. When you hear that a loved one of theirs is sick, follow up and ask about it the next day.

What it comes down to is that if you want people to assist you, you should (a) ask them, because not everyone

is that attuned to what you need, and (b) be a decent human being. Do not pretend you know more than you do. Most people are flattered when you have a genuine need and ask for their expertise. When you're offered assistance, respect others' time constraints — don't call every day or expect them to write responses to a hundred questions — and be appreciative.

## Doing Is Everything

There is a big difference between *trying* to do something and actually *doing* it. They're two totally different actions. The difficulty arises when people conflate them. If you *try* to do something, it may or may not happen. If it does not happen, you might try using an altered strategy, and again it may not happen. Although this could go on indefinitely, usually it lasts until you luck out and succeed, get tired of trying or get distracted by something else. Clearly this is a very unproductive way to go about your life.

If you are *doing* something, then no matter how many times you hit a barrier or how frustrated your original strategy becomes, you intend to get the job done, and you bring to bear on it the inner resolve and attention necessary to fulfill your intention. Doing takes *intention* and *attention*.

*Do* — don't *try* — this: List as many of your core beliefs as possible, and then ask yourself what basis you have for each belief. Unsurprisingly, a large number of core beliefs come from parents, the social and physical environment we grew up in and various peer groups.

The next question to ask is, "Which of your beliefs still serve you, and which have become dysfunctional and are best discarded?"

When you make decisions based on "the research," you can easily be led astray by researchers' biases. Even when the data is sound — like the fact that half of all marriages end in divorce — does that mean that you should give up the idea of getting married because it has too high a potential failure rate? Statistics can show you trends; they can't predict your life.

Likewise, consider that the odds have *always* been against greatness. If one were to decide on a career path just by the odds of financial success, we would have no movie stars, authors, poets or musicians. The odds were against the Beatles, Elvis and the Grateful Dead, too. They could have been "scientific" about the whole thing and chosen more reasonable career paths, and what a loss for the world that would have been! If you succeed, the odds are meaningless. Any path may have a 2 percent success rate, yet if you're in that 2 percent, there's a 100 percent chance of success for you. The long shots are often the most rewarding.

### The Gift of Failure

Almost without exception, people who have done great things have also experienced great failures — and in many cases, getting fired or a similar devastating failure turned out to be a gift that allowed them to ultimately find great success.

At the d.school, one of the basic principles is a *bias toward action*: that is, it is better to start to do something and fail than it is to do nothing and wait for the correct path of action to appear. Failure is part of the result to expect if you have a bias toward action. The idea is not to be paralyzed in the face of uncertainty. If you do something and it works, great! If you do something and it fails, maybe even better. You do, you fail and you learn. You do again, you fail again and you learn some more.

If you are mindful about what you have done, failure is a teacher. With a little luck, after enough failures you will succeed. In many cases this is a much better approach than a long, drawn-out investigation into the right way to proceed.

Nobody wants to fail, and yet we all do. Don't be afraid of failure. It is part of the price you pay for action; there's no need to sweep it under the rug and pretend it does not exist. The most liberating way to acknowledge failure is to celebrate it.

## Watch Your Language

The way we communicate with people has a significant effect on their opinions of us. It's not just about what we say but about how we say it. Becoming better communicators can heal relationships, lead to better job opportunities and enable us to reach wider audiences with whatever messages we want to share.

Language influences the way we see things. It has long been known that using different labels for the same thing will promote different behaviors. For our purposes it is important to understand what we do to ourselves with our own choice of words and use of language. Once we are aware of our usage, we can adjust our language to be more in keeping with our true intentions and the existential situations we are describing.

### Have to/Want to

On the list of words to be used as little as possible is the phrase "I have to." The true situation is usually best

described instead by "I want to." To get the flavor of this, change *have* into *want* in your mind the next few times you say "I have to." Do this silently, simply repeating to yourself the sentence that you just said out loud, with just the one word changed. This exercise is very effective in getting people to realize that what they do in their lives — even the things they find unpleasant — is in fact what they have chosen.

Next let's look at "I can't" and test it against "I won't." A good way to make the test is to use the same procedure as in the previous exercise. So, for example, if you said out loud, "I can't stop breathing," you would then say to yourself, "I won't stop breathing." The simple change of *can't* to *won't* is often empowering. *Can't* implies helplessness; *won't* signifies volition and choice.

### Conversations

The question of intention lies behind all communication. What is it that you intend to communicate? Simply saying something does not mean it has been actually communicated. Even if all parties agree on what has been said or even if there is a signed, written agreement, it does not mean that everyone is really agreeing to the same thing. There are often honest misunderstandings.

These take place largely because people do not make sure their meanings — not only their words — are shared. Remember, successful communication takes both *intention* and *attention*. It requires the explicit intention that the meaning be shared, and it also takes the explicit attention to be sure it has been shared.

Suggestions for good interpersonal communications:

- Speak for yourself. Say "I know," "I think," "My reaction is," not "Everyone knows," "We all feel."
- Don't be judgmental.
- Acknowledge other people's issues. People want to know that you've heard them.
- Don't ask *why* questions. Asking people why they do things puts them on the defensive.
- Really listen. Even if you think you know what they will be saying or you have heard it before.
- When you are telling a story, be clear what your point is. Be prepared to be misunderstood.
- Make sure your communication is heard as intended.
- Make sure you understand what is being communicated to you.

When another person feels understood, you've given him a great gift.

## Group Habits

Belonging to groups gives us an important way to express our humanity. Most of us are affiliated with many groups: In addition to family, we have groups of friends; professional, political, health and school groups; and so on. The way you interact within those groups can change the way you feel about each situation and can enrich (or screw up) your life.

### Constructive Criticism

The d.school workshops have adopted a system for criticism originally learned from the late George M. Prince in a Synectics workshop. The idea is to give criticism in a supportive way that promotes positive evolution of the students' work, by saying two "I like" statements followed by one "I wish" statement. For example, I might say, "I like the way you took into account concerns about safety, and I like the way it looks." Then, after a short pause, I would continue, "I wish we could find a way to make it smaller."

The first thing to notice about this feedback is that there is no "but" between the "I like" and the "I wish." They are separated by only a short pause, nothing else. The second thing to notice is that "I wish" is said in a way that encourages further refinement in a positive way. It enlists everyone who hears the comment, including the commentator, to work on figuring out a solution.

### Minimizing Competition

Whenever there is a hierarchy of positions and pay scales, it's likely that you'll also encounter some people who will step on each other as they attempt to climb the ladder. You'll know them as the office gossips, the backstabbers, the users, the phonies. Steer clear of this entire culture. It is important to ask yourself what kind of satisfaction you'll derive from being that kind of person, even if it does mean you get the title you want. Don't lose sight of your humanity in the pursuit of a fancier car.

Many businesses and academic organizations use competition as a means of encouraging people to do their best — they literally have contests (sales contests, design contests, etc.) pitting people against each other. Our culture is habituated to winner-take-all athletics and other zero-sum games. While it can have a strong upside for the winner, it has a strong downside for everyone else. It can lower morale, foster jealousy and hurt relationships.

It's important to learn to be motivated to do your personal best, regardless of what happens around you. Look for ways to be inclusive rather than competitive — for ways to help the whole team win rather than just one

individual. As much as possible, it behooves you to erase the idea of competition in the workplace from your mind. You have to be satisfied only with yourself — not worried about what the Joneses are up to.

## Self-Image by Design

What you can achieve in life has a lot to do with your self-image. If you see yourself as a risk taker and a doer, you're more likely to take risks and do! If you see yourself as cautious and scared, it may make the road to achieving your goals a lot more protracted and difficult. You may not even know for sure how you define yourself, so let's figure out where your self-image comes from and if it suits where you want to be.

### Examine Your Role Models

When we are young, we learn from those around us. Naturally, our parents and siblings have a strong influence on who we become as we start to mature. We may be very fortunate and start life in a warm, supporting environment. We may be less fortunate and start in a harsh, threatening environment. Whether we grow up feeling accepted and loved by our family or harshly judged and rejected, it is almost impossible to escape those imprints.

Examine your family's viewpoints and how they have affected your adult life.

- What do they think about money?
- What do they think is a suitable life path for you?
- What are their views on authority?
- What are their views on hard work? Grades? Blue-collar versus white-collar work? Getting ahead in life? Work versus play? Hobbies? Taking risks professionally and personally? Personal fulfillment?
- Which of their views do you agree with, and which don't you? Have you tailored your life in response to their views? Is it helpful to you, harmful or neutral? Which influences of theirs are better off discarded? Which can you learn from?

If we realize we have a unique persona and a history different from that of our teachers and parents, we can end up being creators of a new synthesis that honors our influences yet is also a true expression of our very being. It is important that we look at our life and work not only from the point of view of its content but also from the question of what our actual intentions are.

Create a list of all the things you intend to accomplish with your work. You can get there by asking yourself a series of questions: What is my intention? Is it simply to get through the day? Is it to get a specific task done? Is it to have a good time? Is it to bolster my ego? Is it to delight? Is it to inspire? Is it to motivate? Is it to escape?

Then, once it is clear what your basic intentions are, the next issue is how to accomplish them. Before you get to that, it is important to be sure your intentions are real and not simply a series of clichés that you have been programmed to recite or have created to appease your self-image. Once you have your basic intentions clear, you can view the method of implementing them as a creative problem-solving activity that will get you unshackled from past practices and mimicked constraints.

## The Big Picture

Life on every level is full of complexity and uncertainty. As individuals we face a life of unknown duration, during which we are likely to go through periods of family, career or personal crisis. The world around us is even more unpredictable. It's a very good idea to have a general sense of your goals in life and an equally good idea not to get too rigid about your path. Stay open to possibility: Let other people in, and listen when new opportunities present themselves.

### The Blessing of Work

In his classic essay "Buddhist Economics," E.F. Schumacher points out that work serves to feed our basic need for association with other people. In fact, work supplies several of our basic human needs: 1. It gives people a chance to utilize and develop their faculties. 2. It enables people to overcome their ego-centeredness by joining with others in a common task. 3. It brings forth the goods and services for a becoming existence.

With this in mind, Schumacher points out that work is a basic human function that transcends the usual economic meanings associated with it: "To organize work in such a manner that it becomes meaningless, boring, stultifying or nerve wracking for the worker would be little short of criminal; it would indicate a greater concern with goods than with people, an evil lack of compassion and a soul-destroying degree of attachment to the most primitive side of this worldly existence. Equally, to strive for leisure as an alternative to work would be a complete misunderstanding of one of the basic truths of human existence, namely that work and leisure are complementary parts of the same living process and cannot be separated without destroying the joy of work and the bliss of leisure."

The constraints on our career paths tend to be self-imposed. We tend to *rise without thinking*. There is a ladder

that exists in many career paths, and society brainwashes people to think they are supposed to climb it. Not every new award, degree or promotion is a good thing for the individual. Keep asking "What do I *really* want?" over and over, until you feel you have gained insight into your own desires so you're no longer at the mercy of society's ideas of what is good for you.

## Make Achievement Your Habit

The word *problem* has negative connotations. It implies there is something wrong that needs fixing. However, if a problem is reframed as an opportunity to make things in our life better, then it becomes a positive, and problem solving can be recognized as one of our basic life forces.

So what are problems? The word *problem* describes any situation that we want to change. Usually problems are stated as questions ("How do I get a job?") or statements ("I cannot afford college"). Generally we want to deal with problems in order to effect a positive change in some situation. Life consists of solving a series of problems. We all have unsolved issues in our lives. There are situations and people that bug us, and there are vexing personal and professional problems.

If you reframe your problem, many possible options become apparent, and the path to a solution often becomes obvious.

### Prototype Your Way to Success

A *prototype* is a sample or model created to show or test a concept — something to be learned from. In solving problems, an excellent way to move forward is to incorporate prototyping into your process.

Early in the problem-solving process it is best to think of prototypes as simply trial balloons — ideas or statements sent out to gauge people's reactions to your ideas. Prototypes do not necessarily have to resemble a physical object. They can take any form. They could be conversations, written drafts, short movies, skits, physical embodiments of social or personal problems or actual physical models of objects. Prototypes can be in any form that gives information. They do not need to *look like* or *work like* the final solution, and they certainly do not need to do both.

The road to a final solution is strewn with ideas that have been prototyped as ways to get information, directions to take, ideas to modify and ideas to abandon. Prototyping is a great way to show people what you have in mind, so you can elicit their feedback.

The next time you are asked to do something, don't spend too much time thinking. Simply charge ahead. Do this by taking the first idea that comes into your head and make a quick prototype. Then think about what you have learned from this. If you are brave enough, try it out on some people and get their thoughts.

### Be the Cause in the Matter

Being the "cause in the matter" means taking full responsibility for whatever you're dealing with and whatever happens in your life, even when it seems that things are not totally in your control. It's a declaration of choice: Instead of playing the role of passive protagonist in your life, choose to take charge of your future. Resolve to get things done, whatever it takes, and no matter how many valid "reasons" pop up.

Adopt an attitude of willingness to give things a chance; allow yourself to test things out and see what happens without thinking you know the outcome. To test things, you need to give them your attention. Attention begins with noticing your behaviors and interactions. Notice both yourself and the people you interact with. What works and what doesn't? What could work better? Then test the various tools and exercises by inserting them into your everyday interactions.

Realize that your mind is trickier than you think and is always working with your ego to make you believe you are doing better than you really are. That's the human condition. What you have going for yourself is that, if you choose to, you can be mindful about controlling both your intentions and your attention to make your life better for yourself and for those around you. You can choose to be the *cause in the matter* of the circumstances of your life, and you can instill in yourself the habit of achievement for a more functional and satisfying life.

# The EQ Difference

## A Powerful Plan for Putting Emotional Intelligence to Work

by Adele B. Lynn

### THE SUMMARY IN BRIEF

Quality of life is essential. Defining it, however, depends on the individual pursuing it. Some would consider it to be good health. Others may desire ample leisure. Still others would define it as possessions and material wealth.

By picking up *The EQ Difference*, readers are probably indicating they value another type of wealth — emotional wealth. Emotional wealth may be the most important asset of all, because in times of material poverty or poor health, emotional wealth sustains people. The dividends gained from investing in relationships and the comfort found in them can often make everything else bearable. Rich relationships, coupled with the strong inner peace that comes from managing oneself, is the hallmark of emotional intelligence. Unlike material possessions or health, emotional wealth is not only immune to the rise and fall of the markets or the ravages of disease and age, but it continues to grow and pay dividends.

Until recently, living an emotionally healthy and intelligent life was more or less left to chance, but today people take steps to improve all different aspects of their lives. Improving emotional intelligence is just one more avenue to living a healthy, productive life. The steps presented make up a comprehensive plan for developing emotional intelligence and living according to one's intentions.

### IN THIS SUMMARY, YOU WILL LEARN:

- The physiology of emotions.
- How emotional intelligence supports living our intentions and values.
- The seven steps to train your "self coach" to develop EQ.
- Methods for dealing with the difficult coaching client.
- How to apply a 360-degree assessment that covers the 10 most essential skill sets of well-balanced, effective leaders.

## PART I: EMOTIONS: THE FUEL OF LIFE

## The Connection Among Behavior, Feelings and Performance

Emotional intelligence is the ability to manage ourselves and our relationships so we can live our intentions. Indeed, emotional intelligence is about making choices.

Other people's behavior can definitely influence your feelings. Think about the last time someone cut you off on the freeway. That behavior could have caused you anything from mild irritation to road rage. Or think about the last time at work that people expressed gratitude for your efforts. More than likely, that had some positive effect on your feelings.

Emotions can also affect performance; in fact, some emotions translate into action and others into inaction. Recognizing this is an important foundation to understanding how emotions can be channeled in the workplace.

Even though feelings can affect performance, many factors contribute to overall high performance at work. Blending workplace knowledge and emotional intelligence can help businesses and organizations achieve the highest level of success.

## The Mystery of Human Behavior

Because behavior has such an important effect on performance, it would be worthwhile to understand the complicated factors leading to human behavior, especially our own. Family and societal values, laws and mores of church and state, personality, group influences, assumptions and beliefs, life experiences, and reinforcement and punishment all drive human behavior.

What do you know about your own behavior? Probably a good deal. However, no matter what your current knowledge, increasing that knowledge is a worthwhile and lifelong process. Also, what you do with that knowledge may be the difference between a life of mastery and one filled with repeated errors and struggles.

### The Dance Between Values and Emotions

Most major companies have eloquently written values statements suggesting that people — both leaders and employees — know how to behave. But people don't always behave the way they "should."

When emotion overrides values or intention, it is called emotional hijacking. Everyone has experienced this at some time. Daniel Goleman, who described the term in Emotional Intelligence, compares emotional hijacking to an emergency signal sent to a part of our brain.

No doubt you've either contributed to or witnessed a hijacking when someone appears with the wrong message. Anger is one of the most obvious forms of emotional hijacking, but muting (feeling one has lost one's voice) and inertia are other manifestations. With effort, these responses can be replaced with new behaviors and reactions.

## The Way We Are Wired

Emotions are rooted in our biochemistry; they are not simply a matter of the heart. Therefore, a rudimentary understanding of the science of our brains is necessary to understand emotional hijacking.

### Three-Brain Structure

Our brains consist of three fundamental areas. One area is our autonomic, or first, brain. According to scientists,

the autonomic brain is responsible for such important functions as breathing and the beating of our hearts.

Another area of our brain structure is our emotional brain, or limbic system, which consists mainly of the amygdala and the hippocampus. The limbic system records danger and fear, giving us the basis for deciding whether to instantly fight or run in particular circumstances.

As our evolutionary development continued, the cortex and neocortex developed as the center for cognitive responses. The cortex is responsible for higher-order rational thought. It is the seat of problem-solving and decision making. The rational brain can help us navigate the path to living our intentions and avoiding emotional hijacking.

### Why Hijacking Occurs

It's important to know that your limbic system works really fast. In a hijacking situation, your limbic system just takes over, and your rational brain is simply not consulted.

Perceived threats have created well-ingrained pathways for reactions. But the reality is that even though our physical survival is not usually threatened, our limbic system still sends signals of risk and danger. Why? Because it has created patterned responses that serve our needs. If screaming and yelling for a cookie at age two produced the desired result, we may still be using that method in production meetings to get something we want. Those pathways are still working as if nothing has changed. The neuropathways contribute as much, if not more, to our behavior than rational thought.

## Emotions: What Are They?

For our discussion about emotional intelligence, we need to understand the three basic components of emotions: the cognitive component, the physiological component and the behavioral component.

### The Cognitive Component

Consider Tom in the Information Technology department. Tom thinks nothing is more interesting, challenging and stimulating than writing computer programs. On the other hand, Karen, a landscape designer, believes nothing is more boring than sitting in front of a computer all day. Tom and Karen have completely different perceptions about the work they like. The thoughts, beliefs and expectations housed in our rational brain definitely contribute to our emotions.

### The Physiological Component

Our limbic system goes to work with us every day. In every meeting and interaction, it's scanning the environment for even the slightest perceived threat. The more in tune you are with the physical reactions triggered by your limbic system, the better you will understand your emotions. Physical reactions are a credible source of information regarding your feelings.

### The Behavioral Component

The behavioral component of emotions is how emotion is expressed. A smile is a universal symbol of the emotion of happiness. In fact, nonverbal behaviors are the most common expression of emotions.

The cognitive and behavioral components of emotions are the two areas where we can focus our attention in emotional intelligence. If we can change what we think and how we behave in certain situations, we can positively influence our emotional intelligence.

## Rewiring for Greater Performance and to Live Our Intentions

Emotional intelligence can best be viewed as a partnership between our rational and limbic brain. By blending the thoughts offered by our rational brain with the rich information from our limbic brain, we can direct our own actions and behaviors. Emotional intelligence allows us to harness our emotions so we can honor our intentions.

### Introducing Your Self-Coach

It would be great if we all had someone who could follow us around during the day and help us know exactly what, when and how to interact with others, but in reality, we're generally left to our own devices. By creating a self-coach, we would have someone to consult, someone to whisper in our ear and someone to advise us about the sometimes treacherous path of human interaction.

## The Five Areas of Emotional Intelligence

Many people think emotional intelligence is equivalent to social skills. That, however, is like thinking that a car is a steering wheel. You're simply missing a huge part of the picture.

Emotional intelligence, therefore, includes skills that drive our internal world as well as our response to the external world.

The model for emotional intelligence contains the following five components.

1. **Self-Awareness and Self-Control.** The ability to fully understand oneself and use that information to manage emotions productively.
2. **Empathy.** The ability to understand the perspectives of others.
3. **Social Expertness.** The ability to build genuine relationships and to express caring, concern and conflict in healthy ways.
4. **Personal Influence.** The ability to positively lead and inspire others as well as oneself.
5. **Mastery of Purpose and Vision.** The ability to bring authenticity to one's life and live out one's intentions and values.

Three of the components of emotional intelligence relate to our internal world (self-awareness and control, empathy, and mastery of purpose and vision); the other two form our relations to the external world (social expertness and personal influence). All are interrelated, and one builds on the next.

To build emotional intelligence, the model requires that we work from the inside out. For example, you can't influence others until you have mastered self-awareness and self-control.

## PART II: TRAINING YOUR SELF-COACH

# The Doorway to Emotional Intelligence

The doorway to emotional intelligence opens with self-awareness. Self-awareness is our ability to understand ourselves and then to use that information to fully live our intentions. In your quest for greater emotional intelligence, you will find that self-awareness is a circular and cumulative process that is never fully achieved.

### The Self-Coach: Your Self-Awareness Partner

So what exactly is the role of your self-coach. First, let's distinguish your self-coach from your conscience. Your self-coach isn't there to tell you right from wrong. The self-coach isn't there to impose guilt when you've done something wrong but rather to help you learn from your experiences. Your self-coach is there to help you monitor your progress; to be a clearing-house for lessons learned; to offer tips, suggestions and advice based on your experiences.

### Seven Steps to Emotional Intelligence for the Self-Coach

The Seven Steps to Emotional Intelligence for the Self-Coach are 1. Observe. 2. Interpret. 3. Pause. 4. Direct. 5. Reflect. 6. Celebrate. 7. Repeat.

With continued practice and patience, you'll find your self-coach an invaluable partner in your daily experiences.

# Step 1: Observe

Every great coach, regardless of the sport or discipline, observes. Coaches watch and analyze each movement of their players.

How can you strengthen the power of observation? For starters, your self-coach needs to get out more; in other words, distance himself or herself. Imagine him just watching, perhaps perched on a ledge and observing you. He can sense your mood, your body language, your breathing and your voice intonations. He can also observe these things in other people around you.

After you practice observing yourself in pleasant situations, you're ready to assume the challenge of observing yourself during conflict or high-stress situations. In conflict situations, at first, try to pay particular attention to your physical reactions. Your physical reactions may well be the first indicators of trouble.

As you cue into your physical reactions, you'll also want to observe other things about yourself. While your self-coach is in training, it might be helpful to ask a trusted colleague or friend to help you with this observation process. It's particularly difficult to see your own nonverbal behavior.

### Scanning

Scanning is a technique widely taught in law enforcement to sharpen and broaden officers' perceptions in high-stress situations. Scanning allows a look at the whole picture rather than only one detail. This technique engages your rational brain to help you think and interpret signals from your limbic system. Both systems are giving you data; scanning ensures you are accessing both systems equally and can build a far more realistic picture of the whole situation.

### Observing Mood and Emotion

Mood is the underlying effect you experience in a situation. It sets the framework for how you may assess a particular event. Emotion is the reaction to a particular stimulus. For instance, if you're in a good mood and you spill a cup of coffee, you may joke about being a klutz. Spilling a cup of coffee when you're in a bad mood may cause you to become angry and lash out.

Moods and emotions fall within continuums. Depending on your mood, someone cutting in front of you on the freeway may cause you mild annoyance or rage. These different degrees are important to recognize. As you become more familiar with moods and emotions in yourself, you should become more able to key in to the moods and emotions of others.

### Voices

The next step in self-awareness is to assess how others' moods and emotions affect you. One way to do this is to begin to observe your internal dialogue. You'll notice that certain voices appear over and over again. These voices have a powerful influence over our moods and actions.

Getting a handle on the voices that speak most often in your inner dialogue is an important grasp for your self-coach. As he becomes aware of your tendency toward a particular voice, your coach will be able to quickly recognize the voice and determine how it affects behavior.

### Triggers

Another important concept for your self-coach is to understand your triggers. Triggers are those factors that influence emotional reactions. Those emotional reactions can be either positive emotional reactions or negative emotional reactions, depending on the trigger. Triggers include mood, moods and attitudes of others, personality, hot words/hot buttons, perceived criticism and situations, among others.

### Observing Bias, Prejudice and Filters

It's important to stretch your observation skills to include bias and prejudice. Limbic reactions can be so subtle that your self-coach may need help to see your prejudices. One way to begin is to monitor your self-talk about various groups. Especially look for ways that you are filtering information with your rational brain. Your self-coach can pose questions like, "How might I be excluding others? How might I be sending subtle messages of bias or prejudice?"

## Step 2: Interpret

Step 1 focused on training the self-coach to be an astute observer. What do we do with all the data garnered through observation? Here again, you need to ask your rational brain for some assistance.

### Modus Operandi

One of the most useful concepts for interpreting information is modus operandi (MO), or method of operation. Each person has unique patterns of behavior that repeat as circumstances repeat. Ask yourself, "How do I typically behave when I experience a particular emotion?" Or "What is the impact of a particular emotion on my behavior?"

### Combining MOs with Triggers

The next task in interpreting data is to combine what you know about your MOs with knowledge about your triggers. When your self-coach can quickly determine what triggers cause what emotional reactions, you will be on your way to greater emotional intelligence. You're interpreting not only what triggers hijack you but also how you react when you're hijacked.

### Impact on Others

As you observe other people, you'll find that your behavior affects them in different ways. Distinguishing the impact you have on others will help you know how to adjust your behavior. Just understanding that you have an impact on others is a huge accomplishment of self-awareness.

### Beware the Pitfalls of Interpretation

If you've done a good job at observation, you should be able to keep bias and judgments at bay as you interpret and analyze your findings. Right? Wrong.

Each of us has an enormous capacity to interpret incorrectly based on some common erroneous beliefs. The problem is compounded because our rational brian has been fooled to think that these beliefs are actually facts.

### Decision Time

At this point, your self-coach has assimilated important information for you. He understands your MO and your triggers. He has checked all of this data against potential confirmation bias and suggestion. Now it's decision time. In the moment, your self-coach will have to make the call. If you continue on your present path at this particular meeting or encounter, are you at risk for being hijacked? If so, the red flag should be waving.

## Step 3: Pause

There are moments when your self-coach decides that if you continue on your present path, you are at risk of being hijacked and not living your intentions. At such times, your self-coach needs a planned and practiced technique for pausing.

First, breathe. Close your mouth and count to eight while breathing in slowly through your nose.

Second, there should be some physical movement you can immediately revert to as you breathe. Examples

include taking a long sip of coffee, removing your eyeglasses or shifting your body weight.

Third, you should have a mantra to recite while breathing and performing the physical movement. That mantra should be uniquely yours, something that helps you gain perspective.

These actions should be practiced until you can instantly revert to this pattern. Thoughtful pause isn't about extinguishing the emotion you're experiencing but about allowing for another form of expression of that emotion — one that will ultimately serve you better.

## Step 4: Direct

Step 4 is about behaving in a way that will increase your likelihood of living your intentions. It's about careful selection of words and behaviors so they are congruent with your values.

For your self-coach to help you choose techniques that will keep you from being hijacked, you need to understand a common basic formula. In an unwanted emotional response, A (activating event) + B (belief about the event fueled by triggers) = C (upsetting emotional response and regrettable action).

This is the typical formula that drives emotional hijacking. If, however, you could insert one more step, you could drastically change the situation. This step is redirecting thoughts and beliefs. Let's change the formula to A (activating event) + B (belief about the event fueled by triggers) + C (redirect thoughts and beliefs) = D (new emotional response and action).

Your self-coach can use a variety of techniques to help you redirect irrational beliefs. These include challenging those beliefs with rational thought, adding humor to your thought processes and amplifying the voices that serve your intentions. As you practice these, you'll notice new assumptions forming; for example, "Others want to see me succeed, not fail" and "I have the power to change many things."

## Step 5: Reflect

Reflection is a wonderful way to get you closer to understanding your emotional reactions in a given moment, which is the true mastery of emotional intelligence.

Reflection is not about regret. It's not about rationalizing or justifying, and it isn't about reflecting solely on our feelings. It should take into consideration not only your intentions and how you felt about your reactions but, more importantly, how others viewed your actions.

### Reflection Methods

Your method of reflection will depend on many things, such as your personality and your comfort level with some of these techniques. Experiment with a variety of things, including journaling, mentoring, coaching, volunteering and reading.

Whatever your methods, reflection is a critical component of emotional intelligence. If you keep in mind that its purpose is to draw you closer to living your intentions, the insights will pour into your consciousness.

## Step 6: Celebrate

Some of the most significant breakthroughs in our thoughts or behaviors probably defined and changed us as much as, if not more, than a graduation or anniversary. In Step 6, we develop an appreciation for those moments and celebrate them.

How should you celebrate? However you like. The only guidelines are that you are clear on what specifically you have accomplished and to celebrate as soon as possible. This will lead to greater reinforcement. Remember, there's a purpose to celebration, and that is to rewire your limbic brain.

Another important thought, so that reinforcement takes hold, is to be sure that you are reinforcing improvements or advancements more frequently than you are chiding yourself for disappointing performance. If you are not, you are likely killing potential progress toward your emotional intelligence because your limbic system is registering negatives and failure. Yes, you are going to make mistakes, but if you pay attention, you're also making progress.

## Step 7: Repeat

Step 7 is about helping you recognize that the quest for emotional intelligence is a way of life, not a destination. Repeating is about renewing the sense of awe that life has to bring every day.

Most people recognize that new life experiences have added to their insights. As new parents hold their infants, they seem to believe that this birth marks the first time anyone has ever done anything so miraculous. It's that sense of wonder and awe in this new experience that changes the essence of who we are. But subtle experiences also change us. The best way to think of those subtle experiences is that they can accumulate and sneak up as wisdom. All of them can change you if you repeat them and allow them to accumulate into wisdom. But you have to be ready.

Repeat sets the stage for you to meet each encounter in life with a new mindset. Knowing how requires practice and discipline until it becomes automatic. Becoming emotionally intelligent is about practicing Steps 1-7 repeatedly.

## PART III: FIVE AREAS OF EMOTIONAL INTELLIGENCE AT WORK

## Self Awareness and Self-Control at Work

Understanding your emotions is central to more effectively relating to people and creating a positive emotional climate at work. Conversely, if you have low self-awareness, people may see you as emotionally out of touch or insensitive. As you may be unaware of your emotions and/or your strengths and weaknesses, you may be unable to develop to your fullest potential.

Self-awareness allows us to understand our limitations, and self-control allows us to address them. Self-control is about selecting the words, appropriate time and demeanor that give you the results you seek.

### Suggestions for Improving EQ at Work in the Area of Self-Awareness and Self-Control

- Solicit feedback from your manager, employees and peers about your strengths and weaknesses.
- Pay attention to how you feel during a conflict situation. What effect are your feelings having on your actions, word, tone of voice and body language?
- Ask yourself, "If I express my emotion here without thoughtful purpose, what is the risk? What is the benefit?"
- Mentally rehearse staying calm in crisis.
- Given your personality, think about ways you could authentically express positive emotions.

## Empathy at Work

Empathy is an essential component of success, regardless of your job or level within the organization. Empathy is understanding the perspective of others, and listening is a tool of empathy. Empathy occurs when listening turns to full understanding of why people said what they said. This listening leads to understanding, not only from an intellectual level but also from an emotional level.

Our life experiences can be crucial in supplying us data that will help us become more empathetic. Our goal is to use those life experiences and the people we encounter as a laboratory where we consciously choose to consider the perspectives of others.

### Suggestions for Improving EQ at Work in the Area of Empathy

- When someone is talking to you, ask yourself what emotion is underlying his or her words.
- When someone says something you disagree with, active-listen to his or her statement in a non-judgmental way. Notice the reaction this precipitates.
- When someone says something you agree with, stay silent about your views. Draw the other person out, and ask them to tell you more.
- Think about the times you have jumped to a wrong conclusion. What can you learn from these experiences?

## Social Expertness at Work

Once you have a firm understanding of yourself (self-awareness), can control your emotional reactions for the desired outcomes (self-control) and are empathetic to others' viewpoints (empathy), you are perfectly positioned to create social bonds, collaborate with others and resolve conflicts effectively. These skills are the components of social expertness.

### Suggestions for Improving EQ at Work in the Area of Social Bonds, Collaboration and Conflict Resolution

- Connect regularly with your contacts.
- Always smile and say hello in passing.
- Remember people's names.
- Find ways to collaborate: It strengthens your social bonds and allows you both to give and take.
- Always respect a different view and be willing to change yours when a case is made for the good of the organization.
- When in conflict with someone, encourage them to state their views. Do not dominate the discussion. If anything, do more listening than speaking.

## Personal Influence at Work

Personal influence is the essence of leadership. Inspiring others through example, words and deeds requires a firm foundation in all the areas of emotional intelligence already discussed.

Persons with strong personal influence are optimistic. Their optimism even affects their health. They live longer than pessimists. A person with strong personal influence exhibits motivation for one's visions, missions, core values and beliefs. Therefore, influence is directed in two directions: internal to self and external to others.

### Suggestions for Improving EQ at Work in the Area of Influencing Self and Others

- Surround yourself with optimistic people. Allow yourself to feel inspired by them.
- Work to your strengths. Gain a good understanding of what you do well. Use that information to advance your ideas, stay motivated and persist. Your strengths will deliver your desired outcomes if you persist long enough.
- Watch your reaction to failure. Are you learning from your mistakes?
- Think about your participation in a truly satisfying and accomplished team. What elements were present to cause this reaction?
- What actions drain you?
- Think about a time when you did not act on something you believed in. How did you feel?
- Think about a time when you took an action on something you believed in. How did you feel?

Purpose is the foundation of emotional intelligence. When we understand our purpose, our emotional response is much easier to craft. Clarity of intention produces a picture of appropriate emotional response. This works for our lives as a whole and in daily situations.

Discovering purpose is hard work. Skills, knowledge, gifts, values, resources, likes and dislikes all offer clues to our purpose. True discovery, however, requires deep reflection and re-evaluation of all that we are. It also requires sacrifice. But the payoff is profound.

## Mastery of Purpose and Vision at Work

Each of us has a purpose to which we are uniquely called. Your purpose is your reason for being here. Purpose is not about your job or the roles you have in life; it's larger than that.

Mastery of purpose crystallizes our intentions. We can continually review our intentions by touching this base. Remember playing tag as a child? You knew you would always be safe at home base. Home base is our purpose. We know that when we come from this place, everything is aligned. We feel comfort. We live authentically.

Purpose also requires that you use your natural gifts and talents.

### Suggestions for Improving EQ at Work in the Area of Mastery of Purpose and Vision

- Think about times when you are truly your best and happiest. What defines these times?
- Think about times when you feel compromised. What defines these times?
- Take an inventory of the things in life that you feel passionate about. How many do you do daily?
- Assess and challenge your values. What do you truly believe in? What beliefs do you hold because others around you expect you to believe in them?

## Letter to Readers

Quality of life is essential. Defining it, however, depends on the individual pursuing it. Some would consider it to be good health. Others may desire ample leisure. Still others would define it as possessions and material wealth.

Emotional wealth may be the most important asset of all, because in times of material poverty or poor health, our emotional wealth will sustain us. The dividends that we reap from investing in our relationships and the comfort we find in those relationships can often make all else bearable.

As you continue to write the story of your life, go deep within yourself. The amount of emotional wealth you can accumulate is unlimited. Perhaps, at times, you just need to be reminded of your potential.

Carefully consider your words and actions. Honor your relationships with others. Honor the whisper in your own soul regarding your purpose, and expect it to grow into a roar. Honor yourself. Take off and soar.

# The Laws of Charisma

## How to Captivate, Inspire and Influence for Maximum Success

by Kurt W. Mortensen

### THE SUMMARY IN BRIEF

It's breathtaking to watch someone with charisma enter a room. The sound of their voice and their mere presence seem to have a captivating effect on everyone around them. It's as if an invisible field of energy surrounds them, mesmerizing others like a magical spell.

Your career, your relationships and your income are all related to your ability to radiate this mysterious trait. But what is charisma? Is it something with which only a lucky few are born? Or is it something that can be learned?

Much more than simply charm, likability, presence or passion, charisma allows you to build rapport instantly, inspire others and influence them to your way of thinking, all while putting them at ease. In *The Laws of Charisma*, Kurt W. Mortensen, one of America's leading authorities on persuasion and influence, reveals the specific skills, traits and attributes associated with charisma that you can learn, develop and master.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to get others to believe in you, trust you and want to be influenced by you.
- How to energize everyone around you with your enthusiasm, passion and expectations.
- The communication skills that will enable you to communicate effectively without speaking.
- Ways to win contagious cooperation from even the unlikeliest of allies.

## Introduction

Have you ever noticed how some people can captivate, inspire and influence others without effort? Other people instantly like them and want to be around them. How do they command such instant attention and influence everyone they meet?

This is the power of charisma. Charisma is a vital motivational and life skill that can and must be mastered if you are going to influence others.

When we hear the word "charisma," sometimes we are not sure what to think. It can be a mysterious attribute. Here's a definition of charisma: the ability to easily build rapport, effectively influence others to your way of thinking, inspire them to achieve more and, in the process, make an ally for life.

Research on charisma shows that you must learn and master certain skills, traits and attributes. As you read on, you will learn a number of critical skills or traits required to master charisma.

### Self-Perception Bias: The Great Blind Spot

What is the greatest roadblock to charisma? We all have blind spots in our lives that impede us from working on the things that can launch us into greater success. The inability to see these blind spots is called self-perception bias. We all tend to rate our skills and traits higher than they actually are. However, to improve, grow and become more successful, we have to know our weaknesses and be able to identify blind spots. If we don't know what they are, then we can never truly improve.

### The Solution

The solution is all about true self-assessment. We all have different strengths and weaknesses. Try to honestly assess yourself or have someone you trust give you feedback. Charismatic people are able to take a good, hard look at themselves and come to grips with the facts, both the good and the bad. When you can do this, you are able to make real progress.

## PRESENCE: WHAT DO YOU RADIATE?

## Passion: The Transfer of Pure Energy

Passion is critical to influencing others and transmitting charisma. Charismatic people radiate heartfelt passion. When your audience can sense your passion and sincere conviction for your cause, they will jump on board emotionally. When you transfer your passion, the people around you start to absorb your energy. They begin to perform better. Being on the job no longer seems like work. They become more proactive, more willing to work as a team and more optimistic.

### Application

Those with charisma increase enthusiasm by gaining insight and knowledge about their subject. They have developed a true belief and conviction in what they do. Believe in yourself and in your message; radiate enthusiasm in all that you do. On the flip side, fake enthusiasm, unrealistic hype and false energy destroy charisma. You can enhance your charisma by doing the following:

- Always maintain your credibility.
- Be sincere in all your interactions.
- Always be connecting with others.
- Always be authentic.
- Maintain constant confidence.

## Confidence: Conviction Is Contagious

True confidence is a state of mind. Charismatic people can maintain confidence in all situations even if they have encountered defeats, setbacks or unpredicted outcomes. We all have a tendency to feel insufficient or inferior at times. When you lose faith in yourself or have had failure in your life, you lose confidence through fear, which can be defined simply as magnified doubt.

Fear breeds doubt and doubt destroys confidence. You need to make sure that your confidence is bigger than your doubts. What does your audience really sense in you? Are you afraid to exercise confidence and charisma? The desire to overcome your fear needs to be bigger than the fear itself. Bottom line: no confidence, no charisma.

### Application

Here are some additional ways you can avoid the trap of seeming overly confident or arrogant:

- Always take feedback or criticism with an open heart.
- Spend more time listening than talking.
- Be able to admit that you were wrong.
- Don't always attempt to prove you are right.
- Ask questions to demonstrate concern.

## Congruence: Action Versus Intention

Congruence opens the door to influence and charisma. It increases your believability and likability. You attain congruence when your message is synchronized with your beliefs and values. It occurs when your voice, body language, words and vocal tone are all congruent and aligned. It comes from making sure that your verbal and nonverbal messages are in agreement.

### Blind Spot

Even when you feel congruent, you may not look congruent. Whether you are deceiving or not, whether you are insincere or not, you might be coming across as if you are. A little fib? A white lie? No one will know. We think others can't tell. They haven't said anything about not believing you or your message. A little deception has worked before, and no one has called you on it. Most people can sense incongruence and rarely will say anything about it. You will either come across as congruent or incongruent. Do your gestures match your message?

### Application

Everyone can pick up on nonverbal behavior. We sense something is not quite right. Here are some things that can trigger a sense of deception:

- Forced eye contact.
- Shifting back in chair.
- Scratching your face.
- Rising voice pitch.

# CORE QUALITIES: THE INSIDE DICTATES THE OUTSIDE

## Competence: What You Don't Know Will Hurt You

A critical ingredient to radiating charisma and enhancing your ability to influence others is to have comprehensive competence, knowledge or expertise in the area where others expect you to have it.

Competence consists of your knowledge and capability in your field. Competence comes from lifelong learning and experience. Having more knowledge or expertise than your audience enhances your charisma.

Passion is a great thing to have, but without the perception of competence you cannot radiate charisma or influence anyone. True competence is when you combine your ability, capabilities and skills.

### Application

The key to developing competence is patience. Nothing works perfectly the first time we learn or try it. Keep focused and keep learning until you feel you can demonstrate competence in your field. In the short term, you can increase others' perception of your competence in a number of ways:

- Have someone endorse you or explain your qualifications.
- Make sure your office and external surroundings radiate competence.
- Keep your reputation untarnished.
- Get others to refer you.
- Always have a definite opinion about your area of expertise.

## Purpose: Tapping into Unlimited Drive

Many people confuse emotion with purpose. Your emotions will constantly change. When you have true purpose, not only do you attract more people and become more influential, but your purpose drives them. Purpose causes you to ooze charisma.

### Application

Do you know your purpose? Do you want to know exactly what greatness lies within you? Do you want to get a better feel for the direction you should take in life? Give these questions some continuous thought and meditation. The answers might come right away, or they might take days, weeks or even months to reveal themselves. Answer the following questions:

- If you knew you would succeed — if you knew you could not fail — what would you do if you were guaranteed success? What would you try? What would you become?
- If you could magically and instantly change one thing in the world, what would it be? What would you change?
- Imagine you became financially independent and no longer had to work, no longer had to think about making money and paying bills. What would you do with your time? How would you spend your day?

## Integrity: Character Counts

The word *integrity* comes from the Latin word *integritas*. It means purity, correctness, soundness and blamelessness. It can also be defined as consistency between your values and actions, between what you believe and what you actually do. When you want to influence others and enhance your charisma, you must radiate integrity. People must know and feel that you believe what you say and will do what you say. Tapping into your integrity requires knowing yourself, knowing your values and knowing exactly what you stand for.

Having great integrity is also part of your character. Character is made up of such qualities as honesty, sincerity and predictability. Solid character and integrity are the very foundation of one's ability to succeed. No success is going to be great or lasting if it stems from questionable ethics, motives or behaviors.

### Application

Tapping into your values will increase your passion, your integrity and your ability to influence others. You cannot influence or inspire others if you do not know your own values and are therefore unable to share them with others. Here are some tips to help you tap into and discover your values and how to live by those values:

- Write down your definition of a value.
- Take time to ponder and reflect on your true beliefs.
- Find people you respect, and define their values.
- Find people in history you admire, and determine whether their values are your values.
- Live up to everything you say you are going to do.
- Tell the truth even though it hurts.

# DELIVERY AND COMMUNICATION: SPEAK WITH CONVICTION

## Presentation Skills: Educate, Inspire and Entertain

Charismatic people have excellent communication skills that captivate, inspire and rivet their audience. Whether on the phone, in face-to-face interactions, during group presentations, amid negotiations and even when texting and emailing, they can articulate their message and make it come alive in your mind. They make you feel as though you're watching a movie; they have created a mental picture so strong that it feels real. These kinds of presentation skills have been described as energetic, enthusiastic and emotional.

### Blind Spot

Being able to talk or create a PowerPoint does not mean you know how to communicate, inspire and present. Most people feel that they have above-average communication skills and average presentation skills. That's the blind spot. The reality is that they are lucky to have average communication skills and below-average presentation skills. Sure, you can give a presentation and no one leaves the room or says anything negative, but did you really have charisma? Charismatic people have mastered their presentation skills, yet they are constantly working on them. There is always something to fine-tune, to learn and to improve.

### Application

How would you describe your presentation skills? Take a look at this checklist to see whether you are making any of these common communication blunders:

- Speaking in a monotone.
- Avoiding eye contact.
- Fidgeting and displaying other annoying mannerisms.

- Using vocal fillers ("uhm," "uh," "er").
- Lacking emotion or conviction.
- Sounding mechanical or rehearsed.
- Rushing through the presentation.
- Overloading the audience with too much information.
- Displaying nervousness or fear.

## Influence: Help Others Persuade Themselves

Charisma and influence go hand in hand. In other words, charisma is getting others to do what you want them to do and like doing it. People get uneasy when you talk about influence, but, just like power, influence is neutral.

Most people misunderstand the concept of persuasion and influence. Influence is usually undervalued and underutilized. True influence is not forceful, devious or manipulative. Make no mistake: Influence can be learned. Understanding the theories of persuasion, motivation and influence will create charisma.

### Blind Spot

The blind spot is that most people exert influence in the wrong way. They tend to influence others as they like to be influenced, and that is completely wrong. You need to adapt your approach to the person and to the situation. As you master charisma, you must influence others in the way they want. Just because you are getting short-term compliance does not mean you have influence over others. Charismatic people don't seek short-term compliance; they are after long-term influence. Short-term is easier, but it works only when you are around, as opposed to long-term influence, which works no matter where you are.

### Application

When people attempt to persuade and influence, they tend to use techniques that are old-school and that no longer work. Make sure you remove these common blunders from your persuasion and influence techniques:

- Getting too friendly too fast.
- The data dump — too much information.
- Persuading people in the way you like to be persuaded.
- Using force or coercion.
- Tired old-school closing tactics.
- Winning the argument but losing the ability to influence.

## EMPOWERING OTHERS: CONTAGIOUS COOPERATION

## Inspiration: Strengthen and Energize

If you are uninspired, you will not be inspiring. Charismatic people have the ability to inspire others, to instantly lift their moods, to adjust their emotions and to increase the energy in the room. When you have the ability to inspire others, people rise to your expectations. They want to grow and improve themselves; they thrive on your high expectations.

If you want your charisma to last, you need to rely on the inspiration that is rooted in your emotions and your vision. When you radiate inspiration, you move people away from despair, inaction and blame. You give them hope in themselves and in the future. You will be able to lead and inspire with charisma and the future in mind.

### Application

So how do you know whether you inspire others? How do you know whether you can promote teamwork? Here are a few questions to think about in order to understand whether people are inspired or stuck in desperation:

- Do others feel better about themselves after interacting with you, or do they feel worse?
- Do they know you are pleased or grateful for their work, or do they think you don't care?
- Do they know you truly care and would go to bat for them, or do they feel they are just another member of the team?
- Do you listen and care about their suggestions and their feedback, or do they get defensive when you critique them?

## Motivation: Light Their Fire

Charismatic people get others to motivate themselves for the long term. They are able to help others visualize goals and make them feel they can attain those goals. Such motivation allows them to set their own goals, solve their own challenges, make their own decisions but still feel they are on the team. The journey to achieve goals can get long, hard, tiring and frustrating. Your charisma is what carries them, motivates them and lifts their spirits when they are feeling down.

You can enhance motivation and empower people in two ways. The first is personal development. When you help others use their minds, increase their knowledge

and enhance their skills, you will find untapped drive and motivation. They will develop a sense of urgency and direction that will propel them faster and higher than before.

The second way to motivate and empower others is to get them to set goals. We live in a world where we want everything now. Moreover, we want it all with minimal effort. How do you motivate this type of person? One way is to understand the power of goal setting. Very few really know how to do it. They key is not only helping others to set and achieve goals, but also being able to communicate exactly what each goal is. People should welcome the new challenge and believe they can meet it. They also should know you are committed to them and believe they can achieve their goal.

### Application

We already know that true motivation does not involve manipulation, force or demeaning people. In the workplace, what can we apply right now to enhance and increase employee motivation?

- Clear and concise expectations.
- Increased training and personal development.
- Jointly setting realistic and exciting goals.
- Limiting negative reinforcement and pessimistic coworkers.
- Recognizing and rewarding improvement.
- Making sure workers have the tools and resources they need.

## Respect: Give It to Get It

Long-term charisma is all about valuing people. It is about the respect you give to others, which breeds more charisma and influence. Respect is viral and highly contagious. When respect is high between two people or within a group, people have more trust, they are more open about feelings and they are able to stay focused on the objective. Learn to build respect in others. The more respect you give, the more influential you become.

The respect you are earning is a combination of how you conduct yourself in all your affairs. When you show respect and character in all your dealings, people will see how you work with others and will talk about it. They also will be able to instantly sense the respect in you. Another word that applies is honorable. Be honorable, and other people will trust, respect and follow you.

If you are finding that people are not taking you, your message or your company seriously, you could be looking at a red flag indicating a lack of respect. Because no respect means no influence and definitely no charisma. The more respect you can earn, the more successful you will be in your communications.

### Application

Respect needs to be mutual. Once you show it, you can get it. And you can show it in many ways. Here are a few things you can start implementing when you are interacting with people:

- Always have integrity.
- Be dependable.
- Show long-term stability.
- Constantly practice your good manners.
- Be grateful to others.

## SUBCONSCIOUS TRIGGERS: IT JUST FEELS RIGHT — OR WRONG

Most people think if we give people all the logic, facts and figures, things will work in our favor. *Wrong!* We do have a logical side, but studies show that we are extremely emotional. Our subconscious mind and emotions are huge factors in our decisions and in how we feel and treat other people.

A subconscious trigger is a feeling that says "I like/don't like this person." Everything you do or say can trigger a response (good or bad) in others. It could be your word choice, your tone of voice, your gestures or your appearance; it could also be the atmosphere, the effect of music or the mood of the audience.

When you become charismatic, you will be able to read people, find patterns in their behavior and know which emotions you are creating. Human behavior is usually predictable; we all have certain triggers or knee-jerk reactions. Long-term charisma depends on knowing these triggers and how they work.

## Verbal Presentation: It Is How You Say It

If you sound either uncertain and timid or arrogant and demanding, your ability to gain charisma will falter. Your voice is your calling card: It must exude confidence, courage and conviction. Charismatic voices have a soothing volume, varied emphases, good articulation and a pleasing pitch.

To create an effective verbal presentation, you need to understand the following critical aspects of verbal packaging:

**1. Word choice.** Words help people form thoughts, feelings and attitudes toward a person or subject. One size does not fit all. Word choice can also be essential to defuse emotional situations and get people to accept your point of view and enhance your charisma.

**2. Rate of speech.** Speeches delivered at a fast rate are rated more influential and charismatic than those presented at slow or even moderate speeds, because people who speak faster appear more competent and knowledgeable.

**3. Vocal fillers.** You are probably using these and don't know it. "Um," "er," "us" or even "ya know." These types of fillers can destroy your presentation, annoy people, hurt your credibility and make listeners tense. Work to eliminate all vocal fillers from your verbal presentations.

**4. Pitch and inflection.** Pitch is the level of your voice frequency. A low pitch tends to show more strength, confidence and assurance. Inflection is when you alter the pitch or tone of your voice. You will notice that influential people use inflection in their voices to show confidence and authority. At the end of their sentences, they will usually inflect downward.

**5. Volume.** This aspect of speaking is easy to understand but often abused. You only have three options: too soft, too loud or just right. Plant someone in the back of the room to rate your volume, or ask a friend on the phone whether your volume sounds good.

**6. Articulation.** When you are talking to someone or delivering a speech, clearly articulate every phrase and word. A clear and coherent presentation radiates congruence. People are more likely to be won over by your message and feel your charisma when you are easy to understand.

**7. Silence.** A well-placed pause can grab attention at any time and with any audience. Pauses let the audience mentally prepare for what you are about to say and allow you to emphasize your point. As you come to the pause, be sure to keep your pitch a little high.

### Takeaway

Does your voice work for you or against you? Do you sound compelling or convincing? Effective use of vocal variety catches and holds other people's attention. If you don't like how you sound, take a deep breath and find a solution. Many people do not like their own voices. Make sure that you listen for specific aspects that you don't like, instead of the blanket reaction of not liking anything about your voice. Focus on the exact aspects of your voice that you'd like to change; then make one improvement at a time.

## Nonverbal Communication: Gestures Trump Words

To captivate and mesmerize their audiences, charismatic people express themselves in positive, nonverbal ways. Their gestures look spontaneous, but they are well planned and practiced. Think of your body as a prop. You are telling a story and keeping the attention of your audience. Make sure your gestures are positive and come across as natural and purposeful.

Not only do charismatic people use nonverbal gestures in the right way, they also have the ability to read and interpret the nonverbal gestures of others. When you are able to read people in this way, you can obtain the knowledge you need to adjust yourself and your presentation based on what you are reading.

Let's look at the different parts of the body and how different gestures can be perceived as either positive, negative or deceptive. Remember you are looking for clusters, that is, two or three of these nonverbals going on at the same time. A single nonverbal does not exactly define what is going on.

**Eyes.** Make sure there is plenty of light for your audience to see your eyes. When someone is attempting deception, look for decreased or forced eye contact, increased blinking, pupils dilating.

**Hands.** Clenching your hands in a fist detracts from your presence and your message and indicates anger, aggression or tension. When someone is attempting deception, look for decreased hand movements, hiding parts of the face with the hands or palms becoming sweaty.

**Legs.** A person's legs pointing in your direction often indicates interest. Tapping a foot means the person is either wishing you would shut up or a sign of boredom. When someone is attempting deception, look for crossing and uncrossing of legs, wiggling or tapping of feet or feet underneath the chair.

**Head.** This is the one body part that most people attempt to control during a conversation because they are the most aware of it. When people get nervous, more blood flows to the head, and you will see increased touching to any part of the head. When someone is attempting deception, look for people biting their lips, dry mouth or ears or nose that turns red.

**Body.** When two people are connected, the movement increases; when there is a disconnect, physical movement will be minimal. When someone is attempting deception, look for an increase in perspiration, more mechanical movements and physically moving back.

Practice learning to read people in every situation throughout the day. Turn the audio off on a movie or sitcom to get a better read on how to interpret body language. Be more aware of your own body movements and nonverbal behavior.

## Emotional States: Understanding Feelings and Moods

Charismatic people know there is a fine line between logic and emotion. To influence someone, you have to have both, but be aware that people's emotions will override logic every time. Logic tends to be temporary, whereas emotion will carry your message into the future. Emotion inspires us to take action, whereas logic justifies those actions. You may be able to form a logical argument, but you must understand emotions if you want to become more charismatic. Your goal is either to change the emotional state of others if it's running against you or to maintain it if it is working for you.

Your ability to change people's moods and handle emotions is a critical factor in your ability to maintain charisma. Let's look at some common emotions and what they mean to you when you try to influence others.

### Emotions that Detract from Your Charisma and Decrease Your Ability to Influence

**Anger.** Anger is a sign that something is out of line. Anger is also known as a secondary emotion. In other words, what people say they are angry about and what they are really upset about are usually two different things. You can help decrease a person's anger by finding out the real reason for the anger.

**Worry.** Worry causes people to feel nervous, uneasy or anxious. Worry can be referred to as a negative vision of the future. You can therefore help your audience by bringing them back to reality, back to the now. Worry will subside when you can substitute positive images for their negative ones.

**Fear.** Fear motivates us and moves us away from perceived unpleasant circumstances or certain danger. Logic rarely helps in reducing fear. The key to understanding fear is to realize that it has been learned from a past experience. Make sure when they are afraid that you can provide a solution. Then your job as a great influencer is to help them feel capable of overcoming their fear.

### External Factors that Affect Emotions

External factors can change perceptions, moods and emotions. This phenomenon is not something your audience can quantify. Let's learn how we can change other people's state of mind and how they are feeling.

**Music.** Understand that music can trigger good or bad feelings and good or bad memories. We know music can lull you to sleep, give you more energy, make you feel more romantic or even make you want to smack the person next to you.

**Smell.** The right smell can make you comfortable or like you have been friends with someone forever. The wrong smell will do the opposite. A strange smell can put someone in the wrong state of mind for you to be able to influence them.

**Colors.** Colors can trigger a mood, a feeling or an attitude. They do so at a subconscious level. Color impacts our thinking and our reactions. Learn to choose the right colors for the right experience and the right state of mind.

## What's Next?

Charisma is a lifetime pursuit. Be careful you don't confuse popularity or the number of friends you have with charisma. Even if you can influence people to do things, you do not necessarily have long-term influence over them. Keep working on your charisma. The more tools you learn, the more successful you are going to be.

The challenge is not finishing; the challenge is starting. Make up your mind to start the race, and then you will know that you are moving toward your goal of finishing. You can come up with all the excuses you want, but none of them will bring you success or happiness. Practice these techniques everyday. The first time you try anything, it might feel a little awkward or might not even work. Stick to the plan, stick to the race and you will see success.

### RECOMMENDED READING LIST

If you liked *The Laws of Charisma,* you'll also like:

1. ***Persuasion Equation*** by Mark Rodgers. This insightful guide reveals what drives decisions and introduces the persuasion equation — a powerful combination of factors proven to speed agreement.

2. ***Executive Presence*** by Harrison Monarth. People reach highly influential positions because they deeply understand the power of perception and know how to leverage it in their favor.

3. ***Pitch Perfect*** by Bill McGowan and Alisa Bowman. Renowned media coach Bill McGowan shows how to communicate with confidence during the pivotal moments of life.

## Everything You Need to Know to Be a Master of Business Arts

by Stanley Bing

### THE SUMMARY IN BRIEF

From the mind of best-selling author Stanley Bing, the ultimate corporate mentor, comes *The Curriculum: Everything You Need to Know to Be a Master of Business Arts*, a no-nonsense, real-world strategy for success. Sharp, practical and amusing when it needs to be, *The Curriculum* is certain to occupy a place of pride on any shelf dedicated to books that explain how business works and how that knowledge can be used to achieve power, happiness and indefensible amounts of money.

Included in *The Curriculum* are key chapters on not appearing stupid (mandatory for entry-level students), fabricating a sustainable business personality, management, group dynamics, mastering electronic communications and dealing with bosses and other crazy people.

After contributing thousands of columns to *Fortune*, *Esquire* and the *Wall Street Journal* and writing nearly a dozen books on corporate strategy, Stanley Bing is at the top of his game, dispensing a lifetime's worth of hard-won wisdom to the next generation of masters. Enroll in *The Curriculum*, and his secrets will be yours.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to not look stupid.
- Methods to fabricate a sustainable business personality.
- Tips to engage in the art of selling, self-branding and self-marketing.
- How to understand and use the fundamentals of power to your benefit.

## 001. Preface

This core curriculum and extensive elective courses are based not on ivory-tower musings but on actual workplace experience augmented by as much research as seems necessary to back it up. The course is comprehensive but will certainly not take anywhere near the two years and up to $250,000 involved in those offered by well-established, time-consuming and tedious ivy-covered institutions stocked with professors who would be eaten for lunch by most serious business executives.

## 003. Curriculum Overview: The Road to Power

This book is divided into four major sections: First, the core curriculum will teach you the fundamentals of the real world. After that, there is a hefty dose of advanced material that tries to help you get granular and muscular as you deal with the daily world that right now you may be ill prepared to encounter.

### Power: The Ultimate Payoff

In the end, business is like ballet. Some have a talent for it. Those who do never stop taking classes, practicing, working out their muscles and sinews, even when they sleep. The art of learning is never done. One layer builds on another, conveying the one true coin of the realm. Power. The goal is power. The Curriculum is the way. Let's begin.

The Core Curriculum establishes a common language and foundation upon which a real-world business career can be mounted.

While the core is not in itself sufficient for mastery in the business arts, it must be completed before more sophisticated development is possible. Those who ignore the core and proceed directly to the helter-skelter world of daily business are in the same position as monkeys given the assignment to type on a keyboard until they achieve *Hamlet*. There's always a chance it may work out, but if it does it will be by accident and only after an unacceptable length of time.

# 100. THE CORE

## Course 101: Not Appearing Stupid

The workplace is accepting of all kinds of people, but not those who appear to be stupid. Looking stupid is almost always an impediment to success, and in certain fields it is a virtual roadblock.

Those who wish to succeed in the higher levels of business life must appear to be the least stupid. While they most often are not smarter than anybody else, those who prosper and advance under the big tent are clearly more adept at *appearing not stupid* than the rest of us, not only in everyday life but, perhaps more important, in crucial business situations as well.

### Mastering the Elements of Nonstupid Discourse

Fortunately, one does not have to be a genius to grasp and then successfully employ the tenets of excellent business discourse both written and verbal. A smattering of knowledge and the ability to exude confidence is key.

Here are the makings of the crucial foundation upon which the appearance of nonstupidity may be built:

**Reading and writing basic business English.**

1. Say what you mean. Don't be afraid to do so, within reason. Of course, "what you mean" may, in fact, be a reiteration of what someone else means; that is up to you, but don't make people read a bunch of gibberish to finally ascertain what you intend to communicate.

Consider "I agree with Lenny." Or "OK by me." The thing that distinguishes these utterances is that 1) they are clear, 2) they are in declarative form and 3) you don't have to be a genius to get it. That's good writing.

2. Adhere to common forms of English. English is made up of some very basic fundamentals: a subject, a verb, an occasional object and a reason for its existence. Consider "Chuck can do it" or "There is absolutely no research to support that. Show me some research, and maybe we can formulate further strategic alternatives."

The last, obviously, is a more complex sentence. But it says what it means and also puts off definitive action for a later date. That's a good sentence. It does, however, utilize *jargon*, which may be defined as a business-specific term that implies knowledge of the subject and also injects unnecessary complexity for the purpose of 1) obfuscation and 2) showing off.

Beyond coherent written expression, the effort to avoid the appearance of stupidity also mandates ... an ability to conceal that which you do not know. Many smart people are, for instance, scared of economics. They think that if they talk about it, they will look stupid. Such is not necessarily the case. Let's put it more simply: You don't need to know anything about economics to talk about it. Just stay out of it, and your risk of seeming stupid will be cut roughly in half.

The best way to avoid looking stupid is simple — but very difficult to accomplish if you are, in fact, either stupid or prone to error, due to lust, pride or even good intentions. And the best absolute inoculation against the appearance of stupidity is this: Don't do stupid things.

How painfully basic! And yet ... every day, in every walk of life, in government, the military, academic establishments and, of course, the world of business, smart people are doing stupid things.

## Course 102: Fabricating a Business Personality

You will never move forward if you do not assume a working personality that supplants your own, at least in part, while you grow on the job. For the most part, the ability — and the right — to reveal one's true self grows over time, until you reach the highest levels of power, where people are unalterably and irrevocably authentic, gigantic, festering warts and all. Sometimes all that's left are the warts ... and a lot of money.

The relationship between self-expression and power may be calculated mathematically:

G = PX2

In this formulation, permissible Genuine Personality (G) is a function of two things:

- An individual's Personal Power (P, on a scale of 1-10), multiplied by ...
- The square of a certain indefinable quality that one cannot conceal (X). It's measured on a scale of 1-100.

In senior management, the expression of Genuine Personality (G) may be huge — a product not only of the Power (P) conferred by the rank and title but also by the enormous size of that uncontainable, irrepressible X factor (X2) that makes a George Washington the leader of his country and Bill Clinton the most charismatic guy in any restaurant he chooses to enter.

A low X factor means a diminished ability to express whatever genuine human being resides within you (G). The answer lies in *building your X factor over time*.

### The Functional Business Personality

Each student has to determine what kind of mix upon which he or she will settle, but the parts of the whole are relatively immutable:

1. **Grooming (5%).** There are men who still use strong aftershave and women who travel in a cloud of seductive scent. Others (men, mostly) have facial hair. These contribute mightily to one's definition of organizational self.
2. **Costume (11%).** For many years, everybody in China and at, say, Westinghouse dressed in the same blue suit. Deviations from that norm made a statement.
3. **Choice of hardware (17%).** At this stage of history, the display of your hardware makes a powerful statement about you, particularly if the implement you fish out when the phone rings is a clamshell that belongs in the Smithsonian.
4. **Work habits (23%).** What does "on time" mean to you? Are you organized? Responsive? Available to do a conference call while attending your mother's funeral?
5. **Substance abuse (7%).** Alcohol and other stimulants and depressants play an enormous role in business, government and the arts. You need to establish your positioning vis-a-vis this important issue to ensure minimum destruction of your newly minted persona.

6. **Approach to aggression, rage and violence (10%).** There are those, even when young, who operate on a short fuse. This gives the ones destined for greatness immediate and credible power — the power to scare people. The other kind of angry people are the ones you see picking up cigarette butts on the sidewalk and screaming about fluoride in their water. You'll want to apprehend the difference.
7. **Friends (17%).** Friends can sometimes, if not always, be counted upon as allies, which are more important than friends.
8. **Craziness (10%).** Each individual must wrangle his or her personal insanity and use it for the best business objectives. One must also learn to manage the insanity of others. Those who do not currently possess insanity are encouraged to acquire some.

### On Conforming to Expectations

The core concept the student must master, as he or she goes about the gradual and serious business of fabricating a sustainable business personality, is the necessity to *conform to cultural and pre-established personal expectations*. It is recognition that one's appearance and behavior must be in accordance, within a certain zone, with what people expect. Falling outside that zone will make people uncomfortable with you. But more important, it will make them begin to see you as *not part of the program*.

Establishing consistent expectations and then meeting them is at the heart of corporate life. As you fabricate your personality, make sure to keep that fact firmly in mind, because the creature you create will have to be sustainable, admirable and capable of growth. It also helps not to hate yourself when you're done.

## Course 103: Selling, Marketing and Negotiating

There are three legs to the salesman's stool, without which the salesman would be sitting on the floor, a position less congenial to negotiating a deal than some others. The three legs:

- **Marketing:** Invented to help sell things people don't need. Products and services that people actually need do not require marketing's song and dance. The more silly and useless the object or activity to be sold, the more intense the marketing needs to be.
- **Selling:** The art of selling transcends the product that is itself the subject of the enterprise. Selling is persuasion, an exercise of self. Selling involves getting another human being to part with something, usually money, in exchange for whatever it is you are telling them they need.
- **Negotiating:** One of the most important skills of all, negotiation is the seductive dance of all business relationships, successful or not. It involves, at one time or another, bargaining, wheedling, cajoling, bullying, reasoning and, when necessary, threats and promises in equal measure.

You can't have marketing without sales or, in most cases, sales without marketing, and you can't close a deal you can't negotiate. Give deep thought to the relationship between the three.

## Course 104: Managing

No matter how small a fish one might be, one must know how to manage. Those who do not manage will, in short order, find things unmanageable. There are four directions in which an effective manager must manage.

### Managing the Boss

No individuals are more in need of guidance and assistance than those whose job it is to provide leadership. Managing your boss includes running errands, disaster control, cleanup, tapping into their fantasy life and keeping paranoia, suspicion of others and rank terror of failure from bubbling.

### Managing Subordinates

The secret of managing other people is complex. Intimately involved are several arts: listening, thinking, questioning, validating, questioning and appropriating other peoples' ideas as one's own.

### Managing Peers

The most neglected skill rarely identified or studied, the ability to manage peers and colleagues is also crucial. The budding future manager will have a lot of work and no one else to do if for them. Sharing the workload is the art of exerting influence without power.

### Managing Yourself

Perhaps the most important management challenge of all: management of yourself. This involves getting it done, thinking hard, fighting fear and chasing the dream.

What just might be the most important quality of great management and those who have a gift for it is listening. Listen to your boss, employees, colleagues, clients and customers, family, research people, vendors, critics and even, at times, to the media when the spotlight beckons. Listen to it all.

And finally: Listen to yourself. The great ones do that better than normal people. And who knows? You may be one of them. But you won't know if you don't listen.

## Course 105: Group Dynamics

Business is often seen as a personal occupation; it is not. It is the functioning of the individual within the context of groups, not just one group but a series of groups that form, dissolve and reform hourly, daily, over months and years. Understanding group dynamics and what an important role they play in any business career is critical. There are four main subjects:

**What is a group?** A group is not simply more than one or two people sitting in a room. It is a living organism, as long as it lasts, whose workings have an impact on each of its members.

**Understanding other people.** What are they? Gifted businesspeople tend to be self-obsessed, driven narcissists who often have an incomplete grasp of the nature and, indeed, the existence of "other people" as entities distinct from themselves. Yet this task must be learned as well.

**Social relationships as a function of group dynamics.** To succeed in groups, the businessperson must build and sustain what are apparently not purely business relations with a variety of people in whom he or she would have no interest in any other context. No one but a true ultra-senior executive can do without human interactions.

**Meetings and other gatherings as a form of work as well as an alternative to it.** The meeting is the spine of much of the "work" that people do at any office. It is also at times the antithesis of work.

Beware of people who tell you that there is no "I" in "Team" unless they are kidding about it. They are usually the people who put the "I" in "Team." If they're around, you probably should keep plenty of "I" in mind, too.

## Course 106: Fundamentals of Power

Hard work and patient achievement is fine, but only a true master can transform labor into power. It is a talent that can be taught only to those possessing the four essential building blocks: desire, obsession, anger and will.

**The First Element: Desire**

The undeniable urge to *get what they want* is what characterizes all people of power. In your development, you will need to begin cultivating this irrational level of desire, the kind that justifies war, revolution, bloodshed, pain and humiliation on the part of your adversaries. Desire escalates through frustration and rage, resolves on a level of action that is frightening to other people, then uses that fear to achieve power.

**The Second Element, Part 1: Obsession**

Beyond the extremity of wanting lies the unique ability of the powerful to obsess about the object of their desire. There are many kinds of obsession that drive the will to power. Although all are forms of madness, some are power builders and, as such, are useful. Others are power drainers and must be avoided. The obsession with winning is a necessary one. No one achieves power without it.

**The Second Element, Part 2: Compulsion**

Compulsion is the flip side of obsession. All these driving obsessive forces arise from and generate more anxiety, the feeling that something is very, very wrong and needs to be made right immediately if the world is not to fall apart. This horrible and pervasive feeling is at least temporarily assuaged by a variety of powerful, ritualistic behaviors that ease the anxiety and give the suffering obsessive an illusion of control, at least briefly.

**The Third Element: Anger**

Anger confers power because people who are not angry are afraid of people who are. Anger is a sword that, in the right hands, becomes the most effective tool. There are other tools, but without anger they are simply less effective.

The aptitude for great anger comes at a cost. Businesspeople interested in permanent, usable power learn to manage their anger and employ it for good use.

**The Fourth Element: Will**

How much risk can you stand? When a tough situation is staring everybody in the face that can only be resolved by an intricate, dangerous, one-on-one engagement, will it be you who quietly says, "Okay, I'll do it"? Power is seized, then used. If not fully utilized, it is lost.

Every piece of the core is useful, but the extent to which you can draw power to yourself and use it wisely will determine the height and depth of your business career.

Having established a strong core, you are now ready for field-based studies to better prepare you for the vicissitudes of everyday work life.

# 200. THE ADVANCED CURRICULUM

## 201: Strategic Thinking

Strategic thinking is utilized to produce a strategy. It helps you come to the conclusion that all hairy situations are amenable to management, even when they're not.

It takes discipline and practice. The six steps of strategic thinking are

1. **Underestimating the problem.** The strategic thinker wants to do some light cognition in a good frame of mind, without freaking out. Consequently, the true strategic thinker is the first to say, "It's not going to be a big deal" when the company's $25 million celebrity spokesperson is found facedown in a bowl of oatmeal, dead.
2. **Fear.** The 3 a.m. kind. Fear is a terrific motivator. It does one of two things in people. Some run away. Some run forward braced and energized by how big and scary everything is all of a sudden.
3. **Rage.** The mind turns black. *Why do these things always happen to me!* you scream, silently to yourself, unless you're the CEO, in which case you can scream audibly at virtually anybody you choose.
4. **Intense, microscopic plotting.** Now it's time to focus. Get a big picture of where you want to go before you start listing stuff. The big picture is very important. Without it you're not building a strategy. Make a list of actions to be taken. Divide your list into three time periods: immediate, intermediate and long-term.
5. **Getting it done.** While the Getting It Done people are getting it done, really tough Strategic Thinking must be taking place by the Getting the Strategy people as well.
6. **Mopping up.** You may think for a moment that the beast is dead, because you chopped its head off yourself. But look. The body is twitching. Better get busy doing some more thinking!

It is always better to go into the engagement with a strategy than without one. Most people in a conundrum of some sort have no idea what to do. They are not thinking strategically. Eventually, they will look to a person who appears to have some idea of what might be done if somebody knew what to do. That will be you. Pretty soon, they'll be calling you a leader.

## 202: On Branding Yourself

Now we're going to take a look at how you might go about marketing the most important product you will ever sell: You. When people buy your brand, they must know that they are getting something consistent, with known properties, that will live up to expectations again and again. That's what your brand must promise.

To begin, think of yourself as a product.

- What are those qualities that make up your personal brand and differentiate you from the generic hordes?
- Who is the target audience? Senior management? Folks in the field? One person in particular?
- How does the product look, smell, taste? Are there aspects of it that you want to stress or conceal?
- Select all other attributes you can put into action. A brand is all about what you do.

Good is good and bad is good. Good attributes make for solid, straightforward positioning. "This is Barb. She works hard. She plays hard. She's trustworthy and bright." That's Barb's brand. Bad attributes can be used to sell a different kind of product. "Don't make Barb angry. She turns into a fucking monster." Not a bad brand at all, particularly if it comes with intelligence, ruthlessness and charm.

A good brand is more than hype. It must live up to its positioning every day by establishing its authenticity over and over again on the job. Establish it. Expand it. Enjoy it. It will bring you power.

## 203: Crisis Management

Every meltdown has an arc — a mistake, a gestation period, a realization by the wounded party, a period marked by gossip when the situation could evaporate or metastasize and, finally, the opportunity for apology and regeneration. Each of these phases must be confronted and nagged in its own particular way. Consider the 14 steps of crisis management:

1. **Examine the horizon.** Crises are always preceded by a precipitating incident that doesn't look so bad.
2. **Stop bad behavior.** There comes a crucial moment where 95 percent of all bad situations can be avoided. Seize that moment!
3. **Foster manageable paranoia.** The good crisis manager makes sure that the decision makers realize that there may be consequences to their actions!
4. **Catch it early.** Here's the point where most people freak out and overreact. Resist the urge. Take a step back!
5. **Gather information.** As soberly and rationally as you can, find out what is going on.
6. **Play whack-a-mole.** Most crises seem to pop up, disappear for a while, then pop up again in a different place. Perch over each hole in the ground and wait.
7. **No sir, you can't hide.** Those responsible for the crisis or for repairing it must be on location, available and visible.
8. **Accept chaos.** The good crisis manager allows all the false solution, the quick fixes, the dumb, dramatic reactions to swirl around while a true and lasting course is found.

9. **Remain cool.** There's no punishment for taking a few moments to think.
10. **Establish the plan.** It's not perfect. But it's the only way to go. Launch the plan!
11. **Communicate.** Even if the message is very, very minimal, there must be some message that tells the world that you have a story and you're sticking to it.
12. **Don't apologize indiscriminately.** Most of the time the crisis is not ended by the apology. It is, in fact, extended to include a merry dance that ends in the decapitation of the apologizer.
13. **Declare yourself closed for business on this stupid thing.** It's time to get back to the real world. You're not playing the crisis game anymore.
14. **Learn something.** This phase is optional. Others are going to want to skip it. Try not to.

In the end, nothing can stop the crisis once it has started on a path to your door. Shit happens. That's OK. You'll live. Unless, you know, it kills you.

## 204: Electronic Communications

Sometimes it's tough to tame the rolling river of electronic sludge. The issue is, how can we make the tsunami of email, text messages, tweets, Instagrams, etc., work for us, not against us? Some of the problems we all face:

**Problem 1: There are too many empty communications.** There is no fighting this with direct action. A more Zen approach based in Not Knowing may be more appropriate.

**Problem 2: People always checking their implements instead of focusing on what's going on around them, including you.** All this constant peering into implements does not improve business or the lives of those who pursue it. Like all tools, electronic ones must be put into a proper framework and managed.

Your electronic communications are an extension of your business persona. Some sensible guidelines to observe:

- Keep your emails brief.
- If you must go on and on, put all the important stuff up front.
- With every email, text message and tweet that you send, imagine it being read by someone who is suing your corporation and has the right of discovery over your electronic communications.

## 205: Crazy People

The realm of business often rewards those who are, by any sane measure, nuts. This is because those who are bound to rigid solutions, are focused on themselves to the exclusion of others and are irrational in pursuit of their goals are likely to do very well in the game. In other words, in the world we're trying to master, it's very useful to be a certain kind of crazy.

### The Seven Kinds of Crazy People

**Bully.** He is willing to do anything to get what he wants. Emotionally vacant and without moral scruple.

**Strategy.** Flattery and backbone. Obsessive attention to the crazy person's mood.

**Narcissist:** He or she is a charming, brisk, highly intelligent, willful, big visionary with a "why not?" attitude that's hard to resist.

**Strategy.** Don't waste time with the truth. He will kill its messenger.

**Paranoid Mind.** A maniac for order. If something falls out of place, it must be restored. Very bad temper.

**Strategy.** Be the solution to his problems, even if they are imaginary. Conveniently, imaginary problems are often easier to solve than real ones.

**Evil Wizard.** While bullies and sociopaths can be a lot of fun when they're in a good mood, these scary people are always a bummer, conjuring winged warthogs from the black depths.

**Strategy.** Only in groups of the righteous is power against evil wizards found. It helps to have a dragon on your side, too.

**Self-Destructive People.** They are vulnerable due to an enormous, crushing lack of judgment.

**Strategy.** Advice and guidance may be offered.

**Hit Men.** They are truly off the rails. The people who dedicate themselves to hurting, maiming and destroying because they work for somebody really, really bad.

**Strategy.** It's tough to work for a stone-cold psycho.

**Cipher.** Who is this fucking guy? Do we know him? Can we count on him not to flake out, burn out, flame out, sell out? No, we can't. Because he is a cipher.

**Strategy.** Whatev.

## 206: Friends, Enemies and Frenemies

In a business setting, there are many differences between a "real" friend and a "business" friend.

Frenemies are neither friends nor enemies but situational associates who, at one time or another, are neither or both. Friends who don't support you and enemies who help you for their own reasons are frenemies. They may be used situationally but watched very carefully, because their support, affection and reliability are inconsistent.

Here are seven ways to make and maintain friends in business:

1. Be nice to people.
2. Don't shame anyone in public. If an ass must be kicked, do it in private.
3. Listen to people.
4. Always say hello to people in lobbies, elevators and so on, no matter how lowly or insignificant their position.
5. Display a happy demeanor. Manage your face.
6. Solve problems; don't create them.
7. Make people happy.

Maintain your friends, and treat them like the precious treasure they are. Take equal care of your enemies; always look for ways your interests and theirs might intersect. Use your frenemies as you would a hammer or a personal digital assistant, tools that will help you get your job done.

## 210: A Short Course in Ethics

Ethics are very easy to have until you need to exercise them. Then it's kind of amazing how many of them can be discussed rationally and modified. "Thou shalt not steal" moves to "maximizing value isn't stealing," which moves to "the rules are unclear about these investment vehicles," which moves to "we'd be morons not to get into this on the ground floor," which results in "it's good for shareholders!"

Rationalizations are at the heart of ethics moderation. Popular ones include

- Everybody does this kind of thing.
- This is chickenfeed compared to what the big boys do.
- My family comes first, not the SEC.

Our brief is *to be as ethical as we can be* on a day-to-day basis, even if the solutions we reach are not perfect, and we do not succeed in guiding matters as we might have wished. In any complex situation, with decisions on the line, the general layout of individual behavior within the closed environment of the business ecosystem is likely to be as variegated as a hummingbird's wing.

You and your company are in this together. The company is juggling regulatory questions, the threat of bad publicity and the immediate punishment that Wall Street might inflict. You have to wrestle with your own ambitions and the expectations of those that rely on you. Finding your way to some ethical comfort level as you go about your business life will be one of the great challenges you will face going forward. Don't expect perfection.

# ELECTIVES

## 316. Boondoggles and Other Opportunities for Public Humiliation

A boondoggle is not what those in Silicon Valley refer to as an "off-site," in which one sits in a closed conference room and fights off sleep while pretentious guys with open collars play with empty concepts on a white board.

The classic boondoggle is an organized excuse by senior management to indoctrinate middle and senior management, forge a common identity, make people happy about who they work for and incidentally have a little fun along the way. There are meetings, always in the morning, always intended to be somewhat mind-expanding or out of the run of daily business. In the afternoon, there is sometimes golf or tennis. At certain times during the three-to-five-day boondoggle, there will be entire group events designed to forge unity of spirit and enhance morale among those who perhaps need some.

It should be noted that boondoggles are fewer and farther between at this writing. But as the economy improves and senior managements get too bored staying at home, the boondoggle will pop up again for those who are doing well, and certain understanding of the opportunities and dangers involved will be essential to those who wish to avoid personal destruction. The elective begins with a look at the consequences sustained by those who choose to dance with a tie around their heads, and goes on from there.

## 325. No Guts, No Glory

Required for Graduation.

## How to Future-Proof Yourself for Tomorrow's Workplace

by Karie Willyerd and Barbara Mistick

### THE SUMMARY IN BRIEF

You know you can do more with your career. And the future is going to demand more of you. The problem is you are so busy keeping up with the day-to-day that you can't prepare for tomorrow. *Stretch: How to Future-Proof Yourself for Tomorrow's Workplace* gives you the confidence and knowledge you need to achieve your goals in an ever-changing world. Karie Willyerd and Barbara Mistick — established experts and the collective winners of dozens of awards in the field of personal development and learning — offer evidence-based guidance on obtaining the skills you will need to thrive in tomorrow's workplace.

*Stretch* offers advice, valuable insights, anecdotes and recommendations to make achieving your goals practical and within reach. To remain relevant in spite of change, you need to know how to learn in any situation, open your thinking to a world beyond where you are now, connect to the people who can help you make your future happen, seek experiences that will prepare you for tomorrow and stay motivated through the ups and downs of a career so you can bounce forward.

*Stretch* offers five practices to help you start, enhance and lengthen your career by anticipating the needs of tomorrow's work environment. Don't become obsolete. Instead, stretch to achieve your potential.

### IN THIS SUMMARY, YOU WILL LEARN:

- The global megatrends that will affect your future.
- The three stretch imperatives and the five practices that will allow you to fulfill those imperatives.
- The top 10 capabilities you will need for the future.

## PART I: INTRODUCTION

## The Stretch Imperative

Gallup reports that the majority of us are disengaged at work. And as people live and therefore work longer lives, it becomes necessary to reshape the identities we formed in our careers. The future beckons. Will you remain one of the 70 percent of the disengaged zombies at work? Are you facing obsolescence? Instead, what if the life you are living is your bucket list, and all you want is to ensure that you get to live more of the life you have, work and all?

It's time to stretch, to prepare for tomorrow's workplace and put yourself in control of the career of your dreams.

### Megatrends That Will Affect Your Future

In order to point ourselves in the right direction, first we need an idea of where we are going. Here are seven megatrends that will certainly have an impact on the types of jobs, entrepreneurial opportunities and skills needed for workers in the future.

**Globalization.** McKinsey estimates that half of the world's largest companies will be headquartered in what are now emerging markets, such as Brazil, India and eastern European countries. Pressure from global competition and other factors resulted in over 40 percent of the companies that were in the Fortune 500 in 2000 falling off the list by 2010. These were replaced largely by new global entrants and technology companies. The types of jobs most affected by globalization will be ones that can be done anywhere in the world and shipped over the Internet. We are all interconnected.

**Demographics Shifts.** In many economies around the world, advances in healthcare and declining birth rates have resulted in a population that is graying and a workforce that is shrinking. Diversity is also on an uptick. An increasingly diverse workforce will demand more representation in leadership positions and in pay equity.

**Explosion of Data.** Experts estimate that from 2009 to 2020, data will grow 4300 percent. Organizations that can mine this data to reveal customer trends will lead the markets of the future. No matter what field you are in, the interface with data and machines will increasingly become a factor.

**Emerging Technologies.** In April of 2015, the first driverless car to cross the United States arrived at its destination in Manhattan after nine days. With 3D printing, manufacturing will move from being a subtractive process to an additive one, where objects are built in layers by printing rather than by machining a block of material. How soon will you interact with a robot providing customer service? The answer may be sooner than you think.

**Climate Change.** The OECD anticipates that by 2050, more than 40 percent of the world's population will live under severe water stress, resulting in floods or drought that, combined, can put the economic value of assets at risk at record highs. Becoming efficient with resources is socially responsible and cost beneficial.

**Redefined Jobs.** The nature of work is going to be increasingly a transactional task exchange, which is to say, those with in-demand skills will be hired to accomplish one specific project, rather than given a full-time position.

**Complexity.** At the organizational level, complexity multiplies with layers upon layers of government regulations, in multiple countries, combined with requirements

from customers with their own unique specifications. At the individual level, the need to master this complexity and balance competing demands is also on the increase. Stanford researchers identified a number of stressors that affect overall health and wellness for employees, including long hours, job insecurity, extraordinary job demands, work-family conflict, unfair work situations and others.

Studies agree resoundingly that these megatrends are forging the working landscape of the future. The question is not whether you have a sell-by date. You do. The real question is what you are doing to extend that date.

### The Stretch Imperatives

Three themes represent the realities of today's workplace. They are called the Stretch Imperatives.

**Stretch Imperative 1: It's All on You.** Not only is your engagement all on you, but your development is too. Research shows that the number one attribute executives value in employees is a high degree of education and qualification. Yet fewer than one-third reported that their companies offered incentives or benefits related to obtaining more education, whether it was degree-oriented or job-specific.

**Stretch Imperative 2: You Need Options.** Even if you have a defined career path at your company, you may not be willing to follow that prescribed plan. You need options in order to maximize your personal development.

**Stretch Imperative 3: You Have Dreams.** Survey respondents and interview subjects shared hopes and aspirations for building their careers now to achieve loftier goals in the future. That might be bigger and more significant roles at your company or another one, or it might mean starting your own business. You want more for yourself and your family, and you are willing to take the steps to be career-ready.

There are five practices that people who stretch to their potential employ. The five practices connect to the Stretch Imperatives.

- Since the first Stretch Imperative confirms that it's all on you, you must be able to learn on the fly in any situation and open your thinking to a world beyond where you are now.
- Because you need options, the practices included in the second imperative will help you connect to the people who can help you make your future happen and seek experiences that will prepare you for tomorrow.
- Finally, to ensure you are able to fulfill your dreams, as cited in the third imperative, we offer some motivational strategies to bounce forward and stay motivated through the ups and downs of a career.

These five practices form the foundation for supporting your ability to reach your career goals and to be resilient and prepared for a future you have yet to envision.

## PART II: IT'S ALL ON YOU

# Learn on the Fly

To avoid becoming obsolete, you must continue to learn and not just in a classroom or in other formal learning settings. In a sense, we must all learn a living because, as people said repeatedly in interviews, "It's on me to develop myself." You must learn on the job, often "on the fly" if you are to have any hope of keeping up.

### Strategies for Learning on the Fly

Here are some strategies to help you become more adept at learning on the fly.

**Adopt a Growth Mindset.** The first strategy to learn on the fly is to commit to a mindset that you have the capacity to learn and grow. According to author Carol Dweck, a person with a growth mindset believes that true potential is "unknown and unknowable because it is impossible to foresee what can be accomplished with years of passion, toil and training." People with a growth mindset, Dweck asserts, "don't just seek challenge, they thrive on it. The bigger the challenge, the more they stretch." With a growth mindset, opportunities to learn will abound and you will find yourself more open to new experiences, and you will be more likely to achieve the skill improvement and professional development goals you set for yourself.

**Cultivate Curiosity.** Committing to a learning mindset and observing in the moment are stronger when followed up with curiosity about why. Curiosity helps us avoid complacency and disengagement. Since we all work from a set of unconscious rules we have acquired from our experiences, asking "Why?" with a sense of curiosity can help bring the unconscious rules to the conscious level.

**Know When to Unlearn.** EMC, the IT storage company, reports that by 2020 there will be more data bits available now than there are stars in the universe. If you considered just the knowledge you need to absorb in your field, the amount of content is beyond what any one individual can absorb in a lifetime, and also facts change. The half-life of facts is changing constantly and differs between fields, but what you learned in school or on the

job might actually now be wrong or outdated. We have to be able to rapidly unlearn as well as learn new things.

Expect to be frustrated when you are unlearning, as that is a natural part of the process. Feeling like you are back to ground zero is the uncomfortable phase you have to go through when unlearning. Having your career goals in mind makes it worth the effort to push through.

### What Organizations and Managers Can Do

Forward-thinking organizations can provide an environment that makes it easier for their employees to learn on the job and to fulfill their potential.

**Create On-Boarding Success Maps for All Transitions.** Help employees consider all the new things they will need to learn and know in any new role. Good on-boarding or transition plans can encourage learning on the job by defining early on what the employee will need to learn, from whom they can learn it and then encouraging those connections.

**Curate Learning Options for Employees.** LinkedIn helps their own employees sift through their ample corporate learning offerings by giving them a variety of lenses with which to cull resources. Not only do they have their training or knowledge resources sorted by functional categories and topic areas, but they also use a tool to ask employees, "How would you like to transform?" Through a series of questions, the system refines suggestions for the employee. As they drill into the specific expertise area, a limited set of curated items are available, including online courses, downloadable books, links to TED talks, articles, Lynda.com training resources or executive videos.

## Be Open

As the first Stretch Imperative tells us, it's all on you, so you must be able to consider many possibilities to progress in your career. You don't want to become stuck in a view of the world that limits your possibilities, even if that worldview has been successful in the past.

Preparing for a changing future requires that you allow yourself to be open to options you may have rejected in the past or to approaches you find uncomfortable at first. Career growth demands adaptation.

### Stretch Strategies to Be Open

The following strategies can help you recognize when there might be opportunities to develop, career shortcuts to take or new options to open your career journey.

**Consider Yourself a Lean Startup.** Successful entrepreneurs start with an idea and adjust as they learn what people respond to. The least successful entrepreneurs are the ones who never test new ideas and, instead, remain steadfast on their current track. Thinking of yourself as if you were a lean startup means that you generate and engage the ideas of where you want your career to go, put some of them into play and test whether those ideas are working. Adapt accordingly. Just like Silicon Valley startups, by doing your due diligence, you are increasing the odds that your time and money will pay off.

**Develop Drone Abilities.** In spite of all the controversy around drones, there are some useful analogies that can help you to remain open to job and career development opportunities. You may be a person who tends to see the big picture and operate at a high level, or you may build the big picture by aggregating the details. Rotating between the two views can help achieve the most comprehensive understanding of options and possibilities. Rosabeth Moss Kanter, author and Harvard professor, calls this zooming in and zooming out. Every decision lies in a broader context. No matter how tempting a promotion may seem, if you step back to a higher level and look at, for example, your industry, is it in trouble? Would taking the promotion make you feel obligated to the company at a time when you may have more options if you left your industry?

**Seek Feedback.** The search for genuine feedback becomes more and more your own responsibility over the course of a career, so it's good to start early. When you are receiving feedback, it's best to switch to a listening and recording mode, so that you can write down both the positive feedback you receive along with the critical information. It's important not to react to criticism. Instead, try taking a reflective stance and thank the person giving the criticism.

### What Organizations and Managers Can Do

It's important that organizations support employees in remaining open to all their career options and to the feedback that will help them grow. The good news is that some of the most effective strategies that follow are not expensive or time-consuming. Simple cultural choices and management practices have yielded big financial results for organizations.

**Create a Development Culture.** Robert Kegan and his colleagues have spent hundreds of hours observing organizations that they refer to as Deliberately Developmental Organizations (DDOs). One of those is Decurion, a privately held company operating businesses such as ArcLight Cinemas, Pacific Cinemas and Hollybrook Senior Living. However, to define Decurion by its businesses is a great disservice. When you land on their

main home page, this is how they begin the description of who they are: "Decurion provides places for people to flourish." That central purpose is shown in practices such as weekly conversations between managers about employees and what job assignments will allow them to grow, public competency boards where everyone can see who has developed new capabilities, and talent assessments as part of the business review that include promotion-ready candidates.

**Provide Training on How Your Organization Really Operates.** To help people develop drone capabilities — the ability to zoom in and zoom out — having access to training on how the organization operates can really help. People who understand the strategy and bigger picture of their organization make fewer errors, are more productive and are more satisfied. If you want more collaboration across your organization, train your employees on how the organization fits together via a custom-developed program.

## PART III: YOU NEED OPTIONS

# Build a Diverse Network

The reward of an ever-expanding network is powerful and often transformational. That is why developing a diverse network is one of the practices that address the second Stretch Imperative: You need options. Networks facilitate collaboration on the job, assist in meeting your overall career goals, and provide support in celebrating life's successes and rebounding from its disappointments.

Building diversity into your networks prepares you to anticipate change and make sure you have the resources to stay relevant at work. It's your personal system to access when you need to understand changes in your field of work or industry.

### Strategies to Build a Diverse Network

Social networks are powerful tools that can help us develop, maintain and expand our contacts. Having the largest number of followers or contacts is not necessarily a sign of network strength. The secret is to find the right balance for your career goals between online social networks and off-line relationships, perhaps by using some of the following strategies.

**Groom a Clan.** As we've fallen into the habit of gathering friends and contacts, many people think that just accepting every request to connect can help build their networks. As it turns out, in most cases, quality matters more than quantity. If you are likely to have dozens of vendors contacting you to try to sell to you, then a more selective approach might make sense; but in an example of "the more the merrier," if you are in sales, knowing as many people as possible might be a better strategy. Understanding what you want your network to do for you can help you determine its ideal size and makeup.

**Adjust Constantly.** Just building a network is not enough. Our experience and research have shown a need for dynamic, adaptive networks that can shift over time because our relationships with our relationships change. The colleagues you saw every day at work change when you change organizations. Although your hometown stays constant, when you move, the proximity to your relationships change and new relationships are formed. When you change to a new role, you must also think about what and how your network needs to shift.

**Strive for Five to Thrive.** The best network stretches you. While you may have hundreds of people in your network, who are the five people who can help you be a better person, especially when it comes to your work? Every time you are with them, you feel you have upped your game and are thinking a little differently. Since we can't maintain close connections to everyone in our networks, focus on the five you could groom to help you thrive.

### What Organizations and Managers Can Do

Collaboration relies on people having good networks to know who they should reach out to without spending an inordinate amount of time finding the right connections. Here are some ideas to consider.

**Sponsor Mentoring and Affinity Programs.** Having a mentor who can help navigate the political and organizational structure at work improves your employees' networking ability, interpersonal influence, social astuteness and, ultimately, their career outcomes. Establishing communities of practice based on common interests or function-based networks is ideal.

**Conduct Speed Networking Events.** The typical approach at speed dating is to have women sit at tables and men move from station to station. One organization uses a variation of this to introduce potential mentors to mentees. They have those looking for mentors sit at tables while the executives move from table to table. It's a great way to meet a lot of people in a short amount of time. The next time you have a management meeting, can you invite in some up-and-coming talent and do a speed-networking session with them?

## Be Greedy About Experiences

Whether you are launching your career, considering a career shift or simply wanting to stay relevant where you are, it's important to have a plan to manage and acquire a variety of experiences.

The word "greedy" is almost never used in a positive context. However, when it comes to experiences, the best way to future-proof yourself is to be voracious in seeking out as many opportunities as you can. Experiences are the most effective way to learn new skills, reinforce what you know and help you build on your strengths. People who have developed a repertoire of skills throughout their career know that this is a gradual and continuous process. It takes practice and repetition.

For example, once you have experienced the anxieties of presenting in front of groups, you understand the value of having well-developed strategies that help you feel confident. You learn that, even when a big deal is on the cusp of falling apart, you have to keep a level head and keep everyone talking until the deal is finished.

The more varied you can make your experiences, the greater the likelihood of developing a broad set of skills. Stepping outside your comfort zone into new situations that call for untested abilities is a great way to boost your confidence and discover new capabilities. If you don't feel in over your head at least three to four times a year, you are not aiming high enough. You are not stretching.

### Strategies for Being Greedy About Experiences

Our natural default is to work on things that interest us. That may not be the best strategy. Instead, think strategically, both in terms of the number of experiences you'd like to acquire and the timeframe in which you hope to accomplish them. Don't just let experiences happen to you, but choose the experiences that benefit you the most.

**Approach Work with a Development Stance.** According to researchers at Harvard, we can approach our work from one of three stances: completion, performance or development. The stance we take will affect how much we learn in any given situation. In the completion stance, our primary goal is to get the task or job done. If any learning happens, it is somewhat accidental. The stakes in a performance stance are little higher. Here you care more about high-quality results and may push yourself with new challenges. Surmounting these challenges leads to learning, even though it may not have been a conscious goal. In a development stance, you care about getting the task done really well and using what you learn to do even better work in the future.

**Get Global.** In today's globalized economy, international experience will differentiate you. Understanding culture and community in different countries is one of the benefits you can get from global experiences. You could also gain language skills and an opportunity to demonstrate that you can manage a multicultural, multilingual working environment while producing great work. Succeeding despite being outside your comfort zone lets organizations know that you are adaptable.

**Stretch Your Limits.** Stretching your limits doesn't always mean an upward step, as Lori Goler demonstrated. When Lori was looking to leave eBay, she called Sheryl Sandberg at Facebook and asked, "What is your biggest problem, and how can I solve it?" Lori's deep expertise in marketing at eBay was not a skill fit for Facebook at the time. Instead, Sheryl hired Lori to address Facebook's biggest problem — recruiting. Because Lori was willing to drop down a level to learn a new function and let go of her seniority status at eBay, she gained new skills and a successful career, rebooting her sell-by date.

### What Organizations and Managers Can Do

Deliberate effort and encouragement can create space for people to be open to new ideas and experimentation, yielding big results for organizations while helping to ensure retention and maximum performance as jobs shift and change.

**Give Employees Customer Experience.** What if everyone in the organization could understand the customer experience by being in a front-line position at some point? At the Canadian telecommunication company TELUS, they can. Closer to the Customer (C2C) gives non-customer-facing employees a short experience away from their regular jobs to shadow other people. For example, a person in accounts receivable might shadow a store manager. Team members find insights into the customer experience that can help them make more informed decisions down the road, and they are exposed to other parts of TELUS.

**Sponsor Mid-Life Internships.** The British bank Barclays announced a mature workers program designed for those who have been out of the workforce for at least two years and want to return. Unlike unpaid college internships, older interns receive salaries and can provide an opportunity for companies to test prospective employees before committing. The head of the apprenticeship program at Barclays remarks, "We see real benefit in employing a workforce . . . who have had previous careers and greater life experiences . . . and are able to really understand and support our customers."

## PART IV: YOU HAVE DREAMS

# Bounce Forward

Bouncing Forward is a key practice of people who have the ability to overcome even the most extreme hardships. At any moment, many of us are dealing with insecurities and uncertainties. Mounting performance pressures in the workplace, radical changes in the global business world plus strained economic forecasts mean we need to figure out how to thrive and not simply survive. It's not just about having the mental stamina to bounce back but about moving forward — bouncing forward.

### The Recipe for Springing Back

To be prepared for the future, you will need an understanding of grit, resilience, and motivation and the ways in which they combine to create the multiplier effect you need to succeed.

**Grit.** The only way to achieve true genius in a field is to dedicate to the mastery of it. This is the underlying rationale for grit: a never-yielding commitment to self-discipline. Grit is like having the discipline to be disciplined. Not to be confused with motivation, which is merely the willingness to do something, grit is the determination to do whatever it takes over time. Your grittiness increases achievement by acting as a multiplier of skills and knowledge, at the same time increasing skills and knowledge, which results in increased chances of success.

**Resilience.** Harvard journalist Diane Coutu reports that resilience is not just genetic, as people can become more resilient over their lifetimes. Resilient people invest a lot of effort in what Coutu calls an uncanny ability to improvise in seeking solutions. They understand that, when searching for answers in difficult situations, the more realistically they grasped the true situation, the more quickly they were able to move into a problem-solving mode.

**Motivation.** Many companies are still focused on compensation as a primary motivator. However, extensive research substantiates that money is not the answer. Rewards may help you accomplish the things you don't enjoy doing, but for the things you love, intrinsic motivation is a stronger predictor in inspiring performance. To facilitate your own intrinsic motivation, consider the five sources of meaning for humans at work: the impact of your work on society, the customer, the company, the team and "me." According to McKinsey, connecting to one or more of these five sources of meaning can help you tap into your enthusiasm.

### Mental Strategies to Help You Bounce Forward

Now that you've learned the three fundamental components of bouncing forward, it's time to consider the practical strategies to deploy them.

**Renounce.** If you aren't receiving feedback at work, ask for it. And when you hear something you don't like, use it as an opportunity to bounce forward. Renounce the fixed mindset that you always have to be right or in control. Instead, adopt a growth mindset where you learn as much from failure and feedback as you do from success.

**Pounce.** In his breakthrough book *The Resiliency Advantage*, Al Siebert advocates adopting a curiosity habit. First, he asks, "How do you react to surprising incidents?" Do you hunker down and try to stay the course, or do you wonder what's going on, look for answers about cause and effect? Curious people ask a lot of questions, which is a great way to gather information and stage the best action for the best outcome — pouncing.

**Trounce.** Setting the stage for winning comes from practice and repetition. Just like basketball players, we can't expect to score if we aren't prepared to shoot. Being prepared to shoot comes from a relentless commitment to practice. Not just practicing before games but practicing every day. Not just weekdays but every day. Not just this year but year in and year out.

**Announce.** Announcing your intentions to others can help you find the motivation you need to stay focused on your goals. Enroll a few people directly in your sprint goals. When you announce a goal, people will jump in to help you and keep you on track.

**Denounce the Small Stuff.** We all need to be able to hold onto inspiration to stay motivated. Too often the first year in a job becomes the fifth and then the tenth, indistinguishable from one another. Not sweating the small stuff let's us put our focus elsewhere and think about the big picture.

## PART V: CHARTING THE PATH FORWARD

# Stretch Into Your Future

How do you future-proof yourself for tomorrow? To help you make a concrete plan for the capabilities you need for the workplace to come, here is a synthesis of dozens of studies and expertise identifying the top 10 capabilities you will need for the future.

**Capability 1: Functional Excellence**. Tim Brown, the CEO of the design consultancy IDEO, says he likes to hire people with T-shaped skills. "T-shaped people have two kinds of characteristics, hence the use of the letter 'T' to describe them. The vertical stroke of the 'T' is a depth of skill that allows them to contribute to the creative process." This part of the T refers to functional excellence, which means having a set of honed skills related to a specific discipline, such as finance, architecture, social science or software engineering. You want to be the go-to person for expertise in your area at work.

**Capability 2: Emotional Intelligence**. "The horizontal stroke of the T," Brown continues, "is the disposition for collaboration across disciplines. It is composed of two things. First, empathy. It's important because it allows people to imagine the problem from another perspective — to stand in somebody else's shoes. Second, they tend to get very enthusiastic about other people's disciplines, to the point that they may actually start to practice them."

**Capability 3: Personal Advocacy**. Personal advocacy means the ability to publicly support and promote yourself in a way that persuades others to engage with you. This includes both in-person and virtual personas, allowing you to have connections and options in many forums. An essential building block of personal advocacy is establishing and building a personal brand. The trick is in the balance: Sell yourself, keep relationships two-sided and have fun content to share.

**Capability 4: Cross-Cultural Dexterity**. You can anticipate an increasingly diverse set of colleagues, even in your own country, whether it's the elderly front desk receptionist, the Gen Y software engineer celebrating his marriage to an arranged bride, or your female black manager — a Gen X MBA from Harvard. Embracing and flourishing in diversity will be a key criteria for success both now and in the near future.

**Capability 5: Geek Acumen**. The phrase "I'm not really that technical" should be banned from everyone's thinking. To be ready for the future, we all must embrace at least the technologies and the enabling power of machine learning in our own fields. Otherwise, be prepared to become obsolete.

**Capability 6: Virtual Collaboration**. Virtual collaboration has three components. First, it requires being able to work independently to achieve a set of shared goals. Second, you must be able to communicate and share knowledge effectively with others who are not in time or space proximity to you. Finally, people who have a capability to virtually collaborate are able to use technology-mediated communication tools.

**Capability 7: Entrepreneurial Spirit**. Successful entrepreneurs bring a set of skills and competencies, such as the ability to identify a niche market, financially manage a business and build customer relationships, among others. Additional entrepreneurial traits are initiative, passion, innovation and the willingness to take risks.

**Capability 8: Creative Problem Solving**. Traditional problem solving followed a fairly linear path: First identify a problem, involve others in seeking solutions, collect data and conduct analyses, search for best solutions and, finally, make a decision. The valued contributor of tomorrow will adapt to any situation with creative resolve and always have the ability to revisit and modify while still engaged in a methodical problem-solving process.

**Capability 9: Leadership**. Research showed that employees yearn to be inspired by others, to have a vision to follow, to see meaning in their work and to be guided with a clear pathway for making the vision come alive. These are the responsibilities of leadership, and they will remain an important capability in the future. New leaders must be able to collaborate and connect in real ways with employees, making social media and other technology and staff tools the delivery system for the company mission.

**Capability 10: Stretchpertise**. Stretchpertise is the professional ability to creatively restructure and repurpose in order to adjust to changing environmental demands. Stretchpertise means adapting your career to meet your own evolving personal needs and motivation. You must be able to learn on the fly, be open, create an effective network and gather a variety of experiences. Stretchpertise is the immunization against obsolescence and requires the bounce-forward skills of grit, resilience and motivation to aim toward longer-term goals.

The future beckons. Will you be one of the disengaged, or will you stretch to new capabilities, extending your sell-by date? The fulfillment of dreams doesn't happen by luck. Stretch to become your best self — the person who you know you can be.

# Deep Work

## Rules for Focused Success in a Distracted World

by Cal Newport

### THE SUMMARY IN BRIEF

Deep work is the ability to focus without distraction on a cognitively demanding task. It's a skill that allows you to quickly master complicated information and produce better results in less time. Deep work will make you better at what you do and provide the sense of true fulfillment that comes from craftsmanship. In short, deep work is like a super power in our increasingly competitive 21st-century economy. And yet, most people have lost the ability to go deep — spending their days instead in a frantic blur of email and social media, not even realizing there's a better way.

In *Deep Work*, author and professor Cal Newport flips the narrative on impact in a connected age. Instead of arguing distraction is bad, he instead celebrates the power of its opposite. Dividing this book into two parts, he first makes the case that in almost any profession, cultivating a deep work ethic will produce massive benefits. He then presents a rigorous training regimen, presented as a series of four "rules," for transforming your mind and habits to support this skill.

A mix of cultural criticism and actionable advice, such as the claim that most serious professionals should quit social media and that you should practice being bored, *Deep Work* is an indispensable guide to anyone seeking focused success in a distracted world.

### IN THIS SUMMARY, YOU WILL LEARN:

- Why deep work is valuable, rare and meaningful.
- Strategies to help you learn to embrace deep work.
- What it means to embrace boredom.
- To determine the true value of social media in your work and life.

# THE COMPLETE SUMMARY: **DEEP WORK**

**by Cal Newport**

**The author:** Cal Newport is a writer and a professor of computer science at Georgetown University. He is the author of five books and runs the popular advice blog Study Hacks, which attempts to decode "patterns of success" in both school and the working world. His contrarian ideas on building a successful, meaningful life have been featured on TV, radio and in many major publications, including the *New York Times*, *Wall Street Journal*, *Washington Post* and *New York Post*.

## Introduction

Deep work is professional activities performed in a state of distraction-free concentration that push your cognitive capabilities to their limit. These efforts create new value, improve your skill and are hard to replicate. We now know from decades of research in both psychology and neuroscience that the state of mental strain that accompanies deep work is also necessary to improve your abilities.

Deep work stands in sharp contrast to the behavior of most modern knowledge workers — a group that's rapidly forgetting the value of going deep. The reason knowledge workers are losing their familiarity with deep work is well established: network tools. This is a broad category that captures communication services like email and SMS, social media networks like Twitter and Facebook, and the shiny tangle of infotainment sites like BuzzFeed and Reddit. In aggregate, the rise of these tools, combined with ubiquitous access to them through smartphones and networked office computers, has fragmented most knowledge workers' attention into slivers.

A 2012 McKinsey study found that the average knowledge worker now spends more than 60 percent of the workweek engaged in electronic communication and Internet searching, with close to 30 percent of a worker's time dedicated to reading and answering email alone.

This state of fragmented attention cannot accommodate deep work, which requires long periods of uninterrupted thinking. At the same time, however, modern knowledge workers are not loafing. In fact, they report that they are as busy as ever. What explains the discrepancy? A lot can be explained by another type of effort, which provides a counterpart to the idea of deep work: Shallow Work: noncognitively demanding, logistical-style tasks, often performed while distracted. These efforts tend to not create much new value in the world and are easy to replicate.

Our work culture's shift toward the shallow (whether you think it's philosophically good or bad) is exposing a massive economic and personal opportunity for the few who recognize the potential of resisting this trend and prioritizing depth.

The Deep Work Hypothesis says that the ability to perform deep work is becoming increasingly rare at exactly the same time it is becoming increasingly valuable in our economy. As a consequence, the few who cultivate this skill, and then make it the core of their working life, will thrive.

## PART I: THE IDEA

## Deep Work Is Valuable

MIT economists Erik Brynjolfsson and Andrew McAfee, in their influential 2011 book, *Race Against the Machine*, provide a compelling case that among various forces at play, it's the rise of digital technology in particular that's transforming our labor markets in unexpected ways. "We are in the early throes of a Great Restructuring," Brynjolfsson and McAfee explain early in their book. "Our technologies are racing ahead but many of our skills and organizations are lagging behind." For many workers, this lag predicts bad news. As intelligent machines improve, and the gap between machine and human abilities shrinks, employers are becoming increasingly likely to hire "new machines" instead of "new people."

This reality is not, however, universally grim. As Brynjolfsson and McAfee emphasize, this Great Restructuring is not driving down all jobs but is instead dividing them. Though an increasing number of people will lose in this new economy as their skill becomes automatable or easily outsourced, there are others who will not only survive but thrive — becoming more valued (and therefore more rewarded) than before.

In this new economy, three groups will have a particular advantage: those who can work well and creatively with intelligent machines, those who are the best at what they do and those with access to capital. If you can join any of these groups, therefore, you'll do well. How does one join these winners? There is no secret for quickly amassing capital. The other two winning groups, however, are accessible. The following two core abilities are crucial:

1. The ability to quickly master hard things.
2. The ability to produce at an elite level, in terms of both quality and speed.

Let's begin with the first ability. To start, we must remember that we've been spoiled by the intuitive and drop-dead-simple user experience of many consumer-facing technologies, like Twitter and the iPhone. These examples, however, are consumer products, not serious tools: Most of the intelligent machines driving the Great Restructuring are significantly more complex to understand and master. To join the group of those who can work well with these machines, therefore, requires that you hone your ability to master hard things. And because these technologies change rapidly, this process of mastering hard things never ends: You must be able to do it quickly, again and again.

If you want to become a superstar, mastering the relevant skills is necessary but not sufficient. You must then transform that latent potential into tangible results that people value.

The two core abilities just described depend on your ability to perform deep work. To learn hard things quickly, you must focus intensely without distraction. To learn, in other words, is an act of deep work. If you're comfortable going deep, you'll be comfortable mastering the increasingly complex systems and skills needed to thrive in our economy. If you're not comfortable going deep for extended periods of time, it'll be difficult to get your performance to the peak levels of quality and quantity increasingly necessary to thrive professionally. Unless your talent and skills absolutely dwarf those of your competition, the deep workers among them will outproduce you.

## Deep Work Is Rare

In 2015, Facebook moved into a new headquarters designed by Frank Gehry. At the center of this new building is what CEO Mark Zuckerberg has called "the largest open floor plan in the world": More than 3,000 employees work on movable furniture spread over a 10-acre expanse. Facebook, of course, is not the only Silicon Valley heavyweight to embrace the open office concept. When Jack Dorsey bought the old San Francisco Chronicle building to house Square, he configured the space so that his developers work in common spaces on long, shared desks.

Another big business trend in recent years is the rise of instant messaging. A third trend is the push for content producers of all types to maintain a social media presence.

These three business trends highlight a paradox. Deep work is more valuable than ever before in our shifting economy. If this is true, however, you would expect to see this skill promoted not just by ambitious individuals but also by organizations hoping to get the most out of their employees. This is not happening. Open offices, for example, might create more opportunities for collaboration, but they do so at the cost of "massive distraction," to quote the results of experiments conducted for a British TV special titled "The Secret Life of Office Buildings." Instant messenger systems are meant to be always active — magnifying the impact of interruption.

Forcing content producers onto social media also has negative effects on the ability to go deep. Serious journalists, for example, need to focus on doing serious journalism — diving into complicated sources, pulling out connective threads, crafting persuasive prose — so to ask them to interrupt this deep thinking throughout the day to participate in the frothy back-and-forth of online tittering seems irrelevant (and somewhat demeaning) at best and devastatingly distracting at worst.

Although our current embrace of distraction is a real phenomenon, it's built on an unstable foundation and can be easily dismissed once you decide to cultivate a deep work ethic.

### The Metric Black Hole

Even though we abstractly accept that distraction has costs and depth has value, these impacts are difficult to measure. We should not, therefore, expect the bottom-line impact of depth-destroying behaviors to be easily detected. Such metrics fall into an opaque region resistant to easy measurement — a region we can call the metric black hole. None of the distracting behaviors would survive

long if it was clear that they were hurting the bottom line, but the metric black hole prevents this clarity and allows the shift toward distraction we increasingly encounter in the professional world.

When it comes to distracting behaviors embraced in the workplace, we must give a position of dominance to the now ubiquitous culture of connectivity, where one is expected to read and respond to emails (and related communication) quickly. Why do so many foster a culture of connectivity even though it's likely, as researcher Leslie Perlow found, that it hurts employees' well-being and productivity and probably doesn't help the bottom line?

The answer can be found in the Principle of Least Resistance: In a business setting, without clear feedback on the impact of various behaviors to the bottom line, we will tend toward behaviors that are easiest in the moment. If you work in an environment where you can get an answer to a question or a specific piece of information immediately when the need arises, this makes your life easier — at least, in the moment. Constant connectivity is just one of many examples of business behaviors that are antithetical to depth, and likely reducing the bottom-line value produced by the company, that nonetheless thrive because, in the absence of metrics, most people fall back on what's easiest.

If you believe in the value of depth, this reality spells bad news for businesses in general, as it's leading them to miss out on potentially massive increases in their value production. But for you, as an individual, good news lurks. Assuming the trends outlined here continue, depth will become increasingly rare and therefore increasingly valuable.

## Deep Work Is Meaningful

The science writer Winifred Gallagher stumbled onto a connection between attention and happiness after an unexpected and terrifying event, a cancer diagnosis — "not just cancer," she clarifies, "but a particularly nasty, fairly advanced kind." As Gallagher recalls in her 2009 book, *Rapt*, as she walked away from the hospital after the diagnosis, she formed a sudden and strong intuition: "This disease wanted to monopolize my attention, but as much as possible, I would focus on my life instead."

Gallagher set out to better understand the role that attention — that is, what we choose to focus on and what we choose to ignore — plays in defining the quality of our life. After five years of science reporting, she came away convinced that she was witness to a "grand unified theory" of the mind: "Like fingers pointing to the moon, other diverse disciplines, from anthropology to education, behavioral economics to family counseling, similarly suggest that the skillful management of attention is the sine qua non of the good life and the key to improving virtually every aspect of your experience."

We tend to place a lot of emphasis on our circumstances, assuming that what happens to us (or fails to happen) determines how we feel. From this perspective, the small-scale details of how you spend your day aren't that important, because what matters are the large-scale outcomes, such as whether or not you get a promotion or move to that nicer apartment.

According to Gallagher, decades of research contradict this understanding. Our brains instead construct our worldview based on what we pay attention to. If you focus on a cancer diagnosis, you and your life become unhappy and dark, but if you focus instead on an evening martini, you and your life become more pleasant — even though the circumstances in both scenarios are the same. As Gallagher summarizes, "Who you are, what you think, feel and do, what you love — is the sum of what you focus on."

Consider for a moment the type of mental world constructed when you dedicate significant time to deep endeavors. There's a gravity and sense of importance inherent in deep work — whether you're a craftsman smithing a sword or a computer programmer optimizing an algorithm. Gallagher's theory, therefore, predicts that if you spend enough time in this state, your mind will understand your world as rich in meaning and importance.

### A Psychological Argument for Depth

Our second argument for why depth generates meaning comes from the work of one of the world's best-known (and most misspelled) psychologists, Mihaly Csikszentmihalyi. Csikszentmihalyi's work helped validate a theory he had been developing over the preceding decade: "The best moments usually occur when a person's body or mind is stretched to its limits in a voluntary effort to accomplish something difficult and worthwhile."

Csikszentmihalyi calls this mental state *flow* (a term he popularized with a 1990 book of the same title). At the time, this finding pushed back against conventional wisdom. Most people assumed (and still do) that relaxation makes them happy. We want to work less and spend more time in the hammock. But the results from Csikszentmihalyi's studies reveal that most people have this wrong: "Ironically, jobs are actually easier to enjoy than free time, because like flow activities they have built-in goals, feedback rules and challenges, all of which encourage one to become involved in one's work, to concentrate and lose

oneself in it. Free time, on the other hand, is unstructured, and requires much greater effort to be shaped into something that can be enjoyed."

The connection between deep work and flow should be clear: Deep work is an activity well suited to generate a flow state. And as we just learned, flow generates happiness. Combining these two ideas, we get a powerful argument from psychology in favor of depth.

## PART II: THE RULES

# Rule #1: Work Deeply

In an ideal world — one in which the true value of deep work is accepted and celebrated — we'd all have access to a work environment (and culture) designed to help us extract as much value as possible from our brains. Unfortunately, this vision is far from our current reality. We instead find ourselves in distracting open offices where inboxes cannot be neglected and meetings are incessant — a setting where colleagues would rather you respond quickly to their latest email than produce the best possible results.

This rule is designed to reduce this conflict. The strategies that follow can be understood as an arsenal of routines and rituals designed with the science of limited willpower in mind to maximize the amount of deep work you consistently accomplish in your schedule.

**1. Decide on your depth philosophy.** You need your own philosophy for integrating deep work into your professional life. Here are four different depth philosophies that work exceptionally well in practice.

- **The monastic philosophy of deep work scheduling** attempts to maximize deep efforts by eliminating or radically minimizing shallow obligations. Practitioners of the monastic philosophy tend to have a well-defined and highly valued professional goal that they're pursuing, and the bulk of their professional success comes from doing this one thing exceptionally well.
- **The bimodal philosophy of deep work scheduling** asks that you divide your time, dedicating some clearly defined stretches to deep pursuits and leaving the rest open to everything else. During the deep time, the bimodal worker will act monastically — seeking intense and uninterrupted concentration. For example, on the scale of a week, you might dedicate a four-day weekend to depth and the rest to open time.
- **The rhythmic philosophy of deep work scheduling** argues that the easiest way to consistently start deep work sessions is to transform them into a simple regular habit. The goal, in other words, is to generate a rhythm for this work that removes the need for you to invest energy in deciding if and when you're going to go deep. A common way to implement the rhythmic philosophy is to have a set starting time that you use every day for deep work.
- **The journalistic philosophy of deep work scheduling** is a nod to the fact that journalists are trained to shift into a writing mode on a moment's notice, as is required by the deadline-driven nature of their profession. This approach is not for the deep work novice. The ability to rapidly switch your mind from shallow to deep mode doesn't come naturally. Without practice, such switches can seriously deplete your finite willpower reserves. This habit also requires a sense of confidence in your abilities — a conviction that what you're doing is important and will succeed.

**2. Ritualize.** An often-overlooked observation about those who use their minds to create valuable things is that they're rarely haphazard in their work habits. Charles Darwin had a strict structure for his working life during the period when he was perfecting *On the Origin of Species*. He would rise promptly at seven to take a short walk. He would then eat breakfast alone and retire to his study from eight to nine thirty. The next hour was dedicated to reading his letters from the day before, after which he would return to his study from ten-thirty until noon. After this session, he would mull over challenging ideas while walking on a prescribed route that started at his greenhouse and then circled a path on his property. He would walk until satisfied with his thinking, then declare his workday done.

Great minds like Darwin and others didn't deploy rituals to be weird; they did so because success in their work depended on their ability to go deep, again and again. Their rituals minimized the friction in this transition to depth, allowing them to go deep more easily and stay in the state longer.

There's no one correct deep work ritual — the right fit depends on both the person and the type of project pursued. But there are some general questions that any effective ritual must address: where you'll work and for how long, how you'll work once you start and how you'll support your work.

**3. Be lazy.** This strategy argues that you should inject regular and substantial freedom from professional concerns into your day, providing you with the idleness

paradoxically required to get (deep) work done. At the end of the workday, shut down your consideration of work issues until the next morning — no after-dinner email check, no mental replays of conversations and no scheming about how you'll handle an upcoming challenge; shut down work thinking completely. Downtime aids insights and helps recharge the energy needed to work deeply.

## Rule #2: Embrace Boredom

Rule #1 taught you how to integrate deep work into your schedule and support it with routines and rituals designed to help you consistently reach the current limit of your concentration ability. Rule #2 will help you significantly improve this limit. The strategies that follow are motivated by the key idea that getting the most out of your deep work habit requires training, and as clarified previously, this training must address two goals: improving your ability to concentrate intensely and overcoming your desire for distraction.

**1. Don't take breaks from distraction. Instead, take breaks from focus.** Instead of scheduling the occasional break from distraction so you can focus, you should instead schedule the occasional break from focus to give in to distraction. To make this suggestion more concrete, let's make the simplifying assumption that Internet use is synonymous with seeking distracting stimuli. Similarly, let's consider working in the absence of the Internet to be synonymous with more focused work.

With these rough categorizations established, the strategy works as follows: Schedule in advance when you'll use the Internet, and then avoid it altogether outside these times. Keep a notepad near your computer at work. On this pad, record the next time you're allowed to use the Internet. Until you arrive at that time, absolutely no network connectivity is allowed — no matter how tempting.

The idea motivating this strategy is that the use of a distracting service does not, by itself, reduce your brain's ability to focus. It's instead the constant switching from low-stimuli/high-value activities to high-stimuli/low-value activities, at the slightest hint of boredom or cognitive challenge, that teaches your mind to never tolerate an absence of novelty. This constant switching can be understood analogously as weakening the mental muscles responsible for organizing the many sources vying for your attention. By segregating Internet use (and therefore segregating distractions) you're minimizing the number of times you give in to distraction, and by doing so you let these attention-selecting muscles strengthen.

If you're required to spend hours every day online or answer emails quickly, that's fine: This simply means that your Internet blocks will be more numerous than those of someone whose job requires less connectivity. The total number or duration of your Internet blocks doesn't matter nearly as much as making sure that the integrity of your offline blocks remains intact.

**2. Meditate productively.** The goal of productive meditation is to take a period in which you're occupied physically but not mentally — walking, jogging, driving, showering — and focus your attention on a single well-defined professional problem. Depending on your profession, this problem might be outlining an article, writing a talk, making progress on a proof or attempting to sharpen a business strategy. As in mindfulness meditation, you must continue to bring your attention back to the problem at hand when it wanders or stalls.

You don't necessarily need a serious session every day, but your goal should be to participate in at least two or three such sessions in a typical week.

By forcing you to resist distraction and return your attention repeatedly to a well-defined problem, it helps strengthen your distraction-resisting muscles, and by forcing you to push your focus deeper and deeper on a single problem, it sharpens your concentration.

The key to this strategy is not the specifics but, instead, the motivating idea that your ability to concentrate is only as strong as your commitment to train it.

## Rule #3: Quit Social Media

The idea that a drastic Internet sabbatical is the only alternative to the distraction generated by social media and infotainment has increasingly pervaded our cultural conversation. The problem with this binary response to this issue is that these two choices are much too crude to be useful. The notion that you would quit the Internet is, of course, an overstuffed straw man, infeasible for most (unless you're a journalist writing a piece about distraction).

This rule attempts to break us out of this rut by proposing a third option: accepting that these tools are not inherently evil and that some of them might be quite vital to your success and happiness, but at the same time also accepting that the threshold for allowing a site regular access to your time and attention (not to mention personal data) should be much more stringent, and that most people should therefore be using many fewer such tools.

**1. Apply the Law of the Vital Few to your Internet habits.** The first step of this strategy is to identify the

main high-level goals in both your professional and your personal life. Once you've identified these goals, list for each the two or three most important activities that help you satisfy the goal. These activities should be specific enough to allow you to clearly picture doing them. On the other hand, they should be general enough that they're not tied to a onetime outcome. A good activity in this context would be something like "regularly read and understand the cutting-edge results in my field."

The next step in this strategy is to consider the network tools you currently use. For each such tool, go through the key activities you identified, and ask whether the use of the tool has a substantially positive impact, a substantially negative impact or little impact on your regular and successful participation in the activity.

Now comes the important decision: Keep using this tool only if you concluded that it has substantial positive impacts and that these outweigh the negative impacts.

This radical reduction of priorities is not arbitrary but is instead motivated by an idea that has arisen repeatedly in any number of different fields, from client profitability to social equality to prevention of crashes in computer programs: The Law of the Vital Few: In many settings, 80 percent of a given effect is due to just 20 percent of the possible causes.

**2. Quit social media.** This strategy offers you a different but complementary approach, in which you ban yourself from using social media services for 30 days. All of them: Facebook, Instagram, Google +, Twitter, Snapchat, Vine — or whatever other services have risen to popularity. Don't formally deactivate these services, and (this is important) don't mention online that you'll be signing off: Just stop using them, cold turkey. If someone reaches out to you by other means and asks why your activity on a particular service has fallen off, you can explain, but don't go out of your way to tell people.

After 30 days of this self-imposed network isolation, ask yourself the following two questions about each of the services you temporarily quit:

- Would the last 30 days have been notably better if I had been able to use this service?
- Did people care that I wasn't using this service?

If your answer is "no" to both questions, quit the service permanently. If your answer was a clear "yes," then return to using the service. If your answers are qualified or ambiguous, it's up to you whether you return to the service.

This strategy picks specifically on social media because among the different network tools that can claim your time and attention, these services, if used without limit, can be particularly devastating to your quest to work deeper. They offer personalized information arriving on an unpredictable, intermittent schedule — making them massively addictive and therefore capable of severely damaging your attempts to schedule and succeed with any act of concentration.

**3. Don't use the Internet to entertain yourself.** A class of network tools that are particularly relevant to the fight for depth are entertainment-focused websites designed to capture and hold your attention for as long as possible. These sites share the use of carefully crafted titles and easily digestible content, often honed by algorithms to be maximally attention catching. Once you've landed on one article in one of these sites, links on the side or bottom of the page beckon you to click on another, then another. Every available trick of human psychology, from listing titles as "popular" or "trending," to the use of arresting photos, is used to keep you engaged.

These sites are especially harmful after the workday is over, where the freedom in your schedule enables them to become central to your leisure time.

This strategy suggests that when it comes to your relaxation, don't default to whatever catches your attention at the moment, but instead dedicate some advance thinking to the question of how you want to spend your "day within a day." It's crucial, therefore, that you figure out in advance what you're going to do with your evenings and weekends before they begin. Structured hobbies provide good fodder for these hours, as they generate specific actions with specific goals to fill your time. A set program of reading, where you spend regular time each night making progress on a series of deliberately chosen books, is also a good option, as is, of course, exercise or the enjoyment of good (in-person) company.

If you want to eliminate the addictive pull of entertainment sites on your time and attention, give your brain a quality alternative.

## Rule #4: Drain the Shallows

The shallow work that increasingly dominates the time and attention of knowledge workers is less vital than it often seems in the moment. For most businesses, if you eliminated significant amounts of this shallowness, their bottom line would likely remain unaffected. If you not only eliminate shallow work but also replace this recovered time with more of the deep alternative, not only will the business continue to function; it can become more successful.

This rule asks you to apply these insights to your personal work life. The strategies that follow are designed to help you ruthlessly identify the shallowness in your current schedule, then cull it down to minimum levels — leaving more time for the deep efforts that ultimately matter most.

**1. Schedule every minute of your day.** We spend much of our day on autopilot — not giving much thought to what we're doing with our time. This is a problem. It's difficult to prevent the trivial from creeping into every corner of your schedule if you don't face, without flinching, your current balance between deep and shallow work, and then adopt the habit of pausing before action and asking, "What makes the most sense right now?"

At the beginning of each workday, turn to a new page of lined paper in a notebook you dedicate to this purpose. Down the left-hand side of the page, mark every other line with an hour of the day, covering the full set of hours you typically work. Now comes the important part: Divide the hours of your workday into blocks, and assign activities to the blocks. For example, you might block off nine a.m. to eleven a.m. for writing a client's press release. To do so, actually draw a box that covers the lines corresponding to these hours, then write "press release" inside the box. Not every block need be dedicated to a work task. There might be time blocks for lunch or relaxation breaks.

When you're done scheduling your day, every minute should be part of a block. You have, in effect, given every minute of your workday a job. Now, as you go through your day, use this schedule to guide you. If your schedule is disrupted, you should, at the next available moment, take a few minutes to create a revised schedule for the time that remains in the day. Your goal is not to stick to a given schedule at all costs; it's instead to maintain, at all times, a thoughtful say in what you're doing with your time going forward — even if these decisions are reworked again and again as the day unfolds.

**2. Quantify the depth of every activity.** Some activities clearly satisfy the definition of shallow work. But the classification of other activities can be more ambiguous. To do so, ask a simple (but surprisingly illuminating) question: "How long would it take (in months) to train a smart recent college graduate with no specialized training in my field to complete this task?"

If our hypothetical college graduate requires many months of training to replicate a task, then this indicates that the task leverages hard-won expertise. Tasks that leverage your expertise tend to be deep tasks, and they can therefore provide a double benefit: They return more value per time spent, and they stretch your abilities, leading to improvement. On the other hand, a task that our hypothetical college graduate can pick up quickly is one that does not leverage expertise, and therefore it can be understood as shallow. What should you do with this strategy? Once you know where your activities fall on the deep-to-shallow scale, bias your time toward the former.

**3. Ask your boss for a shallow work budget.** Here's an important question that's rarely asked: "What percentage of my time should be spent on shallow work?" If you have a boss, have a conversation about this question. If you work for yourself, ask yourself this question. In both cases, settle on a specific answer. Then try to stick to this budget. For most people in most non-entry-level knowledge work jobs, the answer to the question will be somewhere in the 30 to 50 percent range.

Obeying this budget will likely require changes to your behavior. You'll almost certainly end up forced into saying no to projects that seem infused with shallowness while also more aggressively reducing the amount of shallowness in your existing projects.

The reason why these decisions should start with a conversation with your boss is that this agreement establishes implicit support from your workplace. If you work for yourself, this exercise will force you to confront the reality of how little time in your "busy" schedule you're actually producing value.

By ruthlessly reducing the shallow while preserving the deep, this strategy frees up our time without diminishing the amount of new value we generate.

A commitment to deep work is not a moral stance and it's not a philosophical statement — it is instead a pragmatic recognition that the ability to concentrate is a skill that gets valuable things done. If you're willing to struggle to deploy your mind to its fullest capacity to create things that matter, then you'll discover, as others have before you, that depth generates a life rich with productivity and meaning.

# Impossible to Ignore

## Creating Memorable Content to Influence Decisions

by Carmen Simon, Ph.D.

### THE SUMMARY IN BRIEF

Audiences forget up to 90 percent of what you communicate. How can your employees and customers decide to act on your message if they only remember a tenth of it? How do you know which tenth they'll remember? How will you stay on their minds long enough to spark the action you need?

Many experts have offered techniques on how to improve your own memory but not how to influence other people's memory — and impact their decisions. Drawing on the latest research in neuroscience and cognitive psychology, Carmen Simon, Ph.D., reveals how to avoid the hazards of random recall and deliver just the right amount of content. In *Impossible to Ignore,* she shows you how to execute a proven three-step plan for persuasion: create cues that attract attention and connect with your audience's needs; use memory-influencing variables to control what your audience remembers; and turn today's intentions into tomorrow's actions.

Whether you're giving a presentation, conducting a meeting, delivering training, making a sales pitch or creating a marketing campaign, these field-tested techniques will help you develop content that speaks to people's hearts, stays in their heads and influences their decisions. It's not just memorable — it's *Impossible to Ignore.*

### IN THIS SUMMARY, YOU WILL LEARN:

- To view memory from the angle of the future, which is more practical when influencing behavior.
- To use three key steps to influence memory and decisions.
- To create distinct, repeatable messages that your customers won't forget.
- How to differentiate between expectation and anticipation and why it matters for memorable content.
- How to retrieve memories through narrative techniques.

## Memory Is a Means to an End

### Why Memory Matters in Decision Making

At some point, we all create something and hope that other people will act on it: read it, listen to it, like it, buy it or recommend it to others. But how do we get others to act in our favor in an age of increasing competition, complexity and noise? You can spark action by using an overlooked variable: memory.

When we aspire to be a part of people's future decisions, we implicitly ask what the future will bring. All neurologically intact people are relentlessly on fast-forward. Think of your own situation: When you woke up this morning, did you think about meetings you might have to attend, the lunch you might have to eat, the work you really didn't want to do after dinner? The brain has evolved to be a prediction engine because natural selection favors those who can accurately predict the future.

If the brain is a prediction engine, memory is its fuel. In our everyday life, we make behavioral choices that maximize our biological fitness; we rely on memory to predict rewards and we guide our behavior in three ways:

1. A reflexive way, through which we subconsciously alter behavior to ensure biological fitness. It takes only one experience with a hot surface (stimulus) to remember what to do next time to prolong survival (reward).
2. Another way we make decisions is habitual: We tend to repeat actions that proved rewarding in the past, such as taking the same route to work.
3. There is also a goal-oriented way toward decisions, through which we anticipate outcomes based on the past but are willing to change our minds in light of new information. Imagine looking for a new job when the current one is unsatisfying.

So…if you want to stay on people's minds, you must create content that hooks into one or more of these three pathways to decision making. Hook into people's reflexes, such as their preference for aesthetics, social connections or controlling one's environment. Or hook into their habits, such as placing new content in an application they are already using. Or hook into goals they consider valuable, such as the excitement of discovering new things or the desire to be creative or socially desirable.

In addition to these three ways of using memory to influence decisions, what are some other ways in which we can stay on people's minds? Here are 15 variables we can use to influence others' memory: context, cues, distinctiveness, emotion, facts, familiarity, motivation, novelty, quantity of information, relevance, repetition, self-generated content, sensory intensity, social aspects and surprise.

All these variables will be addressed in more detail. We don't have to use all 15 variables in a communication artifact all at once. Research shows that nine out of these 15 variables will impact someone's memory. The combination is up to you. Also, 40 percent of the segments in a communication sequence must have at least seven variables in the same segment. For example, if you're developing a PowerPoint presentation with 30 slides, identify 12 slides that include seven memory variables in the same slide. This way, you can be sure that you're making some critical messages stand out and become memorable. A mistake that business communicators make is to include segments that are too weak or too varied, and nothing has a chance to stand out.

## A Business Approach to Memory

### 3 Steps to Influence Memory and Decisions

Instead of viewing memory as merely recollecting things from the past, let's look at memory from the lens of the future. Imagine that we share content at Point A, and we hope people remember and act on it sometime in the future, at Point B. This "future" can be as close as two minutes from now, two days, two weeks or longer. So it is pragmatic to ask, what is happening in people's lives, and what do they intend to do at Point B? If we know this already at Point A, we can prepare for Point B so we can become part of people's memories and future intentions.

Research reveals that when people act on future intentions successfully, they complete three steps, sometimes within fractions of seconds: 1) *Notice cues* that are linked to their intentions; 2) *Search their memory* for something related to those cues and intentions; 3) And if something is rewarding enough … *execute.*

Let's say you have a dinner party and want to buy some wine on your way home from work. You tell yourself in the morning, "When I drive by the store tonight, I must stop and buy the wine." The intention is to buy the wine, and the reward is your guests will think of you as a wonderful host. On your way back, you see the store (so you notice a cue); you think, "What was I supposed to do? Oh, yes, buy wine" (so you search your memory); and you pull into the store (therefore, you execute on an intention).

Consider your own content, and imagine you must help your audiences go through these three steps. With a prospective memory model in mind at Point A, you can prime your audiences with the proper cues, help them to keep in long-term memory what is important, and make it easier for them to execute on intentions at Point B.

Let's imagine you have to create a training program and want to divide it into three sections. At Point A, during the training, people see these three sections. But at Point B, will there be any cues in participants' environment to remind them of these exact three sections? Let's imagine that at Point B, participants will see a software application, which they're supposed to use in combination with your new content. A much better approach is to create the training content at Point A using segments from the software tool because this increases the likelihood that at Point B, people will see cues that will trigger the new behavior you're after. If the content at Point A also includes some of the memory variables we will discuss next and the reward is strong enough for participants to use the new content, then you will have a much higher chance for action because people will notice cues; they will remember what they're supposed to remember and act.

## Control What Your Audience Remembers

### Practical Ways to Avoid the Hazards of Random Memory

When we want to influence others' memory, we must start with this question: What is it exactly that we want them to remember and act on? In asking this question, we implicitly ask another: How much would we like others to remember?

A concept called the "forgetting curve" hypothesizes that we lose information over time when we make no effort to retain it. The forgetting curve is exponential after the first session, meaning that in the first few days after exposure to content, we forget most of it, up to 90 percent by some accounts. Even memories that are strong at first are fated to be forgotten. The little that we do keep in our minds stabilizes over time. Let's call this the metaphorical 10 percent, since it is difficult to measure definitively how much business content people really remember, because they don't typically consume it with the intent to memorize.

Despite a lot of forgetting, there is the opportunity for a small percentage — that "10 percent" — to become part of our audiences' long-term memory, and it is important not to leave it to chance.

The scientific approach to memory has borrowed from fuzzy logic and has produced the fuzzy-trace theory, according to which we form two types of memories: verbatim and gist. Verbatim memories are word-for-word, accurate representations of what we learned in the past, such as recollecting the exact names of all European capitals. By contrast, gist memories include the general meaning of something that happened in the past, and they are less accurate and specific, such as remembering a vacation spent in Paris years ago. Gist memories tend to be longer lasting than verbatim memories. Verbatim memory requires stimuli that people can process easily (such as simple words or actions that are reflexive or habitual) and more intensive and repeated exposure to stimuli.

When you create content, you have three ways in which to evaluate whether you're staying in people's minds with the accuracy you desire: 1) Accept only verbatim. 2) Accept a combination of verbatim and gist. 3) Accept only gist.

If you work in a courtroom or academia and specialize in topics based on hard facts, it is likely you will want to be remembered verbatim, in which case you must create simple content and provide a lot of repetition. If you work in the corporate world, you're mostly hoping that the audience would remember a combination of verbatim and gist. It's advisable to insist on verbatim memory any time you want to differentiate from competition, otherwise gist memory may enable *others* to receive credit for your work. If you work in a creative field (such as fashion or design), you will probably aim for gist memory. In this case, aim for colorful storytelling and varied content, which gives an audience a strong feeling of comfort and familiarity.

## Made You Look

### How Cues Pave the Way to Action

Cues are important because they are reminders of what to do next, such as seeing a hanger in your closet reminds you to pick up the dry cleaning. Most people in the business world don't sit around and wait for cues. This means the cues we create for them at Point A must be distinctive enough at Point B to attract attention and prompt a specific memory, even when people are busy doing something else.

When the cues you use to attract attention at Point A are similar to what people encounter later at Point B, they are more likely to signal action. For example, let's say that a husband and wife must lower their cholesterol and have to take pills. At home, they can remember to do that if they tie an old routine — drinking coffee — to the new routine of taking pills. Setting the pills by the coffeemaker helps them to act on their intention. This process is in danger when they go on vacation and the coffee drinking does not happen in the same location. Suddenly a routine that served as a cue is no longer in its place, so it's easy to forget to take the pills.

**Consider cuing people's senses in an automatic way.** The physical properties of various stimuli have the power to attract our attention. A bright-red jacket, a loud sound or the unexpected touch of a lover's cold feet will get our attention in a reflexive, automatic, effortless way. This happens because humans have an outstanding vigilance system, which constantly scouts the environment through an attentional filter and zooms in on what's important for survival. Consequently, physical properties that suddenly alter our environment, such as unusual or bright colors, textures, size, motion, loud sounds, harmony or orientation of objects, force us to look.

What can be externalized to the environment to cue your audiences automatically? Spend time finding the answer to this question because it pays a huge reward: There is an increased likelihood that your audiences will act on what you believe is important because they don't expand too much cognitive energy.

**You can also consider tying your content to an audience's current but unfulfilled goal.** People tend to pay greater attention to and remember more of what is not finished because the brain seeks closure — and it is seeking it now. Having an active goal enhances recall of relevant information only so long as that goal has not been attained. The goal can be attainable in one shot, such as getting a meal or a winter coat, or it can be something that is process-based and always lingers in the background, such as staying healthy or being socially desirable.

Consider offering the people in your audience both something they can complete using your content and something they cannot complete during a certain amount of time, for which they will have to return to you later on. For example, "There are four steps to create an effective investment plan. Today, we have time to cover the first three."

## Sweet Anticipation

### How to Build Excitement for What Happens Next

There are many advantages associated with anticipation: It provides a cue that something interesting or important will happen, and it leads to improved attention, memory and the decision to act. This is why it is worthwhile to understand anticipation and learn how to create it for your listeners in the quest to become impossible to ignore.

While general expectations are about seeing the future (e.g., "Here is what to expect during business meetings"), anticipation is about feeling the future (e.g., "Here are three reasons to get excited about our next meeting"). Imaginative thought is aspirational, but it's imaginative emotions that push us into action. Anticipation is therefore a stronger expectation, a boost that gets us ready to act.

Why does anticipation have so much power over our brains? The power stems from the "juice" that fuels it: dopamine. When we simulate the future, we are looking for rewards, and neuroscientists confirm that stimuli predicting the possibility of a reward invoke the same neuronal activity as the one triggered by the reward itself.

So far, we know two things: 1) if there is an anticipated reward, people notice and are willing to exert some effort

to get it; and 2) dopamine is released in even higher doses when there is an unexpected but pleasant reward. Let's see how we can put these findings into practice.

Providing a modicum of uncertainty in your communications is effective because dopamine spikes in the face of unexpected events. In general, uncertainty makes us uneasy, which is why it is often referred to as "tension." We can tolerate some tension as long as 1) we know its degree, 2) we are reminded about the importance of the final outcome, and 3) we can tolerate the amount of delay until that outcome is realized. Let's identify practical guidelines associated with each.

First, let's look at **the degree of uncertainty.** As a communicator, you must balance how much information to reveal (and allow listeners' brains to predict accurately) and how much information to withhold (and get listeners ready for action, even if the action only implies people showing up to listen to you). Uncertainty can derive from the "what" or the "when" of a situation, which means you can manipulate these two variables when you create a message of anticipation. For example, telling your friend you have a gift for her but not telling her when she will receive it plays with the clarity of *what* and the surprise of *when*. Or, saying that "the meeting at 8am will reveal some insights" plays with the clarity of *when* but not *what*.

Second, let's address **the importance of possible outcomes.** When we anticipate events, the brain typically estimates the worst and best possible outcomes, consciously or subconsciously. Reflect on your own messages. When you build anticipation for an upcoming event, ask from your listeners' perspective: What are some possible outcomes? How important are they? And is there a big difference between the best and worst outcome? For example, scheduling a conference in Hawaii cannot have too many bad outcomes. Even if the conference sessions are subpar, the location mitigates the tension.

**The delay before the outcome is realized** contributes to uncertainty too. This is the time that elapses before an outcome is realized. When you create any sort of communication, you essentially take your audience from one state to another state. The time lapse between the starting point and the destination can be short (seconds, minutes) or long (weeks, months, even years). In business communication, the length of the delay depends on your audience. Sometimes casual business audiences are in such a rush that only a short delay is effective, such as revealing an important point at the end of a 300-word blog. When your audience is patient and extremely interested, you can create a slightly longer delay with longer sentences and stories instead of just a few words and bulleted lists.

## What Makes a Message Repeatable?

### Techniques to Convince Others to Repeat Your Words

When we share information at Point A, we hope others will retain it and retrieve it at Point B to inform their next action. This means that at Point A we must create a memory strong enough that it endures long term. One technique for solidifying memory is repetition. However, since we are looking at memory from the perspective of the future, this chapter is not so much about repeating the same message over and over at Point A. That's only part of the technique. The challenge is to make sure people can repeat that same message at Point B on their own. And how to create a message so it is repeatable in the long term is something that demands investigation.

One way to make a message repeatable long-term is to ensure it is **portable,** meaning that you can use it in different contexts. For example, a team of scientists at Cornell University studied the attributes of a quotable movie line. The team built a computer program that analyzed thousands of quotes tagged by users on IMDb, or Internet Movie Database. The program compared quotable lines in a specific movie against other lines of the same length said by the same character in the same movie. Their observation was that most memorable lines were applicable in various contexts. For instance, the famous line in Jaws, "You're gonna need a bigger boat," is portable; you can use it on or off the water to allude to the need for more resources.

Start by creating generic statements, using few personal pronouns or indefinite articles, and keeping the statements in the present tense. Can people repeat your favorite message at the supermarket, gym, dog-boarding facility or new hair salon where a total stranger is approaching you with scissors? May the force be with you.

You can also create distinct **words tied by simple syntax,** such as "My name is Inigo Montoya. You killed my father. Prepare to die." If asked to quote anything from the movie "Princess Bride," people who have seen it would most likely repeat this quote. The syntax in this quote and the order of words are simple and easy to understand. Yet the word choice attracts extra attention. The name "Inigo Montoya" is unusual. The word "prepare" is something we may expect in the context of preparing a meal or preparing for a meeting, not preparing to die.

The impact of simple syntax on memory is backed by scientific studies. Research shows that people are able to reproduce sentence structures independent of meaning, words or sounds, even when they have amnesia. Research also shows that once the syntax is simple, providing a safe canvas, the foreground must be marked by distinct words, or disfluency. Disfluency has benefits because it induces cognitive roadblocks, which, in a counterintuitive way, invite deeper processing. Another advantage of disfluency in messages is that it encourages us to ignore surface properties and focus on deeper meaning. This leads to the formation of abstract thoughts. A burst of disfluency, when attention is likely to fade, is especially effective. But…use it sparingly. If all characters in the "Princess Bride" movie had unusual and difficult-to-pronounce names, we would not remember them as much.

## Become Memorable With Distinction

### How to Stay on People's Minds Long Enough to Spark Action

One way to avoid forgettable content is to make it distinct from what your audiences see elsewhere. However, it is one thing to draw viewers' attention to a distinct stimulus and another for them to remember that stimulus long term.

Researchers suggest that when the brain detects differences between isolated and background items, encoding results in two categories: the isolated items and the background items. Imagine three red dots surrounded by 50 black dots. Since the isolated items represent a smaller category compared with the background items, recall is better for isolates. The probability of retrieving an item from one of the two categories is inversely proportional to the size of the category. This is why, when we create content, it is useful to ask 1) How many items do we want to isolate? 2) Do they represent the most important content we want others to remember?

It is practical to regard any messages you create as a set of items placed along a temporal continuum (e.g., a set of paragraphs in an email or blog, a set of sounds in a meeting, a set of slides in a presentation, a set of campaigns in a marketing initiative). Audiences can discriminate between items depending on their position along this continuum. Similar items that crowd a psychological space are harder to discriminate compared with something that is distinct in a crowd or that does not have much in its close proximity. For instance, you may remember a word better if it was followed by five pictures but not if it was followed by five other words.

You can also **create distinctiveness by thinking in opposites.** If distinctiveness is providing a stimulus that is different from neighboring items, we can create it by choosing the opposite of what an audience just saw. This idea may be easy to understand, but opposites are not always easy to identify because not everything can be described in opposition. It is useful to consider opposites from a contextual angle, with a fuzzy-trace approach. In underdeveloped nations, rich and poor consider themselves opposites, but an outsider from a well-developed nation may consider them both poor and not opposites at all. What matters in your content creation is, What does your audience consider the opposite of what you presented for a while? Maybe a dialogue after a monologue? Maybe seeing something dynamic after something static? Maybe being informal after a formal segment?

You can also **achieve distinctiveness with a human touch.** If we consider distinctiveness "departure from the expected," a deviation that many will appreciate and find impossible to ignore is one with a human touch. We create our communication in the service of other people. Notice what happens when we shift from a formal, technology-oriented message to an informal, human-oriented language. "When I'm not deep into algorithm design, data modeling or analytic visualizations, I really like to ski," says Pedro Desouza, data scientist from EMC.

Patagonia's CEO Rose Marcario also achieves distinctiveness with a human touch. Recently, she embraced an environmental approach to business for her company. Patagonia advises consumers not to buy its clothes. By doing so, it sacrifices some of its earnings. The company also shares product breakthroughs with competitors — all in an effort to cause less wear and tear on the environment. The message in Patagonia's paradoxical campaign "Don't buy this jacket" is do not buy more than you need. Can you identify ways to create distinctive content using a human approach to business?

## 'I Write This Sitting in the Kitchen Sink'

### The Science of Retrieving Memories Through Stories

Let's consider a story from Kevin Kregel, a former NASA astronaut. I had the opportunity to interview him, and no interview with an astronaut is complete without a story about seeing our planet from an exclusive vantage

point. Here is what Kregel remembers from one of his missions, after being in space for eight days: "The flight deck on the space shuttle is not that much bigger than a 737," he said. "A bit wider, a bit deeper, but not by much. There are six windows and two overhead windows. We turned off all the displays on the flight deck and blocked off the access to the mid-deck because there are lights there that you can't shut off. It was pitch black. Even though there was not much room, we all had good body control, and floated, and put our faces in front of a window so you could not see anybody else. You could see the Earth below, and the stars, and we floated that way for 45 minutes, listening to Pink Floyd, "The Dark Side of the Moon." It felt like you were just flying and you weren't really in the shuttle. Nobody said a word. Nobody moved. Nobody touched anything. We were all floating in our separate window and the sun finally came up, and it was gorgeous." He concluded humbly, "I guess that's what it must have been like to be on LSD in the '60s."

The reason this story has a chance to be remembered is because it meets the three criteria for a memorable story: It has perceptive, cognitive and affective elements. Perceptive elements are based on sensory impressions in context (such as experiencing pitch black in a flight deck slightly larger than a 737's), and include actions on a timeline, such as first turning off display lights, *then* blocking off lights from other areas, *then* taking a spot in front of a window and *then* listening to Pink Floyd until the sun comes up. Cognitive elements include facts, abstracts and meaning, such as how big the space shuttle is and how many windows it has, the name of a music album and the abstract thought of being on LSD. Affective elements include emotions, such as enjoying a gorgeous sunrise from space.

The absence or imbalance of perceptive, cognitive and affective elements in a story is what makes business content forgettable. Ineffective communicators tell "stories" that 1) stay too factual or too abstract; there is nothing wrong with facts or abstract ideas, but when the other components are missing, it leads to forgetting; 2) have no plot — nothing really happens across a timeline; and 3) lack emotional intensity.

Emotion is a particularly critical component in memorable stories because emotional stimuli lead to neurochemical activity in the areas of the brain responsible for encoding, storing and recalling memories. How do we include emotion in our messages, especially when business content is dry, technical and complex, and audiences increasingly cynical?

Nostalgia is an emotion that helps to abstract and extract meaning. It is especially effective with cynical audiences because it levels the knowledge in the room. Romancing the past has the potential to strengthen the bond with others. When everyone feels like an equal, people are more likely to trust each other and are more likely to allow themselves to be swayed in a certain direction by others. This is why messages that start with "Remember when …" are so effective.

Also, use **intense** emotions. An old Nike ad with a lot of attitude says, "If you're serious about sports, buy Nike shoes. If you want to dance, buy Reebok." This works for memory because it adds tension, which generates emotion. It is not a flat statement such as, "Buy these shoes to enjoy running." This would generate an emotion, too, but not a strong one. You don't need to bash the competition, but it is important to ask, "How intense is the emotion I include in my content?"

## How Much Content Is Too Much?

### How to Handle Content Sacrifice

Brevity is advantageous because it gets attention and sustains it since there is not much to absorb. It also creates a feeling of mastery and completion, which generates positive emotions. But what happens when we can't bow to the rhetoric of the micromessage? Consider the steps below when determining the length of your message.

**Consider what the audience must remember.** When we want others to remember precise information, to recollect it with details, we aim for verbatim. If we are satisfied when others are familiar with what we said, without recalling many details, or use some of their own words to describe what they remember, we are aiming for gist.

If we aim for verbatim, we have to leave some room for repetition and elaboration to make sure concepts stick in a precise way. If we aim for gist memory, we can get away with more content as long as at least one main message is clear and we draw attention to it often.

You must also **determine what the audience must act on next.** If our intent for a communication effort is to have others simply "like" the content, leave a comment or share it with others, these intentions are better achieved with shorter content. On the other hand, if the audience needs to make a difficult decision, such as awarding us a significant amount of money, effort or time, then longer content is necessary to be convincing.

Quite often, we have to **meet time constraints imposed by others.** A client says, "You have an hour for this presentation." Someone may be a bit thriftier: "We can

give you only 30 minutes." In an investor presentation, you may have 10 minutes. Adjust to any of these situations by starting with two questions: "What do I want the audiences to remember?" and "What do I want them to act on?" If these are clear — and knowing that we speak at a rate of about 140 to 160 words per minute — you have a metric for how much you can say in 30 seconds, 10 minutes or one hour. Treat each of these segments as a stepping-stone for the audience to get closer to a reward.

## How Does the Brain Decide?

### The Neurobiology and Neuroeconomics of Choice

As our lives unfold in a series of decisions, ranging from fully automatic to fully strategic, we may experience some tension balancing them. A little voice in your head may say, "I am craving something sweet." The automatic voice adds, "A KitKat bar would be really good." And the strategic voice asks, "Can I afford the calories?"

Reflecting on your own content, ask this: What gives your own audiences a rush? What do they crave? What lights their fire naturally? Can you divide your content approaches so as to appeal to something automatic and strategic in balanced proportions? For example, in a current antismoking campaign, we see a young girl, Amanda Green, writing a "contract" in which she agrees to relinquish part of her freedom to a cigarette. The voiceover bluntly states, "There is a contract in every cigarette; when you light up, you sign up." The commercial appeals to all three decision drivers: a reflex, our automatic desire to be in control; an existing habit, smoking; and a goal, quitting. The ad ends with "Know the real cost," which appeals to a strategic approach for quitting.

In any decision, the brain will select a choice to maximize a reward, which is based on what the brain values. But how do we know what people value? Here are some dimensions to consider. We value what is functional, in the sense of having tangible attributes, such as a dishwasher, a type of detergent, or even insurance. We value things for their *emotional* value: think of the last time you used your GoPro or enjoyed food, drinks, or a film with friends. We value things because of their epistemological value, meaning products or experiences that give us the opportunity for *knowledge* development and intellectual stimulation, such as books and seminars. We value things for their *aesthetics,* such as clothes and decorations. We also seek *hedonistic* values because they evoke sensory pleasure, which is why we enjoy good hotels and fun nightclubs. Sometimes we choose because of *situational* value, such as selecting champagne versus wine because of a special occasion. And if we're lucky enough, we may be exposed to things of *holistic* value: choosing a vacation in Paris with a new lover is likely to appeal to a range of values from emotional to epistemological, aesthetic to hedonistic.

Which of these values do your customers appreciate, and are those values coming across clearly in your communication? If so, then there is a greater likelihood of action.

## The Right to Be Forgotten and the Intent to Be Remembered

### How to Balance Accidental and Purposeful Forgetting

The ability of your audiences to remember will influence their decisions, but their ability to forget may be equally important to your cause. Think of it this way: Forgetting is accidental or purposeful. *Accidental* forgetting happens when people fail to encode new information we provide them or when existing knowledge we've given them decays over time because of a lack of reactivation. Forgetting is *purposeful* when we want to convince people to give up old routines in favor of new thinking. In this case, it is preferable that audiences forget the old and remember the new.

Reflecting on your own content, consider catering to both types of forgetting. Reactivate your most important message often to avoid accidental forgetting, and purposefully direct your audiences' attention toward new things when the old does not serve them any longer.

Being on someone's mind and influencing decisions is a position of honor and responsibility. Using the guidelines, consider placing in people's minds thoughts and ideas that are enduring enough and rewarding enough to help humanity evolve and take us all on fulfilling paths.

### RECOMMENDED READING LIST

# Winning the Brain Game

## Fixing the 7 Fatal Flaws of Thinking

by Matthew E. May

### THE SUMMARY IN BRIEF

Each day, a game of mind versus matter plays out on a field defined by the problems we must solve. Most are routine and don't demand a more mindful approach. It's when we're faced with more difficult challenges that our thinking becomes vulnerable to brain patterns that can lead us astray. We leap to solutions that simply don't work. We fixate on old mindsets that keep us stuck in neutral. We overthink problems and make them worse. We kill the ideas of others as well as our own. Worse, we keep doing these things, over and over again, naturally and instinctively.

But it doesn't have to be that way. In *Winning the Brain Game,* author and creative strategist Matthew E. May explains these and other "fatal flaws" of thinking, revealing seven observable problem-solving patterns that can block our best thinking. Calling on modern neuroscience and psychology to help explain the seven fatal flaws, May draws insights from some of the world's most innovative thinkers. He then blends in a super-curated, field-tested set of "fixes" proven through hundreds of creative sessions to raise our thinking game to a more mindful level. Regardless of the playing field, mindful thinking is the new competitive advantage, and the seven fixes are a magic set of tools for achieving it.

*Winning the Brain Game* will lead you to better decision-making, higher levels of creativity, clearer strategies and overall success in business, work and life.

### IN THIS SUMMARY, YOU WILL LEARN:

- The seven fatal flaws of thinking and the fix for each one.
- The importance of reframing and generating the right questions.
- Concrete ideas and strategies for practicing each cure.
- How neuroscience can help solve problems.

# THE COMPLETE SUMMARY: **WINNING THE BRAIN GAME**

**by Matthew E. May**

**The author:** Matthew E. May is an award-winning author and noted thought leader on strategy and innovation. A creative advisor to Toyota for eight years, he is now a popular speaker, facilitator and coach, who works worldwide with individuals and organizations. He has written five books and writes a column called "Brain Game" for *Inc.* magazine.

## Introduction: 7 Fatal Flaws

An elegant solution is one that achieves the maximum effect with minimum means. But there are seven fatal thinking flaws. Each carries with it the potential to kill a great idea and prevent an elegant solution from ever seeing the light of day.

- **Leaping.** Immediately and instinctively leaping to solutions in a sort of mental knee jerk almost never leads to an elegant solution to an unfamiliar, complex problem, because not enough time is devoted to framing the issue properly.
- **Fixation.** Fixation is an umbrella term for our general mental rigidity and linear thinking — our go-to mindsets, blind spots, paradigms, schemas, biases, mental maps and models — that make it easier for us to make it through the day but harder for us to flex and shift our perception.
- **Overthinking.** This can be thought of as our knack for creating problems that weren't even there in the first place. Overthinking is a rather deep bucket filled with a host of variations on a theme: overanalyzing, overplanning and generally complicating matters by adding unnecessary complexity and cost.
- **Satisficing.** By nature we satisfice, a term combining satisfy and suffice, and coined by Nobel laureate Herbert Simon in his 1957 book *Models of Man.* We glom on to what's easy and obvious and stop looking for the best or optimal solution, the one that resolves the problem within the given goals and constraints.
- **Downgrading.** Downgrading is the close cousin of satisficing, with a twist: a formal downward or backward revision of the goal or situation, often resulting in wholesale disengagement from the challenge.
- **Not Invented Here (NIH).** This is defined as an automatic negative perception of and visceral aversion to concepts and solutions developed somewhere else, somewhere external to the individual or team, often resulting in an unnecessary reinvention of the wheel. We don't trust other people's solutions.
- **Self-Censoring.** When we reject, deny, stifle, squelch, strike, silence and otherwise put ideas of our own to death, sometimes even before they're born, it is an act of Self-Censoring. Self-Censoring is the deadliest of the fatal flaws, because any voluntary shutdown of the imagination is an act of mindlessness, the long-term effects of which eventually kill off our natural curiosity and creativity.

Regardless of the playing field, mindful thinking is the new competitive advantage, and the seven fixes for the seven flaws are a magic set of tools for achieving it. The seven can all be placed in a larger toolbox properly called Reframing. Reframing is the singular response to the question of how to respond to the following mantra: "What appears to be the problem, isn't; what appears to be the solution, isn't; what appears to be impossible, isn't."

## PART I: MISLEADING

## Leaping

Perhaps the easiest way to explain Leaping is to do what psychologists and neuroscientists alike do: categorize our thinking into two main circuits. Psychologist Daniel Kahneman in his 2011 book *Thinking, Fast and Slow* uses terms coined by psychologists Keith Stanovich and

Richard West: System 1 and System 2. Let's just keep it simple and memorable, taking our cues from Kahneman: FAST and SLOW.

FAST does the rapid, automatic, reactive, unconscious and instinctive thinking we employ to solve routine problems. SLOW handles the labored, effortful, conscious and rational thinking we employ to solve more complex and unfamiliar challenges. FAST is where our expertise and confidence live, where our intuitive "sixth sense" operates. It's also where almost all of our mistakes get made. And it's where Leaping occurs. Kahneman tells us that our FAST circuit is a "machine for jumping to conclusions" when information is limited.

While deeper thinking SLOW should be the one that prevents mistakes and keeps us out of trouble, it's lazy. It wants to act like FAST. SLOW thinking is just plain hard work, requiring too much mental and physical effort. And our formative years have not focused on thinking slow but, rather, how to economize thinking to make it fast.

What can we do to improve the tension between FAST and SLOW? We can leverage our FAST circuit to improve our SLOW and train our minds to fix our brain's fatal flaw of Leaping. The secret lies in how to trigger SLOW so that it acts and feels like FAST.

### The Fix: Framestorming

The fix for Leaping is Framestorming. Framestorming is a mash-up of framing and brainstorming. Framestorming operates under the same basic rules of brainstorming: Go for quantity, build on ideas, withhold judgment. That's the storming part. It's the part that feels good, because it calls up FAST. What about the frame part?

How we frame something has everything to do with how well it turns out. The ability to properly frame an issue or problem goes far in avoiding the typical pitfalls that limit our ability to reach the elegant solution. With framestorming, the focus is on generating questions, not solutions. The power of framestorming lies in its ability to engage our SLOW thinking in a manner that feels like FAST thinking.

Framestorming consists of three straightforward steps conducted under the general rules of brainstorming, with the ultimate goal of stating the challenge as a compelling question that acts to frame a problem as an intriguing puzzle, one that engages our more imaginative SLOW thinking.

**Step 1: Cue the language of frames.** Good frames are stated as questions. Author Warren Berger writes, "a beautiful question is an ambitious yet actionable question that can begin to shift the way we perceive or think about something — and that might serve as a catalyst to bring about change." Warren advises cycling through three stages of inquiry: why, what if and how?

"Why is this a problem?" "Why hasn't anyone solved it?" "Why might it represent an opportunity?" At some point, the innovator moves from "why" to "what-if" questions — imagining possible solutions, often by connecting ideas. "What if we tried X?" "What if we combined Y with Z?" That's the idea stage. Then, you have to get from imaginative, what-if possibilities to something more practical and concrete; you begin to ask, "How might we do this?"

**Step 2: Generate questions.** Now generate as many "why," "what-if" and "how" questions as you can. As in brainstorming, framestorming initially favors quantity over quality. Go for at least a dozen questions that frame the challenge, preferably more. Don't stop until you're well into the double digits. Reserve judgment or evaluation for step three — the last thing you want to do at this point is be conservative or critical.

**Step 3: Pick the two best.** Once you have a master list of frames, you can select at least two that will launch you into the solution brainstorming mode, which is essentially another round of the "why," "what-if" and "how" questions, this time focused on answers. From there, you know what to do!

## Fixation

Psychologist Karl Duncker in his 1939 book *On Problem Solving* coined the term "functional fixedness" to explain the difficulty people have in looking at objects and situations in ways different than they commonly do or have in the past. Various other labels for functional fixedness include paradigms, blind spots, mindset, bias, brain lock and mental models.

Fixation can wreak havoc in individuals, organizations and even entire industries. Organizational theorist Ian Mitroff attributes General Motors' dramatic loss of market share in the 1980s at the hands of import car companies to a decades-old, multilevel version of Fixation that went something like this: Styling and status are more important than quality, foreign cars are no threat and workers don't make a difference. General Motors only became aware of their faulty thinking when it was far too late.

All day long, unbeknownst to us — and for the most part uncontrolled by us — our brains record every single experience, sending sensory information in the form of electrical impulses to our cerebral cortex, the "grey

matter" that houses the brain's higher functions. Each new experience is automatically stored as data in our brain. The process is additive and cumulative, and generally goes unedited. Different patterns combine to make memories and perceptions, and those connections are reinforced over time, becoming mental models — mindsets, biases and paradigms. As soon as our brain recognizes a piece of information as being part of a pre-existing pattern, our FAST thinking overrides our SLOW, and we get fixed on our solution, essentially screening out other possibilities.

### The Fix: Inversion

The cure for Fixation is called Inversion, because it involves flipping your thinking around in order see things through a new, fresh and unique lens, in turn sparking new neural connections in your brain, effectively rewiring it. The Inversion method is called "Opposite World." Opposite World is about inverting the normal conditions, defining features or key characteristics of whatever challenge you're tackling. There are three basic steps.

**Step 1: List the defining attributes.** Let's take a common example, that of the traditional circus, first used by Stanford's Tina Seelig in teaching her entrepreneurship class how to address what she called "problem blindness" in her 2009 book, *What I Wish I Knew When I Was 20.* The traditional circus has a number of classic elements: clowns, barkers, multiple tents, carnival music, "star" attractions, animals, cheap tickets, kid oriented.

**Step 2. For each element, list the extreme opposite or reverse.** In our circus example,

- Clowns — no clowns,
- Barkers — no barkers,
- Multiple tents — one tent,
- Carnival music — sophisticated music,
- "Star" attractions — ensemble cast,
- Animals — no animals,
- Cheap tickets — expensive tickets,
- Kid oriented — adult oriented.

You probably just experienced a bit of the Fixation flaw, if you thought of Cirque du Soleil.

Part of the point here is to illustrate the power of Inversion, an illustration which necessitates a backwards glance at something we consider nontraditional, even disruptive: Airbnb is the inverse of a traditional hotel or bed-and-breakfast in that it does not own property; Uber is the inverse of a traditional cab or limousine service in that it does not have a fleet; Tesla cars are the inverse of cars with combustible engines, at least to some degree, in that they do not use gasoline for fuel. By taking the polar or extreme opposite view of the current or traditional way of thinking about a given concept, you can easily forge new avenues worth exploring creatively, which brings up the final step.

**Step 3: Framestorm/brainstorm, using the opposites as your starting point.** Look at your opposites list. While it may not reveal a solution, each opposite provides a starting point to now use your framestorming chops and ask Why (not)? What if? How (might we)? Those questions in turn will spark new trains of creative thought. When you're done, you may be surprised at just how off-road you've gone with your thinking.

## Overthinking

General George Patton once said, "No plan escapes first contact with the enemy." Ex–heavyweight boxing champ Mike Tyson updated Patton's sentiment by saying, "Everyone has a plan until they get punched in the mouth."

The question is, where did our love of planning come from? Part of the answer comes from our evolutionary addiction to resources: The more we have, the more we feel safe, secure, in control, shielded from risk and thus able to perform better. But in reality, just the opposite is often true — the more we attempt to control and regulate apparent risk, the more exposed and at risk we often are. That's because the more protected we think we are, the less vigilant we become.

Another part of the answer centers on our need to be certain and correct, a need easily traced to how we learn and how we are educated. Consider first the natural learning that occurs long before we ever enter a classroom. By all accounts, it is our most intensive learning period. It features failure upon failure: learning to smile, hold our head up, roll over, grab things, sit up, crawl, walk, talk . . . everything is an experiment, nothing happens right the first time, and what we now call failure was not at that time thought of much less labeled as failure but rather a continuous cycle of learning and progressing and improving — the very nature of growing.

Once in the classroom, our fearless learning through testing was replaced by a new kind of learning. Our teachers now asked the questions, and we had to answer correctly. The need to be certain and correct grew. In a complete reversal of toddler learning, we faced a new kind of test, one that came after the lesson. There was a right and wrong answer involved with this kind of test, and a grade called "F," for failure. Along with grades on

tests came fear. As the demands of homework assignments, quizzes and tests grew, so grew the need to plan our time in order to avoid failure.

The good news is that the working world now realizes the errors of our institutions and is racing to rekindle the childlike ethos of curiosity and experimentation with which we entered the world, eager to embrace what perhaps Charles Kettering said best: "Virtually nothing comes out right the first time. Failures, repeated failures, are finger posts on the road to achievement. The only time you don't want to fail is the last time you try something. One fails toward success." All we really have to do is get back in touch with how we made our way in the world those first few formative years.

### The Fix: Prototesting

Prototesting is a mash-up of prototyping and testing. A prototype is defined as an early model of a potential solution that can take many forms, from purely conceptual, like a strategy, to completely physical, like a product. Broadly speaking, though, a prototype in any form is at its core simply a set of educated guesses about the future. And the fancy word for an educated guess is hypothesis. And the purpose of a hypothesis is to guide a test, an experiment. Creating a prototype is play; testing it is purposeful play. Two powerful tools will help you raise your Prototesting game.

**Surfacing Assumptions: What Must Be True?** If we want to survive Patton's "first contact with the enemy" and avoid Tyson's getting "punched in the mouth," we must address the assumptions inherent in our potential solutions. The best technique to surface an assumption and alchemically turn it into an advantage amounts to a single but powerful question: *What must be true?*

For example, determining whether a prototype strategy represents a good set of choices may require asking what must be true about the industry structure, market segmentation, distribution channels, cost structures and competitive reaction. A prototype product or service offering may require asking what must be true about what users truly value. Once you develop a list of answers to the question of what must be true for your concept to be a good choice, you will have a fairly robust set of conditions for success. This list is your portfolio of educated guesses about the future, your hypotheses.

**Testing Assumptions: Experimental Design.** The following test design is so simple it needs no further explanation; simply plug in your most worrisome assumption from the what-must-be-true exercise, and you're good to go. Here are the test design parts:

- **Conditions:** Which of our what-must-be-true assumptions are we most worried might not be true? Why is it so worrisome?
- **Hypothesis:** What must we learn? What is our testable belief about future value creation?
- **Experiment:** How will we test our hypothesis? What is the target metric that will be our standard of proof that helps determine pass/fail?

What is so attractive about Prototesting is that it calls up the kind of learning that creates new and valid knowledge, in which it is the test that produces the lesson. And the Overthinking flaw fades away.

## PART II: MEDIOCRE

# Satisficing

Satisficing is a real word, part satisfying and part sufficing, coined by the late economics Nobel laureate Herbert Simon his 1956 book *Models of Man*. He used it to describe our natural inclination to settle for "good enough" when faced with a decision.

In general, we go with the first option that offers an acceptable payoff, choose the one that appears to get us "in the ballpark" quickest, but then stop looking for other ways, including the best way, to solve the problem. We rationalize that the optimal solution is too difficult, not worth the effort involved or simply unnecessary. Simon called this "bounded rationality."

In the vast majority of routine, everyday decisions, we'd be wise to satisfice. That's when "good enough" is, well, just that. But when you're trying to solve a difficult problem in which a suboptimal solution could put you at risk is not one of those times.

As people grappling with various thought challenges engage in Satisficing behavior, they ignore the very constraints that can paradoxically open up new and different ways of looking at things. They mistakenly pose the question, "What should we do?" before asking, "What is possible?" They want a solution, but they don't have the patience to pursue the optimal one, favoring implementation over incubation. They would much prefer to throw some resources at the problem and move on, or tweak a previous solution and fit it to the current situation. They fail to look more holistically at the challenge, to search, scan and see the bigger picture. The result is that elegant solutions completely elude them.

### The Fix: Synthesis

An easy way to think about Synthesis is "both-and" thinking, versus "either-or." Here are two ways to synthesize.

**Double Down.** Here, you have two solutions, one of which has many benefits with one huge drawback and the other of which has one huge benefit but many drawbacks. Taking a cue from Blackjack players who double down on a hot hand may be a way to synthesize a third option. Roger Martin and Jennifer Riel state that, "The trick is to find the conditions under which the first model can produce the benefits of the second."

They give the example of Walmart, facing a huge drawback in the form of a massive erosion of their global reputation if they did not change both their stance on environmental sustainability as well as carbon footprint. Doing so would be expensive, which for a low-cost provider strategy is a big drawback, but would do wonders for the company's reputation. Walmart effectively doubled down by extending their general strategy of placing pressure on suppliers to reduce costs. In this case they placed pressure on their suppliers to adopt more environmentally friendly strategies, refusing to purchase goods from suppliers who did not meet certain standards for water, waste and carbon.

**Decomposition.** When you have two equally attractive solutions that you wish you could fully implement simultaneously but can't because they are in direct conflict and require significant trade-offs, break the larger context down into component parts, so that you can apply each solution in whole to those components.

When Target was in its early years, its senior executives realized they faced a dilemma: It had to contend on one hand with Walmart, far and away the low-cost retail leader. Seeing Kmart relegated to also-ran status, Target knew it couldn't win the game of everyday items offered at rock-bottom prices. On the other hand, it faced successful, highly differentiated department store retailers, such as Nordstrom and Macy's, strong brands that would be nearly impossible to steal significant share from, much less unseat.

In order to compete effectively, Target adopted a strategy of decomposition. It decided that groceries and everyday commodities — a box of Tide, a package of Bounty — would be sold at prices equivalent to Walmart's. However, when it came to apparel and other higher-margin items, Target chose to partner with well-known designers and celebrity homemakers looking for broader audiences. These offers had no direct substitutes at either Walmart or higher-end retailers, and Target was able to create the illusion of being a discounter in one part of the store and a unique retailer in another. It broke the problem down and essentially created two stores under one roof, becoming a discounter-plus-retailer, convincing people that they could get fashionable things along with the halo of everyday low prices from the store within a store. Target grew exponentially, carving out a unique playing field on which it could win.

As with all Synthesizing, the goal of decomposition is to avoid satisficing compromises and "either-or" trade-offs in order to create more value through "both-and" thinking.

## Downgrading

Henry Ford once said, "If you think you can or can't, you're right." In that single line he captured the sum and substance of Downgrading. By Downgrading we somehow fool ourselves into believing we can declare victory ... through a pre-emptive surrender!

The legendary Jack Welch faced this very issue during his tenure as CEO of General Electric. Welch was known for his winner's mindset, demanding that all GE lines of business maintain no less than second place in market share, and preferably first. But his lieutenants began gaming the goal by revising how they defined their respective markets, shrinking the market small enough that they could declare themselves number one or two in the space. Welch caught on, though, and reset the constraint so that no business could hold more than a 10 percent share, believing that if people defined their market to be much larger than their share of it, they would be more aggressive in pursuing opportunities to win the top spot.

When we view a problem as unsolvable or a goal as unattainable, we go through four phases. The first thing we do is try harder. No surprise there. Next, if our efforts don't yield the results we want, we get angry. Again, no surprise. Third, we resign, mentally distancing ourselves from the goal, and we get depressed. Finally, our commitment dissolves completely, and we become open to committing to a new goal.

### The Fix: Jumpstarting

Jumpstarting is a three-gear battery recharger, with three effective methods to avoid Downgrading and eventual disengagement.

**Can-If Cascading.** The concept is quite simple: Force yourself to replace "can't because" with a "can-if" statement. If you're on the Mars Pathfinder team, for example, "We can't land a rover on Mars for $150 million, because

landing modules cost too much" might become "We can land a rover on Mars if we figure out a way to land without a landing module." You then keep going, using either another "can if" or, if a single "can if" does the trick, a Framestorming "what if" or "how." You never know, you might come up with the elegant solution the Pathfinder team did: Use air bags like those found in automobiles to bounce the rover to a stop on Mars.

**Why-How Laddering.** From neuroscience we know that both a "why" and a "how" must be present and connected to keep us engaged in the pursuit of a challenge. The first is about purpose; the second is about process. And since we know that focusing on both why and how isn't possible, we need a practical method to call one or the other up when we begin to stall and contemplate Downgrading. Seemingly impossible challenges seem impossible because there is no clear how, and the entire point of such a challenge is the creative search for a solution. So we can be fairly confident that we are in for a difficult struggle with the how at some point.

That's where Why-How Laddering comes in. If the "how" isn't yielding the desired progress, we can ladder up to asking ourselves the "why." If the "why" isn't as clear as it could be, we can ladder down to a lower-level "how" until we find something we can accomplish to get a quick win and restart our progress toward the "why."

**Fresh Starts.** According to a study by Katherine Milkman, people are more likely to set a new goal corresponding with or immediately following an event such as a birthday or the start of a week, month, season or year, suggesting that temporal landmarks or timestamps might make it easier to engage in aspirational behavior. Milkman proposes that these landmarks create new "mental accounting periods" that psychologically distance our present self from its past imperfections, propelling us to behave in line with their renewed self. Second, temporal landmarks interrupt attention to day-to-day details, causing us to take a big-picture view of our situation and focus more on the broader challenge we're chasing.

But you do not need to wait for the new year, your next birthday or even Monday morning. The Energy Project CEO Tony Schwartz talks about the power of pulsing: working in 90-minute cycles, effectively achieving the Fresh Start effect several times a day. The science shows that after working hard for more than 90 minutes, our brains begin to slow down to conserve energy. We become more reactive and less capable of thinking clearly and reflectively, or seeing the big picture. It doesn't matter much what you do as long as you change your space every 90 minutes or so. You'll be surprised at the re-energizing effect this has on you.

## PART III: MINDLESS

# Not Invented Here (NIH)

NIH is defined as a strong resistance to, or automatic rejection of, concepts — knowledge, ideas, solutions — produced somewhere else, somewhere external to the individual or team, often resulting in an unnecessary reinvention of the wheel. The pairing of these two aspects, external idea origination and immediate internal devaluation, is the defining characteristic of NIH.

NIH becomes more prevalent as we develop subject matter expertise, which is a form of power. Psychologists maintain that deep but narrow bands of knowledge, aka subject matter expertise, provide us a bounded personal and social domain closely integrated with our self-image. As a result, we perceive anything that may breach that domain as a potential threat to our status, position or power base. If we're the expert, we should be the one with all the great ideas, or so the thinking goes. Irrational as it may be, if someone else gets an idea or conjures up a solution that lies within our domain of expertise, we somehow get a sense of diminished capacity: "I should have thought of that." Fear then creeps in if we feel as though others may perceive us to be somehow less of an expert, especially if those others happen to be bosses, employers, or clients. That's when we double down on defensive maneuvers like NIH to protect our status, position or power base.

### The Fix: Proudly Found Elsewhere (PFE)

The two salient features of a PFE strategy are an outside-in flow of ideas and an inside-out connection with sources of new (to you) ideas. The following tools are among the best ways to achieve both.

**Open Hackathons: Bringing the Outside In.** Hackathons have moved well beyond the technology-only focus that "hack" conjures up, to become a valid method of bringing a diverse and passionate group of people — designers, storytellers, marketers, coders, entrepreneurs — together over a short time to solve real-world problems and produce a basket of strong ideas. Innovation is a contact sport, and having dozens of talented individuals rub shoulders and put their heads together is bound to produce something profound.

**Knowledge Work: Reaching Out to Connect.** The goal of creating a knowledge network is to become more productive and commercially valuable by exploring and exploiting the talents of others and bringing their ideas into your own repertoire through a more permeable boundary than you might have right now. This will help squelch any NIH-type tendencies you may entertain. A high-quality connection is one that you reference and connect with constantly. The information, knowledge and guidance you receive is excellent and enables you to be faster, better and smarter. Your relationship to individuals is characterized by high levels of dialogue, responsiveness and collaboration.

## Self-Censoring

Self-censoring, the deadliest flaw, is a special form of Fixation that borders on mental masochism: We field or create a great idea; we recognize it as such but deny or kill it anyway.

The causes of Self-Censoring are both biological and social, share the same origins and invoke the same brain functions as Fixation and look a lot like NIH. There is a nuanced difference, though, and it is wrapped in the wisdom of the old idiom "once burned, twice shy." One touch of a red-hot stove is usually all we need to avoid that kind of discomfort in the future. The same is true as we experience the emotional sensation of stress from our first instances of social rejection or ridicule. We quickly learn to fear and thus automatically avoid potentially stressful situations of all kinds.

As mindfulness author Ellen Langer defines it, "When you're mindless, the past is over-determining the present. You're trapped in categories created in the past. You're trapped in a rigid perspective, oblivious to alternative perspectives."

### The Fix: Self-Distancing

The Self-Censoring fix rests on a version of mindfulness that emphasizes a higher-order attention and noticing moment-to-moment changes around you. It is called Self-Distancing for several reasons. First, the kind of heightened in-the-moment noticing at the core of this mindfulness brings to mind a classic concept well over a century-and-a-half old — The Impartial Spectator — first introduced by Scottish philosopher Adam Smith as a central figure in his 1759 book *The Theory of Moral Sentiments.* Smith wrote that we all have access to "the person within" by invoking "the impartial and well-informed spectator," which he defined as the ability to observe our behavior as an objective onlooker does, while remaining fully aware of our thoughts, emotions and circumstances.

Second, the modern term psychologists use for Smith's Impartial Spectator is in fact self-distancing, coined by researchers Ethan Kross and Ozlem Ayduk. In one study, they invoked stress and anxiety in one of the most powerful ways known to turn a challenge into a threat: public speaking in front of judges without sufficient time to prepare. In this case, college students had only five minutes to prepare and could not use notes. One group was told to use first-person pronouns to work through their stress; for example, "I shouldn't be so nervous" and "I will be fine." The other group was told to use their name or a third-person pronoun; for example, "Matt, don't be nervous" or "You'll do great." Not only did the judges find the latter group's performances to be more confident and persuasive, but the participants themselves reported far less shame and rumination than the first-person group. According to Kross, when you think of yourself as another person, it allows you to give yourself more objective, helpful feedback.

Experiencing Self-Distancing is not unlike the feeling you might get when you travel to a distant and unfamiliar place. As visitors we are de facto spectators: naturally mindful, fully present, noticing details the locals now take for granted. We are very much the outsiders, watching ourselves as we stumble and fumble local customs, chuckling at our folly rather than stressing over how stupid we are, as we surely would as natives to the land. And all the while we stay fully aware and alert to everything happening around us. We are in it but not of it, so we are able to view ourselves in a more detached, rational and objective way.

By becoming more attentive to the moment and seeing the situation from the perspective of an objective outsider, mindlessness yields to mindful thinking, a non-negotiable requirement for winning the brain game.

# The Outward Mindset

## Seeing Beyond Ourselves

by The Arbinger Institute

### THE SUMMARY IN BRIEF

Our mindset is the lens through which we see our work, our relationships and our entire world. Unknowingly, too many of us operate from an inward mindset — a narrow-minded focus on self-centered goals and objectives. When faced with personal ineffectiveness or lagging organizational performance, most of us instinctively look for quick-fix behavioral band-aids, not recognizing the underlying mindset at the heart of our most persistent challenges.

When individuals and organizations make the change to the outward mindset, incredible things start to happen. The outward mindset is focused on the objectives and results of the organization as a whole. It seeks to be helpful, responsible and make a real impact. It helps individuals see how they might be creating obstacles in the work of others, and helps them change the way they are working and relating to their team members in a way that creates real, sustainable results.

Through true stories and simple yet profound guidance and tools, *The Outward Mindset* enables individuals and organizations to make the one change that most dramatically improves performance, sparks collaboration and accelerates innovation — a shift to an outward mindset.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to recognize the two mindsets that drive people and organizations.
- How and why we prevent ourselves from having an outward mindset.
- The three key elements of an outward mindset and strategies for adopting them.
- Why adopting an outward mindset creates a competitive advantage for organizations.

## Introduction

Think of the following people: the three people in your life whom you most like; the two people who've had the most positive influence on you; your best boss; the person who inspires you to do your best; your three favorite co-workers; the acquaintance you most respect.

As you think about these people, consider why you like them, respond well to them, work hard for them and revere them. Many of the people you are thinking about likely have this in common: You feel seen by them. Something about the way they see and engage with you makes you feel as if you matter. You feel this way when you are with them because to them, you do matter. This characteristic you admire in others is a way of seeing that is called an outward mindset.

People often use the term "mindset" to refer to a core belief about oneself. However, the biggest lever for change is not a change in self-belief but a fundamental change in the way one sees and regards one's connections with and obligations to others. Understanding the difference between a self-focused inward mindset and an others-inclusive outward mindset will help you become more outward in your work, your leadership and your life. It will guide you in building more innovative and collaborative teams and organizations. And it will help you see why you like many of the people you do and what you can do to become more like them.

Developing an outward mindset is a matter of learning to see beyond ourselves. "Leaders fail," says Paul Hubbard, CEO of a healthcare company, "by coming in saying, 'Here's the vision. Now you go execute what I see.' Although leaders should provide a mission or context and point toward what is possible, what humble, good leaders also do is to help people see. When people see, they are able to exercise all their human agency and initiative. When they do that, they own their work. When people are free to execute what they see, rather than simply to enact the instructions of the leader, they can change course in the moment to respond to ever-changing, situation-specific needs. That kind of nimbleness and responsiveness is something you can't manage, force or orchestrate."

Our journey begins with a foundational idea: Mindset drives and shapes all that we do — how we engage with others and how we behave in every moment and situation.

## PART I: SOMETHING NEW

## What Shapes Behavior

Countless books on personal improvement and organizational transformation recount the behaviors and actions of people who have achieved remarkable results with the promise that, by replicating their behaviors, you can achieve similar outcomes. This formulaic approach to improvement takes as its starting point the simple idea that behaviors drive results.

The idea that behaviors drive results seems almost self-evident. But how many of us have tried to replicate a behavioral formula — adopting the same leadership practices or mimicking the same interpersonal approaches of those who have achieved enviable results — only to throw up our hands in frustration? "Well, that didn't work!"

There are two core problems with a purely behavioral approach for improving performance:

- The behaviors people choose to engage in (that they sense are right and helpful given their situation) will depend on how they see their situation and those with whom they interact. So while behaviors drive results, behaviors themselves are informed and shaped by one's mindset.
- In whatever a person does, his or her mindset comes through, and others respond to this combination of behavior and mindset. This means that the effectiveness of an individual's behaviors will depend to some significant degree on that individual's mindset.

Change efforts built upon the incomplete behavioral-model approach, where a person or organization tries to improve performance by focusing only on behavior change, will fail much more often in comparison to efforts that focus on changing both behavior and mindset. Studies conducted by McKinsey & Company corroborate this, showing that organizations that "identify and address pervasive mindsets at the outset are four times more likely to succeed in organizational-change efforts than are companies that overlook this stage."

When you sufficiently improve the mindset — either of an individual or of an organization — you no longer have to specify everything each team member is supposed to do (the way those who operate from a behavioral model often assume). As the mindset changes, so does the behavior, without having to prescribe the change. And where certain behaviors still need to be stipulated, the suggestions won't be systematically resisted. For these reasons, mindset change facilitates sustainable behavior change.

Moreover, as the mindset changes, people begin thinking and acting in ways that hadn't been imagined before. Let's begin to explore the mindset that makes this possible.

## Two Mindsets

Incentive structures, company metrics, career goals and personal egos all conspire to keep people focused on themselves and their own perceived needs and challenges, usually to the detriment of the team and the enterprise. In short, organizations and their people get inwardly focused, and as a result, they get stuck. They consider only those options that would advance their own agendas. This way of operating is called an inward mindset.

With an outward mindset, people are able to consider and behave in ways that further the collective results that they are committed to achieve. These two mindsets — an inward mindset on the one hand and an outward mindset on the other — form two ends of a continuum. Consider, for example, an organization in which every person operates with an inward mindset and where the practices, policies and processes continually invite the same. No organization is completely this way, but consider this extreme case as the left end of the mindset continuum. Then consider an organization composed of people, processes, and practices that are entirely outward. Again, no single organization operates with a completely outward mindset, but consider that possibility as the extreme right end of the continuum.

The objective is to move individuals and organizations further to the right on the mindset continuum. Why? Because accountability, collaboration, innovation, leadership, culture and value to customers all improve as organizations increasingly apply an outward mindset in their strategies, structures, systems, processes and day-to-day work.

### Seeing Truthfully

With an outward mindset, you are alive to and interested in others' needs, objectives and challenges; you see others as people. With an inward mindset, on the other hand, you become self-focused and see others not as people with their own needs, objectives and challenges but as objects to help you with yours. Those that can help you, you see as vehicles. Those that make things more difficult for you, you see as obstacles. Those whose help wouldn't matter become irrelevant.

Don't confuse introspection with an inward mindset. One can introspect in a self-centered way, which would indicate an inward mindset. However, a person also can introspect about one's connections with others, which is the very essence of outwardness. Sometimes it is helpful to look inside to see how one is connected with what is outside.

Seeing people as people rather than as objects enables better thinking because such thinking is done in response to the truth: Others really are people and not objects. This truth, once seen, enables change even where change seems most unlikely. Rok Zorko, vice president of product development for the very successful app-development company, Outfit7, said, "It is an eye-opener to realize that you are not to treat people as objects but to treat them as people. Once you have this knowledge, you can never unthink it."

## PART II: EXPLORING THE OUTWARD MINDSET

# Getting Out of Our Own Way

For all the advantages that an outward mindset seems to offer, why would people ever be inward? It is tempting to blame difficult circumstances or challenging people. However, what keeps people from an outward mindset is themselves. We get in our own way.

You might find yourself in circumstances that make this claim sound naive. Your boss may be difficult to work for. You might be on the brink of financial ruin or feel as if your career has hit a dead end. In response to these or other difficulties, perhaps you have felt compelled toward an inward mindset.

Let's consider how this happens. Let's say that you work with someone named Lori. Suppose that one day you come across a piece of information that will be very helpful to you in your work. Suppose as well that from your understanding of Lori's needs and objectives, you realize that the information would be very helpful to Lori. If you have an outward mindset, knowing that the organization's success depends on your colleague's success as well as your own, you will feel an obligation to help your colleague succeed. Recognizing that Lori would be helped by the information, you will have the desire to share it with her.

But what if you were to choose not to share the information? What if Lori once did something that made a situation harder for you? As you begin to entertain the possibility of not sharing the information with her, do you think that you might remember that time when she didn't help you? What if she has some annoying habits? Maybe you don't know Lori very well. Not knowing her would give you a lot of room to imagine what she must really be like. What picture of Lori would make it easier for you to feel justified for not sharing the information? Lori as hardworking or lazy? Trustworthy or unreliable? Helpful or uncooperative?

With an inward mindset, you see Lori in distorted ways — ways that help you feel justified for deciding not to help her. You will zero in on anything in her or in the situation that will give you this apparent justification. "She doesn't help me," you might say to yourself. "And she's really an annoying person. You can't trust her either; no one who is really trustworthy has such shifty eyes. Besides, if she worked harder, she would've discovered the information herself. I shouldn't reward slothfulness. No, that wouldn't be good for the company. It would really be a mistake if I shared this with her." Your self-talk and how you are now feeling toward Lori will justify the way you are choosing to live.

Are there people in your life, either at work or at home, whose needs, objectives and burdens you resist seeing? How about people that you don't resist — people with whom you are open, curious, interested, aware? As you compare these relationships, what differences do you notice in how you feel and act? Can you spot any blame in what you tell yourself about others or any self-justifying narratives that you've come to believe about yourself?

The most troubling areas of our lives will be those in which we resist what the humanity of others invites us to see. This is a hopeful truth. It means that we can be rid of the distorted ways of seeing that strain our connections with others. We can stop resisting.

### The Lure of Inwardness

Within organizations, every person who is burning time and energy seeking justification is doing so at the expense of the contribution he or she could be making to the overall results of the company. The energy-draining, time-wasting, silo-creating effect of this justification seeking is one of the most debilitating of organizational problems. Entire organizations can fall prey to the lure of inwardness with spectacularly damaging results.

An inward-mindset style can easily be mistaken for an outward mindset. This style omits the needs, objectives and challenges of others. Even though people or organizations operating with this style of inwardness feel as if they are doing things for others and not for themselves, they aren't paying attention to the needs, objectives and challenges of those they are supposedly doing things for. They don't experience themselves as being egocentric. They feel as if they do good things for others all the time and actually experience themselves as being outwardly facing.

What is the cost of an inward mindset? When people focus on themselves rather than on their impact, lots of activity and effort get wasted on the wrong things. The absence of collaboration results in low levels of innovation. And employees disengage due to the boredom inherent with inward-mindset thinking and working.

# The Outward-Mindset Solution

A person conceiving her work with an outward mindset is alive to and interested in the needs, objectives and challenges of each of the persons toward whom she has responsibility — toward her customers, direct

reports, peers and manager. Her objectives and behaviors take these people's needs, objectives and challenges into account. Her focus is outward on something much larger than herself — on her essential contribution to the overall goals of the organization. And thinking of her role in this way requires her to focus on doing her work in a way that helps others to do theirs.

The power of this outward-mindset approach can be seen in the results of an innovative debt-collection agency that has built its entire mission and strategy in terms of the outward mindset. The company is CFS2, headquartered in Tulsa, Oklahoma.

Bill Bartmann, founder and CEO of CFS2, has known his own hard times. Having been hounded by debt collectors himself, he wanted to build a debt-collection company that worked differently — which is to say, outwardly.

Bill and his company focus on treating those who are in debt with dignity and respect. They operate from the premise that their clients owe them money precisely because they don't have enough money to pay them. The typical approach to debt collection — an inward-mindset approach — is to browbeat those who owe money until you squeeze whatever you can out of them. An outward-mindset approach, on the other hand, begins with thinking about these people and what they are up against. Those who take this approach are alive to and interested in the challenges these people are facing, and their mission is to help them with those challenges.

With this approach, Bill Bartmann and his people began by figuring out how they could help their clients make money. Bill asked his entire workforce to begin brainstorming and experimenting to see how they could best help their clients get jobs. At first, they tried giving their clients advice and suggestions about what to do. But this didn't seem to help much. One of Bill's employees offered this observation: "They can't do the heavy lifting themselves — they're so beat down they have no get-up-and-go left."

So the employees of CFS2 began writing résumés for their clients. They began looking for job opportunities for them, helping them fill out applications and scheduling job interviews. They ran mock interviews to prepare them for the real thing. And they even began calling their clients on the mornings of their appointments to get them out of bed early enough to arrive at the job interview on time!

From there they began helping in other ways. Any headache in their clients' lives became an opportunity to help. CFS2 has identified a myriad of organizations that exist to help people in need with these and many other services, and Bill's team brings in these organizations to help meet the needs of their clients. And they do all this for free. In fact, Bill rewards his employees not for how much debt they collect but for how many free services they can provide to their clients!

From an inward-mindset perspective, this all seems crazy. But the results speak for themselves. After just three years in the industry, CFS2's rate of collection was two times that of any firm in the industry.

We see in the CFS2 story how an outward-mindset approach can mobilize an entire company to work on behalf of its customers — not just to provide a product or service but to enthusiastically innovate to meet the customers' needs and help them achieve their own objectives. Inward-mindset people and organizations do things. Outward-mindset people and organizations help others to be able to do things.

Now let's explore a proven methodology to move from an inward mindset to an outward mindset.

## PART III: BECOMING MORE OUTWARD

### The Outward-Mindset Pattern

Those who work with an outward mindset see the needs, objectives and challenges of others; adjust their efforts to be more helpful to others; and measure and hold themselves accountable for the impact of their work on others. Engaging in these three steps is a practical approach to implementing and sustaining an outward-mindset way of working. You can remember the pattern with the simple acronym SAM — see others, adjust efforts, measure impact.

Alan Mulally was hired as president and CEO at Ford in September 2006. Bleeding at the rate of $17 billion per year, Ford put all its remaining chips on Alan Mulally. As Mulally soon discovered, no one at Ford felt responsible for the problems of the company.

Mulally led through a mechanism of weekly meetings, including the Business Plan Review, or BPR. Mulally trained his executive team to come to the BPR prepared with charts that showed performance against the company plan for each area of responsibility. He had them color-code their charts: Anything that was on plan was to be coded green, anything at risk of going off plan was to be coded yellow, and anything off plan was to be coded red.

Mulally also pointed to 10 BPR rules: people first; everyone is included; compelling vision; clear performance goals; one plan; facts and data; propose a plan, "find-a-way"

attitude; respect, listen, help and appreciate each other; emotional resilience … trust the process; have fun … enjoy the journey and each other.

As the executives presented, each and every chart was coded green. Why? Because you couldn't be wrong at Ford and keep your position. "The company was underperforming, sure," the executives would privately admit, "but I'm not."

The next week, just before the new Ford Edge was about to ship out of Oakville, Ontario, Canada, a test driver reported a problem on one of the test vehicles: The tailgate had an actuator problem. Mark Fields, who led Ford's operations in the Americas, had a decision to make.

Telling the truth, exposing challenges in your area of operations, usually resulted in losing your job. Fields felt like a dead man. If he shipped and the vehicles were faulty, he was a goner. But he was sure that the same fate awaited him if he came to the meeting and, in a final blaze of glory, told everyone that the Edge had a problem.

He thought it over and finally decided that since he was dead anyway, he was going to call it like it was. He prepared his chart. In red. Everyone around the table knew what Mark Fields knew. He was as good as gone.

Everyone except one, and that person started clapping. "Mark," Mulally smiled as he clapped, "that is great visibility." Then he turned to the rest of the group and asked the question that was the beginning of their education in the outward mindset: "Who can help Mark with that?" At that invitation, a number of Fields' colleagues jumped in with offers. One said that he had seen that issue on another vehicle and would get that information to Fields immediately. Another offered to quickly get a group of his top-flight engineers to Oakville to help on any redesign that might need to happen. And so on.

When he showed up the following week with his Edge chart still red, but moving to yellow, and Mulally still smiling at him, the others began to realize that Mulally was for real. "You aren't red," Mulally insisted. "The issue you're working on is red." And he wanted them to help each other with the challenges they each faced, something they could do only if they came forward with their challenges. The week after that, the charts around the room had so much red that the meeting looked like a crime scene.

You may know the rest of the story. Working this way together and spreading this helpful, self-accountable approach throughout the company, Ford was able to pull itself out of a deep ditch — to such a degree that it was able to get in front of the financial crisis of 2007–08 as the only American automobile manufacturer that didn't have to take federal moneys to survive. Alan Mulally retired from Ford in the spring of 2014. His replacement at Ford was Mark Fields.

### The Three Elements

Think about the Ford turnaround story in relation to the three elements of the outward-mindset pattern. Regarding the first step — seeing the needs, objectives and challenges of others (and the organization as a whole) — the BPR process itself gave the members of Mulally's team visibility both into their own contribution to the whole and into the needs, objectives, challenges and activities of their colleagues. Because Mulally's mindset was outward in the way he worked with his team and conducted these meetings, that forum offered the Ford team an opportunity to see their own roles in relation to others.

The second step of the outward-mindset pattern is adjusting one's work to become more helpful to others. This step naturally follows the first. Once the team could see the challenges faced around the table, Mulally invited them to step up and help. "Who can help Mark with that?" was more than a question. It was a statement about how Mulally wanted his people to take responsibility not just for their own part in the overall project but also for their impact on their colleagues' ability to successfully fulfill their responsibilities.

Lastly, they gathered together each week to see if the help they were providing was making any difference in their co-workers' ability to get results. This is the third step in the outward-mindset pattern: measuring impact. Mulally's process gave the Ford team at least a once-a-week way of assessing whether the adjustments being made by those around the room were actually helping. Each week they had the opportunity to assess their impact on one another and the company's overall results and make necessary adjustments. The turnaround at Ford depended on the team's engaging in each step of the outward-mindset pattern: See others, adjust efforts and measure impact.

## Don't Wait on Others

While the goal in shifting mindsets is to get everyone turned toward each other, accomplishing this goal is possible only if people are prepared to turn their mindsets toward others with no expectation that others will change their mindsets in return. This capability overcomes the biggest impediment to mindset change: the natural, inward-mindset inclination to wait for others to change before doing anything different oneself. This is the natural

trap in organizations. Executives want employees to change, and employees wait on their leaders. Everyone waits. So nothing happens.

Ironically, the most important move in mindset work is to make the move one is waiting for the other to make. Sometimes people are afraid to make this move because they think that others may take advantage of them if they do. But people misunderstand if they think that working with an outward mindset when others refuse to do the same makes a person blind to reality or soft on bad behavior. It does neither.

In fact, what obscures vision and exposes people to more risk is not an outward mindset, which stays fully alive to and aware of others, but an inward one, which turns its attention away from others while simultaneously provoking resistance. People who work in dangerous, high-risk situations know this most of all — people like the Navy SEALs and SWAT team members. They know that their lives and missions depend on their ability to remain fully aware of the complexities of their situations and to do so in a way that doesn't stir up escalated resistance. The outward mindset doesn't make them soft; it makes them smart.

Remember, the principle to apply is, "As far as I am concerned, the problem is me. I am the place to start. Others' responses will depend mostly on what they see in me. The most important move is for *me* to make the most important move."

## PART IV: MULTIPLYING THE MINDSET CHANGE

# Mobilize Around a Collective Goal

In organizations that have successfully built outward-mindset cultures, one factor is constant: The leaders involved their organizations in pursuing a collective result — that is, a result that at once involved everyone in something much bigger than himself or herself and required that everyone join together with others in order for their efforts to succeed.

Every organization already exists as a collective, but very often, people in organizations mostly identify around their separate, individual roles. They don't have an understanding of how their own roles are essential to the overall collective result of the organization.

Here are some questions you can ask yourself as you utilize the outward-mindset-at-work framework for redefining your role in this way:

- **Toward your manager.** Do I have a clear understanding of my manager's objectives? What can I do to learn about them? What do I need to do to make sure that I am holding myself accountable for my contribution to my manager's results?
- **Toward your customers.** Who are my customers, and what objectives do they have that I could help them with? How will I measure whether they are, in fact, helped by my efforts?
- **Toward your peers.** Which of my peers are affected by my work? Do I know whether I am helping or hindering them in their ability to accomplish their objectives?
- **Toward your direct reports.** Are my direct reports growing in their abilities? Have I worked with them to set a collective result for the entire team, and do they understand how they contribute to that result? Are they holding themselves accountable for that impact in each of the directions of their work? What can I do to help them to do this?

Wherever you are located in your organization, you can begin to rethink your work so that you see yourself in the context of achieving your own essential part of a collective result.

# Allow People to Be Fully Responsible

Without realizing it, too many leaders assume that the role of leadership is to control. They espouse Plato's "division of labor," which, according to social thinker Hannah Arendt, has influenced government and military structures for thousands of years. With the advent of the industrial revolution, she argues, corporate action, like the action of monarchies and armies, proceeded in two phases: planning and execution. Accordingly, in most organizations you find a class-divided lot: the minds and the bodies, the brains and the backs, the knowers and the doers, the manipulators and the manipulated.

Organizations that perpetuate this leader/led distinction tend to be riddled with justification and blame. Those who are tasked with doing can always blame poor performance on uninformed or unrealistic plans, while those who do the planning can always blame failures on poor execution. Leaders will cry for greater accountability, but the way most organizations are set up breeds a constant lack of accountability.

With an outward mindset, leaders position people to be fully responsible. This means that they empower their

people with the responsibility both to execute *and* to plan their work. A distinguishing characteristic of organizations that operate with an outward mindset is the extent to which people in those organizations are allowed and encouraged to engage their whole brains in the planning as well as the doing of their work. Whole brains means all of their faculties, including their wills and their hearts. People operating with an outward mindset exercise, as it were, their whole selves.

## Turn Systems Outward

An important aspect of leading successful mindset change is a willingness to reconsider the objectives, systems, policies and processes of an organization. Systems and processes that are designed to manage objects rather than empower people have widespread negative consequences. Efforts to rethink those systems and processes from an outward-mindset perspective can deliver huge benefits.

Leaders of organizations that operate with an inward mindset may feel confused by what they see in organizations that operate with an outward mindset. It will seem risky to manage those they see and treat as objects with systems and processes that are designed to empower people.

This is one of the reasons why an outward-mindset approach becomes such a competitive advantage. Those who are unwilling to adopt an outward mindset won't be able to successfully replicate outward-mindset systems, processes and approaches, while organizations that turn systems and processes outward become positioned to achieve and sustain higher levels of performance. The outward-mindset reporting practices at Ford positioned the company to be able to get in front of the financial crisis in ways that others couldn't.

Hiring and onboarding practices, sales and marketing processes, budgeting practices, incentive structures, performance evaluation and management systems, and every other organizational system, structure and process can be conceived and deployed in inward-mindset or outward-mindset ways. Organizations that are serious about operating with an outward mindset turn these systems and processes outward to invite and reinforce outward-mindset working.

## The Road Ahead

Sometimes having an outward mindset is rather easy. We may be among people who care about each other, and it may seem utterly natural and easy to respond to them with an outward mindset. In such cases, we feel so cared for and considered by those whose mindsets are outward toward us that we feel no need or desire to be defensive toward them. Almost effortlessly we find ourselves naturally showing consideration in return. An outward mindset in one person invites the same in others.

Unfortunately, the same principle works as well in reverse. When we interact with someone who is operating with an inward mindset, we may feel that he is failing to consider our views or opinions, and we can see that as an invitation to take offense or withdraw. If we do, we will give back to this person exactly what he is giving to us, and we will become embroiled in an inward-mindset struggle. Although an inward mindset in one person does not cause others to respond with an inward mindset, it does invite others to respond in kind. The challenge is how to respond with an outward mindset when those we work or live with invite the opposite.

Consider this central question: What can I do to be more helpful at work? What can I do to be more helpful to those I know and to those I don't? What can I do? And will I see myself and others in ways that will enable me to do what I can do? An indication of an outward mindset is the willingness of a person to honestly ask these questions in each area of his or her life, coupled with an excitement to begin acting on the answers despite challenges.

So what will you do as you consider the people you work with? Whatever you do, you can do it with either an inward mindset or an outward mindset. Which way you do it will determine to a large degree your results.

Start with mindset. Apply the outward-mindset pattern: see others, adjust efforts and measure impact. Don't wait for others to change. Mobilize yourself and your team or organization to achieve a collective goal. Allow people to be fully responsible. Finally, rethink systems and processes to turn them outward.

### MORE SV CONTENT ON BEHAVIOR & PSYCHOLOGY

*Access these and more in your Soundview Online Library:*

**Summary: *Selfish, Scared and Stupid* by Kieran Flanagan, Dan Gregory.** Behavioral research strategists Dan Gregory and Kieran Flanagan examine the basic instincts of fear, self-interest and simplicity and their impact on the success or failure of a company's best ideas. They offer three interconnected principles that can be used to head off disengagement inside and outside of a company and to unlock human potential.

**Webinar: *How to Create Behavior Change That Lasts* by Marshall Goldsmith.** Bestselling author and world-renowned executive coach Marshall Goldsmith examines the environmental and psychological triggers that can derail us at work and in life. Filled with revealing and illuminating stories from his work, Goldsmith offers a personal playbook on how to achieve change in our lives, make it stick, and become the person we want to be.

# #NOW

## The Surprising Truth About the Power of Now

by Dr. Max McKeown

### THE SUMMARY IN BRIEF

Do you ever feel stressed? Of course you do. One way we cope is to lower expectations, but we miss what may make us stronger. Dr. Max McKeown offers valuable insights into an alternative.

You can choose to nurture a Nowist mindset, and by seeking joy in the flow of life, you will discover your natural power to take action and keep moving forward. We live in the present but carry the anxieties of the past and concerns of the future with us at all times. Yet, you can only directly think, do or change anything at the point of now. Realizing this, you can learn to transform your life with every moment. *#NOW* helps you to embrace the fullness of everyday life.

It encourages you to move beyond surviving, or coping, to joyfully and effortlessly live in harmony with the demands of your work-life balance. Instead of passively hiding or becoming overwhelmed, you can actively leap into the best that life has to offer.

Discover the power of your #NOW that enables you to take action, make decisions fast and effectively, and enjoy the moment while creating a successful and happy future.

### IN THIS SUMMARY, YOU WILL LEARN:

- Why impulsiveness can be highly functional and advantageous.
- Why Nowists love uncertainty and don't regret missed opportunities.
- Understand the deep relationship among action, movement and joy in the Nowist mindset.
- Recognize and adopt goals that allow you to think and live as a Nowist.

## Introduction

All we've got is #Now. Life, composed of a billion moments, from our first to our last thoughts. Some voices tell us to slow down, yet our human nature urges us all to move forward. Some people resist this. For most people, most of the time, it is better to lean towards action rather than inaction.

Nowists act on their belief that they will be happier and healthier if they keep moving. That they will achieve more and experience more if they move forward than if they stand still. The virtue of impatience is often of greater practical use than the vice of self-denying, motion-delaying, joy-draining, now-numbing patience.

**#NOW**

The circles on the cover of *#Now* represent time and our perception of time, with the present at the intersection of past and future. The # represents Now. It is here the point at which life is experienced and action can be taken or not taken. It is here that everything you do is done. And it is when everything you will ever make happen first happens.

Your #Now can be happy and connected. Or unhappy, disconnected and overwhelmed. Nowists run when they could walk, jump when they could sit, and dance when they could sit at the edge. They regret inaction, so simply act. In contrast, the Thenist state is where our time is spent comparing ourselves with others, regretting what could have been, complaining about what is and fearing what might never happen. If we're too careful, we can end up with a thousand different action plans that block taking any action and leave us worrying rather than loving life.

Let's discuss the kind of behaviors that effectively harness the power and joy of #Now.

## PART I: NURTURING YOUR NOWNESS

## Your Need for Speed

In the last couple of decades of the 20th century, with the Soviet Union collapsing, the Internet getting started, and hip-hop going worldwide, two curious scientists ran some experiments that produced some very surprising implications for the 21st century. The first of these was Scott J. Dickman, a doctoral student working in the Brain, Cognition and Action Laboratory at the University of Michigan.

One month in 1985, Dickman carried out a series of experiments. In one, each person sat down at a table with a deck of 36 cards in front of them. The cards, which were about the size of a smartphone, were each emblazoned with a large letter made up of smaller letters. On the command 'Ready, set, go!' the participants completed three variations of the task: sorting the cards into piles based on the large letter, the small letters or a mixture of both. The groups were asked to sort the cards as quickly and accurately as possible. Dickman expected the experiment to show that highly impulsive people would find it more difficult to complete the tasks, because that

was the traditional view of both society and psychology. Impulsivity was seen as dysfunctional.

To his great surprise, people with high impulsivity scored as highly on the card-sorting tests as people with low impulsivity. Dickman ran another set of experiments to try and figure out what was really going on. Once again, the high impulsives did just as well as the low impulsives.

The breakthrough came when Dickman asked an insightful question. "Could it be," he said, "that there are two separate traits?" The kind that pushes people to decide quickly in a way that is likely to lead to bad consequences. And the kind that allows people to decide quickly with good results. "It would be an awful waste of talent and potential if people assumed that slow thinking is always better thinking."

### Two Kinds of Behavior

One of the greatest living psychologists, Arie Kruglanski, turned his attention to the difference between two kinds of guiding behavior. Imagine, he asked, two people driving together to the supermarket. One wants to find the perfect parking spot, even if this means delaying the moment when they can start shopping. The other wants to park in the first available place, even at the price of a longer walk from their parking space to the store.

The first person is guided by what Kruglanski called *assessment*. When people think like this, he wondered, maybe they focus on figuring out the perfect choice rather than getting anything done. Their companion is guided by what Kruglanski called *locomotion*. When people think like this, he mused, perhaps they just want to get on with doing, rather than worry about getting the decision absolutely right.

Results of further research showed that high locomotors tended to be committed to action; that they can stay focused on a task and are energetic, conscientious and goal-oriented. By contrast, high assessors had a tendency to worry too much — about doing the wrong thing, any kind of ambiguity, what other people think and how they measure up to other people. Locomotors moved. Assessors worried.

People high on assessment were anxious to prove that they were good at what they did, while locomotors enjoyed becoming better at what they were doing. The future was something positive for people in locomotion mode, it made them happy because it pushed them on to greater efforts in the day. But for people in assessment mode, the future is just one more thing to worry about.

When you're in assessment mode, you assume that coming up with more alternatives is a good thing: because surely thinking more has to be smarter than thinking less? Unfortunately, if you waste time coming up with a range of unnecessary options, then you just end up having even less time to do the job. Your head is full of half-finished options that leave you feeling like you've done some work, but you don't have a sense of what to do next. Instead of a clear path to action, you've got a circular path of inaction. It's painful, slow — and *avoidable.*

## Keep Your #Now Moving

The good news is that we can all become a little more Nowist. Simply remembering a time when you enjoyed making good things happen is enough to get you into a Nowist mindset.

Everything a Nowist sees, everything around them — ideas and objects, people and situations — tends to be understood in terms of how it can help keep them moving forward. They are often better at seeing opportunities for action than other people. They are better at linking sequences of opportunities for action than other people. And they are particularly good at moving from seeing opportunities for action to actually using those opportunities to move forward.

When they see opportunities for action, they are primed by the opportunity to take action. Seeing a pair of running shoes makes them want to start running, and they are much more likely to go with the flow than walk past with passive regret. They are looking for movement and the payoff of change, so are likely to move towards whatever is most likely to make that happen. They are taking advantage of our natural need for momentum.

There are three joys of #Now, which highlight one of the most successful and natural parts of momentum. By seeing joy in the doing of a thing, in the having done the thing and in opportunities for doing more things, you are allowing momentum to drive you forwards to more successes. The mere act of doing creates more opportunities for doing and leads to greater joy. This may sound simple, but without this approach the opposite is just as easy to fall into — the paralysis of inaction caused by over-assessment can mean that the best that can be experienced is the absence of disappointment.

### The Certain Uncertainty of Joy

Nowists are more likely to experience joy because they embrace the uncertainty of existence. Uncertainty suggests potential, and the prospect of proving self-potential against the odds or against criticism, and it is this that can be

alluring and inspiring. Nowists want change, and they want new. They want to try to succeed at new tasks that tell them something new about themselves, and keep alive that feeling of forward motion and self-enlightenment.

Think of billionaire entrepreneur Elon Musk. As a 12-year-old he sold computer software he had written for $500 to a magazine; as a 22-year-old he sold his stake in his first startup for $22 million; and as a 30-year-old he sold his share in PayPal for $165 million. Musk then immediately invested it all in a seemingly insane three-streamed plan to make solar power the dominant source of energy, convert the whole world to battery-driven cars and colonize the moon. The point is less that Musk has succeeded in the past and more that he was motivated each time to gamble his winnings on new ventures where final payback was uncertain. For Musk, it was not a gamble but an embrace of the uncertain.

### Got To Be Starting Something

Like sprinters who anticipate the start of a race, a key element behind a Nowist's ability to enjoy action is their ability to get started. And get started now. In a Nowist mindset you are looking for whatever gets you moving: reasons to move; reasons to start; reasons to change; reasons to keep going; ways of keeping on, keeping on.

To make it easier to start, Nowists are better able to make the future feel like now. And because it is easier to be motivated to start when the deadline is closer, they use Nowist mind tricks to make the task deadline seem like part of the present.

The desire to start immediately, despite the possibility of inefficiency, is a tendency that's been labeled precrastination. You can see this pattern in the approach of the world's very best rock climbers. They look ahead while others are looking down. They are seeing the route ahead, not just as individual holds or the top and bottom but, instead, as combinations of holds and problems. They are looking ahead for the crux of the particular climb — so that they can be preparing while ascending.

A team of psychologists found that the winners of international speed-climbing competitions climb faster on the simple parts of the climb and start moving more slowly just before reaching the crux. They look ahead to save strength for the leap. And that's smart because there is often a leap required, a part of the challenge that cannot be overcome unless you move fast and fluidly.

### The Regret Minimization Strategy

Jeff Bezos famously stated that he started Amazon.com as part of his regret minimization strategy. He said that he thought about being 80 years old and looking back on his life. He concluded that he would never regret having created an Internet startup even if it failed but that he would regret having not tried to make his idea work.

The action-oriented Nowist is also the regret-minimizing Nowist. It is why they seek to avoid the regret of inaction, looking back and wondering what might have happened if they had acted. It is also why they find it easier to sidestep letting the one that got away stopping them from enjoying the next opportunity. This second kind of response can really slow people down because there are so many opportunities that appear to have been missed. And for people in a Thenist mindset, the pain of missing out once tends to drag focus away from all the opportunities that are available, so you lose out more than once.

Several different experiments confirm that people generally devalue new opportunities because they compare them to the missed opportunity. It happened whether people missed out on a special offer at a health gym or a bargain price for a luxury guided tour of a foreign city. They couldn't see past what had been lost.

## Because Effortless Is Not Lazy

Nowists prefer effortless decisions. There is nothing lazy in their preference for effortless decisions, nor are they demonstrating childish or immature reasoning. Their effortless decisions rely on what some view as more advanced cognitive systems — neural networks that develop throughout and beyond childhood.

There are a few principles that guide a preference for effortless thinking. The first is understanding that the pains taken are not always worth the effort: Near enough can be good enough. If you know that you need about two slices of pizza per person and that each pizza can provide eight slices, about five pizzas is a decent approximation for a party of 20 people. Going with five pizzas because you had five pizzas last time for pretty much the same crew is even faster.

Imagine the pain of calculating anything much more accurately — you could have a supercomputer with the best mathematical modelers in the world and still struggle to find the perfect quantity of pizzas to order. How many people are likely to drop out? What will they have eaten before they arrive? Who will be dieting? Even if you could somehow calculate the perfect number of pizzas to order, that figure could change at any moment — it is vulnerable to fluctuating with every bite one of your guests takes.

### Hell Is Back-Seat Drivers

Sartre says that "hell is other people," or, more accurately, "hell is the others." By this he is referring to the pain of being judged by the distorted, negative views of others. This includes what we think the "others" think, but also the negative, distorted views of ourselves by our own others — our past, future and present selves. The back-seat driver is a whole series of self-related, time-related thoughts that can make now hellish.

This kind of backseat driving can overwhelm our better judgment so that we are busy arguing with our various selves rather than calmly moving forward. In a recent study this was also shown to be the case with novice drivers, who made decisions too slowly to keep up with the road conditions and then lurched into action, leading to more accidents and deaths. Instead it was the experienced drivers who made faster decisions — calmly and quickly anticipating and reacting; keeping in time with the flow of the surrounding traffic. Just as experienced Nowists keep up with the speed and flow of life.

### Trusting Your Inner Nowist

Nowists tend to make split-second decisions with good outcomes, in part because of their willingness to trust their overall sense of what needs to be done in a situation. They delegate authority to their preconscious, which is able to focus attention on the level of detail needed to make a decision — and find an action that fits the situation.

To do this they clear their minds of the irrelevant — anything that gets in the way of clearly seeing what needs to be done next, and then get on with it. Negative emotions related to mistakes, whether they occurred long ago or in the past few seconds — and even if they played a part in causing the situation you now face — are better left behind or downplayed. So if you get action-oriented Nowists to try almost anything, they will handle mistakes better than other people, especially when everyone involved really wants to succeed.

But there is something else that Nowists believe about making mistakes. Not only do they instinctively move past distracting or passive negativity, they also take with them useful lessons from the experience of making a mistake. And, unlike many people, Nowists know that taking action is often the best way of helping you to decide both what you can do next and what you want to do next. This is counterintuitive to some people, who want to decide what they want to try without trying anything.

Nowists take advantage of action as a kind of mental shortcut. First, by making a choice — to do something — they learn what actions lead to what outcomes, and gain practical skills in the art of making something happen: It's an education in cause and effect. And they develop the habit of moving from choice to decision, and come to understand how it feels — both the good and the bad.

Second, Nowists learn more about their own preferences in terms both of the action and the outcome. You can link the action with a consequence and the outcome to a preference. You go to a party and have a good time, so you remember that going to a party is something you enjoy. Or you taste squid and have an allergic reaction, so you remember that squid is something that could kill you. The result is a valuable store of patterns for later decisions.

## PART II: THE THREE STREAMS OF #NOW

## There's Only One Way to Find Out

Just as every atom contains massive energy, so each moment of #Now contains power. First, your personal power, your energy and self-belief to keep moving. Your ability to slip smoothly past the obstacles and things slowing you down, by using the flux of life to propel you perpetually forward. Second, your power to influence others to get more done. Your ability to attract help and supporters, to attract friends, partners, backers, a fan club; to get more done than you could ever do alone.

And third, the fundamental power of moving, the power of (automatic) momentum to make things happen. The cumulative, multiplicative, holistic power of #Now, as you keep rolling forward in powerful spirals of joyful action and growth.

An initial step is to realize and recognize the powerful difference between goals and anti-goals. Goals are the things you want. Things that are desirable and worth seeking out — they may be based on a wish or a dream, but they are best when they are actively motivational. Anti-goals are the things you do not want. They are undesirable, to be avoided — ought-nots, fears, nightmares, unattractive or, worse, demotivational in a way that drains you of energy.

One kind of anti-goal avoidance is said to involve self-control. There's a famous experiment where people used up limited self-control energy to eat what they presumably viewed as distinctly non-yummy raw radishes. After using up their energy, they found it harder to successfully resist chocolate — the anti-goal on offer.

But just focusing on resisting the chocolate is a waste of energy. All the time you're looking hungrily over at the

chocolate, or any other desirable anti-goal, the best you can hope for is a neutral result. You have not eaten, partaken, given in, but you are now behind because energy has been used for no specific goal benefit. Not eating chocolate does not equal fitness or health. Not doing something cannot bring the joy of doing something. To keep resisting is exhausting, and the best-case scenario is un-living.

It is much more rewarding to actively seek out the goal — the action — that will make it easy to avoid the anti-goal. So, for instance, exercise makes it easier to resist high-fat food. First, if you go for a run, then it's unlikely that there will be a refrigerator-microwave combo in sight or in mind. And second, the running often diminishes your interest in the anti-goal. You're less interested in the dopamine released by eating when you're getting high on the endorphins produced by exercise instead.

### Getting Stronger, Extending Your #Now

Nowists know that to feel strong at any particular moment is easier if you get stronger before each successive moment. This getting stronger can be about your personal power, your ability to get things done.

But it can also be the kind of know-how-to-get-help-and-supporters that expands your strength to include other people's energy and knowledge. Even behind what seem the most individual pursuits, those who enjoy the most success, and enjoy their success the most, are often those who attract and benefit from a network of fans and supporters.

It's easier to smoothly roll forward with the space and power that can come from supporters — those who give you the psychological room to see clearly; experts — those with knowledge that you lack; and veterans — those who have already experienced what you are going through, or can help you anticipate what may happen next. In this way, you can adjust your movement without either crashing or losing momentum.

### Get Moving, Start Enjoying

If you are stuck or overwhelmed, the smart thing is to get unstuck and start rolling forward. And by far the easiest, most powerful way to do this is to prime yourself to start rolling forward when stuck.

When people are asked to write a letter full of positive memories and emotions to a loved one and then are asked how much they value the goal of maintaining that relationship, they say it is hugely important and worth real, long-term investment. But something surprising happens when people are asked to spend the same amount of effort writing a letter full of negative memories and emotions to a loved one — they say that the goal of maintaining the relationship is less important to them.

So what is happening? Somehow the mood energy from the activity changes the way they see their goal. If the work towards a goal is experienced as enjoyable, your appetite and energy for moving forward is increased rather than decreased.

Moving will make you feel more powerful, which in turn will encourage you to take more action — which if successful will make you feel even more powerful. This first action–power spiral can extend in a number of ways. One of these is that if you are seen to move powerfully and purposefully, you are more likely to gain influence. This influence may be thought of as a form of gravity and is also likely to move the actions of others. You may acquire resources, from your own work, and attract the support of others who can help you to keep moving further and faster.

## Finding Joy in Your Now

Once you master the basic leap into action, you can apply it to new situations and goals. Like anything else it's a progression, with one technique or fundamental skill opening up new possibilities. The difference for people with a Nowist's mindset is that they actively seek out new moves and new combinations of those moves. They don't waste their lives wishing that they had, or regretting that they hadn't, or fearing that they might fail or be criticized. Falling is moving, and moving is more interesting than experiencing nothing new.

In the 1940s, many different people, often surfers looking for a thrill when the surf wasn't up, started attaching rollerskates to boards. They called their new activity sidewalk surfing; the world would call it skateboarding. This was all pretty one-dimensional: standing on a skateboard, using one foot to propel yourself forward and avoiding obstacles. Opposition came from naysayers who worried about what might go wrong and how much fun the kids seemed to be having, but the skateboarders kept moving and eventually developed two-dimensional tricks.

Frank Nasworthy was just a student in California who noticed the skateboarders rolling past, and happened to have seen polyurethane wheels in a factory owned by a family friend. He quickly fixed the wheels onto a standard frame and gave the upgrade to some boarders who found that they could jump in new, previously impossible, ways. The new wheels meant that jumping didn't make the

board slide out from under you. Frank sold 300,000 in a year, and boarders shifted tricks into three dimensions.

There were the Z-Boys, a legendary team of skateboarders who were among the first to start skateboarding in swimming pools, empty because of a drought. Skating the vertical walls as if they were waves, jumping high above the edge of the pool, their "vert" style caught on, winning competitions and fans worldwide.

One can learn much about Nowists by studying the perpetual need to move that led to sidewalk surfing, the joy in spontaneous adventure that led to the dramatic vertical jumps of the Z-Boys, the everyday backyard experimentation that led to the "Ollie" and the millions who have followed all the original pioneers.

They did it for fun. And they did it for freedom. The exhilarating, empowering energy that confirms that you have the power to take the risk and just go for it, which is part of the reason that Nowists get stronger and feel right; rather than getting stuck wanting to be right or look right, they want that inner joy.

In a Nowist mindset it seems better to enjoy the moment while doing something that you value than to do something just to impress other people. And this leads to some curious, surprising moments of clarity and enlightenment: If work can be enjoyed, then it doesn't need to be avoided. And if enjoyment is included as part of your valued goals, then joy is not a distraction.

### Expecting to Make Good Things Happen

It is good to expect good things to happen. This kind of classic optimism has been shown to open people up to more positive interpretations of events and make them more likely to hope for positive experiences in the future.

Athletes who expect good things to happen are more likely to experience enjoyment in movement for its own sake. They are more likely to enjoy being carried away in the motion and speed of their sport, because they are not interrupting their enjoyment with negative thoughts.

And, again, this is a good thing, yet the difference is that an athlete with a Nowist mindset enjoys the movement and expects to make more good things happen. They are looking for ways to fill the future with more of the change and movement that turns them on, and they also tend to turn the pursuit of what they want into part of the fun challenge. They view what happens as something they can influence, and even more crucially for the Nowist this positive sense of influence means that they make changes in the only place and time that change can happen, the present.

So, instead of getting stuck regretting the past, fearing the future or being paralyzed by trying to find the perfect plan, successful happy people actively change the future by taking action today. They don't spend time figuring out the one most important thing. Instead, they instinctively do the next positive thing. They keep moving. They look while leaping and leap while looking. They don't get hung up on getting everything right, but on making a start and making things happen.

## Three Streams of #Now

Let's look at how Nowists use, live with and think about time. People propelled by their joy in something are able to see the future clearly enough to connect their actions in the present to the future. They build streams of action that connect them to their passion.

The ways our lives develop, especially in our modern world, mean that it is not possible to think about doing just one thing. Nowists go further; they embrace the fact that there are always so many things to do and enjoy. It is the ability to move between them that can increase our success, both in how we work and our happiness.

A powerful start is to work with three streams of #Now — with the kind of things that matter most to you in each stream. It doesn't have to be three, but the number has been deliberately chosen to be adapted to our natural limits of working memory.

There are three streams and up to three active goals or actions in each stream. They will be flexible, because you won't always remember them and because priorities and circumstances change, but they provide a guide to keeping what you value in mind as you move forward. You might choose, for example, learning as a stream, or friends and fun.

The power in such a Nowist approach to time and tasks is not that you always remember everything perfectly. Instead, the power comes from the improved outcomes that follow from viewing life as multiple streams of action. You will still need to plan out actions to achieve goals, but you'll be more likely to plan for goals that contribute to what really matters to you.

Seeing life as being about creatively connecting streams of action makes it easier to absorb the energy of unwelcome shocks or less dramatic setbacks. So that when you can't succeed the way you'd originally intended, you are able to slip into one of your other streams of action, or replace one method or means to an end with something quite different. And because you were already looking for better alternatives, you can find them.

Consider Kurt Yaeger. The Californian was already a professional BMX rider, a part-time actor and was studying as a masters student when his accident happened. He was forced to swerve to avoid a car and crashed his motorbike into a metal pole. The collision broke his back and pelvis and damaged his left leg so badly that surgeons had to amputate it below the knee.

In the aftermath he considered killing himself. But he remembers saying to himself that "it was time to stand up and get better." So he stood up and got better. It took 30 surgeries over four months to get out of the hospital. It took another year to rebuild his motorbike and perform his first wheelie. Then another couple of months to get back on a BMX.

And, in a very Nowist way, he was able to jump between multiple action streams to keep moving forward. He tried sticking his prosthetic foot onto his bike's pedal with tape, velcro and eventually succeeded with clipless magnetic pedals that he invented in collaboration with his wider network. He became the world's top-ranked Adaptive BMXer. Online videos of him performing stunts one-footed attracted journalists. Their articles led to a music video for a UK band, Rudimental; hit movies followed, as did parts in big TV series. And he became an entrepreneur, turning his one-off magnetic pedal solution into a business.

Before his leg was amputated, he moved between multiple streams of action. After his loss, his past experiences helped. He knew how to get up from a painful fall, and he knew how to grab hold of opportunities.

## PART III: THE #NOWIST TOOLKIT

## Nowist Teams and Culture

The truth is that Nowists will tend to judge organizations not on structure but on whether that organization gives them the opportunity to keep taking effortless action. They'll prefer a fairly traditional hierarchy when it allows them to move quickly, or a no-rules, no-leaders environment when that works best for speed.

So, if you are an employer and want to attract Nowists and benefit from their ability to look while leaping, the best way is to ask yourself how well your company facilitates movement and pushing limits.

A firm like Valve Corporation, the creator of ground-breaking video games, believes in a different way of working. In principle, anyone can work on any project they want. And new projects can be created by anyone who can get other people to work on their project. They even have desks with wheels so that they can roll towards other people to form new teams. Spontaneous order in action — and all without the waste of fixed management structures and rules.

## Breathing Deeply, Moving Forward

Do you ever feel stressed? Of course you do. By seeking joy in the flow of life, you will discover your natural power to take action and keep moving forward. It's good to reach out for stress first-aid when you're feeling overwhelmed. But there are alternatives to relatively passive ways of dealing with the pressures of life and work.

Martin Gibala and his colleagues found that even one minute of intense exercise can be as effective as much longer exercise sessions. Their surprising research showed people getting pretty much the same benefit from 60-second bursts of intense movement as they did from longer, less intense exercise.

Another way of moving more is to just stand up rather than sitting down. There are standing-up desks that allow all the same access to paper and equipment, and these have been made available by some employers. Yoga also reduces stress and is linked with decreased blood pressure and heart rate.

Your life is what still happens when you're busy trying to become unbusy. Life is the thing that happens all at once while you try to find that one thing to focus upon. Life is priorities, plural — not priority, singular. Nowists tend to dive into streams of the unplanned and planned. Rather than feeling time-poor, they feel experience-rich. The surprise, the shock, the extent, the never-again and the ordinary or extraordinary.

# Primary Greatness

## The 12 Levers of Success

by Stephen R. Covey

### THE SUMMARY IN BRIEF

From Stephen R. Covey — the late, legendary author of *The 7 Habits of Highly Effective People* — a new set of rules for achieving a happy and fulfilling life of primary greatness.

Many of us are hurting. We have chronic problems, dissatisfactions and disappointments. The idea of living a "great life" seems a distant dream. Too often, however, we have the wrong idea of what a great life is.

Stephen R. Covey believed there were only two ways to live: a life of primary greatness or a life of secondary greatness. Through his classic books and seminars, he taught that the intrinsic rewards of primary greatness — integrity, responsibility and meaningful contribution — far outweigh the superficial rewards of secondary greatness — money, popularity and the self-absorbed, pleasure-ridden life that some people consider "success."

In *Primary Greatness,* a posthumous work, Covey lays out the 12 levers of success that will lead to a life of primary greatness: Integrity, Contribution, Priority, Sacrifice, Service, Responsibility, Loyalty, Reciprocity, Diversity, Learning, Teaching and Renewal. For the first time, Covey defines each of these 12 qualities and how they provide the leverage to make your daily life truly "great."

### IN THIS SUMMARY, YOU WILL LEARN:

- The key differences between primary and secondary greatness.
- Why principles ultimately govern values.
- The four human endowments that help us align ourselves to principles.
- The most important features of the 12 key principles, or levers.

# THE COMPLETE SUMMARY: **PRIMARY GREATNESS**

**by Stephen R. Covey**

**The author:** Stephen R. Covey (1932-2012) was an internationally respected leadership authority, family expert, teacher, organizational consultant and author who dedicated his life to teaching principle-centered living and leadership to build both families and organizations. Dr. Covey was the author of several acclaimed books, including the international best-seller *The 7 Habits of Highly Effective People,* which was named the #1 Most Influential Business Book of the 20th century and one of the top-10 most influential management books ever.

## Introduction

Primary greatness is the kind of success that comes from contribution. By contrast, the trappings of success — position, popularity, public image — are secondary greatness. Primary greatness is on the inside. It's about character. Secondary greatness is on the outside.

A successful life is about primary greatness — a life of duty, honor, integrity, perseverance, self-sacrifice and service, regardless of material rewards or circumstances. These are natural, universal, unbreakable principles. They are the same for everyone everywhere and for all time.

If you want to go directly north, you align your nose to the needle on the compass. Any deviation, and you're no longer headed toward true north; that's just reality. The principles that govern reality are the same principles that govern success.

The principles that govern reality are inarguable. They are beyond our control. Thus, we're more likely to succeed in life if we align ourselves to those principles and stop trying to ignore them. That means examining our character and motives. If we want success in life, we might have to realign our character and motives to different principles. We might have to work on a character flaw, such as procrastination or envy or selfishness. In any case, we have to confront who we really are inside and align our lives to principles that govern success.

Principles are like levers. It might be impossible to move a boulder by yourself; but if you use a lever, it can be relatively easy. And the longer and stronger the lever, the easier it gets. Principles like integrity, service and priority have great leverage. Only by consistently applying these levers can you hope to dislodge the biggest obstacles to your success — lapses of character such as selfishness, victimism and "fatal distractions" from true priorities.

Dr. Covey describes how to make that important journey from an obsession with secondary greatness to a focus on primary greatness. He then describes 12 of the highest-leverage principles successful people live by, giving guidance as to how to internalize those principles: Integrity, Contribution, Priority, Personal Sacrifice, Service, Responsibility, Loyalty, Reciprocity, Diversity, Continuous Learning, Renewal and Teaching to Learn.

Dr. Covey's 12 levers are based on his own deep research and long experience working with thousands of people around the globe. These 12 levers are not the sum total of the principles of success — there are many others — but they are the indispensable principles. The 12 levers take us from seeming successful to being successful, from deep-down insecurity to the inner confidence people feel when they anchor their lives in natural principles. Primary greatness is the natural consequence of pushing on these levers.

## The Secret Life

We all live three lives: public, private and secret. The secret life is where your heart is, where your real motives are — the ultimate desires of your life. It is also the source of primary greatness. If you have the courage to explore your secret life, you can honestly question your deepest motivations. Are you prepared to rescript those motivations — to realign your life to the core principles of true success? The secret life is the key to primary greatness.

In our public life, we are seen and heard by colleagues, associates and others within our circle. In our private life,

we interact more intimately with spouses, family members and close friends. The secret life is part of the other two. The secret life is the mainspring that motivates the other two lives.

The unique endowment of self-awareness — the key to the secret life — is where you can stand apart from yourself and observe yourself. Courage is required to explore your secret life because you must first withdraw from the social mirror — the reflection of ourselves that society feeds back to us but may have little to do with our inner selves. We get used to the view of ourselves in the social mirror.

The most critical junctures in life take place when you visit your secret life and ask, "What do I think? What do I believe is right? What should my motives be?" One of the exciting fruits of the secret life is the ability to consciously choose your own motives. Until you choose your own motives, you really can't choose to live your own life. Everything flows out of motives and motivation — they are the root of our deepest desires. The question is, which motives will we put first in our lives?

People who regularly explore their secret life and examine their motives are better able to see into the heart of others, practice empathy, empower them and affirm their worth and identity.

### Self-Affirmation

A key to having a healthy secret life is self-affirmation. Among the most important bits of communication are messages of affirmation you give yourself and others. A good self-affirmation has five characteristics:

- It's personal, meaning it is written in the first person.
- It's positive rather than negative, meaning that it affirms what is good and right.
- It's present tense, meaning you are doing it now or have the potential for doing it.
- It's visual, meaning you can see it clearly in your mind's eye.
- It's emotional, meaning you have strong feelings attached to it.

## Character: The Source of Primary Greatness

Character, what you are, is ultimately more important than competence, what you can do. Primary greatness is, at its base, a matter of character. Both are important, but character is foundational. All else builds on this cornerstone. Even the very best structure, system, style and skills can't compensate completely for deficiencies in character.

Emotional maturity is foundational to all decisions and all relationships. Emotional maturity is the ability to express your feelings and convictions with courage, balanced with consideration for the feelings and convictions of others. Balancing courage with consideration is a good way to achieve improved results and better relationships. Without this balance, you tend to get one at the expense of the other.

Even though people may be technically well educated, if they don't grow in emotional maturity, eventually their skills may be their undoing. Skills don't trump character, yet the training and education of most people is designed to build competence, not character.

How can we meet the equally important need for ongoing character development? You could do this through a 360-degree stakeholder information system, which gives people solid, scientific, systematic feedback on their performance in both dimensions.

A 360-degree survey gets information about a person from all stakeholders: employees, customers, supervisors and co-workers. Then the person will say, "Gosh, I have low marks for team building and interdependency, even though I'm producing the numbers. What can I do?" Now they recognize where they need to work on character development. They can then organize resources to draw on: their families, their friends, professional association, church and support groups.

How can we reprogram ourselves? Well, often we must first be humbled, either by circumstances, such as not getting desired results and losing our assets, or by crises, not getting the meaning or fulfillment we desire, or failing to maintain good relationships with our colleagues, spouses and kids. We are then more willing to accept the fact that universal principles like respect, empathy, honesty and trust ultimately govern. We are then more willing to accept responsibility for who and what we are. We are then more willing to develop and live by a solid sense of mission, which does much to produce integrity. Ultimately, what we are (character) is the most critical component of success.

With the strong foundation of character in place, we can add all the colorful elements of personality. If you don't have the character roots, you might pretend to play the part, but when push comes to shove, you'll be uprooted. Such uprooting is among our most difficult learning experiences but also among the most powerful and useful ones as we recommit to live lives of integrity.

## How to Align Yourself to Principles

The key to primary greatness is to be centered on principles. Building character and quality of life is a function of aligning our beliefs and behaviors with universal principles. These principles are impersonal, external, factual, objective and self-evident. They operate regardless of our awareness of them or our obedience or disobedience to them.

If you and your people have spent time working on your value system, usually those values will reflect true principles. However, sometimes distortions are introduced from the wider culture (from the media, for example) or a subculture (like an obsession with a musical group) or from a magnetic force (like a powerful emotional event or magnetic personality, such as a powerful boss who has a big ego and a deep agenda in a certain direction), and those distortions can totally throw off your sense of direction and your moral bearings. When those distortions happen, you get uprooted. You become a double-minded person, a person who is unstable, and you experience a deep inner sense of vertigo.

Another question relates to the age-old argument of relative versus absolute truth. People ask, "How can you suggest there is such a thing as true north, when it's all relative anyway?" Here's a three-word test of truth:

1. **Universal**. If there are no universal principles, there is no true north, nothing you can depend on. You can forget about the character ethic; just create an image that sells well in the social and economic marketplace. You end up with business and political systems that operate independent of natural laws like integrity and honesty.
2. **Timeless.** True north is a symbol for bedrock principles — principles that don't change over time. To the degree you move away from the laws of nature and toward what is timely and trendy, your judgment is adversely affected.
3. **Self-evident**. A true principle is self-evident, as in the Declaration of Independence: "We hold these truths to be self-evident." That is, you may try to argue against them, but it's futile. If you try to argue against a principle and find it to be a foolish argument, you know you have a natural law.

If your current lifestyle is not in alignment with natural principles, then you may want to trade a values-based map for a principle-centered compass. When you recognize that principles ultimately govern, you might willingly subordinate your values to them and align your roles, goals, plans and behaviors with them.

How do we align our lives with true-north realities that govern quality of life?

### Four Human Endowments

As human beings, we have four unique endowments — self-awareness, conscience, independent will and creative imagination — that not only separate us from the animal world but also help us distinguish between reality and illusion and align our lives with the laws that govern quality of life.

**Self-awareness** enables us to examine our paradigms — the lenses through which we see the world — to think about our thoughts, to become aware of our social scripting and to enlarge the separation between stimulus and response. Self-aware, we can take responsibility for reprogramming or rescripting ourselves out of secondary greatness and toward primary greatness.

**Conscience** puts us in touch with something within us even deeper than our thoughts and something outside of us more reliable than our values. Conscience is universal. No matter what people's religions, cultures or backgrounds are, their mission statements all deal with the same basic human needs: to live (physical and financial well-being), to love (social well-being), to learn (mental well-being) and to leave a legacy (spiritual well-being).

**Independent** will is our capacity to act — the power to transcend our paradigms, to swim upstream, to rewrite our scripts, to act based on principles rather than reacting based on emotions, moods or circumstances.

**Creative imagination** empowers us to create beyond our present reality. It enables us to write Personal Mission Statements, set goals, plan meetings or visualize ourselves living with fidelity to principles even in the most challenging circumstances. We can imagine any scenario we want for the future. Memory is limited. It's finite; it deals with the past. Imagination is infinite; it deals with the present and the future, with potentiality, with vision and mission and goals, with anything that is not now but can be.

Here are four ways to nurture your unique endowments:

- Nurture self-awareness by keeping a personal journal.
- Educate your conscience by learning, listening and responding.
- Nurture independent will by making and keeping promises.
- Develop creative imagination through visualization.

## The 12 Levers of Success

### The Lever of Integrity

Total integrity is the first lever of primary greatness. People who have lost integrity live and work in a world of seeming to be something they are not. Living a false life is a heavy burden on your conscience and on the people who rely on you. Total integrity lifts that burden from your life. Those who have primary greatness are people for whom total integrity is deeply inscribed in their character.

How do you arrive at integrity? Integrity is the child of two primary character traits: humility and courage. Humility means realizing that, over time, principles ultimately govern. A humble person doesn't say, "I am in control," or "I am in charge of my destiny." That theme, so common in much of the success literature in recent decades, is a product of the social value system. And our social values may not be based on rock-solid principles but on the shifting sands of ego or opinion. Humility is, in a sense, the mother of all virtues, because all of them come through that spirit of submission to pragmatic reality.

The father of all virtues is courage, because when put to the test, courage defines our commitment to those virtues. Eventually, every value is tested. Whether we will align our values, our lives and our habits with those principles is the big question. In other words, will we really live by our principles? We may be humble, but are we courageous? Will we, in fact, swim upstream against very powerful social values or against our own individual tendencies?

When you have both humility and courage, you naturally develop integrity. Integrity means that your life is integrated around principles and that your security comes from within, not from without.

### The Lever of Contribution

Primary greatness is achieved by those who have a mission, a purpose to serve that is higher than themselves, a lasting contribution to make. Many of us are tempted to take the easy way through life, never asking much of ourselves, and never ask the liberating questions, "What does the world need from me? How can I contribute to the lives of others?"

As we move toward the global economy and the new rules that govern the workplace, we'll see more competition from high-quality and low-cost producers, and this competition will exceed anything we have known in the past, particularly as we see the emergence of Asian, South American, Indian, Chinese and Middle Eastern economies. People will need to reconsider their own purposes and redesign themselves to accommodate the new reality. There are three things in particular:

- They need a sense of what true north is to them. They must define a personal mission based on a vision that contributes to the organization and a value system that is principle-centered, that will not change.
- They must be willing to bear risk. They must be willing to take three kinds of risk: in the way they speak, in the way they listen and in the way they act.
- They must make and keep a commitment to lifelong learning.

In addition, to achieve the line of sight between what the world needs and what you offer, you need to answer three questions: What does the world need? What am I good at? How can I best do what I like to do and meet real needs where I now work? In effect, you must become an artistic leader and follower.

### The Lever of Priority

Shifting from secondary to primary greatness means that things we too often put first in our lives should actually be last. Some things are just plain more important than others; in fact, some things are so important — your life, your health, your family — that others are trivial by comparison. If your days are filled with "fatal distractions" such as trivial work tasks, gaming and endless entertainment, you need to press on the lever of true priorities.

What are the first things in your life? One good way to answer that question is by asking others, "What is unique about me? What are my unique gifts? What is it I can do that no one else can do?" Your unique talents and capabilities determine the important work you have to do in life. The tragedy is that our unique contribution is often never made because the important first things in our lives are choked out by other urgent things. Thus, some important works are never started or finished.

The path to personal effectiveness is a balancing process. Think through this process very carefully. "What are your responsibilities in life? Who are the people you care about?" The answers become the basis for thinking through your roles. Your goals are then set by asking, "What is the important future state for each relationship or responsibility?"

For many people, the dominant metaphor of life is still the clock. We value the clock for its speed and efficiency. The clock has its place and efficiency has its place, but only after you've achieved effectiveness. The symbol of effectiveness is the compass, because it provides direction — purpose, vision, perspective and balance.

To move from a clock mindset to a compass mindset, you focus on priorities instead of schedules. The clock can tell you when a meeting is going to be held, but it won't tell you if the meeting is worth going to. Follow this time-management credo: "I will not be governed by the efficiency of the clock; I will be governed by the compass of my conscience."

## The Lever of Sacrifice

Primary greatness depends on the principle that we are better together than alone, that no one person can do it all and that no one ever made a worthwhile contribution all alone. To sacrifice means to revere. You can't bond with an entity — a family, a team, a company — you can only bond with people. That bonding occurs when a sacrifice reveres what otherwise might be disregarded. As we treat one another with more love, kindness, courtesy, humility, patience and forgiveness, we encourage the same in return.

The same principle applies to any relationship, even in business. Partnering is a key to primary greatness. Unless we are willing to work together, to sacrifice our pride of ownership of our ideas or our image, we will not meet the ever-growing demands of the marketplace. The old levels of service will not meet future demands. It's going to take a new level of empowerment, which will come through partnering.

- We need to partner up and down the channels with suppliers, distributors and customers; we need strong partnerships with all stakeholders.
- We need to partner with firms across functions. This is rarely done, because of powerful misaligned structures and systems that foster internal competition and comparison.
- We need to partner across lines of business. We gain synergy when we communicate across lines of business, not just across functions.

## The Lever of Service

The principle of service is highly personal — it's a giving of the self. The personal touch matters with 90 percent of people, and it empowers the rest. Selfishness is the source of our heaviest burdens in life, while serving others — lightening the burdens of others — is the very essence of primary greatness. Secondary greatness has nothing to do with service.

Why is this principle so important? Why does it open hearts and minds and doors? It's because the deepest hunger of the human soul is to be recognized, valued, appreciated and understood. When you acknowledge the presence of others and adapt your presentation in an effort to reach them, in effect you say to them, "You matter. You're a person of worth. You have intrinsic merit, and I'm not comparing you with anyone. You are precious. And if you allow me into your mind to leave a message, I know that I'm on sacred ground."

How do you get this concern for the individual customer? Three ways: hire it, train it or cultivate it in the culture. You might hire it and train it, but the most powerful way to cultivate the service ethic is to develop strong social norms in the culture itself. When people begin to see that this is how we treat each other, you will then have a sustainable competitive advantage. The cultivation of the spirit of servant leadership will teach everyone to be kind, respectful and caring, even though some people aren't naturally that way.

## The Lever of Responsibility

Taking responsibility is essential to primary greatness. It's easy to take responsibility for the good things in our lives, but the real test comes when things aren't going well. Those who practice primary greatness know that their quality of life depends on their own choices, not on the choices of others or even their circumstances.

People often are offended — or they offend others — and then neither party has the humility to take full responsibility for their part. Instead, they rationalize and justify themselves. They look for evidence to support their perception of the other person, which only aggravates the original problem. Ultimately, they put each other into a mental-emotional prison.

You can't come out of that prison until you pay the uttermost farthing. A farthing was a tiny English coin equaling one fourth of a penny. Paying the uttermost farthing means paying the price that's required. It means a humble and complete acknowledgment of your responsibility for the problem, even though others might be partly responsible as well. If you take full responsibility for your part in it — and acknowledge it and apologize out of deep sincerity and concession of spirit — the other person will sense the utter sincerity of what you say. Of course, your behavior must then comport with that expression, so that others can see your integrity.

To pay the uttermost farthing, you might say, "I was wrong." "I embarrassed you in front of your friends." Or "I cut you off in that meeting, when you had made this tremendous preparation. And I'm not only going to apologize to you but also to the other people who were in that meeting, because they could see the way I dealt with you, and it offended them as well." You make no effort to

justify, explain, defend or blame in any way — you make every effort to pay the uttermost farthing in order to get out of prison. Only by making a complete and specific acknowledgement of your own failings or mistakes do you pay the uttermost farthing.

### The Lever of Loyalty

People with primary greatness are loyal, not unquestioningly loyal, but they show the kind of loyalty that refuses to stereotype, castigate or label others in their absence. Too many of us carry the burden of disrespect for others, of conceit or even contempt for the imperfections of the people around us. We unload a tremendous weight from ourselves if we can cast off unrealistic expectations of others and stay loyal to them as human beings.

The ultimate test of primary greatness is to be loyal to people who are absent. When other people are not with you, they're in the dark; they don't know what you're saying about them or whether you're loyal to them. And that's when you show your true character. That doesn't mean you can't be critical, but you're constructively critical and loyal to the point that you would not be ashamed if they happened to overhear the conversation or if word were to get back to them, as it often does. You don't just sit on the sideline cutting, labeling and stereotyping people and then look for evidence to support your disdain for them.

When you defend the integrity of a person who is absent, what does that say to those who are present? It says that you would do the same thing for them. Sure, it takes courage to speak up at the time. It's much easier to say nothing. But I believe that if we have a chance to defend others or to speak up for our cherished beliefs and values, we need to do it.

### The Lever of Reciprocity

Primary greatness is based on the principle of reciprocity — that what you give comes back to you. The concept of fairness is deeply ingrained in every culture. Those who believe in secondary greatness want to tip the scales of every human interaction in their favor — their motto is "WIFM": What's in it for me? By contrast, those who live by the principle of reciprocity know there is no win in life if others do not win too.

How can we ensure that the most important relationships in our lives are reciprocal?

- Look first to yourself. Be honest with yourself first.
- Create intimacy. The more you bond, the more you care.
- Share knowledge and information.
- Include all stakeholder relationships.
- Care about those on the front lines.
- Choose mercy over "measure for measure."

Recognize that others need love and understanding and mercy just as you do. These simple principles, consistently applied, ensure the kind of bonding that leads to primary greatness.

### The Lever of Diversity

Sameness holds you down and drains your energy. Primary greatness seeks out diversity. Nothing kills success faster than being incapacitated by limited data and narrow thinking. Without diversity, there is no synergy, and without synergy, nothing new happens.

The natural tendency is to surround ourselves with people like us instead of creating a complementary team. Cloning yourself produces negative energy, because it inhibits other people's talents and gifts. On the other hand, building a complementary team — which has one goal but many different roles, perceptions, methods and approaches — enables the full expression of talents and releases positive energy.

Why is the tendency to clone so prevalent and so strong? It is because cloning gives leaders a false sense of security. When you have people thinking like you, doing like you, speaking like you, referring to you, quoting you, dressing like you and grooming like you, then you feel that you're being validated as a leader. You feel that you have value because other people value being like you. However, they're telling you what you want to hear, not what you need to know. So you may get some artificial harmony, conformity or uniformity, but you won't have much creativity, synergy, unity or security. Cloning comes from insecurity and from being centered on public opinion.

The new ideal is the complementary team where unity is achieved by those who have different talents — who have one vision and purpose but many roles, perceptions, capacities and duties. Unless you have a transcendent purpose and a shared value system, differences become negative and counterproductive — not positive and synergistic — simply because there isn't unity on the fundamentals. If there's unity on the fundamentals, you can tolerate differences in other areas and still have positive synergy.

### The Lever of Learning

Secondary greatness isn't very interested in learning, but primary greatness demands it. In business, a person who isn't constantly upgrading his or her skills and knowledge

becomes untrustworthy in time. Beyond this, learning is what we call a primary good, valuable for its own sake. The love of learning and the search for wisdom help make life worthwhile. We all have a moral obligation to the people who are important in our lives, as well as to ourselves, to learn and progress without ceasing.

We often talk of the need for continuing education in the context of work, but we rarely speak of it as a governing principle of life. In fact, continuous learning will save your life because, without it, you slip quickly into irrelevance.

A business can only do so much; the rest is up to the individual. As individuals, we ought to take into account the needs of the organization in our personal- and professional-development programs; otherwise, we may be developing for the wrong reason or at the wrong time. Our personal development should be relevant to the economy, to the industry, to the company and to our current assignment.

Among the many job-related learning options available to most people are research skills of analysis and synthesis, a personal reading program, review of classic literature and personal universities, such as TED talks or massive open online courses.

## The Lever of Renewal

You can't achieve primary greatness by neglecting yourself — your health, your mind, your emotional and spiritual life. Each of these vital areas of your life needs constant, even daily, renewal. Pushing the lever a little bit every day can offset a slow or even catastrophic downward decline in your personal energy and even save your life.

Act on four assumptions dealing with the four parts of human nature: physical, mental, social and spiritual. The ultimate personal synergy comes when we renew ourselves in all four dimensions regularly, on both personal and professional levels.

**Physical assumption:** Imagine you have already had one heart attack (personal) or one business failure (professional). Work on the assumption that you should live carefully, wisely, with a good exercise and nutrition program, so that you can have many, many more fulfilling years of life.

**Mental assumption:** Imagine that your knowledge (personal) and skills (professional) will be obsolete in three years. If you make this assumption — and it is accurate, by the way — you will get into serious systematic study and reading.

**Social assumption:** Imagine that everything you say about other people will be heard by them, both at home (personal) and at work (professional). You might still be critical, but your criticism will be far more responsible and constructive when you feel as if they are listening to what you say.

**Spiritual assumption:** Imagine that you will soon have a one-on-one accounting with the people you love and who love you (personal) and with your boss and team members (professional). In this personal interview, you will give an accounting of your stewardship: how well you are maintaining your physical health and fitness; what you have learned and how well you have employed knowledge and skills; how true and loyal you are to other people, especially behind their backs; and how well you are developing the spiritual side of your nature.

## The Lever of Teaching

What's the best way to internalize the levers of primary greatness you've just learned about? It's simple: Teach them to others. As you do, your understanding of the levers will deepen. Others will look to you to exemplify those principles. You'll become an authority on primary greatness.

There are four big advantages in applying this principle: you simply learn better when you teach; when you teach something you feel good about, you increase the likelihood of living by it; when you teach what you learn, you promote bonding in the relationship; and when you teach something you learn, it lubricates the change and growth process for yourself.

Remember, we are teaching something all the time, because we are constantly radiating who and what we are.

The end of a life filled with primary greatness is wisdom — a perspective that embraces principles, continuous growth and an integrated wholeness. It is a perspective that brings peace to the inner person and prosperity to the world. It is a perspective that brings security because the principles upon which we live our lives are solid, enduring and will never change.

# The Power of Presence

## Unlock Your Potential to Influence and Engage Others

by Kristi Hedges

### THE SUMMARY IN BRIEF

Hands-down, executive presence is the corporate "it" factor. It's directly linked to your ability to get noticed, forge trusting relationships and get others on board with your vision.

But few people realize their true presence potential. Think of the otherwise competent team leader who doesn't command respect in executive meetings, or the overextended boss who never seems to know what's really going on with his employees or how to motivate them.

The good news is that limitations such as these are not set in stone. In fact, they're completely surmountable with the strategies and exercises in *The Power of Presence,* a highly readable and deeply insightful book that cuts to the heart of presence — what it is exactly and how to get more of it.

*The Power of Presence* shows everyone how to improve their presence. Author Kristi Hedges has witnessed even the highest-level people struggle to connect and communicate, often tangled by nerves and confused about how others perceive them. Her experiences have helped her develop the unique I-Presence™ model, which is equal parts communication aptitude, mental attitude and authentic style.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to use the I-Presence model to be clear and confident in any situation.
- Ways to forge strong relationships and build trust with others.
- How to inspire and motivate others to create solid followers.

## Introduction

What is it about some people who can get others to follow with ease? What qualities do they possess that engender trust? How can presence be learned if one's own skills aren't enough? The I-Presence model is the secret sauce of executive presence. It is equal parts communication aptitude, mental attitude and authentic style. It combines a supportive inner mindset with the outer skills needed to create the natural, confident, consistent leadership presence we all seek. It consists of three pillars. I-Presence is at once intentional, individual and inspirational.

**Intentional.** Your beliefs shape every aspect of your presence, from body language to the actions you choose to undertake. Therefore, it is critical to get your head around what type of presence you want to demonstrate, the values you want to convey and how that matches up (or doesn't) with how others currently perceive you.

**Individual.** We connect with individuals, not with the hierarchical concept of a leader or manager. Whether with employees, customers, investors or the marketplace at large, these connections drive business, loyalty and career success. And counter to what you may believe, building these connections doesn't involve having all the right answers or working harder than everyone else.

**Inspirational.** What tools are in your toolkit when you want to inspire others? What's the best way to address a group and get people excited? What do powerful communicators do that's different?

You need to focus on and leverage your greatest potential as a leader — your own presence.

## PART I: INTENTIONAL: UNDERSTANDING AND MANAGING YOUR PRESENCE OF MIND

## What Are You Thinking?

The first pillar of the I-Presence model is being intentional. Having an intentional presence is defined as understanding how you want to be perceived and subsequently communicating in a manner so that you will be perceived in the way you want. It means aligning your thoughts with your words and actions. And it requires a keen understanding of your true, authentic self as well as your impact on others.

There are different kinds of intentions. Some are broad and relatively stable, such as when you declare, "I want to be a visionary leader." Others are situational, such as, "In this strategy session, I must be the catalyst for change." Taking the time to have the discussion with yourself about what you want to accomplish with your presence may seem more like pop psychology/self-help than hard core executive training, but guess again. Taking the time to figure out what you want your presence to convey is a critical and powerful first step. That is the image of yourself you want to keep in mind — it's your mental aim.

As you develop your mental aim, you also need to determine what conversation is currently in your head and how it may need to change. Even when you aren't paying attention, your internal conversation is always happening. Do any of these negative thoughts sound familiar?

- I can't speak in public.
- I'm not a people person.

- I'll appear self-promoting.
- I'm an introvert and can't network well.
- I'm just not good in these situations.
- I don't have what it takes to play the office-politics game.

If this is where you are placing your mental focus, you can bet it's showing up in your presence, and maybe even screaming. The intentions that we hold in our head, either positive or negative, create mental shortcuts that become a veritable path of least resistance. The more we think something, the easier it is for our mind to process it. That's why it's critical to be fully aware of any negative thoughts blocking your progress. Knowing what our limiting thoughts are, and replacing them intentionally, is the only way to create a different possibility. Eventually, the possibility becomes the new and improved shortcut.

## Your Actions Are Speaking So Loudly I Can Hardly Hear What You're Saying

Our actions prove (or disprove) what we say about ourselves. They are signals for receivers to decode so they can learn what we're all about. Actions can either underline or undermine our executive presence. If you want to be seen as trusted and credible, then your actions must be in alignment with your intentions, both stated and unstated. It's the only way to be received with clarity.

In terms of how people perceive and interpret you, two types of action are of equal importance:

- Micro-Actions (your body language, facial expressions and tone of voice).
- Macro-Actions (how you spend your time, what you do and your consistency).

Body language is most often promoted as the key to effective communication in our personal and professional lives, but paying too much attention to how you stand, talk, gesture or present can erode authenticity — and for many people, confidence as well. Because body language is a vehicle to get your message across, it should be in alignment with your message while feeling natural to you. Focusing on the use of tricks to convey something you aren't feeling distracts you and undermines your intentional presence.

Your macro-actions include where you show up or don't, what you produce or deliver, how consistent you are and whether you keep your promises. All eyes go to our actions because they are the backbone of presence. We trust actions more than anything — they speak louder than words, after all. But what happens is that real life steps in, and we get busy. And that leads to a lot of unintentional actions. We take shortcuts. We put out fires. We let things slide and hope that no one will notice. Or we try to do everything and spread ourselves way too thin.

Managing your presence means committing to managing your actions as carefully as your words. For most people, it means you have to make choices about the actions you want to emphasize. The best place to start is by choosing the actions that make up your core values or, in other words, your personal-presence brand. Actions are the communications we trust most. Your work on presence won't get off the ground unless you begin to notice, and then to understand, and then finally to change your micro- and macro-actions.

## Stopping the Negativity Loop

Nearly everyone struggles with nervousness, anxiety and insecurity in high-pressure situations where we care deeply about the outcome. It happens to even the most successful and dynamic communicators. Negative thoughts can build momentum into a downward spiral that drags your thoughts, feelings and actions down with it, with each thought reinforcing another until you have a full-blown negativity loop.

Negativity loops destroy intention. They are akin to a heavyweight pro fighting a lightweight amateur. You can win only if you take away the big guy's strength. You do that by disputing the negativity and turning it into optimism. Recognize those stressed-out thoughts for what they are: catastrophizing with little or no root in reality.

## Presence as Perception

Presence is part communicating in alignment with your intention and part being received with clarity. You can't figure out how you are doing with the latter without some form of feedback, formal or otherwise. Finding out the effect you have on others gives you a helpful framework for focusing on your own presence.

Getting feedback is necessary. Pursue it, digest it and internalize it. Most important, keep in your mind the entire time that there's no right way to have a strong presence. One size does not fit all. Much of how we experience others is filtered through our own experiences and completely biased. One person may gravitate toward the strong way you open a meeting, while you will seem overly brash to someone else because

you remind him of a dictatorial co-worker. You are viewed through others' subjectivity.

Conducting a presence audit can be a simple but remarkably valuable process that only involves four steps:

**1. Pick the Right People.** Select five people you know and trust to be part of your feedback circle. Choose people who are accustomed to seeing you in the kinds of situations where you are looking for feedback. While its it important that you trust the people and find them credible, make sure you don't just choose people that you like. Steer clear of those who will avoid conflict or tend to soft-pedal.

**2. Ask for Participation.** Without question, this is the hardest part, so you have to frame your request correctly. You want the people in your feedback circle to know that you are sincere, that you won't hold a grudge and that you are seeking feedback for your own personal development. Explain that it's not about what any one person says but what themes emerge from the group. This can help ease the burden for the people participating and allow them to speak more freely.

**3. Ask Two Simple Yet Powerful Questions.**

a. What's the general perception of me?

b. What could I do differently that would have the greatest impact on my success?

**4. Manage Your Own Reaction.** You'll get information that's as good as your ability to receive it. People will be looking to see what effect their feedback has on you in real time. Even though you are the one soliciting the feedback, every cell in your body will want to explain and defend yourself. Pay attention to your own presence during this feedback process, and really listen. Don't interrupt. Don't offer explanations or make excuses. If you ask questions, they should be only to clarify. Then smile and express sincere gratitude for the gift you've just been given.

In cultivating executive presence, intention is your aim. It creates the basis from which everything else follows. By practicing intentionality, your presence will benefit immensely, even if you do nothing else. But if you want to build the kind of compelling presence that draws others to you, then you need not just intention but connection.

## PART II: INDIVIDUAL: FORGING STRONG RELATIONSHIPS

# Go Ahead, Trip Over Your Own Perfectionism

The second part of I-Presence is about individual connections — how we bring people closer to us, invite them in and build trust. If intention is your aim, then individual connections are your target. In the workplace, strong connections make us more productive employees, better co-workers and motivating leaders. For leaders, and in particular those new to leadership positions, it's a frustrating experience to learn that your title only gets you obedience (if you're lucky). Winning over hearts and minds requires a nuanced approach of making yourself someone others want to trust and follow.

Whether you are a leader or not, without connection you will lack presence. You may have the perfect oratory skills, deliver impeccable work and have the focus of a laser, but if you aren't someone that others relate to on a human level, you will at best be admired but never fully trusted.

### Balancing Competency and Vulnerability

Too much competency can be intimidating. Too much vulnerability can be read as weakness and ineffectiveness. But when we show our power alongside our humanity, others will connect to us. It's the combination that creates great presence. Consider what qualities make for a great boss or colleague. The answers are always the same: Most of what makes a leader or colleague memorable to us is the connection piece. "All business" is never how we describe the people who have meant the most to us. The competency piece is simply the price of admission. You felt a connection, and chances are you worked harder for them.

### You're the Only One Who Believes You Can Be Perfect Anyway

Hand in hand with the "all business" persona is the perfectionist. Perfectionism may get you admiration or even flat-out respect. But it will never get you the connection that renders it possible for someone to come into your office and tell you something you really need to know, despite the fact that it's difficult to say.

The funny thing about perfectionism is that while we may endeavor to embrace it in ourselves, no one else buys it. They can see right through it. They know when your confidence is actually just boasting, or how that catch in your throat reveals insecurity, or how your ever-present right answers don't always turn out so right in the end. Perfectionism creates the opposite of connection. One person's perfectionism causes guardedness in others. It sabotages openness, which is precisely the quality that gives us tremendous comfort in our leaders and colleagues.

## Trust: The Ultimate Gatekeeper

Trust is foundational to presence. You need other people to feel comfortable enough about your motives and credibility to invest in you as a person. The more trust, the larger the investment. And if you are deemed untrustworthy, you'll have the opposite of investment — distance, suspicion and even sabotage.

Trust is complicated because it's partly fact-based and partly emotional. We also have different trust standards for the workplace than we do in our personal lives. We tolerate more gray area around trust at work because we don't always expect as much from people in the workplace. It's assumed that leaders may act in their own self-interest or that ambitious colleagues will use others to get ahead. And getting a handle on our own general trustworthiness is tougher still.

Coming from a place of trust is a conscious decision. In every interaction, we can choose who we want to be and whether we will lead through our values or tuck them away in our back pockets. In the toughest of situations we can be distracted into thinking that a Right Way prevails over our way because that's what worked for someone else, or because we're unsure of ourselves or perhaps because well-meaning advisors recommended it. But if you know what you value, you can usually find a path to effectiveness that supports whom you want to be.

## A Note to Emailphiles, CrackBerry Addicts and TurboTexters

Presence is a full-contact sport. With each layer of information, we understand more of the other person. Writing gives us baseline information, verbal intonation a layer more and finally body language provides a giant leap in understanding. Nuanced messages are communicated far more effectively in person.

### Management by Email

Managers know that they need to be in front of their teams to deliver their vision, rally the troops and tackle uncertainty — in other words, the big stuff. But emails and texts tend to be a convenient default in the day-to-day realm of getting work done. Most managers will say that they use email in the interest of saving time. It's easier to delegate projects through email than by catching people on the phone or in their office between meetings. But when assigning work, the most important aspect is to be clear about your expectations. This generally requires a give-and-take about content, resources and deadlines. If that process is absent, you are likely to run into a lot of time-consuming inefficiencies.

Any communication that could be interpreted as bad news should never be sent via email. First of all, for the recipient, getting a negative email feels rotten. You're missing valuable context. You can't ask questions or present your side. It shreds your productivity. When you get such an email, you don't read it and get back to work. You stew on it. Send it to your spouse. Update your resume. In the absence of important cues from the sender that would make the communications productive, there's usually nothing to act on. If the manager's goal is to correct behavior or direct attention to a problem, a negative email accomplishes very little of that.

Employees frequently complain about the volume of emails from their managers. It's not that they don't expect emails. It's simply that they want to get some work done in between reading so many emails. Check your sent box and see if you're emailing the same people more than three times per day. If you are, then you may be managing by email. Try to consolidate your correspondence so that your team feels less barraged. Or try an old trick: Just get up and walk down the hall.

### 24/7 Emails

Constant emailing is mainly an issue for the manager to address. If you want your team to be burned out and resentful, 24/7 emails are the way to go. Otherwise, give people the courtesy of having a life. And if you are on the receiving end, holding off on your response until the normal workday (assuming it's not truly urgent) or waiting 24 hours on the weekend is perfectly acceptable and gently establishes boundaries.

The final pillar of I-Presence is about being inspirational — using our presence to influence others. It's the quality most people generally associate with executive presence.

# PART III: INSPIRATIONAL: COMMUNICATING TO BUILD AND MOTIVATE FOLLOWERSHIP

## Inspiring Change From the Brain Down

Being inspirational means that you are a change agent. As corporate hierarchies have flattened and the demand for creative, conceptual work has risen, old models of

communication no longer work so well. You cannot say, "Do this because I'm your boss and I say so" and expect other people to automatically act or think differently. We need our teams and co-workers to take our ideas, internalize solutions and personally buy into them. We want to invite them into our way of thinking, not grab them by the neck to get there. When you inspire others, you are altering their thoughts, perspectives or actions. They are different as a result of your exchange.

### Change Starts with You

When it comes to inspiring change, there are two audiences you need to consider: yourself and everyone else. First think about how to change yourself. This first step of embracing and managing change in yourself is critical and, at times, the hardest to undertake. Second, consider how your ideas create change in others. What makes people either readily accept or flat-out reject your message?

There are universal human responses to change. Understanding them enables you to frame your own communications to be heard with optimal clarity. Here's the easy part: Turns out that what makes it difficult for you to change is the same thing that makes it difficult for your audience to change. No one is trying to be intractable. You can blame it on the brain.

### Your Brain Prefers Life in a Worn, Comfortable Recliner

The brain strives for efficiency. Therefore, reinforcing our current mental maps, which are essentially our thoughts and perceptions, feels good to us. When we see information that confirms our existing perceptions, the grooves between point A and point B on our maps become better established. Energy is saved. When we see data that disproves our exiting perceptions, our thoughts spend more time in our prefrontal cortex as we compare and contrast against existing mental maps. Loads more energy gets used.

Our brain is built to resist change because doing so enhances efficiency and saves energy. We are optimized to seek out information that confirms what we already believe to be true, and to avoid information that goes against our existing belief system. This is critical information to have about yourself as you encounter new ideas.

### Five Steps to Optimize Your Brain for Change

So where does that leave someone who wants to turn insights into action? We know that creating a new mental map is key, but to sustain a new mental map — to wear the newly established grooves down so that they become a default path — we have to keep the focus on what we are trying to accomplish with frequency, intensity and deliberation:

**1. Make Room for Reflection Time.** Being reflective involves taking a cerebral step back. It's not about forcing our full mental heft on the problem at hand. It's about creating space to allow thoughts to come to us (and old mental maps to be dug out of our gray matter).

**2. Focus on Solutions, Not Problems.** Attention shapes our mental maps. By pivoting our attention we can begin to develop new modes of thinking and doing. When we are trying to create change, we have a far better chance of succeeding if we make a concerted effort to focus on solutions. (Of course we need to understand the basics of the problem, so we don't repeat it, but beyond that, the future is in the solution.)

**3. Strike While the Aha! Moments Are Hot.** It feels great when we get that release of adrenaline from newly formed connections. We are primed to take action in that moment, but the clock is ticking on our excitement. You'll have far greater success with change if you can capture that moment and act quickly, or at least create a path to action. The easiest action to take is to write down your ideas. Sketch out your thoughts in the moment, so you can recall them when the adrenaline rush is over and your brain is flooded with other thoughts.

**4. Just Do It (At Least in a Small Way).** Change is a process. If our brains sense some degree of certainty, then we are more likely to be open to change and allow it to happen. Incremental change allows us to gain some confidence and perspective and then try the next goal. It's much more comfortable for people to envision a tangible, discrete step than to jump to a faraway place they've never seen before.

**5. Find Your Flow.** In his seminal work that created an eponymous business term, *Flow*, psychologist Mihaly Csikszentmihalyi laid out his research findings on what creates intrinsic joy in our work and in our lives. Flow happens in those moments when we feel "in the zone," when we are immersed in an activity, lose track of time and bring our full skills to bear.

## From Vision to Visionary

Vision is one of those barely tangible characteristics of executive presence that has great resonance. While we spot it immediately when it's there — often by calling someone strategic or forward-looking — we are not sure what's missing when it's absent.

As an employee, you know which leaders have vision. They run the teams everyone wants to work on. They are the CEOs people drop everything to follow. They create a reality that we clamor to be a part of. They personalize our work effort. Alternatively, visionless leaders are in danger of cultivating teams with a feeling of purposelessness, of being disconnected from the whole. Typically, people on such teams are biding time until something better comes along.

In the workplace, a vision helps the leader and everyone else figure out what's important. A vision provides context amidst chaos. We need data plus context to make decisions that are useful, relevant and aligned with the organization's overall goals. Becoming the messenger or carrier of that vision, as the visionary, requires that you be aspirational (endorsing and encouraging potential) and personal while also articulating a vision that is shared and active (woven into the nuances of everyone's working life).

## Declarations Create Possibilities

Your presence is conveyed by the way you communicate in total. Part of that is through the words you choose. In essence, inspiring through language is about painting a picture of what the future could be. It includes the use of declarations, just as Steve Jobs demonstrated when he first took the stage at Macworld in 2007 and declared, "We're going to make history together today." Inspirational language steps us into a bigger game. After all, it's tough to inspire by playing small.

Declarations create and clarify vision for others and ourselves. They help to define that all-important sense of purpose around our work. They offer a promise of something more, of greatness. They are made individually and shared. They inspire followership. Declarations are compelling, ambitious, strong, direct and enticingly risky. They show confidence in oneself and in the power of the collective. They force us to push ourselves and play on a bigger stage. They provide a rallying point that brings a group together.

## Strategic Shock Value and Other Ways to Create Shining Moments

While many leaders bristle at being in the spotlight, people expect it. It's not about personal ego but about accepting the role and learning to play on a bigger stage. Part of being inspiring is simply being interesting. Having a point of view on a wide range of industry issues, telling relatable stories and making bold statements allow you to use the leadership stage to bring more attention to your company.

### There's Bad Interesting and Good Interesting

It's hard to define exactly what makes a person inspiring or interesting. To a certain degree, good interesting is in the eye of the beholder. There's no magic to it. It's about authentic presence: being intentional, presenting our real selves, sharing stories, exposing vulnerability or showing empathy. Being good interesting means staying in alignment with our executive presence intention and bringing our full selves to our communications. It's about accepting the spotlight and using it to a greater and positive advantage.

On the flip side, as hard as good interesting is to define, it's remarkably easy to identify bad interesting: being outrageous for attention, misrepresenting yourself, taking the credit from deserving peers, grandstanding for personal gain or always having to have the last and loudest word.

### Shining Moments in the Daily Grind

To bring the concept of the good interesting down to the practical level, look for opportunities to pivot the daily grind into opportunities to shine:

**Networking Events.** Turn your purpose around. Instead of asking someone for something, focus on those who may benefit from your advice or your experience. When you bring down your self-orientation, you not only boost trust, but you also set yourself apart from the majority of the people attending the event.

**Internal Meetings.** Most often reviled as a colossal waste of productive time, these meetings present an opportunity for you to convey your presence by acknowledging the elephant in the room and committing to minimizing the waste of everyone's time and establishing ground rules to make the meeting fun, creative and productive.

**Speaking Engagements.** Whether you dread them or tolerate them as a necessary evil, speaking engagements are typically thrown together at the very last minute with the intention of being professional but by no means controversial. Pivoting this perspective presents these engagements as shining moments — opportunities to inform, inspire and entertain.

**Press Interviews.** Restrictive corporate communications policies typically limit the frequency of such interviews, but when they do happen, the standard operating procedure is to stick to the key points and tow the company line. But reporters are people too, and being appreciative of their objectives and endeavoring to be as

engaging as possible will separate you from the herd and earn you more opportunities to build your presence in future interviews.

**Sales and Client Meetings.** Most of the time, these meetings are content driven and focused on getting the audience to like/respect/pay us. Demonstrating credibility is paramount. PowerPoint is the weapon of choice. The audience probably has their guard up in anticipation of being sold or over-promised. Turning this into a shining moment by focusing on building trust above all else increases your presence, your likeability and your credibility. You'll also come across as refreshingly different, interesting and memorable.

## Bringing It All Together: Presence in a Pinch

The three "Is" of the I-Presence Model — intentional, individual and inspirational — follow a specific path from inward to outward. That's exactly how presence works. It starts with you, builds through your connection to others, and ultimately catalyzes through your communications. Each piece is important on its own, and it is the combination that catapults leaders to a new level.

Since being intentional implies thorough preparation before a big meeting, presentation or important conversation, here is a distillation of the core principles of the I-Presence Model that form a Prep Guide:

**Prepare with Intention.** Whether you have 30 minutes or 30 days to prepare, always start with intention. Everything flows from it. You may think this is the easiest part to skip when you are pressed for time. But it's actually the most critical.

**Align Your Physicality to Your Intention.** Hopefully you've rehearsed and have a strong sense of how you want to appear when you take the stage (literally or otherwise). Remember the three-part body check: face, gestures and posture.

**Find the Connection Points.** Connection is about finding the humanity in others. If you want to strengthen your presence, consider how to foster trust and empathy. For many of us, this requires attention and deliberation.

**Use Language to Inspire.** Setting a compelling vision through language is a key part of managing change. Even the best vision is meaningless if it can't be communicated and received clearly.

Remember, as you head into that all-important meeting, you already have every ounce of presence you need in various parts of your life. All you are doing is integrating them to present your best self — your strongest presence — more purposefully and frequently. Don't try to be perfect. It's not about using every best practice you've ever learned or reshaping your personality. Set an intention, go with what's authentic for you and wow them.

## Afterword

While presence itself is open to interpretation, here are a few pieces of advice that will help you on your path to strengthening it.

Pay attention. The simple act of noticing your own behavior and that of others, in a deeper way, will create an ongoing focal point on presence. When someone inspires you (or fails to), take a moment to understand why.

Maintain a sense of humor. Learn from your mistakes, and learn to laugh at them, too. Remember, things are rarely as bad (or as good) as you think they are.

Be brave. It's hard to extend yourself by trying new behaviors, especially when failure can mean public embarrassment. Summon the courage to be uncomfortable. You won't get anywhere by playing it safe. Put yourself out there.

Go easy on yourself. No one is perfect, and yes, that includes you. You'll notice 90 percent more of your mess-ups than anyone else will. Smile, and keep going.

Don't get hung up on doing the right anything. What works for one person can bomb for someone else. Presence is your personal essence; it's a unique composite of behaviors. You'll encounter many people who will tell you that you must do it their way. Keep an open mind. But if it feels foreign to you after trying it a few times, skip it.

When all else fails, walk tall, keep your head up and look people in the eye.

### MORE SV CONTENT ON LEADERSHIP

*Access these and more in your Soundview Online Library:*

**Summary: Executive Presence by Harrison Monarth.** Harrison Monarth provides the techniques to help you leverage the power of perception in your favor.

**Webinar: 50 Ways to Enhance Your Presence and Impact at Work by Simon Tyler.** Simon Tyler argues that without wisdom, purpose and authentic intention, your impact is empty. You need a sense of what motivates and inspires you. Through your passion and belief in your purpose, people will want to follow your ideas.

## The 12 Universal Laws of Power Persuasion

by Kurt W. Mortensen

### THE SUMMARY IN BRIEF

Salespeople, consultants, managers, executives, entrepreneurs — everyone depends on influence to achieve success and prosperity. And everyone can develop their skills with *Maximum Influence*, the most authoritative and effective arsenal of persuasion tactics ever assembled.

Updated with the latest findings from behavioral science, new case studies and cutting-edge techniques, *Maximum Influence* uncovers secrets of the master influencers, including the Law of Dissonance, the Law of Contrast, the Law of Expectations — and nine other proven principles that consciously and unconsciously propel people to act. It's the ultimate guide to getting what you want, anytime you want it.

### IN THIS SUMMARY, YOU WILL LEARN:

- The 12 Laws of Persuasion and how they can be applied for Maximum Influence.
- Four steps to use the Law of Dissonance to get your foot in the door.
- Learn how to use praise to release positive energy in all business and personal dealings.
- How to use the Law of Association to take advantage of association triggers to evoke positive feelings.

## The Power of Persuasion

Has this happened to you? You are talking to a potential client, a prospect or a manager of another department. In your mind what you are proposing is a no-brainer, and it will take only a few minutes to influence the other person to do what you want done. The more you talk, the more they resist. What happened? Why weren't you able to persuade them?

Or even worse, have you ever met someone who did not seem very smart but was making ten times more money than you? Didn't seem that bright, but could persuade anyone to do anything? What do they have that you don't have? They have mastered the *power of persuasion*.

### Persuasion: The Engine to your Success

The power of persuasion is of extraordinary and critical importance in today's business world. Nearly every human encounter includes an attempt to gain influence or persuade others to our way of thinking. Some people define persuasion as being forceful, manipulative, or pushy. Such an assumption is dead wrong. Tactics like these might get instant results and maintain influence for the short term, but Maximum Influence is about getting short-term compliance while maintaining the long-term relationship. Lasting influence isn't derived from calculated maneuvers, deliverate tactics or intimidation. Rather, proper implementation of the latest persuasion strategies will allow you to influence with integrity. People will naturally and automatically trust you, have confidence in you, and want to be persuaded by you.

The art of persuasion must be customized to every group or individual, to every situation or event.

Getting people to do what you want is not an accident or coincidence. You must use techniques based on the proven Laws of Persuasion to achieve such results.

Professional negotiators, sales professionals and upper management around the world use these 12 laws. They are the same principles that help thousands of people gain control of their lives and their financial futures. Mastery of all the 12 laws is crucial for Maximum Influence. You will learn to act instead of being acted on, speak and be heard, lead and be followed. Master the implementation and timing of these laws, and you will become a Power Persuader.

## The Law of Connectivity

We have all had the experience of feeling an instant connection or bond with someone after just a few seconds of being in their presence. This is the Law of Connectivity.

The Law of Connectivity states that the more someone feels connected to, similar to, liked by or attracted to you, the more persuasive you become. Connectivity involves four main factors:

- **Attraction.** The Halo Effect. Attraction operates by making one of your positive characteristics affect other people's overall perception of you. As a result of what is called the Halo Effect, people automatically associate traits of kindness, trust and intelligence with attractiveness.
- **Similarity.** Similar is Familiar. Similarity theory states that familiar objects are more liked than less familiar ones. The same holds true with people: We like people who are similar to us. The theory seems to hold true whether the commonality is in the area of opinions, personality traits, background or lifestyle.

• **People Skills.** Winning Instant Acceptance. The ability to connect and work well with people tops the list for common skills and habits of highly successful people. Studies show that 91 percent of those surveyed assert that people skills are important in business. People skills are crucial because they have a huge impact on our success.

• **Rapport.** The Instant Connection. Rapport is the secret ingredient that makes us feel a harmonious link with someone else. It is equivalent to being on the same wavelength with the other person. Rapport is the key that makes mutual trust materialize.

## The Law of Involvement

When you can get others involved, get them to participate; they are easier to persuade. The Law of Involvement suggests that the more you engage someone's five senses, involve them mentally and physically and create the right atmosphere for persuasion, the more effective and persuasive you'll be.

As a persuader, you need to move your audience one step closer to taking action. As a Power Persuader, your goal is to decrease the distance someone has to go to reach your objective.

### Increasing Participation

You can create involvement through increased participation. The more individuals take an active role and get involved, the more open to persuasion they become. You will have more success involving your prospects in the solution if you give them the option of participating.

Feeling that it was their choice and their solution, your prospects will take ownership: They have persuaded themselves. It becomes their own problem and their own solution. By nature, people will support what they help create.

### Creating the Right Atmosphere

Another way to boost participation is with atmosphere. Atmosphere is really just a state of mind that you can create.

Atmosphere can also include the tension in the air. Are customers rushing or relaxed? What type of climate are you trying to create? Do you want a quick, fast decision, or do you want your customers to feel comfortable enough to stay for a while?

### Using the Art of Questioning

Of all the tools in your persuasion toolbox, questioning is probably the one that Power Persuaders use the most. Questions are used in the persuasion process to create mental involvement, to guide the conversation and to find out what your prospect needs.

One questioning technique is the use of leading questions. Leading questions not only alter the way we interpret facts, but they also influence what we remember. When you are probing for information, ask open-ended questions. Responding to a question that can be answered with a simple yes or not is just too easy. For example, instead of saying, "Do you wish you had decided differently?," ask, "How did you feel after you made that decision?"

### Engaging the Senses

Our five senses help us create generalizations about our world. You should engage as many senses as possible when trying to persuade an audience. When we learn, 75 percent comes to us visually, 13 percent comes through hearing and 12 percent comes through smell, taste and touch.

Keep in mind that we gravitate toward three dominant senses: sight, hearing and feeling, and most people tend to favor one of these perceptions over the others. As a Power Persuader, you need to identify and use your prospect's dominant perspective of the world.

## The Law of Esteem

The Law of Esteem identifies that all humans need and want praise, recognition and acceptance. Acceptance and praise are two of our deepest cravings; we can never get enough. William James once said, "The deepest principle of human nature is the craving to be appreciated." Human beings have a psychological need to be respected and accepted.

Compliments have the power to change behavior because they make the recipient feel needed and valued. The individual now has a reputation to live up to or an opportunity to prove the validity of the compliment. To use the Law of Esteem effectively, you must clearly understand the relationship between an inflated ego and a healthy self-esteem.

### Self-esteem

People who possess self-esteem are strong and secure; that is, they can admit when they are wrong. They are not unraveled by criticism. Their self-confidence permeates into all aspects of their lives: their jobs, their education, their relationships and their income.

Unfortunately, several studies show that Americans overall do not enjoy high self-esteem. Two out of three Americans suffer from varying levels of low self-esteem. The short list of symptoms attributable to low self-esteem includes

- The inability to trust others;
- Aggressive behavior;
- Gossiping;
- Defensiveness.

Esteem is definitely among the very top of the list of all the human needs. When you're in a persuasive situation and not sure what to do, helping your prospect feel important is a fail-proof place to start.

### The Leverage of Praise

Sincere praise and compliments can have a powerful effect on people. Praise boosts one's self-esteem. When you genuinely give praise, it releases energy in the other person. When you receive sincere compliments or praise, you smile, your spirits soar and you have a new aura. When our own esteem is low or our ego is bruised, we tend not to praise others.

Always be sincere in giving praise to others. Even the most cunning flatterer is ultimately detected and discovered. Complimenting someone sincerely for something small is better than complimenting someone insincerely for something big.

## The Law of Obligation

The key to obligation is knowing that the results might not be instant but that the sense of reciprocity will put you higher on the list for a presentation or consideration for future business. Obligation has been used as a persuasive technique since the beginning of time.

The Law of Obligation, also known as pre-giving or reciprocity, states that when others do something for us, we feel a strong need, or urge, to return the favor. Returning the favor rids us of the obligation created by the first good deed. The adage "one good turn deserves another" is a part of social conditioning in every culture.

People often trigger feelings of indebtedness and obligation in others by carrying out an uninvited favor.

The drive to alleviate feelings of obligation is so powerful that it can make us bend toward people we don't even know. Accepting gifts or favors without attempting to return them is universally viewed as selfish, greedy and heartless. It is often strictly due to this internal and external pressure that people conform to the rule of reciprocity.

### Give a Gift, Expect a Gift in Return

Before a negotiation starts, offer some sort of gift. Note, however, that offering the gift before and not during the negotiation is of prime importance, or your token will come across as bribery. Your gift will almost always be accepted, even if only out of social custom and courtesy. Whether your recipient likes or wants your gift or not, the psychological need to reciprocate will take root, increasing the likelihood that your request will be met affirmatively.

The Law of Obligation is a very simple law to implement. Ask yourself what you can do, give or say that would create that indebtedness in your prospect's mind.

## The Law of Dissonance

Cognitive dissonance is a psychological discomfort that happens when someone's actions or decisions are not congruent with their values, beliefs or past commitments. Creating dissonance will increase your ability to persuade. When someone senses you are going to try to persuade them, say, to buy something — even though they need it, want it, like it and can afford it — they will resist you. Dissonance will help people persuade themselves.

The Law of Dissonance states that people will naturally act in a manner that is consistent with their cognitions and commitments. Basically that means when people behave in a manner that is inconsistent with these cognitions, they find themselves in a state of discomfort. To eliminate or reduce that tension, we will do everything possible to adjust our beliefs, even if it means doing something we don't want to do.

### The Human Brain

Neuroscientists have made significant progress on how the brain processes information. Our brain can be very biased, especially in politics. As a persuader, you need to help people feel dissonance about where they are now and where they want or need to go. Just paint the picture for them, and let them feel the internal pressure. They have a problem, and as a persuader you are there to help them solve it.

Dissonance is a powerful tool in helping others make and keep commitments. Most people try to follow through when they promise to do something, especially if it is in writing. This is why corporations sponsor writing contests about social issues or their products. They really don't care about your writing style. They're really looking for consumer endorsement. You increase persuasion by using commitments through your presentation.

### Getting Your Foot in the Door

One aspect of the Law of Dissonance is the urge to remain consistent with our answers and our commitments. This technique of capitalizing on such a principle has been called by several names, including foot-in-the-door (FITD), self-perception theory or the sequential request. The principle is a means of using a person's self-perception to motivate her to take a desired action.

### Four Steps to Using the Law of Dissonance

**Step 1: Find their Cognition.** What are your prospect's beliefs about, past experiences with and attitude about you, your product or service?

**Step 2: Get a Commitment.** Commitments from your prospects should be public, affirmative and voluntary.

**Step 3: Create Dissonance.** Once you have the commitment, you can create dissonance. You create that dissonance by showing your prospects that they have not kept their commitment.

**Step 4: Offer a Solution.** Whenever you create dissonance, you always need to offer a way out by showing or explaining how your product or service can reduce the dissonance your prospect feels.

## The Law of Verbal Packaging

Over 60 percent of your day is spent in verbal communication, in which you could be persuading, explaining, influencing, motivating or instructing. You can create movement, excitement and vision with the words you use. As Mark Twain said, "The difference between the right word and the wrong word is the difference between lightning and a lightning bug." The bottom line is that the words you use attract or repel your prospects.

Properly used and packaged, language is a powerful instrument that can be fine-tuned to your advantage. The proper use of verbal packaging makes you adaptable, easier to understand and more persuasive.

### Word Choice in Marketing

Word choice in marketing and advertising is absolutely critical. Even in copywriting, every word matters. When you write copy, an email or a letter, every word can attract or distract the reader. Use words that capture their curiosity, grab their attention and trigger emotions.

Skilled advertisers can get us to absorb their message unconsciously. They might even package an identical product with different words and phrases to reach a wider segment of the public.

Simple is better than complex. Because we are unable to recapture or replay our spoken words, we hope that they will be correctly interpreted the first time they are heard or read. When you are in a persuasive situation, use simple, direct and concise language, rather than fretting about how eloquent you are sounding.

### Vocal Techniques: Keep People Attentive and Listening

Voice plays a critical role in influence. How we say the words we choose is just as important as the words themselves. Our voice is a powerful instrument that can motivate the troops or lull them to sleep. There is a huge difference between presenting and persuading, informing and influencing, and communicating and convincing. Your voice is a complete arsenal of persuasive techniques in and of itself.

You can change your rate of speech, the volume, pitch, inflections, emphasis and even the pauses that you use. You can keep your audience's attention, increase their energy and render them absolutely spellbound because of the power of your voice. It must be interesting and easy to listen to in order to help, rather than hinder, your ability to persuade.

## The Law of Association

To maintain order in the world, our brains link objects, gestures and symbols with our feelings, memories and life experiences. We mentally associate ourselves with such things as sights, sounds, colors, music and symbols. These associations create quick subconscious triggers, and the feelings you generate can help or hurt your ability to persuade.

Power Persuaders take advantage of association triggers to evoke positive feelings and thoughts that correspond with the message they are trying to convey. In this sense, you, as a persuader, can actually arouse a certain feeling in your audience by finding the right association key to unlock their door.

### Anchors: Capture the Feeling

Anchoring is a technique that captures the feelings, memories and emotions of certain events, places or things. The psychology lies in the use of elements from a previous situation to replay the emotions and feelings of that experience. An anchor can be anything that brings up a thought or feeling and reminds you of something you

have previously experienced. It will usually reproduce the exact prior emotion or feeling.

An anchor can be produced either externally or internally. Anchors don't have to be conditioned over a period of several years to be established. They can be learned in a single event. The three primary sets of anchors include smells, music and symbols.

### Affiliation: Create the Link

Another aspect of the Law of Association is the use of affiliation. Persuaders want you to affiliate their company with positive images, feelings and attitudes. The idea is to link something positive in the environment with the message. For example, a good game of golf, a weekend at the beach, NFL tickets or an exotic cruise would all typically build positive associations and feelings in your prospects.

Three affiliation techniques are the most often used: advertising, images and color. Each has a unique role in affiliation. Advertisers and marketers use affiliation to evoke valuable associations in the minds of their prospects. They know that babies and puppy dogs automatically carry great associations of warmth and comfort in the minds of their audience.

## The Law of Balance

The Law of Balance states that logic and emotion must be blended and balanced. Emotions will trigger action, whereas logic will justify the agreement. The proper fusion of emotion and logic will speak to both the conscious and subconscious parts of the mind and increase your ability to persuade.

Power Persuaders know that each audience and individual has a different balance of logic and emotion. Analytical personalities need more logic than emotion. Amiable personalities require more emotion and less logic. A Power Persuader will create a proper balance between logic and emotion to create the perfect persuasive situation and message.

### Logic: What Stirs an Audience?

We generally think we make decisions based on facts, but truly this is not the case. It has been found that, when people agree with a message, they tend to perceive it as being logical or rational. The truth is that our decision-making process relies on a mixture of emotion and its partner, logic. However, we cannot rely entirely on emotion until our logical side has been engaged.

Spend whatever time you need to fully research the types of evidence you want to use to strengthen your arguments. You already know that using the right evidence from the right sources greatly increases the credibility of your message. The more confidence the prospect has in a speaker, the less thinking and processing they will do about the message.

### Emotion: Winning People's Hearts

Whereas logic is the language of the conscious mind, emotion is the language of the subconscious mind. We know that emotions are reactions to perceived and imagined stimuli; they are based on one's own personal experiences, not on logic. Emotions often outweigh our logic.

When you are persuading someone, emotions provide the springboard for a successful execution of your argument. In fact, I would even say emotions are the energy and very fuel of the persuasion process. Logic is important, but emotion helps you catapult an otherwise dull or flat exchange to the next level.

### Mood and Happiness

There is evidence across the board that mood is a major factor in persuasion. Even simple mood-boosting methods like eating a sweet snack or listening or pleasant music have been shown to make people easier to persuade. Consumers who are in a good mood will be more aware of positive qualities in products or experiences they encounter.

## The Law of Expectations

The Law of Expectations uses expectations to influence reality and create results. Individuals tend to make decisions based on how others expect them to behave or perform. As a result, people fulfill those expectations, whether they are positive or negative. When we know others expect something from us, we will try to satisfy them in order to gain respect, trust and likability.

By adding the Law of Expectations to your persuasive toolbox, you can change your audience's expectations of you — and their expectation to buy your product, service or idea — and you will be infinitely more persuasive.

### Assumptions: Expect with Confidence

Are the assumptions and expectations you have about yourself (or others) liberating or victimizing? There are countless examples of so-called self-fulfilling prophecies — or the Law of Expectations at work in everyday life. Did you ever notice how people who think they're going to be fired suddenly experience a drop in the quality and enthusiasm of their work? What happens next? They get fired!

The expectations we create for others often become reality. This effect can have interesting consequences when applied in the real world. Honestly assess how you think you make others feel when they're around you. How you treat someone and what you expect from them will open or close the doors to persuasion and influence.

### Goal Setting: Creating Personal Expectations

Many people don't like the idea of goal setting; in fact, just the mere mention of the words makes them cringe. However, goal setting works. Goals must have the power to stretch and inspire, and they must be realistic in the mind of the person being persuaded. Research shows that goals dictate future performance. Conscious goals influence our overall performance.

It is a general rule of thumb that greater or more difficult goals actually increase performance. The reason is that lofty goals set a higher expectation, and, as explained, expectations strongly influence behavior. For goal setting to work effectively, individuals or the members of a group have to be able to visualize and see themselves achieving their goal and be committed to its success. The goal cannot be so hard, so complex or so overwhelming that it does not seem realistic.

## The Law of Contrast

The Law of Contrast states that value will always trump price. Your goal is to have the value exceed the price or the benefit to exceed the prospect's time commitment. The Law of Contrast explains how we are affected when we are introduced to two different alternatives or options in succession. As a Power Persuader, you can use this contrast to navigate your audience toward the object of your persuasion.

Contrast is used for negotiations and is all about human perception. The human mind has to find a benchmark or comparison to make judgments, especially when we are talking about unfamiliar situations or new products. People need to make comparisons with their past experience and knowledge. The brain will always attempt to contrast your product or service.

### Door-in-the-Face (DITF)

Door-in-the-face (DITF) is one of the most common techniques for implementing the Law of Contrast. Basically, an initially large and almost unreasonable request is made, likely to be declined — hence the door is slammed in your face when the prospect rejects the proposal. Then, a second smaller and more reasonable request is made. People accept the second request more readily than if they'd been asked for more the first time because the contrast between the two requests makes the second one seem so much better.

The person you are persuading will then feel obligated to agree with your smaller request. DITF is so effective because society and the Law of Obligation tells us that each concession must be responded to with a concession. When you give them a concession, they will be more inclined to give you a concession.

## The Law of Social Validation

The Law of Social Validation recognizes and builds on our innate desire to be part of the group or part of the majority and that we tend to change our perceptions, opinions and behaviors in ways that are consistent with group norms. Even if we don't admit it, or maybe even realize it, we care about what others think. We seek to find out what others are doing as a way of validating our own actions. Social validation compels us to change our behaviors, our attitudes and our actions, even when what we observe doesn't really match our true desire or thoughts.

The Law of Social Validation is always happening, everywhere: publicly passing the donation plate to help with a community project, doing the wave at sporting events, going to popular dance clubs when you don't enjoy the surroundings, and so many other examples of going along with the crowd.

The more a brand is advertised, the more popular and familiar it is perceived to be. We as consumers somehow infer that something is popular simply because it is advertised. Many salespeople find great success in telling clients that a product is their best-selling or most popular because social validation increases their credibility of the product. When customers feel that something is a hot trend, they spend more money to acquire it, even if there is no proof other than the salesperson's word.

### Making Social Validation Work

The power of social validation can be used to your benefit in any persuasive situation. When your product or service is socially validated, people are likely to use it or switch to it. People are always looking around and comparing themselves to see whether they line up with everyone else. If they feel a discrepancy between where they are and where everyone else is, they will most likely conform to the group standard.

## The Law of Scarcity

The Law of Scarcity states that the more scarce an item becomes, the more the item increases in value, and the greater the urge is to own it. Scarcity drives people to action, making us act quickly for fear of missing out on an opportunity. The law plays a large role in the persuasion process. Opportunities are always more valuable and exciting when they are scarce and less available.

Whenever choice is limited or threatened, we humans need to get a piece of the limited commodity, making us want it and crave it all the more. Scarcity increases the value of any product or service.

### How to Use the Law of Scarcity

Scarcity helps us make decisions. Most of us fear making a decision, so we naturally put it off to allow ourselves time to think and ponder. As a persuader, however, be aware that when your prospects put off the decision, chances are they won't ever make one. Creating scarcity helps your prospects make their decision.

When you want to increase the impact of your scarcity and adapt it to different personalities, make sure you buffer your scarcity with some type of reward. For example, "This offer ends today (scarcity), but when you re-enroll today, I will give you an extra six months of support (reward)."

## The Inside Secrets of Maximum Influence

To be an effective persuader, you cannot use the same techniques for all people all the time. You have to customize your message to fit the demographics, interests and values of your audience. Prepare yourself by knowing as much about your audience as possible. Feeling competent and prepared increases your motivation, reduces fear and enhances your ability to influence. Just remember the three Ds:

- **Discover** what your prospects want and need to hear.
- **Design** and structure a powerful persuasive presentation.
- **Deliver** the message with passion, compassion and purpose.

As a Power Persuader, you must be able to create and motivate change. Understanding human nature is knowing that most people will resist change and burrow into their comfort zones. However, change is the only thing that can lift us up from where we currently lie.

### Your Listening Skills: Crack the Code

Dale Carnegie asserted many years ago that listening is one of the most crucial human relations skills. Listening is how we find out people's code, preferences, desires and needs. Of all the skills one can master, listening is probably the one that will pay you back the most.

Follow these proven keys for effective listening:

1. Give them your undivided attention.
2. Look them directly in the face while they are talking.
3. Show sincere interest in them.
4. Keep the conversation going by asking questions.
5. Use silence to encourage them to talk.
6. Pause before replying or continuing.

### Creating Your Call to Action

The call to action is the most important part of your presentation. This is where your audience understands exactly what you want them to do. Throughout your presentation, you should have gently led them to the same conclusion that you are now giving them.

You should create your call to action before creating the rest of the presentation. Your entire presentation should be built around the call to action but should be no more than 5 percent of your total presentation.

### Preparation Is the Key to Influence

Pre-persuasion is everything. Prepare your mind, know your audience, know their code and structure a winning persuasive argument accordingly. Know who, what, when, where and why about your message and your audience. Power Persuaders know that information and structure are the seeds for perfect persuasion.

# The Time Trap

## The Classic Book on Time Management

by Alec Mackenzie and Pat Nickerson

## THE SUMMARY IN BRIEF

Suffering from information overload? Being asked to do too much? Can't say no? If you're finding your days clogged with endless activities and responsibilities and your work life spinning out of control, it's time to employ some practical, realistic solutions to the age-old problem of "too much to do and too little time."

Considered to be the classic book on time management, *The Time Trap* gives you powerful methods for both maximizing efficiency and getting the most satisfaction out of your workday.

Based on decades of research and interviews with businesspeople around the world — and extensively revised to include technology-based solutions to the challenges we all face in the virtual world — *The Time Trap* is loaded with smart tactics and priceless time management tools. Let this proven guide boost your personal productivity and professional success when time is *not* on your side.

## IN THIS SUMMARY, YOU WILL LEARN:

- Ways to avoid so-called "time savers" that don't really work.
- Tips to set realistic goals and make commitments you can keep.
- How to accurately estimate the amount of time needed on new tasks.
- A method to pinpoint and combat your most tenacious time-wasters.

# THE COMPLETE SUMMARY: **THE TIME TRAP**

**by Alec Mackenzie and Pat Nickerson**

**The author:** Alec Mackenzie was an internationally known speaker, consultant and expert on time management. Pat Nickerson, President of EBI Inc., San Diego, is the author of *Managing Multiple Bosses*. Her seminars on time and priority management have attracted 180,000 managers and professionals — business, government and military — worldwide.

## PART I: TIME MANAGEMENT FOR THE TWENTY-FIRST CENTURY

Your goal in pursuing better time management is to reach the end of any challenging day and ask yourself,

- How many minutes or hours was I able to focus, undistracted? (If you were able to beat the average manager's eight minutes of peace and concentration, celebrate!)
- How often did I insist that validity trump apparent urgency? (If your answer makes you proud, celebrate!)
- What proportion of my work added value for those I am here to serve? (If your answer pleases you, celebrate!)
- Was I able to negotiate realistic expectations (quantity, quality and time) in order to validate some tasks? (If yes, then celebrate!)
- How often, today, did my decisions fit my sense of ethics? (Celebrate!)
- Did I work hard, meet a lot of my goals and have some fun, too? (Celebrate!)

Getting to this point means leveraging a comprehensive set of ideas and tools to curtail distractions, adjust expectations (yours and other people's) and find satisfaction in doing work you can validate and celebrate. Unfortunately, we are prone to several traps that our traditions have taught us to accept.

## Time Traps We've Been Taught

Information, exploding from worldwide sources, keeps expanding exponentially every day. When you can't keep up with the inflow, software makers and service providers step in to oblige — hiking your personal storage capacity or holding your info-burden on their own servers until you tap it or delete it. But to start managing your business overload, you need to tailor your own criteria for opening and retrieving information. What you need is a personal set of criteria, a system well planned to cut through the clutter, ready to retrieve only the data you need at any moment. You need stringent filtering rules tailored to your needs.

### Pressure Puts Off Planning

Cleaning up your personal information system takes planning and decision-making — and both of those take time because no one else can do it for you. But you're not alone if you find the prospect daunting and other matters more pressing. Can you relate to the following scenarios?

- You're frustrated when an important job is still not ready at deadline — but you're too exhausted to start hunting for missing data.
- When time-driven projects come up, such as year-end reports, you steel yourself for the long night and weekend hours ahead and then reach the finish line, afraid that your hasty findings may prove flawed.
- Senior requesters tell you, "Drop everything, and do this." But you know they'll return shortly for that "everything" you were told to drop.

Even if you are a time-aware professional — even if you list your priorities in writing and struggle to maintain them — you can still get sidetracked by two powerful habits, always painted as virtues: responsiveness and randomness:

### Responsiveness and Randomness: Double Trouble

As a caring professional, you may well have been taught to welcome any of the following:

**Rebecca S. Clement**, Publisher; **Andrew Clancy**, Executive Editor; **Ashleigh Imus**, Senior Editor; **Masiel Tejada**, Graphic Designer; **Andy Ghillyer**, Contributing Editor

- Walk-in workers with legitimate problems. *(The problem is legitimate; the timing may not be.)*
- Unscheduled meetings about other people's priorities *(The solution may lie with them, not with you.)*
- Email demands, all tagged "urgent." *(You and your team need defensive email protocols.)*
- Lengthy phone calls from "the lonely" or disengaged *(You must redirect without appearing brusque.)*
- A crisis unfolding despite your early warnings. *(Politeness forbids saying or thinking, "I told you so.")*

You may shoulder the odious problem yourself, for the sake of peace. You'll earn little or no gratitude, and the upshot is clear: The interrupters will deepen their dependency. They'll be back — and you'll rue your role as rescuer.

### Cool Your Itch to Respond

When you resist the urge to mend other people's problems, you give them a chance to extricate themselves on their own. You dampen their appetite for cheap help and let them expend some effort of their own. Especially for the experienced workers who may report to you, your practice of counting to ten may contribute handsomely to *their* development.

### Time Management: The Oddest Assumption of All

Do you really manage your hours on earth? Your time is one asset you'd like to consider yours alone, and yet, you can't keep it. You can give it as a gift to your loved ones. You can donate it to worthy causes as a volunteer, and you can lease it out to your employers for an agreed sum. But you can't bank it. It cannot be accelerated or slowed. It must be spent the instant it is received and at one fixed rate: 60 seconds per minute, 60 minutes per hour. We cannot choose whether to use it, only how.

## How to Connect Goals, Objectives and Priorities

Goals … Objectives … Priorities. In casual conversation, business people often use the terms interchangeably. This is a mistake with serious consequences. Though the terms are certainly related, they flow in a strict cascading hierarchy, from goals to objectives to priorities. If you attempt to prioritize your daily tasks without a clear picture of the goals and objectives that are driving them, you can invest a lot of time and effort to produce a result that falls short, because the goal never became clear — to you or anyone else.

### The Cascade From Goals to Objectives to Priorities

Here's how the process is meant to operate in business:

**Stage 1: Goals.** Owners or investors and senior managers commit the research, the funds and the impetus to enter a new market, launch a new product or offer a new service. They draw up strategic plans that focus on the end point (the goals), citing the advantages or gains that this enterprise offers. They set out the concepts and parameters, add financial and political support, and lay out the goals for management in ways to motivate eager sign-up.

**Stage 2: Objectives.** Next, division and department heads draw up plans detailing all the diverse elements to be managed — design, engineering, finance, manufacturing, marketing, sales, service and administration. They lay out the programs and processes involved, plan for coordinated results and deploy the startup teams, doling out the budgets and setting up precise deliverables and time lines.

**Stage 3: Priorities.** Now, the actual performers in each department learn about the goals and objectives set by those above them. They accept their assignments and organize the practical task groupings to accomplish them. They make specific plans and schedules to fit this new work into their existing workloads.

In fact, priority setting is not about scheduling — not yet. It's not about when to do the new tasks — it's about whether these tasks should be allowed to compete with standing obligations. Priority setting aims to make goal accomplishment feasible — on both old and new goals.

## How to Set Priorities and Hold Them

Today, you are asked to reset your priorities, not daily but hourly or at the "speed of change." Hundreds of messages can clog your email, voicemail and smartphone. Mergers, acquisitions and reorganizations can leave your head spinning. On some days, managers or customers can paint even the most absurd demands as valid, urgent and non-negotiable. Often, if the requester has enough clout, you accede to the demand and add a few more hours to your unpaid overtime.

A decade ago, most people reported to one boss, so they knew whom to consult about conflicting priorities. Today, you're just as likely to report to several bosses. If your business is built upon matrix management and project management, you may perform different roles in different groups: You may supervise one team, serve on a second and act as internal consultant or SME on a third.

Furthermore, your "virtual" colleagues and clients may access you directly across continents and culture, so your clock never stops.

Hence, you face fuzzier lines of authority and thinner support than ever. As for setting and holding to priorities, you are on your own! You need a good system that suits your style.

### Minimum Requirements for Prioritizing

There is no one best way. But you can build your system on three firm elements:

1. Build your logic on Vilfredo Pareto's Law, the "80/20" law that proposes that 80 percent of your results will come from only 20 percent of your tasks.
2. Defend your logic with performance criteria.
3. Start each day with a written plan: three bullets, right in front of you, on your task screen or on a sticky note at eye level.

Once you embrace Pareto's Law, you can seriously oppose the common dictates that say "do it now!" or "handle a piece of paper only once!" Sure, those rules sound good, but they only make sense if all incoming tasks had equally high impacts. Pareto is right, so only 20 percent of your tasks deserve attention at the best times on your schedule. Further, of the 80 percent of items clamoring for your attention, only 60 percent may deserve your attention soon — somewhere in the middle 60 percent of your day. And the lowest 20 percent may not merit your attention ever!

Hence, your new rule should be, Don't DO it now —VALIDATE it now!

### The Process of Validating Work

Compare new demands against those in your current load. If an issue can really compete in importance and validity, then slot it in and get it done — not "now" — but in a slot that will assure delivery by its deadline. If it's only a mid-value item, then give it a slot on your schedule that cannot intrude on any slot dedicated to your top 20 percent. Or delay giving it any slot at all — instead, post it in a "holding space" for slotting later.

### Standard Lead Time Tool: One Cure for Deadline Dementia

Many smart departments publish a list of common tasks they perform, along with realistic time estimates. They post these on a shared site and encourage requesters to take a look before submitting requests with optimistic deadlines imposed.

When you accept an assignment, ask the requester for an estimate of the time necessary to complete the task. Always do that before accepting a deadline as reasonable. (Mostly, requesters don't have a clue about work time estimates, but ask!) If common sense will let you do an "eyeball" estimate, go ahead. If not, offer to evaluate the job and come back later with an estimate.

Only after you have made a thoughtful estimate can you agree on a reasonable deadline. Next time you start to evaluate a job, don't look at the clock or the calendar. Instead, consider the discrete tasks involved, and decide where on a time line they will fall.

### Show Risks: Offer Options

If you're the one delivering the final product, never opt out of a discussion on conflicting assignments. Instead, take three tactful steps:

1. Show the risks involved if you attempt clearing both tasks at speed.
2. Show options that make practical sense, with roughly matched trade-offs (pain levels) for either side.
3. State your own preferred solution and the reasons for it.

Then, with a clear conscience, you can accept their joint mandate and perform your best effort. By electing to negotiate, you give both parties the right to examine risks and options and to accept the honest advice of the one who must deliver the goods: you!

## How to Tame the Time Log

Time seems to evaporate when you're very busy. If you can discover where your time actually goes, you can capture more value from it and control the leaks that rob you by stealth.

### How Logging Got a Bad Name

The simplest tool for getting control is a time log. But too many users and authors, by misreading the correct uses of logging, have given it a bad name. What do they fear?

- Boredom: Yes, time logging would be tedious if you kept it up for long. But you won't!
- Inaccuracy: People forget to make entries, then try plugging items from memory…then abandon the job. But, it's not crucial to write in every entry. In our system, you enter only those distractions that conflict directly with your top priorities.
- Guilt: People are shocked when they see their time losses; they berate themselves without mercy. But you can take up logging with the conviction that you're not a machine. While you'll never manage time perfectly, your brief, selective logging exercise will help you to protect your top priorities. That's the whole point.

### Selectivity: The Most Vital Secret

If you try to log everything you do all day, you'll not only suffer boredom, you'll get nothing else done. But that's not what we have in mind. Instead, focus your log on a short list of your top three priorities. Then record "changes of direction," noting only the items that intruded into time slots reserved for priorities. On that basis, your simple time log can be designed like this:

1. Start with a simple two-column layout.
2. In the left-hand column — let's call it your "Red Zone" — you list only your top-priority tasks with their allotted time slots.
3. You hope the right-hand column will remain blank. Here, you log only those incidents that you allow to divert you from Red Zone tasks.

### Analyze Your Log to Maintain Momentum

To get maximum value from your logging exercise, ask yourself 10 important questions. Do it while studying your completed chart. In fact, keep asking yourself these questions long after you have stopped logging. They'll help you discover insights and maintain your improved habits:

1. Did you start on your number one goal at the time you intended?
   a. Did anything distract you from starting?
   b. How could you have avoided that distraction?
   c. Once distracted, how long did it take you to recover?
2. What was your longest period, totally uninterrupted on priorities?
3. What was your most productive period? Why?
4. Least productive? Why?
5. To what extent did you achieve your main goals? Were your time estimates adequate? Should you adjust for the future?
6. Did you keep any task that could have been delegated?
7. Concerning interruptions:
   a. Were any interruptions actually more valid than the scheduled task? If yes — and if they'll repeat, then add them to your priority list.
   b. What categories of interruptions were heaviest? Phone? Walk-in? Crises? Self-imposed escapes?
   c. Did you needlessly interrupt anyone else?
8. Contacts:
   a. Were your planned contacts aimed at advancing priorities?
   b. Did they take longer than planned? Was your data ready?
   c. Did you get the right person? Was that person ready?
9. Paperwork and email:
   a. Did you spend time checking your email during time slots intended for priorities?
   b. Did you lose time on paper because of clutter, poor filing, missing data?
10. Monitoring:
    a. Did you have an adequate tracker for monitoring progress, especially on elements of your priority tasks?
    b. Did you use or provide a simple template for reporting progress by any teammates assigned to the task?

Keep your Red Zone log for three days; analyze what it tells you about your current habits, and gain some benefits from your own deeper insights. Then, select just a few permissive habits for removal or remodeling. Give yourself credit for your good habits to assure rapid response and recovery. Reinforce and rejoice!

## PART II: THE NEW TIME TRAPS AND ESCAPES

# Inadequate Planning

How much of your day do you spend juggling the demands of bosses, team members and customers? As your workload keeps expanding, do you find less and less time for planning? Do you reach many a day's end drained by activity but with little to show for it?

There's no more important activity for a serious time manager than a written daily plan. To be sure your plan will stick, you must commit it to writing. Only with your written or visual plan can you stay in control of your day.

Without a written plan, your friendly optimism can overrule your common sense. You take on too much; you put yourself in the middle of power struggles; you allow random interruptions; and you slow to a dead end. Your written plan will help you get your top 20 percent done; it will guide you in judging incoming priorities and will bolster your visceral strength to resist drift.

### Three Barriers to Maintaining Priorities

There are three barriers shared by many managers and technologists who try priority-setting for a brief period and then abandon it:

1. **Confusion of time management rules with priority setting rules.** Time management is tactical — it determines when to do a task that has already

been validated. Priority management is strategic — it determines whether to do a task at all.

2. **Unclear criteria for setting priorities.** Yours may differ, depending on your business or industry, but they must still meet objective, measurable standards or rules for defining where in the queue a task will go.
3. **Fear of negotiating when priorities are threatened.** Once armed with objective standards, you, as the performer or SME, must use your data to highlight risks and negotiate priorities.

## Inability to Say No

As an astute professional, you've learned that the word "no" may insult the ear of a boss, colleague or customer. A flat "no" can damage relationships and stunt your career, exposing you to labels like rude, uncooperative, egotistical, even insubordinate. Yet, you must set some limits, some boundaries, or be forced to accept tasks whose technical or ethical risks are plain as day.

Consider this five-part approach that should get "no" across, firmly but gently:

1. When — for whatever reason — you must decline a request, don't say "no" outright. The moment requesters feel denied or resisted, they stop listening and start building counter-arguments.
2. Open, instead, with a response like, "I see a risk to you." Or, possibly, "I see a risk to our customer/to the public," whatever is true. This way, you raise your requesters' curiosity, not their defenses.
3. Let requesters see the risks graphically. If you are in the same room together, start sketching the risks on a scratch pad. This puts their focus on the page, not on your face. Sometimes, the requester will want to retrieve that sketch if they must make the case, later, with their own higher-ups.
4. Avoid mentioning any problem or inconvenience to yourself or your team. Your requester will expect you to manage your risks — and muffle your pain — in private.
5. Finally, be prepared to illustrate workable options for every risk you list.

## Poor Communication

Despite its challenges, we take for granted that communication is simply a natural activity, a skill or gift we are born with. Through a lifetime of encounters, we ascend to more and more convoluted conflicts in conference rooms, classrooms or courtrooms — communicating every waking hour.

### Five Reasons Why Casual Communication Is Never Casual

1. The words we use have different meanings in different contexts, on paper and even more so in person.
2. The channels we use can carry subliminal meanings: An email of congratulations feels chillier than a greeting card or a handwritten note.
3. The distance between cultures and continents should oblige us to cultivate those nuances we'd sense so easily if we were face to face. A silence on the phone can rattle our nerves, but a face-to-face silence can speak volumes when we can see and read the facial expressions and body language the other person is conveying.
4. The timing and context — ours and the other person's — may contrast greatly during an encounter. If either party feels distracted, tired, suspicious or threatened — for reasons unrelated to the current message — those feelings can bleed into the exchange, distorting or blocking the message.
5. The quantity or volume of data may baffle us too. How much detail should we include in a message? Will basic coverage insult readers' intelligence? Will advanced coverage assume background that may be missing for too many receivers?

## Poorly Run Meetings

We must improve meetings, not abolish them. Human beings exhibit a built-in need to assemble, especially in times of trouble or triumph. So face it: Meetings are here to stay. Virtual or actual — in times of trouble or opportunity, we can make meetings quick, constructive, comforting and compelling.

### Don't Call Meetings Just Because You Can

Here are five ways to make meetings bearable:

1. Call a meeting only on topics requiring two-way communication.
2. Call a meeting only when the topic cannot be covered in a memo.
3. Hold team meetings on a reliable schedule — but without a set length. This gives every member a chance to suggest items of concern for your pre-agenda. Teams work better when they know they

can rely on airing an issue of concern to several team members.

4. Keep meetings short. If you only need 20 minutes, that's all you take.
5. Prepare well. Today's teams are smart and easily bored.

Some suggestions for keeping good order:

- List agenda items in order of impact: If time runs out, damage is minimal.
- Members will not interrupt presenters; instead they reserve questions for a question period that can be slotted after each agenda item or held to a timed Q&A session at the end of the meeting.
- Members will not interrupt one another in mid-sentence or will raise hands to be heard next.
- No "been there, done that" reactions. Don't criticize: Offer a better idea.

## Information Overload and the Paper Chase

Information fuels your enterprise. In a typical year, you may scan industrial and market research, news outlets, learned journals and your corporate intranet — to scan millions, indeed billions of words in dozens of languages. Access is easy; selection is tougher; validation and deployment of the data, even more challenging. So, to gain control, you face two tasks:

1. You must tap information sources efficiently, for precisely the information you need and no more.
2. You must control the paper chase that still rages around you, 30 years after the pundits predicted you'd be paperless.

### First Challenge: How to Gain the Information You Need

For a systematic assessment of what you'll need for any task, your team must think through your data requirements early. You could ask yourselves,

- What information will we need? At what stages of a project?
- Where will the information originate? Which department? Person?
- What deadlines are critical?
- What could go wrong?
- What steps could we take to buffer errors or delays?
- What alternative sources could we tap? When? At what cost?

### The Second Big Challenge: Manage the Information You Gather

Your ability to apply the information you gather will depend on building a logical storage and retrieval system (probably electronic) and on improving your personal organization skills to avoid drowning in paper. Here are a few warning signs:

- Fat file folders clutter the top of your credenza.
- Several tasks are flagged on your electronic organizer, still untouched since yesterday.
- Scribbled scraps of paper — reminders of hallway conversations — lie half buried in clutter.
- Last month's professional journals lie unopened as this month's issues arrive.
- Your coffee goes cold while you dig through your briefcase for a missing flash drive.
- People kid you, kindly or otherwise, about your rumpled desk until an important task, buried in clutter, slips past your notice. Then it ceases to be a joking matter.

## Confused Responsibility and Authority

Sudden change — the one constant in business — brings with it an immediate and dangerous condition: confused responsibility and authority. At the most basic level, they can be distinguished this way: Responsibility denotes a duty or obligation, whereas authority denotes the power to take action. If you impose responsibility on a team member, you must also grant matching authority to complete the task for which he or she is now responsible.

### Five Clarifying Practices

To clarify responsibility and authority on any job being assigned, the boss must provide and the appointee must insist on the following:

1. An accurate job title that clarifies the appointee's level of authority.
2. A written job description agreed to by boss and assignee.
3. An organizational chart that shows who reports to whom and how members and teams interact.
4. A written change announcement to all whose cooperation will be needed.
5. A set of simple metrics to drive regular performance evaluations, to be conducted at intervals frequently enough to allow continuous improvement.

## Attempting Too Much

Have you reached a point where people take your superior service for granted? Do you make everyone happy but yourself? Do you allow important priorities to get buried by convincing yourself that "it all has to get done, anyway"? Keep your eyes open for the day when the overdrive that began as a virtue can morph into a vise drawn ever tighter around your time and your life.

### Four Hazardous Habits of Mind

Four common confessions from perfectionist, workaholic overachievers include,

1. "I needed to keep excelling, even under pressure, to keep up my sense of self-worth, but others were clearly indifferent about the results. They tell me I'm overdoing it, even to this day."
2. "I'm reluctant to delegate, either through lack of faith in others, inadequate practice in delegating or discomfort about my earlier, failed attempts to let go."
3. "Almost daily, I overschedule myself, with unrealistic notions on how much can be done in a day."
4. "Perfectionism drives me to lavish attention on minor details and to keep reworking everything. If my name is on it, it has to be perfect or I can't release it."

### Execute Four Escapes

What can you do to change your mindset and behaviors?

1. You must dump the myth that you work better under pressure. People don't work better under pressure; they just work faster. And that can lead to errors, discovered too late.
2. Don't assume that "it all has to get done" — at least not by you. Discriminate between high- and low-priority tasks. Then, assign and teach a low-priority task to a delegate. Allow for learning and refinement time. Realize that the consequences can't be too high if the priority is actually low.
3. With your team, build a standard lead-time menu showing commonly repeated tasks so requesters learn to make reasonable demands. Post the menu on a shared website. Teammates and requesters will consult it before bothering you.
4. Finally, save your perfectionism for those tasks that warrant it. Make a conscious decision about how good a result must be. Build your quality standards for vital tasks, and then set up your computer to flag any variables from that acceptable range. Your computer will keep an eye on things.

## PART III: PARTING ADVICE

## Where Do We Go From Here?

Perhaps your time logs showed you the truth about where your time has been going. Now, you need an action plan to confirm and consolidate your resolutions about upgrading time management.

Many people, when first introduced to time management, pounce on a specific idea or two — and off they go to reform their practices without a thought about the overall patterns of their lives or the ripple effects of one time management trap on another.

### Expect the Tug of Old Habits

On their own, few people can analyze the causes of their difficulties with time management or understand the invisible habits that cause the problems. Instead, they jump at quick and easy solutions, then wonder why the cure didn't take. In a few weeks, the old ways are back.

Long-term success demands a coordinated approach, one in which you recognize your persistent patterns of behavior and form a systematic plan, sketched out and posted where you can see it. Then, it must be followed, daily, to get you past disappointments.

So don't limit yourself to exploring a few "whats." Instead, work to understand the "whys" — the habits of your lifetime. Then, you'll find it easier to adopt behaviors that conserve time for the people and the passions you value at work and at home.

You are in charge of your time, but your time-based decisions will impact others. Let people know what you're doing. Enlist their help, and return the favor by sharing the time-saving techniques you learn. Lead by example. Few business development ideas are more team-friendly than good time management.

### RECOMMENDED READING LIST

If you liked *The Time Trap*, you'll also like:

1. ***Time Traps* by Todd Duncan**. Sales expert Duncan explains why you should abandon time management and instead adopt task management.

2. ***The 5 Choices* by Adam Merrill, Leena Rinne and Kory Kogon**. Be empowered to make more selective, high-impact choices about where to invest your valuable time, attention and energy.

3. ***Extreme Productivity* by Robert C. Pozen**. Pozen provides proven antidotes to productivity-draining activities such as meetings, email and an unbalanced workload.

# The Wisdom of Oz

## Using Personal Accountability to Succeed in Everything You Do

by Roger Connors and Tom Smith

### THE SUMMARY IN BRIEF

What are your dreams? What do you want? This book will help you get whatever you consider worthwhile in life. Simply put, when you unleash the power of personal accountability, it will energize you in life-altering ways, giving you a concrete boost that enhances your ability to think, to withstand adversity, to generate confidence, and to increase your own natural emotional, mental, and intellectual strength.

In *The Wisdom of Oz,* Roger Connors and Tom Smith present the practical and powerful principles of personal accountability in simple, down-to-earth terms that you can apply. Connors and Smith demonstrate that by taking personal ownership of your goals and accepting responsibility for your performance, you also take control of your success.

You will discover that while no one will ever wave a wizard's wand and magically solve all your problems, there is a way to experience the near magical impact of personal accountability.

### IN THIS SUMMARY, YOU WILL LEARN:

- Why accountability is a personal choice to achieve desired results.
- The difference between Above The Line thinking and Below The Line thinking and the impact it can have on achieving your goals.
- The four Steps To Accountability: See It, Own It, Solve It, and Do It.
- The simple questions you need to answer to See It, Own It, Solve It, and Do It.
- Suggestions to help you think outside the box when trying to Solve It.
- How to use positive accountability to overcome circumstances.

# THE COMPLETE SUMMARY: **THE WISDOM OF OZ**

**by Roger Connors and Tom Smith**

**The authors:** Roger Connors and Tom Smith are co-founders of Partners In Leadership, the Accountability Training and Culture Change Company, with thousands of clients all around the world. Their principles of personal accountability are presented in simple, down-to-earth terms that can be applied in all aspects of life. They are also co-authors of the *New York Times* best-selling books *The Oz Principle, How Did That Happen?* and *Change the Culture, Change the Game.*

*The Wisdom of Oz* by Roger Connors & Tom Smith. Copyright © 2014 by Roger Connors & Tom Smith. Summarized by permission of the publisher, Portfolio/Penguin, a division of Penguin Group. 144 pages, $26.95, ISBN 978-1-59184-715-1.

## If I Only Had A...

Most of us have seen the iconic 1939 movie *The Wizard of Oz* so many times that we know the story and songs by heart. Why do Dorothy, the Scarecrow, the Tin Man, and the Cowardly Lion touch us? Like all great entertainment, the story resonates. It hits home. We see ourselves in the characters and wish we possessed the power, the brains, the heart, and the courage to make our own dreams come true.

Think about what you want. What you really want. *If I only had a ...* Is it a promotion or raise? Finding a new job? Overcoming a persistent challenge or obstacle? We call the worthwhile things we want in life results. But they don't come easily.

### Get Off the Couch!

On March 22, 2012, 35 days before the country's presidential elections, the Malian army stormed the presidential palace, overthrowing the western African country's 20-year-old democracy. "It was a tragic moment when the coup happened," says Yeah Samake, mayor of a small town located approximately 40 miles from the chaos. "I came into my living room and completely collapsed on the couch. [Then] my wife came and kicked me. I couldn't believe it. I told her, 'I am looking for sympathy here. Why are you kicking me?' She only said, 'Get out there and go do something.'"

Whether you get off the couch on your own or require a little nudge from somewhere else, the point is to get out there and go do something. Mayor Samake's wife's kick gave him the resolve to get off the couch, get in the car, and drive through five rebel checkpoints into the heart of chaos.

Impressed by his courage, the rebel leader, Captain Amadou Sanogo, invited Mayor Samake to speak to the Malian people on national television. Samake later did just that, denouncing the coup and demanding that power be restored to the people. Yeah Samake went on to become the democratic voice of his nation and made a real difference in the reinstatement of Mali's democratic presidential elections.

**Only you can unleash the positive power of personal accountability to overcome the obstacles you face and achieve the results you want.**

We call this The Wisdom of Oz. Understanding this "big idea" will help you tap into this power of personal accountability. Getting off the couch, dealing with your circumstances, and going after the result lie at the core of The Wisdom of Oz.

### There Are No Wizards!

In *The Wizard of Oz,* we meet Dorothy, the Scarecrow, the Tin Man, and the Cowardly Lion, who, through no fault of their own, find themselves in circumstances beyond their control.

All of these timeless characters initially felt victimized by their shortcomings and circumstances. They believed they could not possibly change things on their own, so they set off on the yellow brick road to the Land of Oz in hopes of finding some all-powerful Wizard who would solve all of life's problems for them.

You remember the story. Arriving in the Emerald City after a treacherous journey, Toto, Dorothy's adorable little dog, pulls back the curtain to reveal a truly powerless Wizard, one who pulls levers and blows smoke but can do nothing for them.

Each of these characters eventually rose above their circumstances, their fear, their errant beliefs and shortcomings, to achieve their desired results. Getting what they wanted had nothing to do with the powerless Wizard and everything to do with their own powerful inner commitment to achieve their desired results. They

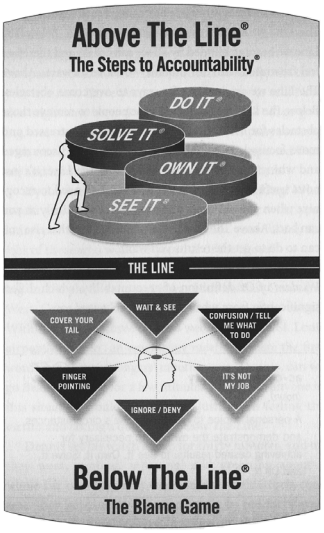
conquered their challenges and fears and got what they wanted by working together, doing their best, and finding the power within.

### Making the Choice

Greater accountability is a *choice,* perhaps the most powerful choice you can ever make. Choosing accountability will empower you to overcome obstacles and succeed in everything you do. This is how you put the Oz Principles to work: by recognizing that you can't change yesterday but you can choose to take charge of what happens today.

Think about a major result you want for yourself, or an obstacle blocking your progress. Write it down; carry it in your purse or wallet; tape it on a bathroom mirror. The more concrete and simple your goal, the better. Pick one thing, some specific goal, then apply what you are about to learn and watch it work.

## You Can't Go the Way You Came



The solution to most of life's problems and opportunities is a strong dose of personal accountability. Tragically, however, people typically view accountability as somethign that happens to them when things go wrong. Does the mere mention of the word "accountability" trigger your natural fight-or-flight instinct to run for cover in order to avoid the fallout you just know is coming? This negative and uninspiring view of accountability is reinforced in this common dictionary definition:

*Accountability (noun): Subject to having to report, explain, or justify; being answerable, responsible.*

With a definition like this, no wonder people have problems accepting accountability. Passing the buck, dodging the bullet, running for cover — that's the natural human reaction when it comes to the old textbook notion of accountability. Facing this kind of accountability, people just naturally resort to the avoidance strategies we human beings use to get off the hook, whether or not we were really ever on a hook at all.

You unleash the real power of personal accountability when accountability becomes something you do to yourself voluntarily to ensure success, not something you're forced to do to account for failure.

The secret sauce is the Steps To Accountability. In the illustration you will notice a line separating Above The Line thinking from Below The Line thinking. Above The Line is where you take personal accountability to overcome the obstacles and achieve the results you want to achieve. Here you take the steps to See It, Own It, Solve It, and Do It. The Steps To Accountability can have a magical effect on how you think and act.

Below The Line is where we can all get stuck in the blame game, focused on excuses rather than results. Above The Line we are looking for ways to overcome obstacles. Below The Line we are looking for people to remove those obstacles for us.

With the Steps To Accountability in mind, here's The Wisdom of Oz definition of accountability, which differs significantly from what you're probably used to:

*Accountability (noun): A personal choice to rise above one's circumstances and demonstrate the ownership necessary for achieving desired results: to See It, Own It, Solve It, and Do It.*

### Life is Always Better Above The Line

It's important to realize that the Steps To Accountability only work if you become personally accountable for how you *think* and *act*. The goal is to consistently think Above The Line.

You are only human if you're thinking about all the other people in your life who you believe block your ability to get what you want: All those who are Below The Line in their own lives and how they rub off on you. If you're thinking this, we simply ask, who is the most important person in your life who needs to be Above The Line? Obvious answer: you! As Socrates once said, "Let him that would move the world first move himself."

What makes some people crumble under hardship or adversity and stay "on the bench" while others soar above their circumstances? Taking control of your circumstances, rather than have your circumstances control you. That's the essence of what it means to move Above The Line.

Dorothy easily could have stayed in Munchkinland, where she was instantly adored. But being queen of the

Munchkins wasn't what she wanted for herself. Wanting a better you is a good thing.

## Lions and Tigers and Bears, Oh My!

Nothing much good happens Below The Line. Problems don't get solved, goals aren't attained, and dreams die. Sure, you can get some sympathy; you may even get off the hook, at least temporarily. But real results? Forget it.

The lesson we should all learn is that all the "blame-storming" in the world will never move you closer to the success you want. Finding convenient reasons to shift responsibility or blame is never healthy and never brings better results.

Now, this doesn't mean there aren't legitimate victims, because there are. Those who have been injured or suffered great tragedy have every right to remain victims as long as they like. No one would deprive them of those feelings. Yet all victims must ultimately decide how long they will stay stuck in their suffering. In the end it is still a choice, though sometimes a difficult one.

### What It Means to Be Below The Line

So what does it mean to be Below The Line? It simply means to have a mindset that allows you to stay stuck, a victim of your circumstances. To reside Below The Line means you have stopped trying to overcome the obstacles and have decided that the solution lies beyond you, out of your control, that someone else will need to solve the problem for you.

The gravitational tug from Below The Line is ever constant because the obstacles and challenges keeping us from what we want are real and often very hard to solve. Because they are real issues, they legitimize the idea that we are stuck: *Surely, everyone can see that I am justified in feeling this way.*

### Time for *You* to Rise Above The Line

This is what The Wisdom of Oz is all about: guiding you through a concrete, step-by-step process of shedding victimhood and becoming a results-driven, accountable, and vibrant person. So how do you leave the victim cycle? Just how do you shed Below The Line thinking and behavior? You keep what you want firmly in mind and choose to rise Above The Line by learning to consistently See It, Own It, Solve It, and Do It — the four Steps To Accountability. Although it isn't easy, it is possible when you're armed with a working knowledge of these four Above The Line steps — steps you are now prepared to learn how to use.

## The Cowardly Lion: Mustering the Courage to See It

Seeing the world as it really is takes courage. How do you work up the courage to admit your reality may not actually be *the* reality? As with everything related to accountability, it all starts with making a personal choice.

It is human nature to "lock in" on what you are familiar with and "block out" everything else. This lock-in/block-out reflex produces blind spots that limit your ability to solve problems, improve relationships, overcome obstacles, and get the results you want.

When it comes to our ability to See It, we all have blind spots that give us a distorted view of reality, allowing us to see only part of the picture — that part of the picture we are already familiar with.

It is nearly impossible to take accountability and successfully navigate the See It step when you don't have a full view of what you're really facing. So that means you have to look smart and hard, so you can See It. The more you improve your ability to See It, the more successful will be your journey Above The Line.

### The "See It" Question

Recognizing the need to See It is one thing. Actually Seeing It is another, because people want what they want and want it now. This wanting can be blinding. What is the key to moving from Below The Line to Above The Line? Surprisingly, asking and answering one simple question:

**What is the reality I most need to acknowledge?**

Over the many years we've spent working with people who are trying to master the See It step, we've discovered that the very best way to overcome the blind spots is through feedback, gained primarily in conversations with people who can help you see the whole picture. If you are a husband and want to know how you are doing in your marriage, ask your wife. If you want to know how things are going at work, ask your boss and coworkers. Simply ask, "What feedback do you have for me?"

After asking for the feedback, you then need to do the hard part and actually listen to what they're saying, no matter how painful. Humility, gratitude, openness, honesty, patience with self, and a desire for better results are your best friends when it comes to getting feedback.

### What Happens When You Don't See It

The ability to muster the courage to See It and examine your blind spots will not only help you avoid life's big problems but also help you with the little everyday troubles. The See It step is the first step Above The Line, and it must be taken with courage, resolve, and determination in order to grasp the full reality of what you are facing.

If the Cowardly Lion chose to summon the courage to leave the shadows and seclusion of the forest to march up the yellow brick road, so can you. We promise you, the view is much better up Above The Line, where life is a lot more fun and rewarding for those whose eyes are wide open.

## The Tin Man: Finding the Heart to Own It

Remember how the Tin Man blamed his heartless predicament on his creator, claiming to be hollow inside because the tinsmith "forgot" to give him a heart? Did the tinsmith really forget, or did he just figure it was the Tin Man's job to develop heart himself?

As with everything related to accountability, true ownership does not come from outside — it comes from within. No one can make you Own It. There is no magic wand.

Why do we care more for the things we "own" than for the things we "rent?" Perhaps it's because we don't have as much invested when we simply rent or borrow; there's not as much at stake. When you rent, you can walk away without losing anything. At the core of it, owners are just more invested than renters; they are "all in."

When it comes to achieving the result you want, are you a renter or an owner? Are you approaching what you want with the high level of commitment, interest, and investment that only an owner can possess? Or are you going through the motions, only half committing to the goal, leaving yourself an easy exit in case things don't go the way you hoped?

We would go so far as to say that the ability to Own It is a key characteristic that often separates people who are highly successful from those who aren't. When you Own It, you set yourself apart from the crowd.

### The "Own It" Question

The question you should ask yourself to make sure you Own It is:

**How am I contributing to the problem and/or solution?**

If it's a problem you're trying to solve, your ability to Own It will pave the way for the next step Above The Line. If it is a challenge you are taking on, then an Own It mentality will fill you with the drive to get there.

Making your desired results a reality requires you to own both the problem and the solution. People most often fail to own their circumstances because they cannot bring themselves to accept the other side of the story — what we call the *accountable side*. When you focus only on what happens to you, as opposed to what you did or didn't do, you block out this other side of the story.

To Own It you must find the heart to see both sides of the story, linking what you have done, or failed to do, with your current circumstances.

Making all the right connections in the Own It step sets you firmly on your own path of living in a world Above The Line. The power already lies with you to overcome obstacles and get the result you want. You empower yourself when you take the Own It step.

## The Scarecrow: Obtaining the Wisdom to Solve It

After meeting the Wizard, it didn't take Dorothy and her friends long to realize he could not help them. They come to know what you already know: Solving It is about you creating your own way to move forward, your own way to overcome the obstacles you face in order to get what you want in life.

Typically, someone makes it to the Solve It step because they sincerely want to achieve some challenging goal or solve a sticky problem. This takes belief. It takes tenacity. The great news is that by following the Steps To Accountability, you will get there.

When you take the Solve It step, prepare to go the distance. What you're after is likely not going to be easy. Pursuing a major goal takes resolve, persistence, and a huge amount of passion to find solutions to overcome obstacles and make it happen.

The Solve It state of mind is a creative, "as if my life depended upon it" kind of thinking, a thinking that brings solutions for challenges and obstacles that we often believe are outside our control. Creative solutions come when you put everything on the line. So when you take the Solve It step, although your life may not actually be at risk, your happiness is.

### The "Solve It" Question

When taking the Solve It step, you should ask:

**What else can I do?**

Repeatedly asking "What else can I do?" forces you to drill down through any obstacles to find solutions, solutions that are often buried deep in the rich soil of innovation and creativity, solutions that almost always lurk below the surface of your easygoing, everyday, even routine way of thinking.

Taking the Solve It step is not for the faint of heart. It is hard work but will yield rich rewards.

Successful people don't always win, but they do spring back up when they fall. Your Solve It ideas won't always work. Solve It thinking means to keep trying, keep moving. We like the way football coach Vince Lombardi put it:

"The greatest accomplishment is not in never falling but in rising again after you fall."

### How to Solve It

Here are some suggestions about how to think outside the box, suggestions that will help you deal creatively with any obstacles you meet during the Solve It step:

- **Brainstorm with the right people.** Try to find someone who has achieved a similar goal or solved a similar problem. Write ideas down, and loosen up your thinking.
- **Keep asking, "What else can I do?"** Allow your mind time to think about it.
- **Think differently.** Interview people and ask, "What would you do?"
- **Do your homework.** Utilize the Internet and the library. Find out what others did and how it worked for them.
- **Test your assumptions.** Ask how you can get outside the box. Fight for new ways of thinking.

Every successful journey Above The Line begins by asking a single question: "What else can I do to achieve the result I want?"

## Dorothy: Exercising the Means to Do It

As you may recall, in *The Wizard of Oz* Dorothy eventually discovered that all she had to do was click her heels three times and focus on what she most wanted by saying, "There's no place like home." From the moment she touched down in Oz, her ability to exercise the means to Do It by enlisting the help of her friends, listening to the advice of those she came to trust, showing resourcefulness in solving her problems, and being patient with staying the course so that she could make it back home — all moved her beyond angry apple trees, poisoned poppies, flying monkeys, and wicked witches. She knew what she wanted to accomplish and kept after it. When it comes to the Do It step and achieving what you want: Trying is just not in the equation. It's all about doing.

### Walking in Circles

Have you ever felt that after setting off on a journey to accomplish your goal or to solve a pesky problem, you were wandering in endless circles, unable to make any real progress? Even when you're ready to Do It and focus on the direction you want to go, the littlest things can veer you quickly and surprisingly off course.

When you set off to Do It, how can you keep from walking in circles — that is, going through the motions but making no real progress? First, you must have a clear path. It may not be a yellow-brick-road kind of clear, but you should lay out a clear plan with the steps you will take to accomplish whatever it is you want to accomplish. Second, you need determination to do the things you said you would do.

One more caution: You must be prepared to be tested in your resolve to succeed as you take the Do It step. Every good thing you want to accomplish — solving a problem or achieving a goal — comes with its own challenges, and you will certainly come across some of these on your journey:

- Your faith in your ability to Do It will be tested.
- Your desire to get it done will be challenged, your resolve stretched.
- Your ability to stay Above The Line will be tried.
- Your willpower to overcome obstacles will be drained by a desire to take the easy way out or slip back into the comfort of bad habits.

Here's what we have learned when it comes to these soul stretchers: *You've got to want it more than you don't want it*. Success only comes when you hit that tipping point and you want it *more* than you don't want it. That's when real movement occurs.

### The "Do It" Question

The following all-important Do It question should help you concentrate on what you need to do to get what you're after. At this stage of the Steps To Accountability, ask yourself:

**What am I accountable to do and by when?**

By asking this question, you remove any potential for confusion and you create a concrete plan of action — a plan that includes all the things you are going to do and the dates and times by which you are going to do them. Be sure to break down your plan into small, achievable pieces. Pace yourself, but always include a "by when" date and time in your plan. You should feel accountablefor your, "by when," and do everything in your power to follow through by the time you set.

Finally, if you want to increase the probability of doing it, tell someone about it. Make your plans and deadlines visible; put yourself out there. There is power in sharing your plans.

### The Gravitational Pull Below The Line

When you are working to Do It, there is a gravitational force constantly tugging on you, trying to drag you down Below The Line. This force gets bigger and stronger as the challenges get larger and tougher.

But those reasons become excuses as soon as you start using them to stop trying to solve the problem. Let's talk

for a minute about two of those forces constantly tugging you Below The Line:

- **First: Other people.** The people around us and the views they have been conditioned to hold can either help us or hurt us when it comes to reaching for our dreams. Ask yourself if the people you spend time with are good for you? Are you good for them? Are you beating up on one another with no idea why?
- **Second: Health.** Serious health issues strike people and can totally immobilize them. Day-to-day health challenges that plague most of us come with a choice: Let it pull you down, or rise above it all.

### Doing What You Say You Will Do

There is no doubt that Dorothy really wanted to get back to Kansas, but getting home took more than desire. She had a plan and knew what she and her new friends needed to do and when they needed to do it. This kind of focused action comes from committing yourself at whatever cost, discovering your own unique means for Doing It, and then Doing It until it's done. Imagine if Dorothy had stopped before bringing the witch's broom back to the Wizard. She had come so far, but all her effort would have meant nothing had she and her friends not finished the job.

Doing It is more than just working harder. It's more than just fighting like crazy against any obstacle. It's organizing what you're going to do. It's working smart. Building a plan, following a path, bringing a logical flow into your actions.

Doing It means wrapping your arms completely around what you need to do and when you need to Do It and then doing what you say you will do to make it happen.

## You've Always Had the Power ...

At the end of *The Wizard of Oz* we learn that Dorothy always had the power to go back to Kansas — she just didn't know it. Not even the good witch Glinda's magical power could whisk Dorothy home; she had to discover this power inside herself — the power to control her circumstances and not let her circumstances control her. The same applies to all of us. And when that discovery happens, the sky's the limit for what we can achieve.

People who make the personal choice to take control of their lives and overcome all the traps, tricks, and troubles that we all face are the people who succeed. The results of doing so can be miraculous — for your own life and the countless lives you go on to touch.

By now you should have learned more about the power of personal accountability than you ever knew before, maybe even more than you've ever wanted to know. We hope you are ready to unleash this very real power in your life by making a choice and acting on it.

Your choices — *acts of selecting from two or more possibilities* — will either move you Above The Line, where you take charge of making it happen, fulfilling your aspirations, or solving that problem you face, or drop you Below The Line, where you risk wallowing in the blame game while getting trapped in the victim cycle.

But you can't be in two places at one time. That may seem obvious, but it is human nature to straddle the line, to sit on the fence, to wait and see. In the end, you have to choose one or the other.

### The Air is Better Above The Line

Just like a breath of fresh air, accountability allows a person to think more clearly about everything. Given our ongoing 30-year experience studying the impact of personal accountability in people's lives, and with millions of people as our "laboratory," we have come to realize that accountable, Above The Line people enjoy quite a few benefits. They

- Are empowered to see things as they really are;
- Find solutions that most others don't;
- Learn and grow from negative experiences when others would get stuck;
- Avoid having problems in the first place;
- Enjoy better, stronger, more fulfilling relationships;
- Experience less of the stress and depression that always comes with victimization;
- Have more inner confidence that they can Do It.

You get the point: Greater accountability brings all kinds of personal payoffs.

### Put It to the Test

While inaction is the assassin of accountability, taking the right actions will accelerate your journey to results. And those actions are the Steps To Accountability: to See It, Own It, Solve It, and Do It. This means asking yourself the right questions to help you achieve your goal, solve the problem, or finally experience the performance breakthrough you've been looking for.

After you identify exactly what you want, it is time to apply the accountability questions to it. Each of these questions is specifically designed to help you effectively move Above The Line:

1. **See It: "What is the reality I most need to acknowledge?"** This question is key to figuring out what is really going on. Here are other questions you can ask yourself to expand your ability to See It:
   - What is not working?
   - What are the "hard things" I need to hear?
   - Who do I need to ask for feedback?
   - What am I pretending not to know?
2. **Own It: How am I contributing to the problem and/or solution?** The answer to this question will help you see why you are where you are and what you can do about it. Some additional questions you can ask yourself:
   - What role have I played in my current circumstances?
   - Am I trying to be in two places at one time?
   - Am I totally committed to moving forward?
   - What feedback would I give someone else in this same situation?
3. **Solve It: Your answers to the powerful Solve It question, "What else can I/we do?" will reveal new ways to move forward and see real progress.** Consider these additional questions:
   - If everything depended upon me, what else would I do?
   - What can I control that I have assumed is outside of my control?
   - If I were to do things differently, what would I do?
   - If my life depended upon it, what else would I do?
4. **Do It: What am I accountable to do and by when?** This final Above The Line question will help you lock in a specific plan to move forward. Additional questions you can ask yourself:
   - What realistic deadlines can I give myself?
   - Have I broken down the plan into simple, actionable steps?
   - Who can I tell my plan and report my progress to?
   - What adjustments would make my plan even more realistic?

Don't be discouraged if it takes some time to make the progress you want to make. Be patient with your plans, and remain consistent in your efforts to Do It. They will pay off.

## A Word of Warning

**Practice Before You Preach:** Just remember, it is not "Practice what you preach," it is "Practice before you preach." In our experience, when you do this, other people will see the positive changes in you and wonder what's in your water — what you've been doing. As you work with others and share what you've learned, you will help them escape their bad Below The Line habits while improving your own ability to remember these principles and make them part of your daily life.

**Manage Your Stress:** In your quest to live Above The Line and accomplish your goals, fix your problems, or set new records, you may be driven to overachieve in one way or another. That can get stressful. We all need to manage our stress.

Bottom line: Enough sleep, regular exercise, and healthy eating can work more wonders than all the medications in the world. Be sure to pay attention to the basics. They matter.

Even though we've spent nearly 30 years eating, drinking, living, and sleeping accountability, we would be the first to tell you not to go overboard in your own journey toward greater accountability.

### Keep Stepping!

The Wisdom of Oz is about discovering the power of taking personal accountability for the things you want to do and the problems you want to solve. It's about taking the Steps To Accountability to See It, Own It, Solve It, and Do It and being filled with the knowledge and desire to stay Above The Line. It's about overcoming your circumstances and not being overcome by them.

It's worth repeating. The Wisdom of Oz is, above all, simply this: **Only you can unleash the positive power of personal accountability to overcome the obstacles you face and achieve the results you want.**

# Writing Without Bullshit

## Boost Your Career by Saying What You Mean

by Josh Bernoff

### THE SUMMARY IN BRIEF

*Writing Without Bullshit* is the first comprehensive guide to writing for today's world: a noisy environment where everyone reads what you write on a screen. The average news story now gets only 36 seconds of attention. Unless you change how you write, your emails, reports and web copy don't stand a chance.

In this practical and witty book, you'll learn to front-load your writing with pithy titles, subject lines and opening sentences. You'll acquire the courage and skill to purge weak and meaningless jargon and wimpy passive voice. And you'll get used to writing directly to the reader to make every word count.

At the center of it all is the Iron Imperative: *Treat the reader's time as more valuable than your own*. Embrace that, and your customers, your boss and your colleagues will recognize the power and boldness of your thinking.

Transcend the fear that makes your writing weak. Plan and execute writing projects with confidence. Manage edits and reviews flawlessly. And master every modern format, from emails and social media to reports and press releases.

Stop writing to fit in. Start writing to stand out. Boost your career by writing without bullshit.

### IN THIS SUMMARY, YOU WILL LEARN:

- Techniques that will help you adhere to the Iron Imperative.
- Why fear generates bad writing habits and how to get over it.
- Specific needs and expectations of business readers.
- To plan longer projects and embrace collaborative writing.
- To write and promote intelligently for online audiences.

# THE COMPLETE SUMMARY: **WRITING WITHOUT BULLSHIT**

**by Josh Bernoff**

**The author:** For 20 years, Josh Bernoff was a principal analyst and senior vice president of idea development at Forrester Research, the elite technology research company. He has written software documentation, online help files, press releases, newsletters, magazine articles, web copy, over a hundred research reports and four books. His first book, *Groundswell: Winning in a World Transformed by Social Technologies*, written with Charlene Li, was a *BusinessWeek* best-seller. *Writing Without Bullshit: Boost Your Career By Saying What You Mean* by Josh Bernoff. Copyright © 2016 by Josh Bernoff. Summarized by arrangement with HarperBusiness, an imprint of HarperCollins Publishers. 304 pages, $23.99, ISBN: 978-0-06247-715-6. ## Change Your Perspective

### Transcend Bullshit

The tide of bullshit is rising. Your email inbox is full of irrelevant, poorly written crap. Your boss talks in jargon and clichés. The websites you read are impenetrable and incomprehensible.

Bullshit is a burden on all of us, keeping us from getting useful work done. Technology has made it breathtakingly easy for anybody to create content and distribute it to thousands of people. Unfortunately, nobody told those creators what it takes to create good content, so we're stuck wading through a deluge of drivel.

You know this is a problem. It's also an opportunity.

One principle powers everything else you're about to read. It's called the Iron Imperative: *Treat the reader's time as more valuable than your own*. That couldn't be simpler. And yet everything that's wrong with the way businesspeople write today stems from ignoring this principle.

Bullshit is communication that wastes the reader's time by failing to communicate clearly and accurately. The biggest problem is lack of clarity. Jargon, overuse of qualifying words like "very" and "deeply," confusing passive sentences, poorly organized thinking and just general rambling on: That's bullshit. Those are constructions that hide meaning rather than reveal it.

Your objective in learning to write without bullshit is awareness of your own habits and why they exist. With that awareness and some tips on ways to do better, you can improve. The goal is not perfection; no writing is perfect. The goal is to understand what it takes to be better and to create content that stands out from the ordinary bullshit-laden writing that surrounds us all at work.

Learning to write this way will feel like learning yoga or skiing. You'll learn new ways to do things that will feel a little weird. You're going to have to unlearn some of what you learned about writing, which will slow you down at first.

But very soon after, you'll begin to internalize these techniques. You'll be able to write shorter and faster. As you put this new, bold content out into the world, people will notice you. They will thank you for your clarity and directness. You will both feel and reflect integrity. And you might even get some of your work done a little quicker.

### Seize Your Opportunity

A miasma of word pollution pervades our everyday business lives. One simple sentence explains how we got here: We spend all day long reading on screens, and what we read is unedited text created by poorly trained writers.

Reading on a screen is hard — especially when it's a five-inch smartphone screen. But increasingly, computer and phone screens are what we read all day. What is this doing to the way we read?

Josh Schwartz, chief data scientist at Chartbeat, says the average reader spends no more than 36 seconds on the average news story. When the company tested the comprehension of people who'd read a news story, they found that only 37 percent could answer a question about a detail at the end of the article, a result that's only slightly better than guessing. The issue here is how reading on-screen impairs concentration.

**Rebecca S. Clement**, Publisher; **Sarah T. Dayton**, Editor in Chief; **Ashleigh Imus**, Senior Editor; **Masiel Tejada**, Graphic Designer; **A. Imus**, Contributing Editor

Also, content is very different from what the previous generation of office workers consumed. Most of what you read comes directly from the fingertips of the person who wrote it to your eyeballs, with no editorial process. Not just editing for grammar — no one is editing for content, either. With no editors, clarity and accuracy are hit or miss, and bullshit is inevitable.

Finally, writing that succeeds in the cluttered read-on-screen environment of today needs to follow a different set of rules. In high school, you follow a rubric called the five-paragraph essay. But this training won't teach you to think very deeply or make your point in a way that sticks.

Learn to clear away the crap, regain your integrity and say what you mean. You could learn to uphold the Iron Imperative and treat the reader's time as more valuable than your own. Your readers will notice. And against a gray background of unmitigated bullshit, your bold writing will stand out.

What you need is courage and a clear set of instructions.

## Change What You Write

### Move Beyond Fear

Business writers write for one reason: to get things done.

Practical writing may sound more straightforward, but in reality, it's not, because of the fear factor. In business, fear generates bad writing habits. Feeling fear in the workplace is normal; there are risks in everything you write. You fear taking a stand, being held responsible, being wrong. Each of us would prefer to write with integrity rather than out of fear. We want to get a reputation for telling the truth, not hiding it.

But while integrity is in our hearts, fear poisons what we write. Fear destroys clarity and muddies up our writing. You cannot change how you write until you acknowledge it. The trick is to write boldly even though you are afraid. Let's start with the most important thing you can do to communicate better: Write shorter.

### Write Short

Use fewer words. Of all the ways to communicate boldly and powerfully in a noisy world, this is the most effective. Get to the point quickly, deliver your message and let readers get on with the rest of their day. Remember the Iron Imperative: Treat the reader's time as more valuable than your own.

In the WOBS Writing Survey, business writers were asked what problems frequently made the material they read less effective. They cited one problem more than any other: 65 percent agreed that the material they read was frequently too long.

Your ideal should be tight writing. Eliminate everything you don't need. The tighter you write, the more persuasive you will be. Don't just trim the fat. Lop off the stuff you liked but that isn't helping enough.

Here are a few tricks for you, listed in the order you should use them, starting with broad advice and going down to the line-editing level:

**Edit everything.** No one writes tight prose on the first draft.

**Aim for a word count.** Your emails should be under 250 words. Your blog posts should be under 750. Learn the feel of a 100-, 300-, 500- or 1,000-word hunk of prose.

**Say what you really mean.** Sometimes you have to draft a whole piece to understand what you really mean. That's okay, as long as you go back and get rid of the parts that no longer apply.

**Start boldly.** Introductory text is wasteful — scrap it. Your first 50 words should intrigue the reader.

**Organize relentlessly.** Have you hit the same point in several paragraphs or sections? Pull them together and eliminate the redundancy. Reorganize prose around the main points.

**Prune sections and arguments.** If you've got five sections, could you make do with three or four? Could you cut a whole paragraph without weakening the argument?

**Use bullets or tables.** Lists written out in prose (e.g., "Firstly," "Secondly," or "On the one hand," "Alternatively") take up extra space. Where possible, convert to a bulleted list.

**Use graphics.** A simple diagram is often easier to comprehend than a lump of prose.

**Trim connective tissue.** Look for long sentences and break them into shorter ones. This makes prose easier to digest.

**Delete weasel words and qualifiers.** Every "very," "considerable" or "on the other hand" not only weakens your prose, it makes it longer.

### Front-Load Your Writing

"Front-loading" your writing is putting the conclusion up front. To master this way of thinking, you must invert what you learned in school about reasoning and writing. You learned to start with a warm-up, then

reason deductively, starting from first principles and reaching a conclusion.

Business readers have no time for warm-ups and lack the patience for extended reasoning unless they know the payoff up front. So start with bold statements and conclusions. Then follow with the reasoning that got you there. That way, readers who don't read the whole document will still benefit from reading your conclusion.

Here are some good examples of subject lines for emails to colleagues:

- July sales exceed quotas by 20 percent.
- We must respond quickly to competitor's new features.
- Change in benefits requires your attention.

Here are some terrible subject lines:

- Some things that are on my mind right now.
- Three ideas about our product.
- Time to get ready for a big change.

The first three subject lines promise content. The second three could be anything; recipients might open them but might not.

Likewise, documents should hook people with the title and opening. For blog posts, write titles that intrigue both people and Google.

## Purge Passive Voice

Passive voice makes your writing muddy. It has its uses, but you're using it far too often. Everyone does.

In a passive voice sentence, the subject of the sentence is not the actor performing the action. The sentence starts instead with the noun that the action is done to. The missing actor at the start of the sentence obscures the meaning. For example, in the sentence "Attention must be paid to the state of our nation," who is supposed to pay attention? That's the missing actor. Grammatically, passive voice sentences include some form of the verb "to be" (" is," "was," "ought to be," "have been," "should be" or "can be," for example) plus a past participle.

Every passive voice sentence sets up uneasiness in readers' minds. They wonder what unseen force is responsible for the actions they're reading about, because the passive hides the "who" in sentences. The more passive voice, the more uneasy people get. This uneasiness wastes readers' time, and that violates the Iron Imperative.

Passive voice is everywhere, but it's especially common when people want "something to be done." They write a report saying what needs to happen but hide who has to do the work. If you try to act on a recommendation like this, you immediately get stuck. You can't figure out who's supposed to do what.

Here's a sentence from a report that some folks at the University of Massachusetts wrote to analyze the cost and challenges of mounting the Olympic Games in Boston, with the passive constructions highlighted in bold. "[These are] issues that **will need to be closely monitored** in order to ensure the public sector **is protected** from extensive financial commitments." Who is supposed to monitor the issues? Who is protecting the public sector? Somebody in government, but they're not saying who.

While many passives are just lazy writing, fear is also a causative factor. You either don't want to say who's responsible for something or don't want readers to blame you. Writing these sentences in active voice is an act of courage and one your readers will respect.

To rewrite passive sentences, check that verb. Ask yourself who is monitoring or protecting. When you've answered the question, rewrite the sentence with that person or entity as the subject. Rewriting passive voice makes you think harder about what you're saying. It may require research to prove an unsupported statement. You may need to rethink the sentence altogether.

## Replace Jargon

Jargon is extremely useful. It makes writers seem like sophisticated insiders. Unfortunately, it makes life much harder for readers. Remember the Iron Imperative — that you must treat the reader's time as more valuable than your own? Jargon accomplishes the opposite: It clearly communicates that you think you are more important than the reader.

The problem is that when you write in jargon, you effectively divide the world into two groups. One is the insider group — the people who, along with you, know what these special words mean. The other, much larger, group is the world outside your bubble. That other group likely includes most of your customers and many of your employees. The more jargon you use, the more you are alienating large groups of people who should be reading and understanding what you write. You make them feel ignorant because they are ignorant; they don't know your secret code. Some of them will work hard to figure it out, but most will just give up on you and whatever you're trying to get across.

The first thing to change is your attitude. Do you think that writing in direct, informal language makes you seem too simplistic? The opposite is true. Once you realize this,

you can give yourself permission to rewrite whatever you're working on in plain language. That means looking at what you've written and asking, "Can a broad audience actually understand this?" If not, rewrite it using words and concepts anyone can understand.

Or why not skip the rewriting step and just write clearly in the first place? Here's the trick. Before you start, clearly visualize your audience. Is it a small-business person — maybe the owner of a hair salon? Is it an engineer who writes in Java? Is it all the customer service reps in your department? If you imagine average readers — not the smartest ones you know — and think of explaining whatever you're trying to get across to them, you'll be in the right mindset.

Then write a few simple, direct statements that, taken together, get across what you're trying to say. If you're communicating to the customer service reps, it might look like this: "A new software release of our product is going out this weekend. New releases typically generate a lot of calls. You need to familiarize yourself with the details of the update before you come in on Monday. It's going to be stressful, but I'm counting on you to balance efficiency and politeness. Please let me know if you're receiving calls or emails that indicate a more pervasive problem."

### Reveal Structure

Prose sucks. Every paragraph that your reader reads, they're potentially losing interest. The more paragraphs, the greater the chance they won't make it to the end of what you've written.

Unless it's short, a piece of writing made of paragraphs looks uniform and therefore intimidating, especially on a narrow screen like a smartphone. Anything that's worth reading and is more than 300 words long has a structure of some kind. Reveal that structure, and you've given the reader some signposts. They see what's coming and that it looks interesting. That's why you need to mix up your text with headings, bullets, lists, tables, graphics, quotes and links.

What you write always has a beginning, middle and end. Break things up into chunks, then use headings to make those chunks easy to see. Within the chunks, use lists to create even more structure.

If you're trying to get across a complex idea and the words won't flow — or if there are just too many words — draw a picture. Brainstorm it on the whiteboard. Pull in somebody who's graphically talented if you want. But your graphical ideas don't need to be complex. Simple Venn diagrams, flow charts or boxes with arrows can often do the job. Regardless of how you use graphics, remember three key things:

- Graphics and text are parallel ways of representing meaning. The text and the graphics in a document should work together.
- Keep it simple.
- Graphics escape their containers and roam the web freely. No matter what you do, people will clip and share your graphics.

A table stands out from the text like a graphic but enables you to present structured content neatly, like a list. Tables deliver a lot of information in a small space. Just don't get carried away and try to stuff all your data into a single table.

Two more tools you can use are quotes and links. Even within paragraphs, words in quotes stand out. In documents, blog posts, and even emails, quoted material pulled out of the text draws your attention. Links let you reference anything online within any type of writing — an email, a web page or a PDF document. Using links is second nature for bloggers, and it should be for you, too.

To get to the next stage, you must go further. You must change not just what you write but how you write it.

## Change How You Write

### Be Paranoid Early

Now you've got a bunch of new habits to get into as you type anything, whether it's an email or a blog post. Those rules are sufficient for tasks where the first draft plus a little polish is the final draft, but not for a big project.

Let's walk through your process for writing projects. You've got a big report due four weeks from now — a piece of writing thousands of words long with lots of effort behind it. For many writers, what comes next is less than ideal, a process called the three Ps:

**Procrastinate:** You can't start writing yet — you need to interview a few people, pull some data and sit down and do some web research. Since you can't get started and the deadline is four weeks off, you do other pressing things on your schedule — things that have nothing to do with this project.

**Panic:** You realize that the amount of time left is barely enough for you to get the writing done. You're writing but with lots of interruptions to get the missing pieces

in place. The end result comes together a few days before the deadline.

**Pray:** There's always somebody who has to approve it before you're done: your boss, the finance guy, the copy editor. So you send them the complete (but not finished) draft to review and tell them to turn it around in a day and a half. Concurrently with their reviews, you're fixing flaws you've already noticed, and as a result, lots of the review comments come back pointing out errors you just fixed or requesting changes in sentences you've deleted. You hope against hope that nobody finds something that will blow the whole thing up — and if they do, you find yourself arguing that it's better to live with the flaws than start over again. Is it any wonder this process generates bullshit?

The key to writing an effective document in a business setting is to know what you're trying to accomplish at each stage and to put in equal effort at each stage, not to do everything at the end. So let's revisit the three stages again, this time with a clearer understanding of what you're aiming for at each stage.

**Stage 1. Prepare (Be paranoid early):** It takes a professional to be paranoid at the start of the writing process. Being paranoid early means not just worrying about what might go wrong but also acting to prevent it. While late paranoia generates anxiety, early paranoia is productive. Do you have a clear audience and objectives? Do you have enough content? Have you taken the most creative approach? What is your structure?

**Stage 2. Draft (Find your flow):** By completing your research and planning ahead of time, you put yourself in a position to write well. Your objective in this stage is to complete a draft. A complete draft is not a finished product — it is a complete piece of writing with flaws. In a four-week process, writing the first draft should take about three days.

**Stage 3. Revise (Manage reviews effectively):** Drafting is not an end goal. It is simply the step that allows you to get to the Revise stage. Revising is not a monolithic process either. Depending on how important your draft is, you'll need different levels of edits, each of which will get you closer to your goal: a bullshit-free finished document.

## Think First

Business writing exists for one purpose: to create a change in the reader. If the reader is no different after reading, then you have wasted the reader's time and violated the Iron Imperative.

Before you start writing, you must think clearly about the elements of the change you are hoping to make.

Use the acronym ROAM to help you keep track of the change you want to make in your readers. ROAM reflects the four elements of that change: Readers, Objective, Action and iMpression.

**Readers:** Who is the audience? Before writing anything, visualize your readers. When you write "you," whom are you thinking of? Different audiences require different tone and different content.

**Objective:** How will you change the reader? Do you want them to feel favorably about a political party? To learn the steps to change an oil filter? To support your project? To feel joy? What will they know after reading that they did not know before? Each element of your writing should guide the reader toward the objective. Cut anything that doesn't serve the objective.

**Action:** What do you want the reader to do? Once your readers are done reading, what will they do next? Objective and action are related but not identical. The objective describes the change that you want to create in the reader, while the action is what the reader actually does: voting for the candidate, changing the oil filter, budgeting for the project, sharing the joyful writing with others.

**iMpression: What will the reader think of you?** Objectives and actions may be fleeting, but impressions last. The impression is the metamessage. The readers' impression determines the future of your mutual relationship. Do you want readers to think of you as smart? trustworthy? witty? If you don't know the impression you hope to create, how will you know what style to write in?

Whether you're writing an email, a tweet or a white paper, when you have that moment where you say "What am I doing here?" deploy ROAM. It will tell you what to do — and what not to.

## Collaborate Without Tears

The best thing about writing in a business setting is that there are so many people to help. The problem with writing in a business setting is that there are so many people to meddle.

Here's what you need to know: It's your document. You're writing it, and your name is probably going to go on it. Here's how to write with other people, without losing the soul of what you write.

The first thing to understand is everybody's role in the process.

**Editors and project managers** work throughout the process. An editor makes writing better. Editors stand in

for the reader. They tell you what they think the reader needs, or won't understand, in what you've written. If they've got any talent, they also suggest how to fix things.

The other job that some editors do is to manage the whole writing process, interacting with your other reviewers and coordinating the feedback you get. But sometimes that's someone else's job: a project manager or traffic person who keeps track of everything, manages the flow of drafts and comments, and hammers on deadlines.

**Researchers and contributors** help during the research phase. Researchers do a lot of the legwork for you and can find the data, facts and content you need to beef up a piece of writing. These are often bright entry-level staffers. Turn them loose with clear instructions on what you need, and they'll find great content for you. You may also get help from other specialized contributors. For example, as you develop content ideas, you'll have ideas for graphics — pull in a designer or illustrator to work with you just as you're starting your draft.

**Advisory reviewers** comment on your drafts. Your organization probably includes experts who can help you in many ways — with ideas, with structure or with content knowledge, for example. Make sure your editor — your primary reviewer — knows who you're working with. And be clear with reviewers about expectations. Tell these folks the specific kind of help you want from them.

**Gatekeeping reviewers** get the last look. Gatekeepers are folks whose edits you're not allowed to ignore. Legal and regulatory reviews fall into this category. Sometimes your boss does, too. People fear gatekeepers, but they are there for a reason: to keep you from screwing up.

**Copy editors and fact-checkers** keep you safe at the end. When you think you're done with a document, you turn it over to the copy editor. The copy editor's job is to look for grammar and usage errors. But just as with any other reviewer, don't assume you must do everything the copy editor says — it's still your document. This endpoint is also when you check facts and quotes. Most organizations can no longer afford separate fact-checkers, but if you have one, they'll check to make sure you're not lying about the population of Sri Lanka or what the senior senator from Missouri said.

## Embrace Edits

"I love criticism . . ." . . . said no one, ever.

How can you learn to love hearing about your flaws? Writers are proud. Criticism hurts. Well, it turns out there's a trick to it.

The first part of the trick has to do with how you feel about writing. While you are writing, you must believe you are creating something wonderful. You believe you are creative, witty and smart. Your passion to reveal the truth, without bullshit, drives you to create something good.

Once you are done writing, you must discard this frame of mind. What you have created is just words on a page. Words don't love you, so why should you love them? Your job now is not to create but to reveal truth. You can rearrange, cut or change anything that better reveals that truth. You should feel no more emotion about this than you would when pruning a shrub. You're making it better, and "it" is no longer a part of you.

This is where the second part of the trick comes in. It has to do with edits. You must not look at each suggestion and say, "Should I do this, or should I not?" That's too binary. Worse, it means that you are judging yourself against others' thinking — are they smarter than you, or are you smarter?

Instead, you should think, "What has this suggested edit revealed about what could be better here?" This way, you remain in charge, and you remain smart. You decide what flaws the edit has revealed, even if the reviewer did not see them. You decide in what way to fix things. It might be the way the reviewer suggested, or it might be some other way. You seek a higher truth, a more profound way to communicate without bullshit.

If you struggle to deal with edits, keep this key principle in mind: Editors and reviewers exist to reveal what you cannot see, not to tell you what to do. When you are seeking and addressing feedback, follow these five steps:

**Be clear about your vision.** Analyze your Readers, Objective, Action and iMpression. Reflect on your target sentence as you decide how to revise.

**Choose editors to match what you need.** There are five levels of edits, from spitballing big conceptual ideas to correcting nitpicky details: idea development, structural edit, paragraph or line edit, copyedit and fact check, proofread.

**Expose your flaws.** Tell reviewers what you are worried about. Is the structure right? What should I cut? Have I gone too far or not far enough? What's missing? Is it "bury the lead" or "bury the lede"? Whatever you're insecure or doubtful about, let the editor know.

**Use edits to gain insights.** The purpose of the editor is not to tell you what to do. You're the writer, and you have the vision. Their job is to show you what you cannot see.

**Apply the insights to your rewrite.** For each suggested edit or piece of advice, regardless of how big or how small, you should take one of three actions: Accept the edit,

and do what the editor says; learn from what the editor suggests, and use that knowledge to make the writing better; reject the edit but because you have a good reason.

## Change What You Produce

### Email Thoughtfully

Emailing on automatic pilot is easy. You write a subject line, type what occurs to you, add as many people as you can think of to the "To:" line and then hit Send. It's the quickest thing you can write.

A hastily composed email often becomes "the puzzler." You know, the email that recipients read and say, "Why did I get this? What am I supposed to do about it?" The busy person puts it aside and then forgets about it, which means the sender needs to follow up. That wastes time. Or the recipient asks for clarification and copies everyone else, which wastes even more people's time.

Rethink emails. The first instinct you need to change is that email is the solution to all problems. Get up and talk to people. Call them on the phone. If it's an issue that would benefit from dialogue, email is not the best way to solve it.

If you do decide to send an email, recognize that there are two types of emails: those that are important to you and the recipient and those that are not. Important emails include emails you send to groups of customers or employees as well as those that you send to one person to generate action. Important emails are important enough to plan and execute thoughtfully. Here's a quick checklist on what to include:

- A subject line that's clear about what you need.
- A microwave greeting, like "I'm a colleague of Alan's in our finance department."
- A one-sentence summary. Your first substantive sentence should tell the whole story.
- The facts, on one topic only, structured for browsing.
- The call to action with a deadline.
- Thank you and goodbye.

### Promote Intelligently

Promotion is a worthwhile activity — you have to tell people what your company is doing and why it's good. But press releases and other marketing-focused content, such as marketing web pages, are out of touch with the readers we're trying to reach and with the way we consume content now.

What is a press release doing now? Here's a ROAM analysis:

**Readers:** Anyone who can spread the word. The target is no longer just journalists and analysts; it's anyone from mommy bloggers to nontraditional content sources like Upworthy and BuzzFeed — basically, anyone who can spread a story.

**Objective:** Positive sentiment. Get readers to believe the product is worthwhile and the company is good.

**Action:** Spread the word. Generating news stories used to be the ideal action. That's still useful, but now the release can get people to share information on social media as well.

**iMpression:** The PR person is valuable. In the past as a PR person, you didn't care — you annoyed 998 people to get to the two who mattered. Now you're creating a relationship.

When you remove the jargon, the fluffy quotes and the superlatives, what are you left with? Facts. Now let's add something back in: the direct voice of the company. It could be the CEO, CMO or head of PR.

Put the news in the title, and explain what you did and why it is important. Use as many facts as possible. Write it in an easily accessible fashion to maximize spread. You can spread it through the usual PR distribution channels. But you can also post it for your company's friends on Facebook and Twitter. If those friends read it and understand it, they will actually share it. And you'll get the attention you deserve.

Your organization will make great strides if clarity becomes a core value. Together we can help the world to understand the value of writing without bullshit. And then, perhaps, we'll all be able to get a little more work done.

MORE SV CONTENT ON EFFECTIVE COMMUNICATION

*Access these and more in your Soundview Online Library:*

**Summary: *Brief* by Joseph McCormack.** Senior marketing executive Joseph McCormack offers a step-by-step approach to getting to the point quickly and delivering every message with maximum impact. Brief describes how to use BRIEF maps, narratives and visual media to make your message more compelling.

**Webinar: *Setting Expectations for Powerful Working Relationships* by Shari Harley.** Shari Harley shows you how to make your work environment less tense and more productive by practicing direct communication. Set relationship expectations, work with people how they like to be worked with, and give and receive regular feedback.

# Ask More

## The Power of Questions to Open Doors, Uncover Solutions and Spark Change

by Frank Sesno

### THE SUMMARY IN BRIEF

What hidden skill links successful people in all walks of life? What helps them make informed decisions, inspire creativity and forge stronger connections? The answer is surprisingly simple: They know how to ask the right questions at the right times.

Questions help us break down barriers, pinpoint solutions and explore new ways of doing things. Yet, most of us assert more than we ask. We talk more than we listen. Imagine how much more effective we would be if we flipped the equation.

*Ask More* puts questions at the center of every conversation. Author Frank Sesno, an Emmy Award-winning journalist, has spent decades questioning global leaders and everyday people alike. He draws on his formidable interviewing skills to break down the art of inquiry into 11 categories of questions, each designed for a different purpose.

In an age of instant answers, fly-by facts and relentless clickbait, Sesno makes a passionate appeal to observe carefully, listen intently and ask more. He reveals a process of inquiry that can change your life — and might even change the world.

### IN THIS SUMMARY, YOU WILL LEARN:

- How strategic questions can define a mission and forecast success — or failure.
- To use diagnostic questions to get to the heart of a problem.
- When to use confrontational questions to hold people accountable.
- Why mission questions help nonprofits fundraise more successfully.

## Why Ask?

Smart questions make smarter people. Questions — asked the right way, under the right circumstances — can help you achieve both short-term and lifelong goals. They can open doors to discovery and success, bring you closer to a loved one and even uncover answers to the universe's most enduring mysteries. Insightful questions help you connect with a stranger, impress a job interviewer or entertain at your next dinner party, and they can be the keys to a happier, more productive and fulfilling life.

Technology has revealed endless horizons, but it has also created a quick-hit, search-engine culture where a fast answer can obscure deeper inquiry. The polarization of politics, amplified by social media, has fractured civic discourse and infused it with invective instead of dialogue. Television interviewers are given less time and focus more on controversy and the horse race than on explanation and substance. Sincere questions too often play second fiddle to certainty, ideology and outrage. But what if we asked more and asserted less? What would we discover?

Humans are built to be curious, that much is in our DNA. Our questions reflect who we are, where we go and how we connect. They help us learn, and they help us lead because effective questioning marshals support and enlists others to join. After all, asking people to solve a problem or come up with a new idea turns the responsibility over to them. It says, "You're smart, you're valuable, you know what you're doing — what would *you* do about this problem?"

## Something's Not Right: Diagnostic Questions

*Diagnostic questioning* identifies a problem then burrows down to its roots, especially when those roots are not instantly obvious.

Your tooth is killing you. You go to the dentist. She asks where it hurts, when it hurts. When you chew? When you drink? She taps, pokes and applies cold water until you leap out of the chair. Oh sorry, did that hurt? "Yes," you grunt, through the junkyard that litters your palate. She says the problem is this *other* tooth. You're feeling "referred pain." An X-ray confirms it. A filling fixes it.

Diagnostic questions progress systematically to describe the problem and identify it.

**Connect symptoms and specifics.** Start with big, broad, what's-the-problem questions and then narrow down, zero in. Get past the generic to identify the symptoms and describe related observations in detail.

**Ask for the bad.** Don't duck the issues or avert your eyes. Ask direct questions in search of direct answers. It may get ugly, but if you want to fix a problem, you have to acknowledge it to deal with it.

**Study history.** Look back. Ask about similar experiences, events and patterns. They provide a baseline. Look for similarities to other situations.

**Ask again.** The mere existence of a problem means there is something unknown or unanticipated. To be sure you're on solid ground, ask several times and several sources. Confirm and corroborate.

**Challenge the expert.** We rely on experts to diagnose our diseases. But that doesn't mean they're right or that they're off the hook in explaining what's going on. Before

you accept a diagnosis, ask what it is, what it means and where it's coming from. And reserve the right to get another opinion.

## The General's Charge: Strategic Questions

Strategic questions ask about the bigger challenge and the long-term goal — about stakes, opportunities, costs, consequences and alternatives — as you focus on the big picture.

"Strategy, by definition, is about making complex decisions under uncertainty, with substantive, long-term consequences," Freek Vermeulen, an associate professor of strategy and entrepreneurship at the London Business School, wrote in the *Harvard Business Review.* Vermeulen crafted an elegantly simple description of a word that almost everyone overuses and poorly understands. But by asking strategic questions, you can define and articulate your long-term goals.

Colin Powell was a key player in America's two wars against Iraq. The questions he asked — and did not ask — stand as examples of how strategic questioning can shape decision-making at a time of crisis.

Powell posed strategic questions before the First Iraq War, looking at the big picture, challenging assumptions and defining success. Only if the answers to all were positive, he believed, could the president confidently launch a full-scale invasion to liberate Kuwait.

Powell's questions intended to define success produced clear answers and finite, achievable goals with a realistic exit strategy. The result was Operation Desert Storm. The mission was a success, and the ground war lasted just 100 hours. Colin Powell's star was never higher.

Colin Powell experienced the dark side of decision-making when he and others didn't ask enough tough questions leading up to the Second Iraq War. The really tough strategic questions that should have been asked were unwelcome.

*Have the risks and costs been fully and frankly analyzed?*
*Have the consequences of our actions been fully considered?*
*Do we have a clear and attainable objective?*

As secretary of state, Powell didn't push back hard enough. The power players — the vice president, the secretary of defense and others — drove the decisions. They didn't ask the right questions either. The U.S. mission in Iraq turned into a costly open-ended commitment riddled with unintended consequences and terrible casualties resulting in an ugly and inconclusive outcome.

### Challenge Yourself

Strategic questions are vital at any major crossroads. They are deceptively simple questions that illuminate complex decisions characterized by great risk or uncertainty. They call for answers about purpose and the big picture.

You might decide that the answers need to be unanimous and affirmative. Or you might be comfortable with a more ambiguous response. Strategic questions prompt you to examine the terrain broadly, to estimate the situation from which you can proceed with a better sense of capability and destination.

## From the Inside Out: Empathy Questions

*Empathy questions* explore what makes people tick, think, fear, and feel. They focus unselfishly and spring from genuine interest. The simple act of asking, of listening without comment or judgment and letting a silence linger or a free form thought to coalesce, invites a person to reflect or think out loud. It might even prompt a revelation.

Empathetic questioning helps you connect with others. Use this line of questioning when a colleague needs to talk through an argument at home or politics at the office, or when you want to reach out to someone who comes from a different place, background or perspective.

Helen Riess is a clinical professor of psychiatry at Harvard Medical School. She studies empathy and teaches doctors how to incorporate it into their work with patients. Riess tells doctors to start with a broad question to establish an empathetic relationship. "How are you doing today?"

Riess tells her doctors that they have to do more than just ask. They have to listen closely and sincerely. They have to hear more than words. They must listen to voice tone and inflection and watch for reactions and body language. She coaches them to maintain eye contact and scan the other person's face to see if they seem relaxed, anxious, frightened, or stressed. If they hear strong emotion, they should respond to it directly and ask compassionately. "What are you most concerned about?"

Riess believes it is the questioner's responsibility to take in fully what the patient is communicating. This affects outcomes; patients who don't experience empathy are less likely to trust their doctors, and they're less likely to

adhere to the treatments that are recommended. A systematic review showed that low empathy and communication in patient-doctor relationships actually lead to worse health outcomes.

You don't need a degree to be a disciplined listener and an empathetic questioner. You just need to know who you are talking to and be able to imagine what the world looks like through their eyes.

## The Gentle Interrogator: Bridging Questions

*Bridging questions* are intended to encourage people to talk when they don't want to. They coax information, glean detail and assess intent and capability.

The principles behind bridging questions support a specific and clear outcome: getting a closed person to open up. The objective is to lower a person's defenses and move his or her brain out of red-alert territory. Questions should be framed to generate conversation, however halting, as a means of establishing trust and building a dynamic that will coax information from the most reticent personalities.

A psychological theory developed by Nobel Prize-winning psychologist Daniel Kahneman posits that there are two "systems" in which the human brain operates. *System One* is a sort of low gear; it goes anywhere and allows us to make decisions easily and come up with ready answers. Consider it your brain's autopilot. It goes on when your surroundings and reference points are familiar.

*System Two* triggers the brain's overdrive and makes it spin faster, work harder and use more oxygen. System Two is a response to the unfamiliar, the complex, the difficult or frightening. A brain in System Two is on alert with its guard up.

The goal is to put your subjects' brains in System One, into low gear, as much as possible. Start with questions the interviewee is comfortable addressing even if the questions are not relevant to the issue at hand.

As you're building rapport, ask "how" questions. "How" questions ask for explanation and background. They encourage stories. The human brain is wired for stories. It's how we learn and how we remember.

As the subject is speaking, listen hard for "entry points" to turn the conversation to the story you want to hear. You can recognize an entry point by actively listening for an observation or a complaint that resonates with the story you're after. A flash of anger or expression of regret can be an entry point. Use them to your advantage.

To keep subjects talking, on track and in System One, use periodic "micro-affirmations." When you hear something relevant, signal interest by leaning forward, offering a slight nod or a barely audible "uh-huh." These micro-affirmations reinforce without interrupting or distracting. They signal that you are engaged and sympathetic.

Use questions without question marks. Phrases like, "Tell me more," "Explain that to me," "Go on," "That's remarkable" or "Fascinating," serve as open-ended invitations for a subject to pause, reflect and provide more detail. They convey interest and, when stated in the right tone and accompanied by open body language, offer affirmation and validation, which are important to reduce barriers and generate cognitive ease. Questions without question marks can feel less threatening and less like an interrogation.

Angry, alienated people might believe they see and understand things that others do not. By saying, "A lot of people agree with you," you offer a measure of validation without an endorsement of the point of view. You "normalize" the conversation, creating the appearance that you understand.

## For the Record: Confrontational Questions

Confrontation and accountability questions put issues on the table and demand answers for the record. They air a grievance, level an accusation and reinforce the rules of acceptable behavior.

Confrontational questioning often requires assertive interruption or repetition to make it as difficult as possible for your adversary to change the subject, dodge the question or run out the clock.

When you adopt a true adversarial approach, you raise the stakes. Confrontational questioning must be approached from a position of strength. Questions can be used as weapons. If you're going to confront someone in power, there has to be an element of aggression. You must have the courage of your convictions and realize it isn't a popularity contest.

### An Audience Helps

If you have the basics — solid information, a clear objective to your questioning and enough spine and moral indignation to stand up to authority — you can have an impact, especially if you understand your platform and

know your audience. Invoking community is one of the surest ways to give more heft to your case and more edge to your questions.

Whether at a town hall or a staff meeting, confronting a powerful person is not easy. But having a community on your side creates an alliance. Your questions become the group's questions, which are harder to dismiss as the ranting of a malcontent and easier to amplify because of the implied voices ready to join you. If you've done your homework, are prepared to stand up to the pressure of the encounter and have crafted your questions so that you succinctly express the problem and the challenge, you can take the high ground and demand answers.

### No Way Out

You should prepare for an evasive or confrontational response. Effective confrontational questioners have to be fast and uncompromising listeners. It's what good lawyers do in a courtroom and good interviewers do in front of a camera. They pick up on a voice tone and swoop in on hesitation. They shut down attempts to filibuster or self-aggrandize. They keep the laser aimed at the core issue they're after.

With accountability questioning, you want precision. You want to pin someone down. Often, questions that elicit one-word answers can be the most effective crow-bars to the truth. Yes-no questions:

*You were late yesterday. Is that correct?*
*Did you call when you knew you were going to be late?*
*Did you think about the consequences of being late?*

Lawyers like yes-no questions because they establish the record and draw precise boundaries. They put on the record a definitive response to a specific action or moment and give the questioner almost complete control over the witness and the testimony.

Confrontational questions entail risk because they put relationships and reputations on the line. If you're wrong, or if you sound ill-informed or like a bully, the questions will boomerang and hit you and not the person you are trying to hold to account.

## Imagine This: Creativity Questions

Creative questioning asks people to close their eyes and imagine. It welcomes crazy ideas, shrugs off the obvious and seeks alternatives.

### Travel in Time

The president of Middlebury College was in the early stages of crafting a 10-year strategic plan. At the fall retreat, a facilitator started with a question that invited participants to think creatively about the college's future by going there.

"It is 10 years from now," he said, "and the latest college rankings have just come out. This school is at the top of the list. What are we doing?"

He put the future in present tense. His question was a time machine. Once inside the machine, the obstacles that often interfere with big ideas — practical considerations like cost, resources, staffing and economics — fell away. Participants listed qualities that earned them the top spot. There was a new science center, a new library, more students who brought more diversity, more faculty and more funding. The future was clear!

Then, they worked backward to determine how to make it happen, from program design to funding. Today, the college has accomplished many of the goals set out in that exercise. The school is in the top ranks of liberal arts colleges. Imagined reality became actual reality.

### Imagined Reality

A publisher convened an off-site retreat with his top editors. He began with an exercise. Crunch time had arrived, and each magazine had to cut its budget by 50 percent. He asked:

*What do you cut?*
*What do you do?*
*Where do you start?*

The teams went to work prioritizing and calculating, cutting staff and expenses. Though this was just an exercise, everyone played along and took it seriously.

Then came the twist. In a surprise move, the publisher gave his editors their money back. Every penny. But, he told them to use the budget they'd cut just a few minutes earlier as their new baseline. They could invest the money they had "saved" in any way they wanted.

*What will you build?*
*How will you invest?*

Their answers helped transform the company's five newsstand magazines and led to more National Magazine Awards than any of their rivals. The net profit for the company doubled in two years.

## The Solvable Problem: Mission Questions

*Mission questions* help you draw people into a genuine conversation about shared goals and what everyone can bring to the task. They help you convey your priorities. Mission questions require you to talk less and listen more.

### The Value Proposition

Karen Osborne, founder of the Osborne Group, a fundraising consultancy, developed a set of questions to help her identify what people care about and where and why they give. Osborne's *discovery questions* generate a conversation. They ask what people care about and the motivations behind their passions. If they are now in a position to do something more about a problem they're passionate about, what will they do?

Osborne's "rapport building" questions define principles and goals and connect past actions with future aspirations. They establish a conversation and build a relationship.

*What are the guiding principles that have helped you in life?*
*What do you hope to accomplish with your philanthropy?*
*What values do you consistently support?*

Osborne asks her questions to get answers, but she also asks to be sure the other person is doing the talking. As research shows: People forget what they heard, but they remember almost everything they say.

Your questions prompt people to answer and to engage. That's a critical step, Osborne says, if people are going to embrace a cause for which they're going to provide significant financial support. Osborne insists that engagement is the key to philanthropy. The more that people are involved in an initiative, the more they give to it.

### Change the World

Once you have established the mission and concluded that your goals coincide, you can start thinking about the next step: actually doing something.

Rick Leach, founder of the World Food Program USA, rallies support, raises money, and finds partners in business and government to support efforts to get desperately needed food to victims of drought, poverty, war and natural disaster. To attract people to social movements, he believes, you must engage their curiosity and connect passion with mission. He focuses on turning commitment into concrete action. "It's earnestly asking questions and learning to more fully hone the need in search of the opportunity to address the need," he said. His template for partnerships is built on four questions.

*How do we define the problem?*
*What are the strategies to solving the problem?*
*What's the goal?*
*How can we all play a role in achieving the goal?*

When the 2015 Ebola crisis hit, food and nutrition quickly became a big problem, as whole areas of some countries shut down. Business stopped. Leach turned to his longtime sponsor, United Parcel Service, Inc. (UPS), knowing its capacity in logistics. Leach asked if UPS would help distribute food, medical supplies, generators, and equipment. UPS agreed. The company provided invaluable logistical support to assemble material, equipment and relief supplies and fly them into West Africa. World Food Program distributed food to more than 3 million people in the year and a half after the Ebola outbreak.

This approach to mobilizing people and defining roles can be applied at virtually any level — whether you are trying to change the world or the town where you live. Get good people together and use Leach's questions to define the challenge, consider strategies and set roles.

## Into the Unknown: Scientific Questions

Scientific questioning drives a process that revolves around data, experimentation and observable fact. The discipline this line of questioning imposes makes for better inquiry and better decisions across the board.

There's a line of inquiry characterized by the slow question, the one that doesn't yield an immediate answer and dares you to embrace uncertainty. The slow question is expressed through the inquisitive lens of science. The method builds logically from the ground up.

**Observe a problem, frame a question.** Take what you see or know to be objectively and measurably true from the real world and ask a question. What's going on here? What's causing this?

**Offer an explanation.** Based on your observations, your experiences, and the facts and data that exist, put together a clear hypothesis that could explain the situation.

**Put your hypothesis to the test.** Experiment and measure over time. Try to prove yourself wrong. What else could explain this situation? What did you miss? What

could be wrong with your approach and your data? If your hypothesis holds up, you are making progress.

**Share.** If you think you're onto something, shop it around and show it to other knowledgeable people. Let them review it. Do they see something that you didn't Do they have a problem with your data or your methods. If not, you might just have a theory you can act on.

The methodical, logical approach to scientific investigation provides a blueprint for inquiry that rewards reality, not emotion, one step at a time.

In most cases, we are rewarded for decisiveness and quick answers. The person at the meeting who speaks up with authority and offers to "fix the problem" is often the one who is praised and promoted. When we propose an idea, we don't say to the boss or the shareholders, "I think I'm onto something here, but I'm doing my best to prove it wrong." We're expected to defend our point, not openly invite others to attack it.

The discipline of scientific questioning, however, moves us toward a more methodical form of inquiry that invites more data and better measurement into the questions we ask and the answers we get. As data becomes more accessible, we can expect more science and more metrics in the decision and questioning process.

## The Edison Test: Interview Questions

The first rule of the job interview: Don't wing it. Preparation pays. Know what you're talking about and to whom. Know as much as possible about the job. Have a list of questions on a pad and in your head. You are not sitting down for a random chat. You are trying to learn as much about the other person as you can to establish whether this position is a good fit for both of you.

If you're the applicant, you can anticipate that most every interview will ask you touchstone questions.

*Why are you interested in this position?*
*What do you think you can do for us?*
*What makes you qualified and unique?*
*Why should we hire you?*

Prepare a series of responses for each question. Organize your thoughts in bullet points, two or three distinct characteristics for each response, so you can talk about several traits without getting lost or long-winded. Practice your answers. You want to be clear, concise and prepared to address the question — or a variation of it — directly and confidently. Think of some examples or short stories that highlight relevant experience or set you apart.

Keep in mind that your tone will convey as much about you as the words you use, so strike a balance in how you present yourself. Talk about your successes without bragging, express confidence without sounding cocky and acknowledge your shortcomings without sounding insecure. Be prepared to speak about your character and personality by citing a tough decision or a dilemma you faced and how you worked your way through it. Know what questions you want to ask. The questions that you, the candidate, will ask are nearly as important as your answers to the interviewer's questions. You need to project informed curiosity about the position, the enterprise, the competitive landscape, and the measures of success.

Try practicing by recording your answers on your smartphone. Practice will allow you to fine tune your answers so you project confidence and fluency.

If you're the interviewer, you have to ask precisely and persistently to get beyond the resume and practiced responses. If you're filling a management position, ask about how your applicant deals with people, motivates success and handles setbacks. You are asking questions that call for tangible answers that shed light on your applicant's talent, experience and personality. You want to get a sense of what will motivate her and keep her productive. You ask about situations or experiences that illuminate intangible characteristics, such as how the person deals with adversity or thinks creatively. You want insight into the other person's work ethic and professional expectations, goals and ambitions.

*What's the most successful project you've run?*
*What is it about this job that interests you most?*
*How does this job connect with your larger professional aspirations?*

If red flags have come up through reference checks, ask about those, too: "What would your detractors say about you?" You want honesty and realism. Self-awareness is essential to being a successful leader.

## The Inspired Host: Entertaining Questions

Entertaining questions allow you to engage your audience and keep the conversation interesting and lively

so everyone plays. You can be commanding or charming, funny or unpredictable, but the objective always revolves around creating an experience that your guests will enjoy and remember. Use questions the same way a chef uses spices: subtly but deliberately to bring out the flavors of the meal. So what are the basic ingredients?

**Know your audience.** Who are you talking to? What have they done? Where have they been, and what do they care about? Pick questions that intrigue and interest everyone.

**Think creatively and choose deliberately.** Draw from a menu of topics and questions to create a flow and distinctive moments. You want a combination of topics that will engage different people on different levels.

**Set a mood, and set a rhythm.** Funny or serious? Provocative or reflective? Set the mood through signals, prompts words, and timing.

**Engage emotion.** You trigger emotions through the subjects you pick and the questions you ask. Serious or snide? Funny or flippant? It's your call.

Start with an exchange that is spontaneous and a little unexpected. You can often break the ice, get a smile and set a tone that is more relaxed and will lead to a more genuine experience.

### You're On!

Good hosts are always on, always listening and always interested in their guests and the conversation around them.

If you're the host, prepare accordingly. Adopt a strategy that creates the event you want. If you want a fun, free-flowing evening, roll out some questions that tap into the easy currents of daily life. Make them open-ended and friendly questions. Ask about the new restaurant, the local football team or the newest Leonardo DiCaprio movie.

By applying a little "conversation leadership" to get people interacting, you can create an environment that is inclusive, interesting and dynamic. A few well-placed questions will jump-start a conversation. The more you ask, the more you get.

## Lessons for Life: Legacy Questions

Legacy questions ask what we've accomplished or changed and inquire about the lives we've touched. They are questions about meaning, spirituality, lessons learned, gratitude, regrets, people and purpose.

Legacy questions open the door for reflection and resolution. They seek context. They can be existential or spiritual. Legacy questions ask about meaning and gratitude, mistakes and adversity.

A properly told life story can capture life's impact and its meaning. But not all stories have happy endings, and not all lives end with clarity or resolution. A question can prompt a reply brimming with guilt or sadness. Anger and sorrow are not uncommon emotions at the end of life.

Some burdens may seem insurmountable: feelings of acute failure, a sense of a wasted life. End-of-life expert Ken Doka believes every life has meaning, though sometimes it takes hard work and persistent questioning to find it. He asks:

*How do you put your mistakes in context?*
*What lessons would you share?*
*What high points in life would you point to?*

We do not need to wait for the deathbed moment to ask about the meaning in our lives. Legacy questions travel with us. If we have the courage to ask them, they help us get our bearings and write our story. If we listen closely to our answers, we gain perspective.

## I'm Glad I Asked

Questions are our way to connect with other human beings. Inquiry, not imitation, is the sincerest form of flattery. Ask a good question, and you convey interest. Slow down, listen closely and ask more and you engage at a deeper level. You show that you care. You generate trust. You empathize, and you bridge differences. You become a better friend, colleague, innovator, citizen, leader or family member. You shape the future.

You can't ask for more than that.

# The Spark and the Grind

## Ignite the Power of Disciplined Creativity

by Erik Wahl

### THE SUMMARY IN BRIEF

We've been conditioned to think about creative genius as a dichotomy: dreamers versus doers, the spark of inspiration versus the grind of hard work. But what if we're wrong? What if it's the spark *and* the grind?

Erik Wahl, a visual artist, speaker and entrepreneur, helps us unite the yin and the yang of creativity — the dynamic new ideas with the dogged effort. He shows why we won't get far if we rely on the spark without the grind or the grind without the spark. What the world really needs are the creators who can hold the two in balance to further innovation.

Wahl offers surprising insights and practical advice about how to fan the sparks and make the grind more productive. He deftly synthesizes the wisdom of other artists, philosophers, scientists and business visionaries throughout history, and adds the secrets of his own practice.

If you want to ensure constant creativity in your life and produce your most innovative work — this is your guide.

### IN THIS SUMMARY, YOU WILL LEARN:

- To discover the creativity within yourself, as well as how to harness and cultivate that creative spark into something tangible.
- To trust the unpredictable nature of the creative process, and then develop a disciplined routine that will strengthen your creative drive.
- To embrace the unfamiliar, take risks and find comfort in being an amateur knowing that the unknown can only fuel those creative sparks.

## Creativity Is a Complicated Friend

What is it about creativity that draws us in? If we grasp it, understand it, embody it, we believe it can give us a new start. A first step. A cutting edge. A breath of fresh air. A breakthrough. Originality. Freedom.

Our desire for creativity is one of the most, if not *the* most, transcendent desires of our lives. That's because our desire for creativity is ultimately a longing for more meaning, and more meaning breathes more life into our days. When our creations are an unobstructed outflow of our purest thoughts, beliefs and convictions, our doing is in step with our being.

Whether or not you've experienced the spoils of creativity in your own life, we have all observed that a tight bond with creativity forges a freedom and opportunity quite unlike anything else. Whether or not we understand it, we often desire it in the areas of our lives that matter the most. We especially desire it in the areas where we sense we are either underperforming or off track.

Creativity is a scorching-hot commodity. We are paying for it in historically large sums. And yet, the investment isn't paying off as we'd expect.

On the corporate level, efforts to court creativity translate to serious money. Total spending "increased 5.1% to $680 billion" in 2015, according to "2015 Global Innovation 1000," a report produced by PricewaterhouseCoopers's consulting team, Strategy&, which details how much the top 1,000 public companies spend on innovation each year. And yet, after conducting 10,000 analyses, the same study found no statistical relationship between increased innovation spending and sales growth, gross profit growth, operating margins, net profit growth and total shareholder returns.

Clearly, there is a tangible difference between treating creativity like a health supplement and treating it like the ecosystem in which your company breathes and operates.

Our relationship with creativity becomes more complicated as we get older. As a child, it was effortless. You have changed. Creativity has changed. Life is different now. You did, in fact, grow apart. Traditional schooling and typical corporate protocol have taught you that creativity isn't as important as finding the correct answer or following the correct strategy. As a result, your relationship with creativity takes real work today. And that's where the relationships stalls — even ends — for many of us.

The common practical response to this realization is that you will work at being more creative *only when you need to.* A more cynical response to realizing that connecting with creativity is hard is the proclamation that being creative on a regular basis is unrealistic and, frankly, takes a certain kind of quirkiness that doesn't play in all settings. The truth, however, is that you can rekindle that relationship. You just have to understand how to do it as an adult because the way it works has changed.

Here's the good news: You can learn to trust creativity again, on a daily basis. As a result, you can learn to churn out more vibrant, imaginative results from your efforts. Trusting and utilizing creativity as an adult involves simultaneously embracing two concepts that, in your mind right now, probably sit on two different planets. And yet, these concepts are two sides of the same coin we call creativity.

### The Spark

The "spark" is what we traditionally think of as the start of creativity — an initial illumination. It denotes the most basic understanding, the first step of creative production.

It's what we first hope for when we're looking for that creative edge, that game-changing idea, that fresh catalyst for progress. Generating creativity takes personal effort to make the initial spark — whether it is an idea, strategy or product — that you hope will ignite your relationship or company or campaign.

### The Grind

The grind is the work of creativity. This is the first truth you have to understand about creative endeavors: The more you grind at any given endeavor, the more you learn about the process, about the outcomes and about yourself. The grind is the disciplined process required to become a master at something.

### The Spark Without the Grind

Ongoing, original creativity requires the spark and the grind: the initial flicker of hope and the work to stoke it into something that changes the game. It's always both and never just one.

The final measure of creativity, innovation or revolution is neither ideas nor dreams. It's whether those sparks grow into something that matters. People who chase the spark but don't embrace the grind are into igniting big ideas but not fanning them into a meaningful blaze. These are Igniters. Others may call them "idea people" and "visionaries," and they are wholly necessary in our world; but left alone, the ideas they ignite would remain underdeveloped.

### The Grind Without the Spark

The grind without the spark is what we feel when we refer to work as a grind. It is work for the sake of working, spinning your wheels, continual effort without meaningful progress. In other words, what makes the grind more grindlike is an absence of sparks, an absence of freshness or originality. Those who embrace the grind but not the spark are called Grinders.

To be more creative more often — to be the maker you were born to be — you must learn to chase the spark and embrace the grind not at the expense of each other but in concert with one another. This dualistic approach is what separates those who create constantly from those who struggle to create even when it matters most.

## Trust the Process

Creativity improves everything, from how you think to how you love to how you work, but not until you understand that being diligent is not enough nor is having great ideas. Finding a way to embody both is the only way to tap the full potential of your creative power.

While great creators possess proficient ability in both activities, it is most accurate to say that they intuitively know when to step back and swim with the sparks and when to lean in and grind out a single idea. This back and forth happens so fluidly that the best creators never think, *Now it's time to pause and think,* or *Now it's time to lean in and work*. While they grind out a single idea, they remain aware that more promising ideas might appear or a more promising path might evolve from the original idea. While considering a host of ideas, they remain primed to jump after a brilliant one and work it out.

Great creators embrace a discipline of thinking and a discipline of doing. In embracing both disciplines, these once voluntary and independent patterns become involuntary and interdependent. The disciplines evolve from something that feels like a regimen to something that feels like a lifestyle. From activities that feel like burdens to activities that feel like nourishment.

In any creative venture, whether you're crafting a new product, writing your autobiography or launching a company, there are seasons of both clarity and confusion. A hard charger has a tendency to push through the confusing moments with laser focus on the prize — the finished product or the goal that has already taken some tangible form in your mind, in a document or on a whiteboard. Grinders rarely charge after something that doesn't have at least some clarity up front, an initial spark of insight, intuition or understanding. They are driven by achievement, by not only the elation of finishing or checking another item off the list but also by the rewards of that achievement — whether they are economic, emotional or hierarchical. True Grinders rarely grind mindlessly, but their laser focus can blind them to more creative possibilities.

Grinders are driven to finish a journey; Igniters are driven to explore. Igniters don't mind the uncertainty of the unknown. They don't need a lane or a finish line — at least not right away — and it's this comfort with an undefined destination that often sparks the most original creations. While the Grinder worships the end goal, the Igniter worships the early magic. While Igniters have an uncanny ability to embrace the early mystery of the creative process, they often balk the moment the starry night gives way to the dawn, which is when the real work begins.

The Igniter who's unwilling to grind beyond the wonder — at times, even see beyond it — often ends up with doughy, half-baked ideas. He possesses the plasticity and divergence to discover good ideas anywhere but lacks the fervor to craft those discoveries into something tangible let alone viable.

This is the risk in being only an Igniter: You eventually come to enjoy the sight of yourself in a beret or beanie so much that you aren't eager to swap it for a hard hat. It's the gratification of a Hemingway lifestyle without the discipline to park your ass in front of a keyboard each day and write a thousand words.

A single spark is needed to start a fire. But don't celebrate too soon. Producing something is important. But know it's only the beginning. Keep grinding — keep stoking — and keep watching for the swelling of the spark into something else, something hotter. The first spark is never the brightest one inside you.

Most great creators know that not all sparks should stay alive, but they know that the ones that are viable must evolve or expand. Igniters need to learn to keep working to develop an idea. Grinders need to unlearn their tendency to forget the fire for the prized ember.

To be more creative more often, you have to become a traveler who sets out in a direction to discover and evolve, not merely confirm. That's the creative process — trust it. The more you grind into it and through it, the more you learn to trust the sparks that arise as you go. They don't come one detached spark after another as if from some random universe. The truth is that the rising sparks are really growing from the initial spark as it swells into a bigger and hotter flame.

Valuing ideas over hard work often leads to a lack of creations. Valuing hard work over ideas often leads to anemic creations. The secret to trusting the creative process lies in embracing the duality of creativity: That it is both a fresh idea and a fierce drive. It's not one or the other but both at the same time. Applying this to your day-to-day requires an ability to know which is needed during the course of creation. While you might automatically assume that ideation is the beginning of the creative process, this isn't always the case.

Sometimes, it's better to begin grinding the task at hand and let the sparks that fly reveal a bigger idea of a better path. Either way, there is no script for creativity. Sometimes, the idea fuels the work. Sometimes, the work fuels the idea. Your job is to begin, and then remain open to toggling between the sparking and grinding according to what is needed most — either more originality or more progress. Knowing when to toggle is largely based on your ability to remain fully present during the process. When you are present, you remain open to the learning possibilities in and around you.

Trusting the creative process is like committing to an expedition in an uncharted land, where beginning knowledge is limited and progress is governed by discoveries made, not distance covered. Your most important tools are observation and resourcefulness.

To be constantly creative, you must be both an Igniter and a Grinder, and you must understand when one role takes precedence over the other without losing the other altogether. How? Practice. Your trust will grow as your creative prowess does.

The sum of trusting a fluid creative process is that you set out to shape and become rather than to solidify or confirm. This small difference is so impactful because it immediately changes your expectations.

Grinders transition away from expectations that are governed by the success and failure of individual products or pursuits. Igniters transition away from unrealistic expectations that never materialize beyond the surface of whiteboards and notebooks. Both Grinders and Igniters transition into expectations that are governed by constant effort, education and growth.

## Attach Yourself to the Work

Creation can be inspired by the originality of others, including the natural world. But constant creation requires you to travel beyond restylized mimicry. To be a constant creator, you can never let what makes you original and distinct be snuffed out.

The single greatest benefit in being a constant creator is that the process doesn't just improve what you create, it improves who you are. There is a transcendent need in every one of us to reach our full potential.

When you attach yourself to everything you do, you manifest pieces of your being into your everyday living. Some of these creations are practice — warm-ups for a bigger manifestation. All creations are lessons that create momentum if we're willing to capture it. A few of them will ignite into flames that spread and come to mean more to you than the feeling that you are well balanced.

Passion and purpose are just unproven notions until they are lived out in the creative muscles you use every day. When this happens, your life begins to make sense because

what is inside you is integrated into what comes from you to the outside world.

Your greatest creative impetus is the attachment of who you are to what you do. Detachment doesn't automatically spell failure. It just makes the grind much more grindlike; you become driven by destinations rather than destiny.

Detachment forces you to be driven by singular goals rather than by growth, and to be roused by an ever-fleeting endgame. In this state, your work is more difficult to weave together into one inspiring tapestry.

On the other hand, when who you are is attached to what you do, striving for excellence excites you instead of burdening you. Your drive to see an endeavor through is fueled by passion and purpose instead of mere duty or obligation. There's a tangible difference. Detachment is the short path to frustration, burnout and boredom. Attachment is the short path to discovery, growth and fulfillment.

Your creations are meant to shape you into better, more advanced versions of yourself. We tend to downplay our own originality especially when it comes to offering it to the world in a tangible form. But if we all thought the same thoughts and carried out the same acts in a similar manner, there would be no innovation, progress would be predictable at best and we'd eventually be bored out of our minds.

Attaching yourself to your work is not about capturing a glowing mission and vision statement. While it's not a bad place to begin, the real attachment happens when you begin living out those ideas, when you begin actively loving the thing you've fallen in love with.

When your grind is void of personal purpose, it produces sparks that lack deep meaning and significance. Left unaddressed for too long, this sort of grinding eventually turns to concession.

Don't aim for balance. Don't buy into detachment. Take courage and aim for integration — the folding of all you are into what you do.

## Keep Your Day Job

One of the most important choices you will make in life is to explore where you are right now in the job you currently possess, within the relationships you currently have, at the places you regularly visit. Within your current context lies more creative opportunities than you probably ever realized. There are no dead-end streets for the truly creative.

Being a constant creator begins by unlocking what is in your heart, right here, right now. You might have been playing that role for such a long time that it seems absurd to think you could actually do something different, something truly creative and heartfelt. But, there is no question that you can. As this change occurs inside you, it changes the appearance of the world around you. Yes, this is true even for a job you consider far from your heart.

The infusion of your whole self into any environment in which you find yourself will change how you see that environment.

There are four reasons why your current roles are the best place to begin grinding new sparks:

**Reason one:** Your current roles are your reality. Whether you're an Igniter or a Grinder, embrace your current reality because, frankly, it's the only reality you have. Many realities throughout history needed to change. This sort of change never happens from a detached stance. It always happens when creators dive headfirst and heartfirst into their current realities and dirty their hands.

**Reason two:** Your current roles are the most prime real estate available to you for introducing creative solutions. Many of history's greatest artists were simply common people who immersed themselves in their current roles and realities. They remained where they were, sought to fully understand their contexts and then infected them with groundbreaking ideas and creations. You have a body of submerged knowledge right now that can offer you creative insights about the roles and realities before you. Use it to capture the sparks that arise from your current grind.

**Reason three:** Your current roles give you the needed support to take creative risks. When you grind where you are, you do more than ignite legitimate sparks; you also provide a financial and emotional foundation from which you can pursue less certain creative ventures that might not pay right away or maybe not ever — except through a greater measure of fulfillment, camaraderie or purpose. The more connected you are to the world through a day job, the more creative freedom you will have, the more creative material you will have to draw from and the better understanding you will acquire about your intended audience.

**Reason four:** When you simultaneously grind your current roles and your creative frontiers, you cultivate a symbiotic relationship that fuels both your day job and your creative potential. Time has a lot to do with this. When you have fewer hours to grind your wilder sparks, your mind is forced to be more focused. Your good habits at work tend to carry over into other responsibilities and activities, including your currently unpaid creations. Draw

no lines. Start where you are, doing what you do. Wake up each day and go to create.

## Embrace a Routine

Creatives are generally thought of as eccentric people — odd birds whose capricious lives ebb and flow with their latest whims. The idea that great creatives embrace a strict discipline seems antonymic to their characters. But, there's no doubt that constant creators have learned that strategic discipline is more essential than their vices and foibles will ever be.

To be disciplined as a creator, you need a mindful routine that allows for fast progress and simultaneous flexibility to explore without an immediate deadline.

This is a creativity conundrum: We need to be efficient and use our energy wisely, but in order to make progress, we also need to explore, ideate and create. Routine is the glue that holds them together.

To be creative, there has to be a constant willingness to let go — of assumptions, of current knowledge, of safety nets — and Igniters have a natural inclination to do this. But there must also be structure if you want to make any real strides in your creative efforts, enough to force you to take action and produce something, anything, on a daily basis.

You might have a flood of ideas every day, but with no structure to get them moving, your ideas end up bobbing in an ever-expanding puddle.

Conversely, creativity within the right structure is like a river with banks. Ideas move faster in the current of your work, and yet there is still room for them to deepen and even accelerate as needed by narrowing the banks.

It's one thing to embrace structure to get an idea in your head into a tangible form. It's an entirely different thing to take that tangible creation and mold it into something that is distinctive and memorable. Many creators get the product finished and then move on to the next product. That can be a mistake. Often, the initial product still contains some embers that just need a little more stoking to ignite a bigger flame.

When your creative urge begins to diminish, when you no longer have the space to wander both mentally and physically, you've taken your routine too far, spread it too broadly. Back off and build in some more margin.

There is no creative routine worth embracing that is simultaneously light on risk and heavy on reward. The creative process is risk and reward at once and all at once. Embracing a routine that ushers us into this lifestyle each day is a small price to pay, honestly. It may hurt at first, but the more you do it, the less risky, rote and unreasonable it will feel even when your actual odds of failing haven't changed. Fighting this fight is one of the most worthwhile battles in your life.

Set about today to establish a routine, a rhythm, that allows you to maximize as much creative juice as possible every day, in every context you find yourself, with the tools you possess and those you are still learning.

This is the real effect of discipline: You embrace whatever routine sets you up for constant creative progress, and the rewards come to you. And you can come to expect them.

Allow your routine to become part of who you are, part of your lifestyle. When you experience its rewards, even only a few times, you will be ready to lean in further. In other words, you will comprehend what constant creators have known for centuries.

## Defamiliarize the Ordinary

Despite all the planning and forecasting involved in running your life, constant creativity hinges on your ability to regularly enter unfamiliar space and cultivate your creative instinct. Fields never turn green without regular storms; but they also never grow without a break in the clouds allowing sunlight to shine through. The natural world is a constant reminder that progress never occurs without some change to the familiar.

The key is to ignite that lack of familiarity yourself. Don't avoid it. And don't wait for it to come.

Sparks arise when you discover nuances you hadn't seen before and connections you'd never made. The fact is, original breakthroughs rarely occur in familiar locations. This includes the space in our own minds where we carry our preconceived notions about the people and places around us and where current knowledge resides. So, the trick is to remove yourself from your familiar places or else discover what is unfamiliar about where you already are — even if it's as simple as taking a different way to work, or going to lunch with someone you barely know.

The path of your current knowledge, your current know-how, your current understanding is never enough if you want to remain on the creative frontiers. You must peer down the path of the unknown and unfamiliar if you want to continue generating sparks.

When we start with no knowledge, suddenly, discovery is our primary resource. It is far easier to reach this conclusion about yourself — that your knowledge is limited or truly nil — when you begin to comprehend the vastness of opportunities and miracles around you every day.

The goal of all creations is to remove complexity and move toward simplicity. To do this, though, you have to enter into the complexity, the uncertainty, the unfamiliar. Your brain has what you know from past experience locked in. It's in the bank, so to speak. But the sparks that come from that reservoir are ever diminishing unless you add fresh data to it every day — unless you mix the familiar with the unfamiliar.

A lack of creativity is fundamentally a lack of curiosity. It is a lack of desire and latent drive to seek new answers. That drive is in you. But with it in neutral or turned off entirely, you easily cling to a binary view of the world.

Stay open to whatever comes with the uncertainty. Breathe it in. Digest it. Fold it into your perspective and understanding. Let everything begin to teach you.

When you make a habit out of defamiliarizing the ordinary, your life comes alive as the beautiful mystery, adventure and frontier of possibility that it truly is — that it always has been. Along this frontier rise the sparks of your greatest creations, both big and small.

## Stay Foolish

Sparks come from action — even the awkward, bumbling action of doing something completely new. Being an amateur creator is not conceding that you'll never become a pro. Nor is it conceding that mediocre creations are the goal. It's conceding that to become a pro, and remain a pro, you have to remain willing to become a fool in love, again and again.

Constant creators hold tight to one constant when all is falling apart and when all is thriving: foolishness. This is different from embracing the mind of a beginner who is willing to learn from anything. Foolishness is in the doing. It's an ability to embrace ideas, opportunities and paths that we know are impractical and will break us down. Being foolish is doing what the majority would call stupid, senseless or a waste of time.

Constant creators remain in a state of constant wonder. Not merely the kind of surreal wonder that can get stuck in fantasy if we're not careful, but the kind of wonder that worries less about the "whats" and is more inclined to explore the "what-ifs." And not just mentally explore. Physically explore.

When you're starting something totally new, you're taking a leap of faith. You have to believe, and you have to make other people believe even when you're nowhere near ready.

The bright future of anything — career, company, industry, relationship — relies on those who are willing to keep creating whether or not they've done it before and despite a lack of knowledge or resources. Stupidity and feelings of insufficiency can be fuel for innovation — often the most natural fuel you possess — if you let them be.

Like a child learning to draw, just draw. Don't try to be inspired. Don't trace or connect the dots. Just create something. And then do it again. If you do it consistently enough, inspiration and discovery are guaranteed to occur. Get yourself used to acting forward, not merely thinking forward. And don't mind acting the fool.

If there is an obstacle to engaging in foolish activity, it's fear. If you are truly acting on a spark that requires you to play the amateur, you will always fear something along the continuum from mild disappointment to complete disaster. However, the overlooked aspect of this sort of activity is that it is rarely a chore. Amateur spontaneity will stretch you, yes. But it is because you are stretched that this activity can be one of the most exhilarating and fulfilling things you do. You have to act through the fear.

We are delighted by the sparks that rise from this sort of foolishness. We are drawn to their mystery. These sparks are fueled by your own natural curiosity.

Your logic tells you that your days are easiest when you know what to expect. There's truth in that. But your spirit reminds you that your days are only inspiring when you learn and stretch and grow. There's transcendence in the fascination with our own curiosity.

There is always fear in playing the fool. You are never fit for what you don't yet know and can't yet do. That's why great creators don't attempt to think their way into acting spontaneously. They just act spontaneously.

There is a tendency to see creative foolishness as frivolous or even careless behavior. This is a flawed view; it assumes that you are happy with your current "everything." If you are, stay where you are and hold on to everything. Learn nothing new. Spark no hidden potential. If your everything isn't everything it's cracked up to be, let it go now, and then see what else you can learn and find.

The majority of your amateur experiences and foolish experiments, will teach you something right away and

illuminate an immediate application to a current venture. This application must be captured. You must become proficient at refining your creativity through reaction.

Constant creators work with a continuous sense of urgency to raise the bar in every facet of their lives. They resist hitting the cruise control when something is working. And they rarely rely on existing road maps to direct future paths because they know the best road map is an ever-increasing awareness.

If you can begin to see creativity through this lens — accelerated output, immediate impact — you will begin to see why acting the fool matters. You don't need brilliance to make creative progress. You just need enough foolish drive to move forward when you are neither qualified nor equipped. Opportunities come quicker and steadier when you forget your ego and just go.

Don't fear the fool in you. Let him lead you into creative frontiers every day.

## Fall in Love

When you learn to trust the creative process, attach yourself to your work, keep your day job, embrace a routine, defamiliarize the ordinary and stay foolish, creativity becomes a love affair. And when you're hooked, you're hooked for life.

When you fall in love with your unique brand of creativity, strange things happen. Details like time and space being to fade into meaninglessness.

A new creator will fall into the temptation of trying to orchestrate the perfect space and time to start creating, but that only impedes progress. He doesn't yet understand love.

When there's love, creators no longer wrestle with the "wheres" and "whens." The real matter at hand is the pursuit of the next creation, the next opportunity to display their love.

Clearly, this sort of love gets messy now and then. While there is a place for clean and tidy, the love affairs of some creators thrive in messy environments. The point isn't that messy means more creativity. Or that tidy does either. Messy or tidy is more a personality trait or preference than a principle. The point is that when you're in love with creativity, you don't worry about either. You take it as it comes each day.

When you don't know where to find creative inspiration, it's often because you're not listening to your heart. Creativity lives in your heart, and because that's true, you can ignite sparks and grind them anywhere.

The most profound element of this sort of love — of any true love — is that you always have each other. In good times, sparks and champagne spray the air. Life is artful, meaningful and a true manifestation of who you are. And in bad times — in loss, rejection, disappointment — creativity is still there reminding you that an upswing is just a spark away. When you have creativity, you have the ultimate bond.

In the end, creating is as human as breathing. You breathe in. You breathe out. This proves you are living. You absorb. You create. This proves you are alive.

You are a human being and a human becoming. Your creativity fashions the bridge between the two. Who you are is art. You are organic and meant to manifest the features of your becoming.

Your becoming is beautiful and lucid. It inspires and instructs. Your becoming is hideous and chaotic. It inflames and confounds. Thus, your life sings both magic and mystery, fulfillment and frustration. Thus, the products of your becoming are risky. Don't let risk confine you. Being without becoming is riskier still.

Let your senses craft substance, your mind craft meaning, your heart craft belief. Allow the combinations to originate emotion; let conviction be fashioned. Desire and despair. Satisfaction and discontent. Faith. Hope. Love.

Do it every day. Pursue it like a lover you can't live without.

In the end, what you truly love determines who you become. But knowing what you truly love is challenging to clarify … until you're in a difficult or desperate situation. Love is often theoretical until there is no longer time or energy for theories. That's when your lens is in clear focus. And it's then that you know where you stand with creativity.

# No Limits

## Blow the CAP Off Your Capacity

by John C. Maxwell

### THE SUMMARY IN BRIEF

We often treat the word "capacity" as if it were a natural low of limitation. Unfortunately, most of us are much more comfortable defining what we perceive as off-limits rather than what's really possible. Could it be that many of us have failed to expand our potential because we have allowed what we perceive as capacity to define us? What if our limits are not really our limits?

In *No Limits,* leadership expert John C. Maxwell identifies the abilities and choices that make up our capacity. Some are things we all already possess, such as energy, creativity and leadership. Others are things we must choose, such as attitude, character and intentionality. Maxwell examines each of these capacities and provides rich insight on self-awareness as well as clean and actionable advice on how you can increase your potential. He teaches you how to *identify, grow* and *apply* your critical capabilities. Once you've blown the "cap" off your capabilities, you'll find yourself more successful — and fulfilled — in your daily life.

### IN THIS SUMMARY, YOU WILL LEARN:

- To become aware of the possibilities that can increase your capacity and make you better by recognizing your value through self-awareness.
- How to identify and develop the capacities that are already within you and understand how each capacity works together to improve you and your life.
- To make smart choices that allow you to reach your fullest potential and become successful by building up your existing capacities.

# Awareness: Remove the Caps from Your Capacity

If you grow in your *awareness,* develop your *abilities* and make the right *choices,* you can reach your capacity. This is "The Capacity Challenge." If you are willing to accept this challenge and follow the processes outlined here, your life will change.

The Capacity Challenge begins with *awareness*. Becoming aware is the first big step you can take to blow the cap off your capacity. People will more readily reach their potential when they work on their strengths rather than working on their weaknesses.

It is important to remember these two thoughts as you prepare yourself for this challenge:

1. **Change doesn't always have to be drastic to be effective.** Change your focus from your weaknesses to your strengths. Be on the lookout for where you need to change your focus to become more aware of your potential.
2. **Change is necessary for you to reach your capacity.** Later in the challenge, you will be asked to work on some things that may not be natural strengths. You will find that difficult. Growth in skill areas, if they are not natural, is often slow and small. That's OK. Every little bit of positive change helps. It increases your capacity.

All of these changes, whether difficult or easy, are needed if you desire to increase your capacity and reach your potential.

## Your Capacity Isn't Set

Have you given much thought to your capacity? Most people think theirs is set. You hear one person identified as "high capacity" and another as "low capacity," and you just accept it. What's your capacity? Have you defined it as high, low or average? Do you think it's set? Maybe you haven't put a label on it, but you've probably settled into a level of achievement that you believe is what's possible for you. That's a problem.

Too many people hear the word "capacity" and assume it's a limitation. They assume their capacity is set — especially if they're beyond a certain age. People give up on the idea that their capacity or their potential can grow. All they do is try to manage whatever they think they've got.

Some caps are fixed. But most are not. We can't allow these unfixed caps to keep our lives from expanding. We can't let caps define our potential. We need to see beyond the caps and see our true capacity before we can blow off our caps and expand our capacity.

## You Can Become Aware of the Possibilities That Can Make You Better

All lasting growth requires awareness. Unfortunately, if you lack awareness, then you don't know that you are unaware. Self-awareness is a powerful skill. It allows you to test your limits. It empowers you to understand other people. It makes partnership with others stronger. It allows you to maximize your strengths and minimize your weakness. It opens the door to greater capacity.

Our perspective colors our view of the world, other people and life. But it's also true that who we are determines how we see ourselves. We naturally tend to see things as we have always seen them. If we want to

increase our capacity, we must see differently. We need to be willing to look at ourselves and our world in new ways. We need to pay attention and look for what we need to know.

What stops people from reaching their capacity often isn't lack of desire. It's usually lack of awareness. There are factors that work against us and prevent us from developing great self-awareness, such as excuses, unresolved negative emotions, habitual self-distraction, absence of personal reflection and the unwillingness to pay the price to gain experience.

Most people who have developed self-awareness have had to battle one or more of these factors to get where they are. They've had to work very hard. It takes a desire to make self-awareness discoveries. It takes discipline to look at yourself and reflect on your experiences.

The next step forward to increasing your capacity involves removing the caps that are holding you back. Awareness changes everything. As soon as we become aware that some of our "limitations" are artificial, we can begin to overcome many of them. We can blow off these caps, which opens the way for growth.

Are you ready to take the capacity challenge? Maintaining the status quo is easier than accepting the challenge. If you wanted to, you could find plenty of reasons *not* to strive for your potential. But that shouldn't stop you.

### Recognize Your Value and Increase Your Capacity

You have great potential. Not only are you good enough, but you have the ability to get even better and achieve greater significance in your life. You need to be aware of the caps in your life and recognize which caps you can't remove and which ones you can.

We don't have any control over how our life begins, and there are also many things that happen to us in our lives that we cannot control. We suffer accidents or illnesses. We lose people we love. We discover that we don't have the talent or ability to fulfill a dream. These are called "life caps."

Part of the process of fulfilling your purpose is becoming aware of the things you can't change that limit you so you can direct your attention toward the things you can maximize to increase your capacity.

The first type of limitation comes from the caps that others put on us. You're not even aware of some of them. But you don't have to let their lack of belief define you.

Perhaps the caps that limit us most are the ones we put on ourselves. Too many people simply accept whatever environment they're born into. They think it's normal, and they start to believe they don't have any other choices in life. When that happens, they've created a self-imposed cap on their life.

Self-imposed caps don't just blow off in one moment. We expose ourselves to new ideas and successful people, and the caps begin to loosen. And when they get loose enough, then they come off. What caps do you need to loosen so that you can blow them off and start increasing your capacity? Are you limited by complacency?

## Ability: Develop the Capacities You Already Possess

We often talk about capacity in the singular. But what if we're thinking about capacity in the wrong way? Thinking of capacity as one thing is too limiting.

After awareness, the second step to changing our capacity is to recognize that we have many capacities. You have dozens, maybe even hundreds, of them. Each capacity is based on your talents and choices. There are seven capacities that rely more on talent than choices, though both are involved.

Everyone possesses these capacities, and every one of these capacities is significant to a person's success. By continually maximizing today's capacity in these areas, you will increase tomorrow's potential.

These seven capacities don't develop in isolation. They work together. It may be helpful to think about this idea in two ways. First, your capacities build in layers. This creates a great foundation that you can build your life upon. Second, they connect to one another. Each time you increase a capacity, it has the potential to synergize with another capacity and increase your potential. As you develop your seven core capacities, explore your options. Look for ways to expand your ability. You will be amazed by the compounding effect you will experience and the increased potential that will result.

### Energy Capacity — Your Ability to Push On Physically

There are many capacities that we can increase, but there's nothing we can do to expand time. That's why we need to focus on our energy. That's something we can influence. If we want to get more done and make a greater impact on the world, we need to increase our energy capacity.

How should you focus your energy? Here are three R's that can be used for prioritizing: *requirement* (what you have to do), *return* (what you do well), and *reward* (what

you love to do). Doing what rewards you almost always gives you energy. The same is true for doing what gives us a high return. However, for most people, fulfilling requirements is not energizing — unless your requirements line up with return and reward. If you have the power to align all three of those, you'll always be energized by your work.

It's vital to increase your energy as much as possible. It's also crucial to use the energy you have wisely. Use it when you need it, conserve it when you don't, and know the difference between the two.

How much have you thought about your energy capacity? Have you assumed that your energy capacity is fixed? That you can't change it? If so, you need to change your mindset. Start paying close attention to what increases or decreases your energy, and begin making adjustments to what you do. Tap into things that increase your energy capacity, and manage your energy for the things that matter most to you.

## Emotional Capacity — Your Ability to Manage Your Emotions

Emotional capacity is the ability to handle adversity, failure, criticism, change and pressure in a positive way. All of these things create stress in our lives. The inability to deal with stress or emotional pressure takes a lot out of people. They give up, break down or do unhealthy things to try to escape the pressure. However, emotionally strong people are able to manage their emotions and process through difficulties. That allows them to increase their capacity, and moves them closer to reaching their full potential.

The first, and maybe most important thing that emotionally strong people do is take an active approach to their emotions. Maybe you can't control your emotions completely, but you can change them through your actions.

All of us are hit in the gut by unwanted surprises, blindsided by negative relationships and knocked down by the blows we didn't see coming. There are times when we want to tell the world how unfair life is. But only by taking action can we pull ourselves out of the pits we find ourselves in. The faster we can recover from the shock of the emotion, process through it and move toward action, the quicker our recovery time will be, and the more emotionally strong we will become. The choice is always ours. We either continually work on mastering our emotions, or we will be continuously mastered by them.

## Thinking Capacity — Your Ability to Think Effectively

If you want to increase your overall success capacity, then you need to increase your thinking capacity. Most people do not recognize the value of good thinking. They have thoughts, but they let them go and don't do anything with them. However, when you value good thoughts, it makes all of your thinking more valuable. That is the starting point of increasing your thinking capacity.

Once an idea has been put on the table and improved by a key group of people, it's time to take the idea out and let more people see it. You learn a lot when you present an idea to people who don't know you or who won't automatically give you the benefit of the doubt. It's always easier to think an idea than to practice it. An idea always sounds better when it hasn't been challenged. But an unchallenged idea is rarely able to live in the real world.

Something powerful happens when a person moves from *believing* in an idea to *owning* an idea. Believing in an idea can be good, but it's very limiting. When you believe in an idea, it's like investing in an endeavor with someone else's money. You give it a try and hope it works. However, when you own an idea, it's like putting your own money into an investment. You do what it takes to make it work. The greater the investment, the more you feel that it *has to work*.

When you launch an idea, you need to be clear about what you want people to know and what you want people to do. The launch is the greatest test of any idea. The implementation demonstrates an idea's real value — or lack of value. When it works, it's powerful because everyone sees it.

Launching an idea is very rewarding. But the results come with the landing. When a thought lands and makes a positive difference, the temptation is to celebrate and move on. But if we do that without looking for a way to upgrade the thought, we've missed a great opportunity.

Growth requires your thoughts to be continually upgraded. If you want to increase your potential, maximize your capacity and be successful, then you need to develop your thinking. High thinking capacity and the ability to sustain your thinking will give you a higher return than being smart or working hard.

## People Capacity — Your Ability to Build Relationships

We are defined by our relationships. People can usually trace their successes and failures to the relationships in their lives. You cannot increase your people capacity unless you value people and care about them. If you don't like people, don't respect them and don't believe they have value, it stands as a barrier to your success with them. You can't secretly look down on others and build them up at the same time. However, if you value people, it

shows through. And it makes the development of positive relationships possible.

Put yourself in the position to meet and spend time with the right people. Use the Power of Proximity Principle, which is, "Get next to 10 people who can take you to the next level." Be intentional and show initiative by moving toward the relationships you desire in life. If you wait for the right people to meet you, you won't meet the right people.

People capacity really does make a huge difference in a person's life. And your people capacity will go to a new level once you realize how much you need the right people in your life. The more you value people, put yourself into their world, seek to add value to them and be their friend, the better your life will be.

### Creative Capacity — Your Ability to See Options and Find Answers

Is it true that some people are born highly creative? Of course. There are the rare few who create to create and are gifted to change the world in that regard. In fact, some argue that all of us are born creative, but most of us lose that creativity as we grow up. You can rekindle the creativity that's already in you, as well as cultivate new pathways of creativity.

Creativity is changing the question from "Is there an answer?" to "What is the answer?" Creativity always takes time, patience and experimentation. You just have to enter into the process believing there is an answer. Creativity is a mindset. You have to believe that answers and solutions are out there if you're willing to keep fighting to find them. Questions always spur creativity. Why? Because questions cause you to explore, to seek out.

Creativity is about connecting things. Focus on a particular idea and then look for ways to make connections to it. This is called "connection creativity." With an idea fixed in your mind, look for ways to connect it with experiences, people, quotes, stories, opportunities, questions — anything you can think of. If you want to increase your creativity, begin looking for connections.

Keeping our imaginations sharp is essential to creative thinking and problem solving. That requires practice. Unfortunately, as we get older, most people practice creative thinking less and less. Working with half-baked ideas forces us to use our imaginations and practice creative thinking.

If you desire to increase your creativity capacity, you can do it. You can train yourself to see possibilities. You can learn to find answers. You can become someone who always offers options. And you can work with others to become inventive and innovative. If you can harness that with productivity, you'll *really* be able to increase your capacity.

### Production Capacity — Your Ability to Accomplish Results

Production capacity can be increased dramatically and immediately if you are highly intentional about it. If you're willing to work at it, you can be successful. No one has ever had to work at *limiting* their capacity. That happens naturally. The world tries to talk us out of working hard. We convince ourselves that we can't get ahead. There are even people who will tell you that the system is rigged, that successful people have pushed you down and have gotten to the top by stepping on you.

Everything worthwhile in life — everything you want, everything you desire to achieve, everything you want to receive — is uphill. The problem is that most of us have uphill dreams but downhill habits. And that's why we have a cap on our production capacity. To increase production capacity, initiate many tries at one thing, not one try at many things.

Downhill is easy. It has no requirements. It doesn't take any effort. A downhill lifestyle is characterized by unintentionality, complacency, inconsistency and excuses. There is no big-picture vision for the future, only instant gratification.

Uphill is hard. Moving uphill requires intentionality, energy, determination, hard work and consistency. It requires you to keep an eye on the big picture, be determined, demonstrate character and put in the time. The right thing to do and the hard thing to do are usually the same thing. More and more people resist doing the right thing because it's hard, so they choose the easy thing. They go downhill instead of uphill.

When you want to accomplish something, you have to have a vision for what you're trying to do, but you also have to be willing to take action in the face of uncertainty. You need to tap into your thinking capacity to know what you're shooting for, but you also need to have a bias for action to be productive. You have to be willing to take a step, probably a small step.

That's the mindset you must have to become more productive. Whatever you have, or don't have, you're willing to start regardless of how little you know about how you're going to get where you want to go.

### Leadership Capacity — Your Ability to Lift and Lead Others

Communication is the language of leadership. Leadership is a two-way street. To find the people who want to

help you as a leader, you need to ask questions and actively listen. Questions open up doors and allow us to connect with others. They place value on the other person. And they give us a different perspective. Before we attempt to set things right as leaders, we need to see things right. The highest compliment you can give someone is to ask them their opinion.

However, none of that works if you don't listen. If questions unlock the door, listening keeps the door open. Questions start the conversation, but listening encourages it to continue. Questions + Listening = Quality Conversation. Quality Conversation = Quality Leadership.

If you're a task-oriented person, connecting may be something you have to work at to achieve. If you're a people person, building relationships may come naturally. But making the transition from relationship building to movement requires a *leadershift*. That "shift" is the transition from connecting with people to helping them make the changes necessary for the benefit of the team.

The greatest gift a leader can give their team members is a belief in them that lets them know they are valued. It's wonderful when the people value the leader, but it's more wonderful when the leader values the people.

How we as leaders see others determines how much we will invest in them. But how they see themselves determines how much they will invest in themselves. Value assessment determines investment. The value you place on yourself determines the level of your commitment to yourself and others. Self-worth is foundational to belief. The moment that your belief in yourself goes up, so can your commitment to help yourself. If the people on your team don't believe in themselves, as the leader, you need to try to help them find that belief. You need to encourage them. You need to speak positive words of affirmation.

## Choices: Do the Things That Maximize Your Capacity

The word "choice" implies that we have other options, and we do. How much capacity do you want in your life? You have the right and the power to choose. Choices add to the things we learn and the gifts we possess.

To maximize our capacity, we must choose to be intentional, focus on one area at a time and take action every day. You can maximize your capacity by making choices in 10 key areas.

These areas aren't skills or talents; they are life choices. The more you live them and learn to love them, the larger your capacity will be and the greater your success.

### Responsibility Capacity — Your Choice to Take Charge of Your Life

One of the reasons successful people are successful is that they see and seize opportunities. Often, we see them going through doors of opportunity, making the most of them, and we think to ourselves, *I wish I had that chance.* We see the results, but what we often don't see is the deep level of personal responsibility they had to take to make the most of the opportunity. Without increasing their responsibility capacity, they could not have increased their opportunity capacity.

The way you take control of the direction of your life is to take responsibility for yourself and for your everyday actions. People who do this see dramatic results. Can you control everything? No, of course not. But, you can choose to control the things that *are* within your control. First, acknowledge that you have the ability to choose. Then, identify which parts of your life you can control and which you can't. Once you begin taking charge and making choices, your life will begin to change.

### Character Capacity — Your Choices Based on Good Values

Values create the foundation of character, and character provides the foundation for success. The results of developing character are life changing. Good character is a choice you make every day. When you choose to do the right thing based on a positive value, your character expands. With each right choice, you develop the strength to make other right choices and more difficult right choices. In contrast, every time you choose to cut corners, compromise on your values or turn your back on what you know to be right, it shrinks your character. The smaller and weaker it gets, the more difficult it is to make another right choice.

Good character uses the same standard in every situation. If something is right, it's always right. If it's wrong, it's always wrong. People with good character are consistent. People who try to use multiple standards with different people and in different situations live fragmented lives.

When a person lives a fragmented life, others never know what to expect from that person. They don't know how the person will act in any given situation. Whenever you make a commitment to another person, you create hope. When you keep that commitment, you create trust.

Good character helps you follow through on that commitment and develop trust.

### Abundance Capacity — Your Choice to Believe There Is More Than Enough

Why are people who embrace abundance so readily able to say yes? It's because they possess high belief in many areas of life. They believe in themselves. They say, "There's more to me than what people see." Beliefs drive behavior. Lack of belief, which is a characteristic of scarcity, holds us back. We hesitate not because we are unable to do something but because we don't have confidence in ourselves.

Abundance people seize the moment because they see potential in it. They believe they can do more than they've done before. They believe they can perform at a higher level than they have before. They believe they can grow more — and keep growing. This belief not only keeps them going but it also allows them to be the first to take action.

Our perspective is not determined by what we see. It's determined by how we see, and that comes from who we are. Two people can be in the same situation and see things completely differently. While a scarcity person often looks at a situation and thinks, *There's no way!* an abundance person sees the same thing and thinks, *There's got to be a better way!*

The world is a better place as a result of people whose perspectives were shaped by abundance thinking. Change your perspective from one of scarcity to one of abundance, and you open the door to innovation and positive change not only for yourself but also for others.

### Discipline Capacity — Your Choice to Focus Now and Follow Through

We won't achieve great things accidentally. Never forget: Everything worthwhile is uphill. Achieving what you want takes time, effort, consistency, energy and commitment. Self-discipline is what makes those things possible and puts success within reach. And here's the good news: Self-discipline is something you can develop. You don't need to be born with it. It's a choice you make and keep on making.

Do you know what's important to you? If you haven't thought it through and written it out, it's very likely that any lack of self-discipline you're experiencing is coming from that. The single greatest way to increase your discipline capacity is to know what's important and have that as a touchstone for your life.

So much of what we do in life has no deadline. As a result, many things get put off. Create external deadlines to create an awareness of time. Discipline is like a muscle. The more we train it, the better we become at developing it.

### Intentionality Capacity — Your Choice to Deliberately Pursue Significance

Intentional living can be distilled into three characteristics. If you choose to embrace them, you can live with a much higher capacity for intentionality.

Be deliberate. We only get one shot at life, and whatever we fail to do will be left undone. Too many people think that good intentions are enough to make a difference. They're not. Good intentions are overrated. The smallest action always surpasses the greatest intentions.

Be consistent. Whatever we continually do in life compounds. If the things we do are negative, life gets worse for us. If what we do continually is positive, life gets better. If we practice intentionality, it compounds and life continues to get better.

Be willful. Living a life of intentionality is an act of will, and it's something you have to be determined to do daily. Most people don't lead their lives; they accept their lives. How much do you want to make a difference with your life? You can make a difference. Are you willing to fight for it?

Significance is all about adding value to others. If you do the following things every day, you will make a difference, and you will immediately feel the significance of your life: Add value to people, think of ways to add value to people, look for ways to add value to people, do things that add value to people and encourage others to add value to people.

### Attitude Capacity — Your Choice to Be Positive Regardless of Circumstances

Coaching and encouraging yourself is huge when it comes to choosing a positive attitude regardless of circumstances. It is the single best thing you can do to help yourself. There are some foundational things you can do to put yourself in a positive position most of the time. By doing these three things, you make it easier for yourself to bounce back from difficulties:

**Become humble:** It is much easier to face life's difficulties and respond positively when you display humility. Doing small things that may seem unimportant to us but that benefit others helps us cultivate humility. Doing them with love builds on that.

**Become teachable:** Teachability is wanting to learn from every experience and every person. It requires an appreciation for everything we experience and knowing that we can always learn something — if we have the right spirit.

**Become resilient:** To maintain a positive attitude, you need to be resilient and not let anything negative take hold of you. Time spent on being angry about the past means less time moving forward and doing what you desire to do.

Your attitude is one of the most pliable and resilient parts of you. Regardless of your age or circumstances, you can change if you're willing to.

### Risk Capacity — Your Choice to Get Out of Your Comfort Zone

When taking big risks, you can't depend on hype or wishful thinking because those things cannot withstand the heat of risk. You need to understand what you're dealing with, look at the worst-case scenarios and look reality dead in the eye.

Risk is rarely comfortable. It requires us to get out of our comfort zone. Yet, that's where we need to live when we're risking big. To take the steps forward in the face of risk, you have to deal with your emotions and doubts.

Everything rises and falls on leadership. That is never more true than during times of risk. The size of the leadership must be equal to the size of the risk. If you're going to attempt something difficult, you need good leadership. You need to either provide it yourself or find a partner who can help you lead. If you are preparing to take a big risk, it may require every leadership skill you possess to accomplish it. Don't take that lightly. Keep growing as a leader. The more you increase your leadership capacity, the more you increase your potential for risk capacity.

### Growth Capacity — Your Choice to Focus On How Far You Can Go

A person's capacity is limitless, and our desire should be to explore how far we can stretch it. Some of the most significant things in life take great time and effort. The joy of the journey toward them comes from the new discoveries we make along the way. Our new knowledge and discoveries become the motivation for us to continue the journey. It is only after we go a long distance that we can look back and realize what we didn't know. Soon we begin to realize that it is not the destination we're seeking. Rather, we desire the growth that we experience, and there is no finish line. At that time, we stop asking, "How long will it take?" and begin to wonder, "How far can I go?"

Failure is not your enemy. Failure can teach you valuable lessons. While failure is inevitable, learning is optional. Failure helps you develop resilience, or endurance with direction. You can use your failures to teach others. You have lost your fear of failure when you are not afraid to share those failures with other people.

### Partnership Capacity — Your Choice to Collaborate with Others

If you want to multiply your effectiveness, you need to work with others. To enjoy great partnerships, you need to be a great partner. If you want to partner up with others, then be the first to meet them where they are. Find common ground, and place their agenda at the top of your agenda. In essence, become a servant leader, and measure each day by the seeds you sow more than by the harvest you reap.

Adding value is the only way a partnership will work. Partnerships begin to disintegrate when one person starts receiving more than they are giving. The only way that we will be given an opportunity to partner with others tomorrow is to add value to them today. If you want to be a good partner and benefit by increasing your partnership capacity, you need to add value to your partners.

Trust is the foundation of any solid relationship. Trust can't be established quickly; it must be earned, proven and tested over time. Once it has been established, your partnerships benefit from a trust advantage, which makes them function more smoothly.

## Your Life with No Limits

If you are aware of yourself and your ability to improve, if you develop the abilities you already possess and if you make the everyday choices that help you improve, you will reach your capacity.

Your life need not have limits. As long as you're breathing, you can improve. You can make a greater difference. It's all within your reach. All you have to do is seize it.

## Creating Meaning and Achievement in Your Career and Life

by Alan Weiss and Marshall Goldsmith

### THE SUMMARY IN BRIEF

*Lifestorming* is your practical guide to becoming the person you want to be. You will discover what it takes to redesign your life, friends, behaviors and beliefs in order to move closer to your goals.

While change is not easy, it is possible. You will discover a new way to think about your goals — why you chose them, how you can achieve them and (critically) how they can evolve over time to reflect your changing priorities.

*Lifestorming* will help you assess your current state in concrete terms and determine your ability to change and adapt. Then, you can purposefully identify the people, actions, habits and beliefs that either support your personal and professional growth or hold you back from reaching your goals. Outlined here are six building blocks of *character* that will help you to challenge your belief system, develop a leadership mindset and overcome the stumbling blocks that keep you from success. You'll map out an action plan and learn how to continually move forward at work, at home and in everyday life.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to set the course of a personal evolutionary journey while being aware of outside forces that can influence the journey along the way.
- To recognize when changes in your behaviors are needed and how to evolve them into aspiration-appropriate behaviors.
- To build character in a way that allows you to reach your full potential and create the future you desire and deserve.
- To understand that legacies are created day by day, and how your behaviors and decisions are building that legacy.

## Setting Our Own Aspirations

Our natural human tendency is to think of ourselves as independent and authentic — authors of our own destinies. But that's a tall order and much tougher than it seems. Bombarded by external triggers and expectations, we can easily fall into roles and patterns established for us by other people.

We often unconsciously become programmed to believe we are someone and then proceed to live our lives trying to fill that role. However, it's often the wrong role — not right for us and sometimes even harmful.

A great many people follow their parents into a profession even when they don't feel any passion for it themselves. This pattern can also be influenced by siblings. Brothers and sisters are highly influenced by their sibs, and tend to play the same sports, become cheerleaders or join the band (and play the same instrument) — or do just the opposite to escape the comparisons. These are roles that have been established as successful, drawing praise from others and creating a precedent to follow or from which to flee.

Thus, unseen by the naked eye, we, without thinking about it, may do our best to become the people we were programmed to be rather than the people who, in our hearts, we want to be!

### An Evolutionary Journey

We're talking about taking an evolutionary journey through life. A journey without a "there." The evolving you is not a moving target but pursues a moving target. Be careful that your "there" is not created by someone else or some external force, such as Facebook. Your "there" can, and often should, be constantly moving as your experiences, successes and perspective change. Our bar may well become higher and higher as we journey through life.

An initial question becomes: To what extent is your journey one of internal control, and to what extent is it one of external control? Do social and normative pressures have a legitimate role in who you are to become?

*Control* is the power to influence. *Internal control* is the power that is believed by the performers to be theirs, within their purview. *External control* is the power that is believed by the performers to be wielded by others or by random events.

Many people arise each day simply awaiting what occurs without the intention of exerting themselves on the world. We see this in circumstances in which external direction has been removed advertently or inadvertently, and no one chooses to step forward into the vacuum. People mill about or drift away. Nothing productive occurs. This is much rarer among entrepreneurs, who realize (and are gratified) that they must make their own plans work and must achieve their own aspirations.

### The Impossible Dream

The fundamental work of changing our behavior for the better is ultimately our own responsibility. Today, we might cringe at the spinning wheel of social media, which is constantly gaining speed. We may feel as if we don't exist if we're not a part of this spinning wheel of information. The centrifugal force threatens to throw us off, so we cling with all our might trying to follow and be a part of a thousand issues for a second each. The inertia is bizarre: The more you get, the more you get! So, we

**Rebecca S. Clement**, Publisher; **Sarah T. Dayton**, Editor in Chief; **Masiel Tejada**, Graphic Designer; **Meaghan Kelly**, Contributing Editor

become overwhelmed with examples, advice and claims that are never vetted, validated or verified.

Today, the phenomenon is multiplied a zillionfold with the unceasing, untiring, always increasing speed of the wheel of information that constantly spins in front of us. We don't *really* know what makes sense and what does not, what's real and what's a lie. If we are not careful, instead of becoming highly skeptical of most things, we tend to accept almost whatever is in front of us.

Our aspirations and goals are seldom purely our own. They are tainted or even created by the furious pace, noise and general uproar around us. Why else would people watch scripted "reality" shows of little consequence? We've lost our sense of perspective.

### Life's Detours

We know that the road of life is filled with unexpected twists and turns that can be terrific opportunities or harmful detours. It's easy to wander down interesting paths and alleys only to find that we don't know the way back. We end up in a career, a location or a relationship that is far from ideal — and struggle to get back.

**Family.** Families are our first and strongest influences. They can help us become the people we want to be, but they can also send us on detours even when they mean well. They model roles and behavior that we choose to adopt or reject later in life.

**Media.** Social media presents unprecedented opportunities. It's given birth to inspiring social movements and empowered individuals to do great things. But, it comes with huge challenges, too. Given the pervasiveness of our media culture, how do you make a smart decision about what dreams and aspirations are really best for you? It can be hard to find time to stop and think.

Our main institutions — family, media, religion, business and government — are in flux. While some of those changes are good, all of this volatility makes it hard for us to set aspirations and metrics for success. Without major institutions to guide us, where can we turn? The answer may be toward each other — to our friends.

## The Importance of New Friends

We tend to become the people who are our friends. It's never a good bet to expect people to change a habit if they are surrounded by people voluntarily and happily engaged in that same habit. The default position is pretty clear: We tend to hang with people who are like us and live near people like us.

### Breaking Out of the "Good Enough" Trap

Negative social pressure can play out in different ways when we try to change our behavior. This is referred to as the "good enough" trap: We look around at the situation and say, "There's no need for me to keep trying so hard when the people around me are perfectly happy with mediocrity." Four environments trigger "good enough" behavior:

1. We lack motivation: If we don't really believe that the goal is worthy or we believe that we lack the skill to do a task well, then we shouldn't take it on. Find something that you care about, and go after it with gusto.
2. We're working pro bono, volunteering or getting paid less than we think we should be: Doing substandard work only reflects badly on us in the long run.
3. We refuse to acknowledge our weaknesses: We tend to see our strengths as our real qualities and our shortcomings as aberrations that don't really define us. We grow when we take responsibility for the whole package — good, bad and in between.
4. We have compliance issues: No one likes to be told what to do, even (and sometimes especially) when the person telling us what to do is right. Saying we're good enough the way we are is a way to thumb our noses at authority.

Now, to be clear, "good enough" sometimes really is good enough. But, when it comes to our interactions with others — how we treat each other — "good enough" sets the bar too low. Not only that, the payoff for *not* settling is tremendous. Pouring all of our energy into behavioral change means that we start to change our environment rather than be changed by it. Our forward progress is exciting and contagious, as others start to make changes in their lives, too.

### The Best Relationships Grow with Us

Maintaining old friendships is a wonderful thing. Keeping in touch with the people who knew us as children adds dimension to our lives and softens the passage of time. However, we don't recommend having *solely* childhood friends. The new (and newer) people in our lives reflect our changing selves, and they are a valuable part of our personal growth.

While it's often quite difficult to retain friendships in a peripatetic world, social media makes it a simple task. We

are contained within a peer group in virtual perpetuity. That can be constricting if we forget that on social media, as in real life, we are free to engage with or avoid people as we see fit. The problem comes when we let these old associations constrain our sense of identity.

Another huge challenge of our media-dominated environment is the way it encourages us to vicariously lead the lives of other people. Scroll through your social media feed, and you'll probably see a number of people exploiting their lives for attention or profit. They invite you to live vicariously through their ever-unfolding personal dramas, but beware of subordinating your own life to theirs.

### Letting Go to Reach Out

You have to let go before you can reach out. Contrary to what most people believe, money and time are not resources; they are priorities. We all have time and money, but the key differentiator is where we invest them. That means we don't have to gather more resources but instead change our priorities as our conditions change.

It's generous to belong to organizations and associations and invest our time, help others and help good causes. However, even these have to be examined as candidates for change. Some people remain part of an organization and become officers and board members and never leave, which means instead of raising the standard of the organization, the organization slows them down. It's recommended that you consider moving on from — or at least review your membership status in — mastermind groups and similar mutual-help arrangements every two years.

We are close to many of our old friends, and we believe strongly in the value of loyalty. We also believe we should be honest in assessing our friendships. There is such a thing as a toxic relationship, whether it's professional, between friends or romantic. The closer you are to that person, the harder it is to disentangle yourself. In some cases, it really is for the best to leave that person behind and move on.

### Why We Halt the Journey

Our journey is sometimes halted, suspended, detoured or even abandoned. We may think there's someone in our way, but usually, we've created the obstacle in our minds.

Another obstacle is the rut we're in. Or we find someone else ahead of us moving slowly, and there's no way to pass unless we leave the track and create our own path around the obstacle, which requires strength, stamina and, most of all, intention. A third factor is procrastination (which is largely fear based).

The evolutionary journey from surviving to thriving requires a sort of global positioning system. You have to identify the next steps, recognize the next level and understand how to seal the doors behind you. We are often slowed because we're expecting people to keep up with us rather than finding friends who force us to speed up. We take our time because we're comfortable, having feathered a nest that we're not willing to leave.

## Behavioral Metamorphosis

Sometimes we don't know that we need to change. We are in denial, convincing ourselves that others need help, not us. We are a culture that is adept at rejecting help in the pursuit of change.

When change takes so long, we tend to miss the best opportunities or solutions. We don't obtain the travel plan we most desire, we miss the tickets for the big event, we find someone else has beaten us to market, or we spend more time on the issue than we really needed to. That's why abrupt change may make sense in some situations, but a metamorphosis might be right for others.

Metamorphosis is not a guarantee of a brighter and better future. The following are five questions to ask yourself to ensure that you methodically create a better future:

1. What behaviors do I seek to change?
2. What behavior will I substitute?
3. What assistance do I need to help with the change?
4. What metrics will tell me I'm making progress?
5. What will I do to sustain the change?

Change for its own sake makes little sense, for organizations or individuals. The key is to determine the salutary results that make the change worthwhile. In our journey of change, of lifestorming, we need to constantly examine our belief systems before we engage in arbitrary behavioral change. The best route to behavioral change is an appeal to rational self-interest by appealing to and/or changing one's belief system.

### Metabehavior

Our behaviors need to change on our journey, both for the long haul and in the short term. We need help with both. Acknowledging that need and obtaining that help are signs of health and internal control.

The shortest period of needed change is situational, in the moment, now. Our reactions here are often the

wrong default: We become angry and lash out, we blame ourselves and become despondent, or we are shocked and retreat from the situation. These behaviors are all dysfunctional. They exacerbate a deteriorating situation. They include many bad assumptions and attitudes, for example: "This person can help me but won't." "I have to radically change my plans and expectations." "I've been misled." "I've failed."

Situational change can be the most difficult because there often is no precedent for a given situation. It's usually a surprise and unanticipated, and it's very dependent on environment and the dispositions of the people involved. That's why situational change tends to be so different in the office versus at home. And so, a brief digression follows. To progress from rejection of change to positive acceptance of change to deliberate creation of change is a healthy evolutionary journey.

### Aspiration-Appropriate Behavior

Our aspirations shouldn't be static. They are a moving target, not something to be accomplished and done with. As we move through our evolutionary journey, our aspirations change. The options that pertain to most of us look like this:

1. Change is discretionary and deliberate.
2. Change is acceptable.
3. Change is resisted.

At the lowest level, we've feathered a nest and don't want to budge. Change is threatening, so we resist external influences. In business, and in organizational culture more broadly, change is a constant — especially now, at time when disruption and volatility are rapidly becoming the new normal.

We can't merely expect to retrain and reskill. We need to change our beliefs about accepting change. That leads us to level two. Here, we are receptive to change. The key to success here is an A+ attitude:

**Accept:** Accept the change without resistance or argument so long as it doesn't threaten your ability to perform and succeed.

**Adjust:** Make the required changes in your habits and activities.

**Adapt:** Now, your behaviors can change appropriately.

Once we've accepted that change happens, we can begin to think about how to bring about the changes we want. Thus, level three is about initiating change and exerting more internal control. When we talk about aspiration-appropriate behavior, we mean adjusting behavior to deal with the moving target of enhanced aspirations. And that means adjusting our belief systems to support those newly desirable behaviors.

## Believe It or Not

There is a belief that might be stated as, "Good work should speak for itself." Maybe, but not usually. When credit is due, if you don't claim it, someone else will. This isn't a question of bragging or selfishness but one of recognizing what you've accomplished.

A belief in positive self-promotion can actually be helpful in professional settings — when it prompts us to realize that we are always selling our ideas. Not only that, it is our responsibility to sell them, not others' responsibility to buy.

### Challenging and Evaluating Your Belief System

One important aspect of examining our beliefs is understanding our own *identities*. We often perceive our "real" selves as inferior to the people others see and with whom they interact. We think we have to play a role to gain social acceptance.

Instead of living our real values, we adopt the values we think we're supposed to have. When we hear that charismatic people are successful, we try to seem charismatic (even if that's an awkward fit for our personality). Some of us try to hang onto our authenticity by describing ourselves how we *want* to be seen.

There's no harm in a little positive self-deception. But too much of it sends our lives off track. That's because it's difficult to be authentic if we identify with someone we haven't become and who is actually not visible to others.

Your belief system needs to be adjusted to what is so that you can make decisions and take actions in the present that reflect the real you and what you're actually doing — authentically.

Here's a quick test to challenge and evaluate your beliefs:

1. What are your basic beliefs about yourself, e.g., what you are great at, what you just can't do, how you respond and so forth?
2. What merits reconsideration and/or change?
3. What actions and behaviors should be modified, created or abandoned in light of those changes?

### The Creation of Attitudes for Growth

Attitudes are the connectors — the synapses — between beliefs and behavior, a self-comforting way of thinking

or feeling about someone or something that is typically reflected in a person's behavior. Attitudes can be paradoxical, widely shared and vary tremendously across cultures.

So what of your attitudes? If you change your beliefs, your attitudes should commensurately change, and your behaviors should follow suit. Attitudes for our own growth would include statements and observations such as these:

- I need to acquire my own developmental resources.
- There's nothing wrong with failure if I learn from it.
- I can take prudent risk without serious threat to the family.
- I must accept the inconvenience of travel away from home.
- I need to be honest and vulnerable to be coached properly.

The objective, periodic review of our attitudes is vital because they are the directors of how we act, the behaviors that manifest our belief system. Therefore, it's best to focus on the wisdom of our intentions before we actually demonstrate them.

### Beliefs Manifest in Behavior

Our behaviors can be influenced by a constructed reality, which is then reciprocally influenced by our behaviors. How is this possible? We behave consistently with our beliefs and attitudes, and those beliefs and attitudes can be heavily laden with assumptions. Individuals and organizations can make poor decisions based on invalid assumptions.

Beliefs form attitudes that are manifest in behavior. Investigate the assumptions you're making about the world around you, and don't simply believe what you're told. Observations can also be used to dispel assumptions.

When we constantly question our beliefs, rethink our attitudes and evaluate our behavior, we stay awake and aware on our journey through life.

## The Importance and Evolution of Character

A shift in your identity doesn't make you a phony. You are allowed to fill new roles and take on new responsibilities. Character evolves. Your circumstances change. Here are six elements of character:

1. Intelligence: the ability to apply critical thinking skills to problems and challenges.
2. Drive or assertiveness: the ability to identify the need for and create urgency.
3. Happiness: Seeking and achieving well-being on our own terms is an essential aspect of character.
4. Empathy: Part of a strong character and virtuous life is the ability to put yourself in others' shoes and understand how they feel.
5. Reciprocity and friendship: The ability to give as well as take, to contribute as much as benefit is a strong element of character.
6. Intimacy and trust: Strong character demands the ability to form loving bonds and allow for vulnerability.

To build character, you need to build these six elements. To evolve character, you need to evolve these elements:

1. Intelligence: Read widely and diversely, including fiction, history, biographies, science and philosophy.
2. Drive: Create short-term deadlines. Don't rely on others or wait for others; take control of your route to your goals.
3. Happiness: Convince yourself that failing is a learning experience and that failing is far better than never trying.
4. Empathy: Think about similar circumstances you've experienced as you listen to someone else.
5. Reciprocity: Identify how you would like to be treated if you were the other person (not necessarily as you've been treated in the past).
6. Intimacy: Be willing to talk about defeats and setbacks. Make an effort to stop being embarrassed by personal questions and expressions of personal feelings.

### Self-Assessment

Unless you have metrics for success, it's almost impossible to assess whether you're doing well. Here is an example of some questions you may ask yourself to serve as a self-assessment: To what extent are you sharing credit and accepting blame? Are you able to create common ground and goals for a variety of diverse viewpoints, bringing them together into a common purpose? Do you make tough decisions, or do you procrastinate or ask someone else to make them?

Character is vital as a gyroscope for our behaviors and worldview. The elements of character are clear and can be learned, mastered, improved upon and sustained as your journey progresses. Character determines ethical behavior in a world where ethics are the bedrock for capitalism and honest, effective market transactions. It provides consistency in even turbulent times and supports both formal and informal leadership.

Lifestorming is about the journey you've embarked on to prepare the future you desire and deserve — admittedly a moving target, but a target in any case — so that the world doesn't make you into something else entirely. And it can do that readily if you're not paying attention, taking charge and utilizing the internal control that is reciprocal with external influences. A strong character is all the help you'll need for yourself and for others.

## Critical Abandonment

When we talk about relationships to eliminate, we are talking about relationships that are consistently, poisonously negative and are extremely unlikely to change. It also represents relationships with groups that are bringing us down. If quitting them cold turkey is hard to do, realize that you can achieve just about the same effect by drastically restricting your time with them in frequency, duration and intensity.

While preserving old relationships sustains us, creating new relationships enables us to grow. We need people who can stretch us, provide new viewpoints, supply differing perspectives and challenge our beliefs. Creating new relationships can mean joining new clubs, taking up new pursuits, becoming more involved in the community, introducing yourself to others or identifying with whom you'd like to hang out.

### Adjustments and Accommodations

Many of us seek out new relationships or behaviors because we think they will make us happy in the future. But, realize that happiness is a choice, always attainable in the present. Let your new relationships and personal transformations add to and reinforce that happiness as opposed to trying to fill a well of sadness and disappointment.

Instead, aim for evolutionary reinvention. Your journey should be one of continually becoming a new, improved person in part by assertively and proactively creating your new world.

### Staying the Course

Change is exciting if you allow it to be, and controllable if you prepare for it. Avoiding a systems failure and providing for the retention of the valuable and abandonment of the obsolete is a guiding principle.

The new you is an ongoing phenomenon. Most of us experience success in some areas of life and find it elusive in others. To achieve our full potential, we should take time to grow in every aspect of our lives.

The evolutionary journey has to be holistic. An effective exercise is to ask ourselves what kind of people we wish to be in a year — as we proceed on our journey — and what's required to arrive there. But these can't be ambiguous goals. They should be specific and related to where we are today, improving on our current conditions.

This is how you stay the course on your evolutionary journey. You create specific goals and metrics understanding that the factors on the axes might change over time, your ratings may change, and/or your ultimate goal may become more challenging. That's a part of growth. *As we grow, the bar gets higher and higher.*

So, this is how you abandon what's not needed; gain traction, torque and speed; decide what to eliminate, accept, retain and create. This puts you on the right road and enables you to stay the course.

## The New You

Negative emotions and misplaced priorities can still sabotage our accomplishments and reverse our hard-won progress. We're especially vulnerable to these mistakes when we're in a new situation — a new job, a new relationship, or even a new state of awareness or understanding. If you know the potential pitfalls, you can avoid them.

Overcoming fear is much easier when you know the causes of your fear and can eliminate them or rationalize them. The ability to laugh at yourself is an important component — not so much when you've panicked underwater but certainly when you've missed the ball with everyone watching.

### Maintaining High Self-Worth

An important aspect of self-worth is believing in the worth of others. Thus, acceptance and forgiveness are the reciprocals of our apologies and recognitions of error that we noted earlier. Remember that it's the *intent* that's important. We need to honestly confront the motives of

the other person. If we extend grace and good will to other people, we will feel its reflected glow on ourselves.

### Gaining and Sustaining Leverage

Leverage is power. For most people, leverage means moving on down the road expeditiously with minimal effort and friction. Journeys don't have to be difficult, and when they are, it's usually because we've made them so by focusing on the unpleasant and unrewarding aspects. Leverage helps us move forward by focusing on the positive and rewarding aspects.

When we encounter difficulties at the outset of a new venture, we have two options. One is to express our discontent, confusion or uncertainties. Another, healthier reaction to difficulties in your journey is being resolute, facing problems head on and solving as many of them as you can.

The idea is not to avoid the ambiguous zone nor to be hesitant about what may reside therein but rather to boldly enter it knowing you have the skills and resources to effectively deal with whatever you find.

## Sustaining the Journey

One of the more important elements in sustaining your journey without sliding back is having a spirit of generosity, and being generous is about more than donating money. Many people are generous even as they themselves struggle. Conversely, some people remain ungenerous even after reaching high levels of success. While generosity is about more than just money, bear in mind that the idea of it is really based not so much on what you give but rather what you have left after you give.

The most precious gift is one of time and attention. Anyone can write a check. Time, after all, is a priority, not a resource. Since we know we have 24 hours every day no matter who we are or at what level of success we are, how we distribute our time is vital. We are telling the world (and others) what our priorities are.

Hence, donating our time is a huge act of generosity whether by volunteering, serving on committees, coaching or by whatever other means. It's easy to be generous by changing our priorities about how we spend our time.

### Evolution Through Exploration

Our journey demands exploration. The road that others used may not be your road. It's not a question of the road more traveled or less traveled but perhaps of building your own road where none has existed. This demands some prudent poking about, looking around the next corner, shining lights in the darkness and feeling our way. To explore, you can't merely *think* outside the box. You have to *be* outside the box.

Exploration involves risk, which for someone people draws them to it mightily. These risks emerge from fear of rejection and fear of damaging our egos — the fear of perceived failure. Yet, no journey is flawless. There will be risks that need to be accepted and undertaken.

### Legacy

This is your life, your dream and your chance to be happy. When you get old, it will be your legacy. Legacy is often thought of as something left behind or handed down by a predecessor. While that may be true and common, what's not so commonly understood is that legacies do not appear upon retirement, departure or death.

Legacies are created daily. Every day you're writing the story of your life. You can consciously create your legacy starting now. Too many people are unaware of this opportunity or ignore it at their peril. Think about it: If you are consciously thinking about *contribution* and what you provide for others, not just for your lifetime but for theirs, might that not color and influence your behaviors and decisions today?

The decisions and behaviors you choose to engage in every day are the woof and warp of your legacy. What are you doing now, today, to build your legacy while on your evolutionary journey? It will seldom be one grand gesture, and will more probably be a continuing series of positive actions that not only help you and help others but provide a lasting guide for others to use along their own journeys. Lifestorming is about taking on life and enjoying it immensely by contributing to it enormously.

## 15 Proven Practices to Build Effective Relationships at Work

by Todd Davis

### THE SUMMARY IN BRIEF

*Get Better* is a practical guide for anyone looking to create a competitive advantage for any size and type of organization by building effective relationships from the performance improvement experts at FranklinCovey.

In *Get Better,* FranklinCovey's Chief People Officer, Todd Davis, explains that while an organization's greatest assets are its people, it's the relationships between those people that truly become the organization's ultimate competitive advantage.

Ideal for professional people at all levels of business, government and education from the front-line supervisor to the president and CEO, Davis describes the most common relationship pitfalls that negatively affect personal careers and organizational results. Davis identifies 15 proven practices that influential people at any level of an organization use to improve the quality of interactions with others and master the skills of effective relationships.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to change personal paradigms and behaviors to improve yourself and your relationships.
- How improving relationships will make you and your business more effective.
- Which practices and behaviors are key to enacting meaningful change.
- Foundational leadership traits that will help you achieve balance, avoid distractions and build stronger, more effective relationships in your work life and beyond.

### CONTENTS: 15 Practices

## Introduction

At both the individual and organizational levels, relationships matter; nearly everything gets better when we focus on strengthening them. Effective relationships yield effective results. Nothing of significance happens without a focus on improving our interactions with one another.

There are numerous practices that affect relationships, but these 15 have the most significant impact.

*Practice 1:*

## Wear Glasses That Work

We view not only ourselves but those around us through a set of lenses; and like any lens, they either sharpen or distort reality. Simply choosing how we see ourselves and others has a cascading effect on what we think, feel and do. This concept is a foundational principle for making significant changes in our lives.

We do a great disservice to ourselves when we wear the limiting lenses that are so often a part of human nature. But the good news is that changing one's glasses is a choice, and we all have the power to do so.

Take a moment to evaluate the glasses you're currently wearing and if you should exchange them for ones that work better. List the reasons you think a relationship is not working. Underline which reasons are facts — things about which most people would agree. Any remaining items are likely opinions or paradigms you have about the person that may be incomplete.

*Practice 2:*

## Carry Your Own Weather

When we allow darkening clouds to dictate our mood, it's easy to feel like a victim and surrender to the belief that we're helplessly subject to the external world. And when others are the source of our dismay and helplessness, it's easy to cast blame and adopt a victim mindset and language.

At the foundation of carrying your own weather is the ability to pause between stimulus and response. The earliest humans learned "fight or flight" as a way of reacting to life-threatening situations. Our stresses now come in different, less life-threatening forms. Yet, external stimuli naturally cause us to react quickly and sometimes inappropriately.

Fortunately, we have more than just the reactive part of our brain to work with. As human beings, we share the unique trait of self-awareness — the ability to see and evaluate our own thoughts. It gives us the capability to pause, step back and see ourselves along with the paradigms we adopt and use. In effect, it gives us the freedom to proactively choose our response.

Carrying one's weather can express itself in many ways: from the simple choice to keep a pleasant or professional disposition to not allowing the events around us to spin the needle of our moral compass. But at the heart of it is always a choice, and that power can never be surrendered unless we allow it.

*Practice 3:*

## Behave Your Way to Credibility

There are three important elements to behaving with credibility.

**Demonstrate character and competence.** Without a high degree of character and competence, credibility can't flourish. Character isn't built on being infallible but by behaving in a way that proves to others you can be trusted even when no one is looking. Many people think strong character can make up for lack of

competence, but you can lose credibility if you allow your competence to wane.

**Take the long-term view.** Credibility isn't earned overnight. Taking the long-term view means you are willing to pay the price to earn it — regardless of the time and effort involved. When it comes to building credibility, there's no escaping time. Transitory actions may build confidence in others, but trust only comes from seeing the consistency of such actions over time. If we don't take the long-term view, our credibility will suffer.

**Adapt to the situation at hand.** Building credibility often means adapting to new situations and people. The behaviors you've honed in one job context may undermine your credibility in a new role. This ability to observe and reorient oneself is often referred to as situational awareness.

Once you've damaged your reputation and credibility with someone, the way back can be difficult, and it certainly won't happen overnight. When it comes to relationships, people are not easily replaced. If you've damaged or lost credibility with someone, or if you need to build additional character and competence, begin the process of behaving your way back to credibility today.

*Practice 4:*

## Play Your Roles Well

To get better at playing your roles well, you need to first identify them, then determine the real contribution you want to make in each one. When you consider the roles you currently play at work and at home, pay attention to how many you take on. Unfortunately, we wildly overestimate our ability to effectively focus on several things at once. The only thing that comes from working on too many roles at the same time is mediocrity.

It's not about spending equal time in each role (most people will spend more hours at work each week than they will on a hobby or an important relationship), but it is about regularly keeping your most important roles top of mind and ensuring you have an overall balance in the long run. Realize that some roles stay with you for a lifetime (parent, partner, friend), and others may change over time (jobs, communities, volunteer positions, and so on). Quite often, our long-term roles turn out to be where we experience the most character and relationship growth.

When the roles we play slip out of congruence with who we are, then it's worth making a change. The number-one regret from those at the end of their lives is, "I wish I'd had the courage to live a life true to myself, not the life others expected of me."

On one end of the continuum is focusing on too many roles at once. On the other end is becoming too myopic — excelling in one role at the expense of others. It might be tempting to believe that work is always cast as the bad guy when it comes to prioritizing our roles. However, you absolutely can be contributing, engaged, and highly productive in your career as well as exceptional in your personal roles. It's a matter of prioritization. In the end, you have to sacrifice somewhere, and being mindful of balance is key.

*Practice 5:*

## See the Tree, Not Just the Seedling

When we look at a person's potential — whether it's a co-worker, direct report, friend, partner or child — it requires us to see past the "seed" and envision the mighty tree it can become. Seeing potential in others is a paradigm that recognizes growth as an organic principle. It doesn't happen overnight; it's a function of growth over time.

Seeing potential in others isn't just about *hoping* people will succeed. It's believing they have unlimited talents and abilities and opportunities for growth. It's also understanding that the road to success is paved with failures — that growing is an ongoing process that may take a lifetime. When we take the long-term view, we see that failure can be a moment of instruction and reflection and can serve to increase the likelihood of success. Seeing potential isn't about continually correcting performance or focusing on all the risks and mistakes that stand in the way of someone's potential. It may feel like we're being helpful by focusing on the negative to keep others from taking a spill, but we're not.

*Practice 6:*

## Avoid the Pinball Syndrome

When you give in to the allure of the urgent over the important, you fall prey to the pinball syndrome. Think of a pinball machine as a metaphor for all the urgent things that demand our attention throughout the day. And while we may not feel like we're playing a game, per se, when accomplishing such tasks, we might feel attracted to (or even seduced by) the rapid pace and focus that's required to get them done. Add a small endorphin rush as we check off the next item on our to-do list, and it's easy to see how the urgent can feel gratifying, even addictive at times. The challenge is that some of the urgencies might also be important, but the allure of the game gives everything equal weight. As a result, we can end up spending time and energy on the less important.

The nature of the pinball syndrome is to confuse urgency with importance. And because organizations often reward urgent behaviors (because by their very nature

they're easy to recognize), work can provide a powerful incentive to pull the plunger back and play round after round. Of course, urgencies will come up that require our attention. Many things are both urgent and important. Avoiding the pinball syndrome doesn't mean we should step away from the game altogether, but rather that we differentiate between when we must play and when we choose to play. Resisting the allure of the game isn't easy. It requires that we delay gratification and take the long-term view.

*Practice 7:*

## Think We, Not Me

There are three levels of maturity: dependence, independence and interdependence. Dependence comes with the mindset of "you." *You* are responsible for me, for my feelings and circumstances. It's *your* job to take care of me. Dependence represents the lowest level of personal maturity, where we can consign our happiness to others or adopt a victim mentality when things go wrong.

However, when we take on a new role or skill, there is a period of time during which it's expected that we'll be dependent on others to teach us as we learn that new skill.

Independence, the next level of maturity, comes with the mindset of "I." Independence sounds like, "*I* am the one who can do this," "*I* am responsible," and "*I* will decide what's best." When we think and act at this level, we move our focus from the people around us to our own strengths and capabilities. For many of us, we think independence is the pinnacle of maturity.

While independence is certainly more mature than dependence, there's something even more satisfying and transformational that happens when independent people choose to work together.

With interdependence, we adopt the mindset of "we." When we think and act interdependently, we make a choice to combine our talents and capabilities with those of others, creating something even greater as a result. Interdependence sounds like, "Together *we* can do it," "Together *we* can collaborate," and "Together *we* can figure this out."

Those who consistently model interdependence balance courage and consideration when working with others. In this context, *courage* is the willingness and ability to speak our thoughts respectfully, and *consideration* is our willingness and ability to seek and listen to others' thoughts and feelings with respect. While it's challenging to maintain a perfect balance of both in every situation, the real thing to look for is that you're not dramatically weighted toward one side or the other.

While great ideas and high courage can be critical to doing a job well, without consideration and respect, the only team you will find yourself on is a team of one. On the other hand, with high consideration but no courage, you may be well liked but will ultimately feel disrespected.

*Practice 8:*

## Take Stock of Your Emotional Bank Accounts

Most of us pay a good deal of attention to our financial bank accounts. The idea is fairly straightforward: we deposit funds in order to build up a reservoir from which our various future expenses are withdrawn. When it comes to our relationships, we engage in similar kinds of transactions, either making deposits or withdrawals in an *Emotional Bank Account (EBA)*. When the balance is high, so is the resulting level of trust. When the balance is low, relationships suffer. The goal of the EBA is to only make deposits and build trust with others. Keep in mind, it's usually the relationships we take for granted — the ones on autopilot — that are most in need of consistent and deliberate attention.

High trust, good will and full engagement are the ultimate outcome of the EBA. When you have a high EBA balance with someone, you feel safe with and energized by them. Every relationship we have has an associated balance in our respective EBAs.

The six best practices for building a strong EBA balance are:

- **Never build up deposits just to withdraw from them when it's useful.** Using the EBA as a means to an end may damage relationships beyond repair. Striving for a high balance in an EBA is a principle to live by, not a scorecard.
- **Know the other person's currency.** We all have individual forms of emotional currency we're willing to accept. What amounts to a deposit for one person can be meaningless or even a withdrawal for another.
- **Communicate your own currency.** Admittedly, it can be hard sometimes to uncover which currency matters most to people. We can help by simply communicating the currency we prefer.
- **Avoid counterfeit deposits.** Don't withhold compliments when they're due, but overdone flattery will never yield EBA deposits. There's a difference between a quid pro quo strategy and making an authentic deposit.
- **Make small, consistent deposits over time.** If you feel the satisfaction that comes from making deposits in the EBAs of others, you'll make more and more until it becomes a pattern of living for you. This stockpile of good can be invaluable when we go through the inevitable trials life presents.
- **Right wrongs.** Sincere apologies make deposits in the EBAs of others. It is the first step in righting

wrongs, but if mishandled or delayed, it can cause even greater withdrawals.

*Practice 9:*

## Examine Your Real Motives

Motives are the underlying reasons for the actions you take and the words you say. A healthy motive is any motive that uplifts the human condition in ourselves and others. An unhealthy motive is any motive that degrades the human condition in ourselves and others.

If we're not careful, our motives can end up being unhealthy: driven by fear, anger or sadness in one moment and in the next by an unfulfilled need for acceptance, power or safety. Too often we go on autopilot, allowing our motives to flow out of our daily routines without checking our underlying assumptions or questioning our choices. But if we examine our motives on a regular basis, we can begin to understand the difference between a motive driven by insecurity or other unmet needs and a motive that aligns with our deepest values and develops the type of character that contributes to effective relationships.

**Use the 5 Whys.** The 5 Whys approach is simple: ask "why" five times to get to the root cause of a problem.

This technique gets to our root intentions or our driving motives in any situation. While it can take less (or more) than five introspective "whys" to get to our motives, because those motives may be buried under years of habit and have been running on autopilot, it often takes asking why more than once. At first, the answers to the 5 Whys might feel obvious. But if you approach the exercise honestly and with humility, thinking through it will help you understand your true motive.

The intention of questioning your motives isn't to make you feel guilty about your motives or to shame you for attempting to fill your unmet needs. It is, however, intended to help you become more aware of any unhealthy motives so that you can choose to redirect them toward healthier, more abundant motives. When you recognize that your motives are driven by something other than to *uplift the human condition* in ourselves and others, be patient with the part of you that's trying to get what it needs. However, also recognize that another part of you can choose a different motive.

**Choose abundance.** Many of us are conditioned to believe that there's a finite amount of everything, that there's only so much reward, credit, recognition, benefits or even love. And because of that, the more *you* get means there's less for *me*. This belief creates a scarcity mindset, which produces an underlying motive of fear. With a fearful worldview, it's difficult to shift the focus off of ourselves and take the needs of others into consideration.

Instead of dwelling on what you don't have, begin to focus on what you do have. Take time to appreciate or express gratitude for what is there rather than complain about what isn't. Look for ways to share your abundance with others.

An abundance mindset is the primary foundation for establishing ongoing healthy motives. As you build this authentic, sincere and positive outlook, it will be a key contributor in positively influencing the people around you.

**Declare intent.** Intent is another word for motive. Declaring your motives, or intent, is one of the core behaviors that builds trust. While we judge ourselves largely on our intentions, others judge us by our behavior. Only you know your real motive. However, sometimes if we don't communicate it early on, we end up putting others in the position of assuming or guessing. You can easily put others at ease (and avoid a lot of misunderstanding) by declaring your intent as often and as soon as you can.

*Practice 10:*

## Talk Less, Listen More

Our propensity to talk more than we listen can get us into real trouble. In the rush to solve problems and get things done, there's a natural tendency for all of us to simply *tell*. And when we take it upon ourselves to do all the talking, we almost always pay a price.

**The downside of talking more and listening less.** Each time we feel misunderstood (not truly heard) by someone important to us, we can feel disrespected and hurt. We may even experience an unintentional breach of trust, as if an essential part of the relationship bond had been chipped away.

**The upside of talking less and listening more.** One of the most profound gifts you can give another human being is your sincere understanding. To do so requires clearing away your mental clutter, suspending (at least temporarily) your agenda and stopping long enough to focus and hear what someone is really saying. Being truly present provides a safe environment in which people can learn to listen to themselves, assess their own behavior, diagnose their own problems and come up with their own solutions.

Many of these reasons why we don't talk less and listen more can be summed up in a practice called *autobiographical listening,* in which we filter what others say through our own stories and experiences. When we do this, we draw

conclusions based on what *we* might do or feel in the same situation. Or worse, because we might be uncomfortable with the situation, we prescribe a solution that makes us feel better. We're often afraid that if we listen too closely, we may be influenced and not get our way. While it's natural to do so, jumping to conclusions or replying too soon with advice can make people feel like we are judging or evaluating them — certainly not listening to them.

When you engage in autobiographical listening, you end up deciding prematurely what people mean before they finish talking, which can create huge communication divides and make people dig in their heels even more, investing in their own point of view and being less open to looking at other alternatives.

Talking less and listening more is not the same as agreeing with people. You may ultimately disagree with what a person is saying or feeling, but while you're listening, you're not imposing your views on the person. You're not trying to figure out how to get him or her to see it your way. Instead, you're suspending your opinions long enough to really step into that individual's world and try to understand it from his or her point of view. This approach sounds simple, but it's one of the most difficult mindsets to master, especially if you're diametrically opposed to that person's point of view or emotionally involved. It takes an incredibly mature person to master this skill.

There are appropriate times to talk *more* and listen *less*. Often, it's necessary to give advice and provide clear answers and direction to get the job done. But there are times when it's also vital to do the opposite. When a person is highly emotional, when the Emotional Bank Account balance is low or you're not sure you fully understand, you'll almost always benefit from talking less.

*Practice 11:*

## Get Your Volume Right

Utilizing and nurturing our unique bundle of strengths is a fundamental part of who we are. Whether as talents we were born with or skills we developed over time, our strengths are often our go-to way for getting things done. They've become so ingrained in our behavior, we often don't think about how we're using them or the impact they're having on others.

Imagine that using your strengths is like a musician performing on stage. For the music to have the intended effect, it requires the right volume as well as the right venue.

We grow accustomed to using our go-to strengths at a certain level. Then, without even realizing it, we often rely on those strengths even more. We turn the knob bit by bit and, unknowingly, make it less likely that we'll achieve the results we really want. And worst of all, we run the risk of damaging relationships along the way.

No one dials up the volume of their strengths with the intention of a bad outcome. Yet, it happens. If the volume of our strengths is set too high, turning it down can often make our strengths more effective. This approach may seem counterintuitive. We're used to mantras, such as bear down, work harder and push through it! And while those all have their place, there's wisdom in knowing when to lighten up, take a step back, or just say no.

In keeping with the analogy of deploying your strengths like a musician on a stage, we should also consider the venue in which we're performing; that is, sometimes getting the volume right means choosing another go-to strength or recognizing that the venue or situation is calling for a different strength altogether — one that may not be as natural to you and may need to be developed.

An important part of getting the volume right isn't just about turning our strengths down when necessary but making sure we have the right strength applied at the right time and in the right situation.

*Practice 12:*

## Extend Trust

Simply put, when it comes to relationships, trust matters. In fact, it's essential. This practice is not only about trust being a belief in someone, it's also about putting that belief into action. Trust, to be fully realized, must be extended to others.

The majority of relationship snags are rarely caused by people trusting too much; they're caused by people trusting too little. Many factors contribute to people being distrustful of others, such as our family or our cultural and social conditioning. What we hear, read or watch can breed more fear than trust, and can work to shut down a natural, trusting heart. But the most common reason we mistrust is because of past negative experiences.

If someone has burned us in the past, it's easy to jump to the conclusion that no one should be trusted. It can negatively color our perceptions when we meet someone new, and if the propensity not to trust runs deep, it may justify our ongoing disassociation and mistrust of people and their motives. Of course, maintaining an element of caution is vital to living safely and securely. Living at either end of the trust continuum can make life difficult for ourselves and those around us.

So, how do you know whether or not you should extend trust? In general, the best approach is always to start with a high propensity to trust, then follow it up with three quick assessments. It's a combination of using both your head and

your heart. Assess the situation, assess the risk and assess the credibility of the person to whom you're extending trust.

If the risk is relatively low and the credibility of the person is high, by all means, extend trust. If the risk is high and the credibility is low, you may need to slow down the process, modify your plan and work with the person to increase his or her skills before you extend trust. In some cases, even when the credibility is solid, the risk may be too high to immediately extend trust.

*Practice 13:*

## Make It Safe to Tell the Truth

We all know how hard it is to give ourselves feedback, but it can be overwhelming, even paralyzing, to get it from someone else. If we see feedback as something useful that can support our process of getting better, perhaps we won't be so threatened by it. Knowing how to receive feedback and when to invite it in, or respectfully hear it but choose no action, requires careful self-examination.

Self-awareness is not just about examining ourselves. It's also about recognizing that we have blind spots and considering others' perspectives. Sometimes in our desire to protect ourselves, we defend, deflect or even ignore input from others that just might make our relationships significantly better. It may be tempting to avoid seeing our faults and blemishes, but without such insights, we're robbed of the chance to learn and grow.

If you recognize that you might *not* be making it safe for others to tell you the truth, here are four ways to make it safer:

**Assume good intent.** While you can't guarantee that everyone has your best interest in mind, you're far more likely to generate good will and build trust if you assume they do. Choose to believe that people are doing the best they can and that they sincerely want you to succeed. Remember, people who have mustered the courage to give you feedback often are feeling as vulnerable sharing it with you as you are receiving it. They are momentarily risking the security of the relationship.

**Ask for feedback.** Recognize that how we ask for feedback can shape the feedback itself and how others choose to give it. A surprise visit or request is not the ideal way in which to get someone to tell you what you may need to know and hear. A more effective approach — especially if it's the first time you've asked for feedback — is to let the person know beforehand that you'll be asking for feedback later. Vague questions like, "How did I do?" make it very difficult for people to respond with anything meaningful. Ask people to share specific things you could do to improve and to phrase it in terms of behavior or language you might use in the future.

**Evaluate the feedback.** We don't need to act on every piece of feedback that comes our way. It's critical to be clear about the values we stand for and have a long-term vision of who we want to become so that we are prepared to compare someone else's truth against what we feel and know is most true for us.

**Act on it.** It doesn't do any good to ask for feedback if you have no intention of acting on it. While we don't need to implement every piece of feedback, not acting on feedback — or not explaining why we aren't going to act on it — is worse than not asking for it in the first place. While people may start to feel safe when you ask them for feedback, they will *know* they are safe when they see you take their feedback seriously.

*Practice 14:*

## Align Inputs With Outputs

An input is what you put into a system to fuel a process, and an output is the result you obtain. Input, process, output. It's a useful framework for diagnosing why we get the results we get.

We can refer to outputs as *lag measures*, or the metrics by which we decide if something is successful. Lag measures show up at the end of a process; by the time they're visible, our ability to influence them has passed.

While it's human nature to get frustrated and focus on the lag measures when things aren't going right, it's best to turn our energy elsewhere. Instead of dwelling on the outputs, focus even more on the inputs, or what we call *lead measures*. Lead measures are the actions we take that add up to a lag measure.

While many inputs might contribute to the desired output, identifying the right inputs can make all the difference. Use the following steps to help align the right inputs with the results you desire.

1. **Describe your desired output in the situation or relationship.** You can't chart a course to a destination if you don't know where it is you want to go. Think of it like a GPS — the more exacting you can be with an address, the more specific it can be in prescribing the route to take.
2. **Describe your current reality.** In keeping with the GPS metaphor, we need both a starting point and an ending point to accurately chart a course. Spending time assessing your current reality also

helps you uncover potential inputs worth examining and possibly changing.

3. **Carefully examine your current inputs.** What things drive the current results you're experiencing? Inputs are not always intuitive. Consider carefully the paradigms you hold, your attitudes toward the people you work and live with, the behaviors you are modeling (or not modeling) and how others might evaluate you.
4. **Try a new and more effective input.** Seemingly complex problems can often be dramatically improved by finding the one or two inputs that matter.
5. **Analyze the result.** Everyone fails, but how we consider that failure can make all the difference. Be objective and thoughtful as you consider the results you're getting, and accept that with each trial and error comes an opportunity to get better.

While there are countless inputs that contribute to our relationships, the 15 practices described here are those that have proven to be foundational and of the highest leverage. Implementing even one can be pivotal in repairing a ruptured relationship, restoring trust or strengthening an already solid relationship. Identifying which of these practices you can use as high-leverage inputs holds the potential to improve even the most stubborn relationship pitfalls.

*Practice 15:*

## Start With Humility

Above all other character qualities, humility is foundational. Those who are humble have a secure sense of self; their validation doesn't come from something external but is based on their true nature. To be humble means to shed one's ego because the authentic self is much greater than looking good, needing to have all the answers or being recognized by one's peers. As a result, those who have cultivated humility as an attribute have far greater energy to devote to others. They go from being consumed with themselves (an inner focus) to looking for ways to contribute and help others (an outer focus). Humility is the key to building solid character and strong, meaningful connections.

Humility has the power to influence nearly every aspect of your personality. Consider self-control, a trait that is seemingly unrelated to humility. Can humility serve to increase willpower? Researchers conducted a study to answer that very question.

The results of the experiment led to a remarkable conclusion: people in a humble state of mind are better at self-control. The same set of researchers found that humility can also lead to greater physical stamina and an increased ability to persevere when the going gets tough. And if that's not enough, other researchers went on to find a link between humility and being able to hang on to self-esteem in times of failure as well as an increased ability to develop stronger social bonds.

As you can see, humility is far from weakness. It allows us to push aside pride, ego and selfishness while lifting nearly every other important virtue to greater heights.

### Humility in the Workplace

When talking about work, we rarely use the word humility. It's like people are afraid to talk about it, as if it were the enemy of what it takes to be noticed, promoted and to succeed. To be humble is to be willing to fail in the pursuit of a noble goal. Without failure, innovation stalls. Humility allows us to strip away our ego, to suppress the need to be visibly right at every turn and to take the longer view.

Although this section comes at the end, it's titled "Start With Humility" because every practice illustrated benefits from obtaining, cultivating and being mindful of this foundational attribute. And while starting with humility is key, revisiting and recalibrating your humility on a regular basis is equally important.

When things become difficult, our tendency as human beings is to find a way out, to head for the exit and move to another room. That might take the form of changing jobs, abandoning associations or even dissolving marriages and long-standing family ties. These endless "exit strategies" imply that we see external forces (other people and circumstances) as the source of our problems and the means of escape. Yet, we all have the ability to take the focus off the things outside of us (the room and those who occupy it) and move it inward. This internal focus or self-reflection starts with humility. It's the way we begin to get better and strengthen each and every relationship we have.

# Let the Story Do the Work

## The Art of Storytelling for Business Success

by Esther K. Choy

### THE SUMMARY IN BRIEF

For millennia, people have used stories to simplify a complex world, make facts and events memorable and stir action. Today, storytelling has emerged as a strategic skill that every business leader must master.

Yet, few use storytelling to its full capacity. Stories work beyond telling how a company overcame competitors or the rags-to-riches background of a founder; these are classic plot devices, and they're frequently layered into corporate messages. But, stories can also operate more subtly. By adapting proven story structures and conventions, you can transform forgettable presentations into truly compelling ones and make lasting impressions with every interaction.

Whether you're trying to attract investors to a startup venture, get donors to commit to a nonprofit's mission, explain a merger to customers or stand out at a networking event, *Let the Story Do the Work* helps you weave storytelling techniques into your communication and strengthen your impact. Anyone can make a presentation and parade a list of credentials. But, nothing resonates and persuades as powerfully as a story.

### IN THIS SUMMARY, YOU WILL LEARN:

- To connect with audiences by determining their points of view and speaking to their concerns.
- How to cut through a thicket of data to explain what the numbers mean and why people should care.
- To blend simple visuals to amplify a presentation's persuasiveness.
- How to tell your story in a way that builds credibility and forges relationships.

## Introduction: Why Stories?

Think back to the most recent lecture or presentation you attended. How many facts do you remember from it? If you're like most people, you can't recall many. Chances are good, however, that you remember stories and anecdotes from the event. The average person today is inundated with facts and data, and we let most of this pass through our brains with minimal retention or reaction — unless something makes the information stand out in a meaningful way. That's where story comes in.

Most people aren't born master storytellers and never will become one. But that doesn't mean we can't tell great stories. Making even subtle changes in the way we communicate can create a disproportionate impact when we attempt to persuade. The classical approach to storytelling can elevate everyday business communication from autopilot exchanges to authentic, persuasive and action-prone conversations.

## PART I: ANATOMY OF A STORY

## Master the Key Elements of Storytelling

### Consider Your Story's Emotional Quality

Your story, no matter how well told, can't achieve its full, intended effect until you embed within it an emotional quality aligned with your purpose.

Emotion is not only necessary but plays a key role in our decision-making process. When we're faced with many similar-seeming options, "go with your gut" is valid advice as long as your emotion is well informed by some set of facts or experience.

### Know Your Audience Inside and Out

When most people are preparing to tell their stories, they tend to think only about what they will tell and how they will tell it. Too often they neglect to think about how their audiences will react to the stories as influenced by their own needs and preferences. Effective leaders have to understand their audiences' needs and constraints to decide how to communicate with them most effectively.

You can understand your audience better by breaking down what happens to them during any presentation or interaction into two levels: internal and external.

What happens to your audience *internally* involves what they feel and what they know.

Whether we intend it or not, our audiences will experience a specific emotion after listening to us. This emotion can affect how long, if at all, they will remember what you've just told them and what, if anything, they are willing to do about it.

You want your audience to come away from the interaction knowing something they didn't before. Unfortunately, we live in a data-overloaded world where most information is quickly commoditized, and information without sufficient context or stickiness is quickly forgotten. So, you have to be highly strategic about how you present the information you want your audience to retain.

The *external* factor has to do with what questions your audience asks and whether — and how — they act as a consequence of what you've presented to them.

A question means your audience wants to know more. Follow-up questions are the number one indicator that you have created real interest in your listeners.

The goal of a story told in a business context is to inspire action, no matter how big or small. A good story will help inspire the desired action. The Key Elements of Storytelling

**The Three-Act Formula:** Story structure holds all the elements together. All stories share the same basic structure: the Three-Act Formula. In Act I, you are oriented to the time, place and setting of the story. You meet the main characters, and ideally you are intrigued by what is about to happen next because there is a hook at the end of the act.

Then, Act II represents the main journey of the story. Toward Act II's end, the protagonist typically meets the biggest challenge head on.

In Act III, we see how she overcomes it. As the challenge is resolved, the lead character and her situation also have changed, typically for the better.

**The Hook:** While there are innumerable potentially valid hooks, a more systematic way to create one — even when you don't feel particularly creative — is to follow the "3 C's": conflict, contrast and contradiction. A *conflict* is the clash of forces or needs going in opposite directions. A *contrast* typically involves the juxtaposition of two opposite qualities. A *contradiction* goes against the expectations of your audiences.

**Challenge and Change:** Challenges create interest, which in turn motivates sustained attention from the audience. Having a central challenge in your story also creates change in the main characters, in their situations or (ideally) both. If challenge is the nerve center of a story, then change is the soul of it. If everyone or everything remains the same at the story's end, then what's the point of the journey? Audiences innately want to know not just what happened in the story, but what's different at the end and why.

**A Clear Theme:** Recounting events or qualifications — no matter how impressive they might be — is not the same as telling a story. A story needs a theme, and chronology is not a sufficient one. In order for listeners to understand and appreciate the story theme, a storyteller must tell stories by weaving events and reflection together.

**Open or Closed End?** In general, we know that by intentionally leaving the end of the story open, we are inviting others to share their stories. But, there are situations in which your story will be more effective with a closed end, when you want to leave your audience with little doubt what they should think or feel. As a storyteller, it's easy to think that your message is so obvious that you don't have to say it. Don't make that mistake. Often, people don't "get it" because the takeaways were never clear.

Be thorough in your approach to endings. Whether you go with open or closed, consider the desired results you wish to see in your listeners. Are you trying to sway opinions? Or are you intending to create an exchange, a dialogue, to collect stories? Whatever the outcome might be, craft the end of your story accordingly and with care.

## The Five Basic Plots in Business Communication

What keeps us interested in stories often boils down to one word: plot. Plot is the sequence of events — and ideally twists, turns, and mysteries — in your story. When it comes to business stories, there are really only five basic plots. These five plots recur repeatedly because they speak to a universality of experience. They give us blueprints for what our narrative theme and sequence of events might look like. Of course, you do not have to limit yourself to these five plots forever. Knowing what they are, however, can jump-start your story crafting and give you a solid foundation from which to be more creative.

**Origin.** An origin story can instill a sense of identity and heritage, place an event or person in historical context or simply satisfy deep curiosity.

**Rags to Riches.** This plot is about someone who starts from a very low station in life, without much hope for improvement, but surprises everyone with a dramatic turnaround.

**Rebirth.** A rebirth story is about having a second chance. Stories of rebirth abound in the business world and tend to be crowd-pleasers, with beating-the-odds elements similar to those of rags-to-riches or underdog narratives.

**Overcoming the Monster.** The "monster" in this story can be any overt or covert entity or situation that threatens survival of some sort or thwarts someone from reaching an important goal. Fighting to survive is elemental to human nature. So, audiences of any type will root for the defeat of the monster, whether at the hands of an individual, group or organization, making this kind of story compelling in business and leadership stories.

**The Quest.** Protagonists in quest stories tend to be enjoying a good life at the outset. But, they are not content to sit at home. Instead, they know that somewhere, in a remote and possibly dangerous place, lies a prize of immeasurable value. Against his better judgement and his friends' and family's advice, the hero in this kind of story ventures out on a quest to claim the prize.

Each of these plots has a unique emotional quality. The origin story addresses the desire to connect the dots between the past and present in an inspiring way. Rags to riches evokes empathy and gets audiences cheering for the down-on-their-luck main characters. A rebirth story is about redemption, a second chance to reverse a bad situation and evoke optimism. Overcoming-the-monster stories can induce righteous anger and compel people to act to ward off a present or imminent threat. And a quest can provoke restlessness, the desire to achieve more than what life seems to promise. Though the primary emotional

qualities involved may be different, consistent across these five plots is the offer of hope.

## PART II: BRINGING STORIES TO LIFE

# Look Who's Listening

Telling a story with a strategic point of view is not about starting only from what you know. Rather, it is about first being clear with what you are trying to accomplish and then crafting your story from the point view that will be most persuasive to those you need to convince. You have to take yourself out of your own mindset, preferences and biases and put yourself into the shoes of your most important audience.

### AIA: Acknowledge, Inspire and Aspire

In crafting your story with a point of view that strongly resembles that of your audience, you can also follow the Three Act Formula in principle.

First, *acknowledge* your audience by telling stories from their point of view. Second, *inspire* them to feel good about your proposed changes, ideas, products or services. Third, use concrete details to get them to *aspire* to a different future, one with you and your solution as important parts of it.

Being truly fluent in more than one language means that you can switch back and forth between them with ease. The same is true with point of view. Yet, mastering point of view, just like learning multiple languages, takes time and concerted practice. The best exercise to make that happen is the Look Who's Listening approach.

**Step 1:** Describe your audience in as much detail as possible, then write the script you are using to persuade them, without necessarily thinking from their point of view. Sketch out the current state and desired state as you see them.

**Step 2:** List what you know and don't know about the impending change. Then, list what your audience does and does not know. Draw a Venn diagram of what you know and what your audience needs and wants to know.

**Step 3:** Restructure your message to fit your audience based on the AIA model.

# Telling Stories with Data

We are in a Data Boom period, with virtually every public and private domain enjoying unprecedented availability of information and data analysis tools. Using key storytelling elements will boost the impact of your message dramatically and prevent you and your audience from drowning in an ever-rising sea of information.

The challenge of making a presentation based on data is that the presenters want to display just how much data they've accumulated, increasing not only their own value and credibility but also the value and credibility of the information they are sharing. However, the audience is not impressed with a flood of data. They want to know what the data means and why they should care.

Poor understanding of audience composition and needs is why so many data-rich presentations fail to offer satisfying answers, insights or takeaways. As noted above, there's often a mismatch between what presenters deem worthy of sharing and what the audience wants to hear. Understanding which audience type you're dealing with is the first step to improving data-rich communications.

Data storytelling is a structured approach for communicating data insights more effectively to an audience using narrative elements and data visualizations. These narrative components are crucial for data-driven presentations because the human mind is built to process stories rather than cold, hard facts or logic alone.

### Let the Telling Begin — A Five-Step Process to Weave Data and Story

**Step 1: Practice Empathy.** Ask these three questions to put yourself in your audience's shoes:

1. What is the makeup of my audience? What do they need to know?
2. What should my audience remember after listening to my presentation even if they cannot recall anything else I tell them?
3. Outside of the current project, what are the most pressing challenges my audience faces?

The answers to these three questions will inform the structure and content of your communication.

**Step 2: Prove and Persuade.** Effective communication in a data-rich environment requires understanding the distinction between proving and persuading. *Proving* is mustering the strongest analytical processes and evidence to support your conclusion. *Persuading* is getting your target audience to agree with your point of view and take action accordingly. When crafting stories in data-heavy environments, you need to have content of both types.

**Step 3: Words Over Numbers.** This approach highlights the critical nature of numbers. An average person can only hold 7±2 numbers in his or her working memory. Because the space to store numbers is finite, we have to be very judicious about how many numbers we show our audiences.

**Step 4: Create Meaning.** In many cases, the ultimate decision-makers sit at a higher level in the organization and spend part of their precious time listening to

presenters like you, seeking analysis and insights as a foundation for their decisions. So, when you facilitate this process well, you are also creating meaning for them.

To create meaning for decision-makers, focus on the whys and the whats of the material you are presenting. If decision-makers are skeptical of your findings or curious to know more, they will ask how you arrived at your findings.

To structure your communication most effectively, you can use the Three-Act Formula.

In Act I, set the scene by diving directly into the answers your audience most likely wants: why they should care and what they should do about it.

By setting the scene and establishing the hook in Act I, you earn the right to present more on the hows in Act II. Resist the temptation to data-dump. Instead, show your audience the journey you took using the 3 R's: remind, recount and reframe. *Remind* them of the context of the project. *Recount* the process you used to arrive at the reasons they should care and what they should do. And *reframe* a point of view even if it represents the slightest change. We are hardwired for story because we love witnessing meaningful change.

In Act III, tie back to how it all began, why your audience should care and what they should do. In this act, elaborate the actions that will be needed in the short and long term. Then, be sure to leave time for questions.

**Step 5: Give Them What They Want, Tell Them What They Need.** When you are the one studying and analyzing big data you may recognize that the questions your superiors will ask may not be as relevant, timely or strategically important as they think they are. How, then, do you generate the most value from your analytics while managing up?

1. Tell the audience what they want to know first and then what they need to know.
2. Don't dive right into the numbers. Tell a story first and then use numbers to emphasize the message of the story.
3. Throughout the presentation, balance clarity and curiosity.

A good storyteller knows how to balance the provision of *clarity,* or giving the audience exactly what they want, and the arousal of *curiosity,* or prompting them to wonder about important areas that they may not realize are important. Too much clarity and audiences either stop listening because they think they have already heard everything they need to hear, or they turn on their inner critic, finding faults and flaws with the presentation. Unless you want to lose their attention or play constant defense, it's best to pique their curiosity by providing interesting but intentionally incomplete information.

## Making the Complex Clear

**Divide and Conquer.** Separate the mass of complex information you are conveying into categories that will help the audience feel less overwhelmed by the material.

**Compare the Unfamiliar to the Familiar.** When you "hitch" an unfamiliar idea to one that is more familiar to your audience, you are creating the sense that the unfamiliar idea is already part of their personal experience.

**Structure Is the Foundation.** Most effective stories share similar structures. A story needs to have an intriguing yet informative beginning, and engaging journey as the middle, and a logically and emotionally satisfying end. This is especially true when dealing with the complex or the unfamiliar.

Storytelling, of course, is not a magic bullet that provides a fairytale ending to every business interaction. But, using the ideas here can help simplify concepts, make helpful comparisons and persuade your audience through a powerful combination of logic, empathy and emotion.

## Combining the Power of Story and Simple Visuals

Although we have five senses, visual input takes up 40 percent of the brain's resources. That's why our visual fields can dominate other sensory inputs. In fact, so dominating is visual input that it can *influence what you hear.* This means that combining visual elements with what your audience hears will make your communications even more powerful.

That's where the concept of the StoryPicture comes in — a visual framework used to convey your story more effectively. Prompt your audience to participate by placing themselves or their experiences in your framework. Use their participation to further inform your communication.

The point is not to use your visuals to illustrate every single detail; rather, they are meant to translate complex and often amorphous concepts into simple pictures your audiences can understand and follow.

### The Six Types of StoryPicture

**Type 1: The Virtuous Cycle.** Use a virtuous cycle to illustrate how any given *system* works by showing the configuration and interaction of key components.

**Type 2: Venn Diagram.** These diagrams can quickly and clearly establish the nature of a *relationship* within or among people, qualities and behaviors and things.

**Type 3: The Graph.** Most graphs depict a *pattern, relationship, process, change* or some combination of these.

**Type 4: The Pie Chart.** The *weight and proportion* of a pie chart is crucial. Used in the right circumstance, pie charts can communicate your core message with great power.

**Type 5: The Formula.** A formula is a way of illustrating a *governing principle,* or a rule that applies to a relationship among several elements.

**Type 6: FEE (Freestyling for Everything Else).** This type covers any other StoryPicture that can be effective but doesn't fall neatly into the previous five categories.

### Make Your Own StoryPicture

Use the following steps to help decide which type of visual to use and how to draw it to best support your story.

**Step 1: List and select the most important elements.** Start by listing all important elements related to your story or concept. Once you think you've got a full list, start to prioritize. Try to narrow this list to about three to five of the most important ones.

**Step 2: Understand what binds key elements.** Once you prioritize the elements successfully, consider the primary binding agent associated with the elements you've chosen. Is it about a system, a relationship or a process? Is it weight and proportion? Governing principle? Or something else you're trying to illustrate?

This is the messy, creative part. The binding agent determines which StoryPicture will be the most effective. There's often no one right answer: Different binding agents may work for the same set of elements. Don't settle for a StoryPicture that doesn't work for you, as it most likely won't work for your audience either.

**Step 3: Develop a story for the StoryPicture.**

**Step 4: Test your story and gather feedback.**

**Step 5: Repeat and refine, refine and repeat.** Think of this as the polishing stage, in which you think hard about final touches to the StoryPicture, the story that accompanies it and how best to present them.

Practice telling and drawing and the timing between telling and drawing. The more you practice, counterintuitively, the more spontaneous your StoryPicture seems and the more effective it becomes.

## Collecting Stories from Everywhere

Mastering storytelling is a process similar to mastering writing. While it's inherently true that writers write, writers also have to read — a lot! In the same way, storytellers have to hear and collect many stories.

The idea is that the more stories you collect, the more adept you will be at understanding and speaking from different viewpoints and the better able you will be to use the point of view that yields you the most persuasive power with a given audience. As you can imagine, speaking from a point of view that matches that of your audience will ensure that your story resonates with them.

### Listen Aggressively

Acknowledgment is the invisible energizer that keeps us motivated in many settings and circumstances. Collecting stories will serve to acknowledge your audiences, letting them feel heard, understood and validated. One of the best ways to acknowledge individuals in any setting is to help them uncover their own stories and listen to them aggressively.

When it comes to mining our own stories, our "vision" tends to fail us. When we think about our own experiences, we generally lack the distance, perspective and objectivity to evaluate what story, if any, is worth telling. When you collect stories from others, your job is to see what they themselves can't or won't. In most cases, once you point it out and validate it, they can quickly start sharing meaningful stories.

It's best not to be overly concerned about impressing others. Instead, let your audience impress you. Let them share their experiences with you, and then show them how their experiences, even those they may not find particularly interesting, can be turned into great stories. They will be grateful because you're acknowledging them and helping them understand that they do indeed have great stories to tell.

It's important to listen with your whole body — except your mouth. Your gaze, in fact, tells more about what's on your mind than any other nonverbal cue. So, to listen aggressively, make sure you're looking at the other person most of the time when they are speaking. To avoid inadvertently staring them down, make sure to alternate your focus between the speaker and nearby empty space. Looking into empty space can also be seen as a sign of thinking deeply, which is not a bad thing for a listener (as long as you're thinking about what's being said).

Asking clarifying questions demonstrates that you care about the story and want to understand it fully. Paraphrasing can provide additional evidence. If you can say the same thing in your own words, then you and your audience have proof that you've grasped what they're saying. In many situations, especially emotion-laden ones, there's nothing more validating than hearing your thoughts, experiences and feelings expressed in someone else's voice. Just remember to do this sparingly.

### Don't Interject With Your Own Story

When you care about the story you're hearing, it may be natural for your own stories to come to mind. But, try to resist the temptation to interject. The spotlight should remain on the audience, not you. The only exception is if

you believe that sharing your story can help your audience gain further clarity or insight or potentially encourage them to share more openly. Aim for about three parts listening for every one part speaking. Respect the silence, and often the story will follow.

## PART III: STORIES IN ACTION

# Using Your Own Story to Build Credibility and Connection

In business settings, hearing, "Tell me about yourself," is inevitable, and your answer to it matters. Offering a compelling answer will set the right tone with your audience, establish trust and credibility and increase your persuasiveness.

This is where likability comes in. Not only do we tend to like those whom we perceive as being like us but we're also more likely to form a stronger connection with them and find their ideas persuasive. Because of this, the "tell me about yourself" question is actually a great opportunity for you to present ways in which you might be like the person asking the question. You won't always hit common ground, but a strategically crafted answer is more likely to resonate than not.

To make a story compelling, it's vital to demonstrate that you have surmounted significant hurdles or solved tricky problems on the road to success. A story with no obstacles isn't much of a story: "I had a problem, and I figured it out easily. The end." Boring!

In your "tell me about yourself" story, a well-crafted hook turns the audience members into active listeners because they want to hear the story and figure out its message. A good Act I hook will make your audience anxious to find out what happens in Act II.

While all three acts are critical, Act III has a lot of work to do. Your listener needs to understand why you are telling this story. Act III is not just a resolution of your story, it puts your story in context and illustrates for your listeners the value that you bring to their situations.

When you're starting to write your story, don't handcuff yourself to the order of Act I, then II, then III. Just fill in whatever parts come to you first. The most important thing is to get started, whether you feel inspired or not.

If you already know what the takeaway is, start with the end. Knowing the takeaway will be hugely helpful when it's time to trim story details, a task most people, even experienced storytellers, find challenging.

Remember: Crafting your story is a process, not a destination. So, follow the process that works for you.

### Test Your Story

Once you have crafted your story, give it a test drive before you take it out on the road. Tell your story to a friend or colleague, and ask them the following questions:

**What info do you recall from my story?** There's no way to find out except going to the sources directly and finding out what has stuck with them and what hasn't.

**How does my story make you feel?** The emotion evoked will probably have a much longer-lasting impact on your audience than anything you've actually said.

**After listening to my story, what questions do you have for me?** This is the target at which we should all aim: inspiring the right questions in our audience. Shaping your story to the point where your audience begins to have questions is a sure sign that you're on the right track.

# Successful Networking Starts With a Good Story Hook

Many people dislike the idea of networking — and not just the introverts among us. Much of the problem with networking interactions is rooted in how they start.

When asked, "What do you do?" the vast majority of us answer in a very straightforward way. We may respond with our job title, something about our function or our industry. Prompted further, we may force ourselves to launch into our elevator pitch. Sure, this back-and-forth seems harmless enough, and it adheres very well to our social norms. In fact, the responses involved are exactly what people expect to hear. And that's a big problem.

When people get what they expect from this kind of social interaction, they also stop thinking and imagining: trying to understand the job you mentioned, imagining what it might look like and so on. And when they stop thinking and imagining, they stop engaging.

Give fellow networking event participants a gift: the opportunity to use their imaginations. Networking could be much less painful. In fact, it could actually become an enjoyable and productive experience.

People enjoy a story that allows them to figure out the message. By planting a hook in the conversation as early as possible, you can transform your audience from passive listeners to active investigators focused on figuring out what it is you do instead of having data dumped on them.

Networking conversations follow a reliable pattern. If you know this, and you can capture your audience's attention by planting a hook, you can pre-craft a much more interactive conversation that motivates audiences to try to figure out what you do — using their imaginations — even as you share information with them. Lively dialogue

beats a one-way monologue. A pre-crafted conversation is basically the script of a dialogue you create by anticipating how your listeners will respond to your hooks and pauses.

Recall that we have defined a hook as a contrast, conflict or contradiction. One way to plant a hook is to contradict your audience's expectations with your answer. Inherent in the question, "What do you do?" is the expectation that it will lead to information about what you do for a living. A contradictory answer will make your audience wonder and prompt them to seek clarification. There is some risk to this approach, but the benefits of intriguing people will outweigh that cost in most interactions. Understand that different audiences have different expectations. For some audiences, you don't have to move far from the norm to be considered strange or weird. With others, you have to try really hard to distinguish yourself because they may be unconventional to begin with. It's part of your job to understand your audience and to adapt your approach accordingly. Sometimes, a conventional approach is the safest bet.

Having the discipline to stop talking is as important as speaking. Give your audience the space they need to react and respond. Your second response to your audience should offer some level of clarification by expanding on the first one, but you don't need to provide the conventional information people expect just yet. You want to prompt even more questions. Make your audience wonder what your professional world looks like and want to know why you are qualified to do what you do.

Write down your own first response to "What do you do?" Be sure to include a hook. Then, write a few possible follow-up questions you might be asked and an appropriate second-level hook. Write the secondary follow-up questions and possible responses. The third response would be the crux of what you do. The first hook is usually the hardest to create. Here are three principles to help you create your hook:

- **Create a vivid image.** A criminal defense lawyer might say, "I stand between people and prisons."
- **Use a concrete object and/or action-oriented verb.** A financial planner might say, "I build financial roadmaps."
- **Pair words or ideas that usually don't go together.** A life coach might say, "I'm a habit destroyer."

Definitely flex your creative muscles as you work on this. But remember: an answer that sounds too strange will elicit a negative reaction and send your listener to the nearest exit. You have to find that happy medium so that people are intrigued by your first response, may get some inkling of what you do and want to learn more.

Storytelling takes on nuances depending on the goal of your story. The following four categories could help you clarify the goal of your story based on the nature of your career, and you can use that knowledge in conjunction with the three principles discussed above.

**Common "old" careers.** These are conventional occupations with a long history, such as accountant, doctor or teacher. If your career falls in this quadrant, the goal of your story is to communicate the core of the value you offer by telling a benefit story. Reorienting your response around the benefit you offer to your audience is a great way to intrigue them. This is especially true in this category because people tend to think they know exactly what you do once they hear your profession.

**Common new careers.** Careers that have arrived on the scene more recently include consultants, IT professionals and web designers. The goal of your story here is usually to create a metaphor that allows the listener to understand what you do by comparing it to something more easily understood.

**Rare "old" careers.** Rare careers that have been around for a long time include acupuncturist, magician and matchmaker. While these fields are sufficiently interesting in their own right, your goal if you happen to work in one of them is to demystify and modernize what you do so your audience can understand how it applies to people's lives in the present day.

**Rare new careers.** Other rare professions that are newer include fashion model, speechwriter and voice actor. If your career fits into this quadrant, your goal is to inform and educate your listener about a field that may be unknown to her or him, at least beyond a superficial level. Most careers in this quadrant are intriguing enough that the listener is eager to hear more.

The main idea is to understand the uniform pattern of networking conversations and find a more creative, intriguing way to present your profession using a hook that encourages the audience to learn more. Give yourself some space to experiment, think about what's most interesting about what you do and pre-craft the conversation. Ultimately, your audiences will guide you to craft your best story.

# Executive Presence

## The Missing Link Between Merit and Success

by Sylvia Ann Hewlett

### THE SUMMARY IN BRIEF

Do you exude confidence and credibility? Can you command a room? Sylvia Ann Hewlett, one of the world's most influential business thinkers, cracks the code of Executive Presence (EP) for men and women intent on winning the next plum assignment and doing something extraordinary with their lives.

You might have the qualifications to be considered for your dream job, but you won't get far unless you can signal that you're "leadership material" and that you "have what it takes." Professionals are judged on presence as well as on performance. Using a wealth of hard data, Hewlett reveals EP to be a dynamic mix of three things: how you act (gravitas), how you speak (communication) and how you look (appearance).

*Executive Presence* is immensely practical. Hewlett teases out tactics that can help you raise your game and close the gap between merit and success. She offers the unvarnished advice you won't get from supportive friends and tackles head-on such touchy subjects as too-tight clothing and too-shrill voices. She shows how the standards for EP vary for men, women, multicultural and LGBT employees, and she shares how to get meaningful feedback from politically correct bosses intent on avoiding the real issues.

With hard facts and vivid examples, Hewlett shows you how to ace EP and fully realize your unique potential — no matter who you are, no matter where you work.

### IN THIS SUMMARY, YOU WILL LEARN:

- Why gravitas is the core characteristic of executive presence.
- The six key elements of communicating with executive presence.
- How to balance authenticity with conformity in the business world, no matter who you are.

## What Is Executive Presence?

President Obama has it. So does Facebook's chief operating officer, Sherl Sandberg. It's embodied by people as varied as Jamaican sprinter Usain Bolt, the late British prime minister Margaret Thatcher, celebrated Burmese parliamentarian Aung San Suu Kyi and actress Angelina Jolie. Nelson Mandela exuded it.

*It* is executive presence — and no man or woman attains a top job, lands an extraordinary deal or develops a significant following without this heady combination of confidence, poise and authenticity that convinces the rest of us we're in the presence of someone who's the real deal. It's an amalgam of qualities that telegraphs that you are in charge or deserve to be.

Executive presence is not a measure of performance: whether, indeed, you hit the numbers, attain the ratings or actually have a transformative idea. Rather, it's a measure of image: whether you signal to others that you have what it takes, that you're star material. If you're able to crack the EP code, you'll be first in line for the next plum assignment and be given a chance of doing something extraordinary with your life.

EP rests on three pillars:

- How you act (gravitas)
- How you speak (communication)
- How you look (appearance)

While the specifics vary depending on context (what works on Wall Street doesn't necessarily work in Silicon Valley), these three pillars of EP are universal. They are also somewhat interactive. If your communication skills ensure you can "command a room," your gravitas grows exponentially.

One thing to note at the start is that these pillars are not equally important — not by a long shot. Gravitas is the core characteristic. Signaling that "you know your stuff cold," that you can go "six questions deep" in your domains of knowledge, is more salient than either communication or appearance.

How do people know you have gravitas? You *communicate* the authority of a leader — through your speaking skills and ability to command a room. When it comes to communication, eye contact matters enormously. Being able to look your coworkers in the eye when making a presentation, or being able to make eye contact with an audience when making a speech, has a transformative effect — on your ability to connect, to inspire, to create buy-in. It means you need to lose your glasses, your notes and your PowerPoint and just wing it. This is not easy. It requires a huge commitment of time since you need to prepare and practice so thoroughly that the arc of your remarks becomes part of your muscle memory. There are no shortcuts.

While cracking the EP code can be onerous and sometimes eats into your soul, this work and these struggles allow you to flower and flourish. It turns out that becoming a leader and doing something amazing with your life hinge on what makes you different, not on what makes you the same as everyone else.

## Gravitas

We all know a real leader when we see one. He or she projects an aura of calm and competence that instills faith

even in — *especially* in — the white-hot center of a crisis. He or she reveals integrity and demonstrates courage by uttering truths when they are inconvenient or most unwelcome. And he or she demonstrates courage and emotional intelligence that secures followership even in the wake of news that would seemingly destroy it.

These qualities connote gravitas, that weightiness or heft that marks you as worth following into the fire. Gravitas is the very essence of EP. Without it, you simply won't be perceived as a leader, no matter what your title or level of authority, no matter how well you dress or speak. Gravitas is what signals to the world you're made of the right stuff and can be entrusted with serious responsibility. But what is it, really? How do you come by it, and how might you telegraph it?

### Top Aspects of Gravitas

Research reveals gravitas to consist of six key behaviors and traits:

- **Confidence and "grace under fire."** You've got to reach inside yourself to that place where you believe, you absolutely *know,* you're eminently qualified to do the job at hand. Most of us are like teabags, to borrow from Eleanor Roosevelt's shrewd words: We don't know how strong we are until we're in hot water.
- **Decisiveness and "showing teeth."** Making difficult decisions is what we look to leaders to do. It is not so much about rendering the right decision but about rendering a decision at a time when no one else dares, that confers gravitas, because it telegraphs that you have the courage as well as the confidence to impose a direction and take responsibility for it. Real leaders listen, gather critical information, weigh the options carefully, look for a timely opening (typically when everyone else is writhing in indecision) and *then* demand action.
- **Integrity and "speaking truth to power."** Speaking truth to power is a potent affirmation of leaderlike courage. The higher you go in an organization, the more impressive you are when you demonstrate you have the spine to share your convictions. Make sure, however, that when you challenge authority, you're coming from a core of unshakable values. Anything less, and your actions will be perceived as insubordination and/or arrogance — the opposite of gravitas.
- **Emotional intelligence.** While decisiveness and toughness in a leader signal conviction, courage and resolve, when untempered by empathy or compassion these same characteristics come off as egotism, arrogance and insensitivity. Emotional intelligence is important for building trust because demonstrating it shows you have not only self-awareness but also situational awareness. Standout leaders who can be trusted to pick up on all relevant cues win the trust of followers to steer them through an uncertain future.
- **Reputation and standing/"pedigree."** Before you enter a room or open your mouth, your reputation speaks for you — never more so than today, when word of your latest blunder or scandal races at lightning speed around the globe in 140 characters or less. Managing your personal brand is almost a job unto itself, lest it be managed for you by people who don't hold your best interests at heart. You've got to be proactive in asserting who you are, what you stand for and how you'd like to be perceived.
- **Vision/charisma.** To communicate gravitas, it's critical you telegraph vision.

Gravitas alone won't secure you the corner office, of course: You've got to have the skill sets, the experience and the innate talent to qualify for the job. But if you have that depth of experience and those vital skills, gravitas is all that's between you and that top job. It can't be faked, but it can be cultivated.

Gravitas is that *je ne sais quoi* quality that some people have that makes other people judge them born leaders. But born leaders are made, oftentimes through their own systematic efforts. They live intentionally, guided by a set of values or a vision for their lives that compels them to seize every chance to put their convictions into practice. We gravitate to them because they telegraph that they know where they're going — a rare and intoxicating certainty that most of us lack. That is the real font of their gravitas.

## Communication

Most of us tend to think of communication skills in terms of formal presentation skills. But when are you not onstage? No matter your job title or how junior or senior you are, you are always presenting. Whether it's a quick email to your boss, a casual comment you make to colleagues in the hallway or a pitch you prepare for clients, you're conveying who you are and what authority is your due. Your communication skills, both verbal and nonverbal, are what ultimately win you the attention and mindshare of colleagues, clients and friends.

Communication is not so much *what* you say but rather *how* you say it. This you can condition and control. The tone and timbre of your voice; your choice and use of words; your inflection, articulation and delivery; and even

your body language determine what and how much your listeners take in — and what overall impression of you they will form and retain as a result. Other people's perceptions of you are very much yours to shape.

**Superior Speaking Skills.** Below are verbal cues that can be adjusted. The painful part is that you'll probably need to be told you've got a problem before you can begin to address it. Ask for feedback. A sponsor or mentor should give you a good sense of what you need to work on. Then get to work — because a lot is at stake.

- **Accent.** Sounding provincial can "destabilize your authority," says top attorney Kent Gardiner. A British accent, on the other hand, does wonders for your gravitas, according to focus groups.
- **Grammar.** Sounding uneducated undermines your gravitas and marks you as an outsider to the inner circle. And yet it's the rare person who will risk correcting your word usage, as such correction calls attention to chasms of socioeconomic class, education and ethnicity.
- **Timbre and pitch.** Not only does the sound of your voice matter twice as much as what you're talking about, but a voice in the lower-frequency range will encourage others to see you as successful, sociable and smart. A high-pitched voice, particularly for women, is a career-stunting attribute.

**Command a Room.** If you aspire to lead, you must mesmerize your audience. How do you grab and keep an audience?

- **Establish connection.** You've got all of five seconds to "touch an audience," or get them to invest in your message. It's all about making yourself human: not oversharing, not indulging in self-revelation but unveiling just enough of your inner core that your listeners feel connected to you and start pulling for you.
- **Deliver your words as a musician delivers notes.** Phrasing, inflection and pace are what distinguish you as a person worth listening to. As in music, it's important to deliver your words conscious of your narrative arc, lifting and dropping your cadence to emphasize key passages or points, paying particular attention to how you end a phrase, so that your listener senses closure and consequently hangs on to the last word and retains it before making room for the next.
- **Use narrative.** Stories, not bullet points, are what grab and hold an audience. Ronald Reagan, an actor by training, earned the sobriquet "the Great Communicator" because he was a colorful storyteller and natural entertainer, not because he wielded facts like a policy wonk.
- **Be succinct.** "Executive presence is not necessarily about being formal or abundant in your communication but rather straightforward and brief," says Kerrie Peraino, head of international HR for American Express. Get to the point, and people will give you their attention.

**Assertiveness.** Being forceful and assertive is a core executive trait for both men and women. But for women, it's a decidedly more difficult trait to embody, as assertiveness in a woman often makes her unlikable. The executives I interviewed uniformly suggest you resist the urge to charge in and make known your demands. The best strategy for women may be what Linda Huber of Moody's describes as "leading from behind." In a room full of men, women often feel impelled to assert themselves by launching the first salvo. But far more effective, says Huber, an army officer who at age 21 had 45 soldiers in her command, is holding off until others have fired off their best shot.

**Ability to Read a Room.** Sensing the mood, absorbing the cultural cues and adjusting your language, content and presentation style accordingly are vital to your success as a communicator, and succeeding as a communicator is vital to your executive presence.

Being oblivious to the needs of your audience will undermine perceptions of your authority. Here's why: First, it intimates you're a closed circuit, someone who can't or won't take in new information. Second, it implies you don't care about your audience, destroying any chance of connection, which is after all the foundation of any communication. Finally, and most damning, it implies you're simply not nimble enough to adapt to rapidly changing circumstances.

**Humor and Banter.** Not everyone can pull off a funny story at the lectern, but everyone can learn to banter at the water cooler. Many of our focus group participants affirmed the importance of mastering the art of small talk. "It's the conversation before the meeting that establishes whether or not you're worth listening to in the meeting," one senior executive pointed out — a skill she refers to as "mastering the banter." It shows, she explained, that you're part of the larger conversation, someone who's "one of the tribe."

**Body Language and Posture.** Never underestimate the communicative power of body language. Since people will be "reading you" the moment they lay eyes on you, take care to enter a room or take the stage with aplomb. Is your head up, your gaze focused straight ahead? Shoulders back but relaxed? Do you stride or shuffle? And do you

look happy at this opportunity to engage? Or do you look like you're nursing an ulcer?

## Appearance

As we wrestle with the thorny — and annoying — issue of looks, three things are uppermost in our minds: What marks us for success? What exactly are bosses and colleagues looking for these days? And how much does this superficial stuff matter anyhow?

Qualitative data found that appearance was typically the *filter* through which gravitas and communication skills were evaluated. That explains why high-performing junior employees oftentimes get knocked out of contention for key roles and promotions: they simply don't look the part. In other words, get this appearance thing wrong, and you're struck off the list.

Over the long haul, the way you look may not be nearly as important as what you say or how you act, but it's incredibly important in the short run. Cracking the appearance code opens doors and puts you in play. So what are senior leaders looking for? What are their top picks?

**Being Polished and Groomed.** It turns out that the intrinsic stuff (body type, height) is not what matters most; rather, it's what you do with what you've got. Research conducted at Harvard Medical School found that judgments about a woman's attractiveness were heavily conditioned by how much makeup she was wearing — the more the better. When you make an effort to look polished, you signal to others that you see them as worth your time and investment, and you're even prepared to tolerate mild discomfort.

Casual clothes may be the right choice for your organizational culture, but in their fit and brand and style, they should telegraph that you take your work and those whom you engage in it very seriously.

Have professionals tend to your hair and nails regularly. Invest in well-cut attire that compliments your body type. Accessorize, but don't billboard your bling. Your appearance should focus your audience on your professional competencies, not distract from them.

**Physically Attractive, Fit, Slim.** There's a plethora of research proving the point that intrinsically attractive people get a speed pass over life's bumpier transitions: They get hired more often, earn more and even fare better in court than unattractive people. With regard to your physical attractiveness, what you do with your God-given gifts counts more than your intrinsic beauty in establishing your credibility as an up-and-comer.

The most important thing you can do is signal fitness and wellness. It's not how much you weigh but how resilient you seem that enhances or detracts from your executive presence — because leadership is demanding. We tend not to entrust our toughest jobs to people who look like they might keel over from a heart attack.

Pay more attention to how well (as in healthy) you look and how well you look after yourself. Whether you're a size 16 or 6, get enough exercise to ensure your muscles are toned and your lung power will see you up stairs without wheezing.

**Simple, Stylish Clothes that Position You for Your Next Job.** The journey begins by dressing for the job you *want,* not the job you have. Complement a sophisticated look with a signature style piece or accent. For men this may be a pair of colorful socks, a playful tie, vintage cuff links, distinctive shoes or a bold watch. Women have arguably more options. Remember that your signature look encompasses not just you but also the physical space you occupy.

**Being Tall.** Shortness in a male leader was and is so easily conflated with major shortcomings. Shortness can create a presumption of weakness. What to do if you're among the height-challenged? In this regard women have one killer app to help them compensate: high heels. And they use them.

For men, there's not much to be done that doesn't risk exacerbating the image problem. The best way to make height a nonissue is to take a page out of New York mayor Michael Bloomberg's playbook. Bloomberg's amour, Diana Taylor, is not only a good four inches taller but also inclined to appear by his side in showstopper heels. He reportedly "doesn't care" about their height difference. A man secure enough to be photographed at the shoulder height of his girlfriend is a man no one will see as weak.

**Being Youthful and Vigorous.** Looking youthful boosts the EP of both men and women because, like slimness and fitness, it implies you've got the vitality to lead the charge and not succumb to setback. If you cannot impress everyone with your obvious vitality, then at least make sure you minimize signs of age and downplay any infirmity.

The crucial point to keep in mind is that appearance is the medium for your message, and, as such, it should neither distract nor detract from what you stand for and what you want to say. Ask your superiors for feedback on your attire, hairstyle and grooming. Provide assurance that you will receive their observations and suggestions not as fault-finding but rather as constructive guidance. While

it may be painful to hear what you're doing wrong, consider how much more painful it is to learn about your blunders later, from someone else, when it's too late to reverse first impressions.

## Feedback Failures

Think for a minute: When's the last time someone at work gave you honest, critical feedback on some aspect of your EP? For that matter, when's the last time you gave someone at work a critical and specific EP pointer?

Unvarnished, concrete feedback on your appearance, communication skills and gravitas is hard to come by. It's especially hard if you're female, though your chances improve slightly with a same-sex boss.

Women often don't get EP feedback from their male superiors. Senior men just can't afford to have their motives misconstrued. It takes only the perception that something unprofessional has transpired to bring down the mighty. As every male who's been subjected to sexual-harassment training might conclude, developing female talent by giving women individualized feedback just isn't worth the added risk of bumping against the third rail of office politics.

For similar reasons, people of color don't get the feedback they need to develop their EP: Fearing discomfort as well as discrimination litigation, senior executives said they would sooner pass over multicultural professionals lacking executive presence than have an honest conversation about their shortcomings. In particular, people of color don't get unvarnished feedback about hair, clothing and body weight.

### Difficult Conversations – But Extraordinarily Important

Some kinds of feedback are intrinsically difficult to give no matter who is on the receiving end. But dispensing good critical feedback across all three EP pillars is a core leadership competency, one that should be developed and evaluated along with other managerial skills.

Great feedback is (1) timely, meaning it's delivered either right before or right after you've blundered; (2) specific to one discrete behavior, as opposed to a global condemnation; and (3) prescriptive, or explicit about what actions need to be taken by you.

Feedback is bad when it sets up a very narrow band of acceptability. Women, for example, are told they're either too angry or too nice, overly passive or way too aggressive, too young or too old. Feedback is bad, too, when it's vague. Given the ubiquity of bad feedback in the workplace, it comes as no surprise that the majority of respondents say they haven't been able to act on the feedback they've been given.

Improving feedback will require a two-pronged approach. First, you as a rising star must learn to become better at eliciting, receiving and acting on criticism. And second, you as a leader must become better at giving criticism while still modeling how to receive it.

### Tactics: How to Get the EP Feedback You Need

- **Recognize you need it.** Says one communications exec, "everybody says they welcome feedback but then persists in thinking they're perfect." She adds, "People I know, probably the smartest people in my group, won't be going anywhere because they don't have EP. And they don't have EP because they don't accept that they need to acquire it."
- **Develop a thicker skin.** Debora Spar, President of Barnard College, says, "I think we're raising both women and men to be overly sensitive to criticism, so that when they finally get out in the real world and they don't get a 5.0 on a performance review, they fall apart. It's so important, early in life, to get that lesson and toughen up."
- **Routinely ask for specific, timely, prescriptive feedback.** If you make a blanket request, as in "How am I doing?," you may get a blanket answer (" Just fine!"). Better to laser in on a recent encounter that required considerable EP — a meeting with a high-powered client or leader in the firm — and request that a superior assess you on your body language, speech and delivery, attire, command of the room and so on.
- **Create a circle of peers with whom you can share feedback.** One ad executive explains, "I always find the time to reach out to people on my team and build these relationships," she says. "I will make sure I'm there to support them when they need my feedback, because at some point I'm going to need theirs."
- **Cultivate a sponsor.** Sponsors are not mentors. Sponsors are powerful leaders who see potential in you and, provided you give them 110 percent, will go out on a limb to make things happen for you. Because sponsors have a vested interest in how you turn out (your reputation now being linked with their own), they will give you the kind of feedback that mentors can't or won't.
- **Demonstrate you will act on the feedback you've been given.** Unless you show superiors that

you are willing to course-correct, they might conclude you're not worth the time and energy it takes to impart difficult feedback in the first place.

Good feedback on executive presence is hard to come by — it's difficult to give, difficult to elicit and difficult to receive. The issue is even more sensitive for women, people of color and LGBT employees. The good news is that improving the feedback loop is a central part of EP workshops and training sessions that have been developed by the Center for Talent Innovation over the last two years.

## Walking the Tightrope

Carolyn Buck Luce, a leader who has negotiated narrow bands of acceptability for decades, says, "If you don't fit the stereotype of a leader, you're not likely to be seen as becoming one." If you're not straight, not white or not male, that is, and you aspire to leadership, you're likely to find yourself up against the impossible expectation that you be someone you're intrinsically not. This expectation is communicated via feedback that's inherently contradictory or paradoxical and that so many on the path to leadership have had to parse before they can proceed.

The majority of women being considered as potential "leadership material" hover in that layer just below top management, what's known as the marzipan layer because it's so rich with talent — and so sticky. We find that, at the door to the C-suite, they hesitate to cross the threshold — fearful, we suspect, of having to walk the tightrope between feminine and authoritative and between effective and likable. Men simply aren't forced to choose, since by dint of being male they're already perceived as leadership material.

Across all three pillars of executive presence — gravitas, communication and appearance — women continue to walk a tightrope. While women are as likely as men to believe that appearance plays a small part in a leader's executive presence, women are much more likely to be pilloried on the basis of it, whatever they do. Women who speak confidently about their accomplishments are identified as "tooting your own horn."

The trickiest EP terrain a woman must navigate concerns her gravitas, where the forceful-but-unlikable chasm yawns the widest. A woman who shows teeth, for example, risks being perceived as a bitch or noncooperative ("not a team player").

### How To Win Greater Latitude: Insights and Strategies

**When you Show Teeth, Show That You Have the Best Interests of the Team at Heart.** Assert your difference of opinion, but take the "I" out of your argument. Too often, says Intel's Rosalind Hudnell, women and people of color set themselves up to be branded as "not a team player" by framing their argument in terms of what's bugging them personally. "Don't make it about yourself, because that only underscores your status as the outsider," says Hudnell. "You'll be far more effective if, before taking a stand, you consider, 'How will this idea be heard by those in power?'"

**Hit the Mark by Taking More Careful Aim.** Too often, says Alliance Bernstein's Lori Massad, women take a broad-spectrum approach to communication: instead of listening to others' views, they blurt out their own first; instead of waiting for an opening that might maximize receptivity, they stream consciousness. Better to be a sniper, says Massad: Pick your target, pick your moment and fire your best shot.

**Build a Personal Brand that Grants you Lots of Latitude to be You — and be Relentless in Projecting it.** A consciously built and confidently maintained brand that positions you outside the box goes a long way in ensuring that others won't dare box you in.

**Show You Care.** For women in particular, winning more latitude in the public's eye depends on showcasing activities that demonstrate you care about the disenfranchised. This works wonders on the likeability front. Kirsten Gillibrand, Hillary Clinton's replacement as the junior Senator from New York State, has become a voice against sexual assaults in the military; Elizabeth Warren, in her run-up to winning a Massachusetts U.S. senatorial seat, recorded a contribution for the "It Gets Better" video campaign to help bullied LGBT teenagers.

Feedback can be helpful in pointing out which paths to take — and which pitfalls to avoid — but at a certain point, many people feel constrained by parameters that narrow the choices between comfort and conformity. Yet walking that fine line is the ultimate test of executive presence.

## Authenticity vs. Conformity

The old metaphor "bleached-out professionals" refers to individuals who, in order to be perceived as professionals in their work environments, had effectively scrubbed themselves of all ethnic, religious, racial, socioeconomic

and educational identifiers. While EP for some was a set of unwritten rules that no one had bothered to share with them, for others it was a terrain they felt they couldn't navigate without sacrificing core aspects of their identity.

The results of our national survey brought this conflict into sharper focus. Forty-one percent of professionals of color said they had felt the need to compromise their authenticity in order to conform to EP standards at their company. White respondents also conceded they felt the need to conform, of course, but people of color were significantly more likely than whites to feel this tension. Among people of color, respondents of Asian decent were afflicted the most — particularly Asian men. Across the board, a majority of professionals of color (56 percent) told us they felt held to a stricter code of EP than their Caucasian peers. Overwhelmingly, the EP code they feel impelled to fit into is that embodied by white men.

The experience of minority professionals parallels that of another group: LGBT professionals who feel obliged to pass for straight at work. Nearly half of gay professionals surveyed said they remained closeted at work for fear of being ostracized by their colleagues and penalized professionally by their superiors. That expenditure of remaining "off the gaydar" costs them both personally and professionally.

No matter who we are and where we work, the workplace imposes norms around appearance, communication and gravitas that we'd be fools to ignore if our intent is to thrive and not just survive.

The difficulty, of course, is that only *you* can determine what constitutes a compromise to your authenticity, as opposed to just a compromise.

### Tactics

Below is strategic and tactical advice from professionals of color who've been down this same road.

- **Know Your "Non-Negotiables" and Walk Away.** Some cultures simply don't deserve your compliance.
- **Never Try to Be Someone You're Not.**
- **Play the Long Game.** Says Carolyn Buck Luce, "It's your responsibility to figure out how to align your talents and gifts to the culture so that, long-term, you achieve your goals. When you are the curator of your authenticity, you can invest intentionally — and then it's a win-win for you and your company."
- **Perceive Slights as Opportunities to Address Ignorance.** One senior executive says, "If you're overly sensitive to the possibility of intentional slights and withdraw as a result, you freeze yourself rather than move forward."

It is precisely your difference that your superiors need to burnish their brand, build their team, extend their innovative capabilities and ultimately succeed as leaders. It is your insight into end users like yourself that gives them a competitive edge in the relentless competition to innovate. In this brave new world, the organization absolutely needs you to bring your whole self to work.

So don't downplay your difference. Commit to owning it.

## Conclusion

Ordinary mortals can crack the EP code. These skills are eminently learnable. You don't have to be born an actor or be endowed with a James Earl Jones voice.

You don't have to be some kind of genius and ace all top picks across the three categories of gravitas, communication and appearance. No need for straight As. Work with your strengths, and try to nail three picks in each category.

Figure out what is negotiable — and what is not. In your drive to crack the EP code, don't compromise your authenticity to such an extent that it puts your soul in play. It will make you miserable and will also backfire, because in the end gravitas rests centrally on your true identity. Eventually your integrity and authenticity will win out.

Finally, commit to the work involved, and embrace your EP journey. It will be enormously empowering. Of course it will require a ton of energy. Learning how to command a room or read a client, figuring out how to use silence to punctuate a speech, finding the perfect skirt or suit to complement your body type — none of this is easy, and it will require hours of painstaking effort. But you can count on the results being transformative.

Cracking the EP code will close the gap between merit and success, between where you are right now and where you could be if you unleashed your full potential and allowed it to fly and soar.

And it will make you feel quite wonderful.

# The Icarus Deception

## How High Will You Fly?

by Seth Godin

### THE SUMMARY IN BRIEF

The old rules: Play it safe. Stay in your comfort zone. Find an institution, a job, a set of rules to stick to. Keep your head down. Don't fly too close to the sun.

The new truth: It's better to be sorry than safe. You need to fly higher than ever.

In his bravest and most challenging book yet, Seth Godin shows how we can thrive in an economy that rewards art, not compliance. He explains why true innovators focus on trust, remarkability, leadership and stories that spread. And he makes a passionate argument for why you should be treating your work as art.

Art is not a gene or a specific talent. It's an attitude available to anyone who has a vision that others don't and the guts to do something about it. Steve Jobs was an artist. So were Henry Ford and Martin Luther King Jr.

To work like an artist means investing in the things that scale: creativity, emotional labor and grit. The path of the artist isn't for the faint of heart — but Godin shows why it's your only chance to stand up, stand out and make a difference.

The time to seize new ground and work without a map is now. So what are you going to do?

### IN THIS SUMMARY, YOU WILL LEARN:

- How and why the industrial age is fading.
- The skills and attitude to help you succeed in the connected age
- Why the keep-your-head-down model does not work.
- How to use the new virtues of risk, danger, disobedience, bravery and standing out to carve out a successful niche in the new economy.

## Introduction

They told you to get your resume in order, to punch your ticket, to fit in and to follow instructions.

They told you to swallow your pride, not to follow your dream.

They promised trinkets and prizes and possibly riches if you would just suck it up and be part of the system, if you would merely do what you were told and conform.

They sold you debt and self-storage and reality TV shows. They sold your daughters and sons, too.

All in exchange for what would happen later, when it was your turn.

It's your turn.

### You Are Not Your Career

Your ability to follow instructions is not the secret to your success.

You are hiding your best work, your best insight and your best self from us every day.

It's too bad that so much time has been wasted, but it would be unforgivable to wait any longer. You have the ability to contribute so much. We need you, now.

A revolution is here, our revolution, and it is shining a light on what we've known deep down for a long time — you are capable of making a difference, of being bold and of changing more than you are willing to admit. You are capable of making art.

### Catching the Wily Fox

Build an eight-foot-long wooden fence in the forest. Lay out some bait and then go away for a week. The fox is too crafty to be caught in a simple trap, and he will smell you and avoid the fence for days. But eventually, he'll come and eat the bait.

At the end of the week, build a second length of fence at a right angle to the first. Leave more bait. The fox will avoid the fence again for a few days, then take the bait.

At the end of the second week, build a third wall and a gate. Leave more bait. When you come back at the end of a month, the fox will be happily prancing in his safe enclosure, and all you will have to do is close the gate. The fox will be trapped.

This, of course, is what happened to us. The industrial age built the trap we're mired in, but it didn't build the trap all at once; that took centuries to perfect. And we were seduced. Seduced by the bait of decent pay and plenty of prizes. Seduced by the apparent security of the enclosure. And once the gate was shut, we were kept in by the threat of shame, the amplification of risk and society's reliance on more and shinier prizes.

For us, though, the situation is even more poignant than it is for the fox. As the industrial age has faded away and been replaced by the connection economy — the wide-open reality of our new economic revolution — the fence has been dismantled. It's gone.

But most of us have no idea that we're no longer fenced in. We've been so thoroughly brainwashed and intimidated and socialized that we stay huddled together, waiting for instructions, when we have the first, best and once-in-a-lifetime chance to do something extraordinary instead.

The Icarus Deception revolves around a simple assumption on my part: that you know how to be human and how to make art. We don't need to be taught to make art, but sometimes we need permission to do so. Following instructions is overrated.

## PART ZERO: ART, THE COMFORT ZONE AND THE CHANCE OF A LIFETIME

Why make art? Because you must. The new connected economy demands it and will reward you for nothing else. Because you can. Art is what it is to be human.

Just south of the Greek island of Samos lies the Icarian Sea. Legend has it that this is where Icarus died — a victim of his hubris.

His father, Daedalus, was a master craftsman. Banished to prison for sabotaging the work of King Minos (captor of the Minotaur), Daedalus fashioned a set of wings for himself and his son. After affixing the wings with wax, they set out to escape. Daedalus warned Icarus not to fly too close to the sun. Icarus disobeyed and flew too high. The wax melted, and Icarus, the beloved son, lost his wings, tumbled into the sea and died.

The lesson of this myth: Don't disobey the king. Don't disobey your dad. Don't imagine that you're better than you are, and most of all, don't ever believe that you have the ability to do what a god might do.

The part of this myth you weren't told: In addition to telling Icarus not to fly too high, Daedalus instructed his son not to fly too low, too close to the sea, because the water would ruin the lift in his wings.

It's far more dangerous to fly too low than too high, because it feels safe to fly low. We settle for low expectations and small dreams and guarantee ourselves less than we are capable of. We're so obsessed with the risk of shining brightly that we've traded in everything that matters to avoid it.

### Your Comfort Zone (Versus Your Safety Zone)

Your entire life has been about coordinating your comfort zone and your safety zone. Like the fox, we've been trained to stay inside the fence, because inside the fence is where it's safe — until it's too late. Now that a revolution has hit, now that the economy is upside down and the rules have changed, we have to confront an obvious truth: The safety zone has changed, but your comfort zone has not. Those places that felt safe — the corner office, the famous college, the secure job — aren't. You're holding back, betting on a return to normal, but in the new normal, your resistance to change is no longer helpful. If you don't figure out how to realign your comfort zone with today's new safety zone, all the strategy in the world isn't going to help you.

The new safety zone is the place where art and innovation and destruction and rebirth happen. The new safety zone is the never-ending creation of ever-deeper personal connection.

### Art Is the New Safety Zone

Creating ideas that spread and connecting the disconnected are the two pillars of our new society, and both of them require the posture of the artist. The bad news is this: Artists are never invulnerable. This safety zone isn't as comfortable as the last one was.

Art is not a gene or a specific talent. Art is an attitude, culturally driven and available to anyone who chooses to adopt it. Art is the unique work of a human being, work that touches another. Seizing new ground, making connections between people or ideas, working without a map — these are works of art, and if you do them, you are an artist.

An artist is someone who uses bravery, insight, creativity and boldness to challenge the status quo.

The connection economy rewards the leader, the initiator and the rebel. The Internet is a connection machine, and anyone with a laptop or a smartphone is now connected to just about everyone else. Those connections are changing the world. Most of all, the connection economy has made competence not particularly valuable and has replaced it with an insatiable desire for things that are new, real and important.

## PART ONE: THE CONNECTION ECONOMY DEMANDS THAT WE CREATE ART

The industrial age, the one that established our schooling, our workday, our economy and our expectations, is dying. It's dying faster than most of us expected, and it's causing plenty of pain, indecision and fear as it goes.

The challenge is to take advantage of this brief moment in time, a time when connection is easier to find and cherish than it will ever be again.

Capitalism transformed the world. Everyone who trades benefits, and the retained capital buys machines and processes that improve productivity, so the benefits continue. Capitalism was refined and condensed and iterated until it became a monster. The industrialist insists on changing two things that have never been changed at a mammoth, worldwide scale before:

- **Change the culture.** The industrialist is big enough and powerful enough and profitable enough that he can act like royalty. He doesn't issue decrees by royal fiat; he does it with advertising and lobbying and by offering a huge carrot to anyone who complies. He demanded a seat

at every table, but it was all okay because the productivity he created made us relatively wealthy.

The change in culture went further than most expected. Another change followed ...

• **Change our dreams.** The industrialist needs you to dream about security and the benefits of compliance. The industrialist works to sell you on a cycle of consumption. And the industrialist benefits from our dream of moving up the corporate ladder, his ladder. Industrialization is about eliminating the risk of failure, about maintaining the status quo and about cementing power.

The media are industrialized now. Organized religions have followed this model as well. So have big-time sports. The industrial model of command and control and the avoidance of failure now permeate every corner of the culture.

The Internet and the connection economy turn the economics of mass on its head. It's now cheaper and more efficient to make edgy, amazing products for the weird edge cases than it is to push yet another average product onto the already overloaded average people in the middle of the curve.

### The Assets That Matter

Successful organizations have realized that they are no longer in the business of coining slogans, running catchy ads and optimizing their supply chains to cut costs.

And freelancers and soloists have discovered that doing a good job for a fair price is no longer sufficient to guarantee success. Good work is easier to find than ever before.

What matters now:

• **Trust and permission.** We do business with and donate to those who have earned our attention. We engage with those people or businesses who delight or reassure or surprise in a positive way. All of those behaviors are acts of people, not machines.

• **Remarkability.** No one talks about the boring. We don't risk interactions in order to spread the word about something obvious or trite. The remarkable is almost always new and untested, fresh and risky.

• **Leadership.** Management is about generating yesterday's results. Leadership puts the leader on the line. No manual, no rulebook, no uberleader to point the finger at when things go wrong. Leaders are vulnerable, not controlling, and they are taking us to a new place, not to the place of cheap, fast, compliant safety.

• **Stories that spread.** In a world of abundant choice, the chooser has too many alternatives, and the scarce resources are attention and trust, not shelf space. After trust is earned and your work is seen, only a fraction of it is magical enough to be worth spreading. This magic is the work of the human artist.

• **Humanity.** The people you seek to lead, the people who are helping to define the next thing and the interesting frontier, these people want your humanity, not your discounts.

The industrial age was about scarcity. The connection economy embraces abundance. We have an abundance of choice, an abundance of connection, an abundance of knowledge.

The labor in the world of connection and art embraces the opportunity to do a little bit more, not less. Since emotional labor scales so dramatically, the ability to bring a little more to the table is the chance of a lifetime. Connection belongs to those who "get to" instead of "have to."

It's not art if the world (or at least a tiny portion of it) isn't transformed in some way. And it's not art if it's not generous. And most of all, it's not art if there's no risk. Art requires the artist to care, and to care enough to do something when he knows that it might not work.

## PART TWO: MYTHS, PROPAGANDA AND *KAMIWAZA*

Myths aren't about gods (real ones or imagined). They are about us. They are about humans acting human but doing it while wearing the cloaks of gods, of legendary figures. Myths highlight the very best of ourselves (and sometimes the worst). Myths are mirrors, paths to walk and bars to be exceeded.

Within a generation, the Homeric myths of bravery and guts were supplanted by the workaday unbrave myths of *Leave It to Beaver* and Archie Bunker. Sure, there were still superheroes in the comic books hidden under our beds, but these heroes were never meant to be us. Our parents bought us Batman Underoos and Superman T-shirts, but it was clearly stated: You can pretend to be a hero, but you are not one, and you will grow up to be an obedient member of society.

Hubris means that you have the voice to challenge authority and the guts to stand up and speak out. It's not surprising, then, that the only part of the Icarus story we're left with is the warning about hubris.

The hubris of art, though, is precisely what we need right now.

Propaganda is a set of stories about what someone in power would like you to be. Propaganda in the industrial age has created generations who believe that consistent

obedience to the powerful is part of who we are. Myths are about becoming more godlike and achieving our best. Propaganda celebrates those in power and urges us to willingly comply with their desires.

The goal needs to shift. The opportunity is not in being momentarily popular with the anonymous masses. It's in being missed when you're gone and in doing work that matters to the tribe you choose. The old system made you popular for fitting in. The new one gives you a chance to stand out.

### Prideful and Disobedient

Art requires both pride and disobedience. The pride of creation and the disobedience of disturbing the status quo.

Here are six daily habits for artists:

- Sit alone; sit quietly.
- Learn something new without any apparent practical benefit.
- Ask individuals for bold feedback; ignore what you hear from the crowd.
- Spend time encouraging other artists.
- Teach, with the intent of making change.
- Ship something that you created.

The industrialist asks, "How does this threaten me?" or perhaps "How can I use this to make gradual improvements in the systems I have?" Most of all, he asks, "Is it safe?"

The artist wonders, "How can I break this?" or "Where is there an opportunity for me to change everything and make an impact?" Most of all, the question is "Is it interesting?"

The Japanese term *kamiwaza,* like most great words for which we have no equivalent, is difficult to translate. The shortest version is "godlike." When we strip away self-doubt and artifice, when we embrace initiative and art, we are left with *kamiwaza*. The purity of doing it properly but without self-consciousness. We can't just commit to one act of *kamiwaza,* one bold emotional risk, and be done with it. We have to commit to a lifetime of them. It's a process, not an event.

When your art fails, make better art.

## PART THREE: GRIT AND ART AND THE WORK THAT'S WORTH DOING

Grit in a batch of spinach makes it inedible, of course. But worse, far worse, is grit on the assembly line. All industrial systems abhor grit, the unmeasurable little bits that gum up the works and make outcomes unpredictable.

Grit is our future. Our best and brightest future. Perhaps the only hope we've got left.

Someone with grit will grind down the opposition, stand up in the face of criticism and consistently do what's right for their art. Mostly, they mess up the machine.

The industrial age prizes control, leverages external motivation and uses approval as a weapon to enforce compliance. To make art, you need to remove these three external things: control, motivation and approval. Control, because external control is the factory; motivation, because if you rely on external motivation to be your best self, then you will have ceded responsibility and authority to someone else; and approval, because the crowd is always wrong. The crowd wants bread and circuses. You can do better than the crowd.

Psychologist Angela Duckworth and various other authors have outlined elements that combine to give someone that invasive attribute they call grit:

- **Perseverance.** Grit includes perseverance, but grit includes goals and a passion for those goals. Those with grit persevere because they believe they have no choice, not if they wish to be who they are.
- **Hardiness.** The person with grit understands that the grind is part of the work, that the grind is part of what makes the work interesting, a challenge, worth doing. If there were no grind, you'd need no grit.
- **Resilience.** Resilience demands flexibility — the willingness to change one thing in order to make up for something that's broken or failing.
- **Ambition.** Grit exists whether or not it leads to measurable external success. Grit is its own reward.
- **Commitment.** People with grit consciously set long-term goals that are difficult to attain and do not waiver from these difficult goals, regardless of the presence of feedback.
- **Flow.** Something extraordinary happens when we are swallowed up by our passion, focused beyond all reason, deep into something we care about.

The connection economy demands grit; it demands the art of imperfection because perfect is boring, not remarkable, and because defect-free often means interest-free.

The problem with blaming the system is that we know the system is broken. Blaming the system is soothing because it lets you off the hook. When the system is broken, we wonder why you were relying on the system in the first place.

## PART FOUR: SHAME, VULNERABILITY AND BEING NAKED

Kryptonite, of course, is to be avoided. Kryptonite, whatever your particular variety is, can kill you. It can pierce your armor and leave you helpless.

Organizational charts are filled with individual boxes connected by thin lines, each of us an interchangeable cog in a vast system of predictable behaviors. The industrialized, corporate, organized world likes it that way. Stay inside the fence!

This strategy feels right. Why open up to criticism, defeat and humiliation if you can protect yourself from it? It feels right only because we've been indoctrinated for a hundred and fifty years. It's not right.

Without kryptonite, Superman doesn't matter, as he is without weakness, invulnerable and boring.

Artists never stop looking for the disturbing truth behind the façade. When reality arrives, they won't be surprised, because they saw it coming. Sometimes they even encouraged it to come.

If not enough people doubt you, you're not making a difference. The cost of art is vulnerability. Taking responsibility and standing up and standing out make us easy targets.

Going forward might open the door to being thought a fool. Again and again we've been deceived, brainwashed into believing that perfection is more important than effort and sold on the idea that we have to settle for what's been offered.

### Art Is Vulnerability Without the Prospect of Shame

*Kamiwaza* involves removing artifice and defenses and poses from our work and boiling it down to the true essence, performing it in a way that eliminates hiding places and excuses. Which makes us extraordinarily vulnerable.

No cog in the industrial system chooses to do this. We risk being shamed for our arrogance. The industrialists amplified the shame of hubris to keep us in line. Fear of shame is a powerful tool to modify behavior, and those in power have been using it for years. They want to be able to change us by delivering shame, and we've been taught to listen to it, believe it and swallow it.

The only way to be successfully vulnerable is to separate the results of your art from your instinct to feel shamed. And that's possible, because while someone can attempt to shame you, shame must also be accepted to be effective. We can't make you feel shame without your participation.

### Accepting Shame (or Not)

Shame is the soul killer, the enemy of those who would have courage. The easiest way to avoid shame is to lie low. But lying low is now a recipe for ending up far outside your safety zone. The artist, then, combines courage with a fierce willingness to refuse to accept shame. Blame, sure. Shame, never. Where is the shame in using our best intent to make art for those we care about?

The watchword of the sane artist: Shun the nonbelievers. First you must pick yourself, and then you choose your audience. After you've created your art, whatever it is, it's done. What the audience does with it is out of your control. Your goal as an artist is to make art that moves the audience of your choice. Figure out who your art is for, get better at connecting with that audience and ignore the rest.

Artists lead, they don't chase.

The voice of resistance is a million years old. It understands that art is dangerous, because art makes you vulnerable, because art generates criticism, because your art is not for everyone. When the resistance shows up, I know that I'm winning. Not my fight against it, but my fight to make art.

The resistance is a symptom that you're on the right track. The resistance is not something to be avoided; it's something to seek out. That's the single most important sentence in this book. The artist seeks out the feeling of the resistance and then tries to maximize it. The artist's constant companion is the screaming lizard brain.

The mass marketers and the industrialists need everyone. You don't. You merely need to matter to a few. The dangerous addiction is to keep expanding the audience until we find people who hate our work.

## PART FIVE: TO MAKE ART, THINK LIKE AN ARTIST. TO CONNECT, BE HUMAN.

"Make good art" is Neil Gaiman's prescription for whatever ails you. If the job market isn't there, if your boss doesn't respect you, if the world doesn't get you — make good art.

If it's not working, then make better art. If you don't know how to make better art, learn. If the people around you are sabotaging your art, ignore them. Day by day, project by project, you can train yourself to ship. Ship small art. Then ship medium art. Then ship world-changing, scary, change-your-underwear art.

Author James Elkins writes of the three components necessary for someone to become an artist:

• **First, learn to see.** Students have to see the world as it is, without labels, without knowing the name of what is seen. Our preconceptions and our fear conspire to make it difficult to see the world as it is. Buddhists call it *prajna* — accepting reality as it occurs instead of interpreting it as part of our ongoing narrative. The trick is to accept what happens without stopping to interpret it according to your biases.

• **Second, learn to make.** Students are taught how to make. How to use hands or voice or body to take what they see and reflect it back to the world. Once you know how to make something, it changes how you see things. Learning how to make things turns you from a spectator into a participant. It gives you the guts to make more, to fail more often, to get better at making.

• **Third, embrace the blank slate.** Art must be done for the first time, not repeated, and that first stroke, those first words — this is the source of our fear. The blank slate is a requirement for original art. If you merely rehash what came before, then nothing remarkable has happened; no connection has been made. The hard part is taking a stand and doing it new. For the first time.

You can risk being wrong or you can be boring. The connection economy won't bother to notice the repetitive or the boring.

Make what you will make. Not in anticipation of or dependence on the applause of others, and not because you are totally entangled in the results. No, make it because you are committed to making it. Only when you make art that isn't for everyone do you have a chance to connect with someone. And when you connect to someone, amazingly, you increase the chances that you've made something that many will want.

The simple reason that creativity, leadership and brainstorming books and courses fail is that people don't want them to work. We've been brainwashed into becoming afraid of art. People hesitate to lead or to invent or to make art because they're afraid of what will happen if they do.

I will share two simple tactics that will expose your fear for what it is and let you look it straight in the eye:

• **Problem and Solution Cards.** At a recent event, I handed out stacks of beautiful hand-printed index cards. One side was labeled PROBLEM and the other said SOLUTION. I asked everyone to write down their real problem, their cherished roadblock, and swap cards with the person sitting next to them. I gave everyone five minutes to do their best and write down a solution on the back of the card. I cared about three things: How did it feel to write down the problem? How did it feel to know that the person sitting next to you was maybe, just maybe, going to write out a valid solution? If the person failed to solve your problem adequately, were you prepared to admit that the problem was unsolvable?

• **The Focus Group.** Find exactly three other artists — who work in different fields, who come from different backgrounds, who pursue different goals — and connect with one another about the process of your art. The object is to remind you of your commitment and to push you to make your art more original, personal and successful. When you know that you need to meet every two weeks and look a respected artist in the eye and tell her what you did (or didn't) make, it will raise your game.

In the idea-driven connection economy, the cost of experiments is lower than ever, the ability to coordinate is high and the impact of being right is huge.

Embrace the fact that your work (your best work) will bring you the joy of creation juxtaposed with the shouting of the lizard brain. Once you acknowledge that this pain is both a signal and a marker, you don't have to waste energy organizing your life to make the pain go away. Now you have the foundation for true freedom, because you are no longer limiting your passion and your art in search of an absence of fear.

Freedom isn't the ability to do whatever you want. It's the willingness to do whatever you want.

All important work is ridiculous until it makes an impact, and then it becomes art. Too ridiculous, though, and no impact is made. Not ridiculous — not important. See, then make, then reinvent on the blank slate. And repeat until you've accomplished the connection you seek. You don't make art after you become an artist. You become an artist by ceaselessly making art.

This is a lousy time to be an industrialist, a lousy time to hope for reliable, predictable demand. On the other hand, there's never been a better time to have something to say, to embrace change and to see the world differently. There's never been a better time to make connections instead of stuff. And most of all, there's never been a better time to make art.

## True-Life Stories of Real Artists

### "Look Like Jill"

Jill Greenberg took my picture when we were both teenagers. Sometime after that, she became one of the most important fine art photographers in the world.

We live in a society where just about everyone has a camera. And when everyone has a camera, just about everyone will take pictures. In that sort of marketplace, with that sort of competition, how is it possible to publish anything?

It's easy to describe but difficult to do: Jill relentlessly chose her own path. She began by embracing Photoshop, a tool that was shunned by all but a few photographers, who believed that all the work had to happen before the shot was taken, not after.

Then she sought out difficult topics. She took pictures of zombielike presidential candidates, angry bears and crying babies. And she did it without reserve. A quick look at Jill's portfolio shows that she consistently refuses to hold back. The pictures are all presented at the volume of 11.

Most of all, Jill's pictures look like Jill's pictures. No one hires her to take pictures that look like they were taken by someone else or that look like they were taken by anyone else. In fact, art directors on a budget often hire other photographers with the instruction to "look like Jill."

Most of the people with a camera don't have the guts to make the decisions that Jill did, and to stick it out for as long as Jill did, and to take as many pictures for no pay as Jill did. Jill sees what the rest of us don't, she makes art in a way that's unique and she has the guts to show us what she's made.

### The Thirty-Six-Billion-Dollar Art Project

Cynthia Carroll was recently made CEO of Anglo American, a multibillion-dollar mining company. It's responsible for finding most of the diamonds, platinum and other essential mined metals in the world. She was its first woman CEO, the first without a long history in mining and the first who wasn't from South Africa. The stakes couldn't be higher: This hundred-year-old company employs nearly 150,000 people worldwide.

The first significant act of her tenure was to fly to the notorious Rustenburg mine and go deep inside the "dark, hot, wet and steep" workplace, hundreds of feet underground, a place where, on average, 40 people a year die in workplace accidents.

Stunned by the enormity of what she saw, Carroll did something no mining CEO in a similar situation had ever done before. She voluntarily shut down the mine. Not in reaction to an uproar (there wasn't one). Not as a PR stunt. No, she shut down the largest and most profitable platinum mine in the world for nine weeks merely because she couldn't abide the danger. She created such an uproar that the CEO of the division quit.

Carroll went even further. She organized a productive working relationship among the unions, the government and the mining companies and engaged in a multiyear battle to redefine what got measured and how mining was done. The next year, as a direct result of one person's art project, fatalities at this mine dropped by half, and they continue to fall.

How do we know the story? Because Cynthia Carroll told us. She aired Anglo's laundry, shared the stats, explained the realities of what her options were and opened herself up to being criticized, ostracized and unloved.

No rule book, no paintbrush. This was high-stakes art, the willingness to work without a map and to forge new relationships.

## Don't Waste This Platform

As I'm writing this, I'm drinking tea (made with leaves shipped through a supply chain more than three thousand miles long) out of a glass bottle (smelted at a temperature unobtainable by humans not long ago), and I'm working on a computer that would have cost a million dollars 10 years ago, except you couldn't buy one at any price, and the computer is connected to the Internet via Wi-Fi (it's all a miracle).

We're living in a moment of time, the first moment of time, when a billion people are connected, when your work is judged (more than ever before) based on what you do rather than who you are, and when credentials, access to capital and raw power have been dwarfed by a simple question "Do I care about what you do?"

We built this world for you. Not so you would watch more online videos, keep up on your feeds, and LOL with your high school friends. We built it so you could do what you're capable of. Without apology and without excuse.

Go.

# Find the Fire

## Ignite Your Inspiration and Make Work Exciting Again

by Scott Mautz

### THE SUMMARY IN BRIEF

Remember when you were eager to go to work? When the prospect of learning new things and making things happen got you out of bed in the morning?

That kind of inspiration is difficult to sustain, as evidenced by the overwhelming majority who drag through their days. What happened to make so many people so tired of their jobs?

*Find the Fire* locates the culprits, and they're not just subpar working environments or uninspiring bosses. In the majority of cases, what drags people down are self-defeating beliefs and thought processes. From fear and disconnectedness to loss of control and feelings of insignificance, nine recurring "Anti-Muses" sap our energy and optimism.

By taking control of the situation and self-administering antidotes, *Find the Fire* shows how to counter the forces that drain inspiration and create conditions where it thrives.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to overcome the common fears of failure, change and criticism, adopt an open mind, seek out new experiences and embolden yourself to take more risks.
- To build upon progress and create momentum, unleash creativity and produce work you're proud of, and reclaim a sense of control and power.
- How you can bolster your inner strength, persevere through challenges, lift your self-confidence and earn respect.
- How to dispel the feeling that nothing really matters and make an impact with your work.

## PART I: THE ANTI-MUSE

## The Forces that Drain Our Inspiration

With motivation, we take hold of an idea and run with it. With inspiration, an idea takes hold of us. The message here is don't wait around for your leaders. Research shows that over 70 percent of us have lost that feeling of inspiration. Don't wait around for your leaders to inspire you and keep you inspired. It's time to take the matter into your own hands. While inspiration can be elusive, it can, in fact, be *codified and coaxed*. You don't have to helplessly wait around for it to happen to you — you can create the conditions where inspiration is much more likely to occur. Find the fire.

### The First Spark

The first spark is struck in one of three ways: You choose to view your job in a new light; you decide, in your heart of hearts, that it's time to move on and find new work, but you first commit to understanding the triggers and warning signs of what keeps and drains your inspiration over time so that you can inform your search; and if you're lucky enough to be in a place where you feel inspired in your job, you then choose to elevate your awareness of why that's the case and how to keep it so.

### The Anatomy of Inspiration

Leading research on inspiration reveals three defining characteristics. Our inspiration can be *evoked,* can come from *within,* and either of these can *compel us to act*. Being compelled to act is, of course, the most critical. It's what we decide to do with the inspiration that matters. The problem with being inspired *by* is that by definition, it's *passive,* so the core elements of inspiration are inherently *passive, elusive* or *repressed*. The point is that this is hardly fodder for believing that sustained self-inspiration is right around the corner.

### The Anti-Muses

In Greek mythology, Zeus and Mnemosyne had nine daughters: nine Muses who each presided over different factions of art and science. According to legend, these daughters serve as the spirit or source that inspires an artist. What if there were powerful forces laboring to actually *kill* our inspiration? There are.

- *Fear:* Inspiration is doomed in the face of three fears in particular: the fear of failure, the fear of change and the fear of criticism.
- *Settling and Boredom:* This Anti-Muse exists, more than any other, by our own choice. Rejecting this force is about choosing to shift to a more open mindset and seek out new experiences.
- *Inundation:* This Anti-Muse is the mortal enemy of our ability to make progress work.
- *Loss of Control:* Research shows that when we feel we have control over what happens in our lives and can favorably influence outcomes, even in times of duress, we're much more likely to look within ourselves for inspiration.

- *Dwindling Self-Belief:* Without a revitalization of our personal presence, we unwittingly shut ourselves out from passion and possibility until eventually the siren song of inspiration is doomed to fall on deaf ears.
- *Disconnectedness:* Research shows that we become uninspired when we become disconnected from those we are surrounded by each day at work. These human connections are deep wells of energy from which inspiration can take form.
- *Dearth of Creating:* Countless studies and raw common sense will tell you that creativity blossoms when the artist, musician, employee, etc. becomes inspired. The link between inspiration and creativity is irrefutable — the former spurs the latter.
- *Insignificance:* This materializes as a feeling that what we're spending our precious time on isn't making a difference on anything that matters to us, and that we don't really matter or simply don't measure up to others.
- *Lack of Evocation:* The longer you passively wait for inspiration to appear, the stronger its cumulative negative effect. More specifically, when inspiration isn't evoked, your belief that it will ever show up rapidly wanes.

## PART II: THE ANTIDOTE

# Fear (Relinquished)

Fear disrupts the preparedness of our mind for being inspired, blocks action, dissuades discovery and growth and engages our brain in the wrong conversation. Fear distorts reality. The good news here is you don't need to go so far as to put a face to your fear. You just need to face it down — and stop letting fear limit you. When we press past our fears and venture forth "unprotected," we discover. We see opportunities, not opposition.

### Fear of Failure

Imagine a funnel, wide at the top then narrowing to its thin spout at the bottom. We start out at the top of that funnel with big, wide-open thinking and a huge scope of possibility. As we grow more fearful of failure, the width of the funnel contracts until we find ourselves in a vastly constricted worldview — the narrow spout at the bottom. When we can employ the proper Frame of Mind, Frame of Reference and Frame of Action, we can reverse the inspiration-killing constriction caused by our fear of failure.

**Frame of Mind.** There are only three ways to actually fail: when we quit, don't improve or never try. Failure is an event, not a person. Never overgeneralize that these one-time events are harbingers of future, widespread failure. You need to believe that when you fail, it was for a reason. *You* don't suffer when you fail, your *ego* does. Your fear of failure shouldn't scare you; it's trying to tell you something's worth it. Failure is a key part of your portfolio. There is no truly successful person who doesn't have failure as part of their life portfolio.

**Frame of Reference.** As we spiral down the fear funnel, our point of reference narrows. We reverse this downward spiral when we anchor our frame of reference to something that provides a helpful, broadening perspective.

We are constantly comparing ourselves to others, but we're not even making fair comparisons. We tend to compare our own blooper real to everyone else's highlight reels. There is one comparison that is worthy: When we find that even massively successful people have failed along the way, and more than recovered, it's reassuring and inspiring.

Stop and remember the potential rewards in the risk/reward equation that you calculated before proceeding. Draw from the thought of achieving those rewards to give you bursts of vitality as you press forward. Stay focused on the process. Break down your ultimate goal into individual steps or tasks to keep your mind focused, and avoid obsessing over whether or not failure is imminent.

**Frame of Action.** Practice getting it wrong. One of people's greatest fears is public speaking; when someone is required to practice it, they will eventually become good at it and lose their fear altogether. You simply need to get comfortable with being uncomfortable.

While visualizing success is an important step toward overcoming a fear of failure, you must also take action. Build on small steps of progress and knowledge gained along the way, slowly but surely reducing the radius of the unknown. Expand your knowledge and level of clarity on what it really takes to succeed. Beat fear of the unknown by knowing more. Expand your knowledge and level of clarity on what it really takes to succeed. Our subconscious self reminds us all day long of our anxieties. The key here is to not let anxieties behind your fear of failure subtly spam your mind.

### Fear of Change

Our brains are wired to value longevity. Change threatens our sense of stability and robs us of our sense of

control. Turn resistance into resolution. Believe that you have competence for change. Insist to your doubting self that you have the competence to succeed on the other side of change. Think of change like a software upgrade. Change can yield You 2.0 — a better version of yourself.

Find an anchor. We hate change so much because it makes us feel like we've become untethered. You can abate your fear by remembering what the change *won't* change about you or the world around you. Bring order to the unruly change, and get clear on the case for change to help strengthen the case for change. Get yourself involved in the change, and focus on what you *can* control.

### Fear of Criticism

Critics believe the creators of the art really want feedback. They see themselves as reporters, boosters and skeptics, all *to create better art*.

Know that anything worth doing attracts admiration *and* criticism, but don't let that stop you. Avoiding criticism is what makes you weaker, not the criticism itself. Seek improvement, not approval. If you can't control the sting, keep it from swelling. You can rise above any words.

Decide who gets to criticize you. Not all criticizers are created equal, and some shouldn't even get a seat at the table. Let your elders inspire you. With fewer years ahead of them, reception of criticism is both fleeting and filed accordingly. Get the skeletons out of the closet. Share things you know you aren't good at and want to improve upon. Recall when criticism helped an outcome, and stay focused on the conclusion, not the criticism.

## Settling and Boredom (Rejected)

Studies show that *up to 40 percent* of time spent at work is wasted, unproductive time — a product of a lulled and bored workplace. You have the power to get yourself unstuck. Leading researchers on inspiration have pinpointed "openness to experiences" as the single factor that most correlates with facilitating feelings of inspiration.

### How to Embolden Yourself to Take More Risks

As we take risks and try new things, we expand our horizons and get exposed to more. Our fear of the unknown diminishes as a result, and we're more likely to try yet more new things.

Defining the rules of engagement in risk-taking up front and giving it some structure can greatly defuse inhibitions. If you're a manager of others, provide this framing. If you're an employee, ask for it. Start with a request to do some experimentation. Celebrate and share the results if the risk pans out, and if it doesn't, be downright enthusiastic about what's been learned.

To help stimulate an environment more conducive to risk-taking, form risk pools. The process of taking risks thus becomes less scary through shared experience and will ultimately produce more of the desired risk-taking behavior. Research indicates that we consistently overestimate the consequences of taking a risk while we discount the cost of status quo.

When we reconnect with the people who benefit from the products or services we administer, it gives us newfound inspiration to take risks on their behalf. Reconnecting with the end user can also uncover unmet or previously unarticulated needs that will require risk-taking to fulfill, thus providing further inspiration.

Think of risk-taking as a skill that must be built, no different from visioning or strategic thinking. Big expectations for results will naturally encourage risk-taking. Plan to succeed. Don't let your doubts and worries become self-perpetuating. The inspiration to take risks often comes from the birth of exciting new ideas.

### How to Get Learning and Growing Again

No one overtly chooses to stop learning and growing; it just kind of happens. Here are some powerful prompts to get you gung ho on learning and growth again:

- Seek conscious growth (becoming who you are) versus growth for its own sake.
- Dread obsolescence.
- Let your values vault you forward.
- Work *on* your life versus *in* your life.

To get growing going, discern between good and great, then go after the latter. Can you truly say that you really understand how your boss would define what great looks like? Many of us guess or simply don't ask.

Introduce new stimuli. If a stroll in the park or a little travel can produce cognitive benefits, imagine what introducing a portfolio of new stimuli could do.

### How to Make Your Own Opportunities

As it turns out, problems, frustrations and adversity are a gold mine of opportunity. A constant effort of looking for ways to one-up how well things are done today can lead to tremendous opportunity. While looking to one-up current practices, you can two-up what you ask

for. Periodically ask for stretch opportunities, assignments, resources and support that are so aggressive they require your boss's boss to approve.

Keep your eyes open for opportunities. Adopt the mindset of always adding value in your interactions with others. The more you expand your network of people you meet and serve, the more opportunities that will come your way.

## Inundation (Relieved)

You know the deal. We're inundated and exhausted. This reality stifles progress, our sense of mastery and our feelings of preparedness. What you may not be aware of, though, is how detrimental all of this is specifically to our ability to attract inspiration. We can become overwhelmed for many reasons. Likewise, many things can cause us to feel a lack of progress, mastery or preparedness. The most common contributions to all these aspects of inundation are that we aren't good at making choices or setting priorities.

### How to Make Choices and Set Priorities

Promise yourself you'll only work on what matters most, what will make the biggest impact on your core objectives. Be honest about the weight of the work you're about to take on — stop and ask yourself, how much work will it really take?

Write down the kinds of things you want to avoid or that you tend to get sucked into. Research is clear on the power of writing down your goals. The thing you should be taking on more of is the truly important; take on less of the distractingly urgent. A more fluid mindset is better, as it gives you permission to take on important new work but still forces accountability to counterbalance the total portfolio of work.

### How to Stop Procrastinating and Get S#@! Done

Don't get sucked into these three misconceptions:

- *"I work better under pressure."* Research simply doesn't support this assertion.
- *"My willpower will kick in."* Researchers found that personal restraint levels were continually overestimated, leading to poor choices.
- *"My self-imposed deadlines will keep me on track."* Group studies have shown that the one that did best on task completion rate was the one working with a series of interim deadlines. Research indicates setting such deadlines externally, such as with a boss or with friends, is the most effective way to encourage adherence to a deadline.

Ditch the distractions. Our brain will attempt to simulate big, hairy, productive work (after first avoiding it) by focusing instead on smaller, mindless tasks, thus giving the illusion that real work is being done. We remember uncompleted tasks better than we do completed tasks because uncompleted tasks nag at us. If we manage to start a task, we're much more likely to remember it and be driven to finish it.

### How to Stop Being a Perfectionist

The only love procrastination gets is from the perfectionist, who employs it as a go-to tactic to delay starting that which they cannot completely dominate at that moment. Tell yourself done is done.

Perfectionists are often unaware of the impact this corrosive behavior has on others. They're assuming that everyone else is harshly judging them, so to do so as well is just the way of the world. Appreciating all you've done, versus obsessing over what you haven't, can set you free. And when you see in others all that they've become, rather than just seeing what they still need to be, your relationships with those people will blossom.

The majority of the time, the odds are pretty good that no one is holding you to the same standard that you're holding yourself to. Perfectionism can be fed by catastrophizing, or massively overestimating the negative impact of miscues or imperfections.

Don't let the opportunity to experience a sense of inspiration be drowned out by feelings of being overwhelmed.

## Loss of Control (Reverted)

### How You Give Away Your Power

Whether or not we realize it, we take actions that directly give away our power. You sacrifice the power of bringing the authentic you to the table to please others and gain approval. How do you shift the emphasis from pleasing to empowering?

How you feel about yourself should flow dominantly from your own self-appreciation and self-acceptance. Stop trying to be everything for everybody. Remember that politicians never get 100 percent of the vote, and neither will you.

Feeling and acting like a victim when we're wronged is the next way we give away our power. It's easy to fall into victimhood and not realize it, so create a number of self-alerts to catch it early on. Those trapped in a victim mentality often have a core group of "rescuers" they turn to for sympathy. Redirect your first-responder unit by asking them not to feed your downtrodden behavior. Own your part of the story. Do right by not honing in on how you were wronged. Instead, think of all the ways you've been blessed in your life.

The last debilitating way in which we give away our power is when our inner monologue turns on us. The same damning belief, the same root cause, in one form or another, keeps surfacing over and over and over again: *"I'm not good enough."*

### How You Can Take Back a Sense of Power

Step back and figure out what you want, setting a path and setting concrete goals that matter. Expand your mind by holding the commitment to learn new things sacred. Be intentional, and take a pause to check in with yourself. Don't try to do it all alone; draw power from others who are willing to give it to you. You take back some control when you control how you react to feedback. Grow stronger and more in control through changes. Being proactive puts power back in your hands.

### How You Emit Power

People are drawn to your efforts to be a force for good. Counterintuitively enough, when you're willing to show your weakness, it's a sign of strength. A loss of control and the uninspiring feelings that go with it can go into overdrive in times of crisis.

Here are five crisis control lessons that come from some of America's worst crises. Start with the 5 C's: calm, candor, communication, concern and courage (lessons from 9/11 and the anthrax attacks of 2001). Get clear on reality (a lesson from the Cuban Missile Crisis). Create a unity of effort (a lesson from Hurricane Katrina). Set a North Star, and waypoints to get there (another lesson from Hurricane Katrina). Be visible up the chain and on the front line (a lesson from the BP oil spill).

## Dwindling Self-Belief (Revitalized)

When our inner strength dwindles, we can feel adrift and alone in what becomes a seemingly massive ocean.

### Self-Confidence

Maximum self-confidence matters. And yet the levels of self-confidence in the workplace are shockingly low. Self-confidence problems are often triggered by our perception of what others' conduct says about us. Remember that no one defines you but yourself. Our internal dialogue can either help or hurt us — don't let yours spiral downward.

Know that in the absence of confidence, courage takes over. There are always drops; it's how you pick up. Playing it safe all the time and not venturing out to try new things can give you the most temporary and false kind of confidence — one born out of simply avoiding failure. Don't lower others' expectations of you by doing it for them.

### Perseverance

There are several powerful truths to be keenly aware of as you face daunting challenges. Know that persevering builds your skill set for the future. Developing mental toughness is a science-backed key to success.

Know just how debilitating worrying is. Perseverance can be massively aided by perspective. When falling short, don't abandon ship. Personify your perseverance. Believe that you're right where you need to be.

Remember the difference between perseverance and persistence. We can persist in doing things that might not even be good for us.

Create a support network. Enroll people you care about in what you're trying to accomplish. Remember, you need self-discipline and self-compassion.

### Being Present in the Moment

A wandering mind is not a happy mind. Accept that multitasking is a myth. Make it a point to notice when your attention is drifting. It's so easy to zone out when you're tired. Go get a drink of water and clear your head.

Don't just passively take in information during a meeting. Notice what's in front of you — the people, the passions, the emotions, the energy and the intention of the information being transmitted.

When you're feeling self-confident, that you can persevere, that you're fully present and that you've earned the respect you deserve, your self-belief soars. It is then that you're most ready to receive the overtures of inspiration all around you.

## Disconnectedness (Reversed)

Making the choice to reestablish connections with those who count can be inspiring. When we do truly connect with our work compatriots, research clearly indicates that it can indeed make us more passionate about and inspired by our work.

Picture a sturdy, thick length of chain. Now imagine that each link in the chain represents the ideal behaviors for facilitating a strong sense of camaraderie within a group. You can instigate such behaviors and, in doing so, fully reconnect with and be inspired by your coworkers and your relationship with them.

To do so, it's helpful to consider three parts of the chain: the center link, the supporting links and the weak links. Camaraderie and connection with thy fellow worker starts with three centerpiece elements: (1) shared purpose, (2) trust and truth and (3) mutual respect.

There are many supporting links in the chain of camaraderie; the more links forged, the greater your chances of inviting inspiration back into your workdays. Create purposeful bonding experiences, shared experiences of substance, shared identity experiences, shared crucible moments and shared appreciation-enhancing experiences. Spread positive gossip. Invite their gifts in, and openly and subtly have their backs. Visibly backing one another up is one of the best ways to move camaraderie forward.

### Cultivate Healthy Debate

Separate the person from the point. Encourage animated, not heated, debate. Enroll early; it's harder for people to objectively listen to input when they're too far down the road on something. Ask that opinions be grounded, not unfounded. To help you keep an open mind, which is absolutely essential to healthy debate, remember General George Patton, who said, "If everyone is thinking alike, then somebody isn't thinking."

Commend, not condemn, the opposing point of view. Those who stand up and speak their mind should stand out and be on your mind. Remember their brave behavior and reward it. Criticism must always contain a new idea or suggestion for strengthening the original idea.

## Dearth of Creating (Reconstituted)

When we create, we become inspired, and when we're inspired, we create. It produces a powerful, virtuous cycle. Creativity can be reignited (and inspiration invited back in) by leveraging the right *Stimulus,* by employing the right *Techniques,* by altering your *Environment,* and by adopting the right *Mindset — STEM.*

### Stimulus

Creativity is contingent upon experiencing life. Seek out the assignments that others don't want. It's a good challenge, but more importantly, there's less pressure, the bar is lower and there is more breathing room to be creative. Go hunt for specific challenges to solve that interest you. Your inherent desire to solve those challenges will get your creative juices flowing. Find a pressing problem/opportunity or an intensely desired goal.

### Technique

Saying that no idea is a bad idea is wrong — there are plenty of bad ideas. The key is to identify them as such early on, kill them and iterate on the ideas with the most potential. Our best creativity can often come from that last effort, the one where you let your hair down and improvise on the fly.

Go on the hunt for relatively small things that you can make better. Borrow and be influenced. It's a loan that will pay interest. Creativity blossoms when we open our senses and look past what's in front of us. Disney "Imagineers" look at a painting, then answer these questions: What does it smell like in this picture? What do you see to the left of the picture? The right? What's the air temperature in this picture? The exercise helps train the brain to think creatively by "looking past the edges" and by using all of one's senses.

The second you start to put structure on innovation is when you lose innovation. Turn off your self-monitoring brain. Research supports the fact that creative people are able to block the instinct to judge their output when they're in the middle of being creative.

### Environment

Carve out the right space and time. If at all possible, the space should be removed from day-to-day distractions — in a location where you can drown out all the other noise that clogs the brain on a typical workday.

Form creative coalitions. Surround yourself with supporters. Surround yourself with people who are positive minded and receptive to your creative overtures. Rekindling anything is hard enough, so you want to add sparks, not a wet blanket.

### Mindset

Don't *talk* about building it, *build* it. It's also about do, don't ask. Just build it. Test. Learn. Iterate. Ask questions. One of the surest ways to spark creativity is to simply ask questions. That includes asking "What if?" before asking "How?" Be willing to do the hard work of creativity and innovation, and keep going when most others don't.

## Insignificance (Reformulated)

Imbuing your work with greater significance and meaning energizes you and attracts more such energy in the form of inspiration. Achieving an inspired state nets higher levels of meaning, which yields still more energy and inspiration. Ask yourself what you're uniquely suited to lead or what unique contribution you could make. One of the ways to do more work of significance is to lead changes that make an impact on a workplace's systems or the way work gets done. You don't have to take on the entire way your organization is organized. Just organize an effort to work on a system, *any* system, that begs for improvement instead of accepting the current system at face value.

### Help Solve a Circumstance

Think of the last time you were in a real pickle and someone went out of their way to help you out. You don't forget that. Fill an unmet need or do a deed that needs doing. Keep asking yourself, "what glaring need remains unmet?" "What deed needs doing?" and the opportunity for more significance will present itself to you as well.

Help move someone forward, and become an expert that others turn to. You can build your own platform of significance, too. Sharpen your expertise on a topic of passion and share it so well that others seek you out for the value you provide. It would be a fitting legacy. A worthy purpose. An inspiring mission possible. You should be intentional about identifying and articulating your legacy and purpose, too. Make a real difference in the lives of others by striving to inspire someone.

## Lack of Evocation (Rediscovered)

Research indicates that three conditions must be present for an outside force to evoke inspiration in us: it's disruptive (forces you to think about things differently), it's relevant (to core human motives) and it's attainable (feels like it can be accomplished).

### The Three Behaviors of Evocation

**Influencing the mood and mix.** You can elevate the mood of your environment by being positive, enthusiastic and optimistic, which will greatly increase the likelihood that you'll receive the same in return. Positive environments and mindsets make it more likely you'll be inspired by something.

**Studying the routine and the remarkable.** Study things routine in nature so you can be inspired by something, but inspiration can be uncovered in things we take for granted.

**How to morph your manager into a source of inspiration.** Realize this, too, shall pass. Know that no single situation, or person, defines you. Don't back down to a bad boss. And you can't shirk your responsibility for improving the relationship. Once you've categorized your boss as horrid, evil, *etc.*, you're more likely to dismiss their better points and unfairly categorize all of their messy points.

When you understand the why behind the behavior of a difficult boss, what to do about it becomes much more self-evident. Research shows that the most important factor for enabling bosses to ultimately inspire you is whether or not you've developed an emotional connection with them. Bring the attitude you want reciprocated, and learn how to give your boss feedback. You deserve a little external help in your endeavors to rekindle inspiration.

So there you have it — all the tools to reignite your own personal mission of becoming inspired at work once again. You'll soon arrive at Destination Inspiration. Let's make it a permanent stop, shall we?

# Your Best Year Ever

## A 5-Step Plan for Achieving Your Most Important Goals

by Michael Hyatt

### THE SUMMARY IN BRIEF

We all want to live a life that matters. We all want to reach our full potential. But too often we find ourselves overwhelmed by the day-to-day. Our big goals get pushed to the back burner — and then, more often than not, they get forgotten.

*New York Times* best-selling author Michael Hyatt wants readers to know that it doesn't have to be this way. In fact, he thinks that this is the year readers can finally close the gap between reality and their dreams. In *Your Best Year Ever,* Hyatt shares a powerful, proven, research-driven system for setting and achieving goals.

Readers learn how to design their best year ever by discovering what's holding them back, how to overcome past setbacks, how to quit-proof their goals, the role of habits in personal achievement and more.

Anyone who is tired of not seeing progress in their personal, intellectual, business, relationship or financial goals will treasure the field-tested wisdom found in *Your Best Year Ever.*

### IN THIS SUMMARY, YOU WILL LEARN:

- Why your beliefs shape your reality — and how to change both.
- How both regret and gratitude lead to opportunity.
- To create great goals that will help you design your future.
- To master motivation and to build a supportive social circle.
- To break up your plan into actionable steps and to use Activation Triggers™ to stay on track.

## Your Best Is Yet to Come

Heather Kampf is a highly decorated runner with an impressive string of accomplishments, including three USA championships for the road mile. But what's most impressive was the time she won first place in the 600-meter final at the 2008 Big 10 Indoor Track Championship after falling flat on her face.

For the 600-meter dash, runners make three laps around a 200-meter course. As the third and final lap approached, Kampf was in second place and ready to take first. Then in a split second everything changed. "I was making a move to pass . . . and probably just didn't account for enough space for my long stride," she recalled. "I felt my heel get clipped once, and then on the second time I knew I was going down."

More than going down, Kampf went sprawling. She skidded along the ground, her face bouncing on the red track as her momentum tossed her legs up behind her. Spectators gasped. It was a hard fall that instantly knocked her to the rear of the pack with virtually no hope of catching up.

When it comes to achieving our goals, a lot of us feel like that. We start out strong and make huge strides, gathering momentum as we go. Then we get derailed or fall short of our hopes, not always — but often enough that most of us can point to a handful of setbacks or failures with disappointment and regret.

When Heather Kampf hit the ground, she could have stayed down. She could have easily become discouraged and admitted what everyone was already thinking — that her race was over.

But she didn't. She leapt up as fast as she fell down and began closing the distance. The crowd responded. "As I started to gain momentum, it was like a crescendo of noise and excitement," she remembered. To the amazement of the announcers and spectators, she passed one runner, then another, then finally her own teammate to take *first* place!

Kampf's story provides a powerful picture of what can happen when we stay in the game and keep pushing. Maybe you feel a few steps behind. Maybe you're at the rear of the pack and can't see how you might regain lost ground and reach your goals.

Whatever has happened in your past — good or bad — it is truly possible to make this your best year ever, even in those areas where you've suffered serious setbacks. Let's talk about how to make the next 12 months the most meaningful and significant you've experienced in your life so far.

## Step 1: Believe the Possibility

There's an old saying, "History doesn't repeat itself, but it rhymes." That's especially true when we're thinking of our personal histories. Why? The circumstances of our lives change week by week, year by year. But we're still us. And our habits of thinking tend to produce consistent results no matter what's going on in our work, our relationships or the world around us.

If our habits of thinking are beneficial, we tend to experience positive results, such as happiness, personal satisfaction, even material success. If our habits of thinking are counterproductive, however, we often experience

the opposite: unhappiness, dissatisfaction and the nagging feeling that the deck is somehow stacked against us.

The good news is that you can change the rhyme scheme. Even if your habits of thinking are already serving you well, you can experience transformative personal improvement in all areas of your life by upgrading your beliefs. When we focus on belief improvement, often our circumstances follow suit.

## Your Beliefs Shape Your Reality

Our beliefs play a massive part in how we approach life. We tend to experience what we expect. Because our expectations shape what we believe is possible, they shape our perceptions and actions. That means they also shape the outcomes. And that means they shape our reality.

Most of us have a long history of not getting what we want out of life. To shield ourselves from future disappointment, we develop a cynical, self-protective attitude toward life. You know what this looks like. You say, "I need to apply for that new job." But then you think, "There's no way. I don't have enough experience or enough education." Suddenly, an idea that might take you to the next chapter of your story just withers and dies.

But what if you could change your sense of what's possible? Pilots once thought it was impossible to fly faster than 768 miles an hour (the speed of sound at sea level). But Chuck Yeager figured he could do it and officially broke the sound barrier on October 14, 1947. Planes have only advanced since then, and pilots regularly fly two, four, even six times the speed of sound.

The first key difference between an unmet goal and personal success is the belief that it can be achieved. Failure of imagination affects athletes, parents, leaders, managers, teachers and the rest of us to one degree or another. The good news is that it doesn't have to. Broadly speaking, there are two ways to look at life. One leads directly to this failure of imagination. But the other can revive and amplify our sense of possibility.

## Some Beliefs Hold You Back

To accomplish anything, we have to believe we're up to the challenge. That doesn't mean it will be easy or that we even know how we're going to accomplish it. Usually we don't know. It just means we believe we're capable; we have what it takes to prevail.

Why is that important? Because every goal has obstacles. When some people have trouble getting over those obstacles, they doubt they have what it takes. But others are confident they'll prevail if they just work harder or come at the problem from a different direction.

Researchers label the first group entity theorists. They think their abilities are set in stone. You've heard people say this: "I'm just no good at x, y or z." These are the scarcity thinkers.

Researchers call the second group incremental theorists. When they struggle with an obstacle, they just look for new approaches to the problem. They know there's a workaround or a solution if they just keep working at it. These are the abundance thinkers.

Scarcity thinkers are entitled and fearful; believe there will never be enough; are stingy with their knowledge, contacts and compassion; and are pessimistic about the future. Abundance thinkers are thankful and confident; believe there is always more where that came from; are happy to share their knowledge, contacts and compassion with others; and are optimistic about the future.

How do you know if you're falling into the trap of limiting beliefs? In his book *Making Habits, Breaking Habits,* Jeremy Dean mentions three dead giveaways: black-and-white thinking, personalizing (blaming ourselves for random negative occurrences) and catastrophizing (assuming the worst). To that list we can add a fourth: universalizing (assuming a bad experience is true across the board).

If we want to experience our best year ever, we have to begin by recognizing which of these two kinds of thinking dominates and intentionally move toward abundance. There's no reason to let limiting beliefs hold us back.

## You Can Upgrade Your Beliefs

You don't have to be hemmed in by limiting beliefs. You can exchange them for liberating truths. Here is a simple six-step process to help you do that.

**First, recognize the limiting belief.** Whatever the content of the belief, no matter how true it seems, it's important to recognize that it's just an opinion about reality — and there's a good shot it's wrong.

**Second, record the belief.** It might be something like, "I don't have enough experience," or "I don't have the right experience." It could be anything. By writing it down, you externalize it. Now you're free to evaluate it.

**Third, review the belief.** Start by evaluating whether the belief is empowering. Try to look at it objectively. Is it enabling you to accomplish the outcomes you want, or is it preventing you from doing so? Be honest.

**Fourth, reject or reframe the belief.** If a limiting belief is false, you can simply reject it. Reframing is a bit more involved. Many limiting beliefs have a kernel of truth in them. That's what makes them so convincing. But they're not the whole truth. If a limiting belief is true or

partly true, you don't have to settle for it. You can always recast the story.

**Fifth, revise the belief.** This is where it gets interesting. These are not simple affirmations, though those can be helpful and have their place, but reorienting your thinking around a new and liberating truth. If, for instance, you think, "I'm too old to be considered for that job opportunity," you might say, "I have more experience than other candidates."

**Sixth and finally, reorient yourself to the new belief.** Start living from the perspective of this new, liberating truth. You might not fully buy into it. That's fine. Try it on. It may feel awkward at first, like putting on a coat that's too big. But if you keep telling yourself the truth, it will eventually fit, and you'll get more comfortable with it. Every time the old belief crops up, reject or reframe it and restate the liberating truth. The trick is to start living as if it's true.

## Step 2: Complete the Past

After limiting beliefs, the next most common barrier we encounter is the past. We tow it around like a trailer full of broken furniture. We can't fully consider the future because we're too tied up in what's already happened. If this happens to you, it'll prevent you from experiencing your best year ever. Step 2 explains how to get the resolution you need.

### Thinking Backward Is a Must

Sometimes we live inside unhelpful stories we tell ourselves. Other times we nurse grievances to justify our current actions or feel unvalued because we were slighted or disregarded in some way. If we don't get resolution, we'll drag all our unfinished business into the future, and it will sabotage everything we're trying to build going forward.

The U.S. Army has a helpful backward-thinking method. It's called the After-Action Review. America's armed forces have been using it since 1981 to improve performance and get better at what they do. After an event, the goal is to understand what happened, why it happened and how they can improve.

**Stage 1: State what you wanted to happen.** This could be your list of goals from the prior year. Start by asking yourself how you saw the year going. What were your plans, your dreams, your concrete goals if you had any?

**Stage 2: Acknowledge what actually happened.** Some of your goals, perhaps many of them, remain unfulfilled. So ask yourself, "What disappointments or regrets did I experience this past year?" Because these memories can be painful, it's tempting to dismiss or ignore them. But as journalist Carina Chocano says, "The point of regret is not to try to change the past but to shed light on the present." What were two or three specific themes that kept recurring? These could be single words, phrases or even complete sentences.

**Stage 3: Learn from the experience.** What were the major life lessons you learned this past year? Distill the lessons from your experiences so you don't lose them and so they can serve as tools moving forward.

**Stage 4: Adjust your behavior.** If something in your beliefs and behaviors contributed to the gap between what you wanted to happen and what actually happened, something has to change. It's not enough to acknowledge the gap. It's not even enough to learn from the experience. If you don't change your beliefs and how you act on them, you're actually worse than when you started.

### Regret Reveals Opportunity

If you're still breathing, you're probably aware of at least one way you haven't measured up. After a little "backward thinking," that number can easily balloon to dozens, even hundreds. It can be a downer. But this is no tragedy. Some people are a little stunned to think regret has any value at all. Our culture tends to miss it. The pain can be real and intense.

University of Michigan psychologist Janet Landman identifies several benefits of regret. First, there's instruction. Regret is a form of information, and reflecting on our missteps is critical to avoiding those missteps in the future.

Next there's the motivation to change. As Landman says, "Regret may not only tell us that something is wrong, but it can also move us to do something about it."

Finally, there's integrity. Regret can work in us like a moral compass, signaling us when we've veered off the path. Instead of seeing our regrets as working against the chance to grow and improve, we can see them as actually pointing the way toward that growth and improvement we most desire.

### Gratitude Makes the Difference

Duke University's Mike Krzyzewski is one of the winningest coaches in college basketball. His players have won over a thousand games and five national championships. Here's his secret.

Before their 2015 tournament, Coach K and his players and coaches wrote the names of people who had helped them on a ball. The players took the ball everywhere.

"Players started carrying the ball around — to team meals, on the plane, at practices, in the locker room," said Coach K. "Some of the guys even slept with it — had it right there with them in their rooms."

After the team took the prize, everyone with a name on the ball received a note saying, "Thanks. You were with us every step of the way." The ball kept gratitude at the center of their game. And it gave the winning edge.

Gratitude is a game of contrasts. Our circumstances look a certain way; then something happens to improve them. Gratitude happens when we take notice of the distance between the two. Suddenly, we have something to be thankful for. That process teaches us something critical about life. While our circumstances might be bad, they can also be better.

Gratitude also reminds us we have agency. Because gratitude involves giving thanks for what others have done for us, this might seem counterintuitive. But that's an illusion. You know what they say about unopened gifts. If we didn't use our agency to receive and act on what others have done for us, we wouldn't have benefited.

Finally, gratitude expands our possible responses. Researchers Michael Tugade and Barbara Fredrickson tell us that positive emotions like gratitude "broaden one's thought-action repertoire, expanding the range of cognitions and behaviors that come to mind. These broadened mindsets, in turn, build an individual's physical, intellectual and social resources."

Whatever our past, if we can see it through the lens of gratitude we will discover that our present is full of more than we can possibly ask or imagine. Gratitude has the potential to amplify everything good in our lives. It's the best remedy for the affliction of scarcity thinking and the best way to cultivate a mindset of abundance.

## Step 3: Design Your Future

Great results don't just happen. You don't usually drift to a destination you would have chosen. Instead, you have to be intentional, force yourself to get clear on what you want and why it's important, and then pursue a plan of action that accomplishes your objective. Step 3 is designed to help you find the clarity you need so you can create the life you want.

And this is where it gets fun.

### Great Goals Check Seven Boxes

We can transform our resolutions, aspirations and dreams into powerful, compelling, written goals that check seven key boxes. Let's dive into the seven attributes of the SMARTER system:

**Specific:** The first attribute of SMARTER goals is that they're specific. Focus is power. Specific goals create a channel for our problem-solving skills, effort and more.

**Measurable:** When the goal is measurable, we know the criteria for success.

**Actionable:** Goals are fundamentally about what you're going to do. It's essential to get clear on the primary action when formulating your goals.

**Risky:** By focusing on what's supposedly realistic, we can inadvertently trigger our natural impulse to avoid loss and end up accomplishing less than we otherwise might have. We should set goals that stretch and challenge us.

**Time-keyed:** This could be a deadline, frequency or a time trigger.

**Exciting:** Only an exciting goal can access the internal motivation you need to stay the course and achieve your goal.

**Relevant:** Limit yourself to seven to 10 goals that align with your life, your values and your ambitions.

### Achievements and Habits Work Together

Both achievement and habit goals can help us design the future we want. Achievement goals are focused on one-time accomplishments. They might target paying off your credit cards, hitting a financial benchmark or finishing writing a novel. It's essential that achievement goals include deadlines.

Habit goals, on the other hand, involve regular, ongoing activity, such as a daily meditation practice, a monthly coffee date with a friend, or walking each day after lunch. There's no deadline because you're not trying to accomplish just one thing. You're trying to maintain a practice.

If you're looking to create seven to 10 goals, you should probably have a mix of both achievement and habit goals. The trick is to know when and how to use them. An achievement goal works for any project with a definable scope or limited time frame. Let's say you want to increase your income. You could set an achievement goal like this: "Increase sales commissions by 20 percent by the end of the fiscal year."

A habit goal works for desires without a definable scope or limited time frame. You can also use habit goals as a means to completing an achievement goal. Let's say you want to increase your revenue by 30 percent before year end. You could identify several next steps, or you could focus on simply installing a habit. To reach your achievement goal, you could set the following habit goal: "Make

five sales calls each week to qualified leads, beginning January 1, and do it for 52 weeks."

### Seriously, Risk Is Your Friend

Goal researchers have documented a strong, direct relationship between the difficulty of our goals and the likelihood we'll achieve them — not to mention greater motivation, creativity and satisfaction. For a goal to matter, it has to stretch us. That means it has to stand somewhere outside our Comfort Zone. If you know exactly how to attain the goal, it's probably not far enough.

Let's say you're the sales manager of a small manufacturing plant. You've been growing at 5 percent a year, and this year you're going to set your growth goal at 6 percent. Is that going to heighten performance, engage your creativity or up your enthusiasm? No way. Small goals just aren't very compelling. If we want to win, we need to get beyond our natural urge to play it safe, jump outside our comfort zones and set some risky goals.

Now imagine if that growth goal was more like 20 percent. Delivering that result will require more from you than you currently know how to manage. That's when growth happens.

Your best year ever lives somewhere beyond your Comfort Zone. How can you prepare for the negative emotions that are sure to hit you during the journey?

**First, acknowledge the value.** We move toward what we esteem. The first step is simply to confess that getting out of your Comfort Zone is a good thing.

**Second, lean into the experience.** Embrace the discomfort. You have to go through the realm of discomfort to get what you want in life.

**Third, notice your fear.** If you feel anxiety, trepidation or uncertainty, that's normal. But you don't have to be controlled by it. Yes, fear can signal danger. But it can also indicate you're on your way to a breakthrough.

**Fourth, don't overthink it.** All you really need is clarity for the next step. When you get it, take the next step in faith, believing you will be given the light you need to take the next one.

## Step 4: Find Your Why

Step 4 is about the importance of identifying and connecting with the motivations for each of your goals. This is important because inevitably you're going to find yourself in the messy middle. It's part of every big dream, every goal, every attempt to improve. Sometimes we think if we just plan better, we can avoid the pain and breeze through to the finish. But it almost never happens that way. The answer is leveraging your motivations. It will give you the drive and stamina to finish when the going gets tough and you want to quit.

### Your What Needs a Why

When we begin a project, there's all kinds of enthusiasm. We're energized by that surge of excitement that comes from novelty and our own creativity. But that surge is like starter fluid; it's not the fuel that will see us through the journey. If you want to go the distance, you've got to find a reason that speaks powerfully and personally to you.

So what are the whys attached to your goals? Record and prioritize your key motivations. Write key motivations as a series of bullets. List each one until you run out. Then, identify your top three. Go through the list and rank them. You want to identify your most compelling motivations so you have several convincing reasons readily available to keep pressing and accomplish your goal.

Next, connect with your key motivations. First of all, *intellectually.* It's important to have intellectual buy-in to the motivation. Maybe it's some research you've done, remarkable data or an argument you find intellectually compelling.

Second, you need to buy in *emotionally.* It's not only important to understand it. It's important to feel what's at stake. Anticipate what it would feel like to achieve that goal. Or, conversely, what it would feel like if you missed that goal. Ask yourself, "What's at stake both positively and negatively?"

### You Can Master Your Own Motivation

Next to finding your why, mastering your motivation is key for developing the necessary persistence to make it through the messy middle. Here are several ways to do so.

**Internalize the reward:** External motivators can work, but they're usually less effective in the long run, especially if we lose interest in the reward, get demotivated and slack off before we're even aware. Intrinsic rewards help us avoid that danger because we connect personally and emotionally with them. Think about challenging activities like exercising, writing or practicing a musical instrument. The joy comes from doing them.

**Be realistic about the commitment:** Researchers at University College London tracked people attempting to form different types of new habits. Instead of three or four weeks, they found it took an average of 66 days for new habits to become automatic — more than three times the popular duration. And some activities, they said, would be more like 250 days! Think of habits not as ends

unto themselves but as serving larger achievements. The habit essentially serves as the next step in reaching your achievement goal. It's easier to maintain the effort over time because your eye is on the bigger prize.

**Measure the gain:** Take a minute and look at the gain. See how far you've already come, and let your progress inspire your perseverance. This is another reason setting milestones is helpful. Not only do they help break up the big goal into manageable chunks, they give us something to measure — forward or backward. By measuring the gains we'll not only cultivate persistence, we'll also get a sense of our momentum.

### The Journey Is Better With Friends

After the surprise success of J.R.R. Tolkien's children's novel *The Hobbit,* in the fall of 1937 his publisher asked him to write a sequel. The public, he wrote, will be "clamouring to hear more from you about Hobbits!"

Tolkien had no plan for a follow-up at first. The issue might have ended there, but it didn't. Tolkien mentioned that he had written more about Middle Earth, the imaginary world in which *The Hobbit* transpires. He offered to let his publisher read the material, even though it was missing the star attraction.

For nearly two decades he'd hustled at uninteresting, sideline writing projects to make financial ends meet. But now, despite having no real plans for a sequel, he was imagining how he might pull it off. Here at last was his big chance to tell stories he loved and simultaneously improve his family's financial situation. Tolkien knew this was a life-changing opportunity.

So how did Tolkien overcome the distractions and discouragement to finish *The Lord of the Rings,* one of the top-selling books of the 20th century? The answer starts back at the beginning with Tolkien's friend, C.S. Lewis. At several critical moments, Lewis encouraged Tolkien to stick with the project when he had given up. "Only by his support and friendship did I ever struggle to the end of the labour," he said in 1954 as the first reviews began coming in. Tolkien had a mammoth goal, and he never would have seen it through without the help of his friend.

We have a very powerful myth in our culture, the myth of the self-made man or woman. But let's be honest: There's no such thing. Success requires help — and usually lots of it. It's impossible to discount the influence of our social circle.

Choose your circle wisely. The right peers serve as a support structure for our liberating truths. They help us retain our belief and commitment when we hit the messy middle. The main issue is the composition of the community and the beliefs it holds in common. If you surround yourself with scarcity thinkers, you'll struggle to stay motivated in pursuit of your goals.

If, on the other hand, you surround yourself with abundance thinkers, you'll gain access to encouragement, emotional and material support, solutions, insights and more.

Some examples of different groups that might work for you are online communities, running and exercise groups, masterminds (peer-to-peer coaching groups), coaching or mentoring circles, reading or study groups, accountability groups and close friendships. Intentional relationships make us more productive, creative and useful than we could ever be on our own.

## Step 5: Make It Happen

In Step 5 we're going to talk about making it happen. It's not enough to plan. It takes action to fully realize our goals.

### One Journey Is Many Steps

Setting the goal is only half the job. The other half is taking definitive action. Any goal is manageable one action at a time. But when we let the task grow and become daunting in our minds, it can leave us feeling indecisive, discouraged and even paralyzed with panic. What's the alternative?

**Do the easiest task first.** While we should set goals in the discomfort zone, the way to tackle a goal is to start with a task in the comfort zone. The first step on any project is usually the toughest. But when you start with the easy steps, you lower the threshold for taking action. This is how you trick your brain into starting. Second, getting some quick wins boosts your mood. Third, getting started and feeling good about your progress means it's easy to build momentum.

**Seek outside help.** For almost every goal we want to accomplish, someone else knows how to get there — or at least has a better hunch than you. It may be a friend, an accountability partner or a professional. You don't have to start from scratch.

**Commit to act.** You next need to schedule it and commit to act. If it doesn't get on your calendar or task list, it's probably not going to happen. You're never going to find time in the leftover hours of the day to accomplish your goals. You have to make it a priority and keep it like an appointment you would keep with anyone else.

## You Can Trigger Success

Activation Triggers™ are simple statements or actions that streamline the process of reaching our goals. By anticipating whatever contingencies or obstacles we might face, we can cue a desired response. Instead of relying on our decision making in the moment (when our mental and emotional resources might be at their lowest), Activation Triggers lock in our decisions in advance.

You can use Activation Triggers to reach your goals by following four phases.

**Phase 1: Brainstorm the best triggers.** So you've got a goal that meets the SMARTER standard. Now you want to identify the triggers that will work best for reaching the goal. Make sure your Activation Triggers are easier to achieve than your actual goals. That's the whole point. For example, you could program the lights in your office to turn off automatically at 6:00 p.m. so you follow through on your goal of quitting work by 6:00 p.m.

**Phase 2: Optimize your activation triggers.** A major part of the Activation Trigger process is thinking when you're at your strongest, rather than relying on your willpower when you're not. With that in mind, you can optimize your triggers to further promote success. As in the example above (programming the lights in the office), take the trigger out of your control as much as possible using elimination, automation and delegation.

**Phase 3: Anticipate obstacles and determine your response.** If you have a habit goal of leaving the office promptly at 6:00 p.m., the goal can easily be undermined by a phone call or someone dropping by at the last minute. The key is to decide in advance how you will handle each of these contingencies. For example, if you get a phone call after 5:45 p.m., then you can let it go to voicemail.

**Phase 4: Experiment until you nail it.** This is the key to success. You're going to experience setbacks — especially if you're normal. Don't give up on your goal, just change your approach. That means modifying your Activation Triggers until they're working right for you. Whatever your goal, the trick is to simply think through the contingencies and obstacles that will prevent you from achieving it.

## Visibility Is Essential

When it comes to experiencing our best year ever, we need the right mix of instruments. You already have two: (1) a simple procedure for breaking down goals into next actions and (2) a set of Activation Triggers. Now we need to add another: a regular goal review process. You can't just write goals and motivations. You have to review them and keep them top of mind.

Break goal review into three separate reviews: daily, weekly and quarterly. The **daily review** starts with a simple list of your goals, a goal summary. To gain the full benefit of the review, you should scan this list each day and look for relevant next actions. Limit your tasks to the Daily Big 3, so you never have more than three significant tasks to complete in any one day. Those three tasks are chosen specifically to help you achieve your goals.

The **weekly review** goes a bit deeper and takes a bit longer, about 20 minutes. There's a triple focus of the weekly review. The first part is to stay intellectually and emotionally connected to your motivations. The second part is a mini After-Action Review. Recap the past week. Review your progress. List your wins and your misses. Next, list the lessons you learned and what you would do differently or better. How will you adjust your behavior? Write that down, too. The third and final part of the weekly review is to get a sense of what needs to be accomplished for the upcoming week.

Quarterly goal-setting naturally leads to a deeper **quarterly review** every three months. You can treat it like a scaled-down version of the Best Year Ever process and walk the 5 Steps again. The main purpose of the quarterly review is to analyze your goals and decide if they're still relevant to your life, and then make any adjustments if not.

Now it's your turn. Your best year ever isn't a movie you can sit back and watch. It's a vision that needs to be built, starting now, or it won't come true.

This is your year; this is your moment. Don't defer your dreams. Once you've determined your next step, take it.

### MORE SV CONTENT ON CAREER & SELF-DEVELOPMENT

*Access these and more in your Soundview Online Library:*

**Summary: *Platform* by Michael Hyatt.** Michael Hyatt offers step-by-step plans for building your virtual stage. The real challenge is getting the attention of potential buyers, and Hyatt shows you how, sharing what he's learned from creating an online following of hundreds of thousands.

**Webinar: *Get Better* by Todd Davis.** In this Soundview Live webinar, Todd Davis explores the most common relationship pitfalls, which affect personal careers and organizational results, as well as the proven practices that people at any level can use to influence effective relationships.

## THE SUMMARY IN BRIEF

In ***48 Days: To the Work You Love***, Dan Miller shares his incredible process born out of his concern that people always seem to talk about new ideas and opportunities, yet never actually take the steps to change their lives. His process is designed to give readers 48 days to evaluate their current position, gain the advice of trusted loved ones, decide on the best options, create a plan, and act.

The book is designed to change mindsets about work and life, so that readers can see that it's possible to find or create a vocation and life that you love— one that combines your unique talents and abilities with your values, dreams, and passions to yield profitable and purposeful work you can be proud of. By the end, Miller has showed readers everything they need to continue their momentum and take the next step in their development and journey.

## IN THIS SUMMARY, YOU WILL LEARN:

- Why the way we think about work is wrong, and how to fix it.
- How to find the right positions to apply for, maximize your resume, and get job offers at companies you'll love.
- Escape discontentment and create a life plan built around your unique values and desires.
- Become the boss you always wanted to have in order to take ownership and control over your own life.

## Introduction

This book outlines a new process of looking at what you are going to be when you grow up. What gifts do you have when it comes to your skills and abilities, personality traits, and values, dreams & passions? From these areas you will see clear patterns from which to make career and job decisions. These patterns create a compass, providing a sense of continuity in the midst of inevitable job changes and workplace unpredictability. Looking inward provides 85 percent of the process of finding proper direction; 15 percent is the application to career choices.

Work is not a curse, but one of the great benefits of living on earth. Finding the work you love is not just a self-serving goal, it's a path to helping fulfill our true calling.

The next 48 days can transform your life. It's an adequate time frame to assess where you are uniquely gifted, identify your strongest characteristics, get the advice of competent advisors, consider your options, choose the best path for meaningful and fulfilling work, create a plan of action, and act.

In this book, you get to decide if the main character is a victim of circumstances, unable to rise above the oppressive forces of his or her upbringing, or a hero who designs a life complete with work that matters, money far beyond personal needs, relationships that nurture the soul, and a legacy that lasts throughout history. You have the power to choose.

### Do I Have To Work?

It seems that more and more people believe that work is a tradeoff for enjoyment, that work is only done to produce a paycheck. Here's another common myth: that the more income a person makes, the higher their stress level. But the truth is that when work and passion are combined, the money flows much more easily. You may be making $10/hour and be stressed, or you may be making $120,000 a year and love what you're doing. The issue isn't how much money is being generated but rather whether the work is the right 'fit' for you.

Our early views of work tend to view it as something less than desirable and enjoyable. Do you work only because of the paycheck? Do you long to leave for something more enjoyable? Have you tried another path only to return to what is more familiar? Many people often get trapped in these patterns of returning to negative, abusive career situations. The emotions and self-esteem issues may be complicated and confusing, but the simple fact is that a job should not define who or what you are. Your calling is a much larger concept than what you do daily to create income. Work opportunities come and go—the direction of your life should remain constant.

## Who Would Hire Me?

Do the smartest people with the best degrees always get ahead? Is it luck that allows someone to get hired? Why do some folks get multiple job offers when others are convinced the economy is bad and no one is hiring?

Too many people today are looking for 'safety' and 'security.' With those as your primary goals, you are almost certain to miss the best opportunities. Those terms imply old and predictable—certainly not new, innovative, full of potential with open-ended income possibilities. Beware of safe and secure—they will trap you in the common, mediocre life.

An amazing number of people are bogged down in analyzing, learning, planning and organizing when what they really need to do is take action. That's what separates winners from losers—winners take action.

Every success is a result of simply doing something, sometimes before a whole lot of work and planning. Are you ready for change? The best way to deal with the challenge of change is to be prepared to act. Genius is the ability to clearly visualize the objective.

Feeling encouraged? Miserable in your job? Just lost your business? Give yourself a new beginning tomorrow. All beginnings are hopeful. And yes, companies are waiting to hire you—if you are a person they want on their team.

### Yes, I Do Have an "Education"

Our ideas about education are being rocked. Major companies are moving away from a focus on SATs, GPAs, brand name schools and credentials. Instead, they're looking at how does this person think, solve problems, lead, and handle failure. Companies like Google, Apple, IBM, Costco, Nordstrom, Hilton, Whole Foods, Penguin Random House, and more have recently announced they no longer require applicants to have a college degree. They look for candidates who have hands-on experience and a proven track record of producing results.

Let's stop depriving our children and ourselves of their best options. Let's stop pretending that a formal college education is the only way that people can become truly educated in a meaningful way. Some go to trade schools, others take on the family business, still other start businesses or travel

the world to learn and grow before choosing a career path. All of these are paths to real, empowering education—and none of them should have inherent value over any other.

## Creating a Life Plan

The following is a framework for moving toward the decisions that matter most regarding what we do in our work. There are three words that tend to be used interchangeably—and they should be. They are 'vocation,' 'career,' and 'job.'

A vocation incorporates calling, purpose, mission, and identity. It's that big picture that many people never track down and identify for themselves. Vocation is not so much pursuing a goal as it is listening for a voice. Before you can tell your life what you want from it, you must listen for that voice telling you who you are.

A career is not the vaunted ideal that many pretend it is. It's possible to go around and around in a career at high speed and never get anywhere you actually want to be. That is why in today's volatile work environment, even professionals with careers as physicians, attorneys, CPAs, dentists, and engineers may suddenly decide to jump off the expected track and choose something else.

A job is just, and nothing more—a job. It's not a critical definition of one's vocation or calling. A job choice can be part of your vocation and your career, but just because you have a job doesn't mean you've found either one.

Always ask yourself—are the job and career choices I'm making putting me on a path toward my vocation? If they're not, it's time to make a significant change in your life.

## Success is More Than a Job

Years of moving off track cannot be recaptured immediately, but we can redirect to maximize the value of our remaining time. We can work to transform our choices to be better in line with what we're most passionate about and most personally invested in—but we have to act now.

Each of us has an internal setting that determines just how much love, success, and creativity we'll allow ourselves. If we can identify that limit, then we can begin taking steps to raise it higher than we thought possible. This adaptation can make us uncomfortable at first, as we fight against the idea that we deserve and are capable of more than we thought. But ultimately, raising our upper limit helps us achieve our greatest dreams.

### The Cure for Divine Discontentment

Ralph Waldo Emerson talked about the concept of 'divine discontent,' the state of knowing that we're not really walking the perfect plan for our lives. When there is a mismatch of who we are and the work we are doing, we experience this divine discontent. Looking inward at your own uniqueness is a necessary starting point for finding proper career direction. Identifying your inner gifts and talents and using them effectively in your work are critical components of your personal well-being.

You can structure your work around goals and meaningful relationships, your unique personality, dreams, and passions. Look inward to give shape to the work that is fitting for you, and the application will appear. After all, it is often in the midst of change and challenges that we find our true direction.

We can work to transform our choices to be better in line with what we're most passionate about. . .

### Show Me Your Promo Materials

Let's face it—you have to have a resume. Most anyone you approach in your job search is going to want to see it. Even if they don't ask for it, you need the process of creating your resume. Even if you have a job you love, you should be constantly revising and improving your resume. The process of creating and refining a resume is one of clarifying your strongest areas of competence. In fact, the process of creating your resume may be more important than the result of that process. Don't think that having the perfect resume is the key to getting your dream job—it's not. At best, it's one effective tool in the process of being offered that dream job. Your personal presentation, responses to interview questions, your work history, your academic background and your online presence are all equally important to your success.

### Six Job Offers in 10 Days!

Jobs are changing, and methods of finding new opportu-

nities are changing as well. No longer can you pick up the Sunday paper, see that your local hardware store is hiring, go down on Monday morning and see your uncle Fred about your next job. The volatility, uncertainty, and transportability of knowledge-worker skills have put millions of people into the job search. Knowing that the average job lasts 2.2 years, even those who are currently employed are looking for the next position.

So what does that mean for you? It means that the most effective job-hunting method is to know your skills, research potential companies that use those skills, arrange to see the person who has the power to hire you, and request the interview. This method, faithfully followed, leads to a job for 86 out of every 100 job hunters who use it.

### Do They Like Me? Do I Like Them?

Most opportunities are obtained through the process of an interview, yet many job seekers fail to develop good interviewing skills. Too many people assume the interview is just a formality to follow up the great impression already made with the resume. But the interview is where the rubber meets the road. This is not a one-time experience, and it's not confined to getting a 'job.' The skills needed for interviewing well are the same skills required to promote your product or service with any work model you choose. Presenting yourself well is a learned art and should be studied, prepared for, and practiced.

Your ability to present well will translate into job satisfaction or success in your own business.

### Show Me the Money

You must totally believe that you are the best person for an opportunity, and that comes from being clear on your areas of competence and from having the confidence, enthusiasm, and boldness that can only come from having a clear focus. Then you're ready to present yourself in the best possible way, the way that's most likely to get you the salary or pay scale you deserve.

### Being the Boss You Always Wanted to Have...

What if the whole process of looking for one more job leaves you cold? You still have trouble seeing the right fit in a company and the prospect of once again being vulnerable to the politics of a company doesn't exactly light you up. Maybe it's been a while since you've had to do a job search, or maybe the thought of having a boss half your age is not very appealing. Don't be discouraged! That in itself is part of this process of clarifying what does fit you, and you can choose the work that fills you with excitement and passion every day.

You really can have work that makes you want to get up in the morning, work that makes you say, "This is why I was born!"

## Dream, Plan, and Act

Don't cheat the world—or yourself—out of the amazing contributions you have to offer. Don't end your life sharing the most common regret of those who know they're dying: "I wish I'd had the courage to live a life true to myself, not the life others expected of me. After considering the best options, you're ready to create your own 48-day plan. You can do this. You can achieve the success you are seeking. Take inventory, focus, create a plan, and act.

Dan Miller is the author of the bestselling *48 Days to the Work You Love* book, workbook, and audio program - now in its 20th Anniversary Edition. As a life coach, he has guided people through the anguish of unexpected change to the exhilaration of meaningful work and increased time and financial freedom. Dan has appeared on CBS's The Early Show and MSNBC's Hardball with Chris Matthews.

## THE SUMMARY IN BRIEF

If you're like most people, you face several influence challenges that have you stumped. For instance, at work your best efforts to make quality part of the everyday culture have yielded no improvements. Or maybe at the personal level you're fighting a problem that has gone on for years.

Whether you're a CEO, a parent or merely a person who wants to make a difference, you probably wish you had more influence with the people in your life. Most of us stop trying to make change happen because we believe it is too difficult, if not impossible. Instead we develop complicated coping strategies when we should be learning the tools and techniques of the world's most influential people. Almost all the profound, pervasive and persistent problems we face in our lives, our companies and our world can be solved.

Over the past half century, a handful of behavioral science theorists and practitioners have discovered the power to change just about anything. From high-powered influencers from all walks of life, we can learn every step of the influence process — including robust strategies for making change inevitable. Through years of careful research and studied practice, the authors have developed powerful influence principles and strategies that can be replicated and that others can learn.

Not everyone will become influencers with a capital "I," but everyone can learn and apply the methods and strategies the world's best influencers use every day.

## IN THIS SUMMARY, YOU WILL LEARN:

- How to identify a handful of high-leverage behaviors that lead to rapid and profound change.
- How to apply strategies for changing both thoughts and actions.
- How to marshall six sources of influence — such as finding strength in numbers, changing the environment and harnessing peer pressure — to make change inevitable.
- What steps you need to take in order to become an opinion leader.
- How to reward vital behaviors and not just good results.
- Why studying positive deviance can help you identify vital behaviors and how to do it.

# You're an Influencer

There are a handful of brilliant social scientists routinely studied by influence masters, but the one cited as the scholar of scholars is the legendary father of social learning theory, Dr. Albert Bandura. Dr. Bandura generated a remarkable body of knowledge that led to rapid changes in behaviors that other theorists had dawdled over for years.

He demonstrated, for example, how powerfully our behavior is shaped by observing others. This came at a time when most psychologists believed that behavior was solely influenced by the direct rewards and punishments people experienced. He also taught us where not to waste our time. For instance, if you want others to change, you don't have to put a person on a couch for 10 years to learn about his or her critical childhood moments.

## *Study With the Best Scholars*

There is a growing body of knowledge as well as an impressive supply of real-life success stories that teach exactly how to change almost any human behavior. The influencers noted below demonstrate that, if you know what you're doing, you can indeed change remarkably resistant behaviors.

**Dr. Mimi Silbert** in San Francisco, Calif. is the founder of the Delancey Street Foundation. It consists of several dozen businesses, all headed by Silbert, and is part corporate conglomerate, part residential therapy. What's unique about the institution is the employee population, which consists of thieves, prostitutes, robbers and murderers. Dr. Silbert's typical new hires have had four felony convictions, they've been homeless for years, and most are lifetime drug addicts. Within hours of joining Delancey, they are working in either a restaurant, moving company, car repair shop or one of the many Delancey companies. Other than Silbert herself, these felons and addicts make up the entire population at Delancey. No therapists. No professional staff. Her remarkable influence strategy has profoundly changed the lives of 14,000 employees over the past 30 years. Of those who join Delancey, over 90 percent never go back to drugs or crime.

Since 1986, **Dr. Hopkins** and his team at The Carter Center in Atlanta, Ga. have focused on the eradication of the Guinea worm disease. The Guinea worm is one of the largest human parasites, and it has caused incalculable pain and suffering in millions of people. Hopkins knew that if 120 million people in 23,000 villages would change just a few vital behaviors for just one year, there would never be another case of the infection. But imagine the audacity of intending to influence such a scattered population in so many countries. And yet, this is exactly what Hopkins' team has done. They are overcoming enormous disadvantages and will have beaten the disease with nothing more than the ability to influence human thought and action.

## *What This Means to You*

There's good news in all of this. Since our ineffectiveness at influencing others stems from a simple inability rather than a character flaw or lack of motivation, the solution lies in continued learning. We can become powerful influencers. It also means that the changes we need to make won't be too intrusive. Instead, we need to expand our self-image by seeing ourselves as influencers; it's the one job that cuts across every domain of our life.

All this is important to know because if you want to

**The authors:** This award-winning team of authors — now joined by leading researcher David Maxfield — previously produced the two *New York Times* best sellers: *Crucial Conversations* (2002) and *Crucial Confrontations* (2005). **Kerry Patterson** has done doctoral work in organizational behavior at Stanford University. **Joseph Grenny** is an acclaimed keynote speaker and consultant. **David Maxfield** is a leading researcher who has done doctoral work in psychology at Stanford University. **Ron McMillan** co-founded the Covey Leadership Center, where he served as vice president of research and development. **Al Switzler** has directed training and management initiatives with dozens of Fortune 500 companies worldwide.

change how people behave, you have to first change how they think. There is no one strategy for resolving profound, persistent and resistant problems. It takes an entire set of influence methods. ■

# Find Vital Behaviors

Before you can influence change, you have to decide what you're trying to change. Influence geniuses focus on behaviors. They're universally firm on this point. Enormous influence comes from focusing on just a few vital behaviors. Take care to ensure that you do not confuse outcomes with behaviors. In most failed influence strategies, you're likely to find at least one example of means/ends confusion, in which the focus is on achieving a specific end result instead of a focus on what actually needs to be done. Without a behavioral focus, often people will not choose to enact the right behaviors.

### *Study the Best*

How do legitimate researchers actually discover the handful of behaviors that typically lead to success? The science of identifying which actions lead to key outcomes — no matter the domain — has already been carefully developed by those who study "best practices." Researchers compared the best to the rest and then discovered the unique and powerful behaviors that led to success. They watched top performers at work, compared them with others who were decent but not quite as good and identified the sets of behaviors that set apart the best from the rest.

The real test of best-practice research comes when scholars take newly discovered vital behaviors and teach them to experimental groups. If they have indeed found the right behaviors, experimental subjects show far greater improvement in both the *vital behaviors* and the *desired outcome* than do control subjects. From this best-practice research we learn two important concepts:

• First, there is a process for discovering what successful people actually do. We know what to look for when examining others' claims that they've found vital behaviors. If the individuals who are offering up best practices haven't scientifically compared the best to the rest, found the differentiating behaviors, taught these behaviors to new subjects and then demonstrated changes in the outcomes they care about, they're not the people we want to learn from.

• Second, in many of the areas where you'd like to exert influence, the vital-behaviors research has already been done. If you search carefully, you'll find that good scholars have found the vital behaviors that solve most challenges affecting a large number of people.

### *Study Positive Deviance*

"Positive deviance" can be extremely helpful in discovering the handful of vital behaviors that will help solve the problem you're attacking. Look for people, times or places where you or others don't experience the same problems and try to determine the unique behaviors that make the difference.

- First, dive into the center of the actual community, family or organization you want to change.
- Second, discover and study settings where the targeted problem should exist but doesn't.
- Third, identify the unique behaviors of the group that succeeds.

In the case of the Guinea worm disease, researchers focused on the third methodology of identifying unique behaviors and flew into sub-Saharan Africa. Once there, researchers decided to study villages that should have the disease but didn't. They were particularly interested in villages that were immediate neighbors to locations that were rife with the Guinea worm disease.

It didn't take long to discover the vital behaviors. Researchers knew that behaviors related to the fetching and handling of water would be crucial, so they zeroed in on those successful behaviors, which could then later be taught to the worm-struck villages.

### *Test Your Results*

Finally, if you've conducted your own research and found what you think are high-leverage vital behaviors, test your ideas. Implement the proposed actions and see if they yield the results you want. Don't merely measure the presence or absence of the vital behaviors; also check to see whether the results you want are happening. To make it easy to both surface and test vital behaviors, conduct short-cycle-time experiments. Don't hypothesize forever or put massive studies into place. Instead, develop the habit of conducting rapid, low-risk mini experiments. ■

**For additional information on how researchers used positive deviance to study the Guinea worm, go to: http://my.summary.com**

# Change the Way You Change Minds

Once you've identified the behaviors you want to change, you're ready to convince others to change their minds. But as you might suspect, convincing others to see the world differently isn't easy.

People will attempt to change their behavior if they believe it will be worth it, and they believe they can do

what is required. Instill these two views, and individuals will at least try to enact a new behavior or perhaps stop an old one. To change one or both of these views, most people rely on verbal persuasion. Talk is easy, and it works a great deal of the time. However, with persistent and resistant problems, talk has very likely failed in the past, and it's time to help individuals experience for themselves the benefits of the proposed behavior.

Dr. Bandura and his team found that if you want people to change their persistent and resistant view of the world, come up with innovative ways to create personal experiences. Second, when you can't take everyone on a field trip, create vicarious experiences.

The good news is that vicarious modeling is one of the most accessible influence tools that can be employed. For most of us, that means we'll make use of a well-told story.

### *Create Profound Vicarious Experiences*

Stories provide every person, no matter how limited his or her resources, with an influence tool that is both immediately accessible and enormously powerful. Poignant narratives help listeners transport themselves away from the content of what is being said and into the experience itself. Because stories create vivid images and provide concrete detail, they are:

- More understandable than terse lectures.
- More focused on the simple reality of an actual event.
- More often credible than simple statements of fact.

Finally, as listeners dive into the narrative and suspend disbelief, stories create an empathic reaction that feels just as real as enacting the behavior themselves.

### *Tell the Whole Story*

Don't make the mistake of shortcutting the story — stripping it of its compelling narrative and leaving out much of the meaning and all of the emotion. And make sure that the narrative you're employing contains a clear link between the current behaviors and existing (or possibly future) negative results. Also make sure that the story includes positive replacement behaviors that yield new and better results. Remember, stories need to deal with both "Will it be worth it?" and "Can I do it?" When it comes to changing behavior, nothing else matters. ■

## Make Change Inevitable

We now know enough about the forces that affect human behavior to place them into a coherent and workable model that can be used to organize our thinking, select a full set of influence strategies, combine them into a powerful plan and eventually make change inevitable.

### Model of the Six Sources of Influence

| | Motivation | Ability |
|---|---|---|
| **Personal** | Make the Undesirable Desirable | Surpass Your Limits |
| **Social** | Harness Peer Pressure | Find Strength in Numbers |
| **Structural** | Design Rewards and Demand Accountability | Change the Environment |

### *Master the Six Sources of Influence*

With this model, influence geniuses know exactly what forces to bring into play in order to overdetermine their chances of success.

**Source 1: Personal Motivation** — work on connecting vital behaviors to intrinsic motives

**Source 2: Personal Ability** — coach the specifics of each behavior through deliberate practice

**Source 3: Social Motivation** — draw on the enormous power of social influence to both motivate and enable the target behaviors

**Source 4: Social Ability** — people in a community will have to assist each other if they hope to succeed

**Source 5: Structural Motivation** — attach appropriate reward structures to motivate people to pick up the vital behaviors

**Source 6: Structural Ability** — ensure that systems, processes, reporting structures, visual cues and so forth support the vital behaviors. ■

## Make the Undesirable Desirable

If you can't find a way to change a person's intrinsic response to a behavior — if you can't make the right behaviors pleasurable and the wrong behaviors painful — you'll have to make up for the motivational shortfall by relying on external incentives or possibly even punishments.

Can you actually change how humans experience a behavior? Is it possible to change the meaning of a behavior itself from loathsome to gratifying, from pleasurable to disgusting, or from insulting to inspiring? If you ask gifted influencers, their unequivocal answer will be, *of course you can*. And you *must.* Specifically, there are two very powerful and ethical ways of helping

humans change their reaction to a previously neutral or noxious behavior: creating new experiences and creating new motives.

### *Create New Experiences*

Sometimes people loathe the very thought of a new behavior because they lack adequate information to judge it correctly. Get people to try it. The "try it, you'll like it" strategy can be further aided by the use of models. Many influence masters have found that vicarious experience can work in situations where they can't get people to try a vital behavior based on faith alone.

When dealing with activities that are rarely satisfying or unhealthy activities that are very satisfying, take the focus off the activity itself, and reconnect vital behavior to the person's sense of values. Don't be afraid to talk openly about the long-term values individuals are currently either supporting or violating.

### *Create New Motives*

Help individuals see their choices as moral quests or as personally defining moments, and that they must keep this perspective despite distractions and emotional stress. Help them to take their eyes off the demands of the moment and view the larger moral issues at hand by reframing reality in moral terms. Spotlight human consequences and rehumanize targets that people readily and easily abuse. Don't let people minimize or justify their behavior by transforming humans into statistics. If people can make their behavior part of a broader and more important moral mission, they can do almost anything.

When facing highly resistant people, don't try to gain control over them by wowing them with logic and argument. Instead, talk with them about what they want. Through a skillful use of open and nondirective questions, called motivational interviewing, examine what is most important to the person and what changes in their life might be required in order for them to live according to their values. When you listen and they talk, they discover on their own what they must do. ■

## Surpass Your Limits

Many of the profound and persistent problems we face stem more from a lack of skill (which in turn stems from a lack of deliberate practice) than from a genetic curse, a lack of courage or a character flaw. But we often underestimate the need to learn and actually *practice* the desired skill. For example, self-discipline, long viewed as a character trait, and elite performance, similarly linked to genetic gifts, stem from the ability to engage in guided practice of clearly defined skills. There is little evidence that people who achieve exceptional performance ever get there through any means other than carefully guided practice. Learn how to practice the right actions, and you can master everything from withstanding the temptations of unhealthy food to holding an awkward discussion with your boss.

### *Perfect Complex Skills*

Not all practice is good practice. For example, most professionals progress until they reach an "acceptable" level, and then they plateau. Beyond this level of mediocrity, further improvements are not correlated to years of work in the field.

So what creates improvement? According to psychologist Dr. Anders Ericsson, improvement is related not just to practice, but to a particular kind of practice — called *deliberate practice*. The techniques of deliberate practice are:

- **Demand full attention for brief intervals.** The ability to concentrate at a heightened level is usually the limiting factor to deliberate practice. Most people can maintain a heightened level of concentration for only an hour straight.
- **Provide immediate feedback against a clear standard.** The number of hours one spends practicing a skill is far less important than receiving clear and frequent feedback against a known standard.
- **Break mastery into mini-goals.** Concentrate on specific goals where the process is controllable.
- **Prepare for setbacks; build in resilience.** The practice regime should gradually introduce tasks that require increased effort and persistence. As learners overcome more difficult tasks and recover from intermittent defeats, they see that setbacks aren't permanent roadblocks, but signals that they need to keep learning.
- **Build emotional skills.** To regain emotional control over your genetically wired responses, take the focus off your instinctive objective by carefully attending to distraction activities. For example, as a strategy to help obsessive-compulsives cope with their tendencies, therapists teach them to wait 15 minutes before giving in to a maddening mental demand. ■

## Harness Peer Pressure

When seeking influence tools that have an impact on profound and persistent problems, no resource is more powerful and accessible than the persuasion of the people who make up our social networks. The ridicule and praise, acceptance and rejection, approval and disapproval of our fellow beings can do more to assist or destroy our change efforts than almost any other source.

### *The Power of One*

To harness the immense power of social support, sometimes you need to find only one respected individual who will fly in the face of history and model the new vital behaviors. When a respected individual attempts a vital behavior and succeeds, this one act alone can go further in motivating others to change than almost any other source of influence. But take note, the living examples of other humans exert power only to the extent that the person who is modeling the vital behaviors is truly respected.

### *Enlist Social Support*

When it comes to creating change, you no longer have to worry about influencing everyone at once. Your job is to find the opinion leaders who are the key to everyone else. Spend disproportionate time with them. Listen to their concerns. Build trust with them. Be open to their ideas. Rely on them to share your ideas, and you'll gain a source of influence unlike any other.

On a more personal note, if you're trying to change something within your own life, co-opt the power of those who have an influence on you. If you make a commitment and then share it with friends, you're far more likely to follow through than if you simply make your commitment to yourself. Better still, team up with someone who is attempting to make the same changes you are.

### *Make Undiscussables Discussable*

Sometimes change efforts call for changes in widely shared norms. In that case, almost everyone in a community has to talk openly about a proposed change in behavior before it can be safely embraced by anyone. This calls for public discourse. Detractors will often suggest that it's inappropriate to hold such an open discourse, and they may even go so far as to suggest that the topic is undiscussable. Ignore those who seek silence instead of healthy dialogue. Make it safe to talk about high-stakes and controversial topics.

### *Create a Village*

Some challenges are so profound that they won't vanish, even if everyone talks openly and new norms are formed. For instance, some personal changes are so significant that asking people to embrace many new behaviors requires that you shape them into entirely new people; this level of transformation calls for the work of an entire village.

When breaking away from habits that are continually reinforced by a person's existing social network, people must be plucked from their support structure and placed in a new network, one where virtually everyone in their new social circle supports and rewards the right behaviors while punishing the wrong ones. ■

**For additional information on the power of one, go to: http://my.summary.com**

## Become an Opinion Leader

If you aspire to become an effective influencer, you should also aspire to become an opinion leader within your own work and family circle. Here's what it takes to become and remain an opinion leader. People, including children, pay attention to individuals who possess two important qualities:

- First, these people are viewed as knowledgeable about the issue at hand. They tend to stay connected to their area of expertise, often through a variety of sources.
- Second, opinion leaders are viewed as trustworthy. They have other people's best interest in mind. This means that they aren't seen as using their knowledge to manipulate or harm, but rather to help.

# Find Strength in Numbers

As the Beatles suggested, we're most likely to succeed when we have "a little help from our friends." These friends provide us with access to their brains, give us the strength of their hands and even allow us to make use of their many other personal resources. In effect they provide us with social capital. In fact, with a little help from our friends, we can produce a force greater than the sum of our individual efforts. But we can do this only when we know how to make use of social capital — the profound enabling power of an essential network of relationships.

So, when exactly should you build social capital to bring about challenging changes?

- When others are part of the problem
- When you can't succeed on your own
- When facing changing, turbulent, or novel times — calling for novel solutions.

### *Blind Spots*

Perhaps the most obvious condition that demands social support as a means of influencing vital behaviors comes with the need for feedback that can be offered only by a pair of outside eyes. When it comes to business and other settings, leaders rarely think of using real-time coaches. Some of today's companies provide their leaders with call-in advisers who discuss what happened yesterday when the leader faced a challenge and didn't do all that well. But few provide real-time coaching. This should change. ■

# Design Rewards and Demand Accountability

Stories of well-intended rewards that inadvertently backfire are legion. The primary cause of most of these debacles is that individuals attempt to influence behaviors by using rewards as their *first* motivational strategy. In a well-balanced change effort, rewards come *third*. Influence masters first ensure that vital behaviors connect to intrinsic satisfaction. Next, they line up social support. They double-check both of these areas before they finally choose extrinsic rewards to motivate behavior.

Making use of extrinsic rewards can be complicated. Not every reward has its desired effect. Sometimes extrinsic programs can completely backfire and serve as punishment. For example, reward ceremonies honor a select few top performers but leave others who are not recognized feeling discouraged.

### *Use Incentives Wisely*

Influence masters eventually use rewards and punishments, so the question is how to use incentives wisely.

Take care to ensure that the rewards come soon, are gratifying and are clearly tied to vital behaviors. When you do so, even small rewards can be used to help people overcome some of the most profound and persistent problems.

If you're doing it right, less is more. When it comes to offering extrinsic rewards, the rewards typically don't need to be very large — at least if you've laid the groundwork with the previous sources of motivation. The thought behind an incentive often carries symbolic significance and taps into a variety of social forces that carry a lot of weight.

### *Reward Vital Behaviors, Not Just Results*

Don't wait until people achieve phenomenal results, but instead reward small improvements in behavior. As simple as this sounds we're bad at it, especially at work. When polled, employees reveal that their No. 1 complaint is that they aren't recognized for their notable performances.

Each year a new survey publishes the fact that employees would appreciate more praise, and each year we apparently do nothing different. There seems to be a permanent divide between researchers and scholars who heartily argue that performance is best improved by rewarding incremental improvements, and the rest of the world where people wait for a profound achievement before working up any enthusiasm.

Influence by rewarding right results *and* right behaviors. If an employees' current performance level is unacceptable, and you can't wait for them to come up to standard, then either terminate them or move them to a task that they can complete. On the other hand, if an individual is excelling in some areas while lagging in others — but overall is up to snuff — then set performance goals in the lagging areas and don't be afraid to reward small improvements. This means that you shouldn't wait for big results but should reward improvement in vital behaviors along the way.

### *Watch for Divisive Incentives*

People are so often out of touch with the message they're sending that they inadvertently reward exactly the wrong behavior. Just watch coaches as they speak about the importance of teamwork and then celebrate individual accomplishment. Kids quickly learn that it's the score that counts, not the assist, and it turns many of them into selfish prima donnas. So when behaviors are out of whack, look closely at your rewards. Who knows? Your own incentive system may be causing the problem.

### *Punishment Sends a Message, and So Does Its Absence*

Sometimes you don't have the luxury of rewarding positive performance because the person never actually does the right thing. In fact, he or she does only the wrong thing — and often. In these cases, if you want to make use of extrinsic reinforcers, you're left with the prospect of punishing this person.

Punishment can create all sorts of serious and harmful emotional effects, particularly if it is only loosely administered. When it comes to punishment, you must be very careful.

Before punishing, place a shot across the bow — provide a clear warning to let people know exactly what negative things will happen to them should they continue down their current path, but don't actually administer discipline yet.

When all else fails, punish. The lack of punishment for routine infractions sends a loud message across an organization. If you aren't willing to punish people when they violate a core value (such as giving their best effort), that value will lose its moral force in the organization. On the other hand, punishing sends a powerful message about your values when you do hold employees accountable. ■

# Change the Environment

For the final source for increasing our ability ("Can I do it?"), we examine how nonhuman forces — the world of buildings, space, sound, sight and so forth — can be brought to bear in an influence strategy.

Consider the profound and yet mostly unnoticed effect of

*things* on entire communities. Realizing the physicality of a neighborhood can send out unspoken messages that encourage socially inappropriate behavior, George Kelling started a community movement that is largely credited for reducing felonies in New York City by as much as 75 percent.

Committed to lessening the effect *things* were having on the community, Kelling advised the New York Transit Authority to start paying attention to environmental cues that provided a fertile environment for criminal behavior. Kelling's crew began a systematic attack against graffiti, litter and vandalism. Over time, a combination of cleanup and prosecution for minor offenses began to make a difference. Surroundings improved, community pride increased and petty crimes declined. So did violent crime.

Environmental factors affect much of what we do, and yet we often fail to make good use of things as much as we should. There are two reasons for this:

• We often fail to notice their profound impact. More often than not, powerful elements in our environment, such as work procedures, job layouts, reporting structures, etc., remain invisible to us.

• Even when we do think about the impact the environment is having on us, we rarely know what to do about it.

### *Make the Invisible Visible*

Once you've identified environmental elements that are subtly driving your or others' behavior, take steps to make them more obvious. That is, you make the invisible visible.

Provide actual cues in the environment to remind people of the behaviors you're trying to influence.

For example, Dr. Leon Bender tried several methods to encourage doctors to wash their hands more thoroughly. He finally realized that he needed to make the invisible visible. At a routine meeting, he handed each doctor a Petri dish with a layer of agar, collected a culture of their hands, and sent the dishes to the lab for culturing and photographing. When the photos came back from the lab, the images were frightfully effective. When it came to changing physicians' behavior, photos created poignant vicarious experiences and visual cues that reminded them of the need to properly wash their hands.

### *Mind the Data Stream*

As in the hand-washing example, small cues in the environment can draw attention to critical data points and change how people think and eventually how they behave. Influence geniuses understand the importance of an accurate data stream and do their best to ensure that their strategies focus on vital behaviors by serving up visible, timely and accurate information that supports their goals.

One warning about data: There is such a thing as "too much of a good thing." Corporate leaders often undermine the influence of the data they so carefully gather by overdoing it. The incessant flow of reports, printouts and e-mails transforms into numbing and incoherent background noise. Influence masters never make this mistake. They understand that the only reason for gathering or publishing any data is to reinforce vital behaviors.

### *Make It Easy*

Rather than constantly finding ways to motivate people to continue with their boring, painful, dangerous or otherwise loathsome activities, find a way to change *things* in order to make the right behaviors easier to enact.

Making use of *things* to enable behavior works best when you can alter the physical world in a way that eliminates human choice entirely. You don't merely make good behavior desirable, you make it inevitable. This is where structure, process and procedures come into play. An example of this is the fast-food industry where employees can simply push picture buttons when taking an order. The process has all been routinized, and it's almost impossible to do the wrong thing. ■

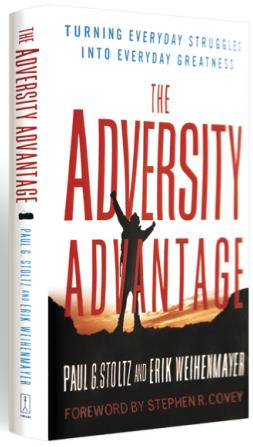
**SOUNDVIEW RECOMMENDED READING LIST**

**If you liked *Influencer*, you'll also like:**

1. ***What Got You Here Won't Get You There* by Marshall Goldsmith with Mark Reiter.** The corporate world is full of skilled executives, but few will ever reach the top and, according to Goldsmith, subtle nuances make the difference.
2. ***The Age of Speed* by Vince Poscente.** In a time-starved era, you need to begin paying attention to authors like Poscente who give you the tools to get ahead of the rush once and for all.
3. ***A Whole New Mind* by Daniel H. Pink.** Pink offers a fresh look at what it takes for businesspeople and organizations to move from the Information Age to the Conceptual Age.

## Become an Influencer

There is a growing body of knowledge as well as an impressive supply of real-life success stories that teach exactly how to change almost any human behavior. Scholarly works by Dr. Albert Bandura and others demonstrate that, if you know what you're doing, you can indeed change remarkably resistant behaviors.



To become an effective influencer, it is important to address all six sources of influence when designing an influence strategy. Stop thinking of influence tools as a buffet and recognize them as a comprehensive approach to creating systematic, widespread and lasting change. Diagnose both motivational and ability sources of influence and then lock in the results by applying individual, social and structural forces to the solution. You now have a powerful six-source diagnostic tool at your fingertips. Use it liberally. ■

### Turning Everyday Struggles Into Everyday Greatness

# THE ADVERSITY ADVANTAGE

## THE SUMMARY IN BRIEF

You might be thinking that any sensible person seeks less adversity, not more. Right? Here's the problem: While you can certainly have an enjoyable life, you cannot reach beyond pleasure to even the most basic level of greatness without a healthy dose of adversity — the very thing most people seek to diminish. Why? Because adversity alone has the unique power to inspire exceptional clarity, purge any vestiges of lethargy, refocus your priorities, hone your character and unleash your most potent forces.

Even minor setbacks provide fertile soil for elevating behavior. If you eliminate adversity, you miss out on life's deepest riches, highest gifts and most powerful lessons. The more adversity you escape, the less you become.

In *The Adversity Advantage*, authors Paul G. Stoltz and Erik Weihenmayer offer proven principles and practical tools that teach you how to use adversity as a force for superior achievement, resilience, agility, innovation, energy and happiness. These two adversity experts have married their dream-team combination of practical science and unmatched experience to develop seven guiding principles to teach you how to transform adversity into your most powerful advantage.

This summary will rewire your core response mechanisms to react optimally to anything that happens the moment it strikes. You will learn to move past avoiding or simply coping with adversity to harness its true power. This summary will also show you how to pinpoint and bolster your adversity strengths in order to bring out your best when you need it most — under pressure.

## IN THIS SUMMARY, YOU WILL LEARN:

- Where you fit on the Adversity Continuum.
- The key differences between regular strengths and adversity strengths.
- How to engage your CORE to meet everyday and major challenges.
- How to "pack light and pack right" in order to take advantage of the adversities that come your way.
- Why you must devise Signature Systems to help you meet your Summit Challenge.

# Summit One: Take It On!

Adversity happens. It doesn't play favorites, and it comes in all shapes and sizes. And your natural response might be "Take it away!" rather than "Take it on!"

In enterprise, the greatest inventions and advances are often spawned from or through adversity. It was Apple Computer's dismal market share in personal computers that unleashed the industry-defining iPod. Likewise, it was concern over global warming, oil dependency and fuel costs that triggered the first hybrid automobiles. Worldwide, we see the greatest outpouring of kindness in the face of the worst disasters. Pain, fear, discomfort and injustice are far more powerful motivators than their opposites.

## *Adversity Defined and Scored*

Defining adversity is the first step. Adversity is *personal* and *relative*. It may be useful to categorize adversity into two areas: (1) *inner adversity* (internal, physical, mental, emotional and spiritual states that cause you hardship) and (2) *outer adversity* (things that occur outside you that cause difficulty).

How big is any particular adversity likely to be? The magnitude of adversity you experience is determined by (1) *impact*, its real or imagined, existing or potential severity and (2) *importance*, how much it matters to you.

Have you noticed that you respond to some adversities more effectively than to others? It turns out that taking on the small stuff can actually be tougher than taking on the big stuff. You are constructed, through the flight-fight response, to draw forth previously unknown powers when the big stuff hits.

We humans do not have a similar protective mechanism for bringing out our best in less dramatic conditions. The good news is that you can craft and install a new mechanism by mastering the first Summit and each of the remaining six.

## *The Adversity Continuum*

The Adversity Continuum is designed to help you gain utter clarity on how you interact with adversity. The Adversity Continuum depicts the range of our approaches to life's tough stuff. It is a steep climb that few complete. As with most mountains, the lower elevations are where you find the crowds. But the higher you go, the better life gets.

At the bottom of the continuum resides one of our most natural and instinctive responses to any adversity — *avoiding it*. And a classic avoidance mechanism is *denial*. While denial has its place and can buy you time, it prevents you from taking adversity on. As a result, the potential benefit that adversity might bring is delayed or even denied to you.

*Surviving* adversity can be downright arduous. It's not difficult to tell when you are in survival mode as opposed to avoidance mode. In general, avoidance only staves off the inevitable, whereas survival can bring relief. With avoidance you go around; with survival, you go through.

You've surely witnessed people applying all sorts of common strategies in an effort to *cope* with the adversity — or get by — in both constructive and destructive ways. Many people get stuck in coping mode because the per-

## Summit One: Take It On!

*(continued from page 2)*

### The Adversity Continuum

ceived impact of the adversity is so great that it takes all they have just to stay even or prevent a downslide.

When you *manage* adversity, you are trying to minimize its downside and its potential impact on other facets of your life or organization. Managing adversity is like operating a moderately effective furnace. It's more productive than coping, surviving or avoiding, but it still has a price. When you work to affect your adversity in some positive way, you are managing it. Done right, proactively managing adversity can be an effective way to keep it in check.

It is only at the level of harnessing adversity that your "furnace" produces more energy than it uses. When you use adversity to elevate yourself and others, or for some tangible gain, that's harnessing adversity.

The truth is that most of us spend time moving between the levels of the continuum. The key is to minimize the time spent in the lower levels and maximize the time spent at the top.

Now that you understand the different levels of the continuum, you can answer these questions: In general, how do you relate to adversity? When it strikes, where on this continuum do you spend most of your time?

### *Your Adversity Assumption and the Adversity Inventory*

Most people's assumptions about adversity run along the lines of "less is more." Overall, "less adversity is better" drives much or our financial planning and many of our choices about how we live. What are your assumptions about adversity?

To get yourself started, write down your two predominant assumptions about adversity. What would the people who see you most and know you best guess your assumptions about adversity to be?

It takes a certain degree of courage to make an inventory of your adversities. But all worthy ascents begin with coming to grips with where you are, so you can move forward and up. To inventory your adversities, go through the following steps:

- **Step One: Categorize your life.** List all the categories of life that matter to you including family, work, friends, community, health, hobbies and others.
- **Step Two: Declare your aspirations.** List your top two or three aspirations for each category of your life. These are things that you have not yet accomplished but that you aspire to achieve in the short or long term.
- **Step Three: Prioritize your pain.** Thoughtfully consider and then list the top two or three adversities that are causing you the most pain or discomfort within each category. Your initial thought may not reveal the true source of pain. Think about the pain beneath the pain and enter *that* on your list.
- **Step Four: Pick your adversities.** Within each category, scrutinize the adversities you listed in Step Three and pick the one that, if you took it on, would unleash the greatest energy in your life.
- **Step Five: Pinpoint your Summit Challenge.** Let's rise above your aspirations to your overarching Summit Challenge. Step Five is to select from your list of aspirations the most compelling thing you've always wanted to do but have not yet done (or completed) for any reason.
- **Step Six: Select your Summit Adversity.** The next step is to select the one adversity that (1) you are sure to face as you take on your Summit Challenge, and (2) if harnessed, would offer the greatest potential energy or breakthrough. This is your Summit Adversity. This adversity may be the most daunting, most impossible or most worrisome.

*(continued on page 4)*

## Summit One: Take It On!

*(continued from page 3)*

• **Step Seven: Clear the trail.** You already know what your Summit Adversity is. In order to "clear the trail," use the following questions to hone your thinking: What are the primary reasons you have *not* optimized that adversity so far? What are your excuses? What are the excuses beneath the excuses? What's really at the heart of the matter?

### *Your Take It On Strategy*

When you turn into the storm, you are consciously deciding to grab the wheel and enter the weather and *not* wait for a wake-up call that forces you into action. Instead of turning away from your adversity, you turn into it and bring it on so you can devise your Take It On Strategy.

If you know that tough weather is coming, you can drive yourself nuts hoping that it doesn't hit or worrying about what happens when it does. Or you can gear up, turn into the onslaught and say, "Take it on!" The idea is to do so not just when you are forced but proactively, by choice, because this provides the energy you can harness, the lead you can turn to gold. ■

# Summit Two: Summon Your Strengths

In Summit One you learned how to use adversity as fuel. In Summit Two, it's not just about harnessing the strengths you have. It is also about developing new strengths that you can bring forth in times of adversity to accomplish what you set out to do.

Decide what you want to do, and clarify why you want to do it. Then bring forth and nurture the strengths required to make it happen. Most important, summon the right strengths when adversity strikes and you, as well as the people around you, will win.

### *Skills, Talents and Strengths*

Let's begin by clarifying three common terms — *skills, talents* and *strengths* — in ways that will ultimately help you turn your adversities to better advantage. For our purposes, we define *skills* as those things you're relatively good at, whether innate or learned. *Talents* are things that you have a natural ability to do well. *Strengths* are a different order of magnitude. Our dictionary defines strength as "an extremely valuable or useful ability, asset or quality." In other words, strengths are portable qualities that may encompass or be a result of several skills. Skills are therefore a subset of strengths. Strengths go deep.

*Will* is one part *determination*, one part *desire*, one part *decisiveness* and one part *effort*. To be strong-willed about something is to put your force of conviction and effort behind it — to want it, focus on it, decide it must be done and then do it.

Will combined with using and developing skills yields strengths. Here is a simple way to think of it: *Skill without will remains still. And will without skill yields nil.*

### *Adversity Strengths Versus Regular Strengths*

Once you think through the Strength Formula — what strengths you need to forge and summon to succeed with your Summit Challenge — you are ready to explore one of the most important issues you will face in any endeavor. This issue is who you are and what you bring out not when times are calm, but when the world is turbulent and adversity rules the day.

Adversity Strengths are what you summon when adversity strikes — those strengths that rise up and shine when you're under the gun or feeling the pressure, or when a situation goes south. These are the strengths that help you effectively take on each new challenge.

One way to turn adversity to your advantage is to close the gap between your Regular Strengths and your Adversity Strengths. Closing the gap between your Regular Strengths — the qualities you regularly demonstrate under calm, normal conditions — and Adversity Strengths is a powerful step toward turning adversity into an advantage, by helping you bring out more of your best, especially when things go wrong.

### *A-W-E*

If talent and smarts alone aren't the answer, how do you select a team that will win in the face of adversity? Go for A-W-E.

• **The A Factor: Adversity.** The A Factor has to do with how people perform and what strengths they bring forth while facing adversity. The A Factor is a gauge of how effective, consistent, trustworthy and dependable a person is when the pressure's on. You can put people into challenging situations, or take note when such situations happen to arise, and gauge their A Factor that way. Obviously, the more realistic the trial, the better the results.

You can put yourself and your team in a much stronger position when the next adversity hits, by (1) gaining utter clarity and being brutally honest about your own A Factor, (2) helping others to shed light on theirs, and (3) working on developing the Adversity Strengths you need.

*(continued on page 5)*

## Summit Two: Summon Your Strengths

*(continued from page 4)*

• **The W Factor: Why.** Practically every book about teams states the importance of having a group of individuals commit to a single, unifying cause. It's simple but very informative to ask a person, "*Why* do you want to be a part of this team?" Then come back again, "Yes, I understand, but *why*?" You will find that by your fourth or fifth *why*, you get at the real why, the why beneath the why. The intensity and content of the real why give you a gauge of where people score on the W factor.

What's the quickest and best way to get at the W Factor? *Ask*. Ask people why they want to do the thing they want to do. Then ask again, until you get the answer that rings truest.

• **The E Factor: Ego.** It turns out that the E Factor can play a big role when adversity strikes. Ego can be what fortifies you with the belief in yourself to dare to take risks, take on the daunting and the impossible, step up when others step back or even forge ahead through some pretty rough weather.

And ego can tie in closely to the W Factor, the why. In general, it takes a reasonable ego to even consider going after the higher whys. There are a few practical ways to get at the E Factor. The direct method is to ask people how good they think they are, overall or at certain skills; how well they rank in certain strengths; and how important they feel their roles are on their current teams. Then compare the answers against the perceptions of others who witness these people firsthand, particularly members of their teams.

This simple approach can lead to some vital insights. When it comes to harnessing life's tough stuff, the term *healthy ego* certainly applies. Look for the E Factor in anyone you bring onto your team. ■

# Summit Three: Engage Your CORE

Your CORE is derived from your Adversity Quotient (AQ), which is a measure of how you respond to adversity of all kinds, or — simply put — how you react to the world around you.

We've discovered, with mounting certainty, that when all other factors are held equal, high-AQ people rise to the top. They tend to outperform, outlast, outmaneuver and outdo their low-AQ counterparts in essentially any endeavor. And they tend to be energized by the same challenges that wear others down.

### *Inside AQ — Know Your CORE*

Your CORE — which resides in the center of your AQ — is the one thing you take with you into every battle. CORE is composed of *Control, Ownership, Reach* and *Endurance*.

• **Control:** The aspect of control that matters most is *influence*. The vital question is this: *When adversity strikes, to what extent do you perceive you can influence whatever happens next?* The lower one's AQ, the less control one perceives. Engage your CORE by asking, *"What facets of this situation or adversity can I potentially influence?"* — as opposed to those you may consider beyond your control. As powerful as Control is in determining your attitude toward adversity, it is when you take *Ownership* that the action unfolds.

• **Ownership:** Ownership is about the energizing tendency to do something, no matter how small, to make things better. Ownership is one of the indisputable fibers of everyday greatness. Question: *When should you do it?* Answer: *When you least feel like stepping up.* It gives you traction and Control. Engage your CORE by asking, *"What can I do to affect this situation or adversity immediately and positively?"* rather than worrying about who caused it or who is responsible for figuring out the ultimate solution.

• **Reach:** Reach influences the burden you carry in life. The better you become at containing difficulties, the lighter you feel. Engage your CORE to limit the scope, size and fallout of your adversities by asking, *"What can I do to minimize or contain the downside of this situation?"* and, *"What can I do to optimize the potential upside of this situation?"* The second question may sound forced or strange. But one of the most compelling discoveries in our AQ research is that the higher your AQ, the more possibilities you perceive and the more upside you see in even the most tragic situations.

• **Endurance:** When adversity strikes, Endurance involves asking, *How long do you predict it will last or endure?* People with higher AQs remain hopeful and optimistic. People with lower AQs tend to see setbacks as long-term, if not permanent. Engage your CORE by asking, *"How can I get through this as quickly as possible?"* Address Endurance head-on by using this question to dispel the assumption that a specific setback must drag on and on.

### *Building Your CORE*

Given the number of adversities that strike each day, you will have plenty of opportunities to practice build-

***(continued on page 6)***

## Summit Three: Engage Your CORE

*(continued from page 5)*

ing and strengthening your CORE. The most practical way to build your CORE is through heightened awareness, with feedback, ideally from multiple sources. One of the best ways is a 360-degree or panoramic perspective. This provides each individual with powerful and helpful feedback, shining a light upon one's blind spots so he or she can grow stronger.

"What's my CORE?" can become your instant pulse check when difficulties strike. So perhaps the simplest, but possibly the most profound, way to build your CORE is to pay keen attention to what thoughts, words, emotions and actions spark inside you the moment you face any kind of adversity.

### *Employ the CORE Strategy*

Begin with your Summit Challenge. Take out some blank paper, and write that challenge down so you can work through the CORE Strategy. The CORE Strategy generates a lot of ideas. But as you come up with ideas, don't discuss, scrutinize or judge them. Only *list* them. The scrutiny comes later. Next, write your answers to each of these questions.

### *C = Control*

- What is everything beyond our control? What things do most people consider as beyond our control?
- Of those things, which ones are absolutely beyond our *influence*?
- Of the things you (or we) could potentially influence in this situation, which two are most important?

### *O = Ownership*

- Where and how can we step up to make the most immediate positive difference in this situation?

### *R = Reach*

- What is the *worst* thing that could happen?
- If we allowed ourselves to think outrageously, what is the *best* thing that could happen?
- What things can we do to minimize the potential *downside* of this situation?
- What things can we do to maximize the potential *upside* of this situation?

### *E = Endurance*

- What do we *want* life to look like on the other side of this adversity?
- What else can we do to get there as quickly and completely as possible?

Understanding, building and engaging your CORE will equip you with the capacity to perform your own brand of alchemy. Your CORE determines how much you benefit, how soon you benefit, and how much you do or don't suffer unnecessarily in between, even in the most extreme circumstances. ■

## Summit Four: Pioneer Possibilities

In Summit Four you will learn to pioneer possibilities in your work and life. The first step you need to take to pioneer possibilities is to pick a worthy goal, such as your Summit Challenge. Once you or your organization has decided what to accomplish, the next question is how you are going to do it. Pioneering possibilities may mean that you need to invent new ways of doing something. These customized solutions are your Signature Systems.

What are the common characteristics of Signature Systems that you can replicate with your challenges and goals? Pioneers carry good PROPS:

1. **Portable.** Most Signature Systems can be taken from place to place.
2. **Replicable** or **Repeatable** or both. They can be readily rebuilt, reused or repeated.
3. **Original.** They tend to be clever and unique.
4. **Personal.** They fit and are adapted to you — your unique style and needs.
5. **Simple.** They require a minimum of steps, hassles and resources.

Most ingenious Signature Systems are as much a result of tenacity and relentlessness as they are of brilliance. The rough systems you and your team devise will take a lot of relentless work to become smooth, elegant, dependable and perfect. ■

## Summit Five: Pack Light, Pack Right

It's tough to climb a mountain if you pack too much or if you pack incorrectly. Likewise, it's tough to be agile and effective at harnessing numerous adversities each day if you're weighed down by all the competing priorities vying for your focus. When you're constantly drained by sheer weight, it's nearly impossible to move toward being great. In taking on Summit Five, you will both reassess and repack your *stuff, time, work* and *self*, shedding

*(continued on page 7)*

## Summit Five: Pack Light, Pack Right

*(continued from page 6)*

unnecessary burdens that may be sapping your strength or slowing you or your organization down. Summit Five will culminate with you completing your own Adversity Advantage Packing List, re-equipping yourself to optimize the three A's — *alchemy, agility* and *adversity*. In Summit Five you will also learn the defining difference between net worth and Life Worth — the enduring source of happiness.

### *Stuff*

Check your own packing — what you currently carry through life. How much of what you own and what you do is really critical? Ultimately, do the things you pack into your life weigh you down or lift you up?

Proper packing takes clarity and discipline, especially in the face of adversity. Most people are weighed down considerably by the wrong stuff. Packed wrong, more can be less. More stuff leads to more complexity, which leads to less time, less peace of mind and less capacity to take on more important challenges.

### *Time*

Time is about how you use your day and spend your life. People who harness adversity have a positive urgency coursing through their veins. Fueled by their latest challenge, they are anxious for the high-octane buzz the next worthy challenge delivers when they take it on, take it in, and convert it into life-enriching lessons and experiences.

How do you load up your time with Life Worth? Take on worthy pursuits, build in worthy challenges, and you will increase your overall Life Worth.

### *Work*

Work is an excellent opportunity to hone your newly acquired adversity skills. Most jobs entail adversity, but they are also a major potential source of Life Worth — an opportunity to demonstrate everyday greatness. Your approach may mirror and will probably influence the way you live your life outside work.

Done wrong, work can be a big drain on Life Worth and energy. Done right, work can be among the most enriching facets of your life. There are two main ways to pack your work life lighter and better. One is to infuse your current pursuit with Life Worth; the other is to pick a pursuit that is inherently rich in Life Worth.

### *Self*

Even if you pack your life light and right — with the stuff, obligations and work that enhance Life Worth, it is still you who has to take on the terrain. Agility, alchemy and adversity demand your best. You have to treat yourself like a world-class athlete so that you can give your best to everyone else. Life is short. Optimize your Life Worth. ■

### The Adversity Advantage Packing List

The point of this exercise is to focus on something you can do now and as an ongoing process to help you pack light and pack right. so you can optimize your three A's — agility, alchemy and adversity.

Packing light and right is not just about shedding unnecessary weight. Packing is also about strategically adding those things that are most climb-critical.

**Stuff:** As you think about everything you own, what item or items could you purchase or add that would improve your three A's?

**Time:** What is a new obligation or something you will add to your schedule to improve your three A's?

**Work:** What will you add to your work to make it richer in Life Worth?

**Self:** What will you add to your life to optimize your energy, your outlook and the three A's?

## Summit Six: Suffer Well

In business, suffering well means putting up with political backbiting, naysayers, long hours, rejection, uncertainty, constraints on resources, downturns and drudgery in the name of a higher cause or a worthy breakthrough. To suffer is to *endure something painful*. And, as with adversity, the more something matters to you, the more painful it may be. Suffering is also relative and is sometimes determined by duration.

The power of suffering is its ability to *strip* away superficialities, ego and distractions. Actually, STRIP is an acronym because, in short, the factors that make up suffering are:

- **Severity** — the magnitude of the pain.
- **Time** — how long you must endure the pain.
- **Relativity** — how severe your pain is when compared to those around you and your situation is compared to your own past or other hardships.
- **Importance** — how much the thing for which you are suffering matters.
- **Price** — how much you may or will lose as a result of the adversity.

*(continued on page 8)*

## Summit Six: Suffer Well

*(continued from page 7)*

Together these five factors determine whether or not you suffer and the degree to which you suffer.

### *The Suffer Well*

Because suffering is so personal, it's difficult and perhaps inappropriate to provide one universal manual for how to do it. But there is a tool — the Suffer Well — that can apply in almost any circumstance.

A drinking well is filled with fresh water. You dip your bucket as deeply as necessary to draw forth the water you need. Likewise, the Suffer Well is filled with vital questions that, when answered, will draw forth the knowledge you need to suffer well. You can dip into and draw forth any or all questions, in any sequence, depending on the nature and severity of your suffering.

- How am I going to elevate myself and others, starting now?
- Who is most affected by how I suffer?
- What is my CORE with regard to my suffering?
- Why do I want to suffer well?
- By when will I have said or done something that demonstrates my commitment to suffer well? ■

# Summit Seven: Deliver Greatness, Every Day

Everyday greatness is not a generic skill set. It is highly individualized, like personality. This means that you get to deliver everyday greatness in your own authentic way.

But it's important to point out that there is a fundamental difference between *epic greatness* — the "great people of history" whose biographies fill the library shelves — and *everyday greatness* — the kind of greatness that can be gleaned from scaling the seven summits. One is an occasional epic event; the other is much more accessible, more of an ongoing effort and an everyday opportunity.

Besides, the reality is that most people are not striving to be like Gandhi, Nelson Mandela or Sojourner Truth — someone who rises up and does the right thing in the face of immense adversity, changing the course of human history in the process. But we still strive to have our lives matter.

The virtues of everyday greatness — resilience, magnanimity, compassion, fortitude, good will and integrity — are like charity. There are people who deliver them more readily and generously when life is good than they may when times are tough. This is true of many leaders who are far better at gelling their teams when they are on a roll than when they are slammed against the rocks. But with charity, what speaks more clearly about your character — giving when you have an endless vat to draw from, or giving when you have nothing to give? Likewise, what matters more — elevating others when your mood, the setting and the conditions are just right, or doing so in the heat of battle? If it were easy, we would call it *everyday normality*.

### *Witnessing Greatness Every Day*

So how do you deliver greatness every day? Consider the people you admire the most and how they deliver their own greatness, then consider the following questions:

- Who do you most admire in work? In life?
- What does he or she do or demonstrate that makes him or her great?
- How does that person take it on?
- How does that person summon his or her strengths?
- How does that person engage his or her CORE?
- What possibilities has this person pioneered?
- What tough choices does that person make to pack light or pack right?
- If you have seen that person suffer, does he or she suffer poorly or suffer well?

After you consider all this about the individual you admire, you can then apply these questions to yourself and determine how *you* go about delivering greatness.

Remember, your relationship with adversity is utterly foundational to all you aspire to be and do. No longer will you remain passive or helpless against adversity. You will prove, over and over, that bad things can spawn good. When life beats you down, you will use its forces to rise up, to elevate yourself and those around you. You will convert life's difficulties into pure, endless fuel for delivering your brand of greatness every day. ■

### SOUNDVIEW RECOMMENDED READING LIST

**If you liked *The Adversity Advantage*, you'll also like:**

1. ***Words That Work* by Dr. Frank Luntz.** According to Dr. Luntz, to effectively obtain the power of communication, you must learn that it's not always what you say, but how you say it.
2. ***The Age of Speed* by Vince Poscente.** In a time-starved era, you need to stop listening to everyone who tells you to slow down and begin paying attention to the rush once and for all.
3. ***Talent Is Never Enough* by John C. Maxwell.** Talent is often misunderstood and overrated. To combat this, Maxwell suggests that people build their strengths and become "talent-plus people."

## THE SUMMARY IN BRIEF

Areté (pronounced *ARE-uh-tay*) is an ancient Greek word that translates in English as 'virtue' or 'excellence,' but it has a deeper meaning. It's really something closer to 'expressing the best version of yourself moment to moment to moment' and it is absolutely achievable. And it can fundamentally and permanently change your life while fundamentally and permanently changing the world.

As we go about living our lives, there exists a state in which we are being our absolute best selves and a state in which we are *not*. The gap that exists between them is where opportunity lies. But we all have that voice inside our heads that creates stories and tells us reasons why we cannot create the life we *really* want. We can settle that voice down and close the gap between who we are capable of being and who we are actually being. We can show up as the *best* versions of ourselves, but to do so we must be heroic. In ***Areté: Activate Your Heroic Potential***, author Brian Johnson helps us operationalize the wisdom of *Areté* and activate our heroic potential.

## IN THIS SUMMARY, YOU WILL LEARN:

- The 7 objectives that activate your Heroic potential.
- How to optimize your Big 3.
- 3 forms of discipline to make Masterpiece Days.
- How to activate your superpower.

## Know the Ultimate Game

When there's a really big gap between who we are capable of being and who we are actually showing up as everyday, not only do we fail to reach our potential, it feels *really* bad. When we choose to do the things that help us show up as the best versions of ourselves, we feel a deep sense of joy. Learning how to do that consistently is the ultimate game we're all playing all day every day.

### How to Close the Gap

There is a very powerful practice we can engage in to close the gap and live with *Areté* as we activate our Heroic potential. Living with *Areté* so we can be Heroic is the way to win the ultimate game. But even when we know what we want and what we need to do to get it, a voice inside our heads tells us all the reasons why we shouldn't or can't. We call this voice Part X.

You must pay attention when that voice inside takes over your brain and tries to take you in the wrong direction. This is called Targeted Thinking.

Know what you want. Know what you need to do to get it. Tell Part X to settle down. And go do what you're here to do.

Close the gap. Give us all you've got. TODAY.

## The 7 Objectives

Knowing the game of life and what is limiting you is nice and warm and fuzzy, but it begs the question, "HOW are we going to activate your Heroic potential?" We put it into practice by integrating ancient wisdom, modern science, and practical tools into SEVEN objectives.

## Objective I: Know the Ultimate Game

Abraham Maslow is the guy who came up with the whole "Hierarchy of Needs" and taught us about the importance of actualizing our potential. This need to self-actualize, is at a certain stage of development, as important as our need to breathe. It's kinda like soul oxygen.

To the extent that you ARE NOT showing up as the best, most Heroic version of yourself and there is a GAP between who you are *capable* of being and who you are *actually* being, YOU WILL SUFFER. Period.

Maslow also told us that in any given moment, we have a choice. We can step forward into growth, or we can step back into safety. We can think of this as +1 or -1. Step forward or go back. Forward or back. +1 or -1.

How we feel at the end of the day is largely determined by those micro-moments of decision. You let enough of those -1 moments trickle into your life and you're going to want to crack a bottle of something when you get home.

Alternatively, sprinkle a ton of +1 into your day and you're feeling radiantly alive and in love with life. What happens when you aggregate and compound those micro-moments into days and weeks and months and years? That's when you are experiencing the joy of fulfilling your highest potential.

When we live with *Areté*, we're closing the gap between who we're *capable* of being and who we're *actually* being. And it feels REALLY REALLY REALLY good. It's almost as if we're high-fiving our inner soul, that best version of ourselves, and we experience a deep sense of joy. We've ALL experienced this.

Think back to a time when you made yourself proud. Feel the wisdom and discipline and courage and love with which you showed up to meet an important challenge. Now, look forward and imagine a life in which you show up as THAT version of yourself.

Empowering you to more and more consistently be that best, most Heroic version of yourself is what Areté is all about. THAT is the ultimate goal in mind.

The ultimate game of life is to flourish by living with virtue. If the ultimate game is won by putting our virtues in action, then we better get REALLY good at doing that, eh? To become virtue connoisseurs, we look to the cardinal virtues of ancient Greek and Roman philosophers, and modern scientists, and boil them down to four Heroic cardinal virtues to APPLY this wisdom to our modern lives:

WISDOM + DISCIPLINE + LOVE + COURAGE.

These virtues guide our work in living with *Areté*. By the time we are done playing together, we will have the WISDOM to know the game we're playing and how to play it well, the DISCIPLINE to *actually* play that game well today, the LOVE to deeply and joyfully connect with others, and the COURAGE to be willing to act in the presence of fear.

Operationalizing *those* virtues is, ultimately, what it's all about.

The Heroic mantra isn't "OM." It's "OMMS." As in: "OBSTACLES MAKE ME STRONGER."

## Objective II: Forge Antifragile Confidence

Now that we know the ultimate game and the virtues required to play it well, it's time to forge some antifragile confidence. Let's define some key terms first, starting with: antifragile.

You can be *fragile* and break easily. You can be *resilient* and withstand more stress before breaking down and then bouncing back a little quicker than most. OR, you can be the OPPOSITE of fragile.

What would happen if, the MORE you got kicked around, the STRONGER you got? You'd be ANTIFRAGILE. When you face the inevitable "winds" of life, are you showing up like a candle and getting blown out by the first breeze OR are you showing up with a HEROIC FIRE such that those winds FUEL you? The Heroic mantra isn't "OM." It's "OMMS." As in: "OBSTACLES MAKE ME STRONGER."

Now, let's define *confidence*. The word literally means "with intense trust." We need to cultivate an intense trust in *ourselves* such that it DOESN'T MATTER what happens because we know that we are the type of people who can do what needs to get done whether we feel like it or not. We can not only handle whatever life throws at us, but we can get STRONGER as a result.

Enter: Antifragile Confidence.

To forge antifragile confidence, we need to understand the proper way to handle life's inevitable challenges. We need to learn how to eat them like energy bars. Let's explore three powerful ways to go about doing that.

### Bring it On

Most people hate feeling any level of discomfort so they pretty much do everything they can to avoid the pain of being outside their comfort zone. Now, that's great if being mediocre is your goal, but not so great if you're serious about living your greatest life and activating your Heroic potential.

Here's the deal.

Your infinite potential exists on the other side of your comfort zone. And what does it feel like when you exit your comfort zone? You feel fear. Doubt. Anxiety. Fill in the blank with the pain of your favorite sense of discomfort. So…to get to the other side, we need to REVERSE OUR DESIRE. Rather than try to *avoid* pain, we need to learn to love it.

We need to see those moments when our heart skips a beat and our palms start to sweat as the gifts that they are–tickets to our destiny. Which leads us to a simple tool.

The next time you feel even an *inkling* of fear or doubt, practice saying to yourself, "BRING IT ON!" Something magical happens when we do this Every. Single. Time. In fact, science shows that we fundamentally change on a PHYSIOLOGICAL level. By INVITING the challenges into our lives, we move from what researchers call a "threat response" to a "challenge response" and, when we do that, our entire bodies change.

### I'm Excited

Research shows that when you're nervous or stressed, it is far more effective to try to get excited than it is to try to calm down. Why is that? Because anxiety is what scientists call a "high-arousal state" while being calm is a "low-arousal state." It's almost impossible to shift from a high-arousal state of fear or anxiety *immediately* into a calm state. It's like cruising at eighty miles an hour and slamming on the brakes. Not a good idea.

*Much* wiser to take all that fear energy and simply reframe it as excitement–channeling it into a positive, constructive direction and, effectively, pressing go on the accelerator rather than stop. Simply saying *"I'm excited!"* is a surprisingly powerful way to make that happen.

### OMMS

Imagine being IMMUNE to obstacles such that they have no effect on you. In fact, let's take it one step further and remind ourselves that, when properly framed, obstacles *literally* make us stronger.

We want to see that truth IN THE MOMENT we are faced with unexpected challenges. That's where the Heroic mantra comes in to internalize this. *OMMS.* Obstacles Make Me Stronger. Chant it with a fierce determination in your soul and a smile on your face, knowing that you have what it takes to meet any and every challenge life throws at you. *OMMS. OMMS. OMMS.* All day. Every day.

## Objective III: Optimize Your Big 3

Sigmund Freud said that a good life is, essentially, all about two things: Work and Love. Only, if we have a hard time getting out of bed in the morning because of poor lifestyle choices, we're going to have a REALLY hard time giving our best to our Work *or* our Love.

Therefore we need to start with ENERGY and then focus on Work and Love and…VOILÀ, we have our Big 3: Energy, Work, and Love. Get those right and we're *at least* 80% there.

### Energy

To get Heroic levels of Energy we have to look into the little energy powerhouses within our bodies: mitochondria. Know this: the health of *those* little guys plays THE leading role in YOUR health and well-being. We'd die in seconds if our mitochondria stopped producing energy.

How do we take good care of our mitochondria? For now, start with a simple question: What's the #1 thing you *already* know you could be doing to dial in your Energy? And, perhaps even more importantly, what's the #1 thing you *could* STOP doing that would most powerfully boost your Energy?

Maybe it's eliminating alcohol, or sugar, or late-night binge-watching. Whatever those #1s are, it's time to get ourselves Heroically Energized so we can show up most powerfully in our Work and in our Love. TODAY.

### Work

Our target with Work is not Mediocre Work. We need to go ALL IN on creating conditions that will allow us to do Genius Work. We have an equation for that, which stems from Cal Newport's book *Deep Work*.

Cal teaches us that most people flit around from one Shallow Work task to another (email, Slack message, reactive this or that). Very few of us are unplugging from technology and locking ourselves in a bubble of focus where we can do some truly impactful Deep Work.

If we want to produce some GREAT work in a very efficient period of time we need to increase the intensity of our focus. Turn everything off. Give yourself a block of time to do nothing but Deep Work. Repeat that tomorrow. And then again. And again.

In the quest to bring our best, we are aiming to go one step further and do Genius Work. The FIRST and most important variable in our Genius Work Equation is ENERGY. When we get our ENERGY dialed in and consistently focus it like a *chainsaw* on what's truly most important Work-wise, we might astonish ourselves with Genius Work.

**Genius Work Produced = ENERGY x Time Spent x Intensity of Focus**

### Love

After getting our Energy optimized to Heroic levels so we can do Genius Work, we want to make sure we're prioritizing the next critical facet of our Big 3: LOVE.

It all starts with Love 0.0. Quite simply: We're going to have a hard time giving others the love we aren't giving ourselves. The fastest way to dial this in is to identify the #1 thing you do when you're at your best. Then make a 101% nonnegotiable commitment to yourself TO DO THAT every.single.day.

Love 1.0 is all about showing up powerfully for your friends and family. The fastest way to dial this in is by putting your phone away. Science says it's a distraction and will erode the depth of your connection. Focus on your loved ones, not your phone.

Love 2.0 is all about those micro-moments of positivity with various people throughout your day. Again, the #1 obstacle here is your phone. Exit your cocoon of self-absorption and be PRESENT.

Love 3.0 is what we call Heroic Love. This is when we move beyond mere compassion for others in the middle of challenging times to HAVING COURAGE TOGETHER. This is a fierce belief in the strength of others to meet their challenges combined with a willingness to act together in the presence of fear to conquer and grow from those challenges.

Love 8.0 is love for our work. We want to KNOW that, when we're doing it right, there's actually NO difference between our Work and our Love as our work IS an act of love. Bring meaning to your current role by seeing how you're making a difference in people's lives.

We must more and more consistently shout, "BRING IT ON!" as we choose to expand, expand, **expand!**

Love ∞.0 is the love of EVERYTHING. We quit arguing with reality and learn to not only accept it but LOVE it. As Nietzche told us, it's all about loving our fate.

## Objective IV: Make Today a Masterpiece

We know the game we're playing. We're forging antifragile confidence and we're optimizing Energy, Work, and Love. Now, it's time to seize the day as we systematically architect our Masterpiece Days.

This objective can be summarized in three simple words. **TODAY's THE DAY!!** If we want to make our LIVES a masterpiece, we need to make TODAY a masterpiece. Here's how.

### Masterpiece Day Checklists

You can (and should!!) use checklists for any complex thing you do that you want to make sure you consistently do well. Here's the short story on a good checklist: It's short. It's precise. And most importantly, it's SUPER PRACTICAL.

To create Masterpiece Days, figure out the few super-basic things you do to help you have great days. Create a checklist to make sure you do them. And make TODAY a masterpiece.

### Time Blocks

The basic idea here is to create a block of time in which you eliminate ALL distractions. Focus on whatever you decide is THE most important thing. Then make a habit of doing that Every. Single. Day.

### Your Prior Best

It's time to begin architecting a new protocol with the ambitious target of making your prior best your new baseline. Spend some time thinking about you at your best. On a piece of paper put "ME AT MY BEST" at the top. Draw a line right down the middle with "I DO THIS" on the left side and "I DON'T DO THIS" on the right.

Now, write down some of the things you DO when you're at your best and some of the things you DON'T do when you're at your best, with a focus on what you do and *don't* do Energy, Work, and Love wise. Do more of the "DO" stuff and less of the "DON'T" stuff. It's not *easy* to do that, but it really is that simple. This will help you make your prior best your new baseline.

The power of having clarity on the things that help us activate our Heroic potential and then DOING THOSE THINGS cannot be overstated, whether (Make that: ESPECIALLY) when we don't feel like it.

## Objective V: Master Yourself

To become the master of yourself, you need to develop THREE forms of discipline: reactive, structural, and expansive.

Something triggers you. Can you step between the stimulus and your habitual response with the DISCIPLINE to CHOOSE a better response? Fantastic. That's reactive discipline.

Structural discipline is all about the daily habits that keep us plugged in–that give our lives the "structure" we need to connect to and express the best version of ourselves. It is also the foundation of the protocol we want to make sure we're executing–ESPECIALLY when we don't feel like it.

Then we have expansive discipline. EVERY SINGLE MOMENT we have a choice. Will we step forward into growth or back into safety?

If we want to activate our Heroic potential and have a shot at experiencing all that we're capable of being we must more and more consistently shout, "BRING IT ON!" as we choose to expand, *expand,* **expand!** In short: We need to make that expansion a discipline.

How are YOU doing with your reactive, structural, and expansive discipline? What's awesome? What needs work? What's ONE thing you can do a little differently TODAY?

## Objective VI: Dominate the Fundamentals

Greatness is all about consistency on the fundamentals. Look at any great performer and that's what you'll see. Of course, a world-class artist, athlete, entrepreneur, and parent will have different fundamentals but the same rule applies in each case: mastery of the basic fundamentals.

What are YOUR fundamentals? We can think of fundamentals on two different levels: the universal and the specific.

We ALL share the need for mastery around the basic fundies: eating, moving, sleeping, breathing, focusing. If we don't have one of those universal fundamentals dialed in then there's simply no way we'll have a shot at activating our Heroic potential.

Then we have our specific fundamentals. These are unique to each of us and our particular crafts. Here are a few ways you can dominate YOUR fundamentals TODAY.

### Eating. Moving. Sleeping.

Your fundamentals are super simple. Eating. Sleeping. Moving. How are you doing? Where are you strong? What needs work? It's amazing how those simple questions elicit some powerful distinctions.

What's the #1 thing you KNOW you could be doing that would help you go to the next level if you started doing it consistently? What, *specifically*, will you do? That #1 thing might not seem like a big deal. But it is.

Your doctor gets nervous if your knee doesn't respond to a little tap. We should get nervous if our fundamentals aren't dialed in. Get clear on what's working and what needs work. And go dominate your fundamentals.

## Objective VII: Activate Your Superpower

Quick question for you: Who's your favorite hero? Who inspires YOU? What individuals–living or dead–embody the qualities you most admire?

What individuals showed up and lived in a way that deeply inspires YOU to show up and give us all you've got? As you think about that, know this…

All those heroes showed up in their own idiosyncratic way–Gandhi was frail and would go days without talking while Churchill was portly and rarely STOPPED talking. And those two guys didn't even *like* each other.

But…ALL of those heroes had ONE thing in common. The ONE thing ALL the great Heroes across all cultures throughout history have had in common is *Soul Force*.

It's every hero's superpower. It's that ineffable power you can *feel* in human beings living in integrity with their highest ideals. It's the force that can (literally) change the world.

And guess what…it's YOUR superpower as well. We just need to ACTIVATE IT. Not *someday*. TODAY. And then, very importantly, you need to REACTIVATE your *Soul Force* ALL DAY EVERY DAY.

THAT, my dear friend, is how we will fundamentally and permanently change your life while fundamentally and permanently changing the world together.

### The Soul Force Equation

All of our favorite Heroes had Soul Force. And, most importantly…YOU HAVE IT! We just need to ACTIVATE it–which is the ENTIRE point of ALL of our work together.

Here's the Soul Force equation that will help us figure out how to activate it:

**Soul Force = (Energy x Focus x WIN) Consistency**

If we want to activate our Heroic Soul Force superpowers, we need to do THREE things at the highest level possible.

First, we need to get our ENERGY to truly Heroic levels. Fact is, if we are dominating our fundamentals (Eating, Moving, Sleeping) and have a hard time getting out of bed because of poor lifestyle choices, we're going to have a REALLY hard time showing up at our best in any aspect of our lives.

Then, we need to FOCUS that Energy on what's *truly* most important right now–or, as we like to say, on "WIN"–which is short for "What's Important Now."

That's the first part of the Soul Force Equation.

**(Energy x Focus x WIN)**

Then we bring in the final, and BY FAR, the most important variable: CONSISTENCY.

KNOW THIS: If you can only get yourself to get your Energy Focused on What's Important Now *once in a while*, you will NEVER actualize your potential.

But…

If you can get yourself to show up CONSISTENTLY…
You can tap into your *infinite* superpowers.

The hope is that in these pages you have been inspired by AT LEAST ONE idea that can help you activate your Heroic potential. Operationalizing our virtues is HOW we can live with *Areté*. HEROES UNITE. It's time to change the world. One person at a time. Together. TODAY.

Brian Johnson is the Founder & CEO of Heroic Public Benefit Corporation and the author of ***Areté: Activate Your Heroic Potential***. He's 50% Philosopher + 50% CEO and 101% committed to helping create a world in which 51% of humanity is flourishing by the year 2051. As a Founder/CEO he's built and sold two social platforms. As a Philosopher/teacher, he's helped millions of people from around the world, trained 10,000+ Heroic Coaches from 100+ countries and created a protocol that science says changes lives. He lives in the country outside Austin, Texas, with his wife, Alexandra, and their two kids, Emerson and Eleanor. Learn more about Brian and Heroic at Heroic.us.

# A Cure to the Modern Pressure Problem

The modern world places demands on us that our family members just a few rungs up the tree could not have comprehended. When people from days gone by performed work, it was mostly manual in nature. Yes, it came with its share of pressures and stressors but the level of stress they lived under pales in comparison to that of present day "knowledge workers." Professionals of every stripe from accounting to teaching to litigating live under a near constant feeling of stress and worst of all, they can't quite put their finger on the source.

Renowned leadership blogger and podcaster Carey Nieuwhof believes that "you deserve to stop living at an unsustainable pace." In his latest, ***At Your Best: How to Get Time, Energy, and Priorities Working in Your Favor,*** he asks readers to imagine what it would be like to move away from the time pressures of modern life and instead, "learned how to live at your best, personally and professionally?" He wrote this book in an effort to help you find "a reasonable diagnosis" and "some welcome relief." He assumes that you are feeling guilty, too, for not being able to keep all of the balls in the air. He believes that "your problems stem from having too much, not too little. Too many demands. Too many opportunities. Too much information. Too many distractions. Too many choices. Too many people vying for attention. And way too much stuff on the calendar." This book offers you a cure to the modern pressure problem. Instead of offering ways to get out of stress or full on burnout, this book offers a way to avoid getting into it.

## Part 1: This Much Stress is Not Okay

Far too many of us are "overwhelmed and overcommitted and overworked" doing precisely what they set out to do. It's not that they didn't want this life they so carefully created. It's just that they didn't expect to feel so tired, lethargic, and dispassionate as a result. Stress leads to burnout and both have disastrous implications for your health and well being. The list of chronic ailments directly tied to stress is long. The list of diseases, equally as lengthy. As if that weren't enough, if your body undergoes chronic stress for too long without relief, you can drop dead of a heart attack or stroke. Game over. It's not okay in any way to live under this much stress.

Nieuwhof points out the irony in modern humans, who are by every measure the most prosperous people the world has ever known, are living to survive instead of surviving to live. Think about some of the things that we hear regularly from people of all ages. "I just need to make it to summer vacation." "Let me survive final exams." "Really, my goal is to get to July, and then all will be good...I hope." Sound familiar?

We are all so overbooked and overextended that we are desperately seeking escape. Sometimes we kid ourselves into believing this stressful time of busyness is just a season. Nieuwhof explains, "If your busy season has no ending, it's not a season–it's your life." The good news is that it doesn't have to be this way. Nieuwhof changed what he was doing with his days and how he was doing it. The result was transformational for himself, his family, and his life.

## Part 2: Focus Your Time

Nieuwhof says that we have three primary assets that we can manage each day. Those are our time, energy, and priorities. The next part of the book focuses on how you can make time work for you instead of against you. The common advice for avoiding burnout is to gt enough sleep, exercise regularly, and maintain your important relationships. Nieuwhof admits this is sound enough advice but many of us follow it and still feel "perpetually overwhelmed." One reason is due to how we use our time.

Nieuwhof says, "Time off won't heal you when the problem is how you spend your time on." We take a few days off here or there or even a long sabbatical once a decade and magically expect our return to real life to be changed. That makes very little sense. "It's about as strategic as telling an alcoholic that he should stop drinking on Thursdays." If you want to experience a meaningful and lasting change in how you feel, you have to change the way you spend all of your time.

In order to focus your time, you have to make two critical mental shifts in how you view time all together. The first is that you must "tell the truth about time." Every person on this planet has the same 24 hours a day. Whether you are the most productive person or you sleep the entire time, it's the same allotment for us all. The excuse "I don't have time for that" is just that. An excuse. You have the time. You just need to take it. Instead, you have to start telling the truth about how you use your time.

Don't say you didn't have the time. Say you had it, but didn't take it. You could have done it, but you chose not to. You could have attended the meeting, but you opted to stay out of it. A key to making this benefit you without alienating everyone you know is to keep this dialogue internal. Slowly over time, you can start using time truth language at work, once you are well practiced and have experienced the shift in how you use time that comes along.

The second mental shift has to do with shifting your goals in relation to time. You have to "embrace passion and abandon balance." Nieuwhof asks you to completely let go of the idea of balance as a goal. This is liberating on a deep level. Most people who view themselves as successful in finding balance are in retreat mode. They are pulling back from their real goals and getting less and less.

Nieuwhof believes that most people who accomplish meaningful things do not seek balance. They seek passion. You have to choose passions carefully and then take the time to engage in them. "Balanced people don't change the world. Passionate people do." Whatever you decide to do, do it with fervor and a full embrace. No guilt, no remorse. "The key to living passionately is to focus your time on what is truly most important to you and to choose to do things wholeheartedly, with enthusiasm."

## Part 3: Leverage Your Energy

Too many of us are investing our energy in unintentional ways. It is true that we are all given 24 hours in a single day, we do not have equal energy spanning over that duration. In reality, most of us have between three and five hours of high productivity every day. That's it. We have to get intentional and thoughtful about the activities we organize during peak, medium, and low energy times of the day.

When we look at leveraging our energy, we have to identify the things that we are uniquely good at doing. These are gifts that we do easily and naturally. Couple those gifts with passion and you have the perfect recipe for making a big impact. The key to leveraging your energy is to identify those things you are good at and do those activities when you are at your peak energy level for the day.

You will get far more done in far less time when you leverage your energy in this way. How you organize your day becomes intentional, not accidental. "Most people let days happen to them, which results in disappointment, tension, unmet expectations, and important things left undone." Leverage your energy with your gifts and passion and you will make a much larger impact.

If your gifting-related activities are the highest priority and thus, performed when you are at your peak energy, you must determine your middle range and low range priorities. Meetings, schedule management, administrative work, and other noncritical, noncreative, lighter activities are typically best suited for these lower energy times of day. Your overall performance in these non critical capacities will be maintained but you won't squander the chance to do what you are best at doing when you are at your best by doing more menial tasks at peak energy times of the day.

## Part 4: Realize Your Priorities

You can set the best of intentions when your day begins but there are times, quite frequently for many of us, when your best intentions get blown up and your day gets totally hijacked. Team members need to pick your ear about a project. Emails keep pouring in and you can't seem to ignore them. Friends text you and you find yourself in long text conversation instead of doing the work you intended to do. It's an all too familiar scenario. In the real world, our priorities get hijacked by others who are trying to accomplish their own priorities. "Before you get mad at the

> In the real world, our priorities get hijacked by others who are trying to accomplish their own priorities. ”

world for this, just realize that's exactly what you do too."

A big part of this problem is that people have unparalleled access to us thanks to our phones. No matter where you go or what you are doing, that device can ping a notification with an associated request to get someone else's priority on your own agenda. When we react to these requests over and over again, we find ourselves wondering where our day went and why we didn't get anything done.

To get around this, you have to put a strategy in place. Make it a goal to "spend 80 percent of your time on 20 percent of activities and tasks that produce 80 percent of your results." Start by making a list of the top activities and tasks that are most important and yield the highest results in your day. Once those top activities are identified, they become a filter you can "use to sift through all the requests that come your way." If the request does not fit into one of your top activities, it should not make it into your calendar. It may not be "fancy or flashy" to spend 80 percent of your time on these things that move the needle the most, "but goodness, it's rewarding,"

There is one major hurdle that stands in your way. So many of us are people pleasers and we find it incredibly difficult to say no. But here's the problem. "Without a strategy for saying no, you default to yes, and your life vaporizes with other people's priorities being realized rather than yours." Saying no is hard because we are fearful of disappointing others or "coming off as a jerk." There is a way to soften the blow to yourself and say no in the nicest way possible, taken verbatim from the book:

1. Tell them you'd love to meet them.
2. Express empathy, showing you understand where they are coming from.
3. Be firm when you answer directly and with kindness that you cannot do it.
4. Redirect them to someone who can help.
5. Thank them to show your appreciation.

Be clear and do not leave false open. Don't say maybe or you will see. Say no, nicely.

## Part 5: Theory, Meet Real Life

In real life, we can succumb to saying yes or get our priorities mixed up or find ourselves stuck in a midenergy task during a high energy time of day. That's life and theories are sometimes tricky to fit into actual life. Nieuwhof recommends using strict control over your calendar so that you stop getting controlled by other people and distractions. If you intend to spend the weekend with your family but have not blocked that time out on your calendar, you are setting yourself up for getting sucked into something else that is lower priority.

"Decide how you'll spend your time before others decide it for you. If you don't decide ahead of time how to spend your time, others will, which is a ticket both to feeling overwhelmed and to ensuring you accomplish nothing that's important to you." If you want to spend time with your family every Saturday, you need to put that in your calendar. If you want to work out every afternoon at 4 pm, that needs to go on your calendar, too. This makes saying no much easier and it places your needs above those of others, right where they should be. You can do this easily and simply by creating repeating tasks in your calendar that will be automatically scheduled out as far in advance as you want.

You can live a life with drastically reduced stress and wildly increased productivity. You can organize your time and effort around your gifts and passions and make time for all of the things that matter to you most. But Nieuwhof has a warning that you should heed. Stress is a sort of modern day siren's song. We hate it but we actually kind of thrive on it. We are almost addicted to it. If we are not stressed, the assumption is that we are not ambitious or hardworking or achieving up to our potential. In our society, stress is seen as a badge of honor. It doesn't have to be that way.

When stress and overwhelm start creeping back in, you've got to recognize them as a signal to do something different. You do not have to be caught up in the swell. You can adapt, plan, and mitigate your way out of the stress cycle and put yourself back into a position of thriving. When you take control of your time, leverage your energy, and prioritize your activities you will truly be at your best.

Zooming In On Your Next Read

## Atlas of the Heart

By Brené Brown

Brené Brown is a research professor at the University of Houston, where she holds the Huffington Foundation Endowed Chair at the Graduate College of Social Work. She is also a visiting professor in management at The University of Texas at Austin McCombs School of Business. Brown has spent the past two decades studying courage, vulnerability, shame, and empathy and is the author of six #1 New York Times bestsellers. She hosts the Unlocking Us and Dare to Lead podcasts, and her TEDx talk, "The Power of Vulnerability," is one of the top five most-viewed TED talks in the world. Her Netflix special, The Call to Courage, is the first filmed lecture by a researcher on the streaming service.

# Mapping Meaningful Connection

You would be hard-pressed to find someone who doesn't have at least some knowledge of Brené Brown and her message. As one of the most successful and widely respected personal development thinkers and authors in the world, Brown has made a career out of sharing powerful insights that have the ability to change lives. Her TED talk on the power of vulnerability is one of the most viewed of all time, her Netflix special is the first filmed lecture by a researcher to be featured on the streaming service, and she's published six #1 bestsellers on the New York Times list. Now, Brown has set her sights on the power of human connection and how to create and sustain relationships in more meaningful ways, with ***Atlas of the Heart***.

Throughout this book's pages, Brown unpacks the ways that emotions, behaviors, thoughts, and experiences combine to influence the way we interact and connect with the people around us. And while she's not afraid to dive into some of the thorniest elements of human nature, she does so with her usual panache for subtlety, humor, and emotional depth that keeps the book from ever straying into emotional manipulation.

Meanwhile, Brown doesn't shy away from getting into the weeds— she covers 87 total emotions and universal human experiences, after all— and doing so with her usual brand of empathy combined with her signature talent for turning a phrase and dropping a memorable line that you'll want to write down on a post-it and stick to your mirror to read each morning.

## Places We Go When Things Are Uncertain or Too Much

Brown isn't one to ease readers in by starting with the pleasant and comfortable. She starts with some of the most difficult-to-process emotions a human being can experience— stress, anxiety, worry, dread, fear, and vulnerability, to name a few. Throughout this section, she provides powerful insights and anecdotes ranging from stories that her followers have shared to her own personal experience. One of the most impactful examples of this is when Brown shares stories of her early years working in food service, trying to manage the incredibly high-stress environment of the kitchen.

She effectively highlights the differences between being stressed and overwhelmed, both in the frame of human connection. When you're stressed, you ask for help— like her experience as a waiter asking her fellow employees to help meet the needs of some of her tables and their orders. When you're overwhelmed, sometimes you must bow out completely for a time— like when Brown would tell the back staff that she was 'blown,' and they would instantly take over for ten minutes while she recovered.

Through anecdotes like these, Brown highlights the fact that allowing yourself to acknowledge our stress, dread, worry, and other negative emotions are far from signs of our being incapable— in fact, they require a great deal of strength. As she says in closing out this section and its final chapter, "Vulnerability is not weakness; it's our greatest measure of courage."

## Places We Go When We Compare

"Nothing that celebrates the humiliation or pain of another person builds lasting connection," Brown says, succinctly summing up much of what's wrong with our current culture that celebrates beating down others in order to make ourselves stronger. As a culture, we've been celebrating the humiliations and pains of others for a long time. Why? Because we think it will make us feel better about ourselves, and by celebrating others' pain we can feel, for a moment, that our pain isn't as significant. But as Brown artfully lays out in this section and its chapters on comparison, envy, jealousy, and resentment, this mindset will only ever lead to disconnection and lack of human engagement.

However, Brown says that not all comparisons are negative. When we experience admiration and reverence for people or institutions, we see them as something to aspire to, someone that can serve as a lighthouse to follow on the way to our goals. Brown keeps this pattern going in future sections, reminding us that every negative emotion has a positive mirror.

## Places We Go When Things Don't Go as Planned

This section is all about control. Brown effectively reframes some of the most common human experiences— feeling bored or disappointed, not having our expectations met, regret, discouragement, and frustration— as a response to having control taken from us.

Consider, for example, her introduction to the chapter on boredom: "Boredom is the uncomfortable state of wanting to engage in satisfying activity, but being unable to do it." Inherent in that definition of boredom is the lack of control. We want something we can't have. Brown then compellingly shows how many other negative emotions begin the same way— despite our best efforts, we end up disappointed. Someone fails to meet our expectations for them. We try our best but ultimately fail all the same.

But Brown goes on to show that these emotions aren't always negative. Once again, take a passage on boredom:

"If it weren't for boredom, you wouldn't be reading this book… Mundane activities can allow our minds to wander, daydream, and create."

## Places We Go When It's Beyond Us

The next section turns the idea of things happening beyond our expectations onto its positive edge, covering feelings of awe, wonder, curiosity, and surprise. This beautifully written series of chapters is a tribute to many of the experiences that make life worthwhile— the feeling of awe and wonder we feel when taking in beautiful art, natural landscapes, spiritual experiences, or thrilling ideas; the experience of curiosity as we begin to explore some of those ideas and yearn to find answers; the surprise we feel when something doesn't happen as expected and causes us to question what we thought we knew.

Brown acknowledges that even some of these feelings can initially leave us feeling a bit off balance, but they ultimately enrich our lives and set us up to form more meaningful connections with the people around us. After all, what are human beings but a collection of creatures experiencing wonder and curiosity together?

## Places We Go When Things Aren't What They Seem

In the introduction to this section of *Atlas*, Brown introduces the concept of feeling two competing emotions at the same time. "The problem starts when we don't have the skills or experience to tolerate the uncertainty and ambiguity and we give in to the cravings for neat, mutually exclusive categories," she says. "There's nothing more limiting than tapping out of tension and oversimplifying the thoughts and feelings that have the power to help us understand who we are and what we need."

This powerful message imbues the entirety of Atlas with a sense of subtlety that doesn't allow Brown's big ideas to get lost in the complexity of her message.

## Places We Go When We're Hurting

Now is the point in the book where Brown dives deep on some of the most painful emotions— anguish, hopelessness, despair, sadness, and grief. It's during this section that she shines most, with her experience in social work giving her a depth of understanding that many other 'self-help' writers simply can't match.

She brings together art, psychology, and the science of trauma to help readers understand where these deep-seated emotions spring from and how we can allow ourselves to fully feel them, rather than running from them, so that we can begin to heal through them. Brown even speaks powerfully about her own personal traumas, and the time when she felt true anguish. Still, she never stumbles into 'sadness porn' but instead uses real-life traumas to illustrate greater points about the role of pain and grief in life.

> ...while some people struggle with perfectionism, others struggle with guilt about the things they haven't been able to achieve."

## Places We Go with Others

Now, enough about pain and suffering. Brown's next section focuses on the beauty that comes from human connection. Diving into compassion and empathy, boundaries and comparative suffering, she discusses the many ways that human beings place themselves among those that are like them and not like them and the way it influences our understanding of ourselves.

It's when speaking on empathy that Brown delivers one of her most timely messages. "Empathy…is about understanding what someone is feeling, not feeling it for them. If someone is feeling lonely, empathy doesn't require us to feel lonely too, only to reach back into our own experience with loneliness so we can understand and connect." Affective empathy, feeling something along with the person who is struggling, is a slippery slope towards becoming overwhelmed and not being able to offer meaningful support.

## Places We Go When We Fall Short

Shame, guilt, humiliation, and embarrassment— these are some of the emotions covered in this section. But Brown also includes self-compassion and perfectionism, two potentially positive traits that can be turned on their heads to cause negative results if we're not careful.

This section is yet another reminder of what's made Brené Brown one of the leading voices in self-development— she understands that her message isn't being delivered to a series of identical readers or listeners. She recognizes that while some people struggle with perfectionism, others struggle with guilt about the things they haven't been able to achieve. In this section, she speaks to all of them in equal— and equally effective— measure.

## Places We Go When We Search for Connection

"Any discussion of belonging has to start with acknowledging that love and belonging are irreducible needs for all people," Brown says in this section. "In the absence of love and belonging, there is always suffering. Expanding on Maslow's hierarchy of needs, recent research shows that finding a sense of belonging in close social relationships and with our community is essential to well-being. What makes belonging essential for us is the fact that we are a social species. We can't survive without one another."

From connection and belonging to disconnection, insecurity, and loneliness, Brown covers the full spectrum of human emotion as it relates to how we interact with one another. In another of the book's most powerful quotes, she espouses the need for love in a world that seems to be lacking: "We need more real love. Gritty, dangerous, wild-eyed, justice-seeking love."

## Places We Go When the Heart is Open

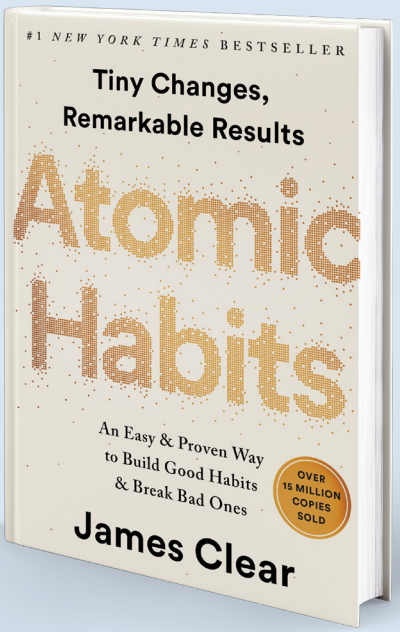
While love and human connection have been discussed previously by this point in *Atlas*, this is when Brown focuses her attention on interpersonal relationships— not just the grander love for our fellow human beings and our planet as a whole. We won't dive into every one of her insights on the topic here, but suffice it to say that when Brené Brown speaks on love, it's worth listening— or in this case, reading.

## Places We Go When Life is Good, When We Feel Wronged, and We Self-Assess

The final three sections of Brown's book are combined here not because they don't all have their own powerful individual insights, but because by this point *Atlas* has covered many of the most central emotional drivers behind a human life and is now filling in the edges with additional vibrant colors. In these final sections, she focuses on the importance of celebrating our joys and successes, while also acknowledging the moments when we feel we've been treated unfairly and taking steps to rectify those injustices.

Finally, she ends with a section on assessing ourselves. Most compellingly, she redefines the often misunderstood relationship between pride and humility, arguing that both are equally positive and important traits— pride in what we've accomplished or attempted, humility as openness to new learning and new experience. In the end, readers are left with a guide for navigating the complex tides of self-image that can make or break a healthy, fulfilling life.

## Conclusion



No surprises here— Brené Brown has done it again. With a book that's at once a deep dive on the inner workings of the human soul and also an easy-to-digest guidebook broken into manageable chunks, she's shown once more why she's one of the most beloved writers on the topic of the self, inward and outward compassion, and personal development. With her *Atlas of the Heart*, Brené Brown has given us all a map worth following.

*A Book Review by Soundview*

# The Power of Tiny Changes to Build Remarkable Results

How often have you started a new year with a plan to dramatically change yourself or your situation? There's a reason the purchase of gym memberships, exercise apparel, and planners spike at the beginning of the year—a faithful belief that if you can just implement (insert behavior to be changed here) for 21 days in a row, it will stick and you will be transformed. Unfortunately, of those who commit to a resolution on the first of the month, most fail by the 10th of that month.

In his latest book, *Atomic Habits: An Easy & Proven Way to Build Good Habits & Break Bad Ones*, author James Clear explains why that approach to self-development very rarely works. It's not your fault. The fact that you struggle to change your habits is not some character flaw that is unique to you—you have lots of company. The fault lies in the system you are using. "Bad habits repeat themselves not because you don't want to change but because you have the wrong system for change," Clear writes.

## The Fundamentals

While most people approach behavior change from the perspective of deficits that need to be fixed—lose weight, exercise more, eat healthier, quit smoking, control spending—Clear is a firm believer in a different approach. Behavior change is about the realization of *potential*. Establishing that alternative perspective also serves to manage expectations. Success isn't about quitting smoking overnight, losing 20 pounds in 30 days, or learning a new language in 45 days. It's about consistent, incremental, and most importantly, positive steps towards a measurable goal.

Much of the author's knowledge has been earned through personal experience. As he shares in the beginning of the book, a high school baseball injury that left him with "a broken nose, multiple skull fractures, and two shattered eye sockets," destroyed his dreams of a professional playing career and left him with a long journey back to full physical capabilities. It was that journey and the inherent need for patience and consistent repetition that led to his interest in human behavior and the potential of compounded incremental change.

## The Aggregation of Marginal Gains

The author's choice of the term *atomic* is deliberate. Atomic denotes something that is so small it is unnoticeable, but it is also a source of immense energy. For human behavior, small changes have the potential to be transformative or toxic. Eating an unhealthy meal once in a while is manageable if the rest of your diet is healthy, but if unhealthy food choices start to dominate your food intake, the damage to your body and your long-term health can be catastrophic.

If you flip that equation and look at small positive changes, the same rule applies. The British Cycling Federation (now known as British Cycling) proved this when they hired a new performance director, Dave Brailsford, in 2003 to transform a team that was known more for its mediocrity than its track record. The team had never won a Tour de France (cycling's biggest race), and with a record of only one gold Olympic medal since 1908, there was plenty of room for improvement.

Brailsford elected to play the long game that he referred to as "the aggregation of marginal gains." In practice, this meant breaking down everything about cycling into its smallest component and rebuilding it to its maximum potential. Some were obvious—better, more aerodynamic apparel and redesigned bicycle seats for better riding comfort—but some were so extreme as to bring Brailsford's sanity into question—hiring a surgeon to show the riders how to wash their hands correctly to reduce the chance of getting sick; researching the correct combination of pillow and mattress for each rider to ensure an optimal night's sleep; painting the inside of the team truck white to help them better spot any dust that might compromise the performance of the finely tuned bikes.

Such attention to every minute detail may seem like overkill, but consider this—between 2007 and 2017, British cyclists won 178 world championships, 66 Olympic or Paralympic gold medals, and five Tour de France victories. Mediocrity was now a distant memory.

## How to Build Better Habits

Central to *Atomic Habits* is Clear's four-step model of habits—cue, craving, response, and reward. Habits are built with these four steps, which recur in the same order, every time, with every habit in "an endless feedback loop that is running and active during every moment you are alive."

Repetitive mental programming makes us automatically fall into patterns of thinking and acting. An example of this from the book is

- The Cue: You wake up.
- The Craving: You want to feel alert.
- The Response: You drink a cup of coffee.
- The Reward: You satisfy your craving to feel alert. Drinking coffee becomes associated with waking up.

One way the author describes this cycle, known as the habit loop, is, "The cue triggers a craving, which motivates a response, which provides a reward, which satisfies the craving and ultimately becomes associated with the cue."

To offer a way to design good habits and break the bad ones, Clear shares the Four Laws of Behavior Change derived from these steps. They also reveal insights about human behavior.

## The 1st Law: Make It Obvious

Key to the first law, *make it obvious*, is to be aware of your habits. You've got to recognize them before you can change them. You also need to acknowledge the cues that trigger them, so that you can respond to them in a way that works best for you.

Another piece of this first law is to figure out the details for when and where you will perform a new habit, so you increase your chances that you'll actually do it. So, if you say to yourself that you are going to run two miles every day, you need a plan for what time and where you're going to run. As Clear says, "Give your habits a time and a space to live in the world. The goal is to make the time and location so obvious that, with enough repetition, you get an urge to do the right thing at the right time, even if you can't say why."

Environment plays a role here, too. Clear suggests that to make a habit a big part of your life, you should make the cue for it a big part of your environment. So for him, for example, he'd buy apples that would get forgotten in the crisper in his refrigerator and they'd go bad. He experienced the power of obvious cues when he put the apples in a bowl in the center of his kitchen counter where he could see them. By redesigning his environment in this way, he said he began eating a few apples a day, because now they were obvious instead of out of sight.

## The 2nd Law: Make It Attractive

The modern food industry has gotten really good at combining salt, sugar, and fat in products that we find irresistible. Clear points to the overeating that this evolution has perpetuated as an example of the second law: *make it attractive*.

Junk food is often craved and used as a reward, thereby exciting the brain and encouraging us to eat more. But for this and other habits, Clear points to the deeper science, as he often does in the book, this time to a neurotransmitter called dopamine.

Habits are a dopamine-driven feedback loop, he says. Behaviors that are highly habit-forming—taking drugs, eating junk food, playing video games, browsing social media—are all associated with higher levels of dopamine. So are basic behaviors like eating food, drinking water, having sex, and interacting socially.

The author's takeaway is, "dopamine is released not only when you *experience* pleasure but also when you *anticipate* it." In fact, the anticipation of that tropical vacation you may be planning could be better than the actual experience of it. The anticipation of a reward is really what motivates action in the first place. And dopamine increases as the craving builds. In this law, we are led to the realization that the more attractive an activity is,

> *You have to get a habit to stick even in a small way to feel successful.*

the more likely it is to become habit-forming. In other words, we're going to keep researching those amazing vacations.

Behaviors can also be attractive. As humans, we want to belong, and because of that our earliest habits are created by imitating those around us. "Behaviors are attractive when they help us fit in," Clear points out.

It is easy to relate to his own admission: "I find that I often imitate the behavior of those around me without realizing it. In conversation, I'll automatically assume the body posture of the other person. In college, I began to talk like my roommates. When traveling to other countries, I unconsciously imitate the local accent despite reminding myself to stop."

As Clear explains, your identity can also become linked to those around you, and growth and change are no longer an individual pursuit. Examples of group identifiers are "We are musicians." or "We are cyclists." After you achieve a goal, staying part of the group helps to embed an identity and sustain behaviors.

## The 3rd Law: Make It Easy

A takeaway of the third law is you don't need to map out every feature of a new habit; you just need to practice it. Clear tells us that every time you repeat an action, you activate a neural circuit associated with that habit. Repetition is critical to encoding a new habit. As a habit is solidified by repetition, the behavior becomes more automatic. And that's good because habits are easier if there is not a lot of friction.

The idea behind *make it easy* is not just to do easy things. The idea is to make a new habit as easy as possible in order to do things that pay off in the long run.

Clear encourages starting small by using The Two-Minute Rule to make your habits as easy as possible to start. Just about any habit can be trimmed down to a two-minute version, he points out. By way of example, Clear suggests if your new habit is to read before bed each night, begin by reading just one page. Or if your goal is to walk 10,000 steps every day, start by putting your walking shoes on.

Clear calls this creating a "gateway habit" that will lead you to more productivity in time. "The point is to master the habit of showing up." A habit must be established before it can be improved. Once you master the art of showing up in these first two minutes, you can build on it in increments so that it becomes a ritual of a bigger routine. This can ultimately lead to developing the intense focus that is required to do great things.

## The 4th Law: Make It Satisfying

The thing we learn from Clear about the fourth law, *make it satisfying*, is "pleasure teaches your brain that a behavior is worth remembering and repeating." He also warns that the cost of a good habit is in the present, but the cost of a bad habit is in the future.

When you are picturing who you want to be in life, it's easy to see long-term value. Most people know that delaying gratification is the wisest choice, but it's seldom the one they go for.

The questions Clear poses are, "Why would someone smoke if they know it increases the risk of lung cancer?" "Why would someone overeat when they know it increases their risk of obesity?" The answer relates to how the brain prioritizes rewards. Overeating is appetizing in the moment and is instantly gratifying.

The thing about a good habit is that the reward is the habit itself, but it doesn't feel worthwhile until you can see the benefits, which can take time. You have to get a habit to stick even in a small way, to feel successful. When you feel successful, it is like a signal that your habit has paid off and all that hard work was worth it.

"Mastery is the process of narrowing your focus to a tiny element of success, repeating it until you have internalized the skill, and then using this habit as the foundation to advance to the next frontier of your development. Each habit unlocks the next level of performance. It's an endless cycle."

Clear advocates using reinforcement—using an immediate reward to increase the rate of a behavior. But the short-term reward has to reinforce the identity you're trying to build, not conflict with it. So if your long-term vision of yourself is being a healthy person, your short-term reward should be aligned with that. Rather than rewarding yourself with a bowl of ice cream for exercising, maybe your reward is getting a massage. As Clear points out, "Incentives can start a habit. Identity sustains a habit."

In *Atomic Habits*, James Clear stands with us as we look honestly at ourselves and see what we like and what we don't like about how we behave. He provides tools and strategies to help us build systems to develop better habits. Ultimately, he gives us what we need to fit the identity that we wish for ourselves in the long term.

With his thorough research and deep thoughtfulness about how habits work for and against us, we have only to add our commitment to never stop making improvements and to sustain the belief that small habits don't add up; they compound. Readers will learn that tiny changes they choose to make in how they live *can* lead to remarkable results. *Atomic Habits* is hopeful, honest, and transformative.

## THE SUMMARY IN BRIEF

If you've ever felt like your life is out of balance, you're not alone. Fortunately, Andrew Temte has created an insightful guide that's loaded with practical advice about how to bring balance back to your life— and help bring balance to your organizations, teams, and employees along the way. Being off-balance almost assuredly results in hurting the people you care for most, because it renders you unable to open yourself up to other points of view. You become prone to making assumptions and taking people for granted. Being off-balance means, almost by definition, that you have a fixed mindset around certain aspects of your life. It causes you to become unyielding in certain circumstances.

In ***Balancing Act***, Andrew Temte outlines the key to finding balance in our careers and in our lives through a series of powerful messages that will be beneficial to everyone from the most entry-level employee to the leading executive.

## IN THIS SUMMARY, YOU WILL LEARN:

- How developing a sense of balance between work, life, and the various aspects of ourselves can make us happier and more effective.
- How communicating and listening are essential for us to become contributing members of any team.
- How to teach, coach, mentor, and inspire in a way that transforms the lives and careers of the people around us.
- How to become more multidimensional— and find more multidimensional people to be employees.

## Introduction

Success without balance is often more disastrous than failure with balance. When the unbalanced achieve victory, it often serves to further destructive habits. When the balanced suffer defeat, resilience and perseverance grow.

Being off-balance almost assuredly results in hurting the people you care for most, because it renders you unable to open yourself up to other points of view. You become prone to making assumptions and taking people for granted. Being off-balance means, almost by definition, that you have a fixed mindset around certain aspects of your life. It causes you to become unyielding in certain circumstances.Being an effective business leader requires balance, and that is something you can achieve through the principles in ***Balancing Act***.

### Leadership for the Next Generation

We're in the midst of a tectonic shift in what it means to be an effective leader. In the past, leaders were chosen because they demonstrated strong technical skills, were able to play and win at the game of workplace politics, or demonstrated supreme loyalty to the leaders and decision makers who came before them.

But in order to do their jobs effectively, leaders need to demonstrate balance: balance between strength and vulnerability, confidence and selflessness, passion and measure, single-mindedness and inclusivity, determination and curiosity, and leadership and followership.

### You Are Responsible for Your Own Wake

Like a boat on the water, leaders at all levels leave a wake as they interact with the organization— the higher up you are in the company, the bigger the wake you throw off. It's your responsibility to be aware of your wake and the impact it could have on individuals and teams, both within your immediate surroundings as well as further downstream.

## Teach, Coach, Mentor, and Inspire

Think of your roles as a manager or an influencer in a business. You are in a position of authority and are responsible for your team. Some of your key roles are to teach, coach, mentor, and inspire. Others are to assess talent and provide constructive feedback to your team members so that one day they can surpass you. As an influencer, you walk a fine line. You need to find a balance that allows you to judge without being judgmental. Sometimes you need to take control of a situation and be the smartest person in the room. It's much harder to help others develop and grow by allowing them to shine.

### The Light in Your Eyes

While poor leadership can quickly extinguish the light in a high-potential hire's eyes, providing a supportive working environment can help nurture the light and keep it shining brighter as time goes on. When you find an organization that offers that kind of supportive, nurturing, and balanced environment, leaving it becomes very difficult.

### Opportunity, Joy, and Purpose at Work

Unfortunately, many people expect that opportunity will be magically bestowed upon them. They've grown up in coddled, 'everyone gets a prize' schools and homes. They believe the business world owes them something for just showing up. But opportunity comes to those who are continuously learning, moving forward, and applying their talents in a constructive fashion. If one sits back and waits for an opportunity to knock, the wait will be long and frustrating. The ego must be balanced, because over the long term, opportunity aligns itself with authenticity.

### Disorder, Chaos, and Growth

Businesses are powered by humans. When a business is created, it is typically formed by a sole proprietor or a small team, and an essential initial condition is a deep sense of trust within the nucleus of the entity. The success or failure of the venture depends on it. Exceptional leaders understand the power of their words, identify and nurture human potential, model organizational purpose, and adopt a continuous improvement mindset to minimize organizational entropy.

### Education and Lifelong Learning

Throughout history, education has played the role of the 'great leveler.' Social structures and societies have been transformed through education. We have clear examples that when education and creativity are stifled or reserved for the elite, our progress as a species is limited. When educational access is limited, entire swatches of the population are left behind.

Those of us blessed with a path to continuous learning must embrace it, and watch as the benefits from that education only grow.

### Think Globally, Act Locally

As our world gets ever smaller through increasing digital interconnectedness and becomes more complex as humans work with and alongside machines of ever-greater capability, we must instill new competencies into the workforce of the future. This is a sentiment shared by the World Economic forum, UNESCO, the OECD, the Brookings Institution, the Pew Research Center, the Harvard Business Review, and many other institutions.

### The Reskilling Revolution Versus the Clay Layer

Resistance to change is a natural tendency that stems from a fear of loss of control and a desire for consistency, what could be referred to as the 'clay layer.' Both change and learning rely on consciously wading into uncharted territory and being purposefully uncomfortable. Hence, doing the hard work of adopting a lifelong learning attitude and being both agile and accepting of change run counter to our human nature.

### The Value of a Personal Continuous Improvement Journey

The beauty of a continuous improvement journey is that it can be truly eye-opening. Adopting a continuous improvement leadership stance helps us understand how we can be a little bit better tomorrow than we were today, and how we can ensure that our mistakes and failures are viewed as opportunities to learn and grow— not as barriers to future success. You'll be more open to new information, perspectives, and ideas; to being creative; and to exploring with curiosity and discovering new ways of disrupting old habits that may have persisted for years or even decades.

## Four Core Competencies of a Future-Ready Workforce

There are four core competencies that everyone needs in order to work effectively across departments, understand how their individual contributions fit into the bigger picture, and ultimately thrive in a future of increasingly advanced technology. These four competencies are financial acumen, data literacy, commercial acumen, and human skills.

### Financial Acumen

We need to apply more effort as a society and as educators to making math more approachable and relevant. Why? Because our businesses and institutions are populated by millions who lack the necessary numeracy skills to be effective in their jobs. They've been conditioned to think that math doesn't matter in the real world, when math is literally the language of business.

### Data Literacy

Whether you're a small business owner or running a Fortune 500 company, you're generating more data today, relative to your size, than ever before. As a leader and an individual contributor, your ability to be creative and drive your business forward is going to rely, in large part, on how you're leveraging the troves of data that your business generates.

That is why a base-level understanding of how data works, where it comes from, and what it can do is going to be an essential skill for employees and leaders of the future.

### Commercial Acumen

Many people within businesses, institutions, and governments don't understand how the products and services they're involved in creating make it to market. They struggle to move from an inward focus— what they do on a day-to-day basis— to a much more outward focus— how their product, service, or brand interacts with the outside world.

Understanding how the activities of the organization fit together within the broader marketplace can help individuals become better contributors, break down silos between departments, and rally employees around objectives that are bigger than their individual roles.

### Solving the Leadership Shortage

Teachers and mentors are critical in changing attitudes towards personal growth through education. The leadership shortage currently underway will become much less acute if we all do our part to promote the benefits of lifelong learning, balance education between technical and human skills, and begin leaning into the upcoming Reskilling Revolution.

## Effective Communication

You don't have to be a performer or actor to benefit from the value of effective storytelling. Honing your skill as a multimodality storyteller can pay real dividends. More importantly, you should always be considering how you're telling your corporate story and whether you're doing so in enough and varied ways. Like a muscle, storytelling must be exercised to be strengthened.

### Listen Up

The epidemic of disengagement that plagues businesses

of all shapes and sizes can almost always be traced back to some sort of failure of communication: failing to respond to important requests in a timely manner, failing to respond to critical feedback, failing to acknowledge those who deserve recognition, and/or failing to address a difficult subject.

### Responsiveness: The Neglected Leadership Trait

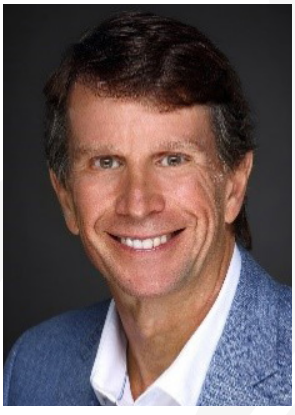
Failing to respond promptly to the people around you can significantly erode interpersonal and team trust. It breeds uncertainty, puts people on edge, and can throw your team off balance. Viewed through this lens, striking the right balance in responsiveness is of critical importance to team cohesion and how others view you as a leader.

## The Whole Self

Balance is hard to achieve and needs constant attention to maintain. Purposefully reflect on the concepts of work/life balance and become more multidimensional. Once you determine the path forward, start small. Test the waters. Take a class or talk to some experts about how they achieved their level of competency. Make the time to pursue your passion.

Meanwhile, hire multidimensional individuals who share their talents with others, as they will reward you with mental agility, persistence, and perseverance.

### Alignment



Most business leaders espouse the value of teamwork and collaboration across departments, product lines, and divisions. Most business leaders are also frequently disappointed by the lack of success in most collaboration efforts. The most common reasons for collaboration failure is the lack of standardization in process, procedure, and data, as well as misalignment of goals and incentives across teams.

### Leader Standard Work

Managers and leaders play an essential role in any value stream. Just like the definition of standard work for an individual or team applies to a specific process or activity along the value stream, leaders must adopt their own standard work to ensure they are providing accurate, reliable, and repeatable guidance to their teams. You can have the most well-defined set of processes and the most awesome value-stream map, but if leaders function in an ad hoc or random manner, optimal flow along the stream cannot be achieved. In other words, a leader who injects chaos into a system is likely doing more harm than good.

## Conclusion

We all live in a state of imbalance. Fortunately, our subconscious minds work continually to help us correct and adjust as we move forward in our daily lives, but we rarely make the time to consciously contemplate how we can return to center. Becoming more aware of the balancing acts we constantly play will help us to be better colleagues, leaders, friends, and family members. We must all work to find balance between strength and vulnerability, confidence and selflessness, passion and measure, single-mindedness and inclusivity, determination and curiosity, and leadership and followership.

As President and Global Head of Corporate Learning, **Dr. Andrew Temte,** CFA, spearheads Kaplan's efforts in helping employees remain relevant in the future world of work, as well as in helping companies continuously improve by attracting the right talent and upskilling/reskilling their workforce. A thought leader on issues related to professional education and workforce skilling, Dr. Temte has been published and cited in a number of media outlets. Dr. Temte earned his doctorate in finance from the University of Iowa with a concentration in international finance and investment theory. He holds the CFA designation and has over 14 years of university teaching experience in the areas of corporate finance, investments, and international finance.

Zooming In On Your Next Read

## Be Your Future Self Now

**The Science of Intentional Transformation**

By Benjamin Hardy

**Dr. Benjamin Hardy** is an organizational psychologist, author, and the world's leading expert on the application of the Future Self science. His books have sold hundreds of thousands of copies, and his blogs have been read by hundreds of millions. He and his wife, Lauren, are the parents of six kids. They live in Orlando, Florida.

## Who Is Your Future Self?

We live in a world of nonstop noise and action. Most people have more responsibilities than they can handle and more priorities than they can prioritize. We live like the proverbial hamster on a hamster wheel. Unfortunately for us, we fare no better than the hamster does in such a state. We grind our wheels and find ourselves no better off after hours and days and years of exertion because all we are ever looking at is what is right in front of us. Our goals are to make it through the day and to try not to drop too many balls in the meantime.

This state of being constantly stuck in the moment with very little insight to the future is a problem that Dr. Benjamin Hardy takes up in his book, ***Be Your Future Self Now***. Hardy's main premise is that in order to optimize our time and efforts to maximum benefit, we must stop working for and looking at who we are now and instead focus on who we want to be in the future. He believes that we should believe we are already our future, ideal selves, and this will help us get to that state. He quotes Neville Goddard as saying, "Assume the consciousness of being the one you want to be, and you will be saved from your present state."

Before walking through the steps needed in order to live in this more optimal state, Hardy compares this future looking view to the view that was prevalent in the late 1800s and the early 1900s. He claims that during this time, scientists and psychologists focused on determinism which is a belief that there is no real human agency. Our decisions are based on simple stimulus and response. In other words, our past determines our present and our future. The problem he finds with this view is that it could only possibly go so far as to explain people's problems, not solve them. He then makes the claim that, "Research now shows that a person's past does not drive or dictate their actions and behaviors. Rather, we are pulled forward by our future." It is this prospective, or this belief that everything we do is driven by our future, that he is concerned with.

Hardy goes on to discuss approach and avoidance behaviors. He states that 80% of people allow themselves to avoid while 20% of people are determined to approach. Both of these are motivators and can help us reach goals, but one is fear based whereas the other is not. The example he gives is of a person who works to avoid losing their house compared to a person who works to get a promotion. Both of these are based on a person's vision for the future, but only one is approach-motivated.

Another problem Hardy discusses is that most people are focused on short term goals. These goals can be something like distracting themselves on social media or paying the bills. He wants people to switch their short term goals to longer term, love-based goals. These goals, he believes, are the ones that will lead people to success and happiness.

Hardy believes that the way to make these changes is to focus on the future life a person wants. He states, "The quality of connection you have with your own Future Self determines the quality of your life and behaviors now." The best way to do this, he says, is to reverse-engineer decisions. A person should look at the end they want and then determine the steps they need to take to get there. Some of the decisions we make now hurt our Future Selves; others help them.

Much of the beginning of Hardy's book stems from Viktor Frankl and his work with logotherapy. Frankl was a prisoner in a Nazi concentration camp. He snuck a manuscript of his book into the camp, but it was eventually destroyed. He was determined to live through the camp so that he could rewrite his book. This purpose, he believes, is what helped him stay alive. Frankl believed this is what all people need: a reason to survive. Likewise, Hardy believes we all need something to drive us; we all need to envision our Future Selves and what we want.

## Threats to the Future Self

There are threats to our Future Selves, however. Hardy mentions seven. The first is that without hope in the future, the present loses its meaning. What we do now does not have much meaning unless we connect it to the future. He says, "It is the future that dictates which decisions you opt for." Unless a person has hope and a clear purpose for their life, they manage to find excuses.

The second thread is holding a reactive narrative about one's past. He says that "how we handle pain and confusion largely dictates who our Future Self becomes." He says that people need to switch their mindset from believing that past experiences determine who they are to a mindset that believes that who they are is a product of their own choosing.

The third threat is a person's current environment. Being unaware of how our environment impacts us can negatively affect our goals. The people we meet, the books we read, and the media we consume all help determine who we will become. To overcome a person's current environment, they need to use their imagination and think beyond where they are. "Who you align yourself with," he says, "has massive repercussions."

Yet another threat is the myopic decisions that can come about when a person is disconnected from their Future Self. Hardy believes that we need to have very vivid pictures of our Future Selves if we are to create that future we desire. We need to have empathy for our Future Self if we want to become that person. Also, we need to see Our Future Self as a different person than who we are now because we will change.

Threats five and six focus on urgent battles and small goals and also not being in the arena at all. When we focus on small goals and only on what is most urgent we will ensure that we stay in the same place. "You get what you're looking for. You see what you're currently measuring. All the while, there are insane, life-changing opportunities sitting in front of your face right now." We need to look beyond the urgent. Likewise, we need to actually put ourselves out there, put ourselves out in the arena. Hardy believes that we will live a life of regret if we stay on the sidelines.

The final threat Hardy mentions is that success can be a catalyst for failure. This can partly be because what a person truly wants can be harder to determine once the massive progress slows down. He believes that people start to focus on lesser goals which keeps us from what we really want. He believes that success is hard to maintain if people lack clarity.

## Truths About the Future Self

Just as Hardy gave seven threats to the Future Self, he gives seven truths about the Future Self.

Hardy gives one of his main premises in his first truth: the future drives the present. Every action we take is for a purpose. He believes that our behavior becomes more intelligent once it is focused intentionally on desired ends. Many actions people take are reactive; the goal is to make them intentional.

His second truth is that a person's future self is different than they expect. People have a tendency to believe they will not change all that much in the future. Ironically, they believe this even when they recognize how much they have changed in the past. This is called both the end-of-history illusion and a fixed mindset. People need to understand that their current self is not permanent. If they focus on this, they can become more interested in growth for the future than in proving themselves in the present.

Hardy's third truth is that the Future Self is the Pied Piper. "Paying the piper is a phrase that means suffering the consequences of your own self-indulgent actions." Hardy explains that people have to pay the consequences for their actions. If a person chooses ease at the moment over their responsibilities, eventually their responsibilities will catch up with them. Hardy wants people to make investments in their future rather than incur costs. Investments, after all, compound over time.

The more vivid a vision a person has of their Future Self, the faster they will progress. This is the fourth truth. This requires measurable goals. He states that "effective progress comes with a combination of measurable metrics, a vivid vision of your Future Self, and clear mile markers." These will keep people on track. Without clarity, people will falter.

Failure is not a threat to the Future Self. Rather truth five states that "Failing as your Future Self is better than succeeding as your current self." By this, Hardy means that trying for what our Future Self wants moves us forward. If we fail, we learn from their mistakes. We have put themselves in the arena. To succeed as our current self is to not move forward at all. It is to stagnate.

> To succeed as our current self is to not move forward at all. It is to stagnate."

Truth six states that people achieve success by being true to their Future Self. Hardy defines the term, "shadow career" as a career people acquire that is different from their dream. They choose this shadow path because they have given up on themselves. Hardy is insistent that we cannot be successful unless what we achieve is something we actually want to achieve.

Finally, truth seven refers to God. Hardy says that our view of God impacts our Future Self. He mentions locus of control which determines how much a person believes they have control over their life. Someone with an external locus of control believes that most is out of their control. A person with an internal locus of control believes they can influence their outcomes. Our view on God can affect this.

## Steps to Take for Your Future Self

Hardy's final section of the book gives seven concrete steps a person can take in order to become their Future Self.

1. Step one calls for people to clarify their contextual purpose. Clarifying this purpose involves three steps: Connecting with your Future Self, Clarifying purposes through three priorities, and setting massive year long targets for these priorities. Hardy believes that if people have too many goals and priorities, they will not be able to follow any of them. He does not believe in small goals. He believes it is helpful for people to 10x their goals. By expanding them in such a way, they force themselves to think in new and creative ways.

2. Eliminating lesser goals. Hardy paraphrases author, Neil Gaiman, who said that he imagines his Future Self as a distant mountain. He constantly asks himself if decisions will move him closer or farther away from that mountain. We can often see how committed we are to our goals by looking at our behaviors because our behaviors will truthfully tell us what is most important to us. We must get away from our current habits if we are going to become our Future Selves.

3. "Elevate from Needing to Wanting to Knowing." Needing is the least optimal state, according to Hardy. Need implies lack. Want, while better than need, still implies lack. Knowing is better than both. It "is the acceptance that you already have what you want." There is a sense of acceptance with knowing. Gratitude can help because we feel gratitude after we have already received something. Hardy states that "gratitude elevates from wanting to knowing." All of this helps people act "from the goal rather than toward the goal."

4. "Ask for exactly what you want." Hardy believes deeply in the value of asking. He believes that often we won't ask for what we want because we are afraid that we will not get it. He believes we should ask God, experts, friends, and anybody. The key is asking.

5. "Automate and systemize your Future Self." This step will help people get where they want to go faster. Hardy breaks apart the difference between effectiveness which is doing the right things and efficiency which is "doing things right." There is not much point to being efficient when we are not effective. He believes one way to be effective is to get rid of what we do not need. Anything that is not one of our big three priorities is a distraction.

6. "Schedule your Future Self." We need to put the important tasks first, even before the urgent ones. A schedule should proactively reflect our priorities and should schedule first things first.

7. "Aggressively complete imperfect work." Hardy extols the virtue of finishing things. If people are always looking for perfection they will never submit the article or submit the resume. They will stifle themselves waiting for perfection. Rather people will do best by understanding when something is ready to submit and submitting it, even before perfection. We need to learn to accept good enough. He believes in what he calls aggressive completion.

Hardy believes that in order to become the people we want to be, we have to know who those people are. His book lays out struggles we face in this progress, but it also gives clear steps people can take to live their lives from the perspective of their Future Self. Illustrations throughout the book help advance the main points, and the book also provides links for a website with templates people can use. Through the symbiosis of all three elements, Hardy gives his reader a clear blueprint for success.

# Better by Mistake

## The Unexpected Benefits of Being Wrong

by Alina Tugend

### THE SUMMARY IN BRIEF

Journalist Alina Tugend examines the delicate tension between what we are told — we must make mistakes in order to learn — and the reality — we often get punished for them. In *Better by Mistake*, she shows us that mistakes are everywhere, and when we acknowledge and identify them correctly, we can improve not only ourselves but our families, our work and the world around us as well.

Through fascinating research, Tugend reveals how cultural attitudes about mistakes can affect us from the earliest stages in our lives and shape us into adults who steer clear of risks and challenges. She takes us behind the scenes into cutting-edge behavioral studies; invites us into the high-stakes world of health care and aviation, where mistakes can cost lives; and delves into the art and science behind learning how to craft a sincere apology and taking responsibility for mistakes.

Bold and dynamic, insightful and provocative, *Better by Mistake* turns our cultural wisdom on its head to illustrate the downside of striving for perfection and the rewards of acknowledging and accepting mistakes and embracing the imperfection in all of us.

### IN THIS SUMMARY, YOU WILL LEARN:

- The many definitions of a mistake and why it is more important to understand the differences between types of errors.
- Why human beings are resistant to mistakes and tend to play it safe.
- The way to create a culture that is more aware of mistakes.
- Why a zero-tolerance policy for mistakes can actually lead to a greater number of errors.

## Introduction

The fear of making mistakes is a cudgel that hangs over so many of us, preventing us from not only taking risks in our personal and professional lives, but even more important, from really accepting — not just giving lip service to — the truth that we all are human and imperfect. Of course, there are big mistakes and small ones and varying levels of consequence. A pilot error that crashes a plane full of people is not in the same league as a minor mistake in a law brief or forgetting to pick up your child from dance lessons. But for most of us, a mistake does not cost a life. I think almost everyone can relate to an anecdote told in a 1999 research paper by a British academic, Patricia Bryans, on what men and women learn from making mistakes at work.

A student of hers, "David," was a night-shift supervisor at a food-production factory. One night, when he was about to start production, he realized that he had mixed ten times too much of one ingredient. David was tempted to ignore and cover up his mistake and go ahead, knowing that the product would taste awful but look fine. Instead, he confessed, held up production, remixed the batch, and left work. The next day, his manager issued a formal written notice saying that if David made one more mistake, he could be fired. David naturally was very upset about this, and his attitude toward his job changed completely. "He now took every opportunity to sneer at what they 'preached' about quality. He started to look for another job. His eagerness to learn and improve was severely diminished. His major learning from that experience seemed to be that he should never have owned up to his mistake," Bryans wrote.

All too often, we come away with David's lesson about making a mistake: ignore it, blame someone else, rationalize it — do anything to avoid admitting it because you just might put yourself in a position of weakness.

Now if David constantly messed up the baking process, then his manager would be right in issuing a warning — and then firing him if need be. But if this was David's first mistake — or even second within a certain period of time — his manager could have discussed how the mistake happened to see if there was a systemic problem, and he could have acknowledged that, indeed, we're all human and mistakes *do* happen.

By delving deeply into why and how we react to errors, we can learn how to acknowledge mistakes without foisting the blame onto others or beating ourselves up. That allows us to be more open to the valuable lessons that mistakes can offer — and will ultimately improve our work and our relationships with our bosses, spouses, and children. ●

## (Mis)Understanding and (Re)Defining Mistakes

Defining a mistake, it seems, is almost as difficult as, well, defining happiness. When Bryans asked participants in a study to provide a definition of mistakes, they "largely agreed that the key issues were misjudgment and adverse consequences which were unplanned. For them, it was the scale of the consequences which differentiated mistakes from errors or slips."

Even then, a real mistake can vary widely. It can be an accounting error that costs millions of dollars, a newspaper article that cites incorrect information, or a teacher
