Behaviorally, desire and hopelessness lead us to *alternate between overdoing and distractions*. Desire makes us hurry to achieve our goals, and we pour time and energy into self-change. When this happens, overdoing gives way to distractions, where we abandon what we desire and try to forget about it.

In the emotional realm, the long unfulfilled desire can permeate our life. It's difficult to relax and do enjoyable things if the looming unsatisfied want is always in the background. Many negative emotions show up when we feel stuck. A sense of hopelessness, dread, restlessness, and despair are common.

The mind *ruminates or obsessively thinks* about how to gain our goal while increasingly doubting that it is possible. Another trick our mind plays on us is to mask hopelessness with the appearance of genuine acceptance. Our inner voice says things like, "I'm fine with it. I'm even better off without it." Yet despite these thin reassurances, and many distractions to stop thinking about it, giving up feels like an impossible option.

Finally, the body cannot but be drained by all the mental, emotional, and behavioral activity that keeps leading nowhere. It's easy to forget that the stress of inner conflict is energetically expensive. If ruminative thinking about past failures and future fantasies continues for an extended period, the body under stress may start showing signs of illness.

## Part II: Working with the Wheel

### Motivation

Wants are the force of our motivational system, pulling us toward our potential. One way to think of how wants function is to start with the core, or developmental wants, which need a method of fulfillment. Before we even understand language, we start forming beliefs, or constructs, of how to achieve what we want and the constructs can stay implicit throughout adulthood.

The most effective constructs tend to relate thematically to the want itself. Take the core need of forming friendships. Treating others well is relational in nature and much more likely to lead to close friendships than something like having an interesting job, for example.

Furthermore, effective constructs are direct actions someone can take now to fulfill the want.

Ineffective constructs promise fulfillment in the far future This causes the core wants to get associated with other wants, each increasingly more distant from the original. The further we get from the core want, the less satisfied we feel when we achieve the outer layer ones, since they only peripherally, if at all, satisfy the want at the core.

The key to our development and fulfillment, then, is to try to excavate and satisfy our core wants. The paradox of success without fulfillment, where we feel dissatisfied and restless despite having accomplished societally admired heights of achievement, is often based on the distance between our core wants and the outer layer of wants we have achieved. The further we are from the core, the less satisfied we will likely be.

Our ability to fulfill our potential depends on holding on to the invisible thread that connects us to our core wants.

Let's say we want self-respect. Buying an expensive watch (an outer layer want) because we want admiration (middle layer want), which we think will give us self-respect (core want) is not likely to work very well or for long. On the other hand, knowing ourselves and acting in accordance with who we are will directly produce the self-respect we want.

*Our ability to fulfill our potential depends on holding on to the invisible thread that connects us to our core wants.*

## Behavior

Now that we have done the difficult work of finding the core wants, what are we to do next? Why should we hesitate to directly satisfy our core wants by changing behavior? Because *when we are stuck in some part of our life, the blocks to change extend not just to wants, but emotions, mind, and the body too, which makes behavioral change difficult to sustain.*

Rather than launch into action, we need to restore enough willpower to move the rest of the Wheel of Self. What that means is that, paradoxically, our task will be to *do less* and sometimes even *do nothing*. Doing less of what hasn't worked in the past will help us restore willpower, to give us enough energy to continue our inner work.

When we attempt to change something about ourselves– eat better, exercise more, become more assertive, or build better relationships– focusing on changing only the behavior without moving other parts of the self frequently results in self-defeat. We will have employed our willpower to push one spoke of the wheel in one direction, while the rest of the wheel's momentum is going in the opposite direction. It is no surprise that after a while we feel drained and broken. Using willpower on any (or all) other parts of the self is likely to be more effective.

We need to *restore willpower sufficiently to move emotions, mind, and old neural pathways in a new direction*. What we want is to make sustained movement in the whole Wheel of Self so that our new way of being will continue naturally and not require either habit or willpower to maintain over time. It will simply be our natural, new way of being.

Often, just before we sleep, we feel our cup of willpower has been drained. Yet, in the morning, we wake up with a full cup of energy and start pouring it out all over again. Overnight our willpower got restored. Just as a fatigued muscle needs rest to restore strength, sleep restores willpower.

Other activities that research has shown to improve self-regulation are exposure to nature, anything that makes you laugh or smile, and meditation. Meditation, in particular, is known to expand the size of the cup of willpower, and it does so over the long term.

Finally, all intrinsically motivated activities that engage core, developmental wants also restore our willpower. This gives us a whole host of unique restorers of self-regulation that can be physical, social, individual, creative, or spiritual.

## Emotion

Emotions are a signaling system that tells us where we stand in relation to our wants. Not only do they signal to us, but they also give us energy and prompt us toward what we have to do to get closer to what we want. When emotions work well and we interpret their signals correctly, they become our guides in effectively protecting ourselves, overcoming obstacles, grieving our losses, and feeling happiness as we get closer to our wants. However, being stuck in some domain of our life distorts our emotional signals so they become difficult to interpret.

When we feel negative emotions, such as being dissatisfied, anxious, or restless, we tend to view the emotions themselves as the problem. Blaming the signal for telling us something we don't want to hear is a bit like blaming pain for signaling that we have been injured. We often treat negative emotions as the enemy, trying to avoid, suppress, or distract ourselves from feeling them to continue with our life as it is. Our emotions, however, will continue signaling for change. The very thing we don't want to experience holds the key to achieving our wants.

Contrary to our everyday use of the word "emotional", emotions are rational at their very core. The amygdala is the part of the brain central to processing emotions. Damage to the amygdala impairs our ability to process emotions

and thus, impairs decision making. We need our emotions to function well to act rationally.

There is an additional component of emotion. Between the situation and the signal, there are lenses that represent our constructs or beliefs. It's the construct or belief that will decide which emotion we'll feel in response to a situation. The very same situation– an environmental disaster, for example, will make some people angry, some sad, some fearful, and others energized. The same situation in different minds will bring about different emotions and, therefore, different actions.

An interesting implication of this way of thinking about emotions is that we can't have an emotion without there being a goal or a want. We often believe we simply wake up with emotions or that they come from nowhere. This seeming unpredictability of emotions, particularly negative ones, can make us feel powerless.

In reality, *negative emotions come when we veer away from our goals, and they go away as soon as we are back on track to fulfill them.* Emotions are meant to be temporary, as would be logical for a signaling system. A traffic light that is always red or always green would lose its function and purpose.

Because we are so used to experiencing emotions in the background of our activities, we may get the impression that emotions are there to be felt. But emotions, if we could give them a voice, would urge us, "Don't just feel me, DO something!" A tool we have at our disposal is choice. Resilience, the ability to not just cope with troubled circumstances, but flourish despite them, can be found in how we leverage this uniquely human tool.

There are two ways you can apply choice: learning how to fully process negative emotions in the moment, and building resilience in the long term.

To process emotions in the moment, follow this technique:

1. Approach, rather than suppress, distract, or express it, giving space and time to experience it.
2. Calm and comfort ourselves.
3. Examine the wants and constructs that underlie our emotions.
4. Strategize.
5. Create a plan to take action.

Practices that we can employ long-term cultivate our resilience, allowing us to not just cope, but flourish in uncertain and troubling circumstances. We cultivate resilience by applying the lever of choice to all components of our emotions.

We can apply choice to:

- Which wants or goals we want to pursue.
- Situations we put ourselves in and how to change our environment to suit us better.
- Change the beliefs or constructs through which we see the world.
- Learn how to express an emotion when it arrives.

When our emotional system is working well, we can move past our obstacles toward our wants and pivot from our losses toward re-engagement, with new goals and relationships.

### Mind

We've now reached the part of our inner work in which we have to reflect on constructs and beliefs that contribute to our inability to get what we desire the most. When a closed construct shows up in our mind, along with other thoughts, it's difficult not to believe them. We have to learn to recognize which ones are accurate and which ones are distorted.

It is far more difficult to get to the truth of ourselves by using our minds than we commonly believe. The mind can argue any side of the case, and when our Wheel of Self is stalled because some of our constructs are frozen in time and don't reflect the reality of ourselves or the world, it is the same mind we need to use to get it moving again.

The mind, in fact, is the central lever that can notice the problem in the self and apply techniques and experiences that will guide it toward change. That's exactly what we do, when we use our mind to probe our wants, to understand rather than distract from strong negative emotions, and intervene to reshape parts of our nervous system to lay down new neural pathways.

How can the mind do such contradictory things– be the cause of the problems, and the pathway to its solution? How can the mind intervene in the mind? It does so by not being one mind. Instead of thinking of ourselves as having one mind, we can think of having three:

1. The Problem Solver: the conscious mind
2. The Intuiter: the unconscious mind
3. The Choice-Maker: the meta mind

## We use the conscious mind to structure experiences that restructure the unconscious mind.

The Problem Solver is the mind we most identify with–the one that can do complex calculations, think through a difficult problem, and carve a path toward a solution. This mind, which we believe does everything for us, turns out to be a very small, powerful, and energy-expensive imagining device. It is small both in terms of how many things we can have in our minds at the same time, and how quickly it processes information, which is estimated at 50 bits per second.

The Intuiter is the unconscious mind. Given its immense capacity, the unconscious is where we store all our learnings, including our expertise. In terms of processing speed, the most conservative accounts put it at 11,000,000 bits per second, a staggeringly fast system.

What we call an instinct is a thought, emotion, or urge to action that is the result of all the processing done by the unconscious mind. This is where all that we have learned in our life waits patiently until we need it, and then just shows up in our awareness. This is important because the closed constructs that we struggle with come to our awareness automatically from the unconscious mind.

If we only had the Problem Solver and the Intuiter as our minds, we could never challenge what they say. Fortunately, there is a third mind that observes what the Problem Solver and the Intuiter are up to.

The Choice Maker is the mind that allows us to watch ourselves think and have thoughts. Without it, we wouldn't be capable of meta-cognition–we couldn't think about thinking or having thoughts. When things are going well, the meta-mind can inconspicuously direct attention to whatever is relevant at the moment.

If there's a problem, the meta-mind directs attention to what it believes to be the source of the problem–our own mind. We become self-conscious. The Choice-Maker notices that something may be amiss, directs itself to our own mind and body, and then makes a decision.

To be able to change, we have to detect and update our closed constructs, which is the source of our problem. We must direct the Choice Maker to illuminate our closed constructs, with the help of the Problem Solver. The Problem Solver is crucial in solving the issue of closed constructs, but not by ordering the rest of the mind about.

Instead, with Choice Maker's help, it will gather the information necessary to design experiences that will allow the rebuilding of close constructs that distort our view of ourselves in the world. *We use the conscious mind to structure experiences that restructure the unconscious mind.*

### Body

Given that closed constructs are neural pathways carried in our body, just knowing what they are, and even how they came to be, doesn't make them reopen automatically. The Problem Solver can't force the Intuiter to update or change the construct.

*Insight may be necessary, but it is not sufficient for transformation.* It needs to be joined with an experience that opens the lid to the closed construct, and only then can we update it, getting the Wheel of Self to move again. The difficulty is that the source experience that closed the construct is most often *in the past*.

To update it we need to go to that source experience, to the past, to lay down a new set of neural pathways. To understand what makes this possible, we need to explore the part of ourselves that allows us to have a past in the first place–our body.

From an evolutionary perspective, we can think of our bodies as vessels made of the past meant to act in the present while looking to the future. The first obvious thing that bodies do is move us around to meet their wants.

The second function of the body is to carry our past, in our brain and nervous system, as well as the muscles, joints, organs, blood cells, immune cells, and many other constituents of the body whose actions in the present moment are altered by the memory of the past.

Bodies hold our learnings and employ them forward as we encounter new situations. If the body carries our learnings,

it also carries our constructs that distort our experience. The closed constructs that feed these unconscious patterns are carried in the body, so it will be in the body that changes required for re-learning will have to occur.

To loosen the lid of a closed construct we need a different, non-linear model of change. We've all known individuals who make a dramatic change seemingly overnight. This is possible because when our emotional system is dysregulated, the nervous system gets into high gear and can build new neural pathways more quickly. Instead of slow, gradual change, we see dramatic and sudden transformations.

Whether the change is positive or negative doesn't depend only on the intensity of the emotional distress, but whether or not it is caused by external circumstances or is part of our own exploration of change.

Emotional dysregulation is like a force that can be used to either shut the lid down on constructs or open them back up, depending on the intensity and voluntariness of the event. What we see then is that emotional dysregulation provides the first ingredient that is essential to a transformative change.

The second ingredient is the information that will be poured into the new construct. Think of it as a new framework or way of looking at ourselves and the world. The nervous system has activated to lay down new pathways quickly, but what exactly it will encode depends on what information it gets. Self-guided re-learning can be designed to open our constructs and lead to development.

There are two components you need to have ready to design a re-learning experience to update your closed constructs.

1. Finding the significant events that caused the closing of the constructs, and;
2. Finding a new framework or experience that would have allowed the processing of the significant event.

To find the events, we must turn to memories and ask two questions:

1. Which memories from the past intrude on our mind when we think of the construct?
2. Do we still have strong emotions about these events?

We can find new frameworks for the problems we encountered during significant events in two ways: as information and as experiences. If we think of a new framework as information, we will follow the beginning steps of cognitive behavioral therapy. We will notice the unhelpful, frozen cognitive constructs, and explore other, more helpful ones.

Another way to think about the new framework is not as information, but as experience. If the construct was created in childhood, for example, one easy exercise to find new frames is to imagine a younger sibling, a child, a niece, or a nephew, in a similar situation and see how we would react to them. As adults, we can take that experiential exercise and offer what we need to our younger selves to reframe it.

The strategies above can be explored more deeply with the support of a friend, therapist, or partner. They can also be repeated as many times as needed to update closed constructs.

We grow and develop naturally, guided and pulled by our potential that manifests in our interests and things we love– whether ideas, skills, hobbies, careers, or people. This is why it's so painful when our development stalls or stops. When we work through each part of the Wheel of Self– motivation, behavior, emotions, mind, and the embodied past– we can get unstuck.

Maja Djikic, Ph.D. is an Associate Professor of Organizational Behavior and Human Resource Management, the Director of the Self-Development Laboratory, and the Academic Director of Rotman Executive Coaching Certificate program at the Rotman School of Management, University of Toronto. As a psychologist specializing in the field of personality development, Dr. Djikic examines the processes and methods of developing a balanced and flexible self. She has published more than 35 scientific articles and book chapters on personality development, and her research has been featured in over 50 media outlets in 15 countries.

The Golden Rule of Habit Change
*Page 5*

Part 2: The Habits of Successful Organizations
*Page 6*

Part 3: The Habits of Societies
*Page 8*

## THE SUMMARY IN BRIEF

In ***The Power of Habit***, Charles Duhigg, award-winning business reporter for ***The New York Times***, takes us to the thrilling edge of scientific discoveries that explain why habits exist and how they can be changed.

Along the way, we learn why some people and companies struggle to change, despite years of trying, while others seem to remake themselves overnight. We visit laboratories where neuroscientists explore how habits work and where they reside in our brains. We discover how the right habits were crucial to the successful promotion of Pepsodent; to Tony Dungy who led his team to a Super Bowl win by changing one step in his players' habit loop; and to Alcoa when it turned itself around by changing just one routine within the organization.

At its core, ***The Power of Habit*** contains an exhilarating argument: The key to exercising regularly, losing weight, raising exceptional children, becoming more productive, building revolutionary companies and social movements, and achieving success is understanding how habits work. By harnessing this new science, we can transform our businesses, our communities and our lives.

## IN THIS SUMMARY, YOU WILL LEARN:

- Why the brain tries to make routines into habits.
- How cravings create and power new habits.
- How to apply the golden rule of habit change.
- What "keystone habits" are and the importance of them in creating a new routine.

## INTRODUCTION

When you woke up this morning, what did you do first? Did you hop in the shower, check your email or grab a doughnut from the kitchen counter? Did you brush your teeth before or after you toweled off? Which route did you drive to work? When you got home, did you put on your sneakers and go for a run, or pour yourself a drink and eat dinner in front of the TV?

"All our life, so far as it has definite form, is but a mass of habits," William James wrote in 1892. Most of the choices we make each day may feel like the products of well-considered decision making, but they're not. They're habits. And though each habit means relatively little on its own, over time, the meals we order, whether we save or spend, how often we exercise, and the way we organize our thoughts and work routines have enormous impacts on our health, productivity, financial security and happiness. One paper published by a Duke University researcher in 2006 found that more than 40 percent of the actions people performed each day weren't actual decisions, but habits.

James — like countless others, from Aristotle to Oprah — spent much of his life trying to understand why habits exist. But only in the past two decades have scientists and marketers really begun understanding how habits work — and, more important, how they change. At one point, we all consciously decided how much to eat and what to focus on when we got to the office, how often to have a drink or when to go for a jog. Then we stopped making a choice, and the behavior became automatic. It's a natural consequence of our neurology. And by understanding how it happens, you can rebuild those patterns in whichever way you choose.

## PART I: THE HABITS OF INDIVIDUALS

### The Habit Loop: How Habits Work

Within the building that houses the Brain and Cognitive Sciences department of the Massachusetts Institute of Technology (MIT) are laboratories that contain what, to the casual observer, look like dollhouse versions of surgical theaters. There are tiny scalpels, small drills, and miniature saws less than a quarter inch wide attached to robotic arms. Even the operating tables are tiny, as if prepared for child-sized surgeons. Inside these laboratories, neurologists cut into the skulls of anesthetized rats, implanting tiny sensors that can record the smallest changes inside their brains.

These laboratories have become the epicenter for a quiet revolution in the science of habit formation, and the experiments unfolding explain how we develop the behaviors necessary to make it through each day. The rats in these labs have illuminated the complexity that occurs inside our heads whenever we do something as mundane as brush our teeth or back the car out of the driveway.

Toward the center of the skull is a golf ball-sized lump of tissue that is similar to what you might find inside the head of a fish, reptile or mammal. This is the basal ganglia, an oval of cells that, for years, scientists didn't understand very well, except for suspicions that it played a role in diseases, such as Parkinson's.

In the early 1990s, the MIT researchers began wondering if the basal ganglia might be integral to habits as well. They noticed that animals with injured basal ganglia suddenly developed problems with tasks, such as learning how to run through mazes or remembering how to open food containers. They decided to experiment by employing new micro-technologies that allowed them to observe, in minute detail, what was occurring within the heads of rats as they performed dozens of routines. Ultimately, each animal was placed into a T-shaped maze with chocolate at one end.

The maze was structured so that a rat was positioned behind a partition that opened when a loud click sounded. Initially, when the rat heard the click and saw the partition disappear, it would usually wander up and down the center aisle, sniffing in corners and scratching at walls. It appeared to smell the chocolate, but couldn't figure out how to find it. When it reached the top of the T, it often turned to the right, away from the chocolate, and then wandered left, sometimes pausing for no obvious reason. Eventually, most animals discovered the reward. But there was no discernable pattern in their meanderings. It seemed as if each rat was taking a leisurely, unthinking stroll.

The probes in the rats' heads, however, told a different story. While each animal wandered through the maze, its brain — and in particular, its basal ganglia — worked furiously. Each time a rat sniffed the air or scratched a wall, its brain exploded with activity, as if analyzing each new scent, sight and sound. The rat was processing information the entire time it meandered.

The scientists repeated the experiment, again and again, watching how each rat's brain activity changed as it moved through the same route hundreds of times. A series of shifts slowly emerged. The rats stopped sniffing corners and mak-

> Habits never really disappear. They're encoded into the structures of our brain... The problem is that your brain can't tell the difference between bad and good habits.

ing wrong turns. Instead, they zipped through the maze faster and faster. And within their brains, something unexpected occurred: As each rat learned how to navigate the maze, its mental activity decreased. As the route became more and more automatic, each rat started thinking less and less.

It was as if the first few times a rat explored the maze, its brain had to work at full power to make sense of all the new information. But after a few days of running the same route, the rat didn't need to scratch the walls or smell the air anymore, and so the brain activity associated with scratching and smelling ceased. It didn't need to choose which direction to turn, and so decision-making centers of the brain went quiet. The rat had internalized how to sprint through the maze to such a degree that it hardly needed to think at all.

But that internalization relied upon the basal ganglia, the brain probes indicated. This tiny, ancient neurological structure seemed to take over as the rat ran faster and faster and its brain worked less and less. The basal ganglia was central to recalling patterns and acting on them. The basal ganglia, in other words, stored habits even while the rest of the brain went to sleep.

### The Automatic Routine of 'Chunking'

This process — in which the brain converts a sequence of actions into an automatic routine — is known as "chunking," and it's at the root of how habits form. There are dozens — if not hundreds — of behavioral chunks that we rely on every day. Some are simple: You automatically put toothpaste on your toothbrush before sticking it in your mouth. Some, such as getting dressed or making the kids' lunch, are more complex.

Habits, scientists say, emerge because the brain is constantly looking for ways to save effort. Left to its own devices, the brain will try to make almost any routine into a habit, because habits allow our minds to ramp down more often. This effort-saving instinct is a huge advantage. An efficient brain allows us to stop thinking constantly about basic behaviors, such as walking and choosing what to eat, so we can devote mental energy to inventing spears, irrigation systems and, eventually, airplanes and video games.

The process within our brains is a three-step loop. First, there is a cue, a trigger that tells your brain to go into automatic mode and which habit to use. Then there is the ***routine,*** which can be physical, mental or emotional. Finally, there is a ***reward***, which helps your brain figure out if this particular loop is worth remembering for the future. Over time, this loop — cue, routine, reward; cue, routine, reward — becomes more and more automatic. The cue and reward become intertwined until a powerful sense of anticipation and craving emerges. Eventually, a habit is born.

Habits aren't destiny. Habits can be ignored, changed, or replaced. But the reason the discovery of the habit loop is so important is that it reveals a basic truth: When a habit emerges, the brain stops fully participating in decision making. It stops working so hard, or diverts focus to other tasks. So unless you deliberately fight a habit — unless you find new routines — the pattern will unfold automatically.

According to Ann Graybiel, a scientist at MIT who oversaw many of the basal ganglia experiments, "Habits never really disappear. They're encoded into the structures of our brain ... The problem is that your brain can't tell the difference between bad and good habits, and so if you have a bad one, it's always lurking there, waiting for the right cues and rewards."

Without habit loops, our brains would shut down, overwhelmed by the minutiae of daily life.

## The Craving Brain: How to Create New Habits

One day in the early 1900s, a prominent American executive named Claude C. Hopkins was approached by an old friend with a new business idea. The friend had discovered an amazing product, he explained, that he was convinced would be a hit. It was a toothpaste, a minty, frothy concoction he called "Pepsodent." This venture, the friend promised, was going to be huge. If, that is, Hopkins would consent to help design a national promotional campaign.

Hopkins, at the time, was at the top of a booming industry that had hardly existed a few decades earlier: advertising.

He had turned dozens of previously unknown products — Quaker Oats, Goodyear Tires, the Bissell carpet sweeper, Van Camp's pork and beans — into household names. And, in the process, he had made himself so rich that his best-selling autobiography, ***My Life in Advertising***, devoted long passages to the difficulties of spending so much money.

### Hopkins' Rules

Hopkins was best known for a series of rules he coined explaining how to create new habits among consumers. These rules would transform industries and eventually became conventional wisdom among marketers, educational reformers, public health professionals, politicians and CEOs.

When his friend approached Hopkins about Pepsodent, the ad man expressed only mild interest. It was no secret that the health of Americans' teeth was in steep decline. As the nation had become wealthier, people had started buying larger amounts of sugary, processed foods. When the government started drafting men for World War I, so many recruits had rotting teeth that officials said poor dental hygiene was a national security risk.

Yet, as Hopkins knew, selling toothpaste was financial suicide. The problem was that hardly anyone bought toothpaste because, despite the nation's dental problems, hardly anyone brushed their teeth.

"I finally agreed to undertake the campaign if he gave me a six months' option on a block of stock," Hopkins wrote. The friend agreed.

It would be the wisest financial decision of Hopkins's life. Within five years of the partnership, Hopkins turned Pepsodent into one of the best-known products on earth and, in the process, helped create a toothbrushing habit that moved across America with startling speed. A decade after the first Pepsodent campaign, pollsters found that toothbrushing had become a ritual for more than half the American population. Hopkins had helped establish toothbrushing as a daily activity.

The secret to his success, Hopkins would later boast, was that he had found a certain kind of cue and reward that fueled a particular habit. It's an alchemy so powerful that even today the basic principles are still used by video game designers, food companies, hospitals, and millions of salespeople around the world.

So what, exactly, did Hopkins do? He created a craving. And that craving, it turns out, is what makes cues and rewards work. That craving is what powers the habit loop.

### Creating a Craving to Power a Habit

To sell Pepsodent, Hopkins needed a trigger that would justify the toothpaste's daily use. He sat down with a pile of dental textbooks. "It was dry reading," he later wrote. "But in the middle of one book I found a reference to the mucin plaques on teeth, which I afterward called 'the film.' That gave me an appealing idea. I resolved to advertise this toothpaste as a creator of beauty. To deal with that cloudy film."

In focusing on tooth film, Hopkins was ignoring the fact that this same film has always covered people's teeth and hadn't seemed to bother anyone. Toothpaste didn't do anything to help remove the film. In fact, one of the leading dental researchers of the time said that all toothpastes — particularly Pepsodent — were worthless.

That didn't stop Hopkins from exploiting his discovery. Here, he decided, was a cue that could trigger a habit. Soon, cities were plastered with Pepsodent ads.

"Note how many pretty teeth are seen everywhere," read one ad featuring smiling beauties. "Millions are using a new method of teeth cleansing. Why would any woman have dingy film on her teeth? Pepsodent removes the film!"

The brilliance of these appeals was that they relied upon a cue — tooth film — that was universal and impossible to ignore. Telling someone to run their tongue across their teeth, it turned out, was likely to cause them to run their tongue across their teeth and, when they did, they were likely to feel a film. Hopkins had found a cue that was simple, had existed for ages, and was so easy to trigger that an advertisement could cause people to comply automatically.

Moreover, the reward, as Hopkins envisioned it, was even more enticing. Who, after all, doesn't want to be more beautiful? Who doesn't want a prettier smile? Particularly when all it takes is a quick brush with Pepsodent?

In the third week, demand exploded. There were so many orders for Pepsodent that the company couldn't keep up. Within a decade, Pepsodent was one of the top-selling goods in the world, and remained America's best-selling toothpaste for more than 30 years.

Before Pepsodent appeared, only 7 percent of Americans had a tube of toothpaste in their medicine chests. A decade after Hopkins's ad campaign went nationwide, that number had jumped to 65 percent. By the end of World War II, the military downgraded concerns about recruits' teeth because so many soldiers were brushing every day.

### Find a Cue, Define the Rewards

The key, Hopkins said, was that he had "learned the right human psychology." That psychology was grounded in two basic rules:

- First, find a simple and obvious cue.
- Second, clearly define the rewards.

If you get those elements right, Hopkins promised, it was like magic. Look at Pepsodent: He had identified a cue — tooth film — and a reward — beautiful teeth — that had persuaded millions to start a daily ritual. Even today, Hopkins's rules are a staple of marketing textbooks and the foundation of millions of ad campaigns.

Unlike other pastes of the period, Pepsodent contained citric acid, as well as doses of mint oil and other chemicals. Pepsodent's inventor used those ingredients to make the toothpaste taste fresh, but they had another, unanticipated effect as well. They're irritants that create a cool, tingling sensation on the tongue and gums.

After Pepsodent started dominating the marketplace, researchers at competing companies scrambled to figure out why. What they found was that customers said that if they forgot to use Pepsodent, they realized their mistake because they missed that cool, tingling sensation in their mouths. They expected — they craved — that slight irritation. If it wasn't there, their mouths didn't feel clean.

Claude Hopkins wasn't selling beautiful teeth, he was selling a sensation. Once people craved that cool tingling — once they equated it with cleanliness — brushing became a habit.

"Consumers need some kind of signal that a product is working," Tracy Sinclair, who was a brand manager for Oral-B and Crest Kids Toothpaste, says. "We can make toothpaste taste like anything. The tingling doesn't make the toothpaste work any better. It just convinces people it's doing the job."

Anyone can use this basic formula to create habits of his or her own. Want to exercise more? Choose a cue, such as going to the gym as soon as you wake up, and a reward, such as a smoothie after each workout. Then think about that smoothie, or about the endorphin rush you'll feel. Allow yourself to anticipate the reward. Eventually that craving will make it easier to push through the gym doors every day.

Cravings drive habits. And figuring out how to spark a craving makes creating a new habit easier.

## The Golden Rule of Habit Change: Why Transformation Occurs

Tony Dungy had waited an eternity for the job as head coach of the Buccaneers. For 17 years, he prowled the sidelines as an assistant coach, first at the University of Minnesota, then with the Pittsburgh Steelers, then the Kansas City Chiefs, and then back to Minnesota with the Vikings. Four times in the past decade, he had been invited to interview for head coaching positions with NFL teams. All four times, the interviews hadn't gone well.

Part of the problem was Dungy's coaching philosophy. In his job interviews, he would patiently explain his belief that the key to winning was changing players' habits. He wanted to get players to stop making so many decisions during a game, he said. He wanted them to react automatically, habitually. If he could instill the right habits, his team would win. Period.

"Champions don't do extraordinary things," Dungy would explain. "They do ordinary things, but they do them without thinking, too fast for the other team to react. They follow the habits they've learned."

How, the owners would ask, are you going to create those new habits?

Oh, no, he wasn't going to create new habits. Dungy was going to change players' old ones. And the secret to changing old habits was using what was already inside players' heads. Habits are a three-step loop — the cue, the routine, and the reward — but Dungy only wanted to attack the middle step, the routine. He knew from experience that it was easier to convince someone to adopt a new behavior if there was something familiar at the beginning and end.

His coaching strategy embodied an axiom, a Golden Rule of habit change that study after study has shown is among the most powerful tools for creating change. Dungy recognized that you can never truly extinguish bad habits. Rather, to change a habit, you must keep the old cue and deliver the old reward, but insert a new routine.

That's the rule: If you use the same cue and provide the same reward, you can shift the routine and change the habit. Almost any behavior can be transformed if the cue and reward stay the same.

Four times Dungy explained his habit-based philosophy to team owners. Four times they listened politely, thanked him for his time and then hired someone else.

Then, in 1996, the woeful Buccaneers called. Dungy flew to Tampa Bay and, once again, laid out his plan for how they could win. The day after the final interview, they offered him the job.

Dungy's system would eventually turn the Bucs into one of the league's winningest teams. He would become the only coach in NFL history to reach the play-offs in 10 consecutive years, the first African American coach to win a Super Bowl, and one of the most respected figures in professional athletics. His coaching techniques would spread throughout the league and all of sports. His approach would help illuminate how to remake the habits in anyone's life.

There is, unfortunately, no specific set of steps guaranteed to work for every person. We know that a habit cannot be eradicated — it must, instead, be replaced. And we know that habits are most malleable when the Golden Rule of habit change is applied. If we keep the same cue and the same reward, a new routing can be inserted.

But that's not enough. For a habit to stay changed, people must believe change is possible. And, most often, that belief only emerges with the help of a group.

If you want to quit smoking, figure out a different routine that will satisfy the cravings filled by cigarettes. Then, find a support group, a collection of other former smokers, or a community that will help you believe you can stay away from nicotine, and use that group when you feel you might stumble.

If you want to lose weight, study your habits to determine why you really leave your desk for a snack each day and then find someone to take a walk with you, to gossip with at their desk rather than in the cafeteria, a group that tracks weight-loss goals together, or someone who also wants to keep a stock of apples, rather than chips, nearby.

The evidence is clear: If you want to change a habit, you must find an alternative routine, and your odds of success go up dramatically when you commit to changing as part of a group. Belief is essential, and it grows out of a communal experience, even if that community is only as large as two people.

## PART II: THE HABITS OF SUCCESSFUL ORGANIZATIONS

## Keystone Habits: Which Habits Matter Most

On a blustery October day in 1987, a herd of prominent Wall Street investors and stock analysts gathered in the ballroom of a posh Manhattan hotel. They were there to meet the new CEO of the Aluminum Company of America — or Alcoa, as it was known — a corporation that, for nearly a century, had manufactured everything from the foil that wraps Hershey's Kisses and the metal in Coca-Cola cans to the bolts that hold satellites together.

Alcoa's management had made misstep after misstep, unwisely trying to expand into new product lines while competitors stole customers and profits away. There had been a palpable sense of relief when Alcoa's board announced it was time for new leadership. That relief, though, turned to unease when the choice was announced: the new CEO would be a former government bureaucrat named Paul O'Neill. Many on Wall Street had never heard of him. When Alcoa scheduled this meet and greet at the Manhattan ballroom, every major investor asked for an invitation.

"If you want to understand how Alcoa is doing, you need to look at our workplace safety figures. If we bring our injury rates down, it won't be because of cheerleading or the nonsense you sometimes hear from other CEOs," O'Neill said. "It will be because the individuals at this company have agreed to become part of something important: They've devoted themselves to creating a habit of excellence. Safety will be an indicator that we're making progress in changing our habits across the entire institution. That's how we should be judged."

The investors in the room almost stampeded out the doors when the presentation ended. One jogged to the lobby, found a pay phone, and called his 20 largest clients.

"I said, 'The board put a crazy hippie in charge and he's going to kill the company,'" the investor said. "I ordered them to sell their stock immediately, before everyone else in the room started calling their clients and telling them the same thing.

"It was literally the worst piece of advice I gave in my career."

Within a year of O'Neill's speech, Alcoa's profits would hit a record high. By the time O'Neill retired in 2000, the company's annual net income was five times larger than before he arrived, and its market capitalization had risen by $27 billion. Someone who invested a million dollars in Alcoa on the day O'Neill was hired would have earned another million dollars in dividends while he headed the company, and the value of their stock would be five times bigger when he left.

So how did O'Neill make one of the largest, stodgiest, and most potentially dangerous companies into a profit machine

and a bastion of safety? By attacking one habit and then watching the changes ripple through the organization.

### Keystone Habits

O'Neill believed that some habits have the power to start a chain reaction, changing other habits as they move through an organization. Some habits, in other words, matter more than others in remaking businesses and lives. These are "keystone habits," and they can influence how people work, play, live, spend and communicate. Keystone habits start a process that, over time, transforms everything.

Keystone habits say that success doesn't depend on getting every single thing right, but instead relies on identifying a few key priorities and fashioning them into powerful levers. The habits that matter most are the ones that, when they start to shift, dislodge and remake other patterns.

Researchers have found institutional habits in almost every organization or company they've scrutinized. "Individuals have habits; groups have routines," wrote the academic Geoffrey Hodgson, who spent a career examining organizational patterns.

To O'Neill, these kinds of habits seemed dangerous. "We were basically ceding the decision making to a process that occurred without actually thinking."

At the time, Alcoa was struggling. Critics said the company's workers weren't nimble enough and the quality of its products was poor. But at the top of O'Neill's list he didn't write "quality" or "efficiency" as his biggest priorities. At a company as big and as old as Alcoa, you can't flip a switch and expect everyone to work harder or produce more. The previous CEO had tried to mandate improvements, and 15,000 employees had gone on strike. It got so bad they would bring dummies to the parking lots, dress them like managers, and burn them in effigy. "Alcoa was not a happy family," one person from that period said. "It was more like the Manson family, but with the addition of molten metal."

O'Neill figured his top priority would have to be something that everybody — unions and executives — could agree was important. He needed a focus that would bring people together, that would give him leverage to change how people worked and communicated.

### Choosing a Focus for Leverage

"I went to basics," O'Neill said. "Everyone deserves to leave work as safely as they arrive, right? You shouldn't be scared that feeding your family is going to kill you. That's what I decided to focus on: changing everyone's safety habits."

At the top of O'Neill's list he wrote down "SAFETY" and set an audacious goal: zero injuries. Not zero factory injuries. Zero injuries, period. That would be his commitment, no matter how much it cost.

The brilliance of this approach was that no one, of course, wanted to argue with O'Neill about worker safety. Unions had been fighting for better safety rules for years. Managers didn't want to argue about it, either, since injuries meant lost productivity and low morale.

What most people didn't realize, however, was that O'Neill's plan for getting zero injuries entailed the most radical realignment in Alcoa's history. To protect workers, Alcoa needed to become the best, most streamlined aluminum company on earth.

O'Neill's safety plan, in effect, was modeled on the habit loop. He identified a simple cue: an employee injury. He instituted an automatic routine: Any time someone was injured, the unit president had to report it to O'Neill within 24 hours and present a plan for making sure the injury never happened again. And there was a reward: The only people who got promoted were those who embraced the system.

As Alcoa's safety patterns shifted, other aspects of the company started changing with startling speed, as well. Rules that unions had spent decades opposing — such as measuring the productivity of individual workers — were suddenly embraced, because such measurements helped everyone figure out when part of the manufacturing process was getting out of whack, posing a safety risk. Policies that managers had long resisted — such as giving workers autonomy to shut down a production line when the pace became overwhelming — were now welcomed, because that was the best way to stop injuries before they occurred.

O'Neill never promised that his focus on worker safety would increase Alcoa's profits. However, as his new routines moved through the organization, costs came down, quality went up, and productivity skyrocketed. If molten metal was injuring workers when it splashed, then the pouring system was redesigned, which led to fewer injuries. It also saved money because Alcoa lost less raw material in spills. If a machine kept breaking down, it was replaced, which meant there was less risk of a broken gear snagging an employee's arm. It also meant higher quality products because, as Alcoa discovered, equipment malfunctions were a chief cause of subpar aluminum.

### Initial Shifts Start Chain Reactions

Researchers have found similar dynamics in dozens of other settings, including individual's lives.

Studies have documented that families who habitually eat dinner together seem to raise children with better homework skills, higher grades, greater emotional control and more confidence. Making your bed every morning is correlated with better productivity, a greater sense of well-being and stronger skills at sticking with a budget. It's not that a family meal or a tidy bed causes better grades or less frivolous spending. But somehow those initial shifts start chain reactions that help other good habits take hold.

If you focus on changing or cultivating keystone habits, you can cause widespread shifts. They help other habits flourish by creating new structure and they establish cultures where change becomes contagious.

## PART III: THE HABITS OF SOCIETIES

## The Neurology of Free Will: Are We Responsible For Our Habits

Habits are not as simple as they appear. Habits, even once they are rooted in our minds, aren't destiny. We can choose our habits, once we know how. Everything we know about habits, from neurologists studying amnesiacs and organizational experts remaking companies, is that any of them can be changed if you understand how they function.

Hundreds of habits influence our days — they guide how we get dressed in the morning, talk to our kids, and fall asleep at night; they impact what we eat for lunch, how we do business, and whether we exercise or have a beer after work.

Each of them has a different cue and offers a unique reward. Some are simple and others are complex, drawing upon emotional triggers and offering subtle neurochemical prizes. But every habit, no matter its complexity, is malleable. The most dysfunctional companies can transform themselves.

However, to modify a habit, you must decide to change it. You must consciously accept the hard work of identifying the cues and rewards that drive the habits' routines and find alternatives. You must know you have control and be self-conscious enough to use it.

Once you understand that habits can change, you have the freedom — and the responsibility — to remake them. Once you understand that habits can be rebuilt, the power of habit becomes easier to grasp, and the only option left is to get to work.

If you believe you can change — if you make it a habit — the change becomes real. This is the real power of habit: the insight that your habits are what you choose them to be. Once that choice occurs and becomes automatic, it's not only real, it starts to seem inevitable.

## THE SUMMARY IN BRIEF

Struggling inner-city kids. Dismayed girls in Sub-Saharan Africa. Disillusioned business veterans. What do these seemingly unrelated groups of people have in common? Each has had their life dramatically altered for the better—the by-product of a newfound sense of self. Each developed a more robust identity.

Identity, with its unique ability to reveal our better angles, breeds confidence sufficient to fuel desirable change. ***The Power of Identity*** takes the central principle (identity) from author Bill Wiersma's groundbreaking book ***The Power of Professionalism*** and deepens its application to individuals and organizations alike, demonstrating how identity is a powerful agent of change in every aspect of a person's life.

When it comes to higher-order development, identity has a dramatic impact on choice and behavior. But identity's real magic lies in its unique ability to ignite one's value system in a personal way.

Identity-based development is an idea whose time has come. ***The Power of Identity*** promises to be as transformational as Wiersma's prior work.

## IN THIS SUMMARY, YOU WILL LEARN:

- Identity's vital role in behavior change and decision-making: how an identity refresh, aided by a personalized identity profile, can jump-start one's outlook and confidence—even in dire circumstances.
- Why the advent of identity-based development promises to disrupt leaders' thinking about their approach to development and change management.

## Identity: A First-Order Mover of Behavior

In the United States we put enormous emphasis on *doing* but far less on *being.* More than ever, people are overwhelmed with activity but starved for purpose. Given the breakneck speed at which so many of us live our lives, the all-important "who am I" question is not asked by that many of us, much less answered.

Perhaps we dismiss the question because we think it's superfluous. Perhaps the question lacks cachet. Perhaps we think it's too simple. Perhaps it never occurred to us to even ask the question. Or perhaps we're anxious about how we would answer it.

The bottom line is the power of identity has not been fully appreciated let alone understood well.

### Behavior Precedes Identity

When you listen to people, whether they be a teacher talking about their students, a store manager talking about an absentee owner, a mother of three talking about her teenage boys, a politician talking about their opponents, the all-star performer talking about their less-than-credible boss, a millennial talking about their roommate, the common denominator in all their stories is *behavior*—often undesired behavior. Behavior is where the rubber meets the road. It's a big deal in every aspect of life and work.

Undesired behavior, because of its nature, gets a lot of airtime. Far too many senior business leaders are deluged with undesired behaviors within their organization. It saps their time and energy. Every one of those leaders, not surprisingly, talks about the need for behavior change. And the need for behavior change is indisputable. The question is how do you approach it so you have positive results?

While behavior garners the spotlight, it's invariably a symptom, an outward expression of something deeper. Frankly, the something deeper is more important than the behavior itself. That something deeper is *identity*. The key principle here is that *being* precedes *doing*. Who we are (our identity) shapes what we do (our behavior).

Consider why a tightfisted friend on a fixed income—and a cancer survivor—consistently contributes more than a thousand dollars a year to the American Cancer Society; why an accountant with a strong environmental leaning buys a hybrid, even though the numbers don't add up; or how a long-standing entrepreneur and free-market zealot suddenly joined spirited public demonstrations as a 99-percenter, which meant that he was taking aim—politically and culturally—against the wealthiest Americans and engaging in unvarnished, bare-knuckle identity politics.

What do these three examples have in common? Each person was acting against their own short-term self-interests. Each felt they were making a principled choice—one that they took pride in. Their identities—a cancer survivor, an environmentalist, a 99-percenter—drove those decisions and the behavior that followed.

### When Identity Influences Decisions

When people allow their identity to influence their decisions, they essentially ask themselves three questions: "Who am I?" "What kind of situation is this?" "And what do people like me do in this kind of situation?" More often than not, this process occurs naturally, automatically, subconsciously. But the tougher the decision, the more it becomes a conscious decision.

Identity is especially helpful when we must grapple with tough decisions, when we're conflicted, when we're tempted, and when we're out of sorts. If you want to make a dramatic change in your life, identity is an essential first step in helping you get there.

What about changes in others? Do you want your company's suppliers to be more responsive? Do you want your work team to ditch all the pointless drama? Would you like your work silos to become a thing of the past? Identity is the key to all these changes. And in the end, changes like these significantly improve everyone's quality of life.

## Identity: What It Is, What It Isn't

Who am I? This long-standing question is arguably one of life's most important. Yet, it's a question that too many simply haven't addressed. As a result, it's no wonder that most people struggle to answer it—at least with much confidence. The question seems straightforward enough, some might even say simple. But the question is anything but simple.

We all have parts: big parts, obscure parts, unique parts, passionate parts, defining parts, inspiring parts, colorful parts, loving parts. Put all the parts together, and they reveal a unique mosaic of who we are. Who we are is a collection of identities that give meaning and direction to our life.

Let's understand identity as an array of important values, beliefs, ideologies, and philosophies. It's a metaphorical

Some identities shape us more than others. There are precious few identities that truly reflect *who we are* and volumes more that reflect *what we are*.

basket that we're always carrying around. It contains the things we love, the things we take pride in, the things we're passionate about, our values, the things we gladly commit our resources to. Identity is a way to express to others who we see ourselves to be.

Some identities shape us more than others. There are precious few identities that truly reflect *who we are* and volumes more that reflect *what we are*.

Assume for a moment that a newborn named Anne in Montreal has the ability to answer that question. What might she say? "I'm Canadian (my nationality). I'm Asian (my ethnicity). I come from pioneer stock (my heritage). I'm upper-middle class (my social status). I'm French-speaking (my language). I'm Catholic (my religion). I'm a Phang (my surname). I have a well-established ancestry (my genetics)."

Collectively, these things, which are largely inherited, tell Anne a lot about her beginnings. Yet knowing Anne's genetics tells us a lot more about *what* she is rather than *who* she is. Who Anne will become is ultimately how she chooses to live her life. We don't yet know what is important to her. We don't yet know who is important to her. We don't yet know what she stands for. Who Anne will become is all ahead of her.

### Identity Profiles

As we acquire more experiences in life, it becomes easier to recognize the identities that define us in unique ways. For example, we could say that a man is a husband, educator, and a professional. These three identities are starting points in understanding who he is. Yet, intuitively we know that three identities provide only a partial picture.

That's why a template is provided in Chapter Four of ***The Power of Identity,*** to help readers create an initial identity profile. Having the profile is important because it helps provide a more robust picture. It's more robust because of the methodology that accompanies the template.

In short, the methodology, among other things, produces "identity tiers," which segment identities by importance. First-tier identities carry the most sway and have the highest degree of impact; third-tier identities have proportionally less sway, less impact. Tier-one identities come closest to describing who we are at our core.

For example, the man's identities of husband, educator, and professional could be his first-tier identities, whereas his second-tier identities could include things such as dad, American, and servant. Third-tier identities could include things like friend, change agent, and entrepreneur.

Invariably there's a difference, sometimes a big one, between who we are and who we imagine ourselves to be. Faux identities, which can arise for any number of reasons, are both prevalent and problematic. Each of us can distort the view we hold of ourself. Sometimes our self-views are embellished, artificial, or illusionary. And naturally, consequences follow from each.

The methodology helps to maximize the number of identities that truly belong on one's profile and to minimize the number of identities that have no business being there in the first place.

Identifying our core identities is often messy. It forces us to go deep, which can be uncomfortable. We're so close to the subject, we don't always see the forest for the trees. Plus, our self-examination suggests that change is in the offing, which is something many of us would prefer to avoid.

The subtle but important differences in identities can be major distinctions. After all, there's a big difference between someone's seeing themselves as a professional defined largely by the color of one's collar and someone's seeing themselves as a professional defined largely by how one acts. When it comes to identities, these things matter, at least if the objective is higher-order decisions and the desirable behaviors that result.

## Keystone Identities: The Key to Transformation

Keystone identities are special. They're often game-changers. For many, being a professional is a keystone identity. So is being a parent. A keystone identity matters most because it has

special qualities that enhance other identities. Simply put, it acts as a lever—it has a disproportionate effect on everything around it. Most important, it helps make us better people.

We might think a tier-one identity would naturally also be a keystone identity. But that's not always the case. Yet, almost without exception, a keystone identity is a tier-one identity. Consider the following questions:

- Do you see evidence of keystone identities among those close to you?
- What does your gut tell you about your keystone identities? Do you recognize any?
- What would it do for your confidence if you were able to identify your keystone identities?

A keystone identity is defining. It's naturally aspirational. In many ways, a keystone identity is magical—helping people to "up their game." In the process, people create a better version of themselves. A keystone identity is one of the precious few identities that truly reflect who we are or who we're trying to be. Non-keystone identities, as helpful as they are, don't deliver the same type of impact.

Because keystone identities have amazing transformative power, being able to identify them is especially important. The methodology in Chapter Four of ***The Power of Identity*** aids in the identification process.

## Who Am I—Really?

You may have already formulated a general identity profile in your mind. If so, no doubt your intuition played a big role in that. Yet, the precision needed to develop a top-notch identity profile requires more than just intuition. The devil is in the details.

Questions help tease out those details. Consider these: How do you choose to spend your time? What do you stand for? What are the things that make you tick? What do you consider your greatest accomplishment?

What do you spend your money on? What was the last thing you took a stand on? How are you using your talents? When faced with two equally compelling choices, what tips the scale between the two? What brings you contentment? What types of things are worth making a sacrifice for?

What types of things really make you angry? What are the types of things you would do if no one paid you? These questions and others like them will stimulate your thinking as you begin to develop your profile.

The aim of an identity profile is to help us better define who we are or who we want to be. It's analogous, as the saying goes, "Be yourself, but be your best self." With greater clarity about who we are, we're better able to breathe life into the things that are most important to us—our values.

A robust identity profile is one that's chock-full with identities that reflect who we are. That's what you should be aiming for in developing your profile.

## Implications for Individuals

Your profile is a terrific start, but it's not the end by any means. Let's now discuss the important implications for individuals, developmentally speaking, that stem from the learning advanced to this point.

Consider development as one of two things: (1) the growth of a person's capabilities or (2) the growth of a person who has evolved in significant ways. The former is about doing; the latter is about being. Naturally, there are synergies between the two.

When it comes to creating dramatic impact, developmentally speaking, identity is the real deal. Identity changes people's very nature. As a result, many things naturally change with it, including behavior.

So what's required of us, developmentally speaking, to become more evolved? How do we hit that elusive developmental high-water mark?

Human-development scholar Robert Kegan suggests two fundamental things have to change in the upward shift from one level of development to another: (1) one's thinking and (2) the source of one's self-worth. Kegan indicates that for us to evolve, the source of our sense of worth—our sense of self (identity)—must also evolve.

This is accomplished by adopting identities consistent with who we are or who we're trying to be. In other words, our choosing who we'll be is a precursor to our evolving.

Numerous stories, both business and non-business alike, in ***The Power of Identity*** illustrate how an identity refresh changed people's very nature and buoyed their confidence. In each case, the wisdom of the day suggested that the desired shifts—dramatic ones—were so much folly. Here's one such story.

### The Girls of Malawi

Mary Tuchscherer's California-based nonprofit organization, VoiceFlame, helps marginalized adolescent girls in Malawi become confident writers and published authors.

"Blossom" isn't a word one normally associates with Malawian young people. Poverty is rampant in the country. Deprivation, isolation, and oppression are commonplace. For most, each day is a struggle to survive. Short life expectancies and high infant mortality are problematic. Nearly a million people are infected with HIV/AIDS, which equals more than 10 percent of the adult population.

When identity is central in an organization's change effort, it inevitably has a multiplier effect.

Most Malawian children have little education because they are needed to tend the fields and care for their siblings. In such a society, the dominant culture reinforces distinct gender roles that favor males. Thus, most routine family tasks are performed by female children. Three-quarters of the country's literate people are men.

On the surface it seemed odd: teaching girls to write and expecting dramatic and far-reaching results. But by expressing themselves through the written word, something ignited within each of the girls. Their outlooks became remarkably upbeat; their confidence waxed strong.

Instead of believing their only choice in life was to marry young (and marry well), the girls began to articulate individualized life goals. Instead of remaining silent about their dreams, the girls expressed hopes and desires through writing and by verbalizing them out loud.

For the Malawian girls, the impacts of the VoiceFlame program don't stop with a newfound ability to read and write. It shifts their mindsets. Their world expands. The girls teach other family members and acquaintances to read and write. The girls take more prominent roles in their family businesses. They strengthened their entrepreneurial skills, and some gained the confidence to start their own small businesses.

In other words, they were very different people than before. The change was dramatic—even more impressive when one considers everything that was working against them.

Appreciating the full impact the VoiceFlame program has had on the girls is often best experienced by hearing directly from them. Some of the girls developed a simple chant, a mantra that conveys their feelings. In four short lines the girls tell their full story. The message—only 15 words long—is simple yet speaks volumes about the girls' newfound perspective: "I am a writer. I have a voice. It is unique. I write with it."

The root of the change is the girls' newfound identity as writers; "writer" became a big part of who they became. And we know that people's most powerful identities—keystone identities—change everything around them.

Time and again, experience demonstrates that this degree of change isn't necessarily unusual. Whether it's a student at a Southern California trade school or a company president in North Carolina—stories both memorialized in the book—it's common to see a big jump in confidence as a result of a refresh involving a keystone identity.

## Implications for Organizations and Families

As impressive as behavior change can be for individuals, it is equally so when applied to groups of people within organizations. When identity is central in an organization's change effort, it inevitably has a multiplier effect.

As the nature of people change in concert with their thinking, an organization's habits improve, new norms are embraced, and cultural health improves. As a result, trust increases and results improve.

For our purposes, an organization is any group of persons joined by common interests or purpose.

Speaking of bottom-line results, what if you could improve the health of your organization's culture such that you could reduce your company's bids anywhere between 2 and 5 percent? Would that give you a competitive advantage?

Would that make your job, as the organization's principal

leader, easier? Do you think the experience might change the way you lead people?

### Organizational Change in Action

Based in Michigan's Lower Peninsula, Danboise Mechanical suffered when sister departments acted as independent entities, wasting energy by competing with each other rather than with competitors in the marketplace. Danboise suffered from a silo mentality that resulted in duplication of effort, lack of synergy, and missed opportunities.

The shift in people's thinking and subsequent actions was a result of Danboise's adoption of identity-based development, with professionalism as its centerpiece. Employees came to view themselves as professionals and worked hard to live up to its tenets by developing a professional mindset. They internalized the notion of being a professional in a way that was far more resolute than prior to the initiative.

Moreover, executive leadership made sure that the initiative wasn't treated as the "flavor of the month."

It changed the culture; it felt like a revitalized company. By becoming more interdependent, Danboise benefited in myriad ways beyond breaking down their silos—as important as that was.

Again, this type of dramatic change—one spawned by identity-based development—isn't a "one-off." For instance, the performance of one division of Otis Elevator in North America went from "worst to first," in statistical terms, in 24 months. That division took on a new aura—thanks in large part to identity-based development and reinforcing it in every aspect of the business.

So taken by the results as well as the process, leaders in both Otis and Danboise adopted a new approach to leading. Rather than attempting to squeeze new behaviors out of the proverbial orange, they chose to grow better oranges. These leaders learned that when someone takes on the mantle of being a professional, a lot of things naturally take care of themselves.

It's strategic in nature because it develops the whole person. Time and again, when leaders learn more about identity-based development, it disrupts their thinking about development and change management.

When leading others, what do you emphasize, behaviors (doing) or being (identity)?

Companies that have made professional ideals their north arrow (meaning they have made a commitment to integrate them into the fabric of their business) should take professionalism out of the shadows and bring it into the sunlight.

But what about talking up the professionalism in environments outside the organization, such as market-facing audiences? For instance, what impact might that have on sales prospects or on investors?

Declaring what you stand for—in this case that your organization is built on professional ideals—with market-facing audiences can be terrific. That is, it can be terrific granted that (1) the organization and its people largely emulate the admirable traits and characteristics that people come to expect from those proclaiming to be professional and (2) that it's communicated effectively. The former is showing (actions); the latter is telling (words). Your actions must be consistent with your words.

## Breaking the Scourge of Shame

Many researchers and therapists today believe we have an epidemic of shame. That shouldn't be surprising if people increasingly aren't clear about who they really are. In the absence of identity, we tend to be tossed to and fro by our culture's finicky whims. Under such conditions, shame has a fertile breeding ground. This is why it's so important for us to be clear about who we really are.

Shame is an especially painful self-judgment about one's self-worth that gets to the heart of who we are (our identity). Shame whispers, "There's something very wrong with you."

Identity proves to be especially valuable as both a prevention and intervention in managing shame. For example, 42-year-old Randy, a star merger-and-acquisition guru, takes a big risk on a tempting but shaky company that quickly loses 80 percent of its market value.

As a "professional" (tier-one identity), Randy felt badly about the stinging impacts on his investors, but the risk was disclosed up front. While Randy felt mortified, he successfully avoided feeling shame.

Just as you're not going to win the Daytona 500 with a 300-pound concrete block tethered to your rear bumper, it's improbable that you'll be able to reveal your best self with shame dragging you down.

Identity is akin to an inoculation from shame. When you're secure in yourself, you won't be obsessed with being liked,

One of the reasons people embrace identity so readily is a sense that it eventually will make them better people... Get better and you'll be better.

you won't measure your success against others, you won't be fixated by what others think of you, and you won't allow others to define you.

## Becoming a Better Person

For many who have undergone an identity-induced change, becoming a better person is the thing they treasure most. Identity plays an important role as a first-order mover of behavior, but its ultimate power is its ability to transform.

People approach identity in one of three ways. Depending on the situation, people treat identity as a means to (1) get something they need or want, (2) help them avoid making regretful decisions, or (3) help them grow as a person.

These can be sorted into the following categories: intervention, prevention, and catalyst. The impact and benefits associated with each are clearly useful, although there are significant differences in scale between the three. In terms of impact, you might think of them as good (intervention), better (prevention), and best (catalyst).

### Intervention, Prevention, Catalyst

Intervention focuses on filling a short-term need that's largely tactical in nature. Prevention focuses on avoiding falling prey to unwise pursuits, unsavory temptations, and the self-indulgent whisperings of one's own ego. Catalyst focuses on becoming secure in who you are or who you're trying to be.

Catalyst is the ideal. When identity is treated as a catalyst, it invariably creates the greatest impact. Because the focus is on becoming something (i.e., it's forward looking), a person's capabilities naturally grow in conjunction with their growth as a human being.

Contrast that against treating identity as merely an intervention, which at its core is primarily about problem solving and helping people to grow their capabilities.

Sometimes what we don't do says as much about us as what we actually do. This is where prevention comes in. Treating identity principally as a prevention has worthwhile benefits. Prevention helps us to avoid saying something or doing something we'd later regret.

Developmentally speaking, intervention and prevention are largely focused on *doing*, whereas catalyst emphasizes *being*. Catalyst has a forward-looking nature and thus is the higher-order approach.

Becoming a better person typically involves things such as a change in one's thinking, an enhanced view of oneself, and a shift to internal validation as one's primary source of self-esteem. Each is foundational, consequential in its own right. They're also representative of the types of things one normally associates with higher-order development.

### Get Better, Be Better

One of the reasons people embrace identity so readily is a sense that it eventually will make them better people. For most, the relationship between a robust identity and becoming a better person is self-evident. Get better and you'll be better. People sense this intuitively.

Identity is, for each of us, our path home. It's our north arrow, one reflecting both our best intentions and noble desires. Because we own it, we're invested.

Getting this identity thing right can be hard, but that mustn't dissuade us. When it comes to aspirational pursuits, falling short is inevitable. But each of us is more than the sum of our individual behaviors.

Writer Charles Moore wrote about a teaching moment that Leo Tolstoy shared with his readers. A priest had been criticized by one of his parishioners for not "walking the talk." The critic told the priest that the principles he was teaching must have been just as erroneous as these aspects of his behavior.

In response, the priest admitted his shortcomings in living up to the ideals he espoused, but he disputed the parishioner's conclusion. He said, "Look at my life now and compare it to my former life. You will see that I am trying to live out the truth I proclaim."

A robust identity brings out the best in us. And identity can make what we become that much more robust.

Identity's fruits can be applied to virtually every aspect of the human condition. Make no mistake, identity is a difference maker regardless of age, tribe, or station in life. And since life is about becoming, identity—with its unique ability to address the whole person—is central in our efforts to become a better person.

## A Final Note – From the Author

As the author has noted, this identity thing is a big deal. When it comes to the subject of identity, there's a lot to unpack. The fact is, the topic of identity encompasses so many important aspects of one's life personally as well as professionally. And, as this summary illustrates, identity is a natural elixir in prompting desired change.

In some instances, it may even change one's very nature. So often, dramatic change is precipitated by a shift in identity. Thus, identity should be central in any change effort. It's higher-order development at its best.

There will be some who see the primary aim of this book to be the building of a personal brand, which is the public side of identity. But that isn't the aim. Rather, it's to help people develop the private side of their identity. It's about proactively defining ourselves and caring more about what we think of ourselves than what others think of us.

It's important to allow identity's private side (i.e., defining ourselves) to drive its public side (i.e., a personal brand), not the other way around.

The dust jacket of ***The Power of Identity*** dramatically superimposes an eye-catching yellow umbrella amid a sea of plain, generic umbrellas. This powerful image artfully depicts the message and purpose of the book. The yellow umbrella represents a fresh, vigorous version of our identity.

And that's the all-important aim of the book: for readers to forge their own vibrant, distinctive self. Everyone should have a yellow umbrella.

When you're confident about knowing who you are, you have a powerful north arrow. Absent that, you'll forever be buffeted by culture's persnickety demands, your own ego, or by cantankerous people.

With a rock-solid identity you won't be obsessed with being liked. You won't measure your success against others. You won't be fixated on what others think of you. You won't allow others to define you.

You'll feel less conflicted and gain a surprising boost in self-esteem. You'll be secure in yourself—something that, unfortunately, has eluded so many.

## Zooming In On Your Next Read

### The Power of Moments

**Why Certain Experiences Have Extraordinary Impact**

*By Chip Heath and Dan Heath*

Chip Heath and his brother, Dan Heath, have written four New York Times bestselling books: *Made to Stick, Switch, Decisive,* and *The Power of Moments*. Their books have sold over three million copies worldwide and have been translated into thirty-three languages including Thai, Arabic, and Lithuanian.

## Creating Your Defining Moments

Chip and Dan Heath believe that certain individual moments in a person's life have immense impact. They call these defining moments and they are "meaningful experiences that stand out in our memory." Some of these moments happen by chance, but others are created. In their book, ***The Power of Moments: Why Certain Experiences Have Extraordinary Impact,*** the Heaths explore the necessary elements needed for a meaningful moment to exist, and they also explore how different individuals and organizations have been able to apply these principles in order to create memorable experiences that can change both business and lives. Their goal in writing their book is to help the reader create defining moments in their own lives and businesses.

In the first chapter, the Heaths discuss what they call duration neglect. Duration neglect refers to people's tendency to forget the actual length of an event. Instead, what people remember most are "the best or worst moment, known as the 'peak'" and the last moments. Beginnings also play an important role in a person's memory of an event. The Heaths use these ideas to prove that people do not rate their experience by averaging the emotion experienced throughout the whole duration, rather they rate their experiences based upon "the peaks, the pits, and the transitions."

There are four elements that alone or in conjunction with the other three have a tendency to create defining moments: elevation, insight, pride, and connection. The authors organize their book around these four elements. While defining moments can be either positive or negative, the authors focus on positive moments because those are the moments they want to help people create more of.

The Heaths believe that three ideal times for defining moments are pits, peaks, and transitions. Peaks are high points in life or in an experience. Some of these milestones include retirement and accomplishments within a person's career. They then discuss pits. A pit, the lowest part of an experience, can actually be turned into a peak if handled well such as when a customer complains and gets satisfactory resolution. Examples of pits are negative feedback and the loss of a loved one. Transitions happen naturally in life, and the authors advocate making them into special moments. Examples of these life transitions are the first day of school, the first day on a new job, and a promotion.

## Elevation

The first element that can help make ordinary moments memorable are moments of elevation. These are experiences that go beyond the ordinary. They are frequently joyful, and they are considered peaks. The authors believe that these moments deserve planning. Too many businesses, the posit, focus most of their time on remedying areas of weakness and not enough time on creating moments of elevation. This is counterproductive, they say, as improving the experience from good to great has a higher financial payoff than moving from negative experiences to neutral ones. The Heaths refer to a study done by the research firm, Forrester, which states that elevating the positives earns a company nine times more money than eliminating the negatives does.

The authors explain that positive moments can be created through "elevation, insight, pride, and/or connection." To create such a moment through elevation, the Heaths recommend boosting sensory appeal, raising the stakes, and breaking the script. While all three elements are not necessary for a particular moment of elevation, most such moments have at least two of these elements. Boosting the sensory experience can involve any or all of the senses, and it involves making things beautiful. Raising the stakes can involve "productive pressure" such as making something into a performance or including a deadline. The Heaths devote an entire chapter to breaking the script. A script, "refers to our expectations of a stereotypical experience." It can be thought of as creating a surprise; however, it is a strategic surprise that forces a person to think about the actual script itself. To exemplify this, the authors point to Southwest Airlines. They encourage their flight attendants to be cheeky when making their safety announcements. These are important because these announcements can turn into peak experiences of the trip.

## Insight

The Heaths describe moments of insight as moments that "deliver realizations and transformations." While many of these moments happen spontaneously, there are a couple of strategies the Heaths have for artificially creating these moments. The first of these is helping people to trip over the truth, and the second is stretching for insight. Oftentimes people will not see the truth until they are forced to, but when they do finally see the truth, that moment can become a defining one in their lives. These are not long and drawn out moments. They usually take minutes or hours to happen. The key to tripping over the truth is that people have to come to the realizations themselves. The events that lead to these realizations can be manufactured, but the lessons must be learned on one's own. A necessary ingredient, however, is that the facilitator of the moment must know what outcome they want to bring about.

Helping people trip over the truth is one way to bring about moments of insight. The other is to put people in situations where they must stretch for insight. "To stretch is to place ourselves in situations that expose us to the risk of failure." This is important because "action leads to insight more often than insight leads to action." Mentors can play a large part in helping people stretch because they push people to become more than they currently are, but mentors also provide direction and support. This relationship gives a person assurance that if they try something new, someone will be there to help them if they fail. This pushing opens the mentee up to the possibility of failure, but it also allows them more moments for self-insight. The Heaths say, "The promise of stretching is not success, it's learning."

## Pride

The next element that can help create a defining moment is pride. Part of moments of pride include working hard and gaining positive results. It is also important, however, that the person is noticed by others. People can help others experience moments of pride simply by recognizing them. The Heaths posit that "while recognition is a universal expectation, it's not a universal practice." The Heaths encourage people to practice recognition constantly with a preference to weekly or daily recognition rather than monthly or yearly. The Heaths are not fans of employee of the month programs because they can breed cynicism as the best employees cannot always win all the awards, so less than stellar employees eventually earn the awards, making them essentially meaningless. To get around this in a formal recognition program, the Heaths recommend using objective measures to determine recognition. Such an objective measure could be sales volume. The other problem the Heaths have with such programs is that the recognition is programmatic rather than personal. The recognition that means the most to people is frequently spontaneous and refers to specific behaviors. In short, "effective recognition makes the employee feel noticed for what they've done." The Heaths refer to researchers who have shown that providing praise often benefits the person being praised just as much as it does the person they are praising.

The Heaths also believe in the importance of multiplying milestones. By this they mean celebrating numerous smaller milestones a person meets on the way to their biggest milestones. One of the benefits of this frequent recognition is that it helps make goals more tangible. For example, the goal of learning to play the guitar is not very specific, and as such, a person may give up after a short period of time. If they provide themselves with many numerous goals along the way, such as practicing a certain number of times per day for a set period of time, they will have measurable goals they can celebrate as milestones. The Heaths refer to this as a level-up strategy. The authors believe that this type of thinking is missing in many areas of life. People frequently focus on "a numerical goal plus supporting plans." The authors do not find this particularly motivating. While goals like this provide accountability, they are not generally inspiring. To create moments of pride, it is helpful to consider what is actually motivating and what can be accomplished in weeks or months. They ask, "What's a different accomplishment that is worth surfacing and celebrating?" For example, a weight loss milestone that might be more motivating than losing 10 pounds in two months might be to fit comfortably in a certain pair of pants. If a person meets a milestone, the authors believe it is important to celebrate, to create a peak moment. Milestones help make people successful because they encourage people to push themselves to complete tasks. These milestones "are conquerable and worth conquering."

> Practicing acting with courage can both reduce fear and bolster confidence."

Many moments of pride in a person's life require courage. While it is not possible to manufacture moments of courage, it is possible to create moments in which a person can practice exercising their courage so they are ready when the moment to act arises. Practicing acting with courage can both reduce fear and bolster confidence. They state that "courage isn't just suppressed fear. It's also the knowledge of how to act in the moment." People can help themselves act as they wish in moments requiring courage by making specific plans for what will happen should a treacherous situation occur. An example of this is if a person who wishes to cut down on alcohol consumption makes a plan specifically for when a waiter asks them if they would like a drink. For many people, the hard part is not knowing what to do; rather it is acting on that knowledge. This requires practice. This practice, however, must require courage itself.

## Connection

The final element that can lead to defining moments is courage. "When members of groups grow closer, it's because of moments that create shared meaning." Many peak moments involve these experiences of shared meaning such as weddings and graduations. They involve personal contact; therefore, big moments are shared, not via Zoom, but through in person at ceremonies in the presence of others. The Heaths explain that groups that bond together quickly often have had to struggle together. For example, when a group of research participants had to complete an activity with their hands in cold water, they bonded more with each other than when the participants completed the same activity in comfortable water. People often will choose to struggle if they deem the work important, if they are granted autonomy, and if they are allowed to choose whether or not to participate.

The Heaths differentiate between purpose and passion. Purpose refers to a person's belief that their work is benefiting others or has a larger meaning. Passion refers to the excitement a person has about their work. People with both high passion and high purpose perform well, but purpose is actually more important than passion in regards to how well a person will perform. They say "purpose trumps passion." Part of this is because people can share a common purpose, but passion is more individual. A takeaway for leaders then is to purposefully cultivate purpose. This can be done by determining who the final beneficiaries of a project are. For example, a hospital janitor can find purpose by remembering that the ultimate effect of his or her good work is "the health and happiness of patience."

The Heaths also discuss responsiveness in terms of how it creates a sense of connection. They state that our relationships are strongest when we feel responded to and when we respond to others. This requires understanding, validation, and caring. In other words, a person should feel seen, respected, and cared about. The need for responsiveness is easily understood in personal relationships, but it is also important in professional encounters. For example, when people find themselves frustrated with a commercial experience, this often happens because they do not believe people at the company have been responsive to them. People do not like being treated like a number. Moments of connection require responsiveness. Responsiveness does not always lead to intimacy. For intimacy to develop, turn taking is required where both parties share. The Heaths write that "a defining moment of connection can be both brief and extraordinary."

Chip and Dan Heath wrote *The Power of Moments: Why Certain Experiences Have Extraordinary Impact* to help people create these defining moments in their own lives. These moments can be personal such as graduation ceremonies or weight loss milestones, or they can be professional such as moments of professional recognition and better customer service experiences. The Heaths do not, however, see these defining moments as simply a means to an end. They believe they are an end in and of themselves. Prioritizing putting out fires over creating moments, in the end, usually backfires. The Heaths write that "In life, we can work so hard to get the kinks out that we forget to put the peaks in." Defining moments are moments of action, and it is the task of the individual to stay alert for these moments.

The Heaths' book provides a clear blueprint for helping to create these moments, but it is also peppered with examples of all of these different techniques that were successfully put into place. Through these examples the authors show how people have been able to elevate the mundane to the remarkable, and in doing so, have created defining moments and memories that can last a lifetime and can help bond people together. Through the entire book, the authors prove that creating these defining moments is a noble task with outcomes that go far beyond being merely a means to an end.

Don't Stop Now
*Page 4*

## THE SUMMARY IN BRIEF

We've all seen a talented individual in action and secretly wished we could achieve as easily and effortlessly as they seem to do. Well, you can! You can replicate any skill, as long as you understand both the visible and invisible workings that an expert utilizes when 'doing their thing.'

***The Power of Potential*** is built around the idea that expertise and excellence isn't about luck or simply natural talent, but unlocking a defined system for identifying skills to model, laying the groundwork for development, choosing the right experts to emulate, and cultivating your skills over time.

Through this summary, you'll learn all about the seen and unseen ways that experts become smarter, better, more effective, and less given to insecurity and delays in their development. By the end, you'll have unlocked the power of your own potential—and discovered actionable tips for continuing your journey towards the top of the experts pile.

## IN THIS SUMMARY, YOU WILL LEARN:

- How to identify the invisible processing through which an individual's worldview influences their actions.
- Unlock your ability to master the skills you really want and need.
- The real but invisible process of receiving information and reacting to it, even when we react to the same event differently each time.
- The tools necessary to harness these inner systems to your advantage.

## Identifying Which Skill to Model

Narrowing the process of skill development into specific areas of expertise spotlights several important interconnected aspects of the modeling process.

- Knowledge and insights are most likely to result from identifying and using a specific moment in time with each expert, which you will be selecting next
- Learning can be accelerated by focusing on a more specialized subject area. Don't be afraid to dig deep.
- Interconnected activities and micro-moments influence outcomes, even when it's not immediately apparent.
- Gaps in understanding the process, left unresolved, can negatively impact the likelihood of acquiring the desired skills.
- Ancillary skill development can be useful with regard to broader developmental objectives

### Laying the Groundwork for Your First Challenge

Now that you've identified your specific area of mastery, it's time to find experts to emulate. At its core, modeling is the process of identifying, codifying, and replicating excellence. When modelling, you should choose your expert mentors according to a few key themes that will determine their effectiveness for you:

- Your own objective assessment of an expert's skill level
- Expert's availability and time commitment
- Expert's openness to exploring the process in detail
- Expert's willingness to be gently focused by the interview
- Your personal ability to develop quick connections
- Your own comfort level with an 'I don't know what I don't know' attitude

### Choosing Your Experts

At this stage, the question arises of how many experts and aspiring experts to choose for developing a model. A good minimum number is five— three experts and two aspiring/in-training experts.

Choosing more experts than needed will give you flexibility in the event that an expert backs out of their commitment.

Once you've selected potential experts, it's time to make first contact using the method of the five Ws— who, what, when, where, why.

By this point, you have hopefully connected with your experts, delivered a crisp and clear message, finalized your participant list, and established a contingency plan.

### Preparing to Interview

When it comes to preparing for an interview with an expert you hope to incorporate into your model, there are seven key preparatory steps:

- Establishing a meeting time and place
- Outlining the meeting
- Recognizing your 'chosen moment' process steps (the moment when you'll obtain maximum value from the interview)
- Adapting to your expert's needs (knowing your expert)
- Making a mental road map of your objectives
- Organization your information collection method
- Knowing and managing yourself (preparing based on your own specific needs)

By this point you should be in a perfect position to conduct an interview in a way that will extract the greatest value for everyone involved!

### Conducting Your Interviews

Conducting successful interviews with experts depends on understanding the following five key concepts:

- The importance of rapport and how to develop and maintain it
- How the Personality Map (PM) can be used to get an outside-in look at how an expert masterfully performs
- The types of questions most likely to elicit relevant information from experts for subsequent use in the first draft model
- The TATE Model: A useful and structured method for organization the skill process
- An applied example of a TATE model

Our next step is to integrate all of this information gathered from the experts into a first draft model, one which you'll hone and develop into what will become your final draft model and which will serve as your guide to developing the skills and expertise you're seeking.

## Developing a First Draft Model

So, here you are, poised with your stack of notes, or your app with annotated notes, or digitally recorded files from each interview. What comes next?

The goal is to integrate the interview notes into a crisp and practical draft model. It's often easier to work backward rather than forward, so start with the end in mind. You need to create the model with a view to ensuring you are inherently addressing the following basic questions or objectives:

What are you seeking to achieve (or help others achieve)?

Who are you doing it for?

Why does it matter?

How do you plan to organize the process steps?

### Closing the Gaps

Closing the gaps between the first draft and the final version of your skill model involves road-testing the draft model, and learning how to identify and eliminate or reduce differences identified. There are two ways to do this:

Observe the expert in action performing the skill concerned

Perform a walk-through of the draft process model with each expert

Observation is typically the best method, because you not only see the perfect model in action, but there's also no filter (other than any inherent observational bias). You're seeing the skill you hope to model in its purest form.

## Developing a Final Model

With gaps identified and dealt with, the final model is ready for development. The easiest starting point in this phase is to update and extend the process flow diagram, using the additional insights gained from the live walk-through (or second interview).

Specifically, look for distinct teaching moments for yourself within the walk-through. These reflective teachable moments serve three purposes:

To identify any residual skill steps that may not have surfaced beforehand during the expert interviews or walk-throughs

To reach 'in the moment' skill readiness. The more practiced, the more effective it will prove in practice

To start shifting focus toward cementing the quiet confidence, the kind of confidence that draws the desired skill outcome to you and keeps it there

### Understanding Motivators and Styles

People have different motivations for pursuing skills and expertise. Generally, these fall into one of three categories, or somewhere along the spectrum between them. Consider which one describes you best, keeping in mind that you may not fall perfectly into a single category.

Are you a Graduator, who is a relatively conservative change agent looking to identify problems and achieve a desired outcome?

Are you a Renovator, who is a pragmatic agent of change looking to apply their skills to solving real problems they see in their life, work, and industry?

Are you a Disruptor, someone who wants to develop skills that will allow them to transform entire industries and maybe even the world?

The motivation behind your pursuit of your skills will help you determine the best path forward.

## A Moment to Dream

Let's take a moment to apply a technique used by Walt Disney and countless others to turn their dreams into plans and their plans into reality.

First, choose three locations nearby your home or office. These should be places that are easily accessible. The first location is to dream, the second location is to plan, and the third location is to critique your plan.

### Dream

Step into your chosen location to dream and connect with your feelings of dreaming freely. Bring the big picture of your desired skill into your dream space. See yourself living vividly and without limitations, using an anything-is-possible attitude.

### Plan

Step into the location you chose for planning, then connect your dream to a concrete plan. Believe that your dream is fully realizable, and define a plan that will make it happen.

### Critique

With a plan in mind, step into the critique location and connect with your on-fire moment here. Take time to poke holes in your plan (not the dream, but the plan to achieve it) and see whether there is a better path forward.

### Prioritizing Your Focus

With your plan defined, it's time to address the next questions: With so many moving parts, where do you start first? What should you prioritize and how do you make that decision? If you can't do it all, what then? Are there any shortcut tricks that will accelerate the outcome?

Align your dream with your plan to develop a powerful visual motivator for the generative outcome you seek. If you don't have these plans yet, choose an example or make up your own for a relatively quick self-improvement activity.

## Reaching Your Destination

So, how do you know you've reached your destination and mastered your skill? Here are some typical criteria you (and people you trust) can use to assess where you stand.

Consistently successful performance: a track record of high and reliable performance of the skill int eh past

Depth and breadth of implied knowledge, such as the ability to identify patterns and relationships between things, the ability to see things others cannot, the ability to anticipate outcomes, understanding complex concepts or systems, and making the complex simple.

Peer recognition and respect: being seen by experts in the field as an expert yourself. Getting expert attention may be challenging; however, the power of social media can turn this around

Experience: the period over which the skill has been performed, typically measured in years. Generally, the longer a skill has been performed, the more perfected it is. Also consider the frequency of skill application, not just the number of years

Self-reflective: Experts can pinpoint their latest mistake in agonizing detail, typically because it eats away at them.

Credentials: Experts commonly hold professional certifications or licensing

## Don't Stop Now

Now, how do you turn your mastered skills into a lifetime as a change champion? Change champions are individuals who:

Understand and acknowledge the need and reasons for change as well as the ecosystem impacts that will result

Set clear outcomes that are accomplished via the planned changes

Understand and plan for things that may work for or against their journey

The possibilities are infinite and you can make a difference now! And, perhaps most crucially, have fun doing it!

For over twenty years, David Wray has been a passionate transformation and change management executive. He has worked with Fortune 100 companies and individuals throughout the Americas, Europe, the Middle East, and Asia. Seeing firsthand how many people struggle—and often give up—while trying to learn new skills, he wondered why some manage it almost effortlessly. During this quest to understand the "differences that make a difference", he discovered their secrets.

## The Power of Regret

### How Looking Backward Moves Us Forward

By Daniel Pink

Daniel Pink is the #1 New York Times bestselling author of seven books -- including his latest, *The Power of Regret: How Looking Backward Moves Us Forward.* His books have sold millions of copies around the world, been translated into forty-two languages, and have won multiple awards. He lives with his family in Washington, DC.

# Looking Back to Move Forward

We live in a world where many people extol the benefits of living regret-free. The theory behind this ethos is that to live without regrets means we accept that every action we have taken has led us to where we are and who we are today. The concept is so prevalent that many people burn the phrase, "no regrets" onto their bodies as a tattoo. Author Daniel Pink, in his newest book, ***The Power of Regret: How Looking Backward Moves Us Forward,*** confronts this idea, and comes to the conclusion that regrets, properly conceptualized and utilized, are actually beneficial and can point us to what we need to do in order to live the good life.

Pink defines regret as the feeling a person gets when people believe their present would be better had they made a different choice in their past. Focusing only on positive emotions and drowning out the negative ones can detrimentally affect a person's life and potential. Pink's goal in his book is to advance the claim that regret is a necessary emotion and that, if used correctly, can help us course correct and create better futures. If used incorrectly, however, it can lead to either overwhelmingly negative feelings or to stagnation and fear of decision making.

## Regrets Make Us Human

For Pink, regret is part of what makes us human. This is because in order to regret something, we have to perform two separate cognitive feats: we need to both go back in time and go into the future. In other words, in order to experience regret, a person must look at their present and experience some dissatisfaction. The person then must cognitively travel back to the past and mentally change some action before then projecting themselves back into the future to see how his or her life would look different had that revised action actually occurred. This is not something beings with lesser formed intellects can perform. That being said, it's such a crucial aspect of being human that not being able to experience regret in this way can signal a problem in a person's psyche.

This is just the beginning of regret, however. In order for a person to experience regret rather than sadness or despair, they must compare their present circumstances with the alternative imagined circumstances and determine that the alternative is better. They then must assign blame.

For regret to occur, the person must feel that the outcome was determined by actions they took, not by a twist of fate. To extrapolate on Pink's ideas, a person might experience regret if they left a stove running and their house burned down. They would experience sadness, perhaps, but not regret had a wildfire come and burned their house down.

## The Nature of Regrets

Pink then begins his discussion of the nature of regrets. He describes counterfactual thinking which occurs when our minds are able to concoct circumstances that never actually existed in real life. In other words, we can imagine other possible outcomes. Some of these scenarios he describes as "at leasts." With "at least" thinking, a person sees an outcome and looks at other possible worse outcomes. This leads the individual to think "At least that didn't happen." These are also called downward counterfactuals. On the flip side, people can come to an "if only" counterfactual. With this scenario, a person looks at a negative outcome and thinks of what better circumstances they would be faced with if only they acted differently in this past. This is called an upward counterfactual.

Despite people's dislike of the feeling of regret, Pink claims three benefits can arise from the emotion:

1. It can improve decision making. This happens because past regret can slow down our decision making as well as help us make different decisions in the future.

2. It can improve performance. Regret can do this by increasing persistence. A large part of this is because people want to avoid the "if only" feelings associated with regret. This can help a person if the regret was their own or even if it was a hypothetical regret of a fictional person. In other words, a person might read a story of someone who experienced regret, and then they become more persistent in their own actions in order to avoid feeling the same way.

3. It can deepen meaning. Regrets can help people make more positive decisions in their present. The example Pink gives is of a woman who regretted not spending enough time listening to the stories of grandparents in the past. Now that the grandparents are gone and the regret has set in, the person makes sure to hear the stories of her own parents, so she does not have that regret as time passes.

Pink describes different attitudes people have towards feelings, and he comes to the conclusion that with regrets, the best option is to understand that feeling is for thinking. He believes that if people acknowledge their feelings, think about them, and use these thoughts to make better decisions in the future, people will create better outcomes. If a person ignores feelings, they can be led into delusion. If they indulge them and value them for only what they are, they can fall into despair. If they use them and think about them, however, these negative feelings can aid us in our future decision making.

## Type of Regrets

Pink and his colleagues launched the World Regrets Project. As part of this project, they have recorded the regrets of over sixteen thousand people over 105 countries. Through analyzing these regrets, Pink has come to believe that while the surface level of many regrets looks different, the regrets share a deep structure. Looking at the deep structure of the regrets, he came up with four main regrets people have: foundation regrets, boldness regrets, moral regrets, and connection regrets.

The first type of regret he discusses is foundation regrets. These regrets concern such actions as not saving enough money for the future and not taking care of one's health. The human need not being met with a foundation regret is a need for stability. This need for stability crosses multiple different facets of human life including the physical and financial lives of people. These "regrets arise from our failures of foresight and conscientiousness." The basis for a lot of these regrets is temporal discounting. In other words, we overvalue the present and undervalue the future. These regrets involve placing too much emphasis on areas where there is no lasting value. One key aspect of foundational regrets is that they compound. This means that small daily choices can add up to large negative effects in the long run. Pink cautions, however, against what he calls the foundation attribution error. If people fall into this erroneous thinking, they are likely to attribute failures to personal faults or decisions. While this may be the case, some of our failures stem from situations outside of our control. The main lesson to be learned from foundation regrets is to plan ahead.

The next type of regret Pink explores is boldness regrets. These regrets arise when we do not take an action that we later wish we had. These regrets could involve a single instance where we did not act boldly, or they can accumulate over a lifetime of small decisions. The main need not being met with boldness regrets is growth. Many people's boldness regrets involve not speaking up when they believe they should have. "The pain of boldness regrets is in the pain of 'what if?'" Pink goes on to explain that people regret inaction more than action. Pink believes this is because when we act, we know what has happened, and we don't have to ask "what if?". The lesson to be learned from boldness regrets is to speak up and take risks.

The third regret Pink discusses is moral regrets. These regrets occur when we do not act according to our belief of what is right and what is wrong. With moral regrets, the need we are deprived of is a feeling of goodness. Moral regrets are difficult to pinpoint because people vary so greatly in their definitions of morality. Only 10% of the deep structure regrets were moral regrets, but when they occurred they were especially painful. Of the regretted moral breaches people expressed regret over, the five greatest were as follows:

1. Harm such as bullying

2. Cheating

3. Disloyalty

> The lesson to be learned from moral regrets is to do the right thing."

4. Subversion or disrespect for authority
5. Desecration which involves regrets about degrading the sanctity of something.

The lesson to be learned from moral regrets is to do the right thing.

The final deep structure regret Pink explores is connection regrets. These regrets form when we have failed to maintain connections with people important to us. The human need not being met with these regrets is the need for love. Connection regrets can be broken down into two categories: closed door and open door regrets. Closed door regrets occur when a person has died and no further connection is possible. Open door regrets occur when there is still a possibility to do something about the relationship. Some of these connection regrets occur because of a conscious decision or a rift that occurs. Others occur when people simply drift apart. People, unfortunately, become fearful about fixing connection results because they overestimate how annoyed the other party might be and underestimate the probability that they would welcome the contact. "The lesson of closed doors is to do better next time. The lesson of open doors is to do something now."

## What to Do Now

If regrets are a natural part of human life, what can we do in order to maximize the benefits they can provide to us while minimizing the psychological harm? Pink lays out a two step process. First, we should undo the regrets if possible. "[P]eople are much more likely to undo regrets of action rather than of inaction." One reason for this might be because action regrets often stem from one harsh incident whereas inaction regrets elicit less extreme and instant emotional discomfort. When looking to undo a regret, a person can offer an apology or try to make current decisions that mitigate the negative effects of past decisions.

Second, we can "at least" the situation. In other words, we can look at the situation and look to see what could be worse if we had performed another action. We can also look for the silver lining in what has occurred. While these will not change our current situation, both can help mitigate the emotional distress we feel when we cannot undo a regret.

There are three things we can do to help ourselves take the feeling of regret, intellectualize it, and turn it into positive action. The first is self-disclosure. When we put feelings into words, we can understand them better and deal with them more effectively. This can be either disclosure to another person or self-disclosure through writing. The phrase Pink uses is "relive and relieve" to discuss the power of self-disclosure.

Next, people need to focus on self-compassion. Pink discusses harm that can come from focusing just on self-esteem. At its worst a focus on self-esteem can lead to narcissism and a lack of empathy. He prefers fostering self-compassion which involves treating ourselves like we would treat other people. If another person messes up, we are often more kind to them than we are to ourselves. He sees a focus on self-compassion as having the benefits but not the drawbacks of focusing on self-esteem.

Finally, he encourages self-distancing. This helps people "analyze and strategize" about their regrets. One way a person can do this is through space, by positioning oneself as a fly on the wall witnessing the regret. The second way to do this is through time. When we do this, we look to the future to determine how we will feel about a regret a month, a year, or even fifty years into the future. The third way to self distance is through language. We can do this by referring to ourselves, in our thoughts, by our first name or by third person pronouns.

Pink's main warning about regret is to not allow ourselves to dwell too much in anticipatory regret. Looking at how we may or may not feel regret in the future can help us make decisions in the present. If we spend too much of our mental space anticipating regret, however, we can paralyze ourselves. To remedy this, Pink urges us to see if a potential regret would fall into one of the four deep structure categories of foundation: regrets, boldness regrets, moral regrets, or connection regrets. If a certain action could trigger one of these regrets, we should put some time and attention into making the decision. If it does not involve one of the deep structure areas, then we can take the decision less seriously.

Pink has surveyed and analyzed the surveys of thousands of people. From these surveys, he and his colleagues have come to understand the underlying structure of regrets. Understanding these regrets can help people come to peace with their past and make better decisions in the future. Pink offers some concrete ways for how a person can do this. Instead of extolling a "no regrets" lifestyle, a person can then use their actual regrets from the past to form a better future.

## THE SUMMARY IN BRIEF

If you've ever felt the strain of being "the Only" in the room—the only woman, person of color, unconventional thinker, or outsider by background or experience, you surely know that sense of difference can create self-doubt, silence strong ideas, and limit visibility. Too often, people who feel they do not fully belong hold back, despite a desire to communicate with confidence and make a greater impact.

***The Power of the Only: Own Your Voice, Thrive in Any Environment*** reframes this challenge as an advantage. It is a practical, reflective roadmap for transforming uniqueness into strength rather than liability. Through structured exercises, real-world stories, and research-backed guidance, readers learn how to reframe limiting beliefs, communicate with clarity, and step forward with confidence. At the core are five principles that help individuals recognize their inherent power, articulate their voice, and focus on thriving rather than merely fitting in.

Written by Angela Chee, an award-winning former television news anchor, media and communication coach, keynote speaker, and host of *The Power of the Only* podcast, the book draws on more than two decades in media and leadership development. Chee blends her experience as a pioneering Asian American woman in broadcast journalism with insights from CEOs, founders, creatives, and everyday professionals, to create a practical guide to leadership, visibility, and authentic influence.

## IN THIS EXECUTIVE BOOK SUMMARY

- Learn how to reframe being "the Only" as a strategic advantage
- Build confidence by recognizing and owning your existing strengths
- Develop a clear, authentic voice and improve communication with clarity, presence, and connection
- Shift from survival mode to long-term growth and leadership impact

INTRODUCTION

## The Power of the Only

The Power of the Only is seeing, understanding, and feeling what others don't. It's leveraging this unique perspective to achieve your goals and create change for yourself and others. It is cultivated through years of navigating challenges and unfamiliar situations as an Only—whether you are the only woman, person of color, LGBTQ individual, neurodivergent professional, or the lone voice in the room who sees things differently and seeks to shift the status quo, break through barriers, and create something new.

When you step into this power, you know the value you bring to every interaction. You don't second-guess yourself. You know what you want and don't want, what you are willing to do and what you are not, and you don't accept that these decisions are unavailable to you. You will thrive in any environment and be the bridge builder for the next generation of leaders, ideas, and innovation. But where does this power come from?

It's already inside us. You already have everything you need. If you are an Only, all the things that may have been challenging in the past, such as the act of hitting barriers and either breaking through them, going around them, or forging a new path, are what have helped shape you to see beyond, understand, navigate, process, empathize, and innovate. Your power is already inside you waiting; all you have to do is tap into it.

Growing up as the only Chinese American girl around taught me how to navigate conversations, be comfortable, and connect with different groups. Working in competitive industries like Hollywood and TV news helped me hone my skills and know how to be seen and heard, despite others telling me it would be too hard. When I was younger, I felt like I had to hide parts of myself; now, I am comfortable in my skin. It took time and various experiences to step into who I am. Once I truly embraced being an Only, it started to make a difference in my life.

### The Five Principles of the Power of the Only

To harness the Power of the Only, we must break through barriers, both internal and external. We must see what those barriers are, understand where they came from, and redefine them so that they are no longer obstacles but strengths.

Through my research, experience, and years of interviewing individuals who have stepped into their strength and thrived, I've identified five guiding principles for doing the same:

1. Own your opportunity
2. Own your power
3. Own your voice
4. Own your communication
5. Own your future

PRINCIPLE 1

## Own Your Opportunity

Owning your opportunity isn't just saying yes to the opportunities in front of you; it's also showing up when others say there are no options. You don't listen to the limiting messages from society, the "You can't do this," or "You shouldn't do that." You see what is possible and believe you can achieve it.

For my whole life, I was taught to be grateful and not make a fuss. It was the built-in template of my immigrant parents.

All of us have a set of internal rules that shape our decisions, feelings, and, ultimately, our lives. These rules can be influenced by our families, life experiences, workplaces, and communities. And sometimes, these rules can block us from our true potential.

Despite all the logical, personal, external, and probably very good reasoning as to why you didn't own your opportunity in the past, you *can* change and learn to navigate your reality with the goal of owning your opportunities in the future. You don't have to be on television or be an award-winning filmmaker. Everyone deserves to own their unique and desired opportunity, whatever it may be.

To own *your* opportunity, you must first acknowledge that some circumstances are not your fault and that you can't fix everything. When you can see that situations are not always in your control but don't internalize this lack of control as a personal flaw, you can more easily access your power and move forward.

Then, you must reframe your challenges. When you understand where your barriers are coming from, you can honor your past, see it as a gift, and use it as fuel for the future. But most importantly, you must view being an Only not as a burden, but as the most important opportunity that you own. Having the ability to navigate diverse perspectives and serve as a bridge builder is a true superpower.

### Recognize It's Not All Your Fault

As Onlys, there will be barriers that aren't our fault. For some, these challenges may be cultural; you may have a lan-

> True worth comes from being in alignment with yourself.

guage barrier or be restricted by cultural norms. Maybe you are ruled by family values or parental expectations. Others may face economic or social barriers that can limit access to opportunities. Systemic injustices like discrimination and gender inequality can also play a role. It's important to recognize your true value and realize that there's not always something to fix or prove.

Sometimes, you may feel a bit exhausted and feel like no matter how hard you try, it's not enough or there's another level to break through. It may take longer to own your opportunities than others if they don't have to overcome the same hurdles you do. These obstacles can slow you down, but you don't have to let them stop you. To own our opportunity, we first need to take a deeper look at where these external and internal barriers come from and what is ours to carry.

Once you have acknowledged the barriers in your life—internal, external, or both—you can create your own story. You don't have to accept what has come before. It's time to challenge the status quo and redefine power and success on your own terms.

### Reframe Your Challenges as Power

Reframing your challenges is shifting your perspective, honoring your past, and embracing all your experiences as stepping stones to growth and empowerment.

We may have taken on barriers from society, our families, and the media; however, we have the agency to control what we take in, what we keep, and what we let go of. To reframe your challenges as power, mine your past challenges for insights, honor your history and the challenges it presents, and embrace those challenges fully to own your opportunities and move forward with abundance and power.

By embracing your challenges or what you once viewed as roadblocks, you can step more fully into your true self. This shift not only cultivates a more positive and resilient mindset but also empowers you to own your opportunity with confidence and perseverance. The process of enduring and overcoming these challenges reveals your true capabilities, fostering a sense of self-assurance and strength.

By appreciating your struggles, setbacks, and barriers, you transform them into powerful lessons that fuel your growth. This mindset allows you to continuously learn, evolve, and thrive, ensuring that you not only recognize but also fully own the opportunities that come your way. In doing so, you become the architect of your own success, turning every challenge into a stepping stone.

### See Being an Only as an Opportunity, Not a Burden

Progress in society's efforts to make change in many areas is slow and often comes up short. That's why it's more important than ever to view being an Only not as a burden, but as a unique opportunity to create meaningful change. By embracing this perspective, we can leverage our distinct voices and experiences to affect change where it matters most.

Do you wonder why it's your responsibility to step up, explain yourself, and educate others? I often hear from Onlys about being disillusioned and tired of running into the same persistent roadblocks.

I believe the very reasons some might view being an Only as a burden—not feeling like you fit in, being isolated, or facing discrimination and microaggressions—are the same reasons why it's more important than ever to own our opportunity and create change, not just for ourselves, but for others.

Having someone with a distinct perspective in the room and fostering diverse perspectives are essential for effective decision-making, innovation, and preventing groupthink. Groupthink occurs when well-intentioned people make irrational or suboptimal decisions because they have a strong urge to conform, leading to not speaking up or raising alternative ideas, which then leads to a uniform way of thinking.

PRINCIPLE 2

## Own Your Power

Owning your power means not letting others dictate your value. You know you have everything you need inside to succeed. You are worthy *now* and not because of your title, level, awards, number of followers, or any other external metric. You don't need permission to take up space. You don't need to change who you are to access your power. You have internal status and agency. You know who you are and what you stand for, and you know you belong there.

You've likely experienced and will continue to experience times when people don't see your power. Truly owning your power is knowing who you are, owning your worth, and embracing it fully. Ask yourself: *Do I know my own value, regardless of external circumstances? How can I improve my sense of self?*

Some of us don't own our power because we cannot see it or because we've been told we don't have any. These limiting messages, whether a passing comment or consistent criticism, can affect what you believe about yourself.

If others put limitations on you, you may start accepting narratives about who you are that don't serve you and keep you from stepping up. These narratives, both external and internal, shape our self-perception.

### Reclaim Your Story

You can step into your full power and claim it:

1. **Understand that you don't need to change who you are**, but you do need to discover who you are and how you want to show up in the world.
2. **Recognize that your worth is not tied to your title, status, or others' expectations.**
3. **Find ways to celebrate yourself** and realize it's not a luxury but a necessity for stepping into your power.

How will you know you're fully owning your power? When you can see *beyond* it.

### Don't Change Who You Are

People often feel like they need to play a role or act a certain way to fit in, or even to hide their true selves. Owning your power isn't about changing who you are; it's about *reclaiming all parts of yourself and embodying all of it*. It's not about fitting in; it's about digging deeper to discover who you are, what you value, and how you want to show up in the world.

When you figure out who you are and embrace it, you no longer rely on external validation. You cultivate a sense of empowerment, authenticity, and self-respect by not changing who you are. When you are true to yourself, you can show up more fully, foster more authentic connections, and truly own your power.

Once you take the time to understand your strengths, values, and boundaries, you too can navigate your life with more clarity and intention. Doing this also helps you live in alignment with your true self rather than being influenced by external pressure, expectations, or the need for validation.

Finding yourself doesn't usually happen overnight, but you can start the conversation today. Or, if you've had this conversation before, now is the time to revisit it.

### Own Your Worth

Owning your worth and internal status is knowing you are enough. It's about seeing and honoring who you are *right now*, even if others don't. It's knowing you are more than a title, position, label, or whatever category others may want to place you in. It's about developing strong internal status: seeing all your strengths, knowing and trusting your value, and understanding what you bring to the table.

It's about remembering who you are, even when facing challenges or transitions. Your internal status follows you no matter where you go, no matter what happens around you. You stop comparing yourself to others. You realize it's not about doing more to be worthy or defining yourself based on your achievements or others' rules and standards.

*True* worth comes from being in alignment with yourself.

### Celebrate Your Wins

We often fail to own our power because we overlook and undervalue our achievements. Celebrating both major and minor victories is crucial; it helps us reconnect with our power and fuels our drive.

Research shows that it isn't just beneficial for your well-being—it also has the potential to positively influence both your emotions and performance. It can lower your cortisol level, reduce stress, and increase the "feel-good" chemicals in your brain—the neurotransmitters that also act as hormones to keep you happy and motivated. Celebrating our wins helps move them from short-term to long-term memory so that we don't lose them. When you feel good, you achieve more and are more productive. *That* is the cycle of celebration.

PRINCIPLE 3

## Own Your Voice

It's important to own your opportunity and know your worth. As an Only, you can make an impact in the room. But unless you speak up and use your voice, nothing will change.

Owning your voice isn't about just speaking up. It's knowing that what you have to say matters and can make a difference. And it isn't just about what you say to others; what you say *to yourself* matters too. It means finally realizing you don't have to find your voice; you already have it.

> Leveraging the power of being an Only means that when something doesn't serve you, you change it.

### Why You Don't Own Your Voice

Speaking up is hard for many people. We're afraid of what others will think about us. We fear showing up, being seen, and not being good enough. As an Only, it may be even more difficult to do these things. Some might feel the burden of representing an entire group or may not speak up in fear of standing out or "rocking the boat." It just doesn't feel safe.

Here are common reasons people hesitate to speak up:

- You could be in an environment where conformity is valued and feel pressure to fit in, or there are power dynamics at play and you don't feel you're in a position of authority.
- You may be scared that others won't listen.
- You've had experiences where you were ignored, criticized, or rejected.
- You might let perfectionism, overthinking, or even comparison hold you back.
- You don't feel ready and need more experience.
- You're someone who once confidently spoke up but now needs to reclaim that voice.

Whatever your reason, overcoming these barriers is essential for making an impact and owning your voice.

### Break Through Your Fear

You shouldn't necessarily want fear to go away; instead, you need to reframe it. You want to understand where it comes from and why you need it. You need to learn how to use your fear as your partner. Shift your focus away from yourself to your message, purpose, or mission, and develop tools to calm your fear through practice and preparation. Embrace fear as a catalyst for growth and let it drive you to deliver your message with greater clarity and impact.

For many Onlys, speaking up has been and continues to be a very real life-threatening experience. Activists and advocates for underrepresented groups often face risks to their lives and livelihoods when challenging the status quo and defending marginalized communities.

In everyday work situations and beyond, the sensation of being observed and potentially rejected can trigger a primal response, making us feel as though we are facing real danger. To overcome this, we need to shift our perception of fear.

Below are four ways to help you break through fear.

**1. Reframe fear as your partner**

The key to reframing and making fear your partner is to ensure you have the optimal level of arousal. "Optimal" is when fear works for you: your brain and body are energized and you feel a sense of clarity and focus.

**2. Shift your inner talk**

Studies show that talking to yourself in the second or third person; that is, using "you" or your own name instead of "I" or "me," boosts clarity, confidence, and performance; it flips a switch in the brain.

**3. Stop focusing on yourself**

Psychologists have found that people tend to focus on the negative quality of their voice recordings, magnifying imperfections that might go unnoticed by others. One way to break through your fear is to realize people aren't noticing you as much as you think.

**4. Focus on your message and mission**

Another way to break through your fear is to stay focused on your message and your higher purpose. What you have to offer—your stories, your insights, your wisdom, or your perspective in an everyday interaction—is a gift. What you want to say matters more than your fear.

### Reframe How You Talk to Yourself About Yourself

Most of us like labels. It's easier to relate to things when we can define them with a universal term. Unfortunately, the problem with labels is that they are *not* universal and can limit us in many ways. Using specific labels to describe certain behaviors can unintentionally create barriers that weren't there before.

How can you reframe how you talk to yourself about yourself? Start by taking a closer look at how you interpret the labels others assign to you, as well as those you give yourself. You need to reframe these labels so they empower you rather than limit your potential, ensuring they reflect your true identity. You must challenge your negative self-talk, self-lim-

iting language, self-criticism, and assumptions. Understand where these labels come from, their history, the context in which they came to be, and how they are evolving today.

Once you see how some labels describe parts of yourself that don't need fixing or overcoming, you can leverage them positively and see them as a strength rather than an obstacle. You may even realize that these labels no longer define you at all.

PRINCIPLE 4

## Own Your Communication

Owning your communication means you know how to communicate so that others will hear you, allowing you to navigate any environment, whether you're leading a team, pitching an idea, advocating for change, or even negotiating with your partner or children.

It's about more than just what you say; it's about how you engage with your audience to create meaningful impact and drive change. It means being heard and felt. It means that in our interconnected and digital world, you have the tools to be clear, confident, connected, and ready for any opportunity.

It also means that, as the Only, you can see your gift of being a bridge builder and know that you have the power to plant seeds of understanding, amplify the voices of others, and foster inclusive conversations.

Owning your communication is vital to harnessing the Power of the Only. By doing this, you not only overcome your own barriers and step fully into your potential but also pave the way for other Onlys to do the same.

### Connect With Your Audience

Connecting with your audience builds trust, enhances engagement, and makes your message more relevant and effective. When people feel understood, seen, and valued, they are more likely to hear you, allowing you to make an impact and move people to action.

To help you apply this in any setting, the YOU, Amplified! Connection Framework outlines seven steps for clarifying your message and forging meaningful connections with any audience.

- **Audience**. Know your audience—who you are speaking to and what you want them to walk away with.
- **Message**. Be clear about your message: what it is, what you want to share, and why you believe what you believe and do what you do.
- **Purpose**. Know your objective and what you hope to achieve in this appearance.
- **Lead**. Decide how you will show up and how others will experience your leadership.
- **Image**. Visualize the image you want to convey—through wardrobe, makeup, style, brand colors, or video background, if applicable.
- **Feeling**. Embody the energy you want to project and the feeling you want your audience to have.
- **You, Amplified!** It's all about you. Step into your amplified self.

### Be the Bridge Builder

Onlys are the bridge builders of the future, shaped by the unique experiences and challenges of being the only one in a room. These experiences foster a deep understanding and strength in connecting with diverse people and seeing perspectives others might miss.

In these polarizing and divided times, being a bridge builder is more important than ever. As you rise and show up more, especially in leadership, part of owning your communication is understanding how to navigate diverse environments, connect with different individuals, and recognize this power. From this strength, you can create opportunities for yourself and others and be an agent of positive change.

PRINCIPLE 5

## Own Your Future

Hard work and sacrifices are part of the job, especially early in our careers and when we start something new. But who does it serve when this behavior is self-imposed and unnecessary? When it's an unconscious pattern and a burden we put on ourselves rather than a required part of the journey?

Leveraging the power of being an Only means that when something doesn't serve you, you change it. It means *you* own your future. The foundation of owning your future is focusing on thriving, not just surviving. Thriving requires recognizing that the mindset, habits, and skills that brought you this far may not be sustainable or enough to propel you forward. Instead of clinging to outdated models of success, you create your own path.

Cultivating a mindset of abundance rather than scarcity is key to owning your future. When you shift your focus from merely surviving to actively thriving, you break free from

> You don't have to make history or be the first at something to have an impact. ”

outdated patterns, societal conditioning, and others' expectations. Instead, you create a future defined by what you desire and design for yourself.

### Create a New Vision

Are you trying to be everything to everyone all the time? Do you have this never-ending to-do list cluttering your brain? Do you set goals and achieve them, yet still feel like it's just never enough? Based on societal pressure and metrics, success is usually tied to achievement, and that can be incredibly exhausting.

In the beginning, the drive for "more" can propel Onlys forward. You might feel under scrutiny, underestimated, or like there is no room for failure. This pressure to prove others wrong can be a powerful motivator.

However, there comes a point when what once fueled your success—your perseverance, grit, relentless hustle, the need to be the best, pushing yourself to the limit, always caring for others, and saying yes to everything—can become your greatest obstacles. What protected us or were our strong suits can also hold us back from our true selves and potential unless we create a new vision of what success means to us.

When you don't take the time to create a new vision of success that fits your current life stage and continue to chase achievement or other old patterns, you can get stuck.

To create a new life vision where you are at your peak, reflect on your values and priorities. The following steps will help you clarify your priorities and define what matters most at this stage of your life.

1. Determine what's important to you now.
2. Pick the values that are a priority for you.
3. List the things that will help you live out each of those values.
4. List the things you want to avoid or eliminate.

### Guard and Heal Your Energy

As Onlys, we often face many obstacles, big and small, that are beyond our control. Over time, these challenges can wear us down and deplete our energy. Being an Only can lead to feelings of being isolated, undervalued, or misunderstood. You may also experience increased pressure or responsibilities and lack of support from your company or peers.

Whether being scrutinized or facing direct and indirect bias, feeling the need to advocate not just for yourself but also others, or being asked to take on extra unpaid work or initiatives, these factors can strain your emotional capacity to manage stress and process emotions, affecting your self-esteem, motivation, work, and overall life.

To own your future, you must guard your energy and honor your wellbeing. Guarding your energy means being aware of your environment, the information you are exposed to and consume, the people you surround yourself with, and what claims your time and attention, then understanding how all of it affects you.

It means that as you navigate spaces that aren't supportive, welcoming, or built for you, you can tap into your intuition to block out—not internalize—the negativity around you. It means you decide which emotions you want to experience and which you want to release. By doing so, you can cultivate the energy to appreciate the joy and beauty around you.

### Be Discerning

The Onlys who will own the future are the ones who can be discerning about information, people, and energies to embrace. You focus your attention on what truly matters to you and learn to block out all the noise from the past, the future, and external distractions that mute the knowing in your soul.

Discernment involves understanding what you should carry and what you shouldn't, deciding what aligns with your values and what doesn't, and determining what truly benefits you. It's about setting boundaries with clarity and purpose, ensuring that you remain aligned with your true self and goals. It means being able to say:

- I don't agree.
- This is not for me.
- I've done all I can.
- I've had enough.
- It's time for me to move on.
- It's time for me to do my own thing.

Many rooms are not made for you as an Only, and things may not be set up in your favor. You may not always have the same access, resources, or networks. While this may not be fair, you can still thrive if you have the awareness and tools to discern what applies to you and what doesn't and the agency to decide what you are and are not going to do moving forward.

Trust in your ability to steer your own course and own your future. Each decision, whether it leads you to move forward or take a step back, is a step toward greater self-discovery and fulfillment. Embrace the journey with all its ups and downs, knowing that each moment of discernment brings you closer to living a life that is genuinely aligned with who you are and who you aspire to become.

## Conclusion

It often takes time to fully see what was in front of us or inside us all along. All of us have so much power and wisdom from our past and present. But to access it, to step into the future we want to create, we need to recognize it and honor it in ourselves and in our ancestors.

I know being an Only can be lonely, but now you know you are not really alone and that it is not a weakness but your greatest strength.

You don't have to make history or be the first at something to have an impact. Realize that *what* you do, *who* you are, and *how* you show up matters.

You have the power. You've had it all along.

And now all you have to do is step into it.

**Angela Chee** is a media and communication coach, keynote speaker, and host of *The Power of the Only* podcast. An award-winning former TV news anchor and reporter, she brings more than twenty years of experience in media and public speaking. Chee has worked with major stations including KCBS-TV, KNBC-TV, and Fox 6 San Diego, and has appeared on networks such as E! and HGTV. She speaks for global organizations including Microsoft, Cisco, Intel, and JPMorgan Chase. Chee helps leaders communicate with clarity and confidence and amplify their unique voice. # Learn to Embrace Imposter Syndrome

Seth Godin knows a thing or two about putting his work out there. As the best selling author of 19 books and the voice behind one of the most widely read blogs on the entire planet, Godin understands that creation requires consistency above all else. ***The Practice*** is founded on the principle that writer's block is a myth. In it, Godin instructs writers, artists, and entrepreneurs in a tested approach to getting unstuck, overcoming the fear associated with sharing creative work, placing consistency over authenticity, and learning to embrace imposter syndrome as a natural part of the human experience.

Godin's dedication reads, "The magic of the creative process is that there is no magic." He believes that we all have passion and creativity inside of ourselves. What we sometimes lack is the empathy required to create work that contributes in a productive, but authentic and joyful way. There is an identifiable pattern amongst those who succeed in creative pursuits and in those who fail. *The Practice* serves as a guide to leverage that pattern of consistent pursuit and turn passion into creative work that needs to be shared.

## Why Shipping, Creative, and Work

Before getting into the meat of the matter, Godin explains why he chose the words "shipping, creative, and work" as the terms used throughout the book. The word "shipping" is used synonymously with the word sharing and he says that "it doesn't count if you don't share it." This book is not about journal entries that will never see the light of day. It's about creations that are put out into the world for the right people to consume at the right time.

He chose the word "creative" because he aims to separate us from "cogs in the system." We are "creators, problem solvers, and generous leaders" who are creating in order to make things better than they are right now. He makes no distinction between the creative work of artists, writers, or business leaders. Anyone who is making something new is creating.

The word "work" is used to show that this is a professional pursuit. Whether or not you are currently paid for the work is not of consequence. You are approaching the creation as

if you are a professional and the work in and of itself, not the outcome, is the reason you are here.

## Trust Your "Self"

The world is full of distracting noise that prevents us from seeing a simple, but extremely powerful truth. "Creativity is a choice, it's not a bolt of lightning from somewhere else." At its core, creation is the result of having a desire to "find a new truth, solve an old problem, or serve someone else." We have control over our process alone. If we commit to practicing creation, we will live in service of making the world a better place and understand that "creativity is not an event, it's simply what we do, whether or not we're in the mood." Engaging in the process honors your own potential and allows you to enjoy the support of all other creatives who began the practice before you. You merely have to trust your creative self.

We are all on individual paths that are distinctly unique and ours. But many before us have found a way to share their perspective and make a difference. You can, too. It's all about finding the courage to be creative and the commitment to follow the pattern that those who paved the way are already implementing. The door is there. The practice will allow you to walk through it.

We live in an economy primarily focused on output. We are "brainwashed from a very early age" to believe that we must play by the rules of the system. We need to work hard, perform tasks, and in the end, we will be rewarded for our efforts. Godin posits what happens, however, when the world changes? What happens when the "prizes" we were taught to seek are suddenly "not as engaging as you'd like them to be?" What happens when the "emptiness of the bargain" becomes plainly obvious? In a changed world, you may find that you've been "busy sacrificing your heart and your soul for prizes, but the prizes aren't coming as regularly as promised." What then?

We must trust ourselves rather than the system. We must follow our own path, even if it is wholly imperfect. Godin shares a quote from The Bhagavad-Gita which says, "It is better to follow your own path, however imperfectly, than to follow someone else's perfectly." If we think about people who manage to make a real difference, they each have widely divergent paths but they have a common and overlapping practice. If we can learn to trust our hidden selves that make us and our point of view entirely unique, then we can "see the pattern, find our practice, and begin to live the process of making magic." You can make an impact. To do so, you have to "trust yourself enough to ship the work." It won't always work. It won't always make an impact. "Do it anyway. And then do it again. If you care enough, it's worth doing as many times as it takes."

When you make the decision to trust your self, two choices are combined. Firstly, you are making the choice to create something "that matters a great deal to someone," not to everyone. You choose to "be peculiar," meaning specific. Secondly, you are making the choice to "commit to the journey," not to the destination or output or outcome. You cannot control what the outcome is, only what you put into it. Not all of your work will "resonate" and that is perfectly fine. "Great work isn't popular work; it's simply work that was worth doing."

## The Professional

There is a difference between talent and skill. We are born with talents that we can choose to develop or not. We can develop skills. Professionals have skill in excess of talent. "Skill is rarer than talent. Skill is earned. Skill is available to anyone who cares enough." The practice asks us to put the effort required to develop our skill and in return, "we are rewarded with better." We gain "better taste, better judgment, and better capabilities." This is what separates the amateur from the professional.

To be clear, Godin does not put down the amatuer. He says it is "possible, admirable, and even heroic to be an amatuer." However, the amatuer works only for herself. She creates work for herself and exclusively finds joy in it. If you want to go from being an amateur to a professional, you must commit to the practice. You must do the work, show up and produce, even when you really don't feel like doing it. However, Godin begs us to "avoid the path of becoming a hack."

He writes that it may be true that any work is better than no work, we must bear in mind that "the posture of giving up your standards to get that work can quickly become toxic." When we place the value on being paid rather than creating something meaningful from a position of empathy and generosity, we risk turning ourselves off from the pursuit entirely. You become a hack when your primary goal is to "please the audience." If you lose your unique point of view, you become a hack. Professionals understand how to walk "the fine line between showing up with a generous vision and showing up trying to control the outcome."

An important responsibility you have as a professional is choosing better clients. A better client is not an easy client. They "demand better work, want you to push the envelope, win awards, and challenge their expectations." They will tell others about you and about your work. They will pay you more, on time. The problem is that most of us "don't trust ourselves enough to imagine that we deserve them." The trick is to "earn better clients by becoming the sort of professional that better clients want." You have to toss things out again and again and again until one day, you catch a better client. "When you trust yourself enough to turn pro, you're entering into a covenant with those you seek to serve. You promise to design with intention, and they agree to engage with the work you promised to bring them."

Professionals should not seek authenticity. When work is created with intention, it is by definition inauthentic. After all, a professional will create what the audience expects time and again, even when there is something else they would much rather be doing at that moment. Authenticity is not a prerequisite for professionalism and in fact, may be a detriment to shipping creative work into the world. Consistency and intention are far more valuable than authenticity for the professional.

What elements are involved in intentional action? There are six simple steps.

> Being creative is a choice and if you choose to engage in the process you will never be blocked.“

1. Figure out who the work is for, taking into account “what they believe, what they fear, and what they want.”
2. Be able to describe what change you are seeking to make in them through the work.
3. Commit to making that change in them and genuinely care about making it.
4. Send out work that “resonates with the people it’s for.”
5. Watch for the reaction from your audience to determine whether or not the work worked in the way in which it was intended.
6. Repeat.

## No Such Thing as Writer’s Block

Sometimes we look for an excuse to avoid shipping the work and really good excuses are quite easy to find and hide behind. Not having the proper credential in terms of education or experience is a very effective excuse. Fear is another excuse that is often masked with things such as a lack of time or some other constraint that won’t permit you to stick to the practice. Any excuse that works is a good excuse. Godin writes, “If it works on you, if it gives you a way to stall, to interrupt your practice and to avoid the truth of your work, then it’s now a good excuse.” Whether or not the excuse is real doesn’t matter as long as it worked.

Actual roadblocks stop everyone, not just you. Therefore, if you stop the practice or avoid the practice because of something that only affects you, “it is an excuse, not an actual roadblock.” Following this logic, Godin asserts that there is no such thing as writer’s block because “being blocked” is a chosen belief. Being creative is a choice and if you choose to engage in the process you will never be blocked.

“Writer’s block is invented” just as fears of certain bugs or beliefs in certain unverifiable phenomena are invented. We know that writer’s block is invented because it changes and is different for any person on any given day. Effectively, it is a choice just as being creative is a choice. When we choose writer’s block, it is a reflection of our uncertainty. There is no “manual or playbook” as you are creating something new entirely. It is easier and safer and more certain to choose being blocked. Writer’s block is a story we tell ourselves to avoid doing the work.

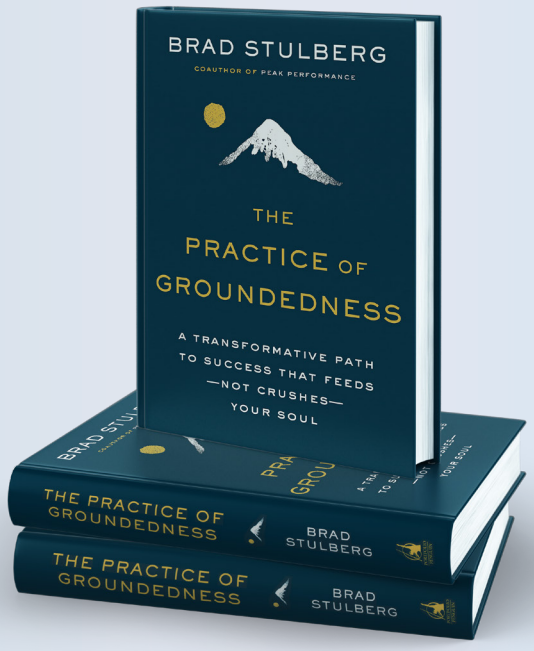
The great thing about stories is that they can change. “If the story isn’t working for us, we can find a better one to take its place.” We can rewrite the narrative that will help us get where we want to go. Writer’s block is a result that comes from the narrative we tell ourselves. “It’s not an actual physical or organic ailment, simply a story we tell ourselves, one that leads to bad work habits and persistent fear.” We simply have to stick to the practice. It’s impossible to get stuck if you are always in motion. Keep moving in the intended direction and leave writer’s block behind for good. “Good process leads to good outcomes.”

## Earn Your Skills

The Superman comic eventually bored readers because the writers would simply invent new superpowers for the hero to employ whenever a new obstacle got in his way. The real world doesn’t have superheroes and you can’t expect yourself to be superhuman. Instead of trying to be really great at everything, pick one thing that you can develop and use to make a lasting contribution. Over time you may choose to develop another superpower, but in the beginning start with just one. “Choose the skill you’re going to assert to the outside world.”

In order to earn your superpower, or your skill, “you’ll need to trust that this process makes it possible, and trust that you are the one to do it.” Likewise, you will need to stay actively engaged in learning, understanding, and applying your skill based on all available resources, of which there are more available now than ever. Your skill is earned and you cross the line from amatuer to professional when you have an understanding of both the pioneers and the current state of the work.

Seth Godin has long been recognized as a thought leader in marketing, leadership, change, and how ideas spread far and wide. *The Practice* is based on his wildly successful Akimbo Workshops, which have catalyzed change in the work of thousands upon thousands of people.



The book veers away from the prescriptive and sticks to the inspirational, offering readers bite-sized nuggets of wisdom that can be taken in any order. Organized into a numbered list of short, pithy, poetic paragraphs, it could just as easily be read as a daily devotional that is visited here and there when a lift is needed as it could be a cover-to-cover guide for getting going. Readers looking for the latter may want to opt for the workshop itself, which is sure to include a more actionable approach for putting *The Practice* into practice.

## The Practice of Groundedness

By Brad Stulberg

Brad Stulberg researches, writes, and coaches on human performance, well-being, and sustainable success. He is bestselling author of *Peak Performance* and *The Passion Paradox.* His work has appeared in The New York Times, Wall Street Journal, Los Angeles Times, New York Magazine, Wired, Sports Illustrated, Outside Magazine, Forbes, and more. He is also co-founder of the Growth Equation, a multi-media platform dedicated to the art, science, and practice of performance and well-being (*www.TheGrowthEq.com*).

Copyright © 2021 by Brad Stulberg • Portfolio

# A Healthier, More Sustainable Model for Success

Brad Stulberg coaches business executives, successful entrepreneurs, leaders in medicine, and athletes of elite status. In 2019 he started to notice a disturbing trend among his clients. While he used to focus sessions with them on developing habits and routines that improve and sustain high-level performance, he was being pulled into conversations around being burned out or the desperate need to turn work off and take a restorative break, but not being able to take a real break, even for a weekend, without feeling "restless or insecure" about work.

This angst, as Stulberg describes it, is a "deep-seated need to always be pushing toward something, lest they feel a widening gap, a sense of emptiness in their lives." And this was not the only alarming feeling or state he was identifying in his clients. Many other clients reported feeling scattered and distracted, inside and out, entangling them in an endless loop of second guessing themselves, looking back to see if they did the right thing, looking forward to plan their next move, and "getting caught up in what-if scenarios."

The themes of restlessness and emptiness extend far beyond Stulberg's own client base. In his writing and research in the worlds of performance, well being, and life satisfaction he has come across this notion of wide reaching discontent in our culture. When viewed from the outside, these top athletes, intellectuals, and creative types seem to have it all. But on the inside, they feel something's not quite right at a deep level. They are "bothered by a lingering sense of dissatisfaction." They want to turn off "all the news and busyness and email and social media notifications" and stop focusing on what's next but when they do, they "feel unsettled and restless, fluctuating between aimlessness and angst."

Men tend to describe this as a constant pressure to be invincible and women tend to describe it as feeling like they are constantly striving to meet an impossible expectation. Stulberg calls is "heroic individualism" which is "an ongoing game of one-upmanship, against both yourself and others, paired with the limiting belief that measurable achievement is the only arbiter of success." You may do a great job of looking like you have it

***Book Snaps™*** is a publication of Soundview Inc. • 225 Wilmington West Chester Pike, Suite 202, Chadds Ford, PA 19317 USA. • © 2021 Soundview, Inc. All rights reserved. all together on the outside, but with "heroic individualism you chronically feel like you never quite reach the finish line that is lasting fulfillment."

Heroic individualism is a common way of life in today's world. In ***The Practice of Groundedness: A Transformative Path to Success that Feeds–Not Crushes–Your Soul***, author Brad Stulberg asserts that groundedness is the antidote to this widespread being untethered and dissatisfied. In it he lays the foundation for the main principles that define groundedness in the first part of the book. The second part of the book shows readers how to put those principles into action, with life changing results.

## The Principles of Grounded Success

Stulberg defines groundedness as "unwavering internal strength and self confidence that sustains you through ups and downs. It is a deep reservoir of integrity and fortitude, of wholeness, out of which lasting performance, well being, and fulfillment emerge." Groundedness does not ask you to let passion, productivity, or performance fall by the wayside. Rather, it makes these qualities steady so that all you are striving for is focused, sustainable, and fulfilling.

Your efforts are in line with your values, interests, and your authentic self. Only by being grounded, can you truly soar. Stulberg identifies and describes six principles that contribute to grounded success, which are evidence-based and exist at the "convergence between modern science, ancient wisdom, and the experience of happy, healthy, high-performing people."

**Acceptance:** You cannot move forward, wherever it is you'd like to go, until you take stock of and fully accept where you are right now. So many of us get burdened with the heaviness of life. Things get messy. Things happen that are completely outside of our control. People let us down. This harsh reality can be difficult to accept. When things are not going our way, it is easier to "default to magical thinking, convincing ourselves that we are in a better place than we are." This phenomenon is called "motivated reasoning" and it refers to our human tendency to "reason our way into seeing things as we'd like them to be" instead of how they truly are.

We see this play out routinely in the professional lives of people. They know they absolutely despise the job they are in, but they don't want to deal with the discomfort of finding a new one so they stay. Miserable, but employed. Even easier than that, we just ignore the hard feelings associated with what is going wrong all together. We reach for distraction and numbing and then wonder why we still feel bad. "We engage in frantic and compulsory activity" like thinking positive thoughts or buying stuff we don't need or sending out tweets. "We expect things to get better without ever acknowledging or accepting our true starting point."

To make progress of any kind, the first step "requires recognizing, accepting, and starting where you are. Not where you want to be. Not where you think you should be. Not where others think you should be. But where you are." Acceptance is critical to your present happiness and performance as well as a key component to changing your future.

**Presence:** Modern Western society highly values speed, efficiency, and being productive above all else. We use technologies that allow us to be online, and thus available, virtually all the time. Our economies are centered around products and services that are competing to "win over and control our attention." Rather than giving anything deep, direct attention, we flit from task to task, thought to thought, engaged in the act of being busy.

A prime example of this tendency is the myth of multitasking. Once celebrated as a defining characteristic on a person's resume, we know now that multitasking is not real. No one can engage in multiple activities at once. A multitude of studies have confirmed that multitasking is not doing multiple things at once. It is actually switching between activities, giving each activity attention one at a time but jumping back and forth between them. Spoiler alert! This does not improve performance at all. It actually hurts it, quite significantly.

It has been shown that when we multitask on two tasks, we are not getting twice as much done. In fact, we get "only about half as much done, with a lower level of quality and enjoyment." When we multitask, we do worse, not better. Conversely, if we do one thing at a time, it receives all of our attention and focus. In effect, we are being present in that moment giving that activity our all. And we perform far better as a result. And it's not just our performance that stands to benefit from us being present.

Research has shown that our emotional well being is vastly improved when we stop scattering our attention. "Constant interruptions and nonstop busyness exact a severe toll on mental health." We are far happier when we are "fully present" instead of doing something while thinking about something else. The more scattered we are, the "more likely we are to feel angst and discontent." The cure is to become present.

Being present is all about "being fully here for what is in front of you. Presence is a concentrated quality of mind that lends itself to strength and stability. If you deliberately practice presence, it can drastically improve your life, both personal and professional."

**Patience:** Counterintuitively, when we attempt to push things through and make things happen, sometimes the impact is for progress to actually slow down or stop altogether. In an effort to start seeing immediate results, we problem solve and try to fix things to keep it moving forward but that backfires on us. If you want to be effective, sometimes you have to practice patience.

This is not the kind of patience that is "equivalent to waiting forever without results." Instead, it is "a thoughtful and steady persistence that requires slowing down in the short term to go faster and farther in the long term." Instead of making things happen, you begin letting things happen. Patience is the best medicine to cure our tendencies to "hurry, rush, and overemphasize acute situations in favor of playing the long game." The results are more lasting, stable, and strong when they are anchored in patience.

**Vulnerability:** In the age of social media, we have all become experts at presenting who we want to be online, rather than who we really are. We "show up" in a display that communi-

> Groundedness requires us to just be ourselves."

cates that we have it all together and everything is just fine and dandy in our lives. Not only do we only post the things that we think portray us in the best light, we change our actual image through filters and photo editing. There is little authenticity left after such careful curation.

It leaves us wondering if we are the only ones who struggle, who are harboring secrets about the real state of our lives. Everyone involved, from those posting to those viewing, has their perception shaped and changed in subtle but constant ways. We are all "keeping up with the digital Joneses" and as a result, we never feel like we are enough or that we have enough. It creates a cognitive dissonance inside us where our internal and external lives don't mesh up.

Groundedness requires us to just be ourselves. The ticket to being okay with who you truly are is to be vulnerable. You have to be honest with everyone about who you really are, especially "when that means confronting perceived weaknesses and fears." You must place a priority on being completely open to "the good, the bad, the beautiful, the ugly." When you open up to your vulnerabilities and better yet, share them with the world, you become more solid and grounded.

**Deep Community:** Despite the fact that old-growth redwood trees stand more than 200 feet tall, their roots only go about six to twelve feet into the ground. They are able to remain standing in any kind of weather because their roots grow out, sometimes hundreds of feet, and become entangled with the roots of neighboring trees. Together, they survive. And humans are no different.

"We, too, are meant to be part of a network that is larger than us. We, too, thrive in collectives. We, too, are most grounded when we are enmeshed in tightly knit communities." Unfortunately, loneliness is an upticking trend in America. We feel like we are more connected than we have ever been, but it's a false promise. Our loneliness breeds higher stress, decreased quality of sleep, increased risks of numerous serious diseases, anxiety, depression, and inflammation. Loneliness is bad for our health and wellbeing. We are lacking community and it's starting to show.

"Our ability to survive, let alone thrive, relies upon being members of a tribe." It's time we turn our energy towards others, forming bonds, belonging to something bigger than ourselves, and making the world and our inner selves a better place. Deep community is a "basic human need" and it is necessary for groundedness.

**Movement:** There are innumerable studies that show the correlation between exercise and improved physical and mental well being. Movement can prevent mental illness and also treat it. Society has given movement a bad reputation through our "infatuation with gut-wrenching workouts, external appearance, and exercise as a punishment." This has created a distorted view of "our bodies and how we ought to use them" instead of allowing us to embrace genuine movement as a means to a better life.

Our bodies and our minds are integrated with one another. They are not separate stand-alone systems. What is happening in one has a very real effect on the other. When we regularly move our bodies "we do a better job of controlling our emotions, we think more creatively, and we retain more information." The science illuminating the very real connection between the mind and the body is starting to catch up to what the ancient Greeks knew intuitively. They have to be treated holistically, to promote health of both.

Movement is a principle of groundedness because it works to create "generalized well being, strength, and stability" in the body and in the mind. On top of that, movement supports the other foundational principles of groundedness. Whatever movement you engage in is not prescriptive. It just needs to happen regularly to reap its many rewards.

## Living a Grounded Life

It is one thing to begin to understand the principles of groundedness. It is a different beast altogether to live by them. The principles help you make the necessary mindshift, but living a grounded life requires that you start practicing them. We become what we do and the key to doing this life in a grounded way is effort.

You will still have bad days and good days. You will never be perfect at living the principles every moment of every single day. That is why it is called a practice. You just keep putting effort forth and the results will come. It's important to note that your focus should be on that effort, not the outcome you expect to get. Like the principle of patience, getting out of your own way is the way forward. Focus on the process, not the prize.

Upheaval, change, uncertainty, and challenge are a foregone conclusion is this thing called life. How we navigate those times is up to us. By living the principles of a grounded life, we are poised to take on anything. We are ready to make the most of our very short time here on Earth. We will live an intentional life of our own choosing, with two feet planted firmly on the ground.

## THE SUMMARY IN BRIEF

We live in a culture that prizes niceness above nearly everything else: rewarding politeness, comfort, and agreeability while discouraging dissent, honesty, and disruption. This obsession shapes how we show up in our communities and, increasingly, in the modern workplace, where difficult conversations are avoided, inequities are smoothed over, and real problems are left unaddressed.

What's framed as kindness often becomes a mechanism for maintaining the status quo, muting critical voices, and slowing progress, leaving individuals disengaged and organizations stuck in cycles of superficial harmony rather than meaningful change. ***The Price of Nice: Why Comfort Keeps Us Stuck—and 4 Actions for Real Change*** offers a practical path forward. The book challenges readers to interrogate cultural norms around niceness and introduces a four-action, social-psychological model—think, feel, do, and revisit—to help people spot hidden barriers, engage in difficult conversations, move from discussion to action, and build accountability over time.

Author Amira Barger, a behavioral communications strategist, professor, and DEI advisor, draws on her work at the intersection of health equity, organizational change, and employee engagement, combining real-world experience and research, to show how individuals and institutions can disrupt comfort-driven habits and take concrete steps toward healthier, more equitable workplaces.

## IN THIS EXECUTIVE BOOK SUMMARY

- Understand how "niceness" can quietly reinforce inequity and stalled progress
- Learn the four actions to move from comfort to courageous action
- Gain tools for navigating conflict and facilitating honest workplace conversations
- Build sustainable habits for continuous learning, reflection, and improvement

## Introduction

*Niceness is a velvet glove over an iron fist*, stifling dissent and prioritizing comfort over progress. It conditions us to accept the status quo, protecting those in power at the expense of equity and opportunity.

As children, we're taught that being "nice" is everything. We allow niceness to shape our lives, relationships, and workplaces in ways that rarely serve us. But what if "nice" isn't as harmless as we think? What if it's the very thing keeping us from real progress?

Unchecked niceness is never benign. It is always, without exception, upheld because someone benefits from it, and from the toxicity that inevitably follows.

### Wholeness in the Workplace

Performative corporate gestures may check a box, but they merely preserve the status quo. Hispanic Heritage Month or Pride celebrations may bring festive decorations to the break room, but they don't shift hiring or promotion practices. Niceness signals change without delivering it.

Corporate culture conditions us to suppress discomfort and avoid conversations that disrupt this illusion of harmony. We are expected to adhere to a "professional decorum" that separates our personal lives from our work. This unspoken requirement to compartmentalize—to keep our personal beliefs, values, and even struggles out of the workplace—lies at the heart of performative niceness in corporate spaces.

Forced separation of the personal and professional is neither natural nor sustainable or even desirable. In fact, research by Harvard professor Amy Edmondson underscores that genuine collaboration and innovation rely on psychological safety: the belief that we can show up fully, speak honestly, and challenge norms without fear of retribution. When people feel safe enough to bring their whole selves to work, they're more likely to contribute, take risks, and surface the very truths organizations need to evolve.

### A Tool Kit, Not a Blueprint

To build something new, we need new tools. As a communications practitioner, I start by asking: *What problem are we aiming to solve?*

This clarifies our purpose and sets direction. It's followed by: *Who are we solving this problem for? Who do we need to influence, and what specific shifts in thought, emotion, or action do we want to inspire?*

To answer these questions, we investigate the motivations, values, and trusted voices of the people we wish to reach. By understanding their worldviews, we can craft messages that inspire wonder, resonate deeply, and mobilize action. Breaking down complex behavioral patterns into manageable component dimensions allows us to more easily identify and replicate opportunities for prevention, intervention, restoration, or transformation.

## ACTION 1: THINK

CHAPTER 1

## The Velvet Glove Comes Off

On the surface, being nice seems like an innocent, even admirable quality: a balm that soothes social interactions. But niceness often hides more profound problems. It's a learned behavior meant to keep things comfortable, avoid conflict, and preserve the existing order.

The truth is more complicated: It costs a great deal to be nice. I'm not suggesting we throw human decency out the window; no one likes an asshole. Instead, I want us to examine niceness as a *social construct*, not a natural or inherent truth, as one of many collectively agreed-upon ideas that shape our behaviors, relationships, and institutions.

### Do You Understand What I'm Saying?

Everyone's experiences shape how they interpret the world and the language they use, and assuming a shared understanding can lead to miscommunication, confusion, and disrupted collaboration.

Consider two terms that anchor my premise: *nice* and *nerve*. While it may not be obvious at first glance, these two familiar words actually represent starkly different approaches to navigating the world: one preserves the current norms, the other drives real change.

#### Nice

According to Merriam-Webster, some definitions of nice are *polite, kind; pleasing, agreeable; appropriate, fitting; well-executed*. We are not addressing nice from this defined vantage point, but as a social construct. You mustn't conflate or confuse the two. Nice, when prioritized above all else, is a trap. It can lead to:

- avoiding difficult conversations to preserve a false sense of peace

> When we solve for those most at the margins, we solve for everyone.

- tolerating harmful behavior because confronting it feels uncomfortable
- masking systemic injustices under a veneer of politeness

Nice emphasizes how things feel rather than how they are. While it soothes in the short term, it stifles growth, silences dissent, and upholds the current state of affairs in the long run.

**Nerve**

I think of the antithesis of "nice" as "nerve." Nerve has a wide range of definitions, from the physical receptors in the human body that send signals to our brains to feelings of agitation or irritability (such as when someone "gets on your nerves"). We will focus on this term as it relates more specifically to the *power of endurance or control; fortitude, strength; assurance, boldness; audacity*.

Unlike nice, which seeks to avoid discomfort, nerve leans into it, acknowledging that growth, justice, and transformation often require us to be uncomfortable, and even to make others uncomfortable. Nerve is:

- speaking up when silence feels safer
- challenging the status quo even at the cost of relationships or personal gain
- holding boundaries and advocating for opportunity despite criticism or misunderstanding

Nerve is about resilience and the willingness to act when it matters most. Where nice prioritizes agreeability, nerve disrupts. Choosing between nice and nerve isn't only about personal values or professional strategies. It's about the world we are building or failing to build for future generations.

## Understanding Mental Models

It is easy to overlook perspectives that fall outside of our own. We unconsciously rely on mental models when navigating more complex challenges, such as those involving language or systemic influences.

The underlying mental models are deeply ingrained beliefs that operate both consciously and unconsciously to shape how we interpret reality and make decisions.

Like the words we use, these internal frameworks reflect societal norms, historical narratives, and personal experiences.

Here are some common mental models that you may recognize when interpreting and articulating your experiences:

**Cause and effect**

- Belief: "If I work hard, I will succeed."
- How it shapes behavior: This model drives people to prioritize effort, but it may cause them to overlook systemic barriers or external factors.

**Confirmation bias**

- Belief: "What I already believe is true."
- How it shapes behavior: This model encourages people to seek information that supports their beliefs while ignoring contradictory evidence.

**Zero-sum thinking**

- Belief: "If someone else wins, I lose."
- How it shapes behavior: This model drives competition in areas where collaboration could create mutual benefits.

Mental models offer stability and predictability, but when applied to complex social issues, they can also reinforce harmful biases and inequitable outcomes. Because many people struggle to articulate (or even recognize) these models, outdated historical or cultural influences often shape how we interact with the world.

We start to see the world differently when we challenge our mental models. Anyone can change their mental models; it just takes a choice to do so. By making this shift, we can break down outdated ideas and build new ones based on inclusion, fairness, and shared understanding. All that's needed are the right ingredients: curiosity, reflection, context, and a willingness to try new things.

## Centering the Margins for Collective Good

There is a foundational mental model we must keep in mind: When we solve for those most at the margins, we solve for everyone. That's why change must begin at the edges, by elevating those most often overlooked, and ripple inward to transform the whole; because the most marginalized hold the truths and needs that should shape the center.

Some will undoubtedly resist this idea, misbelieving that fo-

cusing on *any* marginalized population means disregarding everyone else. Nothing could be further from the truth. When we center the needs of those who are often overlooked or underserved, we cultivate an environment that strengthens everyone, improving resilience and well-being across the board.

CHAPTER 2

## Nice by Design

From childhood, we're taught to be nice: play fair, share, say *please* and *thank you*. As we grow, niceness becomes a rule, a prerequisite for success and belonging in schools, workplaces, and society. But beneath this civility lies a tool of control, a product of historical and systemic conditioning.

America has historically been fixated on niceness, even when it hinders justice and equity. Born from colonial conformity and shaped by powerful institutions, this legacy persists today. One key concept, psychological projection, helps explain why many Americans resist confronting our past.

*Psychological projection* happens when people blame others for their own discomfort. It takes courage to ask questions, be introspective, and open yourself to the possibility that you've been wrong. Belittling others for doing what you are unwilling to do is just easier.

It doesn't have to be this way, though. Research shows there is a path to bridging ideological divides, and it's not paved with more facts or louder arguments. A 2024 study published in the *Journal of Applied Psychology* found that people are more willing to trust ideological opponents when those opponents speak from personal experience rather than citing statistics or generalized stories.

Us versus them has rarely accomplished any good. But the longer we avoid discomfort, whether on a personal level or within our institutions, the more deeply entrenched our problems become, and we keep reinforcing old systems even when those systems are unfair. Finding the courage is the first step toward building something new.

CHAPTER 3

## Society's Silent Partner

"Nice" is a contract signed in silence, subtly shaping our thoughts, feelings, and actions without us realizing it. Power dynamics, unspoken expectations, and the constant battle between authenticity and acceptance capture the universal challenge of navigating societal norms.

### The (Social) Proof Is in the Pudding

*Social proof* is the psychological phenomenon of looking to others to define what is acceptable or desirable. Humans are wired to emulate behaviors that bring approval or avoid conflict. In today's digital world, social proof plays out through curated social media feeds, where likes and shares subtly dictate what we value.

Niceness operates much the same way. This unspoken code of conduct pressures us to behave in ways that yield acceptance or avoid conflict, at the cost of authenticity. Over time, this standard becomes unquestioned. Recognizing these patterns allows us to disrupt them and make more intentional choices about how we engage with the world.

### The Chemistry of Compliance

If social proof shows us how niceness subtly pressures individuals, frameworks in psychology and sociology reveal the mechanisms that sustain it.

In psychology, particularly social and behavioral psychology, the focus is often on how societal influences shape individual behavior and thought processes. Relevant concepts include:

- **Social norms**: The unwritten rules we internalize to gain acceptance or avoid disapproval, like invisible traffic signs guiding behavior.
- **Behavioral conditioning**: Mechanisms like reinforcement and punishment (operant conditioning) that shape behavior and are influenced by societal expectations.
- **Conformity and obedience**: Psychological processes that encourage individuals to align their behaviors with group norms or authority figures.
- **Implicit bias**: Subconscious stereotypes shaped by cultural norms, like wearing tinted sunglasses that color your view without you realizing it.

In sociology, the discussion commonly centers on social or institutional influence mechanisms; frameworks intended to maintain order and cohesion within a society. Relevant concepts include:

- **Social control**: Formal mechanisms (laws, regulations) and informal triggers (peer pressure, cultural norms) that enforce conformity to societal expectations.
- **Structural functionalism**: A perspective that views societal structures (like legal systems, education, or the media) as serving a purpose in maintaining stability, but also as systems of control.

> The question isn't whether we should adapt, but how we do it.

- **Conflict theory**: A framework that emphasizes how societal control reflects power dynamics.
- **Symbolic interactionism**: Examines how social norms and roles are constructed through interaction, shaping behavior and identity.
- **Hegemony**: Describes how dominant groups maintain control by shaping cultural norms and ideologies, making them appear natural and unquestionable.

### The Undue Influence of Nice

Sacred values—deeply held principles like freedom, loyalty, or environmental conservation—shape human behavior.

They aren't just beliefs; they're core to identity. Neuroscience shows that when these values are threatened, the brain's logic center (the dorsolateral prefrontal cortex) essentially shuts down, while emotional and social judgment areas activate.

Like sacred values, niceness operates quietly, shaping our behavior in profound ways. It becomes an unspoken expectation: Stay agreeable, avoid confrontation, and maintain harmony. Over time, niceness traps people in passive acceptance, stifling authenticity and accountability.

### Institutional Manipulation

Media, politics, and education shape public opinion to preserve the status quo. By elevating niceness as a virtue, institutions condition individuals to see dissent as harmful. Schools teach "respect for authority," casting questions about injustice as insubordination, while governments label activists and whistleblowers as "un-American" or "radical."

This gaslighting erodes confidence in personal judgment, discouraging challenges to authority and sustaining harmful systems, especially in the workplace.

The result? A workforce and society disarmed of its ability to challenge oppression, trapped in a cycle of conformity masquerading as virtue, focusing on conflict avoidance at the expense of progress.

Institutions rely on niceness to mask exploitation, ensuring the system thrives even as it harms. Unmasking this manipulation is the first step toward progress.

## ACTION 2: FEEL

CHAPTER 4

# Flow or Crash

"Now, water can flow or it can crash. Be water, my friend." This famous quote from Bruce Lee reflects his martial arts philosophy: letting go of rigid beliefs and being open-minded and flexible to adjust to the situation. Just like water adapts to its surroundings, so must we; the question isn't whether we should adapt, but how we do it.

Armed with an understanding of "nice" as a construct, our response can be to go with the flow or to meet that temptation head-on and crash. Otherwise, we risk simply being carried away by the current of niceness that pervades our society.

### Four Characteristics of Nice That Hinder Progress

Many behaviors that keep us stuck in a cycle of submission often go unnoticed. Recognizing them is the first step toward breaking free and creating change. Conditioned constraints we must overcome include:

- lack of awareness
- lack of accountability
- lack of agency
- lack of adaptability

We must question how and why systems work as they do, embrace hard truths, and take responsibility. Rather than avoiding discomfort, use it to grow. Challenge injustice, speak up, support others, and take even small steps toward change. Reflect on what works and what doesn't, and refine your approach to sustain meaningful impact.

### Outwit, Outplay, Outlast

In a society that has long prized conformity and discouraged dissent, authenticity has often invited punishment. Forced to conceal our culture, physical attributes, emotions, and language, marginalized people have developed various psy-

chological strategies, such as *tuning*, *covering*, *masking*, and *code switching*, as survival mechanisms.

These adaptations are rooted in a history of systemic oppression. Over generations, they have become ingrained habits. The flawed ideal of "colorblindness" is a product of this legacy, promoting the idea that seeing everyone as the same will dispel racism. While seemingly well-intentioned, it erases individual histories and lived experiences, weakening us by valuing conformity over the strength of diversity.

### When Nerve Is Used to Harm

A caveat on building your nerve: It can drive positive change, but also harm. Disruption for its own sake helps no one (again, no one likes an asshole). Worse, history is full of bad actors who've weaponized behavior change, using communication to sow division, consolidate power, and dehumanize others.

In a world where bad actors sow harm, our strongest response is to match their resolve with our own, creating a world where harm cannot thrive. The nerve to oppress is real, evident in policies, slogans, and movements that impede or roll back progress. But we have a choice. Having nerve isn't just about standing up to bullies; it's about standing up for something better and more just.

CHAPTER 5

## Start a Burn Book

In 2013, my then-employer brought in a consultant as we developed the next iteration of our five-year strategic plan. Her process included an unconventional exercise: keeping a weekly creative journal. The goal? To help us shift our perspectives on the problems we were solving and uncover new ways of thinking. So, not a "burn book" exactly, but it was more fun to think of it that way.

What initially felt like unwelcome homework became one of the most valuable tools I've encountered. Journaling daily allowed me to spotlight "rules" I'd internalized and unspoken norms I'd never questioned. Our burn books were not about pettiness or gossip, but about burning the assumptions that held us back.

As it turns out, journaling is a science-backed tool. This process creates clarity, strengthens problem-solving skills, and builds the mental agility to navigate personal and professional challenges. Think of it this way: Creating your own burn book doesn't just expose what's holding you back; it provides you with a tool to move forward.

### How Our Brains Make Sense of Experiences

In neurology, *conscious perception* is when your brain recognizes and makes sense of what you're experiencing: a sound, a sight, or a feeling. It's the brain "switching on the light bulb" and connecting the dots.

When it comes to our organizations, conscious perception allows us to recognize what's happening beneath the surface. We must train ourselves to see past the familiar ways of operating and identify the systems that have outlived their usefulness. This shift is crucial for changemakers because you can't fix a problem until you recognize it's there.

This is where the power of perspective comes into play. We can become so accustomed to the current state of affairs that we stop questioning it. We don't recognize the outdated processes or unchallenged biases that keep us from progressing. But once our perspective shifts, once we see the inefficiencies, inequities, or possibilities we missed before, we can't go back. The change is permanent, and so is the growth potential.

CHAPTER 6

## Dancing with the Devil

Where is the line between hero and villain? Who gets to decide? And what do those titles really mean? Here's how I break down those roles:

- **For the good of all mankind**. Many people, when asked to name a hero, might pick a celebrity, politician, sports star, or author. I define a hero as someone who acts without the promise of personal benefit or the chance to witness the impact of their efforts.
- **Some people just want to watch the world burn**. Villains are the antagonists no one admires. Their actions serve little purpose beyond self-aggrandizement, driven by an insatiable need for power, control, or personal gain.

Good versus evil. Light versus dark. Justice versus the systems that perpetuate inequity. But what happens when someone who seems complicit in the very system we're questioning starts challenging it themselves?

### Am I the Asshole Here?

A popular Reddit thread, #AITAH (Am I the Asshole Here?) is a very interesting sociological experiment that questions the nature of our interactions. But for me, it also resonated with a truth that I had long sensed but resisted acknowl-

> Sometimes, to be the hero, you have to be the villain in someone else's story.

edging. Wrestling with self-doubt, the lesson came slowly: Sometimes, to be the hero, I would have to be the villain in someone else's story.

I began my career as a communicator and fundraiser in the nonprofit sector with clear eyes and a full heart. I wanted to help people, have a meaningful impact on the world, and be an agent of sustainable change in a system that desperately needed it. Little did I know the hoops I would have to jump through to fund that change. Far removed from the philanthropic ideal I had imagined, I found the mission itself overshadowed as I navigated a labyrinth of social expectations and unspoken rules.

We spent too much time indulging wealthy donors, catering to their whims, and playing by their rules. My experience became a cautionary tale of how easily their trivial concerns overshadowed our critical work. But it also taught me this: Sometimes, you must risk the wrath of those in power. If you don't, you'll keep bending to their will, losing sight of what matters, or worse, losing yourself. In their world, they were the heroes: graceful benefactors, saviors of the less fortunate. But if challenging their performative philanthropy would make me the villain, maybe that was a title worth embracing.

## ACTION 3: DO

CHAPTER 7

### Status Update: It's Complicated

Throughout this journey, I've embraced a core belief: Question everything and everyone. Seeking answers is essential to understanding the world and imagining change. But what if everything I've been taught about heroes and villains is flawed? Am I meant to root for the villains now?

Maybe the real lesson is: It's complicated.

I would like to help us solve for this by proposing a third classification: the *antihero*. Not the hero we deserve, but the one we need. Our world isn't black and white; it's full of gray areas where multiple truths coexist, demanding a more nuanced perspective. An antihero acts out of necessity rather than altruism. Though perhaps not inherently driven by virtue, they navigate the messy middle ground to step up when others won't, confronting challenges head-on.

Antiheroes are catalysts for progress. They question the established order and force others to confront uncomfortable truths. In comic books, the antihero often utilizes questionable methods to achieve their goals. But taking on this role is not about causing harm; I am not giving you permission to act out of pocket. The difference is, *our actions will be righteous, but society will tell us they are wrong*.

#### Why Disruption Alone Isn't the Vibe

Disruption is the starting line, not the conclusion. It is incomplete and naive as a singular notion. It exposes inequities and challenges accepted norms, but after the dust settles, no benevolent overseer is waiting to ensure progress takes root.

This world—with all its flaws, injustices, and potential—is ours to break or build. Our progress can be charted in the systems we design, the stories we tell, and the legacies we leave.

#### Applying the Power of Communication to Drive Change

The cartoon *Captain Planet* taught a generation of kids to reduce, reuse, and recycle. The *Got Milk?* campaign made drinking dairy sexy.

These stories highlight a key insight: Communication isn't just about exchanging information. It's about shaping how people see the world and choose to act within it. The words, phrases, and symbols we use are far more than semantics; they are tools of influence and transformation.

If your company prides itself on excellence, integrity, or innovation, position DEI as an integral part of that identity. Make it clear that failing to embrace diversity is failing to live up to the company's own standards. Be willing to confront resistance directly. Use language that doesn't just "invite" inclusion but demands accountability.

In our communities, we can use communication to mobilize people toward collective action and challenge systemic issues like racism, environmental injustice, and economic inequality. Community campaigns work when they tap into shared values.

### The Mandate: "Have Nerve, Even If It's Not Nice"

Change requires us to communicate with intention, clarity, courage, and conviction. Communication shapes behavior, culture, and norms. But to drive the change we seek, we must be willing to disrupt comfort, challenge assumptions, and reject complacency.

Niceness may smooth the edges, but it rarely shifts the ground beneath us. Nerve bends the moral arc, tips the scales of justice, and creates a world where progress is not just possible, but achievable, because we choose to make it so.

CHAPTER 8

## Sweat the Small Stuff

Challenging entrenched systems is *hard*. It takes labor, collective effort, and courage to insist that something new can exist where only the old once thrived. Resistance demands perseverance and resolve.

This is what the system fears most: not loud, rebellious declarations, but the quiet determination of those who refuse to accept its terms.

Small resistance, even with the simplest tools, creates transformation, and the influence ripples outward. So, ask yourself: What would it take to clear a space for something new within your world, your workplace, your relationships, or yourself?

### Rebel *with* a Cause

I'm reminded of another icon, Rosa Parks, who could not have envisioned the impact that her act of resistance would set in motion. Her rebellion is often credited with being the ripple that turned into a tidal wave, the spark that lit the forest ablaze to awaken so many to the cause and incite momentum for the Civil Rights Movement. But why?

I believe it's because when she decided to stop playing nice, to refuse to be relegated to the back of the bus, she stood directly against the tyranny of the status quo and challenged the worldview of what would have been perceived as acceptable.

It wasn't just about dismantling injustice; it was about building a new, more just framework that serves everyone. A world where power is shared, not hoarded. A world where our actions reflect our ideals.

Building such a world demands accountability, imagination, and collaboration. It's unglamorous, messy, and rarely celebrated, but it is where lasting progress takes shape.

CHAPTER 9

## Break the Back Row Barrier

Some leaders operate from a scarcity mindset: fear of losing reputation, revenue, relationships, or relevance. Acting from this place of fear distorts how people think and act.

When we perceive resources as limited, we focus narrowly on immediate needs at the expense of long-term vision. Scarcity thinking results in fear-driven choices, holding us in reactive cycles and preventing us from imagining alternatives or taking bold action.

Yet scarcity is often more perception than reality. Shifting to an abundance mindset doesn't deny limitations; it reframes them. An abundance mindset reframes risk as a meaningful opportunity, fostering courage, creativity, and a broader perspective, allowing people to see the potential benefits rather than just the costs.

### Not Doing Nothing

The concept of inevitability is a trap we cannot afford to get stuck in. This mindset, consciously or unconsciously held, rests on the idea that no matter what we do or fail to do, the world will inevitably become better, fairer, and more just. This myth keeps us in a comfort-induced paralysis, willfully ignorant of the world's evils. We convince ourselves that if we wait long enough and keep our heads down, justice and equality will manifest on their own.

Progress is never the result of passive optimism. It's the product of deliberate, sustained disruption. The world evolves through solidarity, action, and an unwavering refusal to accept what is. The idea that justice will "just happen" is a dangerous delusion. The future we want is ours to build.

# ACTION 4: REVISIT

CHAPTER 10

## The Circle of Life

Progress along the Nice to Nerve Continuum is not a straight line; it's a circle. Change is not a one-time event but a continuous process of learning and adaptation.

At its core, revisiting hinges on the distinction between a fixed mindset and a growth mindset, shaping how individuals and systems approach change, setbacks, and progress:

- A *fixed mindset* believes character, intelligence, and abilities are static and tends to focus on goals viewed as easily achievable, avoiding failure to preserve a fragile sense of worth.
- A *growth mindset* thrives on challenges, prioritizing curiosity and viewing failure as a chance to stretch and improve.

Apathy and complacency are constant threats, tempting us to believe the work is done or that it doesn't matter. Revisiting is the antidote to stagnation, keeping us engaged and ensuring we continue to hold ourselves and others accountable. It embraces the impermanence of transformation, urging us to constantly iterate and refine strategies. It means facing discomfort and rethinking what we thought we knew. Growth demands it.

Revisiting is a tool for reclaiming the nerve that has been socialized out of us. Revisit your assumptions, narratives, heroes, and villains. Rethink your values and reimagine a more equitable world. Question every system and every actor within those systems, including yourself.

CONCLUSION

## Cost Analysis

Progress demands rejecting the compulsion of comfort in favor of community and collective courage. The compulsion of comfort isn't easy to overcome, but by recognizing and naming it, we take steps toward building a world that works for all of us. This is solidarity: working together across differences to demand that systems serve everyone, not just a privileged few.

*The decision is yours: Will you pay the price of nerve, or continue shouldering the cost of nice?*

Make no mistake, there is a cost to choosing nerve over nice.

### Paying the Cost

Stepping into the antihero role often strains relationships. Friends and colleagues, even family members who once stood beside you may retreat. This path tests even the most steadfast resolve. The cost is paid in sleepless nights, repeated battles, and the weight of knowing that doing what's right doesn't often bring immediate reward.

Nice keeps us compliant, comfortable, and complicit in the systems that harm us. The stakes of our compliance are not just stagnation; they're erosion. Erosion of our dignity. Erosion of our humanity. Every time we choose palatability over principle, we pay a quiet tax: a little less truth, a little less justice, a little less of ourselves.

This isn't about one moment of courage. It's about committing to a lifetime of resistance, one choice at a time. You cannot change everything, but you can change something. And that is enough, so long as you keep going.

*Leave people and places better than you found them.*

The question we must ask ourselves daily isn't whether we can afford to challenge the carefully constructed social order imposed on us; the real question is, *can we afford not to?*

The price of nice is comfort at the cost of progress. The price of nerve is discomfort in the pursuit of something greater.

I dare you to have the nerve.

**Amira Barger** is an award-winning executive vice president at a global communications firm, where she leads DEI Advisory and provides strategic counsel worldwide. With more than twenty years of experience, she is a recognized scholar-practitioner and thought leader focused on leadership, organizational health, and behavioral communications. Barger is a contributor to *MSNBC* and *Fast Company* and has been featured in outlets including *Forbes*, *Business Insider*, and *CNBC*. She has received numerous honors, including recognition among top global DEI leaders and executives. Barger also teaches at California State University, East Bay, and the University of California, San Francisco, preparing future leaders.

*Page 6*

## THE SUMMARY IN BRIEF

Are you worried that you will go through life without ever finding your true purpose? You are not the only one. Having a clear sense of purpose has been scientifically proven to help people find happiness, longevity, and health. But paradoxically it is also one of the biggest causes of anxiety. So how can we make sure we find our purpose and get rid of anxiety to attain happiness and leave a lasting legacy?

In ***The Purpose Code***, veteran hospice doctor Jordan Grumet proposes that finding happiness is never about aiming for "bigger-than-life" goals that we may not be able to achieve. Instead, we can find our happiness in going after little P Purposes where the actual journey is what matters, more than the destination.

Grumet believes that true happiness comes from enriching activities that will help you connect with others and build communities. Instead of going after a big P Purpose that typically leads to disappointment and anxiety, try going after a little P purpose that will lead you to meaningful connection and a legacy to be proud of.

## IN THIS EXECUTIVE BOOK SUMMARY:

- Distinguish between two distinct kinds of purpose, revealing why one path consistently leads to deeper fulfillment than the other.
- Identify your authentic purpose and how to climb to reach your meaningful goals, no matter your starting point.
- Understand the fundamental human insights behind meaning and purpose, in order to discover lasting happiness.
- Begin shaping a legacy that continues to make a difference well beyond your lifetime.

## Introduction: The Triumph of the Little Beckonings

Most people struggle to find their sense of purpose, and struggle even harder to integrate this vision into anything they would call happiness. Even though having a sense of purpose can increase lifespan, health, and happiness, it is also associated with anxiety in over 91% of people at some point in their lives.

For most people, purpose has become a kind of indecipherable code, sealing away true fulfillment and lasting happiness. But the purpose code is one that can be cracked. And anyone can do it.

The first step to cracking the purpose code is realizing that the purpose that brings meaning and contentment isn't that kind of purpose at all. It's not Purpose with a big, shining capital letter; it's purpose with a little "p." Small—but with a bigger, better, more meaningful impact on your life than the grandest imaginable all-consuming PURPOSE in bright lights. This purpose is found in small beckonings to pursue the things we are passionate about.

Purpose doesn't need to be something glamorous or difficult to find. In fact, it doesn't need to be something you find at all, but instead something you create.

## Part 1: The Duality of Purpose

Purpose is much more nuanced. We see that the search for purpose can be riddled with anxiety and loss as well as joy and happiness. To truly glean all the benefits, we must parse out these different aspects and differentiate between those which nurture us and those which hinder.

### Chapter 1: Is Purpose a Four-Letter Word?

If you ever need more uncomfortable silences in your life, all you have to do is bring up the topic of purpose. My podcast guests love discussing the what and how of building a prosperous business or lifestyle, but are loath to discuss the why. Many see purpose as nothing more than a four-letter word—something one doesn't talk about in polite society.

The scientific evidence is clear: having a sense of purpose leads to greater happiness, increased longevity, and better health. Yet time and time again, I am reminded by my readers and listeners that purpose anxiety not only is real, but often makes people think that pursuing purpose is futile. How do we resolve this quandary?

By exploring the scientific evidence and breaking down the crucial role that purpose plays in most of our lives, we dive into the heart of the purpose paradox: the challenge that purpose can be both life-affirming and destructive at the same time.

Anxiety associated with finding meaning is not only real, but rampant in today's society. There are many reasons why. All too often, we make one of two bad choices at this point. We either give up on purpose, or we chain ourselves to never-ending treadmills that do very little to fill our souls.

The key to cracking the purpose code is to realize that neither of those choices will bring us what we are looking for. The only way to do this is to recognize that purpose, in its simplest form, is not one but two different entities.

### Chapter 2: Why the Size of Your "P" Makes All the Difference

We fundamentally misinterpret the concept of purpose. It took many years and quite a bit of emotional heartache to reach the conclusion that I hope to convince you of now: when it comes to purpose, bigger is not better.

Most of our anxiety actually stems from what I call "big P" Purpose. Big P Purpose is overly focused on outcomes. "Little P" purpose, on the other hand, is the true creator of the wonderful health and longevity benefits that all those researchers have proven with their studies. It focuses not on the destination or the outcome, but rather on the path or process.

**Purpose With a Big "P"**

- It is goal oriented, as opposed to focusing on process.
- It often depends on an all-or-nothing equation. You either succeed or you don't.
- The bigger the goal, the easier it is to fail. These types of goals often rely on some mix of luck, timing, and good genetics.
- The anxiety that comes with such goals defining our purpose robs us of any enjoyment there might have been in the process of their pursuit.
- It is fleeting. The newness of a major accomplishment is only felt once. And once attained, the excitement of gain is replaced by endless worry over its loss.

Because of these shortcomings, it becomes obvious that when you embrace big P Purpose, you are actually embracing a scarcity mindset. Big P Purpose turns out to be pretty small minded.

> Unlike the big audacious goals we try to steal from other people, little P purpose is created and not found.

**How to Embrace Abundance with Little P Purpose**

Little P purpose embraces an abundance mentality. There is room for everyone—I mean everyone—to pursue that which brings them inner joy and happiness.

Little P purpose centers on you as an individual.

Little P purpose doesn't deny or detract from the joy of setting and achieving goals; it just doesn't depend on them.

Although we can choose what activities to fill our lives with, we can't always choose the outcome. Because of this, little P purpose is anything but all or nothing. In fact, it is all or all. There is no way to fail. And if you find these activities no longer fulfilling, there is no reason whatsoever not to do something else.

Little P purpose espouses the idea of incremental change. It recognizes that humans like the idea of progress.

And finally, little P purpose recognizes that people, as well as what they find meaningful, can change.

The ultimate outcome of focusing on little P purpose is that people have fewer regrets when they die. Instead of wishing they had achieved that which they didn't have the energy, courage, or talent to pursue, they can point to many daily activities that brought them joy and created meaning.

## Chapter 3: You Can't Find What Isn't Lost

Some of us are lucky enough to happen upon our purpose in an unexpected way. If this is not the case for you, however, there is no reason to feel distress. It turns out that average, everyday people like you and me can identify these important purpose anchors and build a fulfilling life.

Unlike the big audacious goals we try to steal from other people, little P purpose is created and not found. We create this type of purpose by concentrating on that which fills our souls, and then being intentional about taking action.

To do this, we will begin with an old hospice technique called the life review. This is simply a structured list of questions that helps people assess the important moments and themes in their lives. It also touches on regrets.

Sometimes we get so anxious about searching for purpose that we forget that we might have created it already somewhere in our lives. I challenge you to look at what you spend most of your time doing—even those things that you say you loathe. Are the embers of a flame hiding in plain sight?

Maybe they need just a wee bit of oxygen.

**The Spaghetti Method**

There are several other techniques to identify little P purpose in our lives. The first is to pay attention to the crazy ideas and inspired moments that pop up in the most inopportune times. I do believe that this is our subconscious urging us to pursue that which is really important.

If you find yourself still struggling, it is time to call for some help. The first and easiest solution is to ask family and friends. If family can't provide the answers, it might be time to bring in the professionals.

These techniques may not yield results. If this is the case, there is one more technique to try. The spaghetti method. That's right: throw a bunch of spaghetti against the wall and see what sticks. This is a shotgun-oriented trial-and-error process. Open yourself up to the universe and see what happens. This means saying yes to people and activities that you normally wouldn't say yes to.

## Chapter 4: Money Can't Buy Love, Purpose, or Happiness

As with the concept of purpose, the relationship between money and happiness is paradoxical—the evidence points to two opposite conclusions.

Research showed that more money makes us happier except past a certain level, and definitely not in poor countries or places where everyone equally enjoys the same economic boon. And furthermore, as income goes down, it is meaning and purpose rather than money that predict happiness.

A prospective study that has been ongoing for decades found that when it came to happiness, it was not money, achievement, career choice, exercise, or a healthy diet that

made respondents happy. It turned out, after 85 years of studying, that one and only one thing was a strong predictor of overall happiness: positive social relationships. Those who felt more connected to others lived longer and happier.

We feel fulfilled when we help people and are helped by them. When we nurture others and are nurtured by them. When we smile and laugh and teach and learn.

It is a virtuous cycle. Happiness leads to more meaning and purpose. Purpose leads to community and connections. Personal connections and social relationships create more happiness and longevity.

## Part 2: Meaning + Purpose = Happiness

Understanding purpose doesn't necessarily mean that we will be happier people. Here, I will completely redefine Aristotle's concept of happiness. While the ingredients are the same—meaning and purpose—we will turn them from abstract concepts into daily opportunities to take action.

### Chapter 5: Meaning and Purpose—Two Sides of the Same Coin

Meaning and purpose form two sides of the happiness coin.

Meaning is focused on cognition and our ability to connect ideas and make sense of our past. It is more thought oriented and less action oriented.

Purpose, however, is much more geared to action. Unlike meaning, purpose is present and future oriented. It's about both being in the moment and helping us project ourselves into the unknown.

To improve our sense of meaning, we need to come to terms with our past and draw connections between what seem like disparate events to feel a sense of connection and meaningfulness. When we struggle with such things, we can often find help through therapy and mental processing.

Once we move past the victimhood mindset, the present and future become limitless. We need this limitlessness as a backdrop for exploring a framework that can help better build purpose into our lives. Just knowing how to create purpose is not enough: we must then use that purpose to create happiness. The way we do this is called the climb, and it is the key to mastering the second half of the happiness equation.

### Chapter 6: The Climb

Although we may just be starting to take notice of our own internal whisperings urging us to a more gratifying way of living, it doesn't make taking action any easier. The climb will provide a template to help you transition smoothly while minimizing fear and providing guidance.

The climb depends mainly on two aspects:

- Filling our time with activities that are joyful or important to us. The nature of these activities is completely up to you. Every person can have a different anchor, and one person can have many anchors. The key is to identify those themes that light you up and then build climbs around them.
- Leaving room for incremental gain. Unlike a larger goal or destination, "incremental gain" means finding controllable ways to feel like you are making progress. The goal of improvement, again, is greater enjoyment or pleasure in your skill set. The goal is not to reach a higher peak or travel to another destination.

The Five Commandments (the Rules of the Climb):

- Your climb should never be goal oriented.
- Being on your climb must bring you joy.
- You cannot fail your climb.
- Climbs can incorporate incremental gain.
- Monogamy is optional when it comes to purpose.

There are several signs that a climb is no longer serving you. If you encounter any of these, it is time to re-evaluate if this climb is still a good use of your time:

- You are regretful of time spent on a particular climb because you would rather be doing something else.
- The climb becomes too goal oriented, and happiness depends on attaining that goal.
- The climb loses something irreplaceable as a result of factors that have nothing to do with you yourself, or even the activity.
- You may realize that pursuing this climb has not led to building a community and better connections.

### Chapter 7: What If You Can't Afford Climbing Shoes?

Naysayers will argue that pursuing purpose or engaging in the climb is a privilege that mostly belongs to the well-off. How do you start the climb if you can't afford a good pair of climbing shoes?

The benefit of becoming aware of your purpose and practicing these climbs is not only your own happiness, but also the happiness of those around you.

While money and time are not the only reasons people feel unable to pursue purpose in a meaningful way, they certainly magnify the contrast between those who are more and less privileged.

Why should this be so? While I don't have scientific data to back this up, I do have a theory: it all comes back to happiness. Happiness consists of both meaning and purpose. If you are struggling to make ends meet, trapped in a job you don't love, it is hard to find meaning in past struggles. You end up having more of a victim mentality.

How are you supposed to be able to climb? I humbly offer two opinions:

- First, try to embrace a single tiny climb, no matter how small. Use a few spare moments to do something that fills you up.
- Second, apply narrative therapy. Though you may not be able to afford a therapist yourself, how can you evaluate the major negative narratives that affect the way you think about yourself?

The benefit of becoming aware of your purpose and practicing these climbs is not only your own happiness, but also the happiness of those around you. This is how you will change the world. But you have to believe that you can. You have to let go of the excuses.

## Part 3: Small but Mighty—How Little P Purpose Changes the World

When I say "legacy," I am talking about the things you do today which last long after you have died, living on in the people who knew and loved you. How do we create legacy in a way that doesn't make us anxious, but also stands the test of time?

### Chapter 8: How the Little P(urpose) Supports the Big P(eople)

We have spent much of our time discussing big concepts like meaning, purpose, and happiness. Now I have to drop a bomb: I have misled you. Meaning and purpose are not the goal. Happiness is not the goal. What I really want for you is connections and communities. They are what winning truly looks like.

People themselves cannot be purpose. Although at times we will feel we are living for our parents, spouse, or children, becoming our best self means developing a sense of purpose outside of them. However, purpose does create strong bonds with those around us. Understanding and pursuing our purpose will automatically lead to the formation of community.

If we are intentional concerning our attempts, becoming part of various communities should be a walk in the park. Here are some suggestions about how you might go about doing that:

- Become your best you.
- Build what you want to see in the world.
- Sign up for a class.
- Volunteer.
- Become a fan.

It is in the building of community that we use purpose to establish legacy. We touch those around us and change them. And that change becomes like a pebble dropped into the ocean. The effects of the water displaced can be felt for miles and miles.

### Chapter 9: A Pebble in the Vast Ocean

Oftentimes, poor coping behaviors come from past trauma, but we can also inherit growth and abundance-oriented scripts that help us become better, happier, and more adapted.

Using tools like narrative therapy can help overcome poor coping skills if you have them. And just because you haven't inherited any of these generational growth scripts, doesn't mean you can't write them anew (with little P purpose)—and pass them down.

What if the model you provide for friends and family is one not of fear but of intentional living, filled with purpose and joy?

Like a ripple created by a pebble dropped in the ocean, could the water displaced ebb and flow for many years and miles? This is the legacy you create by pursuing purpose.

How to Become Purposeful About Legacy

To mangle a quote from the movie Fight Club: the first rule of legacy building is—we don't talk about legacy. Legacy is a byproduct of living a purposeful life and engaging authentically in these climbs.

There are, however, some important considerations when it comes to having your purpose impact your family and others:

- Live Out Loud
- Create Communities
- Volunteer
- Offer Services for Free

Take a moment to think what you would like your legacy to be for future generations. Are you acting accordingly today by pursuing your purpose?

### Chapter 10: Embrace Purpose, Erase Regret

No one wants to look back at their lives and wish they had behaved differently—acted with more courage and insight. Yet that is exactly what most of us do. Like purpose, regret is often a four-letter word.

For most of my hospice patients, it is unfortunately too late. For those not on their deathbeds, however, regret can be not only bearable, but a great motivator to living a more fulfilled life. Regret can be a gift.

Although we think of regret in pessimistic terms, there is quite a bit to be optimistic about. Regret grants us agency. Having agency has the potential to turn regret into purpose. We are one step away from beginning a new climb.

Failure and disappointment go hand in hand. When we set our goals so high that they are unachievable, we lose the agency to bring about the desired outcome. That's why I consider this disappointment instead of regret. Disappointment is actually worse.

By focusing on little P purpose, I was able to escape the mirage created by being a physician, and see clearly that there were true regrets (not disappointments) that I still had to address.

And that's exactly what I did. Years later, I can honestly say that I rarely feel regret in my life. Would I have any regrets if I died tomorrow? I can honestly say no.

Can you do the same? Can you recognize the disappointments in your life and differentiate them from the regrets? If so, can you start to accept the disappointments and act on those regrets today? There is no better time than the present. This is an essential step in cracking the purpose code.

## Conclusion: Be Like Roman, Not Like Mickey

If you are not seeing little P purpose in your life and the happiness it brings people, then you are not looking hard enough. You are not paying close enough attention to the people around you. My life is so full of those who have been examples of such purpose.

One of them is Roman, who found his purpose in buying and selling baseball cards. Roman lost his battle with cancer over 30 years ago. Yet his effect on me was profound. Thirty years later, I am still talking about him and what his little store meant to me.

But you know who has had almost no impact on my life? Mickey Mantle, whose baseball cards I so zealously hunted for during childhood, who broke countless records and undoubtedly was one of the premier players to have ever played the sport of baseball. I rarely think of Mickey Mantle; and even if I did, he has had no positive effect on my life.

In closing, I wish for you to have a life of little P purpose. I wish for you to use that purpose to build communities of people you love and who love you. I wish for you to impact so many people that, like the pebble dropped in the ocean, your legacy will last decades and centuries after you have left this world. I wish for you to be like Roman and not Mickey.

**Jordan Grumet**'s life took an unexpected turn after a profound personal loss reshaped his trajectory. The untimely passing of his father, an oncologist, sparked his journey towards a medical career. He completed his studies at the University of Michigan and earned his medical degree from Northwestern University. This path led him to specialize in Internal Medicine and ultimately to provide compassionate care for the terminally ill in hospice. Jordan's work weaves together medicine, finance, and the significance of purpose, making a profound impact on those seeking a meaningful life

# The Purpose Economy

## How Your Desire for Impact, Personal Growth and Community Is Changing the World

by Aaron Hurst

## THE SUMMARY IN BRIEF

A series of shifts are happening in our economy: Millennials are trading in conventional career paths to launch tech startups, start small businesses that are rooted in local communities, or freelance their expertise. We are sharing everything, from bikes and cars, to extra rooms in our homes. We now create, buy and sell handcrafted products in our local communities with ease.

Globally recognized entrepreneur, founder of Taproot Foundation and CEO of Imperative, Aaron Hurst argues that while these developments seem unrelated at first, taken together they reveal a powerful pattern that points to purpose as the new driver of the American economy. It's an economy where value lies in establishing purpose for employees and customers through serving needs greater than their own, enabling personal growth and building community.

Based on interviews with thousands of entrepreneurs, *The Purpose Economy* shows this new era is already fueling demand for a whole host of products and services and transforming how millennials view their careers. Hurst offers a blueprint for a new economic era that is transforming companies, markets and our careers to better serve people and the world.

## IN THIS SUMMARY, YOU WILL LEARN:

- The three types of purpose and how to achieve them for yourself and your organization.
- Industry trends that are creating value in the new Purpose Economy.
- How to go beyond creating a successful organization in order to build human-centered markets.

## SECTION ONE: WELCOME TO THE PURPOSE ECONOMY

## Introduction

The corporations that dominate society are a relatively recent invention, barely a 100 years old. The sector is still in its infancy, and the giant businesses that lead it, despite all their resources and systems, are far less resilient than people. You will likely live longer than the organization that employs you today.

If little of what we build or experience outlasts us, we can and should give ourselves far more permission to experiment and take risks. Few things cannot change. That means we possess much more power than we realize, but it also means that even if we make mistakes, they are impermanent and reparable. Things are done a certain way, until they aren't. You can be the one who makes the change.

How do we engage people to use their purpose to create meaningful change? People gain purpose when they grow personally, when they establish meaningful relationships, and when they are in service to something greater than themselves.

At the core of the Purpose Economy is people's need and desire to find their professional purpose. This presents an opportunity of unprecedented potential: an economy that will not only continue to generate jobs and resources but one that also has the capability to improve the lives of billions of people. But much of this potential lies in how we as leaders move forward and how we frame and invest in this new economy. It is, at its core, the first economy built for humans.

## The Purpose Economy

Powerful shifts in public desire are changing what we buy, how we buy it, from whom we buy it, why we buy it, and how much of it we buy. A generation of Purpose Economy pioneers, like Whole Foods Market's John Mackey and Virgin's Richard Branson, are challenging others to follow their lead and to create new frameworks both to do well and to do good, which raises the bar for the business community and turns successful theories into movements.

The Purpose Economy describes the new context and set of ways in which people and organizations are focused on creating value, and it defines the organizing principle for innovation and growth. It is an economy where value lies in establishing purpose for employees and customers — through serving needs greater than their own, enabling personal growth and building community. The Purpose Economy explains where markets meet movements, as individuals step out to create their own means of finding purpose through their work.

### Three Types of Purpose

The definition and nature of purpose is often misunderstood. There are three well-researched, core categories that consistently echo through the words of the professionals who applied to the Taproot Foundation: personal purpose, social purpose and societal purpose. Together, they represent the needs that the new Purpose Economy addresses.

**Personal Purpose:** We find purpose when we do things we love, attempt new challenges, and express our voice to the world.

**Social Purpose:** Research shows that purpose is not a solo act. When it comes to meaning in life, relationships matter to humans more than anything else. They reinforce our sense of value, require us to engage, and ultimately help us grow.

**Societal Purpose:** The most powerful source of purpose comes from this concept: purpose comes when we know we have done something that we believe matters — to others, to society and to ourselves.

## The Ten Drivers of the New Economy

There were a special set of circumstances and key drivers that gave rise to the Purpose Economy and that continue to contribute to its growth.

**1. Human-Scale Technology:** Technology has evolved over the last 10 years, from enabling us to move online to now enabling us to find purpose online. The third generation of the web allows us to once again have human-scale markets. We can find services provided by people in our own neighborhood, read blogs by neighbors in our own community, and borrow money from like-minded people rather than big banks.

**2. The Maslow Millennial Effect:** Abraham Maslow famously put forward a pyramid model to explain human motivations, in which basic survival needs form the base, and others, such as self-esteem and creative expression, only become concerns, or needs, when the more basic ones are satisfied. The Millennial generation is increasingly known for its desire to make a difference, grow and share its passion with the world.

**3. Generation Disrupt:** Generation X entered the workforce during the dot-com boom and was trained to think big and use technology. They are now the generation in charge and are putting those talents to practice working on big purpose.

**4. Environmental, Economic & Political Turmoil:** Out of great disasters, whether environmental or economic, often come great opportunities. They inspire courage, invention and innovation. They also force us to redefine normal. We are seeing marvelously inventive new solutions emerging all around us; new models are being tested, hybrid styles of organization are being invented; and capital from both the private sector and the government is being redirected to the Purpose Economy.

**5. Longevity:** As they map out their next 30 years, Boomers are designing their second careers and again prioritizing the purpose they sought in their youth. This reimagining of retirement is directly tied to the fact that humans are now living longer than ever.

**6. Changing Families and Evolving Roles:** Both parents in most families now work, and one of the many consequences of this change is that we are hiring people in record numbers for the jobs highest in purpose — caring for our kids and aging parents.

**7. New Social Science:** The new field of positive psychology has dispelled many of the myths about success and purpose and is changing the way leaders think. Emerging research supports and fuels the changing role of management and leadership to help people find purpose and meaning, rather than just to move up the corporate ladder.

**8. Accelerated Globalization:** Information technology and air transportation have made the world a village. We have become much more connected to people all over the globe and been made much more aware of the problems so many people in the developing world are coping with. As the world has become interconnected, we are no longer free to look the other way about the impact we're having on people's lives around the globe.

**9. A Shifting Social Context:** Organizations and individuals are seeing the gap in what the government can accomplish and trying to step in to fill it.

**10. Blending of the Sectors:** The line between government, nonprofits and companies is blurring, and every sector is seeing purpose at the core of their future. It is increasingly difficult for business to be able to justify a myopic bottom-line strategy or for nonprofits to ignore the importance of market forces. What we expect of organizations is changing.

# SECTION TWO: PERSONAL PURPOSE —OWNING IT

## Purpose Is What Matters

How is success defined? For many of us, we focus on what we can most easily measure: money. Money does matter, of course, at least until we reach a "comfortable standard." We need a certain level of income to be able to meet our basic needs and remove acute levels of stress.

According to University of Pennsylvania professor Martin E.P. Seligman, what we should seek to achieve is well-being, not simply happiness, which he sees as being one-dimensional and fleeting. Seligman breaks down well-being into five areas: positive emotion, engagement, relationships, meaning and accomplishment, or PERMA.

Positive emotion is the basis for having a pleasant life and includes things like warmth and pleasure — things we associate with basic happiness. Borrowing from the work of Mihaly Csikszentmihalyi, he also describes how you can be in a state of "flow," when you lose a sense of self-consciousness and are operating with all of your mental and emotional powers. This level of engagement requires deploying your highest strengths and talents.

Meaning is about who we are and how we are in the world. It is about more than the here and now, and it is about more than just the self. When we combine meaning with engagement, we find the pinnacle state of purpose, where our well-being is highest and most sustained. Purpose enables us to thrive; we need it in the activity we spend most of our waking hours doing: working.

### Learn, Earn & Return

During a recent TED talk, moral philosopher Peter Singer argued that the best way to change the world is to go into finance. You can make a lot of money and then give it away. And the best part is that you get rich, too. This is the fable of "learn, earn and then return."

The thinking goes something like this. The first third of your life is spent learning skills and about yourself, as you gain new experiences to help identify your path. The second third of your life is when you are in the heart of your earning potential and serving as a leader. The final third of your life is focused on giving back. It is when you reinvest in future generations and the world.

Apt as it may have been for another time, the "learn, earn and then return" model is inadequate for today. It no longer fits our society or the needs of new generations. A more useful and frankly gratifying model is to blend all three into every year of your career. We must constantly be learning, earning and returning. Continual learning is a constant of successful careers, and many of those who wait to give back never get there. And even if they do, they miss 30 or 40 years of the pleasure of living with a guiding larger purpose.

## Purpose Myth-Busting

So, how do you maximize purpose in your job? At the core is the understanding that not everyone derives purpose from the same things and that you must come to discover your own purpose. Most of what we understand about purpose at work comes from Hollywood. Stories are a powerful way to learn, but most of the stories we see on screen give us a romanticized view of the role of purpose in our work. They build myths about purpose that actually make it harder for us to focus on what matters.

**Myth One: Purpose = Cause.** One of the greatest barriers among professionals is the ubiquitous belief that they have to find their cause. So many of us who are looking for a cause think we have to find our one true calling. But seeking our purpose is about finding a direction, not a destination. **TRUTH: Purpose isn't a cause; it is an approach to work and serving others. Purpose is a verb, not a noun.**

**Myth Two: Purpose = Luxury.** Why do the poorest Americans donate 3.2 percent of their income to charity, compared to the wealthiest, who donate only 1.3 percent? Money often conflicts with finding purpose, as it creates a false substitute for defining success. **TRUTH: Purpose is a universal need, not a luxury for those with financial wealth.**

**Myth Three: Purpose = Revelation.** Connected to the myth that purpose is about a cause is the myth that we discover our purpose in one fell swoop. We are just walking along, minding our own business when — bam — our life's calling is transmitted to us like a bolt of lightning from above. **TRUTH: Purpose is a journey. It doesn't come as a revelation from above, but from living life awake and seeking new experiences.**

**Myth Four: Only Some Work Generates Purpose.** Work plays very different roles in people's lives. For some people, a job is simply a job. Those with careers care more deeply about their work as a way to get ahead within their profession or function. Those with callings fully integrate their work into their lives and values. **TRUTH: You can find purpose in any job. It is all in how you approach it.**

**Myth Five: Purpose = Easy.** Even when doing work that is making a big impact, if there is no skin in the game, the depth of purpose is diminished. **TRUTH: Purpose requires giving of yourself.**

## The WHO, HOW & WHY of Purpose

We have a language to talk about everything, from our education to our skills to strengths to our titles, but we don't have a shared way to talk about who we are and what matters to us personally. It is critical that you own your purpose and can articulate it powerfully as part of your identity.

When it comes to purpose at work, there are three core drivers that will determine whether we feel fulfilled in

what we're doing: who we serve, how we serve them, and why we serve them.

**WHO of Purpose:** As you seek to have more purpose in your career, this is the first area where you should seek clarity. Are you a doctor, a hospital administrator or policymaker? This isn't an intellectual question; it has to do with what turns you on and ultimately, what will allow you to create the most meaningful impact in the world.

**WHY of Purpose:** The foundation of our purpose is our moral view of the world. We are each driven in our work to drive progress toward achieving what we view as a moral utopia, where our values are universally achieved. It is our definition of progress, our motivation to move forward as a people. To simplify this framework, it is easiest to think of the moral foundations as they apply to work as being on a continuum between two moral poles. Researcher Jonathan Haidt frames the first pole through the lens of karma. Nature will ensure in the long run that everyone gets his or her just desserts. It is our job to get out of the way and let karma work.

The other pole doesn't trust that karma and nature will ensure that everyone gets what is coming to them. This other group sees natural forces as something more akin to entropy. They believe that without intervention, all groups and societies will move from order to disorder. It is only with intervention that we can be a moral society. We all sit somewhere in this continuum. It defines the underlying motivation behind our work.

**HOW of Purpose:** Even with the same moral foundations defining success, we approach the process of getting there differently. How we work is also tied to our view of the world and how we both solve problems and engage in the creative process. We can perhaps gain the most purpose in our work in how we approach it. These approaches include community-centered, human-centered, structure-driven and knowledge-driven.

Some people are always looking for ways to bring other people into an issue to help build ownership, community and awareness. Some people see every situation as an opportunity to redesign it in order to better serve needs. Some people are laser focused on learning and understanding everything about an issue before they move forward. Others look for potential efficiency gains in every line they wait in, and know there is a better way to design processes to bring out the best in people and keep their time focused on the things that matter.

To infuse purpose proactively into your work and life, clearly understanding what drives purpose for you greatly increases your odds of success. You need a mission, or better yet, a purpose statement. You need a short and powerful way to remember what matters.

## The Practice of Purpose

Researchers Susan Ashford and Ruth Blatt at the University of Michigan began their research looking at how people set goals and manage their time when they are self-employed. But as they talked to people, they found that the key issues raised by everyone weren't about time or goal management; what everyone wanted to talk about was how to manage purpose. That was their primary concern. How do I stay motivated and engaged? How do I feel like my work matters? When things get tough, how do I stick it out?

The prerequisite to effectively creating meaning was self-awareness. Understanding the drivers of purpose in your work is foundational to managing that same purpose. In talking to these professionals, Susan and Ruth found that they had implemented four different ways to make meaning for themselves. These become key to practicing purpose and keeping it front and center.

The first is task-focused purpose. It means loving the craft of your work and overcoming the small, task-related challenges. Those using the second approach were impact-focused and created ways to see their work as having an impact on others, part of something bigger than themselves. They considered the impact on society, other people and organizations.

Those in the third approach focused on their own identity. How did they develop a sense of who they are and where they were going? In defining different aspects of their jobs and boundaries, these professionals were able to gain a better sense of themselves and their values.

Finally, the researchers tied it all back to financial drivers of purpose. While money itself is not a purpose, often the reason we need the money is important and purpose-driven. These people see money as a means to enable them to achieve their most important purpose-based work — being part of a family.

### Job Crafting

Job crafting is a conscious or unconscious process of redesigning your own job to better align with your values, strengths and passions. Researchers have found that much of what brings meaning to a job is not the job itself, but what we bring to it. Traditional thinking says that the best way to find more meaningful work is to find a new job. But the theory behind job crafting points to another

solution — changing the job you're in to better meet your needs. Within job crafting, professionals can redesign not only their mindset but also their tasks and relationships.

Done well, this process stems from the WHO, HOW and WHY of what drives purpose. Once you have that self awareness, it is possible to intentionally redesign your job to make it substantially more rewarding.

## SECTION THREE: SOCIAL PURPOSE — THE PURPOSE ECONOMY ORGANIZATION

## The Purpose Economy Organization

Having a purpose or value proposition doesn't necessarily make a Purpose Economy organization. A Purpose Economy organization creates purpose for its employees and customers — through serving real needs, enabling personal growth and building community.

It is perhaps misleading to talk about a Purpose Economy organization as a binary label. There is no organization that you would say is 100 percent a Purpose Economy organization. It is a matter of degrees.

Take Google, for example. Larry Page and Sergey Brin founded Google with a strong commitment to creating purpose for people. Their products have improved countless lives by helping us access critical information when we need it, and their management remains deeply committed to creating positive social impact. At the same time, the rapid growth of the company has left many of its employees hungry for purpose.

Even the most successful organizations, those who are focused on creating purpose for people, have their challenges. A Purpose Economy organization is one that makes the creation of purpose their imperative, even if they struggle at times to realize their values and vision.

### Three Core Approaches

Purpose Economy organizations are emerging with incredibly diverse ways to emphasize purpose. Organizations that are thriving in the new economy integrate at least one of these three methods into their enterprise: 1) delivering purpose to customers, consumers or participants, 2) providing purpose to employees, and/or 3) building purpose throughout the supply chain.

An example of the first method is Harvard MBA Will Dean, who founded Tough Mudder and has built a rapidly growing business out of extreme obstacle courses "designed to test your all-around strength, stamina, mental grit and camaraderie." Over a million people around the globe have participated in these obstacle courses and have found the experience of training and participating to be one of powerful personal growth.

The second approach focuses on providing purpose to employees. Avon has been doing this for more than 125 years. It was inspired less by the needs of customers and more by a vision to make direct sales relevant to women. Avon was critical to building female independence in the economy and giving women a source of purpose. It has come a long way since then but has retained its core vision of empowering women through work.

The tea company Guayaki Yerba Mate is a compelling example of the third approach to purpose. They are building purpose through their supply chain — those people and companies that provide them with tea. The company's goal is to create 1,000 jobs and restore 200,000 acres of rainforest by 2020. They have built a network of certified Fair Trade tea growers that have created jobs for indigenous people in Argentina, Paraguay and Brazil.

## Purposeful Ventures – Five Opportunities

While the Information Economy has created many marvelous inventions and improvements in our society, one of the unfortunate side effects has been a loss of connection in many parts of our lives. But the Purpose Economy promises something different. Technology now has the potential to connect us in more authentic, meaningful ways, rather than isolating us. Here are five industry trends that illustrate how value is created in the Purpose Economy and how that will continue in the future:

**Retail:** In the Purpose Economy, we see the circumvention of traditional retail channels, which mark up goods at several points along the food chain. An increasingly robust direct producer-to-consumer retail capacity is emerging in which any individual can sell her wares at whatever price she determines. This new kind of commerce creates an appealing, person-to-person marketplace that empowers people to support independent artisans and allows them to find their own suppliers, which in turn lets them express themselves through the pursuit of products and producers that interest them.

**Real Estate:** Sharing has become a way to discover more meaning (and purpose) in our lives. Money that might have been spent on owning a big house or expensive car is freed up and can be spent on experiences. It also

connects us to each other in new ways, building trust and reciprocity and deepening relationships. Inspired in part by Starbucks and the mobility of office technology, more formal co-working spaces are popping up everywhere. There are now 800 such commercial co-working facilities in the United States, versus only 40 in 2008 and 300 only two years ago. Whether it's in our homes, our offices or community centers, as Americans, we are finding new ways of sharing our spaces and creating more purpose and meaning for ourselves and each other.

**Finance:** Finance looks almost nothing like it did a hundred years ago. J.P. Morgan built his financial empire by lending money to people based on their character and community standing. Money was lent to neighbors based on relationships, not collateral and loan-to-asset ratios. Banking was a community business. Entrepreneurs like Jeff Stewart have seen an opportunity to return to the roots of finance and live up to the ideals of pioneers like J.P. Morgan. Online social networks, he figured, could enable people again to borrow money based on their character and standing in the community. In founding Lenddo, he not only saw the opportunity to create a more sustainable and sane form of banking, but also to serve the 2 billion people around the world who are currently "under-banked."

**Education:** We are seeing a similar shift happening in education. Homeschooling is growing seven times faster than enrollment in traditional K-12 schools. While homeschooling isn't necessarily the solution, it is a harbinger of what is happening in the field and where America is headed. Parents want to create a rigorous and personalized educational experience for their children. Fortunately, new platforms and technology have made homeschooling manageable on many fronts. Like banking, education will return to a human-scale model based on relationships and personal needs, and it will be where much of the disruption in the economy and labor market occurs in the next few decades.

**Health Care:** Another field undergoing a radical transformation is health care, which also spent much of the last hundred years focusing on scaling and efficiency. Kaiser Permanente is a health care provider to 9 million Americans. They are working to use technology to strip out the paperwork that dominates medical offices today. Their vision is to go even further and implement technology to enable doctors to once again visit people in their homes. They are working to make telemedicine and in-home monitors the new norm. Health care will again be patient-centric. This patient-centric goal is combined with a larger shift in the medical community toward preventive care.

## Leading with Purpose

An emerging model, where an organization's community cuts across employee, contractor and customer lines, is increasingly common in the Purpose Economy. It is designed to build long-term communities that support the mission of the firm. But what's really radical about it is that at any given time, a member could simultaneously be a shareholder, customer and employee.

The blurring of customer and employee isn't only happening with 21st-century born companies. Even for companies like Ford, customers are increasingly driving sales, generating input for new services, and building the company's brand. Customers make up a crucial part of the value-generation process.

Marketing and HR have traditionally been the core functions in a company concerned with people. They both focus on how to attract and engage people in the mission of the company, and for a long time they have been able to operate in a largely disconnected fashion, but that is becoming less possible or desirable.

Smart companies today have started to think of these roles in less siloed ways, instead combining the functions to be in service of the larger community as a whole. By combining these functions, organizations are not only more efficient and effective, they become something far more important, more human-centered.

### Community Organizing

Community organizing is the art of motivating and leading people to lead themselves. It is leadership in its purest form. Or, as Harvard's Marshall Ganz more eloquently defines it, community organizing is "the act of accepting responsibility for enabling others to achieve purpose in the face of uncertainty."

This kind of community leadership is essential to the success of an organization like Mozilla, where there is little distinction between employees, freelancers, volunteers and users. Everyone is part of the community. For example, volunteers do much of the technical support for their products, such as rolling out their mobile platform in Latin America with no staff on the ground, and training staff at cell phone stores on the new mobile browser. Volunteers, many of whom work 40 hours a week at companies like IBM, spend their nights and weekends searching for bugs in Mozilla's software.

### An Incremental Change — Leader as Conductor

For many, the jump to completely integrating a community may be too great a risk and too heavy a lift to do

all at once. Elance's Fabio Rosati uses a conductor as a metaphor for an incremental shift in how an organization can approach leadership that points it in the right direction. As he puts it, "A conductor is not someone who tells people what to do but rather someone who orchestrates work. A conductor is also an extraordinary motivator and is really good at understanding the skills of every person, and how these skills can be brought together."

## SECTION FOUR: SOCIETAL PURPOSE —MOVING MARKETS

# Market Movers

The Purpose Economy is about more than just profits; it's about creating meaningful impact in service of people and the planet. The great business challenge now is not just how to build a successful organization, but how to build more human-centered markets.

### The Five Ways to Move a Market

Technology is but one of five levers, including research and data, bright spots, public perception, and policy, all of which can effect markets in the Purpose Economy. Market creation requires that at least three of these levers be deployed at different times or simultaneously. They are the ways you remove barriers to adoption of the changes you want to make.

**Bright Spots:** Bright spots, or positive deviants, are examples of usually small-scale efforts that have achieved a remarkable result. They point to the possibility that something better is possible and create a starting place for thinking about replication and how to build or expand a market. As you consider how to move a market and address the barrier to a population adopting a change, a bright spot might be something already happening and just needing amplification, or it may be something you need to create.

**Research & Data:** Research is most often a tool to help create incremental shifts in a field, but it can also become a much more powerful level. In the context of the Purpose Economy, research can provide insights that inspire entrepreneurs to pursue markets as innovators. And, given that the Purpose Economy isn't only about the bottom line, research often defines how to measure non-financial success.

**Disruptive Technology:** Disruptive technology can include everything from new medicine to mobile applications. Like bright spots, it changes our understanding of what is possible and gives markets new tools to advance their growth. Information technology has certainly been doing this, with classics like WebMD to mobile applications that help organize responses to disasters.

**Public Perception:** People are unlikely to join a market if they don't know about it or have the wrong frame of mind about it. A great deal can be accomplished by changing public consciousness. A series of health-related marketing campaigns by former New York City mayor Michael Bloomberg has brought about dramatic changes in the largest city in the United States, such as the ban on indoor smoking, and has led to the adoption of similar laws in other cities and countries.

**Policy:** When you change policy, which most often means changing public policy, you change the rules of the market. Changes in corporate policies can also have significant impact. Many companies have such a large footprint that when they change their purchasing or hiring policies, for example, they can quickly move a market forward.

These five market levers can and often should be employed in combination, and you can find these levers in action across industries and sectors.

Repairing the world and saving every being from suffering is an ambitious goal, but we must constantly set it as our true north. That said, both are brilliantly grounded ideas. In setting such unobtainable goals, we also directly have to admit that we will never achieve them, which grounds us in reality and forces us to bring humility to our ambitions within the Purpose Economy.

### RECOMMENDED READING LIST

If you liked *The Purpose Economy* you'll also like:

1. ***Common Purpose* by Joel Kurtzman**. Common purpose is rarely achieved, but when a leader is able to bring it about, the results are outsized, measurable and inspiring.

2. ***Goals!* by Brian Tracy**. Specific advice to help executives and others achieve their personal and workplace goals. Clarifying your values and finding your "major definite purpose" is a key step.

3. ***Hacking Leadership* by Mike Myatt**. Myatt identifies 11 leadership gaps that can be holding leaders back and affecting their performance. The gaps include purpose.

Career & Self-Development

# The Resiliency Advantage

## Master Change, Thrive Under Pressure, and Bounce Back from Setbacks

by Al Siebert, Ph.D.

### THE SUMMARY IN BRIEF

Resiliency — the ability to adapt to life's changes and crises — is key to a healthy, productive life. Based on his deep knowledge of the new science of resiliency, Dr. Al Siebert explains how and why some people are more resilient than others and how resiliency can be learned at any age. Siebert details a unique five-level program for becoming more resilient. *The Resiliency Advantage* helps readers banish negative, self-defeating thoughts and break free from the roles of "victim" and "good child" while improving problem-solving skills, maintaining humor and optimism during rough times, and becoming both self-reliant and socially responsible.

These are challenging times. We are in a turbulent era. One in which too much change is happening too fast for many people. *The Resiliency Advantage* gives you a head start over those who don't want to learn skills for handling constant change and difficult developments. Siebert shows you how to sustain strong, healthy energy in non-stop change, bounce back quickly from setbacks and gain strength from adversities.

### IN THIS SUMMARY, YOU WILL LEARN:

- How to sustain health, energy and positive feelings during the worst of times.
- How to improve your analytical, creative and practical problem-solving skills.
- How to strengthen your self-esteem, self-confidence and self-concept.
- How to develop the specific attributes and skills found in highly resilient people.
- How to sharpen your talent for serendipity — the ability to convert accidents and misfortune into lucky accidents and good fortune.

# THE COMPLETE SUMMARY: **THE RESILIENCY ADVANTAGE**

**by Al Siebert, Ph.D.**

**The author:** Dr. Al Siebert (1934-2009) was founder and director of The Resiliency Center. He was internationally recognized for his research into the inner nature of highly resilient survivors. He was an ex-paratrooper with a Ph.D. in clinical psychology from the University of Michigan.

## Thriving in Today's World

Resiliency means being able to bounce back from life developments that may feel totally overwhelming at first. When resilient people have their lives disrupted they handle their feelings in healthy ways. They allow themselves to feel grief, anger, loss and confusion when hurt and distressed, but they don't let it become a permanent feeling state. An unexpected outcome is that they not only heal, they often bounce back stronger than before.

This is why resilient people usually handle major difficulties easier than others. They expect to rebuild their disrupted lives in a new way that works for them, and the struggle to overcome adversity develops new strengths in them.

### Learning to Be Resilient

The art of resiliency gives you a powerful advantage in today's world. Your learning will be most useful if you put together your own plan for developing your way of being resilient and don't restrict yourself only to what you read in this book. In the school of life, the responsibility is on the learner, not the teacher. ●

## Bouncing Back from Setbacks

Gert Lamfrom and Neal Boyle were college sweethearts. After they married, Neal began working in Gert's parents' small hat-manufacturing business. He learned the business well and eventually took over as its president.

In 1970, Neal died suddenly of a heart attack. Gert's grief was magnified by seeing that no one but her husband knew how to run the business and her parents were too old to come back. All their assets were in the business. If it collapsed, she didn't know what she could do to support herself, her parents and her son in college.

Gert decided she would do her best not to let their small business collapse. She asked her son Tim, a senior in college, to come home and help her save the company from bankruptcy. With debts mounting and workers to pay, they worked long days and on weekends to fill and ship orders.

The business stabilized and they decided to expand by making sportswear. Gert was ruthless in making certain every item was perfect before it shipped. The company, Columbia Sportswear, developed strong brand awareness in 1984 when it launched an advertising campaign that featured Gert as a stern taskmaster with incredibly high standards. The ads featured "Mother Boyle" peering over her glasses, admonishing son Tim to ruthlessly test the durability of Columbia Sportswear garments.

Under Gert's leadership, Columbia Sportswear did more than bounce back from near collapse. Over the years it grew from being a small hat-manufacturing company to become one of the world's largest producers of sportswear, outdoor clothing and ski wear.

### Who Is Responsible?

In the past, most private- and public-sector employees were hired and retained because they were easily controlled. Their upbringing oversocialized them into acquiescing to people in authority. The unwritten agreement was that if they cooperated, did as told and didn't cause problems when feeling upset with management, they would have a lifetime job with fringe benefits and a good retirement package. The arrangement worked reasonably well for most employees while it lasted, but that world doesn't exist anymore. It is now common to hear about excellent employees losing their jobs because of organizational downsizing.

**Rebecca S. Clement**, Publisher; **Sarah T. Dayton**, Editor In Chief; **Andrew Clancy**, Senior Editor; **Amanda Langen**, Graphic Designer; **Jeannette Scott**, Contributing Editor

When your life is disrupted by decisions or actions made by others, an essential question to ask yourself is, "Who is responsible for how well my life goes?" How resilient you are depends on your answer.

Resilient people don't wait for others to rescue them; they work through their feelings, set goals, work to reach their goals and often emerge from the resiliency process with a better life than before. Later, they say they are glad that their difficult situation happened.

## LEVEL ONE RESILIENCY

# Optimize Your Health: A Practical Action Plan

The widespread belief about jobs having harmful stress is an artificial "consensus reality." Articles, books and workshops about stress, while well-intentioned, sustain an illusion that something called "stress" is constantly assaulting and harming us. What most people call stress is really an internal, physical feeling of anxiety or strain that they don't like. This is not just semantics. Stress is the external pressure, strain is the internal effect.

Make a list of six or seven things that you feel irritated, upset or distressed about. Ask and answer questions such as:

- What pressures am I feeling?
- How is my work and my life different than it was a year ago?
- What is difficult for me now and what difficulties am I expecting?
- What feels distressing to me?

Take your time and be thorough. Write descriptive phrases.

The next step is to talk or write about how you feel about the items you listed. During difficult times, an important resiliency step is being able to express your feelings in healthy ways. You can't make feelings go away, but you can move through them.

Now list your positive experiences. List activities that revitalize and invigorate you. Ask yourself these questions:

- What do I have fun doing? What do I get enthusiastic about?
- What would I like to do that I keep putting off?
- Who do I enjoy sharing good experiences with?
- When do I sleep best at night?
- What positive aspects of my life am I ignoring?

### Decide to Cope Well with Challenges

After you've made your lists about what drains you and what revitalizes you, you are at a choice point. Are you going to take action or not take action to reduce your distressing, energy-draining experiences and increase pleasant, revitalizing experiences?

In the 1970s, some psychologists began to study the connection between internal, locus of control attitudes and fewer stress-related health problems. In 1975, University of Chicago Professor Salvatore Maddi began a 12-year study of 450 managers and executives at Illinois Bell Telephone, a subsidiary of the American Telephone and Telegraph Company (AT&T).

The researchers found that the hardy executives and managers had three qualities:

- They made an emotional *commitment* to do their best to successfully handle the ongoing events and to help others.
- They believed they could influence the outcomes and actively worked to reach specific goals. This gave them a feeling of being in *control* of their job assignments and their part of the action.
- They felt energized and *challenged* to solve the problems and cope effectively with every difficulty.

### Decrease Negative Experiences

Look at your list of negative experiences. Pick one item and create an action plan to feel less vulnerable and more in control. Ask yourself: If I can't avoid it, change it or make it go away, what if I changed my response to it? What if I decided to stop letting it bother me?

You feel strained only by what you emotionally and physically attempt to deal with. Disengaging yourself from some things around you conserves your resiliency energy for more important challenges.

### Ask for Support

Everything you think and feel has an effect on your physical health; the quality of your interactions with others has an effect on your physical health. You recover better when you tell your family, a friend or a support group what you are feeling. If you feel overwhelmed and lack energy for handling the pressures, consider seeking professional help. Take this suggestion seriously. Anyone who tries to act as though he or she never feels upset or distressed is more fragile than people who admit they need counseling.

### Enjoy Strain Like a Good Workout

Notice that the Optimal Health Plan does not say to avoid pressure or strain. Without periods of strain we

lose strength and deteriorate. An optimal plan has you alternating the strains of intense work with periods of detachment, rest and relaxation.

## LEVEL TWO RESILIENCY

# Skillfully Problem Solve

Pioneering research conducted by psychologist Richard Lazarus established that effective coping includes both emotion-focused coping and problem-focused coping. The connection between a problem-solving response and resiliency has been confirmed many times. Research conducted by Mary Steinhardt at a division of the Motorola corporation found that employees who use problem-focused coping in a constantly changing work environment are more resilient, have good relationships with others and enjoy better health. Steinhardt's study also confirmed that the least resilient people do not cope well with their unhappy feelings, believe their jobs are full of stress and have more illnesses.

Robert Sternberg and his colleagues have conducted worldwide research to understand the kinds of intelligence that determine success in life. Sternberg, in his presidential address to the American Psychological Association in 2003, described three identifiably different kinds of intelligence used by people in almost every culture:

**Analytical intelligence:** Logic, reason and abstract thinking used to solve familiar problems.

**Creative intelligence:** Used to invent unusual solutions in new and unfamiliar circumstances.

**Practical intelligence:** Applied to solving situational, real-life problems. People who are "street smart" are individuals who have practical intelligence, although they may use logical and creative thinking as well.

### Analytical Problem Solving

First, develop an accurate understanding of the nature of the threat, challenge or difficulty. You accomplish this by asking questions such as: What is the problem? What are the facts? How serious is it? How urgent is it? How much time do I have? What additional information do I need? Is this a problem I can do anything about? Must I be the one who takes action?

Second, ask yourself, What do I want? What is my goal? What kind of outcome would satisfy me? Does my goal take into account everyone who would be affected?

Third, outline two or more possible ways to overcome the problem to achieve a positive outcome. Then look at the risks and potential negative effects of each of your solutions.

Fourth, take action. It is normal to feel a bit anxious when you do or say something you have never done before.

Fifth, look at the effects of the action you have taken. Ask questions aimed at getting accurate feedback.

Sixth, learn from the feedback you get. Reappraise your understanding of the problem and the situation.

Seventh, modify your efforts.

Eighth, re-evaluate the outcome. Can you now leave the situation and move on to other things?

Ninth, ask yourself what you learned from this.

### Creative Problem Solving

Creative solutions cannot be found using logical, analytical problem solving. Creative problem solving starts with feeling that an unusual, new solution is possible. Then you ask yourself many questions to free your imagination from the restrictions of normal thinking and assumptions. You have probably heard the phrase "thinking outside the box." It takes uncensored questions to break out of the invisible walls of socially approved thinking to let your imagination soar free.

### Practical Problem Solving

Many people without a college education are successful in life because they are very practical in how they handle the world they live in. Many people have an amazing practical intelligence with "things." Farmers and ranchers are known for their ability to keep farm equipment running using bailing wire and duct tape. In many large office buildings, the chief of building operations — the person who knows how to keep everything running — is not a college graduate.

The key point to understand here is to think beyond any difficulty, problem or adversity to your desired outcome. Build your plan on new or different actions you will take.

## LEVEL THREE RESILIENCY

# Strengthen Your Three Inner Selfs

Highly resilient people know they can count on themselves during rough times. They have inner strengths they know they can rely on. The differences stem from three core inner strengths essential to being resilient. These strengths begin to develop early in life.

As children play and have many different experiences, they gain a feeling of competence about doing certain things. Their actions may be athletic, learning words or numbers, or skills with computers or a musical instrument. Their competence leads to feelings of *self-confidence* when they anticipate their ability to succeed at certain things in the future.

During childhood we develop emotional opinions about others and ourselves. How we feel about ourselves is called *self-esteem*. If other children at school called you bad names, maybe your mother or father told you to answer back, "Sticks and stones can break my bones, but words can never hurt me." When you did this you were learning to protect your feelings about yourself by rejecting bad opinions of you held by others.

As we get older, we develop ideas about ourselves that create our *self-concept*. Who we think we are shapes our identity.

### How Your Three Selfs Let You Be Effective Without a Job Description

In resiliency workshops, I usually ask how many people have a complete, up-to-date job description. Most people laugh; a few people may raise their hands. An ability to be guided by an inner sense of professionalism is essential in today's workplace. Individuals with a self-concept of professionalism quickly find new ways to be useful, adapt rapidly, are self-motivated to learn new skills and so forth. ●

## LEVEL FOUR RESILIENCY

# Unleash Your Curiosity: Enjoy Learning in the School of Life

Curiosity is essential to resiliency. Why? For a simple reason: If you are going to interact effectively with a new situation, your brain must quickly acquire an accurate understanding of what is happening in your environment.

Curiosity can be viewed as a sort of "open-brained-ness." This open-brainedness does not distort new information with pre-existing assumptions or beliefs. Active curiosity lets you orient yourself to new developments.

People who have the best chance of handling new situations well are usually those with the best comprehension of what is occurring in the world around them. People with closed minds refuse to listen to information or feedback that they don't want to hear. It is not unusual for newspapers and magazines to run stories about how the executives of bankrupt corporations refused to listen to what their employees or customers tried to tell them.

### Three Kinds of Learning

It's useful to understand that you were born with the ability to learn in three different ways.

The first kind of learning is emphasized when students attend classes in school. What they learn is scheduled and controlled by teachers. A second kind of learning occurs from imitating effective people. The third way is self-motivated, self-managed learning; It is the learning that comes directly from your own experience. In the school of life, a skilled student can learn useful lessons from rough experiences.

Highly resilient people learn in all three ways. They learn in classes, learn from role models and learn useful lessons on their own.

A learning response is the antidote to feeling like a helpless, mistreated, abused, beaten-up victim. When life deals you a rough blow, you have two choices. One is to learn a valuable lesson; the other is to remain a wounded victim.

Experiences that feel like failures can break you down or be converted into growth experiences. Here is where the strengths of your three inner selfs play a critical role in determining which way your life progresses. If your self-confidence, self-esteem and self-concept are week, you interpret failure as a negative judgment about you and your incompetence.

### Learning: The Key to Mastering Change

Introductory psychology textbooks define learning as "a change in behavior that results from experience." This means that change and learning are inseparable; they define each other. The key to mastering change is to manage your learning. ●

---

# The Power of Positive Expectations

Two leading researchers into optimism and pessimism, Charles Carver and Michael Scheier, explain that "optimists are people who expect good things to happen to them; pessimists are people who expect bad things to happen to them." Believing that good events will happen in your future is different than hoping that your current difficulties will get better in the future.

Optimism and pessimism both tend to be self-fulfilling prophecies. If you expect a good outcome, your brain

spots little events and momentary opportunities that can lead to that outcome. If you expect a bad outcome, your brain will have you thinking, feeling and acting in ways that lead to that predicted outcome.

Feelings of hope are tied to specific, immediate difficulties, while optimism and pessimism tent to be global expectations about things happening in the future.

### Humans Have Attitudes!

In the 1920s, some executives encountering resistance to change in their employees turned to the new science of psychology for help. George Mead and other social psychologists began studying the nature of attitudes in employees.

Mead said that, in humans, an attitude is a predisposition to react with a fixed way of feeling and thinking. It is a form of prejudice that can be either positive or negative about almost anything. Research into the development, purposes and functions of attitudes led to the finding that attitudes reach deeply into a person's identity.

### A Flaw in PMA Preachings

The term "positive attitude" is a widely used term in our popular culture, but is not a useful concept in psychology. Here's why.

A sales manager trying to stir a room full of sales people into enthusiastic action by exhorting them to have a positive mental attitude (PMA) is poorly informed about attitudes and how people develop them. Motivational speakers who urge people to acquire a PMA set many people up to experience failure, because repetition of positive thoughts alone seldom brings the promised success. Attitudes, as understood by psychologists, are not only mental. Most psychology textbooks define an attitude as having three components: cognitive, emotional and behavioral.

An attitude is an interwoven combination of mental, emotional and behavioral habits. An attitude is a person's habitual, reflexive way of thinking about, feeling toward and reacting to something. A person's attitude cannot be replaced by telling him or her to change what to think. But by choosing to practice thinking in a different way, a person can change an attitude.

A related challenge is that associated emotions and actions must also be changed, as well as the attitudes of groups important to the person. Some people may be open to consider changing their way of thinking, but it might cause them to lose important friendships and acceptance by others if they do.

### Leave My Attitude Alone!

No one can talk another person into changing an attitude, no matter how hard one may try — as many sales managers, parents and spouses know full well. It takes a long time to develop an attitude, and it takes conscious, applied personal effort to undo or change an attitude — as with any habit.

So, when it comes to the matter of attitudes, think "habits." Then you'll have a realistic understanding of what it takes for a person to change an attitude. He or she must want the change to occur and, as with any personal habit, the practiced effort will take many weeks or months before the new way becomes established.

### Learned Resiliency: Drawing on All Ways of Thinking

The starting point for resiliency often begins with asking questions such as, "How can I cope with this? What is still good in my life?" An amazing thing about your brain is that when you instruct it to look for something, it often finds it. If you define the situation too narrowly and think of it only as devastating to your life, then other aspects of your life that seem contrary to your mind-set won't reach you.

Joanne Hill lost 12 family members in four years. Joanne says, "There came the time when heartaches descended upon me like the locusts of biblical times. First I lost my husband, then my brother, followed by my dear stepfather, my mom, aunt, two uncles, stepmother, cousin, foster son and his partner, and finally, my son, who died of a heart attack. Multiple other family crises plagued us through those four years as well. My mother had Alzheimer's, cancer surgery and a broken hip. Everyone I loved seemed to need help."

Joanne says, "Concerned friends often asked me, 'How do you deal with all the grief, troubles and sorrow? How do you do it?' I delved into that question through journaling, meditation and prayer. I discovered that in every stormy time, I could find rainbows if I looked for them." ●

## Integrating Your Paradoxical Abilities

Why do some people achieve much more career success than others? David McClelland, a psychology professor at Harvard University, spent many years searching for answers to this question.

McClelland found that successful people work to achieve personal goals; they are not motivated to achieve

social indicators of success. Success, for them, is a feeling they enjoy when they reach their self-chosen goals. If a goal is imposed on you by others — teachers, family or bosses — you may receive praise and rewards for what you do, but will feel little personal success.

Through carefully controlled scientific research conducted on thousands of people in different cultures, McClelland found that he could predict a person's future from the way he or she daydreams about the future:

- They daydream about how they would feel reaching a certain goal. A girl learning to play soccer may daydream about playing on the U.S. Women's soccer team one day.
- They pick moderately challenging goals.
- They engage in both optimistic and pessimistic thinking about how easy and how difficult it will be to reach the goal. Plans include carefully monitoring their progress so they can make corrections if needed.
- They seek advice from experienced people before making a commitment to achieve the goal.

McClelland's research shows that high achievers do not charge ahead with unbridled optimism. People most likely to succeed at what they set out to do will spend time trying to anticipate everything that could go wrong. Before making a commitment to a goal, successful people try to predict the obstacles, difficulties, personal limitations, possible problems and barriers. They find out what they can learn from experts and experienced people. Then they devise ways to avoid the problems and difficulties or be prepared in advance, should they occur.

Bosses who declare they want to hear only positive thinking about a new project set their organizations up for big failure. This restrictive way of thinking, described as "groupthink" by psychologist Irving Janis, suppresses the kind of critical evaluation that can anticipate potential future problems. Salespeople who restrict themselves only to positive thoughts are more likely to fall into emotional pits of discouragement. In contrast, people most likely to succeed go through phases where they seem to be as negative as any person who is pessimistic all the time.

The key point to understand is that highly effective people can engage in optimistic or pessimistic thinking as they choose to.

A good analogy is the way that you use the hot and cold water faucets at a sink with one spout. When you want a drink of water, you can choose to turn on cold water and not allow any hot water into your glass. When you want to rinse a greasy pan, you can choose to turn on hot water without mixing in cold water. If you want to wash your hands, you can turn on both faucets and blend hot and cold water together. Similarly, when you reach the advanced levels of mental development and emotional intelligence found in highly resilient people, you can exercise inspiring optimism, practical pessimism or a blend of both.

Abraham Maslow pointed out that highly self-actualized people go beyond acting in selfish and unselfish ways. He said they combine both selfishness and unselfishness into the same activity. Maslow's insight had a powerful effect on my thinking. I began to see many pairs of opposite traits combined in highly resilient people:

- Creative and analytical
- Serious and playful
- Sensitive and tough
- Self-appreciating and self-critical
- Impulsive and thorough
- Optimistic and pessimistic
- Outgoing and introspective.

Counterbalanced personality qualities indicate that you have developed advanced emotional intelligence. The more pairs of traits you have, the more you have the mental and emotional flexibility essential for resiliency.

When someone does not handle life's challenges well, it is often because this person always thinks, feels or acts in only one way and would never consider doing the opposite. ●

## Allowing Everything to Work Well: The Synergy Talent

Some people have a desynergistic effect on others. When they are present, they drain energy from a group. You feel relieved when they're absent.

Some people have a synergistic effect wherever they are. When they are present, things work better for everyone. People who are highly resilient interact with others in synergistic ways.

During times of crisis and change, there are always a few solid people who are generous with their concern for others. Self-confident, resilient and compassionate, they provide reassurance and stability in chaotic situations.

A noticeable quality when you're a synergistic person is that you volunteer to help when there's trouble. You're a sort of "foul-weather friend." When things are working well, you may seem uninvolved, but when there's trouble, you show up, ready to lend a hand or take charge.

I'm not saying that everyone is either synergistic or desynergistic. The majority of people are not at either extreme. Most people just drift along with whatever is happening. Things are neither better nor worse when they are present or when they are absent.

A sign that you have developed a synergistic nature is that you accomplish more with less effort. Your life flows along pleasantly and smoothly. People who are synergistic think not of time management, but of energy management. They get all the important things done and still have spare time to do what they enjoy. ●

## LEVEL FIVE RESILIENCY

## Strengthening Your Talent for Serendipity

Serendipity, according to 18th century writer and politician Horace Walpole, comes from using wisdom to convert an unexpected event, accident or mishap into good fortune. He said that three elements must be present for serendipity to occur.

First, something unexpected or accidental happens to you. Second, your perceptiveness, good sense and wisdom (sagacity) lead you to discover the third element — an unexpected benefit, gift or blessing in what happened.

### Serendipity: Converting a Life-Disrupting Event into Good Luck

Serendipity is an advanced-level resiliency skill. Individuals with many basic resiliency strengths are often able to convert a life-disrupting experience into one of the best things that ever happened. This is more than bouncing back; while struggling to cope with a life-disrupting event, you find new strengths and may discover unexpected opportunities. You see that you can take your life or your career in a new direction that would not have opened up to you without the disruptive event. The adversity creates an opportunity for taking your life in a different and better direction than you expected.

An amazing thing about your brain is that when you instruct it to look for something, it often finds it. People who turn intrusive or unwanted events into accidental opportunities do so because they deliberately scan for those opportunities.

Many people confuse serendipity with good luck and synchronicity. Serendipity is not a lucky accident. An example of accidental luck would be to purchase a deteriorated old house and, when you begin to restore it, you discover an old painting hidden up in the attic that is worth more than what you paid for the house.

Synchronicity refers to extraordinary, meaningful coincidences where one feels that something more than chance is involved. Research by quantum physicists is opening many people to understand that we are all immersed in a connected sea of energies in which all things have a sympathetic connection. ●

## Our Transformational Breakthrough

Each of us lives in a constantly changing environment. We can make our lives difficult by denying, resisting or fighting against the ongoing process of change or we can adapt and flow with changes; it's our choice. By accepting that unceasing change permeates our lives and that many kinds of energy constantly swirl through and around us, we can free ourselves from being buffeted around like leaves in a storm.

### An Old/New Way of Being

Highly complex, resilient, synergistic individuals are always curious, exploring, trying new ways of doing things and learning. They maintain mental and emotional stability by keeping themselves in a state of mild disequilibrium. They are open to take in, examine and process new inputs, ignore or let go of what is not of value or interest, and move on to the next experience. Thus it is that they become accustomed to quickly taking in and processing new things that are happening. They can react to an unexpected change by welcoming it and converting it into a desirable life event.

We are born able to learn how to handle nonstop, disruptive change easily and naturally, and constant change is necessary and desirable for us as humans. We are most resilient when we scan new circumstances with curiosity, not knowing in advance what we will do, but confident that we will interact in ways that lead to things working well. ●

## THE SUMMARY IN BRIEF

In ***The Responsibility Ethic***, Adam Kreek explores the 12 key ways that a person can take responsibility in their life, in business, and in leadership. These 12 responsibility ethics span a range of areas, from taking responsibility for the fears and failures we all experience to mentorship, stress, leadership, and even safety.

Adam Kreek is a member of the Canadian Olympic Hall of Fame for his gold medal-career as a champion rower. With eight Olympic golds to his name (and a host of other world championships), he translates the lessons learned in rowing and athletics to the world of business, leadership, and life.

Areas of focus within the book also include goalsetting, handling stress, professionalism in the workplace, recovering physically and mentally, improved communication, stronger resilience tactics, and others. Readers will come away with a deeper understanding for how they can take greater responsibility for their lives and work. The result is the greater ability to change problem behaviors, achieve real and actionable goals, and increase personal fulfillment in everything you do.

## IN THIS SUMMARY, YOU WILL LEARN:

- What it means to take responsibility and how "responsibility ethics" can change the way you see yourself and the world.
- How healthy stress and a confident attitude towards failure can transform your life and career.
- The importance of professionalism, communication, and mentoring in leadership and in your workplace.

## Why Responsibility?

The Responsibility Ethic exists to challenge and heal everyone who has been told to follow their dreams. We're sold the dream, but we don't read the fine print: hard work and labored action. We must transform our dreams into a vision and a plan, then move into action.

Take responsibility. Take action. Be a person who makes happiness and success happen.

The first step is to acknowledge that career, family, and life don't just happen to us. We, and only we, create our futures through our choices, actions, and conscious habits. Our daily choices have led us to today, and our choices today will take us in any direction we choose. We must take responsibility for building an environment that pushes us to act effectively. Get a coach. Ask a friend. Seek a mentor. Build a team.

Adopting the strategies in The Responsibility Ethic takes a lot of effort, and that's the point. We generate far more negative stress when our dreams are unaccompanied by hard action, when we shirk into the shadows instead of wading into troubled waters. It's time to stop wishing, hoping, and worrying— three overused excuses for inaction.

Focusing on what we can control gives us the energy and ability to leap when the next opportunity arises. You can either be someone with a strong internal locus of control and make things happen, or you can be a person with a strong external locus of control and let things happen to you.

What kind of person are you? Who do you want to be?

### Take Responsibility for Your Fear of Failure

All of us fear failure. We carry regret, shame, and other emotional baggage after any significant failure. But there's a powerful process that can help you or your team overcome that baggage and move forward, free from the fear of failure.

First, explore the facts. Take a step back and decouple the event from your related emotions. Facts and feelings are both important to consider, but they're two distinct beasts. Seek to understand each in full.

Too often, we rush through the step of reflection to avoid the discomfort of negative feelings. Rushing is counterproductive, as these emotions will resurface and hold you back in the future.

Next, it's time to learn. You are often the most creative on the rebound from catastrophe. What did you learn about your actions that helped or hindered your result? What did you learn from your reaction that served you well or otherwise? What did you do well? What could you change?

This process, in turn, will help you grow as you address how you'll put each learning into daily or situational action— turning fear and doubt into growth and action.

Too often, we rush through the step of reflection to avoid the discomfort of negative feelings.

## Take Responsibility for Your Goals

If you set, pursue, and achieve healthy goals, you will enter a satisfying space where hard work is easy— and even enjoyable. If you set, pursue, and achieve toxic goals, you'll end up numbing your emotions with vices. Strive to be your best self. Be clear on your destination. Satisfy your core needs. Set better goals.

In the face of low energy, we paradoxically need to imagine new ways of spending our energy that aligns with our values. We need a new challenge that relights our fire. The appeal of a positive future can be a gift in the present moment. From this platform, we can start small and work up the courage to set bigger and bigger goals. If we imagine too big and bright of a future, the challenge becomes too great, and we struggle to take responsibility. Our will evaporates. Instead, we need to find small wins to rebuild our confidence.

Finding small wins creates a positive feedback loop. You take responsibility for a small step and soon know that leap is possible.

### Take Responsibility for Sharing Leadership

The command-and-control model of leadership is dead and buried. Leadership is the ability to turn your vision into reality by enlisting the help and winning the hearts of others. It's time to share leadership. It's time to win together.

In the shared leadership model, instead of one boss at the

top of the hierarchy making all the decisions, vision and influence is distributed to every member of the team. The team has an extreme ownership of group outcomes. Where traditional leadership is static— one person is the leader until they are replaced— shared leadership is remarkably dynamic and powerful.

Shared leadership empowers people within a team to lead one another using their unique areas of expertise. It flows from commitments made at the top. Leadership that holds a strong bias to hierarchy and status is waning. Our modern world is becoming more complex and nuanced, and we need more collaborative leaders who believe in distributing control and direction, sharing it at all levels of an organization.

## Take Responsibility for Your Stress

Channeled properly, stress can be a positive and powerful force. Whether it's the nervousness we feel before going on stage to perform or the stress of a fast-approaching deadline, the anxiety that drives us to do more in less time can be one of our best friends. Many of us think of stress as negative, or something to be avoided. Rethink it. Harness the power of stress as performance energy.

Stress is something each of us must deal with on the job, but it's what we do under that pressure that defines the outcome for our organizations and for ourselves. We can build drive and energy to move through stress by reviewing our past. Look at your calendar week by week for one year and make a list of everything you've done in your life and business. We can look back at our year with regret or we can look back and see how far we've come. From there, you can track and stack your wins.

While some allow stress to overwhelm them, others use stress to motivate and push them forward.

## Take Responsibility for Your Professionalism

How can you be a Pro? A Pro delivers results. Amateurs can pursue an activity simply for the love of it and not necessarily for fame, fortune, or vocation. But when the stakes are high and we want to get something done right, it's time to call in the professionals. A Pro performs at the very highest level. In your key area of focus, do you behave like a professional or an amateur?

The professional has learned that success, like happiness, comes as a by-product of work. The professional concentrates on the work. The Pros do the work and, because of their ethic, have more influence over their results. Professionalism is a choice and its traits can be learned.

When you dedicate yourself to routinely doing your best work, you will find invaluable fulfillment. You'll be motivated to continue and take responsibility for your own professional dedication.

### Take Responsibility for Your Recovery

Effective recovery builds a store of energy and determination to power us through our next peak performance. Effective recovery opens our hearts to the softer, sweeter, and subtler side of life, which can be just as delicious as our achievements. Without adequate recovery, you will experience life-altering injuries, mental breakdowns, and broken relationships. Recover intelligently. Ensure your downtime allows for consistent uptime.

The best prescription for feeling awful is to sweat an hour every day for a month. Move. Sit in a sauna. Go somewhere hot. Eat right, move right, sleep right, get outside, meditate. Make sure you are coping with the right strategies. Start now. You will feel much better a month from now.

In the great outdoors, families are more cohesive, tough decisions become clearer, and the risk of heart disease and depression is markedly lower. It doesn't just sound nice— it's a scientific fact.

### Take Responsibility for Your Coaching and Mentoring

Mentors provide perspective, guidance, and inspiration. Coaches ask great questions that help us lead from within. You'd be foolish to think that your challenges and feelings are unique. They've been experienced by others before you, and others will have similar experiences after you. That's why mentors matter and coaches change lives. Get a coach, get a mentor, and be both for those you lead.

Research says it only takes on consistent year of action by a coach, leader, or mentor to make a significant change in someone's life. And when you or your team make the right kind of change, you gain an ethic that propels you faster toward your goals.

### Take Responsibility for the People in Your Boat

You can get far more done— faster and better and smarter— when you have a talented team aligned under a com-

mon goal. Working together with the right people brings joy in effort and top-shelf results. But this means recruiting and retaining great people and working with those who need help to get up to speed. Do that, and you'll create a team that's hard to beat.

Our limits are often imaginary. We find our real limits if we have the courage to break through. We find our limits if we have the courage to seek failure. We grow our limits if we seek failure with the support of a world-class team.

A great team needs a great leader on top and great leaders within. Choose your team wisely and be the kind of leader whom others will choose.

### Take Responsibility for Your Safety (and the Safety of Others)

Safety performance is not a priority; priorities change. Safety is non-negotiable. It's a core value. Every day, we eat, sleep, get dressed, work hard, get paid, and are safe. We lead safe teams because we care. We build safe cultures because we care. Bring your best self and remember that boring, mundane safety plans are not to be left on the dock.

What small actions and behaviors can you keep sharp to save lives? How can you tweak your on-site safety meetings to be more effective? How can you empower all employees to better use the lines of communication? How can you take better advantage of near misses and other safety moments?

These are the questions that will lead to a strong, robust safety plan.

### Take Responsibility for Your Communication

Communication is a key skill for any leader. We must be clear, frank, and transparent with our people, and our people need to respond in kind. Communication needs to take place the moment an opportunity or problem arises, not long after the fact. After all, the best communication is a two-way street, where team members carry on a dialogue as they work together—constantly sharing plans and exploring issues.

## Take Responsibility for Your Resilience

Change is motivated by two things: the pursuit of pleasure or the avoidance of pain. In pursuing a brighter future, we create the pain of challenge, self-doubt, uncertainty. When pain prompts change, we often resent the push and can wallow in self-pity. But what's worse than change? Staying still. Stagnation. Challenges of the mind. Facing ourselves, suffering as we move toward a brighter future, and being grateful for the motivation of pain strengthens resilience.

## Conclusion

Courage is the sum of fear and purposeful action. It's the courage to continue that will lead us to more peaks in our lives and more moments of peace. Success is not final. Failure is not fatal. Finding the courage to continue is what counts.

Adam Kreek is one of North America's top Management Consultants, and Executive Coaches. Adam has coached, trained, and taught hundreds of thousands of people including teams at Microsoft, General Electric, Mercedes-Benz, L'Oréal, Shell, YPO, EO, TedX, but most importantly, Adam walks the talk. Kreek runs two corporations—KreekSpeak Business Solutions and Ergo Sustainable Solutions, a low carbon initiative that connects small businesses with small governments. A two-time Olympian, Adam holds sixty international medals, including Olympic gold, and multiple hall of fame inductions.

## THE SUMMARY IN BRIEF

Has your email inbox overwhelmed you? Are you losing the battle against clutter? Are important items on your to-do list not getting done? Do you ever envision achieving your business and life goals "as soon as you get control of your life"?

You're not alone, but it doesn't have to be this way.

In ***The Secret to Peak Productivity***, productivity expert Tamara Myles gives you invaluable tools and strategies that will enable you to take control of your life and achieve your goals. You'll learn how to break down all of your objectives into specific, relevant, and measurable daily tasks; master the three Ps of time management; establish an electronic organization system that works for you; and more.

## IN THIS SUMMARY, YOU WILL LEARN:

- How to assess your own productivity strengths and weaknesses based on your own personal style.
- Techniques to tailor your own personal productivity plan to be more effective.
- Ways to get rid of clutter, including a rapid organization system for paper.
- How to enhance your productivity around the five parts of the Peak Productivity Pyramid: physical organization, electronic organization, time management, activity-goal alignment, and possibility.

## Steps to Productivity

What distinguishes professional organizers is they transfer skills rather than simply complete tasks.

At every client appointment, professional organizers strive to transfer skills, teach systems and explain processes. They are committed to empowering their clients with the necessary skills to achieve their best organization system. Empowerment is always top of mind because consultants want their clients to achieve success. Success only happens when consultants explain systems and processes in a way that helps their clients organize their environments in their own way, and a way that works for them.

Nearly 90 percent of people who call for help initiate that first call because they feel overwhelmed by physical clutter. Some clients are happiest to have someone come in and clean up their offices, file their papers, make everything look tidy, leaving them with an office that's cleaner. Others welcome the opportunity to find a lasting solution for managing their incoming papers, mail and other documents. In other words, some clients call and want a Band-Aid for the symptom; others are ready to endeavor to find the root cause of the issue so that they can become empowered to develop lasting solutions to their productivity issues. Rarely is anyone ready to deal with the other issues, such as electronic clutter and time management, until a person's physical clutter is brought under control.

### Maslow's Pyramid

In his 1943 psychological research studies on what motivates people, Abraham Maslow discovered that there is a logical order of needs that have to be satisfied before people can be motivated to the next level. He identified five levels, starting with the most essential needs:

1. **Physiological**. The most basic needs that people experience are the essentials for their survival, such as air, food, drink, shelter, sex, and sleep. They need to satisfy these needs before they are motivated to be concerned about the next level.
2. **Safety**. Once people's physiological needs are met, then security becomes important, including personal and financial security, health, and well-being.
3. **Love and Belonging.** Next in the hierarchy of needs that motivate us are relationships, such as work, group, family, and partner.
4. **Esteem**. Both self-esteem and respect from others are among the needs identified in the next level.
5. **Self-Actualization.** The highest level that motivates people is fulfilling their greatest potential.

Most often, Maslow's hierarchy of needs is expressed as a pyramid, with the most essential needs expressed in the lowest level. People need to fulfill each level, starting with physiological needs, before being motivated to move up the pyramid and achieve the next level.

The strategy for fulfilling a more productive life follows a similar pattern. People have to satisfy, to some extent, competency with one level before they can move on to the next.

### The Productivity Pyramid

The Peak Productivity Pyramid™ System defines the motivational relationship among five areas of productivity. It is a holistic and comprehensive approach to productivity that starts with streamlining your basic organizational systems and moving up the pyramid, working toward developing goals for different possibilities in your life.

The Peak Productivity Pyramid System is a unique and proven framework to take people who want to improve their productivity through the journey of aligning their daily activities to their goals and objectives:

1. **Physical Organization.** The process begins with managing the accumulation of documents, magazines, mail, notes and books. In the business world, this is the primary need that draws people into improving their productivity.
2. **Electronic Organization.** Having systems in place for handling your online information — all the different ways we have to communicate, store and retrieve information electronically — is essential to success at the next level.
3. **Time Management.** This is the most common need associated with productivity. Time management involves managing tasks and appointments, to-do lists, calendars and what you do in a given day.
4. **Activity-Goal Alignment.** The tasks at this level are setting goals, both business and personal, and then aligning what you do each day to fulfill those goals.
5. **Possibility**. The fifth level of the Peak Productivity Pyramid is the culmination of mastering the previous four levels. Level 5 is not something to be achieved or a place to be; rather, possibility is the continual examination and goal-setting process on the path to fulfilling your potential.

Although it is a series of five levels, the Peak Productivity Pyramid is not always exclusively a linear path. Given the busyness of our lives, the distractions we experience and how our physical and electronic worlds are constantly evolving, there will always be ways to improve productivity:

- You can't always be sure what level is the best place to start. Where do you have mastery and where can you learn new skills that will help you be more productive?
- Even when you think you have mastered a level, there will be other skills to learn that will make you more productive. It is a good idea to check in periodically at each level to see if you are being as efficient as you can be.
- Possibility and activity-goal alignment are iterative processes and part of a continuous exercise to be certain you are achieving your ultimate goals.

## Level 1: Physical Organization

Clutter is the most common reason people first contact a professional organizer. No matter what else may be keeping people from reaching their goals and being effective and productive, without first clearing the physical disorganization, every other step in the Peak Productivity Pyramid System falls by the wayside. As Maslow would attest, it is hard to think about love when you're starving and cold. People who have an office that is cluttered are more likely to feel stressed each time they walk into their office. According to the National Association of Professional Organizers (NAPO), the average American spends one year of his or her life looking for lost or misplaced items.

### Getting Rid of Clutter

The first three goals in achieving physical organization are:

1. Get rid of as much paper as you can, so you minimize your space needs.
2. Store what you save efficiently, so you can find what you need.
3. Set up a system for handling your papers as they come in.

According to organizational expert Barbara Hemphill, one way to define clutter is to think about it as delayed decisions. When you fail to make a decision each time you handle a piece of paper, it becomes clutter. Stacks of accumulated paper are a result of delaying to decide what to do with each paper as it arrives. Every piece of paper that comes into your life falls into one of three categories:

1. You're going to shred or recycle the paper.
2. It's a document that requires some type of action, such as a bill to pay, an RSVP to mail, or a form to fill out.
3. It's something that you have to keep either for legal reasons or because you might need to refer to it.

These are the "Three To's" of sorting for all papers: to do, to keep or to toss. When you use the Three To's of sorting, then you can make decisions quickly for all your papers by placing them into one of just three categories.

The mistake most people make when they first tackle the task of organizing their stacks of papers is that instead of starting with three simple piles, they immediately try to sort everything into many different subcategories, such as financial, medical, and projects. When they tackle sorting that way, it takes much longer and can feel overwhelming.

Using the Three To's of sorting is similar to creating a big-picture view of your clutter; it's a way of doing top-level sorting. When you first sort into three piles, the goal is really to get rid of as much paper as you can. These days it's easy to retrieve information online. If an item is a manual or something you can go online and find, you can make the decision to toss it. If you know something is available elsewhere, get rid of it. If you have expired receipts or coupons, it's okay to let go and get rid of them right away. You won't have to make a decision about that piece of paper again later. Once you sort all your papers into these three stacks, you can then file the piles.

## Level 2: Electronic Organization

Electronic clutter is a result of the same lack of decision making as physical clutter and can be the source of a great deal of stress. The other compounding issue of electronic clutter is where to save your electronic information so that it is retrievable. Electronic organization is not just about making choices regarding the amount of information you keep; it's also about being able to find the one item you need when you need it.

### Seven Warning Signs

There are signs that let you know when you need to reassess how you're handling electronic files:

1. Exceeding your email storage space allotted by your company or online system, such as the 15GB limit on Google Gmail.
2. Feeling anxious about deleting something.

3. Forgetting whether you saved something.
4. Spending a lot of time searching for files because you don't know where you filed them or what you named them.
5. Seeing a lot of icons on your computer screen with no rhyme or reason.
6. Keeping thousands of digital photos, even the out-of-date, irrelevant or bad photos, without any labeling system (other than date).
7. Keeping outdated and unread email messages in your inbox.

## Organize Your Electronic Files

It is usually easiest to first organize your electronic files. That step will provide you a basic structure for filing incoming items, whether they are emails, attachments from emails, audio, video, documents or picture files. When organizing your electronic files there are two primary decisions:

1. How to structure your folders.
2. How to name your files.

Just as in managing your physical files, you need to decide what system you will use for your electronic folders and subfolders. The choices are similar:

- **Client folders**, which your computer will list alphabetically, if you start with the clients' last names.
- **Project files**, organized by project numbers (for businesses that track proposals) and/or by numbers assigned sequentially.
- **Folders by date**, many businesses track by date.
- **Financial and other business-operations files** (e.g., staff, taxes and so on).

If you find that you are frequently using the search function to find your files, then you are not naming, or organizing, your folders or files optimally. It is worth spending time to develop a system for file naming that works for you. The faster you can retrieve important information, the more productive you will be.

## A, B, Cs of Email Processing

In a research study cited by an IDC Report by Susan Feldman, entitled ***Hidden Costs of Information Work: A Progress Report***, the activities of email consume an average of 13 hours per week per employee. If you assume that the average knowledge worker earns $75,000 per year, that means that a company spends about $21,000 of that salary for that one employee to create, read and answer email. That's 28 percent of every employee's salary.

These statistics show how important it is to have a good email management system. Without one, you will realize a drop in productivity, an increase in stress and a requirement to work more hours. There are some simple steps you can take to streamline your approach to email and, ultimately, make you more productive. One method involves thinking of your email handling system as the email alphabet:

A = Access D = Delete

B = Batch E = Execute

C = Check F = File

Access your email at allotted times each day. Choosing when to process email depends on what works best for you. Typically, though, checking email four times a day tends to be enough for most people:

1. First thing in the morning—to make sure there is nothing urgent.
2. Before lunch—the natural break in the day makes it a less disruptive time.
3. Mid-afternoon—when you're ready for a stretch or preparing to go off to a meeting.
4. End of Day—so that you will only have fresh emails to check in the morning.

Batch process your email just like a physical pile of mail. Your electronic inbox should be the place you receive your email, and it stays there only until you process it.

Check each email, which doesn't mean you need to read each one. Often you can make a decision about an email from the subject line or from the first few lines of the message.

Delete as you check. If you read a newsletter and find that it is no longer relevant or has little to no value, then unsubscribe. You won't miss reading it, and you will no longer have to handle it. Delete everything that has no further action required.

Execute quickly whenever possible. Just as in organizing your physical papers, you only want to touch each email once. If you only need a few minutes for replying or forwarding a message, then do it immediately.

File only if you cannot delete or execute. The primary

reason to file an email is if it is a record of something, a decision, an instruction, a status report or something else you might need to refer back to at some future date.

## Level 3: Time Management

In their best-selling book ***Rework***, Jason Fried and David Heinemeier Hansson, the cofounders of 37 signals, complain about workaholics, explaining that they are people who "try to fix problems by throwing sheer hours at them… Working more doesn't mean you care more or get more done." They say that the real heroes are at home, even though the workaholics would like them to feel guilty for "merely working reasonable hours."

You probably already have a definition in mind of what time management means to you, but it comes with many different meanings.

Stephen Covey, in ***The 7 Habits of Highly Effective People***, says, "What does it matter how much we do if what we're doing isn't what matters most?" Time management is about doing what matters most first. It doesn't mean doing more things in less time. In fact, time management is creating systems or systematic practices for doing what is of greater importance, even if that means doing fewer things.

Another way to talk about time management is as choice management. We can't manage time. Time happens. We all have the same amount of time. We can, however, manage our choices in relation to the time that we have, what we choose to do with our time.

Just as with organizing, time management is a skill. It requires practice, and it, too, takes time, like learning a new sport or how to play an instrument. The good news is that we are capable of excelling at time management.

You just have to think long-term. You have to be committed to fixing systems and tweaking behaviors and routines, and just like with any other skills, the more you practice, the more you are aware of it, the better you'll become at managing your time.

### Three Ps of Time Management

No one-time management or organization system alone is good for even one person. Even if you find a system that resonates with you, you might need to mix and match techniques and get pieces of different systems until you find what works best for any given moment.

To achieve successful performance in Level 3 of the Peak Productivity Pyramid System, any plan should include the following three fundamentals:

1. **Plan**. Identify what you should work on, everything in your realms of need to do and want to do.
2. **Prioritize**. Identify what you should do first, second or never.
3. **Perform**. It is one thing to know what you should do and another to do it. Performing means committing to your plan.

You've probably heard the cliché that failing to plan is planning to fail. You can always change your plan, but you have to start somewhere.

You start by taking everything that is swirling in your mind and putting it all on paper or in your electronic system. Do a brain dump. Write down everything you can think of that is weighing you down and causing you stress. Your brain should be freed to think strategically and execute your plan, not to try to remember everything you need to do.

Once you have cleared your mind of the swirling to-dos, it is time to look at your list and decide what you are going to do, when and how. Start by quickly estimating how long you think it will take you to perform each task, project or activity on your list.

### Four Decision Categories

Remember, time management is choice management. We all have much more to do than time to do it, so you need to look at all your activities and decide which ones to allocate time to. There are four key ways to decide whether you will do something:

1. **Choose**. Identify what is important and essential for you to do.
2. **Remove**. You can take things off your list by saying "no." You can decide not to do some things.
3. **Wait**. You can push back doing tasks or activities until next month or a few months from now.
4. **Delegate**. You can delegate and have somebody else do something for you.

You choose to do a task when you enter it on your calendar with time allocated to accomplishing it. Once you have made your plan and you have added it up and decided what you are going to do, then you do it. As the saying goes, "Plan your work and work your plan."

### Prioritizing with Urgent and Important

By prioritizing your tasks and all your to-dos, you get a clear sense of which activities in your life are moving you forward, toward your goals and toward important things, so that important things don't suddenly become urgent.

To prioritize your tasks every day and into the future, it helps to answer the simple question, "What is most important for me to work on first?" Let's start by understanding what is meant by important and urgent:

- *Important* activities are of greatest significance or value. They are likely to have a profound effect on your success and will lead you to achieving your goals.
- *Urgent* activities demand immediate action or attention, but they are often not associated with your goals.

Using this simple classification, you can then further categorize your activities into four different boxes:

1. **Important/Urgent** — Activities you need to do:
   - Crises and other deadline-driven emergencies
   - Critical meetings
   - Project deadlines
2. **Important/Not Urgent** — Where success happens:
   - Preparation and strategic planning
   - Working on projects
   - Training and professional development
   - Exercise, relaxation and self-care
3. **Not Important/Urgent** — Activities that cause unnecessary stress:
   - Opportunities with a deadline
   - Requests for information or help
   - Self-imposed deadlines
4. **Not Important/Not Urgent** — Big timewasters:
   - Interruptions
   - Telephone calls
   - Meetings
   - Trivial busy work that occupies or wastes your time

The more you learn about time management and understand the value of your time, the more you will protect it and not let others "steal" your time with interruptions, unnecessary chatter and meaningless activities.

### Perform

Once you have planned and prioritized, you have to perform. There are, however, several things that keep us from performing at the optimal level. Whether you call them distractions, challenges, or timewasters, they stand between you and optimal performance. Examples include perfectionism, procrastination and multitasking:

**Perfectionism**. Among highly successful people, there is often a tendency to pursue perfection, which frequently leads to successful but suboptimal outcomes. Focusing on doing things right is fine but can lead to perfection paralysis, which means that if you're not completely sure how to do something or don't believe you are capable of doing it to perfection, you don't do it at all.

Focus on doing things adequately rather than right. Your perfectionism should be focused on things that really matter or your biggest priorities. Think about doing the right things adequately as striving for excellence, not perfection. Or think about adopting this slogan: Done is better than perfect.

**Procrastination.** Procrastination is delaying to start or finish a task (or several tasks) that should be a priority. The ability to overcome procrastination and tackle important actions can have the biggest positive impact on your life.

There are 10 different ways to overcome procrastination. These strategies are not new, and you will likely find them in other places, but they are worth repeating:

1. **Delete**. Is what you're working on something that really needs to be done? Perhaps you should delete the activity so that you can move on to what is important.
2. **Be positive.** Procrastination is usually tied to negative self-talk or when you say things such as, "I have to," "I should," "I must finish."
3. **Take the first step.** If you start the task right now, you remove all the anxiety and feelings of stress.
4. **Ask for help.** When lack of clarity causes procrastination, sometimes asking for help is all you need to do.
5. **Break it down.** Break down large projects into actionable steps. Huge assignments don't look as big broken down into the smallest steps possible.
6. **Follow the 25-minute rule.** To reduce the tempta-

tion of procrastination, each actionable step on a project should take no more than 25 minutes to complete.

7. **Give yourself a reward.** Celebrate the completion of project milestones, and reward yourself for getting projects done on time.
8. **Set and respect deadlines.** If you haven't been given a deadline for a project, ask for one or assign yourself a deadline, and write it down in your calendar.
9. **Remove distractions.** You need to establish a positive work environment that is conducive to productivity. Remove any distractions.
10. **Be accountable.** Having an accountability partner is one of the best ways to stay on track with tasks and projects.

**Multitasking.** Brain scan studies reveal that if we perform two tasks at the same time, we only have half of our usual brainpower devoted to each task. So when we multitask, we're only half there for each activity. The truth is, we can't do two jobs simultaneously. Our brains aren't capable of focusing on two separate things at the same time.

Instead, the brain switches rapidly between one task and another, which causes us stress and to lose concentration, as it takes time for the brain to refocus and concentrate on one task and then the other. Multitasking becomes ineffective and ultimately counterproductive.

## Level 4: Activity-Goal Alignment

When you hone your skills at the bottom of the Peak Productivity Pyramid, you become organized and you create the systems you need to help you to manage your environment better. Then you work to achieve time management, and you operate more efficiently.

All of these skills change how you manage your day, and you fall into control. But it's not until you develop goals and align them with what you choose to accomplish every day that you start making big changes in your life. You will find yourself living your life with purpose.

### Why Goals Are Important

Living a life with purpose means living each day thinking about the desired outcome. To do that you need to take a step back from the chaos of everyday life and see the bigger picture. What do you want to be when you grow up?

Setting goals doesn't have to be overwhelming. What if the day-to-day tasks that you do actually move you toward your goals? Sometimes, becoming aware of how setting goals helps to move you toward a better situation opens the doors for change.

### Developing Your Vision

To create an environment where you are working toward goals, you need to develop your vision, how you see yourself in the future, both in the short term and the long term. Think about who you want to become in all the different aspects of your life: work, family, spiritual, fitness, romance, and so on. Your goals have to take into account your entire life, not just a portion of it. After all, every choice has consequences, and in order for your goals to be realistic, something you really believe in, you must consider the entire picture.

### Six Steps to Goal Setting

Each goal should be specific, measurable, attainable, relevant and timely (SMART). If you've never used a SMART goals system, here are some simple steps to get you started:

- Commit by establishing goals that you want to achieve.
- Understand why this change is important to you.
- Set time aside to create your SMART goals.
- Break down tasks into specific activities that will lead you to fulfilling your goal.
- Schedule the time frame in which the goal will be accomplished.
- Assess and reassess whether each goal is still important to you. No goal is set in stone. Goals help you set the direction and keep you moving toward your vision.

### Paving the Way to Possibility

The first four levels of the Peak Productivity Pyramid focus on implementing changes in your environment and processes. They are all about the tangible things you can do to improve your productivity. There are also some intangibles that contribute to success and increased productivity.

The two most important attributes are **discipline** and **attitude**. Even if you have the best time-management system set up, your life will only change if you have the discipline to implement the practices. Attitude is another contributing factor.

If you have a picture of your success, whatever that means to you, there is a greater likelihood that you will achieve it.

## Level 5: Possibility

Within the context of the Peak Productivity Pyramid System, a *possibilist* is someone who embraces the emotion associated with change; someone who is aware that there are new possibilities out there and looks for the next one. A possibilist is constantly evolving to a new stage or state in life, always with a vision of living to their full potential.

In the previous level, you worked on setting goals to give your life direction and then learned how to break those goals into actionable steps, to ensure that what you do every day is moving you closer to achieving your goals.

The possibility level is not merely about setting goals but helping you look at your purpose. It gives you permission to dream, to pursue things that you never imagined before. It pushes you to strive for a life lived to your fullest potential.

### The Five Es of Possibility

One of the most frequently asked questions when faced with an open-ended vision of possibility is, "What is it that I really want to do or be? What is that big picture to me?" There are entire books devoted to helping people determine their life's purpose, develop life goals, create visions for a bigger purpose and so on. Yet there are some steps you can take to start the process for figuring out what you want to become:

1. **Enjoy**. Go back to something you used to enjoy doing but left behind.
2. **Engage**. Spend more time with people, friends, family, in your spiritual community, or in public service.
3. **Enable**. Spend more time paying attention to your health, home, and welfare.
4. **Evolve**. Spend more time and effort doing something you enjoy doing now, and take it to the next level.
5. **Explore**. Look for new challenges, something that you never dared to attempt, something that requires major changes in your outlook.

These five steps to fulfilling your possibility goals will ensure that as your productivity increases, your efforts will result in something that is more meaningful to you. Unless you make time to think about what if and what's next, you might never set the goals or make something new or different happen. Remember, possibility is about making things happen for you rather than waiting for them to happen to you.

Before you can start making changes, it is critical that you shift your perception of time. The truth is that we all have time. Time is the greatest common denominator because regardless of gender, social class, or race, we all have the exact same amount of time. Remember, time management is choice management.

Here's to a more productive you!

# The Siren's Call

Chris Hayes

Book Snaps™
In-depth reviews of best-selling business books.

## The Sirens' Call

**How Attention Became the World's Most Endangered Resource**

*By Chris Hayes*

**Chris Hayes** is the Emmy Award–winning host of All In with Chris Hayes on MSNBC and the New York Times bestselling author of *A Colony in a Nation* and *Twilight of the Elites*.

*A Book Review by Soundview*

# Wrest Back Control of Your Life

Chris Hayes opens his book, ***The Sirens' Call: How Attention Became the World's Most Endangered Resource***, with a discussion of the Sirens in Homer's epic, *The Odyssey*. Knowing the power of the Siren's call, the men aboard Odysseus's ship put wax in their ears so they would not hear the call. Odysseus did not because everybody knew he would want to hear the call. Instead, he had himself tied to his ship so that he could not go after the Siren's call once he heard it. Hayes states, "The Sirens of lore and the sirens of the urban streetscape both compel our attention against our will. And that experience, having our mind captured by that intrusive wail, is now our permanent state, our lot in life. We are never free of the sirens' call." This inevitable tie to our modern sirens is what Hayes's book centers around. For Hayes, control over one's attention is crucial. It is our most important resource, and it is also "the very thing that makes us human."

## What Is Attention?

Hayes believes that "attention exists to solve a problem, and the problem is information." While there is a seemingly unlimited amount of information in the world, one's attention is necessarily limited. He quotes William James's definition of attention as being "the taking possession of the mind, in clear and vivid form, of one out of what seem several simultaneously possible objects or trains of thought."

Hayes highlights three forms of attention. The first is voluntary attention. This refers to attention we purposefully give to an act or thought, and examples of this are having a conversation and reading a book. "You focus, you listen, you train your flashlight of thought on something or someone." This type of attention requires a person to refrain from giving their attention to other thoughts or endeavors. The second type of attention is called involuntary attention. This can be exemplified through the sound of a police or fire truck's signal. Regardless of what a person is doing, this sound will involuntarily draw a person's attention. Hayes believes that there is a remarkable quality about this type of attention because when a person places their voluntary attention in one place, they suppress other information. Sounds like sirens, however, demonstrate that the mind is

still processing the background information the person is choosing not to focus on so that truly important stimuli can still get through. The third type of attention Hayes discusses is social attention. From a baby's earliest moments, they need attention to survive, and because of this, human beings are wired to desire social attention. A unique and important factor of attention that Hayes presents here but will come back to throughout his book is that it is easier to grab a person's attention than it is to keep that person's attention.

## The Problem of Boredom

Hayes discusses the problem of boredom. While we are currently in a state of too much information, when human beings have a dearth of it, they face boredom. "We are finicky creatures, and there's a tenuous equilibrium where we have just enough to occupy our minds, but not too little and not too much." We run the risk of being overwhelmed on one hand and restless on the other as he describes boredom as "a feral beast."

One problem with technology is that it provides us with so much information, and the more we have, the more we want in the same way that a drug addict eventually only becomes satisfied with more and more of their drug of choice. Hayes claims that the more information we access, the more we need access to in order to feel okay. He claims that those who do not live under industrial capitalism "spend a lot of time doing what we would consider nothing," spending a lot of time just sitting and thinking, and they do this without getting bored. The concept of boredom is "culturally, socially, and institutionally produced."

Tedium is a main driver of boredom, and what is considered tedious changes. For example, a new driver is not at risk of becoming bored because there is so much stimuli that they have to attend to. Experienced drivers, however, have become accustomed to this stimuli and are no longer aroused by it, and in such a way, an experienced driver can easily become bored. In industrialized nations, work does not revolve around the seasons as it once did, changing cyclically. Now the same person can do the same task year round, and this also can lead to boredom. Boredom is not relegated to just those working shift work, of course. Those with nothing to do because of excess leisure time and resources also succumb to boredom. Hayes attributes some of the rise of new technologies to a need to solve this problem of excess leisure.

Because people feel uncomfortable when both over and understimulated, idleness becomes a solution. He writes, "you can't busy yourself out of boredom, because the problem of boredom is deeper than just being occupied, it's your comfort with your own thoughts," and "ideally, thinking of nothing makes boredom impossible, because you've ceased chasing stimulation."

## The Pursuit and Attainment of Social Attention

The need for social attention is evolutionary. After all, as babies, if we failed to keep the attention of caregivers for even a very brief stint of time, our very lives were in danger. We needed our caregiver's focus to be on us. Hayes discusses the problems people face when they lack this attention by pointing to prisoners in solitary confinement. People can begin to lose their minds if they do not have any attention from anyone for too long.

Human beings spend more time in solitude today than in any other time in human history. Hunter-gatherer societies were communal societies. Part of the reason for the alienation people currently feel is due to our economic prosperity. The more wealth a person accumulates, the more they can separate themselves from other people. Home becomes too comfortable. People no longer need to see people in grocery stores now that they can have goods delivered. Children do not need to go to arcades because they can have world class video games in their homes. People can sit on their devices in their rooms alone rather than gather together to watch a movie.

Historically, people have come together to participate in joint attention. This occurs at concerts when thousands of people join together, all directing their gaze at the person on the stage. It goes back much farther than stadium concerts, however. Religious practice almost always involves people coming together to direct their attention on worship through music and speaking.

Throughout history, people engaged in two different types of relationships: those with close kin and those with gods. The first stemmed from social interaction while the latter stemmed from "our imaginative powers." A different type of attention is now available to many people, however, and that is attention from strangers. In the very recent future, only a handful of people could ever achieve fame and have the gaze of many on them. Now with the advent of social media and the concept of going viral, a person could always be at the bring of fame, however short lived it may be. Fame does not equate to love and approval, and many people find themselves at the receiving end of harsh comments and words by complete strangers because of parts of themselves they have put out into the world. The human being is wired to care what people think. After all, shared positive regard is part of the reciprocity that keeps relationships alive. This reciprocity is not possible in situations where the gaze only goes one way, but people still crave positive regard. People are far more affected by negative comments than by positive ones. The other problem that arises in one way relationships is that when we realize that people are gazing at us, we become aware of two selves: the one we perceive of ourselves and the one the rest of the world sees. This problem that was once the problem of the elite is now a potential problem for anybody in the age of the internet.

## The Problem of Alienation

Hayes next turns his attention to the concept of alienation. He opens the chapter discussing Taliban warriors turned bureaucrats. Once the Taliban seized control of Kabul, people who had been fighting for the militia their entire now had to do the work of governing, and this kept them behind desks most days all day, and this led to "endemic boredom, restlessness, and unhappiness." They missed the freedom their old roles gave to them, one going so far as to say, "I sometimes miss the jihad life for all the good things it had." These men often turn to the

> *Attention has always been the concern of humanity as what we pay attention to can be seen to be what makes up our lives."*

internet and social media just like countless other people do across the globe when faced with boredom.

Hayes writes that "alienation is a subjective experience of something that should be a part of us seeming foreign or alien to us." He compares our current state of alienation to how people felt as labor became a commodity when work moved from fields and to factories. What had once always belonged to the people, their labor power, now belonged to capitalists just as now, what always belonged to individuals, our attention, is being bought and sold by corporations.

Karl Marx wrote about the dehumanization that occurs with the deindividuation of labor, and this dehumanization leads to feelings of alienation. Once products began being produced in factories, shoemakers, for example, would never work on an individual shoe from start to finish. Rather, they would work on one small aspect of a shoe, never actually even seeing the end product. "The worker under capitalism is haunted by a subjective feeling of alienation; that which should be his is instead outside of him, and his own humanity, which should be his most precious possession." This, Hayes writes, is "directly analogous to the experience of what we might call attention capitalism."

Attention has always been the concern of humanity as what we pay attention to can be seen to be what makes up our lives. The change that has occurred in recent decades is that "attention is now commodified and can be traded, bought, and sold in sophisticated, instantaneous algorithmic auctions that price a second of our eyes' focus." This, he maintains, causes us to feel alienated.

Technology has also caused people to feel alienated because of the way people have begun to engage with it. At one point in time not all that long ago, watching a television show was usually a communal experience. At first this was because only a select handful of homes would have a television and multiple families would gather around that set. Even as most households acquired tv sets, people in one household still watched the same show together. Their attention was communally focused. Now, it is not uncommon for everybody in a home to be focused on a different screen, consuming completely different content. The only way to bridge this gap is through sharing content, but that moment is transient and requires more content to share in order to maintain connection.

## Historical Roots and Physical Analogies

Hayes writes about the difference between information and data. There is an unlimited amount of information available to us at any time down to individual leaves on particular trees. Hayes is interested in data, however, which he classifies as a specific type of information. Data is "that which has been generated or encoded by humans." Data is quantifiable. The amount of data in the world has increased dramatically over recent decades, and whenever we have internet connectivity, we are virtually presented with an unlimited amount of data. "The products of the information age are different" from the products of the industrial age, and a large number of jobs revolve around the manipulation of information.

Hayes compares the current information situation with that of our current obesity crisis. For millennia, food was scarce, so bodies learned to conserve it and people learned to seek it out. At least in the world's wealthy nations, the amount of food is pretty much unlimited, but people still continually seek it out and bodies hoard it. In a similar way and not too long ago, information was limited. People therefore sought it out and were attracted to it. Now, however, that a seemingly unlimited amount of information is out there, we are still seeking it out and gorging on it. We are breaking down, however, because we can only process so much information. The main problem with all of this is that information consumes attention. We have a fixed amount of attention, and that attention is precious.

To discuss the problem of spam attempting to hijack our attention, Hayes turns to Google. Google changed the way people interact with the internet, making it much simpler to find needed or desired information. Google saves time, and as such, it garners our attention. Hayes writes that if any product is "good at conserving our attention and sustaining our focus, then it's also a good place to try to wrench away our attention for other purposes, which will eventually be a vector for spam." Google attracted our attention, and our attention is a commodity, so Google began selling it through ads. Hayes writes that spam can never be defeated because any place there is attention, there will be spam. Hayes claims that "At any given moment, nearly all the interruptions, solicitations, and seductions that are attempting to grab our eye are things we want to ignore."

## The Pursuit of Public Attention

Hayes centers his discussion on public attention around three main characters. The first two of these are Abraham Lincoln and Frederick Douglas and their notable debate. Of note to this discussion is the manner in which the debate occurred with each party taking at least an hour at a time to present his ideas before the attention was given to the other party. Lincoln and Douglas's audience was accustomed to reading the written word, and as such, they were able to follow lengthy oral arguments and complicated sentence structures.

This is in contrast today to the world of the soundbite. People, even those with the best of intentions, are often concerned more with attention than they are with content these days. This is because attention is necessary to even get a message across or to maintain a platform in which to spread a message. News segments, therefore, are often quite brief, so broadcasters can switch to newer content to continue to attract attention. The problem is that the shorter the amount of time a person has to present an argument, the more basic that argument necessarily needs to be. Complicated rationales find no room in a six minute television segment.

This brings Hayes to the third public figure he discusses in this chapter, Donald Trump. Hayes quotes writer, George Saunders, who in 2007 described a hypothetical man going into a dinner party with a microphone. This man says whatever he wants to just to get attention. Hayes sees this description as applying quite aptly to President Donald Trump. Hayes says that for the most part, politicians are very concerned with getting positive attention because they rely on favorability in order to be elected. This is not the case with Trump, however, as Hayes believes Trump likes to get attention in whatever way possible. Because President Trump is so effective at getting attention, he skews political discourse towards the topics he wants. While most people are acutely aware that it is important, in theory, to not give attention to trolls or people just seeking attention, it does not work to ignore President Trump because some of his comments are so egregious to some that they feel an imperative to stand against them. This leads to our climate where political discourse is frequently fragmented.

In addition to the problem of trolls, Hayes also discusses two other problematic forms of public attention: whataboutism and conspiracism. The former refers to a situation when a person points to, as a claim for their own case, their opponent's poor behavior or judgment in another area. Conspiracism refers to certain people's tendency to believe and promote conspiracy theories. Hayes believes this tendency is, in part, part of a person's desire to make sense of a complex world. Another reason for conspiracy theories, Hayes proposes, is that people are drawn to attention-grabbing ideas, and conspiracy theories are often much more attention grabbing than simple reality is. Hayes describes our current political discourse as "the burbling, insistent ruckus of a deeply unquiet mind." He believes that our "civic mental life… permanently teeters on the edge of madness."

## In Conclusion

As Hayes mentioned earlier on, complex theories and ideas cannot be stated in mere paragraphs or in sound bites. They take time and space if they are to be given the consideration they deserve. His book, which advances a complex theory of its own, allows itself enough space so that his opinions are clearly articulated and elaborated upon. As such, his book relies on thoughtful readership, not just an audience looking to be entertained by soundbite. Hayes's book is not just theoretical, however, and this is most evident in its closing chapter where he gives concrete solutions to the problems of divided attention. Some solutions are being spearheaded by individuals and grassroots movements such as people dedicated to reading The New York Times rather than viewing the online version and people committing to vinyl albums rather than flipping through streaming services. Other recommendations he explores are proposed policy changes and limitations on the amount of attention large corporations and tech companies can monopolize. This will take legislation and public support, but the outcomes could prove to be no less dramatic than those obtained by the labor laws of centuries past.

## THE SUMMARY IN BRIEF

*What's your story? Who are you? Where do you come from? What do you want?*

When you seek to influence others, you face questions like these. Whether you are proposing a risky new venture, trying to close a deal, or leading a charge against injustice, you have a story to tell. Tell it well and you will create a shared experience with your listeners that can have profound and lasting results. In this summary, you will learn how the art of storytelling will help you inspire, influence and persuade others.

✓ **You will explore the six distinct stories you must know how to tell.** These include, "Who I am," "Why I Am Here," "Vision," "Teaching," "Values in Action" and "I Know What You Are Thinking" stories.

✓ **You will learn what story is.** Stories, whether true or fiction, illustrate truths better than a recitation of facts. You will learn why stories connect on a human level and break though barriers facts never will.

✓ **You will learn how to tell a good story.** Storytelling is a skill you can develop. You will soon see how to tell a story effectively, using the right material, expressions and gestures.

✓ **You will discover how stories connect on a psychological level.** In the process, you will also see how you can use stories to connect with the unwilling, unconcerned and unmotivated people you need to influence.

✓ **You will see the power of being a listener as well as a storyteller.** Sometimes you can't influence someone until they have told their story and made you understand why they believe as you do. You will learn the tricks that make you a real listener, able to reach deep into your audience's psyche.

✓ **Storytelling Dos and Don'ts.** Finally, you will learn what you should and should not do as you tell the stories that inspire your audience to be influenced by your views and listen to your advice.

# The Six Stories You Need To Know How to Tell

People don't want more information. They are up to their eyeballs in information. They want faith — faith in you, your goals, your success, in the story you tell. It is faith that moves mountains, not facts. Faith needs a story to sustain it — a meaningful story that inspires belief in you and renews hope that your ideas indeed offer what you promise. Genuine influence goes deeper than getting people to do what you want them to do. It means people pick up where you left off because they believe. Money, power, authority, political advantage, and brute force have all, at one time or another, been overcome by faith.

Story is your path to creating faith. Whether you tell your story through your lifestyle or in words, the first thing people look for before believing in you is trust. There are six types of stories that will serve you well if you want to create trust and faith. These are:

- **"Who I Am" stories.**
- **"Why I Am Here" stories.**
- **"The Vision" story.**
- **"Teaching" stories.**
- **"Values in Action" stories.**
- **"I Know What You Are Thinking" stories.**

Before being influenced by you, your listeners want to know, "Who are you and why are you here?" If you don't take the time to answer, they will make up their own responses, usually negative ones. It's human nature to mistrust and to believe that others look out for themselves. You need to tell a story that demonstrates that you are different, that you are trustworthy.

A story lets listeners decide for themselves whether they should trust you. If your story is good enough, people — of their own free will — conclude they can trust you and the message you bring.

### *"Who I Am"*

You don't have to tell a personal story as long as the story you do tell reveals something about who you are. For example, if you tell a story about Mother Teresa that reveals you understand gratitude and humility, you have told a "Who I Am" story. Your audience will conclude you aren't bound by ego. If the story you tell reveals you understand self-sacrifice, your audience will believe you can blend compassion with the desire for self-gain. If your story reveals you have learned to recognize your own flaws, they will believe you can be trusted to deal head-on with tough problems.

### *"Why I Am Here"*

Your "Why I Am Here" story needs to reassure the audience that you have good intentions. However, before you tell them what's in it for them, you must tell them what's in it for you. If you don't, they will suspect you have a hidden agenda. It's a big mistake to try to hide selfish goals. The CEO who makes 50 times the salary of his subordinates is foolish to begin a company meeting about the upcoming merger with a, "We are doing this for you" speech. People won't be influenced

*(continued on page 3)*

## Building a Cathedral

A man came upon a construction site where three people were working. He asked the first, "What are you doing?" and the man answered, "I am laying bricks." He asked the second man the same question, and he answered, "I am building a wall." He walked up to the third man, who was humming a tune as he worked. When asked what he was doing, he stood up, smiled, and answered, "I am building a cathedral." If you want to influence others in a big way, you need to give them a vision story that will become their cathedral.

## A Businessman at the Hospice Explains: 'Why I Am Here'

A successful businessman who volunteers for an AIDS hospice uses a story about the Dead Sea to explain to other businesspersons why they should contribute their time and money to the cause. The Dead Sea and the very much alive Sea of Galilee are both fed by the same source, explains this businessman. However, the Dead Sea can only receive an inward flow, while the Sea of Galilee can flow out as well as in. Because the Dead Sea is prevented from flowing outward, the accumulation of salt has killed it. For this businessman, you can only be alive and thrive if you can give out as successfully as you can take in.

### The Six Stories You Need To Know How to Tell

*(continued from page 2)*

by those who treat them as if they are stupid.

#### *"The Vision"*

Once your audience is comfortable with who you are and why you are there, they are ready to listen to what's in it for them. Your job is to take your vision and transform it into the audience's vision. You have to take the time to find a story about your vision in a way that connects — a story that people can see. Tell it from a place of authenticity. Tell it with conviction. A real vision story connects with people in a way that shrinks today's frustrations in light of the promise of tomorrow.

#### *"Teaching"*

Whatever your role in life, you have certain skills that you want others to have, too. Whether you need to teach someone to write a letter, design software, answer a telephone, make a sale, or manage a group of volunteers, story halves the necessary teaching time.

Use story to get your message across, especially when you need to show both what needs to be done and how it should be done. For example, telling your new receptionist where the hold, transfer and extension buttons are will not make her a great receptionist. But telling her that the best receptionist you ever knew was Mrs. Ardi, who could simultaneously calm an angry customer, locate your wandering CEO, and smile warmly at the UPS man, gives a better picture of the skills you want her to display. Later, under stress, your new receptionist will ask herself, "What would Mrs. Ardi do?" rather than, "Where is the hold button?"

#### *"Values in Action"*

Without a doubt, the best way to teach a value is by example. The second best way is to tell a story that provides an example. Story lets you instill values in a way that keeps people thinking for themselves. "We value integrity," means nothing. But tell a story about a former employee who hid his mistake and cost the company thousands of dollars or a story about a salesperson who owned up to a mistake, and earned so much trust her customer doubled her order, and you begin to teach an employee what integrity means.

A good test for yourself is to figure out how many stories you can come up with to demonstrate the values you profess to hold. This will be the first source of your "values in action" stories. You need as many stories as possible in your tool kit if you want to influence the values of others effectively enough to change their behavior.

#### *"I Know What You Are Thinking"*

Tell a story that makes people wonder if you are reading their minds. It isn't hard to do. If you have done your homework on the group or person you want to influence, it's relatively easy to identify their potential objections to your message. If you address their objections first, you disarm them. Often, the people you need to influence don't trust you and aren't ready to accept

*(continued on page 4)*

## The Piano Lesson: A Story of Values

Marti Smye, author of *Is It Too Late to Run Away and Join the Circus? A Guide for Your Second Life,* tells a values story based on the often neglected value of having fun at work. Marti's story involves her brother, who was also named Marti, and her father (named — what else? — Marti). Clearly Marti (the father) was a bit eccentric.

The story involves the piano lessons that Marti and her brother were forced by their mother to endure when they were young. The piano sat on the back porch, and both children dreaded practice time. (Her brother even wore his football helmet during practice in silent protest).

The torture continued for months until one day, her brother came running into the house saying, "Mom, come look, COME LOOK!" Everyone ran to the back porch to see the piano engulfed in flames as her father watched. Turning to the rest of the family, her father calmly explained, "I want my children to know that if it ain't fun, don't do it."

### The Six Stories You Need To Know How to Tell

*(continued from page 3)*

your advice. Instead, they may subtly attempt to sabotage your efforts. If you tell an "I know what you are thinking" story, you get to the heart of their objections up front and can begin building credibility that much sooner. ■

# What Is Story?

Clothing truth in story is a powerful way to get people to open their minds to you and the truth you carry. The naked truth sometimes must be dressed up to be seen. Consider what happens if you bluntly tell your boss his idea will never work. The reception will likely be less than gracious. Clothe your objection in a story, and it appears more gracious and prompts less resistance.

### *Story and Authority*

Story creates power. You don't have to be in a leadership position when you know the power of story. Like the sword of Excaliber, story conjures a magic power that does not need formal authority to work. As a storyteller, you borrow the story's power to connect people to what's important and to help them make sense of their world. You temporarily hold the power to gather people together for a common cause.

### *Narrative Truth*

A story is a narrative account of events — true or fictional. The difference between giving an example and telling a story is in the addition of emotional content and added sensory details in the telling. A persuasive story is any narrative account from your own experience, your imagination, a literary source or oral tradition that will accomplish any of the six story goals above.

Whether stories are factual or not, good stories always have an element of Truth in them. Truth with a capital T is the kind of Truth we recognize and know without empirical evidence. When you tell a Truth story, it acts as a tuning fork. Your listeners resonate with that Truth; as they remember their own experiences, they tune in to you and your message.

***Whether stories are factual or not, good stories always have an element of Truth in them.***

Stories are "more true" than facts because stories are multidimensional. Truths like justice or integrity are too complex to be expressed in a law, a statistic, or a fact. Facts need the context of who, what, when, why and where.

Consider this example. If you tell a manager to "stop criticizing employees," she may counter, "How else do I let them know they are making mistakes?" Your clear directive is superficial and without context. Your opinion does not communicate the Truth of treating people with respect and balancing positive and negative feedback. However, if you tell her, "In Washington, D.C., last week I had a Haitian cab driver who shared his grandfather's favorite saying with me, 'The man who beats his horse will soon be walking,'" you call her attention to a larger, deeper context — with a one-sentence story.

Life is more complex than ever. People construct walls to keep you out, no matter how well-intentioned you are. They simply don't want to learn about yet another thing they should be doing. Already overloaded and confused, they assume that your added request will only make things worse. Frustration and apathy is the norm. Here you are, trying to influence people who have defaulted to basic self-interest. They are either

*(continued on page 5)*

## Avoiding Alienation

Clear guidelines and rules alienate creative thinkers. Take, for example, an airline with rules about who gets bumped from a flight and who flies. If the airline has a formula based on frequent flier miles, fare categories and order of arrival, airline employees aren't exactly being invited to come up with creative solutions. When faced with an obviously angry customer, they have no option except to recite "the rules."

What if the training of airline customer service employees focused more on stories illustrating creative solutions to problems and less on the rules? The training, for example, could include the story of a counter person who was bullied by a man demanding, "Do you have any idea who I am?" The counterperson grabbed a loudspeaker and announced, "We have a passenger who doesn't know who he is. Could anyone who might help identify this passenger please come to the counter?"

The passenger in this story laughed. Of course, he could have become more angry. Whatever the outcome, the point would be made that when dealing with passengers, the airline expects its personnel to be creative — and even use humor if they believe it might be effective — rather than mindlessly intone rules.

### What Is Story?

*(continued from page 4)*

content in their little world or apathetic, frustrated and secretly cynical about you and your goals.

But when you offer a story that makes then feel curious again or helps them make sense of their confusion, they will listen. A story can transform the hopeless into a band of evangelists ready to spread the word. ■

## What Story Can Do That Facts Can't

A subtle but powerful shift occurs when you seek to influence people to make wise decisions rather than "right" decisions. When you decide to awaken sleeping wisdom rather than convince others you are right, you produce a much more powerful experience. If you trust that the wisdom is in the room, then your only job is to allow this wisdom to flow freely.

*And the wisdom is in the room.*

What people don't need are more facts. Instead, they need help finding their wisdom. Contrary to popular belief, bad decisions are rarely made because people don't have all the facts. They're made because people ignore the facts, don't understand them, or don't give them enough importance. Basic human emotions like anxiety, greed, exasperation, intolerance and apathy have hijacked their brains and directed them to the easy way out. More facts won't help them regain perspective. A story will. A story will help them figure out what all these facts mean.

People are not rational. Many decisions are based more on feelings than on rational, logical thinking. People decide they like a piece of art because someone they like likes it. They will select one item out of ten identical items and give a list of rational-sounding reasons why it is superior to the other nine. They then explain these decisions in a way that makes them seem rational — they irrationally believe they are rational.

### Story First, Facts Second

People have a natural tendency to interpret facts to fit their preconceived notions of how things work. These notions are the stories they have come to believe. If you present facts first, followed by your story, your audience will interpret the facts to validate their existing beliefs. But if you present the story first, and then the facts, the audience is more likely to fit the facts into your story.

### Japanese Businessman's Rational Approach Fails

A Japanese businessman learned a valuable lesson in the use of facts when he sent a memo to his American female counterpart advising her about appropriate attire for her upcoming visit to Japan. He provided her with the fact: "Do not wear red, tight-fitting clothes or low-cut blouses. Do not wear hosiery that is patterned or brightly colored. Do not wear perfume or heavy make-up. Do not wear dangling earrings or heels over two inches." She was miffed, to put it mildly. Her American "story" told her that this sort of communication was disrespectful. He would have been better off telling her the story of the woman who visited their office in a red dress and long earrings who was hit on by the Japanese men who assumed she was "easy."

### *Ten Situations Where Facts Are Inferior To Story*

● **One-D to Three-D:** You probably will seem very one dimensional to the people you want to influence, especially if they don't know much about you. Reciting a lot of facts about your educational and work background isn't going to help much. To come alive in 3D, your best bet is to tell a story that reflects who you really are. For example, if your role is to create a team, a story about how you grew up in a family of 12 and learned about teamwork firsthand will go much farther than reiterating that the company organizational chart shows you are the team leader.

● **Bear-Trap Questions**: The people you wish to influence have egos. If you get on the wrong side of one of those egos, he or she may set out to discredit you with a bear-trap question. If you respond by saying something unpopular, you are trapped. For example, if you are telling a group that "telling the truth" is going to improve work performance, you will be asked, "Are you saying we should always tell the truth?" A yes or no answer will either sound naive or sound as if you condone lying.

A story can defuse the situation and get the discussion back on track. You could talk about the time that a coworker was about to give his first presentation and asks you right before he takes the stage whether you think he will do a good job. Even if you have your doubts, you would tell him "yes" since this is neither the time nor place to say otherwise. Your story illustrates that you understand the nuances of truth-telling.

● **Tunnel Vision:** The people you want to influence

*(continued on page 6)*

## What Story Can Do That Facts Can't

*(continued from page 5)*

often suffer from tunnel vision. The facts you throw at them bounce right off. To help them, tell an extreme story. For example, a marketing executive might tell a "disaster story" about a delivery nightmare to make his world real to the manufacturing executive who doesn't want to look at marketing. Or a parent who tells his teenager about a friend he lost in high school in a car accident is more effective than one who recites accident statistics.

● **Saying It Without Saying It:** There are times you want to say something, but direct communication is unwise. For example, perhaps there is information you would like to share but confidentiality prevents you from sharing it. Story lets you communicate in the gray area by saying it without saying it (see box at right).

● **Stop Asking Me!** When you are in a leadership position, sometimes you find that your group depends a little too much on your advice. You cannot succeed in the long run if all you do is serve as the decision-maker. The others will never learn to make independent decisions. Tell a few stories that steer them in the right direction without giving them the answers.

● **Giving a "Demo":** Selling a product is much easier when you can give a demonstration. When you are selling an idea, a good story becomes your "demo." Take a trainer in a gym. Exercise is a tough product to sell. Health facts don't help. Everyone knows exercise is good for you. Success stories explaining before and after results are an ideal demo.

● **Telling Your Superior He Is Wrong:** There are times you can see a problem your superior doesn't see. Since it's a rare human being who warmly welcomes negative feedback, directly delivering bad news can be dangerous. A story can respectfully deliver bad news safely.

● **Don't Tell Me What To Do:** When faced with an impasse, the worst thing you can do is give directives. In fact, many people will technically comply with a directive in a way that assures failure. A passive-aggressive response is the likely outcome. A better approach is to tell a story that illustrates why you want things done your way.

● **Reasons Why Stories:** There are times you have to say "no." Telling a story *before* you say no will help the person who wants only to hear "yes" see your "no" in a different light.

● **Did Somebody Die?** A bad mood is like a bad smell. It can't be ignored and it can ruin a group's efforts. A story can go a long way toward destroying a bad mood. ■

### How to Say, "OK" Without Saying It

A manager in a telecommunications firm was hampered in Asia because of his firm's limits on his expense account. The manager could not entertain his Asian customers in the manner to which they were accustomed. The manager's boss commiserated, but could not tell the manager to break the rules.

The manager told his boss a story of how a salesperson in another firm was able to circumvent a similar problem by turning in his expenses after the sale was made. "Sounds like a smart guy," said the boss in response to the story. The message was clear: If the manager broke this particular rule but made the sale, he would probably be forgiven.

## How to Tell a Good Story

You can entice, inspire, cajole, stimulate or fascinate your audience, but you can't **make** someone listen to you. Instead, what you want to do is create curiosity. You want to catch and hold someone's attention. To prepare, you can develop the basic instruments of communicating. When you tell a story, your body and voice become the stage, actors, costumes, music and props.

Practice the skills that make up your presentation and you will be well on your way to being a great storyteller capable of influencing your audience.

### *Oral Language*

One of the first skills you must pay attention to is your use of oral language, including the use of gestures and facial expressions. Your face is a communication tool that transcends language and cultural barriers. You can communicate emotional content in a split second, whether you want to or not. The secret is that to deliver the appropriate emotion, you must feel it. Actors have long ago learned that they must conjure up joy in their minds before they can show it on their face. Don't bother to tell a story about hope unless you feel hopeful. Practice getting in the right frame of mind.

Facial expressions reinforce the emotional content of your message. Raised eyebrows and a roll of your eyes can substitute for, "I thought he was crazy," while a surprised look and dropped jaw means, "I was speechless." A good technique to master delivery is to watch a recording of yourself telling a story with the sound turned off.

### *Bring in the Senses*

Sounds, smells and tastes can also make their way into your stories. If there is wind in your story, purse

*(continued on page 7)*

## Story and Change

When a small southern town sets out to decide which street to develop first as part of its redevelopment plan — Martin Luther King, Jr. Street or Elm Street — an epic battle begins. The racially mixed city board has to deal with emotions and relationship dynamics going back 300 years. If the executive director forces a decision, she will likely find that months later nothing in the "approved" strategic plan has been accomplished. A better approach would be to give voice to all the divergent interests, including the community's. A quick decision does not allow the parties to test out the new story of downtown development. Instead, the constituents on each side of the controversy will come to believe that their representatives have sold out to the other side. A better approach would be to allow the stories of racial tension that surface as old wounds are opened to be told publicly until healing can take place.

### How to Tell a Good Story

*(continued from page 6)*

your lips and make the sound of wind. Chattering teeth make it cold. Mentioning chocolate chip cookies baking evoke childhood smells and tastes. Other storytelling devices include the use of timing and pacing. For example, a pause gives people a chance to think about what you just said and what you are going to say next. Silence acts as an amplifier for the sensory and emotional aspects of a story. ■

# The Psychology Of Story's Influence

At the core of the psychological models of how we influence others is the concept of self-interest. The self seeks to achieve what it wants — whether it's profit, destruction, justice, martyrdom or whatever. The psychological goal of influence is to connect your goals to your listeners' self-interest. Advertisers understand this. The story they tell is, "Buy our product and you will get what you want."

From a junkie to a multimillionaire to a soccer mom, people want what they want and their wants fuel the momentum of their thoughts and actions. The goal of an influential story is to connect their momentum to your goals. The jargon we use when talking about influencing people demonstrates this. We try to "hook them" and then "reel 'em in." However, if (to continue the metaphor) the fish don't bite, do you blame the fish? No, you look for better bait. By its ability to tap into the human needs we all share, a story makes excellent bait.

### *Connect Before You Convince*

Genuine influence occurs between people who feel comfortable with each other. Regardless of our differences — money, status, race, gender, experience, culture — as human beings, common understandings flow beneath our superficial differences. Telling a story that connects to any of these allows you to connect with any human being. The myths and fables that have lasted thousands of years lasted because people connect with them at a personal level.

One universal "want" is the desire to belong and to be acknowledged and seen. In our technological economy, human attention is a scarce resource. People need it, crave it, and will pay for it with their cooperation. When you tell a story that touches someone, you give the gift of human attention. Once you have connected, you are ready to move your listener, step by step, to see the world as you see it. ■

# Influencing the Unwilling, Unconcerned or Unmotivated

Your desire to influence is born of some belief that you know a better way. The firmer your conviction that you are right, the more susceptible you are to labeling those who disagree as wrong. People, of course, don't respond well to someone who believes they are wrong.

For example, environmentalists who don't want an incinerator for chemical wastes on the army base in their community calls the army a bully insensitive to the needs of the community. Yet the army needs to dispose of the chemicals, and have concluded the process is safe. To them, the activists are reactionaries.

A "we are right, you are wrong" approach will sabotage your ability to connect with the other side of the argument. You only have a chance of influencing the other group if you come to believe that they are honorable in their beliefs. That won't happen if you demonize them. Redefine the adversary as within your community. Find a story that acknowledges their point of view and good intentions; only then can you begin to break through their barriers.

### *Influencing the Cynical*

You may find yourself trying to influence cynical people who doubt your sincerity, your competence or your ability to deliver. You need to tell a story that proves the cynics wrong. Assurances and promises aren't enough. If you don't practice what you preach, you can forget about influencing the cynical.

Dick Mueller, CEO of the software company MTW

*(continued on page 8)*

## Influencing the Unwilling, Unconcerned or Unmotivated

*(continued from page 7)*

Corporation, knows that top-notch IT personnel tend to be demanding employees who value a good working environment — and are cynical of corporate promises. One way that Mueller uses to combat this cynicism is a story about health insurance.

Mueller describes the dread he used to feel when reviewing insurance providers every year. No matter which provider he chose, there were always complaints. Eventually, Mueller decided to delegate the choice to the employees who cared the most. He put the people who were the most unhappy with previous choices on a team and gave them 45 days to make the choice. Then he sat in a meeting room and learned about their decision with everyone else in the organization.

### *Influencing the Resentful*

Another tough audience are the resentful. This crowd nurses old injustices and uses them as justification for inaction. If you want to influence an individual or group mired in resentment, tell them a new story. They don't need a better understanding of the system, clearer instructions, more data, or a vision statement — they need to let go of their resentment. A story featuring a significant role for a peacemaker often helps bridge the gap resentment builds.

### *Inspiring the Hopeless*

Depression is at epidemic levels. A societal crisis of meaning has left many of the people you want to influence secretly hopeless about positive change. Whatever cause you are promoting, they believe that someone else besides themselves has the power to make change happen. They feel powerless.

Your job is to help them see their power, then influence them to use it. Find a story that sustains your own hope. Prepare for the long-term commitment needed to change a habit. Breaking out of feeling hopeless is hard. One classic hope story is the tale of Rosa Parks, who sat down in the white section of a Montgomery bus. Her action wasn't planned; her feet simply hurt and she needed to sit down. But her arrest and the subsequent boycott orchestrated by Martin Luther King, Jr. was enough to change segregation in the south forever. When others see that a small act can have profound impact, they begin to feel hopeful and powerful again. ■

## Storyteller Dos and Don'ts

Storytelling can be done well or it can be done badly. When it is done well, the storyteller sometimes gets a big head. But storytelling carries with it responsibility. After all, telling a good story will help you influence people. Don't misuse the skill. If you use story to cheat people out of their money, get someone fired, take rewards you don't deserve, or influence in an unethical way, your story will have a bad ending. Other dos and don'ts include:

- Don't act superior. Any act of superiority is an overt act of disrespect.
- Don't bore your listeners. Don't tell a story that's too long or goes nowhere.
- Don't scare people or make them feel guilty. Stories that use fear or shame to mobilize action can be counterproductive over the long run.
- Do intrigue and captivate.
- Do connect at the level of humanity.
- Do leave them feeling hopeful.

# Storylistening As a Tool of Influence

New ideas need room to grow. When old beliefs crowd new ideas out, the new ones wither and die. Listening to people lets them pour a little of the old thinking out so they can make room for new thinking. Most people who think they listen don't, or are doing it badly.

Genuine listening has a deep, transformative power. Try to remember the last time someone truly listened to you and you probably remember your mental defenses slowly fell away. As they did, you began to wonder about your uncertainties. Influencing you then became much easier.

Listening is hard. A good listener asks questions that are designed to make the audience revisit their beliefs, look behind their conclusions about how things are and work, unravel those assumptions, and draw new conclusions.

A car salesman trying to sell a lease will probably find listening more effective than persuasion. If the customer says he hates leases, the salesman asks why he feels that way and what specific experiences he has had with leases or what horror stories he has heard. If the salesman can stay quiet long enough, he will at least know what the customer's objections are and at best hear the customer ask why this lease is different. Listening is a great way to earn your turn to talk.

Some people are poor listeners because they think that asking too many questions is good listening. But asking lots of questions is a good way to destroy the flow of someone's story and the introspection the narrator is engaged in. Instead, let the stories flow. At the very least, listening to stories will make you more knowledgeable about the mental terrain of the individuals you want to influence. ■

## Taking the Counterintuitive Approach to Live a Good Life

Our society holds to the notion that if we never give up and we persist in striving to achieve our dreams, we will eventually succeed. Part and parcel to that value system is a borderline obsession with maintaining "unrealistic positive expectations." Above all else, we should strive to be better, happier, faster, richer, sexier, and smarter. In ***The Subtle Art of Not Giving a F*ck***, blogger and author Mark Manson categorically rejects these ideas.

Most "conventional life advice" is centered on positivity and happiness. This "fixation on the positive–on what's better, what's superior–only serves to remind us over and over again of what we are not, what we lack, of what we should have been but failed to be." We look in the mirror and tell ourselves we are beautiful because we believe that we are not already beautiful. We practice visualization about being more successful because we do not feel we are successful already. We research endless options to make more money because we believe we don't have enough money already. That has to change.

To be all that we can be, Manson asserts, we have to stop trying to be better. We have to accept who we are and honestly project that authentic person to the world. We have to embrace our shortcomings, share our failures, and be comfortable with it all. Further, achieving our goals, regardless of how we arrive at them, will not magically make anyone a great person. Manson says, "Self-improvement and success often occur together. But that doesn't necessarily mean they're the same thing."

We are bombarded with messaging that tells us that the "path to a better life is more, more, more." We are persuaded to give a f*ck about everything, all the time. From taking the best vacations or having the fastest car to watching TV on the best model, we are constantly reminded that we should care about it all. Manson guesses that these messages are so prevalent because they are good for business, not because they are good for us. Simply put, Manson writes, "While there's nothing wrong with good business, the problem is that giving too many f*cks is bad for our mental health."

We are "overly attached to the superficial and fake" and we are dedicating our entire lives to "chasing a mirage of happiness and satisfaction." The real key to having a good life is to stop focusing on the more and to start putting energy and focus "only on what is true and immediate and important." We are "facing a psychological epidemic" in which we have lost sight of the fact that life sucks sometimes and that is perfectly okay. Manson lays out why we think this way and what we can do, right now, to start not giving a f*ck in all the right ways.

## Three Subtleties

First, some clarification. Manson is not suggesting that we go through life vainly attempting not to feel anything or to avoid seeking meaning. He offers three "subtleties" that explain what this looks like in practice.

**Subtlety #1:** Not giving a f*ck does not mean being indifferent; it means being comfortable with being different. People who are indifferent actually care far too much about far too many things and end up hiding in avoidance. They fear making meaningful choices and end up stuck in self pity. Here's the thing. People are going to care about things. It is in our biology. However, we have to intentionally choose what we give a f*ck about and let go of things that do not matter. We have to boldly live by our self-prescribed values, even when they make us different from the people around us.

**Subtlety #2:** To not give a f*ck about adversity, you must give a f*ck about something more important than adversity. People who tend to make a huge deal over trivial things don't have anything important to put their energy towards. We have to find meaningful, legitimate things that are worthy of our attention, focus, and yes, f*cks.

**Subtlety #3:** Whether you realize it or not, you are always choosing what to give a f*ck about. When we are young, we care about every little thing. Over time, we realize not to sweat the small stuff because they don't matter in the long run. Maturity allows us to become more selective in what ruffles us and to choose what is worthy of our attention. This simplifies life and is both rewarding and happy-making.

## The Feedback Loop from Hell

Our brains have an insufferable ability to drive us nutty, if we allow it. Manson asks if the following scenario sounds familiar. You feel yourself becoming anxious about a problem. This breeds more anxiety as you begin wondering why you are so anxious about this problem. Essentially, you are becoming "anxious about being anxious." "Oh no! Doubly anxious!"

Or let's say you get angry about little things quite frequently. Something inane sets you off and you respond as you always do, by getting bent out of shape. You realize you are getting pissy over nothing important so you start getting mad about being mad. This quickly turns into being mad at yourself for always getting mad at trivial nonsense. "You're angry at yourself getting angry about being angry."

Manson calls this the "Feedback Loop from Hell" and it "has become a borderline epidemic" in our society. We believe that we should always feel good all the time. When we experience anything negative we think there is something terribly wrong. We feel "overly stressed, overly neurotic, and overly self-loathing."

Manson attributes this to social media and consumer culture. All we have to do is tune into our Facebook feed and we are inundated with picture-perfect scenes from everyone else's perfect life. We have no choice, Manson says, than to "feel like something is wrong with us." Before we could hold the world in the palm of our hands, humans would feel bad sometimes. And they would say to themselves, "that's life."

Now we feel bad and we enter the Feedback Loop From Hell. We start feeling bad about feeling bad. The key is to "not give a f*ck." When you enter the loop, you can "short-circuit" it. Instead of thinking there is something wrong with you because you feel bad, you acknowledge that you feel bad, that that is totally normal and fine. As if "by magic" you "stop hating yourself for feeling so bad."

## 5 Counterintuitive Values

Our experiences are shaped by the values we place on them. What is happening to us objectively is often way different than "how we come to see the situation." Life is full of problems. We get to control what they mean and how they impact us, positively or negatively, by how we "choose to measure them." If we want to change the way we experience inevitable problems that can shape our lives for better or worse, we have to assign the correct values, or metrics, to those problems. Manson dedicates the rest of the book to explaining five counterintuitive values that lead to us giving a f*ck about the right things, and ultimately, making our lives better.

### 1. Choosing to be Responsible

We have little to no control over external circumstances. However, we "always control how we interpret what happens to us as well as how we respond." We have to take ownership of the things that happen to us, whether or not we caused the problem or it was thrust upon us from outside forces. We must develop the means to recognize that "we are always choosing." Deciding to own our problems is not to say that we are at fault for them. Manson explains that fault is in the past and responsibility happens in the present. It may be your ex's fault that your relationship fell apart, but it is your responsibility to get over the unhappiness you feel in the aftermath. It is to say that fault doesn't matter. It is to take controlWhen we choose to accept responsibility for our problems, no matter where they come from, we take the first step towards solving them.

### 2. Being Wrong About Everything

Throughout our lives, we are constantly wrong. We look back at our past decisions or beliefs or "truths" and understand absolutely that we had it completely wrong. And that is a good thing. Being able to look back and understand that you were wrong means that you are growing. Further, we are never, ever

> We will never get that perfect truth, but we can come close by aiming to constantly be open to our error and pursue being 'a little less wrong tomorrow' than we were today.

completely right.

"Growth is an iterative process." We do not simply flip a switch from being wrong to being right. "When we learn something additional, we go from slightly less wrong to slightly less wrong than that" on and on in "the process of approaching truth." We will never get that perfect truth, but we can come close by aiming to constantly be open to our error and pursue being "a little less wrong tomorrow" than we were today.

**3. Failure is the Way Forward**

Improvement happens only after a seemingly endless string of small failures. How well you succeed at something "is based on how many times you've failed at something." No matter what it is, if someone is "better at something than you are" it is likely because they have experienced more "painful learning experiences" in it than you have.

Most of us are programmed to avoid failure. We become afraid of it and that "confines and stifles us." Failure is something we should run towards, not run away from. If we can face great adversity and overcome it, we come out of the struggle "stronger, more resilient, and more grounded." If we refuse to get into the pain, we risk denying our potential. Manson points out that the "most radical changes in perspective often happen at the tail end of our worst moments." These crises shake us up and force us to take a hard look at the meaning of our lives and what needs to change.

**4. Rejection Makes Your Life Better**

Our culture places a high value on being as "accepting and affirmative as possible." We are taught to be open to everything, saying yes far more frequently than we say no. The problem with that is if we never reject anything, we stand for nothing. We have to reject something or we have no direction.

The world is full of possibilities. You have to say no to many of the alternatives so that you can go full force into whatever value is best for you. In order to have our own identity, we have to choose other identities to reject. "Rejection is an inherent and necessary part of maintaining our values, and therefore our identity." We are naturally drawn to honesty as human beings. The trick is to become comfortable "saying and hearing the word no" to bring more honesty into our lives and have healthier relationships with ourselves and others.

**5. Contemplate Your Own Mortality**

When Manson was nineteen years old, a close friend of his died suddenly in a cliff diving accident. Manson was, understandably, in deep grief and depression, the likes of which he had never imagined. He frequently had dreams of his friend with lengthy conversations which were vividly realistic. In the last such dream, he told his friend that he was sorry that his friend died. His friend replied something to the effect of, "Why do you care that I'm dead when you're still so afraid to live?"

After months of "nothingness," Manson woke up. He had a transformative understanding as related to fear, death, and truly being alive. In the face of the inevitability of death, there is no sense in avoiding pain or discomfort. We are all going to die so it is senseless to "give in to fear or embarrassment or shame." We have to go after the things that will make our lives meaningful. To not do so is to avoid being alive at all.

We start giving a f*ck about the right, consequential things when we understand that our own mortality makes life meaningful. Superficial values are seen for what they are, meaningless. We ask ourselves what mark we will make on the world, what legacy we will leave behind, and what influence we will have caused. Death forces us to look beyond ourselves to something greater, which is "the basic root of all happiness."

*The Subtle Art of Not Giving a F*ck* is the antidote to decades of participation ribbons, self-esteem awareness, and power of positive thinking promotion. Mark Manson unapologetically villianizes conventional self-help, placing at least partial blame on the pervasiveness of anxiety disorders and stress in our society on its cornerstone tennant, positivity. We are a culture filled with people who are completely uncomfortable with even the tiniest amount of discomfort. The time has come, urges Manson, for us to get comfortable with all aspects of life, including the not-so-pretty painful and shameful parts.

His take is open, honest, refreshing, and very frequently hilarious. The book is laced with personal anecdotes and historical perspectives that support his arguments and keep the readers eagerly turning pages for the next nugget. In a sea of superficial get rich quick schemes and guides to being happier, skinnier, or prettier, Manson's book is a stand out. He recommends, instead, that we be okay with looking squarely at our authentic selves and presenting that person to the world, warts, farts, faults, and all.

A self-help book for people who shudder at self-help, Manson helps readers get beyond the surface and focus on the things that are worthy of receiving one's lifetime limit of f*cks.

## The Summary In Brief

Everyone seeks success—in family, in work, even in recreation and play. The major objective of ***The Success Model*** is to teach the techniques and thought processes and help you apply the proven methodology necessary to be successful in all the endeavors of your life.

***The Success Model*** will enable you to determine exactly what it is you want in life and help you achieve it. Since you cannot hit a target you don't know is there, it is important to know what it is that you are aiming for. Once you know what it is you really want, you can then apply the Success Model to achieve your success.

Author Sam Silverstein believes that there are a few key words that, when correctly understood and properly applied, will lead you to ultimate success. Words are extremely powerful. They can create. They can destroy. Understanding the key words to success is critical. It's not just what you know; it's how you use what you know that determines your ultimate outcome. The level of passion applied to each segment determines the effectiveness of your results and the amplitude of your success.

## In This Summary, You Will Learn:

- To identify the desires that will lead to success.
- How creativity, listening, and focus can yield change.
- That expectations, goals, and even crises can bring success.
- To use enthusiasm, service, and even failure for successful outcomes.

Many people go through life only dreaming of things they would like to achieve. The most successful people are those who work to minimize the difference between their dreams and reality. The Success Model can help you shrink that gap to realize your dreams.

## Desire Is The Beginning of Success

Desire is the first step of The Success Model. The "success energy" necessary to accomplish in life what you want to accomplish comes from your primary desires. This energy translates into the commitment and enthusiasm needed to follow through on your plans.

Desire is the beginning of all greatness. Lee Iacocca was fired by the Ford company, but his desire brought him back and he saved the Chrysler Corporation. Abraham Lincoln lost six elections and political nominations before becoming the President. The goal you desire must be so important that you will use all your skills and develop new ones to achieve success. Figure out what you most deeply want. Your primary desires will force you to knock so hard you will knock the door down. You will pick the lock if that is what it takes!

### Attitude

Negative attitudes can derail the power generated by primary desires. Focus on the target, not on the obstacle. Often, a golfer will be so concerned with a sand trap that his shot will go directly into the trap, as if he had aimed for it. He should have been concentrating on the green, his ultimate goal. Through what type of lens do you look at your surroundings? Does your lens, your attitude, brighten or darken your environment? A positive attitude will enable you to overcome challenges.

### Fear

Your brain can only process one thought at a time. If it is busy worrying, it can't be generating creative solutions. Free your mind to do the most productive things possible. Consciously or unconsciously, you will get and become what you think about. Those desires you are willing to "walk through fire for," will give you the courage to overcome your fears. Let the power of your desires fill your mind to address those fears.

### Motivation and Momentum

Internalizing motivation makes you the driving force in your life, putting you in position to maintain the energy necessary to meet your desires. To illustrate, wood has been replaced in some construction by PVC pipe. When wood is ignited, it will burn until there is nothing left. If a burning match is held next to the PVC, the pipe will burn, but when the match is removed, the flame on the PVC will go out. Wood will continue to burn after the match is removed. How deep is your motivation? Intrinsic motivation will provide the strongest push toward your primary desires. Be like wood. Sustain your own fire in order to always maintain forward momentum.

## Change Is Required

Change, the second step in The Success Model, can only be initiated as the result of a primary desire. The space inside your comfort zone is finite. The area outside the comfort zone is where change can happen. It has no limits. If a runner can run a mile in seven minutes and always trains in his comfort zone, he will always run a seven-minute mile. A commitment to change means opening your mind, realizing the need to make improvements in your thinking, habits, and behaviors to achieve your desires.

### Focus

Thomas Edison had 1,093 inventions patented. When asked about his unusually high productivity, he said that he worked on only one project at a time. He didn't move from project to project. He stayed focused. To stay focused, you must concentrate on the task at hand. Think about work when you are working, about play when you are playing, and about your family when you are with your family.

### Listen

Most people feel that as long as they are speaking they are in control. Actually, the opposite may be true. Only through listening can we learn. Listen not only to what people say but to what they mean. Listen not only to the words but also to how they are delivered. Pay attention to changes in pace. Listen for voice inflections.

It has been said that information is power. As your listening skills improve, you will get more out of each conversation, while at the same time, earning the respect of the person speaking to you. A positive relationship is based on effective, two-way communication. Success is built on positive relationships.

### Creativity

Creativity is the ability to generate solutions to problems, that when implemented, will move you closer to achieving success. The average four-year-old asks 437 questions a day!

This questioning leads to their creativity and gives them the ability to come up with solutions that, sometimes, adults can't see. Encourage your creativity. Ask questions. Acquire information for new ideas.

### Paradigm

In 1952, The Lipton Tea Company invented the rectangular-shaped, flo-thru tea bag. Forty years later Tetley Tea made a paradigm shift. They decided, "Tea cups are round. Why not have round tea bags?" After introducing the new product, Tetley's sales increased over 40 percent, becoming number one in the market!

Your paradigms dictate the way you see the world around you. You can have major improvements in your life by shifting your reference points. Evaluate your paradigms to open up new areas of potential growth. Don't say, "That's impossible." Say, "How can I make that possible?"

> Each time you emerge from a crisis you are better equipped to succeed than you were before.

## Plan for Success

The third step in The Success Model is the plan, a step-by-step program for reaching your goals. Some people like to "wing it," thinking that challenges will take care of themselves. However, the quality of your plan directly relates to your level of success.

If you live in New York and decide to go to Miami for a vacation, would you load up the car and drive off? How about a map? Which roads will get you to Miami? If you just start driving, you could end up in Chicago. However, if you have a smart phone and follow a predetermined route, drive at a steady speed, take planned breaks, and spend the night at pre-decided motels, the chances that you will arrive at the projected time and destination are pretty good. If you prepare for your vacation, why not plan for the primary desires in your life?!

### Expectations

If you place $40,000 expectations upon yourself, you will seek $40,000 results. If you have $100,000 expectations, you will work toward $100,000 results. How can you raise your level of expectations in the basic areas of your life—financial/career, health, education, family, social, recreation, and spiritual? What would your life be like if you were able to increase your performance just ten percent in each of these areas? Apply the success model to your new expectations.

### Crisis

Each time you emerge from a crisis you are better equipped to succeed than you were before. For example, to harden steel it is heated to temperatures as high as 1700 degrees Fahrenheit. Then it is placed in a cold bath. This tempering process hardens the steel and makes it twice as strong. When you face a crisis, it's as if you are being tempered. The proactive approach to crisis means anticipating the problems you may encounter during the execution of your plan.

### Fundamentals and Goals

Successful people have a knack for understanding and mastering the fundamentals in a given situation. They know that the little things are often the big things in any endeavor. People who take the time to learn the fundamentals will outperform those who underestimate their significance. Separate yourself from the crowd. Make sure you are a master of the fundamentals.

## Implementation Is the True Test

Implementation is the fourth step in The Success Model. When a captain gets ready to leave port, he picks his destination. Then, he maps out a course. As he sails along, he knows that the tides and winds may move him off course. He uses satellites for position readings to determine exactly where he is. If he is off course, he adjusts. Over the journey he may make several such adjustments before reaching his destination. This process is the same in your life. Your desire must push you to write out your goal and proceed on your journey. Once the methodology of success is learned, internalized, and implemented, you will be able to move through life achieving one goal after another.

### Enthusiasm and Passion

Notice that the only difference between the word "feast" and the word "fast" is the letter "e." Let's say the "e" stands for enthusiasm. "Enthusiasm" comes from the Greek word

enthousiasmos, which means "breath of life." When you breathe life into a task, you are going to enjoy doing it because you know it will help you achieve a primary desire. Your enthusiasm will become contagious to those around you. Your results will be greater than anticipated.

Herb Kelleher, founder of Southwest Airlines, has been known for passion. He has dressed as Elvis and sung to his staff. He once settled a legal dispute by arm wrestling. For Halloween, he turned the home office into a giant haunted house. Kelleher's passion for his people and company are what has made Southwest the model airline in their industry. Passion is contagious.

### Failure

Jane wanted to be in business for herself. She saved money, took out a small business loan, and purchased equipment to open a small print shop. After one year, sales were not what Jane had projected, and her funds were running out. Jane's daughter asked Jane to print flyers for homecoming. Instead of flyers, Jane printed 250 promotional T-shirts. The shirts were a huge success. With the proceeds from those shirts, she bought more shirts. Shirt sales were so brisk that Jane sold her traditional presses and bought silk-screening equipment. Her business grew to be one of the largest sports specialty stores in the state! Instead of quitting, Jane modified her plans and pushed forward, meeting her primary desire of owning her business.

### Little

A local car dealer has found that it's the little things that make his service first-class. When a customer drops a car off, the service representative offers to drive the customer to work or to pay for a taxi. They call when the job is done or provide a free loaner car if they take longer than estimated. Finally, they call a few days after the service to check on the job. By doing the little things well, they are able to do a superior job and insure that they have satisfied customers. Sometimes, people look for shortcuts in life, which usually means they end up with average results. Little things can yield big results.

## Success Is the Reward

Success, the fifth step in The Success Model, is the positive results received from your daily achievements in pursuit of your primary desires. Results are the natural conclusion of the first four steps in The Success Model. What this means is that you only have to concentrate on 80 percent of The Success Model. If you properly apply the first four steps in your life, the last step, success, will take care of itself. We must increase our capabilities and always continue to grow. If we reach one goal and don't set a new goal, we will become complacent. Continued growth is necessary to maintain a feeling of self-satisfaction.

The promise of the future is a tremendous power that drives people to set goals and achieve great things. If you vividly paint the promise of the future, you can borrow the impact of that promise to affect your actions today. Use this promise, and what it holds for you and those you love, to drive you to dedicate yourself to success. If the promise of the future is great enough, then you will be willing to pay the price to achieve success.

Sam Silverstein is founder and CEO of Sam Silverstein Enterprises, Inc., a think tank dedicated to helping companies create an organizational culture that prioritizes and inspires accountability. He is both a sough-after speaker and the author of several books including ***Non-Negotiable and Making Accountable Choices***. He is an internationally recognized consultant, coach, and business advisor.A past president of The National Speakers Association, his client list includes such organizations as AFLAC, Lucent Technologies, the National Association of Home Builders, Prudential Insurance Company, and the United States Postal Service.

## THE SUMMARY IN BRIEF

Success can be a complex term to define. We all want to experience success in different ways. For some, it might be linked with money. For others, it might be about living a great life. Regardless of the kind of success we're looking for, have we paved the right path toward it?

The book ***The Success Paradox: How to Surrender and Win in Business and Life*** lays out a series of paradoxical strategies to help us not just survive but thrive. Personal anecdotes are weaved beautifully with deep revelations translating into a roadmap toward how surrendering can truly enable us to win in business and life.

Author Gary C. Cooper with Will T. Wilkinson urges us to begin doing the opposite of what we had been doing before and what we think we should do now. By laying out comprehensive exercises, they help us come out of our comfort zone regardless of how chaotic the beginning may seem.

## IN THIS SUMMARY, YOU WILL LEARN:

- The three principles of the Success Paradox.
- About powerful paradoxes that open new pathways for success.
- How to incorporate the Success Paradox Lifestyle or SPL.
- How to surrender and win in business and life.

## Introduction

Success is the accomplishment of an aim or a purpose. Paradox is a seemingly absurd or self-contradictory statement or proposition that when investigated or explained may prove to be well-founded or true. This book harnesses the power of paradoxes to help readers embark on their journey toward success that truly matters. It is organized in three parts, traveling through the three acts in the classic hero's journey.

Heroes often traverse a magical portal into a different dimension. Think Harry Potter or Avatar. They find a secret door, they learn a spell to cast, and they often find an ally to guide them. Here's your door, your spell, your guiding ally, all in one paradoxical invitation: Begin experimenting with doing the opposite of what you've done before and what you think you should do.

## Part 1

### Chapter 1: Three Principles

If we surrender our will to a higher power, "surrender and win" is the call sign for true success.

The Success Paradox Lifestyle (SPL) applies to the whole of our lives, not just business. It operates according to three principles: being authentic, doing good, and doing well.

"Being authentic" means asking the question, "What's most important to me?" If you ask me, what's most important to me now is being myself. Every addiction is an attempt to fix something on the inside with something from the outside. Changing things on the inside creates a ripple effect outside.

Your business should be about "doing good." It should be as much about helping others as it is about helping you. Being authentic flows through everything we do, helping others and generating abundance to share.

Profits are essential to growth and personal, corporate, and cultural health. But accumulation shouldn't be our primary. "Doing well" must be about helping people along the way.

### Chapter 2: Being Authentic

"Father is a Child to the Man," a William Wordsworth original, means that the character we form as children stays with us into our adult life. "Father rest child to the man" means that fathers influence their children to become adults like them or in opposition to them. It's necessary to disrupt that programming to become our authentic adult selves.

When my father died, I adopted his workaholic patterns, which almost killed me. I was trying to reach and exceed my father's goals. No matter how successful I became, I felt unworthy because I didn't know who I was. When a doctor told me I had less than a month to live, I was forced to change.

I was meant to live my life, not extend my father's, no matter how wonderful he had been. The most important thing to me is to be authentic. I remembered to use my Pause Button. Pausing can seem like being timid, but I learned that my partners and employees, and family don't lose confidence in me when I pause for a moment to make sure of something. This has become an important new habit in my long journey toward becoming a better human, a better businessman, and a better father to my four children.

### Chapter 3: Doing Good

We are separate individuals, right? Well, the Earth also seems flat, and the sun seems to revolve around the Earth. All is seldom as it seems. We are individuals, and we are connected, like waves in the ocean, and we are designed to help each other. So, why do we often wait for an emergency before we start doing that?

We are bombarded by a constant media stream that either overtly or subtly defines what is "normal" or "best." We are urged to compare ourselves to others and then buy something in order to become better or achieve more. Our modern and historical heroes (real and screen sized) always win. We hesitate to portray ourselves as needy or incompetent. We fear being devalued or even shunned if we dare admit that we aren't self-sufficient.

But self-sufficiency is a myth. We need each other. We learn our management strategies from our early family experiences. We are happiest when we are helping others. Empowering friendships supports us to become our authentic selves.

### Chapter 4: Doing Well

Putting social profit first (people and environment), results in financial profit without harmful side effects, but only when we are synchronized with the full profit system known as nature. Life is a profitable enterprise when everything and everyone wins.

For-profit corporations increase share value for stockholders. Nonprofit organizations create social value. Some companies, like ours, manage to do both. We are experimenting with a new model that we call "full profit." It's all about the profit-generating power of generosity.

Everything changes when we prioritize being authentic, which inspires us to help others, and results in doing well. We create a fundamentally different kind of profit: a reflection of our goodwill.

Imagine more and more individuals shifting their relationship with money and making their companies full-profit enterprises, putting profit before profit. They would do good, and they would do well. Profit is a reflection of doing good.

## Part 2

### Chapter 5: Finding Your Why

If you do want more, if you want peace, to feel like you're living your own life, to truly enjoy your success and sleep well at night; if you feel ready to explore the actual details of what it would look like to surrender and win in your life and your organization, then you're almost ready to rock and roll. But first, you have to find your why.

Why do you want to go down this road and not some other? In Start with Why, Simon Sinek wrote: "Very few people are companies can clearly articulate why they do what they do. When I say why, I don't mean to make money – that's a result. By why I mean what is your purpose, cause, or belief? Why does your company exist? Why do you get out of bed every morning?"

Understanding and answering your "whys" is often the first step toward making a positive change.

### Chapter 6: The Success Paradox Lifestyle

Expediency drives us to take shortcuts but kicking the can down the road doesn't get rid of the can. Eventually, we must be accountable for the repercussions of our actions. So, why not just do things right the first time?

According to recent brain research, "When you think about yourself, a region of the brain known as the medial prefrontal cortex powers up. The further out in time you try to imagine your own life, the less activation you show in the MPFC. In other words, your brain acts as if your future self is someone you don't know very well and, frankly, someone you don't care about."

What helps develop our future thinking skills is to simplify everything down to what truly matters. Our business, for instance, has only three components we focus on: being authentic, doing good, and doing well. These are the three principles of the SPL, a formula that helps deal with that brain problem.

### Chapter 7: Giving Up

To have more, we need to get more, right?

The answer is "yes" only when we limit our wealth to personal possessions. Nature operates on the principle of shared wealth. It revolves around giving and receiving our mutually profitable activities that sustain balance and health. So, as you progress with your life and business, always remember to give back in whatever way you can.

Another thing to give up is overdoing things or over-exhausting yourself. Our inability or refusal to rest creates a wall to success. We can push all we want, but work won't be fulfilling or enjoyable, even if we hit our financial goals.

Remember: give to receive, receive to give. "Breathing" is a simple metaphor to explain this paradox. During an asthma attack, it becomes difficult to breathe out, so air gets trapped in the lungs, which means there's no room to breathe in new air. That's what happens when we're reluctant to give. There's less room to receive. Likewise, when we struggle to receive, we have less to give.

### Chapter 8: Opening to Big Change

Pushing for what we want often blinds us from seeing that we already have what we need. Being grateful for what is restores our vision.

We sleep about a third of our lives, 230,000 hours during an average lifetime, yet most of us pay more attention and invest much more money in our cars than our beds. Likewise, another third of our lives is spent at work, about 90,000 hours on average before retirement. So why don't we invest more in the working environments of our organizations?

Change is hard. But once done, it can result in truly magnificent things. Fortunately for our organization, we learned about this in time to make major changes before the dysfunctional elements woven deeply into our company culture could sabotage us. The big change had to start at the top.

### Chapter 9: Answering a Cry for Help

We'd rather feel high than low, right? When we feel "high," we are bursting up against the ceiling of a boundless heaven the infinite potential of creative possibilities. When we are feeling "low," we are dipping our toe into the underworld of our unconscious mind, where, as Jung said, we become enlightened by making the darkness conscious.

Social media is like waking up in a mental asylum. You have no idea you're committed until you try to leave. It can give

us instant gratification, but at what price? Addiction to quick hits of dopamine. But real life can't be all highs and no lows.

Sure, social media can be a gigantic box full of "bad." But it can also be an equally huge opportunity to do "good." Aside from using social media for entertainment and fake friendships, we can tap into its power to make the world a better place.

## Part 3

### Chapter 11: What's Next for You?

Is reality objective or subjective? Why do things happen the way they do? We are not spectators; We are creators. And the best creating tool we have is our mind.

Business is where I give my gifts, and it may be the same for you, or you may thrive doing something completely different like music or dance, or snowboarding! If our educational systems were what they should be, our uniqueness would be encouraged, not constrained, and we'd learn how to give our gifts for the betterment of society.

But what happens when your mind's connection with universal intelligence gets blocked? We prioritize "doing" over "being" and use our willpower, disconnected from the source of life – often with the best of intentions – but we know where paving that road leads.

Using your mind, map, and compass to become an expert with the SPL requires commitment and follow-through. It requires you to create your map and compass and erase the structural tension between the way things are now and your vision for a preferred future.

### Chapter 12: What's Next for Your Organization

Seeing is believing, right?

Well, it turns out that the opposite is also true. "Implicit bias" is the official term that describes how our brains can blind us to the obvious when what we are looking for conflicts with what we believe we should see. When it comes to determining what's next for your inorganization, remember to tap into our top 18 recommendations for putting the SPL into action in your organization:

- House cleaning before growth
- Incentivize growth
- Develop your multiyear strategic plan
- Formulate your vision, mission, and values
- Develop your senior leadership team
- Create a succession plan for all senior leaders
- Transparency
- Communication
- Graduate from isolated silos to collaborating teams
- Used scorecards that everyone sees
- Improve your employee orientation process
- Maintain a relentless focus on people first
- Develop realistic performance standards
- Focus on purpose by staying true to your vision, mission, and values
- Be responsible, successful, and accountable enough that PE partners don't feel the need to interfere
- Let go of the vine
- Celebrate your wins and give recognition

## Conclusion: Surrender and Win

The end justifies the means, right?

That traditional approach invites conflict between personal and organizational values. In fact, whatever we do along the way will always show up in our end product. Chefs know this. Salt tastes different than sugar. Every ingredient influence taste.

So, embrace the lifestyle. Stay true to your vision, mission, and values. Live the "be, do, share" principles. Your results will naturally reflect your process. Remember the end is a beginning. You'll need to trust the process to experience the effectiveness of the Success Paradox for yourself. Enjoy experimenting with what you've learned and be surprised by the wonderful things you'll discover about yourself and your organization!

**Gary Cooper** is the Executive Chairman of Palmetto Infusion, the CEO & Founder of The Carolus Company. The companies he leads are on a mission to improve the lives of families and communities in the Carolinas and beyond. Gary built his businesses based on a set of core values: kindness, caring, laughter, and extreme generosity. He is an advocate of servant leadership. His career has been dedicated to providing healthcare that enables people to remain independent, and he enjoyed a great deal of success in home healthcare, home medical equipment, hospice, private duty nursing, home infusion, and ambulatory infusion clinics.

## Zooming In On Your Next Read

## The Tools

**5 Tools to Help You Find Courage, Creativity, and Willpower - and Inspire You to Live Life in Forward Motion**

*By Phil Stutz and Barry Michels*

**Phil Stutz** graduated from City College in New York and received his MD from New York University. He worked as a prison psychiatrist on Rikers Island and then in private practice in New York before moving his practice to Los Angeles in 1982. He is the subject of the Netflix documentary Stutz, directed by Jonah Hill.

**Barry Michels** has a BA from Harvard, a law degree from University of California, Berkeley, and an MSW from the University of Southern California. He has been in private practice as a psychotherapist in Los Angeles since 1986.

## Live Life in Forward Motion

Barry Michels starts the book he co-authored with Phil Stutz, ***The Tools: 5 Tools to Help You Find Courage, Creativity, and Willpower - and Inspire You to Live Life in Forward Motion,*** by discussing a patient he once had named Roberta. Roberta came into his psychotherapy practice and wanted something she could do right away to feel better. Michels was at a loss because his training did not prepare him to provide Roberta with any such tools. Psychotherapy took time, he was taught. His mentors all urged him to go back to Roberta and tell her that she would have to delve into her childhood to find the basis of her problems. This did not satisfy Michels, but he was not equipped to help her find any better solutions. Then he heard a lecture given by Stutz, and this changed his practice because Stutz gave Michels practical tools that people could implement immediately.

Stutz then goes on to say that he was interested in the questions Michels began to pose to him because he wanted to know where the tools came from. Stutz began developing his tools when he became frustrated with failures in his psychology practice. Eventually he decided that whenever a patient asked him for relief, he would address the problem immediately. He makes the point that his tools are not attitude adjustments. Rather, tools are actual behaviors people can perform to find relief. It took many attempts to find tools that worked. Once he was able to refine a tool, he could see positive results in his patients.

## The Reversal of Desire

The first tool the authors discuss is the reversal of desire. They begin this section by discussing a man named Vinny who could very easily make people angry with him. He sabotaged almost every opportunity that came to him. After time, it was revealed that Vinny disliked situations where he felt like his fate was dependent upon another person. The authors explain that many people spend too much time trying to avoid pain, and this is what Vinny was doing by sabotaging situations where he might be at the mercy of others. Many people avoid pain by using alcohol or drugs, pornography, or by spending too much time on the internet. The authors state, "The Comfort Zone is supposed to keep your life safe, but what it really does is keep your life small."

Michels states that taking action is what moves people towards the future, and once they take action, they activate what the

authors call the Force of Forward Motion. This is the first of five higher forces they discuss, and refers to how every living being "is evolving into the future with a sense of purpose." This force, however, only works if a person is willing to use it. Many people choose avoidance instead.

To explain the reversal of desire, Stutz tells the story of a very successful football player he knew in high school. This player was not necessarily more naturally talented than the other students. His success came because he was not afraid to get hurt. In fact, he would run right into the nearest tackler on purpose. Michels explains that this technique can be used in everyday life when people learn to desire what it is they avoid. Michels explains that people should visualize something they have been avoiding. Then he wants people to put the situation out of their mind and just visualize the pain. While continuing to visualize the pain, they want people to say "Bring it on," "I love pain," and "Pain sets me free." The authors explain that this is helpful because when a person moves towards pain, it shrinks. This tool should be used whenever a person has to do something they wish to avoid or whenever they find themselves thinking about doing something they do not want to do. The authors say, 'There is a hidden, inner strength that you cannot find unless you push yourself through adversity." The reversal of desire helps a person develop courage.

## Active Love

Active love is the second tool Michels and Stutz describe. They discuss what they call the maze which is the state people find themselves in when they get angry. Typically people either go on the attack or withdraw when they find themselves in the maze. The problem, they state, is not the original trigger but the reaction of the person who was harmed. The problems with the maze are that it is hard to get out of and it primarily hurts the person who is trapped in it. It can blind people to all the good in other people. The authors claim that one reason the maze is hard to get out of is because people are interested in fairness. They believe they will be letting people off the hook if they let go of their anger.

The higher force that Active Love employs is Outflow. One of the authors explains how when he was a child he got angry with his father as they headed out to sled in the snow. The author was so angry that he refused to go sledding or get out of the car. Eventually his parents gave up trying to coax him out of the car. At that point, he saw a puppy, and as he went towards the puppy, he was filled with overwhelming love. He says, "Everything felt different; it was as if the universe had suddenly tilted on its axis." His ill feelings for his father turned into positive feelings. He explains that this was a very particular kind of love called Outflow. This "is an infinite, spiritual force that gives of itself without restraint." Outflow is always there, the authors claim. A person just needs to tap into it.

A person should use the tool of Active Love whenever they are tempted to enter the maze. There are three steps to using Active Love. First is called concentration. Here, a person tries to gather up all of the love they can feel around them and concentrate it on their heart. The next step is called transmission. During this step, they should act as a conduit, transferring that love from this higher place into the world. The third step is called penetration. When the person feels that love enter the other person, they will feel an acceptance. Active love can be used any time a person feels injured, remembers past injuries, or is preparing to deal with difficult people.

## Inner Authority

When discussing Inner Authority, Michels and Stutz discuss insecurity. They say, "insecurity destroys people's ability to connect with one another." This is important, in part, because people give other people opportunities when they feel connected to them. They say that the reason insecurity is so hard to get rid of is because there is a second self hidden inside of everybody, and people are ashamed of this second self. They call this second self the Shadow. "The 'shadow' is everything we don't want to be but fear we are, represented in a single image." The authors explain that the Shadow is different from other archetypes as it does not affect how someone sees the world but rather affects how they see themself.

To find the shadow, the authors urge the reader to focus on being in front of a group of people who make them feel very insecure. Then the reader should push those feelings out in front of them and imagine the feelings with a face and body. This visualization is the Shadow. They believe that the Shadow "is the source of one of the most basic human conflicts." In short, everybody wants to feel that they have value, but they are ashamed of the Shadow inside of them.

The higher force at play with the Shadow is self-expression. This force propels people to express themselves in a truthful manner without caring what others think. "When you're connected to the Force of Self-Expression, a part of you speaks that's usually silent. You're speaking from your deepest, inner self," they say. As people grow into adults, they tend to turn from their inner self. Through this process, people turn their inner selves into their Shadows.

In order to use Inner Authority, a person should gather an image of their Shadow in their head. Next they should connect with it and then command the Shadow to listen as they approach the people who intimidate them. The authors want readers to use this tool any time they are preparing to be judged in any manner. They recommend practicing it first in situations that are less intimidating so they can gain experience with it before they approach larger challenges.

## The Grateful Flow

The authors discuss fear in this section. To explain fear to a patient, the authors explain how they told a patient to call to mind a fear. The woman described it as a cloud. The woman did this again with another fear and felt the same cloud. The authors call this the Black Cloud. They say, "When you worry incessantly, regardless of the subject, you're creating a negative energy that hands over you like a cloud." To experience the Black Cloud, a

> The more specific the question, the more ideas can be generated. . .”

person can close their eyes and call to mind worried thoughts. These should be repeated in intensity to mimic real anxieties. The person can then focus on their inner state and what it feels like. This is “a mild version of the Black Cloud.”

The problem with the Black Cloud is that it takes away peace, making everything into a crisis. Also, positive thoughts do not have the power that negative ones do, making the technique of merely replacing negative thoughts with positive thoughts unhelpful. In addition, many people believe that their negative thoughts actually can help ward off bad things from happening.

The higher force that the Grateful Flow employs is gratefulness. Stutz explains a scare he had when, as a child, he thought he might have the same type of cancer that had killed his brother. When the tests came back negative, he was able to experience everything differently. He said that he “was in the presence of an all-giving power.” The authors name this power the Source. It is always there, and it is what created everything. This Source lives in the spiritual world. Gratefulness is the way in which people perceive the Source.

The tool the authors want readers to use when they experience fear is the Grateful Flow. To do this, first a person needs to think back to something beautiful that they did not create themselves. Then they should imagine the gratefulness they felt at the time. Finally, they should trace that gratefulness back to an “unimaginably generous force.” At first, people can list things they are grateful for. Eventually, however, they should try to feel gratefulness emanating from themselves when they think of what they are grateful for. The authors want people to pay attention to their thoughts and use Grateful Flow whenever they start to notice negative thoughts. This does not need to just be used with worry. It can also be used whenever thoughts are undirected. This process is especially helpful because people are always vulnerable in the physical world. They are not vulnerable, however, when they are connected to the Source.

## Jeopardy

The final tool the authors describe is Jeopardy. The authors notice that many patients eventually stop using the tools. They explain that people like to think that they are finished products, and when that happens, they believe they do not need to use the tools. They have an idea that there is a destination a person can arrive at where they will no longer have to work. This is not the case. They believe that deep down, everyone believes that there is one thing that they could achieve that would make all their troubles go away. The authors tell the reader to imagine this something and imagine it taking away all struggle. Then they say the reader should squash that visualization because it is not real. Exoneration, the name they give to the belief that one day everything will fall into place and struggle will become a thing of the past, leads to demoralization.

The higher force Jeopardy taps into is Willpower. The authors tell the reader that changing their life will be difficult. The other higher forces were outside of a person. Willpower needs to be generated within the individual. They say, “To act right now requires a sense of urgency. But urgency is uncomfortable. The only time we feel it is when we’re in jeopardy of losing something important.” People need to realize that their future is always in jeopardy as they are always at risk of stopping using the rules. This sense of jeopardy will encourage willpower.

To use Jeopardy, a person needs to see themselves on their deathbed. The person can imagine this dying version of themself getting up and yelling at them for not properly using their time. This will create the pressure to use the tools. Stutz says that people need “a permanent source of jeopardy.” People should use this tool when they feel demoralized and when they are experiencing success that can make them feel exonerated.

Throughout this book, the authors provide three main keys to each tool: the tool, the higher force behind it, and cues as to when to use it. Their hope was to create a highly practical book that people could use immediately to help them with their problems. They clearly lay out the steps and walk the reader through each tool, providing a clear blueprint for how to succeed. Michels ends the book by explaining that he was able to come to terms with the spiritual principles in the method that he had previously rejected because he realized they worked.

### How to Create Trust-Based Relationships with Your Clients

# THE TRUSTED ADVISOR

## THE SUMMARY IN BRIEF

Do you ever find yourself asking one or more of the following questions:

- How can I get access to my clients more often?
- How can I cross-sell?
- How can I avoid being typecast, labeled as a specialist only in my main discipline?
- How do I get clients less focused on price?
- How do I get clients to play fairly with me?

The answers to these and other similar questions have the same basis — you must earn your client's trust; without trust, none of these ambitions can be realized. The authors of *The Trusted Advisor* know this truth from shared and individual experience, and they use that experience to both illustrate the need for trust in long-term client relationships and educate readers in the process of developing that trust with every interaction.

Among the things they reveal are:

- The distinct attributes of trusted advisors.
- The three core skills of trusted advisors: earning trust, giving advice and building relationships.
- The essential characteristics of trust in all business endeavors.
- How to develop trust in five essential stages: engaging, listening, framing, envisioning and committing.
- How to define client problems in a way that provides insight and a fresh way of thinking, both in rational and emotional terms.
- How to add value to a client's business by helping them envision an alternate reality — an ideal state in which their main problem is solved and their goals within and beyond the context of that problem are defined.
- How to build commitment to action and carefully manage your client's expectations of what will be required to solve his or her problem.

Are you ready to build stronger, more trusting relationships with your clients? If your answer is "yes," turn the page and get started ...

# THE TRUSTED ADVISOR

**by David H. Maister, Charles H. Green and Robert M. Galford**

## — THE *COMPLETE* SUMMARY

## What Is a Trusted Advisor?

A common trait of trusted advisor relationships is that the advisor places a higher value on maintaining and preserving the relationship itself than on the outcome of the current transaction. The advisor makes a substantial investment in the client, without guarantee of return, before the relationship generates any income, let alone any profit.

Sports agent David Falk helped create and build basketball superstar Michael Jordan into one of the world's most successful "brands." Falk has been able to sustain his relationship with Jordan in part because he has earned Jordan's trust, sacrificing guaranteed financial reward in order to grow the relationship. On two occasions (including once early in Jordan's career) Falk waived or significantly reduced specific fees, without being asked by Jordan, because he knew instinctively that it was what his client wanted — although Jordan himself would never have made such a request. Falk believes that is one of the reasons the two continue to work together, with Falk collecting four percent of Jordan's enormous earnings.

Trusted advisors tend to have a number of distinct attributes:

- They have a predilection to focus on the client, rather than on themselves.
- They focus on the client as an individual, not as a person fulfilling a role.
- They believe that a continued focus on problem definition and resolution is more important than technical or content mastery.
- They show a strong competitive drive aimed not at competitors, but at constantly finding new ways to be of greater service to the client.
- They consistently focus on doing the next right thing, rather than on specific outcomes.
- They are motivated more by an internalized drive to do the right thing than by their own organization's rewards or dynamics.
- They view methodologies, models, techniques and business processes as means to an end — they are useful if they prove effective for this client, and are discarded if they don't.
- They believe that success in client relationships is tied to the accumulation of quality client-contact experiences.
- They believe that both selling and serving are aspects of professionalism; both prove a dedication to helping clients with their issues.
- They believe that there is a distinction between professional and private lives, but that both lives are very personal. The two worlds are often more alike than they are different — and for some people, these worlds overlap to an extraordinary extent. ■

## The Three Core Skills of Trusted Advisors

In addition to the distinct attributes of trusted advisors listed above, we see three core skills emerge: the ability to earn trust, the ability to give advice and the ability to build relationships.

### *Skill #1: Earning Trust*

Trust must be both earned and deserved. You must do something to give people evidence that helps them decide whether to trust you. You must be willing to give in order to receive.

David Maister once had to hire a lawyer to probate a relative's will. He called several law firms and was treated to sales pitches about when the firms were founded, what they would charge and how many offices they had. Finally, he found a lawyer who, in the initial phone call, asked Maister how much he knew about probating a will. He then offered to fax Maister a comprehensive outline of the steps involved, including which ones to prioritize based on their urgency in the

## The Three Core Skills of Trusted Advisors

***(continued from page 2)***

process. The lawyer provided this information freely, earning Maister's trust by being generous with this knowledge and proving he was willing to earn the potential client's business.

At its core, trust is about relationships; people tend to trust one another if they are convinced the other is in for the long haul and not looking simply to maximize the short-term benefit of individual interactions. Trust is about reciprocity; you help me and I'll help you if you exhibit some form of caring, and if you provide some evidence that my interests are as important to you as yours are.

### *Skill #2: Giving Advice*

Many professionals approach the task of giving advice as if it were an objective, rational exercise based on their technical knowledge and expertise. Yet advice is not an exclusively logical process, but rather an emotional duet played between the advisor and client. If you cannot learn to recognize, process and respond to a client's emotions, you cannot be an effective advisor.

Consider the client's perspective in receiving advice, or in engaging professionals in general. Think about the personal risks (reputation, promotion opportunities, career issues) that accompany the responsibility for choosing and working with any outside provider for a risky or expensive engagement. If something goes wrong, the person who made the decision to go with the particular vendor or service organization is blamed; clients, therefore, tend to tread carefully when choosing professionals to handle their problems.

Because of this, the diagnosis and solution of a client problem cannot be performed without considering the sensitivities, emotions and politics of the client engagement. Regardless of how technical your field or discipline, the act of giving advice is dependent upon an intimate understanding of the personalities involved, and on the ability to adapt the advice-giving process to the specific individuals involved.

What clients frequently want is an advisor who will take away their worries and absorb all their hassles; what they often get, however, are professionals who add to their worries and create extra headaches by forcing them to confront things they would prefer to ignore. Since clients are often anxious and uncertain, they are looking for someone who will provide reassurance, calm their fears and inspire confidence. It can take some time for many advisors to recognize and develop the interpersonal skills required to address these concerns.

Once you have these skills down, you can begin the process of providing your client with valuable advice. Keep the following points in mind:

- **Find the right words.** We aren't always aware of how we come across to clients in conversations. What we intend to convey is sometimes not what gets communicated. To help develop this skill, rehearse a client conversation, with a friend or colleague playing the role of the client. Look for occasions to rephrase things differently, to avoid the perception of being unclear or pompous.
- **Ask the right questions.** Like a good teacher, your role when giving advice is to get your client from point A (what they know and understand now) to point B (an advanced state or deeper understanding and knowledge). You must have a firm understanding of point A and be able to take the client, step-by-step, to point B through a logical reasoning process. This process is most often phrased as questions: "Why do you think we have this problem?" "What advantages do you foresee for the different options?" "What benefits will occur as a result of our approach?"
- **Be mindful of politics.** It is sometimes necessary to suppress your own ego and allow a client to believe they came up with a solution, to avoid the hassles of corporate politics. One way to do this is to help the client understand all available options by explaining the advantages and disadvantages of several courses of action, then making a recommendation. This enables the client to make an informed decision based upon that information and your opinion.

### *Skill #3: Building Relationships*

To build a strong relationship, you must try to be understanding, thoughtful, considerate and supportive. Fortunately, there are some key principles of relationship building that apply both in personal and professional life. Among these are the following:

- **Go first.** You must give a favor to earn a favor, visibly displaying your willingness to make an investment in the relationship in order to earn the client's trust.
- **Show, don't tell.** A primary goal of any relationship-building activity is to create opportunities to demonstrate that you have something to contribute. For example, a professional firm, competing for business with Wells Fargo Bank, arranged for their proposal to be delivered in saddlebags. The same firm had a proposal for business with Domino's Pizza delivered by one of their people dressed up as a Domino's delivery person. The message was clear: "We are trying to treat you as special and unique."
- **Be sure your advice is being sought.** You must learn to hold back the urge to tell a client, "I know how to solve your problem; you need to _____." While you

***(continued on page 4)***

### The Three Core Skills of Trusted Advisors

*(continued from page 3)*

may be right, your advice will probably not be accepted. Clients don't always want advice; often, they simply want a sympathetic ear.

● **Earn the right to offer advice.** In a romance, there are rules of sequence; certain stages of the relationship are not appropriate until other stages have been met and passed. The same is true in business relationships. You must earn the right to offer advice to the client by first understanding the client's situation, then understanding how the client feels about it, then convincing the client that you understand both.

● **Say what you mean.** The most common form of communication breakdown (and a major source of lost trust) is misunderstanding about what has been said. Never assume the client is a mind reader. Say what you want and think. Don't hint around. ■

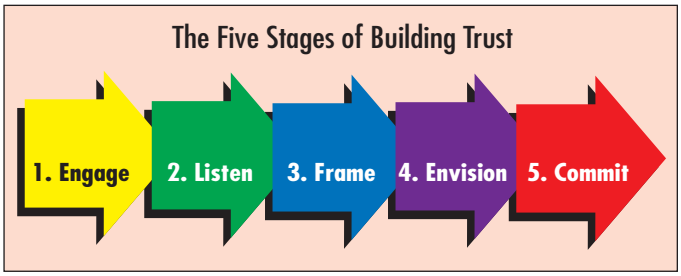
# What Is Trust?

Before we learn to increase the level of trust in our client relationships, it is useful to note the characteristics of trust:

● **Trust grows.** Trust rarely develops instantly, except in the face of powerful experience. Upon meeting someone for the first time, we are more likely to recognize that we like or respect the person, rather than trust them. Trust does not happen without work, volition or effort; it emerges from accumulated experiences over time. There is no quick fix where trust is concerned.

● **Trust is both rational and emotional.** In client relationships, trust is, on the one hand, based on a client's direct experience of the expertise brought to bear on that client's problems — a rational approach to the relationship. On the other hand, it is also based on the value placed on advisors for their support, dedication to the client's interests, and courage in constructively challenging the client — all emotional factors.

● **Trust is a two-way relationship.** Trust is a two-way street; you cannot create a trusted-advisor relationship on your own. Clients must participate and reciprocate, and they must do so of their own will — you can't force trust. Building a trusted advisor relationship involves not only straightforward discussions, rigorous decision making and conventional consultation, but also a number of other less structured moments of inspiration and epiphany.



● **Trust entails risk.** The potential of trust violation is always present in a trusting relationship; the advisor's choice not to violate that trust is what makes the relationship special. Creating trust entails taking some personal risks — this is the essence of trust. If you're not a little scared on occasion, you're not taking risks. If you're not taking risks, you're not likely to create risks.

● **Trust is different for the client and the advisor.** Just because you can trust doesn't mean you can be trusted. However, if you are incapable of trusting, you probably can't be trusted. The ability to trust someone else is a necessary, though not a sufficient, condition for being trustworthy.

● **Trust is personal.** Although some companies try to attract customers by telling them, "You can trust us," there's no such thing as institutional trust. We don't trust institutions. We don't trust processes. We trust people. Trust requires being understood and having some capacity to act upon that understanding. Organizations are incapable of doing either; only their people can do so. Brand name recognition and reputation can get an institution on anyone's short list, but only a person can keep it there. ■

# The Development of Trust in Five Stages

It is important to understand how trust-based relationships are developed; indeed, when examined closely, you can see five essential stages that lead, consistently, to trusting relationships.

### *Stage 1: Engage*

While some believe that the trust-building process begins with listening, something must come first: an initial connection between the advisor and client that sets the stage for the client to want to discuss his or her need. This connection requires an investment on the part of the client — an investment in time and energy to take a risk on the would-be advisor (something the client would not do unless they sees some likelihood of good results in return).

Engagement is the stage in which it first occurs to clients (new or current) that perhaps you might be able to help them find a solution to a specific problem. Specificity is important. Not even your current clients will respond to you just because you listen; they must believe that you have something to offer them on a spe-

*(continued on page 5)*

## The Development of Trust in Five Stages

*(continued from page 4)*

cific issue in order to open up to you about it.

### *Stage 2: Listen*

Effective trusted advisors are very good listeners. Indeed, listening is essential to "earn the right" to comment on and be involved with the client's issues. We must listen effectively and be perceived to be listening effectively before we can proceed with any advisory process. Advisors make two common mistakes when listening to earn the right:

● **Overly rational listening.** Listening to "earn the right" is very much an emotional as well as a rational process. When you take the time to listen to the client, then absorb what you hear and use it to build the relationship, you display a level of caring that is essential to being a trusted advisor. Listening is not a "soft" skill; at the end of the day, you want the client to be able to look you in the eye and know that you won't let things go by that aren't in his or her right interest.

● **Overly passive listening.** Good listening is an active undertaking, a continual back-and-forth acknowledging that each person in a conversation is being heard and understood. The kind of acknowledgment could be a verbal cue (an "Mm-hmm," or "I see," etc.) or body language, depending on the content of the message.

### *Stage 3: Frame*

Framing is the act of crystallizing and encapsulating the client's complex issues and emotions into a problem definition that, in an objective manner, provides both insight and a fresh way of thinking about the problem. It is usually the most challenging of the five steps, although often the most rewarding. Framing involves identifying and enunciating the essence of the issues at hand — usually something that is hidden, critical and/or fundamental.

There are two kinds of framing: rational and emotional. Rational framing consists of distilling a complex set of issues down to a few critical variables. It can be done in such deceptively simple ways as generating a list, drawing a diagram or sketching out a process or approach. It is a critical component of effective advising, but it is hardly sufficient. Emotional framing enables advisors to raise emotional or political issues related to a client problem in such a way that the issues can be addressed without doing harm to the process of solving the problem (which they would eventually do, if ignored). Emotional framing is first and foremost about the courage to take personal risk and surface hidden emotions — a difficult task that is made easier when you remember that it is the client's emotions that must be framed, and not your own.

One useful technique for emotional framing is called "naming and claiming," which is characterized by three factors: 1) an acknowledgment of the difficulty of raising an issue; 2) an acceptance of the responsibility for raising it; and 3) a direct statement of the issue itself. This technique addresses the embarrassment that stems from speaking what hitherto may have been "unspeakable," or too uncomfortable to be stated. Using emotional framing is the equivalent of dynamiting a stream that has become clogged to the point of dysfunction.

Most initial attempts at framing, especially those made by clients, are often laden with blame: "I can't get so-and-so to listen to me," or, "We need better training." Blame gets in the way of effectively framing an issue, and of effective advising in general. You must systematically tell the truth and eliminate blame, in order to

*(continued on page 6)*

## What Good Listeners Do

What do good listeners do that makes them good listeners?

- ✓ They probe for clarification.
- ✓ They listen for a story, and for unvoiced emotions.
- ✓ They empathize.
- ✓ They summarize well.
- ✓ They get rid of distractions while listening.
- ✓ They keep the client talking by asking for more details that help them understand.
- ✓ They look (not stare) at the client as the client speaks.
- ✓ They encourage by nodding their head or giving a slight smile.
- ✓ They ask how they might be of help.
- ✓ They are aware of and control their body movement (they don't move around, shake their legs, fidget with objects, etc.)

### *What Good Listeners Don't Do*

On the other hand, good listeners don't:

- ✓ Interrupt.
- ✓ Respond too soon.
- ✓ Editorialize in midstream.
- ✓ Jump to conclusions.
- ✓ Judge the speaker.
- ✓ Try to solve the problem too quickly.
- ✓ Take calls or interruptions in the course of a meeting.

## Emotional Framing

Being willing to move from blame to responsibility is a risky endeavor. "Naming and claiming" allows responsibility to be accepted in a manner that actually reduces personal risk. It makes judicious use of responsibility-taking caveats such as the following to negate the risks involved in claiming an issue:

✓ **"It's probably just me, but …"**
✓ **"I'm sure you've covered this before, but …"**
✓ **"You've probably thought of this already, but …"**
✓ **"I'm not sure if this is on point, but …"**

Having posed enough responsibility-taking caveats, say the thing that needs to be said. Only by emotionally framing difficult issues can you realize the enormous payoffs that come from handling problems openly and moving forward.

## The Development of Trust in Five Stages

*(continued from page 5)*

maneuver toward full ownership of a blame-free problem statement that can be acted upon, evaluated and transcended.

### *Stage 4: Envision*

Contrary to what many might think, once a problem is defined, the next step is not to solve it. A problem can have many solutions, depending on what clients want to achieve, or for which state they want to aim. Together, you must jointly envision (in as rich a detail as possible) how the end result might look without prematurely giving in to the temptation to solve the problem.

Envisioning entails addressing at least three questions:

- **What are we really aiming for here?**
- **What will it look like when we get there?**
- **How will we know we are there?**

When done successfully, envisioning is usually the point in the process where clients begin to understand their own true goals, defining those goals in such a way that they can realistically be committed to achieving them. Successful envisioning takes people out of the technical, problem-solving, high-risk perspective with which they approach most problem-solving and into a new perspective, one that encourages freedom and creativity, creating great value in the process.

For example, United Research (a consulting firm that later became part of Gemini Consulting) used envisioning to great effect in the 1980s and early 1990s. As part of its sales process, the organization asked large numbers of people in client organizations a series of leading questions:

- **Could things be different around here?**
- **If so, could they be better? How?**
- **What would things look like in this better future?**
- **What would have to change for that to happen?**
- **Where would the benefits show up?**

As people spent time on this envisioning step, they articulated in great detail how things might look in a world where the major problems facing them had been solved, or a major opportunity attained. In doing so, they took an abstract concept of a "better world" and created a concrete vision of their ideal situation, enabling them to work toward making it a reality.

In a two-person, trust-based conversation, you can jointly focus on a mutually attractive future, unencumbered by the problems of the present, enabling you to break down barriers and build bridges to that ideal future. It should, however, be recognized that even acknowledged problems cannot always be solved, as a matter of the client's choice. The client may determine that the benefits of the future state are not worth the effort, or that the problem is one he or she can live with.

### *Stage 5: Commit*

The dictionary gives two meanings of the word commitment: 1) an agreement or pledge to do something in the future; and 2) the state or instance of being obligated or emotionally impelled. The first definition is about action; the second is about an emotional state. It is the second definition that keeps us in the realm of the personal and emotional, which is what commitment should mean in the context of trust.

If you follow the trust-building process, by the time you get to Stage 5, the problem has been framed to everyone's satisfaction, and the vision you wish to attain is clear. What must follow is a series of conversations that will determine:

- **what stands in the way of achieving the solution,**
- **what the involved parties are willing to do about it,**
- **who must be brought into the loop,**
- **what roles each person must play,**
- **what information you need,**
- **when and how to check in on progress,**
- **what key deadlines loom ahead.**

The client must understand the details of implementation, what difficulties loom ahead and what new behaviors might be required to address those difficulties. Trust, in this case, is enhanced by the advisor's openness and candor, sharing his or her experiences in an effort with which the client may be unfamiliar. It can be

*(continued on page 7)*

## The Development of Trust in Five Stages

*(continued from page 6)*

tempting, for example, to leave out discussions of risk at the beginning of an assignment. These conversations are essential, though; to leave out an explanation of the pitfalls of an endeavor might be viewed by the client as arrogance or secrecy.

A central part of building commitment to action is carefully managing the client's expectations about what is and is not going to happen to solve the problem. To manage expectations well, you must do the following:

- **Clearly articulate what you will and will not do.**
- **Clearly articulate what the client will and will not do.**
- **Define the boundaries of the analyses you will perform.**
- **Check with the client about areas in which or people with whom the client does not want you to be involved.**
- **Identify precise working arrangements.**
- **Agree on methods and frequency of communicating.**
- **Decide who should get which reports, how often those reports will be delivered and how they will be used.**
- **Decide what milestones and progress reviews are needed.**
- **Decide how success will be measured, both during and at the end of the process.**

Commitment in the context of the trust process is both joint and personal. The advisor must forge a two-sided, truly joint commitment, not one that arises simply from a shared workload calculation. To do this, the advisor must propose solutions that deepen the linkages on both the rational (or content) side and the emotional (or personal) side, strengthening the relationship between the two parties. ■

# What's So Hard About All This?

There are many reasons people find it difficult to fulfill the trusted advisor role, among them:

**"It's all too personally risky."** That's right. It is risky, and if you don't do it with careful balance, it will also come off as flaky and embarrassing. Careful balance is key — as are awareness, focus and practice. The fact that it doesn't get done often is an opportunity, not a problem. It's a chance to distinguish ourselves. Risk is the essence of creating intimacy.

**"Content is all."** The fact that professional services firms often breed a culture of content expertise and mastery means very little if the client doesn't trust you. Truly great professional service firms haven't just made an adjustment to a trust-based approach; they are (or will be) built on it.

**"The process sounds so s-l-o-w! My budget won't allow for this!"** This makes two false assumptions. First, it assumes that clients won't pay for counseling time. In truth, clients more readily perceive the value of counseling because it is done with them, in their presence. Secondly, this concern assumes that time spent advising a client must be recouped on the current assignment. In truth, effective counseling can be among the best means of generating future revenues. ■

# The Lieutenant Columbo Approach

Sometimes a metaphor concisely captures and conveys meaning better than words. Such is the case with Lieutenant Columbo, the television homicide detective played by Peter Falk for three decades. The Columbo character embodies a number of characteristics that can be useful for successful advisors.

Although his rumpled appearance and aloof manner

*(continued on page 8)*

## What Skills Are Required to Build Trust?

The five stages of trust building require different skills that the trustee must accomplish:

- ✓ **Engaging requires the skill of being credibly noticed.**
- ✓ **Listening requires the ability to understand another human being.**
- ✓ **Framing requires creative insight and emotional courage.**
- ✓ **Envisioning requires a spirit of collaboration and creativity.**
- ✓ **Commitment requires the ability to generate enthusiasm and manage over-enthusiasm.**

Individuals you encounter might have divergent opinions as to which stage is the most important, but there is no "key" to the process, no "magic button" that stands above the others — each stage is essential to the trust-development process. The point in the process at which a client might articulate a key moment depends largely on the issue at hand and on the approach of the advisor.

## The Lieutenant Columbo Approach

*(continued from page 7)*

hardly seem imposing, Columbo actually has an instinctive knack for drawing out the criminal and confirming his (correct) suspicions. He disdains official police methodology, preferring to go for customized, on-off situational engagement, allowing the criminal to let down his guard. Columbo uses his style to eradicate a preconception, thereby setting the other party at ease; this is his genius, and it is what an advisor must emulate.

Often, client interactions boil down to, "you expert, me dummy" exchanges, sending out deep, layered psychological echoes that may include resentment, awe, jealousy, competition and so on. Because there are things at stake, the client may also have a sense of criticality, of impending something. Advisors may also have on display visual trappings of their expertise — a framed degree, a new technological toy, etc. — that causes unease on the part of the client.

Columbo neatly punctures these trappings, praising the "client's" intelligence, dismissing the seriousness of his capabilities, and thereby lowering the "client's" inhibitions. The "client" is then willing to talk openly and honestly, describing things as he perceives them and not as he wants others to perceive them. Information is offered; personalities emerge; progress toward resolution can be made.

Columbo's genius lies in neutralizing expectations about himself, stripping away illusion and pretension, subordinating his ego at the service of the "client." And, of course, he always wins. ■

# The Quick-Impact List to Gain Trust

What are the things you can do to gain trust that have the highest impact, or fastest payback?

**1. Listen to everything.** Force yourself to listen and paraphrase, in order to get what the client is trying to say.

**2. Empathize (for real).** Anyone who understands us has earned the right to engage in discussion, even debate; anyone who empathizes with us has earned the right to disagree and still have our respect. Listen to where the client is coming from, understand that perspective and acknowledge that understanding.

**3. Note what the client is feeling.** Note what clients say and do in your interactions with them. Make careful deductions about what their feelings might be. Acknowledge your own feelings and voice them as well, but carefully.

**4. Build a shared agenda.** Whether you're in a large or informal meeting, share your ideas for an agenda and ask the client to add their ideas as well. This creates buy-in and shows you have a "we, not me" attitude.

**5. Take a point of view.** Go out on a limb with an idea or perspective, even if you're not entirely sure of it. Such articulation stimulates reactions and crystallizes issues, serving as a catalyst to draw ideas out of your client.

**6. Take a personal risk.** Put yourself "out there" for your client — reveal something about yourself, even though such revelations carry with them risks of personal loss, even ridicule.

**7. Ask about a related area.** Advisors who notice and express interests outside their particular realm of experience make an impression on their clients. They show that they care enough about the client to not merely focus on the narrow realm of their professional issues and interests, but to expand that focus to address a wide array of client needs.

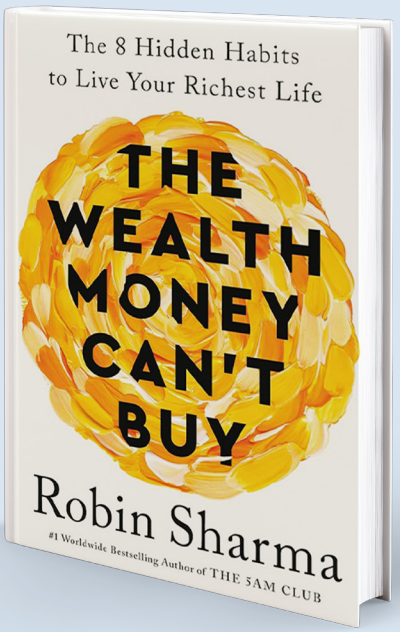
**8. Ask great questions.** Open-ended questions allow you to probe for client needs without artificially framing the client's response or biasing them one way or another. The objective is to hear what the speaker has to say, in the speaker's own terms. By doing this, you show the speaker respect by allowing him or her to set the frames of reference, not contorting them to fit your viewpoint.

**9. Give away ideas.** Expertise is like love — not only is it unlimited, but you can destroy it by not giving it away. It cannot be scanned into a database; rather, it is the uniquely human ability to redefine a problem and come up with creative solutions for solving it. It is what a successful advisor brings to every situation, and it only gets better with practice.

**10. Return calls with unbelievable speed.** Getting back to the client, fast, could be the most trust-creating thing you do. No one expects it, and it demonstrates how much you value your client.

**11. Relax your mind.** Critical meetings with your client can be stress-inducing environments; it is crucial to rid your mind, however temporarily, of internal distractions prior to entering into such situations. One way to do this is to concentrate on a piece of wisdom or key question, such as the following:

- **It's about the client.**
- **Who am I thinking about?**
- **The problem is rarely what the client said it was at first.**
- **Who am I serving by my present approach?**
- **What am I afraid of here?**



Think about one saying or question at a time. Write out your feelings about the one you choose, or talk through it, aloud, prior to a client meeting. Doing so will help cleanse your mind of distractions or internal conflicts prior to heading into a potentially stressful situation. ■

Book Snaps™
In-depth reviews of best-selling business books.

## The Wealth Money Can't Buy

### The 8 Hidden Habits to Live Your Richest Life

*By Robin Sharma*

**Robin Sharma** is one of the world's premier speakers on Leadership and Personal Mastery, recently named one of the World's Top Leadership Gurus. As a presenter, Sharma has the rare ability to electrify an audience yet deliver uncommonly original and useful insights that lead to individuals doing their best work, teams providing superb results and organizations becoming unbeatable. For nearly 20 years, many of the most well-known organizations on the planet, ranging from Nike, GE, Microsoft, FedEx, PwC, HP and Oracle to NASA, Yale University and YPO have chosen Robin Sharma for their most important events, when nothing less than a world-class speaker will do.

*A Book Review by Soundview*

# Discovering Real Wealth

What is wealth? Most would argue that it is the collection of a lot of material goods, titles, and things that will make our lives easier or better. Wealth, when defined this way, results from a job with a large, healthy salary that allows us to live this luxurious life. We have been told since we were young that this should be our chief aim. We should focus on gathering money and other things so that we can be wealthy. But what if there was a different definition of wealth? One that encourages us to rethink what wealth is and strive to live in a way that will make us feel more fulfilled and help us to have a more significant impact on the world around us.

In ***The Wealth Money Can't Buy: The 8 Hidden Habits to Live Your Richest Life***, Robin Sharma reveals the habits that will help the reader to live a beautiful, enriching life. He admits that his philosophy on what makes a great life differs significantly from others in the personal development field. Still, he hopes that what he shares will inspire the reader to create a life of far more incredible beauty and connection than they experienced before. In reading this book, readers will discover how to live a full life with a new appreciation of what wealth really is.

Sharma shares that he wrote *The Wealth Money Can't Buy* because of the suffering of the people in the world who think and feel that they don't have enough and that money will make them happy and/or solve their problems. Money isn't bad, and Sharma states that having it will allow the reader to live the way they desire, but asserts that it isn't the only form of wealth we need to strive towards. While money is essential to live, it should not be everything.

While they are each related in different ways, the 8 forms of wealth are broken down into separate sections and still further into chapters in which he shares the hard-won wisdom he has gained throughout his life. They are each based on habits that he encourages readers to embrace and apply to their lives. The Habits are Growth, Wellness, Family, Craft, Money, Community, Adventure, and Service.

## The 1st Form of Wealth: Growth: The Daily Self-Improvement Habit

In this section, Sharma invites the reader to face their unfaced fears and to stop denying themselves the opportunity to grow

and experience a more meaningful life than they currently are. He encourages readers to appreciate themselves, something others might see as vain. In appreciating themselves, they can more effectively journey forth to who they want to be and become the most excellent version of themselves. He tells the reader to change their narrative and stop letting fear and the scars of their past hold them back from the growth that will propel them to the life they've been dreaming of.

**Difficult Is A Good Thing**

While personal growth might sometimes feel challenging, he says it's supposed to. He says that while change is hard in the beginning and messy in the middle, it will be amazing and beautiful in the end. If it were easy, there would be no value in acquiring a new skill or accomplishing a challenging goal. The change being worked toward is worth the frustration, setbacks, and pain that might be experienced along the way. As the reader experiences this growth, Sharma encourages the readers to keep a daily journal for several reasons, including increasing one's inner clarity, noting down ideas, recording moments of one's life that are too magical to forget, and reading a wide variety of books to gain as much knowledge as possible.

**Growing Despite The Pain**

Sharma encourages the reader to honor the scars they have gained along their journey from the experiences and people around them. Each scar is a lesson learned, and a gift gained that will shape the reader into the person they were always meant to be. He also shares that it is best for the reader to let go of any resentment they might hold and instead forgive and expect the best from the people around them. In doing so, they not only open themselves up to growth, they also invite the people around them to grow as well.

## The 2nd Form of Wealth: Wellness: The Steadily Optimize Your Health Habit

Sharma is adamant that the reader's health is a form of wealth. He believes that if one doesn't feel well (emotionally, physically, mentally, and more), the material wealth that is gained ultimately means nothing. He encourages the reader to prioritize their whole health to enjoy their lives more fully. Over the course of this section, he shares several ideas that he has applied to his life that have helped him feel better and enjoy life more fully.

**Keeping it Clean**

Many of Sharma's ideas might seem common knowledge, but they are often overlooked because they go against the narrative society now follows. He encourages the reader to prioritize getting out in nature, meditating, and moving their bodies and shares that doing these things, among many others, will result in the reader feeling healthier and more able to apply themselves to the things they are passionate about. The reader can also learn how to add years to their lives to do the things they love and spend more time with the people they love.

**Learning from the Past**

He enthusiastically shares some ways that others have bettered their lives throughout history. While it is the societal norm to rush from thing to thing as though running a race, he encourages the reader to slow down, retrain themselves to breathe like samurai, and prioritize their spiritual health. Doing these things and seeing them as a form of wealth will help the reader experience a life they never had before.

## The 3rd Form of Wealth: Family: The Happy Family, Happy Life Habit

Sharma says that having the love of one's family is one of the greatest and sweetest rewards that one can achieve in life. It is possible to be materially wealthy, yes, but if it is not accompanied by the love and support of family and friends, then one is poor indeed. Taking the time to invest in healthy relationships with loved ones will enrich not only the readers' lives but also the lives of the people around them.

**Relational Investments**

Sharma encourages the reader to show the people around them how much they mean to them, even if it means doing something others might perceive as unusual or outside the norm. By purposing to show the people around them what they mean, it will encourage them to do the same to those in their lives. He goes beyond surface-level empathy and says to learn how the reader's friends see the world and to purposefully understand what is important and valued to them and why. Build others up so they, in turn, can do the same.

**Hard Isn't Always Healthy**

While he does want the reader to take the time to invest in their relationships and, therefore, live a more prosperous life, Sharma is firm in saying that it shouldn't always be hard. He states that the reader needs to first state their non-negotiables, protect their priorities, and, if they are in a space where those around them are constantly defeating them, end the relationship. In order to live a healthy, prosperous life, the reader must "teach" others how to treat them and not allow others to abuse or walk over them.

## The 4th Form of Wealth: Craft: The Work as a Platform Habit

Every individual has an innate sense of searching for a purpose, and many will try to fulfill that longing with their work. However, instead of being content with working and simply seeing a job as that and nothing else, Sharma tells the reader that they should instead focus on mastering their craft and purposing to build a rich life. There is great dignity to be found in working, and rather than seeing it as something to get through, it should instead be seen as the means to cultivate the beautiful life that is desired.

**Finding Magic**

A job doesn't simply have to be a means to an end, and Sharma

> *. . . rather than seeing [working] as something to get through, it should instead be seen as the means to cultivate the beautiful life that is desired."*

invites the reader to change their approach to work so they can experience a fuller work experience. Each individual is responsible for discovering their gifts and purposefully sharing them with the world. They must see it as a superpower and not let anything, including themselves, stand in their way of mastering it. It's also important to continue learning, growing, and reading so they do not fall into the trap of complacency that has trapped so many others. Even when others aren't watching or appreciating the work that is being done, the individual doing it with passion can feel peace and joy in what they have accomplished.

**Growing Pains**

It would be easy for them to get discouraged by not immediately experiencing the success they are longing for, but Sharma encourages the reader to expect them and use that as motivation to continue to get better. This will build a foundation to propel them forward so they can refine their genius so that when they share it with the world around them, they have an even more significant impact than they might have otherwise thought possible. Great success takes time, and there are many lessons that can be learned along the road that will serve readers well as they grow.

## The 5th Form of Wealth: Money

Having enough income to live life on their own terms is important, but that will not make the reader truly wealthy. Sharma gently shares that it is vital for the reader to know when they have enough so that money doesn't own them. Too many get lost in the trap of always looking for more, and that holds them back from experiencing the freedom that wealth can provide and from being grateful for what they have.

**A New View**

Sharma states that it is essential for the reader to understand that wealth should be a gateway one can walk through. In doing so, the reader will be able to free themselves from a prison that will ultimately destroy their happiness and potentially that of their families. They must learn how to see their money in a new way and utilize it in a way that serves them on their journey to creating the life they have been dreaming of. Readers must also learn how to renew their own strengths so that they are able to be more energized and invested in the work that they do. When the reader are living their healthiest lives, they are able to make better choices so their money serves them more effectively.

**What is Truly Important**

Sharma encourages readers to remain humble, be grateful for what they have, and abstain from jealousy. These are among many things that will keep individuals from living their fullest, wealthiest lives. What does having a considerable sum of money matter if it is enjoyed alone because they are greedy, selfish, jealous, or simply rude? Sadly, Sharma shares that those who enjoy great wealth without friends and family around them often don't enjoy what they have painstakingly collected. Ultimately, what is meant for the reader will come to them, and they will be able to enjoy a full life when they understand what makes them genuinely wealthy.

## The 6th Form of Wealth: Community: The You Become Your Social Network Habit

Community, Sharma shares, isn't just the neighborhood that the reader resides in, the area they live in, and the people they come into direct contact with. Instead, the humans around will help define the individual's net worth and self-worth. These individuals will be the ones to encourage and build up or discourage and disappoint. By investing in those around them, the reader has the potential to see doors open for more significant opportunities.

**Unwrapped Gifts**

It might surprise the reader that in a society that values physical gift-giving, sometimes giving a gift and investing in others is most special when shown in expected ways. Sharma states that something as simple as keeping your word, writing a thank-you note, wishing others a great day, or showing up on time is a way to invest in others and build relationships. Doing so will encourage others to do the same and will result in a revolution of sorts, where people are more supportive and appreciative of each other. Relationships, particularly when they are curated in person, are a true and underappreciated form of wealth.

**The Great Unknown**

It doesn't take much to invest in and encourage people, and Sharma is adamant that the reader should invest in those they might never see again. The great unknown doesn't just speak to a place that hasn't been explored yet but also the person that has yet to be. By taking the time to talk to someone and treat them with dignity and respect, the reader is honoring and helping them grow into the best person they can be.

## The 7th Form of Wealth: Adventure: The Joy Comes from Exploring, not Having Habit

Sharma enthusiastically shares that he believes that adventure is a form of wealth and that rich memories are more precious than

any sum of money that can be collected. He states that this form of wealth is more focused on restoring a sense of curiosity and magic so that the reader is spiritually enriched. He encourages purging one's possessions so that one feels free to explore without stress and the energy drain one might be experiencing.

**Staying Put**

Sharma shares that one way to explore is by reading and watching documentaries. Doing so allows the reader to explore the world and gain a new appreciation for it and those who inhabit it. It will also expose readers to new thoughts and ideas from a wide variety of time periods and cultures. He also encourages the reader to speed a year "going ghost" so that they can focus on pulling back and experience tremendous personal growth that will prepare them to view the world in an incredible new way.

**A Little Danger Can Be Good**

However, there is a flip side. Too often, the comfort zone wins, and people are stuck living their normal, safe routines, never exposing themselves to the unknown. Sharma encourages the reader to challenge that and live a little dangerously, even going so far as to live like a pirate! By purposing to step outside of their comfort zone and pursue their passions, readers will add to their lives in ways they might not have otherwise.

## The 8th Form of Wealth: Service: The Life is Short So Be Very Helpful Habit

In this final chapter, Sharma passionately shares that few virtues will give the feeling of fulfillment that having a positive impact on the world does. He restates that there is nothing wrong with being financially successful, but there must be a balance when acting out the eight forms of wealth that he has shared, and that is what he hopes the reader will learn to apply to their lives. By sharing what they have and purposing to make the world a better, more generous, and more beautiful place than before, readers will experience a new form of wealth they never had before.

**Learning what Lasts**

Sharma hopes the reader will understand that they don't need a lot of stuff to be happy, particularly since it will only last a lifetime and not beyond. When that thought is kept in mind, he hopes it inspires individuals to live out their dreams, live graciously, and encourage those around them. When they are able to do that, a ripple will go out that will influence others to do the same and brighten their corner of the world.

**A Right Attitude**

It is all too easy for others to influence the attitudes of the people around them, whether for good or ill. Sadly, others might have a head knowledge of that but do nothing to change the way they interact with others. Sharma hopes that the readers realize that they don't have to let the attitude of others negatively impact their day and that they don't have to accept what they are being offered. They can choose to reflect the joy and light that they have inside of them and leave the choice to accept it up to the other individual. The kindness that is displayed can help others reevaluate and have a better day than before.

***The Wealth Money Can't Buy: The 8 Hidden Habits to Live Your Richest Life*** by Robin Sharma is an enjoyable, easy-to-digest, and apply read that draws the reader in. Sharma is an energetic, personable writer who is passionate about helping those who pick up this book. His conversational writing style draws the reader in and makes them feel he is sitting in the room and talking directly to them. Sharma shares stories, anecdotes, and wisdom in a gentle, easy-to-read way and explains his thoughts in a way that readers can readily apply to their lives so they can experience each of the different types of wealth that he discusses in his book. He states that he is not a guru or a prophet; he is simply a man who has knowledge and experience to share with the world in hopes of making those living in it able to live a fuller, more prosperous life.

## Think Again

### The Power of Knowing What You Don't Know

*By Adam Grant*

**Adam Grant** is an organizational psychologist at Wharton, where he has been the top-rated professor for seven straight years. He is one of TED's most popular speakers, his books have sold millions of copies, his talks have been viewed more than 25 million times, and his podcast WorkLife with Adam Grant has topped the charts. His pioneering research has inspired people to rethink fundamental assumptions about motivation, generosity, and creativity.

*A Book Review by Soundview*

# Rethink and Unlearn

We all have preconceived notions about the way the world spins. We have opinions and ideas and are hard-pressed to give them up because the conviction of correctness is so strong. But what would happen if we took the time to second-guess those convictions? What if we changed our way of thinking to be more like a scientist, where we tested our theories, and instead of digging our heels in our raging, we explored those ideas? Maybe even accepted them?

In ***Think Again: The Power of Knowing What You Don't Know,*** Adam Grant invites the readers to challenge the way they think. He states that part of the reason the general population struggles to rethink is that we would instead be settled in the comfort of the things we know rather than allow the doubt to cause us to squirm. He calls this cognitive laziness because rethinking styles, decor, and more so we can stay up with the latest trends is easy. Rethinking our knowledge and opinions, however, isn't easy.

It can be challenging to drop the knowledge gained over the years, but Grant invites the reader to do just that because it might cause them to miss things that are becoming problems in their lives. He calls this mental flexibility, and his goal in Think Again is to explore how rethinking happens and how this can happen by speaking with those he considers to be some of the world's best rethinkers.

He does this by breaking *Think Again* into three sections for the reader. Doing this makes it easy for the reader to understand what is being said and digest it to see how it applies to their lives. The first section is about the reader opening their minds and learning to see things in a different light. The second is about the reader motivating others to do the same and open their minds. Finally, the third section shares how to build communities of individuals who are lifelong learners.

Throughout the book, Grant shares examples of great re-thinkers. He does this to show the reader that it can be done and why it should be done. He closes the prologue by saying that the hallmark of wisdom is knowing when to drop some of our tools and treasured parts of our identity. In doing so, the rust is removed, the dust is displaced, and the world and its problems are seen and addressed in a new way.

Beginning with "Why"

Grant begins by sharing that when most people think of the term "mentally fit," the word "intelligent" comes to mind. However, in today's turbulent world, the reader must use a different set of cognitive skills, usually left in the mental tool shed to rust: the ability to rethink and unlearn how to address a situation.

He states that the reader doesn't just hesitate to rethink an issue; they are nervous about the very thought of rethinking. Part of the problem is the ease of hanging on to prior beliefs (cognitive laziness) and the fear of admitting that things might have changed; facts were proved wrong, and now something new must be learned. It's uncomfortable to do this, so digging heels in has become the norm.

Refusing to rethink or stretch one's cognitive ability is a common mistake. Grant encourages the reader to adopt a new way of thinking that includes mental flexibility. When this is done, the reader has a better chance of facing and conquering an obstacle others might not have.

## A Personal Update

Why is it difficult to rethink? The idea of the unknown may cause worry. Or is it because change is uncomfortable, and staying put is too convenient? People would often rather the world change to suit themselves and might be unwilling to adapt when faced with something new. Adapting needs to happen, however; when this isn't done, something or someone will likely get left behind in this ever-changing world.

It's usually easy to see when someone else needs to rethink. Often, people are quick to adopt one of three mindsets, preacher, prosecutor, or politician, when trying to convince someone of their wrongness. They deliver sermon-like dissertations and courtroom-worthy arguments or use every persuasive campaign trail debate when convinced of one's rightness and another's incorrectness.

Can something else be done? Grant says there is a fourth, necessary option: to think like a scientist, to address the situation by being willing to see things from a different perspective in a quest for the truth, and to reserve the mental space to change views based on presented information.

Grant comments that he hopes his ideas will encourage readers to develop their beliefs. It's an encouraging invitation out of stagnation and into a place of evolution and growth.

## The Right Kind of Confidence

Just as there are blind spots in cars when being driven, there are also blind spots in knowledge. The problem comes when they go unrecognized, resulting in false confidence that can hinder a desire to rethink. It becomes difficult to rethink or relearn what we need when this happens. The good news is that with the right kind of confidence, it is possible to spot those blindspots and learn to see oneself more clearly. It is essential to recognize the mental blind spots and then revise thinking accordingly.

Grant shares that many want to use a Goldilocks method of finding that sweet spot but that it's not the best way to be confident. It's necessary to remain grounded so that one can believe in oneself and still have the humility to question whether the correct tools are being used to achieve one's goal.

When confident humility has been learned, it will improve the quality of rethinking. When doubts creep in, they can cue the reader to enhance their cognitive toolkit.

## When Being Wrong Is Alright

Grant says that when one is attached to one's beliefs, it is harder to recognize the flaws in one's opinions. A type of detachment needs to happen, and he shares two varieties for the reader to try. The first requires a detachment of one's present self from one's past, which can lead to a place where the reader is mentally healthier over time.

The second requires the reader to detach their opinions from their identity. When their identity is based on their values—core principles such as integrity, freedom, and security—they can remain open about what can update them in light of new, presented evidence.

These two forms of detachment will help the reader grow and relate to the people around them. Being wrong is not always a negative experience. Sometimes, it leads the reader to a place where they discover something new and exciting.

## Taking a Different Approach

When readers gain the ability to rethink for themselves and open up to a new way of learning, they are also presented with a new opportunity: they now have the chance to convince others to rethink in a new way. Often, challenging the thoughts of others is done in an adversarial way. The result that follows is usually the other person digging their heels in, shutting down, and refusing to consider a new way of thinking or new ideas. In exploring a new way of personal thinking, the reader will then be able to convince others in a more collaborative way that will invite them to think more like a scientist.

This takes practice, though, and much self-reflection. Grant realized this when conversing with a former student and being called a "logic bully." Instead of thinking like a scientist and being willing to consider a different point of view, he was thinking like a preacher and a prosecutor and ended up alienating his student.

He shares that to succeed in changing someone else's mind, one must first be willing to be open to the stance of the person with whom one is debating. This is about more than making a good argument. It's about making sure that the reason for convincing someone else to change is right and changing the way an argument is carried out. When this is done, a common ground is more likely to be found, leaving those involved in a more positive place.

It's essential to learn this skill and show others that the desire for growth, openness, and willingness to learn are mutual. Simply presenting someone with a reason to change their mind isn't

> *". . . a critical way to help others rethink their views is to ask them to consider their opinions if they were living in a different reality."*

enough and might not work, but it needs to be done in a way that doesn't feel like an ambush.

Grant draws the reader in by sharing a story of his own failure as he goes on. Why is this important? This makes him relatable to the reader because it conveys his humanity and fallibility, and he does this in a genuine way.

Where to start?

It is important to start with a conversation to understand how change can happen and how the cycle of overconfidence can be broken. What would a conversation do? It can lead to common ground and help establish a common identity. However, a conversation must go further because common ground may not always be enough.

Grant shares that he turned to the psychology of peace, which helps to establish empathy. Through several examples, he shared that learning about individual members of a disliked group and forming positive opinions about them in an ideal world could change how the group is seen. Sadly, typically, the individual of that group is seen as an exception to the rule, and negative opinions are held, so go back to the drawing board many will go.

## Seeing Things in a New Way

Grant states that a critical way to help others rethink their views is to ask them to consider their opinions if they were living in a different reality. For example, what views might they hold fast to if they were born in a certain time period or to a family that is a fervent supporter of a particular team?

This way of thinking helps people gain humility as they reflect on how certain changed circumstances might have led them to live a completely different life. When that curiosity begins to seep in, they are opened up to a place where they can find some new commonalities to displace the stereotypes that are there.

Grant also shares a practice that has been called motivational interviewing, which focuses on helping others find their motivation to change (rethink). Three key techniques are involved in this that are extremely helpful:

- Asking open-ended questions.
- Engaging in reflective learning
- Affirming the person's desire and ability to change,

This needs to be done accompanied by an attitude of humility so that the cycle of overconfidence can be broken and others can see the new opportunities around them in a new light.

When trying to convince someone to change, Grant shares a critical caveat: When conversing with someone who is successful in changing their mind, it is essential to ask oneself not just if they're proud of what they achieved but how it was achieved.

## A New Community

Learning doesn't stop when a diploma is handed out at graduation. Or at least it shouldn't.

It might not always be comfortable, especially since information is abundant and only a few clicks away. However, the problem comes when that information isn't accurate, and only the extremes are presented (which then polarizes issues even more).

This is called "binary bias," and it happens when a topic is presented as simply black and white as if there are only two sides to it that should be discussed. Instead of being open to different perspectives, human nature tends to seek clarity by simplifying a complicated subject.

So, what can be done to combat this way of thinking? Grant shares the good news that there is an antidote, and it comes when a range of perspectives is explored on a given topic. He uses the imagery of looking at the issue through the lens of a prism, multifaceted and complex. When this is done, the reader is more likely to rethink their stance and look at it through a gaze of curiosity.

Grant wants the reader to be able to rethink well so that they can continue to learn as they go through different stages of life. It's hopeful to think that the possibility for us to change and grow does not stop when graduation happens, and a career begins. There will always be something new to learn, but there must be a willingness and openness that accompanies it.

Does it have to be complicated?

Complexity is not always negative, and it is possible to communicate complex topics well. One way to do this is to look at how scientists communicate: They include in their presented research the caveats that they have found along the way. Grant shares that this is a type of porthole in how they think and the research that they have done.

Acknowledging that a topic is complex, Grant states that it doesn't make it less convincing but makes it credible, particularly in social sciences. It shows that the researcher hasn't picked out the pieces that will best support their argument and instead has explored a variety of views to share with the world.

## Productive vs Unproductive

When presenting a complicated topic, a lack of emotional range can sometimes hinder a conversation. This is quite the opposite of what might be common, though, and it's vital for the research to understand how people can share their emotions in a charged conversation. When this is done, there is a higher potential for rethinking and understanding another's point of view.

A hindrance to this happens when a binary bias controls one's emotions. Binary bias doesn't only play a role in relation to topics. It can affect how one feels about a situation or a topic. Just as it is possible to see a presented topic through a prism-like lens, it is also possible to see emotions that way. It can lead to a place of frustration as well as curiosity. It can cause sadness and mix it with excitement at a new discovery.

When thinking like a scientist, one has the opportunity to discover new truths that will lead to both personal and communal progress and growth. Sometimes, this can cause confusion, but that can and should cause one to pause to recognize the cue that something new is to be learned or discovered.

## Conclusion

*Think Again: The Power of Knowing What You Don't Know* by Adam Grant is a read that is very encouraging and inviting. It is an invitation for the reader to change how they think without name-calling, belittling, or oversimplifying how this can be done. He genuinely cares about how the reader thinks and what their impacts can be on the world at large. It encourages the reader to seek outlets for new knowledge and shows them how to do this in a healthy and effective way.

Grant is humble in saying that he wishes he had thought about some of these things in his previous publications. This is a refreshing show of humanity and his willingness to practice what he shares with the world. In the epilogue to the conclusion, he shares moments of rethinking he experienced when writing *Think Again*.

He believes that rethinking can and should happen. It is more likely to happen in a culture that is passionate about learning instead of staying stagnant. He also says that it's not necessary to totally upend one's life in order to rethink. Small pivots in rethinking one's position can end up having a huge impact, both personally and on the people around them.

Grant closes by saying that rethinking is not just a way for the reader to update their knowledge or opinion base—it goes much deeper than that. It takes humility, doubt, and curiosity to start down the path of rethinking, and the result? We will have a new tool to help us lead a more fulfilling, learning-led life. He also shares the thought that if people put on their scientist goggles a little more often, the world might be a better place, but if the reader disagrees, he closes with an open-ended question: "What evidence would change your mind?" showing his willingness to step into a place of continued growth.

# Thinking Fast and Slow

Daniel Kahneman

Book Snaps™
In-depth reviews of best-selling business books.

## Thinking, Fast and Slow

By Daniel Kahneman

Daniel Kahneman is Eugene Higgins Professor of Psychology Emeritus at Princeton University and a professor of public affairs at the Woodrow Wilson School of Public and International Affairs. He received the 2002 Nobel Prize in Economic Sciences for his pioneering work with Amos Tversky on decision-making. He is the author of the international bestseller, *Thinking, Fast and Slow.*

Copyright © 2011 by Daniel Kahneman • Farrar, Straus and Giroux; 1st edition

*A Book Review by Soundview*

# Two Systems that Drive the Way We Think

For the better part of the 20th century, behavioral psychologists attribute most human actions to the simple fact we, as human beings, are essentially ignorant of ourselves. While these radical, revolutionary aspects of Freud and others have been molded in a different direction, the ramifications of their work linger to this day. What if the reason we act irrationally in some situations and more cogent in others isn't rooted in some repressed emotion, but rather due to a more dualistic nature of thought?

This is the heart of Daniel Kahneman's revolutionary tome, ***Thinking, Fast and Slow***. For Kahneman and others subscribing to his (and his longtime professional colleague, Amos Tversky's) viewpoint of there being two systems of thought: fast, and slow, one is rather intuitive while the other is slow, basking in effort, and deliberate. When we understand our thought processes on a more intimate level, then, according to Daniel Kahneman in this book, we will be able to "improve the ability to identify and understand errors of judgment and choice, in others and eventually in ourselves, by providing a richer and more precise language to discuss them." Bad judgments, as Kahneman also notes, create damage. This book provides a better, deeper understanding of the nuances that affect each and every impression, thought, judgment, and reaction people face on a daily (even every second) basis, and that's merely the starting point.

## Part 1: Two Systems

The moment you turn the page to this first part, you're met with an image. Your reaction is expected. It's anticipated. What's more, it's natural. Your initial reaction to the still image highlights the first system, or System 1 in Kahneman's book. This is innate, fast, responsive. Right after that, you're shown a basic mathematical problem, and an explanation about how most people will need to slow-think the solution. Because of the nature of the stimuli, each person's responses will shift from either fast, or slow, thought. This is the essence of the two system approach and Kahneman masterfully dives deeper, as though drawing back layers of an onion to reach the heart of the matter. Psychologists have long debated and investigated these two modes of thinking, especially as they relate to the image you'll

be presented and the math problem.

What Kahneman digs at is the essence that the fast response is grounded in more automatic instinct, or nature. This doesn't mean that a person responds to stimuli based on their biology, but rather the confluence of their experiences. The reaction is almost instantaneous, leaving little to no room for introspection. The other response requires conscious effort and thought to process.

Within these two processes, Kahneman identifies two characters, which one may relate to 'characters of thought' (or thought processes). Kahneman cleverly points out that too often people are quick to identify with System 2, as though they are the staring role in their thought processes, yet there is no separating an individual from both System 1 and System 2. In other words, when a person thinks they are more slow-thinking, careful, deliberate in their processes, they are deluding themselves and overlooking a vast, powerful, and inherent aspect of their nature. System 2 is slow and for any form in our human nature that tends to be slow, it wears out more easily. When that happens, it becomes much more willing to accept whatever System 1 tells it to think or react. Yet, at the same time, System 1 prefers to simplify, to break down complex issues in a quick, simple nugget, and that can often lead to unfair or unjust judgments.

By first understanding the two system approach to thought and reactions, this book leads the reader down a narrowing path to better understanding of their

## Part 2: Heuristics and Biases

Life is a confluence of large and small components, just as any research studies tend to be. The larger a sample size of a study, for example, to more reliable the results tend to be. Most of us have experienced this, especially in recent years with regard to political polling. While Kahneman doesn't fall into the trap of politicization of his work, he uses others, including the rate of kidney cancer and marbles. However, for the purposes of our review, let's focus on political polls. The larger the polling sample, the more evenly distributed against the backdrop of a population, the more accurate and reliable it tends to be. On the other end of the spectrum, the small the sample and more skewed to one angle or another, the less reliable and trustworthy it becomes.

Seeking to solve problems or understand why groups of people act or react differently in various situations requires heuristics, and will naturally be impacted by bias. Bias leads to what Kahneman and Tversky termed the 'anchoring effect'. Because of preconceived or planted information, even if it has nothing to do with the actual topic, will directly influence thought processes, regardless of one's background, culture, or history with education or the topic at hand.

One example used involved housing prices. For the average consumer who may not have direct knowledge of local housing markets (as a Realtor would, for example), the listed house price will immediately impact a person's perception on its value, or worth. Even for someone who wants to resist such anchoring, they will be less empowered to push back, simply because the listing price immediately and directly influences the perception of its value.

Tversky and Kahneman created a number of stories through the years of their research, including one about Linda. They created the background of her story, then shifted her profession, and sought to understand how respondents would view her, her politics, her appearance, and so forth. As Kahneman writes, "Life presents us with many occasions to forecast." When we allow System 1 to dominate, biases take over. Yet, even when System 2 is targeted, too often bias infiltrates our thoughts to influence reactions, which is why it becomes critical to be aware of such things.

## Part 3: Overconfidence

One of the overarching themes in Kahneman's book (more often slipping in through the fabric of each story, topic, and chapter, but not often so bold as to push itself onto the reader) is the risk of overconfidence. There is an illusion of understanding among most people. We have a tendency to make many assumptions on a range of topics. The more education or experience we may have on given topics, the more confidence we build. In our efforts to make sense of the world around us, we seek out stories or facts or historical data that fits into our preconceived worldview, which, in turn, manifests itself in even more overconfidence, leading to greater chance of moving from System 2 thinking to System 1, or for System 1 to insert itself into every situation.

One of the key examples Kahneman utilizes in this book involves scientific journals. As he noted, "Scientific journals occasionally publish exchanges, often beginning with someone's critique of another's research, followed by a reply and a rejoinder. I have always thought that these exchanges are a waste of time. Especially when the original critique is sharply worded, the reply and the rejoinder are often exercises in what I have called sarcasm for beginners and advanced sarcasm."

What a colorful and direct example of not only bias and System 1 thought imputing itself into the center of his idea, but also in how overconfidence, especially from experts, directly influence our own thought processes. While he goes on to explain about a collaborative effort with someone whose ideas opposed his own, Kahneman -perhaps unknowingly- supports his own assertion regarding confidence, expert status, and the impression that can (and often does) leave with the average audience. In this case, how many of you will now view scientific journal replies or rejoinders in an unbiased, non-judgmental manner?

Through a careful and deliberate lead of the reader through numerous examples of bias and reason, Kahneman gets to the core of this section, which involves the challenge many of us deal with when faced with emotion and rational thinking. When we rationally know something is unlikely to work out, but our emotions are stirring us to action, too often we tend to dive in against odds to pursue some venture, which can have some positive, but more often negative results. He explains why as he closes out this section.

> The duration of one's life, ultimately, doesn't seem to be what matters most to others, but rather the quality of those years..."

## Part 4: Choices

By the time Kahneman digs into this section on choices, he's made it clear in other areas of the book that he doesn't agree much with many economists or financial 'experts,' mostly because, as he commented, of the 'psychological assumptions of economic theory.' He uses a quote from Bruno Frey, a Swiss economist in the 1960s and 70s whose book Kahneman read, highlighting the opening salve, "The agent of economic theory is rational, selfish, and his tastes do not change."

As Kahneman notes, "I was astonished." He viewed this as insight that economists and psychologists were studying two completely different worlds. To him, people are not fully rational, nor are they completely selfish, and to make such presumptions misses a key marker that could help others make some vital, yet difficult choices. Throughout this section, several theories are presented and though they can appear complex on the surface, each highlights key components to better understanding human choice.

When he discusses Rare Events, one of the examples used was from his time in Israel. At the time, there were 23 bombings between December 2001 and September 2004, killing 236. With about 1.3 million people riding buses, the risk of being blown apart on a bus was very small, but people avoided buses as often as they could.

Even though logically they were relatively safe, emotionally people were taking greater lengths of avoid such travel. Or risks. We also begin to notice that people react to certain issues or topics based on the way they are framed. Language, the way words are used, have long been known to influence perception and reaction, and these all have prolific impact on the choices we make each and every day.

## Part 5: Two Selves

The closing salve of Kahneman's prolific book focuses on two selves, or two utilities, as he describes them: experienced utility and decision utility. While the things one person experiences may differ from another's it's those experiences that affect their choices, their reactions, and their decisions later on.

One key question he posed was, "How much pain did Helen suffer during the medical procedure?" This is a wonderful, yet simple anecdote almost every single one of us can understand. Each person experiences pain differently, so while you may rate a specific kind of headache as being 'mild,' another may rate it 'severe'. Experienced utility will change based on numerous factors. Kahneman uses temperature as a quick example, which is influenced by multitude factors, including cloud cover, position of the sun along the latitudinal lines (ie. seasons), time of day, ground cover, and more.

At the end of the day, people care about the experiences of others, and there are several wry examples expounded upon in this section, but for some clarity, one involved knowing that a scientist had his or her work proven to be false after they had died. We may feel sorry for them, as though their efforts and life's work were wasted, or a missed opportunity, although that individual would have no concept of what actually happened.

We care about having and leaving a good story for others to hear about. Perhaps Kahneman had Joseph Campbell's *The Hero's Journey* in mind when he wrote this section, because he mentions, we "all care intensely for the narrative of our own life and very much want it to be a good story, with a decent hero." The duration of one's life, ultimately, doesn't seem to be what matters most to others, but rather the quality of those years, as highlighted by a study conducted by a contemporary of Kahneman's.

Marriage is one of the final examples he uses in his book, and perhaps it is noteworthy here, for how many of you have heard the jokes about how 'life ended' for the one after he (or she) was married? Life satisfaction seems to drag downward after the initial, emotion-filled first year of marriage. But why?

Perhaps it's the balance between System 1 and 2 at play, the quick reaction to 'marriage' equaling happiness and bliss, and then longevity with your best friend. Yet every marriage demands work, just as every effort worth making demands better understanding of the thought processes we go through.

While Daniel Kahneman's book, *Thinking, Fast and Slow* is long and detailed, it is the quintessential tome on reason and thought for anyone who desires to understand the human mind, how we process information, and seek fair balance rather than incorrect judgment in life.

## THE SUMMARY IN BRIEF

In modern life, the world is filled with countless distractions and drains on our time and energy. Whether these come from external factors or our own bad habits, these distractions can leave us constantly feeling like there aren't enough hours in a day. But the truth is that there's plenty of time in the day where we struggle in organizing and optimizing the way we use that time.

***Time Management Ninja*** teaches 21 essential principles for improving time management skills, covering everything from how to make time for what matters and the tools necessary to do it to making time for your passions and letting go of the things you can't change. In the end, you'll find yourself better equipped to take on whatever the day throws at you because you'll have planned and prepared for it all. That's the power of becoming a time management ninja.

## IN THIS SUMMARY, YOU WILL LEARN:

- How to manage time more effectively to get more done and be happier doing it.
- How to prioritize tasks, stop procrastinating, and be productive instead of just busy.
- How to clean and declutter your life to make yourself happier and less distracted.
- How to accept the parts of your life you can't change so that you can live your life to the fullest.

## Introduction

These days, our lives appear to be an endless marathon of busyness. It feels like there is never enough time to get to what's important, which means we have even less time to do what we actually enjoy.

But it's your time. You don't have to give it up and away. You don't have to let others steal it— you're in control. It's time to do something about the time crisis and the technology takeover. It's time to better manage your life. Inevitably, you will experience less stress as you begin to unplug from the endless stream of distractions.

### Time Management Should Make Time, Not Take Time

When it comes to time management, the simplest solution is the best. Common sense and practical tools will make you more successful than a system that takes weeks to learn and years to implement. Managing your time should be quick, effortless, and efficient.

A good rule of thumb is, "If your time management requires a flow chart, it is too complicated." Are you really going to refer to a chart every time you are trying to get organized? It definitely shouldn't take you thirty minutes to prioritize and sort your to-do list into a matrix. A good set of necessary weapons, used with discipline, will beat a complicated system any day of the week.

## Four Productivity Weapons You Need

Your productivity depends on four essential weapons. Making sure they're always readily available will help ensure that you're staying on top of your time management needs.

#### To-Do List

A to-do list is crucial for tracking your tasks and obligations. It helps you remember your tasks so that your mind is free to work on what is immediately in front of you.

#### Calendar

Your calendar should track your schedule and remind you when and where you need to be. While you're living in the now, your calendar can follow your appointments that are days, weeks, or even years in advance.

#### Address Book

Having contact information is so imperative for us to be able to communicate with others and connect. Your address book captures those contact details so you'll have them at your fingertips at all times.

#### Notebook

A good notebook records your most important information. The idea is that you have one notebook to record your notes so that you're not writing things down in random places or on Post-It notes that can get easily misplaced.

## Your To-Do List Should Be Your Best Friend

Your to-do list should track tasks so you can concentrate on your work. Keep one universal list and prioritize it to ensure you work on the most critical tasks first. Capture all tasks, whether big or small, as soon as they arise. Feel free to reorganize your list as necessary. You should also constantly ensure that your list is with you at all times.

The bottom line is that you want to keep your list close and let it fulfill its purpose—tracking all of your tasks. If it's not with you and readily available, you won't be able to capture those fleeting tasks as they pop up.

### Make Appointments With Yourself And Your Work

For most people, their schedule is entirely filled with things they need to do for other people. To take back control of your time, you need to take control of your calendar. Always remember, it's your time first. Too often, individuals' calendars are merely lists of other people's priorities and work. Make sure you use your calendar to schedule for yourself and your priorities.

### Write It Down Now, So You Don't Have to Remember It Later

Whether you use physical or digital means, taking notes is absolutely essential for keeping your thoughts and ideas organized and accessible. Many people make the incorrect assumption that if an idea is good enough or important enough, they'll just remember it. That's not the case.

Keeping a notebook, even a digital one, is essential. Taking notes also has the dual benefit of improving your own memory. By writing it down or typing it out, you actually increase your chances of remembering the information. And if not, it's still there in your record. Don't limit what you keep in your notebook—anything important has its place.

## Planning Is Good, Preparing Is Better

It only takes a few minutes to come up with a plan that can save you hours later—and that's generally all the time it should take. Don't take an hour planning out the next two hours—spend just a few minutes outlining what the following day will look like. You're more likely to stick to that plan.

Once you have a plan—prepare. Preparing for what you know is ahead will help you hit the ground running when the time comes.

### Be the Early Bird and Get a Head Start on the World

Being an early bird is a choice, and it's a skill that can be learned. Everyone makes excuses for sleeping in, but the truth is that all it takes is deciding to do it. You'll get better at it much faster than you think.

If you find yourself scrambling for time and battling distractions, you'll be amazed at what you can do while the rest of the world (and its distractions) are still asleep. However, being an early bird requires more than just waking up early. It requires you to have a routine and to be purposeful with your early hours, and also requires you to be smart about your sleep habits. You can't go to sleep at midnight each night and maintain an early bird pattern.

## Do Tasks Until Done

This is a fairly simple concept, but it can be challenging in execution. It's human nature to try and multitask, or to avoid the mentally taxing job of actually finishing a task. But humans are actually quite poor at multitasking, and you'll get more done if you stay with a task until it's finished. Undone tasks can incur penalties and other life consequences and multitasking often leads to more work started at lesser quality.

### Put It Away Now, and You'll Know Where It Is Later

Everyone with a rational brain knows that clutter doesn't happen all at once. It builds up, sometimes quickly, as a result of individual decisions. You decide not to put away a certain item. Then the next. Before you know it, your office, bedroom, or entire home is an array of items that are distracting and intruding on your ability to focus.

Putting things away when you're done with them, saves time looking for them later. Your possessions need to have a place to call home, so you'll always know where to find them. In this role, containers can be a very effective way to store supplies, kits, and more.

### The ABC Method of Cleaning

In the world of cleaning, the ABC method stands for 'Always Be Cleaning." This might sound like misery for some, but hear us out. Always Be Cleaning simply means that you find small, fifteen-minute messes or decluttering tasks you can complete on a regular basis. This helps avoid having to clean-up ninety-minute monster messes. Tackle small jobs every day of the year and you'll never have to devote entire days or weeks to massive cleaning tasks.

### One Extra Task a Day Keeps Procrastination Away

Designate one task each day that you have been avoiding or were probably going to push off. Do that one extra task today and give it utmost priority. Doing it earlier in your day will motivate you and prevent a more significant disruption of your activities. Follow this powerful nugget of wisdom and you'll finally be able to trim your task backlog, one task at a time. This means you can address tasks that may not be urgent now, but will become urgent if ignored.

### Never Confuse Busy with Productive

Busyness doesn't necessarily mean you're actually getting things done. You can do less and still accomplish more when you focus on real priorities. Remember— haste doesn't produce results. Focusing priorities delivers real value and real results.

### You Can't Finish If You Don't Start

It's vital to keep in mind that you'll never accomplish goals that you never begin. Someday never comes along unless you make it today. Talking about goals doesn't move them forward— your goals need deadlines, or else they'll remain just dreams. A small step forward each day is progress.

### Realize You Are Stronger Than You Think

External factors don't determine your abilities or performance— your internal beliefs do. Only by exceeding limits set for yourself can you then set new and more rewarding ones. But to do that, you have to become comfortable leaving your comfort zone. Ask yourself which areas in your life have limits that need to be tested. Ask whether you're too comfortable with the current status quo, and whether that's left you feeling unsatisfied? Then, take action.

### Know You Are What You Do Every Day

When we're procrastinating or avoiding our goals, we tell ourselves that one day doesn't matter. That's true—every day matters. Good habits, repeated day after day, build you up. Bad habits are self-destructive. Those habits are made a day at a time, and a routine ensures that you consistently practice your habits. You truly are defined by the things you do every day, for better and for worse. Make it for better.

### Use Your Tech for Good, Not Evil

Technology can be a recipe for distraction or a tool for productivity and focus. Make sure it's the latter. Always remember that tech is for your convenience, not to make it easier for the world to pull you in a hundred different directions. Don't let gadgets run your life— turn off interruptions, beeps, and ringers when you're focusing. Prioritize people (and yourself) over your technology.

### Make Choices or Life Will Make Them For You

The ability to make a choice is the greatest gift and a most precious right. If you don't make choices, the river of life will make them for you. Think about what you want and make choices that lead you in that direction. Don't wait for a perfect time—make those choices now. There's also never a perfect choice, so don't get paralyzed by the need to make perfect decisions and actions.

## Passion Makes You More Productive

Research is clear—when you're doing things you truly care about, you're much more likely to be productive and focused. That doesn't just apply in the moment—when your free time is filled with enriching and engaging habits and hobbies, you're more likely to be driven and focused during your work time. Carve out time for your hobbies and passions. It won't just make your life happier, it will make you more productive when you work.

### Let It Be (You Can't Do It All)

Despite all of these productivity improvements you're set to make in your life, you'll still have to accept that certain things won't get done. Don't overcompensate by taking on others' responsibilities, and don't drop your tasks or pick up unneeded ones. Saying no sometimes will give you a renewed sense of self-worth.

### Don't Create Your Own Life Friction

The world has plenty of its own stressors and slow-downs without you adding them yourself. Many problems aren't really problems, just tasks that need to be addressed. There are very few true emergencies in life, and many of the things you worry about can be safely ignored. Reduce unnecessary friction wherever you can, and unavoidable friction will seem more manageable.

### Live Your Life Or You Won't Have One

What's the point of all this time you've saved yourself if you don't use it to live life to the fullest? Live in the present, note the past, and plan for the future. When you do save time, don't use that saved time to fill it with unnecessary tasks. Focus on what matters most, and you'll become a true time management ninja.

Craig Jarrow is the author of ***Time Management Ninja*** - the blog rated one of the top 3 "most influential in productivity today" by Biz 3.0. While widely accepted as one of the best business blogs for information on time management, productivity, technology, and goal-setting, Craig's conversational style coupled with his easily implemented tips make him a favorite for anyone who wants to "Win the battle against wasted time, disorganization, and all other things evil..."

## Unapologetically Ambitious

By Shellye Archambeau

Shellye Archambeau is one of high tech's first female African American CEOs and has been featured frequently in Forbes, the New York Times, Business Insider, and more. Formerly an executive at IBM and President of Blockbuster.com, Archambeau was recruited to be the CEO of a then-struggling Silicon Valley startup, which is now MetricStream, a recognized global leader in governance, risk, and compliance software solutions. She currently serves as a Fortune 500 board member and holds board seats at Verizon, Nordstrom, Roper Technologies, and Okta.

# Go After What You Want - Unapologetically

Shellye Archambeau is the product of a family that had "limited means and high ambitions." As a student at Wharton she set the lofty goal of becoming a CEO. After catapulting herself through the ranks at IBM, she became one of the first female African American tech CEOs in 2003 at the age of 40. She cannot count the number of times she has been asked, particularly by women and people of color, how she did it. The simple answer is, "ambition." "Ambition supported by conscious choices" got her to where she is today.

Archambeau's book is the result of gathering those "values, experiences, lessons, ideas, strategies, and actions" into one place so that others can do the same. In ***Unapologetically Ambitious,*** Archambeau gives readers permission to blow past the "solely supportive roles others expect them to fill" and instead, forge their own path, rising to whatever heights their ambitions demand, including all the way to the very top. It asks readers to question what they really want from life, what values they live by, what lifestyle they desire, and what they find fulfilling. It provides practical strategies, tools, and approaches to make our actual lives match the answers to those all-important questions. It empowers us to go after what we want, unapologetically.

## Getting Around Imposter Syndrome

Each of us is born into a unique set of circumstances that can help or hinder our ability to succeed. Archambeau believes that regardless of where we begin, we can put ourselves on the track to achievement. Rather than letting the fates decide, we can effectively create our own luck by "setting a goal, creating a plan, developing the right skills, maintaining the right attitude, and aligning everyday choices with those goals." We can gain wisdom that will last a lifetime from these early lessons.

In early childhood, we all view ourselves as being pretty much the same as everyone else around us. This does not hold true forever, however. Around the age of six, research shows that we begin conforming to gender stereotypes and begin seeing and organizing our lives around differences between us. This is true in terms of gender, race, and ethnicity. We look to the adults in

our lives to confirm or deny our attitudes towards sex, race, and how those demographics impact us. This shows itself in our tendency to choose friends that are similar to us and to believe that we are unable to do certain things because of our race or sex. If we are never shown that we can break any and all molds, we may unwittingly form ideas about ourselves and others that are difficult to change. Experiences in our early life can lead to "imposter syndrome," which is "what happens when you start believing what an unjust society says about you."

Imposter syndrome is very common among girls and women, especially those of color, but it can develop in anyone who seeks to break barriers and enters "unfamiliar territory." It subconsciously gives you a sense that you don't belong and that you don't deserve the success you have achieved. Imposter syndrome pops up when you get a promotion that you feel you aren't qualified for or someone compliments your work and you can't take it at face value. It constantly whispers, "one day, they're going to realize I'm not as great as they think I am."

Imposter syndrome can "severely undermine your aspirations." Achievement requires risk taking. You cannot take those risks if you don't have faith in yourself and your abilities. Through education and hard work you may acquire a wealth of skills and knowledge, but it means nothing if you don't have the confidence to apply them. The good news is that you can overcome the limitations of imposter syndrome. Here's how:

Step One: Understand that you are not alone. Countless "accomplished people" feel like imposters. If they can find a way around it, so can you!

Step Two: Become aware of the "critical and self-doubting" voice inside your head that tells you that you cannot do something. Understand that this voice is not speaking the truth. Don't believe the false narrative those voices create.

Step Three: Learn to take compliments and wins at face value. When someone recognizes your worth in the form of a promotion or praise, understand that it is happening "because you deserve it."

Step Four: In all things, "adopt a "fake it 'til you make it" mentality." This will help you project confidence, even when you feel anything but confident. Put your game face on and know that over time, you will know what you are doing and won't have to fake it anymore.

## Sticking to the Plan, One Choice at a Time

One major misstep that is made by so many of us is the failure to devise a plan for reaching our goals. Knowing where you want to end up is a huge step in the right direction but without a clear plan on how to get there, you will likely end up lost along the way. Archambeau recommends making conscious, strategic choices that align with your goals to bring you ever closer to realizing them. A logical, fully thought out plan can serve as the guide when presented with a decision to go in one direction or the other. This recurring need to make a choice means trading short-term gratification for a far greater future success, and it pays greatly.

One way to ensure that you make choices that are in line with your goals is to not flounder on your own. When you need help or are faced with uncertainty, reach out to those who can provide support. If you are struggling with a concept in school, ask your professor for clarification. If you are unsure what role or area of work you would like to pursue in your career, talk to people who are already in those roles to see what the job really looks like day to day. Archambeau urges us not to "struggle in silence." It gets us further away from our goals and reflects a lack of strategy.

Women are especially vulnerable to perceive the act of asking for help as cheating. It is not cheating and it does not make us inadequate. Archambeau says that she has "known many women who have gotten stuck in their careers because they were unable to master a skill they could have delegated, unwilling to delegate a task someone else could do, or unwilling to seek guidance when they needed it." Don't make the same mistake.

Another way to support conscious decision making is to foster self determination in yourself. Archambeau defines self-assurance as "the ability to say yes to yourself when most people around you are saying no. It's the power of believing in your own ability to make choices about your life–and not just to make choices, but to make them responsibly." Self assurance allows us to make the sometimes surprising discovery that our potential is always greater than we once imagined. We can foster this in ourselves by fulfilling needs in the three psychological areas of competence, autonomy, and relatedness.

Competence has to do with the ability to handle yourself, navigating familiar situations with a degree of confidence and skill. Autonomy is living with the sense that you are in control of your own destiny and the knowledge that the choices you make impact your life and your interests directly. Relatedness is about feeling like you have a place in the world and that you fit in with others. A deficiency in any of these areas means "you'll be more likely to struggle or withdraw from challenges." On the other hand, developing yourself in these areas leaves you more "prepared to set your own life goals and reach them."

There will be times when you will not want to make the choice that you know you must make in order to stick to your plan. These will be difficult and trying times. Archambeau shares that long before she even became pregnant with her first child, she planned to take five weeks maternity leave and get back to work and the path she laid out to become a CEO. However, as the clock wound down on those five weeks she found the prospect of leaving her baby at home almost impossible to bear. But she put her faith in the plan and reminded herself that she had to trust it. She and her husband had "strategized in accordance with her ambition" and when she remembered that, it helped her get back on track. When the trade off is viewed as a conscious choice rather than a sacrifice, it makes all the difference.

> The roles in your personal life will never be fully separate from your roles at work."

## Forget "Work/Life Balance"

Archambeau plainly states that she is not a big fan of the phrase, "work/life balance." In fact, she "hates it." Here's why. The word balance "implies a fixed equilibrium" like the scale of justice with only two sides. Life is much more complicated than that. If balance is the metric we use, we are "bound to feel like we're failing." "We need a different metaphor" that accounts for "all the overlapping responsibilities of career, family relationships, friendships, self-care" and any other facets or circumstances particular to our particular life. Archambeau prefers to use "work/life integration" instead, which is more inclusive and descriptive of reality.

To make life work, we don't "put on one hat and take off another." We wear all the hats, all the time. The roles in your personal life will never be fully separate from your roles at work. Shellye Archambeau is a wife, CEO, mom, friend, volunteer, mentor, mentee, and more all at the same time. Finding a way to integrate those various roles into one meaningful, workable life is the goal.

In order to achieve that integration, you must explore all options. Ask things like, "Where can you make room for the things that are currently a priority? Who can help you get it done? How can you accomplish multiple things in one action?" Striving for balance is limiting while aiming for integration is empowering.

## Top Five Tips for Improving Your Odds

Archambeau believes that anyone can get what they want if they strategize and follow their plan. That being said, she fully recognizes that the hill is inherently steeper for some of us than others. Opportunities for women and minorities have improved immensely since she was starting out, but the comparative odds of success are still not that great. In order to increase your chance of success, follow the five tips she says are her "best advice for improving your odds."

1. Find Your Mentors: "Mentoring is one of the best ways to improve your career progress and opportunities." Unfortunately, most of us go about it the wrong way. Traditionally, mentoring is a formalized process. The mentee asks a potential mentor if they will serve in the role and if the mentor has the time and desire, they accept. Mentor and mentee meet infrequently and frankly, nothing much comes out of the relationship. Archambeau has a secret. She found the most meaningful mentors by skipping the formalities and instead, simply "adopted them, treating them like a mentor without ever formally asking."

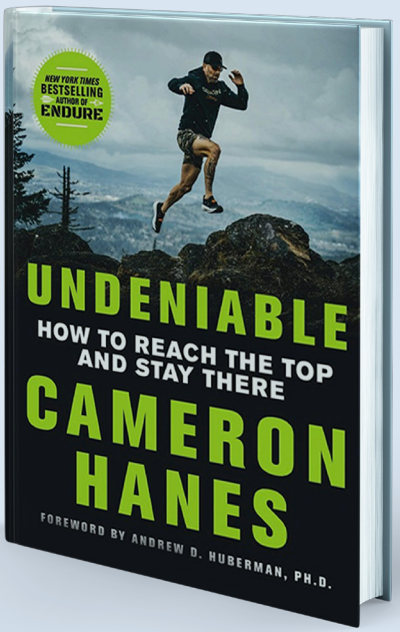
2. Build Your Network: People who network achieve higher levels of career success. Your first network may very well be your own family and you should lean on them and get as much support as possible. Your friends, colleagues, community groups, and online connections are all part of the network you already have. Continue growing that network, always looking for opportunities to connect with others, and you will soon have a vast pool of contacts to leverage when you need help.

3. Find the Current: Wherever you aim to end up, there is a clear and flowing current that will take you to that place. When Archambeau decided she wanted to be a CEO, she investigated how the power flowed to that position. Once the current is identified, you can jump into it and allow it to propel you forward. "Sail past the opportunities that will lead you into the weeds and take the opportunities that will move you toward your goals."

4. Take Risks: Regardless of the path you choose, you are going to encounter risks along the way. If you attempt to avoid risks all together, your opportunities will be limited. No doubt you've heard that with great risk comes great rewards. This is true with your ambitions as well. That doesn't mean risks should be taken lightly or jumped into blindly. In order to turn risks into rewards and not mistakes make sure you have that support system in place, trust yourself, and measure your fears against facts.

5. Plan Your Life: You have a long life ahead of you. You've got to plan for the big picture goals you have or you will never achieve them. Archambeau recommends taking a hard look at five major areas in your life and making a plan for how you want them to play out. Those areas include "getting your first job, marriage or partnership, career planning, having children, and long-term life plans."

Anyone who finds themselves grappling with what to study in school or how to forge a path towards an audacious goal, who are eager to climb the corporate ladder or looking to change directions midstream will find Archambeau's book an invaluable resource. Centered around her family and personal experience, the book reads more like a conversation between mentor and mentee than a guide on goal achievement. Her advice is delivered candidly but in a heartfelt way, convincing readers that she really cares about what happens to them, believes that they can do anything, and understands the hurdles they will face on the journey.



As one of the very first African American tech CEOs in America, she understands better than most people how to swerve around obstacles and not let anything stand in your way. Archambeau's unique voice is an important one to hear, especially for young women and minorities that aim to blast their way into a more inclusive future.

## Undeniable

**How to Reach the Top and Stay There**

*By Cameron Hanes*

Cameron Hanes is a passionate bowhunter who dedicates himself year-round to preparing for the physical and mental challenges of hunting in the remote wildernesses of the West and Alaska. He shoots his bow daily, trains in the gym seven days a week, and runs 200+ mile ultramarathons in the off-season to push his limits in pursuit of becoming the "Ultimate Predator"—a goal he acknowledges is unattainable but drives his relentless effort. Known for his intense discipline, Cameron has inspired millions through his writings, TV appearances, and social media.

*A Book Review by Soundview*

# Undeniable Grit, Unmatched Results

Cameron Hanes is a bowhunter who prides himself on facing the toughest challenges he can find. Every day he is committed to shooting, running, and lifting in order to become the best he can. He started running and lifting to help him with his hunting as hunting the toughest terrains and predators on the planet takes significant stamina and strength. He has come to realize that becoming the best and doing what most others think is impossible is not as much about innate ability as it is about being able to withstand pain in service of a greater good. In his book, ***Undeniable: How to Reach the Top and Stay There***, he tells his own story as well as that of other people he deems undeniable, those whose success and determination cannot be denied. In his ten chapters, he tells the stories of these individuals as he illuminates key lessons that can be of use to readers and to anyone in search of greatness in any arena.

## The Value of Suffering

In his first chapter, Hanes discusses resilience. Suffering is inevitable, he writes. Hanes believes that part of his success can very well be attributed to the fact that he is "good at suffering." He has lived through difficult circumstances including the divorce of his parents as a child. Chris Williamson, one of the people Hanes spoke with, had a similarly difficult time as a child. Williamson was teased at school and was bullied. Hanes quotes him as saying, "Most of the high performers that I know about are coming from a place of insufficiency… They're trying to prove something to that parent, that teacher, that bully, that group of friends or whoever from their childhood that they actually are worthy of love or praise or acceptance or admiration." Suffering will happen in everyone's life. Hanes believes that the best way to prepare for these unplanned sufferings is to choose your own suffering.

Balance is a popular phrase in culture today, and it is often extolled as being a virtue that leads to peace and contentment. Hanes questions the worship of balance, however. Discussing people who exercise and also indulge in sweets in the name of balance, Hanes notes how these people are quite different from undeniable people. Undeniable people will not reach the

heights they do by putting balance above all else. Additionally, he does not know if peace can be found with balance, at least not for him. Hanes does not feel peace when he is not pushing himself. For example, he writes "I have a hard time sleeping because I'm like, 'I should be putting in miles, doing work. I'm wasting time sleeping.'" He likes ending his days physically exhausted. His efforts do not go unrewarded in part because they are what prepare him for extreme adventure hunts. He writes, "We put ourselves in those positions over and over and over again. Places of pain and pressure. Moments where we felt miserable. Hours of being on our own." Suffering, for Hanes, comes with a reward.

## Determination and Focus

Hanes turns to determination which becomes crucial when obstacles present themselves. Those who become undeniable choose to do more than anyone else they know or know of. Hanes writes about Nedd Brockman who decided as a young adult to run "50 marathons in 50 days" to raise money to help those living in poverty. Brockman could not see any reason why he could not do this even though a doctor called him and told him that both he and the medical professionals he spoke with said this is an impossible feat. Brockman remained undeterred, telling Hanes that "There are always people who say you can't do that because they put their own limits on it." Not only was Brockman able to complete his 50-day streak of marathons, but he did it while continuing to work his job as an electrician. He believes he thrives when he has made up his mind to do something, and his plan is always simply to "find a way." This is the same lesson Hanes has learned bowhunting, writing "One thing I have learned over the years is that successful bowhunting is more about overcoming obstacles than anything else."

Along with determination, focus is important both in bowhunting as well as in performing any high level feat and in living an undeniable life. Bowhunting is a high pressure sport. It is about performing at your best during the most difficult of circumstances. Because of this, Hanes has learned to incorporate distractions into his training to best learn how to perform during crunch time. For example, he sometimes shoots through his truck window so he can better learn to eliminate distractions. Another high pressure situation he put himself in was to cut the ribbon of a Cabela store that was opening up in his hometown. There would be thousands of people there, and it would also be televised. While this is not a particularly difficult shot, he knows that people miss easy shots all the time especially when under the effects of adrenaline. This is not just in bowhunting, as Hanes explains that most basketball players would prefer to try to make a game-winning shot during normal game play than from the free throw line because of the pressure the free throw line presents.

While Hanes admits that not all people desire to become undeniable, he says that those who do "have to force [themselves] to focus under extreme pressure." Fear, Hanes states, is often the biggest deterrent to focus, and as such, high performers must learn to overcome their fears if they want to perform at elite levels. One of the best ways to overcome fear is through preparation. Not every element can be controlled for, but Hanes always tries to prepare for any obstacles he can anticipate. This allows him to focus when the time comes for performance. The good thing about focus is that it gives people a place to put their energy.

## Consistency and Discipline

While determination and focus are crucial aspects of success, consistency is of equal value. Hanes defines this trait "as the quality or fact of staying the same at different times." Hanes spoke with Joe Rogan on the latter's podcast, *The Joe Rogan Experience*. Hanes told Rogan that his daily routine is to "Lift, Run, Shoot." Hanes went on to explain that this is his routine seven days a week. He does not take any days off including Sundays.

Hanes tells the story of Nick Bare. He was an average athlete growing up and while he suffered at a young age from an eating disorder, he was able to overcome that and enter the Army. When he left the Army, he solidly claimed that he would never again run another day in his life. Surprisingly to him, however, he came to see that he missed running. Eventually he came to run 100-mile races. He credits part of his success with something that happened to him while he was training for a marathon. He was eighteen miles into the training when he started to question everything he was doing. He was suffering. He chose to continue going because, in his mind, if he quit on this, then he would have nothing to stop him from quitting in other areas of his life. This led to his motto of "one more" because after he finished that difficult eighteenth mile, he was able to successfully finish his training. For Bare, making a decision and sticking to that goal is the key to success. Courtney Dauwalter who competes in Tough Mudder echoes this sentiment when she tells Hanes, "It's tiny, consistent blocks that you're adding, or grains of sand on the pile. Like you're just putting one more grain on there, one more tiny block each day, but that consistency is a huge thing." She goes on to say that someone pursuing the goal of running five miles should not start out trying to run five miles but rather should start out simply by running around the block. The grains of sand add up over time.

Any undeniable person must have discipline. In his chapter on discipline, Hanes specifically writes about self-discipline. Part of this self-discipline is being able to avoid sabotaging oneself and undoing hard work through poor choices, specifically regarding food and drink. Many of the outliers Hanes spoke with had to overcome addictions of various kinds. Hanes quotes Robert Frost's poem, "The Road Not Taken," when he writes, "Two roads diverged in a yellow wood." Hanes believes that we all come to a "fork in the road, where we face having to choose which path to take."

At one point in his life, Hanes life motto was "same shit, different day." When he was seventeen, he found himself sleeping wherever he could when his mom, stepdad, and siblings moved away, but he chose to stay in Oregon. While he had different living situations over the next few years, his low self-esteem combined with his low ambitions and expectations did not take him far. He drank frequently. He hit a low point after crashing his truck, and it is then that he realized he could either choose

> *Evergreen companies are concerned with Pragmatic Innovation. They seek continuous improvement."*

the trailer park or the mountains. He says that all of the outliers he spoke with faced a similar fork in the road. "Sometimes to be undeniable, you have to choose to *deny yourself* of something," he writes. He no longer drinks any alcohol because it will affect his training. Hanes ends his chapter writing, "Whatever talent you have – and we all have some untapped talent inside of us – if you don't sacrifice, then you won't reach your full potential. That's what they call wasted potential. Don't ever live with that."

## Confidence and Tenacity

Confidence is "a feeling of self-assurance arising from one's appreciation of one's own abilities or qualities." Hanes knows the importance of confidence. He has had to have confidence in himself in his bow hunting and also in his more public work and when working with brands. He tells the story of one time his confidence paid off for him. He had been working with the brand Under Armour for a while. Up until 2018 he had been going bowhunting, and then the film about that hunt would come out months later. He did not want to work with this model anymore. Instead, he wanted crews to accompany him on his hunts so that he could post one-minute clips on his social media every day to show his followers what he is doing. He truly believed in this vision of his, so he was adamant to make it happen regardless of the difficulties inherent in it. Under Armour agreed. The task was without challenges and a significant expense, but in the end it was worth it as the film that came of it, *Cam's Bull of a Lifetime*, "is the second most popular video on [his] YouTube page, with over four million views." "Success, confidence, self-belief – it's a mindset. You have to find it in the morning and carry it up the daily mountain," Hanes writes.

Confidence must be combined with tenacity, "the quality displayed by someone who just won't quit – who keeps trying until they reach their goal." Hanes opens his chapter about tenacity by discussing a commercial he did for Under Armor in which he had to face a snarling wolf. The filmmakers told him that this 11-year-old wolf had been trained since it was five weeks old. In order to get the wolf to look fierce and to snarl, they had to give it meat multiple times and then take it away. Hanes was warned that the wolf could not be used in any other capacity the rest of the day because it would remain too angry. Hanes saw a lesson in this, writing that even after all that training, "he was still a wolf. He still had that tenacious heart beating inside of him."

Hanes then describes MMA and UFC fighter, Michael Chandler, as "an example of tenacity in action." Chandler did not always have the confidence to act with tenacity, however. When he was younger, he was a walk-on to the wrestling team at the University of Missouri. He worked harder than everybody else on the team, but he never truly believed he deserved success. His outcomes matched with his belief in himself, and he eventually came to believe that he would have to believe in himself if he was to ever succeed. Chandler knows that he may always suffer with confidence even though he has proved himself to be undeniable, but he believes that "everybody has something that they need to work on. Everybody has these doubts and fears and insecurities." Hanes ends his chapter by writing that he is the person that he always wants to beat. He does what he does for himself.

## Passion, Toughness, and Purpose

Passion is key to success at very high levels. Hanes writes about neuroscientist, Dr. Andrew Huberman. One night Huberman gave a talk at the University of Oregon that over 500 people attended. Hanes finds it shocking that this many people attended a talk given by a scientist. Huberman is known for his podcast *Huberman Lab* and is a celebrity of sorts. Huberman always loved learning from a very young age. He often got teased because of just how invested he was in his interests and the degree to which he spoke about them. He struggled in his teen years after his parents divorced, and he admits to having bad attitudes in college. He was bitter that teachers were not able to instill an excitement in him about what he was learning, but one day he decided that he was going to do what needed to be done even if he did not have the most amazing professors, going so far as to memorize textbooks. He earned his Ph.D. and became a Stanford professor in Neurobiology. It took Huberman decades to get to where he is right now, but he learned that he is capable of doing hard things. Huberman was lucky in that he found his passion when he was young. The key is to find that passion and to be intentional about following it.

When writing about toughness, Hanes uses the phrase "Roy Tough: Unable to be broken; able to endure hardships and misery for reward." The Roy that Hanes is referring to is his deceased friend Roy Roth. Hanes tells the story of when he and Roth were out on Kodiak Island. They were in a tent after hunting very difficult terrain for twelve days and were thinking about their successful trip and discussing what they would eat when they returned home. They wanted pizza and cheeseburgers. Suddenly Roth realized that he still had a deer tag, and he was determined to stay, saying that a hamburger was not worth leaving when he had the tag. "Roy was committed to *more success* and willing to stay in the wild of Kodiak Island alone to achieve it. The next day Roy ended up arrowing his biggest buck." Hunting in Alaska is significantly more difficult than hunting in the lower 48 is, and according to Hanes, Alaskan Roth "set the bar for toughness."

The last principle Hanes writes about is purpose. He believes that to truly live an undeniable life, a person must have a purpose and must be willing to accept criticism if others disagree with that purpose because it is purpose that gives everything in life meaning. Hanes's life and career has not been without its critics. He finds people even criticize the attention he brings to bowhunting as these people wish the world of bowhunting to remain smaller. Hanes does not agree with them. After all, if nobody had ever introduced him to the world of bowhunting, where would he be? He wants to spread love of the sport that has made such an impact on his life.

One person Hanes respects greatly for her sense of purpose is Hawaiian Tulsi Gabbard who is a veteran, former US representative, and former presidential candidate. Gabbard began working for a better world as a teenager when a landfill was proposed "over one of the largest water aquifers on the island." She formed a nonprofit to fight this landfill, and she continued to serve her community in different capacities throughout her life, always inspired by a desire to serve God and to serve others. She eventually joined the world of politics, but this was never her ambition; it just seemed to her to be the best way at that time to serve people. Of her faith she says, "It's everything. I draw strength and clarity and courage." Every day she prays to God to help her be of service to others. This faith and her desire to be of service helps her when she faces inevitable criticism. This keeps her focused because her happiness derives from her service, not from the approval of others.

Hanes book, *Undeniable: How to Reach the Top and Stay There*, is one of inspiration. It tells story after story of people who were able to complete the seemingly impossible. These people are willing to submit themselves daily to suffering and to sometimes overwhelming obstacles so they know that they have done what very few or any other people can do. While Hanes believes that anybody is capable of undeniable success, he notes that there are key attributes and mindsets that the truly undeniable carry, and these are the attributes he illustrates in his book. This is not a how-to book of simple principles for success. Rather Hanes shows his readers how people achieve true success through his own gift of storytelling. This book leaves the reader with all the inspiration they need to go about achieving their own wildest dreams, to become undeniable, and to never shrink in the face of an obstacle.

## THE SUMMARY IN BRIEF

How do you reach success? Do you have to work hard? Or do you have to get lucky?

None of these. What you need is the underdog approach.

In his book ***Underdog Nation: Zero In on Effort and Results for Success***, Quang X. Pham uses his own extraordinary life story to show how the underdog approach works: by putting in the effort and analyzing the results.

Following this concept helped Pham move from Vietnamese refugee to pilot in the U.S. Marine Corps, to founder of Cadrenal Therapeutics, one of the most successful biotech startups in recent years.

## IN THIS EXECUTIVE BOOK SUMMARY:

- Discover the underdog formula for success
- Understand how building your success is similar to an airplane's approach to landing
- Learn how to analyze and accept your past identities
- Find out how to turn failure into a source of future success

## Introduction

When I look back at my life, from the decisions my parents made to leave Vietnam, to my choice to join the Marines, to my choice to go into pharmaceutical sales, to my choice to become an entrepreneur, I see that two simple ideas have always been at play: Effort and Results. ER. And going back to the ER.

Look at any underdog, and this has also been their approach. They put in the effort. They looked at the results. And then they adjusted their efforts until they finally achieved the results they wanted.

Being an underdog means people don't expect much from you— certainly not a success story. Most people want to back the top dog. So I'll let you in on a little secret: Don't try to be like most people. Be your underdog self.

### Chapter 1: Start with Success

Life has taught me that your best approach is often to start by assuming success. This may sound counterintuitive, but underdogs go into the fight assuming success.

Your first step in success is to define success first. If you let others define success for you, it becomes a moving target. You will either never hit it, or even if you do, it will never bring you the satisfaction promised.

What sets underdogs apart from everyone else is their willingness to take action and risk.

Therefore, the framework is what I call the underdog approach. And rather than complicate success, it relies on the simple equation:

Success = Effort x Results3

In the equation of success, we have to face the fact that there is a clear relationship between your effort and your decisions. Good effort alone is not enough. It's about the right effort.

Let's not pretend this means everything magically works out. Without results, it doesn't matter how much effort you pour in. The math has to add up.

Where you lack experience, you can turn to the people you admire who are ten steps ahead of you: the Admirables. They're the people you admire specifically because they embody a version of the success you have defined.

### Chapter 2: Coincidence of Destiny

When you're facing a sudden disruptive change you have to think on your feet and adapt. Adaptation is rooted in survival. No one adapts in the midst of a comfortable environment. So when coincidence comes your way and disrupts the status quo, you have to make a choice.

Once you adapt, only then do you have the chance to adopt. And that means to assimilate. With adoption, you start making choices not from a necessity to survive, but from the opportunity to thrive.

A thriver never wants a handout. You thrive through your efforts. You have to adopt the attitude and behaviors that will get you there, even when others might not understand, especially those who look and talk like you.

Opportunities will come along if you put in the effort and results for the destination you want. But it will require some discomfort. It will require you to integrate yourself into the right environment around the right people.

The secret to integration is that you need to be a little bit of an outsider and an insider. If you're already an outsider, then you have to accept the norms, expectations, and the creed of the society or organization you find yourself in. You can't make changes as an outsider. Only insiders can do that. Changes come within.

Yet you have to maintain enough of your outsider's perspective to see the challenges that need to be fixed. Otherwise, you will sink to the status quo. As an outsider-insider, you can set yourself apart—and know when to pivot.

## Avenue of Approach 1 Commit

### Chapter 3: Love What You Do Until You Can Do What You Love

Maybe you're reading this book because you feel stuck or jaded. The first action you have to take is to heighten your self-awareness. Wherever you are now, you have to make the best of it. Right or wrong, you make a decision. You take yourself to the ER and pivot as needed. And you commit to excellence until you reach your jumping-off point.

What if you don't have a jumping-off point determined yet? What should you do if you realize you're on the wrong track? Maybe you feel like you have no options, but you actually do. Start identifying the skills you want to grow in. Even when you are making an industry or career shift, there are skills in every job that you can transfer over to the next role.

You need to feel like you're contributing to the success of

Several underdog strategies can help you love what you do until you can do what you love.

the organization, even when you know it's not forever. Because the success you have there will be the building blocks for your destination.

Several underdog strategies can help you love what you do until you can do what you love.

The first is time management. It's human nature to do the easiest tasks first, but underdogs fight that nature. They do the most important stuff first. When you prioritize the most important tasks, you're aligning your efforts to your results.

The second strategy is to build a rationale around every task. Even when you don't see how the skill could possibly help you in the future, create a reason.

The third strategy is to aim high. When people jeer at you for aiming high, look for the ones who cheer. Find your supporters.

### Chapter 4: Individual Accountability

Teamwork doesn't happen if the members of the team don't take individual accountability for their role within the team. There is a responsibility to do your best because if you don't, you're not only letting yourself down, but you're negatively impacting everyone else around you.

Individual accountability doesn't happen without emotion. You have to actually care about the outcome. When emotion is missing, then the work is an obligation, not a calling. Only when you have a sense of individual accountability can you take responsibility.

Practice taking responsibility even when there is no immediate payoff for doing so.

In some ways, success and failure should be treated the same. If you take all the credit in success, then you should do the same with failure. The problem is that when failure happens, many people are prone to play the blame game.

Overcoming the blame game is a personal choice. It starts by taking yourself to the ER—recognizing how your efforts created the results you see.

When the results are what you hoped for, take accountability by making a plan to repeat the success. When the results are not what you hoped for, take accountability for your failings so you can improve upon them.

The power of failure is how it gives you the chance to make accidental discoveries. Failure helps transform coincidences into destiny. When you have your clear definition of success, you can recalibrate your effort and results no matter how many failures or rejections you encounter.

### Chapter 5: Be Ready When Your Number Is Called

One of the great underdog stories of all time is that of the 1980 "Miracle on Ice" Olympic hockey team who bested the Soviet Union—a team who had gone undefeated in the Olympic Games since 1968.

Coach Herb Brooks's goal for the team was simple—he wanted the U.S. to be the best-conditioned team on the ice. This belief is reflected in two of his most famous quotes:

- "Success is won by those who believe in winning and then prepare for that moment."
- "Great moments are born from great opportunities."

You can't say it better than that. When you prepare, great opportunities and great moments follow. None of us can control the timing of the opportunity, but we can control the preparation piece of the equation through our efforts.

So the real question we all must answer is "Will you be ready when your number is called?"

Many people believe they are prepared. The problem is that they are indeed preparing and putting in the effort, but all for the wrong purposes. Or without any purpose at all. This leads only to burnout, frustration, and all too often, hopelessness.

But it doesn't have to be that way. Take yourself to the ER. The power of preparation comes full force when seen through the lens of effort and results.

So much of preparation is about developing confidence, not

only in yourself but in others. The wonderful thing about confidence is that you can build it at any time from wherever you are. You have the internet at your disposal to develop your credentials within your industry, network with the people you want in your circle, and develop your reputation.

## Avenue of Approach 2 Confront

### Chapter 6: Identifying Barriers

Everyone's emotional barriers look different. And it's human nature to bury them, to want to hide your cards from the world. But you can't play the game if you're not willing to put the cards down in front of people.

The most difficult barrier is when you're in a situation with no obvious course correction to take. This could include being let go from a job—maybe even your dream job. That's when you'll have to do the most difficult task of all—facing your emotional triggers.

Unresolved personal issues will become triggers, and they can be set off in the most unexpected ways.

To deal with your own emotional triggers, you have to be highly cognizant of your past identities. This is true in any field, whether you're a military veteran entering the private sector, a teacher transitioning into owning a business, or a professional athlete leaving the game. Those past identities are part of your story and your glory, but if you don't become aware of the emotional triggers attached to them, they will hold you back from the new identity you need to form.

As much as is humanly possible, take the time to identify your emotional triggers. Think back to the times when you experienced fight, flight, or freeze. What happened? By revisiting those moments from a safe distance, you can gain some perspective and be better prepared for the next time they come around.

The greatest barrier facing any of us doesn't look like a barrier. Complacency. And the greatest danger with complacency is that it can reverse success.

Complacency skews your efforts. It tells you that you're already doing enough. It tells you that you don't need to learn anything new.

And on all counts, it's wrong. Complacency will undo all your effort and results. It will pull you into self-sabotage mode and make you vulnerable to both internal and external threats.

Your ultimate enemy isn't a toxic boss, lack of opportunity, or competition. It's complacency. And no one can fight it for you. You alone have to confront it.

### Chapter 7: Clearing the Path

People like to say, "Leave the past in the past. Move on. Don't reopen old wounds." The problem is that the advice fails to acknowledge how the past can be a cage. And no amount of looking forward will get you out of the cage. What you need is the key. Only then can you move forward.

Though it sounds counterintuitive, sometimes you need the emotional trigger to spur you on to find closure. At some point, you will have to confront your past. You cannot avoid it forever.

When you look back at your professional journey thus far, you likely have regrets. In all of these, finding closure can help you create your next opportunity. You can rise again like a phoenix.

Everything described here requires immense mental stamina. Mental stamina is about knowing when you're feeling out of whack. It is forward thinking to fight complacency. Just like with a long-distance race, you don't build up mental stamina overnight. It's a process. The more situations where you have to be mentally tough, the more resilience you develop, the more stamina. You'll be more prepared for the journey ahead.

## Avenue of Approach 3 Course Correct

### Chapter 8: From Loser to Winner

My first sense of being a loser happened at my first Little League baseball game. A fly ball sped toward me, I missed the catch in the lights, and the ball struck me so hard in the chest it knocked me to the ground.

Everyone laughed. Being laughed at made me extremely uncomfortable. I took it as a challenge. In my mind, I said, Let me show you, and I dedicated my efforts to learning everything I could about baseball.

By the next spring, the story had changed. At our first practice game, I was the lead-off batter—and hit a homer over left field.

But I've also experienced going from winner to loser. You can still be a winner, even in the midst of a failure. But it starts with a decision to course correct by finishing what you start.

It sounds ridiculous to be grateful for failure. But if failure teaches you to be more dedicated, then it becomes a source for gratitude.

Despite your best efforts, the results still may not be what you hoped for. When that happens, you can still course correct. Choose to see failure as an asset. It creates a brand of motivation that perpetual winning can never do. And that's why underdogs are so powerful—because they have learned how to course correct by redefining success. But also by redefining failure.

The psychology behind failure is fascinating. Many athletes have spoken about being more motivated by the fear of failure than the desire of winning. Failure allows you to course correct rather than become a part of your identity. Never let failure define you. Redefine failure as something to be grateful for.

It sounds ridiculous to be grateful for failure. But if failure teaches you to be more dedicated, then it becomes a source for gratitude.

Gratitude is always aligned with ownership. It's impossible to be grateful for something that isn't yours. When you have personal ownership in the failure or success of a business, it becomes much more difficult to drop out. You're far more grateful for what you create.

### Chapter 9: Overcoming the Darkest Days

You don't get to quit the darkest days when they come. You don't get to quit difficulty or setbacks. We all have to face them.

The darkest days don't have to define you, but they are pivotal. What matters most is the next step. How do you overcome the darkest days? What are the course corrections you have to make after defeat?

Most people are "on the fence people." They have no strategic plan for their lives, so they straddle. That's the beauty of the darkest days—they push you off the fence. Once you fall, then you have the choice to get up. You have the choice of resilience.

What do you do when the darkest days involve defeat? You'll find three paths to take on the other side of defeat:

PATH 1: DROPPING OUT

These are the people who live in the "if only …" for the rest of their lives. Instead of going to the ER by looking at their effort and results, they abandon the course altogether. They live in a state of victimhood and blame everything and everyone for their lack of success.

PATH 2: RETURN TO STATUS QUO

The people who return to the status quo do so because they would rather live with the devil they know than face the unknown. The problem is that the status quo becomes comfortable, and once you're comfortable, you can become complacent.

PATH 3: DIG DEEPER

The third path is for the underdogs. These are the people who learn from their defeat, go to the ER to analyze their effort and results, and then make the proper adjustments. They are digging deeper to unleash their underdog energy.

You'll find two types of persistence in the world—intelligent and unintelligent. Intelligent persistence pivots on what the right efforts are, not always what the most logical or smartest efforts would be. But you can't know what that is if you haven't defined success through the lens of your purpose and values.

## Avenue of Approach 4 Build Credibility

### Chapter 10: Establishing Professional Credibility

Credibility is only developed one way—through action. People must be able to see the proof.

Yet this is a major gap for many driven individuals. They believe they are ready for the next step and yet they have not put in the work to establish their credibility through actions.

But how do you start filling the credibility gap? When possible, you can solve the experience problem by being ready when your number is called. You never know when the opportunity will come, so be prepared by doing the extra.

When you don't have much experience yet, then use the experience you do have to compensate.

What you know is important. But who you know is invaluable. When you have a credibility gap, then one of the best solutions is to borrow someone else's credibility. Consider what happens when you provide a potential employer with your list of references.

In today's digital world, it's never been easier—or more important—to network. Your online profile isn't just a digital résumé for people to stumble across—it's your strategic credibility builder.

Not everyone is going to believe in you. That's good. When people don't believe in you, your inner underdog thrives. And criticism, when filtered correctly, helps you close your credibility gaps.

We all make mistakes, so when criticism comes along, assess whether there is a gap you haven't filled yet. Is there some area where you need to improve more than others? This type of criticism is valuable because it helps you find those blind spots and address them faster. When you close that gap, you only become more credible.

Likewise, no one can perfectly avoid all conflict. Nor should you. Conflict serves to make you stronger. The right amount of conflict helps expose the gaps and develop both your credibility and the company's credibility.

### Chapter 11: Navigating Your Identity

Much of life finds you navigating between identities, and it's not uncommon that you reach a crossroads where two identities come into conflict with one another—and you have a choice to make. Most people passively take whatever identity is put upon them. Underdogs fight for their identity.

If you allow others to shape your identity, then you also allow them and the environment to define success for you. But no one else can tell you who you are—or who you will be.

Think for a second about your definition of success. Envision your future self. What is the gap between your identity now and this future identity?

You can't build your future without proving yourself in the present. And you can't prove yourself in the present by only relying on the past. Reshaping your identity doesn't mean you eradicate who you were. Rather, your old identity becomes the building blocks for who you need to be now and in the future.

### Chapter 12: Aligning Personal Purpose and Company Mission

According to research, only 9 percent of New Year resolution makers can say they stuck with them. To become part of the 9 percent of underdogs who succeed with their goals, you must have purpose.

In my experience, purpose is a choice. Whether you're in leadership or not, you always have the choice to set personal goals that complement the organization's objectives.

Throughout your professional journey, you need to regularly revisit your personal purpose and how it complements the mission and purpose of the organization you're working for. Don't allow misalignment to go unchecked. Recognize it early and take proactive steps to either close the gap through your efforts— or when necessary, to seek out the environment with a mission more closely aligned to your purpose. Remaining in misalignment is a one-way ticket to burnout and missing your next opportunity.

## Conclusion: The ER Approach in Action

The beauty of the Effort and Results approach is you only need the honesty and accountability to take ownership of your effort and results. When that is paired with purpose and commitment, then you will unleash the underdog within.

In a world where most people settle for lives shaped by chance and complacency, commit to being the underdog. Zero in on your effort and results, and success will follow. Because there are no losers in the Underdog Nation.

**Quang X. Pham** has been a war child refugee, a combat Marine veteran, top-producing biotech salesman, and successful serial entrepreneur. As a perpetual underdog, he is the first American of Vietnamese heritage to become a US Marine aviator and lead a biotech IPO on Nasdaq (CVKD)— Cadrenal Therapeutics, a biopharmaceutical company developing tecarfarin, a novel blood thinner for patients with rare cardiovascular conditions. He is also the author of A Sense of Duty: Our Journey from Vietnam to America and has received the EY Entrepreneur Of The Year® award.

## THE SUMMARY IN BRIEF

Hemingway wrote using a technique that has come to be known as the iceberg principle, in which characters' words and actions—everything observable to the reader, above the surface—allude to deeper thoughts, feelings, and motivations that the author leaves mostly unsaid. People are much better at concealing the anxieties, stresses, and struggles that lie beneath the surface, at least until those things threaten to pull them under completely.

In ***Undoing Urgency: Reclaim Your Time for the Things That Matter Most,*** Ryan Matt Reynolds teaches readers how to handle those stresses and fears that bring people down. Many times, people are the ones holding themselves back. With this guide, readers can distinguish what is holding them back and how to fix it. The book helps people discover their core values and how those feed into their priorities. Setting long and short-term goals can be easy with a clear plan and can help everybody reach their potential.

## IN THIS EXECUTIVE BOOK SUMMARY:

- Discover what is holding people back in being successful.
- Create core values to help drive yourself.
- Set long-term and short-term goals to reach your potential.
- Learn about action items and how to create them to maximize your time with minimal effort.

# Part 1: Drowning

## Undue Urgency

Status is the perception one has of himself or others, which may be founded or unfounded. Value is mostly built when no one is looking.

Urgency is an emotional response to high stakes, a ticking clock, and the fear of losing. Like fight-or-flight, urgency can be a good thing. It can motivate people to take action when action is needed. Without a plan to deal with it, urgency can become all-consuming. Undoing urgency can change how you spend your time and the return on your efforts by letting you focus on what truly matters most.

## Don't Prioritize, Deprioritize

Rather than confront the culture of busyness, we've turned it into a status symbol, where the picture of success usually means someone who "has no life." Successful people are often busy people, but busyness does not equal value, even if we think it makes us look important.

THE EISENHOWER MATRIX

Without practice, most people do not automatically distinguish between the urgent stuff that makes us busy and the important stuff that adds value to their lives. The Eisenhower Decision Matrix removes personal whims from the process by helping classify every task on our list. It's a rectangular array of two rows and two columns into which you can sort every item on your to-do list by whether it is urgent or not and whether it is important or not.

The first actionable step for deprioritizing the unnecessary urgency in your life: build an amazing list of tasks. Now, take that list and assign every task to one of the four quadrants in the Eisenhower Matrix.

Eliminate – Not Urgent/Not Important

Delegate – Urgent/Not Important

Efficiency – Urgent/Important

Enjoy – Not Urgent/Important

Make your list. Then, immediately start deprioritizing the unimportant tasks.

## Stop Making Excuses

THE REFINING POWER OF VOLUNTARY HARDSHIP

The myth of overnight success is one of the most harmful perceptions in business, health, and personal growth. The overnight success story is the opposite of the mindset and work that makes progress possible: the voluntary hardship of success. You learn, you train, and you work to get better. Even then, value only follows when you consistently make hard choices. That is the idea behind voluntary hardship.

VOLUNTARY HARDSHIP

Voluntary hardship is the means that justifies the ends. It's the hard work of pursuing your values that gives those values meaning. In this way, voluntary hardship is intrinsically virtuous—part of the collection of core values that add up to a well-lived life.

THE FOUR DERAILMENTS

1. Fear: There are three types of fear that fuel urgency and make up excuses against voluntary hardship: fear of success or failure, fear of risk, and fear of trust and its expression in micromanaging.
2. Chaos Derails: Chaos is the product of being in survival mode. Chaos derails because it distracts. A chaotic life is overflooded with urgency.
3. Self-Medication and Vices Derail: The reality is that hardship, even voluntary hardship, can be stressful. Vices anesthetize against hardship, not only derailing your goals but also harming your health, family, and relationships.
4. Stubbornness: Stubbornness is a rejection of personal responsibility and authority. The root of the problem is the rejection of personal responsibility for a lack of progress.

## Your Calendar is Not the Problem; You Are

CALENDAR AS TRUTH-TELLER

You can use your calendar as a health marker concerning how you use your time. Your calendar is a truth-teller. When it's too full of the wrong kinds of tasks then it's time to examine your habits.

DO A TIME AUDIT

Every kind of audit is tedious, but most will not be as immediately useful as a time audit. The concept is simple: track blocks of time, every fifteen to thirty minutes, every day for one week. You just need a consistent account of every twenty-four hours for seven days. Accurate time auditing will help you in a few different ways. It will show you those minor tasks that should take less than three

Is urgency ever a good thing? The answer is “yes.” Urgency can be a useful tool, but it is always unsustainable as a primary motivator.

minutes but tend to occupy whole blocks of time. It will also help you take note of when you are distracted or trying to focus on too many things at once. Identifying a central goal or task for a block of time reveals where your time is going much better than hindsight.

FOCUSED WORK: DEALING WITH THE URGENT/IMPORTANT

Focused work comes in many flavors: deep work, flow state, productivity, grit, and generally getting things done. Every type of focused work comes down to habit-building and creating the states most conducive to maximizing your output and the quality of your work. The first thing to learn for focused work is how to eliminate distractions. When it’s time to tackle those Urgent/Important tasks, it is necessary to wall yourself off from the outside world. By creating an intentional space, even a temporary one, you learn to signal to yourself that it’s time to focus.

Pomodoro Technique: The technique is simple: work for twenty-five undistracted minutes. Take a five-minute break. Repeat as necessary.

Practice Aggressive Deadlines: Aggressive deadlines will compress those tasks down to their actual size rather than letting them linger and take up more of your day than is strictly necessary.

Preplan Your Day: Planning your day means breaking everything down into fifteen- and thirty-minute time blocks and giving each block a job. Tasks that will take you three minutes or fewer always come first. Just get those done, regardless of their relative importance or urgency. Next, prioritize your Urgent/Important tasks for the day and assign those to the earliest blocks.

Build a Consistent Routine or Schedule: Perhaps the best habit you can build is the overall framework of your day through a consistent routine or schedule. The specific schedule is much less important than consistency.

WHEN TO EMBRACE URGENCY

Is urgency ever a good thing? The answer is “yes.” Urgency can be a useful tool, but it is always unsustainable as a primary motivator. What makes urgency work for you—rather than bury you—is clear priorities, a clear end date, and action items and metrics for completion.

## Part 2: Build Your Game Plan

### Identifying Your Core Values

Defining core values is the process of calling your shot. It means defining the highest ideals for yourself to act as guidelines for goals, actions, and other decisions.

WHAT ARE CORE VALUES?

When we create core values, we are creating personal standards. These are the rallying points for your long-term goals, actions, and decisions about how to spend your resources, and you are the standard bearer whose job it is to hold those core values high. First, core values require radical self-honesty. Second, don’t confuse core values with their respective attributes. Every person may express their core values in different ways. Finally, start at the end. Reputation and legacy make up the lens of this exercise.

CORE VALUES AND VOLUNTARY HARDSHIP

It is important to create these core value statements in an environment of thoughtful reflection. Later, when you are contemplating goals or making important decisions with real-world consequences, you reference these core values and tune your most immediate reactions to them, letting them act as an unwavering guide.

CORE VALUES: REPUTATION AND LEGACY

Core values are a blend of our needs and wants. Taking ownership of your reputation and legacy will keep you within the bounds of realistic core values. This also highlights the imperatives of your core values—the goals that your core values help you accomplish.

STEP ONE: DEFINING YOUR CORE VALUES

The only things you need to define your core values are time and thoughtfulness, both of which require no skill.

STEP TWO: PRIORITIZE

The next step is to put your core values in order from the highest priority to the lowest priority. All core values are important, but some will have a natural priority.

## Goals Maketh the Game Plan

The GAME Plan begins with Goals, followed by the Actions and Metrics that turn those Goals into active projects, and then the Execution strategies that bring this system together.

GOAL SETTING: DISCIPLINE, MOTIVATION, AND HABITS

Discipline, motivation, and habits make up a progressive spectrum for what fuels consistent, difficult decision-making. If you are disciplined, you choose hardship because the intrinsic value of that hardship exists apart from the expected outcome—the choice and the work itself are the rewards. If you are motivated, you choose hardship because the perceived benefit of the outcome is greater than the perceived cost of the choice. If you've built great habits, you choose hardship because that choice has become your default response to adversity.

WHAT ARE GOALS?

The strongest Goals weave together core values, aggressive deadlines, ambitious but attainable progressive steps, and objective standards for success. Break down Goals into two categories: long term and short term.

SET YOUR LONG-TERM GOALS

For each of your core values, ask yourself, "How much change is needed?" to more closely align with your core value statements and "How much change is possible?" in the next three to five years. The more that needs to change, the higher the priority. Similarly, the sooner you can positively affect a core value, the higher the priority. Next, for each core value, starting with the highest priority, ask yourself, "What are the one or two things you can do in the next three to five years that will make the biggest impact on that core value?" The answers will make up your long-term Goals.

SHORT-TERM GOALS

Determine each of the major actions, tasks, stages, or accomplishments that add up to the long-term Goal. For this step, you must think systematically. Each short-term Goal should have a deadline and a way to measure progress.

## Minimum Effective Dose for Maximum Impact

Before getting into the details of identifying the specific Actions that support the short-term Goals, this is the overriding principle used to select those Actions that will have the most impact and give you the most return on investment (ROI) for your time, energy, and money.

MINIMUM EFFECTIVE DOSE (MED)

Uncertainty is a normal part of chasing goals, and it's easy to fall in love with complex solutions when you are unsure of the next step to take. You can replace trial and error with a MED approach, using a systematic strategy for identifying Actions, allocating resources, and controlling variables. For the GAME Plan, we do not just want to identify the smallest steps to take; our aim is to look for the MED for maximum impact.

MINIMUM EFFECTIVE DOSE: SIMPLE. NOT EASY.

We want to simplify our Goal into Actions that manipulate as few variables as possible while making great progress. MED seeks to trump overly complex and complicated ideas from the get-go. To do this, we identify and control the variables and then work to find the sweet spot for the maximum impact of our actions.

VARIABLES: TIME, ENERGY, MONEY

Most goals in business, health, and life rely on three primary resources: time, energy, and money. These make up our primary variables any time we create or organize Action items.

Time: When allocating time, think of the priorities that will make you a person of action, meaning you should look for big changes that are possible with short time allocations.

Energy: Energy as a resource recognizes the intangible cost associated with certain tasks. You must ask how much effort something takes, how specialized the required skill set, the amount of stress that will result, and other intangibles that affect your ability to sustain the level of investment.

Money: There is always a cost to doing things, but the cost does not always have to be monetary. MED requires that you think more like a CEO, whose primary job is resource allocation between time, energy, and money as they relate to relationships and problem-solving.

MED FOR MAXIMUM IMPACT

1. Simplicity over complexity.
2. Economy over excess.
3. Effort over easy.

Finding the sweet spot for maximum impact is not as easy as it sounds.

FINDING THE SWEET SPOT

Finding the sweet spot for maximum impact is not as easy as it sounds. It is an exercise in exploring the possibilities of diminishing marginal returns and growth potential for the investments of your time, energy, and money and possible economies of scale.

MAKING MISTAKES

You can minimize mistakes and their associated costs by starting small and paying attention to the data available as you make changes. But you can never be afraid to make mistakes altogether.

### Actions Focus the Game Plan

GAME Plan Actions are where we learn to direct our focus and capture the natural urgency of a deadline, turning it to our use for meaningful, purposeful work.

ACTIONS MAKE UP THE GOALS

Actions are not merely a list of tasks to be done but the component pieces of each Goal, crafted from MED principles, allocating resources with care, and using the process for finding the maximum impact for our resources.

GAME PLAN ACTIONS: CHARACTERISTICS

- Clear and Specific
- Testable
- Meaningful
- Limited in Scope
- Quantifiable/Objective
- Predictive

With these characteristics in mind, start to envision each step that will lead to a GAME Plan Goal and write those steps down as GAME Plan Actions. Each Action must meet the following criteria:

1. Actions should identify what needs to be done, by whom, and when.
2. Actions must be written to track progress and allow you to mark them as completed (or not) at the deadline.
3. Actions must follow MED principles:
   - Each Action uses only one resource or adjusts one variable at a time.
   - Each Action is designed to make a significant impact with the fewest resources.
   - Each Action anticipates improvement in some meaningful measurement.
   - Actions are tested and retested to find their maximum impact when necessary.

TAKE ACTION

Now, it's time to list your Action items. For each of your GAME Plan Goals—the short-term Goals you've created to guide your actions over the next three months to a year—you will list three to four Action items that, when completed, will practically guarantee you meet the Goal.

ACTION ITEMS

1. Create three to four Actions that support each Goal.
2. Focus on output: Actions that move the needle the most in the least possible time.
3. Set aggressive deadlines.
4. Use MED prioritization.

## Part 3: Executing the Game Plan

### Metrics for Measuring Success

Metrics will give you an overarching measure of the health of your GAME Plan or company and are divided into two categories: (1) Targets, which are measured by Targets to Improve (TTIs), and are the objectives that will represent the future successful completion of actions, and (2) Key Performance Indicators (KPIs), which are the metrics that give you a snapshot of the health of a company or GAME Plan in real time.

METRICS AND TTIS: FROM QUALITIES TO QUANTITIES

Creating Targets and assigning Metrics to your GAME Plan accomplishes a few important things. First, it sets the goal-posts steadfast, so you can confidently make and Execute your GAME Plan. Second, Targets connect your daily efforts to your core values. TTIs are an active, not passive, use of Metrics.

METRICS THAT MATTER

Metrics and Core Values: We want to be careful not to get too distracted by Metrics, especially those that do not tie back to core values.

Problem Solving: If a Target does not move or improve, there are two troubleshooting steps. First, assess your effort through a lens of radical self-honesty. Second, if the Actions are being completed with the requisite effort, then determine whether the Action can move the needle of that Metric the way you thought it should.

## Execution: Game Plans in Action

GAME PLAN FUNCTION AND FORM

It is easy to get excited about a new way of getting things done; believe me, I know. But without committing to a consistent plan of Execution, you are most likely to get stuck in your everyday routines without experiencing any real change.

"E" IS FOR EXECUTION

GAME Plan Execution is a process for generating a chronological and comprehensive task list for every step of every Action.

Annual: The annual GAME Plan is the least detailed because it hovers high above the daily work down in the trenches, focusing instead on the major Goals and Actions needed to meet long-term GAME Plan Goals.

Monthly: The monthly GAME Plan brings the perspective closer to the daily work.

Weekly: The weekly report is the feet-on-the-ground-level work, highlighting major progress on GAME Plan Actions, noting obstacles that still lie in the way, and planning for focused, efficient work the following week.

Daily: At this level, you review the task list, add new items, and remove completed ones every day.

## Putting it All Together

CREATE YOUR CORE VALUES

1. Identify your valued attributes
2. Categorize and define your core values
3. Prioritize your core values

SETTING LONG-TERM AND SHORT-TERM GOALS

1. Set long-term Goals for each high-priority core value
2. Set three to five short-term Goals to support each long-term Goal

ACTION ITEMS

1. Create three to four Actions that support each Goal
2. Focus on output
3. Set aggressive deadlines
4. Use MED prioritization

EXECUTION SCHEDULE

- Annual. Create a thirty-thousand-foot GAME Plan for the year with the top three to four Goals and the three to five Actions that make up each Goal.
- Monthly. A review of the previous month and updated GAME Plan for the next month.
- Weekly. Create a weekly report organized by priority and active Goals.
- Daily. Review the task list, add new items, and remove completed ones.

People can choose the easy path every chance they get and still find success and comfort in life. Usually, that will come from some luck, support, or innate talent that can be leveraged with minimal work, but it is possible. What is impossible without hard work is cultivating and carrying the joy of a life well lived.

That is the difference between happiness, which is fleeting, and joy, which lasts. Once you unbind the important work from the urgent and enticing distractions, you can examine your core values—how you want to look back at this life. From there, break down the steps that will get you to that version of yourself.

Identify the major Goals that will mark progress on that path, and start doing the work that will get you there. It is a simple but meticulous process. When done well, there will be value in the work because the work is driven by your values.

Ryan Matt Reynolds is a former professional strongman, gym owner, successful strength coach, podcast host, and the Founder/Owner/CEO of one of the largest online fitness platforms in the industry (Barbell Logic), where the focus is on redefining and reforming the antiquated personal training model and replacing it with white-glove personal, professional online fitness coaching from the best expert coaches in the world. More importantly, Matt has built a home and community in the heart of the Ozarks, Springfield, MO, with his wife of 25 years, Rachel, and two children, Cailin and Kinsley.

## THE SUMMARY IN BRIEF

Many high-performing people feel quietly stuck. Calendars are full, purchases add up, and progress appears steady, yet something essential feels absent. The modern habit loop rewards busyness and accumulation, even when it crowds out meaning. Over time, this creates a life that looks successful on paper but feels misaligned in practice. The real problem is living on autopilot—following routines and definitions of success that were never consciously chosen.

***Unhinged Habits: A Counterintuitive Guide for Humans to Have More by Doing Less*** argues that the answer is not doing more but doing less with greater intention. At the center of the book is strategic subtraction: removing habits, goals, relationships, and possessions that dilute focus and satisfaction. Rather than chasing constant balance, the author proposes embracing seasons of focused intensity, deliberate imbalance, and periodic reassessment. By committing to fewer priorities and clearer trade-offs, readers can align short-term actions with long-term fulfillment while remaining present in what matters now.

Drawing on his experience building multi-million-dollar businesses while traveling with his family, Jonathan Goodman offers practical frameworks for rethinking work, money, friendship, and love—arguing that a deliberately unbalanced life can ultimately be a richer one.

## IN THIS EXECUTIVE BOOK SUMMARY

- Learn how strategic subtraction can create more clarity, wealth, and fulfillment
- Understand why consistency alone often fails, and when intensity matters more
- Reframe success around seasons, not balance, to reduce guilt and burnout
- Build deeper friendships by investing in fewer, more meaningful relationships

INTRODUCTION

## The Secret Hidden in Plain Sight

Our lives have three priorities: money, health, and relationships. It's rare to have all three going well at the same time. Young people often have relationships and health, but no money. In midlife, we often have health and money, but no time for relationships. When old, we're often rich in money and relationships, but poor in health.

The challenge we all face is balancing short-term desires with long-term planning. It's getting the order right: setting us up for a bright future without missing the magic in the present.

What follows is a practical framework to identify what truly matters in your life and the courage to eliminate everything else. You'll learn how to break free from society's outdated expectations, your own bad habits, and the incessant pressure to do more.

Instead of constantly adding commitments, people, and things to your life, you'll become a master of the art of strategic subtraction, creating space for what's essential and discarding what's not.

It's easy to fall into patterns—lazily accepting even the silliest additions to our lives and never reassessing whether something helps us, hurts us, takes up space, or, in this case, makes any sense. We keep things as they are simply because that's how they've always been.

I call this the *Slinky Effect*: when we get so used to the silly, invisible habits running our lives that we don't even notice them anymore. And *that's* the problem.

In a modern world designed to distract us, we don't actively architect our lives. We default into them. Most people think the solution to feeling overwhelmed is to do more, optimize better, and work harder. That's wrong. You need to do less, but with more intention.

If your days are full yet not fulfilling, it's time for you to examine your life honestly and, perhaps, break some bad habits.

CHAPTER 1

## Birds Never Sing in Caves

No matter how deep down the achievement rabbit hole you are, it's possible to dig your way out—to walk about wide-eyed like a kindergartner, excited once again about the littlest blade of grass, with days filled with surprises.

Philosopher Henry David Thoreau wrote, "Birds do not sing in caves." And neither do we. When you explore with intention, you cease to become intent in your complacency.

Exploration isn't about geographic distance but about the internal journey of breaking free from the caves of our own making: those comfortable, predictable routines that dull our senses and shrink our world.

When you explore with intention, you break free from those caves of comfortable routine. But stepping outside our routines requires overcoming a powerful human instinct: the desire for safety and predictability.

This often means ranking safety third, behind growth and experience, not first and not even second. This doesn't mean being reckless. It means recognizing that avoiding all risk is itself the greatest risk.

When you approach life this way, you'll discover that exploration isn't just about going to new places but about becoming more fully alive wherever you are. You'll begin to see opportunities where others see only risk. You'll develop your awareness, adaptability, and openness to the unexpected.

### Laws of Living Lost

Accept that you'll get lost. Accept that you're already lost. Explore. Try stuff. Because the more that you try stuff, the more you'll be forced to *figure it out*. And the more you figure it out, the more confidence you'll gain in your ability to figure it out.

Exploration is not just about going to new places but about a profound process of identity reconstruction. Each time we step outside our comfort zone, we're not merely collecting experiences; we're actively rewriting our internal narrative.

When you allow yourself to become temporarily "lost"—whether in a foreign city, a new skill, or an unfamiliar social context—you suspend the rigid definitions of who you believe yourself to be. You become malleable. Adaptable. Your sense of self is no longer a fixed point but a fluid landscape of potential.

### Where Challenge Meets Enjoyment

What if uncertainty isn't something to fear but a resource to be cultivated? An exploration mindset is less about having all the answers and more about becoming comfortable with not knowing. Here are a few reframes:

- Uncertainty is an opportunity. The unexpected isn't

> The more you figure it out, the more confidence you'll gain in your ability to figure it out.

a threat. It's an invitation to discover something new about yourself.

- Prolonged comfort is dangerous. Stagnation grows moss.
- Failure is information. Instead of letting it get you down, consider what you learned to avoid or what you will do differently next time.
- Flexible intentions are better than rigid expectations. Set adaptive goals. View your path as a compass, not a GPS.
- "I wonder what I might discover" is more useful than "I already know." Cultivate radical curiosity.
- Ask naive questions and drop preconceptions. Set your ego aside and embrace a beginner's mindset.

Despite the long-term benefits, we don't explore as much as we should. Instead, we exploit too much of what we already know. That's because exploiting is predictable and proximate in contrast to exploring, which is distant, uncertain, and often negative in the short term.

### The Explorer's Compass

Modern life often chains us to predictability, but exploration doesn't require scaling unmapped mountains. It starts with a simple framework I call the *Explorer's Compass*: a guide for intentionally introducing uncertainty into your life.

**1. Instruments**

Just like early mountaineers carried essential tools, you need your own personal instruments. These aren't physical objects but capabilities such as language, physical preparedness, and a mental toolkit.

**2. Risk Spectrum**

Create a personal risk assessment that helps you incrementally expand your comfort zone:

1. **Safe experiments** (low risk): try a new restaurant without checking reviews, take a new route to work.
2. **Moderate challenges** (medium risk): join a class in something you've never done, volunteer for a project at work outside of your expertise.
3. **Bold adventures** (high risk): solo travel to an unfamiliar country, start a side hustle in a new industry.

**3. Trajectory**

Exploration isn't about having a perfect map but about understanding your general direction. This means setting loose, flexible goals and remaining open to unexpected detours.

**4. Reflection**

After a bout of exploration (big or small), take fifteen minutes and ask yourself three questions:

1. What unexpected thing did I learn about myself?
2. How did I just introduce meaningful uncertainty?
3. In what way did my comfort zone just expand?

Remember: the goal isn't constant upheaval but a sustained openness to the unknown. Exploration is less about the external journey and more about your own internal willingness to be surprised.

Everywhere you turn, you are being limited. This can change. But you can't just know yourself intellectually. You must also know yourself experientially. Shake off the shackles that remind you who you are or whom you think others think you are and explore being somebody else for even the shortest bit of time.

Exploration is not a destination. It's not a checklist of experiences or a collection of passport stamps. It's a way of being—a commitment to remaining perpetually curious, perpetually uncertain, and perpetually alive.

CHAPTER 2

## Define Your Season

Life's too short. The moment you focus on one thing, an unshakable guilt for not doing another rears its ugly head. I offer a radical, almost unhinged, alternative to the myth of balanced improvement: a seasonal approach where focused intensity on a single priority replaces scattered consistency across many.

By embracing intense seasons of growth followed by periods of rest or maintenance, you'll make transformative progress in what matters most while keeping guilt at bay. This isn't about doing more; it's about doing less, with greater intensity, at the right time.

With each season of intensity, your old ceilings will become your new floors, continually circling each element at a higher level—a lightning strike permanently impacting the landscape versus a series of unimpactful sparks.

Whatever it is you want to excel at, whether it's your career, your family, your fitness level, a personal passion, your social life, define it and clearly prioritize it by placing it at the top of your to-do list.

This type of maniacal focus is unhinged, almost deranged. None of this is likely to be sustainable long term, either financially or temporally. It doesn't need to be. It's not possible to be in season all the time.

Intensity is for gaining. Consistency is for maintaining. You can't have one without the other.

### Ten Thousand Iterations

Success in anything isn't the result of ten thousand hours. It's the result of ten thousand iterations. That's obviously not an exact number, but the idea is correct. You don't need a perfect plan up front; you sketch. Like a folded piece of paper, the first fold is stiff and awkward, but each subsequent fold over the same crease line becomes easier and faster.

What if true consistency isn't about doing the same things every day but rather consistently honoring the natural rhythms of intensity and recovery our bodies and minds require?

What I propose is that the most sustainable approach is one that plans for both. And so, at any given time, we must be selective about which priority we want to focus on, pursue it aggressively, and be okay with just being okay at anything else—for the time being.

### We're Wired to Have Seasons

Living a seasonal life is nothing new. Our hunter-gatherer ancestors worked hard in the spring, summer, and fall to collect food, then spent the winter mostly living off their stores. During that time, they rested and, I imagine, spent more time with family and community.

The invention of the lightbulb, combined with the clock, caused natural time to take a back seat to artificial time. Every day became the same: nine to five. In the search for efficiency, we've become more machine, less human. It's mechanistic. Unnatural. No wonder we burn out.

We're wired to have seasons: stops, starts, periods of work followed by periods of rest.

It's natural to work hard and go all-in on one thing, obsess over it, and get tired. Tired is good. But then you need to rest, recover, and sketch a different line, renewing your energy like a sprouting spring flower in early May.

Whenever you enter a season, create an off-season checklist. Things that need to get done in order for you to feel comfortable committing obsessively on your priority. It keeps your fear-based brain at bay, knowing that what has to get done is getting done.

Of course, you'll miss the mark sometimes. When you get off track, when your brain jumps into fear mode, when the walls feel like they're closing in, look at your checklist, take a deep breath, and get back on track.

Every iteration gets you closer to *your* perfect. With each season, you'll become more aligned with how you work best, more focused on your priority, and more energized because you'll be doing more of what fuels you and less of the accumulated crap that inevitably builds up over time.

CHAPTER 3

## Make More Mistakes

The more we know, the less we tend to admit we don't know. The older we get, the less we explore, learn, and experience, and the smaller our world becomes.

That's because the older we get, the more pressure we tend to feel to optimize the life we're living for productivity, efficiency, and certainty. But what if the path to more meaning isn't found through ever-increasing productivity but through periods of strategic (un)productivity?

The more you know, and the more you've achieved, the more you'll feel pulled to move throughout the world with the self-directed expectation that you *should* have the answer. With life, there is no right or wrong answer. The best you can do is make a best guess. And so, you must program yourself to go into almost any situation where, even if you don't know everything, you won't have an unhealthy level of false confidence.

Said another way: admit your ignorance.

### Seeking Serendipity

Productivity isn't the struggle; having something worth being productive for is. Admittedly, saying yes to more isn't productive. It does, however, lead to more serendipity.

> Exploration is less about the external journey and more about your internal willingness to be surprised.

There's an old saying that "the unlived life is not worth living." An overly productive life isn't worth living, either. But an unbalanced life can be—because it's full of meaningful work, serendipity, exploration, and wonder.

What holds us back from embracing more serendipity? It's often our misperception of risk.

Most decisions in life are framed incorrectly. We treat small choices with the same weightiness as permanent ones. And most decisions are small. To break this pattern, we need a better framework for understanding which choices are consequential and which aren't.

### Hats, Haircuts, and Tattoos

There's a simple decision-making framework, originally popularized by author James Clear, that sorts choices into three categories based on how reversible they are:

- **Hats** – move quickly; decisions are easy to reverse
- **Haircuts** – risks worth taking
- **Tattoos** – consider carefully; decisions are hard to reverse

If the outcome risk is low, you can move quickly and try a lot of things. The harder the outcome is to reverse, the more energy, thought, and preparation should be used.

Most experiences you say yes to are merely hats to try on, yet you treat them like permanent tattoos, overcompensating with a decision-making process that's too slow, too deliberate, and too choosy. Not because it's the smart thing to do, but because you're scared of what might happen and have never stopped to consider the worst that *could* happen.

Whatever you want to try, consider whether it's a hat, haircut, or tattoo. When you recognize that most opportunities are just hats you can try on, it opens you to periods of intentional exploration.

### Seasons of Yes

*Seasons of Yes* are powerful ways to break out of routine. They're deliberate, time-limited periods, where you commit to saying yes to opportunities, invitations, and experiences you'd normally decline. It's not about reckless abandonment of boundaries but rather a strategic expansion of your comfort zone to break entrenched patterns and discover new possibilities for yourself.

Specifically, Seasons of Yes work well for four types of people:

1. **Professionally stuck** – you've achieved some success but feel trapped in a routine and notice your enthusiasm for work fading.
2. **In transition** – you're going through major life changes and need to rebuild or reimagine your identity and community.
3. **Overly optimized** – you've become so focused on efficiency and productivity that you've engineered serendipity out of your life.
4. **Seeking identity** – either earlier in your journey as a recent graduate or during a major career transition.

CHAPTER 4

## Choose Your Hard

Much of our current culture celebrates escaping work, suggesting that the goal is to earn an effortless life. But what if that's exactly backward? What if the goal isn't to eliminate hardship but to choose the right kind of hard?

There are two types of activities: finite and infinite.

Finite activities aim at terminal states. Getting married is finite: it's done when you're wed. Writing a book is finite: it's done when you tap the final key.

Infinite activities don't aim at a terminal state. It doesn't drive toward finishing. It describes the process, which never truly completes.

In our future-focused society, we're trained to be finite. Always striving to get *there*, never *here*—thinking about the past, driving toward the future, and leaving the present curiously unoccupied.

### Finding the Good-Tired Sweet Spot

When it comes to money (and your job), there's such a thing as enough. We've got to stop the goalposts of excess and desire

from moving. With work, however, the moment one project finishes, find the next to drive toward. Keep those goalposts moving so long as you find the infinite within the finite.

Don't seek an easy life. Choose your hard. If you don't, it will manifest in depression and listlessness in ways you won't expect. Doing the work makes you worth a damn, regardless of whether you get paid or how much.

Let me be clear: I'm not suggesting you should find joy in financial hardship or pretend that structural barriers don't exist. They do. But within even the most constrained circumstances, you have a critical choice about whether you maintain your agency or allow it to be stripped from you.

Here are a few choices you get to make, regardless of the hand you were dealt:

- **Approach vs. avoidance**: You can fully engage with necessary work or mentally check out while doing it.
- **Growth vs. stagnation**: You can look for learning opportunities within constraints or simply endure them.
- **Connection vs. isolation**: You can build relationships within difficult circumstances or withdraw into private suffering.

None of these choices eliminate hardship, but they change how hardship affects you. When options are limited, choosing your hard might simply mean choosing to be fully present in your current struggle rather than mentally escaping it.

Choose meaningful work over empty leisure. Choose energizing exertion over dulling comfort. Choose focus over scattered distraction. These choices won't make your life easier, but they will make it better.

People talk about work-life balance. I've never liked that. Balance is binary. Too precarious. If you're in balance, it means that you can also be in imbalance. I prefer the term "work-life harmony." A flowing state where you roll with the punches as they come. Expect the unexpected. Build tolerance to life's intolerances.

CHAPTER 5

## The Paradox of Abundance

Being driven to succeed can often lead to living a mediocre version of life. Workaholism is how you lose yourself, not how you find yourself. At the time, it can feel entirely justified. Sadly, the only people who will remember that you worked late will be your kids.

It's easy to fall into the trap of marginal thinking, justifying to yourself why you should make an exception "just this once." And perhaps if it really were just this once, then that wouldn't be a problem. But it never is, is it?

The real game of life is internal. There's no big bad boss. We're *our* only enemy. It's like Tetris, where getting a high score depends on a strong foundation. Good choices divide; bad choices multiply.

None of this is to say that you should knowingly do a bad job or reduce your output. Instead, you have to stop believing that the answer lies in figuring out how to do more. The counterintuitive way to have more is to do less but to do it better by making the hard decisions about what to do with your time and accepting its trade-offs.

Money and success aren't change catalysts; they're amplification agents. If you're adventurous, money will help you go on more and greater adventures. But if you're not, it won't.

If you're a good person—moral, generous, caring, loving, and well-adjusted—money and success will amplify all that's good. If you're selfish, driven by greed, absorbed by envy, unhappy, lonely, and overworked, then no amount of money will change you.

Owning too many things doesn't enhance our lives; it paralyzes and exhausts us. Abundance, therefore, is a paradox.

### Price Versus Dignity

Philosopher Immanuel Kant framed this distinction perfectly: there's price and then there's dignity. Anything with price can be replaced. It's a means, not the end. Dignity stands above price. It's the end, not the means. Over time, wisdom lies in exchanging more things with price for things with dignity.

The longer you spend chasing things with price while postponing things with dignity, the harder it becomes to escape the trap. Every decision you make becomes evidence of who you are, creating a self-reinforcing loop through your identity, network, and habits.

### Your Plan Versus Reality

Life has a way of going well for people who do stuff and not going well for people who sit at home and plot and plan and make excuses for not doing stuff yet. Even if it goes awry, you'll learn something if you do something.

If you ever go back and do a full accounting of your life,

> To maximize what matters most, you've got to minimize everything else.

you'd find that almost everything good that happened to you was the result of random things you learned and random experiences that you had that got mashed together in a way impossible to explain or reproduce.

Think about a recent mistake that you made. Surely it challenged you and strengthened your resolve, teaching you a thing or two about yourself, about others, and about how your world works. Maybe it changed your path, setting you down the road you're on now. Do you actually regret your mistake? Or, with the benefit of hindsight, are you oddly grateful for that terrible thing that happened because of what it taught you, how it strengthened you, and what it led to?

CHAPTER 6

## The Joy of Fewer Friends

Eighty-five years of research from Harvard University concluded that your relationships are the single greatest predictor of your happiness—not money, career achievement, the number of countries you've visited, or the size of your home. In a world obsessed with productivity, followers, and networking, we've forgotten something essential: the depth of our connections matters more than their breadth.

People come and go, living their lives and passing through yours. Don't feel guilty for letting loose friendships lapse. It's perfectly okay to enjoy a fleeting moment with another while simultaneously appreciating that almost every relationship you have had (and will ever have) is short-lived.

### The Garden of Friendship

Think of your social life as a garden that you cultivate with grass, flowers, birds, and trees. Like any good garden, it contains different types of plants and visitors, each playing a unique role in the ecosystem:

- **Grass** – professional connections that provide basic coverage and practical support.
- **Flowers** – seasonal acquaintances who bring joy when your paths naturally cross.
- **Birds** – one-sided relationships with people you watch but who don't know you exist.
- **Trees** – true friends who remain steadfast across all seasons.

In a busy life, you can't realistically maintain too many true friendships; just a couple or, in my case, one. To that person, the highest compliment you can pay is "You are useless to me." Perfect friendship must exist outside your job and ambition with no agenda attached.

You've got a true friend if they pass these three tests:

1. **Uselessness** – they do nothing for your professional or social ambitions.
2. **Effort** – they go out of their way for you even if it doesn't make sense, just because.
3. **Celebration** – they are genuinely happy for you when things go well.

Go ahead and maintain friendships of all types. But research from the University of Michigan indicates that the number of friends we have doesn't meaningfully impact our well-being. Instead, all you need for higher levels of life satisfaction, self-esteem, and lower levels of depression are two relationships: a spouse and one true friendship.

CHAPTER 7

## Find Your Missing Half

The most successful relationships aren't built on similarity but on complementarity. Differences, when respected and leveraged, create a relationship stronger than the sum of its parts. We're drawn to people like us, yet ironically, it's our differences that make relationships thrive.

The happiest couples round out each other's personality. You need compatibility, but not necessarily a great deal of it. More than anything, you need complementarity, shared values, and respect for the other person's individuality.

Complementarity isn't just about fitting together like puzzle pieces. It's about creating space for each other to grow. Strong partnerships demand that both people develop themselves independently to strengthen what they build together.

The people who love you want to celebrate with you but don't know how. Left to their own devices, they'll wait for a

positive outcome—a job promotion, the sale of a business, an award—and celebrate after the fact. But it's the process they should be celebrating, not the outcome.

However, it's not your loved one's responsibility to figure out when and how to celebrate. It's yours. A simple way to add richness to personal or professional growth is to design shared experiences at waypoints that signify process wins along the way of achieving individual goals.

These experiences follow a structured framework anyone can use I call the *4S Celebration Protocol*:

- **Shared** – involves someone you care about
- **Scheduled** – is set for a specific date
- **Sacred** – commits both people to showing up
- **Significant** – feels special, not routine

This protocol embodies intentional life design. It creates structures that align your actions with your values. It ensures the journey itself becomes rewarding. And it's a way to celebrate the growth and differences that bring people together.

CHAPTER 8

## The Profound Power of Ruthlessly Editing Your Life

Every item you own demands a piece of you: your money to buy it, your space to store it, your time to maintain it, and your attention to worry about it. The career you've built can slowly become your prison. Your devices, designed to connect you to everything, can disconnect you from what matters.

Much of your story has already been written for you: where you were born, how you look, your natural attributes. You can't control the start of it, and it is true that some stories are fairer than others, but you can control the end.

You are not the author of your life, but you can be the editor. Great editing prides itself on subtraction, not addition—on discipline through omission. In a world pushing you toward more possessions and more commitments, your greatest freedom comes from strategic reduction. To maximize what matters most, you've got to minimize everything else.

*The Three Spheres of Intentional Minimalism* is a framework for identifying where life naturally accumulates excess and where thoughtful reduction can restore focus and clarity:

1. **Physical space** – the visible stuff that fills our homes
2. **Mental bandwidth** – the invisible decisions consuming our attention
3. **Identity** – the roles and personas fragmenting our sense of self

Start small. Try the Ten-Minute Minimization Challenge. Set a timer for ten minutes and choose one small space (a drawer, a shelf, your phone's home screen). Ask just one question: "Does this help me maximize what matters?" Not, "Might I need this someday?" That's fear talking. Do this daily for a week. You'll remove dozens of items from your life. More important, you'll strengthen your minimization muscle.

### Freedom

Freedom is optionality—the opportunity to fail, the ability to do what you want, when you want, with whom you want, and the knowledge that you can move on even if you decide not to. Ultimately, freedom is control. If you want to be free, you must keep your walking costs low. Walking costs come in three forms:

1. **Financial costs** – debt, recurring payments, lifestyle inflation that requires your current income
2. **Relational costs** – obligations, social expectations, commitments to energy vampires
3. **Identity costs** – titles, status, and self-perceptions you've invested in but no longer serve you

For each category, ask, "What's one thing I could eliminate that would increase my freedom without reducing what truly matters most?"

When you let yourself become owned by your belongings, your work, or your ego, you become suffocated by your own selfishness. By minimizing needless choices, unnecessary necessities, and your attachment to empty extravagances, you maximize your time, your energy, and your money to share with others. That's how you take control.

And when you're in control, you become free.

## Conclusion

Books attempt the impossible task of making order out of disorder and chaos. Yet they are never the truth itself; life remains inherently unpredictable. Happiness, I've discovered, is not a destination but a direction—an ongoing, iterative search that requires sorrow to appreciate joy, pain to appreciate pleasure, and effort to appreciate rest.

The world hasn't changed much in the past thirteen years during which I've gotten married, had three children, and traveled for a total of almost two thousand days. If anything, it's gone farther off the rails. But I've changed. I no longer experience it in the same way.

To paraphrase David Brooks, freedom isn't an ocean to explore. Freedom is a river to cross so that you can make a home somewhere on the other side, and fully commit to someone and something.

The best use of life is figuring out a way to spend as much of it as possible with the people you love.

**Jonathan Goodman** is an entrepreneur, author, and educator who builds businesses while traveling the world with his family. Over thirteen winters, he has explored dozens of countries with his wife and three children, challenging conventional ideas about work, education, and family life. Goodman is the founder of multiple multimillion-dollar companies and is known for helping professionals build sustainable businesses that support meaningful lives. His work has been featured in *The New York Times*, *Men's Health*, *Forbes*, *Robb Report*, *Entrepreneur*, and *Inc.* Goodman lives in Toronto and continues to write, teach, and share ideas about entrepreneurship, freedom, and family-centered success.

## THE SUMMARY IN BRIEF

What does it mean to be extraordinary? Why are successful people often the most extraordinary of the lot? How can you harness your own extraordinary power?

By taking us through the kaleidoscope of inspirational life lessons, ***Unremarkable To Extraordinary: Ignite Your Passion To Go From Passive Observer to Creator Of Your Own Life***, teaches us how to be truly extraordinary. You learn about why courage makes all the difference, how each failure brings a new experience, why opportunities must be created, what having a vision means, what we don't know about responsibility, and how leadership is the duty of every extraordinary individual.

Author Jeremy Ryan Slate presents extraordinary stories, facts, and takeaways to break down exactly what the journey toward becoming extraordinary looks like. Most of us haven't yet tapped into "the extraordinary" inside us and the author gently pushes us to find our own extraordinary.

## IN THIS SUMMARY, YOU WILL LEARN:

- What makes someone extraordinary.
- The core elements to become an extraordinary.
- How to harness your courage and create your opportunities.
- How to have a vision and be a leader.

## Introduction

This book comes from research I've carried out in addition to nearly one thousand interviews I've conducted with world-class performers and newsmakers. A lot of what the book unfolds comes from my direct conversations with these individuals.

Although this book is meant to be read straight through, it is structured in a way that you can jump to a specific chapter if you're looking for help in a single area. Here, you'll encounter four things to aid your journey – extraordinary takeaways, extraordinary facts, extraordinary stories, and extraordinary reads.

This work is not just meant to inspire but to show you what is possible and help you see your path for yourself. It is meant to be an adventure. We'll dive into the important details that the lives of extraordinary people include and help you draw parallels in your own life. Here's to your adventure into the extraordinary.

## It Takes Courage

The single greatest component of being an extraordinary human being is courage. We all are born with the same elements – talent, looks, and more. Some have a little more, some have a little less. But we all have an equal shot to reach our greatness. Up to this point in your life, you may not have been courageous. But this is, in fact, the perfect time to start.

JJ Virgin, the New York Times bestselling author and one of the most famous names in the fitness industry, knew that failure could not be an option for her. She knew that she could pay for her son's medical care only if she was successful.

Maybe you take courage for your loved ones in life as JJ Virgin did for her son. Or maybe you become courageous for your own success. However, you define what is courageous for you. It took me 32 years to make the decision to be courageous. Courage for me was more about speaking my mind and not speaking to please others. For you, it may be starting with a schedule to reach a goal. Whatever age you are in life, now is the perfect time to start.

## Your Mo Lewis Moment

You must understand that there will always be adversity in your life. You cannot control adversities or opportunities. They will happen.

Though I've never been a Boy Scout, the goal is for the Boy Scout motto, "always be prepared," to become your motto. It is critical to be prepared for every eventuality when the time comes. When an opportunity comes, you cannot say, "I wasn't ready," Instead, be ready for the day opportunity presents itself, because it will.

The story of Tom Brady, arguably the best quarterback ever to play in the NFL, is the greatest example of preparation meeting circumstances. Brady's position was never solid as he was competing with New York Yankees' prospect Drew Hensen for playing time.

Brady wasn't the most athletic, didn't have the biggest arm, and thanks to his competition with Hensen, wasn't seen as a future star. Despite the odds, he continued to work on his craft until he got the opportunity to become the starter in the second game of the 2001 season. From there on, he led the Patriots to a Super Bowl championship that season, in addition to five more as the Patriots quarterback.

## Don't Follow Your Passion

I mentioned with Mike Rowe, "Don't follow your passion, but do bring it with you." In other words, find something you're good at – this could be a skill or vocation that can produce something – then, continue to work at it until this skill becomes effortless.

Most successful people I've spoken to had multiple attempts at greatness. Sometimes it wasn't the first, sometimes it wasn't second or even the third. But eventually, they figured it out. To me, experience is the most valuable teacher.

Self-education is one of the most common things in every successful individual I've spoken to – from Grant Cardon to Kevin Harrington. Extraordinary individuals don't depend on the traditional education system but on the School of Hard Knocks.

Don't be afraid to get knocked around, like Grant Cardone, put in the work every day, learn from every single experience, and be willing to educate yourself. Don't be afraid to fail. But just make sure you're learning.

## Learning from Failure

The fear of failure keeps many from even trying. However, those who are truly extraordinary have tried many things. They didn't hit a home run the moment they held the bat.

They had to put up with losses. And those times they lost turned out to be some of the greatest learning experiences

Baseball royalty Nick Swisher almost didn't get drafted. When he went on his first recruiting trip to West Virginia, the size of the players made him feel football would not be his sport. He went 50 rounds only to know he didn't get drafted. What more could he do? Well, he went from a non-drafted player out of high school to a first-rounder out of college. Eventually, and of course, after several failures along the way, he was finally a part of the New York Yankees, the winningest franchise in major league baseball.

For many, it is dwelling on the losses that actually ends their dreams. But losses are inevitable. Figure out what you can learn from them but don't live them. Use losses to plan for the future and as Nick Swisher says, "If it wasn't for losing, we wouldn't know how great winning is."

## Done Is Better Than Perfect

Extraordinary people have the drive to just make it happen. One of the weaknesses we all share is wanting to make everything perfect. But how can you focus on getting something done when all your focus is snatched away by the illusion of perfection?

The speed with which Mike Lindell, the founder of MyPillow, grew his company is incredible. To go from 10 employees to nearly 500 in just 40 days doesn't seem human. But it shows what a little grit and someone that is truly self-made can do when they grasp an opportunity.

Sometimes we pour in too much attention on just how perfect something is, and that waiting keeps us from ever getting it out there. Had Mike worried about how perfect the first infomercial was, his product may have never gotten out!

Don't spend your time deciding if something is an opportunity or not. Just go for it. What's the worst that could happen? If you fail, you'll always have the opportunity to try again later.

## Create Your Own Opportunities

Many of us expect an opportunity to show up at our front door, But many times, it doesn't work like that. Sometimes, you have to find an opening, grab the opening, widen it, and realize you are going to create the opportunity to fill that space.

It is something great athletes have done for years, but something great businesspeople have not always notoriety for. If you look at many of the extraordinary people that we have spoken to, when the door was closed to them, they didn't just wait for a new one to open. They built a new door. Moral of the story? To be extraordinary, you have to be willing to see opportunities everywhere.

## Define Your Success. Don't Let Others Define It for You

Extraordinary people don't make decisions based on what others do. They don't select their life plan based on what others want.

The truth is, you're never going to have everything figured out in life. That's just not how it works. For someone to be extraordinary, they really must have the drive to keep working at it until they figure it out. They may not know exactly what they want to do but they know they have big goals for their life.

Not caring what other people think can perhaps be the most difficult thing to do. Doing what people say may bring you praise. However, if you truly want to be extraordinary, you cannot live on praise. On your journey to become extraordinary, there will not only be no praise, but you'll face true hatred for what you're doing.

Don't let the opinions of others stop you from being extraordinary. Their own limits will try to limit you. Instead, remember to always reach for the stars, and once you've hit them, drive past the heavens.

## Past, Present, and Future Vision

When you're stuck in surviving right now, you can't see three inches in front of your face, let alone seeing your future. This is why it's best to have a job while you're building something or to have your first business running before you build a second.

Sure, looking to the future when you're trying to survive today is a difficult skill to learn. But every successful entrepreneur believes in mastering this one skill. Powerful entrepreneurs like Jayson Waller have managed to figure out how to not get stuck in the past or the present so they can be the ones to put the future together for us.

Ordinary people fight their past and try to survive in the

present. Extraordinary people put the future first. So, be the one that builds the future.

## Be the One to Tell Your Story

No one is going to tell your story for you. No, telling your story is not synonymous with "boasting" – something we were taught as kids.

When you really look at it, to live is to communicate. If you're not communicating, then you're not living, and if you're not living, then there's no way you're going to grow. To be extraordinary is to understand you're not boasting. You're simply doing what you need to do to survive – telling a story.

Become responsible for your own story, get good at telling it, and tell it to those that matter. Alexander the Great conquered the known world before the age of 30. Did he wait for others to tell his story? He did not. In fact, he brought his own publicist or scribe, Arrian to all his campaigns.

Never hesitate from telling your story. Remember, those who tell you not to promote your own achievements are afraid of what you may achieve.

## Radical Responsibility

Being fully responsible for your own life is both the scariest thing to learn and the most empowering thing to learn.

A great example of radical responsibility is motorsports. But when you truly dissect it, many of us deal with life and death every single day. If you don't stop at the stop sign, you could cause an accident. If you don't pay your taxes, you could go to jail. If you don't take all the precautions, someone could get hurt.

Many things we complain about most often come down to responsibility. How responsible can you get when it comes to your own life? There is a big difference between what's easy and what's responsible. If you don't like your current job, it's easier to blame the opportunity than to have the ability to make the opportunity work for you.

Once you start understanding how you can be more responsible, not blame others, and stop playing the victim, only then can you kickstart an extraordinary life.

## The Duty of Leadership

I have found far too often that people who insist on having the title of a leader are men and women that do not actually lead. It is those that have humbled themselves and worked on themselves every single day that have the right to lead others.

When it boils down to it, real leadership is about having others respect you so much that they will follow you and listen to your authority. A real leader does not lead out of fear, because eventually, fear-driven leadership will consume the leader herself.

A true leader, on the other hand, puts the interest of those she leads above her own. Leaders have a responsibility for leading those who follow them to a better future than the one they currently have – not one of less freedom, not one of control, but a future for the betterment of mankind. If you want to lead, figure out for yourself what leading this planet to be a better place looks like. Whatever you choose to do, do it with courage. Lead now to make the future your own.

## Conclusion: Finding Your Extraordinary

At the end of the day, being extraordinary is like a kaleidoscope. Better yet, it's like a mosaic. It takes small pieces of a large collection of skills that we work on every single day.

To be extraordinary is to be able to look into the future when others are stuck in the moments of today. The core elements of an extraordinary life include: courage, your mo lewis moment, don't follow your passion, learn from failure, done is better than perfect, creating your own opportunities, define your own success, have a future vision, have a duty to lead, tell your story, be radically responsible.

All I want for you is greatness and an extraordinary life. Make these lessons the change you need to move forward to become extraordinary.

# Unsafe Thinking

## How to Be Nimble and Bold When You Need It Most

by Jonah Sachs

### THE SUMMARY IN BRIEF

How can you challenge and change yourself when you need it most? We're creatures of habit, programmed by evolution to favor the safe and familiar, especially when the stakes are high. This bias no longer serves us in a world of constant change. In fact, today, safe thinking has become extremely dangerous.

Through stories of trailblazers in business, health, education and activism, and leveraging decades of research on creativity and performance, Jonah Sachs reveals a path to higher performance and creativity for anyone ready to step out of their comfort zone.

*Unsafe Thinking* is full of counterintuitive insights that will challenge you to rethink how you work. Sachs reveals, among other key points, why your area of deep expertise is often where you'll find your biggest blind spots, why anxiety can be fuel for creativity, and how collaborating only with those that share your values stunts your creativity.

An inspiring and accessible read, *Unsafe Thinking* has the power to change the way you approach both your work and your life.

### IN THIS SUMMARY, YOU WILL LEARN:

- To recognize — and break out of — the "safe thinking cycle."
- To find the perfect balance of intrinsic and extrinsic motivation.
- To keep exploring and avoid falling into the "expert's trap."
- When to trust intuition and when to challenge it.
- To build an organization that embraces intelligent risk.

# THE COMPLETE SUMMARY: **UNSAFE THINKING**

**by Jonah Sachs**

**The author:** Jonah Sachs is an author, speaker and viral marketing trailblazer whose work helped spur the 21st-century values revolution. His pioneering new approaches to digital media were critical in bringing the ideals of social change to the forefront of business and popular culture. He is also the author of *Winning the Story Wars*, and his work has appeared in the *New York Times*, the *Washington Post*, CNN, FOX News, the Sundance Film Festival, NPR and *Fast Company*.

## Courage

### The Safe Thinking Cycle: Why We Stick to Our Guns When We Know We Shouldn't

Unsafe thinking is the ability to meet challenges with a willingness to depart from standard operating procedures; to confront anxiety, tolerate criticism, take intelligent risks and refute conventional wisdom — especially one's own views — in order to achieve breakthroughs.

In a rapidly changing world, unsafe thinking is an indispensable skill. But it doesn't come naturally because the basic structures of the human mind prejudice us against changing ourselves and how we approach problems.

When facing an unfamiliar challenge, we often know we need to open our minds to a wider field of possible solutions because the status quo clearly will not suffice. At the same time, the threat we feel switches our brains into survival mode, which tends to make us cling to the familiar and engage in safety-seeking behavior.

The pernicious dynamic of clinging to the familiar and safe is captured in the safe thinking cycle. The first step of the cycle, threat awareness, gets triggered in many ways. We feel it when we get negative sales information, a customer or client complains, or our boss criticizes our work. Even success leads to threat awareness, paradoxically, because it propels us onto bigger stages, with greater challenges and higher stakes. It is impossible to live our lives, let alone try to accomplish anything of value, without triggering threat awareness along the way.

In step two of the cycle, the perception of threat causes a spike in what neuroscientists call cortical arousal, a state of increased wakefulness, vigilance and focus. We need this to react quickly and decisively to physical threats, for example. But a low arousal state is better for creative thinking. With all our cognitive systems running at normal, we're free to let our attention roam to where our curiosity takes it, and this fosters creative insights.

When we confront a challenge that feels threatening, we no longer have the option of staying consistently in low arousal. We are programmed by evolution to respond with high arousal because of the need for speed of action in dealing with many of the threats our early ancestors faced.

Take the case of a new competitive threat at work, say, from a fast-emerging new technology. Though we may perceive that our old ways of operating aren't adequate for this new challenge, and we may feel a desire to "open up," our brains scream at us to shut down our range of options and take safety-seeking action. These are short-term fixes that we believe will hold off the threat and lower our anxiety.

We tell ourselves that once we've handled the immediate threat, we'll have the luxury of being more expansive. Unfortunately, we're unwittingly priming the cycle to repeat. Following an old course of action in the face of new challenges sets us up for even more threat and thus more anxiety and arousal.

### Fear as Fuel: How to Embrace Anxiety and Break the Safe Thinking Cycle

Mahatma Gandhi, now a global symbol of courage in the face of danger, wrestled mightily with the fear of not fitting in and being judged.

Well into adulthood, Gandhi suffered debilitating shyness. He never became entirely comfortable with social interaction, but he came to see his struggles with himself as an important source of his power. As he grew older,

Gandhi spoke of his shyness, which had once brought him tremendous shame, as one of his key assets. To his trait of speaking hesitatingly and slowly, for example, he attributed the fact that he hardly ever regretted a word he had said. That, he reflected, was a key to his leadership.

We all feel anxiety when setting out on a new and uncharted course. How we contend with that anxiety makes all the difference.

Trying to stop ourselves from feeling anxiety only makes the cycle more pernicious. Psychologists call the act of suppressing negative emotions "experiential avoidance." People spend enormous amounts of energy trying to master the art. But the effort is worse than useless. Experiential avoidance actually has the effect of exacerbating unwanted emotions.

Rather than trying to avoid or fight our anxiety, those who study its nature say we should learn to become more comfortable with the discomfort of it, which lessens the impulse to react in a fight-or-flight fashion and frees us to be more creative in our responses to challenges. But how can we build up this tolerance?

Cognitive psychology has shown that the simple process of becoming aware that we're having an automatic, emotional reaction and coaching ourselves to accept the feelings rather than trying to avoid them can be extraordinarily powerful.

If we can welcome a bit of discomfort with a belief that it is a necessary signal of the potential for growth, we can feel the cortical arousal, give it a moment (or a day) to pass and then retake control of our actions. With a foundation of courage and a mindset that embraces rather than shrinks from anxiety, we can learn to master discomfort and change long-held thinking patterns.

# Motivation

### Mastering Motivation: How to Energize Yourself and Others to Stay on the Edge

The popular understanding of motivation tells us that to sustain our energy while taking the risk of breaking with the herd and to pick ourselves up from failure, we must be driven primarily by passion for the work we're doing, or as psychologists say, we must be intrinsically motivated.

This notion doesn't come out of nowhere. Teresa Amabile shook the world of creativity research by demonstrating how children lose their creative edge when offered a reward for their work. The London School of Economics studied 51 companies using pay-for-performance plans and found that these bonuses actually decreased employee effectiveness. But can we really expect to achieve a state of pure intrinsic motivation without quitting our jobs and heading for the Himalayas?

Yes, there are times when a focus on rewards can be absolutely deadly. But there are smart ways to use intrinsic and extrinsic motivation together to amplify the energy and commitment required to keep ourselves in the demanding zone of challenge and creativity.

Researchers have concluded that when offered rewards in ways that make us feel manipulated, coerced or controlled — which is how our bosses and society tend to impose extrinsic motivators — we lose motivation. We feel like pawns in someone else's game and give up or act in counterproductive ways.

But when we understand that the two types of motivation and rewards are offered in an upfront way that doesn't feel manipulative, we can make choices about how we respond to rewards. We come to treat them as fun, enjoyable bonuses rather than tools of control. Thus, the external rewards only serve to increase our intrinsic drive.

If we're smart and have established a base of love for what we do, we can use the desire for money, esteem, status or freedom in just the right way to boost motivation.

Intuit, the financial software giant, uses what it calls an "Unstructured Time" reward for top innovators. If you perform at a high level, you'll get significant chunks of time to explore and play wherever your passions lead.

### Finding Your Source: Why We Need to Love the Challenges We Face

Every day people get stuck in the face of new and critically important challenges. All too often, they lose their drive to succeed and settle for the mediocre. They fall back on the familiar rather than take the risks needed for success. Why is that?

Psychological science tells us not simply that a healthy dose of intrinsic motivation is important but where intrinsic motivation actually springs from. And it provides clues for how we might imbue any team's work with focus, energy and love of the process.

Psychologist Mihaly Csikszentmihalyi uses the term "flow" to describe the psychological state we enter when the conditions of high challenge and high skill emerge. He has shown that when the level of challenge just barely exceeds the level of skill, this lays the groundwork for producing a state of heightened focus, creativity and determination.

If we add to this mix clear goals and the ability to get consistent feedback on our progress, Csikszentmihalyi

has demonstrated, flow consistently emerges. Despite exertion and hard work, people in flow feel a sense of love for the task they are involved in and are far more likely to invent novel and useful solutions. Flow is a key source of intrinsic motivation.

Throughout the act of creation, we can achieve and stay in flow by checking in regularly to assess our answers to these three questions:

- Do I (or we) know what success really looks like? Flow theory asks us to take the time to be very specific about what our targets are and how we'll know we're achieving them.
- Can we get regular feedback to know if we're making progress? If we receive feedback with a sense of unattached curiosity (positive feedback is a great sign we're making progress; negative feedback is a great chance to learn), we're increasing our chances to create flow.
- Do we have the skills to match this challenge? It makes sense to do the equivalent of an equipment check as we set off on our journey. We can begin by mapping out the phases of a project from first conception to execution and refinement. For each phase, or even for each necessary task, do we believe we have the specific skills we need? Or will the challenge be too much of a stretch in spots? If we can identify those places ahead of time, we can plan for them.

## Learning

### The Explorer's Edge: How to Pursue Expertise Without Falling into the Expert's Trap

Being unprepared for an exam is one of the most common nightmares people experience. In fact, dream researcher Tony Zadra says this nightmare is not just experienced by those who go through life truly underprepared but is particularly common among the highly educated and successful.

We are right to fear not having expertise when we need it. And we need it often. It's extremely difficult to create anything of value in a field without first becoming something of an expert.

Why then, if expertise is so indispensable, do experts so often lead us astray? Why are experts so slow to update their views in the face of new evidence? And why do relative beginners sometimes beat experts at their own game? The answers to these questions are critical because, throughout the process of creation, we must constantly decide whether to rely on or question our expertise, to deepen what we know or seek entirely new ideas, to see the world through the eyes of the expert or the beginner.

Decision-making researcher Gary Klein points out that while expertise can make us enormously efficient at playing an established game, it can also make us slower to realize when the game has changed and less able to respond to those changes. For example, expert bridge players have been shown to have more trouble than novices in adapting when important rules, like who gets to lead, are suddenly tweaked.

Rice University researcher Erik Dane says one of the most effective things we can do is put ourselves in situations where we're novices. Get out more and explore. It's a key way, he says, of taking the rigidity out of overdeveloped knowledge networks. Time spent in the unfamiliar can enhance anyone's creativity significantly.

Why do so many of us stay comfortably in our own domains, inadvertently becoming more fixed and rigid? The culprits are two drives we humans have trouble resisting: ego attachment and urgency. Learning to master them can open the space to explore much more broadly and get out of the kind of safe thinking that keeps us stuck.

### Ego and Urgency: How to Tame the Urges That Keep Us From Exploring

It's 2007, and Vineet Nayar has just been appointed CEO of HCL Technologies, a global IT services company based in India. His first public appearance is about to get underway. Nayar steps onto the stage as a crowd of 4,000 employees murmurs speculation about what the new boss is going to say.

Nervous anticipation fills the room because Nayar is taking over in uncertain times. The firm has recently grown rapidly to 55,000 employees, and major challenges are on the horizon. HCL is going through the growing pains of transitioning from cut-rate outsource IT provider to aspiring global player, and that will mean having to compete with giants like IBM for some of the world's most demanding customers. Few feel that the company is ready.

Nayar faces the room and smiles. Suddenly, a popular Bollywood tune blasts through the auditorium. The boss begins bopping his head and awkwardly wiggling his portly, middle-aged body. He is dancing! He descends the stage and boogies his way down the aisle. The employees, nervously at first, begin clapping their hands over their heads. Now they're cheering as he pulls people out into the aisle to dance with him. He shimmies all around the room, employees crushing in

behind him, and when he returns to the stage, sweaty and out of breath, the crowd erupts in a cheer.

After performing another number on stage to more raucous approval, Nayar composes himself. He begins to lay out his vision for totally upending the company's management structure, giving more autonomy to frontline employees. He says that he has laid out the bones of the plan but still wants his employees to speak up and challenge it — that their input is vital.

He recalled later, "Those words sounded very different coming from a sweaty man who had just proved in public that he couldn't dance than they would have coming from the emperor at the podium." His goofy ploy worked. An animated, two-hour discussion followed.

Nayar wasn't dancing only for the employees that day; he was also playing a psychological trick on himself. The company's board had given him carte blanche to drive change however he saw fit. But he feared thinking he knew exactly what to do. He wanted to find a way to make sure he listened, genuinely and with a flexible mind, to any and all ideas shared. By humbling himself with his wacky dancing, he primed his psyche to be receptive. After dancing, he felt he had less of an expert's image to defend, having already showed how imperfect he was.

It feels good to be an expert. It's a mark of accomplishment, intelligence and hard work. It brings us esteem and makes us feel needed. And that, just like overactive pattern recognition, can lead us, unwittingly, down the path to entrenchment.

As we come to identify with what we think we know, our identities and our egos can become attached to the unique knowledge networks we've constructed, leading us to want to defend our expertise from any challenges, whether from new information that runs contrary to our accumulated knowledge or from people questioning our views.

The endpoint of this path is closed-mindedness and overconfidence. The problem of overconfidence and closed-mindedness in areas we believe we have expertise is all the more troubling because we so generally tend to credit ourselves with having more expertise than we do. Many studies have documented this phenomenon, often referred to as the "better-than-average effect." For example, 93 percent of US drivers rate themselves as above average behind the wheel. Even drivers currently laid up in the hospital for accidents they themselves had caused were similarly found to overestimate their abilities!

This data may explain a rising appreciation for humble leaders who act like explorers rather than experts. Instead of making their employees feel uncertain and unguided, according to a 2013 study from the University of Washington and the State University of New York, Buffalo, humble leaders were far more likely to have engaged, satisfied and loyal employees.

## Flexibility

### The Power and Perils of Thinking With Your Gut: Why We Need Intuition and How It Often Leads Us Astray

By their very nature, counterintuitive ideas lead the way to possibilities few others are interested in considering, and this is a key reason that, according to esteemed creativity researcher Robert Sternberg, they can be such rich sources of creative breakthrough. Because analysis alone can't prove an unusual idea is right, proceeding demands a heavy dose of intuition.

What we commonly call "intuition" actually refers to a couple of very different mental processes that we experience in very similar ways. The first we might simply call subconscious processing, in which our brain is logically analyzing information in the background of our conscious attention, and when it arrives at a sense of coherence, an intuition bursts forth. This type of intuition uses similar neural pathways in the brain as those used for conscious thinking, so its conclusions, while hard to explain and justify, can be as "smart" as those derived by our conscious mind.

The second source of intuition relies on what Daniel Kahneman and Amos Tversky have famously referred to as "heuristics," mental shortcuts that we use to quickly and efficiently make sense of a complex world. In other words, snap judgments. Heuristics are hard-coded deeply in our psychological makeup, often regardless of experiences we've had. We don't learn these shortcuts so much as we're born with them. For example, we intuitively "know" that things that happen in close succession and close proximity are probably related through cause and effect (even when they're not).

Like subconscious processing, heuristic thinking tends to transmit its findings through the body and through feelings. The instantaneousness of both processes also makes them feel quite similar. Subconscious processing often takes considerable time, but because we're not aware that our brains are working in the background, the resulting intuition may feel like it happens all at once. Heuristic thinking, on the other hand, does happen at lightning speed.

Intuition can be powerful in helping us recognize patterns in conditions of complexity and when speed of

decision making is vital, and that intuition is an indispensable part of creativity. But we've got to be alert about false intuitions that can trap us, leading us to decisions based on biases we would never consciously embrace.

### Harnessing Intuition: How to Recognize Faulty Intuition and Hone Your Instincts

Kahneman and Tversky have demonstrated that what feels like intuition can often just be faulty heuristic thinking or bias. For example, "availability bias" is a thinking flaw that causes people to consistently overweight the importance or likelihood of things that are easy to recall. Familiarity bias pushes us, for example, to prefer investments in the known over the unknown, even when the numbers don't work in our favor.

These cognitive biases are devilish and difficult to overcome. But they aren't alone in skewing our intuition. Because intuition travels to our attention along our emotional highways, it can often get muddled and polluted by feelings that have their own, often unhelpful, agendas.

If we want to find and invest in counterintuitive breakthroughs, abandoning our intuition altogether hardly seems reasonable, but if it's so often flawed, is letting it guide us ever advisable?

Robin Hogarth, a leader in the field of intuition research, advises, "Emotions are data that need to be explained." In other words, we should treat our intuitive insights like ingenious hypotheses. We shouldn't ignore them. We also shouldn't feel sheepish about openly discussing them with our colleagues. Intuitions belong at the front of the line of our attention when making difficult decisions in uncertain environments. But we should never trust our intuitions until we've questioned them, pressure-tested them and patted them down, searching for cognitive and emotional bias.

Hogarth says that intuition is a learned and trainable skill. We develop intuition over time based on our experiences and the rewards and punishments we receive for using it. And that means the environments in which our intuitions develop are of critical importance. A "wicked learning environment," in Hogarth's terminology, gives us slow, ambiguous or misleading feedback, while a "kind learning environment" gives us plenty of timely, clear and accurate feedback.

When we form an intuitive judgment, we should ask ourselves, "Am I getting this intuition in a kind or wicked learning environment?" If the environment is kind — that is, you've been in it long enough to understand it, it provides lots of clear and direct feedback, and it hasn't changed much over time — Hogarth says, you should be more inclined to trust it. If the environment is wicked, your intuition deserves a far more skeptical eye.

### Leaping into the Counterintuitive: How to Tackle Difficult Problems With Unexpected Solutions

Counterintuitive insights can grow logically from stepping back, finding those places where conventional thinking is broken, and then creatively attacking the problem from a new angle. To do that, however, we must begin with a willingness to work through the discomfort of accepting that some of our most basic beliefs about how the world works might be leading us astray.

We can use a set of established tools to optimize our ability to entertain more seemingly outlandish ideas. Here's how:

**Embrace cognitive dissonance**. What are the inconvenient truths of your industry or your company? Think of the inconvenient truths you dig up as starting points for engaging in productive cognitive dissonance rather than as obstacles to avoid.

**Reformulate the problem**. Before spending any more time trying to solve a particularly difficult problem, ask if you must solve it to reach the end you're seeking. Might you solve other problems instead that will achieve the same result? Might subtle reformulations of the problem open new doors?

**Bring in an outsider's mindset, or simply an outsider**. We can all benefit from inviting outsiders into our solution-finding or leveraging our own knowledge from other, unrelated fields.

**Listen to, then test intuition**. We should not dismiss counterintuitive approaches simply because they defy conventional wisdom. We should capture them as they appear in our creative processes, even when they come from our own mysterious intuitive thinking. Once they do emerge, we must then test them rigorously.

**Present ideas as minimally counterintuitive**. An interesting body of research demonstrates that people tend to tune in to, remember and talk about ideas that strike a happy medium. Known as minimally counterintuitive concepts, they tend to be rather mundane in most ways but to have one or two features that break expectations.

Airbnb launched as AirBedandBreakfast, emphasizing that people all around the world were already opening their homes to strangers by running bed-and-breakfasts. Early Airbnb hosts were nothing at all like professional

bed-and-breakfast owners, but the analogy made the new model feel safer and better established in renters' minds.

## Morality

### When Wrong Is Right: Why Being Creative Means Sometimes Bending (or Breaking) the Rules

Classrooms, companies and governments set rules for many good reasons, such as to increase predictability, minimize risk and create harmony. In contrast, new, breakthrough ideas are usually unpredictable and risky and upset established patterns. That's why companies and managers so often talk about how much they value creativity, then reject it once they see it, forcing creative individuals to lie, cheat and steal to bring their ideas to life.

Writer Ira Chaleff brought the term "intelligent disobedience" to the business world's attention, inspired by his observations of how guide dogs are trained to behave at work. Imagine a blind woman and her trusted dog. For the duo to function, the dog must be instantly responsive to his owner and make her goals his own.

What happens, though, when the owner tells the dog to step off the curb, but the dog sees a car coming that might kill one or both of them? Amazingly, without abstract thought or verbal language, guide dogs can be taught to disobey with a commitment to a higher purpose. They will ignore a direct command that goes against the best interest of the team. Without that ability, neither owner nor dog would be remotely safe.

So how can we bring intelligent disobedience into our organizations without getting our heads chopped off? Research shows that it's a two-way street. As employees, we can cleverly increase our chances of getting away with rule-breaking with a few critical strategies. And as leaders, we can design our organizations to benefit from rather than punish positive rule-breaking behavior.

First, be open about dissatisfaction with creativity-killing rules. While pushing back on company policy can get us labeled as troublemakers, we're far more likely to make enemies by resisting in secret.

Next, it's important to articulate the pro-social value of breaking a rule rather than the personal reason for doing so. Managers are more likely to forgive a violation committed in the interest of customers, co-workers or society as a whole rather than to help an individual employee achieve a personally important goal or rectify a private grievance.

### Creating With the Enemy: Why We Need Friends Who Look Like Foes

In a surprising and widely quoted experiment, the University of Michigan's Scott E. Page and Lu Hong of Loyola University showed that groups selected at random tend to be more effective at solving complex problems in fields like business, public policy and education than even handpicked groups of the best and brightest experts.

"This is because the random group is more likely to contain a diversity of approaches to these tasks," explains Page. The experts are all likely to follow similar strategies and duplicate each other's work. But the random group, because its members have different perspectives and ideologies, Page says, will more quickly overcome any shared weaknesses.

"If we're in an organization where everyone thinks in the same way, everyone will get stuck in the same place. But if we have people with diverse tools, they'll get stuck in different places. One person can do their best, and then someone else can come in and improve on it."

These findings should throw up warning signals for the growing number of organizations proudly declaring that they hire for cultural fit over skills (Google calls their cultural fit Googliness). We want to keep negative, destructive personalities off our teams, but how quickly can culture fit come to mean people who think like we do, care about what we care about and employ the same mindsets we do?

## Leadership

### Unsafety in Numbers: How to Break Consensus and Infect Others with the Confidence to Take Risks

Over a 20-month period, the University of Richmond's Dejun Tony Kong watched 42 teams take on a difficult change-management consulting project. He found that the teams made of highly agreeable people not only performed worse than more cantankerous teams but often couldn't tell when things were going wrong. They judged their satisfaction with their team based on how good it felt to be together rather than what they were getting done.

Teams with a few disagreeable individuals showed a different pattern. Not only did they perform better, but their satisfaction tended to track well with their results. Feeling good came not from getting along but from making progress, and so they had a functional internal compass to guide them to success.

The first takeaway here is that we should stop spending so much energy trying to make others feel good, and if nobody else is doing it well, we should strive to be an occasionally disagreeable member of any group we're in.

But Kong's study also highlights another important and subtle rule about teams: Success derives from disagreement but not of the sort that depresses a team's satisfaction in working together.

We need not denigrate, embarrass or resist our teammates to break out of the trap of agreeableness. So how can we disrupt harmony without destroying morale? One way is to gamify disagreement by finding mechanisms that both encourage and depersonalize controversy.

A low-tech solution for gamifying disagreement is the use of red teams. The term comes from military war games in which the blue team represents our side and the military strategies we are considering using in the real world.

The red team takes the role of the enemy, and its job, of course, is not to make the blue team feel good about itself. Red team members are supposed to expose every possible flaw in their opponents' plans and defeat them if possible.

Despite the fierce competition, everyone playing the game knows they're actually on the same side with a common goal of making the chosen strategy better, and there's a culture of respect for those who run excellent red teams even though they occasionally best their colleagues or superiors.

This kind of approach can work for any group.

### Rewarding the Nonobvious: How the Right Incentives Fuel Breakthrough Creative Teams

When Steve Kerr took over as head coach of the Golden State Warriors in 2015, the NBA team was already one of the best in the league. The year before they had gone a very respectable 51–31, but they had lost in the first round of playoffs, leading to the firing of head coach Mark Jackson.

Once Kerr had earned their trust by showing respect for their accomplishments, he says, he proceeded to shift the team's focus to the important activities that usually get overlooked. "We were last in the league in passes per game," he said. "We weren't involving everyone. So we started to celebrate and reward the number of passes we made. I would read off the stats each night, and the team got really interested. We went from 245 a game to 315, and that had a huge impact on our ability to win."

By celebrating not just those who scored and made the highlight reels but those who contributed to group success, Kerr took the team from 51 to 67 wins and an NBA title in his first season.

To instill a sense in our teams that it's safe to take risks, a focus on incentives that reward effort and not just results is critical. Research indicates that we can begin by specifically rewarding contributors who pursue thoughtful but disruptive lines of experimentation (regardless of where they lead). We can give credit to those who share their negative results, recognizing that in doing so they're saving the larger group from repeating their mistakes.

And we can provide incentives based on group rather than individual performance, allowing for some members to risk hitting dead ends while still sharing in the larger group's success.

Groups must be constantly cultivated to allow for disruption as well as incentivized to step beyond the bounds of safety. And that takes a constant focus from leaders at all levels. When it's done right, the payoff is profound.

So many conventional notions of what it means to be a leader, a creator or a disruptor are just plain wrong. If we want to adapt to a changing world, we need to attune our internal role models to the latest science and to our times.

Perhaps the most important thing you can do is try confronting challenging situations with a new internal role model, to ask yourself when you face the unknown, "What would an unsafe thinker do?"

And then do it.

## Using the Power of Focus to Take Action and Achieve Your Goals

by Pete Wilkinson

### THE SUMMARY IN BRIEF

Be determined. Be driven. Be Unstoppable. Don't just coast through life — power through. Stop making plans that don't come to fruition. Everyone's busy, but nobody's getting much done. It's time to start achieving our life goals and not letting life itself get in the way.

Get organized. Lead. Build relationships. Deliver results. With training from accomplished business coach and endurance triathlete Pete Wilkinson, you'll learn how to hone a razor sharp focus, keep driving through to the finishing line and become what you've always wanted to be. You'll learn how to be more productive, expand your support system and make things happen. You'll discover your strengths and weaknesses and how to leverage one and delegate the other.

Dust off your aspirations, and drag them into the light. Get rid of the frustration, regain your focus and start making your goals a priority. *Unstoppable* gives you a roadmap to your very best destination.

### IN THIS SUMMARY, YOU WILL LEARN:

- How your habits can be one of the biggest factors in whether you are able to achieve your personal and professional goals.
- How to develop a 1-3-5 action plan, including one Vision, three Core Objectives and five Goals for each Core Objective.
- The four key execution skills you need to create your unstoppable system.
- Seven steps to take to power your performance through the next 12 months.

# THE COMPLETE SUMMARY: **UNSTOPPABLE**

**by Pete Wilkinson**

**The author:** Pete Wilkinson's professional career started 18 years ago with senior management roles in retail. Wilkinson has managed a large team of 300 people, along with having P&L responsibility for a $46 million business. He has also run his own retail business with a much smaller team. He is massively passionate about ambitious, professional people achieving their potential and spends his time in his business delivering keynote presentations, leading workshops, and partnering with chief executives and managing directors. Wilkinson has an MBA from Newcastle Business School.

## PART ONE: THE BEGINNING

### Why Develop an Unstoppable Attitude?

When you compete in a challenge like an ultra-endurance triathlon, you have to be quite fit. But you don't even stand a chance of reaching the finish line inside the 17-hour cutoff without realizing that your mindset can dramatically affect your attitude.

You have been into a store, bank or medical surgery and a member of staff displayed the wrong type of attitude. You can then turn the corner and visit another business and have a completely different experience. It's amazing to consider that some businesses don't address these traits.

There are lots of components that come into play when you are developing your attitude for endurance racing. You have to consider your nutrition, your physical training, your mental strength training in winter and dealing with setbacks such as mechanical failure with your bike. All of these go into the pot of building the attitude that you will be successful on the day of the race.

#### Change It Up

The same approach applies when developing your attitude for your business and life. Where you are now is not where you have to stay. Change is inevitable, but growth is optional. You are the one person who can decide how you respond to that change.

One of the greatest characteristics of winners is that they develop the expectation of success way before there is any evidence to support that success is certain. They simply believe that they will be successful. Tom Peters (business speaker and author of *In Search of Excellence*) said that belief is pointless without the right toolkit. Developing your Unstoppable system and 1-3-5 Action Plan is an exciting journey, admittedly very challenging at times but still exciting.

When you have developed your foundation 1-3-5 Action Plan (one Vision, three Core Objectives and five Goals for each Core Objective) and then developed the key skills to maximize the application of your 1-3-5, you will be far more confident, your belief will increase and you will have developed your Unstoppable system.

## PART TWO: THE FOUNDATION

### Becoming Effective is All About Your Habits!

Having a solid foundation is critical to the success of your life and business. Many people start a business without giving enough attention to the foundation upon which it is built. You've heard of the phrase "built on shifting sand." But be honest. How much time have you given to your business foundation?

The Eiffel Tower in Paris is a beautiful sight. The tower was built by the engineer Gustave Eiffel, and one French mathematics professor thought it would collapse at a height of 748 feet. It was thought also that it would only last 20 years; it's still standing strong over 100 years later.

**Rebecca S. Clement**, Publisher; **Sarah T. Dayton**, Editor in Chief; **Andrew Clancy**, Executive Editor; **Amanda Langen**, Graphic Designer; **Ashleigh Imus**, Senior Editor **Eileen Spatz**, Contributing Editor

One of the main reasons the tower is still a beacon of French pride is because of how Eiffel designed its foundation. Gustave intricately designed the tower's foundation, which is composed of cement and stone placed at an exact angle so that each of the four curved piers of the tower with an inward tilt of 54 degrees would maximize wind resistance and exert a perpendicular thrust to its foundation.

So, it is fair to say that the level of focus and detail that Gustave Eiffel displayed in designing the tower is the key reason why it is still standing today.

Look at your business and your life, and build a similar style foundation. If you have a large business that has departments, what are the foundations like within those departments? When you do build that solid foundation, your business will be more stable, more profitable and far more successful.

But most people don't do that. Most people have a notion of what they want to achieve, a vague idea of what success looks like, and just start the process of delivering. This isn't to say that taking action isn't vital; it is. However, most business owners come in on a Monday morning and just start doing what they have always done largely in the same way and expect a different result. That is not going to happen. This way of approaching your business is opportunistic. If you want to be successful in your business or even in general life, you need to get strategic!

### Set "Stretch" Goals

Completing an ultra-endurance triathlon is a really big achievement. For you it may be a 10k run, a double triathlon or learning a challenging new skill or language. The key is that you push yourself to shift out of your comfort zone. All too often we get comfortable in our lives and our businesses. When we get comfortable, we can start to coast. That's the absolute worst thing that can happen to a high-performance person like you. We need to be pushed, and we need to be challenged. The last thing you want to do is flick your cruise-control switch.

Stretch goals are a great way to make sure you don't flick your cruise-control switch. What stretch goal could you set right now that you will complete in the next 90 days? A stretch goal is something that when you achieve it, it will deliver a quantum shift in performance for you and your business. It might be launching a new product, writing a book, learning an instrument or acquiring a new strategically significant client (someone who is ideal and really gets what you do and will pay you the correct fee).

All too often when we're doing something difficult or when we consider doing something difficult, we often focus on the feeling while immersed in the task instead of the great feeling we'll experience when we've completed the task. If instead you aim to build the habit of connecting to the outcome rather than to the task, you will take more action on what you need to take action on and achieve more.

When you get control of the thoughts that occupy your mind and keep focused on the positive ones, you'll get momentum on your side and make far more effective progress. You can go on, you can get control of your thoughts, you can switch them to be positive and you can get through it.

Learn to control the thoughts that occupy your mind; be focused and consistent, and you'll be Unstoppable.

### Are Your Habits Serving You?

Before we can get started with building your 1-3-5 Action Plan, we first need to look at how you are operating currently. If 47 percent of what we do is habitual, it's important that we assess our habits and rituals and check if they are serving or strangling us.

A habit is something that we do on a regular basis until it becomes so easy that we can do it without thinking. Some of your habits will be good, and some will be not so good. It takes about 21 days to form a new habit. Address any bad habits, and you'll open up a whole new range of possibilities for you to use your strengths.

It's worth remembering that successful people have successful habits. Sit and think for awhile about who you respect in business and life. Think about what they do (their habits and rituals) that enables them to be successful. Then build a picture of yourself having and displaying that habit.

If we want things to change, then we must change, so identify and correct bad habits. Think about this for a moment: The reason your business is doing so well is because of you — well done! But the reason your business is only doing so well is because of you. We really need to take responsibility for where we are in our businesses and our lives in general. A major area to take responsibility for is our habits, and remember that every bad habit needs to be replaced with a good habit. Your habits will determine your future; what you do today will affect what you receive tomorrow.

## Your Crystal Clear Vision

Now it's time to start building your 1-3-5 Action Plan. The first component of becoming Unstoppable is Vision. Having a crystal clear Vision is the start. How clear do you see the big picture? People talk about being pulled toward

their Vision rather than having to push all of the time. Plus, when you have clarified your Vision, you will find it easier to engage others in your plan.

Many business owners say that they have a Vision. These corporate Visions tend to be about the business and often don't even mention the customer and what they are going to receive. All your business is about is delivering a result that your customer feels is worth more than they pay for that result. Just make sure that what you deliver has a higher value (can be perceived) than its monetary equivalent.

If you don't have a crystal clear picture of the type of life that you'd want and a crystal clear picture of the type of business that you'd want, how on earth could you create it? You could end up like the many business owners who finish each week not feeling fulfilled in their business because they are not engaged and motivated about what the big picture is and what they are in the process of creating.

Become Unstoppable, and get crystal clear about your Vision.

### Achieving Crystal Clear Focus

In order to maximize your progress and multiply your resuts, we're going to clarify your Vision.

Here's where the excitement starts. Your Vision is going to give you an overall focus. It's going to frame what you do every single day. It's going to pull you towards success the way gravity pulls an apple to earth.

Your Vision is going to be engaging. It's going to incorporate what you do, who you do it for and what they'll get. It's going to say what you'll receive and what you'll be able to do with what you receive. It's going to clearly and succinctly describe what success means to you and WHY you want it.

Your Vision is the real starting point. Because of that, we're going to get it right. I've created this seven-step process for you to follow so that you can create a powerful, big Vision for yourself:

**Step 1:** Create your picture. Have a go at drawing what you would like to create. Think about the different components that would make up an ideal business and structure for you.

**Step 2:** Collect some photographs of the things you would like to have in your life.

**Step 3:** Describe what a perfect day looks like.

**Step 4:** Imagine what life will be like when you achieve your Vision.

**Step 5:** Measure your success. Have a figure to focus on that means something to you.

**Step 6:** Get clear about the value you're going to deliver. If you are struggling to come up with some of the values and benefits of what you do, then you can always ask some of your existing clients.

**Step 7:** Write down your own first draft of your business/life Vision.

Clarify and then read your Vision weekly; you need to connect with it and keep it front of mind. This is going to drive all of your actions. Can you imagine how much more you will achieve when you start your week really motivated and have your Vision at the center of what you do?

## Your Three Core Objectives

You now have your Vision. You've created a simple, succinct statement of what success looks like to you. Now is the time to chunk it down.

The overall purpose of creating your 1-3-5 Action Plan is so that you have a proven plan that enables you to take focused action on a consistent basis so that you become exceptional and ultimately Unstoppable. Action is the essential ingredient in life; only what you think about, talk about and then do something about will actually come about.

With your Vision being so grand, you'll be wondering where to start. This is where your three Core Objectives come in — chunking down your Vision to make it more achievable.

You may be wondering why we have three Core Objectives. The reason we have three is because if you are like most business professionals, you probably have more to do than you have time to do it. Your focus is being spread too thinly, and your efforts are being diluted to the point where, in some weeks, you begin to wonder what impact you have had.

Having three Core Objectives will ensure that you cover the main objectives that are needed to achieve your Vision, and this is where you are going to direct your attention and focus. If you undertake a task that doesn't directly contribute to one or all of your Core Objectives, then you need to question why you are doing that task. Because your three Core Objectives are central to the completion of your Vision, the majority of your time should be spent on achieving them.

### Creating Your Three Core Objectives

Starting with Core Objective One, you need to ask yourself, "What is the first thing that absolutely needs to be in place for you to reach your Vision?" An example would be, if you were a chiropractor, then focus on the

number of clients on a particular payment plan which contributes to turnover. If you were a trainer or coaching professional, Core Objective One may be how much income you want from a particular income stream or product line in a 12-month period.

Core Objectives of this nature emphasize that you are only going to achieve Core Objective One by helping people to do or have something before they pay you. Whatever business you are in, you need people. That may be people to support you, people you support or people you identify as paying clients.

Before you dash off and write your Core Objective One, there are three main things that your objectives need to be: they must be core, they must be specific and they must be written like you've achieved them.

Core Objective Two should be focused on process and system. Thinking about your Vision, what process and system would need to be in place? Looking critically at your business Core Objective Two could be about having a proven delivery system that enables you to grow your business and achieve your Vision.

If you are a manufacturing or retail business, your Core Objective Two could be about how you deliver your product. It would be the development of a system or process manual that enables you to achieve a sustainable competitive advantage.

Core Objective Three is your final objective. Core Objective Three could have to do with the person you need to be to achieve the success and the Vision you have set. You may have to develop some brilliant new habits. You may have to acquire new skills. You may have to make far better use of your time.

It's possible that your Vision is about reaching and having an impact on many people, far more than you impact on today. If that is the case, having a Core Objective to focus on in that area could be critical.

Be careful your Core Objectives are not just simple goals. They are meant to stretch you and not be something you could achieve with your eyes shut. When you've set your Three Core Objectives, keep focused on taking action to achieve them; keep making progress.

## Your Five Goals

One of the major reasons why people don't get to where they want to be is because they can't see a route. Let's design some signposts so you know where you're going and you can measure the inevitable progress you'll soon be making. This is why it is crucial to set goals.

This is the critical stage where we start to nail down what needs to be done every day that will enable you to reach and achieve your magnificent Vision. The three main things your goals need to be are

**1. Stepping stones.** If you were to look back earlier at my ultra-endurance triathlon 1-3-5 Action Plan, you'll see that my goals were stepping stones to achieving that particular Core Objective. Your goals should be stepping stones that emphasize your own desire to make progress. Your goals are also going to be dynamic. This means that you will replace them as you achieve them.

When you achieve one of the goals in your 1-3-5 Action Plan, highlight it in bold italics so that you know you've achieved it and feel a little satisfaction for a short while. You then replace it with another goal to focus on, always making progress.

**2. Action orientated.** Next, your goals are going to be action orientated. We're going to set your goals so that you've absolutely got to take some action in order to achieve them.

Action is the essential ingredient in life; only what we think about, talk about and then do something about will actually come about. It is certainly the people who "do" who succeed. Make sure you create stepping stones to lead to something bigger; develop the action habit, and you'll make an amazing amount of progress.

**3. Outcome focused.** Finally, your goals will also be outcome focused. If you are going to make the very best of yourself, one of the things you need to do is ensure that you always have an outcome in mind. This is why your five Goals for each Core Objective are going to be outcome focused.

### Be a Goal Achiever

It's not enough for you to just set your five Goals for each Core Objective. It's vital you take action to achieve those goals; don't be a goal setter; be a goal achiever.

We know that what we focus on magnifies, so if you've got your 1-3-5 Action Plan with you close at hand and you focus on it, then the results you experience will magnify and multiply.

You've now identified and written down your 15 Goals (five goals for each of your three core objectives). You have made sure that these are stepping stones, action orientated and outcome focused. Your goals are what you're going to focus on on a daily basis. Write them out; imagine you have achieved them; make your goals what you are thinking about.

When you start using your 1-3-5 Action Plan, we need to turn the whole thing on its head. You're going to work

on a daily basis on the five Goals for each Core Objective; then they will lead to completing your three Core Objectives, and they will enable you to achieve your Vision. So, although you created your 1-3-5, in execution it becomes 5-3-1.

## PART THREE: THE EXECUTION SKILLS

## The Four Key Skills You Need

There are many skills that are needed in order to become a success.

Tom Peters said, "Leading yourself may be toughest of all." It's all too easy to let yourself off, to ease back and never ever flick the cruise-control switch! The key question many of us need to ask ourselves more often is, "If I was the very best version of myself, what could I achieve?" When you answer this, you must do something about it!

The four key execution skills that make up the remaining elements of your Unstoppable system are

**1. Leadership.** You cannot make the best of yourself and your circumstances without developing your leadership skills. After you have developed your leadership skills, it is very important that you make the most of your time.

**2. Personal Organization.** Personal organization is a skill that requires many hours to develop. You'll get far more done. You can concentrate on the important stuff and avoid wasting precious time.

**3. Relationship Building.** Focusing on relationships is key. In a successful business, the emphasis should be on the relationship and not the transaction. Relationship building is about getting better at strengthening and deepening relationships.

**4. Key Strength Development.** We all have key strengths, and the degree to which we utilize and set our businesses up to make use of this key strength will be the final piece in achieving your grand Vision and making the very most of yourself.

We are not looking to become perfect in any of these skills; we are looking only to make progress in these areas in order to make the very best of our 1-3-5 Action Plan.

## Skill One: Leadership

Leadership is keeping things as simple as they can be. It's not about overcomplicating things — it's about results. It's about achieving the big picture. It's about deciding what result your organization, your family or your sports club want to achieve, and it's about engaging yourself and those around you with effective communication to "come on board" and deliver that result.

The first people you engage if you have a team are the team. Ask yourself now, "How well have you engaged your team?" Be honest. Does your team know where you are heading? Does your team know what progress has been made and how they are performing? Do you have a structured performance-management process in place where good performance is rewarded and poor performance is highlighted and acted upon?

Being able to execute is essential. There are times when you are doing things in your business that are not glamorous. There will be times when you as the leader may want to do something else, and being the leader may mean that no one is going to kick you in the backside if you don't execute.

When you become skilled at building rapport, people feel comfortable around you, and they feel you're on their wavelength. All of this leads to you becoming a more effective leader, and with your being a more effective leader you'll improve your business results.

When you develop your leadership skills and actually "lead" your team, you'll be light-years ahead; plus you'll find it easier because with an engaged team, you'll start to develop leaders at all levels of the business structure.

## Skill Two: Personal Organization

We can't actually manage time — just what we do with our time.

Why is it that some people just seem to get more done? Is it because they are luckier? Is it because they have a larger team? The reason some people just seem to get more done is because

**1. They plan.** You should plan for at least one week at a time. It is not effective to come into the business in the morning and think, "What should I do today?" That is not making the most of your time. Because you have developed the successful habit of reading your 1-3-5 Action Plan at least every week, you'll know what you should be working on. At the end of the day, do a quick review. Have all your tasks for the day been completed? Is there anything to carry forward? By doing this, you are concentrating on what is important and giving yourself the best opportunity of success.

**2. They stay focused.** It seems that being overwhelmed at least some of the time is a prerequisite of run-

ning a small business. The key is to focus on what matters. The kicker is that, although there are critical things, hard things, that must be done, our natural impulse is to gravitate to more enjoyable, possibly easier, more comfortable tasks. A simple habit is to focus really hard on the outcome you will get from doing the hard thing.

**3. They prioritize.** People who are personally organized work on what is important, not the stuff that is urgent. Because you now have your 1-3-5 Action Plan, you have identified the important stuff that needs to be done for you to reach your Vision. Ask yourself if doing a certain task will take you closer to your Vision. If it will, then it is important; if it won't, it should be done after the important stuff is completed.

**4. They are consistent.** The great thing with consistency is that when you decide to be consistent, you immediately see the results. Be clear about what you are going to do each day, and reward yourself for your little breakthroughs. Keep a picture in your mind of what your outcome, your Vision, is going to be, and commit to doing some of the things that just need to be done.

**5. They manage their distractions.** One of the easiest ways of not being consistent is to allow distractions. By identifying three things that have recently distracted you this week, you can consider how to manage these distractions in order to remain consistent. What little process can you implement that manages your distractions?

**6. They are clear about what they want to achieve.** Time-effective people have a clear picture. Be clear about what outcome you want for each day; be clear what outcome your want for each week and month. When you are on a mission, you don't want to waste time. You have a purpose, and your purpose is to achieve your Vision so that you can have the life and business that you want and you deserve.

## Skill Three: Relationship Building

For you to reach your Vision in your 1-3-5 Action Plan and make the most of yourself, you are going to have to focus on relationships with your clients and those around you. You are going to have to adopt the mindset of continuously looking for ways to enhance, strengthen and develop those relationships.

The key point to remember when it comes to business relationships is value, and value is in the eye of the beholder. If you have a good product and it delivers what it is supposed to deliver, then you will be adding value to your clients/customers. Have you asked your clients how they rate the experience of your services or product? Do you regularly request testimonials from satisfied customers that can be shared?

How do you ensure that the customer is happy and satisfied? How do you find out if they have feedback that could help you improve your product or service? If you can add value to your clients and customers and be seen as an integral part of their business or life, then you are in a great position to enjoy lifelong beneficial relationships.

What can you do to develop your customers and clients into raving fans? A raving fan is someone who actively wants to see your business improve. Happy, loyal customers will go around and become ambassadors of your business; they'll promote it for you.

When you value your client relationships, you'll follow up with these people properly and develop a relationship with them where you demonstrate value up front.

## Skill Four: Key Strength Development

Have you ever worked out what your key strengths are? It's not something people often do. Go ahead and ask five people who you have either worked with closely in the past or who you work with now what they think your three key skills are.

We also need to identify what we are weak at, and instead of working on these weaknesses we have to find creative ways of delegating our weaknesses.

### Key Strengths of an Effective Leader

There are the four key strengths that an effective leader should have. These are the strengths that will enable you to lead effectively within your business and make the very best of yourself and your team. These four key strengths are

- **Executing.** Too many people fall down with execution. Getting things done and carrying through with a project is important.
- **Influencing.** Being able to influence your team so that they perform at a desired level is key. Influence your customers by using good communication skills so they realize if they have a problem, you can and will support them to find a solution.
- **Relationship building.** It's important to remember that no one became successful by themselves and that we all need other people in our businesses and our lives. Being strong at building relationships is a way to build that support team so you reach your goals.

• **Strategic thinking.** Being strategic is about looking ahead and deciding on a course of action. Thinking strategically is about building the big picture and not allowing yourself to get bogged down with the details too much.

## PART FOUR: THE NEXT 12 MONTHS

## Seven Steps to Take

You've come a really long way, you now have a foundation plan in place and you've upgraded your skills. Here are the seven key steps that will ensure the next 12 months are fantastic:

**Step 1. What's worked and what hasn't?** The first thing to do when planning a new year in business is to look back at what has been working and what has not. Let's start with what hasn't worked. Be honest: What have you done in the last year or in the last six months that didn't work? What have you spent time on that didn't produce the desired result?

You will be doing many things that are working well for you, and it's important to identify what they are. From a leadership point of view, this is about recognizing the good things you do so that you keep doing them.

**Step 2. Success for the next 12 months.** There are some key areas in your life that you need to work out what success looks like to you. The purpose of doing this is to decide in 12 months' time what would be a good result in these areas. They include health, wealth, family, relationships and contributions.

Now we're going to look in more detail at your business success for the next 12 months. What does business success look like to you? Ask yourself, "What sales figure did you deliver? How many customers did you support? What profit level did you achieve?" When you have entered a number or result for the questions that are relevant, the next step is to come up with a simple method of tracking the result.

**Step 3. Product review.** How happy are you with the range of products you have? Are there gaps in your product portfolio? Could you ask your clients and customers what product they would like to buy from you? Could you look at other people and companies that occupy your space and identify anything they are offering that you are not?

The purpose of carrying out a quick product review is to understand that it is our products that are going to deliver value to our clients. The results we deliver for our business will be directly impacted by the level of value we deliver to our clients.

**Step 4. People review.** Every business is a people business. If you haven't got a team, build one! What can you do to ensure you have the right people in your team for this year? What action can you take to fill a skill gap or a development gap?

If you have a need for some people in your business to do a certain function or support you with a certain project, you can come up with some creative ways to get that support.

**Step 5. Time review.** When you look ahead at the year and assess how you use your time, the most important thing you can do is make sure you're spending most of your time working in the area of your strengths.

Are there any activities that you regularly spend time on that are not giving you a good enough result? You have to assess your time usage so that you have the time to spend working on and with your 1-3-5.

**Step 6. Message review.** Moving forward this year, what is going to be the key message you want to communicate? This message has to be clear and understood by your target audience, your client avatar. Remember that if you are targeting everyone, then you are targeting no one.

What are some of the things you want to be known for this year? Make sure what you are doing day in, day out of every week this year is in line with your message.

**Step 7. Actions.** Thinking is good, talking is better, action is best! It all comes down to taking action. When you spend a little time looking at what worked well and what didn't and also assessing your products, your people, your time and your message, you'll be in an excellent position to maximize your strengths and multiply your results.

I hope reading *Unstoppable* will be the start of your journey towards achieving exceptional results in life and business.

### RECOMMENDED READING LIST

If you liked *Unstoppable*, you'll also like:

1. ***Triggers*** by Marshall Goldsmith. How can you overcome the triggers that cause you to behave in ways you'd rather avoid? Goldsmith offers six engaging questions that can help you enact meaningful and lasting change.

2. ***Leadership Blindspots*** by Robert Bruce Shaw. Shaw helps leaders identify weaknesses, threats and other vulnerabilities that can impair effectiveness and results.

3. ***Hacking Leadership*** by Mike Myatt. Myatt identifies 11 leadership gaps that can be holding leaders back. He provides strategic advice for everything from purpose and culture to knowledge and innovation.

## Using Your Voice to Captivate, Persuade, and Command Attention

# VOICE POWER

### THE SUMMARY IN BRIEF

*While everyone has a voice, not every voice is one that gets attention — a personal weakness often overlooked. The concept of "dressing for success" — creating the right appearance — is second nature by now. However, most people are unaware that their voices account for one-third of the total impression they make on others (the other factors are appearance and message).*

*Throughout your working life, you will be constantly using your voice — either to your advantage or disadvantage.*

*In this summary, Renee Grant-Williams, who has worked with U.S. senators, business executives and sales professionals, as well as numerous pop recording stars, shares her techniques for improving the quality of your voice. These techniques will help you train your voice to maximize your effectiveness in any form of speaking — speeches, sales presentations, and even telephone and voice mail messages. You can learn to improve the tone and resonance of your own voice to make your presentations more dynamic and powerful — and successful.*

*Your voice is one of your most important assets. Make sure your voice is one that people want to listen to — a voice that commands respect and gets attention.*

## What You'll Learn In This Summary

✓ **Learning to Breathe — Correctly.** Paying attention to how you're breathing is the first step to improving your voice's impact on others. It's simple but not always easy.

✓ **Full Body Support.** Proper posture is essential for building a rich healthy voice to project confidence and assurance.

✓ **Voice Delivery Techniques.** Learn how professional singers and actors mold their words for the most impact.

✓ **Writing and Delivering Your Speech.** Gain practical advice for writing, rehearsing and delivering your next speech — whether it's to one person or to an audience of 100.

# VOICE POWER

**by Renee Grant-Williams**

## — THE *COMPLETE* SUMMARY

## HOW TO MAKE THE MOST OF YOUR NATURAL VOICE

# The First Step: Learning to Breathe

The path to a rich, full and commanding voice begins with the most basic of skills: breathing. This article examines the mechanics of our breathing, and the major impact of breathing on the quality of our voice.

### *The Goal: Passive Breathing*

Athletes and opera singers have used various breathing techniques to get the most out of their performances. These techniques have had many names over the years — reverse breathing or breath play, for example — but common to all of them is a natural, unlabored or passive breathing. This naturalness or passiveness is what you are trying to achieve.

### *Producing a Tone*

With each intake of breath, the diaphragm, the large, thin muscle that rests beneath our lungs, relaxes and flattens, creating a vacuum. Air flows into our lungs, thus filling the space.

When we speak, we use the diaphragm to push the air back out of our lungs. It passes over the vocal cords, causing them to vibrate and produce a tone. (Think of whistling through two blades of grass.) All of our speech comes from these tones.

It sounds simple. However, listen to your own breathing and that of others around you — you'll hear shallow breathers, chest-heavers, gaspers, and so forth.

With a full-length mirror, a chair and a tape recorder, you can take a simple test to see what kind of a breather you are.

Standing in front of the mirror, take a deep breath. As you do so, notice what happens to your mouth, shoulders and chest. Do this a few times and then answer the following questions:

**1. Did you breathe through your mouth or nose?**

**2. Where did you "stash" the air you breathed in?**

**3. Did your chest expand or your shoulders rise?**

**4. Can you describe how the air got from the outside of your body to the inside?**

Some voice instructors will tell you to breathe only through your nose or only through your mouth, but the important thing is to do what is most comfortable or natural for you.

The second question — where did you stash the air you breathed in — is key.

Most often, people find that they breathe into their chests so that their shoulders get filled up. But remember the diaphragm — that's below the lungs (and therefore below the shoulders and chest!). If you saw your midsection expand as you inhaled, good; but you need to bring that breath even lower. Aim for right below your waist. Find your belly button and then walk two fingers down from there. That's where your air needs to go for the most passive breathing.

The bottom line: Don't gasp, draw, suck or pull the air into your body. Just relax, open your mouth and let the air fall in.

### *The Benefits of Passive Breathing*

Passive breathing gives you a richer, fuller voice. Breathing into the lower body allows the vocal cords to relax. Shallow breathing, on the other hand, makes you sound breathy and weak and adds to tension around the neck. Concentrating in the throat, shallow breathing also cuts off resonance and makes your pitch rise. ■

# Use Your Entire Body To Support Your Voice

Speaking involves an interrelated group of muscles. Taken collectively, the system of muscles that help create the voice is called *support.*

Resonance is the way the sound vibrates in the body.

Support and resonance work together. Energy is needed to create tone, but the trick is finding the right source of energy that does not compromise the resonance.

Most people use their throats to create sound, but this damages the body's resonance. Instead of relying on the throat alone, you need to draw the energy for sound from your entire body. This is called *full body support.*

Below is a step-by-step method to help you develop full body support for your voice.

### *The Buzz on Full Body Support*

1. **Locate with your fist again the spot two fingers below your navel where you take the air you breathe in.** Exhale and relax the lower abdominals to let the air out. At the same time relax your jaw and open up your throat to let in a new supply of air.
2. **Press in with your fist, contracting the lower abdominal muscles around the air while making a short buzzing sound.** The buzzing sound should start in your lower abdominals, not your throat. Stay relaxed above the waist.
3. **To stop the buzzing sound, relax your abdominal muscles, open your jaw and throat and let a new puff of air fall back in.**
4. **Ideally your chest should be relaxed (as well as your throat and jaw) and your hips should be tucked under you, as if you were lifting something heavy.** In a sense you are lifting something — your voice.

The point of this exercise is to illustrate the concept of supporting your voice with good posture and to keep the jaw and throat area relaxed.

### *Focus on the Midsection*

After you've mastered the buzzing "Z" sound, do this exercise with some other sounds. The idea is to keep your energy centered in the middle of your body.

Balance on the balls of your feet and press into the floor with your legs and lower body. Try the EEE sound in this posture. Try NN, AH, MM. If your voice begins to sound thin, it's because you're putting too much pressure on your jaw. Focus your strength into the center of your body, into the legs and feet.

Try also the OH and VV sounds. If you are dropping back correctly on your hips and keeping your chest loose, your legs and lower body will almost automatically compensate by tightening underneath you.

## Rate Your Voice Power

Score yourself on the following six statements to rate your voice power:

1. **Others let you finish talking without interrupting.** Always (4) Usually (3) Sometimes (2) Seldom (1) Never (0)
2. **You speak without being asked to repeat yourself.** Always (4) Usually (3) Sometimes (2) Seldom (1) Never (0)
3. **People seem to remember what you say.** Always (4) Usually (3) Sometimes (2) Seldom (1) Never (0)
4. **Others are quick to act on your suggestions and commands.** Always (4) Usually (3) Sometimes (2) Seldom (1) Never (0)
5. **You find it easy to change people's minds.** Always (4) Usually (3) Sometimes (2) Seldom (1) Never (0)
6. **At the end of the day your voice still sounds fresh.** Always (4) Usually (3) Sometimes (2) Seldom (1) Never (0)

### How Did You Do?

If you scored:
20-24 — Have you considered running for office?
15-19 — Your voice is clearly an asset.
10-14 — There is hope, but the competition isn't worried.
5-9 — Ever wonder whether you're invisible?
0-4 — Good luck! You're going to need it.

### *Keep Your Head Forward*

Try this exercise: From a normal position, whistle. Then, tilt your head back to look at the ceiling and whistle again. This time the sound loses resonance. While most people don't stare at the ceiling when they're giving a speech, it is a reminder to not "lead with the chin." Rather, arch your entire head slightly forward so that the sound can resonate freely.

### *Engage Your Mind*

Once you're comfortable with these breathing support and resonance exercises, it's time to get your mind engaged as well. Visualize ahead of time how you want your voice to sound and then use these techniques to create it. This gives you a pallet of voices to use in different situations.

Once you have mastered these techniques you can manipulate your voice to give it either a rich tone, or one that is mellow and soothing, or a tone that is commanding and precise. When you control your voice, you are better able to keep people focused on what you are saying. ■

## VOICE DELIVERY TECHNIQUES

# How to Create Drama, Command Attention And Make an Impact

In the first part of this summary, you learned the secrets of breathing, resonance and support to make your voice an asset, rather than a liability. Depending on what you are trying to achieve, your voice can be rich and full, mellow and soothing, warm and sincere, clear and precise, commanding, and in control.

In this section, you will learn about delivery techniques that will further increase the power of your voice. You will learn how to use consonants, pauses, volume, tone, speed and pitch to your advantage.

### *Consonants*

Just as a singer holds our attention by the way he or she holds onto and drags out the sound of consonants, we can make consonants work for us when we speak. Consonants highlight the emotion of our message.

Here's how: Rather than simply speak louder when we want to emphasize something, we should lll-engthen the consonant sound at the beginning of the word we want to emphasize. Just think of Tony the Tiger telling us how "great" Frosted Flakes are and you get the picture. The long R creates suspense, making us want to know more. Or think of Sinatra's "Start sprrr—eading the news…"

In speaking we do not pronounce every syllable. In fact, we unconsciously tend to "speed listen" and skip to only the important words or sounds. As with reading, we gauge where we think the sentence is heading and mentally fill in the blanks.

Therefore, as speakers, we need to decide which are the important words we want to stand out for our listeners. Those are the words we need to elongate. You can double your impact by emphasizing the consonants at both the beginnings and ends of the high-value words. Want to drive home that "Sales must be up next quarter"? Try saying it, "Sales mmm-u-sssttt be up next quarter."

### *Rhythm*

Speech, like music, has a natural cadence or rhythm. Look at the word "me." At first glance you might think it only has one syllable. But it has two distinct sounds — M and E. The problem is you can only emphasize one sound within each beat. The way we naturally speak, we place the emphasis on the vowel — the E. This means that the M goes before the beat. But to highlight the consonant M (that is to emphasize the word "me") means that you have to give up something to keep the beat. The preposition "to" gets shortened, and we say, "This is important t'MMM-ee."

### *Pauses*

Like the elongated consonant sound, you can also create power pauses to build suspense and grab attention. The key is in placement of such pauses. Use pauses when you want to give your listener(s) time to think — particularly when what you are about to say is unexpected, unusual or possibly shocking. Pausing before a word gets listeners ready for something unexpected; pausing after a certain word gives them time to let the new idea sink in. Such pauses can also be used to express powerful emotions.

Think of Henny Youngman's delivery of his famous line, "Take my wife // please." Without the well-placed pause it has a totally different meaning. Likewise, think of speech without any spaces as "the fine print," such as the taglines you hear at the end of most car commercials, "Pricedoesnotincludedealerprepchargestaxes…"

### *Variations on a Theme: Volume, Tone and Speed*

The goal in speaking is to get people to listen, keep them listening, and eventually get them motivated to take

*(continued on page 5)*

## Rx for a Healthy Voice

Once you've learned what your voice can do for you, find out what you can do for your voice — to keep it healthy:

**Get plenty of rest.** Think of the four R's of a good night's rest—revive, recover, replenish and relax.

**Drink plenty of water.** The tissues of the throat and its mucous membranes need adequate moisture to stay resilient and flexible. By drinking enough water the cells in your mouth and throat can flush out impurities. We need two-and-a-half quarts of water a day, some of which we get from food. Ideally, we should be drinking eight glasses a day, more if we have a cold or fever.

**Use a humidifier.** It is essential that you keep the water fresh — clean and disinfect it once a week.

**Watch what you eat.** Be aware that some foods and beverages (i.e., caffeine and alcohol) can dehydrate you. Also, alcohol and sugar can give you unpredictable changes in your energy levels throughout the day. Greasy and fatty foods can cause gastroesophageal reflux disease (GERD) or heartburn. This backup of stomach acids into the throat can literally burn the sensitive membranes of the throat.

## Delivery Techniques: How to Create Drama, Command Attention and Make an Impact

*(continued from page 4)*

action. To make your speech as compelling, dynamic and meaningful as possible, learn to adjust your volume, pitch and rhythm to create your own style.

**Volume.** First of all, maybe your volume is too low. If an audience has to struggle to hear you, eventually they will give up trying. Tape yourself speaking to gauge if you need to speak louder. There are times when varying the volume can be used. Dropping your voice commands attention almost as much as if you suddenly began to shout. Beware, though, that shouting's effect wears off quickly. Be careful, also, not to let your sentences drop off into a silent abyss as they near their conclusion.

**Tone.** The choice of tone affects how what we say influences others. Warm tones are calming; use this tone to diffuse tense situations. Even when you are tense use the passive breathing techniques outlined here to avoid shallow breathing. Your listeners will be able to read your body language, and passive breathing techniques will help your remain calm and centered.

**Speed.** By varying the speed (or tempo) of your speaking, you can apply a conflict-resolution structure to your voice's rhythmic pattern. Use different tempos for different situations. For your major points, slow down — by using silent pauses and long consonants. This allows your main points to resonate with your audience. To set your audience up for a major point, speed up your introduction.

Become familiar with your natural speaking pattern. Don't overuse one pace or pattern, because listeners will become bored and can tune out. Vary the length of your phrases. In most cases, you want to avoid a strict monotone voice.

### *Pitch*

Pitch is defined as "the difference in the relative vibration frequency of the human voice that contributes to the total meaning of speech" (with thanks to Webster's Dictionary). A voice like Lauren Bacall's or Kathleen Turner's, low and rich, gives the impression of authority. A higher pitched voice, in contrast, implies youth and inexperience. When you need to convey wisdom and authority, lower your pitch — but stay within your own natural limits. You don't want to sound phony. Using the technique of support will keep your body resonant. Especially when lowering pitch it's important to keep your jaw loose. Raising your pitch can help highlight certain words when you need to convey energy and enthusiasm.

### *Getting an Edge*

You can use all of the techniques discussed above to make your voice more distinctive to your listeners. In today's media-saturated world, people are inundated with more messages (visual, auditory and tactile) than they can absorb. Creative use of tone, pitch, pauses and elongated consonants can give you an edge in getting people's attention. ■

**For more on elongated consonants, go to: http://my.summary.com**

## Avoid the Valley Girl Syndrome

Beware of the Valley Girl Syndrome. This occurs when you lift your pitch at the end of every sentence, like you know?

Also, be careful when you need to drop your voice a pitch. That can signal the most irritating of all human sounds — the whine. The dissonant arrangement of notes that are never resolved is what makes whining so annoying.

## The Sound of Silence

English is not the primary language spoken by most of the business world. When you are speaking to others who do not know your language as well, use of silence can help. These pauses give listeners time to translate, so be sure to place appropriate pauses before and after the most important information. Don't hurry. Avoid flowery language. Make sure to get confirmation from your listener that they understand.

In some cultures, people find silence uncomfortable. As a reaction, people tend to fill in any silent pauses with chatter or a string of annoying "ums." Especially in negotiating sessions, silence can be a powerful tool. In Asia, use of silence has long been recognized as an effective tactic at the negotiating table. During your next conversation, try waiting a few beats after the other person has stopped talking before responding. This will convey the impression that you're thinking carefully to what they've been saying. Not only is that a complement to the other person (their ideas are so deep and insightful), but it also buys you some time to gather your response.

Conversely, have you ever seen a movie where a powerful person is portrayed as being "chatty?" If you want to be taken seriously, stop and count to three before giving a response. Use silence as a way to help you gain control in a conversation.

## APPLICATIONS OF VOICE POWER

# Preparing Speeches That Make People Listen

No one enjoys giving a speech. In fact, it's the top-rated phobia in America. Fear of giving a speech ranks higher than fear of dying in some studies. In this section, we will examine the process of writing and giving a speech, using the voice techniques already described. The steps are:

- **Writing the speech — phrasing decisions and constructing a phrasing schematic**
- **Developing your own physical presence**
- **Neutralizing stage fright**
- **Rehearsing**

### *Writing Your Speech*

As you write your speech, keep in mind what kind of pace you want to use when delivering it. In general, long sentences slow down your pace while short ones pick up the tempo. A slow increase in pitch, volume and tempo gives you forward energy. When well constructed, this pattern can help make your point more compelling as you build to your conclusion. Or you can start out with normal-length sentences, and then make them shorter and punchier as you come to your conclusion.

### *The Schematic*

To help remind you of the pacing and tempo you want to use, incorporate marks to indicate phrase breaks and accents into your text. Even if you don't plan to read from the pages while delivering the speech, it will help during your rehearsals. Be sure to double space.

First, read your entire speech aloud to find out which information you'll need to highlight. These are the words you'll want to emphasize with long consonants, or changes in volume, pitch or tone. Experiment out loud until you feel comfortable that your delivery method matches the intensity you want the information to convey.

One system of phrase notation is to use double forward slashes // to indicate a pause, CAPITALIZATION to indicate a rising in pitch or volume and **boldface** to indicate a long consonant. Read the following quotes using the schematic:

"Work is the meat // in the hamburger of life."

"Work is the MEAT // in the hamburger of life."

"WORK // is the meat // in the hamburger of life."

As the composer of your speech, you decide how to emphasize which words. Take your time when building your speech's schematic. It can be a powerful way to give your listeners new ways to think about your ideas as well as direct them to the points that are most important to you. This exercise will also help you learn your speech.

### *Personal Presence*

Before you utter the first word of your speech, your audience has already started making up its mind about you. Your first impression on them is visual. How you carry yourself sets the tone. To create a powerful impression, here are some suggestions on how to carry yourself:

- **Balance on the balls of your feet**
- **Tuck under slightly for support**
- **Keep your shoulders down**
- **Arch up with the back of your neck**
- **Keep your chin down**
- **Look up from below**

It's no coincidence that these same positions for creating a powerful presence are the same ones used for building support and resonance.

### *Rehearsals and Neutralizing Stage Fright*

Having several run-throughs of your speech can help ease any nagging fears. One suggestion is to think of all the mistakes you could make when delivering your speech — then act them out. Practice giving the worst speech of your life. Some people find it's actually quite difficult to make mistakes. In any case, practice, while perhaps not making perfect, can at least relax you. If possible, videotape yourself giving a rehearsal. Then review, several times, paying attention to visual and verbal gestures and stances. Don't clasp your hands behind your back (this throws your body out of alignment); you

*(continued on page 7)*

## Show Time!

As you step up to the podium, you will not be relaxed — but you must appear relaxed. Let passive breathing keep anxiety from taking over your voice. Take 10 low relaxed breaths to center yourself.

Once you've relaxed, you can begin your speech. Be sure to avoid a tone of voice that alienates your audience by talking at them instead of to them. Use a conversational style of speaking. Speak as if you were talking intimately into the ear of one person. During the speech, focus on individuals, talking directly to that person.

Remember the techniques you've learned, such as pacing, variety, timing, consonants and moments of silence. But don't focus so much on technique that you forget why you're speaking and what you're saying. You want to be polished, but not mechanical.

## Preparing Speeches that Make People Listen

*(continued from page 6)*

can't use support in this position. Keep your arms and shoulders loose and free.

Some practical tips for preparing for the day of the speech:

- **Avoid caffeine (it dries out the throat).**
- **Eat something light at least two hours before the speech — but skip dairy products (they are mucus-producing and will make you sound as if you need to clear your throat).**
- **Drink plenty of water.**
- **Visualize yourself making the speech.**
- **Practice voice warm-up techniques.** ■

# When Your Speech Is a Sales Call

Even if your job title doesn't include the word sales, all business comes down to selling yourself and your ideas. You're trying to motivate others to follow your actions or recommendations. Just as you prepare to give a speech, use these same voice preparation techniques when planning for a one-on-one or group meeting. If the business speech is your solo, consider the sales call your duet. The only catch is that you're not exactly sure of the words or music. For this reason, sales calls are much more volatile and improvisational. You're not the only one in control.

But there are tools you can use. Just as you learn as much as you can about your client before the meeting, you can go through the voice preparation, resonance and full body support techniques. Your voice is the most powerful tool you have to project confidence and assurance.

### *Establishing the Relationship*

If people like the sound of your voice they will want to listen to you. Creating resonance in your voice helps you establish a good relationship with your client.

Once you've researched your client's issues and needs, write these out in schematic form, using the money-word consonants and power pauses to bring attention to what you want your client to remember the most. Tape record yourself to make sure you've covered everything.

### *A Friendly Opening*

The opening is crucial in any sales call, particularly the cold call. People make up their minds within the first three notes, or beats, of your message. Your objective at this stage is to create a friendly atmosphere, using an upbeat tone. Listen to the tempo of the client's response. It will tell you want they expect from the encounter. Listen also for the client's pace and style, and respond in kind. This will help you build trust.

Don't let the friendly chatter stage go on too long. Lower your tone to indicate you're getting down to business. Bring out the consonants for clarity and the power pauses for impact. Your client, like most people, will tend to respond in the same tone you are using. Remember to leave time for the client to respond. You should be doing more listening than talking at this stage.

### *Asking for the Sale*

When it's time to ask for the sale, be concise and specific. It may be appropriate to raise your pitch and volume slightly. Some people even move physically closer to the client when asking for the sale. Make sure you don't over-do it, though. If you're moving into some-

*(continued on page 8)*

## How to Use Voice Mail Effectively

Voice mail is a fact of life in business today. You can use the voice techniques discussed here to make your voice mail messages really count.

Preparation is the key. When the call is an important one, try these six steps to make sure you leave a voice message that will get you the results you want:

1. **Write down what you want to accomplish with this call or message — what is it you want to see accomplished, changed, put into action or concluded by this message.**
2. **Have the information you'll need during the call or message (notes from your last meeting, product information, etc.).**
3. **Organize your message into a sequence of topics in order of importance.** With different voice mail systems, you have different amounts of time to leave your message.
4. **Ask for a specific action.** Be clear by using voice color, consonants and rhythm to highlight your most important issues.
5. **Be prepared to wait for a response.** You may even need to leave one or more messages. Have notes ready so you remember what you said in the first message. You may even mention that you will try calling them back at a certain day and time.
6. Finally, **decide when to stop playing phone tag.** You can leave a message that is very direct, suggesting a meeting time and place, or a number for them to call you to confirm that they received your message. Be brief. Nobody likes long voice mail messages.

### When Your Speech Is a Sales Call

*(continued from page 7)*

one's physical space, make sure you lower your volume so you're not invading on two fronts. Once you've asked for the sale, use the power of silence to give the client room — and time — to say "yes."

Soft sales are more relationship-based. You may have a longstanding history with certain clients, but not every visit or call results in a sale. The focus of your visits or presentations is to give a positive view of your company and its products or services. Naturally, you'll want to make sure your voice is one they look forward to hearing. ■

**For tips on making the sound equipment support your voice, go to: http://my.summary.com**

## Using Your Voice on the Job

Whether or not you are in a voice-intensive job, such as radio broadcasting, your way of speaking has a significant impact on how you are perceived and on the opportunities for any advancement. Whatever your profession, good speaking skills are essential; unfortunately, there is not much formal training in this area. This article looks at a few areas where your voice plays a crucial role on the job.

### *Voice Power for the Rising Executive*

Executives need a voice that commands respect and projects authority. Your voice needs to convey the sense of being in control; in difficult situations, it must be able to show dissatisfaction without reflecting anger and be able to calm the emotions of others. It is important to use the same tone when talking with subordinates as with superiors. Strike a balance between sounding condescending while showing concern and sympathy when appropriate. Some people have a distinctive sound or accent to their speech that can work in their favor. Barbara Walters' slight lisp is her unique trademark. Perhaps because of it, she is always careful to speak slowly and clearly.

Managers and executives are also often called upon to motivate employees for less-than-enviable tasks. For anyone who wants to advance in a corporation, such skills are essential. To be a great motivator, your speech needs to not only touch the hearts and minds of others, but also literally stir them to action. Even if you are not motivated yourself, as a business leader, you will need to sound that way. The tone of your voice must be able to convey how anything negative (i.e., working weekends) can be turned into something positive (i.e., meeting new company goals and gaining more market share). Having your pitch rise at the end of your sentences will indicate increasing energy and enthusiasm.

### *Telephone Etiquette*

When your only means of communicating is via the telephone, you have no visual clues to help assess the other person's moods or responses. Use listening skills to help you set the pace of the conversation. Speak clearly and use frequent pauses to invite responses. Visualize the person you are speaking to and project your voice through the mouthpiece. ■

## Voice Skills for the Job Interview

Everyone knows the importance of researching a company they will be interviewing with, developing a clear idea of why they are the right candidate for the position, anticipating likely questions, and preparing appropriate responses.

Don't stop there. Your voice represents a third of the total first impression you will make with the interviewer. Put enthusiasm in your tone that shows you want to learn more about the company, the position and opportunities for advancement. Ask a lot of questions and practice good listening skills.

Silence is indeed golden. Don't offer any unnecessary information.

Consonants can be used to highlight the positive aspects of your qualifications and work history. Pacing is important; you need to communicate personal credibility while bonding with your interviewer.

## In Small Groups, Concentrate on Intimacy

When presenting to a group of less than 10, use a technique that professional singers use: concentrate on intimacy. Act as if you were singing/speaking into the ear of one person. Become a part of the group. Use inflection in your voice to allow frequent questions from everyone. This will help you identify the key decision makers within the group. Watch the interactions among the group.

When presenting to more than 10 people at a time, you can't count on conveying intimacy, but rather you need to use more of the techniques for giving a speech: full-body support and a resonant, committed tone. If you need to be seated during such a presentation, you can practice support by sitting forward in your chair, placing yourself in the three o'clock/twelve o'clock quadrant, with one leg in front and the other off to the side (and a little behind you). Press into the floor, balancing with the balls of your feet.

## Presentations and Conversations That Get Results

by Darlene Price

### THE SUMMARY IN BRIEF

For many people, presentations are one of the most difficult parts of their job. Whether it's speaking to a roomful of people, explaining your budget to the CEO, pitching to a potential client, leading a departmental meeting or presenting remotely via the Internet, otherwise effective and valuable employees struggle to drive home their message and persuade their audience. Even experienced presenters can fall flat on their faces when the stakes are high.

Rambling, nervousness, excessive detail, overreliance on slides, lack of focus on the audience: These are all common problems — and all easily corrected with *Well Said!*, the complete how-to-do-it guide to delivering targeted, memorable presentations that get results in every business situation.

The key to truly great presentations is to understand your audience's point of view and to tell them what's in it for them. *Well Said!* helps you make this crucial audience assessment, then carefully analyzes the mechanics of stellar presentations. It is packed with tried-and-true tips, tricks and techniques based on the author's extensive experience, industry research and client surveys.

Believe it or not, you can become comfortable — even enthusiastic — about presenting yourself and your message with clarity, credibility, and confidence by following the expert guidelines in *Well Said!*

### IN THIS SUMMARY, YOU WILL LEARN:

- How to stop worrying about protecting your presentation and start connecting with your audience.
- Ways to organize your presentation with persuasive logic and an effective structure.
- How to ensure a dynamic, confident delivery every time that will engage and involve your audience.

## The Most Important Element of All

When I conduct executive-level presentation coaching programs, I often begin by waving a crisp $100 bill around the room. "You'll win $100 if you can answer this question correctly: What is the most important element of every presentation?"

The correct answer? The audience. In the hundreds of presentation coaching programs I have conducted, fewer than 10 people have won that $100 bill.

By getting to know your audience first, addressing what is important to them, and solving their issues, I promise you'll win much more than a $100 bill.

Here are 10 critical questions to ask about your audience:

1. Who are they?
2. What are their expectations and why are they here?
3. What are their main issues and challenges?
4. How does your message solve their problem?
5. What do you want them to do?
6. What is the single most important idea you want to communicate to the audience?
7. How much does your audience already know?
8. What are your audience's attitudes about you, the topic, and the environment?
9. What are their personality types?
10. What objections or questions might this audience have?

As you analyze your audience using the 10 critical questions, there are multiple resources to help fill in the blanks. Here are a few ways to gather critical information about your audience:

- Send out a questionnaire or survey.
- Read the latest articles relating to your audience's industry, company or interests.
- Visit their facility, store, or office.
- Study their competition.
- Converse and mingle with participants as they enter the room.
- Ask questions during the presentation to gather on-the-spot feedback.

## How to Persuade a Decision Maker

The skill of persuasion is critical in presenting to decision makers. To be successful at affecting the beliefs and actions of others, you must not only understand what motivates people to act, but also how to use that knowledge to your advantage. As a general rule, people are motivated to act based on four reasons or four key payoffs. Think of them as the Four Ps of Persuasion: profit, pleasure, power and prestige.

I asked 237 senior leaders in Fortune 100 companies, "What qualities do you dislike most in speakers who present to you?" Here are the 10 biggest complaints:

1. Gives too much information.
2. Rambles on.
3. Fails to tie the message to the audience's key business drivers.
4. Lacks confidence and enthusiasm.
5. Hasn't done any homework.
6. Doesn't anticipate audience questions and objections.
7. Fails to ask for what the speaker needs from the decision-maker.

8. Responds defensively to decision makers' feedback.
9. Lacks an executive image.
10. Doesn't teach anything new.

The three top communication qualities deemed most promotable and persuasive are: Clarity, Conciseness and Credibility. Practice the Three Cs to convince decision makers: Be clear, concise and credible. ●

## Establishing Credibility

Enthusiasm is the outward expression of sincerity, and sincerity is an inner quality that one radiates.

The decision makers in your audience use three senses to evaluate you and your credibility: sight, hearing and touch. I call these the Visual, Vocal/Verbal and Relational Factors of perception.

First, the Visual Factor considers how the audience sees you. The goal is to hone your body language, dress, appearance, grooming, executive presence, the room setup and environment. You need to be intentional and conscientious about everything the decision makers see.

Next is the Vocal/Verbal Factor — how your audience hears you. The objective in this area is to enhance your voice tone, vocal variety, and use of persuasive words and phrases while applying persuasive logic to your presentation structure. Every word and phrase you say reinforces the audience's perception of you as authoritative, intelligent and well prepared.

The third sense, touch, is the basis of the Relational Factor. It refers to how the audience feels about you. Do you and your message "touch" them in a meaningful and positive way? Your audience focus, customized message, friendly demeanor, humor and attention to detail create trust and emotional appeal. ●

## Crafting Your Presentation

A persuasive presentation consists of three sections, delivered in this order:

**I. The Opening** (tell them what you are going to tell them): Set the stage by providing your audience with a well-organized opening consisting of three key elements: introduction, attention-getter and executive preview. Quickly establish your credibility and enthusiasm, and clearly state the purpose of the presentation. The attention-getter is a magnetic tool that keeps them watching or listening. Startle them with a surprising statistic or fact related to their industry or your topic. Ask a rhetorical thought-provoking question followed by a pause. Use humor, which may include an amusing personal story, funny saying, witty example or clean joke. The executive preview shows that you are organized and prepared with a well-thought-out plan. They immediately see that you are going to lead them down a logical path and not waste their time.

**II. The Body** (tell them): The body of your presentation consists of three elements: key points, supporting material and transitional statements. Select three key points. There's an age-old principle in communicating that suggests when things come in a pattern of three, they are inherently more satisfying, easier to remember, even funnier. Add supporting material: feelings and facts; abstract and concrete; heart and head. A persuasive presenter seeks first to connect on an emotional level by eliciting positive feelings; then he or she offers concrete evidence to confirm those feelings. Transition statements between key points notify the listener that you are about to change the course of direction. It leads your audience from one key point to the next.

**III. The Close** (tell them what you just told them): Conclude your presentation with a powerful, persuasive close that consists of three key elements: summary, call to action and appreciation. Summarize the key points and benefits of your message. Tell your audience exactly what you want them to do in response to your message. And, finally, thank them for their time and attention.

Presenters who follow this proven format enjoy more successful outcomes. It makes it easier for you to prepare, present and persuade. It makes it easier for the audience to listen, remember and respond. ●

## Developing Content That Involves and Engages Your Audience

As adults, we are active, hands-on learners. Give your listeners an opportunity to participate and engage in the learning process. Adult learners want presentations that focus on real-life problems and tasks rather than academic material. Learning is active: "Tell me, I forget. Show me, I remember. Involve me, I understand."

Though their styles may vary greatly, memorable speakers have one thing in common: they know how to create a connection with their listeners. Here are 20 proven techniques to help you do the same:

1. Conduct a pre-session survey.
2. Invite introductions.
3. Record their wish list.
4. Request a response or ask a question.
5. Show a photo.
6. Play a video or audio clip.

7. Use creative props.
8. Set up a demonstration and invite audience members to participate.
9. Conduct a quiz or host a game show.
10. Give away prizes.
11. Ask the audience questions during the presentation.
12. Use activities, games or exercises.
13. Ask for volunteers.
14. Play fill-in-the-blank.
15. Facilitate a discussion.
16. Focus on benefits to the audience.
17. Provide practice or application opportunities.
18. Use learning aids.
19. Use humor.
20. Tell a story to illustrate your points.

A big part of your job as leader and presenter is to motivate people to reach certain goals; to influence their thinking; to adopt your point of view. You will need to engage their emotions. A good story is key. The "five-part STORY method" crafts the tale into a concise and meaningful engagement opportunity:

1. **S**: Set the scene with time, place and characters.
2. **T**: Tell the trouble. What's the obstacle, conflict, problem or scary part of the story?
3. **O**: Overcome the obstacle. What is the climax of the story?
4. **R**: Reveal the reward. What was the happy (or unhappy) ending? What lesson was learned?
5. **Y**: You-focus. Ask a question or make a point that transfers the story to the audience and their action. Employ a *you* question, such as, "Have you ever... ?" ●

## Designing and Presenting Effective PowerPoint Slides

Despite the ample criticism that surrounds PowerPoint, I like the tool and recommend using it when the message calls for it. The key to remember is this: You are the message. Slides do not persuade, inspire or connect with an audience — only people do. Therefore use slides to support you, not replace you, upstage you or distract from you. Don't use them as your notecards or crutch.

Here's a condensed checklist of my PowerPoint best practices in the areas of design, rehearsal and delivery of slides:

- Face the audience, not the screen.
- Ensure readability by using a 28–30 point font.
- Follow the 6x6 Rule: limit text to six lines of copy per slide/no more than six words per line (36 words total).
- Use compelling, relevant photos.
- Manage time and number of slides with the two-minute average.
- Rehearse with slides using the pyramid approach: must say (10–15 seconds); need to say (60 seconds); want to say (if time permits, 2 minutes to 2 hours).
- During your presentation, black out the screen periodically.
- Seamlessly navigate to any slide by using a printout of numbered slides. ●

## Preparing for a Powerful Performance

Truth be told, you don't want to get rid of the butterflies because they are carriers of energy and enthusiasm. Adrenaline is your friend. The key is to control, harness and focus that surge of adrenaline so that it works for you. Control your nervousness and anxiety by practicing STAGE MIGHT:

- **S**mile.
- **T**alk positively to yourself.
- **A**cknowledge the three audience truths: They believe you're the expert. They want you to succeed. They don't know what you're going to say.
- **G**reet and meet the audience before you speak.
- **E**xercise lightly beforehand.
- **M**emorize the first and last minute of your presentation.
- **I**nteract with your audience immediately.
- **G**ive. Give. Give. Focus on giving to the audience.
- **H**old a dress rehearsal.
- **T**rust yourself.

Most of the time, what presenters give the audience is their rehearsal presentation. Think about it this way: If you have not practiced the entire presentation beforehand, you are giving a dress rehearsal — and it shows.

Here are some techniques you can employ to make sure your presentations are not dress rehearsals, but award-winning performances:

- Visualize your success.
- Record and listen to the main parts of your presentation often to familiarize yourself with the content.

- Stand up and deliver your presentation aloud.
- Deliver it to a dress-rehearsal audience in the actual setting if possible.
- Videotape at least one rehearsal, followed by playback and evaluation.
- Time the presentation.
- Rehearse often enough to be comfortable, but avoid over-rehearsing.
- Memorize the first minute and last minute of your presentation to create a positive first and last impression.
- Repeatedly recite the top three to five benefit statements and the main ideas of your presentation.
- Anticipate tough questions the audience may ask.
- On the day of the event, arrive early and do a technical run-through. ●

## Using Effective Body Language to Show Confidence

When you present, you send two kinds of messages to your listeners: verbal and nonverbal. While you may be communicating verbally through the words you speak, a more memorable message is conveyed nonverbally by your body language and voice tone. You cannot avoid sending nonverbal messages to an audience, but you can train yourself to send the right ones.

In body language, you are equipped with at least five powerful tools to communicate your message:

**1. Eye communication:** Eye contact is the most important nonverbal tool you have; it is the cement that bonds a speaker with his or her audience. There is no surer way to break that bond than by failing to look into the eyes of your audience members. A lack of eye contact implies a list of offenses: disinterest, detachment, insecurity, insincerity, shiftiness or arrogance.

**2. Facial expressions:** When you speak, your face serves as a billboard communicating to others your attitudes, feelings and emotions. People recognize almost every emotion simply by observing a person's facial expressions. A genuine smile conveys interpersonal warmth, empathy and friendliness. If you smile easily, your audience is likely to as well.

**3. Gestures:** Gestures are the punctuation marks of body language. They support your message and help the audience interpret your meaning. When used effectively, gestures increase a listener's understanding, attentiveness and retention. Gestures serve as a positive, effective outlet for extra adrenaline. Loosen up and let your body move naturally.

**4. Posture:** Good speaking posture involves your whole body from head to toe. It's a revealing indicator of self-assurance, attitude and energy level. Good posture aligns your body to optimize breathing. This allows you to project your voice more effectively. Try the following: Pull in your stomach. Balance your weight evenly. Keep your head and chin up.

**5. Body movement:** Meaningful body movement is a tremendous asset to your delivery style. Here are a few guidelines on how to move with meaning: Step away from the lectern. The more of your body the audience sees, the more of your message they believe. Have a mobile microphone so you are free to move. Change your body position to transition between points. Step forward for emphasis. Avoid pacing or swaying. Move to both sides of the room to be equally accessible. ●

## Conveying a Professional Image Through Dress and Appearance

Dressing appropriately not only makes a great first impression, it also affects your credibility as a speaker and as a person.

• **Executive attire for women:** Wear a two-piece matched skirt suit or pantsuit. Choose a conservative color, such as navy, dark gray, dark brown or black. Ensure that all garments are pressed and have a well tailored fit. Wear a silk or cotton blouse. Solid light colors work best. Jewelry should be minimal.

• **Executive grooming for women:** Make sure your hairstyle is current, neat and clean. Apply makeup sparingly, but do use it. Business etiquette guidelines suggest not wearing any scent at all.

• **Executive attire for men:** Wear a high-quality wool suit, well tailored in dark pinstriped or plain tones. Make sure your jacket is buttoned when you're standing or walking. Do not close the bottom button. Ensure that your tie is tasteful and, preferably, made of 100 percent silk. The size of the knot should be small. A 100 percent cotton, long-sleeved, pointed-collar business shirt in white or blue is a traditional safe choice.

• **Executive grooming for men:** A classic haircut is best. Keep it short, neat, clean and current. The clean-shaven look is most common among business executives and tends to create the best first impression. If wearing a beard and/or mustache, keep it short and neat. And, clean, well-manicured nails solidify respect. ●

## Speaking with the Voice of Authority

Your audience of decision makers is influenced by what they hear. If they are distracted by the way you talk, they will miss your message and fail to take the action you want.

The key to discovering your best voice is cultivating six key vocal qualities:

**1. Use a listener-friendly tone of voice**. Tone is how you say something. Your tone is your most important voice attribute because it conveys your emotions and attitudes. Set a microcassette recorder beside your telephone and click it on when you answer. Afterward, play back the recording and listen for your tone of voice. What feelings and attitudes do you hear?

**2. Control your pitch.** Pitch refers to the highness or lowness of your voice. Speaking in the lower register of your voice range sends the message of credibility and command. Think of your voice as a musical instrument. Sing the *ah* sound at various pitch levels, traveling up and down your vocal scale. Recite the letters of the alphabet while ascending and descending within your range. This exercise builds awareness of your various pitch levels and builds confidence to use more of the lower tones available to you.

**3. Calculate and vary your pace.** Pace, or rate, is how quickly or slowly you speak. The average rate of speech for most presenters is 150–160 words per minute. It's a rate that is quick enough to keep the listener interested, yet not so fast that it loses or frustrates the listener.

**4. Use volume to speak up and speak out.** A timid, weak, or inaudible voice is not persuasive. You have a message and a purpose for presenting it, and you have earned the right to be heard. Give yourself permission to project your voice with confidence.

**5. Use inflection to influence decision makers.** A monotone voice is a listener's No. 1 pet peeve. The remedy is inflection — adding special emphasis to a word by modulating your tone, pace or pitch.

**6. Practice articulation to speak clearly.** All words are pronounced correctly and each syllable is enunciated intelligibly. Warm up your mouth muscles by practicing a few tongue twisters. ●

## Leveraging the Language of Leadership

Effective leaders use language that captivates, motivates and persuades others. They take a position and state a point of view with words and phrases that strike at the very heart of an issue.

In my professional opinion, the three most compelling words in the language of persuasion are one's own name, "you" and "your." "You" answers the audience's unspoken question: "What's in this for me?" Often the least persuasive words are first person pronouns, such as "I," "me," "my" and "mine."

It may help to think of a presentation as dining with a companion. If you talk about yourself the whole time, your friend will likely become exhausted (if not bored and uninterested) because everything is all about the speaker, not the listener.

To lead is to act. When you speak with action verbs you connect the audience to your proposed outcome. Through your verbs, you create momentum, drive and energy.

Be sure to employ plenty of benefit words and phrases. The decision makers in your audience buy benefits, not features or functions. Never assume that listeners will figure out for themselves what the benefits are. ●

## Handling Q&A with Credibility and Finesse

With all the preparation and hard work you put into your presentation, answering the questions should be easy. However, for many, the Q&A session strikes fear and dread in their hearts. Here are a few tips on how to approach this critical and interactive aspect of your presentation:

• *Adopt and convey a positive attitude.* Take on a mindset that embraces interaction with the audience — including objections, feedback and discussion.

• *Anticipate the questions your audience is likely to ask.* Write down these questions and think about the answers.

• *Rehearse your replies aloud.* Rehearsal will greatly reduce your nerves and help portray you as the expert you are.

• *Prepare questions you want to answer.* This is a tried-and-true technique used by masterful politicians. To segue smoothly, you can say, "One question I am often asked is …"

• *Give the audience guidelines.* Let them know when you would like them to ask questions.

• *Display confident, open body language.* When you take a question, be sure to turn toward the questioner.

• *Listen carefully to the entire question.* Be patient. Force yourself to listen to the entire question and make sure you understand it.

• *Repeat the question.* This habit is the sign of a pro. By repeating or paraphrasing every question, you ensure that everyone in the room hears it.

• *Follow the K.I.S.S. Formula.* Keep your answers short and simple.

• *Answer only the question that was asked.* Many presenters dig a hole for themselves by bringing up information that was not requested.

• *Conclude with a rehearsed summary.* Don't end your presentation with the Q&A session. As the presenter, you get the last word. Make sure your last words are actionable and memorable. ●

## Planning and Conducting Powerful Conversations

Your most basic responsibility as a leader is to connect with those around you. You are listening and talking with people; you are having conversations. Ideally, those conversations are powerful, influential and meaningful. Are your conversations creating the outcomes you desire?

You can learn to achieve results by following four basic but important steps:

**1. Establish mutual objectives and purpose.** An effective leader goes first and gets the ball rolling, especially if the topic is emotionally charged or laced with conflict. The critical success factor in the step is sincerity. Be open, approachable and transparent. Your candor and authenticity create an emotional connection with people that in turn gives them the green light to open up and express what they want to accomplish.

**2. Express mutual needs and wants.** The second step — the critical success factor — is seeking understanding. An effective leader seeks to understand the other person; to gain clarity by probing for his or her wants and needs. The second part of step two is clearly stating your own wants and needs. In advance of meeting with the person or group, clearly define your own desired outcome in your own mind.

**3. Explore new possibilities.** The key success factor in step three is curiosity. All too often, leaders skip this critical stage. Their results-oriented personality urges them to jump directly into an action plan. It's critically important, however, to invest some extra time to imagine all the possible options and alternatives. A great leader challenges his or her team to stretch their thinking and go beyond textbook answers.

**4. Commit to mutual action.** The key differentiator between powerful conversations and the ordinary run-of-the-mill variety is measurable outcomes. Action is the critical success factor in this step of the process. It's critical that all action items are clear and explicit, and that each person commits to his or her to-do list. ●

## Writing Emails That Get Results

Make sure your emails get the attention and response they deserve with these best practices for effective emails:

- Make the subject line clear and meaningful.
- Keep your message short.
- Communicate first things first.
- Tell recipients what action you want them to take and give due dates.
- Organize your points using bullets or numbers.
- Make sure your intent is clear: start with your conclusion and then explain.
- Use proper "Netiquette" and email formatting. Show thoughtful consideration for the other person.
- Realize your email is not private. ●

## Facilitating Effective Meetings in Person and via the Telephone

For some companies, meetings are highly valued and considered to be vital vehicles of critical information.

The following tips and techniques will help you run effective, efficient meetings, whether in person, by phone or by video conference:

• *Don't meet if you can avoid it.* Don't just have a meeting because it's Monday morning, or because you haven't met in a while and feel as though you should.

• *Determine your objective and agenda.* Complete this phrase and you'll have your objective: "At the end of this meeting, I want this group to _____." Use the agenda to set clear expectations and communicate accountability.

• *Invite the right people.* Make sure the right people are there. You need no more attendees than that. Be selective and invite only those people who can significantly contribute to the outcome.

• *Limit and prioritize topics.* Cramming too much content into a meeting dilutes the impact of each topic and restricts participants from quality discussion and feedback. Rank the topics from most to least important on the agenda and cover them in that order.

• *Encourage involvement.* Encourage all attendees to participate and contribute. Invite people to speak. If a person is attending, that person is responsible for contribut-

ing. Consider assigning everyone a task prior to the meeting.

• *Prepare a strong opening.* Craft a well-planned opening, as you would for a formal presentation. As a leader, you need to convey enthusiasm.

• *Manage the time.* The true sign of a professional is to start and end the meeting on time. Do not spend time recapping for latecomers. Display a clock. Don't allow the agenda to be derailed.

• *Bring the meeting to a close.* Leave 3 to 5 minutes for the summary. Briefly recap each topic. Gain agreement on tasks, timelines and responsible individuals.

• *Follow up promptly.* Solicit feedback regarding the meeting's purpose, topics, process and outcomes. Find out what worked and what could be better next time. Prepare and distribute a meeting summary. ●

## Delivering Winning Webinars

Effective webinar presenters must rely more heavily on voice and visual aids as the primary communicators. The following guidelines are designed to help you improve your ability to present powerfully and persuasively in the virtual presentation environment.

Before the webinar, plan, prepare and rehearse. Ideally, schedule the webinar to begin at 15 minutes past the hour. Times such as 10:15 a.m. and 2:15 p.m. are optimal to ensure participants' availability before or after lunch. Keep your presentation relatively short — typically no more than an hour if possible. Arrive 30 minutes early to ensure proper technical setup.

Open with a captivating attention-getter. Design and use more slides for a webinar than you would in a face-to-face presentation. Stand up to present; exude enthusiasm and use an upbeat tone of voice. Use a high-quality headset or handset; avoid the speakerphone.

Interact with your audience frequently and change a visual element every 30 seconds. Close with a compelling summary and call to action. After the webinar, follow-up appropriately. Ask for feedback or conduct a survey to improve your next webinar. Send an email thanking attendees for their participation. ●

## Leading Team Presentations

Use the following guidelines for planning, rehearsing and delivering winning team presentations:

• *Appoint a strong leader or captain.* The team leader is responsible for total project management from concept development through the final presentation. Whether it's content, structure, presenters or logistics, the captain takes full responsibility for the overall outcome of the presentation.

• *Decide on three clearly defined goals.* Make a list of goals, then narrow it down to those that are most important. Focus on the three most essential goals you as a team want to achieve with this specific audience.

• *Prepare, prepare, prepare.* Know your audience. Organize your individual presentations as if they were each part of one continuous presentation delivered by several people.

• *Optimize individual strengths.* Assign each team member specific responsibilities regarding content, delivery, visual aids, research, handouts and deadlines — based on each person's strengths and expertise.

• *Ask the lead presenter to facilitate Q&A.* The leader should respond immediately with a brief answer and then direct the question to the member who is best equipped to elaborate.

• *Rehearse as a team.* It's critical that the team practice together. It's the best way to ensure a high level of comfort with the presentation and each other. A full dress rehearsal with visual aids is a must for successful team presentation.

• *Remember, you are always on.* In a team presentation, everyone is being watched, even when they're not presenting. Stay alert. Listen. Show interest in what's being said. Pay attention to the audience. You may pick up signals that help you gauge audience response and then tailor your comments and presentation accordingly. ●

## Afterword

Effective presentation and communication skills will not only get you noticed, remembered and promoted more often and more quickly than any other skill set, they will also help ensure that you get more of what you want and deserve in life. By acquiring these abilities, you will begin enjoying a whole new level of success — personally and professionally. ●

## Create the Life You Want On All Fronts

In the world of sales, success requires a special combination of attitude and implementation. When a go-getter says they will do whatever it takes to earn business and achieve the life they dream about, they actually have to get out there and do the work. They must be ready to act in big ways.

Brandon Bornancin is an author, CEO, and Founder of Seamless.AI, a Top 50 LinkedIn Startup. In ***Whatever it Takes: Master the Habits to Transform Your Business, Relationships, and Life*** he shares his secrets to success with an unmatched energy and passion that will inspire you to get out and make things happen.

There are many books out there that share success stories and inspire us to want more out of our business, relationships, and personal lives. Bornancin's book is different. His book is motivational, to be sure, but it also provides practical solutions and steps you can start taking today to create the life you want on all fronts, no matter what is happening in the world around us.

During the pandemic, Bornancin's company grew an astounding 300% and 50 of his employees received promotions. He credits their success to the principles he shares in this book. This book will fire you up and tell you how to keep the flame burning over the long term, even during times of unprecedented uncertainty.

If you are ready to make a complete transformation in your personal and professional life, there is no better time than right now and there is no better book to begin your journey than *Whatever it Takes.*

## Preparation

Sales training, courses, experts, and books all set out to help you achieve your goals but many of them miss the mark. At times contradictory and at other times outright confusing, Bornancin recognized that much of what he was consuming to get better was just like jumping on the bandwagon of the latest fad diet. The results were limited and never lasted. One of the missing ingredients was the importance of preparation. Specifically, you have to fully commit to the process and to the work, holding nothing back.

You have to overcome the biggest obstacles to your success, which lie within your own mind. "Your habits, mindset, beliefs, and choices can be changed at any time–no matter who you are, where you are going, what you believe, or what you are going through." The first step is to prepare yourself for a radical shift by eliminating self-defeating thoughts. You have to stop telling yourself that you can't do it or that you don't deserve it. Never listen to these thoughts again. Believe that you have exactly what it takes to become successful and that you deserve that success. Eliminate every and all excuses and decide to do the work.

We all hold a set of beliefs that help shape who we are and what we value. The problem is that some of those beliefs hold us back, rather than help us move forward. "Success in life is based on about 10 percent of what happens to you and 90 percent how you respond, believe, and react." Confronting and eliminating those responses, beliefs, and reactions that do not serve you are a major part of becoming prepared to do whatever it takes.

Naturally, the beliefs that limit you will be different from the beliefs that limit someone else. It's a very personal thing. However, Bornancin has encountered some that show up again and again and stand in the way of becoming fully prepared for maximum success. Get rich quick schemes should be ignored. If you want to get rich, you have to do the work and it will be anything but quick or easy. Eliminate the false promise of these systems.

Many people are bogged down in regrets from the past. You have to let the past go and focus on creating a future of your own making. Regardless of what happened in your childhood or the failures you encountered as an adult, you can still make the future you want. But you have to cut loose the regrets or complaints about what happened earlier.

Finally, too many people focus on saving money instead of making money. Becoming overly focused on saving instead of making and investing money leads to a scarcity mindset. Scarcity thinking breeds anxiety and holds you back. "You can only save so much money with what you make. However, your earning potential is limitless. Don't save money. Focus on investing in ways to make more money."

## Mindset

Your mind is fully in control of what you can and will achieve. What you think about and focus on actually becomes your reality. This is powerful. You can use your mindset to dream and achieve big or you can use it to stay small. The choice is entirely yours. You get to define your destiny. Whatever you believe will "make or break you." Bornancin asks you to "free your mind and your heart to dream big so you can believe that anything is possible."

The first critical mindset shift is to move from playing defense to playing offense. What he means by playing offense is that you need to "go all out to maximize your sales, marketing, product development, customer success, branding–you name it." Strive to grow your prospect list so much that you do not rely on one customer. You need a "wide portfolio of investments you've made with all of your activity, time, effort, capital, and resources."

Goal setting is a major component to getting the right mindset for success. Bornancin recommends SMART goals, which are defined as being specific, measurable, attainable, relevant, and time based. You must set SMART goals for every area of your life, be it sales figures, the number you want to hit on the scale, or the state of your relationship.

Once you have goals set, you must set out to achieve them with an insatiable appetite. You have to go all out, each and every day, putting in the hard work that is required to get what you want. "There is no way to sugarcoat this." If it were easy to make seven figures in sales, everyone would achieve it. Before you start, ask yourself if you are "willing to invest 1,000 hours into mastering this and working on this every day to become the best that you can be." If the answer is no, you will not be able to do it. You have to give it your all and never, ever give up.

## Habits

Having the right mindset to succeed is a massive step in the right direction but your aspirations will fall short if you don't turn those mindsets into action. You have to drop bad habits and foster the best habits for success. You cannot maximize your potential without walking the walk. Making a habit out of giving it your all is the only action plan you really need. Bornancin shares some specific habits that have helped him do just that. Everyone needs a "guiding light" that focuses their efforts each and every day. For Bornancin, he aligns his actions with his vision through asking himself a series of questions, taken verbatim from the book:

1. Does this help maximize my wealth?
2. Does this help maximize my health?
3. Does this help maximize my potential?
4. Does this help positively impact 1 billion people?

If he can answer those questions in the affirmative, he moves forward. If he cannot, he does not. Simple as that. Your guiding light will differ from his and from anyone else you know. Design them with your integrity in mind and "execute tasks aligned with your guiding light."

Once your guiding light is developed, you can take an inventory of your habits. "Identify the habits that are moving you towards your goals and double down on augmenting them." Habits that are moving you away from your goals should be minimized or eliminated completely. It's hard work and it will not be fun. As the saying goes, old habits are hard to break. But breaking them is critical to staying true to your guiding light and achieving what you want to achieve. When you practice a new habit that is tied to your guiding light, celebrate that! It will help fuel your fire to keep moving forward.

Prioritization is the next crucial component. Each and every day you need to make a complete list of tasks that need to be accomplished. Those tasks must be ranked "with clarity and confidence. Focus on the activities that will generate the greatest return versus the ones that will have minimal impact."

> Work and act the way that you expect others to work and act."

Communication with your contacts must be an ongoing effort. You have to actually care about them as human beings and communicate that care on a regular basis. If they only hear from you when you want to sell them something, they will not be open to talking to you at all. "Your prospects and your network need to know that you care so much about them and that you would do whatever it takes to maximize their success, even if it means taking a bullet for them."

## Secrets

Bornancin has a set of secrets that he is willing to share with his readers. These are practices that are far too often evaded or ignored by people who think they are doing what they must do to hit that target. The secrets are closely tied to values and integrity and they can be harder to live by than you might think.

Leading others, which becomes necessary once you achieve a certain level of success, is far more complicated than just leading yourself. "Work and act the way that you expect others to work and act. Bring the team up. That means considering the tone of every message you send–in person and in writing–so it aligns with how you want people to see you and how you expect them to act."

The team, not you personally, should be given recognition and credit when things go right. Nothing good happens without the full effort of the whole team. Recognize them for their effort and valuable contributions, regardless of what percentage of the work they did to make the outcome happen. When it comes to mistakes or failures, the opposite tact is better. Be the very first person to take responsibility when things go wrong. "Your team will respond with greater loyalty and admiration and will assume their own responsibility because they will respect you for accepting the ultimate responsibility for the group's performance."

The greatest secret that Bornancin can share with you is something we have all heard before but he means it and it bears repeating. "Do what you love and love what you do and you will never work a day in your life." He personally puts in 14 to 18 hours a day, every single day of the year. He does not take breaks. He shows up, day in and day out for one very simple reason: he absolutely loves what he does.

When he says you have to do what you love, he means "you really need to figure out deep down what you love and go do that all day long." The key to making this aspect work is learning everything you need to learn and giving yourself access to all the tools you need to succeed.

Rest and recuperation are necessary, especially when you are putting in long days every day of the week. Bornancin and his super-productive lawyer wife cannot take long vacations. Five days into a week-long trip they become bored and anxious to get back to their work and routines. Instead of taking one long vacation every year, they opt to take four mini vacations throughout the year. Every quarter, which works perfectly for sales professionals, they take a short vacation to celebrate all that they achieved in the previous 90 days. This "rejuvenates the mind, body, and soul and prepares them for the next 90-day sprint."

Finally, you must pose some big questions to yourself that will ensure you do not lose your way when your life changes alongside your success. Instead of being driven solely by money, "start doing things because of your mission, your vision, and your purpose to change this world for the better." Focusing on this much bigger purpose will keep you motivated and inspired for the rest of your life. Bringing other people value instead of bringing fatter checks to your bank account makes your relationships mutually beneficial. As a bonus, the money starts flowing faster, too!

When Bornancin was a college student, growing his first startup and achieving wild success, his personal life was turned upside down. His mother was diagnosed with early-onset Alzheimer's that took her memories, her communication ability, and with it, her future goals and aspirations. She was waiting–for the right time or the right conditions to reach for her dreams. She never got the chance because of disease. Bornancin learned that life doesn't wait for you. Nothing is guaranteed. If you want something, you have to get out there and take it. And that is what he is hoping you will do with the help of his book.

There are no excuses, only results. The time is now to start living your dream. No matter what is going on in the world, no matter what you have experienced in the past, you are in control of your destiny. You just have to fully commit, own your life, and make it happen. "The biggest mistake you can make in this life is to think that you have all the time in the world because you do not." You have to do whatever it takes, starting today. If you can do that, you can do anything.

# Sometimes Things Change… And So Should We

## The Legacy

*Who Moved My Cheese?* was written over two decades ago and still sells steadily around the globe. The book's riotous success was an utter surprise to the publishing world, particularly after its slow start. But author Spencer Johnson, who died at the age of 78 in 2017, knew he had something special. He worked tirelessly giving presentations and talks about the book and word began to spread about the big promise contained in the pages of this little book.

Executives started recommending it and companies started ordering the book for their employees, including Southwest Airlines who purchased nearly 30,000 copies. The book became a fixture on bestsellers lists with millions of copies sold in countries far and wide. Simple as the story may be, *Who Moved My Cheese?* has been credited with changing lives, saving marriages, and catapulting careers all over the world.

## The Premise

This classic business parable aims to teach readers how to react to change in the most beneficial and meaningful way possible. The story features four characters:

- **Sniff:** a mouse who senses change early on
- **Scurry:** a mouse who springs into action as soon as change is noticed
- **Hem:** one of the Littlepeople characters who out of fear denies that change is happening
- **Haw:** the other one of the Littlepeople who adapts to change realizing it can lead to something better

These four funny characters find themselves in a Maze searching for Cheese, but changes keep happening that make finding the Cheese a challenge. The "Cheese" in the story represents the things that people look for, sometimes all of their lives: a big house, ample money, good health, peace within, freedom to do what they wish, or even just the time and energy to pursue a hobby.

The "Maze" represents where humans spend all of their time in pursuit of Cheese. It could be the place a person lives, where someone works, or the relationships they have.

The characters represent the simple and complex parts of ourselves—both of which have advantages in different applications. Every person has their own Cheese and every person believes that getting the Cheese will lead to happiness. When we have the Cheese, we are very attached to it. When we do not, we are lost or even traumatized.

## The Story

Johnson set the scene for his story by telling readers about the four little characters "who ran through a Maze looking for Cheese to nourish them and make them happy." The mice, Sniff and Scurry and the Littlepeople, Hem and Haw, spent time in the Maze each and every day looking for their own special kind of Cheese.

Sniff and Scurry were simple-minded, as to be expected of mice. Hem and Haw were more complex with many emotions, beliefs, and desires when it comes to Cheese. Despite their differences, their early days in the Maze were very similar. They got up early every morning, outfitted themselves in jogging attire, and ran into the Maze looking for the right kind of Cheese.

Sniff and Scurry used "the simple trial-and-error method of finding Cheese." They would rush down each corridor of the Maze and see if there was any Cheese there. If there wasn't, they moved quickly to the next one. Sniff used his sense of smell and Scurry used his speed. The pair often went the wrong way, got lost, and had mishaps but in time, they eventually found their way.

The Littlepeople found life in the Maze more challenging as "their powerful human beliefs and emotions took over and clouded the way they looked at things." Ultimately, however, all of the characters found what they had been searching for "one day at the end of one of the corridors in Cheese Station C."

Things were easy for all of the characters now. They knew exactly where to find their Cheese and could easily navigate to it every day.

Even still, the mice kept up with a rigorous routine, rising early every morning as they had always done, racing their way to Cheese Station C. The mice even performed checks to make sure the Cheese supply was still ample and that nothing had changed at Station C.

The Littlepeople fell into a bit of a different routine as time passed, though. They started sleeping in a little later and took their time getting to Station C. They became comfortable and even complacent. They regarded the large stock of Cheese as their very own.

They came to believe that they deserved the Cheese, as they had worked long and hard to find it. Despite the fact that they didn't really know where the Cheese came from or how long it would last, they felt secure that the Cheese would always be there and for a long while, that was the case.

Hem and Haw were so comfortable in their success that they didn't see what was slowly happening right in front of them. Their supply of Cheese was dwindling to the point of disappearing altogether.

Sniff and Scurry, on the other hand, had taken the time to keep up with their routine and never take their Cheese for granted. They looked around Station C every day and noticed that things were changing over time. When the day arrived that there was no Cheese at all at Station C, Sniff and Scurry were not at all surprised, but Hem and Haw were aghast.

Sniff and Scurry got right to work, lacing up their running shoes and setting out in search of New Cheese.

Hem and Haw, on the other hand, felt they had been scandalized. They stormed around claiming that it wasn't fair. They demanded to know, "Who moved my Cheese?" They were stunned in disbelief. They wondered how this could have happened. "It wasn't right. It was not the way things were supposed to be."

When the Littlepeople returned the next day to Station C to find that it was still empty, they began to think about their problem. They debated whether or not they deserved this, deciding that they definitely did not. They argued with one another over why this happened. Cheese was extremely important to the Littlepeople so they intended to take a long time figuring out what to do next.

Meanwhile, the mice were well on their way to finding New Cheese. Driven with the simple purpose of finding it, they explored all options, including areas of the Maze they had never seen before. Eventually they arrived at Cheese Station N, where they found a big supply of New Cheese.

As time wore on, Hem and Haw became irritable, frustrated, and increasingly worried. Haw had a flash of determination and told Hem they should get out of Station C and go in search of New Cheese. But alas, Hem discouraged him, saying they were too old to try New Cheese and didn't need to get lost or make fools of themselves. Despondent, they returned to Station C each day to find it empty.

Finally, they decided to at least turn over every stone at Station C and make sure there really was nothing left. They got some tools and started working. They got up early, stayed long hours, and worked very hard to find Cheese at Station C. Of course, their search came up empty, but their futile efforts finally uncovered a revelation. They were doing things the same way over and over again, but nothing was getting any better. That had to change.

Haw asked himself, "Where am I more likely to find Cheese? —here or in the Maze?" He knew the answer. He visualized himself going into the Maze and was surprised when the thought put a smile on his face. He imagined that he would get lost from time to time, but his courage swelled as he realized he could find his way out of any missteps. With this newfound strength he said, "Sometimes, Hem, things change and they are never the same again. This looks like one of those times. That's

He came to understand that this unexpected twist, this change, could lead to something better than what he had before.

life! Life moves on. And so should we." With that, Haw ventured into the unknown to search for New Cheese while Hem remained paralyzed into inaction by his fear.

While Haw searched for New Cheese he had time to reflect on what went wrong with the Cheese in the first place. He began to realize that he could have avoided being taken by surprise if he had only been more in tune with the Cheese. If he had taken time to stop and check in with his supply of Cheese, he may have noticed it was becoming depleted. Also, he noticed that if he was taking action in this new direction, he felt much better than if he stopped and let his mind return to fear. He became free the more he moved in this new direction. He pictured all that he could gain from this new search rather than what he had lost in the old one.

He came to understand that this unexpected twist, this change, could lead to something better than what he had before. This gave him strength and energy to move ahead with more enthusiasm and speed than ever. The more he let go of the pain and regret involving the old Cheese, the more New Cheese he would find. He was sure of it.

Haw began to understand that his beliefs were changing. He used to think that it was best to avoid anything new and scary. His search for New Cheese taught him that "the fear you let build up in your mind is worse than the situation that actually exists."

His thoughts used to be clouded with worry and he used to focus on all the things that could go wrong instead of all the things that could go right. He was coming to see that change is natural and is going to happen whether you are expecting it or not. "You can believe that change will harm you and resist it. Or you can believe that finding New Cheese will help you and embrace the change." You get to choose which way you believe.

After a long while of searching, Haw finally arrived at Cheese Station N where he found the most abundant supply of Cheese he'd ever seen, and he found his old buddies Scurry and Sniff.

Haw thought often about his friend Hem and wondered if he would be able to convince him to change if he ever ran into him again. He decided that Hem would have to learn the lessons on his own. Everyone has to come to see the advantage of change for themselves.

## The Lessons

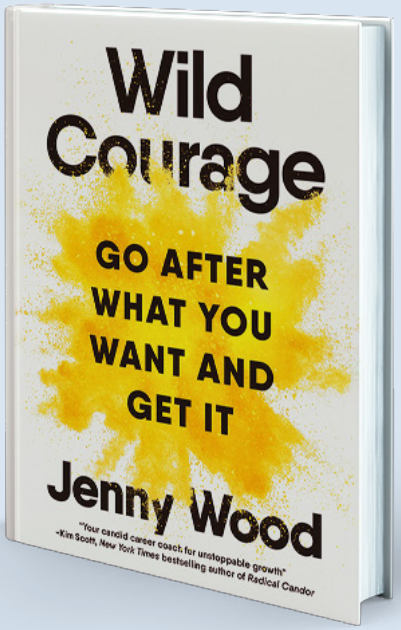
The story of Sniff, Scurry, Hem, and Haw is laced with lessons that can be applied to someone's professional or personal life.

Some of those lessons include:

- Keep things simple. Overcomplicating matters can lead to stagnation.
- When things change, don't get bogged down in worry and fear. Be flexible and move forward quickly.
- When change happens, there are other opportunities out there. You just have to get out there and search for them.
- When we become too comfortable with things, we can miss the subtle cues that things are changing.
- Sometimes you need to let go and move on to stay healthy, well, and happy.
- Change does not always have to come from an external source. There are times when you should initiate the change yourself.

Even though it was originally published more than twenty years ago, Johnson's message has never been more relevant. Change happens. Now more than ever, society is learning that we need to be adaptable, flexible, and able to handle the stress that comes along with unavoidable change. Further, some of the changes that are forced upon us can lead to a happier, healthier, more well-rounded life. Every company and indeed, every person, who wants to stay competitive and thrive in an ever-evolving future must be able to react to change in a healthy, productive way.

Of course, the messages and lessons conveyed in the story are presented in simplistic terms to the extreme. However, some would argue that this characteristic is precisely why this parable endures, being just as popular today as it was two decades ago. Historian Mitch Horowitz called it "the consummate American self-help book."



*Who Moved My Cheese?* helps people release negative energy around change and find profound benefits that can impact their career and personal lives, now and well into the future. It has done just that for countless people all over the world over the course of decades. Although we all understand that not all change is good, we can all agree that our ability to learn how to live in the face of changes, small and great, leads to a more enjoyable life. Johnson's story drives that point home in a memorable, actionable way.

## Wild Courage

### Go After What You Want and Get It

*By Jenny Wood*

Jenny Wood is a Google executive, founder of Own Your Career, speaker, writer, mom, and pilot, known for her fearless approach to life and work. After a bold move that led to marrying a stranger she met on the subway, she committed to always pursuing what she truly wants. Her writing has appeared in Harvard Business Review, Entrepreneur, Inc., and Forbes. She holds a B.A. in Economics and International Business from Brandeis and was a research associate at Harvard Business School. Jenny lives in Boulder with her husband and their two children.

*A Book Review by Soundview*

# Rewrite Fear, Reclaim Your Power

Fear can be difficult to move past. When faced with pursuing one's desires, it often whispers reminders of failures, what-ifs, and more, and those can be crippling. This can lead to missed opportunities, resulting in promotions and projects being passed on to others. Unacknowledged fear puts life on hold, but it's not too late to change that. Fear doesn't have to have the last negative word.

But what if fear says that what is being chased after is too valuable to let go? What if that fear can be harnessed to propel us towards the desired success? If fear can be acknowledged, felt, and set aside, there is room for courage to pursue what is desired.

In ***Wild Courage: Go After What You Want and Get It***, Jenny Wood encourages her readers to live life with courage, pursuing what they truly want and fighting against the fear that would hold them back. She says that money, talent, or anything else is standing in the way of one's success but themselves. Since that's the case, there is only one obstacle to overcome, and that's the mindset of fear, which tells them not to reach for what they desire. It can, and likely will be, uncomfortable, but taking agency and viewing fear as a compass pointing in the chosen direction will lead to the ability to follow one's ambitions and achieve the goal.

The desire to fit in is ingrained from childhood, so when the decision is made to strike out on a different path, it is natural to fear what others will think or say. It's time to take action, despite fear, and summon the necessary courage to succeed. That begins with having a mindset of success before success comes. Once the fear of not succeeding has been pushed aside, the fear of being labeled must also be addressed, specifically the labels associated with breaking social norms to achieve one's goals: **Weird**, **Selfish**, **Shameless**, **Nosy**, **Manipulative**, **Brutal**, **Reckless**, and **Bossy**. These traits don't stand alone. Each trait is linked to each other throughout *Wild Courage* and it's easy to see how they are related and lift each other up. Having the courage to utilize one of these traits will lead to having the courage to utlizing each of them in day-to-day life

Wood transforms these labels into Traits that are powerful principles for success and are the title of the chapters. She purposefully puts these in bold to differentiate these positive Traits

from the negative connotations they are associated with. Each chapter of *Wild Courage* is laid out in a way that makes it accessible for the reader to reference a particular thought or idea that Wood proposes quickly. Chapters always begin with a definition of the trait being discussed and then conclude with Trait Traps, which are barriers to help bring attention to when these strengths are potentially turning into weaknesses. She states that each Trait requires nothing other than courage to achieve the set goals, and that courage will only grow the more it is utilized.

## Weird

Being weird, like all of the Traits that are discussed in *Wild Courage*, is often thought of negatively. It's thought that fitting into societal norms is better and will make fewer waves, but while this may be true, it can be harmful. Sometimes, aspects of what makes humanity unique can be overlooked in the pursuit of what others want, and that can lead to a loss of creativity, new ideas, and individuality.

Everyone is unique, and in that lies their greatest strengths and ability to utilize them to further their career by highlighting those aspects of themselves and working to reach their goals. Being true to themselves will help to avoid being forgotten on one's chosen career path. When trying to impress others, playing it cool might work alright in high school, but outside, playing it hot is a commitment to bringing energy and creativity to the spaces that need them. Taking a calculated risk, such as speaking up in a meeting, even if it might not be the right thing to do at that moment, can help ensure your name is at the top of the list for new opportunities.

It's also essential to push past the discomfort that comes with leaning into **Weird**. It can help carve out a path to reach goals, rather than waiting for the opportunity to fall into the sphere of influence randomly. By discovering what piques interest and identifying areas that need improvement, that knowledge can be shared with leaders and managers so they know who to share opportunities with when they arise.

## Selfish

Being selfish is generally discouraged and thought of as bad, but when it comes to protecting oneself and moving into places where opportunities will come, being **Selfish** means advocating just as strongly for oneself as well as colleagues and friends. In order to be **Selfish**, it is essential to learn how to say no to the small things that do not serve to advance the ultimate goals. It might feel scary, but it will show others dedication and necessary, valuable contributions to the team.

Purposing to be **Selfish** also means acknowledging needs and wants and doing what is necessary to meet them, even if it feels uncomfortable. Yesterday's ambitions need to be aligned with today's, and that means making decisions based on day-to-day experiences so that they serve long-term goals. If there isn't a spark of excitement or energy about what has been worked toward, it's time to revisit whether this is still something that needs to be worked toward.

It is also essential to be **Selfish** when thinking about potential jobs and the managers that will be interacted with. The acronym START stands for Style, Thoughtfulness, Attitude, Responsiveness, and Transparency. By evaluating opportunities with these qualities in mind, particularly when speaking with managers, it will be easier to ensure that the reader is **Selfish** and has the allies they want and need.

## Shameless

**Shameless** means that a new strength and courage are put behind the exertion to bring dreams and goals into reality. There are times when shame is an appropriate emotion, but it can quickly become toxic and manifest itself as anxiety or stress, which takes a significant mental and emotional toll. To combat this, it's time to discover Power Assets and learn how to leverage them. Label and name the top three strengths and share them with managers, mentors, and anyone else who can have a positive impact on one's career. It is possible to experience a new level of confidence and demonstrate how they can be utilized to achieve success.

It's essential to reframe thoughts surrounding shame so it has an appropriate place and doesn't force unnecessary burdens to be carried. This can be done by utilizing the Truth and Tales tool, which encourages examining the situation and recording the facts of what happened. Once that has been done, separate the tale being spun and then reframe it in a **Shameless** way, one that sticks closer to the facts and leans more towards a neutral, if not positive, approach.

Learning how to speak up can be hard because sometimes, uncomfortable truths might be shared. Questioning the inner voice that staying quiet is better than sharing what is needed is essential, and it will help your confidence grow. It may feel uncomfortable to be the first to ask questions at a meeting, but it will encourage growth and discourage the addition of unnecessary words to what needs to be said. It will also encourage the reader to celebrate their wins in a society that often discourages them. Celebrate the wins, both large and small, and shut down the negative self-talk and insecurities that need no space.

## Obsessed

When work feels important and doing less than one's absolute best threatens the moment of the project, it's a sign that it's the right thing. In this new definition, being **Obsessed** means setting a new, higher standard and not accepting anything less. Instead of coasting, select an item from a to-do list and promise to give it complete attention until the task is completed. Be purposeful about the work that needs to be done, and when faced with a new project or objective, create a planning document to show stakeholders that it's being taken seriously and not being procrastinated.

Getting others involved in the building process is vital, but it must be done effectively and efficiently. Start sending the meeting agenda to team members so they know what to expect when they come into the meeting, and it will be easier to stay on track. The IKEA effect shows that if team members are involved,

> *Success at anything requires putting in a lot of work, and mistakes will be made. However, what matters is continuing to move forward and working towards progress."*

the meeting output is better. Consistency is key when being **Obsessed**. Showing up and purposing to do the thing well, yes, but also learning how much output each task needs so life can be broken down into attainable chunks of time, so the exertion a task takes doesn't lead to burnout.

## Nosy

It is ingrained from childhood that being nosy is a bad thing and asking too many questions isn't a good thing. Being **Nosy** means being insatiably curious and digging deeper than others might. It can be a practical asset and a sign of a great leader. It can also result in answers to questions that others may not know how to ask. Being **Nosy** also helps negate moments of awkwardness when meeting someone new, as the focus is on the other person and their wants and needs, rather than inward.

It can also be helpful to flip the script and, instead of starting sentences with "I", start by focusing on the other person. By placing the emphasis on others and not saying "I", they will be more engaged by feeling the genuine warmth that is being shown. Asking questions, even if they feel basic or obvious, can be a decisive move because people typically enjoy sharing their thoughts and ideas. By inviting them to do so in a **Nosy** way, it allows them to share and provides the asker with the knowledge they are seeking. This doesn't mean to ask questions when the answer is already known; instead, lead with humility to support the other people in the room.

Being **Nosy** also means watching others and picking up the traits that they do well. A conversation doesn't necessarily need to happen, particularly if they are too senior a leader to ask for mentorship. If that is the case, purpose to observe them and make notes. Doing this will make it possible for their skill sets to be acquired and utlized in toolbox of the observer.

## Manipulate

This word is often associated with a negative connotation because it is perceived as a means of exerting control over others. **Manipulate**, as defined by Wood, means having the courage to influence other people and lead with empathy. To maintain and sustain relationships, it's essential to minimize strain and tension, making it feel effortless. Figuring out the office politics at play and then learning how to **Manipulate** those in charge, investing and connecting with them, is essential and will eventually lead to having a seat among them.

Even if the initial instinct is to ignore office politics and pretend they don't exist, it is vital to squash those feelings and figure out the flow of power in the office. This can be done by talking to others to understand who needs to be consulted with to ensure a project succeeds, mapping out the those who have the power to move a project forward or stop it in its tracks and finally, to seek power. Purpose to find ways to be at the table and make sure that it isn't just everyone else's voice that is being heard.

Being fluent in influence is an essential part of **Manipulating**, extending it, and exerting it, and this needs to be done in every direction. Wood states that power grows through proximity, so it's essential to be visible, present, and network with all team members, including skip-level managers, potential mentors or sponsors, and peers. Building influence can also happen by being authentically generous with others in the organization, not just with time and being purposefully available, but by sharing gifts, ideas and praise.. Being generous is an underused and easy way to build relations with others and it also simply feels good to give to and invest in people.

## Brutal

While being brutal typically means being sarcastic, biting, or blunt when interacting with others, here it means having the courage to protect one's time and energy so they can be focused on what is truly important. Creating and maintaining firm boundaries can be difficult, but it is key to prioritizing what matters most, which means being **Brutal**. Part of this means saying no to performative work, where the focus is on being responsive because it isn't clear what efforts matter to the outcome, and focusing on saying yes to the rewardative work. This is the work that may require being unresponsive at times, as the focus is on major business outcomes (e.g., ensuring an important report is completed instead of rushing from meeting to meeting, leaving other work undone).

Another way to be **Brutal** is to let go of the need to always clear out the emails that are sitting in the inbox so there are no unread or replied emails.. Emails tend to multiply and become overwhelming, so Woods recommends following the Four F's. Using Filters to sort through emails so newsletters, casual communication, and more are in their correct space. Next, focus on emails only during specific time blocks throughout the day. Before going on vacation, feel Free from the burden of catching up on emails upon one's return. Finally, before replying to an email, take a moment to address what feelings have arisen so that the immediate heated response doesn't come back to impact future relationships.

When the workload threatens to become overwhelming, it is often a knee-jerk reaction to focus on the big-ticket projects and then delegate the smaller tasks. Instead of doing this, be **Brutal** and drop those smaller tasks. Delegating and deferring those

smaller tasks postpones the invetiable, so without announcing it, focus the energy on the bigger, more important projects and let the less importance quietly disappear.

## Reckless

Being **Reckless** means having the courage to take calculated risks and becoming comfortable with moving in low-risk/high-reward ways. Because there are so many options and paths to take, it is necessary not to become too trapped focusing on the what-ifs and the possibilities. Feeling a little dangerous in the world is a good thing; instead of waiting until tomorrow to start taking risks, start today. Success at anything requires putting in a lot of work, and mistakes will be made. However, what matters is continuing to move forward and working towards progress.

It's also important to note that not feeling totally ready is a good thing. Being 100% ready for the task leaves no room for spontaneity, and there is a risk of losing passion for the project at hand. Every task should present a challenge that will ultimately lead to growth. Preparation and planning are essential, but don't let them be hindered by fear and prevent forward progress. Make moves toward a goal, and then work to map out a path to reach it. Setting aside ten minutes a day to work towards the objective, particularly for new ventures, will allow for opportunities for growth and action, rather than stagnation.

## Bossy

Being bossy doesn't sound like a good thing and is often associated with words like domineering, dictator, and worse. However, being **Bossy** is totally different. It requires humility and courage to listen to others in the room and then lead well. Leaders aren't supposed to have all the answers; that distinction belongs to team members. Instead, leaders are supposed to ask questions so they can help others succeed.

It can feel scary at times, but an essential part of leadership is letting the others on the team do their job. This means relinquishing whatever control that had been previously clung to and helping and allowing others to shine. Doing the day-to-day tasks only requires half of one's attention, and communication is necessary in every direction possible. Coaching the team to success means being the coach of a successful team, and that is a positive thing.

Particularly for those new to leadership roles, it is vital to be humble and shadow team members. This will allow the leader to get to know their team members' strengths and weaknesses, and prevent any awkward blunders. Whether the work is being done virtually or in a physical office, take the time to get to know the other team members and invest in learning about each person's role and their preferred working style.

In *Wild Courage: Go After What You Want and Get It*, Jenny Wood shares nine traits that often carry negative connotations and are typically suppressed in today's world. Throughout the book, she teaches how to transform what are perceived as unfavorable traits into positives and how to leverage them to become a better leader. In addition to this, she also shares how these traits, even when used positively, can trip the reader up and become a weakness. Each chapter ends with a Trait Trap, which serves as a simple barrier to alert readers when these strengths are turning into potential weaknesses.

*Wild Courage: Go After What You Want and Get* is a positive read that encourages readers to step outside their comfort zone to achieve their dreams and live the lives they want. No more looking for affirmation or permission, those who follow Wood's guidance decide to take action despite whatever fear they may feel. They have the courage to move forward and achieve their goals.

# Win Every Argument

Mehdi Hasan

# BOOK SNAPS™

Zooming In On Your Next Read

## Win Every Argument

**The Art of Debating, Persuading, and Public Speaking**

*By Mehdi Hasan*

**Mehdi Hasan** is an award-winning British-American journalist. He is the host of The Mehdi Hasan Show on MSNBC and NBC's streaming channel Peacock. Hasan is a former columnist and podcaster at The Intercept and a former presenter on Al Jazeera English, and his op-eds have also appeared in the New York Times and the Washington Post.

## Know Your Argument

Mehdi Hasan's goal in ***Win Every Argument: The Art of Debating, Persuading, and Public Speaking***, is to help his reader do just that. Hasan has made a career of arguing, and he does not believe arguments should be shied away from. He considers them "to be the lifeblood of democracy" as they help with problem solving, opening people up to new ideas, and discovering new ideas. He believes it is important to know one's own argument as well as the argument of the opposition. He quotes John Stuar Mill's *On Liberty as Mill* says the same. Hasan's goal, however, is not all about persuasion and logical arguments. In fact, at one point he argues for the use of what is frequently known as ad hominem attacks which are usually considered to be logical fallacies. Hasan breaks his book up into three sections.

In section one, he defines ethos, logos, and pathos, and helps his reader get the audience's attention as well as become a better listener. In part two, he shares techniques with his reader, and in the third section, he explains what people need to do in order to prepare to debate. He ends his book with an explanation of how to bring this all together.

## Debate Basics

Hasan begins his first section by talking about the importance of knowing one's audience. This is important as different pieces of support will win over different audiences. He encourages debaters to know the make up, size, and demographics of the audience. While a debater should tailor the types of support provided to the audience, they should also tailor the language and even the voice volume used when presenting ideas. He does not condone changing a thesis because of an audience but rather just changing the way the argument is presented. Part of appealing to the audience is making sure to get their attention. He believes the first sentence a speaker says is important in grabbing attention. Speakers also need to be sure to make eye contact, praise the audience, and attempt to bond with the audience.

Hasan also believes it is important to bring emotional appeals to an audience rather than just facts and figures. He says, "our feelings rarely care about the facts." Because of this, facts alone will not win an argument. He discusses Aristotle's three modes of persuasion. These are ethos, which relies on the credibility of the speaker, pathos, which relies on emotional appeals, and

logos which relies on reason. Aristotle believed all three were equally important, but Hasan believes that pathos is the most important of the three modes. He quotes Antonio Damasio as saying that human beings are "feeling machines that think." Stories are one way that speakers and debaters can appeal to pathos. Quality pathetic appeals use careful language in an attempt to show rather than tell.

Hasan discusses logos in more detail in his chapter entitled, "Show Your Receipts." This involves both finding evidence and citing sources. The first part of this task is to actually get what he calls receipts, or facts and proof. A person can also create their own proof by citing something the opponent said previously in the argument against them. It is important not just to have proof to undermine the opponent's credibility; it is also important to time when a person delivers these receipts.

People concerned with formal logic such as professors in a classroom will advise people to avoid attacking their opponent's character. Hasan is not concerned with helping people formulate formal academic arguments. Rather, he is interested in helping people learn to win arguments. Because ethos, the credibility of the arguer, is part of Aristotle's three modes of argument, Hasan finds it very helpful to attack the credibility of the opponent; after all, if they are not credible, people will not take their arguments as seriously. These ad hominem attacks can be abusive like those Donald Trump uses. They can be circumstantial meaning that they can point out an opponent's biases, or they can be tu quoque meaning they point out the past words of an opponent to call into question their current case.

An example of this is when liberals point to pro-life Republicans supporting abortions in personal life while rejecting the pro-choice argument in political life. These ad hominem tactics do not prove the logic of an argument to be wrong, but they do call into question the veracity of the opponent. If someone is attacked with an ad hominem, Hasan says they can either call it out as an ad hominem fallacy, they can concede their argument and make apologies for past mistakes, or they can go on the attack with their own ad hominem attack.

## Tools for Debate

In his next chapter, Hasan discusses the absolute necessity of listening well. People prefer to speak rather than to listen, particularly in debates. This is harmful, however, because people cannot appropriately respond to what is being said if they have not listened first. Hasan writes that there are two types of listening: critical and empathetic. Critical listening requires evaluating what is being said. Critical listening can help a debater recognize false claims and fallacious arguments and find places where they must concede points to the opposition. Empathetic listening is important when an audience member is speaking. It requires the listener to try "to see the world through that person's eyes." Hasan says that to improve empathetic listening a person can stay present to the speaker, make eye contact, and ask the right questions.

Laughter is another important tool for the debater, according to Hasan. Audiences appreciate humor. Laughter, in fact, can bring an audience together, helping them to identify with the speaker. Hasan is not against getting laughs at the opponent's expense. In fact, Hasan quotes Mary Beard as saying that Cicero, one of the best orators in ancient times, used to use ridicule to get the upper hand. Humor can open up an audience to a speaker's points because it can make the audience like the speaker better. It also serves to lighten the mood. Sometimes jokes can be planned out, but a debater also needs to be prepared to be spontaneous. He does warn against being offensive, however, as well as against telling too many jokes.

One tip Hasan gives is to use the rule of three. He explains that people understand and remember ideas given in three parts. Again he goes back to Cicero to show how ancient this technique is. He says that one benefit of the rule of three is that audiences will naturally clap before the third item is given, such as in Martin Luther King Jr's "I Have a Dream" speech. A person can organize a speech around the rule of three by including a beginning, a middle, and an end, and making sure to introduce three main points in the introduction and repeat them in the conclusion.

Next Hasan moves on to what he calls his judo moves. He discusses the imperative to sometimes be willing to yield. Sometimes this yielding can actually help a person win an argument. One of the ways a person can gain an upper hand is by admitting to concessions. Sometimes an opponent makes a valid point. By admitting that the opponent is right, a speaker can frequently throw the opponent off their game while making the audience see the speaker as being both reasonable and rational. Hasan discusses synchoresis which occurs when a person concedes one point in order to make a more important one. He then discusses that sometimes having the last word is not as important as people think it is. He prefers to speak first when there are multiple speakers because he can debunk opponent's arguments before they are even made. Judo moves that put an opponent off balance should be used sparingly so as not to be overdone.

Next Hasan discusses the zinger. To exemplify the zinger, Hasan mentions how often Dan Quayle used to mention how he had as much experience as JFK did. Eventually after Quayle had said this numerous times publicly, Lloyd Bentsen responded by saying, ""Senator, you are no Jack Kennedy." This zinger is considered to be one of the biggest moments in vice presidential debate history. A zinger is something that is intended to throw a person off guard. They are used to leave opponents "red-faced and speechless." Hasan's suggestions for using zingers are for the speaker to be prepared, practice the zingers when possible, and to keep them short. Timing is key.

Hasan also thinks it is beneficial to set booby traps. One way to do this is through using an opponent's own words against them. This often requires a lot of research, and it can be used effectively when first asking a person if they agree with something without telling them that the words came from a statement they previously made. Then when they disagree, the speaker can inform them that these were their own words from the past. This can be effective because often people give so many interviews that they simply cannot remember everything they

> . . . a speaker never budges when confronted with a gish galloper."

have said. Another way that a speaker can trap their opponent is with a question that they will not be able to answer. Here he gives an example of when he stated the number of Tibetans that have been killed in the last sixty years. Zhang, the person he was interviewing, said that number was wrong, so Hasan asked him what the number was. Zhang was not able to answer the question, and Hasan used this to prove that he, then, should not be questioning the studies.

Hasan uses the term gish galloper and quotes the Urban Dictionary's definition as "spewing so much bullshit in such a short span that your opponent can't address let alone counter all of it." It is much harder to counter false claims than to make them, and as such, the gish gallop can be effective in debate. Hasan gives his reader tips for when they encounter such a rhetorical situation. First, he suggests that a person pick their battles. All of the claims simply cannot be addressed, and as such, it is important to hone in on which ones to pursue.

He suggests finding "the weak links in the chain." This works best when there is one clear, definable worst argument presented in the gish gallop. It does not work as well when a cohesive argument is given. He then goes on to recommend that a speaker never budges when confronted with a gish galloper. Often the gish galloper is trying to muddy the water rather than actually win people over. It is important not to allow the speaker to move on to new points or evade questions. Another tactic is to specifically call out the person for the gish galloping that they are doing.

## Being Confident, Calm, and Prepared

The final section of Hasan's book details what should occur behind the scenes in order for the reader to win an argument. Hasan starts by describing the importance of confidence, and then he presents some tips for increasing this confidence. One of these is to visualize success while with as much detail as possible. Next, he suggests taking risks such as volunteering to speak in situations and participating in arguments with friends. FInally, he says it is important to surround oneself with positive and encouraging people. Body language, voice projection, and eye contact are all crucial elements for a speaker.

Being calm is also important, says Hasan, in an argument because, among other things, it gives the speaker the best chance to get their point across. He gives numerous strategies, including breath control and laughter to help with this. In regards to self-talk, he recommends people speak to themselves in the third person which helps them think of themselves in the same ways they think about others.

Winning arguments is something that can be taught, he maintains. As an example, Hasan writes about Winston Churchill who, as a child, had a stammer, a lisp, and was shy. He worked on all of these and spent so much time rehearsing and practicing his speeches, that he rose to become an excellent orator. For his reader, Hasan recommends recording and watching back videos of their own speeches, sometimes without the volume, to see how they present to the audience. In regards to voice, he encourages his reader to focus on pitch, power, pace, and pause as these all affect how a message will get across.

After discussing the importance of doing the homework and understanding one's opponent and argument, Hasan closes out his book discussing the importance of a great ending to a speech. The ending is an excellent place to include pathos which helps draw the listener in. It is also a good time to summarize the main points of the argument, but it is important not to include new arguments at this point. Also crucial, to Hasan, is avoiding just ending an argument after the final point.

Hasan's book is not a theoretical book on rhetoric or logical arguments and fallacies. Rather, it is a practical book, written by a master of debate, whose purpose is to help readers win arguments. The book walks the reader through the entire process of debate, from the preparation and practice phases through actually delivering a speech or argument. The book does not just tell the reader what is important but gives the reader practical tips that help them to implement these crucial aspects into their own speeches. Hasan discusses the importance of lists of three, and many of his recommendations come in groups of three, leading to a well-organized, cohesive, and easy to understand and implement guide to winning arguments.

### Discover the People Principles That Work for You Every Time

# WINNING WITH PEOPLE

## THE SUMMARY IN BRIEF

*What does it take to win with people? Good relationships are the foundation for achievement. Relationships are more than just the icing on the cake in life: They* are *the cake — the very substance we need to live successful and fulfilling lives.*

*Many people fall into the trap of taking relationships for granted. That's not good because our ability to build and maintain healthy relationships is the single most important factor in how we get along in every area of life. Our people skills determine our potential success.*

*In this summary, renowned leadership expert and author John C. Maxwell describes how anyone can improve his or her relationship skills. With 25 "People Principles" that anyone can learn and use anywhere he or she might be, Maxwell shows how relationships can be created and strengthened for success in work and life.*

*Fortunately, Maxwell explains,* anyone *can learn to become a people person and succeed in the things that matter the most. This summary provides the tools needed to immediately improve existing relationships as well as cultivate strong, exciting and new ones. The skills used plus the relationships chosen equal success.*

## What You'll Learn In This Summary

- ✓ Better ways to prepare for relationships.
- ✓ How to examine ourselves.
- ✓ How to connect with others by focusing on them.
- ✓ How to put ourselves in other people's place.
- ✓ Ways to build mutual trust.
- ✓ How to make an investment in other people.
- ✓ Better ways to create synergistic, win-win relationships.
- ✓ How to increase your odds of winning with others.

# The Readiness Question: Are We Prepared for Relationships?

Not everyone has the skills to initiate, build and sustain good, healthy relationships. Many people grow up in dysfunctional households and never have positive relationships modeled for them. Some people are so focused on themselves and their needs that others might as well not even exist. Still others have been hurt so badly in the past that they see the whole world through the filter of their pain. Because of huge relational blind spots, they don't know themselves or how to relate to people in a healthy way. It takes relationally healthy people to build great relationships.

## *The Lens Principle*

Who you are determines what you see and the way you see it. What is around us doesn't determine what we see: What is within us does. And who you are determines how you see others. If you are a trusting person, you will see others as trustworthy. If you are a critical person, you will see others as critical. If you are a caring person, you will see others as compassionate.

The way you view others is determined by who you are. If you don't like people, that really is a statement about you and the way you look at people. Your viewpoint is the problem. If that's the case, don't try to change others. Don't even focus on others; focus on yourself. If you change yourself and become the kind of person you desire to be, you will begin to view others in a whole new light. And that will change the way you interact in all of your relationships.

## *The Mirror Principle*

People unaware of who they are and what they do often damage relationships with others. The way to change that is to look in the mirror. Consider these truths that we must learn about ourselves:

**Self-Awareness.** Human nature seems to endow people with the ability to size up everybody in the world but themselves.

**Self-Image.** Your image of yourself restricts your ability to build healthy relationships. A negative self-image will keep a person from being successful. If those with a poor self-image do somehow achieve success, it won't last because they will eventually bring themselves down to the level of their own expectations.

**Self-Honesty.** Comedian Jack Parr quipped, "Looking back, my life seems like one big obstacle race, with me being the chief obstacle." What can save us is a willingness to get honest about our shortcomings, faults and problems.

**Self-Improvement.** Critic Samuel Johnson advised that "he who has so little knowledge of human nature as to seek happiness by changing anything but his own disposition will waste his life in fruitless efforts and multiply the grief which he purposes to remove."

**Self-Responsibility.** No significant accomplishments can be achieved by individual effort. However, every significant accomplishment begins with the vision of one individual. Once we possess the vision, we must take responsibility for carrying it to others.

## *The Pain Principle*

German poet Herman Hesse wrote, "If you hate a person, you hate something in him that is part of yourself. What isn't part of ourselves doesn't disturb us." When hurting people lash out, it is in response to what's happening inside them more than what's happening around them. They feel or believe something negative within themselves. The problem is that people who don't believe in themselves will never succeed, and they will also keep those around them from succeeding.

Not only do hurting people hurt others, but they are also

## The Readiness Question: Are We Prepared for Relationships?

*(continued from page 2)*

easily hurt by others. As you interact with others, remember this: Any time a person's response is larger than the issue at hand, the response is almost always about something else.

If you find yourself dealing with a hurting person, don't take it personally. Look beyond the person and the situation for the problem. Try not to add to his or her hurt. Forgive those who lash out at you, try to help them and move on.

### *The Hammer Principle*

Psychologist Abraham Maslow observed, "If the only tool you have is a hammer, you tend to see every problem as a nail." People require more judicious treatment than that. When little things bother us, our primary objective must be putting our personal agendas aside and building relationships. When tempted to use overkill, the following four Ts can help you temper your behavior:

**Total Picture.** If you come to conclusions long before the problem has been detailed, you should listen, ask questions, listen again, ask more questions, listen some more and then respond.

**Timing.** Noted hostess and writer Lady Dorothy Nevill observed, "The real art of conversation is not only to say the right thing in the right place, but to leave unsaid the wrong thing at the tempting moment."

**Tone.** People often respond to our attitudes and actions more than to our words. Many petty conflicts occur because people use the wrong tone of voice.

**Temperature.** The size of a problem often changes based on how it is handled. If the reaction is worse than the action, the problem usually increases. If the reaction is less than the action, the problem usually decreases.

### *The Elevator Principle*

People can be the wind beneath our wings or the anchor on our boat. People who add value to others almost always do so intentionally. Adding value to others requires a person to give of him- or herself. That rarely occurs by accident.

In relationships, receiving is easy. Giving is much more difficult. We all want to be a positive influence in the lives of others. If you want to lift people up and add value to their lives, keep the following in mind:

- Lifters commit themselves to daily encouragement.
- Lifters know the little difference that separates hurting and helping.
- Lifters initiate the positive in a negative environment.
- Lifters understand life is not a dress rehearsal. ■

### How to Develop a Softer Touch

- Let the past stay in the past.
- Ask yourself, *Is my reaction part of the problem?*
- Remember that actions are remembered long after words are forgotten.
- Never let the situation mean more than the relationship.
- Treat loved ones with unconditional love.
- Admit wrongs and ask forgiveness.

## The Connection Question: Are We Willing to Focus on Others?

All human beings possess a desire to connect with other people. The need for connection is sometimes motivated by the desire for love, but it can just as easily be prompted by feelings of loneliness, the need for acceptance, the quest for fulfillment or the desire to achieve in business.

To fulfill our desire for relationships, we must stop thinking about ourselves and begin focusing on the people with whom we desire to build relationships. When you stop worrying so much about yourself and start looking at others and what they desire, you build a bridge to other people and you become the kind of person others want to be around.

### *The Big Picture Principle*

People who remain self-centered and self-serving will always have a hard time getting along with others. To help them break that pattern of living, they need to see the big picture, which requires perspective, maturity and responsibility. Here are some steps to follow:

**Get out of your "own little world."** Go places you have never gone, meet the kinds of people you do not know, and do the things you have not done before.

**Check your ego at the door.** If your focus is always on yourself, you'll never be able to build positive relationships.

**Understand what brings fulfillment.** Ultimately, the things that bring fulfillment involve others. A person who is entirely self-focused will always feel restless and hungry because he or she separates him- or herself from what's most important in life: people.

### *The Exchange Principle*

Instead of putting others in their place, we must put ourselves in their place. When we fail to see things from the perspective of others, we fail in our relationships.

To become better at making the exchange, at seeing things from another person's perspective, do the following:

**Leave "your place" and visit "their place."** Do whatever you can to change your perspective. Listen to people's concerns. Study their culture or profession. Read in their areas of interest. Or literally visit their place.

**Acknowledge that the other person has a valid viewpoint.** People's belief systems and personal experiences are diverse and complex, and even if you do work to see things

*(continued on page 4)*

## The Connection Question: Are We Willing to Focus on Others?

*(continued from page 3)*

from another person's point of view, there will still be differences of opinion. Working to find the legitimacy of another person's point of view stretches your thinking.

**Check your attitude.** It is always easy to see both sides of an issue about which we are not particularly concerned. It is much harder when we have a vested interest in it. When that's the case, we are often more concerned with getting our way than connecting with others.

**Ask others what they would do in your situation.** The key to the exchange principle is empathy. When you have empathy with others' points of view, it becomes much easier to connect with them because they know that you care.

### *The Learning Principle*

Each person we meet has the potential to teach us something. All of us can learn things in unlikely places and from unlikely people. But that's only true if we have the right attitude. If you have a teachable attitude, you will be positioned well to learn from others. Then all you will need to do is to take the following five steps:

**1. Make Learning Your Passion.** Management expert Philip Crosby notes, "There is a theory of human behavior that says people subconsciously retard their own intellectual growth. They come to rely on cliches and habits. Once they reach the age of their own personal comfort with the world, they stop learning and their mind runs on idle for the rest of their days. They may progress organizationally, they may be ambitious and eager, and they may even work night and day. But they learn no more." If you desire to keep growing, you cannot sit back in a comfort zone.

**2. Value People.** People don't learn from people they don't value.

**3. Develop Relationships With Growth Potential.** Find people who are especially likely to help you grow: experts in your field, creative thinkers who stretch you mentally, and achievers who inspire you to go to the next level.

**4. Identify People's Uniqueness and Strengths.** Philosopher and poet Ralph Waldo Emerson remarked, "I have never met a man who was not my superior in some particular." People grow best in their areas of strength — and can learn the most from another person's area of strength. For that reason, you can't be indiscriminate in choosing the people you seek out to teach you.

**5. Ask Questions.** Learning begins with listening. The best way to learn is to watch others and ask questions.

### *The Charisma Principle*

People are interested in the person who is interested in them. According to Dale Carnegie, "You can make more friends in two months by becoming interested in other people than you can in two years by trying to get other people interested in you." Carnegie's teachings in *How to Win Friends and Influence People* include:

- **Become genuinely interested in other people.** People don't care how much you know until they know how much you care.
- **Smile.** If you want to draw others to you, light up your face with a smile.
- **Remember names.** A person's name is the sweetest and most important sound to that person.
- **Be a good listener.** Encourage others to talk about themselves.
- **Talk in terms of the other person's interests.** Treat others the way *they* want to be treated.
- **Make the other person feel important.** Become sincerely interested in others.

### *The Number 10 Principle*

All people have potential. Everyone you meet can be a 10. Believing in people usually brings out the best in them. If people believe in themselves, they can reach their potential and become the individuals they were created to be. If you've been hurt or disappointed in the past, don't let that negatively color your attitude in the future.

Philosopher and poet Johann Wolfgang von Goethe said, "Treat a man as he appears to be and you make him worse. But treat a man as if he already were what he potentially could be, and you make him what he should be."

### *The Confrontation Principle*

Caring for people should precede confronting people. Conflict is like cancer: Early detection increases the possibility of a healthy outcome. While intellectually it's simple to resolve conflict, emotionally it can be difficult. It requires honesty, humility and dedication to the relationship. Take these steps when confronting someone:

- **Confront a person only if you care about that person.** It is more productive to go into a confrontation keeping the other person's interests in mind.
- **Meet together as soon as possible.** Putting off confrontation only causes the situation to fester.
- **First seek understanding, not necessarily agreement.** The person who gives an opinion before he or she understands is human, but the person who gives a judgment before he or she understands is a fool.
- **Outline the issue.** Be positive, describe your perceptions, state how this situation makes you feel, and explain why this is important to you.
- **Encourage a response.**
- **Agree to an action plan that clearly identifies the issue and spells out concrete steps that will be taken.** The action plan should include a commitment by both parties to put the issue to rest once resolved. ■

# The Trust Question: Can We Build Mutual Trust?

Philosopher and poet Ralph Waldo Emerson said, "The glory of friendship is not the outstretched hand, not the kindly smile, nor the joy of companionship; it is the spiritual inspiration that comes to one when you discover that someone else believes in you and is willing to trust you with a friendship."

Why do many personal and business relationships fall apart? The reasons for such breakdowns are many, but the cause that outweighs all others is broken trust.

### *The Bedrock Principle*

In his book, *On Becoming a Leader*, Warren Bennis says, "Integrity is the basis of trust, which is not so much an ingredient of leadership as it is a product. It is the one quality that cannot be acquired, but must be earned. It is given by co-workers and followers, and without it, the leader can't function."

That can be said not only of leaders and followers, but also of all relationships. Developing trust is like constructing a building. It takes time, and it must be done one piece at a time. As in construction, it's much quicker and easier to tear something down than it is to build it up. But if the foundation is strong, there is a good chance that what is built upon it will stand.

If you desire to build your trustworthiness — and as a result, your relationships — remember:

**Trust begins with yourself.** If you are not honest with yourself, you will not be capable of honesty with others. Self-deception is the enemy of relationships.

**Trust cannot be compartmentalized.** Many people today try to compartmentalize their lives. They believe that they can cut corners or compromise their values in one area of life and it won't affect another area. But character doesn't work that way. And neither does trust.

**Trust works like a bank account.** Mike Abrashoff, author of *It's Your Ship*, states, "Trust is like a bank account — you have got to keep making deposits if you want it to grow. On occasion, things will go wrong, and you will have to make a withdrawal. Meanwhile, it is sitting in the bank earning interest."

### *The Situation Principle*

Never let the situation mean more than the relationship. It is more rewarding to resolve a situation than to dissolve a relationship. Any time a person puts the situation ahead of the relationship, it happens for one reason: loss of perspective. People are always more important than mere things. Our property, our position and our agenda are transitory.

Whenever we experience a rough time in a relationship, we need to remind ourselves of why that relationship is significant to us in the first place. Also, we must keep in mind that there is a big difference between a situation that occurs once and one that occurs again and again.

### *The Bob Principle*

If Bob has problems with Bill, and Bob has problems with Fred, and Bob has problems with Sue, and Bob has problems with Jane, and Bob has problems with Sam, then Bob is usually the problem.

Every problem starter is like a fire lighter. And each of us is like a person carrying two buckets. One is filled with water and the other with gasoline. When we see a problem fire being lit, we can choose to douse it with water and put it out, or we can throw gasoline on it and make it worse.

If you have someone who creates and spreads problems, respond with a positive comment, show your concern for the person being criticized, and encourage steps toward resolution. Not everyone will respond positively to your suggestions. But if you have a strong connection with a Bob or you are in a position of authority with him, then ask him to THINK before he speaks using this acronym:

| | |
|---|---|
| **T** | Is it true? |
| **H** | Is it helpful? |
| **I** | Is it inspiring? |
| **N** | Is it necessary? |
| **K** | Is it kind? |

If he can answer yes to all of these questions, then it's appropriate for him to proceed.

### *The Approachability Principle*

Being at ease with ourselves helps others be at ease with us. People miss many opportunities for connection and the chance to build deeper relationships because they do not make themselves approachable. Approachable people usually exhibit the following seven characteristics:

**1. Personal warmth.** Approachable people truly like people. To be approachable, you need to generate personal warmth toward the people you meet.

**2. Appreciation for the differences in people.** Approachable people appreciate people for who they are and what they have to offer.

**3. Consistency of mood.** Approachable people are even-keeled and predictable. You know what you'll get because they are basically the same every time you see them.

**4. Sensitivity toward people's feelings.** Although approachable people are emotionally steady, they might not expect others to be that way. They tune in to the moods and feelings of others, and then adjust how they relate to them.

**5. Understanding of human weaknesses and exposure of their own.** Approachable people are honest about their abilities and shortcomings. They are willing to be told not what they want to hear but what they need to hear.

**6. Ability to forgive easily and quickly ask for for-**

*(continued on page 6)*

## The Trust Question: Can We Build Mutual Trust?

*(continued from page 5)*

**giveness.** Approachable people quickly ask for forgiveness and easily grant it to others.

**7. Authenticity.** Approachable people are real. They engage with others on a genuine level, and don't pretend to be someone they're not. They don't go out of their way to hide what they think and feel. They have no hidden agenda.

### *The Foxhole Principle*

We face many kinds of battles in life, and the "foxholes" we sometimes inhabit come in many shapes and sizes. These foxholes can include the home, a business, a sports team, a small group, a platoon or something else. When preparing for battle, dig a hole big enough for a friend. The foxhole is for you and a friend, not a friend alone. You can ask a friend to fight with you, but you should never send someone else to fight your battles. And you should be willing to fight for any friend whose help you would request.

You might have many friends, but not all of them will be foxhole friends. For that matter, you will not be that kind of an ally to everyone in your life either. Foxhole friendships are special. Even before the battle, simply knowing that someone believes in you and will fight for you is uplifting. People who climb down into the foxhole with you see things from your point of view and they express empathy for your situation. That makes them not only a great help, but also a great comfort. ■

# The Investment Question: Are We Willing to Invest in Others?

Are you willing to invest in other people? You may build a beautiful house, but eventually it will crumble. You may develop a fine career, but one day it will be over. You may save a great sum of money, but you can't take it with you. You may be in superb health today, but in time it will decline. You may take pride in your accomplishments, but someone will surpass you.

Relationships are like anything else. The return you get depends on what you invest.

### *The Gardening Principle*

All relationships need cultivation. You cannot neglect a relationship and expect it to grow. That's not to say that all relationships are the same and need the same amount of attention. The nature and purpose of the relationship will determine the energy and time needed to cultivate it.

You can start to cultivate a healthy, growing relationship by focusing on the following six things:

**Commitment.** Every long-lasting relationship suffers strains and setbacks. No two people agree on everything. Even the best friendships can expect to face conflict. The question is: What are you going to do when trouble comes?

**Communication.** A relationship begins with easy communication. It deepens with more difficult communication. And it is sustained with intentional communication.

**Friendship.** Critic Samuel Johnson remarked, "If a man does not make new acquaintances as he advances through life, he will soon find himself left alone; a man, sir, should keep his friendship in a constant repair." That goes for old friendships as well as new ones. We sometimes take for granted the people closest to us, and as a result, we neglect to try being good friends to them first.

**Memories.** Shared memories are a wonderful source of connection and bonding for people.

**Growth.** When you begin any friendship, it is filled with promise. But you have to find ways to keep it fresh and strong so that it continues to have potential and not just good memories.

**Spoiling Each Other.** Voltaire wrote, "If the first law of friendship is that it has to be cultivated, the second law is to be indulgent when the first law has been neglected." Let your friends and family members know how much you care as often as you can.

### *The 101 Percent Principle*

Sometimes building relationships is an uphill battle, and connecting with another person can be particularly difficult. How do you connect with people when you seem to have nothing in common with them? Can you build relational bridges in such circumstances? And if so, can the relationships be healthy, long-lasting and productive?

When the connection is difficult, you must find the one thing the two of you can agree upon. You can do that with just about anybody. The problem is that many people naturally take the opposite approach; they look for differences. Why? Sometimes it's due to natural competitiveness; people are often looking for an edge. Sometimes it's to make themselves stand out and to find their own distinctiveness. Other times, people focus on differences because they feel threatened by others.

When connection is difficult, you must find the one thing the two of you can agree upon. The greater the differences, the more important it is to focus on what you agree on. Once you do, give it 100 percent of your effort.

### *The Patience Principle*

The journey with others is slower than the journey alone. Here are the steps you can take to become a more patient person in relationships:

**Prioritize patience as a virtue worthy of develop-**

*(continued on page 7)*

## The Investment Question: Are We Willing to Invest in Others?

*(continued from page 6)*

**ing.** Oft-quoted Arnold Glasgow stated, "You get the chicken by hatching the egg, not smashing it." In the long run, you will find that patience with people is beneficial to you. But you may not see a return right away.

**Understand that it takes time to build good relationships.** Relationships of any depth take time. The more people involved in the relational circle, the longer it takes.

**Practice the exchange principle.** Each of us thinks our circumstances warrant special consideration — people should be extra patient with us. Instead, put yourself in the other person's place and be extra patient with him or her.

**Realize that people have and create problems.** When you decide to develop a relationship with another person, it's a package deal. You don't get to take only the good stuff and reject the bad. Try to give others the same kind of grace you'd like to receive for your shortcomings.

**Identify areas where people need patience with you.** It's a good idea for us to know what ours are.

### *The Celebration Principle*

The true test of relationships is not only how loyal we are when friends fail, but how thrilled we are when they succeed. Everyone identifies with failure. The problem is that because people so readily identify with failure, they sometimes have a hard time connecting with success. And if they don't identify with success, they may resent it.

Frequently the very same qualities that prevent people from achieving success — emotional insecurity, a scarcity mind-set, petty jealousy and the like — prevent them from celebrating others' successes. They constantly compare themselves to others and find themselves wanting.

How do you learn to celebrate with others instead of ignoring or undermining them? Realize it's not a competition. You must be willing to look at things from other people's point of view. When they achieve something that is important to *them*, celebrate with enthusiasm. Celebrate successes others don't yet see. Sometimes people make great strides and aren't even aware of it.

### *The High Road Principle*

We go to a higher level when we treat others better than they treat us. If you're slinging mud, you're losing ground. There are really only three roads we can travel when it comes to dealing with others. We can take the low road where we treat others worse than they treat us. We can take the middle road where we treat others the same as they treat us. Or we can take the high road and treat others better than they treat us.

The low road damages relationships and alienates others from us. The middle road may not drive people away from us, but it won't attract them to us either; it is reactive rather than proactive and allows others to set the agenda for our lives. The high road helps to create positive relationships and attracts others to us; it sets a positive agenda with others that even negative people find difficult to undermine.

High roaders understand that it's not what happens to you but what happens in you that really matters. Newscaster David Brinkley observed, "A successful man is one who can lay a firm foundation with the bricks others have thrown at him." They commit to traveling the high road continually. Nearly anyone can be kind in the face of unkindness every once in a while: It's more difficult to sustain a high road attitude all the time. High roaders recognize their own need for grace, and extend it to others.

High roaders set higher standards for themselves than others would. They make excellence their goal. They care more than others think is wise. They risk more than others think is safe. They dream more than others think is practical. They expect more than others think is possible. And they work more than others think is necessary. ■

## The Synergy Question: Can We Create a Win-Win Relationship?

Some relationships add value to both parties, and that is rewarding. When both parties enter into a relationship with an investment mind-set — after having connected and built trust with each other — a win-win relationship can result.

The wonderful thing about win-win relationships is that they can be forged in every area of life and in all kinds of relationships: between husbands and wives, parents and children, friends and neighbors, and bosses and employees. If both parties sustain a giving attitude and both are having their needs met, then the relationship can become something truly special.

In the long run, lopsided relationships don't last. If one person is doing all the giving and the other is doing all the receiving, the giver will eventually become worn out. And ironically the taker will become dissatisfied because that person will feel he or she is not receiving enough. The only way to build a positive, long-lasting, synergistic relationship is to make sure everybody wins!

### *The Boomerang Principle*

When we help others, we help ourselves. Those who invest in others give and then receive. They believe that success comes from being helpful, caring and constructive. They desire to make everything and everyone they touch better, and they understand the best way to accomplish that is to give of themselves. To enrich the world and become someone who invests in others, you must:

**Think "others first."** Good, healthy, growing relationships begin with the ability to put other people first. Begin

*(continued on page 8)*

## The Synergy Question: Can We Create a Win-Win Relationship?

*(continued from page 7)*

every relationship by giving the other person respect — even before he or she has had a chance to earn it.

**Focus on the investment, not the return.** Investors in people are like investors in the stock market. In the long haul, they will benefit, but they have little control over what that return will look like or how it will occur. But they *can* control what and how they invest.

**Pick out a few people with great potential.** When people prepare to make financial investments, the wise ones don't put all their money into a single stock or fund. They diversify by investing in several areas. But good investors don't spread themselves too thin. They know they can give only so much time and attention to each particular investment. Wise investors in people follow a similar pattern. Pick only as many people as you can handle with intensity, choose only people with great potential for growth, and choose only people whose need for growth matches your gifts and talents.

**With their permission, begin the process.** You cannot help someone who does not want your help. The stronger the relationships and the greater the trust, the higher the likelihood that the investment process will work.

**Enjoy a return in due season.** When people's motives are pure and they genuinely desire to add value to others, they cannot help others without receiving some benefit. The return may be immediate, or it may take a long time, but it will occur. And when it does, the relationship begins to resonate with synergy.

### *The Friendship Principle*

Most people underestimate the power and importance of relationships in regard to business and career. They try to learn the most recent management fad, focus on product quality, or create programs and systems to improve productivity or increase repeat business. These things are helpful, but the real key is relationships. Never underestimate the power of friendship when it comes to doing business.

As soon as you understand the way that relationships affect business, you begin to realize that all business relationships are not created equal. Here are the four levels of business relationships:

**People Knowledge.** Your understanding of people helps build your business. All the product knowledge in the world won't help someone without people skills. Nor will technical expertise. Nor will the ability to build a brilliantly efficient organization. If individuals don't possess people skills, they very quickly hit a ceiling in their effectiveness.

**Service Skills.** Barry J. Gibbons, author of *This Indecision Is Final*, writes, "Between 70 percent and 90 percent of decisions not to repeat a purchase of anything are not about product or price. They are about some dimension of the service relationship." How you treat the people with whom you do business really matters, especially in a competitive market.

**Business Reputation.** Writer Howard Hodgson said, "Whatever business you are in, you are in a business of relationships. That's why your reputation is your greatest asset."

**Personal Friendship.** Your friendship with others builds your business. The highest level of business relationships is reached when people like your business, but more important, they like you!

### *The Partnership Principle*

Working together increases the odds of winning together. Try to build relationships with everyone, but forge partnerships with only a few. Those closest to you determine your level of success. Move from simply working with good, capable people to partnering with difference makers. Find capable people with the same passion and mission as yours who also need others to make a difference. This will lead to many rewarding relational partnerships and together you will do things that make a positive impact by helping others.

Every person possesses one of two mind-sets: scarcity or abundance. People with a scarcity mind-set believe that there's only so much to go around so you have to scrape for everything you can and protect whatever you have at all costs. People with an abundance mind-set believe there's always enough to go around.

### *The Satisfaction Principle*

In great relationships, the joy of being together is enough. A lasting relationship begins as a healthy relationship. The following four factors help to create the right climate for relationships where simply being together is enough:

- **Shared memories create a bonded environment.**
- **Growing together creates a committed environment.**
- **Mutual respect creates a healthy environment of trust and servanthood.**
- **Unconditional love creates a safe environment.** ■

### It's Not What You Say, It's What People Hear

# WORDS THAT WORK

## THE SUMMARY IN BRIEF

*Why are some people better than others at talking their way into a job or out of trouble? What makes some advertising jingles cut through the clutter of our crowded memories? What's behind winning campaign slogans and career-ending political blunders? Why do some speeches resonate and endure while others are forgotten moments after they are given?*

*The answers lie in the way words are used to influence and motivate, the way they connect thought and emotion.*

*In this summary, language architect and public opinion guru Dr. Frank Luntz raises the curtain on the craft of effective language and offers priceless insight on how to find and use the right words to get what you want out of life.*

*Luntz draws much from his experience in the political arena, and he has played in a role in how we describe various current issues. For example, it was Luntz who turned the term "estate tax" into the more politically charged "death tax." He also reframed "drilling for oil" into "exploring for energy." In his book, Luntz explains how these subtle shifts in word usage can mean the difference between success and failure.*

*Whether your goal is to boost company sales, win political office, inspire your employees or get the raise you deserve, Luntz has something instructive to say about how language can help. Every day is a battle of perception, and in this book, Luntz demonstrates how to win by transforming mere words into an effective arsenal.*

*In this summary, you will learn:*

- ***How the right words can give you the edge in any venture.***
- ***How to avoid common mistakes in your messages.***
- ***How we all submit to the power of language, whether we know it or not.***
- ***How you can achieve better results by narrowing the gap between what you intend to convey and what your audiences actually interpret.***
- ***How to go beyond your own understanding and look at the world from your listener's point of view.***

# WORDS THAT WORK

**By Dr. Frank Luntz**

## — THE *COMPLETE* SUMMARY

## It's Not What You Say…

You can have the best message in the world, but the person on the receiving end will always understand it through the prism of his or her own emotions, preconceptions, prejudices and pre-existing beliefs. It's not enough to be correct, reasonable or even brilliant.

The key to successful communication is to take the imaginative leap of stuffing yourself right into your listener's shoes to know what he or she is thinking and feeling in the deepest recesses of his or her mind and heart. How that person perceives what you say is even more real, at least in a practical sense, than how you perceive yourself.

Just as a fictional work's meaning may transcend authorial intention, every message that you bring into the world is subject to the interpretations and emotions of the people who receive it. Once the words leave your lips, they no longer belong to you. The act of speaking is not a conquest, but a surrender. When we open our mouths, we are sharing with the world — and the world inevitably interprets, indeed sometimes shifts and distorts, our original meaning.

Examining the strategic and tactical use of language in politics, business and everyday life, this summary shows how you can achieve better results. The critical task is to go beyond your own understanding and to look at the world from your listener's point of view. In essence, their perceptions trump the "objective" reality of a given word or phrase. What matters isn't what you say, it's what people hear. ■

## The 10 Rules of Effective Language

The rules of language are especially important given the sheer amount of communication the average person has to contend with. We step out of our houses each morning into a nonstop sensory assault: advertising and entertainment, song lyrics and commercial jingles, clipped conversations and abbreviated e-mails. A good deal of noise also comes from inside our homes, from our televisions to our sound systems to our computers and iPods. How do you make people hear your words amid all this chatter?

Here are the 10 rules of successful communication:

**Rule 1. Simplicity: Use Small Words.** Avoid words that might force someone to reach for the dictionary, because most Americans won't. The average American did not graduate from college and doesn't understand the difference between *effect* and *affect*.

**Rule 2. Brevity: Use Short Sentences.** Be as brief as possible. Never use a sentence when a phrase will do and never use four words when three can say just as much.

**Rule 3. Credibility Is as Important as Philosophy.** People have to believe it to buy it. If your words lack sincerity or if they contradict accepted facts, circumstances or perceptions, they will lack impact.

**Rule 4. Consistency Matters.** Repetition. Repetition. Repetition. Good language is like the Energizer Bunny. It keeps going … and going … and going.

**Rule 5. Novelty: Offer Something New.** In plain English, words that work often involve a new definition of an old idea. At a time when cars and the promotion of them were expanding in size, Volkswagen took exactly the opposite approach in design and in message. It

## The 10 Rules of Effective Language

*(continued from page 2)*

worked because it made people think about the product in a fresh way.

**Rule 6. Sound and Texture Matter.** The sounds and texture of language should be just as memorable as the words themselves. A string of words that have the same first letter, the same sound or the same syllabic cadence is more memorable than a random collection of sounds.

**Rule 7. Speak Aspirationally.** Messages need to say what people want to hear. The key to successful aspirational language for products or politics is to personalize and humanize the message to trigger an emotional remembrance.

**Rule 8. Visualize.** Paint a vivid picture. From M&M's "Melts in your mouth, not in your hand" to Morton Salt's "When it rains it pours" to NBC's "Must See TV," the slogans we remember for a lifetime almost always have a strong visual component, something we can see and almost feel.

**Rule 9. Ask a Question.** "Got Milk?" may be the most memorable print ad campaign of the past decade. A statement, when put in the form of a rhetorical question, can have much greater impact than a plain assertion.

**Rule 10. Provide Context and Explain Relevance.** You have to give people the "why" of a message before you tell them the "therefore" and the "so that." Without context, you cannot establish a message's value, its impact or, most importantly, its relevance. ■

# Preventing Message Mistakes

Few words — indeed, few messages of any kind — whether in politics or in the business world, are ingested in isolation. Their meanings are shaped and shaded by the regional biases, life experiences, education, assumptions and prejudices of those who receive them. Communicators too often forget this, or absentmindedly acknowledge it but then continue obliviously, making assumptions about where their audience is coming from, figuring that whomever they're pitching their product or policy to is just like they are. They learn too late that most Americans are not denizens of Capitol Hill or the executive suite.

Never lose sight of whom you are talking to — and who is listening. Remember that the meaning of your words is constantly in flux, rather than being fixed. How your words are understood is strongly influenced by the experiences and biases of the listener.

### *How You Define Determines How You Are Received*

Positioning an idea linguistically so that it affirms and confirms an audience's context can often mean the difference between that idea's success and failure. The fact is, not all words with similar definitions prompt the same response.

In politics, for example, Americans will often come to diametrically opposite conclusions on policy questions, depending on how the questions are phrased — even if the actual result of the policies is exactly the same. In effect, positioning an idea doesn't merely "frame" it so that it carries a certain meaning; it actually defines the terms of the debate itself.

For example, by almost two-to-one, Americans say they are spending too much on *welfare* (42 percent) rather than too little (23 percent). Yet an overwhelming 68 percent of Americans think they are spending too little on *assistance to the poor*, versus a mere 7 percent who think they're spending too much. Think about it: What is assistance to the poor? Welfare! So while the underlying policy question may be the same, the definition — welfare versus assistance to the poor — and positioning make all the difference in public reaction.

Communicators need to put themselves in the mind-set of their audiences: what social status people occupy, what they've heard in the past, what their level of education is and what gender they are. All these things affect how people will receive a message. ■

# Old Words, New Meaning

The definitions of words change with the generations. Americans are constantly creating new words even as they give old words new meanings. To create words that work, you have to pay close attention to the vitality of the language.

You have to understand how people use words today and what those words have come to mean. The English language is general, and creating words that work in

*(continued on page 4)*

## Keeping Up With the Language

Here are some examples of the way language has changed over the years:

| WAS | IS NOW |
|---|---|
| Used Car | Pre-owned vehicle |
| Secretary | Administrative Assistant |
| Housewife | Stay-at-home mom |
| Stewardess | Flight Attendant |
| Waiter/Waitress | Server |
| Caretaker | Estate Manager |
| Garbage Removal | Sanitation Services |

## Old Words, New Meaning

*(continued from page 3)*

particular is a living, dynamic, shifting challenge; being aware is essential when it comes to effective communication.

### *Misuse of Words*

One reason why the definitions of words have blurred or changed over time is simply because of their misuse. There are a growing number of examples where the incorrect meaning of relatively commonplace language has become more widespread than the original intention or definition.

A good example is the word *peruse*. Most people think that to peruse something means to "scan or skim it quickly, without paying much attention." In fact, this is the exact opposite of what peruse really means: "to study or read something carefully, in detail." But the word has been misused so often by so many people that this second sense of it — the exact opposite of what it actually means — has finally been accepted as a secondary definition, and as far as most people know, it's the only definition.

It's one thing to insist on proper usage in a piece of formal writing, but if you're speaking or communicating informally — whether to your customers or your constituents — it's really more important to be understood. This is not to say that you should knowingly misuse the language; instead, just find a simpler, more readily understandable way to convey what you have to say. ■

## Effective Communication

Arriving at the best language isn't enough in and of itself. The majority of human communication is nonverbal. It involves not only symbolism and imagery but also attitude and atmosphere.

Those character attributes that make up personality — that describe someone's affiliations and sympathies — are a critical component of communication. When they clash with a listener's expectations, the most precise, tailored and on-target language in the world won't save you.

The most powerful messages will fall on deaf ears if they aren't spoken by credible messengers. Effective language is more than just the words themselves. There is a style that goes hand-in-hand with the substance. Whether running for higher office or running for a closing elevator, how you speak determines how you are perceived and received. But credibility and authenticity don't just happen. They are earned.

# How 'Words That Work' Are Created

While most researchers depend on focus groups to understand the *why* of a topic, Luntz writes that he prefers "Instant Response Dial Sessions"— also known as "People Meters" — because he believes they multiply the benefits of a traditional focus group.

The differences between dial sessions and traditional focus groups are significant. Dial sessions have more participants than a focus group, typically about 25 to 30 people. They're conducted classroom style, and last longer — usually three hours. Dial sessions are much more expensive than focus groups. A typical dial session in 2006 ran from $27,500 to $40,000, while focus groups were as cheap as $7,500 and rarely cost more than $12,000.

In a well-constructed dial session, it is not uncommon to contact more than 1,500 people to fill the 30 slots. Luckily, e-mail is making it increasingly possible to reach and recruit the right people for an affordable cost.

What truly differentiates a dial session from a focus group is the dial technology itself. The dials are the research equivalent of an EKG that measures a combination of emotional and intellectual responses and gets inside each participant's psyche, isolating his or her emotional reaction to every word, phrase and visual.

Participants hold small wireless devices that are about the size of a remote control. Each device has a computerized numerical display that ranges from 0 to 100 and a knob about the size of a quarter on the front that they turn up toward 100 (more positive) or turn down toward 0 (more negative).

They do this on a second-by-second basis based on their immediate, visceral, personal reactions to what they are seeing — a videotaped speech, commercials, snippets from a television show or movie, even a live presentation or conversation. Those reactions are collected in real time on a computer and are displayed as a line superimposed on the tested video. Every time the line spikes or plunges, something was said or shown that caused a significant reaction and deserves further group exploration.

Dial sessions provide deep insight into behavioral and emotional patterns that cannot be captured in telephone surveys. Many of the "words that work" most likely came from a dial session. ■

# Be the Message

The importance of authenticity cannot be overstated. Whether your arena is business or politics, you simply must be yourself. Few things in this world are more

*(continued on page 5)*

## Be the Message

*(continued from page 4)*

painful than a politician or a CEO trying to act cool. Employees and voters see right through such bad-faith attempts to connect and bond with them.

By all means, show, don't tell. Reveal your personality. Be the message rather than narrating it. But, above all, be *authentic*.

### *The Corporate CEO as Messenger*

The business world is particularly plagued by shoddy language. Employees and customers are inundated with jargon and "ad-speak," cliches and windy phrases that signify nothing and are forgotten even before they are remembered. It's stunning how poor communication skills can be, even at the highest levels of corporate America.

The CEO is often the de facto messenger for the company he or she leads — the living, breathing embodiment of whatever product or service it sells; that's not always a good thing. Right now, there's a Fortune 20 CEO out there who is leading a crumbling manufacturing behemoth and doesn't realize that his own unintelligible public statements are contributing to its collapse, and he is certainly not the exception.

Two CEOs, one current and the other retired, stand head and shoulders above the rest in how their language embodies the companies they run, the management style they typify and the leaders they are.

Jack Welch, the venerable former CEO of General Electric, truly practiced what he preached. A tireless worker, Welch led the expansion of GE into the powerhouse corporation it is today.

Linguistically, Welch was a dedicated follower and communicator of two of the rules of effective messaging: repetition and relevance. The incredibly powerful and personal "GE, we bring good things to life" ad campaign was launched under his watch, and it perfectly matched his laser-like focus on success.

Steve Jobs, Apple's past and current CEO, is another winner because of his larger-than-life persona and his candid assessment and lasting impact on the human condition. The parallels between his life and the company he created are remarkable.

His twice-occurring rags-to-riches story is one that should be taught at every business school because it demonstrates the power of personal conviction — and that conviction has defined Apple as well. Responding to a critic who asked why he thought his overly ambitious development plans could be achieved, Jobs declared, "Because I'm the CEO and I think it can be done." His unrelenting can-do language and spirit are a perfect reflection of Apple. ■

## The Most Recognized Slogans

In a recent national survey, the most recognized product and corporate taglines included:

- "You're in good hands." Overtly visual, aspirational, and recognized as Allstate's slogan by 87 percent of the American public.
- "Like a Good Neighbor." Recognized as State Farm's tagline by 70 percent, this slogan is aspirational, as well as memorable with a jingle written by Barry Manilow.
- "Always Low Prices. Always." Extremely repetitive and unquestionably credible, Wal-Mart's tagline is identified by 67 percent.
- "Obey Your Thirst." A relatively new tagline for Sprite, recognized by 35 percent of the population because of its novelty, twist of language and visualization.
- "Think Outside the Bun." Taco Bell's tagline is recognized by 34 percent, for reasons similar to Sprite's.
- "i'm lovin' it." The latest and greatest for McDonald's, is already at 33 percent despite being only a year old, because it hits more than half of the rules: simplicity, brevity, credibility, aspiration and relevance.
- "What's in your wallet?" This rhetorical question from Capital One earns a 27 percent recognition level.

# Words We Remember

Words we remember are not the common words of common people. They are the political, corporate and cultural words that have been burned into our brains. Some are serious, others frivolous. They are words that will always be with us. Forever.

Much advertising saturation — and our subsequent ability to recall it — is involuntary. That's one of the definitions of words that work: We remember them even when we're not trying. The Doyle Dane Bernbach agency's 1959 campaign for Volkswagen, titled "Think Small," was named by *Advertising Age* as the top ad campaign ever. Just two words, brief and simple, but the contextual surprise signaled a new sophistication of American advertising, marking a subtle but influential shift in the way products would be sold from then on.

### *Accessible Language*

Accessible language rules. The best advertising taglines abide by the 10 Rules of Effective Communication and are therefore easily remembered.

The power of poignant language is immense, but the destructive power of an ill-thought sound bite is unending and unforgiving. Successful, effective messages — words and language that have been presented in the

*(continued on page 6)*

## Words We Remember

*(continued from page 5)*

proper context — all have something in common. They stick in our brains and never leave, like riding a bicycle or tying our shoelaces. Not only do they communicate, educate and allow us to share ideas — they also move people to action.

Words that work are catalysts. They spur us to get up off the couch, to leave the house, *to do something.* When communicators pay attention to what people hear rather than what they are trying to say, they manage not merely to catch people's attention, but to hold it. ■

# Corporate Case Studies

Words that work in business don't merely inject themselves into memory and compel you to act; at times they actually mean the difference between millions of dollars and billions of dollars.

The one component that virtually all successful corporate communication efforts have in common is the decision to take a proactive approach. In today's anti-corporate, distrustful and highly politicized environment, there's a simple linguistic equation: Silence = Guilt.

### *Wal-Mart and Vons*

For years, Wal-Mart did not respond to an increasingly serious set of public, community, legal and governmental challenges, and now finds itself on the defensive in neighborhoods where it wishes to locate or expand, and at open war with public interest groups that once hailed the company for low prices and job opportunities.

Vons, the Southern California division of supermarket giant Safeway, consciously made the decision to encourage its store directors *not* to talk to employees or customers about labor issues in the run-up to the terribly destructive strike in 2004, and it paid the price in employee agitation and an angry consumer marketplace during and even after the strike.

### *A Clear and Immediate Response*

Regardless of the facts, even if it's unfair to do so, it's only human nature for audiences to regard silence as a tacit admission of wrongdoing. Every attack that is not met with a clear and immediate response will be assumed to be true.

Whether in the midst of an employee strike, corporate scandal or just a bad quarterly financial report, a company's communication with the public must be proactive, consistent and ongoing. Whether a difficult event is about to take place — or a crisis has just landed in your lap — the rules are the same. The key word is *more:* more conversation with the affected community rather than less, more information rather than less and more details rather than fewer. If the words are right, there is no such thing as overkill.

One of the best examples of an industry tackling its greatest image weakness and turning it into its most beneficial strength just by changing a single solitary word (two letters, really) is the *gaming* industry — formerly known as the *gambling* industry. ■

# Political Case Studies

Back in 1993, when Rudy Giuliani was in his first successful campaign for mayor of New York City, he was pressed by his advisers to talk about *public safety* rather than *crime* and *criminals.* Polling with the voters of New York showed that the public placed a higher priority on *personal and public safety* than on *fighting crime* or even *getting tough on criminals.*

There is an important distinction. *Fighting crime* is procedural and *getting tough on criminals* is punitive — and that's certainly important. But *safety*, although somewhat abstract, is definitely personal, and most of all aspirational — the ultimate value and the desired result of an effort to fight crime. And so Rudy Giuliani adopted not just an anti-crime message but a pro-public safety agenda — and his success in New York City led to the reframing of the way Americans think about crime, criminals and a safe, civil society.

Words that work don't just happen. They are uncovered and utilized only in cases where someone cares enough to apply the principles of effective communication to an issue or cause. ■

# Myths and Realities About Language and People

Here are five great myths about Americans and the realities behind them:

**Myth: Americans Are Educated.** False. Fewer than half of Americans have graduated from college. Only 29 percent of adults in the United States over the age of 45 have a bachelor's degree or higher, and only 27 percent of adults over the age of 25 are college educated.

**Myth: Americans Read.** False. Polls, dial sessions and focus groups show again and again that nobody reads. In 1985, 67 percent of households subscribed to one or more newspapers. By 2001, only 43 percent of households received a newspaper. In 2005, only one in four Americans said they read a magazine recently, versus one in three in 1994.

**Myth: American Women All Respond to Messages Like … Women.** False. It is true that there are real dif-

*(continued on page 7)*

## Myths and Realities About Language and People

*(continued from page 6)*

ferences in men's and women's policy priorities, and one great ideological divide: Women typically put more faith in the government than men, so they are less hostile toward Capitol Hill. Once you get beyond this one generalization, though, it's a profound mistake to treat women as a single, monolithic bloc.

**Myth: Americans Divide Neatly and Accurately Into Urban, Suburban and Rural Populations.** False. Over the past five years or so, Americans have seen the emergence of a fourth, new category: affluent homeowners with growing bank accounts, growing families, larger big-screen televisions and a bigger outlook on life. They are moving far away from the country's urban areas, and even from the conveniences of the suburbs. Welcome to exurbia, a marketer's dream.

**Myth: American Consumers Respond Well to Patriotic Messages.** Wrong, sort of. There is an essential perceptual difference between "American patriotism" and "American pride." To some, patriotism connotes arrogant, obnoxious, xenophobic, red-white-and-blue, America-can-do-no-wrong jingoism. American pride, on the other hand, has a far more universal appeal. ■

# What We REALLY Care About

Words not only can determine how we feel, they can also determine what we achieve. And what we hear often defines exactly what we want.

Words that work are powerful because they connect ideas, emotions, hopes and (unfortunately) fears. There are dozens of priorities, principles and preferences that matter to all of us, no matter what our political leanings. Taken together, these elements comprise the semantic terrain we all share, and their importance extends well beyond politics. No matter what communicators are selling, those who establish the correct tone by presenting their ideas in terms of these three keys to American thought and behavior will arrive at the right words.

One word that bridges the partisan divide is *opportunity*. It is unifying, alienates fewer people, and gives out a practical impression. ■

# Personal Language for Personal Scenarios

In most situations in life, the immediate reaction is the only reaction that matters. When we meet someone new, whether at work or in a social situation, we begin making judgments instantaneously, based on dress, mannerisms, body language, demeanor and dozens of other small details.

This process of reasoning and judgment is subtle and often subconscious, but it never stops: It is the basis of words that work. The meaning of words and actions resides in a kind of flux, their appropriateness never fixed, forever contingent upon individual, unique circumstance. And those circumstances are set by what may be the most important aspect of communication: context. ■

# 21 Words and Phrases for the 21st Century

The words that follow are not superficial, timely or contingent on the ephemeral circumstances of the moment. These words cut to the heart of Americans' most fundamental beliefs and right to the core values that do not change.

**1. Imagine.** This word evokes something different to each person who hears it. No matter what your company's product or service, the word "imagine" has the potential to create and personalize an appeal that is individualized based on the dreams and desires of the person who hears or reads it.

**2. Hassle-free.** When it comes to how we interact with products, services and people, "hassle-free" is a top priority.

**3. Lifestyle.** This word is incredibly powerful because it is at the same time self-defined and aspirational — everyone defines and aspires to his or her own unique lifestyle.

**4. Accountability.** Americans universally want corporations held "accountable" for their actions as well as their products and how they treat their customers, their employees and their shareholders.

**5. Results** and the **Can-do spirit.** When we buy something, we want to know that it's going to provide a tangible benefit — something that we can see, hear, feel or otherwise quantify. And if results are the goal, the "can-do spirit" is the effort.

**6. Innovation.** This word immediately calls to mind pictures of the future. It leads to products that are smaller or lighter or faster or cheaper … or bigger, more resilient, stronger and longer lasting.

**7. Renew, Revitalize, Rejuvenate, Restore, Rekindle, Reinvent.** These are the so-called "re" words,

*(continued on page 8)*

## 21 Words and Phrases for the 21st Century

*(continued from page 7)*

and they are incredibly powerful because they take the best elements or ideas from the past and apply them to the present and the future.

**8. Efficient** and **Efficiency.** In the bargain-hungry environment in which we live, efficiency is a significant product advantage.

**9. The right to …** Americans have always been committed to the concept of rights.

**10. Patient-centered.** This concept describes what most people want out of their health care. It is the most effective umbrella term for anything related to medicine involving human beings.

**11. Investment.** "Spending" suggests waste. "Investment" suggests the responsible handling of resources.

**12. Casual elegance.** This expression best defines what Americans want when they travel, more than any other attribute.

**13. Independent.** This word means having no constricting ties, no conflicts of interest, nothing to hide.

**14. Peace of mind.** This term is a kinder, gentler, softer expression of "security" that is less politicized, more embracing and all-encompassing.

**15. Certified.** We want and need ironclad agreements that what we buy won't fail us months or even days after our purchase.

**16. All-American.** America is all about progress and innovation, two ways in which the third largest distributor of semiconductors and a top-10 supplier of electronic components, All American, has used its patriotic image to outgrow the competition and become an industry leader.

**17. Prosperity.** This word encompasses the idea of more jobs, better careers, employment security, more take-home pay, a stronger economy and expanded opportunity.

**18. Spirituality.** When appealing to a broad audience, evocations of "spirituality" are more inclusive and therefore more politically effective than are generic references to "religion," specific denominations, or even "faith."

**19. Financial security.** Sadly, financial freedom is more than most of us are hoping for at the moment. Financial security is still attainable.

**20. Balanced approach.** Just as professing your independence from partisanship and ideology will win you credibility points with the public, so too will arguing for a balanced approach to our nation's problems.

**21. A culture of …** By defining an issue or a cluster of issues as part of a metaphorical culture, you can lend it new weight and seriousness. Social issues have been supplanted by cultural issues, which sound less threatening and judgmental.

In the end, how these words are used and delivered is almost as important as the words themselves. Style is almost as important as substance. ■

For additional information on the concept of imagination within companies, go to: http://my.summary.com

## … It's What You Hear

For most people, language is functional rather than being an end in itself. It's the people that are the end; language is just a tool to reach them, a means to an end.

But it's not enough to simply stand there and marvel at the tool's beauty. You must realize it's like fire, and the outcome depends on how it is used — to light the way, or to destroy.

The real problem with our language today is that it's been so coarsened. Words and expressions once considered vulgar have become a part of the common speech, their original meanings all but forgotten.

The issue is that our language has become so unimportant and disposable that we feel we can say anything we want whenever we want to, and after it is spoken it disappears into the ether.

Beyond the vulgarity of such talk, there's a harshness to it — a disturbing discourtesy, even viciousness, that's relatively new in American life. We seek out words to divide, demean and putdown. Negativity feels more pervasive than ever before. Surrounded by such meanness and abrasiveness, there is much to be gained by being upbeat and optimistic. Accentuate the positive and eliminate the negative. Negativity can work, but a solid positive message will triumph.

To be successful with the words that work of the 21st century, you will have to become comfortable with them. You have to live the words; they have to become you. As Roger Ailes, the greatest media guru of the 20th century, so accurately put it: "You are the message." ■

### SOUNDVIEW RECOMMENDED READING LIST

**If you liked *Words That Work,* you'll also like:**

1. ***Made to Stick*** **by by Chip Heath and Dan Heath.** The Heath brothers provide a practical guide to effective communication and explain how great ideas stick around.
2. ***Naked Conversations*** **by Robert Scoble and Shel Israel.** Blogging is the latest frontier for businesses to embrace in an effort to further connect with customers.
3. ***What Got You Here Won't Get You There*** **by Marshall Goldsmith with Mark Reiter.** The corporate world is full of intelligent executives, but few will ever reach the top and, according to Goldsmith, subtle nuances make the difference.
4. ***Success Built to Last*** **by Jerry Porras, Stewart Emery and Mark Thompson.** Through interviews with 300 successful individuals, the authors uncover the secrets of their accomplishments.
5. ***The Power of You!*** **by Scott Martineau.** Martineau shows that fulfillment doesn't come from success at work or happiness at home; it comes from both.

The Heart of Performance
*Page 8*

## THE SUMMARY IN BRIEF

The secret of success is not what they taught you in school. What matters most is not academic excellence, not a business school degree, not even technical know-how or years of experience. What distinguishes star performers from the mediocre is *emotional intelligence.* Emotional intelligence is actually a set of skills that anyone can acquire, and in this practical guide, renowned researcher and author Daniel Goleman identifies them, explains their importance and shows how they can be fostered.

The higher a person's position, the more emotional intelligence matters — it is crucial for successful leadership. As Goleman documents, it's the essential ingre-dient for reaching and staying at the top *in any field,* even in high-tech careers. And organizations that learn to operate in emotionally intelligent ways are the companies that will remain vital and dynamic in the competitive marketplace of today — and the future.

Comprehensively researched, crisply written and filled with fascinating infor-mation from the front lines of business, ***Working with Emotional Intelligence*** offers good news to the employee looking for advancement and a wake-up call to lead-ers, organizations and corporations.

## IN THIS SUMMARY, YOU WILL LEARN:

- How emotional intelligence works and why it can be crucial to your career.
- How to connect a wealth of new understandings to the riches of older wisdom.
- An entirely new way of looking at the root causes of many of the ills of our families and society.
- How to achieve what it takes to succeed in your career.

## The New Yardstick

The rules for work are changing. We're being judged by a new yardstick: not just by how smart we are or by our training and expertise, but also by how well we handle ourselves and each other. This yardstick is increasingly applied in choosing who is hired and who is not, who is let go and who is retained, who is passed over and who is promoted.

The new rules predict who is most likely to become a star performer and who is most prone to derailing. And no matter what field we work in currently, they measure the traits that are crucial to our marketability for future jobs.

These rules have little to do with what we were told was important in school; academic abilities are largely irrelevant to this standard. This new measure takes for granted we have enough intellectual ability and technical know-how to do our jobs; it focuses instead on personal qualities, such as initiative and empathy, adaptability and persuasiveness.

The research distills with unprecedented precision which qualities mark a star performer. And it demonstrates which human abilities make up the greater part of the ingredients for excellence at work — most especially for leadership.

In a time with no guarantees of job security, when the very concept of a "job" is rapidly being replaced by "portable skills," these are prime qualities that make and keep us employable. Talked about loosely for decades under a variety of names, from "character" and "personality" to "soft skills" and "competence," there is at last a more precise understanding of these human talents and a new name for them: emotional intelligence.

## Competencies of the Stars

Emotional intelligence skills are synergistic with cognitive ones; top performers have both. The more complex the job, the more emotional intelligence matters —if only because a deficiency in these abilities can hinder the use of whatever technical expertise or intellect a person may have.

Take, for example, an executive who had been brought in to run a $65 million family-owned business, the first president from outside the family. Shortly after the executive was hired, a researcher, using an interview method to assess the executive's ability to handle cognitive complexity, determined his capacity was the very highest — a "level six," someone smart enough, theoretically, to be CEO of a global firm or head of a country. But during that interview the conversation turned to why he had to leave his previous job: He had been fired because he had failed to confront subordinates and hold them responsible for their poor performance.

"It was an emotional trigger for him," the researcher said. "His face got red and flushed, he started waving his hands — he was clearly agitated. It turned out that his new boss — the owner of the company — had criticized him that very morning for the same thing, and he went on and on about how hard it was for him to confront low-performing employees, especially when they had been with the company for a long time." And, the researcher noted, "while he was so upset, his ability to handle cognitive complexity — to reason — plummeted."

In short, out-of-control emotions can make smart people stupid. As Doug Lennick, an executive vice president at American Express Financial Advisors, said, "The aptitudes you need to succeed start with intellectual horsepower — but people need emotional competence, too, to get the full potential of their talents. The reason we don't get people's full potential is emotional incompetence."

### The Emotional Competence Framework

The great divide in competencies lies between the mind and heart or, more technically, between cognition and emotion. Some competencies are purely cognitive, such as analytic reasoning or technical expertise. Others combine thought and feeling; these can be called "emotional competencies."

An emotional *competence* is a learned capability based on emotional intelligence that results in outstanding performance at work. There are many paths to excellence.

**Personal Competence.** The 25 emotional competencies fall into five categories. The first three categories contain personal competencies, which determine how we manage ourselves:

- **Self-Awareness: Knowing one's internal states, preferences, resources and intuitions.** Self-awareness competencies include emotional awareness, accurate self-assessment and self-confidence.
- **Self-Regulation: Managing one's internal states, impulses and resources.** This category includes self-control, trustworthiness, conscientiousness, adaptability and innovation.
- **Motivation: Emotional tendencies that guide or facilitate reaching goals.** Motivation competencies

include achievement drive, commitment, initiative and optimism.

**Social Competence.** The last two categories contain social competencies, which determine how we handle relationships:

- **Empathy: Awareness of others' feelings, needs and concerns.** Empathy competencies include understanding others, developing others, a service orientation, leveraging diversity and political awareness.
- **Social skills: Adeptness at inducing desirable responses in others.** This category includes influence, communication, conflict management, leadership, change catalyst, building bonds, collaboration and cooperation, and team capabilities.

## The Hard Case for Soft Skills

A recent study assessed the importance of emotional competence for executive and leadership positions in business. Based on research with hundreds of top executives at 15 global companies — including IBM, PepsiCo and Volvo — the results were stunning.

Just one cognitive ability distinguished star performers from average: pattern recognition, the "big picture" thinking that allows leaders to pick out the meaningful trends from the welter of information around them and to think strategically far into the future.

But with this one exception, intellectual or technical superiority played no role in leadership success. At the top executive levels, everyone needs cognitive skills, to a certain extent, but being better at them does not make a star leader.

Rather, emotional competence made the crucial difference between mediocre leaders and the best. The stars showed significantly greater strengths in a range of emotional competencies, among them influence, team leadership, political awareness, self-confidence and achievement drive. On average, close to *90 percent* of their success in leadership was attributable to emotional intelligence.

To sum up: For star performance in all jobs, in every field, emotional competence is twice as important as purely cognitive abilities.

For success at the highest levels, in leadership positions, emotional competence accounts for virtually the entire advantage.

## The Inner Rudder

The ability to read subjective currents has primordial roots in evolution. The brain areas involved in gut feelings are far more ancient than the thin layers of the neo-cortex, the centers for rational thought that enfold the very top of the brain. Hunches start much deeper in the brain. They are a function of the emotional centers that ring the brain stem atop the spinal cord — most particularly an almond-shaped structure called the amygdala and its connected neural circuitry. This web of connectivity, sometimes called the extended amygdala, stretches up to the brain's executive center in the prefrontal lobes, just behind the forehead.

The brain stores different aspects of an experience in different areas — the source of a memory is encoded in one zone, the sights and sounds and smells in other areas, and so on. The amygdala is the site where the emotions an experience evokes are stored. Every experience that we have an emotional reaction to, no matter how subtle, seems to be encoded in the amygdala.

### The Source of Gut Feeling

As the repository for everything we feel about what we experience, the amygdala constantly signals us with this information. Whenever we have a preference of any kind, whether for ordering risotto rather than the sea bass special, or a compelling sense that we should dump our shares in a stock, that is a message from the amygdala. And via the amygdala's related circuitry, particularly nerve pathways that run into the viscera, we can have a somatic response — literally, a "gut feeling" — to the choices we face.

This capacity, like other elements of emotional intelligence, can grow stronger with the accumulating experiences life brings us. The classic term for this strengthening of our guiding sensibility is *wisdom*. And people who ignore or discount messages from this repository of life's wisdom do so at their peril.

### Self-Awareness –– Competencies

Intuition and gut feeling bespeak the capacity to sense messages from our internal store of emotional memory— our own reservoir of wisdom and judgment. This ability lies at the heart of self-awareness, and self-aware-ness is the vital foundation skill for three emotional competencies:

- ***Emotional awareness:*** The recognition of how our emotions affect our performance and the ability to use our values to guide decision-making.

- ***Accurate self-assessment:*** A candid sense of our personal strengths and limits, a clear vision of where we need to improve and the ability to learn from experience.
- ***Self-confidence:*** The courage that comes from certainty about our capabilities, values and goals.

## Self-Control

The single most striking finding from brain studies of people under stress — like giving a talk in front of a critical audience — shows the emotional brain at work in ways that undermine the workings of the brain's executive center, the prefrontal lobes, located just behind the forehead.

The prefrontal area is the site of "working memory," the capacity to pay attention and keep in mind whatever information is salient. Working memory is vital for comprehension and understanding, planning and decision making, reasoning and learning.

When the mind is calm, working memory functions at its best. But when there is an emergency, the brain shifts into a self-protective mode, stealing resources from working memory and shunting them to other brain sites in order to keep the senses hyperalert — a mental stance tailored to survival.

During the emergency, the brain falls back on simple, highly familiar routines and responses and puts aside complex thought, creative insight and long-term planning. The focus is the urgent present — or the crisis of the day.

While the circuitry for emergencies evolved millions of years ago, we experience its operation today in the form of troubling emotions: worries, surges of anxiety, panic, frustration and irritation, anger, rage.

### The Managed Heart

The notion of emotional self-control does not mean denying or repressing true feelings. "Bad" moods, for instance, have their uses; anger, sadness and fear can become sources of creativity, energy and connectedness. Anger can be an intense source of motivation, particularly when it stems from the urge to right an injustice or inequity. Shared sadness can knit people together. And the urgency born of anxiety — if not overwhelming —can prod the creative spirit.

Emotional self-control is not the same as overcontrol, the stifling of all feeling and spontaneity. In fact, there is a physical and mental cost to such overcontrol. People who stifle their feelings, especially strong negative ones, raise their heart rate, a sign of increased tension. When such emotional suppression is chronic, it can impair thinking, hamper intellectual performance and interfere with smooth social interactions.

By contrast, emotional competence implies we have a choice as to *how* we express our feelings. Such emotional finesse becomes particularly important in a global economy, since the ground rules for emotional expression vary greatly from culture to culture.

### Self-Regulation –– Competencies

Self-regulation — managing impulse as well as distressing feelings — depends on the working of the emotional centers in tandem with the brain's executive centers in the prefrontal areas. These two primal skills —handling impulse and dealing with upsets — are at the core of five emotional competencies:

- ***Self-control:*** Managing disruptive emotions and impulses effectively.
- ***Trustworthiness:*** Displaying honesty and integrity.
- ***Conscientiousness:*** Dependability and responsibility in fulfilling obligations.
- ***Adaptability:*** Flexibility in handling change and challenges.
- ***Innovation:*** Being open to novel ideas, approaches and new information.

## What Moves Us

People who find their work exhilarating perform at their best. The key to that exhilaration is not the task itself, but the special state of mind created as we work, a state called "flow." Flow moves people to do their best work, no matter what work they do.

Flow blossoms when our skills are fully engaged and then some — say, by a work project that stretches us in new and challenging ways. The challenge absorbs us so much we lose ourselves in our work, becoming so totally concentrated we may feel "out of time." In this state we seem to handle everything effortlessly, nimbly adapting to shifting demands. Flow itself is a pleasure.

Flow is the ultimate motivator. Activities we love draw us in because we get into flow as we pursue them. When we work in flow, the motivation is built in —work is a delight in itself.

Flow offers a radical alternative to the widely held ideas about what motivates people at work. This is not to say that incentives don't matter; they are key as prods or ways to "keep score." There is, of course, value in reviews and promotions, stock options and bonuses —as there is with basic salary. But the most powerful motivators are internal, not external.

For instance, when people kept a journal of how they felt while they performed a range of tasks throughout the day, one result was clear: They felt better doing work they loved rather than work they did only because they were rewarded for it.

Traditional incentives miss the point when it comes to getting people to perform at their absolute best. To reach the top rung, people must love what they do and find pleasure in doing it.

### Motivation –– Competencies

Three motivational competencies typify outstanding performers:

- ***Achievement drive:*** Striving to improve or meet a standard of excellence.
- ***Commitment:*** Embracing the organization's or group's vision and goals.
- ***Initiative and optimism:*** Twin competencies that mobilize people to seize opportunities and allow them to take setbacks and obstacles in stride.

## People Skills

Sensing what others feel without saying so captures the essence of empathy. Others rarely tell us in words what they feel; instead they tell us in their tone of voice, facial expression and other nonverbal ways. The ability to sense these subtle communications builds on more basic competencies, particularly self-awareness and self-control. Without the ability to sense our own feelings— or to keep them from swamping us — we will be hopelessly out of touch with the moods of others.

Empathy is our social radar. Lacking such sensitivity, people are "off." Being emotionally tone deaf leads to social awkwardness, whether from misconstruing feelings or through a mechanical, out-of-tune bluntness that destroys rapport.

At the very least, empathy requires being able to read another's emotions; at a higher level, it entails sensing and responding to a person's unspoken concerns or feelings. At the highest levels, empathy is understanding the issues or concerns that lie behind another's feelings.

### Empathy –– Competencies

Because of differences in how well we have learned the basic skills of social awareness, there are corresponding differences among us in workplace competencies that build on empathy. Empathy represents the foundation skill for all the social competencies important for work. These include:

- ***Understanding others:*** Sensing others' feelings and perspectives, and taking an active interest in their concerns.
- ***Service orientation:*** Anticipating, recognizing and meeting customers' needs.
- ***Leveraging diversity:*** Cultivating opportunities through diverse people.
- ***Political awareness:*** Reading the political and social currents in an organization.

## The Arts of Influence

Influencing another person's emotional state for better or worse is perfectly natural; we do it constantly, "catching" emotions from one another like some kind of social virus. This emotional exchange constitutes an invisible interpersonal economy, part of every human interaction, but it is usually too subtle to notice.

The *emotional* economy is the sum total of the exchanges of feeling among us. In subtle (or not so subtle) ways, we all make each other feel a bit better (or a lot worse) as part of any contact we have; every encounter can be weighted along a scale from emotionally toxic to nourishing. While its operation is largely invisible, this economy can have immense benefits for a business or for the tone of organizational life.

In the world of work, no matter the business at hand, emotional elements play a crucial role. Emotional competence requires being able to pilot through the emotional undercurrents always at play rather than being pulled under by them.

The most effective people in organizations naturally use their emotional radar to sense how others are reacting, and they fine-tune their own response to push the interaction in the best direction.

### Social Skills –– Competencies

Social skills, in the essential sense of handling *another person's* emotions artfully, underlie several competencies. These include:

- ***Influence:*** Wielding effective tactics of persuasion.
- ***Communication:*** Sending clear and convincing messages.
- ***Conflict management:*** Negotiating and resolving disagreements.
- ***Leadership:*** Inspiring and guiding.
- ***Change catalyst:*** Initiating, promoting or managing change.

## Collaboration, Teams and the Group IQ

What makes a team perform better than the best person on it? That question is key. Outstanding team performance raises the "group IQ" — the sum total of the best talents of each member on a team, contributed to their fullest. When teams operate at their best, the results can be more than simply additive — they can be *multiplicative*, with the best talents of one person catalyzing the best of another and another to produce results far beyond what any one person might have done. The explanation of this aspect of team performance lies in the members' *relationships* — in the chemistry between members.

A study of 60 work teams in a large American financial services company found that many elements mattered to some extent for the teams' effectiveness. But the single dimension that mattered most was the human element — how members interacted with each other and those the team connected with.

### Social Coordination –– Competencies

Several competencies of star performers are rooted in the basic human talents for social coordination:

- ***Building bonds:*** Nurturing instrumental relationships.
- ***Collaboration and cooperation:*** Working with others toward shared goals.
- ***Team capabilities:*** Creating synergy in working toward group goals.

## A New Model of Learning

Cultivating emotional competence requires an understanding of the fundamentals of behavior change. The failure to take this into account wastes an immense investment in development and training each year. Today, millions upon millions of dollars are being wasted on training programs that have no lasting impact —or little effect at all — on building emotional competence. It amounts to a billion-dollar mistake.

When heads of development at Fortune 500 companies were asked what makes it difficult for them to evaluate their own training programs, the most common complaint was the lack of standards and yardsticks available for training in the so-called soft skills like emotional competencies.

To help change this, the Consortium for Research on Emotional Intelligence in Organizations was founded *[Daniel Goleman was co-founder]*, a coalition of researchers and practitioners from business schools, the federal government, consulting firms and corporations. The consortium has searched the scientific findings on behavior change and studied exemplary training programs, to create basic guidelines for the best practices in teaching competencies based on emotional intelligence.

Here are some of the resulting guidelines:

- **Assess the job.** Training should focus on the competencies needed most for excellence in a given job or role.
- **Assess the individual.** The individual's profile of strengths and limitations should be assessed to identify what needs improving.
- **Deliver assessments with care.** Feedback on a person's strengths and weaknesses carries an emotional charge.
- **Gauge readiness.** People are at differing levels of readiness.
- **Motivate.** People learn to the degree they are motivated and making the competence a personal goal for change.
- **Make change self-directed.** When people direct their learning program, tailoring it to their needs, circumstances and motivation, learning is more effective.
- **Focus on clear, manageable goals.** People need clarity on what the competence is and the steps needed to improve it.
- **Prevent relapse.** Habits change slowly, and relapses and slips need not signal defeat.

- **Give performance feedback.** Ongoing feedback encourages and helps direct change.
- **Encourage practice.** Lasting change requires sustained practice both on and off the job.
- **Arrange support.** Like-minded people who are also trying to make similar changes can offer crucial ongoing support.
- **Provide models.** High-status, highly effective people who embody the competence can be models who inspire change.
- **Encourage.** Change will be greater if the organization's environment supports the change, values the competence and offers a safe atmosphere for experimentation.
- **Reinforce change.** People need recognition — to feel their change efforts matter.
- **Evaluate.** Establish ways to evaluate the development effort to see if it has lasting effects.

## Best Practices

Though almost every development program for emotional intelligence includes at least a few of these "best practices," optimal impact comes from their added potency when used in combination.

These guidelines offer a state-of-the-art blueprint for teaching — and learning — emotional intelligence.

- **Assess the job.** One basic question needs to be asked and answered before any training is undertaken: What does it take to do this job superbly?
- **Assess the individual.** In general, the ideal evaluation relies not on any one source but on multiple perspectives.
- **Deliver assessments with care.** If there ever was a task that called for emotional intelligence, giving people the results of 360-degree evaluations is it; empathy, sensitivity and delicacy are essential.
- **Gauge readiness.** If people are not ready to take action, forcing them will lead to disaster: the sham of going through the motions only to satisfy others, resentment rather than enthusiasm, quitting.
- **Motivate.** The more motivated people are to learn, the greater the effectiveness of the training for them.
- **Make change self-directed.** We change most effectively when we have a plan for learning that fits our lives, interests, resources and goals.
- **Focus on clear, manageable goals.** Breaking goals into smaller steps offers easier challenges —and successes.
- **Prevent relapse.** People need to be warned at the outset of training that they are likely to experience bad days when they revert to their old habits. Show them how to learn valuable lessons from those slips.
- **Give performance feedback.** Knowing how we are doing keeps us on track. Feedback means that someone notices whether — or how well — the new competence is being used and lets us know.
- **Encourage practice.** People learn a new skill more effectively if they have repeated chances to practice it over an extended period of time than if they have the same amount of practice lumped into a single, intensive session.
- **Arrange support.** Mentoring can serve as a coaching forum for boosting emotional competence.
- **Provide models.** We learn by watching others; if others can demonstrate a competence, they create a living classroom for us.
- **Encourage and reinforce.** A fledgling competence needs to be expressed during the actual situation at work in order to take hold.
- **Evaluate.** Establish sound outcome measures, especially for the competencies that were targeted in training, and include job performance measures.

## The Emotionally Intelligent Organization

An emotionally intelligent organization needs to come to terms with any disparities between the values it proclaims and those it lives. Clarity about an organization's values, spirit and mission leads to a decisive self-confidence in corporate decision-making.

An organizational mission statement serves an emotional function: articulating the shared sense of goodness that allows us to feel what we do together is worth-while. Working for a company that measures its success in the most meaningful ways — not just the bottom line— is itself a morale and energy raiser.

### Managing Emotions Well

One largely ignored pulse of an organization's viability can be read in the typical emotional states of those who work there. Sounding the depths of emotional currents in an organization can have concrete benefits.

Consider a gas plant division at Petro Canada, the country's largest oil and gas refining company. "Guys in the gas plants were having a wave of accidents, some fatal," said a consultant who was called in to help. "I found that in the macho culture of the petrochemical industry, guys never acknowledged their feelings. If someone came to work hung over, preoccupied over a sick child or upset by a spat with his wife, his workmates would never ask how he was doing that day or if he was OK enough to be sharp on the job. The result would be that the guy would be inattentive and cause an accident."

With this basic insight into the human cost of ignoring emotions on the job, the company initiated a series of workshops for crews "to get them to see that how they are feeling has consequences — that *this matters*. They saw that they had to look out for each other, and they were doing themselves and everyone else a favor if they checked in about how they were doing. If someone was off that day, they needed to say to him, 'I don't think I can work with you today.' And their safety record improved."

## The Heart of Performance

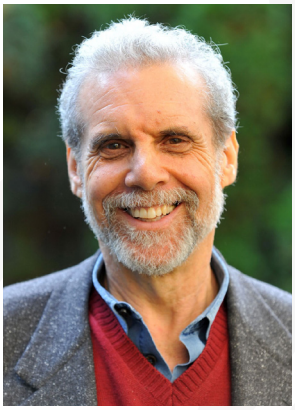
Perhaps the strongest argument for the economic advantage of emotional intelligence in organizations can be read in data generated by Jac Fitz-Enz at the Saratoga Institute, in a project sponsored by the Society for Human Resource Management. Since 1986 the institute has collected data from nearly 600 companies in more than 20 industries, detailing policies and practices. They analyzed top companies, selected for profitability, cycle times, volume and other similar indexes of performance.

Searching for what these outstanding companies held in common, the institute identified the following basic practices in managing "human assets" — their people.

- A balance between the human and financial sides of the company's agenda.
- Organizational commitment to a basic strategy.
- Initiative to stimulate improvements in performance.
- Open communication and trust-building with all stakeholders.
- Building relationships inside and outside that offer competitive advantage.
- Collaboration, support and sharing resources.
- Innovation, risk taking and learning together.
- A passion for competition and continual improvement.

This list is intriguing because of the clear similarities between these organizational practices and the emotional competencies that typify top-performing individuals.

But here these same capabilities have ended up on a list generated by observing top-performing companies, not individuals. Just as with individuals, organizational competencies can be thought of as falling into three domains: cognitive abilities, in the sense of managing knowledge well; technical expertise; and managing human assets, which requires social and emotional competence.



## Some Final Thoughts

The good news is that emotional intelligence can be learned. Individually, we can add these skills to our tool kit for survival at a time when "job stability" seems like a quaint oxymoron.

For businesses of all kinds, the fact that emotional competencies can be assessed and improved suggests another area in which performance — and so competitiveness — can be upgraded. What's needed amounts to an emotional competence tune-up for the corporation.

At the individual level, elements of emotional intelligence can be identified, assessed and upgraded. At the group level, it means fine-tuning the interpersonal dynamics that make groups smarter. At the organizational level, it means revising the value hierarchy to make emotional intelligence a priority — in the concrete terms of hiring, training and development, performance evaluation, and promotions.

To be sure, emotional intelligence is no magic bullet, no guarantee of more market share or a healthier bottom line. The ecology of a corporation is extraordinarily fluid and complex, and no single intervention or change can fix every problem. But, as the saying goes, "It's all done with people," and if the human ingredient is ignored, then nothing else will work as well as it might. In the years to come, companies in which people collaborate best will have a competitive edge, and to that extent emotional intelligence will be more vital.

Daniel Goleman is the author of *Social Intelligence* and the best-seller *Emotional Intelligence* and a co-author of *Primal Leadership.* He received his Ph.D. from Harvard and reported on the brain and behavioral sciences for The New York Times for 12 years.

## THE SUMMARY IN BRIEF

We all have different ideas of success. We even take different paths toward success. But those who are truly successful have one thing in common: they know how to be the best.

The book ***You Can Be the Best: Life Lessons From the Butcher and the Businessman*** lays out a fascinating exploration of what constitutes success, the journey that can be taken to reach it, and the measurements to confirm it.

Author John Ply opens his heart to share with us valuable personal stories about his and his father's life journeys. By laying out a clear roadmap toward becoming the best, the book helps us unlock our true potential and become the best version of ourselves.

## IN THIS SUMMARY, YOU WILL LEARN:

- How to become the best.
- How to pursue your passion by using your tools.
- How to always find a way.
- How to be kind, grateful, generous, and never give up.

## Introduction

"What is success?" This seems like a simple question to answer but people often get it wrong. Our idea of success has been distorted. Because of this, people waste time and energy chasing the wrong things. You need to know two things about success:

- Success is not about financial wealth
- Success is not absolute

Success is about total happiness. It is also about accomplishment and achieving your dreams and goals. Everybody has a different starting line toward success, which is why success looks different for everybody.

But how do you achieve success? The answer is simple: be the best. Don't try to measure yourself up compared to others. Instead, reach your full potential and be the best you.

## Chapter 1: Become the Best

One of the first lessons I learned from my father was to be the best. For him, no matter the job, there was never a reason to do it less than your very best. If you are going to do something, you should do it 100 percent and shift all your focus to a single goal.

Sometimes, we may pick the wrong goals. The goal we set for ourselves is not the goal we actually need to succeed. We underestimate what we're capable of and limit our potential by setting our sights too low. But if you strive to become the best, you give yourself room to unlock and discover your true potential.

When it comes to achieving your goals, however, there are no guarantees. You may or may not reach your ultimate goal on that long and bumpy road. But that's not the point. The point is to see how far you can go. You don't want to go through life not trying, because one of the worst things you can do is lead a life of regret. Even though there are no guarantees, it's important to strive to become the best because your goal is your compass that will guide your decisions.

It doesn't matter where you start. We're all dealt different cards in life. You might wish you had been dealt a better hand, but life doesn't come with re-deals. But wherever you are in your journey, whatever cards you've been dealt, you can become the best. When you continually focus on becoming a better version of yourself, the exterior parts of your life have a way of improving. Be the best "you," and everything else tends to take care of itself.

## Chapter 2: Pursue Your Passion

Success is defined internally. Only you can decide what it means for you. That's why it's so important to pursue your passion. Make your passion your career. Look within yourself, and you'll find the path you're meant to follow.

While it's important to pursue your passion as your career, it's equally important to not allow your career to take over your identity as a person. We don't have one singular passion in life. We have passions, plural. If you identify yourself based on your career, even if that career is a passion for you, you're limiting yourself. You're not giving yourself room to pursue all your passions and live your most successful life.

But sometimes, people lose their passion, and that's a sad thing to watch. If a person has lost their passion, it means, somewhere along the way, they've forgotten how to have fun. If you've lost your passion, take the pressure off yourself. Stop worrying about the external results and just have fun.

Passion and drive are closely connected. If you lost your passion, you'll lose your drive and if you're driven by wrong things, you'll end up killing your passion. To keep passion in your heart, you have to be driven by the right things. When you're struggling, all you have to do is listen to your heart and trust your gut. You know best the right path for you.

## Chapter 3: Use All Your Tools

There are some who believe an artist is only as good as their tools, while others believe blaming the tools is merely an excuse. The truth, however, is somewhere in the middle. Talent and skill will take you far. But if you don't build a deep understanding of all the tools you use, you will never live up to your full potential for success.

In life, you start with commitment, get closer with strategy, overcome obstacles with recovery, and bring it home with consistency, ending with the completion of your goal: achievement. These are your tools for success. Three of the most important strategies in life include:

- Measure your results to figure out what's working and what isn't and adjust accordingly.
- Incentivize performance so you don't lose motivation and stay focused on working towards your goals.

- Assess and adjust because no matter what you achieve, there's always room for improvement. Ask yourself two questions, "Do I need to do anything differently?" and "What can I do to get even better?"

Use your life's tools again and again, keep sharpening them consistently, and success will come.

## Chapter 4: Never Give Up, No Matter What

When you're faced with challenges and you're thinking about giving up, ask yourself, "What do I have to lose?" If you think about that question, the answer is usually nothing. And don't forget to ask that all-important second question: "What do I have to gain?" If you give up halfway, you'll never find out.

Anything new you take on is going to be challenging. If you let something push you down, and you stay down, then you're making a choice at that moment. But if you choose to get back up every single time you get pushed down, you're making the choice to believe in yourself and your ability to learn, grow, and improve.

Never giving up is about attitude. Keeping a great attitude and thinking positively is crucial for a winning mindset and success. If you can go through life with a positive and enthusiastic attitude – whatever it is you're doing or whoever you're with – it's infectious. Positive things tend to happen to people who think positively and all that leads to the ultimate definition of success. So stay positive and never give up, no matter what.

## Chapter 5: Find A Way

No matter your goals, there's always going to be some kind of obstacle blocking your path. Success never comes easy, nor should it. The important thing is to always find a way.

In my nearly four decades of entrepreneurship, I've met countless people who say they dream of launching their own businesses. But they never do it. Why? They're afraid to give up their comfortable jobs and steady paychecks, and who can blame them? They're stuck because the security is too risky to give up. They're fearful of the unknown and afraid of what they could possibly lose.

If you really want to start a business of your own, be prepared to sacrifice. Finding a way also means you don't wait for opportunities to come to you. You take action to create your own success. Doing this can be uncomfortable, but that's simply what it takes.

Opportunities hit us smack in the face every day but of the 1 percent who see an opportunity, 99 percent will not act on it. To take advantage of opportunities, you have to keep your awareness level up and remain open to life's possibilities, and you must be willing to act.

Remember, life owes you nothing. If you expect something from the world around you, you will almost always be disappointed. Instead, recognize that life owes you nothing, so whatever you want out of this life, it's up to you to find a way to achieve it.

## Chapter 6: Be Honest and Trusting

Life and success ultimately come down to relationships, and relationships are built on honesty and trust. Your word is everything. If you make a promise, keep it. People can't trust you if they can't trust your words.

Honesty is fundamentally about trust and trust is a two-way street. Aside from receiving trust, you will need to give trust as well. If you go through life withholding trust, then you're going to eliminate hundreds of great possibilities. You'll end up closing yourself off to relationships and opportunities that make life so interesting and richly rewarding. But if someone behaves dishonestly, it's time to take the trust away. Remember, the measure of your honesty is how you act when it gets difficult.

Dishonesty can stick with you for a long time. Sure, none of us are perfect human beings. Yes, you'll make mistakes. But what matters is how you own up to them. You may not always be able to correct your mistakes, but you can always learn from them. It's never too late to start being honest and doing better.

## Chapter 7: Be Kind

The philosophy of kindness should be deeply ingrained in our lives. Being kind doesn't have to be as extreme as sacrificing your life for another. It can be as simple and easy as keeping our mouths shut.

Avoid tearing other people down not only for their sake but for your own. Those who say unkind things about others tend to have something in common: they're not happy.

When you voice unkind thoughts aloud, you're just feeding into negativity, and reinforcing your own unhappiness.

The first step in being kind is to focus not on others, but on yourself – specifically, on your mindset. Whenever you feel inclined to say something unkind about a person, ask yourself why. Focus on getting rid of the negativity so you can treat yourself and others with kindness.

A successful business must treat three groups well: its employees, its customers, and its suppliers. Think of it as a three-legged stool. If one leg is missing, the company is never going to be great. If two legs are missing, the company will most likely not succeed. And if all three legs are missing, well, you're basically doomed. The same lesson can apply to any career or even your personal life.

## Chapter 8: Be Grateful

True success cannot be measured externally. It is something internal, a feeling of satisfaction and pride in one's life. Being grateful and showing gratitude along your own journey to success is how you will become and feel like your very best self.

Most people are unhappy or dissatisfied simply because they don't appreciate what they have and what they've achieved. The secret to fulfillment isn't to keep acquiring more things. It is to be grateful every time. Gratitude is simple: you need to want less and do more.

No matter where you fall on the wealth spectrum, there's always someone with far less or far more. Ultimately gratitude is a choice. You can choose to complain, or you can choose to be grateful, and being grateful will always bring you more joy and happiness.

## Chapter 9: Be Generous

Life can be hard and lonely. We all have times when we could use a little help, and you never know much a small moment of kindness and support could mean to someone.

When we think about generosity, our minds typically go straight to money. If you have money to spare, then, by all means, be generous with it. Generosity, however, is about so much more than just money. The most valuable thing we all can give of ourselves is our time and our spirit. You don't have to be rich to make a difference in people's lives.

True success is being able to look back on your life and recognize that life is not measured by material possessions or the money you've accumulated, but by the joy you've brought to others. If you can do good to just one person, then you should consider that a success.

## Chapter 10: Do Good

Doing good is rewarding in and of itself. It is also our duty because none of us make it through life without receiving help. Helping each other is the greatest tradition of our species. This is the thing that sets us apart from all other life on Earth. When you do good for others, you do good for yourself. Someone helped you, so you help others, and they will help yet more people in the future, and on and on!

## Conclusion

I made you a big promise at the start of this book. I told you that you can be the best. I truly believe that, and I hope by now you believe it too. Because the thing about that promise is that I'm not the one who can keep it. You are. I've shared the lessons with you, and now it's up to you to put them into practice. You can do it. One day at a time, far and sure, you can be the best!

**John Ply** built a company from scratch that became the best in the industry--twice. First with Priority Food Processing, a service provider to the food industry, then with Insight Beverages, a company he started to become a customer of his first! John was determined to build these companies to "be the best" because that was the first lesson he learned from his father. And now he's teaching others to be their best.

# You Owe You

Eric Thomas

BOOK SNAPS™
Zooming In On Your Next Read

## You Owe You

**Ignite Your Power, Your Purpose, and Your Why**

*By Eric Thomas*

**Eric Thomas,** part coach, part preacher, all grind, is one of the world's best known motivational speakers. In addition to reaching millions on YouTube, he works with many top businesses, the NFL, the NBA, the NCAA, and dozens of individual teams and players, as well as schools and prisons across the country. He has a PhD in education from Michigan State.

# Become the CEO of Your Life

Eric Thomas worked his way from being a high school drop out with no clear path for what he wanted to do with his life to being a renowned, sought-after motivational speaker. He has spent his life preaching in his church and speaking to people all over the country. He first gained far-reaching notoriety when he had a Youtube video go viral. In this video he tells the story about a man who goes to visit a guru. The man asks the guru what the secret to success is. The guru tells the man to go to the beach the next morning. The man does just that, but when he arrives, the guru pushes the man's head under water and holds it there while the man flails about frantically. Eventually, the guru releases the pressure on the man's head, and the man comes up gasping for breath. The guru then asks the man what he wanted to do most of all when he was under water. The man replied that what he wanted most was to breathe. The guru says that the man will be successful when he wants something as much as he wanted to breathe.

This video was on the web for quite awhile before it gained fame. It was eventually included in motivational videos and set to music by others. Thomas shares this story as well as other secrets to success in his book, ***You Owe You: Ignite Your Power, Your Purpose, and Your Way.***

Thomas makes his points and advances his tactics to success by telling his own life story and how he has used these principles successfully in his own life and in developing his own business as a motivational speaker. He starts out with the message "that you are the only one who can change your life. You are the person who determines your value. You are the only person who can truly choose your purpose and find your path to greatness." He explains that he spent time feeling like a victim. He turned his back on his family and made himself homeless. At one point, he did not even have a GED to fall back on. Eventually, he was able to own his power and propel him to where he is now as a successful speaker and Ph.D.

Thomas goes on to explain his childhood to illustrate just how important it is to take ownership of one's own life. His grandparents lived during the Jim Crow era where they were not even allowed to share many spaces with white people. His mother came from a place that was so impoverished that Thomas says that it "was basically slavery in all but name" as they had to

give up a good share of their crops to the landowner just in order to survive. His mother was very smart but got kicked out of high school for becoming pregnant although she was still able to earn her diploma. Thomas shares all of this to show how he came from a place of instability. Nothing was ever expected of his mother. All they could focus on was survival. His mother met Jesse Thomas and the two married.

One day, Eric Thomas was going through some paperwork and found his birth certificate. Through it, he realized that Jesse Thomas was not his biological father. This led the young Thomas to believe that he could not trust anybody. It made him feel like a victim, and he acted in such a manner. Despite talking to counselors and therapists, Thomas was not able to overcome his anger in the short term. Eventually one day Thomas broke, and he left home, staying in empty warehouses, homeless by choice.

The lesson Thomas derives from this story is that all people will find themselves in situations that are unfair or unsettling in life, and all people will have their feelings hurt. He insists throughout the book, however, that "feelings are not facts." He wants people to know that they can have their feelings, but they need to avoid being victims. Getting rid of feelings of victimhood allows people to take ownership and responsibility and to claim control over their own lives.

Thomas then goes on to dispel the myth that anybody is ever really alone in life. He is adamant that the world is not conspiring against anybody. To explain this, he talks about how he started to spend time at a church run by Pastor P.C. Willis. The pastor's family made Thomas feel like he had a chosen family, and this along with his freedom made him feel powerful. Thomas says that "where your focus goes your energy flows." As such, he tells his reader not to focus on who failed them or who was not there because this inhibits a person's ability to see the people who were there for them and who did not fail them.

Once a person has overcome victimhood, it is important for them to find their superpower. Thomas tells a story of going to camp when he was a child. He did not want to go away for the week, but his mother was sure it would be good for him, so she insisted. When he came back, the boy was ecstatic, and the people at camp loved him. His mother was told that he was one of the most connected kids they had ever had at the camp, and that he was the only one who could get the white kids and the Black kids to play together.

Thomas uses this story to show that he was always the hip-hop preacher. It is important, he maintains, to be able to harness your superpower to one's advantage. He maintains that sometimes we do not even realize when we are gifted in an area because it comes so naturally to us. We have to be able to tune out the outside world in order to tune into our super power. The world can criticize superpower and misunderstand people. Thomas tells of a time when he gave up the violin because his friends did not approve in order to illustrate this. It is important to tap into oneself in order to tune out these opinions and distractions of the world.

Thomas then goes on to say that "Your why is what takes your superpower to the next level." A person's why is their reason for doing something. Thomas's why is his wife, Dede. One day about a year into their dating relationship, Dede told Thomas that she had gotten into college and was going to leave for Alabama. Thomas decided to join her, and with the help of his pastor, he was able to earn his GED and gain admission to Oakwood College with Dede. Then and to this day, Dede is his why.

While at Oakwood, Thomas took advantage of multiple opportunities. He started to teach GED classes as well as to become a substitute teacher. He also started traveling with lobbyists and was doing speeches introducing the mayor. He was doing well in these capacities despite not doing well academically. Eventually Dede became pregnant with their oldest child, and Thomas was able to discern the reason behind his reason. In order to discern a person's reason behind their reason, Thomas suggests asking why you want what it is you want. Once Thomas understood his reason behind his reason, he stopped playing in life and became serious.

He then goes on to discuss walking within your purpose. Oakwood College is an HBCU or historically Black college or university. Its campus is purposefully separated from the rest of the nearby community to keep the students safe from racially motivated violence. Thomas and his friends decided they wanted to set up a ministry they called Bell Tower. They had no assets, and yet they were able to stand by the bell tower in the middle of campus, and Thomas would preach to people as they walked by. Thomas does not believe in preaching to people who do not want to hear. At Oakwood, people could stop and listen or they could walk by. Many stopped to listen. Thomas realized that he was a powerful speaker, and he used this knowledge to walk in his purpose. He goes on to explain that purpose needs both structure and standards. These two are necessary if a person is to use their superpower and fulfill their why.

Also important, according to Thomas, is to put oneself in miracle territory. He says that "Miracles happen when you put yourself in the way of them." He tells multiple stories of times when he took one opportunity and another greater one developed from it. One such time was when he was offered a position at Michigan State University. Neither his father nor his wife believed he should take it. They ended up deciding to go to MSU anyway, and the time there was tough at first. It ended up, however, being the jumping board for what he would later achieve in life. He ended up earning both a masters and PhD at the university.

Receiving miracles, he says, is not a passive act. He explains how people can become quite aggressive playing the lottery or gambling while not paying nearly attention to the areas in their life where they could actually succeed. He knew he wanted to be a speaker, and as such, he started trying to put himself in the venues where the people he wanted to emulate were. At first, this was not as a speaker, but he would work in whatever capacity they needed in order to get himself into miracle territory.

Thomas extols the importance of education. He explains that where he grew up, success meant finding a blue color job at a

## Expression must go along with education and knowledge in order to truly thrive."

factory. At MSU, he worked as an academic advisor. He saw many young Black students who faltered because the university, and academia in general, was not prepared to meet their needs or focus on their success. He realized that with many of these young Black students, the university could come up with a predictive GPA before they even started, and this often showed that they were unlikely to ever graduate. He was able to come up with a counseling program at MSU that could help these students succeed. Knowledge is not all about formal education, however. He encourages people to look into any avenue of learning or information available to them about topics they are passionate about because "When you embrace education, you begin to see opportunities that were seemingly not there before." Knowledge, he says, can help give people control over their lives in spite of changing circumstances.

Expression, he says, must go along with education and knowledge in order to truly thrive. Thomas began to understand the importance of language and communication as he saw great famous speakers who came before him like Martin Luther King Jr. He then goes on to discuss code-switching which refers to the way in which people use different language and communication styles depending on their environment. He says that this is something everybody does everyday. He claims that the best people learn the languages of the environments they are in and incorporate them into their own communication. This allows them to thrive in their environment while staying true to who they are.

Thomas works with athletes, and he explains that sometimes players who are traded often excel. This is because they want to prove their worth. This adversity actually helps them to grow. He then goes on to discuss a church that he was the pastor of. The people there wanted him to change his style, but his church was successful, and he wanted to remain true to his principles. Ultimately, they had him removed from the church. This led Thomas and his wife to create their own ministry. He uses both of these examples to prove that sometimes we have to give up what is good to get something that is great.

In regards to business and seeing oneself as a business, he says that it is important to not only put oneself with people in the business but to also know one's own worth. To exemplify this, he talks about how his rates for speaking increased once someone told him that he could charge much more for his services. He simply had to believe in himself and his worth. He then goes on to say that it is important to keep perspective once dreams start coming true. He writes of professional athletes who feel lost once they make it to the NBA. They had been fighting for this for as long as they could remember and they sacrificed so much for it, and when they got there, they did not know what to do with themselves.

Thomas tells the story of a time when he turned down the best paying gig he had been offered because the company insisted he wear a suit and a tie. Thomas said that this was not who he was, and despite his partner's disagreement, they turned it down. Eventually he was offered a gig for the same amount of money where the company requested that he arrive in his regular clothes as that is what people know him for thanks to his Youtube videos.

In this book, Thomas tells the story of his success in an effort to help his readers find and develop their own success. Through his anecdotes, he makes his lessons clear and shows how they are applicable to life. Each chapter ends with both some questions for thought and a challenge to help the reader successfully put these principles into work. Always, he maintains, a person must be true to themselves and look inside to truly succeed.

## THE SUMMARY IN BRIEF

As you strive for improvement in life—more income, a better relationship, a bigger business, or a better body—the most important battles you will face are the battles against yourself.

Author Todd Cahill highlights important battles that keep us from success. From his experience as a life and leadership coach, Todd explains how to isolate the specific battles we all face and then sheds light on how we can practically overcome them. Overcoming them doesn't mean becoming invincible; it means having the wherewithal to kick our own ass when needed. ***You vs You*** shows you how to face these battles, and it allows you to make conscious choices not to let your battles defeat you.

Each battle includes three parts. Return isolates the issue; admit where you are in the struggle and how fighting it affects you. Redefine helps you think about the battle differently. If you redefine what it means, you can start to relinquish its power. Repeat is the choice you make every day to become the best you. Return to the issue, redefine its meaning, and repeat the cycle to keep winning.

## IN THIS SUMMARY, YOU WILL LEARN:

- To isolate the issues that hinder your success.
- That redefining the battles provides motivation to win.
- Daily choices may be small, but drive the outcome.
- Your future success starts with today's choices.

## You vs Your Success

Winning the You vs You battle takes a concerted effort to stop spending time trying to impress others and instead spend it doing the things you are meant to do, the things that move you. The authentic you will be the one that steers your future.

### Return

Winning the battle between you and your success requires that you first figure out what success means. What could you accomplish that would make you feel like you could drop the mic and walk off the stage with nothing left to prove? Of more than 2,000 Americans interviewed in a recent survey, 90 percent believed success was more about happiness than power, possessions, or prestige; 66 percent cited "good relationships with friends and family"; and 60 percent said, "loving what you do for a living." Only one in five said monetary wealth meant success.

Determining what success means to you means examining what sacrifice you're willing to make to fulfill your desires. When asked about her perspective on fame and success, Taylor Swift said, "Playing stadiums. . . walking down the street . . . I'd choose playing stadiums. It's a trade-off. You pick one. You don't sit there and go, 'Oh, I wish I could have all the good things in the world and none of the bad things.' It doesn't work like that." The key to winning the battle is to pursue only the sort of success that requires trade-offs that don't diminish the best you.

### Redefine

Don't think about an unreached goal as failure. Think about it as time-released success. What would happen if we gave ourselves permission to fail? Better yet, what if we not only expected it but embraced it?

Author Stephen King thrived on rejection. In his early days as a writer, he posted rejection slips from publishers above his bed for motivation. At nine years old, future megastar Beyoncé and her hip-hop group lost a Star Search competition. Basketball legend Michael Jordan missed more than 9,000 shots in his career. To offset the inevitable deterioration, as it pertains to failure and success, one must keep moving!

### Repeat

There is you, and there is your list of achievements. To ultimately win the battle, you can let what you've done refine you, but you cannot let it define you. If you ask people who fit the conventional definition of a successful individual, many will tell you that their achievements aren't what make them feel accomplished. Instead, they often talk about relationships, well-being, and societal impact—who they helped, who they loved, who loved them. You're a balancing act, and you're doing a damn good job.

## You Vs Your Freedom

### Return

Bob Dylan wrote these words: "A hero is someone who understands the responsibility that comes with his freedom." What consumes your mind, controls your life. We all have the same opportunities to create freedom.

In the U.S., in 2014, 21.5 million adults battled substance abuse, and almost 80 percent of them also struggled with alcohol use. More than one in three adults were diagnosed as obese. As many as 750,000 young people revealed a gambling addiction. About 6 percent of women and 5.5 percent of men admitted to being compulsive buyers. People are anything but free.

Three types of freedom define us. Freedom from is past-oriented. Groups such as Alcoholics Anonymous help addicts have freedom from addiction. Freedom to is rebellion and ego-driven. Freedom for is what inspires revolutions. Nelson Mandela, although imprisoned, functioned with this type of freedom. Freedom for is not just casting off one's chains but living in a way that respects and enhances the freedom of others.

### Redefine

Your ability to win the battle between you and your freedom hinges not only on how you view your freedom but also on how you use it.

There's a fable about a famished wolf and a well-fed dog. The wolf sees the dog, compliments him on his beautiful coat, and asks how he looks so well fed. The dog tells him that he is given food day and night and sleeps in comfort in a lovely home. The wolf asks what the dog does in return for all the luxuries, to which the dog replies that he guards the house. In fact, he would have to hurry home once nightfall came, for his master counted on him to watch the place at night. The wolf was envious and told him how he lived in the woods and endured constant heat, insects, and hunger. The dog invites the wolf to live at the house with him and his master and says they can share the guard work.

The wolf is excited as he imagines the food he will soon eat and the comfort of a roof over his head, but as they head back to the house, he notices the hair on part of the dog's neck is worn away and asks him how that came about.

"Oh, it is nothing," says the dog. "That is only the place where the collar is put on at night to keep me chained up; it chafes a bit, but one soon gets used to it." "Is that all?" said the wolf. "Then goodbye to you, Master Dog."

The wolf is not willing to trade his freedom for a life of comfort, but the dog isn't the victim here. The dog simply has a different kind of freedom: he is free from worry and solitude and rich in pride and purpose. And he has a different view of freedom: to him, having a servant's heart doesn't make him a slave.

Most people use their freedom to do what they want, when they want, how they want, where they want. However, if you only use your freedom on yourself, if you never venture toward freedom for, you just might be the one who ends up imprisoned.

### Repeat

Instead of just using your freedom to develop into a better version of yourself, use it to develop others into better versions of themselves. What do you feel crushed by? What do you want freedom from? When you get it, think about what you're going to do with it. You don't have to fully understand freedom to want it, but you do have to be ready to take responsibility for the path you walk after you get it. Is your endgame freedom to or freedom for? Are you going to start a rebellion or a revolution?

## You Vs Your Health

### Return

You are fearfully and wonderfully made. Health is often not valued until sickness comes. Do you only appreciate being healthy until you're not? When's the last time you gave your body a big, giant thank-you?

What has impressed you about your own body? Maybe you've given birth. Excelled at a sport. Memorized the periodic table. Overcome an illness. Functioned during the day after getting no sleep the night before. Quit smoking. Run a marathon. Your body is imperative to your success. The body fuels the mind. The mind fuels your beliefs. Your beliefs fuel your worldview. Your worldview fuels your opportunities. Your opportunities fuel your success. So, to think your health has little to do with your success is either incredibly ignorant or utterly arrogant.

### Redefine

Winning the battle between you and your health means training your body to work for you instead of letting your body work against you. People are prioritizing their health and investing in themselves and their longevity. Winning the battle is only possible if it's won on your own terms. It cannot be prioritized because society tells you it should or because you want to relive the glory days of your pre-middle-age physique. Besides the benefits of taking care of yourself, your body deserves it. It never stops working for you, so why would you stop working for it?

### Repeat

Love the process and not just the result. Commit to moving every day. Walk a mile, run a mile, bike a mile, row a mile, etc. Do a mile every day for seven days, and you will see progress. Ultimate health is about daily progress, not perfection. Small changes over long periods of time produce the biggest results. Set goals you can attain. Once you reach a goal, set another one. Enjoy the process of getting your body and mind to function at their full potential.

## You Vs Your Relationships

### Return

Nothing will shape your life more than people. Humans aren't meant to do life alone. Our basic human needs for social interaction and sensory stimuli stem from the reality that we're social creatures who crave connection.

On a remote Italian island, super longevity is common to both sexes. Psychologist Susan Pinker started her research of the people with the genetic profiles. She found that genes account for just 25 percent of their longevity; the other 75 percent was lifestyle. In every house she visited for interviews, she found a kitchen party. The people were always surrounded by extended family, friends, neighbors, the priest, the barkeeper, the grocer. They were never left to live solitary lives.

The top two predictors of a long-lasting life have to do with your social life. Close relationships are the people who you can call at a moment's notice, who will visit you in the hospital, who will sit with you if you're having an existential crisis, who will celebrate your successes or help shoulder your burdens. Those people, your close circle of friends, can prolong your life.

### Redefine

When it comes to you and your relationships, you must be willing to fight for the good ones and remove yourself from the toxic ones. The old adage says, "Show me your friends, and I'll show you your future." King Solomon said it more directly some 4,000 years ago: "He who walks with the wise grows wise, but the friend of fools suffers harm." The company you keep can bring you up or bring you down, make you better or make you worse.

### Repeat

Take initiative to invest in relationships that either build you up or build others up. To win the battle between you and your relationships, you must master the art of balance. A healthy relationship is never one-sided. If you pour out too much without being poured into, you'll crash. Conversely, if you allow yourself to be poured into too much without pouring yourself out, you will become self-centered and insignificant to others. You must give and take, seek and bestow forgiveness, and choose every day to keep making the investment.

## You Vs Your Future

### Return

Let the hope of tomorrow inspire you but be driven by today. Winning the battle between you and your future starts with not living with your head in the clouds. You can have the future in mind, but loosely enough to be able to maintain a firm grip on the words and actions you are responsible for now.

### Redefine

The purpose of life is to live a life of purpose. If you don't, the battle between you and your future is already lost. Viktor Frankl was a Jewish neurologist and psychiatrist living in Vienna, Austria, when the Nazis deported him, his wife, and his parents to a concentration camp in 1942. Victor became the family's sole survivor. His famous book, Man's Search for Meaning, tells the story of how surviving the Holocaust led him to discover the importance of finding meaning in all forms of existence, even the most brutal ones, and thus, a reason to continue living. What we can learn from Frankl is endless: resilience, forgiveness, selflessness, courage, empathy. He never made it about himself.

### Repeat

It's never too late or too early. Right now is the best time. To win the battle between you and your future, you must relinquish the anticipation of the future itself. You must have the wherewithal to realize that tomorrow is not promised, and you must live right here, right now, with purpose. What are you going to do? Who are you going to be? Every You Vs You battle will challenge, shape, and strengthen you.

Todd Cahill launched Beyond Driven with the expressed purpose of teaching and equipping others. Through this proven system, his life coaching and leadership training has helped hundreds of people create a 6-figure income by launching and building their own businesses. Todd focuses his energy on guiding people along their journey by creating a step by step plan, designed to help them find and achieve their true purpose.

## You're Invited

By Jon Levy

Jon Levy is a behavioral scientist best known for his work in influence, human connection, and decision-making. More than a decade ago, Jon founded The Influencers Dinner, a secret dining experience for industry leaders, from Nobel laureates, Olympians, celebrities, and executives to artists, musicians, and the Grammy-winning voice of the bark from "Who Let the Dogs Out." Guests cook dinner together but can't discuss their careers or give their last names. Once seated to eat, they reveal who they are. Over time, these dinners developed into a community. With thousands of members, The Influencers is the largest community of its type worldwide.

# How the People Around You Define Your Success

On the surface, founder of Weight Watchers Jean Nidetch and abolitionist Frederick Douglass wouldn't seem to have much in common in terms of their struggles, achievements, and legacy. Despite the incredible differences between their journeys and accomplishments, they were both able to succeed because of a startling similarity in their approach. "They found a way to bring people together and create deep and meaningful connections between them."

Author and consultant Jon Levy draws this connection based on a powerful idea of success that has driven his personal career and changed thousands of lives through his work with some of the world's largest organizations. "The fundamental element that defines the quality of our lives is the people we surround ourselves with, and the conversations we have with them." Levy learned this principle at a seminar at just 28 years old and it was life changing. In ***You're Invited: The Art and Science of Cultivating Influence***, he asks readers to join him in adopting this philosophy and improving their own lives, careers, and organizations.

When we connect with other people who have similar goals, struggles, or needs, we form communities, in which we can feel safe being open and vulnerable, build trust with one another, and provide support to each other. Within those communities we find the ability to amplify the results we could achieve alone. Habits, emotions and behaviors, both good and bad, are essentially contagious within groups. If we surround ourselves with others whose beliefs and values and lifestyles are admired, we increase our chances of adopting those habits, emotions, and behaviors ourselves.

This potent concept explains the wild success of Weight Watchers as well as the massive and quick spread of the abolitionist movement in the late 1830's. Making meaningful connections between people who can impact your life and the issues that you care about is a universal strategy. Far before social media, influence was the means by which directional change took place, in personal lives and society as a whole. Levy's book is about putting that potential to work for you.

## The Influence Equation

Levy developed what he calls the Influence Equation to define how influence is created and amplified by those in our chosen or formed communities. It says:

Influence = (Connection x Trust) Sense of Community

Levy explores the factors of trust, connection, and a sense of community that are at play when we seek to establish a relationship with another. Trust "is willingness to be vulnerable." Researcher at the Trust Project at the Kellogg School of Management Dr. Kent Grayson says that trust is made of three basic pillars:

1. Competence, which is "the ability to do something successfully."
2. Honesty/Integrity, which is being truthful and honest as a person or company.
3. Benevolence, which is "acting with your best interests in mind."

These three pillars are foundational in your ability to draw people to you, your business, or your cause, the degree to which your team members work well together, and how influential you can become. Understanding how these pillars function is, therefore, essential. When there is a breach in any one of these pillars, the relationship can be damaged and in need of repair. However, not all breaches are treated equally. Failures in competence are more easily overlooked or forgiven than breaches in integrity or benevolence, for example.

In order to establish trust quickly, savvy influencers must rely on something called the IKEA effect. The theory says that even though IKEA's products are not necessarily the most sturdy or long lasting pieces of furniture on the market, customers are fiercely devoted to the pieces they own. This is because those people put forth a tremendous amount of effort and hours into assembling the furniture, which come with notoriously confusing instructions. That experience cultivates an attachment.

This phenomenon can be extended to create attachments between people as well. We see it at play in armed services boot camp where newly-uniformed military members are put to the test with extreme discipline, challenges, and demands. Through this experience, they become bonded at a life or death level with those other members of the military who are going through it with them. We also see this effect at work when looking at the pledge activities of sororities or fraternities. After going through humiliating, difficult, and even dangerous events with one another, pledges are entirely devoted to and care deeply about one another.

The IKEA effect can be leveraged to quickly build trust with the people you hope to involve in your life, too. Obviously you are not going to treat potential clients or donors to a grueling or totally overwhelming activity but you can apply the principle to the problem of establishing trust quickly. You just have to find a challenge you can invite others to join that requires people to work together. In doing so, they will inevitably provide support to each other, which is a surefire way to establish trust between individuals. When others receive and give support to each other in a benevolent way, bonding takes place at a far faster rate than typical.

Merely wanting to connect with someone and actually getting them to connect with you are two different things all together. In order to connect with influential people, you have to understand what it is they themselves value. By focusing on what they care about instead of what you care about, you are taking a benevolent approach and that is far more effective than the selfish one.

## Cultivating Connection

Levy recognizes that it would be impossible to discover what motivates each individual person with whom you wish to connect. Instead, he recommends organizing those potential connections into four distinct groups that will guide how you approach them for connection.

The first group is "Global Influencers" who have a reach that spans the entire globe. These are your mega celebrities and hugely powerful people in politics or even royalty. People in this group are in exceedingly high demand and thus are surrounded by large teams of people dedicated to keeping the machine running. Oftentimes, every waking moment of their lives is scheduled and protected. This, naturally, makes it very difficult to establish a connection with a global influencer.

Levy discovered a surprising way to connect with this upper echelon group in what he calls the "ubiquity approach." "The ubiquity approach is simple: if you connect and develop a trusted relationship with people in their inner circle, in time you will become part of their community and you will be pulled in as a trusted member." After all, Levy reminds us, "if you are friends with the presidents of Tesla, SolarCity, SpaceX, and Neuralink, it won't be long before you are hanging out with Elon Musk." An interesting point to note is that the inner circle of a global influencer is frequently made up of industry influencers, which will be discussed next. The key to making headway is to allow plenty of time for your relationship with the connected industry leaders to develop before even attempting to connect with the global influencer.

The second group are called "Industry Influencers" who are established leaders in a particular field or industry that are sometimes, but not necessarily, well known outside of their group. CEOs at FOrtune 100 companies, for example, are hugle influential in their industries but they are not household names like Queen Elizabeth or Beyoncé. As mentioned, a global influencer's inner circle is frequently made up of people in this group. More importantly than their ability to reach a global influencer is the fact that they are often the better person to connect with as they are more involved at a hands-on level with the "day-to-day priorities and intricacies of what can and can't be done" with any organizations or causes related to the global influencer.

Levy identifies four qualities that "consistently get the attention of industry influencers and draw them in." The degree to

> The ticket to reaching people that can influence those at a community level is to add value to their lives."

which you put on an event or experience that mixes up the four or leverages one more than the other is entirely up to you and the circumstances, but the more of them that are included, the greater your chances of success. Those qualities are: generosity, novelty, curation, and awe. Being generous involves giving more of your time, money, or attention than was expected. Novelty is when something is new or different enough for us to be interested but not so outlandish that it becomes off putting. There is a sweet spot between the two that must be found. Curation relates to the intentional choosing of the right mix of people to get the right results you are seeking. Finally, awe is a highly-desirable emotion because it is so rare. If you can inspire awe in an industry influencer, they will be more apt to connect with you. Striving for this encourages us to think big.

The third group is "Community Influencers" who hold sway over organizations, religious or cultural groups, or creatives who have built a strong and devoted following. The ticket to reaching people that can influence those at a community level is to add value to their lives. Levy sticks to the acronym SOAR to guide relationship building at this level. Provide people with skills, opportunities, access, or resources and they will flock to your event or experience and connections will be formed.

Finally, "Personal Influencers" are those who impact your own life directly, such as your family, close friends, teachers, or coworkers. As previously discussed, behaviors and habits are contagious among personal connections. To influence those with whom you are personally connected, Levy recommends connecting them with others who have a skill, habit, or behavior that you'd like your personal connection to adopt. This tends to be far more effective than addressing them directly on something like losing weight or quitting smoking. Over time, these shared goals will create a "community of positive influence."

## Creating a Path

This section of the book puts the pieces of the Influence Equation together in a simple approach that applies it to real life. In essence, Levy explains what we need to do with the Influence Equation now that we understand its parts. It accounts for human behavioral quirks that are exploited by some of the biggest brands to create a path for people to take on a journey they will love.

To illustrate this point perfectly, Levy shares how visitors to Disney World are taken on a literal path to enter the park after paying the entrance fees. The average park visitor earns an average salary and thus, paying the entrance fee to the park represents a large expenditure that can be quite uncomfortable to the person laying out the cash. Many experience buyer's remorse shortly after the register accepts their payment.

To counteract this and avoid having throngs of angry, remorseful park visitors entering for a day that should be filled with fun and memory making, Disney created a work around. Instead of walking right in, visitors must take a twenty-three minute ride on a monorail or ferry boat that carries them to the iconic front gates of the Magic Kingdom. The length of the ride is, not coincidentally, just enough time for visitors to get over their buyer's remorse, which results in longer stays at the park and, of course, more money spent while they are visiting.

The path at Disney was created by design, taking into account the buyer's-remorse quirk of human behavior. Your own path will also need to be intentionally designed to take those you want to influence on a ride that they are sure to enjoy. "By taking into account all the amazing irrationality of human decision making, we can create better connections, greater levels of trust, more influence, and stronger communities." The end goal is to take people down a path that is appealing to them logically and emotionally and that "gets them where they need to end up."

Levy's book lays out a clear prescription for how any person can leverage the power of connection and community to influence others for a greater purpose. During the course of writing it, he came to realize that the fastest and perhaps easiest way to approach any problem is by extending an invitation. When someone accepts your invitation, they are immediately invested in whatever it is you are presenting or offering. When a person commits in this way "the context shifts from someone wanting them to participate to actively saying they want to engage." This is a magic-making dynamic.

With You're Invited: The Art and Science of Cultivating Influence, Jon Levy is extending a personal initiation to each and every reader to "participate in a life-changing experience." No matter how much money you make or what level of success you have achieved, each of you has what is necessary to connect with other human beings. There is no more critical time to make these connections than the present, which represents the most lonely and isolated time in human history. Connecting, communing, and influencing others is the positive path to a happier, more fulfilled, healthier, and successful life. The first step is to accept the invitation Jon Levy has extended to you. The second is to reach out to another, with an invitation of your own.

## THE SUMMARY IN BRIEF

What stops you from achieving your goals? Not enough time? Not enough motivation? Not a clue as to what you want to do? You're not alone. It's difficult to focus on your goals when you have to invest time and energy you don't really have into something that may reward you down the line. However, if you make your goals a priority and work on them for short periods of time, you will eventually reach your desired destination.

Over the years, author Debra Eckerling has helped people around the world set and achieve goals through strategizing, troubleshooting and offering resources, encouragement, and deadlines. She has developed and polished goal-setting and productivity techniques and adapted them into a simple roadmap. In ***Your Goal Guide***, she shares this method with readers to figure out what they want and how to develop a plan to get it.

## IN THIS SUMMARY, YOU WILL LEARN:

- How to determine your ultimate dream, goal, or desired accomplishment.
- What processes you can use to identify optimal options and possibilities.
- How to establish goals, benchmarks, and tasks that will get you to your destination.
- How to stay motivated and energized along the way.

## Determine Where You Want To Go

Go back in time. Think about those things that have stuck with you –the ideas that roll around in your head and show themselves every now and again. Now's the time to take them out to play. Maybe the life you want has nothing to do with the life you have. In order to change that, you start with one question: What do you want? And only you can answer it.

### Exercise 1: GoalTopia

Open a dedicated notebook or computer document and write "GoalTopia" at the top. Underneath, write "GoalTopia 1." What's your ultimate dream, goal, or desired accomplishment? Write down the first thing that comes to mind.

Now, give it some thought. Meditate. Set a timer for fifteen minutes. Close your eyes, clear your mind, and let your thoughts wander. Time's up. Write your next header, "GoalTopia: Take 2." Answer the question again: What's your ultimate dream, goal, or desired accomplishment? Write it down. If necessary, repeat this process a few more times.

Once you are happy with your potential GoalTopias, read through the list. Do you see similarities? What keeps popping up? This could have to do with your job or career, industry, family, health, wealth, lifestyle, or a combination of them all. After some consideration, from your list, identify the GoalTopia – or combination of GoalTopias – you want to focus on and write it down under the header: "Ultimate GoalTopia."

### Exercise 2: Your Current Biography

A bio is a document that shares your accomplishments, experience, and expertise, along with your strengths and values. It is written in narrative form and should be in your tone and style, showing some personality along with your professional background. It's the public's first impression of you and a good way to remind yourself of all you have done and what you want to achieve.

To assist you, try some simple tricks to make the process of writing your biography easier. Go to a networking event. After you've spent an hour or so introducing yourself to a bunch of new people, your background will be in easy recall mode. Still stumped? Ask your friends and peers to give you their unique, unbiased perspective. Find previous bios of yourself on your blog, company website, or LinkedIn and read them.

Go to the next page of your dedicated notebook or document and title it, "Current Bio."

Label and fill in the following sections: Employment History; Education, Organizations, and Certifications; Successes; Strengths; Challenges; Skills; Personal Details or Anecdotal Information. Take the information and turn the high points into a 150-300 word bio written in third person.

### Exercise 3: Your Future Biography

The next step in this process is to figure out your future. Identify what additional skills, education, and relationships you need to pick up or develop along this journey. When you see the distance between your current life and your future, you can begin to chart your course. Your future biography should reflect your ideal persona once you reach your yet-to-be-determined destination.

Go to the next page of your dedicated notebook or document and title it, "Future Bio."

Label and fill in the following sections: Future Work Experience; Education, Organizations, and Certifications; Successes; New Skills; Personal Ambitions. Use this information to write your biography 1, 3, or 5 years from now. Copy your future bio into your Trip Map.

### Exercise 4: Create Your Mission Statement

Your mission statement is a summary of your goals and values, as well as the driving force behind them. Furthermore, once you know your mission, you are able to set long- and short-term goals that reflect it. Since your mission statement combines your biography with your ultimate goal, you've done a lot of the legwork already. It's just a matter of putting all the pieces together, mixing them up, and adding one more.

Go to the next page of your dedicated notebook or document and title it, "Mission Statement."

Answer the following questions as concisely as possible:

- Who are you? What is your work, education, and personal background?
- What are your values? What principles are important to you?
- What are your unique qualities? What talents and skills define you?
- What do you ultimately want? What is your goal?
- Who does it serve and why? What is the value to others?

Once you've answered these questions, use the information to create your mission statement. For example, I am a (adjective) person who enjoys (talent) and excels at (skill) who wants to help (demographic) (do this) in order to (reason). Once you have your mission statement, add it to your Trip Map.

### Exercise 5: Create Your Motto

It can be helpful to turn your mission statement into a motto that you can use as a barometer for making decisions that relate to your goals. Take 5-7 keywords from your mission statement and create a memorable phrase that will stick with you.

## Explore Different Destinations

Although you know what your GoalTopia looks like, you are just getting started. Now you need to go through the process of investigating different possibilities. The legwork, which includes writing, research, and outreach, will help you identify options.

### Exercise 6: Directed Journaling

Directed Journaling is a technique that helps you work through any sort of concept, decision, or problem. This method is effective because, when you put your ideas in writing, you are able to look at them objectively, move things around, and determine the best course of action.

In your calendar, schedule five or more fifteen-minute sessions for journaling. Spend that focused time writing out your thoughts, answering a specific question or series of questions. What should I do? What do I want? What changes do I need to make? These are the kinds of questions your Directed Journaling will answer. Your stream of consciousness will identify numerous scenarios that could lead you to achieve GoalTopia.

### Exercise 7: Common Themes

Go to the next page of your dedicated notebook or document and title it, "Common Themes."

Read the first day of your journal entries and jot down five things that stand out.Repeat this for each of your journal days. Now compare your lists. What ideas showed up on most days? Are there any obvious omissions? What did you learn about yourself? Take your answers and assign them a common two-to-three-word theme. Examples include Career Change, Climb the Corporate Ladder, or Start Side Hustle.

Your theme will help you home in on what actions to take, interests to explore, or lifestyle elements to change as you get closer to identifying your specific destination.

### Exercise 8: Identify Options

Go to the next page of your dedicated notebook or document and title it, "Options."

Based on your journal entries and notes, make a list of five possibilities of what you can do in service to your theme.

Answer the following questions:

- Why does this interest me?
- How will it serve my mission and motto?
- In what ways is it a good fit for my theme?
- Which of my experience and skills can I use or transfer to pursue this?
- What additional education, support, or resources will I need to obtain.

Use your answers to narrow your options down to three finalists. These are the options you will research extensively.

### Exercise 9: Research

Take your top three options from the previous exercise and extensively research them. Find out who the leaders in the field are, what education is required, and what resources exist within the field. Think about any connections you may already have to each option and reach out to them.

### Exercise 10: Select a Destination

Now that you have carefully researched what it takes to get to your different options, you have enough information to make a Destination Decision. Review all of the exercises you have done so far and see how each option relates and is aligned with your mission, motto, and theme. Ultimately, ask yourself, "Do I want to do this?" From your answers, you should be able to determine your destination.

## Brainstorm Your Route

Now that you have selected a destination, you get to decide how you are going to get there. You will brainstorm all the goals, benchmarks, and action items you believe are necessary to get to your destination.

### Exercise 11: Goals Brainstorm

In your notebook or document, write down all of your professional and personal goals. The reason to set both is

because they work in tandem. If you get stuck, look at your future bio, mission statement, journaling pages, or options exercise to see if you missed anything.

### Exercise 12: Organize Professional Goals

Separate your master list into two categories: Professional Goals and Personal Goals. Take your list of professional goals and identify which are long-term and write each on a separate page. Now, put any short-term goals from your list under the appropriate long-term goal. Now, add benchmarks, or mini-hurdles, under each short-term goal. Under each benchmark, write out the tasks necessary to accomplish it.

### Exercise 13: Organize Personal Goals

Personal goals complement professional ones. When you do things to improve your personal life, it impacts your career, and vice versa. Map out your personal goals in the same way you have mapped out your professional goals into long-term, short-term, benchmarks, and tasks.

### Exercise 14: Priorities

Prioritizing is simple. When trying to decide what takes priority, ask yourself: Is it exciting? Is it necessary? Is it urgent? From your extensive list, choose three of the long-term goals that will lead you to GoalTopia. Next, choose three long-term personal goals. Now zero in. Choose three short-term professional and three short-term personal goals that you will tackle first to make those long-term goals happen.

### Exercise 15: Choose Alpha And Beta Projects

Even though you prioritized, you can't pursue all of your goals simultaneously. What you can do is choose alpha and beta projects. Alpha projects will take center stage because they are more timely and important to keep you moving towards GoalTopia.

## 5 Of 7 Rule

While the idea of working toward your goals every day is good in theory, it's not always realistic since you have plenty of other professional and personal responsibilities. Long-term goals take time.

The 5 of 7 Rule helps you take the pressure off yourself as you work toward your goals while continuing to juggle everything else going on in your life. Work toward your GoalTopia five out of every seven days each week. This enables you to keep your objective top of mind while giving you ample downtime. It eliminates the fluster you feel when life happens and you need to skip a day or two.

Everyone deserves happiness in their lives. If you don't have it, you can do one of two things: be okay with being miserable or do something about it. For those at a crossroads who've decided to make a change, good for you! But don't stop there. That decision is a huge first step, but you need to do the work and follow through. Nearly anything is possible. You just need to take the time to figure out what you want and commit to making it happen.

Debra Eckerling works with individuals and businesses to set goals and manage their projects through one-on one coaching, workshops, and online support. A professional writer, communications specialist, and project catalyst with more than 20 years of experience, Debra is the founder of Write On Online, a live and online community for writers, creatives, and entrepreneurs and host of the #GoalChat Twitter Chat.

## THE SUMMARY IN BRIEF

The old saying that the grass is always greener on the other side captures a familiar frustration at work: the belief that fulfillment, balance, or success lies somewhere else, in a different role, company, or career. Many professionals feel stuck between wanting more satisfaction and fearing the cost of chasing it. But what if job satisfaction was a skill that can be practiced and mastered, just like any other skill?

***Your Grass Is Greener: Use What You Have. Get What You Want. At Work and In Life.*** argues that lasting improvement does not come from changing jobs, but from changing how you work. Drawing on his experience as a startup advisor and public speaker, author Jason Silver shows how people can use strengths they already possess to improve efficiency, reduce stress, and enjoy their work more.

The focus is on practical tactics such as improving communication, speeding decision-making, and aligning daily tasks with what you do best—methods that help you become more effective without sacrificing your life outside the office. These tactics are designed to be applied immediately, using strengths and habits you already have rather than requiring sweeping changes or major trade-offs. As work improves, success follows more naturally, and the resulting confidence and satisfaction spill over into personal life as well. Over time, these small, controllable changes compound, creating a more sustainable and rewarding way to work and live.

## IN THIS EXECUTIVE BOOK SUMMARY

- Learn how to improve job satisfaction without changing roles or employers
- Find out how to use existing skills to work more efficiently and with less stress
- Examine practical methods to reduce miscommunication and progress faster at work
- Acquire a mindset shift that turns everyday work into a source of life satisfaction

## Introduction

Shortly before her 37th birthday, my sister lost her battle with cancer. Losing Rachel sent me into a spiral. I fell to pieces, slowly picked them all back up again, and through her death have been learning more about how to better live my own life. I challenged every assumption I had about how I was living and focused on my own well-being more than I ever had before.

Over time I started to feel better in life and turned my attention to work. A similar deep dive upended everything I thought I knew about how I was supposed to work, and in the process, helped me find a better way. One that allows me to continue to work hard, but enjoy myself more along the way.

### How to Work—and Live—Better

Research has shown that enjoying your job isn't just a nice perk. The more you enjoy your work, the better you do at it. You're more creative and you build better relationships with your colleagues too. Studies also show that the joy you feel at your job spills into the rest of your life. When you enjoy your work, you have more energy for everything else. Simply put, working better is the key to unlocking a better life.

Workplace statistics paint a clear picture: the way we're working today isn't working.

- Productivity is lower than ever.
- About 8 in 10 people have burned out at least once at their current job.
- 77% of employees feel disengaged from work.
- The "Great Resignation" and "quiet quitting" have become so popular as to be routinely newsworthy.

If, like so many others, you're struggling at your job today, know that you can turn it around. Whatever job you have and however it's going for you today, finding ways to work better will bring you big benefits both at the office and outside of it.

### The Secret to Better Work

*Work smarter, not harder.*

Does anyone even know what that actually means? Are you waking up every day trying to work dumb? No, you're not. The problem isn't you or what you're capable of; it's that no one has ever really explained *how* you're supposed to work smarter at work.

This book breaks down nine of the most impactful tactics for working better across these three opportunity areas:

- How to do five days of work in four (without working until midnight)
- How to enjoy your day-to-day work more (without changing jobs)
- How to progress faster without (waiting for a title or promotion)

What you'll learn works because each tactic is focused entirely on what you control—no waiting for your boss to approve a new project, spending months interviewing for a "dream job" that may never come, or holding yourself back anymore.

CHAPTER 1

## How to Eliminate Miscommunication

Miscommunication in the workplace costs the US economy upward of $1.2 trillion every year. Aside from productivity, miscommunicating just feels bad. A recent study showed that most employees (69%) can point to a specific, recent miscommunication at work that left them feeling more stressed or anxious.

When one of my favorite campaigns we ran at Airbnb resulted in a scheduling error involving the NBA, the NHL, and Bruce Springsteen, I realized this was because I'd made a classic blunder of communication: I assumed others had interpreted my words how I'd intended them to be interpreted. I'd forgotten one of the most obvious and important rules of communication—different people hear the same words differently. Why does this happen?

The answer is obvious, yet all too often forgotten. We're all different from each other. We all think differently. We all hear things differently. Different people can hear the exact same instructions and produce completely different results.

The problem isn't if you're understood, it's *how* the other person understands you. There are two types of miscommunication:

- **Visible miscommunications** – occur when you speak and can immediately tell you're not being understood. The other person looks at you funny or replies to your email with a confused emoji. So, in the moment, you reword your message and try again.
- **Invisible miscommunications** – occur without your awareness. They happen when you've been understood

> Enjoying your day-to-day work is a self-reinforcing multiplier for your career.

but misinterpreted. These are the miscommunications that cost us because you only discover them after you've wasted time and effort going in the wrong direction.

Solving for invisible miscommunications in the moment, before the wasted work and effort, is where you can get back hours every week.

### The Solution to Invisible Miscommunications

To stop invisible miscommunications, you have to find a way to make them visible. You want to make them obvious in advance so you can fix them before paying the price of doing the wrong work. Using the brief back, a proven communication tactic, can help here.

The brief back asks a listener to repeat back what they heard in their own words. This immediately reveals whether an invisible miscommunication has taken place. You will unquestionably know how the other person interpreted your meaning because they'll have just told you.

There are basically two approaches to deploying brief backs: the safe way and the asshole way. Consider these examples:

1. "Tell me what I just told you. I want to make sure you were listening."
2. "Can you let me know what you took away from this conversation so I can be sure I did a good job getting my point across?"

Guess which one works better?

Option 1 is condescending, passive-aggressive, and rude. I don't recommend asking for brief backs this way. From much trial and error, I learned that the key when asking for a brief back is to focus on yourself, not on the other person.

The brief back should confirm that *you* did a good job of communicating, not that the other person did a good job listening. The idea is that if something went wrong then it's on you, not them.

Notice the focus of Option 2: "I can be sure I did a good job." This clearly signals to the other person that you're looking for feedback on the job you did and not checking on something they did or didn't do. I've rarely if ever seen anyone have an issue with being asked for a brief back.

CHAPTER 2

## How to Speed Up Slow Decision-Making

How many times have you felt frustrated with slow decision making at work? You know what you need to do, but you're stuck waiting around for someone else to make a decision so you can move forward. Or you get called into a meeting to discuss a topic that should have been decided days, if not weeks, ago.

It feels like the more people involved in a decision, the more it seems to slowly grind to a halt. But do more people always mean you'll move more slowly? Too many cooks in the kitchen isn't the problem. Teams can make good decisions quickly, even big teams.

As humans, we want to agree with one another because we care so deeply about getting along. Our brains are wired for consensus. Yet we're actively building teams that create more controversy.

As we add more people to our teams and they bring a greater diversity of thought, we are actually creating the conditions for more disagreement. We need diversity, but with diversity necessarily comes differences of opinion. Left unaddressed, this is what slows down decision-making.

So, the question is: How do you adapt your decision-making approach to leverage the superpower of diversity without the slowdown of always having to agree?

### For Faster Decisions, Learn to Disagree Better

Though it might feel somewhat paradoxical, better disagreement leads to faster decisions. Here's the secret: your team can be in alignment without being in agreement. Faster decision-making happens not in spite of disagreements, but *because* of them.

The following three essential tactics can help you productively disagree so you can make decisions faster as a team:

**1. Decide who decides**

Always stop and ask, "Who is making this decision?" before diving into the decision itself. This single tactic alone will save you hours of wasted effort. You'll be surprised how often

the actual decision maker isn't clear and how much faster you'll move once your team has that clarity.

**2. Collect context, not opinions**

Groupthink refers to the challenges we face making decisions in group settings. To make good decisions at pace, your goal is to collect the diverse context of what everyone is thinking while reducing the probability of bad decisions from groupthink. Since it's subconscious, you can't entirely stop groupthink from happening. You can, however, rethink what you and others say to reduce the likelihood that it occurs.

**3. Seek alignment, not agreement**

Great teams can recognize genuine disagreements and decide to move forward together anyway. The idea is to share your thinking and argue vehemently, but once a decision is made, support it as if it were your own. This tactic may be the most difficult because it requires you to hold two competing points of view in mind at the same time: that you disagree with a decision and *fully* support it.

CHAPTER 3

## How to Take Back Control of Your Time

How often in your life and at work do you put other people's requests above your own? How long does it take before your week gets away from you and you have no time left for what *you* need to get done?

We all know we need to say *no* more, but it's really hard. No one ever explains how to do it well. What if you could learn to say *no* more effectively, with less guilt and less fear of judgment from others?

### Why You Don't Say No as Often as You Should

You, me, and anyone else with a human brain pretty much sucks at estimating how long a task will take. Psychologists call it the *planning fallacy*, and it effectively means we expect to get way more done than we actually can. How often do you get through a day or a week with a completely finished to-do list?

Thanks to the planning fallacy, most of us take on too much, setting ourselves up for failure and over allocating our time before a week has even begun.

Conventional wisdom tells you to focus on your methodology—to optimize your time better—but the key to better prioritization isn't methodology; it's psychology. It's a mindset shift to focus on *what you won't do* that makes you more effective at what you will do.

It's incredibly hard to intentionally not do something. The same is true at work. Even when you tell yourself not to, you still wind up checking your email in a meeting or letting a "quick" conversation expand into an hour-long, off-topic brainstorm. It's much more difficult to have the discipline not to do these things.

Your to-do list doesn't tell you what not to do. Shifting your mindset to focus on clearly defining what you won't do is exactly what you need to make more progress on what you will do. When you know what not to do, you're better able to avoid distractions and stay focused on what matters most. It's also easier to take much-needed breaks because you know when you've done enough.

### Write a Not-To-Do List

If you plan to take on too much before your week even begins, it's only going to go downhill from there. That's why we're going to take your existing to-do list and complement it with a not-to-do list.

To set yourself up for a great week, open up your long to-do list and spend fifteen minutes first thing on Monday doing this:

1. Pick your top three most important priorities. *You only get three.*
2. Put everything else on your not-to-do list. *Yes, everything else.*
3. Only add more to your to-do list if your schedule is wide open after blocking out time for your top three priorities. *Remember the planning fallacy: your top priorities will take longer than you expect.*

Having so few to-dos and so many not-to-dos will probably make you feel like you're going to underachieve at first, but your results will tell a different story. Clearly articulating your non-priorities in a not-to-do list helps you keep focused and has a number of bonus benefits as well:

- Your mental health will improve.
- Your expectation management will improve
- Your organizational skills will improve.

The purpose of upfront clarity is to help you be more intentional throughout the week.

As requests and tasks come up throughout the week, compare them against what you've already written down. If it's

> If you want lasting happiness and more joy on the job, you have to focus on improving how you work and not just what you're working on. ”

on your not-to-do list, then don't do it. If it's something you think you need to do, go for it. But before you do, choose what it will replace on your to-do list. Don't just add it on top of everything else.

CHAPTER 4

## How to Promote the Imposter in You

When you feel the self-doubt of imposter syndrome, you might see it as a problem—something you need to get rid of to feel better. That doesn't work. Imposter syndrome isn't a light switch you can turn on and off.

When you try to ignore the feeling that you don't belong, it usually feels worse and you perform worse as well. That's why we're going to completely flip the script. You'll learn how to use the same imposter syndrome that feels like it's holding you back as the very thing that propels you toward more impact and a deeper feeling that you do belong.

You've experienced imposter syndrome if you've ever:

- felt self-doubt
- had trouble acknowledging your success
- been worried that you'll be exposed as a fraud because you're not as good as other people think you are

The textbook definition of imposter syndrome adds that these feelings happen despite verifiable and objective evidence of your success.

When you try to turn your self-doubt off, you usually wind up feeling worse. Stop trying to fix it. There's more to imposter syndrome than what prevailing wisdom would have you believe. It's not some bug in your source code that needs to be corrected. It's a feature to be embraced. When you stop trying to turn it off, imposter syndrome can bring you benefits rather than burnout.

Research has shown that when you experience imposter syndrome, you tend to compensate by becoming more "other-focused." You listen better and ask more questions. When you do, you become more interpersonally effective and people like working with you more. In other words, the very concerns you have about not belonging help you build more belonging. The right amount of imposter syndrome makes you a better teammate.

### The Question Is the Answer

Researchers at Harvard University found that people like you better when you ask more questions. When people like you better, you'll feel a greater sense of belonging.

Despite their superpower, most of us don't recognize questions as the pathway to interpersonal success. We don't ask enough questions. Instead, we have it backward. We tend to focus more on answers, thinking this will make us seem smarter and more valuable. But answers aren't better.

What really has value in workplaces today is figuring out the *right questions to ask*. Not only do great questions pave the way for great answers, but they're also one of the best ways to learn and build relationships.

Research found that follow-up questions consistently performed the best in terms of how much they make people like you. Follow-ups encourage people to elaborate their points while showing your colleagues that you are listening to them. You can't ask a follow-up question if you weren't listening in the first place, so when you ask one, you're sending a strong signal that you were paying attention.

CHAPTER 5

## How to Measure Your Joy on the Job

Enjoying what you do at work isn't just important because it feels good. Research has shown that when you enjoy your job, you have more impact, are more creative, and you build better relationships with your colleagues.

Enjoying your day-to-day work is a self-reinforcing multiplier for your career. The more you enjoy your job, the more impact you have. The more impact you have, the more you'll enjoy your job. And so it goes, onward and upward from there.

Work joy also spills outside of the office into your life overall. When you feel good at work, you feel better across the rest of your life as well.

### You're Measuring the Wrong Variable

*Hedonic adaptation* is our shared, human tendency to revert to a base level of happiness following any meaningful event. Like getting a big promotion or landing that fancy new job you've always wanted, winning the lottery is a milestone. Just think about your last major win at your job. I bet you felt great. Did you feel the same way the next day? The next week? At your next performance review? That's hedonic adaptation at work—and it's why milestones are the wrong variable to focus on.

I firmly believe that anyone can experience more joy in their job, but we have to flip our notions of what leads to more enjoyment. Generally, we all focus on career milestones. You think about the goals you want to achieve, the promotions you plan to land, and the projects you'll need to work on to get there. If you want lasting happiness and more joy on the job, you have to focus on improving how you work, not just what you're working on.

### Do You Enjoy Your Moments?

When you're asked "Do you enjoy your job?" your brain plays a trick on you. A growing body of literature shows that humans are quite inaccurate at recalling how they've felt in the past. It's called *affect recall bias*.

This is another reason why traditional performance reviews don't help you do anything about your on-the-job experience. Broad reflections over long time periods don't match how you actually feel about your work day-to-day. If you really want to know if you're enjoying your job, you need to measure your moments and ask yourself how you're feeling as close to your day-to-day experience as possible.

CHAPTER 6

## How to Unlock More Joy at Your Job

The reason why many people don't like their work as much as they could is because they're not doing their work in the best way *for them*. Forget working on best practices. You need to find the practices that work best for you. When you do, you can use what you're already great at to find more enjoyment in the job you already have.

If you're going to find and keep on a path that makes you happier at work, you're going to need something to help you find your way. To discover your optimal professional path, you need a career compass.

A career compass reorients you toward how to enjoy your job every day. When you have a task to complete, each of the four points of the compass will show you how to get your job done in a way you'll both enjoy and excel at. When you can apply at least one of the points, you're in good shape. Two will feel great. Three will feel even better. And employing all four will reward you with maximum enjoyment on the job. Here are the four points of your career compass:

- **Love**. The more you do what you love, the better it will be for you personally and professionally.
- **Leverage**. The more you use skills you're already great at, the better you'll do and feel.
- **Learn**. The more you improve skills you care about, the more you'll enjoy your job, and the better you'll get at it too.
- **Less**. The more you avoid what you don't love doing, aren't great at, and have no interest in improving, the better you'll feel.

For a career compass to be applicable to your day-to-day tasks, you'll need to customize the four cardinal points so they relate to what's unique about you.

### Keeping on Your Path

*Be present. Stay in the moment.*

There's a reason for these sayings. Studies show that you're happiest (and most effective) when you're focused on the here and now. Though you likely know what sayings like *be in the moment* mean, figuring out how to apply them is much harder.

You can use your compass to help you stay in the moment. Anytime you get a new task, use your compass to figure out how to make it happen. When you find yourself getting distracted away from your day-to-day work—stressing about milestones, worrying that you're doing things differently than everyone else around you, or simply disliking what you're doing—you can again turn to your compass and let it guide you back to the best way to work for you.

CHAPTER 7

## How to Make Better Decisions

No matter how hard you try, you will never fully control the outcome of your decisions. In fact, the only aspect of the decision-making process you have complete control over is how you make your decisions themselves. When you im-

> Ignorance might be bliss,
> but it won't make you any better. ”

prove your approach to making decisions, you maximize the chances of getting the outcomes you want.

Your brain *is* a mess of tangled legs, or at least a mess of 100 billion neurons and their 25 quadrillion pathways. With so many routes to take, your brain evolved to find the fastest, easiest way to make decisions.

The problem is that efficient thinking is rarely the most effective thinking. Anytime you're making a decision, your brain is finding ways to skip the hard work. These mental shortcuts are known as *unconscious biases* because you can't know when they are happening to you.

You can't eliminate biases from your thinking entirely, but you can take different approaches to lessen their effects. What you need is a way to step back and force your brain to do something it doesn't want to do—think deeply about your decisions.

Asking the right questions can force your brain to do the right thinking. When you start by evaluating the factors of a decision, you become primed to think more analytically. It's this initial priming that improves your overall decision-making.

### Use Factors to Make Better Decisions

Instead of listing pros and cons, list *factors*. A factor doesn't tell you which option is better; it tells you how to think about which option is better. Listing factors will help you think through the important aspects of your decisions while priming your decision-making to be more analytical.

Once you've listed the relevant factors to any decision, you can then use a simple but effective thought routine to make your choice. You can use it for any decision, big or small.

1. List every relevant factor in your decision
2. Make a mini-decision based on each factor alone
3. Make a final decision considering all of the factors together

This routine works because it helps you avoid the mental shortcuts that hurt your decision-making. By listing the relevant factors first, you avoid letting less important information sway your opinion—like how many pros or cons there are. Then, the routine forces you to think deeply about what decision you would make considering each factor as if it were the only one. Having that thinking done before you holistically consider all factors together will make your final decision better.

CHAPTER 8

## How to Get More Feedback

Tough feedback is hard to hear, but it's always better to hear it than not. When you know about it, you can do something about it. Ignorance might be bliss, but it won't make you any better. Research has shown that more feedback helps you learn and develop new skills faster, improves what you're able to achieve, and increases your overall motivation as well. It's also been shown that teams with free-flowing feedback significantly outperform those without.

As conclusive as the evidence is that feedback supercharges people's growth, it's equally clear that most of us aren't getting enough.

Giving feedback comes with social risks, and because we're unsure how someone may take our feedback, we often decide to play it safe and keep it to ourselves. You can be the change you want to see in your workplace by taking the first, sometimes scary, step of giving more feedback to others. The more feedback you give your colleagues, the more of it you will get for yourself.

### How to Give More Feedback

- **Give better feedback**: To keep your feedback in a safe zone, steer clear of right and wrong. Don't get into a situation where your comments can be perceived as correct or incorrect, because that's where arguments happen and feelings can get hurt.
- **Give positive feedback**: One of the best ways to give more feedback—especially at first while you're getting used to giving it—is to focus on positive feedback.
- **Ask before you give feedback**: One final tip to help you share more feedback is to ask in advance. Remember, you're almost certainly underestimating someone's desire to hear your feedback. Rather than assume

they don't want to hear what you have to say, ask them and find out for sure.

### How to Get More Feedback

As you give more feedback, more of it will naturally come back to you thanks to reciprocity bias. But remember, feedback is just as hard for others to share with you as it is for you to share with them.

- **Ask for feedback in advance**: Asking in advance gives people the chance to prepare and makes it easier for them to share it with you because they know you want to hear it.
- **Listen to understand**: When someone gives you feedback, they're doing something that isn't easy. When receiving feedback, focus on listening and making sure you understand, not debating whether the feedback is justified.
- **Close with gratitude**: Try to end every feedback conversation with gratitude. A simple thank you goes a long way.

CHAPTER 9

## How to See Opportunities Everyone Else Misses

The problem is, thanks to confirmation bias and a simple trick of language, we're holding ourselves back every single day without realizing it. Opportunities to advance more quickly, both in terms of professional accomplishment and personal growth, are all around us. We just miss them.

The moment you hear the word *can't*, confirmation bias kicks in. This particular unconscious bias, yet another of the 180 we all have, unknowingly leads you to look for or interpret information that is consistent with what you already believe. Rather than exploring potential, when we hear *can't*, our brains actively avoid the possibility and we move on.

Here's the truth: very few achievements are impossible. But the flip side is this: many achievements aren't feasible.

The key to seeing opportunities others miss is differentiating between possibility and feasibility. People regularly say something *can't* be done when they really mean it *shouldn't* be done. This subtle difference makes all the difference.

### The Question You Should Be Asking All the Time

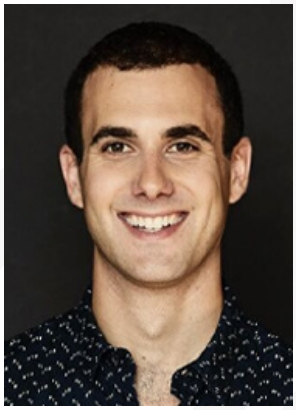
To see opportunities others are missing, ask yourself: What would need to be true?

When you're faced with a hard goal—something that can't be done or an idea someone else thinks is never going to happen—make a conscious effort to stop and think. Move from declarative statements about impossibility to exploratory conversations about feasibility.

This works because that single question shifts your focus from confirming all the reasons an opportunity won't work to exploring the specific details that would need to be true to make it happen. The question forces you to actively consider the possibilities. Once you have a tangible list of what would need to be true, you can more consciously decide what to do next.

CONCLUSION

## Gutted, Grateful, and Greener Grass



Changing what you do on its own doesn't address the true root challenge if you want to accomplish more and feel better about it along the way. The secret to better work—and a more enjoyable life as a result—is to change *how* you're working. Using the skills you already have to improve the work you already do. This leads to the most lasting change because any improvement in your underlying approach carries forward to the next project, team, or entirely new job you do in the future.

Avoid looking at the grass elsewhere and expecting it to magically be greener. You already have a job that can be your dream job; you just need to do it differently. You already have the skills you need to work smarter, not harder. You just need to use them differently.

Do whatever you need to do to remind yourself that you have the power to change how you're working. Other people can help you, but you certainly don't need to wait for anyone other than yourself to decide to work differently and transform your job into one of the most positive drivers in your life overall.

You already have everything you need to get what you want at work and in life.

Your grass *is* greener.

**Jason Silver** is a multi-time founder of companies and a multi-time founder of kids. He is driven by helping modern employees and teams discover better ways to work, with surfing a close second. An early employee at Airbnb, he also helped build an AI company from the ground up before the field gained mainstream attention. Today, he advises a startup portfolio valued in the billions on how to build enduring companies where people genuinely enjoy working. A sought-after speaker, instructor, and advisor, Silver focuses on making work a meaningful driver of positivity. His children regularly remind him how much he still has to learn.

## THE SUMMARY IN BRIEF

You may think that you lack creativity, are unable to learn, or are incapable of getting good ideas. Many people think that way about themselves, so don't worry. It is possible to work through the complexities of successful creativity. Doing so will help you find your ideas and develop presently undiscovered abilities along the way.

In ***Your Next Big Thing: Creating Successful Business Ideas from Scratch***, author Matthew Mockridge offers tools and proven methods that will allow you to produce groundbreaking ideas and summon unexpected accomplishments – ones that may change your life forever.

## IN THIS SUMMARY, YOU WILL LEARN:

- What features must be present for an idea to be a "next big thing."
- How to think about creativity in a way that leads to scalable business ideas.
- Practical idea-generating tools that you can implement immediately.
- How to evaluate your ideas to see if you should pursue them or not.
- Practices that should be incorporated into your daily life to increase your ability to realize your big idea.

## Attributes Of A "Next Big Thing"

Before you can understand how to develop your "next big thing," you must first understand what attributes make something a truly "next big thing." These attributes or values will be used as a guide or checklist when considering different proposals. A real "next big thing" includes all or some of the following features:

Meaning and Value: It costs time, money, and attention. It becomes an integral part of the founder's life and is closely connected to a team, environment, customers, and partners.

Fairness: It must consider the principles of morality and ethics. Is it legal, fair, and honest?

Problem-Solving: Big problems set the stage for big ideas. Your next big problem will open up a market that has big potential.

Scalability: Can the idea scale, grow, and function, even without the founder standing next to it?

Optimized Risk: It generates profits inversely proportional to the risk. It does not financially paralyze you and clearly tells you when to collect your chips and leave the table.

## Thoughts On Creativity

The following thoughts about creativity are actionable and fool-proof.

Where are your ideas coming from? You don't come up with ideas. Ideas come to you. Ideas come from the sum of everything you are exposed to—they are the product of your environment. Go for a walk, talk to new people, read books that challenge you, and visit new places, and you won't be able to save yourself from good ideas.

Being creative means discovering and improving—not just inventing! Creativity does not automatically mean inventing something new; it often simply means discovering something and then making proper use of it. Find existing opportunities, rearrange them, and improve them!

Can you learn or inherit creativity? Not everyone is born creative, but every person you encounter, every setting or situation you experience, can set in motion creative thinking. Expose yourself to unfamiliar situations—crazier, newer, sharper, and more drastic experiences result in more innovative ideas.

Must you always be an expert? Creativity does not result from an expert performing a miracle, but from a design "ecosystem" based on the right team and on a mix of perspectives, new and old. Not knowing something is impossible makes it once again possible!

The flash of genius—does it actually exist? Suddenly, out of nowhere, a winning idea! Apparently a million-dollar moment, but what is missing? The efforts that preceded the insight. The subconscious part of our mind incubates ideas. Sooner or later, the moment comes when the idea is mature. Many people interpret this moment as a "flash of genius." The actual idea, however, arrived via subconscious processing.

## Idea-Finding Tools

These razor-sharp practical tools and theories immediately produce ideas.

1. $100 Per Day: Make it your goal to generate five ideas that could raise $100 today. Then think, how can you make your basic ideas bigger?

2. Go. Stop. Breathe. Go!: Be aware that you have finite energy that you must leverage to the best of your ability. Step away from the task, gain insights, and come back to it later. Devote some time to reflection on a regular basis.

3. Brainstorming, Mind Mapping, Etc.: These tools force you to activate your right brain, the part responsible for creativity and imagination, so that you can visualize your thoughts in an unlimited way.

4. Divergent vs. Convergent Thinking: Before you start thinking about your next idea, clarify what kind of thought path you want to use to get to your goal. In a divergent thinking process, a person or team produces as many different results as possible for later evaluation. With convergent thinking, the desired result is predefined and the aim of the team is to move in the direction of the goal.

5. Five Perspectives: All strategically relevant perspectives need to be considered. Obtain five contradicting perspectives to arrive at important insights about your idea.

6. Sleep Well!: During sleep, subconscious mechanisms take place that we do not perceive. These can be incredibly valuable if you know how to leverage them. Give yourself ample sleep and during the day, try to remember what your subconscious worked on or processed during the previous night.

7. Write it Down: Make sure you always have a medium at hand so that you can immediately capture your situational

genius. When an idea shoots into your head, write it down before it disappears as quickly as it came.

8. Fifty Ideas: Quickly come up with fifty basic ideas. Don't focus on quality as the potential combinations can be gigantic.

9. Matthew's Creativity Cocktail Technique: The role of this technique is to unlock creative bandwidth and reveal an idea's untapped potential. Take basic ideas and shake them up, check them from all angles, pull, stir, push, and change them until something very special emerges.

10. Expose Yourself to New Things: When you break away from the norm and old processes, the fresh wind and slight insecurity will keep you on your toes. You'll find stimuli and inspiration in the places outside the situations you already know.

### Idea Evaluation Tools

When you get an idea, should you pursue, adjust, or throw it out? These tools allow you to effectively and efficiently make that decision.

1. Critics: The person who least likes your service, product, or idea is the most important person you need to consult with in order to move forward. The critic will tell you what didn't work, what was bad, or what was good but could work better.

2. Potential Customers: Marketing, idea development, and strategies are always more effective when you start with the customer. Put yourself in the shoes of the customer, find out what they need, and give it to them.

3. Systems vs. Humans: Good ideas are replicable, systematic, transferable, and scalable. Create ideas based on systems, not people. Make yourself replaceable, systematize all processes, and transfer the risk and implementation to as many different bodies as possible.

4. Solve Problems, Don't Treat Symptoms: It's always easier to grow out of a niche than to develop a new one. Talk to your customers and solve their problems. They will often give you your next big idea.

5. The Competition: You must be able to objectively understand whether your idea has elements that are implemented better or worse than the competition. This understanding will sharpen your strategy and determine your plan.

6. Journey Five Years Into the Future: Follow the timeline of your idea far ahead into the future. Take a close look at everything, come back to the present, and set your course to get there.

7. Start at 100: If you produce a lot of really bad ideas, you will also —statistically speaking—generate many good ones. Your first 5, 10, 100 ideas are easy routes and unexciting. At idea 100, the easy paths are no longer open and you are forced to fight against short-sightedness, lack of experience, and insecurity. In these remote corners of your mind, the great treasures lie buried.

8. Your Creative Friend: Creative types look deeper, see more, and think differently than others. Show them your idea and then just listen. Your idea can go deeper, and your creative friend can show you how.

9. Auditioning for Ideas: Your idea must make the cut three times to get the part. Take them rigorously through three rounds of scrutiny. The one that makes it to the end is your next big thing.

10. What Would it Cost You to Quit?: Evaluate your idea in terms of the potential cost of your exit. Do not move forward if the costs of your exit are too high of if you could invest your budget more efficiently on another idea.

## Success Thoughts

The following processes need to be in practice in order for you to remain productive, effective, and on course for the long-term realization of your next killer idea.

1. Flow and Meditation: You have flow when you don't think about what you're doing; when it just happens. It's much more subconscious than conscious. Meditation can help you get to your subconscious and experience flow in any situation. Regular morning meditation sends you into the day strengthened and ready.

2. Journal of Joy: Get a notebook and write down what you are thankful for, proud of, and who you helped each and every day. This inner dialogue and personal retrospection is the basis for real happiness and your best life.

3. Fitness: Fitness is one of the best productivity tools available. Physical training releases endorphins, dopamine, and serotonin. This makes you strong, healthy, productive, and well-balanced.

4. Nutrition: Your body reacts immediately to what you provide it. Learn what you need to feed your body every day in order to feel well. Eat clean, get smart, and feel

great. It all begins with your nutrition.

5. The Winner's Routine: There is routine at the heart of your best day. Certain things have to happen for you to feel really good. Determine what those things are and reproduce a winning routine every day. Plan exactly what needs to happen in order to make yourself happy and fulfilled and then let your system make it happen.

6. The Willpower Muscle: You can train your brain like a muscle and make it really fit and strong. The part of your brain that is responsible for willpower is the prefrontal cortex. It can be trained by doing again and again the things you want to anchor in your life, and that you will need in order to grow and be fulfilled.

7. You Get All the Things You Focus On: If you ask yourself why something is not working, it's not going to work. Focus on growth, opportunities, big goals, and impressive developments, and that's exactly what will happen.

8. Smile: In the body, a simple smile produces endorphins and "feel good" neurotransmitters. A smile smooths any social situation helping you and the other person feel security, serenity, joy, and happiness. Give everyone you meet a smile and you can't imagine how good you'll feel and how much positivity you'll get back.

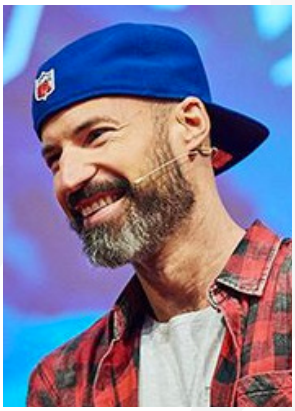
9. Shock Yourself: Create situations that turn your status quo completely on its head and give yourself a breath of fresh air. The next time your thoughts aren't really sharp and you feel burned out, shock yourself with something you wouldn't otherwise do. Go out, jump, scream, dance, and tell your body you're flipping a switch. Everything old is suddenly washed away by the adrenaline rush and now you're ready.

10. Go Where Your Fear is the Greatest: You have to do exactly those things that make you really nervous, because that's when your feeling of success and your sense of victory over your own limitations will be at their highest.

## A Leader T-O-D-A-Y

The secret sauce of every idea and every company is leadership. Here are five building blocks for the world-class leader in you.

**T**otal Devotion: Don't do what is easy, do what is right. Push hard, even when no one is watching.



**O**pen Emotion: It's not weak to show emotion; it shows character and real courage.

**D**ifference: Make a small difference by being nice, positive, and over delivering.

**A**ll-Star Teamwork: Make real human connections with your team. Deal openly, honestly, and supportively.

**Y**our Decision: Make a decision to do things today that you will thank yourself for tomorrow. It's the things you don't do and the opportunities you don't use that will tear you apart.

Carefully chosen and arranged, the individual practices and systems presented here are indispensable tools for constructing your most creative work—and your best life. By examining the structure of success, back to its logical source, you can construct "your next big thing."

Matthew Mockridge studied international business and management in Miami, FL, USA but returned to his home country Germany, to start and later sell what has been called "the Facebook of live entertainment." He now gives catchy keynotes about the whole thing (mostly wearing a cap and sneakers), for the likes of PHILIPS, RE/MAX, Lufthansa, MERCK and SHELL.
